(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

250 Huntington Ave., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,
Associate Editors.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.

Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month.

The date of expiration may be found on the address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

The people of Dawson are reported to have organized, with a membership of two hundred, the International Society for Polar Research and Experiment, whose ultimate object is to launch an expedition for the North Pole. The scheme was originated by Dr. Anthony Varicle, a Parisian inventor, now in Dawson, who has spent some time in the Yukon and has made research and study of the subject of polar work. Yukoners believe they have found many weak points in the methods of travel, equipment, and composition of nearly every polar expedition of the past, and think to improve upon them by adopting methods that have proved successful in the Yukon in the equipping and handling of long expeditions. It is the plan to try out all experiments in the Yukon, with Dawson as headquarters, and to get the expedition started next June.

Anthony Fiala of Brooklyn, N. Y., leader of the Ziegler polar expedition, which was recently rescued by a relief ship, is reported as saying: "Although the great question of the pole remains unsolved, we have brought back data which should prove of scientific value, and have explored and surveyed the archipelago from Crown Prince Rudolph Land to Cape Flora, discovering four new channels and three large islands."

What is considered by automobilists a far-reaching decision as regards their rights in the streets, has been handed down by the Appellate Division of the New York State Supreme Court. The decision places on the chauffeur the responsibility of an accident in which a person may be injured while an automobile is turning a corner. The lower courts recently took a different view of the matter.

Six representatives of the Imperial Railway system of Japan are in this country to study the American locomotive and to purchase railway supplies. From here they go to England, thence to France and Germany. One of the party is quoted as saying: "Japan is preparing to spend over $30,000,000 in railway supplies, and the bulk of these will be secured in the United States and England."

Edwin H. Conger of Iowa, recent Minister to China, has resigned his post as American Ambassador to Mexico, to take effect October 18 next, and President Roosevelt has accepted the resignation in a kindly letter acknowledging his worthy service.

The resignation of Lord Curzon of Kedleston as Viceroy of India, and the appointment of Lord Minto as his successor, has been announced from the India Office.

The announcement was made at Portsmouth, N. H., on August 29, that complete accord on the terms of peace had been reached by Russia and Japan.

Foreign.

A further step has been made towards the completion of the railway which is to transport tourists to the summit of the Jungfrau. A year ago the station of Eigerwand, which is about nine thousand feet above the sea, was opened. Trains have just begun to go through to the next station, Eismeer, 950 feet higher up. A tunnel nearly a mile in length had to be bored through the rock of the Eiger. The view from Eigerwand is nearly always spoiled by a mist, which constantly comes and goes, but up at Eismeer the atmosphere is clear and the view of the Alps superb. From the Eismeer the tip of the Fiescherhorner can be seen, as also the Schreckhorn and Wetterhorn, and down below stretches the Eiger glacier with its abysses and gorges. By next summer it is hoped to have a road open up to the summits of the Eiger and the Monch, while the railway will be continued along the Col de Jungfrau to the point from which a gigantic liit will convey passengers up a tunnel bored through the mountain to the summit.

The Norwegian Parliament consists of one hundred and fourteen members, many of whom sit in the House under protest. All Norwegians over twenty-five years of age who satisfy certain conditions of residence, etc., meet in the local parish church once in three years and choose one man out of every one hundred present to select the members of Parliament for the country. The men so selected are bound to serve. Immediately Parliament meets, one-fourth of the members are chosen to form the upper House, the remaining three-fourths constituting the lower House.

The Storthing of Norway has adopted, by a vote of 104 to 11, the proposals of the Government for the formal opening of negotiations with Sweden for the dissolution of the union.

Industrial and Commercial.

In some parts of Maine, particularly in Washington County, the management of lands that have been deforested, and that would be worthless for general agricultural purposes, has been systematized, and the canning of blueberries has become an important industry. In Washington County there are about 150,000 acres known as the "blueberry barrens." One owner controls about 40,000 acres of "barrens." The land is divided into several tracts, each of which is leased to some responsible party who assumes the whole care of burning, keeping off trespassers, harvesting, and marketing the fruit. The owner receives, as rental, one cent per quart for all the fruit gathered. The pickers receive from one and one-half to three cents per quart; those who lease the land and haul the fruit to the canning factory, or to the station for shipment, one-half cent per quart, which varies a little according to the market price. The fruit is all canned or shipped by one firm, which keeps a record of the amount as it is brought in, and pays royalty to the owner. Every year a certain section of each "lease" is burned over. The canning of blueberries is largely in the hands of a few leading packers. The largest of these factories has a daily capacity of seven hundred bushels, and the average annual output is 8,300 cases of two dozen cans each, representing 6,250 bushels of fresh fruit. The average price per case for the canned fruit is $1.90. The value of the annual product of this one factory is not far from $15,000. There are from one to two thousand men, women, and children employed in the blueberry packing industry during the canning season. About $30,000 is distributed among the pickers each year. The total canned product of the "blueberry barrens" in 1899 was about 50,000 cases and the value of the blueberry crop in this one section considerably more than $100,000.

Two independent companies, the Independent and Western Packing and Provision Company, have organized in Chicago to compete with the "Beef Trust," and their plants will cost nearly $500,000 when completed. The interests represented are the wholesale butchers, hotel and restaurant men, as well as other large consumers of meat. The two plants are now nearly completed. The third and largest independent plant will be built next summer, and will cost more than $500,000. Wholesale butchers, meat dealers, hotel and restaurant men are reported to have organized in twenty cities of the country, and are getting ready to build similar packing houses.

A project, the carrying out of which would bring the leading ports on Lakes Michigan and Superior three hundred miles closer together, will formally be called to the attention of Congress at its next session. It is proposed to connect Lakes Superior and Michigan by the construction of a waterway extending through almost the exact center of the upper peninsula of Michigan, at a point where the peninsula is only about thirty miles in width, and where two rivers, rising in the same district and running in opposite directions, are available for use. The project is considered entirely feasible. It would cost some millions of dollars.

The aggregate financial transactions of the 175 cities of the United States having a population of over 25,000, equal in magnitude those of the National Government excluding the postal service. The total corporate receipts for these cities amounted to $541,624,203 in 1903 and the total corporate expenditures to $535,804,200. The national debt in 1904 amounted to $895,157,410; the aggregate debt of the 175 cities, exclusive of sinking fund assets, was $1,134,578,783. The receipts, expenditures, and debt for the city of New York represent about one-third of the city totals.

The Government's figures indicate a winter wheat crop of 424,400,000 bushels. The indication on spring wheat is for a crop of 285,331,000 bushels, against 210,464,171 bushels in 1904. The indicated corn crop is 2,608,110,000 bushels.

General.

A proposition, backed by the Massachusetts Horticultural Society, has been made to erect a suitable memorial to Ephraim Bull, the originator of the Concord grape. On the old Lexington road, in the town of Concord, Mass., there is a little white cottage, in the yard of which the original Concord grape-vine is still growing and bearing fruit, more than three score years after it was transplanted from the woods where it was found. The Concord grape is one of the best varieties grown, and it is a parent of many other fine grapes, the Worden, Brighton, Pocklington, Moore's Early, and others.

The management of the Blue Hill Observatory, Boston, has installed on the summit of Mt. Washington an automatic, self-registering anemometer, barometer, thermometer, and a device for measuring the atmospheric humidity. Similar data will be obtained from the summit of Twin Mountain, a dozen miles distant and several thousand feet lower in altitude. From this mountain, kites carrying recording instruments will be flown to a height corresponding to the elevation of the higher mountain. The data will then be compared to see how far conditions agree at the same altitudes.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

Getting Along with Others.

PROF. JOEL RUFUS MOSLEY.

It is easy to live in peace and love with those who are severe in their judgment of themselves and charitable in their judgment of others; who are quick to see, to condemn, and to forsake their own errors, and equally quick to recognize and rejoice in the virtues of others. Those who are charitable in their judgment of others and severe in their judgment of themselves are as free from giving cause for offence as they are from taking offence, and find it easier to forgive others than to forgive themselves. On the other hand, it is very difficult, but not impossible, to love and live in peace with those who are severe in dealing with the supposed as well as the actual faults of others, and lenient in dealing with their own errors; who are as blind to the virtues of others as to their own vices; who are easily offended and slow to forgive; who are self-righteous and uncharitable.

Jesus and the apostles were familiar with both these types of character; and the New Testament abounds in commendations of the one and in admonitions to the other. Indeed, according to the New Testament standard, the person who is humble, charitable, and forgiving is a Christian, while the person who is self-righteous, unmerciful, and unforgiving is a Pharisee. After we see and accept the Christ-way of humility, meekness, and charity, and seek to overcome the world's way of pride, selfishness, and condemnation, the battle against error is begun, and it must continue until we actually love God with all the capabilities of our being, and our neighbor as ourselves.

As a condition of attaining this ideal of Christianity and of Christian Science, as well as of getting along with each other, we can and should apply the Golden Rule in our mental as well as oral judgment of each other. While we would have others see our errors as error, we would have them judge righteous instead of unrighteous judgment. While we would have others, at the right time and in the right spirit, point out to us all the errors we need to overcome, we would also have them see, encourage, and love our ideal, spiritual, and real selfhood as God's image and likeness. Until we do learn to judge righteous and loving, and therefore helpful judgment, it is best not to judge at all. We must first cast the beam out of our own eyes, before we can see clearly the motes that are in our brother's, or know how to cast them out. Then, too, if we are wise and loving enough, we will not try to separate the tares from the wheat until the harvest—until the error is ripe for destruction and the wheat ready to be garnered,—lest we injure the wheat while we are trying to pluck out the tares.

We should also apply the Golden Rule with reference to forgiveness, and learn to forgive each other as God forgives us. We need to understand that, in the light of Christian Science, God's forgiveness means the reformation of the sinner; the destruction of the errors forgiven; the annihilation of the sense of evil, even the blotting out of the remembrance of sin. And while we are not ready to be forgiven, or even to forgive ourselves, until we are willing to cease sinning, we have not attained to the spirit of true forgiveness until the desire to forget the evils of others takes the place of the reckoning up of our own wrongs and the remembrance and the recounting of the errors of others. In this connection it is well to remember that the state of mind which refuses to be silent about the errors of others, and to forget them, is usually ungrateful and given to the casting up of benefits conferred.

A person who yields to these errors is quick to forget what he has received and slow to forget what he has given, while one who yields to the promptings of good is quick to forget the favors he bestows and slow to forget the blessings he receives. Indeed, ingratitude, the recounting of one's wrongs, and the casting up of benefits, are not only kindred but most often conjoined errors, while gratitude, the remembrance of one's blessings, and silence about others' faults and one's own merits, are kindred virtues which almost invariably appear together.

Now all these virtues are not only the flower and fruit of the Christian spirit, but also the very condition of getting along with others. Those who yield to and manifest these virtues naturally become so lovable that it is easy to get along with them. On the other hand, those who become the victims of the error of ingratitude and of unkind and unrighteous judgment, and who give themselves to the reckoning up of wrongs and to the casting up of benefits, are not only missing the Christ-way, but also the recognition, the honor, and the lower advantages they seek. To the degree that we yield to any of these errors, to that degree we make ourselves unsocial and unlovable; we find it more and more difficult to rightly understand, to appreciate, and to live in peace with others; and we make it very hard for others to get along with us. Worst of all, the habitual yielding to the ungrateful, unjust, and self-righteous tendencies of the carnal mind produces that type of character which stands in the door of the temple of Truth, Life, and Love, and which not only refuses to go in itself, but obstructs the way through which others would enter.

In order to avoid as well as to check and overcome these errors which stand most in the way of getting along with each other, we need to keep in mind that the condition of being forgiven is not only reformation, but also a willingness to forgive others as we would have God and others forgive us. We are taught to ask for and expect forgiveness only as we forgive. In fact, any other plan would be ethically unsound and is scientifically impossible. As only the merciful are ready to receive mercy, so only the forgiving are ready to be forgiven. As Jesus said, "Forgive, and ye shall be forgiven." "For if ye forgive men their trespasses, your heavenly Father will also forgive you: but if ye forgive not men their trespasses, neither will your Father forgive your trespasses."

The application of the Golden Rule both to giving and taking offence makes it easy for us to get along with others and for others to get along with us. It is our privilege so to know and to love the Divine law, the basis of all right relationship, that nothing save our own errors shall ever

offend us, and at the same time it is ours to avoid everything that gives any cause or occasion for offence. (See article on "Taking Offence" in "Miscellaneous Writings" by Mrs. Eddy.) "Great peace have they which love thy law: and nothing shall offend them." "But woe unto him, through whom they [offences] come." It is also true that those who are easiest offended are usually quickest to give cause for offence.

If we would get along ideally with each other, we should apply the Golden Rule to all the relationships, courtesies, and amenities of life. We should see that in all evil things it is better to receive than it is to give, just as in all good things it is better to give than it is to receive. We should "be kindly affectioned one to another; . . . in honor preferring one another." And "in lowliness of mind let each esteem other better than themselves." As this is done, all excuse for unkindness, misunderstanding, and misjudgment is removed, and the secret of joy and of mutual blessings in each other's companionship is found. The confession of faults one to another, the correcting of past mistakes, and the atoning for past sins are seen and known to be blessed and joyous privileges rather than trying duties and painful necessities. There are few joys that are sweeter, and no service that is more Christlike, than to forgive those who have offended.

The Little Cup.

A. M. P.

APART from the world's strife dwelt a hermit, and he worked patiently at the making of certain vessels for holding the water of Life. Finely formed were the bowls of Obedience and Sacrifice, and skilfully wrought the pitchers of Intelligence, Study, and Effort, the cups of Patience, Suffering, Aspiration, and many another; yet was the worker tired and wan, as one that worketh without reward. Then came there a laughing child, who, standing at the doorway of the rude hut, watched the hermit with wide-eyed interest; and not content with long silence, "Prithee, good sir," he prattled, "wherefore makest thou so many and such pretty vessels?"

"I fashion them," replied the man, "to carry the water of Life. For months, nay years, have I worked at them; and for that there are so many, it is because I am apt to cast aside the one just finished as perhaps not worthy the sacred purpose. I would fain please the man at the fountain, and they say he is somewhat stern and difficult to please."

"But," said the boy, "already thou seemest tired and thirsty, as though in very need of the water."

"Verily that is so," sighed the worker, "and now methinks I could scarce walk so far as the fountain, or carry home one of these vessels filled with its blessing."

"O sir," cried the child in great pity, "take thou this little cup of mine. It is most simply wrought, and is not heavy. The Master gave it me for the asking, and verily it is never turned away at the fountain,—nay, ofttimes the Master meeteth me, and, smiling, filleth the cup himself, and after that I have drunk of the water, I run merrily to my lessons or my play, nor ever think of weariness from earliest morn till the sun goeth down."

"Passing strange!" murmured the hermit, as he finished a dove's wing on his bowl of Resignation. "Look, boy," he said aloud, "I have no cup shaped precisely like thine. Prithee, what dost thou call it?"

"I call it," replied the child simply, "my little cup of Loving Trust."

"Sit thou here awhile, and let me shape one after that pattern," said the man humbly, and full joyously did the child obey.

And thus it came to pass that in a few days the hermit himself had a little cup of Loving Trust. And thereupon he set out on his journey to the fountain; and for that he was so weak, the Master, being on the watch, came swiftly towards him, and helping him forward, soon poured out for him the water of Life, as much as his cup would hold. Further, he bade him be of good cheer, for that so long as he brought his Loving Trust to the fountain he would find it easier to carry a larger vessel thither.

"Aye," cried the hermit eagerly, "then I shall have enough to share with some other traveler who may be passing my way!"

And the Master smiled and wished him well.

Now in the process of time, when the child had become a sturdy stripling, came he hurriedly and in great grief one day to his friend, crying out as he came,—

"Alas for my cup, my little cup that never failed me!"

"How now, my son!" exclaimed the hermit, "wherefore such lamentation? Where is thy cup?"

"Gone! Gone!" came the mournful reply.

"Nay, foolish boy, be not in such despair. Thou hast slept and let it roll from thee. Under some hedge thou'lt find it anon; come, let us go search for it together."

"Alas, we shall never find it! Sit thee down, dear friend, and hear my tale."

A flush as of shame overspread the lad's face as he continued. "It happened but yesterday that, listening to the pleasant tale of a stranger, I lingered over my walk instead of marching along quickly as is my wont. We were but half way to the fountain when there met us one whom, by his giant size and the swarthiness of his features, I felt could be none other than the robber Doubt." He paused again.

"Thereupon, the neighborly stranger, whose name I must tell thee is Pride, whispered sweet counsel to me, saying that I, strong fellow that I am, could easily put this fellow to the rout should he touch me. And verily therewith did Doubt fall foul of me, and in the scuffle that followed my precious cup of Loving Trust was hurled to the ground and broken into a thousand pieces."

"And then, my son?"

"Then, escaping somehow from his clutches, I was for running with all speed to the Master; but again Pride forestalled me, exclaiming, 'Nay, boy, dost think he will notice thee now! Never hath he commerce with Doubt, and as like as not after this adventure will he turn upon thee with his scornful "I never knew you." But how now! Dost want to be kept forever in leading-strings? Come! A friend of mine named Human Intellect liveth hard by, and hath carven many a finer vessel than you cup of slavish trust.'

"'Loving Trust,'" I cried hotly.

"'Ah, well, it is all one,' quoth he. And with this he hurries me off to see a collection of the most beautifully wrought vessels that thou canst imagine. Soon was I all but persuaded to purchase one called Will-power, when by good luck I spied a hole in the bottom of it. Thereat did Pride's friend smile, saying, 'Thou art a quick fellow; but my vessels are not often wanted for water. They are used for holding the delicious fruit of the Tree of the Knowledge of Good and Evil. And truly do I wonder at so smart a fellow as thou being content with thy ignorance of that fruit. No wonder Doubt could throw thee so easily!'"

"Did'st buy?" queried the hermit hastily.

"Nay, my friend, for I was becoming more and more uneasy. It had chafed me sore that Pride had spoken ill of my Master, and now this deceiver, Human Intellect, was tempting me to taste of that fruit against which thou thyself hast warned me. But my cup, my little cup of Loving Trust is broken!" and with furtive gesture the lad dashed a tear from his eye.

"Grieve not, my son. God's grace hath not forsaken thee, foolish fellow though thou wert to make a companion of Pride. Thou seest," he added, rising and approaching the doorway, "this large vessel of Penitence, which thou when a child would'st drag an inch or two to examine the forlorn figures in sackcloth and ashes graven upon it; come, thou shalt carry it now to the fountain! And for that thou hast oft admired the violets encircling my little cup of Humility,

Digitized by Google

I give thee that to keep as a token of my love. Away with thee, and it may chance, when the Master seeth thou art yet in earnest, he will meet thee by the way as of old. And after a while, thou being true, he may give thee a cup like this he hath given to me. This precious vessel of Faith is of pure gold and hath been tried by fire."

The hermit paused, and with face upturned to the blue heavens seemed unaware of the other's presence.

But the boy was looking at the vessel of Penitence. "Verily, a heavy one to carry so far," he murmured ruefully, inviting an answer of pity.

It came not, however, and with one glance of wonder at his friend, the lad did then arise, and with exceeding quietness lifted the vessel to his strong young shoulder, picked up his cup of Humility, and went forward more steadily and more surely than before to seek his beloved Master.

"Ye shall know the truth."

LEWIS C. STRANG.

Ye shall know the truth, and the truth shall make you free.
JOHN, viii, 32.

THIS saying of Jesus is much quoted by Christian Scientists. They like it because it is a clear, concise, positive, comprehensive, and demonstrable declaration of the fundamental teaching of Christian Science. This saying is one of the basic premises upon which Mrs. Eddy has established the irrefutable logic of "Science and Health with Key to the Scriptures." The flawless correlation of this saying is proved not only by Jesus' own marvelous works, but by the widespread healing of all manner of diseases which has attended the faithful study of the Christian Science textbook. It is a question, however, if all the students of this great subject who quote the saying, get from it the practical aid in their daily experience that they should. At any rate, the writer knows that a narrow sense of its meaning long deprived him of much spiritual gain, and inquiry among his friends has caused him to suspect that his blunder of interpretation and consequent lack of correct understanding are somewhat widespread.

Most of us have been trained in an interpretation of the Scriptures which begins with the fall of man, continues with a hopeless present, and ends with a speculative future. One effect of this training is a strong mental tendency to cast every good thing promised to man by his Maker out of the present into a suppositional future. Faithful to the old belief, the saying, "Ye shall know the truth, and the truth shall make you free," was considered to mean something like this: Sometime you will so grow in spiritual understanding and will know so much about God that you will be free from every false belief. This paraphrased statement is true, but it is not what Jesus said, nor is it likely that this is what he meant, judging by the circumstances under which the saying was voiced.

Jesus was a practical teacher. His message was a present salvation. He was speaking to the Jews who believed on him. He knew that their greatest need was not a promise of future attainment, but a method of speedy salvation from present conditions. The natural thing for Jesus to do under these circumstances was to give them present help, and as a fact, the saying, grammatically and sensibly interpreted, does give precisely the instruction which those Jews needed then, and which we need to-day.

The key to the situation is found in the auxiliary verb "shall." Shall is used to form the future tense only in the first person. Consequently, if Jesus' saying refers to a future condition, the correct English of it would be, "And ye will know the truth, and the truth will make you free"—a palpably weak and ineffectual rendering of his ringing declaration. Used in the second person, as in the case under consideration, "shall" expresses the imperative, the commanding tense. Is it not plain that Jesus' saying is a command, an order, a simple yet comprehensive rule for the accomplishment of every scientific demonstration? It is not a promise; it is instruction. It is not alone the word of a prophet; it is the direct and unqualified statement of a teacher. It is as if he said, No matter what difficulty presents itself, no matter in what form or under what head the argument of error is advanced, regardless of material conditions, claims, or causes, your method of work is plain, —"Ye shall know the truth." This is the sovereign remedy, the universal panacea, and with this knowing man's responsibility ends. For "the truth shall make you free."

"Instant in prayer."

MAUD R. L. SHARPE.

I AM always especially grateful for the proofs of the efficacy of Christian Science which are given in cases of sudden hurts, such as sprains or burns. Fifteen years ago, when I had just seen that Christian Science is the truth, I had the first of these experiences. A cup of sizzling oil had been poured over one of my hands. I ran to a dark clothespress and shut the door, since the agony was so great that I felt unable to resist looking at the hand, and I realized that it would frighten me. After a few minutes of right thinking in Christian Science, I came out of the dark, and in less than a half hour the hand was as normal, both as regards sensation and appearance, as it had been before the accident. Similar experiences have occurred in the intervening years, and I was reminded this morning of the change in my thought which enabled me to stand fearlessly looking at a severe burn while it disappeared before the statements of truth. I had carelessly grasped a red-hot handle, and my hand was instantly seared across the palm and fingers. As I looked at the wide red scar, the skin began to rise in blisters, but I did not take my eyes from the hand until all marks of the burn had gone, which was perhaps ten minutes after. The pain lasted some moments longer, but that also was gone within twenty minutes.

I am grateful for the growth out of fear which enabled me to work with a better understanding of the allness of God, good, and in the face of seeming evil to look the lie of hurt and pain out of countenance while it disappeared. We are told in the old fables, notably in the familiar story of Faust, that the devil cannot stand in the presence of an uplifted cross, and so disturbing is this symbol to his comfort that he shrinks from sight whenever it appears. I have always felt that this typified a great truth, and the suddenness of the evil one's disappearance delighted me.

In Christian Science we prove the powerlessness of evil when in temptation we uplift the thought of the Christ. In accidents of any sort we have proof of this, for in these cases one must choose his help quickly and without reserve. When we realize that Truth is instant and unhesitating in helping us, we shall be instant and unhesitating in our reliance upon Truth. The temptation to postpone our demonstration until to-morrow does not enter with an accident, but with colds, fevers, and the hundred claims of evil which beset mortals, we are too prone to say to ourselves that if we are not better by to-morrow we will then do some Christian Science work to destroy the discord. We shall find that all pains and ills disappear as rapidly as the effects of an accident, when their first appearance is met instantly by the understanding that they have no right to take one minute from our harmonious and useful lives.

The instant prayer, added to the fervent one, availeth much for our need, and we receive God's answer while we are asking.

Every inmost aspiration is God's angel undefiled,
And in every "O my Father," slumbers deep a "Here, my child."

The universe is not complete,
Without my work well done.

Misstatements Corrected.

Editor Public Opinion:—In an article entitled "Wealth of New Religions," published in the July 29 issue of your weekly, Louis Paul Kirby writes of his impressions concerning this particular phase of several religious bodies, and among them he has included the Christian Scientists. He fails, however, to portray correctly this side of the development of the Christian Science church, mainly because he does not see how widely different has been its growth from that of the other organizations referred to. No communistic endeavor has characterized the establishment and growth of Christian Science, founded by Mrs. Mary Baker G. Eddy. No loss of individuality or submission to the dictates of any person attends the acceptance of the teachings of Christian Science, but each follower has the spiritual import of the Master's theology pointed out to him, and is left free to demonstrate its verities by healing sickness and overcoming sin. No creed or religious forms await those who turn to Christian Science, the Science of all that relates to God, which already has been proven to be universal in its application by redeeming mankind from all forms of sickness and sin.

Each congregation or branch of The First Church of Christ, Scientist, in Boston, is a separate and self-supporting organization, governed by its own by-laws. These branches maintain Reading Rooms and provide lectures, to which the public have access without charge. Those who have had the benefits to be derived from an honest investigation of Christian Science are the only persons who contribute toward the expenses of this denomination, and the support they render is wholly voluntary.

When Mrs. Eddy and twenty-six others perfected the organization of The First Church of Christ, Scientist, in Boston, this by no means represented its actual membership or the number of her followers, as Mr. Kirby would have your readers believe. The records of the clerk of the church show the membership to have been 1,512 at the time of the first annual meeting. A large body of Mrs. Eddy's students were scattered throughout this country at that time, whither they had gathered at Boston from time to time, eager to receive instruction in Christian Science. Instead of "The Mother Church" in Boston now having a membership of 15,000, as Mr. Kirby states, the number enrolled at the time of its annual meeting in June, 1905, was 34,063, and there were in all 625 branch churches.

What our critic has been pleased to call Mrs. Eddy's "faith-cure boarding-house," was in the beginning what it still remains, an institution chartered under the laws of the State of Massachusetts, and located in Boston, being known by its rightful name, the Massachusetts Metaphysical College. The charter for this, the only metaphysical college ever chartered by the State, was granted in the year 1881, and Mrs. Eddy continued as its teacher until the year 1889, when she retired to devote her efforts to needed work in other directions, though pressed by a great demand for the continuance of her personal teaching. Besides the voluntary relinquishment of this lucrative branch of her work, Mrs. Eddy presented to the National Christian Scientist Association, in 1889, the right and title, which were solely hers, to its official organ, *The Christian Science Journal*, as well as the funds belonging thereto. She also purchased and gave to the church the title to the ground on which its first edifice stands. More than all this, the Discoverer and Founder of Christian Science has lived a unique and consecrated life,—a life devoted to the task of uplifting humanity through the alleviation of all forms of human suffering, by restoring to practice the simple and demonstrable religion of Jesus the Christ.

Since Mrs. Eddy's retirement from active participation in the work of the college, her only source of income, outside of the interest which may have accrued on some of her money, has been the well-earned revenue from her published writings. Repeated public misrepresentations of Mrs. Eddy's private affairs made necessary, in 1899, a published statement, furnished by her bookkeeper and taken verbatim from her books, which showed that Mrs. Eddy had expended large sums annually in both public and private benefactions. By those whose privilege and pleasure it is to know this much-beloved woman, it is said that the only value she places upon money is the good she is enabled to do with it.

H. CORNELL WILSON.
Public Opinion.

It is argued that Christian Scientists should take a course in medicine before they shall be permitted to charge for treating the sick; that they should "possess a reasonable knowledge of the various diseases of the body and their most approved treatment." Permit me, therefore, to call attention to the fact that a part of the duties of a Christian minister, for which he is paid a salary, is to pray for the healing of sick people. Suppose his prayers should be answered and the sick should be healed, would you think his salary should be curtailed because the sick were healed? If it is right to charge for a gospel that does not heal, is it wrong to charge for a gospel that does heal? Would men regard as just a law which, while professing not to interfere with their religion, prohibited Christian ministers from receiving any pay for their services? Christian Scientists do not charge for healing, because they know better than any one that they do not do the healing; but if they give all their time to this work, like the minister they must receive in return enough to pay their living expenses.

Is it important that a minister should take a course in medicine, should possess some special knowledge of a disease and its most approved material remedies, in order to pray intelligently for its healing? Of course not, and why? Because God does not make such knowledge a condition to an answer to prayer; and He does not need that any man should tell Him either the nature of the disease or its remedy. If a medical education is not necessary to a minister in order that his prayer may be answered, why is it necessary in order that the prayer of a Christian Scientist may be answered? Christian Scientists and other Christians pray to the same God, and a Christian Scientist knows that the healing is the answer of God to his prayer. He knows full well that the healing does not depend on his knowledge of medicine and disease, "but in the answer of a good conscience toward God." It is an understanding faith, and not an understanding of disease, that heals the sick.

JUDGE L. H. JONES.
Lexington (Ky.) *Herald.*

The Christian Science teachings from first to last abound in exhortations to be pure, to be honest,—not alone to be honest in business and with our fellow-men, but to be honest with ourselves. It teaches that honesty is indispensable in working out our salvation from the bondage of sin and discord. Christian Science teaches that Deity must be enthroned in the heart of man, that God must be acknowledged as supreme. It teaches that all evil intent, all evil desire, envy, malice, hate, must be avoided if we would bring about the reign of righteousness, the brotherhood of man. The study and application of Christian Science makes more acute the ability to judge between right and wrong, which is man's God-given heritage. We therefore assert that if more lives were shaped in accord with the high spiritual teachings of Christian Science, there would be less perjury, less dishonesty, and less discord of every nature.

In reply to the charge that Christian Scientists use formulas in their treatment, we will only refer to the Manual of The Mother Church, The First Church of Christ, Scientist, in Boston. Article 26, Section 5, of this Manual, prohibits the use of formulas. This Manual is intended to govern the conduct of all Christian Scientists.

Among the Churches.

Reading Room Work in San Francisco, Cal.

First Church of Christ, Scientist, begs to submit the following statement regarding the Reading Room work for the year ending June 30, 1905: Visitors to Reading Room, 6,919; total sales of literature for year, $7,977.90; copies of Science and Health sold, 1,214; sales of literature for July, 1905, $1,066.40; copies of Science and Health sold, 156.

THOS. H. LORD, *Clerk.*

Prospective Church Building in New Orleans, La.

Christian Scientists, now worshiping in the Hibernia Building, will soon have a church building of their own.

A site for the new building was purchased yesterday at the corner of Pitt and Dufossat Streets, uptown, wood side. The lot is forty-five by one hundred feet and the price paid was three thousand dollars in cash.

New Orleans Times-Democrat.

Opening of Fifth Church of Christ, Scientist, Chicago, Ill.

The first service in the new edifice just completed for Fifth Church of Christ, Scientist, of Chicago, was held Sunday, August 20, at 10.45 in the morning; and in order to accommodate the large number who desired to attend the opening of the new building, the service was repeated at 3 o'clock in the afternoon and again at 7.45 in the evening. There was no attempt at display and the regular Lesson-Sermon for the day was used. The number who attended the three services is estimated at thirty-five hundred.

Fifth Church was organized in January, 1903, in order to relieve the crowded condition of First Church, and Rosalie Hall was rented for its regular services and meetings; but it soon became apparent that this hall was too small for the accommodation of the constantly increasing number who attended the services, and as no other suitable place could be obtained, it was necessary to erect a building. With the help of the other Christian Science churches in Chicago, the necessary funds were raised, and the building which was opened last Sunday was erected. It stands as another object-lesson of the rapid growth of the denomination and the loving unity which prevails in the great city of the West, in which our Leader herself planted the standard of Christian Science over twenty years ago.

Correspondence.

The Work in Painesville, O.

Just two short years ago three loyal Christian Scientists rented rooms for the purpose of holding Sunday services, and for a Reading Room during the week, and a little over a year later a Christian Science Society was organized with fourteen members. The signs of their faith have followed: the eyes of the blind have been opened, the lame made to walk, and the poor have had the gospel (good news) preached to them. Having outgrown those rooms, and being unable to secure others suitable for our needs, we purchased a large dwelling-house, conveniently located, and the place was made suitable for occupancy by the first of June. First Church of Christ, Scientist, of Painesville was then organized, and our first Communion service was held July 11, under our own vine and fig-tree.

During the first nine months of the past year of our work, we have had over twelve hundred visitors at our Reading Rooms, and sold one hundred and fifty dollars worth of literature. The past month forty dollars worth was sold. A lecture delivered in March was well attended, and is still bearing fruit. We consider this lecture one of the greatest of our many blessings. Our expenses have all been met. Many times the offering on Sunday morning amounts to more than a dollar apiece for each one present. The first money which was laid aside for our own building fund, together with a thank-offering from the Society and Sunday School last Thanksgiving, was sent to The Mother Church Building Fund. The notice in the *Sentinel* at the last Communion season, to those who contemplated going on to Boston to attend the Communion services, to send their money instead, met with a hearty response from the members, and in keeping with our Leader's words in Science and Health, page 79, we are not impoverished by our giving. We realize that as The Mother Church in Boston prospers, so will its branches flourish. We want to tell how the dear children in the Sunday School work. They assimilate this wondrous truth very easily and have many good demonstrations; they give generously, and while they are few in number, they have bought, paid for, and presented to the church a beautiful pulpit, and also given one dollar to the church every Sunday towards the music fund. We have every reason for gratitude, and we know that if God be for us, none can be against us.

We are grateful to our Leader, who has made this advancement possible, and are striving to be obedient, knowing that to obey is better than sacrifice.—ALFA HATCH.

A Kind Word from Ridgewood, N. J.

Ridgewood, N. J., August 10, 1905.

The Christian Science Publishing Society.

Dear Friends:—At our little meeting in this place last night (Wednesday), among the eight testimonies that were given there were three expressions of gratitude for this week's *Sentinel*, dated August 5.

One man said that as he read it from cover to cover, he was filled with a desire to send a copy of it to each friend of his in the orthodox churches who had questioned him about Christian Science, for he found an answer there to all their questions. He expressed deep gratitude for the privilege of drinking at this fountain of good every week.

Another man, in voicing his thankfulness for this week's *Sentinel*, said he was tempted to be ashamed and discouraged, when he realized that with such a blessing coming to him weekly, he is not a better, stronger Christian Scientist than he is. But on opening the "little book," the key to the storehouse of divine treasure, he soon realized that every moment spent in entertaining a sense of discouragement is wasted, and he was filled with a longing to live a life worthy of the blessing offered to us each week.

My own debt of gratitude to you, and to every contributor, and to each one who has given testimony, is greater than words can express, but I am sure you and they will all rejoice with me in the fact that this *Sentinel* has brought to me an inspiration to live in a higher, holier atmosphere of thought and word and deed, that I may more closely follow in the footsteps of our blessed Master, "whose holy work was doing good" (Christian Science Hymnal).

I thank our dear Leader, Mrs. Eddy, for the establishment of this splendid paper, and more than that, for the life she has lived, actuated by a glowing desire for Truth which impelled her to search for "hid treasure," until amidst all the trials which beset her she succeeded in finding for humanity the way to God.

God bless you all, dear friends, and as you labor in obedience to the injunction of Paul to Timothy, "Study to shew thyself approved unto God, a workman that needeth not to be ashamed, rightly dividing the word of truth," may you have not only the joy and satisfaction of God's approval, but the cheer and appreciation and love of those for whom you are so faithfully working.

Yours in truth,

MRS. MARTHA J. VOGELL.

Correction.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Practise the Golden Rule.

[In response to a telegram received by Mrs. Eddy from the *Boston Globe*, she made the following statement, which appeared in the *Globe* of August 30, together with the views expressed by other prominent and representative Americans. The telegram and Mrs. Eddy's reply follow.—EDITOR.]

THE GLOBE'S TELEGRAM.

"Official announcement of peace between Russia and Japan seems to offer an appropriate occasion for the expression of congratulations and views by representative persons. Will you do us the kindness to wire a sentiment on some phase of the subject, on the ending of the war, the effect on the two parties to the treaty of Portsmouth, the influence which President Roosevelt has exerted for peace or the advancement of the cause of arbitration."

MRS. EDDY'S REPLY.

Concord, N. H., August 29, 1905.

To the Editor of the *Globe*.

War will end when nations are ripe for progress. The treaty of Portsmouth is not an executive power although its purpose is good-will towards men. The government of a nation is its peacemaker or breaker.

I believe strictly in the Monroe doctrine, in our Constitution, and in the laws of God. While I admire the faith and friendship of our chief executive in and for all nations, my hope must still rest in God, and the Scriptural injunction, —"Look unto me, and be ye saved, all the ends of the earth."

The Douma recently adopted in Russia is no uncertain ray of dawn. Through the wholesome chastisements of Love, nations are helped onward toward justice, righteousness, and peace, which are the landmarks of prosperity. In order to apprehend more we must practise what we already know of the Golden Rule that is to all mankind a light emitting light. MARY BAKER G. EDDY.

New Evidence in Old Case.

[We are glad to give prominence to the following letter to Mrs. Eddy, which we copy from the *Concord* (N. H.) *Daily Patriot*. The statement of Mr. Sargent which it contains clearly defines Dr. Quimby's practice as that of a mesmerist, and, therefore, an impossible foundation for Christian Science, which has no affiliation with mesmerism, but which, on the contrary, overcomes and destroys its alleged power.—EDITOR.]

New York, August 25, 1905.

Beloved Leader and Teacher:—A gentleman (who is not a Christian Scientist) called on me to inquire about treatment, and in the course of conversation it appeared that he had known well the late Dr. P. P. Quimby of Portland, Me. He had lived and grown up in the same town with him, had himself taken treatment of Quimby, knew him well personally, and knew his reputation in that community.

The name of this gentleman is Mr. Charles C. Sargent. He resides at No. 29 East 73rd Street, New York, and has a large business establishment at 917 Broadway. I find he is in every respect a reputable, honest New England gentleman, a man of education and refinement, sixty-three years of age. He says that he lived for years at Belfast, Me., where Dr. Quimby resided before he moved to Portland. He also says that one day, when he was quite a lad, a professional mesmerist gave an exhibition at the public hall in Belfast, which proved a failure, because some person in the audience perverted the hypnotic influence and prevented a perfect control. The hypnotist invited the person, whomsoever he might be, to remain and meet him after the performance, and it proved to be Park Quimby (as Mr. Sargent repeatedly referred to him). Mr. Quimby was told by the hypnotist that he (Quimby) possessed extraordinary mesmeric powers, and that if he developed them, he could become a great adept.

That he (Quimby) forthwith proceeded to do so, the following incident shows: Mr. Sargent says that at the age of ten years, as a little boy, he remembers distinctly having been troubled for days with a sore neck, which medicines did not heal. Finally, in desperation, his mother sent him to Dr. Quimby, who was then practising the mesmeric art in physical healing. The latter examined his youthful patient, and told him emphatically that he did not have a sore neck, but instead, that it was his front tooth which pained him. This, young Sargent strongly denied, insisting that his teeth had never troubled him, but that the pain was in his neck. The boy held to his point so persistently that finally Dr. Quimby told him to go home, and tell his mother that he could do nothing for him, because he (the boy) had too strong a will; that his purpose had been to direct the boy's thought from his neck to his tooth and thus accomplish the cure.

Mr. Sargent says that Dr. Quimby was widely known in the community as a hypnotist; that people feared his powers, which he used rather freely; that whenever some one felt or acted queerly on the street, it was a common occurrence to say that Park Quimby was working on him.

I asked Mr. Sargent if he had ever heard Dr. Quimby connect God in any manner whatsoever with his method of healing. He replied that he never had; that, on the contrary, the power possessed by Quimby was quite notoriously a mesmeric power, and nothing higher.

This rehearsal of facts may at any time be verified by calling on the gentleman named. Christian Scientists well know that the Christ-method of healing disease and sin through the spiritual power of God, or Truth, acting beneficently upon the human mind and body, is based on the divine Principle which, through you, God has unveiled to a waiting world, and that it is in no conceivable manner related to, nor emanating from, the material system of human suggestion or will-power practised by P. P. Quimby.

Lovingly and gratefully yours,

JOHN C. LATHROP.

To Rev. Mary Baker G. Eddy, Pleasant View, Concord, N. H.

[Here we state, on Mrs. Eddy's authority, that after she visited Dr. Quimby and conversed with him on a higher basis of healing, he assumed a higher outlook, and she regards him as a good moralist.—EDITOR.]

Impossible Conditions.

To the Editor of *The Herald*.

A dispatch from Amesbury, Mass., appearing in *The Herald* of Wednesday and reporting the death of Miss Sarah O. Bagley of that town, alleges that she taught the Rev. Mary Baker G. Eddy "her first lessons in the healing art" some thirty years ago, when Mrs. Eddy was sojourning in that town.

To correct this rumor I have received from Mrs. Eddy the following statement:—

"I taught my first student in 1867 in Lynn, Mass. I never saw Miss Bagley until about the year 1870, while I was stopping in Amesbury, Mass. Then she, Miss Bagley,

Digitized by Google

applied to me for admission to a class in Christian Science that I was preparing to open, but I declined to accept her as a student. She was a Spiritualist and a so-called medium when I knew her."

This false claim, so often refuted, that Mrs. Eddy did not discover Christian Science but learned it from some one else, seems to still seek circulation, though its authors change and the names of the alleged tutors of Mrs. Eddy change. First it is asserted that Dr. Quimby discovered Christian Science and gave Mrs. Eddy her first lessons on the subject. Now it is declared that Miss Bagley gave Mrs. Eddy her first lessons in Christian Science. Just how both of these persons could have been Mrs. Eddy's first teacher is somewhat of a puzzle. Regarding this subject it is important to note that Mrs. Eddy's alleged teachers are not named until they are dead and gone, and therefore not here to speak for themselves and credit to Mrs. Eddy that which belongs to her.

ALFRED FARLOW.

Boston Herald.

Comment on a Recent Decision.

THE failure of the criminal proceedings commenced some three years ago against several Christian Scientists at White Plains, N. Y., has been freely commented upon, editorially, by newspapers throughout the country, and it is gratifying to note that much of this comment has been from the standpoint of constitutional rights and a "square deal." *The Daphne* (Ala.) *Standard* has the following to say about this decision:—

"This decision is more than a victory for Christian Scientists, it is a victory for all people; and is another long stride towards freedom,—the right for people to choose their own methods of treating the sick, to choose their own medical system. This is a constitutional right and should be carefully guarded. Any encroachment upon these rights would be likely to end in a medical despotism.

"The *Standard* is not contending for the rights of any particular sect or *ism*, but for the equal freedom of all people to choose for themselves in matters affecting their own interests."

The comment of the *Chicago Chronicle* is:—

"It is difficult to see how the court could have reached any other conclusion. . . . If the State begins to meddle with the treatment of disease, it must go much farther than this. If it condemns Christian Science, it must also pass on the medical schools,—such as homœopathy, allopathy, osteopathy, eclecticism, and what not,—and this would be a fatal *reductio ad absurdum*. . . .

"We are opposed to bigotry, either in religion, in politics, or in medicine. This is a free country and a free age. People who are as sane as we are must be as free as we are, even if they seem to us to embrace dangerous errors. Error is harmless as long as truth is left free to combat it, and no doctrine or theory was ever yet eradicated from people's minds by persecution and oppression.

"Christian Science is no more scoffed at and persecuted than homœopathy was when it was first introduced, and for all we know Christian Science treatment may yet become as popular as any school of medicine whatever."

The conservative *New Haven* (Conn.) *Leader* says,—

"In numberless cases where the best of regular physicians have failed, the healers have succeeded in restoring health and strength, an assertion capable of abundant proof right here in New Haven, as almost everybody knows.

"Certainly persons mentally responsible ought to be allowed to choose their own courses of treatment.

"Men, women, and children die while being treated by physicians of the old school, and also while receiving attention from physicians of the new school, and nobody thinks of prosecuting the physicians. It is only a square deal to let the Christian Scientists go where they are wanted, provided their methods do not endanger lives other than those they are sent for to save."

All this indicates a wholesome condition of public opinion, and an encouraging growth away from the intolerance and ignorant prejudice which characterized much of the public discussion of Christian Science a decade ago. The real question involved in cases such as the one at White Plains is this, Has the State the power to compel a man to take drugs, or to submit to surgery, when he has no confidence in either, and to debar him from resorting to a system which has proved itself efficient? If it is within the province of the State to compel the use of drugs or surgery, then it must be within its power to prescribe the kind of drug and the nature of the surgical operation—a proposition so absurd and so tyrannical as to shock a liberty-loving people.

ARCHIBALD MCLELLAN.

The Father's House.

IN times of doubt or of sorrow the struggling human sense must needs rely upon the anchor of faith which keeps thought from drifting astray till the storm is past. In these hours Christian Science comes to light the gloom and reveal the way for very many who otherwise might suffer shipwreck. By this new understanding of Truth the Master's statements are illumined, and their relation to our individual experiences is made clear and practical. It is readily seen that our old, material sense of his words is inadequate for the working out of our problems, and that the light which we need is spiritual.

Jesus' declaration, "In my Father's house are many mansions," has been a great source of comfort to many, but it has also given rise to much unprofitable speculation. It would seem, however, that one lesson is clearly conveyed by it; viz., that the Father's house is the universal domain of divine Love, and that the needs of all God's children are amply provided for therein. It would also seem that the many mansions referred to by the Master, represent the different stages of consciousness through which we must pass on our way to a full understanding of divine Principle,—our Father-Mother God. To mortal sense our present abode may be lowly, it may even be o'ershadowed with sorrow or suffering, but a growing recognition of the presence of divine Love will dispel the clouds and reveal a home radiant with the light of Truth, and in the hours of still greater illumination there will be glimpses of the walls of jasper, of sapphire, and of emerald. Christian Science teaches us how we should demean ourselves in such a "home of the soul," and that we may invite to its shelter all sick and weary wanderers.

The cheering words, "I go to prepare a place for you," tell us that the Christ—the divine idea—ever goes before us, anticipating our needs and providing for them, and that as followers of Truth we, too, should be preparing for others, places in consciousness where no sense of evil can find entrance, either as sin, disease, or death. As Christian Scientists we may well ask ourselves whether we are following Christ Jesus in this regard, whether we, in our Christlike living, are revealing the "many mansions" to those who are straying in the mazes of materiality, and who believe that the only way to the "Father's house" is through the valley of the shadow of death.

In our Leader's writings we are clearly shown how all may trace the footsteps of the Master, and thus find their rightful place, provided by infinite wisdom. We should know that each of us is *now* in one of the many mansions, and that all good is therein, and for us, if we but recognize it. It is our present task to cast out every belief in evil, sin, disease, discord, for we can ill afford to let discordant tones break in upon our unfolding recognition of the eternal harmony. No one who reads of the "Father's house," ever supposes that sin, sickness, or death has any place therein. Christian Science endorses this view, and further insists upon the necessity for such an understanding of divine Truth as will show that we are not consistent followers of Christ

Digitized by Google

unless we prove our Christian loyalty in thoughts, words, and deeds befitting the Father's house, into which nothing can enter that defileth "or maketh a lie." The thought of this stately abode is beautifully expressed in Holmes' poem, "The Chambered Nautilus:"—

> Build thee more stately mansions, O my soul,
> As the swift seasons roll!
> Leave thy low-vaulted past!
> Let each new temple, nobler than the last,
> Shut thee from heaven with a dome more vast,
> Till thou at length art free,
> Leaving thine outgrown shell by life's unresting sea!

ANNIE M. KNOTT.

Letters to our Leader.

Chicago, August 21, 1905.

My Dear Mrs. Eddy:—I have never before been willing to encroach upon your time with a letter, but to-day I am impelled by genuine gratitude to write you, with the hope of cheering and encouraging one who, by her words and works, has encouraged and cheered so many of her fellows. Never until the recent past have I had any true conception of what it means to remain faithful, day by day, to a sacred trust. During the inception, organization, and growth of our church (Fifth Church of Chicago), and during the work of building a church edifice, I have learned something of the meaning of faithfulness, meekness, and patience.

Yesterday a milestone in the path of our progress was passed, and the work in which I have been privileged to take a small part was rewarded in the opening (not dedication) of our beautiful new building with the usual simple services peculiar to the Christian Science church. About thirty-five hundred persons attended the three services; and it was indeed a joy to look into the faces of so many who, through Christian Science, have been led out of "great tribulation." The atmosphere of peace and good will was the same as that which characterizes the Communion services in The Mother Church, and was derived from the same source.

It is no mere coincidence that the Lesson-Sermon for the day was the splendid one on Christ Jesus, and in the readings from Science and Health and the Bible I gained a new understanding of the presence of "God with us." The singing of your hymn, "Saw ye my Saviour?" gave us all, I am sure, a renewed conviction of the "power of the Word."

That part of the Lesson-Sermon which elucidated the perception, by the faithful Mary, of God as the Father of man, also turned thought lovingly toward you who, in our time, have discerned and revealed God as the Father and Mother of man. Christian Scientists can never be too appreciative of your courage in declaring man's eternal sonship with good, and your sublime fidelity to the purpose of defending and demonstrating this marvelous declaration in the face of the vicious assaults and subtle arguments of evil.

Gratefully yours,

GEO. SHAW COOK.

Florence, Italy, July 13, 1905.

Rev. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—At the close of our first year's service in Florence, Italy, we, the little band of workers seeking to demonstrate the great truth you have revealed to us, wish to express our gratitude to you who are so patiently striving to lift mankind into the light.

Beginning alone, twenty months ago, my mother and I read the beautiful and helpful Lessons in our own home, for one year, but last October others who were interested in Christian Science joined us, and after one month, through the manifestation of the healing power of divine Love, so many joined us that we rented a small room at the English Library, where, from seventeen the first Sunday, the attendance at our meetings grew to number forty-eight.

When closing the services for the two summer months, we find, with hearts filled with joy, that we have a surplus fund of one hundred and forty dollars, half of which the congregation has voted to the Readers for their services, but which they beg to add to the other half, to send to the Building Fund of The Mother Church, that church which represents the fulfilment of the Gospels,—the Christ-healing,—and we consider it a great privilege to be partakers in the work of its erection.

We have been so bountifully supplied in all things by the Love which never withholds aught from us, His children, if we commit our way unto the Lord, and follow your wise and loving teaching, that we wish to send our message of love and gratitude to you who have so wisely and so patiently shown us the way to the peace which "passeth all understanding." It is our daily prayer that we may so grow in the understanding of divine Love that we may help all weary seekers to know that truth which will make them free.

With sincere affection,

GERTRUDE BEASLEY MORRIS, *First Reader.*

Washington, D. C., June 5, 1905.

Beloved Leader:—Remembering my promise to write you of any important movement in Second Church, I send you these few lines. Some weeks ago a motion was made by the Board of Second Church to invite First Church to unite with us in trying to arrange for services at either The National Soldiers' Home or the jail in Washington. First Church accepted our proposition; a joint committee went to work, and in a few days permission was gladly given by the Commandant of the Soldiers' Home, General Hawkins, who said that he and his family would be present at the first service. We were given Stanley Hall, a most beautiful and commodious structure, for this purpose, and yesterday at four o'clock we assembled. The service was read by a man from First Church and a woman from Second Church. An old soldier told me that one hundred of the inmates were present. He spoke of our hymns, and we gave him a Christian Science Hymnal. The notice of this service was read from First and Second Churches, also from the soldiers' dining-room, and the bugle-call was sounded about four o'clock. Thank God "from whom all blessings flow."

This is surely a "bugle-call to higher thought and action" (Rudimental Divine Science), and I know you will rejoice at this manifestation of love and unity.

With abiding love,

HELEN L. SWASEY.

Orange, N. J., August 6, 1905.

Beloved Teacher:—I have sent to Mr. Chase what I have long desired to send, a check for two hundred dollars for The Mother Church Building Fund, this amount representing the normal class tuition fee which you declined to accept at the close of that wonderful class. This is merely the fee,—the real debt I owe you, I can pay only as I know, love, and reflect God, Spirit, and instantaneously heal the sick. Our little church has sent to this Building Fund over one thousand dollars, and forwards regularly the collection taken on the first Sunday in each month.

Your loving student,

NEMI ROBERTSON.

Burlington, Ia., March 18, 1905.

Dear Mrs. Eddy:—My heart, so full of blessings, cries out in travail to be delivered of the gratitude I feel for your blessed gift. I am still an infant in understanding, but the few months in which the richness of my heritage has been unfolding to me have been the shortest and brightest I have known. Every added assurance makes me more grateful to you and increases the desire to be all the help that I can.

With love,

CLARA M. BEHRENDT.

Testimonies of Healing.

In obedience to the command of Jesus, who said, "Freely ye have received, freely give," I gladly testify to the healing and saving power of Christian Science. From a small boy I was a great sufferer from severe headaches, also chronic constipation and piles. Physicians failed to cure me, and in addition to their prescriptions, I had taken nearly every remedy recommended as a sure cure. The attacks continued with increasing frequency and severity until 1892, when I was scarcely able to attend to my business. I was obliged to have constant medical attention, my physician sitting by my bedside for hours at a time, watching for some symptoms which might disclose the cause of my suffering as I lay in a semi-conscious condition.

Drugs and electricity failed to afford even temporary relief, and I was taken to an oculist, who, after making a most rigid examination of my eyes, informed me I had astigmatism to such a degree that he was surprised I had not been an inmate of an insane asylum. Glasses were prescribed and fitted, which in time brought some measure of relief, the attacks of headache becoming lighter and less frequent, and for a few years I was freer from suffering than I had ever been. However, my hope of health and happiness was not yet to be realized, as I soon found myself in the grasp of another tyrant,—a severe stomach trouble. As I was then a firm believer in *materia medica*, I consulted one physician after another, until the skill of twenty was tested and I had indeed suffered "many things of many physicians, . . . and was nothing bettered, but rather grew worse."

The diagnoses of my case were as numerous as the physicians, each one differing from the others; and as several of my ancestors had passed away with cancer, I felt sure I too was a victim of that dread disease. Being a man of the world, my condition was aggravated by indulgence in that greatest curse,—the social drink habit.

In the fall of 1893 we located in this city, when almost immediately my wife was taken with a severe cough and an aggravated case of nasal catarrh, which, notwithstanding the best efforts of two physicians, continued all winter. On their advice, much of the next summer was spent out of doors, but to no purpose, as with the return of winter the old trouble appeared again, more severe than before. As it could not be relieved, we were advised to remove from the city, the physicians agreeing that she was not strong enough to endure the lake climate. In despair we said, "Where shall we go?" "To any inland city," they said. Rochester, N. Y., was decided upon, and preparations were begun at once for our mid-winter flight after health. Owing to a change in my business, we were obliged, during the summer of 1900, again to take up our residence in this city, and after a month's search, a house was found, protected somewhat from the lake winds, of which our fear was still very great. I shall not attempt to picture our unhappy condition,—my own health shattered until I was on the verge of nervous prostration,—I could scarcely eat or sleep; my wife afraid to go out of doors, and fearing a return of her old trouble. We were indeed without God and without hope in the world.

But in truth man's extremity is God's opportunity, for in March, 1901, Christian Science was recommended to us, and as a last resort it was accepted. Treatment for myself was begun the next day. Gradually, one by one, old things passed away, the glasses being the last to go. Then indeed all things became new. While I was under treatment my wife read and studied Science and Health, and without receiving a treatment she was healed of the troubles previously mentioned, also of rheumatism which had troubled her for twelve years, as well as the need for glasses, which she had worn for astigmatism.

Joyous and happy in our newly discovered freedom, we were filled with an earnest longing to learn more of this blessed truth, which had disclosed to us a rift in the cloud that had hung like a pall over our lives for so many years. After nearly four years of perfect health, without medicines, which previously could be found in every room in our house, we have proved that God's children can be healthy anywhere.

Christian Science has not alone made us free, but through our understanding of its teaching we have been able to destroy sin and sickness for others. Our daily prayer is that our lives may attest our gratitude to God, and to our dear Leader, through whom His truth has been revealed.

HARRY B. KLINE, Buffalo, N. Y.

About nine years ago I began to study Christian Science. I was treated by a practitioner, and healed of heart trouble, kidney disease, also constipation in the worst form. When I first went to see the practitioner I was unable to walk two blocks at a time, but when I left for home I forgot my ailments, and walked about town. When I reached home I found I was healed of all my troubles. I went on for about five years, helping myself and others. Finally I got hold of some literature which claimed to be Christian Science, and it led me away from the truth. I soon found myself drifting back into the same condition in which I had been, groping around in darkness, knowing not which way to turn. I tried every way I knew to lift myself out of darkness, but could not. I tried to read Science and Health, a little at a time. I could not give up; I wanted to get back to the light again. The words of our Leader's hymn came to me, "Shepherd, show me how to go." They seemed to comfort me. I then called on the same practitioner, and she was faithful in helping me out of darkness into the glorious light of liberty. The *Sentinel* is a welcome visitor at our house. I now have "Miscellaneous Writings," and Mrs. Eddy's other works. I am filled with gratitude to God, also to Mrs. Eddy for giving us Science and Health to show us the way to Him. I live in the mountains, and have no church to go to, and if it were not for our textbook and the *Quarterly* I could not be contented here.

MRS. S. M. RIDINGER, Dolph, Ore.

It was about fifteen years ago that Christian Science first came to my notice. At that time I had been a chronic invalid for a good many years. I had acute dyspepsia, bowel trouble, sick-headache, bronchitis, and a number of other troubles. One physician had told me that my lungs were like wet paper, ready to tear at any time, and I was filled with fear, as my mother, two brothers, and a sister had been victims of consumption. I tried many physicians and every material remedy that could be found which promised help, but no help came until I found a copy of Mrs. Eddy's book, "Science and Health with Key to the Scriptures." The book was placed in my hands by one who did not then appreciate it, and I was told that it would be hard for me to understand it. I commenced reading it with this thought, but I caught beautiful glimpses of Truth, which took away my fear and healed me of all those diseases, and they have never returned.

I would also like to tell how I was healed of a sprained ankle. The accident occurred in the morning, and all that day and during the night I gave myself Christian Science treatment, as best I could. The next morning it seemed to be no better, being very sore, badly swollen, and much discolored. Feeling that I had done all I could, I decided to stop thinking about it. I took my copy of Science and Health and began reading. Very soon I became so absorbed in the book that I forgot all about my ankle: it went entirely out of my thought, for I had a glimpse of all God's creation as spiritual, and for the time being lost sight of my material selfhood. After two hours I laid the book down and walked into another room. When next I thought of my ankle I found it was not hurting me. The swelling had

Digitized by Google

gone down, the black and blue appearance had nearly vanished, and it was perfectly well. It was healed while I was "absent from the body" and "present with the Lord." This experience was worth a great deal to me, for it showed me how the healing is done.—CALISTA HERSEY, Portland, Ore.

Soon after my marriage, twenty-six years ago, I had a severe spell of illness which left me in a very delicate state, and I never knew what it was to be really well and strong. A good deal of the time I was in the hands of doctors, and was in a hospital four times. A little over three years ago, I got into such a state that I could not sit up or walk even a few steps without pain, and at times the pain was so intense that the family would lose much rest at night trying to give me relief. The doctors thought the only help for me was to have a very serious operation performed, but I was unwilling, as I had known others to have the same operation without receiving any benefit.

A friend wrote, begging me to try Christian Science, and as it was my only hope, I consented in fear and trembling, not knowing anything about it and fearing it was the work of the devil. I, however, wrote to a practitioner, asking her to help me, but before sending the letter, I got on my knees and prayed most earnestly that if it were wrong for me to take this step, the letter would never reach its destination. I cannot say how thankful I am that it did reach the practitioner, and by return mail I had a letter from her, saying she had begun treatment. In a few days I was almost free from pain, was walking up and down stairs, and in a short time was able to drive about the country. I have been improving in health and strength ever since. I think I gained at least forty pounds the first year after taking treatment. Now I am a strong woman, I do not keep a servant, and get on nicely with my work. I am living in more comfort than I have done for twenty-six years.

Words cannot express what a blessing Christian Science has been to this family in every way, and I pray that my heart will ever be filled with love and gratitude to God, and to His faithful messenger, Mrs. Eddy.

ELIZA R. MARSHALL, The Plains, Va.

I feel that the time has come for me to acknowledge my wonderful healing in Christian Science. It is about three years since I knew anything of this truth that delivers us from the bondage of the flesh and makes free. Previous to this time, I had for eighteen years been a confirmed invalid, suffering intensely all the time. After exhausting the skill of twenty physicians, some of whom were noted specialists, besides using different medicines, electricity, hygiene, every material method,—being subjected to all the tortures that a human being can endure,—and after spending some time in a hospital, I was told that another operation must be performed. With no hope whatever, I then turned to Christian Science, and I have found the peace that passeth human understanding. To-day I am a perfectly well woman, and a very happy one, for I can say with St. Paul, that I have been transformed by the renewing of the mind. Old things are passed away, and all things are become new.

I am very thankful for the slight understanding I have of this truth, and the light and liberty it has brought to me. It is the greatest blessing that has ever come into my life. Words fail to express my gratitude to God, and to Mrs. Eddy for this truth that has led me out of darkness into light.—MRS. ADA B. ELDER, Detroit, Mich.

I would be most ungrateful if I did not express my thanks for all that Truth has done for me and mine. Ten years ago, Christian Science was first brought to our notice by an old friend of my husband, who was an officer in the army. At this time some of us were always sick, and every time my husband met his friend, he would talk to him of Christian Science and what it could do. My husband would come home and tell me about it; but I did not pay much attention to it until our eldest daughter, who had always been delicate, was taken with very bad spells of heart trouble, and the doctors could not help her. We then decided to try Christian Science, and sent for the friend, who came about noon and talked to us. When I found that it was God who did the work, I was willing to trust this one child to His care, as I had lost three by the doctors' methods. Our friend gave a treatment and went away. That afternoon, my baby, sixteen months old, went to sleep, and slept peacefully for four hours. This was something she had not done, either day or night, since her birth, and I was quite anxious about her, but when she awoke we found that she was all right and we wondered much. The one who had been treated was also quite harmonious, but the greatest cause for wonder was that we all went to bed that night and never wakened until morning, something we had not done since the birth of our baby. When the practitioner came next day we told him about it, and he said it was due to the power of Truth. I told him I could not account for it, for I did not know that anything but opiates could produce sleep. The eldest girl continued to improve rapidly, and never had any more of the spells.

We now have no other treatment but Christian Science in our family. I have this and many other blessings to be thankful for. I am grateful for our Lesson-Sermons, and for our Church. Words fail to express my gratitude to our beloved Leader, Mrs. Eddy, for the revelation of Truth given to a needy world through "Science and Health with Key to the Scriptures."

MRS. LOVINA TYLER, Victor, Col.

Like a great many others I sought Christian Science as a last resort for relief from physical suffering. For over a year I had scarcely known what it was to be free from pain, which at times was so severe that it seemed almost unbearable. During this time I had the best of physicians and every care and remedy which *materia medica* could suggest, but all without avail. The close of the year found me more miserable than ever and utterly discouraged, for the physicians said that while the case was not dangerous I need not expect ever to be comfortable again. I knew nothing about Christian Science except that there was a method of healing called by that name. However, I resolved to try it, and went to a practitioner. I shall never forget the peace and happiness which came to me at that first visit, for I knew then I should be healed, and I was. I received immediate relief; in about ten days the main complications had entirely disappeared, and with them several other troubles which had annoyed me all my life.

Words cannot express my gratitude for this healing, which occurred four years ago. The time since then has been one continual unfoldment of the beauties and wonders of Divine Science, revealed through the study of our devoted Leader's works.—ZELLA B. SAND, Toledo, O.

It is with a heart full of gratitude that I give my testimony of the healing power of Truth and Love, revealed in Christian Science. A little more than three years ago I was a great sufferer from nervousness and a general breaking-down of the system, caused from overwork and close confinement in an office. My physician told me that the best thing for me to do would be to go to another climate and have a complete rest. I was then taking three or four different kinds of medicine and there were more to follow as soon as I was strong enough. At this time a Christian Scientist called at our home and suggested that I try this treatment. It did not then appeal to me, but the seed was sown, and came up after a time. I was very despondent over the prospect of going away from my home to another climate, alone and sick, when my husband suggested that

Digitized by Google

I try this Science. The only restriction was that if I were healed I should drop it and have nothing more to do with it. Upon his seeing the great benefit it brought to me, however, I was not even asked to give it up. In a few days after taking treatment, I commenced to improve steadily, and in a short time I was healed. Since then I have had many beautiful demonstrations over various ailments, such as neuralgia, severe colds, throat trouble, etc.

The Science of Christianity has taught me that God is an ever-present help in time of trouble, if we but trust in Him. I am very grateful to Mrs. Eddy for what she has done for suffering humanity.

MRS. R. H. GEORGE, Lincoln, Neb.

It would cover many pages were I to try to enumerate all the proofs of the power of Truth that I have had since I joined the Christian Science Society of Georgetown, now a church with steadily increasing membership. I was originally attracted to Christian Science by the spirit of love and harmony that permeated the then small congregation. I soon had occasion, at the birth of my first baby, to realize the healing power of Truth. I could not relate all the good that has come to me during the three years that I have been in this Science. I wish, however, to tell of two demonstrations in the last three months which prove God's care for all His children. When my second baby was born, I had only a nurse and a Christian Science practitioner who was a dear friend of mine. The conditions were so adverse that a happy result seemed almost impossible. A physician who was told the circumstances later, declared that he would have thought an operation necessary, which would have endangered the lives of both mother and child. With the assistance of the Christian Scientist the unnatural conditions were overcome, and by what seemed a miracle to mortal mind, I was delivered, comparatively without pain.

This demonstration had a result that I have reason to be no less thankful for. My husband, who had been a more or less hard drinker ever since he studied at German universities sixteen to twenty years ago, and who on this account had dropped Christian Science, which he once for a short time had taken up, became so convinced of its truth, that he asked for treatment for his diseased appetite. With three treatments he was perfectly cured, and not only has he not taken any intoxicants since, but he has not even experienced the slightest desire for them. May others follow this truth, and they will find, as I did, that the Lord will take away from them all sickness.

MRS. HENRY B. WAGENSCHIEFFER, Denver, Col.

I wish to add my mite, and speak of some of the benefits I have received from Christian Science. A few years ago I was taken very sick, and lingered along for weeks, apparently growing worse as the days went by. There was a general breaking-down, with various complications, and it seemed to me that there was no help for me anywhere. I knew then of the healing efficacy of Truth, but I was loth to turn to God for help. At the last moment, however, I turned wearily to Christian Science. My healing was slow, it seemed to me, but there was certainly a thorough eradication of my many ills, and to God belongs all the praise. Not only was I healed from disease, but from many sins and bad habits, including the use of tobacco.

Previous to my conversion to the truth, it seemed impossible for me to have any geninue success. I was out of work a good share of the time, and when employed did not get on with my business associates. All this is now changed; for three years I have had an abundance of good things,—steady employment, excellent health, a cheerful disposition, "with malice towards none, with charity for all." I am still climbing upward, slowly but surely. My work, from a material standpoint, is very hard,—tugging and lifting, hour after hour,—but with no bad effects; and Christian Science has done it all.

Some years ago the doctors told me I never would be able to do any hard work, but since I have been healed in Christian Science I can do the very hardest work. I am out in all kinds of weather, working some days from ten to fifteen hours, and am strong and healthy where once I was weak and full of fear. The little understanding of the truth which I have, I would not exchange for money or fame.

IRVING HARTFORD, Stoneham, Mass.

I wish to express my gratitude to God for this blessed truth. I did not come to Christian Science for physical healing, but my husband was always ailing, and I thought I might help him through Christian Science, so I took up the study and it met all my expectations. I have great cause to feel grateful, for he had colds both summer and winter. In the hottest weather we sometimes had to sit with the windows closed, so afraid was he of drafts. He was also very bad with asthma. He had periodical attacks, but since we came into this truth, eighteen months ago, he has had but one attack and that was a year ago; his colds are less severe and farther apart as time goes on, and yield readily to treatment.

I laid off my glasses, after reading in Science and Health three days, and was cured of astigmatism, for which the oculists said I would always have to wear glasses. A disease of the bladder came up to be destroyed in Science. One doctor told me I had Bright's disease. I was very much troubled with the kidneys and bladder for over fourteen years, and through the reading of our text-book I am healed. This was a slower healing than that of my eyes, but I gained a better understanding of man's unity with God.

For these blessings, and the peace and happiness which the truth brings, I am truly grateful to God, and to Mrs. Eddy. Every day brings to me new manifestations of divine Love. I am getting a glimpse of the light and love beyond. I see everything in a different light as I journey on in this great truth.

MRS. MARIE HOUSEHOLD, New York, N. Y.

I feel that I cannot better express my gratitude than to testify to God's many mercies vouchsafed to me in the overcoming of various ills which seemed very grievous to bear. I now realize more than ever the truth of the Psalmist's declaration that God is our refuge and strength, and this is made practical through Mrs. Eddy's teachings in Science and Health. I am grateful for the knowledge thus gained; it has directed my faltering footsteps in the right way,—the path that leads to righteousness and peace.

CHARLOTTE H. MITCHELL, Mt. Pleasant, S. C.

I wish to tell of my healing through Christian Science. Three years ago I was wearing glasses all the time, and although my eyes were treated by the best specialists, they continued to grow gradually worse. After the first Christian Science treatment I removed my glasses and have never worn any since. At times the old error has presented itself, but I feel that God is an ever-present help. I shall ever be grateful for what Christian Science has done for me.

M. H. BUTCHER, St. Augustine, Fla.

The Way.

HAROLD SUSMAN.

THERE was a time, when day most bright,
To me seemed like the darkest night;
Though I had eyes, I had not sight.

But now, all that has passed away,
Most black night seems like brightest day;
For now I see! I've found the way.

From our Exchanges.

Next November, in Carnegie Hall, New York City, there will be a notable conference. It will be an attempt, brought about by the National Federation of Churches and Christian Workers, to induce all the various denominations, acting for themselves, to form a general federation. The basis of the federation will not be on any creedal statement or governmental form, but of co-operative work and effort, particularly in such questions as marriage and divorce, Sabbath desecration, the social evil, Mormorism, child labor, the relation of capital and labor, foreign immigration, the bettering of the conditions of the laboring classes, the moral and religious training of the young, and evangelization. Expression will be given as never before to the substantial unity of the Christian Churches of the republic.

This visible expression of unity will emphasize the need and the opportunity for co-operation in securing the moral and spiritual welfare of the nation as a whole. Through federation the differences which exist between the churches will be acknowledged and realized as far less than their agreements, undue rivalry between the several denominational churches will be reduced to a minimum, and a conservation of resources, both of men and means in city work and foreign fields, will be effected.

There will be no interference with the autonomy of any church; co-operation is not incorporation. Over seventeen Christian denominations have either appointed or authorized the appointment of delegates to this conference. If all the Protestant churches are represented, the total delegates will be from six hundred to seven hundred, and will represent about twenty millions of church members and a majority of the Christian people of the United States.

Western Christian Advocate.

We may not know much, but after the centuries of Christian teaching, it is pitiful if we know not something which we can teach, which we can affirm is so. Success awaits the Christian Church when it ceases arguing about God and preaches God; when it ceases speculating about Christ and preaches Christ; when it ceases quibbling about salvation and calls to salvation; when it ceases debating immortality and proclaims immortality; when it ceases surveying the streets of the New Jerusalem and proclaims the kingdom of heaven is at hand. Preach convictions and not doubts. Be always going somewhere, but forget not to mark the steps of your going so that the timid feet of your followers may not falter. Souls are saved by truth; if you have no truth to give them when they come with the plea of their needs, what excuse have you for cumbering the ground? If a man ask bread, will you give him a soap bubble?—*The Universalist Leader.*

Truthfulness is the only test of truth—not age, nor yet newness. The Christian must retain all of the old but its falsity, none of the new but its truth. For we would protest most earnestly against the too common assumption that the spirit that welcomes all new light is antagonistic to the spirit that clings to the old. Were any truth merely for a given time, were any truth without relation to other truths, such antagonism might be possible. But all truth is eternal, all truth is one, and when we have seen the truth of former days in its proper light there can be no more opposition between it and the truth called new than there is between the hand and the foot of one body.—*The Pacific Baptist.*

In questions so clearly involving ethical issues, the pulpit can remain silent only at its peril. If it avoids the really vital problems of life, it abandons men when they need it most, and will in its turn be abandoned. It may rightly hesitate to pronounce verdicts on complicated industrial questions, but it cannot renounce its moral mission. It can, and must, insist that the ethical standards which rule private life shall rule business life also.—*The Homiletic Review.*

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to The Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of The Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to The Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number, or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By the Hon. WILLIAM G. EWING of Chicago, Ill.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

A bulletin just issued by the Bureau of the Census shows that the number of teachers in schools, colleges, and universities exceeds the total number of clergymen, physicians, and lawyers. In continental United States in 1900 there were 140 teachers for every 10,000 persons between the ages of five and twenty-five, which represents an average of one teacher for seventy-one potential pupils. According to this method of comparison the supply of teachers is increasing, and has more than doubled within the last thirty years. In 1900 Nevada had the largest proportional number of teachers reported in any State or Territory; Vermont was the second State in this respect, Maine the third, and Iowa the fourth. The proportion of teachers in Continental United States is smaller than in England and Wales, but greater than in Germany, France, Italy, Canada, Mexico, or Cuba.

The Marble Hall of the Municipal Building, Manila, was crowded all one day last week with followers of the professional agitators for the independence of the Philippines, who had been invited by Governor-General Wright to air their grievances against the Insular and Federal Governments before the visiting Congressmen of Secretary Taft's party. The speakers urged the immediate independence of the islands. The committee, it is stated, are not convinced of the present readiness of the islanders for independence.

The commander and chief engineer are to be tried by court-martial on the charge of neglect of naval duty in connection with the Bennington disaster. Secretary Bonaparte indorses the findings of the court of inquiry, and speaks of the incident as "a discreditable matter," and takes exceptions to the conclusions of the court on several points.

A magnetic survey of the North Pacific Ocean will be undertaken soon by the department of international research in terrestrial magnetism of the Carnegie Institution at Washington. The object of the expedition is to secure precise data of the distribution of the magnetic forces over the Pacific Ocean.

The Statehood Constitutional Committee of Indian Territory agreed last week on the name of Sequoyah for the name of the Commonwealth. It was also decided to make prohibition a part of the organic law and to issue bonds for $25,000,000.

Abraham Lincoln's birthplace, a 110-acre farm at Hodgdenville, Ky., has been sold at auction to Robert J. Collier of New York for $3,600. He hopes it will ultimately come into the possession of the Government or of some patriotic society.

The treaty of peace between Russia and Japan was signed by the plenipotentiaries, Sergius Witte, Baron Rosen, Baron Komura, and K. Takahira, at the Portsmouth Navy Yard conference room, on Tuesday, September 5, at 3.47 P.M.

Industrial and Commercial.

A Japanese company of importers and exporters of Japanese goods, who have leased a large tract of land on Bainbridge Island, Wash., to demonstrate the possibility of growing Japanese plants there and to teach American farming methods to Japanese, have been growing bamboo there with success. According to members of the firm the bamboo has shown every indication of developing as rapidly there as it would in Japan, and the quality of the stalks is said to be equally as good. The growing of Japanese flowers is expected to develop into an important industry entirely apart from the transplantation of Japanese vegetables.

Japan is now buying about $300,000,000 worth of goods annually. The five leading items in the long list she is procuring from the United States are flour, cotton, kerosene, leather, and canned goods. Thousands of men who have heretofore subsisted on rice are learning to eat bread in the army, and it is argued that when they return to their homes they will become flour customers and convert their families and friends to its use.

The Japanese foreign commerce during the first six months of this year, shows a remarkable growth. The value of imports was $142,650,000, an increase of fifty-seven per cent; of exports, $71,098,000, an increase of four per cent. The largest increases in imports are credited to the United States, the United Kingdom, and British India, the largest increases in exports occur under the head of China, United States, and Korea.

Advices from Lancashire, Eng., are to the effect that the number of mills projected has increased to forty-eight, with a spindleage of 4,180,000, and it is reported that fully 20,000 looms are being installed in new mills. These additions to the Lancashire cotton industry are expected to give employment to some 15,000 operatives and to cost about $25,000,000.

New passenger equipment, costing in the aggregate nearly $5,000,000, has been ordered for the lines in the New York Central system. The new cars and coaches for the eighteen-hour trains between Chicago and New York, just received, cost $1,000,000. To maintain this eighteen-hour service four complete trains, exactly alike, are required.

It is expected that three months more will see the Grand Central Station, New York City, razed, and work begun on the magnificent structure which is to replace it. The new terminal will cover nineteen square blocks. The plans of the railroad company call for the expenditure of $25,000,000 on the improvements

General.

Good results were reported from most of the astronomical expeditions sent out to observe the total eclipse of the sun August 30. At Tunis light clouds may have marred the photographs. The corona, as seen there, was characteristic, with streamers extending, according to visual estimates, as much as two diameters beyond the disk, and were of a rose color. A magnificent group of prominences was seen. Many stars were visible. The Astronomer Royal's party, as well as the French mission, carried through their programmes with success. At Assouan, Egypt, the eclipse was successfully observed, under a normal, clear sky, by the British party. They obtained five ordinary exposures with the astrographic telescope, besides one with a green color screen, and one enlargement. Six photographs were polarized by reflection in the horizontal plane and two in the vertical plane. Six plates with a Goetz lens were obtained for comparison with similar plates taken in Labrador. The Lick Observatory party carried out its full programme, obtaining eight plates with a forty-foot lens, eight plates for intro-mercurial planets, with a composite battery of four telescopes, and one plate of the general coronal spectrum. The Russian party took four plates of the corona and a photographic register of magnetic elements.

The American expedition in Algeria obtained a splendid photograph, and by means of special apparatus sketched the sun's protuberances. The American, Italian, and French expeditions at Tripoli observed the eclipse in a clear atmosphere and numerous photographs were obtained. The results on the Island of Majorca were indifferent, owing to unfavorable weather. Near Valencia, Spain, the contacts were observed in a clear sky and good records of the radiation and temperature were obtained.

A unique election has been held among the boys who frequent the Hamilton Fish playground, an East Side park, New York City. Under the tutelage of the City Commissioner of Parks they cast a regular ballot recently for mayor of the playground city. All the boys under eighteen years old, some eight hundred in number, were allowed to vote, and they rallied under the banner of political purity party. The new mayor will be responsible for the care of the dumb-bells, trapeze, and other apparatus used by the boys. He will appoint a squad to act as police agents, and other lads will be nominated to aid the park laborers in keeping the playground clear of rubbish.

Luther Burbank, the California floral "wizard," has received letters from several of the European monarchs, asking him for information about his work. A recent letter is one from Siam. The writer informs Mr. Burbank that he may expect a consignment of seeds and bulbs from Siam, with which he is asked to experiment. Mr. Burbank has received from Japan a newspaper containing an essay he wrote. It is printed in Japanese and English.

The announcement is made that a new and modern municipal lodging-house is soon to be built in New York City at a cost of $200,000, in addition to the one that has been in operation during the past nine years. In 1896 an old carpet-cleaning factory was turned into a free city lodging-house for homeless persons of both sexes, and during its existence five hundred thousand people have been lodged free in this city hotel.

On the 29th ult. the great searchlight upon Pike's Peak, said to be the largest in the world, was operated for the first time. Built upon a track 120 feet in circumference, with rotating contact, this great light will fall upon the Kansas-Colorado State line, the Royal Gorge, Denver, and Cripple Creek goldfields. Its beacon will carry 280 miles through the jagged hill country of the Rockies.

The English language is now spoken by more persons than use any other civilized tongue. To-day 130,000,000 people speak English, 100,000,000 speak Russian, 75,000,000 use German, 70,000,000 employ Spanish, including the inhabitants of the Latin-American countries, and 40,000,000 speak French.

Reports from steamers indicate that the Gulf Stream is active more than two degrees farther north this summer than usual, running strong within twenty miles of the Nantucket Shoals lightship. Last winter it ran as far south of its usual course as it now runs north.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

A Holy Habitation.

BLANCHE H. HOGUE.

Because thou hast made the Lord, which is my refuge, even the most High, thy habitation; there shall no evil befall thee, neither shall any plague come nigh thy dwelling.—PSALMS.

EVERY man's consciousness is for him an individual dwelling-place wherein he holds communion with everything of which he is cognizant. It is through the windows of his own thought that he looks out upon an external world, or looks in upon the impressions of his own mind and heart. Each man's thinking constitutes his own castle, furnished within by the quality of his thoughts, and open to outside invitation or attack only as the entrances are left unguarded. And the man whose trend of thought leads him upward, finds in the teaching of Christian Science that which aids him to build a mental habitation, cleansed and purified within, and fortified against all that should remain without. Ruskin has said, "To get peace, make yourselves nests of pleasant thoughts." Men have labored untiringly along all lines of development and education to provide for themselves that intellectual knowledge which enjoys all that is beautiful, true, and great; to secure dwelling-places of satisfaction for the affections; to insure habitations of ease for the senses. Yet in all this search for a secure mental stronghold, the standards may have been personal rather than impersonal, human instead of divine; and because of this there is no really holy habitation until the Master of the household, the Mind of Christ, enters and takes possession of His own.

Christian Science is teaching the men of to-day that only as mind and heart are prepared to receive this royal visitor, can He enter. What is the Mind of Christ, in nature and office, but the Mind of rightness, of righteousness? Was the Christ-idea, manifested in Jesus of Nazareth, anything other than absolute righteousness, individually expressed, to the undoing of all the sin, disease, and death with which it came in contact? Could it have been other than the perfect spiritual understanding of all things, in their relation to the infinite? The disciple knows that he cannot attain at once the altitude of Christ's perfection, but unless he sees that he must begin to prepare his habitation by Christlike thinking, he is in no way fulfilling his discipleship.

Every Christian Scientist knows so much of his own shortcomings that he is prone to think, sometimes, that the understanding of divine Love, the Love which unselfs the affections and desires and transfigures daily thoughts and deeds, is far from him, and far from his present attainment. This may be true, but there is no Christian Scientist who cannot be faithful to-day in his effort to cast out the opposite of divine Love, just in the degree that his emotions and tendencies are uncovered to him as being unlike Love. Each man who desires to fit his mental home for God's presence, can cease indulging un-Godlike thinking. He can stop hating; he can stop fearing; he can stop condemning, criticising, resenting. In fact, he can take all the unholy brood of evils which throng the human sense, and put them so far from him that they cease to clog his thoughts. And all this can be done, not through unstable desire, not through the will-power which seems to enable one to reform though he sin again, but through the revelation of Christian Science, which exposes the impersonality and unreality of the evil suggestions which the race has so long believed to be personal and real. Christian Science teaches its student what to think and how to think, and its first point of control is the rejection of the first wrong thought discovered under its searching analysis. Unless there be obedience upon this first point, the mental habitation cannot be cleansed, for the intellectual knowledge of the letter alone does not mean Christian regeneration. If there be such obedience, the Prodigal has arisen, to find his way to his Father's house, and the Father comes out to meet him; divine Love floods the heart which prepares for Love's coming by casting out self.

This point is well illustrated by the mental process of a student of Christian Science who finds himself hurt by the injustice, the carelessness, or the unkindness of another. One who knows nothing of Christian Science will at best be wounded and unhappy until the natural reaction of thought has changed the feeling and time has made the matter a forgotten incident. One who understands something of Christian Science, finding himself so hurt, will begin a dissection of his own thought, which will uncover the true nature of the mental elements conspiring to make him unhappy. He may find, first, that it is self-love which has been wounded. The desire to be appreciated and considered has been disappointed. Then self-pity comes to light; he is sorry for himself because he has been so treated. Wounded pride and resentment stir the hurt and loving heart to a tinge of bitterness, and perhaps criticism shows its head; the friend should have been more thoughtful, more kind. Envy may insinuate that other people have smoother pathways. Fear adds its burden, suggesting that a friendship may be ruptured, or that some loss or sorrow may occur from the incident, and self-justification always whispers that the experience was undeserved. In the more evil natures, and under acute temptation, these mental tendencies, intensified, blaze into the activities of anger, retaliation, and revenge. This, however, is beyond our present consideration, for the loving nature which cannot be stung to such evil feeling itself, yet can suffer under the touch of a careless hand, offers sufficient field for the discovery of many of the lurking thoughts which make for unhappiness.

It requires courage to designate one's own emotions as self-love, self-pity, envy, or retaliation, but Christian Science gives to its student just such courage. It equips him with such clear vision that he can dissect the elements of an undefined misery pulling at his own heartstrings, and lay bare the disturbing mental characteristics of his own nature. Without this analysis he would go on harboring such emotions under the head of sensitiveness and sorrow. With such analysis, he begins to clear his own mental habitation of these unworthy guests. A season of enlightened prayer will reject them all, because they have been detected in their true nature, and consequently can be intelligently handled. The Christian Scientist's own mentality has been the scene of his battle. It is always the only arena for defeat or victory. He has rejected wrong thinking and has taken

Copyright, 1905, by Mary Baker G. Eddy.

Digitized by Google

refuge in right thinking, and thus the incident which would have disturbed his peace has become a lesson in humility and patience, and a proof of the temporal nature of personal experience. That which is said or done to-day, is regretted to-morrow. The emotions of the human disposition are passing, subject to time and change in every way, and they can pass from the consciousness of the Christian Scientist just so rapidly as he ordains that they shall. His refusal to cherish them, and his righteous determination to dislodge them by the adoption of that Mind "which was also in Christ Jesus," compasses their destruction.

When Jesus said, "Blessed are the pure in heart: for they shall see God," he set forth the unfailing reward of a righteous effort. Only the conquest of all that opposes purity of heart, enables thought to grasp the power and presence of God, and the measure of the "seeing" is determined by the measure of the overcoming. Thomas à Kempis, in his work "Of the Imitation of Christ," portrays Christ as saying, "I am the lover of purity and the giver of all sanctity. I seek a pure heart, and there is the place of my rest. If thou wilt have me come unto thee, and remain with thee, purge out the old leaven and make clean the habitation of thy heart. Shut out the whole world, and all the throng of sins; sit thou as it were a sparrow alone upon the house-top, and think over thy transgressions in the bitterness of thy soul. For every one that loveth will prepare the best and fairest place for his beloved; for herein is known the affection of him that entertaineth his beloved."

This analysis of the right thinking which redeems one from sensitiveness and its attendant suffering, touches only one phase of human experience, but it serves to illustrate the way of deliverance from all discord. The clearness and thoroughness of this mental work bears directly upon the healing of sickness as Christian Science accomplishes it. Sickness is primarily a mental condition, for unless there be a mental recognition of the trouble, no person can be conscious of it. Though the manifestation seem to be physical, it must be mentally accepted to establish itself in experience. This acceptance of disease has become universally prevalent because disease is believed to be inevitable, but Christian Science explains it as an unlawful intruder upon the rights of mankind, in that God no more upholds it than He upholds sin; and this classification stimulates thought to begin a rejection of its claims which eventually demolishes it. The rejection of individual temperamental traits, and the resistance of the minor temptations of the disposition, underlie the efforts to dispose of disease, for disease is an effect of wrong thinking, and thought must be corrected to produce a change in its phenomena. This by no means declares that every case of sickness is the direct result of some specific sin, but it does stimulate the thinker to conquer his own injurious mental habits, that he may come out from their influence and find himself free to dispose of both sin and disease under the "new dispensation" of the law of God, understood and demonstrated.

It is highly important that both practitioner and patient be alive to this demand for righting wrong thinking in every field of feeling and action. If the adjustment be confined merely to the physical question under consideration, there may be delay and disappointment; but if there be found with each individual an earnest desire to re-adjust all mental limitations and deformities which offend the law of absolute righteousness, there can be no obstruction to peace and healing. The man is not only regenerated himself, but he is protected against any lack of regeneration in his fellow-men, for he becomes a law unto himself which stays the power of others to undo him. His mental habitation is furnished within and fortified against all that lies without. It is what he accepts of good and what he rejects of evil, which makes his consciousness a sweet and holy place wherein he may rest in quietude, gathering strength and understanding in the companionship of that divine Mind which comes to him as evil goes out of him. And as this regenerating mental process proceeds day after day, thought rises gradually to the apprehension that there is really but one great mental habitation, wherein all men will eventually find their real being,—the divine Mind which is God himself. The patient rejection of the fleshly mind brings each man to know that in reality he possesses no erroneous mind of his own, for when the wrong thinking has gone there is no longer a wrong thinker, and consequently no wrong mind. Thus he finds himself a living individual idea in that great divine Mind which cherishes within itself all it has created.

Why Science First Appealed to Me.

FRANCES HOLBROOK PFEIFFER.

Not long ago I had occasion to call upon a dentist, who was studying here, to learn how they were doing things in her line of work.

"For you know," she said, "every school and city has some different ways and means."

"But why?" I asked.

"It is seldom that any two doctors treat the same disease alike, you know," she answered.

"But why shouldn't they?" I asked. "Isn't it true that there is only one right way?"

"They are trying to arrive at a conclusion," she answered.

"Then medicine and dentistry are not exact?" I asked.

"No," she admitted.

"They cannot, then, be scientific, either of them, for Science is always exact, you know," I said.

The thought seemed new to her. "Will either of them ever be a science?" I asked.

She looked thoughtful, and replied, "I am afraid never in this life."

This little talk made me realize why Christian Science had appealed to me so strongly from the first. When I was in school I studied many things which were the exact opposite of this Science, but in the attempt to understand physical science I received a certain discipline which helped me to see more quickly how wonderfully exact is the Science of Christianity, as taught by Mrs. Eddy, and it also helped me to see that outside of this teaching all is uncertainty. The unanswerable arguments of our text-book, especially the chapters, "Science, Theology, Medicine" and "Physiology," convinced me, because I knew enough of the other side to see its unreality.

In my school work there used to be long discussions about the source of life, and these always ended with the admission that life could not be traced to its source by material means. We were studying the brain, the supposed "seat of intelligence" (and of pain, by the way), and we were told that the substance of it was the same as that of the amœba, the smallest bit of animal life. Then a classmate said that if the brain were made up of the same structure as the amœba, then the amœba must be all brain, hence wholly intelligent, and she thought it ought to manifest more mentality than is necessary to merely send out a portion of itself to absorb a little nourishment from the water! The professor had no answer for her earnest suggestion.

While Christian Science appealed to me from the first, I have grown to understand more and more its spiritual teaching, which came as a revelation to me when I read Science and Health for the first time. I saw that even if we recognize the physical body, we must, in order to progress, live on a much higher plane than that on which we found ourselves. Now I am seeing more clearly why it is that only in divine Mind do we "live, and move, and have our being."

At first I felt a great sense of admiration for Mrs. Eddy's literary ability, and read Science and Health simply because

Digitized by Google

it appealed to me from that standpoint. I had seen the golden thread which ran through everything in the *Sentinel* and *Journal*,—thoughts gained from the study of Science and Health. Then I grew to admire her for her scientific clearness; and now I love and reverence her, not so much because of what she has done for me and for others (though that were reason enough), as because of her love and unselfishness, and the wonderful God-given power to keep her thought so high as to receive this revelation and to do her great work for the world. I have found that it is hard, even in my own modest life, to keep above the material, and her success in this respect is enough to commend her to the love of every high-minded person.

I had learned that there were things that could not hurt me,—drafts, food, etc.,—though I did not know the reason for it. I had not then learned that if drafts could not hurt me, neither could fresh air do me good, and I was, for the same reason, careful to choose certain kinds of food. This thought that I am free—free from every material thing—has meant much to me, and has made me realize more clearly that I do "live, and move, and have my being" in God, infinite Mind.

"This kind can come out by nothing, save by prayer."

WILLIAM HOLMAN JENNINGS.

In looking over the "New Testament in the Original Greek, Revised by Westcott and Hort," I find in the list of "Rejected Readings" the Greek word translated "fasting" in the King James Version of Mark, 9 : 29; so that the verse should read as it does in the Revised Version: "And he said unto them, This kind can come out by nothing, save by prayer." Westcott and Hort also reject verse twenty-one of the seventeenth chapter of Matthew, which reads, "Howbeit this kind goeth not out but by prayer and fasting." The Revised Verson likewise rejects this verse from the text of Matthew 17,—relegating it to the margin.

Since in Christian Science practice we rely on prayer alone, without fasting, in the physical sense of the word, I am very glad to find that our practice is borne out by the text of the most ancient manuscripts. There can be no necessary connection between physical hunger and metaphysical healing. Surely it is the hunger and thirst after righteousness that is filled in the healing of the sick and the sinful.

When our deepest desire is to see God's kingdom appear on earth, in the outward man, as we perceive its presence in heaven—in the inner man; when the ideal which we cherish —the perfect man—is expressed in the harmonious functions, organs, and activities of the human body, then we are reaching a realization and demonstration of harmony.

Seeing the power of the Master's prayers, is it not natural that the apostles should have asked, "Lord, teach us to pray"? And from the fact that Jesus had hitherto taught them no formula of prayer, can we not infer the thought, elsewhere expressed, "The letter killeth, but the spirit giveth life"? He then gave them no prayer-book, but briefly bade them realize that "our Father" is in heaven, as a basis for the inference that heaven or harmony is everywhere, since God is in harmony and God is omnipresence. He bade them hallow the name of our Father, by calling no man our father; and by acknowledging no other creator or creation, no other cause or effect than God, good. He bade them know that God's kingdom always comes and abides with the thought of His omnipresence, for the suppositional hell is based on the thought of God's absence in a far-away heaven. The "gates of hell" have no foundation, if God is everywhere; and "the prince of this world" is judged to be a false usurper, his supposed presence and power and science are rendered null and void by the omnipotence, omniscience, and omnipresence of God. God's will is done because He is everywhere and has all power and wisdom to do His will continually. His will is the law of the universe, and is done in the regular and orderly operation of divinely natural law. God gives us eternally His Christ, the divine idea, the real bread of heaven. He forgives us all sense of sin, and blots out all belief of debts and misdeeds; therefore we should owe no man anything but love, and love is the fulfilling of the law of God. God tempts no man, but saves man forever from all sense of sin, disease, and death.

Finally, brethren, when we pray, let us know that all things whatsoever we pray for, we are to believe that we receive them, and we shall have them. (Mark, 11 : 24.) We are to realize that we have all things; for "He giveth to all life, and breath, and all things," and all things are ours. But have not all of us prayed amiss, until Christian Science showed us the way? Did we not pray believing that we had disease or poverty or sin? Whereas we ought to have known and realized that God's children always have health and endless life, infinite abundance and perfection.

"The way of salvation."

M. MAC L. E.

WHILE I was being treated in Christian Science, I asked the practitioner one day why I was not yet healed. The reply was, "You are like a person in a dark room who tries to drive out the darkness with a club instead of letting in the light."

I returned home feeling discouraged and almost hopeless. I had given up an operation,—which the doctors hoped might bring me relief but which promised no cure,—to try Christian Science treatment. For weeks I had been faithfully reading the Bible and Science and Health, and watching each day for the physical healing. That night I opened my Bible and turned the leaves listlessly, for I felt there was no hope for me, here or anywhere else. Suddenly these words from the third chapter of Proverbs caught my eye, and through my tears I read them again and again, "Trust in the Lord with all thine heart; and lean not unto thine own understanding. In all thy ways acknowledge him, and he shall direct thy paths." A great sense of peace came to me and a ray of light penetrated the darkness. I saw that my own understanding had been that sickness, sin, and sorrow were true, and I had been leaning unto that understanding all my life. If God is All-in-all, as we are told in the Bible and in Science and Health, surely I could trust Him. I did turn to Him, and rested in Him, and in a short time the physical trouble entirely disappeared.

Many times since then, when there have been problems to solve and when the darkness has seemed impenetrable, I have suddenly realized that I have been using the club to error, and leaning unto my "own understanding." Then I have turned to God, to ever-present Love, and the darkness has disappeared, and there has been no problem to solve. Surely we should try each day to get a fuller realization of the meaning of "ever-present." The divine light is always shining, and in the "Father of lights" is "no variableness, neither shadow of turning."

Take away the mental assumption, "I am injured," and the complaint is removed; remove the complaint, "I am injured," and the harm itself disappears.

Marcus Aurelius

New Setting for our Leader's Hymn.

CHRIST MY REFUGE.—A hymn for voice and piano, with suggestions for organ registration. The poem by Rev. Mary Baker G. Eddy, the music by William Lyman Johnson. Arrangement for high and low voice in same copy. Price, 75 cents; $7.00 per dozen. Send orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

Eternal Punishment.

The term punishment, if attached to Deity, should have a meaning differing from that which is current, since its common use is to refer to an affliction which is prompted either by wrath or a mere determination to offset an evil deed with its merited pain. To associate this sort of practice with God, is to belittle His exalted nature and hide His unerring law. As a matter of fact, no God-made condition or law exists without a purpose; and skepticism is born and bred of the attempt to enforce the acceptance of mere dogmas without presenting therewith a rational explanation of their need and intent.

Even a human parent, if civilized, would not inflict pain upon his child as a mere matter of revenge or because he was angry, but his single object should be to correct the child. Much less would the All-wise institute any methods of torture merely because He was provoked to anger, nor would He permit such to exist beyond the lifetime of the erroneous condition which the affliction is calculated to expiate. It is the evil in the individual which is punished or which suffers, and it is irrational to suppose that God would continue the punishment after the evil is destroyed, or would establish a plan of affliction on the supposition that evil is eternal. Pain and discord are never the special visitants of God, but are always directly produced by deviation from the law of rectitude, which must ever govern harmoniously.

A careful study of the New Testament discovers that its authors had a much more scientific sense of punishment than is credited to them by some modern theologians. For example, in Matthew 25, the text, "And these shall go away into everlasting punishment," could have been translated, "And these shall go away into age-abiding correction." The unjust, not being ready for the state of the just, shall endure correction throughout the lifetime of the evil in the individual.

The word punishment, as it occurs in the Scriptures, should be interpreted by a correct knowledge of the Being who punishes; and a scientific knowledge of the nature and attributes of Deity shows that He punishes only to destroy evil and to spare the individual; always in accord with the law, "Whatsoever a man soweth, that shall he also reap."

Those who are in error are not fit for the kingdom of God; that is, they are not living in recognition of harmonious being; and, as a consequence, they remain in discord. To suppose that God, who is Love, has made provision whereby certain classes are to be forever shut off from further opportunity for improvement, is not Christian, and is not borne out by any teaching of the Bible.

It can be properly said that when "the Son of man cometh in the glory of his Father, with the holy angels;" that is, when the glorified sense of God's sonship appears to the individual, the separation between truth and error, good and bad, begins, and the evil is eternally destroyed, while the good lives on forever. Error overpowered or displaced with error, may revive again, while error overcome with truth, is eternally destroyed, and this constitutes its eternal punishment.

Mortals are struggling for harmonious, substantial, and enduring existence, a state which can come only through the understanding and practice of righteousness; and they will suffer defeat, failure, and discord so long and in exact proportion as they fail to apprehend and deport themselves according to right ways and means. This law never changes; it applies to the life beyond as well as to this present plane of existence; and he who fails to finish his work in this life, will not only have the opportunity but be under the necessity of finishing it in the future, for the Scripture prophecy will be fulfilled, all evil will eventually be abolished, and righteousness alone will abide. ALFRED FARLOW.

Boston Times.

A progressive condition of thought is so manifest to-day, that the orthodox can attend the Baptist church without having his feelings shocked, and the Christian Scientist hears his own views spoken from pulpits which sneer at his denomination. The end of it all will be what we all desire to see; viz., unity among men, and oneness as regards the belief in things spiritual.

Editorial in *Watertown* (Mass.) *Tribune-Enterprise.*

The philosophy of Christian Science is idealistic, that is, things exist as objectified states of consciousness; they have no real existence apart from divine Mind which gives them individuality and identity. The materialistic philosopher with his utmost reach of conjecture assumes an evident effect as primal cause and upon this quaking foundation builds the fabric of his dream of life. In our system of philosophy, God, Spirit, Mind, is the only cause; for Mind to think is for Mind to create, and this Mind comprehends within itself the entire universe of being and action.

G. HOWARD WILSON.

Halifax (Can.) *Mail.*

Christian Scientists contend that since the universe and man are governed and sustained by divine law, a single demonstration in overcoming sin, disease, and death, through the understanding and application of this law, proves the possibility of overcoming all sin, disease, and death. For, where perfect law governs, whatever is done once may be done again. On this basis Jesus taught that the works he did, his followers, to the degree of their Christliness, could do also. And Christian Scientists, by the healing of great numbers of well authenticated cases of sickness and sin, are proving in part the promises of Jesus and that the Christianity he taught and lived is scientific. J. R. MOSLEY.

Exchange.

Christian Scientists rest secure in the consciousness of the integrity of their motives, they are striving to be Christian, to overcome evil with good, and to aid in the physical, moral, and spiritual regeneration of humanity. They have no hesitancy in allowing what has already been accomplished in this direction to serve as an index of what may still be accomplished. This has not been done by "formula," by hypnotism, nor by any other so-called paraphernalia of the "carnal" mind, but by the divine efficacy of God's laws which heal both sin and sickness, by strict adherence to the good and utter repudiation of all that works evil. JOHN RENDALL.

Fort Dodge (Ia.) *Messenger.*

Does not our critic see that if sin is real, then every time he prays for the reformation of a sinner he is praying for the destruction of something fixed and indestructible? In common parlance, when the word unreal is applied to anything, it means that it is destructible, or, in other words, that it may be overcome—is temporal, finite. If you say that evil is real, you virtually declare for its indestructibility. What hope, then, would there be for the sinner?

It is difficult to see why men should continue to call sin a reality, when in truth everybody who aims at reform of any kind does it on the basis that it is possible to banish evil as something which is foreign to God and has no right or claim upon man. Speaking in metaphor, Jesus called sin (or evil) a liar. This he said because there is nothing either true or real in a lie; a lie always was a lie "from the beginning" and God is not the father of it.

REV. CHARLES D. REYNOLDS.

The Lectures.

Marshall, Mich.

A lecture on Christian Science was delivered by Miss Mary Brookins at First Church of Christ, Scientist, in this city, Sunday afternoon [June 25]. The lecturer was introduced by the First Reader, Miss Esther Watson, who said in part,—

By Jesus' understanding of the truth of man's relation to God, he demonstrated the power of Spirit over the flesh, Truth over error, Life over death, in healing the sick, reforming the sinner, raising the dead. With the spiritual interpretation of the Scriptures as given through the understanding of Christian Science, we find that it is possible for the disciples of Jesus to-day, as of old, to prove the omnipotence, the omnipresence of Truth and Love—to know God and to know man in His image and likeness as the Scriptures declare. With this knowledge of God and man, the promised peace and rest—the freedom which is man's rightful heritage—is a present possibility for all who "hunger and thirst after righteousness" and who will deny themselves to take up the cross daily and follow in the "way, the truth, and the life."—*The News.*

Indianapolis, Ind.

Edward A. Kimball of Chicago spoke last night [June 22] at Tomlinson Hall to a large and deeply-attentive audience. John V. Dittemore, First Reader of Second Church of Christ, Scientist, introduced the lecturer, saying in part,—

If a few years ago some one should have prophesied that a lecture on Christian Science could bring together in our city an audience of probably two thousand people, an audience as representative of the best thought and culture of the community as this one here to-night, such a statement would have been received by most persons as a prophecy of a result impossible to accomplish. Notwithstanding the fact that this opinion has been generally held, Christian Science has shown here and everywhere a most vigorous and rapid growth, until to-day its hundreds of churches and hundreds of thousands of adherents are scattered over the entire civilized world.

The achievement of such a result must be traceable to a worthy and adequate cause, and those of us who have felt in our lives the regenerating and beneficent power of Christian Science know that it has the power of Truth, and that it has for each and every one a message—a message of health, of peace, and of good-will.—*Indianapolis News.*

Taunton, Mass.

The annual Christian Science lecture under the auspices of First Church of Christ, Scientist, occurred in the Taunton Theatre on Sunday [June 11], the lecture being delivered by Bicknell Young of Chicago. The speaker was introduced by Rev. T. W. Illman, pastor of the Universalist Church, who spoke as follows:—

Ladies and Gentlemen, Good People of Taunton:—The century that is behind us less than five swift years was noted, among other things, for the phenomenal growth and development of a religion founded by a woman. This growth and development deserves to be reckoned among the significant events of a century pre-eminent in all history for what it brought forth. I refer, of course, to the religion of the now well-known, numerous, and influential sect of the Christian Scientists, who owe allegiance to the Rev. Mary Baker G. Eddy of Concord, N. H., as their head. I once had the pleasure of meeting this lady at the house of a mutual friend, and I number among my personal friends near relatives and personal friends of hers.

Like all religions, this one may be resolved into its two constituent elements, a force quickening and shaping human life and action, and the philosophy with which that force is, in the minds of its adherents, associated. As such, it has achieved two noteworthy results, by which it is chiefly distinguished in the world. First, it has demonstrated in a popular way the therapeutic value of mental states—the curative power of religious ideas to which minds give themselves in full surrender. Second, it has banished from among its adherents the gloom of life, born of fear of God, and aroused in its stead a confidence which results in cheerfulness, serenity, and content.

I am not a Christian Scientist, and full justice to myself would require me to say that . . . with me recognition of its force does not carry with it conviction of the truth of its special dogmas.

Any religion, however, that has done what it has done, and secured so wide an acceptance among thoughtful people, has the right to demand for itself a candid hearing and earnest consideration. If I were presenting it as mine, I should disdain anything less than the most keenly discriminating and rigidly searching reception; and I am sure I speak the mind of our lecturer here to-day, when I say that he, too, wishes such at your hands for his message. Like every other religion, it will stand or fall by the verdict of the generation, and ours is entitled to subject it to examination and cross-examination.—*Taunton Gazette.*

Mt. Washington, N. H.

Yesterday afternoon [August 13], in the music room of the Mount Pleasant, a representative audience of White Mountain guests was assembled. It was the occasion of the Christian Science lecture given by Judge William G. Ewing of Chicago, under the auspices of First Church of Christ, Scientist, White Mountains. There are many members of the Christian Science church, and many people not professedly allied with it, yet deeply interested in the faith, who spend their summers in the mountains. Indeed, an active church is supported here by them.

Mr. Lewis C. Strang presided over the meeting. In introducing Judge Ewing, he spoke in part as follows:—

Nearly forty years have passed since the attention of the world was challenged by the striking union of two words, which in the popular thought stood for opposite things—Christian and Science. Though at first a light in a single human consciousness, Christian Science quickly gained widespread notice—first, by its works of healing, and second, by its original philosophy. So remarkable and so numerous have been the cases of healing, that at the present time few persons, and none of them well informed, will deny that Christian Science does heal the sick. Whatever honest doubt there is regarding the truth of Christian Science, concerns not its healing, which is already an established fact, but its philosophy, which so absolutely reverses all systems of human invention.

Those who know Christian Science best, know best that it has nothing to conceal. On the contrary, the history of the Christian Science movement is largely a record of the repeated and untiring efforts of the Discoverer and Founder of Christian Science, the Reverend Mary Baker G. Eddy, to bring to public attention the plain truth about her discovery. Christian Science is not mysterious. It is not even miraculous. Its Science is as calm, dispassionate, and impersonal as a mathematical problem, while its Christianity is rich, full, satisfying; it pulsates with tenderness and love.

The purpose of this lecture is not to win followers, but to tell the truth about such limited phases of Christian Science as can be touched upon in a single afternoon. It will ask nothing of any of you except to investigate and see for yourselves whether or not this great thing is true.

Among the Clouds.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

"Proof, security, and authority."

Chicago, Ill., July 25, 1905.

Rev. Mary Baker G. Eddy.

My Dear Mrs. Eddy:—For many years my wife had been under a doctor's care. According to the physician's report, her case was one which awaited the knife as the only possible cure. My attention was then called to Science and Health. The first evening's reading of that book gave me the intimation that Christian Science is the truth which Jesus taught. Being a business man, and accustomed to having propositions, promises, and statements supported by proof, security, and authority, I required nothing less to convince me that primitive Christianity had been restored to a waiting world. I recalled the fact that Jesus said, "By their fruits ye shall know them." I saw clearly that healing the sick was one of the "fruits" or tests of the truth which Jesus announced to humanity. The giving of sight to the blind was another fruit, and making the lame to walk another.

My wife called one of your loyal students to treat her, and was healed in three weeks. A friend came to my home a few months after my wife's healing, nearly blind. Christian Science restored his sight almost wholly in a few days. A little lame boy whom we knew, was made to walk in one week's Christian Science treatment. Here were three positive proofs to me; namely, the sick restored to health, the blind made to see, and the lame to walk. Upon further investigation, I found hundreds of trustworthy men and women who had tested the efficacy of Christian Science throughout a series of years, and whose statements I would readily accept on any business proposition. They assured me that Christian Science is indeed all that is claimed for it, and much more. This appeared to me to be good security. I then began a careful study of Science and Health, and was soon convinced that its wonderful statements were founded upon Bible facts, and that they were capable of accurate and absolute demonstration. I could ask no better authority. Having proof, security, and authority, that Christian Science is indeed primitive Christianity restored, both myself and wife accepted the Bible and your text-book as our guides to health and happiness. That was six years ago. They have never failed us. Each test gives us more confidence. We are striving to live closer each day to the Sermon on the Mount, the Lord's Prayer, the Christian Science tenets, and the scientific statement of being. We find that in proportion as we understand these, we release our hold on material beliefs. We are glad to express our love and gratitude to you for the benefits your patient work has brought to us.

With sincerest love, I am yours truly,

JOHN E. FELLERS.

The Views of a Physician.

THE following excerpts from an article which recently appeared in *The Independent*, were not written by an opponent of *materia medica*, but by a distinguished member of the medical profession, A. E. Wright, M.D., of whom *The Independent* says,—

"Dr. Wright is one of the highest recognized medical authorities in England. He is the Pathologist and Bacteriologist of St. Mary's Hospital, London, and was lately Professor of Pathology in the Army Medical School at Netley, and was a member of the Indian Plague Commission."

The article is a plea for more extensive medical research, and it contains a frank admission that physicians "are not, in fact, making any effort worthy of the name to solve the problems of disease." Dr. Wright says,—

"One only of the problems that confronted man at the outset of his race still stands and confronts us practically unabated—the problem of disease. Over the processes of disease we have as yet achieved almost no directive control.

. . . . . .

"Of all the evils which befall man in his civilized state, the evil of disease is thus incomparably the greatest. It ought, accordingly, to loom largest in his mind. In comparison with the chance of winning directive control over this evil, every other thing ought to be counted as loss. The cutting off of a day from the Atlantic passage, the supersession of submarine cables by wireless telegraphy, the acceleration of trains and motor-cars, and objects of this order of importance occupy the attention of man. All these ought to be to civilized man, in comparison with any advance in the exploration of disease, as the small dust of the balances—as altogether vanity.

"If the belief is nurtured that the medical art of to-day can effectually intervene in the course of disease, this ought to be dismissed as illusion. . . . It may be affirmed with confidence of the medical art, as at present practised, that it can do practically nothing to avert death from a virulent bacterial invasion or to bring about a cure. The thoughtful and conscientious physician has absolutely no illusions on this subject. Confronted with an acute bacterial invasion, he does not conceal from himself, or from others, that he is quite in the dark and that he cannot foresee or determine the issue of the conflict which is in progress in the organism.

. . . . . .

"That scientific knowledge which alone can avail in the conflict with disease is—practically all of it—still to seek."

The Chicago Tribune, commenting upon this article, says,

"Dr. Wright's view may be somewhat pessimistic. Few physicians will admit that medical science has made or is making as little progress as he asserts. But, on the other hand, every physician knows that for the most part what he says is strictly true. Disease constantly rages over the earth, spreading suffering, death, and desolation in much the same manner that it did in the time of Hippocrates."

In the face of such testimony as that of Dr. Wright and other eminent men who have expressed similar views regarding the inadequacy of medical practice, it seems almost incredible that our legislatures can seriously consider the enactment of laws intended to compel all sick people to employ physicians or suffer without help of any kind, and this is especially so in view of the fact that through the beneficent ministrations of Christian Science thousands of persons have been healed after their physicians had given them up to die. It is recorded of Jesus that he "went about all Galilee, . . . healing all manner of sickness and all manner of disease among the people," and the results which have been obtained through Christian Science are proof that his method is still effective.

Pertinent to this discussion is the following editorial item from the *Nashua* (N. H.) *Telegraph:*

"It is evident that medical science has not reached high water-mark when the hospitals of London openly admit there were over two thousand cases of mistaken diagnosis during the past year."

ARCHIBALD MCLELLAN.

Peace and Progress.

THE Peace Conference at Portsmouth recalls similar events in the world's history, and invites an answer to the question, How far have all such negotiations tended to

Digitized by Google

bring real peace and progress to mankind? In some of the direful struggles of the past, the cry of those who suffered most was "Peace at any price," while others who could see farther raised the slogan "Peace with honor." It is difficult to find an adequate reason for war in this enlightened age. Though a nation may fight for material possessions, it usually comes out of the struggle impoverished, whatever the result; and if moral issues are involved, they are swallowed up in the demoralizing maelstrom of war. It would seem that the need for the amelioration of suffering, and for human enlightenment, so aptly expressed by Longfellow, would compel mankind to pause ere they plunge recklessly into fratricidal strife, which at best has so little to offer in return for the awful sacrifices demanded. He says,—

> Were half the power that fills the world in terror,
> Were half the wealth bestowed on camps and courts,
> Given to redeem the human mind from error,
> There were no need of arsenals or forts.

In Christian Science we come to see clearly that peace and progress are inseparably united,—that the one cannot exist without the other,—and that they are mutually dependent is proved in our individual experience. In this Science we further learn that because God reigns there is no power which can prevent the ultimate establishment of true progress and abiding peace on earth, since these represent the activities of the divine Mind. When the understanding of Truth has been established in the consciousness of an individual, he speedily becomes aware of an ever-extending area in which the law of progress is operative. He is, at the same time, conscious of a deep peace at the very center of his being, and into this citadel he may retire at any moment when the storm roars without.

The all-important consideration for nations and individuals is to know and value rightly that which alone is worth striving for. Christ Jesus came to offer the world a peace which answers to all human need, and which is linked to universal progress. His offer was, however, rejected, and as he foresaw the doom which must ever follow the rejection of Truth, he wept over the city of Jerusalem, and said, "If thou hadst known, . . . in this thy day, the things which belong unto thy peace! but now they are hid from thine eyes. . . . Thine enemies shall . . . lay thee even with the ground, and thy children within thee; . . . because thou knewest not the time of thy visitation."

Our Leader's words in Science and Health (p. 224, lines 4 to 10) are very significant in pointing to the true basis of peace and progress. From her teaching, and from that of the Master, we learn the needlessness of suffering, but we also see its inevitableness if we build on false foundations. "If thou hadst known!" surely implies the possibility of our knowing what makes for peace, and also of pursuing it to the entire elimination of whatever makes for discord. God is ever ready, with "legions of angels," to uphold the cause of right and to deliver from all evil those who trust in Truth. To-day as of old the promise of Christ Jesus holds good, "My peace I give unto you."

ANNIE M. KNOTT.

In Him We Move.

WHEN we note the apparent stillness and stability of the earth, it does not seem surprising that until a relatively recent date men thought of it as the motionless center of the universe, and adjusted their astronomical speculations thereto. Had the earlier star-gazers dared to dream that this gigantic aggregate was whirling around at a surface rate of a thousand miles an hour, while at the same time spinning over the plane of the ecliptic at the rate of a thousand miles a minute, they would probably have been laughed at or stoned for their vagaries. Modern discovery, however, has long since peopled the sky-depths with unnumbered solar centers whose every planet moves in ceaseless flight upon its appointed way, while suns and systems speed in majestic silence through the vast corridors of space.

Astounding as the movements of the heavenly bodies may seem, however, the sense of the universality of motion is yet more stimulated by the recent discovery of physical scientists who are studying molecular phenomena. These have reached the conclusion that, instead of being an infinitesimal particle of matter, the atom is an aggregation of hundreds of force-centers or corpuscles, respecting which they declare that the enormously energetic vibrations of molecules, which range among the billions per second and which we know as heat and light, are "rest and quiet" in comparison with the far more vigorous and rapid movements of these force centers! (v. "Radium Explained," by Dr. W. Hempson.)

According to Prof. Carl Pearson, the only answer that physical scientists can give to the question, Why this motion of the elements? is this, *Ignoramus!* (Grammar of Science, pp. 275, 276.) Motion of any kind is inexplicable to those who accept the self-limiting philosophy of materialism, and the problem remains inscrutable until through Christian Science we are led to see that infinite Mind and its activities include and express all being. This perception supplies the only possible explanation of the wondrous facts which are ever breaking through the veil of material sense to startle and inspire awakening thought. As we come to understand that every least idea of Mind but reflects the divine wisdom and might, the heart is moved with a great sense of humility and awe, and with bowed heads we exclaim, Who is so great a God as is He who plans and performs every activity in all the expanse of being!

The teaching of Christian Science, that God is the source of all being and action (Science and Health, pp. 187, 419), and that man reflects the divine nature and activities, rebukes much religious thought of both the past and present. An interpreter of Brahmanism has recently declared one of its fundamental teachings to be that "quiescence is the secret of happiness; activity the secret of misery; and that the measure of character is success in quenching desire and living a quiescent life." This thought is oriental, but by no means foreign to the belief and hope of many Christians. The sense of anticipated heavenly rest has always been largely made up of do-nothingness. Said a dying bishop whose loving wife had gone before, "When I reach heaven, I shall lay my head in Mary's lap and rest for a thousand years." To the long-time worn and weary, prospective relief from toil is humanly sweet and inviting, but the kinship of this thought to the faith of the Brahman is very close. We are indeed counseled to "rest in the Lord," but this can only mean that we shall attain to spiritual freedom and supremacy in the conscious embrace of that Life which is revealed in the unwearied activities of good. The rest of inaction can have no place apart from material sense, while the rest that is of God is entire freedom *from* material sense. To abide in the consciousness of ever active Truth is to escape from all that begets a sense of weariness and limitation; it is to enter into the freedom and spontaneity of immortal life. To "live and move" in God is to be lifted above the mesmeric glamour of that longing for rest which is known and nurtured only in human experience. No sense of decrepitude or breakdown can invade the realm of Spirit; God's man rests in all-harmonious action.

The call of Truth in Christian Science is, "Awake, thou that sleepest, and arise from the dead!" and it is ours to so escape from the bondage, the heaviness of materiality, that in our innermost consciousness we may answer, "Now *is* Christ risen from the dead." It is ours to yield such alert, such instant obedience to Truth, that every faculty and endowment of our being shall become a channel of expression for that infinite Life and Love whose pulsations supply the universe with its energy, while beating their way unceasingly into every inlet of the human understanding.

Letters to our Leader.

Nassau, Bahamas, June 30, 1905.

Rev. Mary Baker G. Eddy.

Beloved Leader:—When we received our *Sentinel* with your letter "From the Isles of the Sea," I read it as a blessing—a sort of message of "Well done"—and rested in the glad thought that you, dear Leader, knew of our efforts at well doing and had commended us.

Soon after, I went to my room to study, taking with me the paper containing your message, the Bible, Science and Health, and the *Quarterly*. As I opened the paper this thought came to me,—Our dear Leader has never written any one, that she did not point to a higher and more consecrated way than they had yet attained, so there must be a message here for us. I read the lines, "May you . . . know 'no night there,' no sorrow, no pain," over and over, but could not see a special call for greater effort, and I laid the paper down, trying to know that I would be able to hear and obey in all that you meant to give us. I picked up my Science and Health, and on opening the book I read these words from page 511, "In the eternal Mind there is no night,—no sorrow, pain, or sin," and I realized as never before, what it would mean if the carnal mind were put off, and we knew no other Mind but God—eternal Mind. I felt your cry, your pleading to the dear Scientists, to be more alive, more consecrated, more in earnest in putting "off the old man." I also felt led to read the eighth chapter of Romans, and found there the same message.

For this and all that you have given us through your life and works, I thank you. The dear Scientists here are bravely striving to heed your message.

Faithfully and lovingly yours,

MRS. FRANC B. CURRY.

Eastbourne, England, July 14, 1905.

Dear Mrs. Eddy:—With love for God, and in grateful recognition of your teaching, which has brought us to a greater understanding of Him and His infinite power, we are forwarding to The Mother Church Building Fund, in behalf of the little band of Christian Scientists here, the sum of £11, the result of the collection at our Communion service. In December last, three who had been benefited by Christian Science decided to take a public room, to be used for our services and for a Reading Room. There are now twenty-five who attend the services, and we have numbered as many as forty, with passing visitors.

We send our loving thanks to you for the courage and love you have shown in giving us this interpretation of the life and teachings of Christ Jesus, which has made possible the fulfilment of his commandment to heal the sick and the sinful. We gladly work to share with others the joy you have brought into our lives.

MARGARET HARLEY.
DAISE G. MOLONY.
First and Second Readers.

Newark, N. J., June 29, 1905.

Beloved Leader:—At the regular semi-annual meeting of the members of First Church of Christ, Scientist, Newark, N. J., a unanimous vote was taken to forward our own church building fund to The Mother Church, together with a contribution from the Sunday School and money contributed by those who anticipated attending the Communion service in Boston. We consider it a privilege thus to express our gratitude and love, not only for the "parent vine," but also for you, dear Leader, for your unfailing patience, humility, and affection, as well as for your fidelity to the Principle for which you stand. With gratitude unexpressed, only as we live it, we, as a church, are striving to "watch, and pray for that Mind to be in us which was also in Christ Jesus," and to walk worthy of the vocation wherewith we are called. As a branch of the vine to which we cling in tenderest relation, we strive to bring forth "fruits meet for repentance."

We daily rejoice that through your love for God and man we are enabled to make practical the words and works of our dear Master, and to follow, in a degree, his example,—healing the sick and casting out evils,—working, watching, and praying for growth in grace.

Faithfully and gratefully yours in Love,

EMMA DE PROSSE, *First Reader.*

Atlanta, Ga., April 25, 1905.

Rev. Mary Baker G. Eddy,

Beloved Leader:—I have noted with much interest and pleasure the joy it gives you when one of your students grasps your thought relative to the momentous questions regarding the relation of the sexes and that true ideal of purity which you are so earnestly striving to make us understand, and I never cease to marvel at your unerring wisdom and tactfulness.

It makes my heart glad to know that Christian Science is honored down among the red hills of Georgia, that grand old State which in the past has stood for freedom and advancement in thought, having been founded as a place of refuge for the poor debtors of England and the persecuted Protestants of Europe; which in her infancy had the ministry of the Wesleys and Whitefield,—the home of the first chartered State university in America, and of the Wesleyan Female College at Macon, which enjoys the high honor of being the first college in the world chartered for the express purpose of bestowing diplomas upon women; the State whose legislature in 1866, the year of your great discovery, enacted a law recognizing every right of womanhood save her right to vote and hold public office. Our people are beginning to see that woman has been more than faithful over the few things, and is fitted for and filling those higher positions of vital importance to humanity, and they are now manifesting a desire to learn of Christian Science and its beloved Founder, to know something of that truth which is having such a wonderful influence for good, mentally, morally, and physically.

It may be of interest to you to know that when Mr. W. D. McCrackan lectured for us last December he presented the subject of Christian Science in such a happy manner, and made such a profound impression upon our ministers and citizens generally, that no attempt was made by any one to challenge or criticise his statements in regard to Christian Science. His visit was a blessing to all.

It is a cause for constant prayer and thanksgiving that we have been permitted to see, this day, the wonders that are being wrought in the healing of disease and the reformation of character through the understanding of Christian Science. For myself, I am grateful to have had the privilege of beholding the face of her who, through the exhibition of great courage, fidelity to Truth, and unselfishness, is doing so much for the advancement of humanity that each year added thousands rise up and call her blessed. I am grateful to have been permitted during the past seven years to have some part in the work of that Cause which is dearer to her than all else; to tell of that truth which, when understood, puts a benign smile upon the faces that never knew one before, and that brings the love of God into hearts once filled with hatred.

Beloved Leader, for the joy, health, and peace that has come to me and to the lives of so many I hold dear, through the study of the Bible as interpreted in Science and Health, my gratitude to you is unbounded, and the only way I know of adequately expressing the same is in loving obedience. If I can ever be of any service to you individually, or to the Cause of Christian Science, in Concord or elsewhere, please let me know. My one desire is to serve you and the Cause for which you stand.

Gratefully,

WM. M. GOODWIN.

Testimonies of Healing.

It seems to me that the time has come when I should give a written testimony, thanking God for the great blessings which Christian Science has brought to me. One year ago I was a physical wreck. For seventeen years I had been a sufferer from stomach and liver trouble and nervous exhaustion. Five years of this time I was unable to perform manual labor; I gave up three good paying positions, causing a loss of several thousand dollars in salary and a large amount of money for medicine. I was under the care of several physicians with only temporary relief, tried patent medicines, and finally became much discouraged. My prayers seemed unanswered, and all hope was about to be abandoned when a kind friend persuaded me to go and see a lady who had been healed through Christian Science. I shall ever be most thankful to this lady for her kind advice and for accompanying me to a Christian Science practitioner. Through Christian Science I have been healed. It has been the renewing of the Spirit,—the putting off of the old man and the putting on of the new,—as the apostle expresses it. I can now eat what I wish without fear, and with a relish; I sleep well, have a clear conscience, and enjoy real happiness. I have laid aside my glasses, and feel no inconvenience for having done so, after having worn them regularly for five years.

I wish also to tender my heartfelt thanks to Mrs. Eddy for the text-book of Christian Science.

ISAAC S. AMBROSE, Dayton, O.

It is with a heart full of gratitude that I write of what Christian Science has done for me. It has brought me from a state of morbid, depressing invalidism to a realization of health and happiness never dreamed of a few months ago. For three years I was almost an invalid, sometimes suffering so much that I longed to die. I had neurasthenia and anæmia, with their usual accompaniment, insomnia. I had tried medicine, massage, water treatments, osteopathy, change of climate, and in fact anything and everything that the physicians would recommend, but nothing brought any relief except for a short time. Last winter I grew so much worse that I went to Florida with a friend, hoping to be benefited by the climate. I was benefited,—not by the Florida climate, however, but by my friend's copy of Science and Health. I accepted its teachings at once, and began taking treatment from a practitioner in Cincinnati. In about three months I was completely healed. It seems wonderful to me to be strong and well again, able to be up and busy all day, instead of spending hours each day on the bed or couch. After two years and a half of the horrors of insomnia, I now sleep as naturally as a child. "Ye shall know the truth, and the truth shall make you free," has been thoroughly demonstrated in my case. I am not only free from sickness, but free from fear as well. Even with my limited understanding of this Science, I have been able to demonstrate the power of Truth over the claims of sickness.

Only those who have been led from the darkness of materiality to the light of Christian Science can understand how grateful I feel.—ALICE G. KLEIN, Covington, Ky.

Christian Science came to me in an hour of great need, when everything looked dark, and I wish to say a word of loving gratitude for all that it has done for me. For eighteen months I was suffering with an itching on my leg which also came on my body, and I had no rest, day or night. I tried physicians, who did all they could, but my condition grew worse. I also tried the Hot Springs, but got no better; so I returned home, discouraged and broken-hearted. I did not know what to do. On my return home, my sister saw me in my affliction and wanted me try Christian Science, and gave me a copy of Science and Health to read. I laughed at her and laid it on the table, but my suffering was very severe that night and the next day, and I talked with her again. She advised me to send for a practitioner and take treatments. I did not believe in Christian Science, but was willing to try it, for everything else had failed. After taking two weeks' treatment I was healed, and my leg was perfectly well. I cannot express the uplifting which I received,—the change from sorrow to happiness. I was also healed of a rupture of three years' standing, which was overcome in four months.

My prayer is that infinite wisdom, Truth, and Love may keep me ever worthy to be found in the onward and upward march of the true Christian Scientist. Now I see what Jesus meant when he said, "Come unto me, all ye that labor and are heavy laden, and I will give you rest." What a happy thought to know that when in trouble we can call for divine help. I have had much done for me, for which I am most grateful. In the constant study and application of Christian Science I am content, knowing that only as I am obedient to God's commands can I prove my sincerity. I thank God for the help that came to me when I was in utter despair and darkness, and I sincerely acknowledge the good which has come to me through Mrs. Eddy.

M. M. DALTON, Los Angeles, Cal.

About five years ago I took up the study of Christian Science. I did not come into it for physical healing, but for spiritual understanding. I tried at once to demonstrate the truth for myself and family, and met with some success. For four and a half years medicine has not passed my lips, although I have had many and seemingly serious ailments to meet. I daily read the Lessons in the *Quarterly*, getting up as a rule at five o'clock in the morning, so that I can have my lesson while my thought is clear and before the family are up. I am nearly fifty-eight years old and there are six members in my family. We use no medicine except for my husband.

The first week in December I was going into the basement to look after the furnace. I was the only one up in the house—it being about 6 A.M. I thought I had reached the bottom of the stairs, but had not, and so stepped off, twisting my right foot under me. I had a lighted lamp in one hand, and as I fell the lamp broke, spilling the oil, so that I lay in a pool of it. The pain in my right foot and ankle was great. I commenced at once, as I lay there in the dark, to declare God's allness, and after a little I called so that my husband heard, and I asked him to send my daughter to me, which he did. I told her to treat me, and to help me upstairs. I do not remember how I reached the top of the stairs, but I think I crawled up. I would not have my shoe taken off, and when my husband tried to find out what had happened, I told him I did not wish to talk about it until I had overcome it. I went about the house, after a fashion, till nearly noon, but the pain had increased and I could only shove, not lift, the foot. I asked my daughter to take off my shoe. When she tried to take it off I cried out, it hurt me so. I was seemingly in such agony that I could hardly endure it.

The next morning I put on my shoe, did the usual housework, ironed, and was on my feet most of the day. My husband thought I had only met with a slight jar or fall, but about one week later I noticed that my foot was black and blue from instep to toes, and that under my ankle, about one inch from the sole of my foot, the blood was settled and was black. I called my husband's attention to the marks on my foot, telling him that they should convince him of the healing power of Christian Science. I missed the morning visit to the basement to look after the furnace only once.

We have three grandchildren living with us, and have had to meet measles, grip, stomach trouble, burns, cuts, falls, etc., and have never used material means. I am grateful for all of the Christian Science literature. I am day by day understanding more and more what I owe to Mrs. Eddy, and why I should love and be grateful to her. All

Digitized by Google

the antagonistic feeling which I once held toward her has vanished, and my ruling desire is to understand and demonstrate this truth.—ADA A. VINCENT, Pike, N. Y.

While still confronted with problems that seem unsolved, it is a privilege to bear grateful testimony to rich blessings already received through a year's study of Christian Science. A few days ago I awoke with a severe sick-headache, which seemed to grow worse until I was unable to read or to hold in my thought anything that had helped me at other times. I was alone, and would not send for help. In my misery I did not doubt that God was still my refuge, so I prayed that He would send me a thought that would help me. In a little while, one of our Readers came and brought the healing message. She talked with me a few minutes and I was not sick any more. I attended to the duties of the day, sewed, and studied until twelve o'clock that night with no sense of weariness or discord. This quick and complete healing meant a great deal to me. These attacks have been of frequent occurrence, and were very tenacious in times past. It meant more because the answer to my prayer came so definitely and quickly, bringing comfort and encouragement in the sweet consciousness of God's ever-presence and tender care. Many times the help for perplexity, suffering, and fear has come through the words of our text-book, and for this I am grateful.

The Science work that has come to me, I regard as a sacred trust, and I have wanted to give it holy thought and do it perfectly because it was God's work. I was drawn to Christian Science through the beautiful life of a friend. She did not talk it to me, but reflected divine Love so that afterwards, when far away from her, I overcame indifference, prejudice, the fear of opposition, and sought out this Science mainly that I might thereby come nearer to her. Now that I have come to love the truth for its own sake, I am the more grateful for being led towards it in so gracious a way. I needed Christian Science, and I am proving in some degree that divine Love does satisfy the heart and meet our every need. I seemed always to have been seeking God, but knew not where to find Him. I rejoice now in the clearer vision of our Father that comes to me through the revelation of Truth as taught by our Leader in "Science and Health with Key to the Scriptures."

EFFIE J. FLETCHER, Foxcroft, Me.

It used to puzzle me so much why God did not heal the sick now as He did in olden times. Now I know He does. How thankful I am for the understanding of Truth gained in Christian Science. This understanding has made me a better woman,—it has brought me nearer to God, and taught me to love my fellow-men. I have seen many healed through Christian Science. One case in particular I will mention, that of my grandchild, who was healed of blood-poisoning. Three physicians held a consultation over her and decided they could do no more. One of the doctors told me that the tissues in her body were breaking down. The blood came from her nose, bowels, and kidneys. I had been nursing for years, had given a great deal of my time to the study of medical books, and the child looked as if she could not live until morning. I then knew very little of Christian Science, but my sister-in-law had been healed after all the physicians had given her up to die. I had told the mother about Christian Science before, and she was willing to try it. When the doctors gave no hope, we telegraphed to the practitioner that evening. The child rested all night and slept, and how we realized the presence of God! We all felt very happy, especially the mother and myself. In a short time the child called for food, got up and was dressed, asked for her slate and pencil, and was well. Later she had some trouble, and said that she wanted the lady to pray for her as before. She is well to-day and we know that her desire for the Christian Science prayer brought her the help.

I thank God for this wonderful truth that has made me so happy. Our love for our dear Leader is growing more each day, seeing how faithful she has been in following Christ's footsteps. She has made it plain in Science and Health, that the promises in the Bible are for us to-day as well as for those in olden times, and that this healing is for all nations.—MRS. ANNA JOHNS, Cotter, Ia.

In the spring of 1902, I had reached the point where I could go no farther, that is, in the way I was going. I had been afflicted with epilepsy for five or six years, and had gone through the usual course of remedies applied in such cases, always expecting a cure, and always being disappointed. I had become very despondent and contemplated suicide as a relief to my sufferings, when I was led through a friend to go to a Christian Science practitioner. I was induced to purchase Science and Health, but I stipulated that at the end of thirty days I could return same and get back my money if I so desired. I still have the copy and am very grateful for what its teachings have done for my family and myself. I wish to say for the benefit of others that I was overcome only twice after commencing treatment,—the last time over two years ago. I have also lost the tobacco habit, and have been healed of constipation and other ailments. From one hundred and thirty pounds I now weigh one hundred and sixty-five pounds. Some of the physicians scarcely recognize me, so great is the change.

I do not yet understand much of Christian Science, but I know that discord in whatever guise is wrong and therefore unreal. One who knows nothing of Christian Science cannot understand this statement, but through the study of Science and Health I have partly realized its truth and know that it is only a question of understanding when all will be realized. I have not only been benefited physically but financially as well. I am a different man from any point of view. I am very grateful to our Leader, through whose teachings I have obtained a gleam of this blessed truth, and I hereby acknowledge my obligation to her.

W. J. GEMMELL, Oregon City, Ore.

My best expression of gratitude to our dear Leader, Mrs. Eddy, will be to give a testimony of healing, which was the proof required by Jesus from all who believed on him. When placing the screen in a window, the lower sash being up its full height, before I could remove my hand the sash came down with full force. It was a very heavy window, and cut through the skin, which was scraped from the wrist to the ends of the fingers, clear across the back of the hand. My husband having gone to the extreme end of the house, did not hear my call until he came in, which left the hand in that crevice for over five minutes. When he raised the window he asked if I was much hurt. I showed him the hand, knowing that he would not believe unless he had seen it. The sight of it made him wince. I said, "Don't fear, it will be all right." By this time the pain was almost overcome, but the whole back of the hand was a dark red with the blood oozing through. I placed the hand behind my back, and with implicit faith in God to do the healing, realized that He is all power, after which I took Science and Health and read for about half an hour, when all sense of soreness had disappeared. I looked at the hand and all discoloration was gone. I then took the scissors and cut off the loose skin without any sense of suffering. Inside of four hours from the time the window had fallen, new skin had formed all over the back of the hand, and inside of twenty-four hours the appearance was such that no person would have known that the skin had been broken, not even the parts where were the deep cuts.

This is only one of many beautiful demonstrations of the power of God which I have experienced in our home. Words are inadequate to express my gratitude for the understanding of the teachings of Christ Jesus, as given to the

Digitized by Google

world in "Science and Health with Key to the Scriptures" by Mrs. Eddy.

MRS. CHARLOTTE CRESSWELL, Orangeville, Ont.

It is a pleasure to send my testimony to the *Sentinel*, though words fail when I would express the gratitude that my heart speaks. After finding that physicians could do nothing for my eyes but give me heavier glasses, I went to God in prayer. Every morning I spent some time in reading the Bible and praying to God to heal my eyes. Having read of the many whom Jesus had healed, I had no doubt but that I could be healed through prayer. The 32d verse of the thirteenth chapter of Luke, in which I read, and read again, "I do cures to-day and to-morrow," was an assurance to me that the same healing could be done to-day as was in Jesus' time. A very short time after this, I was told that if I would try Christian Science I would not have to wear glasses. About two weeks after this I began taking treatment, and after three months' treatment I was able to lay off my glasses, which I had worn twenty years. I was not willing to lay them off, but when I broke them three times in two weeks I knew it was time to lay them aside. I have been able to overcome colds to which I was subject. I have also been healed of catarrh of long standing. Indigestion was overcome in two weeks' treatment, and rheumatism in three days, whereas a similar attack, in the old days, lasted three weeks.

I am not only grateful for the physical healing, but for the spiritual uplift and the peace that have come to me. I was very despondent before taking up Christian Science, but am happy now. My heart goes out daily in loving gratitude to God, to our Leader, Mrs. Eddy, for Science and Health, and for the helpful publications of our Publishing Society.

MARY FUESSER, Cincinnati, O.

If the study of Science and Health had not made me love the Bible and its teachings a great deal more, and also made me more desirous of following Christ's example, I would have had nothing to do with it, for I loved the church of which I had for eighteen years been a member. I loved its work and its people, and had not allowed myself to doubt its teachings. A grave condition had, however, existed in our family, which I had earnestly prayed over for four years, according to my highest understanding, but no answer came and the condition grew worse. Not doubting God for a moment, I knew I must be asking "amiss," for I knew that Christian Scientists had answers to their prayers, and that they must know how to pray aright. I also knew that they were all Bible students, so in full faith that I had found the Key to the Scriptures, I began to study. What the study of the Bible, and that divinely-inspired book, Science and Health, with the *Quarterly*, *Sentinel*, and *Journal*, have brought into my life, I have no words to express. Every discordant condition has been changed, but had there been no change except in my own consciousness I would still consider this last year worth more to me than all the other years of my life. A year ago I was filled with anxiety and worry; now I know that peace which passeth understanding, and an almost continual song has displaced the worry. The spiritual uplifting is the greatest blessing of all, and the Bible is much clearer and dearer than ever before.

That Christian Science can heal physically has been proven, too, in our home, but it has served more as a preventive of sickness than otherwise. In past years I had always been considered a delicate woman, and the previous winter I had spent considerable time in bed. This last year I have not known a moment of sickness, and our little daughter, two and a half years old, has had none of the troubles so common to most infants. A serious burn from a hot flatiron, which covered one of baby's cheeks, was healed completely in three days, with no help but that of Christian Science, and no scar whatever was left at the end of two weeks. Two deep wounds from the bites of a dog, one bite severing an artery, also responded quickly, besides many other mal-conditions.

The magnitude of the work Mrs. Eddy has done and is doing for mankind comes to me with greater force as I study on, and gratitude for it all seems a slight expression of what I feel. May my life show how truly grateful I am to God and to her.—LURA R. CURRY, Chicago, Ill.

After an unsuccessful operation, I turned to Christian Science, and was healed. Soon after this I was enabled to lay aside glasses. I was also healed of heavy catarrhal colds that used to come, and remain the greater part of every winter. I was rejoiced to be well, but did not try, for some time, to learn of the Principle that had healed me, though I would turn to Christian Science when I considered that I needed help. When I did determine to study, and try to prove the truth for myself, I seemed to pass through dark hours, but the light is growing brighter as I work away from a sense of evil into a knowledge of good,—which is freedom. I am more grateful than I can tell, to know that I am daily growing into an understanding of God's eternal government. I am also grateful to Mrs. Eddy, to whom we can turn with love and implicit obedience, and who is leading us into the way everlasting—to the reflection of the one "from whom all blessings flow."

VIRGINIA H. REMMER, Evanston, Ill.

For years I have been a great sufferer from rheumatism, sometimes being unable to leave my bed, and often having severe pains in my hands and knees. Medicine seemed to relieve me, but did not cure me. I had never known of any cures through Christian Science until a few months ago. I became interested in it at once, and decided to try whether treatment would benefit me. I was at the point of nervous prostration when I visited a practitioner who had helped a friend of mine. In two treatments all rheumatic pain had left me, and in two weeks my nerves were all right. I could sleep again, as sound as ever. My strength also came back.

I am very much interested in the study of "Science and Health with Key to the Scriptures," and hope to advance in the understanding of this Science.

MRS. L. DEMBINSKI, St. Louis, Mo.

I feel impelled to write of the blessings which are mine through the knowledge of Christian Science. I was healed of nervous prostration last March, my trouble succumbing in five weeks' treatment. I had for many years believed in what I called "Practical Christianity," and so I was in a measure fitted to receive the enlarged truths contained in Science and Health; but while I believed in the healing ever-presence of God, I did not understand, as I am now learning to do, the way to apply it. Mrs. Eddy's book is my constant guide. I do not care to think of the utter blank it would leave in my life, could I not have it ever near me. I earnestly desire to say or do something daily that may lead others to the peace and assurance which I am winning, and to know, as I have learned to know it, the healing and uplifting power of divine Love, as revealed in Science and Health.—FANNY G. T. MILES, Brattleboro, Vt.

I consider it a pleasure and privilege to tell of the many spiritual blessings which I have received,—the overcoming of disease and of sin in self and in others, through Christian Science. In my own experience the reading of the *Sentinel* and *Journal* has always been a source of comfort and joy, and it has helped to give me a higher understanding of the truth. I feel truly grateful to our dear Leader, Mrs. Eddy.

HENRY T. HERR, Topeka, Kan.

From our Exchanges.

The sure word of prophecy which will yet give us a better religion and a more confident assurance of faith, is that God reveals himself to man, not through external nature, not through portents in the sky, not through tables of stone written upon by a divine finger, not through messages dictated to passive scribes of prophecy and the law, but through the quick experience of holy souls, to men and women who have been inspired, instructed, and illuminated by the light which lighteth every man that cometh into the world, who have, out of their own struggles with faith and fortune, wrought out their thoughts of God and discovered the wisdom and love which are revealed in all human life and human experience. The words that Jesus spoke were not his own, but they came into his consciousness and into his message to mankind from the eternal wisdom rising up within him, not coming to him from without. The word made flesh reveals the God which nature cannot contain and which in the human aspects of divinity nature cannot reveal.—*The Christian Register.*

A better day has come. The denominations have come to know that their differences are without and not within the Bible, that they are apparent rather than real, that they are striving not for different faiths, but all for the one common faith; that they are not so many separately organized armies contending with each other, but that they are separate corps of one grand army going forth against a common foe, in a common cause, seeking a common victory. Through the media of interchurch alliances, conventions, and conferences, the denominations have come to know there is great breadth of ground for doctrinal agreement and spiritual fellowship. Questions that once produced schisms, secession, and bitter controversies have disappeared, and overtures looking toward closer relation are confidently made and kindly entertained.

REV. W. F. WHITLOCK, D.D.
Western Christian Advocate.

Under the title "The Doctrines that Divide," the editor of *The Christian Work and Evangelist* says, "After all, what are they worth? Not one of these divisive doctrines is either essential to holy living or final well-being. This is our standpoint, our firm conviction, the thesis we propose to maintain to the end of our writing, the basis of our hope for the union of all 'believing' souls who find that loving the one Lord and the one sole truth is better than spinning webs of fine distinction to catch souls like flitting insects, or stretching ropes of hard-and-fast dogma to trip the feet of our toiling and tired fellow-men. There surely is a better way. If we find it not, what loss is ours! If we find it, behold the gain!"

That individual or institution which serves in the awakening of conscience, best serves the cause of patriotism, religion, and humanity. The results may not be so immediate nor so spectacular as the conviction by the court of evil-doers and the execution of sentence by the law, but the results which endure and continually make for righteousness are those which come from an awakened conscience.

The Universalist Leader.

It is the rebirth of idealism, the renewal of spiritual impulse, the emergence of spiritual passion which is the great need of our day. The soul of the people cries for its deliverance, and that deliverance will only come through a new sensitiveness to the authority of Jesus Christ and the surrender of the individual life to the impulse and control of the Holy Spirit.

W. J. DAWSON, D.D.
The Congregationalist.

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to The Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of The Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to The Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number, or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By the Hon. WILLIAM G. EWING of Chicago, Ill.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* **PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

250 Huntington Ave., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,
Associate Editors.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.

Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month.

The date of expiration may be found on the address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

Specifications and drawings for the lighthouse and station which Congress has authorized Albert S. Eells and associates of Boston to construct at Diamond Shoals, off Cape Hatteras, have been filed at the office of the Secretary of Commerce and Labor. The plans have been referred to the Government Lighthouse Board for approval. The act grants $750,000 for the builders, if they succeed, in accordance with their plans, in erecting and successfully operating the light for one year, before 1909.

With a view to prevent the destruction of the natural beauty of Niagara Falls by electric power companies which seek to divert the waters of Niagara River, thousands of letters are pouring into the State Department, addressed, for the most part, to the President, who refers them to the State Department. The writers ask that the Canadian and American Governments take some action for the preservation of the Falls.

A despatch received from Minister Rockhill indicates that the anti-American boycott is losing strength. The relinquishment of the Canton-Hankow railroad to China, it is believed, has had a great effect for good upon the boycott. The imperial edict issued against the boycott is believed to be a direct mark of appreciation on the part of the Chinese Government.

A movement is under consideration by Governor McLane, to perpetuate for all time the signing of "The Treaty of Portsmouth" and the liberality of the Japanese and Russian plenipotentiaries, by distributing for charitable purposes, on September 5 of each year, the income from $20,000, the joint gift of the envoys.

More Americans have visited Yellowstone National Park this summer than ever before, according to the manager of the Monida and Yellowstone stage line. Fully twenty thousand persons have visited the park since the season opened. The record for last year was thirteen thousand.

A proposal has been made in the Municipal Council at Brussels to name a new street Rue Roosevelt, to commemorate the services of the President of the United States in behalf of peace.

The new light just erected on "The Graves," Boston Harbor, throws a beam equal to 192,000 candle-power and can be seen for twenty miles.

The appointment of Robert Bacon as Assistant Secretary of State to succeed Francis B. Loomis, was given out at Sagamore Hill last week.

Foreign.

A programme for the coming International Conference at The Hague was submitted for discussion at the Interparliamentary Congress at Brussels, August 28, as follows:—

It is desirable that The Hague Conference, in whose convocation the President of the United States took the initiative, should discuss the following questions,—

1. The points adjourned to a future date by The Hague Conference of 1899, viz.: (a) The rights and duties of neutrals, (b) the limitation of armed military and naval forces and of military budgets, (c) the use of new types and calibres of rifles and naval artillery, (d) the inviolability of private property during naval warfare, (e) the bombardment of ports, towns, and villages by naval forces; 2. The renewal of expired conventions of The Hague; 3. The organization of offers of mediation; 4. The periodical meeting of general conferences of the nations; 5. The carrying out of the resolutions and decisions of these conferences and the preparation of future conferences; 6. The elaboration of a model general arbitration treaty.

The American Minister at Caracas reports that the Venezuelan Government has closed the French cable at Caracas and other points, and that he is obliged to use land points from Caracas and La Guayra, and the Government collects twenty cents per word for the service (a distance of twelve miles). A protest has been lodged with the officials at Paris, and the French legation at Caracas has been asked for a report on the status of the affair. Pending the receipt of this report no action will be taken, but both the Government and the company are hopeful of an amicable adjustment of the dispute.

A despatch to the Foreign Office from the French Minister to Morocco, announces that the Moroccan Government has yielded to the French demands and given complete satisfaction in the matter of the arrest of the Franco-Algerian merchant, Bouzian. Apologies have been offered, an indemnity was paid, and the official responsible for the arrest has been removed. The reparation is complete on all points, and the incident is closed, thus terminating the anticipated resort to coercion through the military and naval branches of the service.

Walter Hume Long, Chief Secretary for Ireland, announces that the treasury has agreed to provide additional funds, amounting to $10,000,000, January 1, and such stock during 1906 as will produce $50,000,000 cash, to facilitate the operations of the Irish Land Act and remedy the recent stoppage of sales of land through inability to advance purchase money.

It is reported that a sum of $250,000,000 has already been set aside for the construction of a new Russian fleet. The municipality of St. Petersburg has decided to offer M. Witte the freedom of the city on his return, as a mark of honor for his successful negotiation of the peace treaty at Portsmouth.

It is expected that the negotiations between Norway and Sweden will soon result in a full agreement on the subject of the dissolution of the union. Sweden will probably give up her claim for the razing of the fortresses on the Norwegian frontier, if the forts are not armed.

At Edmonton, last week, the new province of Alberta was created. Sir Wilfrid Laurier and vice-regal party were present to officiate. The ceremony of dissolving the old territorial government and the creation of the new province was witnessed by several thousand people.

The Porte has replied to the note of the six embassies, declining to accept the scheme proposed by them for the financial control of Macedonia. The Powers, it is said, will insist on the acceptance of the scheme.

The Nippon Yusen Kaisha (Japan Steamship Company), through the Japanese consul, is placing contracts for eighteen liners with Clyde shipbuilding firms.

Industrial and Commercial.

About one thousand independent butchers attended last week in New York the ceremonies at the formal opening of the new abattoir of the company which is competing with the so-called Beef Trust. This new plant is the consummation of three years of co-operation by the five hundred retailers of the city. The main building of the new abattoir is a five-story brick and stone structure, while the entire plant occupies altogether twenty-eight city lots, or 49,000 square feet of ground.

All records for the tonnage of vessels clearing from the district of Chicago in one month were broken in August, when 1,208 ships of all kinds, with a registered tonnage of 1,289,953 tons, departed. During the same period 1,202 vessels, with a tonnage of 1,280,302 tons, arrived.

A compilation of the September dividend and interest disbursements made through eastern financial institutions by the principal corporations of the country, gives a total of $46,335,182, as compared with $41,663,765 in the corresponding month of 1904, or an increase of $4,671,417.

Figures made public at the Department of Commerce show that 1,026,499 immigrants arrived in the United States during the fiscal year ended June 30, last. The arrivals in 1903 were 857,046.

The traffic through the St. Mary's canals during the month of August amounted to approximately six million tons, the greatest for any similar period in the history of the waterways.

A large field of kaolin has just been discovered near Parkdale, Col., on the Rio Grande Railroad. Experts pronounce the field to be one of the largest in the world.

Late experimenters, using very sensitive films and very strong X-rays, have succeeded in producing good photographs with exposures of one-tenth of a second.

General.

A Chicago photographer has recently been successful in producing portraits in colors by a purely photographic process. The pictures have a poster-like appearance, and are called by the inventor "poster portraits in colors." The effect is produced by a double printing exposure and a triple manipulation of the chemicals, and is a complicated process for the amateur. The different colors are produced by a series of toning baths, of secret composition. By their aid a variety of color shades are produced, from bright red to pink and from green to deep yellow, the final result being a photograph in two colors. By a variation in the process pictures in three colors can be produced, the shadow being in one color, the high light in another, and the half-tones in a third, one color lying over another.

It is reported that a volcano, throwing off molten lava and in active operation, has been discovered in Rye Patch, Humboldt County, Nevada. Although that section has been traversed for years, the crater has just been found.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

A False Sense of God Destroyed.

SAMUEL GREENWOOD.

IN pursuing his study of Christian Science, the beginner is sometimes conscious of a sense of bewilderment in his thought of God. The outlines of his old belief respecting God become less and less distinct, until there is only a confused blur where before had been a definite mental picture or concept. The idea of a perfect creator and a perfect creation, existing apart from matter and evil, in dawning upon him has disturbed his satisfaction with what he had formerly been taught to believe; although, like the blind man whom Jesus healed, he may not at first have a correct apprehension of the objects seen. In this transition from the old to the new, when the awakening thought is rising from its fading dream and but dimly discerns the things of reality, the student seems at times to stand with neither foot on solid ground. The former things have receded from him, leaving an apparent void, and in his perplexity he may feel that he has lost his God, or that Christian Science has taken Him away.

Mary mourned in much the same sense at the sepulchre, when her material concept of the Christ seemed lost to her and before she discerned him in the spiritual or resurrected sense. It was then she uttered that plaintive lament which is sometimes repeated by those who, like her, have gone to the sepulchre of matter, where they had buried their Lord, to find that Christian Science has rolled away the stone, and that he is not there. When Mary found that the Christ was so much more than a mortal, material man, her false concept disappeared, and she gained the true idea, the Messiah which was to redeem the world.

Christian Science finds each of us with more or less imperfect or erroneous ideals of God. Paul said, "When that which is perfect is come, then that which is in part shall be done away;" and in like manner the imperfections and errors in our sense of God pass away before a more perfect knowledge. If this process has advanced so far as to erase our contentment with past beliefs, while we are yet too timorous to wholly accept the spiritual idea as presented in Christian Science,—while, like the women at the sepulchre, we are affrighted at the angel message,—we may think that our God has been lost to us. But with the gaining of a little more courage we may perceive our risen Lord,—waiting by the sepulchre; and lo, all life begins anew for us.

A false sense of God ought to be lost, for it brings no blessing to its possessor, but holds him instead in bondage to the errors he attributes to Deity. If our mental picture of God has been formed after the fashion of human frailties, if it represents Him as fickle-minded, as liable to anger and revenge, or as taking cognizance of evil, we shall never outgrow these frailties in ourselves until our concept of God improves. Men naturally and unconsciously become like the God they worship. Although we may have derived a vague sort of comfort from the belief that God is much like ourselves in that He sees all the misery that we see, and sympathizes with our troubles much like our friends, yet at the last there was always a dull aching at the heart because He could not or would not save us from them. There are many sad and sore Christians to-day believing that God looks serenely down upon their suffering, that He sees their loved ones torn from their side or laid upon beds of anguish, yet turns a deaf ear to their prayers, or willingly permits the continuance of their distress. What a distorted image to hold of divine Love, whose presence ever destroys fear and suffering!

The belief that God ever did or could do whatever is despicable in a mortal, or that He ever knew or could know what is wrong for man to know, is a very bad belief that we should be glad to lose. The true idea of God must be nobler, more exalted than the best man we know. He must be more just, more lovable, more faithful, and more helpful than the best man has ever been. If our thought of God does not transcend the highest good we can conceive in human nature, or if it does not lift us above the sins and discords of mortal existence, and bring out the best and noblest within us, then we have not yet begun to know what God, infinite good, is.

We should be grateful for whatever destroys our delusions about the nature of Deity, no matter how long we have believed them, nor how cherished have been their associations. Nothing but the absolute truth about God can redeem man from error. The transition between the material and the spiritual thought of God, between the parting from old religious ties and the recognition and acceptance of a new and higher idea of God, may seem as a lonely wilderness, a place of desolation and darkness where no God is, but it is the threshold over which we pass into a larger consciousness of truth, where the new heaven and new earth begin to appear. If the light of Christian Science, shining upon our shadowy and imperfect picture of God, has dissolved it, it is only that its place may be taken by something much brighter and holier than we had ever known.

The idea of God which is taught in Christian Science so far transcends the general beliefs concerning Him that we must ascend into more spiritual planes of thought in order to apprehend it. The clouds and mists of the valleys are left behind as the climber nears the mountain peak. And so the mists of mortals' material beliefs are left behind as Christian Science lifts human conception above the evil and material until it reaches the perfect idea of being, wherein God is the infinite Principle, Love, the all-pervading good that knows no evil, ever enfolding within His consciousness all that He hath made.

Our own experience must decide whether or not we are worshiping the true God. One cannot note how full of misery and wickedness is earthly experience, without admitting that something is either badly wrong with the Supreme Being or with the human concept of Him. Mankind have continued for ages in the throes of suffering from which their God has not delivered them, and to whom they have almost ceased to look for aid. The thoughtful student may wisely ponder the question whether such conditions will ever pass away until mortals improve their beliefs regarding the Divine character and government.

History bears fearful testimony to the evil results of

worshiping a false God, its pages being dyed red with the blood shed in His name. Wide trails of the bitterest strife and persecution, crime and cruelty, have marked the course through human history of the beliefs in a cruel, revengeful, unforgiving God. We know to-day that this sense of God was a mistake, an unreality, and that those who did such things were only carrying out the will of what they supposed Him to be. The world rejoices that such a sense of God is passing away. It is likewise true that the sickness and misery of earth exist in consequence of a false concept of God, that they do not express the nature or purpose of Him whose will Jesus did when he destroyed these conditions.

That Christian Science teaches the truth about God is evident in the betterment it has wrought in the conditions of its believers, lifting them out of the depths of despair into which disease and sin had plunged them, and from which neither medicine nor their religion had been able to redeem. As humanity's thought thus rises toward the apprehension of a perfect God, its progress will be marked by more harmonious conditions, by better health and increased spirituality, purity, and love, and these evidences are the only satisfactory proofs that God is being understood aright. When the human understanding reaches the full significance of what Christian Science teaches of God, all evil will be left behind. It will disappear as a seeming shadow in the effulgence of God's presence.

The Lesson-Sermon and Its Reading.

REV. ARTHUR REEVES VOSBURGH.

IN the Lesson-Sermon which is read in the Christian Science churches there is provided an order of service that gives all the advantages of a definite standard, order, and unity of thought; while in the study required to grasp and elucidate the meaning of these Lessons there is a constant call and incentive to original thought and effort, both on the part of the Readers and of the congregation. In other words, the Lesson-Sermon constitutes an order of service that gives a system, dignity, elevated direction, and tone to the worship in the Christian Science churches, while it in no way curtails but rather inspires to original, individual study.

In giving us this Lesson-Sermon our Leader, Mrs. Eddy, has ordained the Bible and Science and Health as our impersonal pastor. The Lesson is pregnant to us with a life-giving meaning just in the degree that we find in it the very Word of God,—the Word of the great Shepherd who is thus conveying His meaning and message to us.

Thus it is evident that in the office of the Reader is found the highest opportunity and the deepest responsibility. The Reader has taken the place of the preacher; and as the standard given by the apostle is, "If any man speak, let him speak as the oracles of God," it is with such clearness and conviction that the Reader is to deliver the message found in the Lesson-Sermon. The Manual has indicated what are the first essential requirements of Readers. It is expected that the reading of each Lesson-Sermon shall be with a clear perception and conception of its own individual message, and that the manner of its delivery shall be such as will best express this meaning to the hearer.

It has been the writer's privilege to attend the Sunday services in many of the Christian Science churches, large and small, and always there has been manifest the same characteristic earnestness, dignity, sweetness, and power. With relatively few exceptions the reading has been intelligent and fitting, and revealed due care in preparation. And yet, withal, there comes an increasing sense of the possibilities and the demands yet to be fulfilled in making the reading of the Lesson all it should be. There is set before the Churches and before the Readers a high goal, and there is need of emphasizing to ourselves what has been noted in the editorial columns of the *Sentinel*, the requirement of a due preparation for the work of the Reader,—a preparation in general equipment and a preparation sufficient in the case of each Lesson.

In all this it is not to be lost sight of for a moment that here as elsewhere the one rule is that "The preparations of the heart in man, and the answer of the tongue, is from the Lord." Only by awakened spiritual discernment, only as the Readers are directed by the Spirit of truth, will the theme of the Lesson and the footsteps of thought that are involved in its sections be truly grasped. Only in this illumination and inspiration can there be gained such an eager interest in each idea to be presented, such a conviction of its transcendent power and beauty as will bring to the hearer vital interest and conviction. Out of such preparation reading must be spontaneous, intelligent, and potent to comfort and heal; a reading that is truly "in demonstration of the Spirit and of power."

In reaching this demonstration certain very evident footsteps are involved. First, manifestly, is the grasp of the Lesson thought, the line of development and the distinct steps that mark its unfolding plan; while in the actual public reading the ideal should find a spontaneous utterance, marked by clear and true enunciation, pronunciation, emphasis, intonation, and inflection. The demonstration has not been completed until these have been reached; and this means intelligent attention to all these requirements.

By way of illustration how, through worthy or unworthy rendition, the power and beauty of a passage may be either exalted or destroyed, let two passages that have come in the Lessons during the past few months be noted. These are used simply because they come now to the memory of the writer. One is the passage from 1 Corinthians, 15 : 55, "O death, where is thy sting?" As heard in one of the large churches this was read with all the emphasis and inflection thrown upon the word "sting." Doubtless nearly or quite every one who heard it was familiar with the passage, doubtless the Reader fully understood that the question was only the form used to indicate a most emphatic denial that death, in reality, has any sting. Yet the emphasis was such as would indicate that death has a sting, somewhere, and that the Reader's supreme quest at that moment was to find it.

The other passage is that which marks the supreme event when Jesus appears first to Mary on the morning of the resurrection, and Mary, dazed with grief and disappointment, does not recognize him. We can doubtless but feebly realize the intensity of feeling and the transcendent interests that were centered here, when Jesus calls her to recognition and hope by only pronouncing her name, "Mary;" and who may measure the intense love and loyalty that were uttered in her fervent response, "Rabboni,"—My Master? But as this was read from the desk, Jesus' utterance of the word "Mary" was in a brief, matter-of-fact tone, with a downward inflection, and Mary's impassioned response was the same. The tone and inflection might have indicated that this was only the giving of a watchword and counter-sign.

All this is written only by way of illustration and suggestion. The kind of special study and training that will best fit the Reader for his work, whether it shall include elocutionary drill, or shall only be along the lines of intelligent interpretation and expression, as the Spirit shall give utterance, must be largely a matter of individual guidance and determination. The necessity of a profound familiarity with the Bible passages, and with those from our text-book, an understanding and appreciation of their contexts, both from a literal and a spiritual viewpoint, goes without saying. The final solution of the problem of giving fitting utterance to the divine message, as it is divided to the Church and to the world in the weekly Lesson-Sermon, is set before the Church as one of the marks of the high goal which constitutes perfection.

God Known as Principle.

JULIA KINNEY.

THE declaration of Christian Science that "God is divine Principle," is the great revelation of to-day. Other terms, such as Life, Truth, and Love, have been applied to God in the past, but mortals have so lost sight of the true meaning of these terms that, when employed to express the nature and character of Deity, they ofttimes fail to convey the true idea. It is sometimes said that the term Principle is cold and abstract, and that Love better expresses the nature of God, but it may be noticed that those making this objection usually think of a God whose wrath was appeased by the death of His only begotten Son, who afflicts His children with disease and all manner of discords; in short, a God who is the author of evil as well as of good, of discord as well as of harmony. All this goes to show that these persons have no conception of the meaning of the word Love, much less the word Principle, which, when rightly understood, includes in its meaning unchanging, divine Love.

To the Christian Scientist, this word Principle is far from being cold or abstract, for, having learned that the universe, including man, is governed in perfect harmony by divine Principle, they are striving to learn more and more of God and His laws, in obedience to Jesus' command, "Seek ye first the kingdom of God, and his righteousness." The fact that God is Principle in no way prevents Him from being Love, but only excludes the belief in a human and imperfect sense of Love. That God is a loving Father who guards His children well, the Christian Scientist has constant and satisfying proof.

To-day it would be difficult to find two people, outside the ranks of Christian Scientists, who have the same concept of God; hence the question arises, Who is worshiping the true God? Christian Scientists are convinced that their text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, reveals "the only living and true God;" and as a proof of this they have the same evidence as was offered by Christ Jesus when his mission was questioned, —"the blind receive their sight, and the lame walk, . . . the deaf hear." Throughout the Scriptures we find that God delivers His children—those who know and love Him —from disease, sin, and discord of every nature.

In Jeremiah we read, "Where are thy gods that thou hast made thee? let them arise, if they can save thee in the time of thy trouble: for according to the number of thy cities are thy gods, O Judah." This scathing rebuke was given to those who in that time had ceased to worship the true God; and it implies very plainly that if these people had been worshipers of the true God, He would have saved them from their trouble.

Mortals at the present time are very willing to hold God accountable for all their diseases and discords, but consider Him either incapable of saving them from these troubles, or unwilling to do so. When, however, the term Principle, as applied to God, is understood, it solves many vexed theological problems, such, for instance, as that of the atonement. The original meaning of the term atone, is to be or to become at one; to be in accord with; but a false concept of God, as personal, partial, and changeable, gave to it the meaning to appease, or to expiate. Again, the understanding of God as divine Principle reveals the meaning of passages in the Scriptures which refer to the Hebrews as being God's chosen people, one interpretation of which would seem to indicate that God was partial, and that He had chosen Abraham and his descendants to be His people, to the exclusion of others, but a correct interpretation of these passages, from the standpoint that God is Principle, is that this patriarch understood and was able to demonstrate the divine Principle of being better than were others of his time; and his seed are those who, through this same understanding, manifest the faith that he did. The principle of mathematics is not partial because those instructed in this science can demonstrate it, while others cannot. Throughout all ages those who have understood God as divine Principle, have been able to demonstrate in proportion to their understanding.

Through her wonderful understanding of God as Principle, Mrs. Eddy, as directed of God, is leading the Israel of to-day out from the bondage of sickness, sin, and death. Her teachings are not, as many suppose, merely an expression of human opinion; for they unfold a demonstrable Science, founded upon Principle—God. The present age but faintly comprehends either her life or her work, but future generations will appreciate them and bless her. She has revealed to the world a comprehensible and intelligible idea of God, and her writings enable all who will to avail themselves of God's glorious promises to His children. "The Spirit and the bride say, Come. And let him that heareth say, Come. And let him that is athirst come. And whosoever will, let him take the water of life freely."

An Extract from a Letter.

A. T. M.

ON our journey from sense to Soul it is never a question of years, but always one of growth in the knowledge of Truth. The thought that growth and change are dependent upon a material body and that the years mark periods in our development, is a serious mistake. The only real development and growth is the emergence into a truer understanding of what Life is and of the truths that govern us. Is it not a very clear and simple thing to see that we are entirely mental and that the body is not man? As the body has no life of its own, it cannot change one iota of itself. To have the body express perfection we should not direct our thoughts to it, for we should be entirely absorbed in the contemplation of the perfect Mind's creation, and being thus conscious of the perfect alone, our bodies can only reflect the perfect thought, like a stereopticon view thrown on a canvas.

We are in eternity now,—living in Mind,—and should be clarifying our thoughts to see things truthfully—things as they really are. We are on a mental journey to clear thinking, and we approach our destination, the attainment of a pure and perfect consciousness, as we look away from the material to the spiritual. Our progress is all in truthful perception; without which, years and experience count as nothing. Perfection is the natural, the simple, the beautiful, the desirable. It is the standard which Christ Jesus gave us, and he never set us an impossible task; let us therefore not contemplate the years or the body, but let us contemplate the Mind that was in Christ. The thought of added years should cease, and the perception of the perfect creation and perfect image absorb our interest; then will lawless decrepitude be impossible, and matter, the counterfeit of substance, will fade away as mist before the recognition of the spiritual.

[Written for the *Sentinel.*]

The Eternal Now.

JENNIE WALBRIDGE BRIGGS.

THERE is no past, 'twas but a dream,—
A phantom of the things that seem;
The future is not ours, to say
What will be, whether yea or nay.

We live in the eternal now,
While Hope with her immortal brow
In glad fruition sweetly sings,
And Joy has lost her roving wings.

Now Peace to sweet Content gives birth,
And joins the circle round our hearth:
While over us pure Love doth shine,
And shed a radiance all divine.

Bells Brought Tidings of Peace.

The ringing of the chimes in the Christian Science church, last evening, conveyed to the people of Concord generally the signing of the Treaty of Portsmouth.

In Portsmouth there was firing of cannon and blowing of whistles, but the plan adopted by the authorities of the Christian Science church had more of meaning, as bells and chimes since ancient times have been made use of to herald tidings of peace and joy.

On this occasion the Doxology was played, and as the words are so appropriate they are appended:—

Be Thou, O God, exalted high,
And as Thy glory fills the sky,
So let it be on earth displayed,
Till Thou art here and now obeyed.

Concord (N. H.) *Patriot.*

[The ringing of the chimes as an announcement of this important event was by the special request of Mrs. Eddy. —EDITOR.]

Beautiful Windows for First Church of Christ, Scientist, Concord, N. H.

The beautiful colored glass from the celebrated studios of John Hardman & Co., England, for the openings of the great north and south transept windows of First Church of Christ, Scientist, of this city, will be seen by the public for the first time at the regular church service to-morrow [September 10]. These large windows represent the highest order of artistic workmanship in glass decoration, and their rare beauty of classic design and rich coloring make them notable works of art. These worthy masterpieces fittingly adorn the noble building for which they were specially designed.

The windows are the gift to Mrs. Eddy from First Church of Christ, Scientist, of New York City, which church gave the generous sum of ten thousand dollars for this purpose.

The architect of the church, Mr. Francis Richmond Allen of Boston, commissioned the Church Glass and Decorating Company of New York to glaze the openings of the transept windows with colored glass from John Hardman & Company of Birmingham, England. The figure glass in the south transept illustrates the command of Christ Jesus to his church as reported in the tenth chapter of the Gospel according to St. Matthew: "Heal the sick, cleanse the lepers, raise the dead, cast out devils." This is very beautifully done by portraying in the four large openings of the south transept the following incidents in the life of the Master: His healing the sick, cleansing the leper, raising the dead, and freeing the possessed from the power of evil. The glass in the north transept window is devoted to two subjects: one illustrating the 21st chapter of the Gospel according to St. John, and the other the third chapter of the Book of the Acts of the Apostles. The first represents the appearance of Christ Jesus to his disciples after the resurrection beside the Sea of Galilee. His glorified presence, which banished the gloom of the crucifixion and confirmed his victory over death, brought them great joy. This glad meeting with their risen Master, at the commencement of a new day, and the morning meal of which the Master and the disciples partook, is commemorated by Christian Scientists in their Communion service. The second subject depicts an incident of healing by the early church. The Master was no longer with them, but his followers, true to his commands, were doing the works he had promised. The scene is at the Gate Beautiful, where the Apostle Peter says, "Silver and gold have I none; but such as I have give I thee: In the name of Jesus Christ of Nazareth rise up and walk." The subjects of these windows are most appropriate, as they clearly bring before the spectator that the works of Christ and his church were not merely to preach, but above all to heal the sick and the sinful.

The artist of these fine windows has been particularly successful, not only in arranging the various groups so as to make plain to the most commonplace mind the subjects, but he has also given them a quality that enhances their artistic value and places them high among works of beauty and art. It is evident that he has studied very intelligently the text-book of Christian Science, "Science and Health with Key to the Scriptures" by Mrs. Eddy. This is made clear from the expression of the Master's countenance, as there are no indications of the presence of that kind of human pity which weakens and destroys, but on the contrary it is marked by that Divine compassion which heals. These windows are certainly grand sermons, and again demonstrate the value of pictorial art in the crusade against error, and in the setting forth of truth. Moreover, the scenes depicted in these windows demonstrate the power of Christianity to heal the sick as well as the sinful.

The regular Sunday morning service will be observed in the church to-morrow, and all are welcome.

The Concord (N. H.) *Daily Patriot.*

The individual who would be a Christian Scientist must first gain an exalted sense of Deity. God must be enthroned in the consciousness as supreme. A better understanding of the nature and character of God broadens and elevates the human mind, and it begins to discern the truth of Jesus' command, "Be ye therefore perfect, even as your Father which is in heaven is perfect," and Paul's admonition, "Let this mind be in you, which was also in Christ Jesus," and to think on those things which are true, honest, just, pure, lovely, and of good report. Thus thought becomes more spiritual, the separation between good and evil is more easily accomplished. God's eternal laws are recognized at least in a measure, and the great biblical truth that God made all that was made and it is good, becomes an important factor in the consciousness of such an individual. With an exalted sense of God as supreme, omnipotent, omnipresent, and omniscient, embracing all life, all intelligence, all power, all true being, all law, the query naturally follows, "Whence comes the changing, transitory, sin-laden, and pain-racked condition of consciousness commonly called human existence?" Does such an abnormal condition of things emanate from an immutable God whose laws are changeless? Certainly not, and Christian Science helps the thinker to see why this abnormal phenomenon is not, cannot be, the offspring of Deity. That sin, misery, and false human theories abound, no one will deny, but that they exist as part of God's plan, Christian Science emphatically denies, because God's creation is perfect. Then to a consciousness which has been transformed by the renewing of the mind, the things which are changeable, fleeting, sinful, and discordant are entirely outside the realm of the real and must therefore be classed as unreal, and the condition of thought which is sufficiently exalted—spiritual—to know this, can and does displace the erring beliefs resident in the human mind, and the inevitable result of such action is the healing of sickness. But in such healing the Christian Science practitioner does not stoop to the level of suggestion which, according to our critic, has been and is being used by mesmerists, faith curists, mental healers, hypnotists, quacks, and reputable physicians. Suggestion is the operation of one human mind controlling another through statements which the operator himself does not always believe.

Adherence to the spiritual teachings of Christian Science renders of no effect all the theories about suggestion and all the laws and rules of psychology as taught in the schools, and it is to be deplored that Christian Science, which is a practical application of spiritual law, should be considered from the basis of psychology as taught to-day.

The Lectures.

Des Moines, Ia.

Edward A. Kimball lectured on the subject of Christian Science, July 11. Governor Cummins introduced Mr. Kimball in the following words:—

I accepted the invitation to introduce the speaker for no other reason than that it gave me another opportunity to express the appreciation which I increasingly feel of the value of the work of all religious associations. I venture to say that this religion is one which impresses me more deeply day by day. I have had a better opportunity the last three or four years for observing the influences of Christian work than I have ever had before. I have had a better opportunity to weigh and attempt to measure the imperative necessity for Christian work than I have ever had before. I shall not speak, I am not competent to speak, I am not worthy to speak of the Church as an instrument of safety, of salvation in the next world, but I am competent to speak, and I feel that it is one of the highest missions imposed upon man to speak of the Church as an instrument for the salvation of men and women in this world. The age in which we are living has many peculiar characteristics. I need not dwell upon the mighty forward advancement made in our own country in the last century, and as proud as we are of the growth, which is unparalleled in the history of the world, it is attended with dangers, it is accompanied with perils, it is surrounded with temptations, the like of which never surrounded or never beset the human race before. I speak naturally from a public standpoint. I speak instinctively of the Church and of the tendency of religion as allies of good government, as defenders of pure and progressive society. It is more difficult to be upright, honest, and courageous at this hour than it ever was before; and what we need at this time is redoubled energy upon the part of every lover of his country, of every lover of society, of every lover of humanity, to better understand and more faithfully execute the duties that progress and civilization, of which we are a part, have imposed upon us.

I am here to-night simply because I know that you are attempting hour by hour to do good and appreciate all our relations to each other and our relations to the Ruler of the universe, and to make them a little clearer, a little plainer to the human heart and to human understanding. I am here because you are inspired to the high duty of teaching humanity to perform, to recognize, and to enforce these duties and these relations. We must perform all the duties of life with fidelity and with knowledge if we are to accomplish the victories which the patriot and enthusiast have indicated for us. It is necessary, not only that you render to your fellow-man the things that are his, but it is necessary that you shall perform the duties of citizens in the right light, and obey the commands of the Master in whose service you have enlisted. It is just as faithless to the world and to those who are around you to place any man or any woman in a position of trust, believing him or her to be dishonest or careless, as it is to withhold from your neighbor the things which belong to your neighbor. I think one of the greatest missions in which the Church is engaged is to see that the plane of better morals is lifted up, and to see that all humanity is led to a higher level than the level upon which we are now living and the atmosphere we now breathe. I have often said, and I repeat it to you now after years of observation and close intimacy, that I think the churches of America are the most potent factors in the progress and steadiness of the people that can be observed in our nation; and if their protecting and their guarding influence were withdrawn, this society of ours, as we have organized it, could not exist a single year. The only thought in my heart at the present moment is one of congratulation to find before me so many good men and good women who have come here to know how they can live better, to know more clearly what they ought to be. Predicting for you all the pleasure and the profit which flow from this discourse pitched upon a high and spiritual plane and devoted to the good of humanity, I have the pleasure of introducing to you Mr. Kimball of Chicago.

The Register and Leader.

Christian Science at the North Dakota Chautauqua.

The North Dakota Chautauqua Assembly this year surpassed that of all previous years in attendance and in the high quality of its educational advantages and entertainments, and the Christian Science movement on the grounds chronicled a more fruitful season of labor than hitherto. The assembly opened July 1, and Rev. Arthur R. Vosburgh lectured on Christian Science July 2. Though our lecture occurred at so early a date, a large crowd gathered in the auditorium and gave close attention to the words of the speaker. The rare opportunity of presenting a lecture on Christian Science to so cosmopolitan a gathering as that always to be found at a Chautauqua Assembly, is very gratifying to the Christian Scientists. Besides those who came to the lecture a number of persons came from a distance to learn of Christian Science at the Reading Room or to receive treatment, having learned of the establishment of this work on the grounds. This year better organization was effected, committees at many points being appointed to work for next year. The truth gathered from the lecture, the reading matter, and personal conversation, carried in mind and heart to many parts of our State and beyond, is an incalculable influence for the spread of the healing gospel.—MARTHA SUTTON THOMPSON.

Christian Science at the Capital.

Department of Justice,
Washington, D. C., April 29, 1905.

Mr. Calvin A. Frye, Pleasant View, Concord, N. H.

Dear Brother:—We are all aware that this capital city is illumined by the brightest stars in the political firmament, and it occurred to me that it might be of interest to our beloved Leader, Mrs. Eddy, and the other members of the Pleasant View household, to know of the attitude toward Christian Science maintained by some of the people whom the world has pleased to honor.

In our last Wednesday evening meeting, April 26, at First Church, Moses E. Clapp, United States Senator from Minnesota, stated that he had been healed of rheumatism of a severe type, after medicine had been given up. He spoke with much care and deliberation. He has been a regular attendant at the services in First Church for quite a while. United States Senator Burton of Kansas has also attended First Church here for some time, and recently expressed himself as being much pleased with Christian Science. Congressman Vandiver of Missouri and wife are worshipers at Second Church here. They have been in Science some time. There are other congressmen and other notables here, I understand, who are much interested in Christian Science or who are Scientists, but I am unable to give their names. Chief Justice Fuller has two daughters who are Christian Scientists.

Having no personal acquaintance with Mrs. Eddy, and now knowing whether this bit of information would be interesting to her, I send it to you, and leave it entirely to your judgment whether or not it shall be brought to her attention. With much respect, I am,

Sincerely yours,
VINTON A. HOLBROOK.

He that can be true to his best and secret nature—that can, by faith and patience, conquer the struggling world within—is most likely to send forth a blessed power to vanquish the world without.—MARTINEAU.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

"The things that be Caesar's."

It seems necessary, even at the risk of wearying some of our readers, to repeat what has been said in an earlier issue relative to the exploitation of business enterprises in the guise of demonstrations of Christian Science, and the attempts which have been made to secure the financial co-operation of our people in such undertakings.

We copy the following from the *Sentinel* of February 12, 1903:—

"Some of the practitioners whose cards appear in the *Journal* complain that they frequently receive letters and circulars soliciting them to purchase merchandise, subscribe for the stock of newly organized corporations, embark in real estate speculations, and in various ways engage in business enterprises of which they have no information other than that the authors of the letters and circulars claim to be Christian Scientists.

"It is not our purpose, nor do we understand it to be within our province, to inquire into the merits of these enterprises and pass upon the status of those engaged in them, although we are sometimes solicited to do so, but we think we may be permitted to state that practitioners do not insert their cards in the *Journal* in order to receive these business propositions, and if we may judge of the feelings of all by the letters received from a number, the communications are not acceptable to them.

"If we may offer a word of advice to our friends who send out these letters and circulars, it is that every business proposition should stand upon its own merits, and that the promoters of an enterprise are liable to be honestly mistaken in supposing that it is one to be certainly successful and extremely profitable. In case of failure we feel sure that they would be considerably chagrined by the recollection that in urging others to invest their money because they are Christian Scientists, they had made use of an argument which placed the transaction upon the plane of sentiment instead of deliberate business judgment. There is a radical difference between the taking of our religion into our business and the taking of our business into our religion, and if we abstain from doing the latter we shall not be subject to the criticism that we are making merchandise of that which is most sacred.

"To our friends who are in receipt of these communications, it may seem needless for us to say anything further, but we shall hazard the advice that every business proposition should be capable of surviving thorough investigation, and that such investigation should be made before money is invested in any enterprise; also that when the surroundings of a proposed investment are such as appeal to sentiment, this should not be allowed to weigh against the facts that may be ascertained through careful inquiry.

"To those who are without business experience, and especially to those whose limited capital is necessary to their support, we suggest that the uncertain hope of large returns from untried and immature enterprises should be discarded in favor of the certainty of established, conservative investments, wherein safety and permanency are the controlling factors, even if the promised return seems small."

ARCHIBALD MCLELLAN.

"Confess your sins."

From the earliest times the confession of sin has been taught as a religious duty, and in the Mosaic teaching restitution, sometimes fourfold, was insisted upon. Varied opinions have been entertained as to the best way of confessing sin, but some of these, unfortunately, have not emphasized the necessity of forsaking the sin which is acknowledged, to say nothing of making restitution for the wrong done to others. In Christian Science a quickening of the moral sense usually accompanies the healing, and some are troubled in relation to their immediate duty concerning past or present wrong-doing. The question is sometimes asked, "To whom should sin be confessed?" To this it may be answered that the first step is undoubtedly the unreserving admission to one's self, in the light of Truth, that every wrong thought, word, and deed is sin, and that all sin must be abandoned. The tendency of mortal mind is to excuse, and even to justify wrong,—a condition which renders clear views of Truth impossible. To declare God's allness, and to deny that sin is real or that it has power over us, is a long step toward the realization of harmony, and prepares us to take the next; viz., the giving up of the "treasures of wickedness," which, the wise man said, "profit nothing." Simply to confess a sin to a fellow-mortal may not do much for one's real progress, even though the motive which prompts the confession be sincere; the important thing is the forsaking of the sin, and the readiness to take each step demanded by divine Love.

The following case shows how divine wisdom leads thos who seek the aid of Truth away from the devious paths o sin and its effects. Some years ago, a patient, whose heal ing was slow, confessed to the practitioner the forging o a will, by which means a large sum of money had bee secured, and it was supposed that this confession was a that justice required. After receiving further help, willingness was expressed to "donate" to the rightf owners the money wrongfully obtained, but without a mitting the forgery to them. This willingness to gi up the money was a further step in the right direction, a prepared the way for the final one; namely, a frank acknow edgment of the wrong, and restitution so far as this w possible. An obedience like this has the assurance of divi mercy, and the protection of the divine law of justice whi is ever a defence, never a menace to the just.

Sincere sorrow for sin will give clearness of vision and bring a rich harvest of spiritual joy. It also brings health and happiness, and is far different from the "sorrow of the world" which, according to St. Paul, "worketh death." Of the former it may be said, in the words of the poet,—

> Cease the sin with the sorrow! See morning begin!
> Pain must burn itself out if not fuel'd by sin.
> There is hope in yon hill-tops, and love in yon light,
> Let hate and despondency die with the night.

ANNIE M. KNOTT.

Watching vs. Watching Out.

Every Christian Scientist who through practical experience has become familiar with the variety and abundance of error's seductions, appreciates the significance of the Master's injunction which our Leader has chosen for the motto of the *Sentinel*, "What I say unto you, I say unto all, Watch." He very soon realizes that not only growth and success, but safety and peace are dependent upon the constancy and intelligence with which he fulfils its behest. He also learns eventually that he alone is prepared to watch wisely and well who has acquainted himself with the nature of the disabilities he is likely to encounter, and who with adequate equipment maintains that spiritual alertness through which he is able promptly to ward off or destroy any foe that may appear.

Study and practical work in Christian Science speedily brings error to the surface and gives a new and more correct

Digitized by Google

apprehension of its nature and pretences, its asserted laws and *modus operandi*. It is necessary that evil's progeny be thus recognized before they can be destroyed, and it is equally important that they be destroyed as soon as recognized; otherwise the enlarged acquaintance with the seeming multiplicity of their forms and the subtlety of their disguise will have the effect of an increase of their number, and as a result fear is nurtured rather than dispelled.

If we fail to know the claims of evil for what they are—the nothingness of illusion—and enlarge upon the incidents of their seeming, we are likely to exhibit that frightened and frightening bewareness which can but lead others to think that, despite our declaration "There is no evil," we are very decidedly and very old-fashionedly fearful lest this "nothingness" unexpectedly smite us.

In our novitiate we are likely to recognize error far more idly than we are able to effect the demonstration of h. More than this, having been awakened to the far-hing significance of mortal mentality for ill, in human erience, Christian Scientists have very special reasons being on their guard lest they become alarmed and thus lose and communicate an entirely unscientific state of ght to others. Said a keen but kindly disposed ob-er, "For the life of me I can't see how a Christian Sci-st can have any fear or superstition; his whole faith philosophy is dead against it." The answer was, "He sn't." The man smiled and said, "But, my dear fellow, won't deny that"—"No," broke in his friend, "I ainly cannot deny the lamentable weakness and incon-ency of human nature; we are as yet only students, and nners at that; but to be a Christian Scientist is to know evil is impersonal and powerless; that, whatever the ning, there is in truth no *thing* to fear, and that a child God cannot be frightened, even by the thought of the sibility of fright. It is, therefore, our serious and con-ous business to keep our Lord's commandment, 'Fear ' and we have reason to be humbled and ashamed in so as we are not doing it."

he trail of the human invariably appears when, instead carlessly guarding against understood antagonisms with poise which attends scientific apprehension, we trem-gly peer here and there in the dark, looking for an indefinite somewhat which we shall be greatly alarmed to see. Superstition always affiliates with the sense of fear, and nowhere does it grow more luxuriantly than in the ught of a scared religionist. We may be keen to foresee he ideal good, yet fail pitifully to perceive the true way of attaining it, and the right of our purpose renders yet more deplorable the wrong of our method.

The contrast between a calm watchfulness and a perturbed "watching out" is too distinct to escape the notice of an observing world. Watchfulness means thoughtful forelooking from the citadel of conscious adequacy. "Watching out" describes a timid endeavor to ward off an unrecognized but presumably impending ill. He who watches rightly minimizes the manifestations of evil, is quiet and confident; he who is trying to watch out talks much of the possibilities of error, explains, multiplies, and doubts as to the outcome. The one knows the lions are chained, and goes forward with freedom and inward rejoicing; the other peoples the air with dragons and indulges in a strained and elaborate caution. The one rests in Principle and conforms to its rule; the other is first of all nervously anxious to cover every possibility, and later no less troubled lest something has been omitted. The one identifies asserted enemies with false sense, and effects their annihilation through the understanding of Truth; the other confounds them with personality, and thus makes them real and persistent. The one stands ever as a consistent and effective exponent of the healing truth; the other must ultimately reach the solid ground of Christian Science, on which he too can stand and say with the Psalmist, "I will fear no evil, for thou art with me."

JOHN B. WILLIS.

Letters to our Leader.

London, Eng., August 12, 1905.

My Dear Teacher and Leader:—I only write you when I have something cheery to say. We had our first service in the available half of our new church last Sunday. We were compelled by law to vacate the old building (as the limit of our occupancy had been extended to the utmost), in order that it might be pulled down. We were grateful to have part of the new building far enough advanced so that chairs could be hired and we could hold our services there. The first half is paid for, and we are very thankful that, while doing this, our contributions to The Mother Church have increased.

I know that God is rewarding you, dear Leader, for your faithful, unselfish labors and devotion to His cause—and that God, who is Love, protects and guides you.

From your loving and grateful student,

MARJORIE COLLES.

New York, May 9, 1905.

Dear Mrs. Eddy:—I feel that I want to write and thank you for the new By-law with regard to the music in church. When I first read it, my feeling was one of gladness, and ever since then there has been a sense of increasing joy and freedom in my work. I believe that in proportion as the spirit of this By-law is obeyed by those who give and those who receive in the musical service, will it bring a sense of that harmony which "ear hath not heard."

Will you pardon me for expressing a thought which has been in my mind for months? While attending a performance, last winter, of "Die Götterdämmerung," that wonderful climax of Wagner's "Ring" cycle, I was more than ever impressed with the beauty of the ethical motive which runs, like a golden thread, through Wagner's music-dramas, and which is expressed by many others among the great poets and dramatists. It is the thought of surcease of suffering to the world through the spiritual perception, the self-sacrifice and love of woman. Goethe says, "The woman-soul leadeth us upward and on." In your thought, dear Leader, the world is coming to see, more and more clearly, the sweet fulfilment to this age of this longing and prophecy. All mankind are your debtors, but woman especially owes loving gratitude, for to her, through you, has come that greatest privilege of grandest service.

With love and gratitude,

FLORENCE E. BURTIS.
Organist Second Church of Christ, Scientist.

Boston, Mass., August 17, 1905.

Beloved Leader:—A few days ago, while reading your beautiful, healing poem, "Christ My Refuge," and trying to gain some clearer sense of the footsteps therein portrayed, the seven ascending steps of the Beatitudes (Matthew, 5 : 3–9) stood out before me, and I noticed that there were just seven verses in the poem—seven complete ascending steps in human experience. With closer study each verse seemed to reveal to me the clear spiritual interpretation of each corresponding Beatitude, and I was filled with joy and gratitude that I had gained more light on those grand statements of our Master that have meant so much to me during the past few years. The ladder of Jacob's vision must have been symbolic of those seven perfect tones in the Beatitudes which combine in the grand harmony of the Sermon on the Mount; and also of Christian Science, —the essence of which is this Sermon (Science and Health, 271, 231),—for your wonderful teachings are indeed to us as a ladder let down from heaven, by which we may climb from the discords of an earthly sense to the harmony of heaven-born Science—from matter to Spirit.

I am deeply grateful to God, and to you, His faithful Messenger, that you have revealed and demonstrated Chris-

Digitized by Google

tian Science to be the way of salvation for this age, and that I have found the foot of this ladder. My life-purpose is to help others to find it, and to inspire them to climb.

Gratefully, lovingly yours,
WILLIAM R. KNOX.

Somerville, Mass., March 21, 1905

My Dear Leader:—While I cannot count the many blessings that I have received through your discovery of Christian Science—I would like to tell you of the great value that "Christ and Christmas" is to me. When I first purchased the book, some years ago, I looked it over and laid it aside with the thought, "Well, this may be all right, but it is Greek to me." From time to time I again perused it, but saw little if any more in it. Recently, on my way home, the thought kept coming to me to get that book and read it. I did so, and behold, something had happened. It was a new book! I had formerly looked at the illustrations, but now I saw, to a degree at least, their spiritual meaning. The old, material interpretation had gone, and all things had become new. The study of "Seeking and Finding" enabled me to reflect Love enough to heal a patient, for in the presence and protection of Divine light and understanding no error can enter. This new light on the illustrations gives me a better idea of your position as the interpreter of the Word to mankind, for "as we rise the symbols disappear." My prayer is that I may be patient, and faithful to the teachings of your books, which open the Bible and make clear the avenue to God. With deep gratitude, I am

Faithfully yours,
GEO. M. CLOUGH.

Lyons, N. Y., July 14, 1905.

Rev. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—The truth you teach has done much for the people of this town of western New York. I am grateful to you for giving us Christian Science; it is very dear to me, and I would like to tell you in detail how it has restored sanity, destroyed false appetite, and healed the sick. Christian Science not only gives us a desire to be better, it shows the way how to grow better. I have so many blessings to be thankful for, and it is all through Christian Science. I am a student of your student, Mrs. P. J. Leonard, C.S.D.

Your loving follower,
MAGDALENA PFEIFFER.

Cleveland, O., March 14, 1905.

Rev. Mary Baker Eddy,
Pleasant View, Concord, N. H.

Dearly Beloved Leader:—The love expressed for you by your faithful followers all over the Field, brings unbidden tears of gratitude. I thank God that your teaching, "God is Love," is returning to you in the love, the loyalty, and the works of Christian Scientists. I thank you for the opportunity of reading the many beautiful expressions in these letters week after week in the *Christian Science Sentinel*. I desire above all to be faithful.

Lovingly yours,
MRS. MARY SPARGO FRASER.

As to Republishing Articles from the Sentinel and Journal.

In reply to inquiries we will again announce that there is no objection to republishing articles or parts of articles from the *Sentinel* and *Journal*, by newspapers or other periodicals. Scientists causing such articles to be republished, however, will please see to it that due credit is given to our publications, as all matter published in the *Sentinel* and *Journal* is copyrighted. This is necessary to avoid violation of the copyright law, and also is due to our publications as a matter of courtesy and comity.

Testimonies of Healing.

Although my parents had been Christian Scientists for almost twenty years, I did not accept their religion until a little more than four years ago, when I consented to have Christian Science treatment, only as a last resort, for a case of malignant blood-poisoning. The healing was instantaneous, so far as the removal of fear and a belief in material laws, which were being held over me, was concerned; but the physical manifestations of the disease did not disappear for three weeks. I had, however, been under the care of different physicians for a month, and had gradually become worse,—losing thirty-five pounds in weight during that time,—therefore I consider the healing wonderful. I was given a copy of Science and Health, after the first week's treatment, and told that I must work out my own salvation, and I feel that the physical healing was secondary to the spiritual uplifting which took place as a consequence of my earnest perusal of this book. The benefits, mental, physical, and financial, which can be directly traced to my larger understanding of God and His relation to man, are innumerable.

Some time after my healing I was informed by the firm which employed me that their next year's contract was conditional upon whether or not I made a "good fellow" of myself; in other words, that it would be necessary for me to drink with prospective customers, and use my best endeavors to influence them to place their trade with my firm. I resigned at once, and that evening informed my teacher of what I had done, and that I would leave for Chicago at once, to look for another position. My teacher asked me to make no plans for a few days, but to declare the government of God, and to know that man has his place through divine Principle and nothing can take him out of it or keep him from it. The next afternoon, while passing the office of a large telegraph company, I was asked by an official if I knew where he could find a man competent to fill the position of chief operator, to take charge of ten or twelve employees and a large territory of wire testing. I at once applied for the position and was accepted, entering upon my new duties without loss of time or money,—the new position, from every standpoint, being better than my former one.

I presume that some who are not Christian Scientists might call this a mere happening, but I give the glory and thanks to God, through Christian Science. Numerous problems have arisen in my new position, but I find they are quickly met by the realization that man's intelligence is the reflection of the one intelligence, God, and is therefore unlimited.

Recently, while stripping some wire, the heavy knife which I was using slipped and cut my index and second fingers to the bone. For a minute the pain was intense and the flow of blood copious, but as soon as I recovered from my astonishment and began to realize the truth, and man's freedom from accidents when governed by divine Principle, all pain and bleeding ceased. I bound the fingers up and resumed my work. That evening being Wednesday, I expressed at our meeting my gratefulness for the freedom from pain or any bad results from the injury, there having been absolutely no pain or inconvenience whatever, after the first minute or two. My fingers were entirely healed before the following Wednesday, although to mortal sense they were in a very serious condition, and I was advised by several to go to a surgeon at once, as the law of germs, lockjaw, and blood-poisoning was held over me. Since coming into Christian Science, numerous false appetites, such as chewing and smoking tobacco, and the use of cigarettes and liquor, have left me.

I wish to express my gratitude to Mrs. Eddy for Christian Science, which has enabled me in many instances to "put off the old man with his deeds." I am also grateful to the Publishing Society for all the helpful literature.

WILLIAM A. PARTRIDGE, Cedar Rapids, Ia.

Digitized by Google

I desire to tell the world about the many blessings that Christian Science has brought to me and mine. A little over five years ago we moved to Texas. I was miserable, weak, filled with pain and the fear of disease, when a dear Christian Scientist was sent to me. I listened to the comforting, glorious news she had to tell me, not doubting that she was telling me the truth for which I had been hungering and praying since childhood. That night I knelt to say the Lord's Prayer with a new understanding of the will of God as all good. It made me so glad to know divine Principle as God with us. I have been healed of nervousness, fear, and an irritable disposition; of a stomach trouble which used to keep me on my bed for hours, sometimes for several days, suffering the most excruciating pain. I used to have palpitation of the heart, which would prostrate me for several hours. This trouble has made its appearance only once since I began to study Christian Science, and that was over four years ago. At first, when it attacked me, I thought I would have to lie down, but the next instant divine Principle spoke, and I felt that I must wrestle with it and overcome it. In ten minutes, with my slight understanding of the Science of being, the ailment was overcome entirely.

I am thankful for many proofs of the supremacy of Mind, in both sickness and sin. I love to see the *Sentinel* come, for there is always a message in it for me. I am thankful for Science and Health and the glorious light its teachings have shed upon the Bible. My children all love this truth, and ask for its healing with perfect trust. They know no other way but to go to God for help, and they are almost always rewarded by instantaneous healing.

My heart swells with love and gratitude to Mrs. Eddy for teaching us to know Christ, Truth. May peace and joy always be hers.—MRS. J. T. MORRIS, Marshall, Tex.

Through the knowledge of Christian Science gained by reading the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, I was enabled to overcome all the ill effects I used to suffer from poison-ivy. Four years ago, after a picnic in the woods, evidence of ivy poisoning appeared between several fingers on either hand. Knowing in Science that God creates and governs the universe through the law of Love, I found that it must be only the fear of mortals that produced all those ill effects. I overcame all fear, knowing that "Perfect love casteth out fear," and the blisters scaled off instead of spreading. The next two years, while on my vacation, I had occasion to walk through poison-ivy every day while bathing. Many persons warned me to look out for it, but I denied all belief that it had power to poison me; and I knew that the truth would protect me. I was not affected by the ivy at all and never have been since. Christian Science also healed one of my fingers, which was fractured in the last joint, crushed beyond semblance of a finger, by two bowling balls. I tried to treat it alone, but what a young medical student friend called "infected flesh" set in, and I had to ask for help from a practitioner. In a few treatments the diseased condition disappeared and the finger healed entirely. A new nail formed where the old one was torn out. An idea of how perfectly it was healed can be gained by knowing that now I use it in playing the piano as well as ever, the teaching of the piano being my profession. Christian Science also aids me each day in my work and I am very thankful for what knowledge I have of it, and will strive to know more and live it always.—R. C. BARKER, Oak Park, Ill.

I have known of Christian Science for rather more than two years and I have been identified with it for one year. I became interested through the healing of my brother-in-law, in America. I did not come to it for physical healing, but I now know how much I needed its spiritual uplifting and its restfulness, and it has healed me of many ailments and restored my sight to a state of excellence which I had not known for many years. I am a business woman, and I used to be so tired after a long day's work that sometimes I could scarcely crawl home. Now, even if I do get tired, which is seldom, I can overcome it, and reach home fit and fresh. Christian Science also helps me tremendously in my business,—an establishment of about fifty girls goes on harmoniously, work is plentiful even in times of so-called trade depression, there are fewer mistakes made, and all these improved conditions have come about because I daily realize that God is right here, both in my home and in my business. The interest in this Science is growing in Leeds, —first one and then another asks what Christian Science is, and sometimes the need for it is very sore. I am very grateful to Mrs. Eddy, because through her life-work, faithfully accomplished, I can give words of hope and cheer to many who need them. I am looking forward to the day when we shall have a church and Reading Room in Leeds. Three of us, sometimes more, meet every Sunday to read the Lesson-Sermon, which is a great help. I realize fully that Christian Science is the truth, and that it is our privilege to practise it.—CAROLINE B. GETTY, Leeds, England.

Until about three years ago, I suffered from frequent attacks of rheumatism, which were sometimes so severe that I could hardly walk. My mother and brother had been Christian Scientists for a long time, but I had never taken the trouble to investigate this truth. I could not then see how there could be anything in it, and so had always refused offers of help. An attack more severe than usual, seemed to settle in and stiffen the muscles of my neck, so that I could not turn my head. The prophet said, "But they obeyed not, neither inclined their ear, but made their neck stiff, that they might not hear, nor receive instruction." So I bore the pain for about two months, but finally in my misery I accepted treatment from my mother, although I did not have much faith that it would do me any good. The healing was slow, but in about six weeks I was entirely relieved, and have never had a return of the trouble since, although I have been exposed to all kinds of weather.

I was then ready to know more of what had helped me, and commenced reading the Bible and Science and Health, and studying the Lesson-Sermons daily. My progress seemed slow at first, but I have been richly rewarded for every effort I have made to know something of Christian Science. I now have a satisfying religion, and have been helped in many ways. I have had the gratification of proving for myself that God is very near to us, and ever ready to help us if we but surrender our human will and false beliefs for eternal Truth. In comparing my present state of mind with that of three years ago, I am indeed grateful to Mrs. Eddy for her wonderful writings, which are within the reach of every one. If in the past our heavenly Father has had compassion on us, while we were yet a great way off, how much more may we hope for help in our progress, if we are faithful and obedient.—WILLET G. RANNEY, Cleveland, O.

As we grow into a realization of the protective power of Love, fear which "hath torment" leaves us, and we rest in peace and safety. This was brought home to me last summer in a very beautiful and convincing way. We had in the early part of the summer many severe electric storms. Our summer home being in the midst of the pine woods, we seemed to feel the force of these storms unusually. One day such a storm came upon us as I was giving our little boy his supper. My first thought was one of fear, as the lightning and thunder were most startling and almost constant. The little lad sat in my lap, absolutely unconscious of any discord, and looked up at me with perfect trust and love. Immediately a sense of the protection of divine Love came over me, and I thought that as my little boy felt perfect security in my arms and knew

Digitized by Google

no fear, so was I and every member of my family safe in the arms of infinite Love. Hardly had this thought come to me, when a blinding flash and deafening crash seemed to shake the house to its foundations, but all sense of fear had vanished. I was not even startled, nor was my little boy.

Very shortly after, I learned that the house had been struck; that a ball of fire had entered the room downstairs, where four members of the family were gathered around the table, and that it had burst directly over the table with tremendous force, so that for a moment all of them were blinded. But immediately, when the quiet came, it was found that not one had been harmed in any way, and my father, who is not a Christian Scientist, said to me afterwards, "It is strange, but do you know that I did not feel afraid."

Is it not beautiful that Christian Science teaches us what it means to dwell "in the secret place of the most High"?

FLORENCE M. PRAY, Cambridge, Mass.

I never remember being without a headache and backache during my childhood. This condition developed, at the age of nineteen, into confirmed invalidism, and at one time I was confined to my bed for eight months. The skill of the most eminent oculists, physicians, and surgeons of Philadelphia was exhausted in my behalf. At the age of twenty-four I had Christian Science treatment for my eyes, which had become entirely useless. After two treatments I took off my glasses and have never worn them since. They were of the strongest make, each lens being ground differently. In less than three weeks I had much less fear of disease in a general way.

For many years thereafter, my life was divided between foolish and fashionable living and the study of so-called mental science. My copy of Science and Health, which at first had seemed such a treasure, finally reached the top shelf in our library. My thought becoming more and more darkened, I was finally overtaken with a terrible disease, from which I suffered agony daily and hourly. A relative was healed of cancer of the liver, and I at once sought help of her practitioner, a Christian Scientist. I was under treatment for six months. One day, while I was reading from Luke, 10 : 28, an inner voice told me that Christian Science was the Word of God, and that they who could hear it were blessed. I ceased treatment. Soon after this I had class instruction, and at once tried to give unto others that which I had received, gradually working my way out of the bondage of long years of disease, and finding Christian Science the holy Comforter in all ways and in all conditions of human suffering. Repeated attacks of the passage of gall stones were healed so quickly that I was never missed from my professional work.

I have tried to tell briefly of thirty years of suffering. If any one had told me, during those years, that I should have the perfect health which I have had for the past year, I would have thought it a miracle. I now know that the Truth of being, as revealed by Christian Science, reaches and heals every part of the human body, even as the Bible declares. I know of many beautiful cases of healing through Christian Science, in this small country town of West Chester, Pa.

I know there is no way to prove my gratitude to the beloved Leader of Christian Science, Mrs. Eddy, but to give out good as fast as my own growth unfolds it to me.

EDITH S. DARLINGTON, West Chester, Pa.

I wish to express my gratitude for what Christian Science has done and is doing for me. I have known of Christian Science since I was four years old, a period of about eleven years, and in that time I have had numerous proofs that God is Love and a present help in trouble. One day, while I was out skating, I fell, and to sense sprained my wrist quite severely. I went home as fast as possible and asked my mother to help me. The next morning I went to school, but the wrist was so painful that I could not use it, and we thought it best for me to remain at home in the afternoon. Still the pain did not seem to yield, and I did not attend school the next day; but the following morning, thanks to Christian Science, I was able to go to school with a wrist that was entirely healed. I have also been able to overcome chapped hands, sore throat, headache, and many other ailments with truth.

I am indeed thankful to God, and to our beloved Leader, for a knowledge of this blessed truth which heals all error.

AGNES R. HOFFINGER, St. Louis, Mo.

I cannot longer withhold an expression of gratitude for what Christian Science has done for me and mine. I was considered a nervous wreck by the medical faculty. One doctor told me that I need not expect ever to be a strong woman again. Not knowing of Christian Science at that time, I accepted the verdict, and was weak and sickly accordingly, but I wondered whence came so much suffering and disappointment, and my heart cried out for the living God. A beloved daughter was sent by our local physician to a distant city for medical treatment, because he was too honest and kind to experiment with a case he did not understand. Upon visiting her, in about three weeks, I found her in worse health and more nervous than before; then I prayed for something higher and holier than material help, and this prayer was answered in Christian Science.

I called upon a dear friend whom I had known years before, and who had been an invalid at that time. When I inquired about her health, she told me she was entirely well, having been healed by Christian Science. This served as an awakening, and I purchased of her a copy of our textbook, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and came home, leaving my daughter under the doctor's care. A new hope had, however, taken possession of me, I felt that she, too, would be healed by Christian Science,—and she was.

After coming home I devoted all my spare time to the study of the Bible and Science and Health. I was richly rewarded, for I could prove daily that I had indeed found the pearl of great price. As far as human aid and approval was concerned, I stood alone, not knowing of a Christian Scientist in the State of Washington at that time. It has been proven to me that even a slight understanding of Christian Science does wonders for us. I am trying to live in the light of Divine Science by manifesting gratitude to God, and to our dear Leader.

MRS. SARAH O. BRAGG, Colfax, Wash.

I count it a privilege to give my testimony to the value of Christian Science. Divine Love found me wandering, lonely, and without hope of relief from sin and disease. I am thankful for this blessed healing truth which came to me three years ago. To-day my life is very different,—contentment has taken the place of unrest, and understanding has displaced distrust. I have had many demonstrations of the power of Truth in the healing of sickness, and the overcoming of an unpleasant disposition,—fault-finding, hatred, almost everything that would make one miserable.

I had suffered for sixteen years with bleeding piles, and for fifteen years I was a slave to morphine, which I felt obliged to use for pain in my head and bowels. A physician said that nothing but an operation could relieve my suffering. When but four years old I had contracted a disease which made me entirely blind for six weeks. This caused my eyes to be very weak and I was compelled to wear glasses for a year, before I learned of Christian Science. To material sense I suffered all that any mortal could and live. I thought sometimes I would lose my reason, but, thank God, when this healing truth found me, in four hours old things

Digitized by Google

had passed away and all things become new. I was relieved of pain and heartache, and I was filled with joy. All that I am I owe to Christian Science. I am deeply thankful to my heavenly Father for this blessed truth that we have received through the never-ceasing love and labor of our dear Leader, Mrs. Eddy. With the aid of the Bible and Science and Health, I will continue until all the tares are rooted up and nothing remains but the wheat to be garnered in the heavenly storehouse. The Lesson-Sermons have been to me like daily food to the hungry.

My prayer is a desire to live a life that will prove my gratitude to God, to the great Wayshower, and to our Leader.—Mrs. Minnie E. Woock, Brainerd, Minn.

It is now over four years since my attention was first called to Christian Science through the reading of a case of healing given in a daily paper which I had picked up while in a drug-store waiting for a doctor's prescription to be filled. As I was at the time suffering from a complication of ailments, the most serious of which was chronic neuralgia of many years' standing, and as I was receiving no benefit from *materia medica*, I at once determined to inquire about this healing truth, of which I then knew nothing. I was soon advised by a friend who had already been benefited by Christian Science, to call on a practitioner for help. I sought only physical help at this time, and I was healed; but I soon found that I must know more of this wonderful healing power which proved to me the unreality of those excruciating pains which had caused me many a sleepless night, and which once seemed so real. To-day, words cannot express my gratitude for the many blessings received through the teachings of "Science and Health with Key to the Scriptures," which enable us to overcome discord and error of every sort, and lead us to the only true Life, God.

I am deeply grateful to God, and to Mrs. Eddy, for this glorious truth.—Emma Krueger, Oshkosh, Wis.

I used to be very bigoted with respect to Christian Science, but a relative sent me a copy of "Science and Health with Key to the Scriptures," and the *Sentinel*, for a Christmas present. Later, she mailed me an old *Christian Science Journal*. I was then in bed, unable even to be dressed, but somehow I found this *Journal* in my hands and began to read. One article stated that God has all power in heaven and in earth. This I firmly believed, because it is taught in the Bible. I began to think it over, and it occurred to me that my five diseases could not have any power, since God has all the power. I read on, and learned that God's will meant that only good should come to us, and I was very willing to pray "Thy will be done" and have good come to me. I began firmly to believe that it was God's will for me to live, to have perfect health, and to care for my children.

In three weeks I was doing my own housework. God had healed me. I did not then know about taking treatments and I did not seem to understand Science and Health, but used the thought above referred to, and believed it.

How I thank God, and also Mrs. Eddy, and those who sent me the literature. I had lost all faith in drugs, although my parents had been engaged in the drug business for about twenty-four years.

Mrs. Frank L. Elliott, Cadiz, O.

In May, 1891, I first heard of Christian Science. At that time the doctors had passed the verdict on me that I would not live over a year, possibly not six months. On Sunday Christian Science was first mentioned to me, and the next day I went to a practitioner—an all-day journey. On Tuesday, I commenced treatment. On Thursday I walked over two miles and back, something I had not been able to do for several years. The following Monday I walked six miles and back without sitting down, and was not fatigued. The next day I commenced work at carpentering, and I have not lost one day since on account of sickness. One morning, this summer, I cut my foot just below the instep, the gash being nearly an inch and a half long. It bled profusely. The next night I put on a shoe and walked several blocks to meeting. I continued to wear my shoe, and the only remedy used was the truth. This physical healing is only a small matter to the spiritual uplifting I have received. I am truly grateful to Mrs. Eddy for all of her writings, also for the *Sentinel* and *Journal*.

Henry Hazen, Marion, O.

I have been helped so much by reading the testimonies in the *Sentinel*, that I wish to tell of a demonstration I had last March in the filling of two front teeth, the first I ever had filled. I had been told that it would be very painful, and I asked the dentist to leave me alone for a few minutes. I tried to realize that there was nothing to fear, that nerves had no sensation, that God was there and that Truth is the only power. I was in the chair over three hours, and did not feel the least pain, though the cavities were large and the nerves exposed. I felt free, and was thankful when the work was done. I live in the country and am alone in Christian Science. I have attended two Wednesday evening meetings and a number of lectures. I have had very little help outside of my own reading. I have Science and Health, the *Quarterly* and the *Sentinel*, which are a great benefit to me.

I am very thankful to God, and to Mrs. Eddy, for this revelation of Truth.—Charlotte Barker, Omro, Wis.

I first heard of Christian Science in 1898, through a friend who had been healed. I thought if it could heal disease it was just what I was looking for, because I had tried all kinds of doctors and medicines and still kept getting worse. I had a hernia for twenty-four years. I had been to a specialist and he told me there was no cure for me, that not even the knife would do me any good. Then I turned to Christian Science and bought a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy. I have studied this truth-revealing book with the Bible and *Quarterly*, and now I am almost healed. I feel better than I have for years. I am very thankful to God for His great healing power, and to Mrs. Eddy for bringing to the world this blessed truth by which I am made free from sin and disease. There is none else than God who is All-in-all. I am striving to live so that I may be worthy to be called a Christian Scientist.

I. N. Campbell, South Boston, Mass.

I would like to express my gratitude for what Christian Science has done for me. It is almost eight years since I was healed of intestinal indigestion and nervous prostration. Fear was so great at times that I was well-nigh distracted. I could not sleep, even with the use of drugs, or only for a short time, when I would awaken in a fright, and I had a terrible fear of death always before me. I was in a sanitarium at the time, and had been treated by Christian Science before going there, but as I failed to see any results I gave it up. The thought came to me one night, when I was suffering intensely, to try Christian Science again. I wrote for treatment, left the institution, and from the first treatment I received help immediately. I have had no trouble since, and have taken no medicine in eight years. I am very grateful to Mrs. Eddy for bringing us this wondrous truth.—Viola B. Hintjen, Mt. Vernon, N. Y.

The upward look and cry,—yes, more of that we need when we see how prone we are to yield to what we ought to hate, when we feel how strong in our own hearts is the tendency to set up again the passions or the sloth which cannot keep their seats before Christ.

Thomas Starr King.

From our Exchanges.

The growth of a religious spirit in the settlement and adjustment of international affairs, is an evidence that the public conscience is receiving stimulation from some source which leads it on to a reasonable consideration of questions involving international rights, duties, and obligations. This is the religious spirit; it is the spirit which comes from very old teaching; it is the Pauline method of adjusting difficulties in the church, it is now become the universal method of settling difficulties between employers and employees; and now the spirit is going up higher, into the work of nations themselves. This means a new patriotism; that patriotism which is born of a pure religious spirit; it means devotion to a higher principle; it means the patriotism of personal sacrifice, and it is a higher type of patriotism than that exemplified on the battlefield.

CARROLL D. WRIGHT.
The Standard.

The passion for right doing excites all the active powers of the mind, and sets before the doer of righteousness the endless task of attainment. It is a desire which, like the pursuit of truth or the love of beauty, is the source both of satisfaction and discontent without end. There is a so-called ethical passion which mimics this noble attribute of the soul, and which spends itself in passionate protest against the works and ways of other men and women. It spends itself in disparagement of the world in which we live, and wastes in criticism of others the energy which ought to have been used in personal growth and righteous deeds which might serve to make this world a happier and a safer place to dwell in.—*The Christian Register.*

God has made man for final good, and while we may admit a severe discipline along our way to that happy goal, we cleave to the truth that He will not permit the most wayward feet to wander forever from the destined end. He confers no fatal liberty, since both love and justice forbid. Even more divine would it be to violate the greatness of free-will than to suffer it to bear a soul toward final extinction, or an eternal doom of woe. Hence freedom and perversity in man cannot justify an endless hell in the universe of God.—*The Universalist Leader.*

However rampant godlessness may seem to-day, no day has given more evidence of a human thirst for God, a longing of minds disillusioned by the pursuit of unblest goods to find Him who is the strength of the soul. The supreme achievement, peace, glory of our humanity, is just this, to come consciously home to our Father God. Only in finding Him we find our true self; only in knowing Him whose we are, we know what we are.—*The Outlook.*

It is the privilege of the believer to become like God. To the full extent of his being he may be filled with the Holy Spirit. In the entire range of his nature he may possess the attributes of God. To the extreme limit of his powers he may live the life of God. All to whom his influence may reach he may move by the power of God. This is the life of heaven. This is the work of heaven.—*The Watchman.*

Men acquire heavenly life by living according to His Word in all the relationships of life, in business, in the home life, in social life, and especially by acting justly, honestly, and faithfully in one's business uses and duties.

JOHN WHITEHEAD.
New Church Messenger.

We understand the spirit of the gospel of Christ only when we get its thoughtfulness, forbearance, gentleness, into our life. We begin to be like Christ only when in us is born the desire to be of use to every one we meet.

Forward.

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to The Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of The Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to The Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number, or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico. $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

Works on Christian Science

Written by Rev. MARY BAKER G. EDDY

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Enlarged and Revised, 1902. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid $3 18

Two to twelve books (cloth only) to one address, each, prepaid 3 00
Twelve or more books to one address, each, prepaid 2 75

Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid 4 00
Twelve or more to one address, each, prepaid . . 3 75

Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid . . 5 00
Twelve or more to one address, each, prepaid . . . 4 75

Levant, divinity circuit, leather-lined, round corners, gilt edges, silk-sewed, heavy Oxford India Bible Paper, wide margins, each, prepaid 6 00
Twelve or more to one address, each, prepaid . . 5 75

Orders for Science and Health, in lots of twelve or more to one address, may include any or all the different styles of binding.

A COMPLETE CONCORDANCE to Science and Health with Key to the Scriptures, 595 pp., 10 x 7. Bound in cloth, marbled edges. Price, single copy, prepaid . $5 00
Twelve or more copies to one address, each . . . 4 50

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth), each, prepaid 2 25
Twelve or more books to one address, each, prepaid 2 00

Morocco, limp, round corners, gilt edges, convenient for pocket, each, prepaid 4 00
Twelve or more to one address, each, prepaid . . . 3 75

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5 00
Twelve or more to one address, each, prepaid . . 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An Illustrated poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

National.

Negotiations carried on between the Eastern Yacht Club of Marblehead and the Kaiserlicher Yacht Club of Germany, promise to result in a new perpetual challenge cup race. The proposed races have the support of Emperor William. A committee of three has been appointed by the Kiel Club to confer with a similar committee to be appointed by the Eastern Yacht Club, to perfect arrangements for the establishment of the trophy and the first races to be sailed for it.

Many protests are said to be coming in because of the declaration of the Internal Revenue Bureau, that after December 1 everybody who sells patent medicines which are "composed chiefly of distilled spirits, or mixtures thereof, without the addition of drugs or medicinal ingredients in sufficient quantities to change materially the character of the alcoholic liquor," will have to pay the tax of $25 a year as liquor dealers. This is a reversal of the practice of the Department. It has heretofore accepted the sworn statement of the manufacturers as to the ingredients. Hereafter this will be determined, not by the declaration of the manufacturers, but by the Government chemists, who will go into the market and buy proprietary articles under suspicion.

Secretary Wilson, it is reported, will endeavor to get a new beef inspection law from Congress this winter. Since 1901, when the present act took effect, providing for Government inspectors of meats, more applications for inspectors have been denied than granted. Inspectors have been allowed to forty-one packing-houses, while fifty-six firms have been shut out of the export business, their requests for inspectors being refused. As the law is now interpreted by the Department of Agriculture, the packers who have been successful in their efforts to secure inspectors have a monopoly of the export trade. Secretary Wilson declines to shoulder the responsibility for continuance of the system.

It is believed that the big post-office in the heart of a great city is going out of fashion. Modern needs of the postal service are modifying the building programme for the Department. Its place will be taken by a shipping-office, or clearing-house, at each of the great railroad terminals, with sub-stations scattered over the city from which the carriers can radiate, and pneumatic tubes to connect these shipping-points with the nuclei of distribution and collection. In time the central post-office may become merely an administrative headquarters, doing for its locality little more than a sub-station business. The policy of the Department to-day is the development of these smaller working units.

Late news concerning the Peary Polar Expedition has been brought by the auxiliary steamer Erik. Dr. Sohon reports that the ice in Smith Sound suddenly broke and much open water was visible between Littleton Island and Cape Sabine, and that Peary's ship Roosevelt disappeared. It is probable that Peary took advantage of this to push forward immediately to the farthest north, with good prospects of reaching Lady Franklin Bay and perhaps Floeberg Beach, the winter quarters of the British Discovery, 1875-6.

The pension roll reached the maximum number in its history on January 21 last, the number being 1,004,196. The roll passed the million mark in September of last year, and gradually increased for the next four months. The decline began with the first of last February, and by the following May had dropped below the million mark.

The State Department has taken steps to secure a fair trial for the Albers brothers, now in prison in Nicaragua, who are under arrest for alleged violation of the law of that State and for contempt of court.

Foreign.

The Canadian provinces of Alberta and Saskatchewan began their existence September 1. They are of large extent. Alberta is estimated to contain a land area of 250,653 and Saskatchewan of 243,192 square miles. Each extends from the United States boundary to the sixtieth parallel of north latitude. Each contains a greater extent of cultivatable land than any of the older provinces. They are as fertile as Manitoba, and four times the size of that famous wheat-growing province. There is a splendid ranching district. Alberta wool growers are already large producers of a good staple. Coal raising is a developed industry. Other minerals exist. Saskatchewan is reached by six railway lines from Manitoba and by one from the United States. Alberta is already served by three of the Canadian Pacific lines, and one to the United States.

The Central Statistical Committee publishes the following estimate of the crops in seventy-two Russian provinces. The figures are in poods (36 pounds), and represent the anticipated yield: Winter wheat, 325,000,000; spring wheat, 564,000,000; winter rye, 1,017,000,000; spring rye, 23,000,000; barley, 579,000,000; buckwheat, 50,000,000; millet, 90,000,000; maize, 77,000,000.

Norway has given way to the demands of Sweden on the fortifications question. The historical strongholds of Kongsvinger and Fredericksstен will remain intact. The others will be razed. Foreign Powers influenced the decision.

Industrial and Commercial.

A protest is entered editorially in *The Engineering News* against the practice of towing huge rafts of logs for long distances on the ocean, for the reason that the logs may and often do constitute a serious menace to navigation. It advocates some international organization to protect the general interests of all countries in safe transportation on the high seas. The special reason for this protest is the announcement that a British Columbia company proposes to tow a large log raft, containing 10,000,000 feet of logs and spars, across the Pacific to Shanghai, China. The risk is admitted, but is assumed because of the great saving in cost of transportation.

The bridge over the Zambesi River, the highest in the world, was formally opened September 12, in the presence of the visiting members of the British Association. It was linked up at 7 A.M., April 1 of the present year, thus completing another link in the Cape-to-Cairo railway. The bridge, which is of the cantilever style, is four hundred and twenty feet above the river at low water and crosses over the gorge at Victoria Falls. It was built by an English company on the girder pattern.

The Commercial Pacific Cable Company makes announcement that it has secured the necessary concessions to enter Yokohama, Japan, and Shanghai, China. The cable connections with both Japan and China will be made by extending the present lines of the company, which run from San Francisco through the stations of Honolulu, Midway, and Guam to Manila. Japan will be reached by laying a cable from Guam in the Pacific Ocean direct to Yokohama. The cable to China will be laid from Manila to Shanghai.

Large orders for steel rails for delivery next year have recently been booked by Pittsburg concerns. Some of these orders, it is said, are from western railroads, indicating an unprecedented demand in that section. According to an estimate made, the orders placed for delivery next year up to date aggregate 1,500,000 tons. Three hundred thousand tons contracted for delivery this year will probably have to go over.

It is estimated that the Georgia peach growers will realize $2,000,000 from the entire crop of the State this year, approximately the same figure as a year ago.

General.

One of the latest novelties is a talking postal card, the phonopostal. It is an apparatus that registers and reproduces the human voice by means of a sheet of cardboard in the form of a postal card. The postal is prepared on the address side, and the mark traced by the point of the diaphragm is so hard that the post office stamp does not affect it in the least. The address is written on the prepared side without the slightest injury to the registered sentence. In making the record the voice is thrown into a little funnel which is placed in contact with the registering needle. The latter is a sapphire point which passes over a layer of a preparation known as sonorine, which has been previously spread over the paper. The chief merit of the invention is in having found a substance that could be easily spread over a sheet of paper, which possesses all the advantages of wax and can stand the hard usage of the post. The sounds are inscribed by means of a spiral which commences at the edge of the card and proceeds toward the center, finally stopping outside of a circle about the size of a quarter. The number of words which may be sent on each card is between seventy-five and eighty.

A mechanical method of noting speeds, that will interest automobilists, has been devised, the results of which are beyond question. A time-recording camera is used. In this process, now in use in England, a range, or "trap," with a recording camera at each end, is measured off. As the motor-car passes it may be caught by an almost instantaneous exposure, and by the same movement a watch-face is photographed, thus giving the exact time. On passing the second camera a similar photograph is taken, and the difference in time between the two photographed watch faces accurately indicates the time occupied in traversing the distance.

There are no manufactories in Iceland. Each home is a factory and every member of the family a hand. Shoes are made from goat-skins. The long stockings worn over these in wading through the snow are knitted by the women and children, and the smooth, beautiful broadcloth comes from the handlooms found in every house. The women are among the most advanced in the world. Their Woman's Political League has a membership of seven thousand, and they have a voice in all elections save that for members for their legislative body.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

The Study of Christian Science.

PROF. JOEL RUFUS MOSLEY.

Prove all things; hold fast that which is good.—PAUL.

"WHAT distinguishes the genuine student from the dilettante is, mainly, that the former goes directly to the source of his subject, whereas the latter acquires his knowledge from second hand, and usually third mediums. . . . It may be set down as an axiom that no religion can be understood except by a direct study of the sources of that particular religion. . . . Public opinion ought to severely condemn all utterances embodying judgments regarding religions made by those whose position lends to them a measure of authority, unless their judgments are based upon independent researches pursued by the application of scientific methods." (Prof. Morris Jastrow, of the University of Pennsylvania. See "Study of Religion," pp. 333 and 343.)

Religion should always be approached in the right spirit, in the spirit of sympathy and absolute fairness, in the Christian spirit. The "Spirit of truth" leads not only in the way of all truth, but to the perception and employment of right methods in the quest for truth. The study of a religion directly from its sources, in the spirit of sympathy and fairness, and according to scientific methods, is only an application of the spirit and methods of true Christianity. A religion which possesses no written literature would have to be studied by direct observation and personal contact with its adherents. A religion which has a definite literature, but no present-day adherents, would have to be studied from this literature. A religion which has both a written literature and living adherents, should be studied directly from its own literature and by direct observation and sympathetic contact with its adherents. Where the literature of a religion is clearly defined and easily accessible in one's own tongue, and where its adherents are one's neighbors and friends, there is no excuse for studying it from prejudiced and untrustworthy sources. To do so shows a wrong spirit as well as wrong methods. Such a spirit and such methods are far below the ideals of modern science as well as those of Christianity.

To apply these general rules to the study of Christian Science, those who understand the subject will readily see that of all religions of the modern world, it can best be studied directly from its sources. It will also be seen that, even more than other modern religions, the nature of Christian Science makes it impossible for it to be rightly understood except as it is approached in a Christian way and dealt with according to Christianly scientific methods.

The direct and only trustworthy sources for the study of Christian Science are its own authorized literature and those who understand and live, at least in part, its teachings. In addition to the Bible, which Christian Science interprets spiritually and holds in common with all other Christian denominations, its literature is its text-book, "Science and Health with Key to the Scriptures," with the other works of Rev. Mary Baker G. Eddy, and the publications of The Christian Science Publishing Society. The text-book of Christian Science contains an exposition of the truths of being, of healing, and of salvation, and it is as indispensable to the study of Christian Science as is the Old Testament to the study of Judaism, or the Gospels to the study of Christianity. The other works of Mrs. Eddy, "Miscellaneous Writings," "Retrospection and Introspection," "Unity of Good," "Rudimental Divine Science," "No and Yes," etc., and all her messages and published sermons, are not only unfoldments and applications of the basic truths of Christian Science to the problems of being, but, together with *The Christian Science Journal, Sentinel, Quarterly, Der Herold,* and other special pamphlets that are issued by The Christian Science Publishing Society, they furnish the material for the understanding of the history of the Christian Science movement. All this authorized literature of the movement is now accessible in the public libraries, and in the Christian Science Reading Rooms which are found in the leading cities and in many towns and villages throughout the world.

Christian Science services are conducted twice a week, Sunday morning and Wednesday evening, in nearly all the leading centers of population in the United States, Canada, and western Europe, in some few of the cities of Australia, and other islands of the seas, and the literature of Christian Science can be found wherever there is a Christian Science church or society or center of activity. In fact, Christian Scientists, wherever found,—and for their numbers they are the most widely distributed people in the world,—are always ready to aid every honest inquirer in his efforts to obtain the literature, to know the truth, and to receive the benefits of their religion. Much literature is given away, much is loaned, and it only requires a small amount of money to purchase all that is necessary for information, and for the right understanding of the Principle and practice of this Science. The whole literature of the movement is less in quantity, more readily accessible, and can be had at less cost than that of any other great religious movement in the history of modern Christianity. There is, moreover, such unity of thought and point of view in all, that to know and demonstrate it in part is to know something of the whole: and every precaution is taken to keep it pure, to keep it from being confused with adulterations and counterfeits.

To observe for one's self the effect that Christian Science produces in the lives of those who understand and live its teachings, is another direct and reliable source for the study of the subject. Christian Science can and should be known by the fruit it produces. This can only be done by unprejudiced observation and study, and by friendly and sympathetic contact with Christian Scientists, and since Christian Scientists are so willing that their religion should be known by its fruits, and are so ready and glad to give what light they have on the subject to all who seek it in the right spirit, there is no reason why an honest investigator should not always study Christian Science from the most direct and reliable sources. But while Christian Scientists recognize that they are much more competent to speak intelligently as to what their religion is and teaches, than those who have never studied the subject directly from its sources, they point those who would know and live Christian Science to the Bible and Science and Health, and most especially to the allness and goodness of God, and to the perfect demon-

Digitized by Google

strator of the possibilities of scientific Christianity, as well as its perfect Exemplar,—the man Christ Jesus.

Christian Science can be studied directly from its sources to such advantage that there is no excuse for studying it any other way. It only desires and asks for a fair trial to prove its claims. It only seeks an opportunity to demonstrate that the Christianity of Christ is universal, practical, scientific truth, which, to the degree that it is understood and lived, heals the sick, casts out devils, evils, binds up the broken-hearted, overcomes death and the causes of death, and brings to light the kingdom of God. If it proves its claims, humanity has everything to gain and nothing to lose on account of its recognition and acceptance. In any event, it is one of the sublimest efforts in religious history to make life here and now what we long for it to be, instinctively feel it should be, and expect it to be as God's will is done in earth as it is in heaven. Christian Scientists are daily submitting the teachings of their religion to scientific proof and demonstration. If the claims of Christian Science were not true, Christian Scientists, for this very reason, would be the first to find it out, just as they would be and are the first to prove the truth of these claims. In fact, there is no other way to prove the truth or falsity of the claims of any religion except by submitting them to the same Christian and scientific tests to which Christian Scientists are submitting the claims of their religion. It is just as futile to pass judgment on any religion, especially on scientific Christianity, on the basis of prejudice or opinion, as it would be to deal with mathematics in like manner; and there is no perfect, scientific, Christian test ever applied to anything where there is not the desire and effort to know and love the whole truth about it; where the "Spirit of truth" is not the teacher, and where the love of truth does not enter into and determine the attitude of the learner.

While the higher, simpler, and more spiritual any religion is, the greater becomes the possibility of misapprehension, one marvels that the critics of Christian Science should be so unscientific and unchristian in dealing with any religion as they often are in dealing with Christian Science, for the worst of these critics, instead of studying Christian Science from its own literature, study what its worst enemies write about it; instead of judging it by its fruits and from the testimony of those who best understand and demonstrate its teachings, they judge it by what the most prejudiced and unreliable detractors say about it; instead of making an honest and sincere effort to prove its teachings with the purpose of holding fast to them if they are found true and good, they condemn it without a hearing, and instead of approaching it in the spirit of charity and Christian love, they approach it in an attitude of intolerance and antagonism. It is, therefore, not surprising that such critics hate Christian Science and hate it without a cause. This is all the more inexcusable when we take into account the fact that when Christian Science is hated, it teaches its adherents to love; when it is reviled, it would have them revile not again; when it is judged unrighteously, it declares for righteous judgment. It even uncovers error, when the error is directed against itself, that it may destroy the error and free and bless the victims thereof. It would be understood and loved by all, that it may bless all.

In the Garden.

ROBERT L. ZILLER.

THERE are voices which are best heard in the silence of quiet meditation, and when thought is "absent from the body;" wrapped in the contemplation of God's manifest glory, one may listen to the sermons of the birds, the blossoms, and the bees. Nature holds before our wondering gaze the great panorama of the universe, and he whose lamp is filled with inspiration's oil may read upon this chart the wondrous lessons of Life. From time immemorial poet and prophet have sought the forest aisles, green meadows, and rock-ribbed mountains to engage in prayer and meditation. From these quiet hours have sprung mighty deeds, and earth has been enriched by those who have heard the silent sermon of a flower.

Christian Science is emphatic in its declaration that the objects cognized by the physical senses do not present the true aspect of the universe. When, therefore, a beginner in Christian Science sees a more advanced student viewing studiously and with absorbing interest the manifestations of nature, he is often at a loss to account for this apparent contradiction in thought. However, as soon as it is realized that above and beyond the unreal aspect there is forever the glorious reality, unseen to the physical senses, and that by properly viewing the deflection, some idea of the transcendent reality may be gained, the study of these types and symbols assumes a profound interest. Therefore it is that Christian Scientists look out upon a world teeming with multitudinous objects of entrancing beauty and interest, where before they often beheld what seemed but a charnel-house of chance and change, where hope lapsed into a mournful reflection that all things are as the grass of the field which withers and passes away.

It is morning! Look out upon the kindling rays of the rising sun. O, the grandeur of the eastern glow, the dewy morn, the velvet hush wherein hope whispers anew its pure promises! Does it not tenderly tell of the night that is past, when the "Sun of righteousness [shall] arise with healing in his wings"? Does it not prefigure a glorious morn when men shall no longer toil in the darkness of materialism, but know the truth which makes men free through the "Light, which lighteth every man that cometh into the world"? From o'er the purple hills great shafts of mellow light flood the vale. Behold! it has showered diamonds in the night! The meek grass is diademed with light. Each little drop throws out its wondrous prism, reflecting in varied tints of delicate beauty the white light of the sun. How tiny these drops of purity's emblem, yet the jeweler's art seems crude beside their matchless brilliance. In their purity they make manifest, or reflect, the qualities of the light. Glorious thought! so may we, though likewise but little ones in God's kingdom, reflect His nature in proportion to our purity. How well do the myriad voices of the dew echo the hillside sermon, "Blessed are the pure in heart: for they shall see God." Down the dim forest aisles, beneath intertwining boughs, the earth is spattered with gold. Overhead the tiny leaflets dance for joy, and out of their full hearts the dear little birds send up songs of praise. A squirrel whisks up a bending bough, and cunningly holds up a nut as if to say, See how well we and the birds are provided for from the great treasure-house of Love. Then thought reverts to the words of him who said, "Behold the fowls of the air: for they sow not, neither do they reap, nor gather into barns; yet your heavenly Father feedeth them. Are ye not much better than they?"

Beyond the fringe of trees, sloping gently to a little pond, there lies a soft green meadow, dotted here and there with clumps of lilies. We see their gleaming whiteness from afar, as they hold their nectared chalices up to our gaze. Dear, gentle flowers. How sweetly and tenderly they link themselves to all that is truest and best in human character. Who could ever be lonely in their gracious presence! When deserted by friends, or opposed by foes, they ever comfort us with their silent ministrations. Into our sombre musings they send a song of joy from the perfumed strings of their invisible harps, and bring to the bruised heart anew the blessed balm of hope. As they stand before us in their unsullied purity, we may well remember the Master's words, "Consider the lilies of the field, how they grow; they toil not, neither do they spin: and yet I say unto you, That even Solomon in all his glory was not arrayed like one of these." Consider *how* they grow: not with strife and turmoil; not with noisy boast or

Digitized by Google

discontent. Gently they take in the blessings God sends them, the sunshine and the dew. Grace they add unto grace, "here a little, and there a little," until in majestic meekness they stand forth to shed their perfume upon an unrewarding world. When we do likewise, will not the sweetness of our lives draw men unto Christ?

In the little pond the water-lilies rock gently on the bosom of their faithful nurse. Throughout all time men have found a subtle charm in the waxen whiteness of a floating lily. Well have they been likened to chastened hopes upon time's shifting sea. In their presence poets have gained inspiration for immortal verse, and philosophers have confessed that God indeed is Love. As we gaze in silent admiration, a voice seems to whisper, Behold the wondrous lesson of transformation. God's grace is folded in their hearts. Think not of slimy ooze, of rotting leaves and reeking earth, of things impure and dark from which sense says they sprang. With faces to the light they rose above the wave, and lost the odor of the ooze; and now yon rainbow-tinted humming-bird sips nectar from their cups to feed his fledgling brood. Deep sinks the lesson; the heart bows down; and eyes grow dim with tears. Have we judged our fellow-man whose hope is Christ? Have we peered in his buried past, and stirred up dead, repented sin? Have we trailed the gaunt spectres of their past before men's weary eyes, forgotten their struggles, or considered ourselves more worthy than they who likewise hope in Christ? Do we think of our brother as he once may have seemed to be, or as he now *is?* Are we unmindful that God's grace is a wondrous thing, and that men, transformed by the renewing of their mind, may grow into the "knowledge of the Son of God, unto a perfect man," and from the dark streams of mortal life become, through Love's transforming touch, like lilies in Christ's garden? Mortal, "What God hath cleansed, that call not thou common."

Nature has endless object-lessons for those who love her language, and gentleness and grace become manifest when one looks beyond the mere outward form. The little fishes hear a footstep and come crowding to the margin of the pond. They are unafraid of the hand that would not harm, and in love's sweet interchange they gently nibble the pendant finger-tips, or chase each other around in excess of glee. As Love rules our thoughts, and we gain a deeper insight into the real nature of God's creation, there is a marvelous response to our tender care of plant and shrub. We find the transplanted tree need not therefore die, and, through Truth's revealings, flowers and plants gain added strength and unimagined beauty. How little do we yet see of the fulness of those things which God hath prepared for us; but the faithful student will each day turn new leaves in the book of experience, and bring more glorious things to view. Mark well that one who loves nature's lore, and turns his foot aside from ant or flower. An uncrowned poet, he is familiar with the angels.

Our day in the garden is drawing to a close. The sun sinks slowly down into the golden palace of the west. The drowsy bee, with load of sweets, flies to his honeyed home; from distant fields we hear the tinkling of the bells; twilight breezes stir faint odors, sweet as memories of music heard o'er moonlit waters by the sea; shadows lengthen in our pathway; music sinks to sleep in silence,—it is night.

Human thought generally looks upon night as a type of gloom, of despair, pain, and woe. It is then that footsteps falter, earthly hopes grow cold, aspiration fails, and men engage in fierce conflict with the powers of darkness,—self and sin. But otherwise viewed, night brings its lessons. The eastern clouds melt in silver light as the moon's great disk of gold rolls into view, and overhead a million lights appear, to shine on paths that have no end. Mutely we gaze out on the wonder of the rolling world, the infinite expanse of glory, the panorama which staggers finite sense, and thought's swift rushing messages proclaim that God orders all things aright, from a seedling to a star. What beauteous things hath night revealed, when we had thought day closed our view! But for the gloom we had not seen beyond our pleasant paths of sense to things not yet revealed. To a world struggling to free itself from the night of materialism, the lone prophet star appeared which led men to the Christ. So, like bright stars, the light of hope, faith, and spiritual understanding will shine on all who, while struggling in the night of unbelief, with human passions and pain, yet turn their faces from earth to heaven, and are "willing rather to be absent from the body, and to be present with the Lord." As the furnace purifies the gold, so will our struggles in the night of woe turn us from sense to Soul, and though the shadows of night may fall o'er our path, Love's sentinels, like stars, will guide us on our heavenward way. Verily, night hath its recompense!

Perchance at times, when silent footsteps steal down the aisles of yearning dreamland, or thought peers in the curtained chambers of the past and views the pictured hopes on memory's walls, our fancy sees a dim-lit garden by a brook. 'Tis night in Gethsemane. Ancient olives stretch forth their knotted arms across the winding paths, and through the sleeping leaves moonbeams checker the earth with silvery light. The fountains hush their murmurs; all is still, and on a mossy bank Jesus' disciples lie asleep. A little farther on, beneath dense spreading branches, the Master kneels alone. No friend has he to share the long, lone vigil of the night. Unspeakable the agony of those hours in which he wrestled that the whole world might be blessed, but from the conquest of that night there came the resurrection morn.

Though the long centuries roll, life's lessons are not changed, and earth's pilgrims still plead, "Abide with me: fast falls the eventide." To humble hearts, where God's will reigns, the Comforter will come, and lead through shadows of the night to God's eternal day.

A Reminiscence.

F. M.

For a long time we talked, she deep in her seeming distress,—loss of money, a beloved member of her family gone, ill in mind and body,—and she sought relief through Christian Science. Finally, when nothing seemed to lift her thought from the contemplation of error, I said, "Suppose you sat in a dark, dreary dungeon, without a ray of light, and one came to you, and said, 'Come out into the light, come away from this darkness; the sunshine is beautiful, there is everything to make you happy; you need not stay in this dungeon, God's light is free to all, come out into the light,'—and you should say, 'No, there is no sunshine; it is dark there, too, for I see only darkness everywhere.' At last, however, you yield to entreaty, step outside of your dungeon, and at once you say, 'Why, it is light! Oh, how happy I am!' And thus you must come into the light of Christian Science, and see that just so long as you make a reality of evil and regard your troubles as actually existent, you are refusing to let the light of divine Truth dispel evil and bring you to the realization of your right to know that God, good, is all."

At this moment the clouds lifted, and as she listened to the word of Truth, she joyfully exclaimed, "I will come out into the light." So she went away happy; her eye had become brighter, her step more elastic, the color had come to her pale cheeks, and once more the weary had found rest in Truth and Love.

God looks with approval and man turns with gratitude to every one who shows by a cheerful life that religion is a blessing for this world and the next.

Mrs. Eddy Pays First Visit to New Church in Concord.

Mr. Editor:

Yesterday, for the first time, the Rev. Mary Baker G. Eddy visited the new Christian Science church in this city, her munificent gift to the local congregation of that faith.

Mrs. Eddy entered the church by the southeast door, which admitted her to the room prepared for her use in the edifice, which the Scientists call "Our Leader's room," and those who planned this pretty apartment should know the pleasure it gave her. Her artistic sense took in at a glance the beautiful circles of light falling in pendants like grape clusters, the delicate pale green upholstery, embroidered silk drapery, the highly polished Indiana oak floor, and the lighting, done by means of numerous incandescent bulbs deftly hidden in the corniced moulding of the room; also the beautiful bound copies of the Bible and of her own published works, and other dainty, costly gifts from members of her church.

After spending some time here, Mrs. Eddy visited the public Reading Room, which is kept open every week-day from 2 to 5 P.M. Thence she entered the church proper, and after a general survey took a seat in one of the carved upholstered pews, to view deliberately the magnificent transept windows, the grand gift of First Church of Christ, Scientist, of New York City, placed in position last week. Mrs. Eddy regards these windows as exceptional specimens of the highest art; they were described in your columns last Saturday. The organ engaged her attention, and called forth encomiums; the graceful lines of the massive roof-timbers, the fine natural finish of the Indiana oak comprising the entire woodwork, the interlocking noiseless rubber floor tiling, the harmony of coloring and arrangement of the entire auditorium, were all noted and favorably commented upon with much joy. K. G.

At the State Fair.

Mrs. Mary Baker G. Eddy will make her usual distribution of shoes to needy and deserving children at the Concord State Fair on Tuesday next, Children's Day. Her almoner for this purpose, Mr. William A. Thompson, will be in the main exhibition building from half past one to four o'clock Tuesday afternoon. An entry of articles for exhibition in some of the departments in this building has been made from Pleasant View.

Concord (N. H.) *Monitor.*

An Editor's Experience.

In Omaha last Sunday we went with an old friend to attend the Christian Science church to which his wife belongs. We entered the hall where the services were to be held just at the close of the Sunday School, and found ourselves in a large room having a seating capacity of nearly a thousand. When we spoke of the largeness of the room we were told that every seat was usually occupied, and before the close of the service we found this to be true.

We had heard so many awful things said about Christian Scientists that we were curious to know what an aggregation of them looked like. We found them representative of the more intelligent, better class of American citizens, if there is such a thing as a "better class" in a country where it is denied that there are classes. They were well featured, well dressed, sane and healthy in appearance, and looked like people who were very much alive and glad of it. There was nothing queer or freakish about any of them, nothing savoring of the wild-eyed, fanatical enthusiast or "reformer." There was no excitement in their service; everything was quiet and decorous. They place emphasis upon the divine, the spiritual. These are the things that they say are real and eternal; sensual and evil things are transient and illusory. It almost seems as if the poet Moore touched a Christian Science key when he sang,—

> This world is all a fleeting show,
> For man's illusion given:
> . . . . . .
> There's nothing true but Heaven.

And Pope, when he said,—

> All are but parts of one stupendous whole,
> Whose body Nature is, and God the soul.

Christian Science has been defined as being a statement of God's omnipotence over evil of every sort.

Among the members present in the meeting we attended were merchants, lawyers, judges, teachers, editors, and other professional men.—*Sidney* (Ia.) *Herald.*

Jesus found it difficult to make his teachings understood, and because they were misunderstood they excited the most violent opposition. Then as now, the issue lay between materialism and spirituality. Historic Christianity has not kept its eye single, but has tried to reconcile those two; it has compromised the issue and lost the power to carry out that part of the Gospel which relates to Christian healing. "Ye cannot serve God and mammon" is specific language, and Christian Science may be pardoned if it does not claim to teach the wisdom of this world. Jesus said, "My kingdom is not of this world." Paul declares, "The wisdom of this world is foolishness with God" and "The flesh lusteth against the Spirit, and the Spirit against the flesh." It is the glory of Christian Science that it does not teach human philosophy and theories based upon human evidences; rather does it certify with Paul that the Gospel which it preaches "is not after man" but came "by the revelation of Jesus Christ."

Christian Science has no secret or hidden meaning, except the mystery which the material thought always attaches to spiritual things. The great apostle, who was once a persecutor of Christians, when his eyes had been opened wrote, "We speak the wisdom of God in a mystery."

"The natural man [spiritually unawakened] receiveth not the things of the Spirit of God: for they are foolishness unto him: neither can he know them, because they are spiritually discerned." Christian propriety discountenances any suggestion that Christianity is occult.

The critics of Christian Science must be just, or they fall short of being Christian. It should be seen that the distinctive mission of Christian Science is to re-establish Christian healing as an essential part of the Christian dispensation, established through the life and teachings of Christ Jesus. No estimate of Christian Science is just which ignores the good works that it accomplishes. This Science casts its bread upon the waters, healing the sick and reforming the sinful.

REV. CHAS. D. REYNOLDS.

Admission to Membership.

The next admission of candidates to membership in The Mother Church will be November 7, 1905. Applications must be in the hands of the Clerk on or before October 23, 1905.

An application sent to the Clerk of the Church does not constitute the applicant a member; he must be elected to membership by the Christian Science Board of Directors, in which event notice of election will be sent.

The Lectures.

Spokane, Wash.

In his lecture on Christian Science at the Auditorium Theatre, July 16, Edward A. Kimball of Chicago was greeted by a large audience, many people standing. The lecture was given under the auspices of First Church of Christ, Scientist. City Engineer Charles McIntyre introduced the lecturer, saying in part,—

It is only by the results obtained that we can rightly judge of anything that we do not yet fully understand. To-day people demand results,—and rightly so. Mere theories, speculation, human opinions, and beliefs are counted as naught in the presence of a demonstrable Science. Five years ago I was healed in one day of maladies which medical treatment failed to cure. This was accomplished by reading the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, and others in my family were healed of so-called "incurable" diseases by Christian Science treatment. Since then, we have relied on Christian Science alone as our physician. We rely upon it for our health, our happiness, our prosperity; understanding God as an ever-present help,—a help that is available to every man, woman, and child in the world.

Correspondence.

Vinalhaven, Me.

There was a representative gathering of Vinalhaven's townspeople in Memorial Hall last Thursday evening [August 24], to attend the lecture given by Prof. Hermann S. Hering, under the auspices of First Church of Christ, Scientist, of Vinalhaven. In addition to the home people there were numerous summer visitors present. The lecturer was introduced by Prof. T. L. Roberts, who said in part,—

Having myself been healed and regenerated, physically, mentally, morally, and spiritually, through the blessed ministrations of Christian Science, it affords me genuine pleasure to stand here before you, the citizens of this my native town, and present myself as a living example of what Christian Science can do for men. From a condition wherein it required a cane, and often two canes, for me to get about (and this doleful condition continued more than a year), to one of physical soundness and alertness, was indeed a wonderful transformation, and was for me, and for my family, at least cause for rejoicing. But, however wonderful seemed the physical healing, the spiritual illumination that came with it was much more wonderful and satisfying. This is a common experience in Christian Science, and may explain to you why this religion means so much to its adherents.

Before accepting Christian Science, the speaker of the evening was active in the realm of physical science, occupying prominent positions in the line of mechanical and electrical engineering, and for eight years he was a member of the faculty of the Johns Hopkins University in Baltimore.

I now have the pleasure of presenting to you Prof. Hermann S. Hering, member of the Christian Science Board of Lectureship of The First Church of Christ, Scientist, in Boston, Mass., who will speak upon the subject, "Christian Science; Humanity's Helper."—*The Courier-Gazette.*

Lectures at Other Places.

Portage, Wis.—Bicknell Young, August 22.

Among the Churches.

Laying of Corner-stone in New Orleans, La.

Without outward ceremony, but with silent prayer, the corner-stone of Second Church of Christ, Scientist, was laid yesterday afternoon [August 31]. The location of the new church, which will be completed about November 1, is almost ideal, being situated in a delightful neighborhood, while it is easily accessible to all parts of the city.

New Orleans (La.) *Picayune.*

[A notice of the purchase of the lot for this church appeared in the *Sentinel* of September 2.—EDITOR.]

From Ottawa, Ill.

At its last regular business meeting, First Church of Christ, Scientist, of Ottawa, Illinois, voted to add its own church building fund, amounting to one hundred and twenty-one dollars, to that already raised for The Mother Church Building Fund this year, which was $71.30. On the following Sunday $66 additional was contributed for this fund, making a total of $258.30, which was sent to Mr. Chase for The Mother Church Building Fund.

We have a resident membership of twenty and a Sunday attendance averaging from thirty to fifty, and are looking forward to the time when we shall have a church building of our own; but when the motion was made to give our building fund to The Mother Church, it was heartily endorsed by all present. This is truly a free-will offering from our little church, and we feel that we will receive a greater blessing than if we hoarded it for our own church building fund, for we know that if the tree is not watered the branches cannot grow.—MAE BLANCHARD, *Clerk.*

Growth of the Work in Richmond, Surrey, England.

In the autumn of 1900 a few people met together, week by week, in a private house, for the purpose of studying the Bible Lesson from the *Christian Science Quarterly.* In February, 1902, it was found necessary to move into a public room, where for some months services were held every Monday afternoon. In September, 1902, another move became necessary, and regular Sunday services were started. A good room was procured, with Reading Rooms beneath, which on Sundays were used for the Sunday School. The Reading Rooms are now open every afternoon. In April, 1904, we moved into an excellent hall situated in the same building, and shortly afterwards organized into a society. On May 1 of this year we organized our society into a church, with a membership of thirty-one. In the Sunday School there are twenty-six children on the register and they are divided into three classes. Our sale of literature during 1904 amounted to £83 9*s* 10*d*. The growth in the work is very clearly indicated by the steady increase in the demand for the *Quarterly.* Whereas twelve copies sufficed a little over two years ago, the sale during the last quarter amounted to sixty-five.

In accordance with Art. 35, Sect. 4, of the Manual, we have made arrangements for a lecture to take place in Richmond this autumn, to which we are looking forward with much pleasure. It is impossible to express our gratitude for the growth and unity of our little community. Principle has indeed led us step by step, and has taught us to realize more clearly than ever the practical truth contained in our text-book, Science and Health.

SYBIL BISHOP, *Clerk.*

Oh, it is great, and there is no other greatness, to make one nook of God's creation more fruitful, better, more worthy of God; to make some human heart a little wiser, manlier, happier—more blessed, less accursed.

THOMAS CARLYLE.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Watching versus Watching Out.

MARY BAKER G. EDDY.

THE above is the caption to an article in the *Sentinel* of September 16, 1905, that needs to be corrected.

Our Lord and Master left to us the following sayings as living lights in our darkness: "What I say unto you, I say unto all, Watch;" and "If the goodman of the house had known what hour the thief would come, he would have watched, and not have suffered his house to be broken through." (Luke, 12 : 39.) Here we ask: Are Christ's teachings the true authority for Christian Science? They are. Does not the text-book of Christian Science, "Science and Health with Key to the Scriptures," read on page 252, "A knowledge of error and of its operations must precede that understanding of Truth which destroys error, until the entire mortal, material body finally disappears, and the eternal man, created by and of Spirit, is understood and recognized as the true likeness of his Maker"? It does. If so-called watching produces fear or exhaustion, and no good results, does that watch accord with Jesus' saying? It does not. Can watching as Christ demands harm you? It cannot. Then should not "watching out" mean watching against a negative watch, *alias*, no watch; and gaining the spirit of true watching, even the spirit of our Master's command? It must mean that. Is there not something to watch in yourself, in your daily life, since "by their fruits ye shall know them," which prevents an effective watch? otherwise, wherefore the Lord's Prayer, "deliver us from evil"? and if this something when challenged by truth frightens you, should you not put that out instead of *putting out your watch?* I surely should. Then are you not made better by watching? I am. Which should we prefer, ease or unease in sin? Is not discomfort from sin better adapted to deliver mortals from the effects of belief in sin than ease therein, and can you demonstrate over the effects of other people's sins by indifference thereto? I cannot. The Scriptures say, "They have healed also the hurt of the daughter of my people slightly, saying, Peace, peace; when there is no peace" (Jeremiah, 6 : 14), thus taking the name of God in vain. Ignorance of self is the most stubborn belief to overcome, for apathy, dishonesty, sin, follow in its train. One should watch to know what his errors are; and if this watching destroys his peace in error, should one watch against such a result? He should not. Our Master saith, "He that taketh not his cross, and followeth after me, is not worthy of me. . . and he that loseth his life [his false sense of life] for my sake shall find it." (Matthew, 10 : 38, 39.)

Pleasant View, Concord, N. H., September 18, 1905.

A Question.

WHY does not Mrs. Eddy attend our State Fair? This question would not naturally be asked concerning another lady of my years and every-day life, but being up we answer it. Because I have lost all pleasure in such entertainments by having found so much else in moral and spiritual directions that demand my entire time and attention, that I deem it my duty and privilege to abstain from all else.

The managers of our State Fair have my good wishes.

MARY BAKER EDDY.

Concord (N. H.) *Monitor.*

Healed by Christian Science.

THE following item, which we copy from the *Washington* (D.C.) *Times*, adds interest to the statement recently given out, that the pension roll of the United States government reached its "high water mark" last January, and that it has since fallen off. The *Times* says,—

"If an epidemic that has recently broken out among pension-drawing veterans throughout the country spreads, the Pension Office will soon have a sort of conscience fund, which will rival that of the Treasury Department.

"About two weeks ago a Grand Army veteran in the West, wrote to the Commissioner of Pensions that he had recovered the health he had lost years ago, and felt that he was no longer entitled to draw a pension. This has been followed by several other waivers of pension claims from pensioners in various parts of the country.

"The most recent case is that of a man who lives at Pierre, S. D., a letter from whom was received by Commissioner Warner yesterday. It read,—

"'*Dear Mr. Commissioner:*—I feel that I am no longer entitled to draw a pension from Uncle Sam. I was disabled for many years, but now I am well.

"'Christian Science has cured me and you need not send me any more money.'

"This man draws a pension of six dollars a month.

"'The beauty of it is,' said Commissioner Warner in discussing the subject yesterday, 'that whenever he wants to, that man can call on us to resume payment of his pension and we will have to do so. He does not relinquish any rights, and if his cure should prove only temporary he can come back into the fold and draw his six dollars every month.'

"Most pensions which have been relinquished lately—and there have been a dozen or more since Mr. Warner came into office—were small ones, but one man gave up thirty dollars a month."

The pensioner whose letter is quoted above is not the only one who has given up his pension for this reason, and in the first case of the kind the Commissioner would not accede to the unusual request until a medical examination had satisfied him that the conscientious veteran who wished to take such a radical step was sound in mind as well as in body. Thus the fact that Christian Science heals the sick was established as a matter of record in the Pension Office.

It certainly is much pleasanter to know that the pension roll is being reduced in this way, even in a small degree, than it is to think of its reduction through the death of those brave men who, in their country's hour of need, periled all that humanity holds most dear in order "that this nation, under God," should "have a new birth of freedom."

ARCHIBALD MCLELLAN.

The Power of Prayer.

CHRISTIAN SCIENTISTS will be especially interested in knowing that a broader and more practical sense of the power of prayer is finding expression among the clergy in England. The Bishop of Manchester is reported as saying, "More things are wrought by prayer than this world dreams of." These were spoken with reference to a serious industrial crisis which was pending at the time, involving a demand for higher wages on the part of certain workpeople. The clergymen of the Church of England, in this diocese, were advised to avoid all reference to the dispute in their sermons, but they were at the same time instructed to use a special prayer for the tranquilizing of the antag-

Digitized by Google

onistic factions. It seems that concessions were quickly made by the employers, and thus a most distressing strike was averted. It also followed, that thanksgiving prayer, for this peaceful solution of a serious problem, was offered in all the churches of the diocese.

There are none who will rejoice over this recognition of the efficacy of prayer more than will Christian Scientists, for they have learned the wisdom of first seeking divine aid and guidance in all their problems, and many grateful testimonies are given by those engaged in business,—showing that the divine help which was first experienced in their physical healing, is equally available and efficacious in straightening the "crooked places" in business transactions. It matters little to them that others may condemn or ridicule their new views on the subject of prayer, for if they are faithful to the teaching of Christian Science they prove daily that God's kingdom is here, and that no discords can find a place in it.

A business man's experience along this line may be of interest to many. Soon after his healing in Christian Science, he found himself much perplexed over a problem which threatened him with financial loss, and which was greatly complicated by the conflicting views of the parties connected with the enterprise. Nearly all of the others whose interests were involved, indulged in condemnation of their business associates and predicted utter failure for the undertaking. As an important meeting drew near, the Scientist saw the necessity for turning away from all this discord, and he then found confidence and serenity in communion with the divine Mind. He was thus able to think of these others as brethren, and to regard their interests as identical with his own. He was also able to see that if selfishness were overcome, and a desire for each other's good were to prevail, a way would be shown whereby all their interests would be conserved. In this attitude of thought he went to the meeting, his own sense clarified and fortified by prayer and the understanding gained in Christian Science. At the first suggestion of discord he rose and made a strong plea for brotherliness, and expressed a willingness to surrender his personal views and interests, if necessary, in the cause of harmony. After a momentary silence, others took the keynote thus given, and in a short time all discord had given place to good feeling.

A reverent thanksgiving was not wanting on the part of the one who had prayed for and witnessed this demonstration of the eternal fact that God reigns. He also said that the averting of financial loss seemed small indeed, compared with the evidence given, that one Mind, one intelligence, governs and directs all, evidence which assured him of the final disappearance of the erroneous though widely held belief in many minds and many interests.

Thus do thousands, who before coming to Christian Science had no faith in the power of prayer, prove its efficacy in every event of their lives, and no limits can be set to their gratitude for the truth which teaches them *how* prayer may be made "effectual" in every hour of need.

ANNIE M. KNOTT.

The Right Man.

A RIGHT start always means much for the success of an undertaking, and this is particularly true in the case of the individual who is trying to understand the doing of God's will on earth as it is done in heaven. The confidence, courage, and good cheer with which the enterprise is entered upon by the Christian worker, and the faith and persistence with which he continues his labors,—all will be largely affected by the man whom he has in view.

In dishonor of even the wisdom of Confucius, who declared that man's nature is fundamentally upright, much of the Christian teaching of the past has begun with the wrong man. Christian workers have been handicapped from the start by being taught to think of man as a depraved nondescript, weak and imperfect in every part. Through a belief in the law of heredity, he has entered upon his life a prey to dispositions and tendencies for which he is in no degree responsible, and whatever is accomplished in the way of his betterment must be effected in spite of this continuous disability.

Explorers in classic fields rarely expect to find more than a broken trunk, whose single remaining limb, perchance, may give some suggestion of a form which, alas! no restoration can satisfactorily complete. With how much more enthusiasm would they search, did they surely know that beneath the debris of buried cities there would be found an unmarred masterpiece which should reveal the full glory of the Golden Age of Art.

It can hardly be doubted that Pilate was moved, at the moment, by a far more exalted sense than that of the mad people about him, when he led Christ Jesus before them and cried, "Behold the man!" and the apprehension of the grandeur and glory of man in God's image which he so feebly embraced in the flashlight of that experience, Christian Science has come to impress in all its completeness upon the consciousness of the world. It teaches that man is of God, and from God and like God for evermore. The soiled and frayed garments of human sense, and these alone, have led mortals to see a prodigal and not a Prince. In Christ Jesus the nature and the possibilities of the true man, God's child, were revealed, and the realization of this Christlike manhood is the end of all Christian labor and living.

Thinking thus of our brother's true selfhood, the heart is thrilled with a great hope and expectation. Anew, and as not before in the long years, we can declare to men who are sick and shabby, to seeming, "Ye shall be free, cleansed and healed through truth." "Henceforth know we no man after the flesh," cried Paul, and every Christian Scientist is moved by this nobler sense, as in the highways and hedges he reaches a kindly hand to the suffering and needy, with the cheery words, Come, brother,—

Thou art not error's thrall.
Thou hast the gift of God.
Dominion over all.

JOHN B. WILLIS.

Letters to our Leader.

Concord, N. H., August 12, 1905.

Dear Secretary at Pleasant View.

Greeting:—This note is not intended to intrude upon Mrs. Eddy. Do with it as you deem best. We wish to join the rejoicing many with our gratitude and cheer, and we wish Mrs. Eddy to know that we appreciate what she has, with so much devotion, careful thought, and study, succeeded in putting into language capable of conveying to the needy the understanding of the fatherhood and motherhood of God as revealed to her.

MR. AND MRS. J. H. WORTHEN.

[The following is the note above referred to.—EDITOR.]

Concord, N. H., August 10, 1905.

Dear Mrs. Eddy:—I want to thank you personally for the health and happiness which come to me and mine daily through the understanding of our relation to the Father-Mother God of us all, as revealed in your writings. The Bible is now a storehouse of information which I love to study in the light of "Science and Health with Key to the Scriptures." Mrs. Worthen and I are both young in this new understanding, which came to us last December, when your devoted followers and students, Mr. and Miss Tomlinson, freely and fully extended to us the help we stood so much in need of physically. As you well know, the light soon broke in upon our consciousness, till it is joy untold to *know* that our God is Love, an ever-present, unfailing power for the blessing and protection of all whose self-will does not blind them to the teaching of the Bible, as interpreted by you. Now we doubt not that He is able to preserve the life He gives.

Sincerely yours,

JOHN H. WORTHEN.

Portland, Ore., July 20, 1905.

Rev. Mary Baker G. Eddy, Concord, N. H.

Beloved Leader and Teacher:—My long-cherished desire to pen you somewhat from my heart's deep gratitude, seems to have come to its meridian height, as in contemplation this morning a fuller revelation was unveiled before me of what Christian Science really is, and what it means to humanity. It has uncovered to the world no less than the veritable Christ,—the spiritual idea of Love,—radiantly shining "above the mists of materiality," and tenderly, compassionately healing, saving, and binding up the broken-hearted. The very acme of human desire and unutterable longing is met in the presence of revealed Love.

In this clearer vision my heart addresses you in unspeakable love, and I thank God that one was so transparent of thought that the ever-present light of Truth there found abode, and thus is radiating throughout a homesick world, scattering the darkness of sense with the beams of supernal light and glory. In deep reverence I would lay down all sense of a self apart from God, and in Magdalene humility and love receive the white garment and the new name, even the divine nature and character.

With the inspiration of love I desire to thank you for these few words, for through them I have been drawn into closer touch with your life-purpose.—"All that I ask of the world now is that it grant me time, time to assimilate myself to God."

With deep love, your student's student,

MRS. MARY W. WELDON.

Rutland, Vt., August 23, 1905.

Beloved Leader:—If not taking too much of a liberty, for I know full well what a minute of your time devoted to other than your work must mean, I am going to ask you to accept this little marble book. It is the handiwork of one who has worked around the great marble quarries of this section. The white marble came from this part of the country, the rest came from other sections. It is merely a love-thought to you,—an expression of thanks for what your dear words have done to sustain and encourage me to work out the problem, as given in your grand book, "Science and Health with Key to the Scriptures." I would that I could convey to you in a few choice words all that I know has come into my life, that I never dreamed it was possible to receive upon this plane of existence. You had the foretaste of it all, I know, many years ago, and my hourly wish is that I may be able to prove that I am worthy of being a follower of your glorious teaching. Ever in the Christ-truth

Your student's student,

BENJ. H. NORTON.

Mary Baker G. Eddy, Pleasant View, Concord, N. H.

Meeting of General Association of Teachers.

THE annual meeting of the General Association of Teachers will be held in First Church of Christ, Scientist, 96th Street and Central Park West, New York, at 9 A.M., Monday and Tuesday, October 23 and 24. Admission to these meetings will be by card only. The Secretary will mail cards to all members now enrolled.

All non-members, including those who were not present at the meetings of 1903 and 1904, who are eligible according to Section 1, Article XXXIII., of The Mother Church By-laws, and who desire to become members of this Association, should apply by letter to WILLIAM B. JOHNSON, C.S.D., Secretary of the Executive Board, 239 Huntington Avenue, Boston, Mass. These applications must be in his hands on or before October 9.

Application has been made for reduced rates on the railroads.

Testimonies of Healing.

One evening, wishing to reach a small package on a high shelf in my schoolroom, I stepped upon a chair, thinking it to be perfectly secure. I raised my arms to grasp the article, and as I did so the chair lurched, and I fell very heavily upon it. When I regained consciousness I was lying on the floor. I attempted to rise, but the excruciating pains, as if many knives were jagging and tearing the left lung, made it seem impossible, and I settled back on the floor, declaring the supremacy of Truth and Love. After the lapse of three or four minutes I heard approaching footsteps. Not wanting the curiosity or sympathy of mortal mind to center itself upon me, I made a second attempt to rise, and was successful. I conversed a few moments with the one who had entered the room, then started to the car which would convey me to my home. The motion of the car was almost unendurable, as it seemed to increase the pain which was shooting through the lungs, stomach, and head. I declared the truth and studied Science and Health far into the night. The following morning nausea, a cough, and the raising of phlegm put in their appearance. I felt that I must remain at home, but a sweet line taught me in childhood—"There is no safer place than the place of duty"—inspired me. I went to my schoolroom and attended to all its demands. Upon the evening of the second day a sense of disappointment and fear was rapidly gaining a hold. The soreness and pain had not only not left me, but seemed more severe. I worked for some time, the difficulty in breathing seemed to increase, but I rested upon the truth that I lived in Mind, and that error could not prevent me from helping myself.

At last a calmness came upon me; fear subsided, and the discordant conditions began to disappear. Before the dawn of the following morning the nausea had entirely gone and I enjoyed a comfortable sleep. During the day the phlegm and cough disappeared; I could breathe without difficulty, the soreness in head and pain in the ear, as of an ulcerated tooth, disappeared suddenly, after giving one vicious throb. The complete healing required about two weeks, the accident occurring the second week prior to the Christmas vacation. So wonderfully did Truth protect me, that no physical discomfort, no discoloration, no depression in spirits was in evidence to others. The overcoming of this sense of accident verified to me, absolutely, the truth of Job's words, "I know that my redeemer liveth" and that "in my flesh shall I see God." The spiritual uplifting which came through this demonstration was my Christmas joy. Lurking errors that I had thought destroyed were uncovered, and, I trust, overcome.

I am thankful to God for Mrs. Eddy's spiritualized consciousness and life; for Christian Science; and I am thankful to Christian Science for my new sense of God, as it showed me how to get to Him.

SARAH HUTCHISON, Chicago, Ill.

Some seem to come into Christian Science naturally, and to manifest the truth in every way, with only a few weeks' study of Science and Health, while others struggle on and on for years, gaining inch by inch, and even then at times apparently slipping back to conditions experienced at first. My way in Christian Science, for three years and a half, was an almost constant struggle. At the first reading of that priceless book, Science and Health, I could accept the fundamental teaching, as it seemed reasonable and logical and founded entirely on the Bible. Other phases of it I could not understand, but I found, by continued reading and study, that Mrs. Eddy had reasoned from a spiritual basis, while I was reasoning from a material basis. I had suffered from indigestion since I was a boy, in practically all its miserable forms. This ailment has been overcome through Christian Science. There are still times when I am reminded that I once had the trouble, but

Digitized by Google

never to such an extent that I am not soon its master. Last winter, when confined to the house with an acute attack, I feel sure that I was saved from a long course of fever. I was in a state of almost utter collapse, and exceedingly nervous, but Divine power, as explained by Mrs. Eddy, brought me safely through.

If I have learned anything of this great truth, it is that in order to avail ourselves of its healing power, our lives must come into harmony with Christ's teachings. It is when I struggle to gain the mastery over the human tendency to sin, that I am conscious of the right to claim the promises of God. This has meant the giving up of idols, many of which seemed very necessary at first, and some so subtle that I was shocked when I realized their hold on me. Thank God, I can now realize most of the time that I am not fighting my battles alone, and there is not a day in which I do not try to make my life less material and more Christlike. Christian Science has made me a happier man, for it has banished many doubts and fears, and I have a better understanding of what God is. I have learned to read and understand the Bible, and to know that a belief in death is not an essential to life and happiness.

J. JEROME HAYES, New York, N. Y.

I have been benefited so much by Christian Science that I feel it a duty as well as a pleasure to give my testimony. After years of acquaintance with *materia medica*, I have found that Christian Science treatment affords me more reliable protection from physical maladies, while it brings, at the same time, health and peace of mind, which is of even greater importance. It is over three years since I began in Christian Science. When it found me I had been an invalid for two years, not confined to bed but unable to attend to all my household duties. My trouble was with the lungs and with my nerves, which made me very weak in body and mind. My Bible was laid away for almost two years, through the belief that I did not dare to read. I tried several doctors and different kinds of medicine. Failing to get relief, or only for a short time, I turned to Christian Science for help. I have not taken any medicine since, and never expect to do so again. I give thanks to God, and to Mrs. Eddy, for all the good I have received. I am alone in Science in my home, but I study the Lesson-Sermon daily, and I find my path much easier. Our home is now a home of more peace. I teach my children about God, and they are much healthier than they used to be. They very seldom let a day pass without repeating the scientific statement of being and the Lord's Prayer.

MRS. NORA E. FULK, Clay City, Ind.

I wish to acknowledge God's goodness to me. In July, 1898, I was wonderfully healed of nervousness, indigestion, severe headaches, and also of partial paralysis of one of my limbs. I had taken various kinds of treatment for the last-named ailment, and at considerable expense, without having received any permanent relief. I entertained a strong belief in heredity, as my father and grandfather had both died of paralysis. I was living in New York, and a friend who was a trained nurse came to visit me. Learning of my condition she advised Christian Science treatment. I knew little of it, but in my great need I decided to try it. I called upon the practitioner whom my friend had recommended, and at my first interview told him that I had no faith in Christian Science, and asked him what good his prayers would do me. Patiently and kindly he quoted Scripture and opened out to me the promise of the Christ-power to heal, and my hungering heart seemed to grasp the truth. I was healed in five treatments.

I am very grateful to our Leader. The *Sentinel* is a welcome visitor each week.

HELEN J. KELSEY, Pulaski, N. Y.

I am truly grateful for Christian Science, for the understanding of God's Word, and for its healing, cleansing power. Christian Science came into my life when all was seeming darkness. I was without hope of ever being a well woman again. I had long been a sufferer, both physically and mentally, and had exhausted alike the patience and skill of kind physicians. I had also tried electricity and oxygen,—in fact all that was brought to my notice. Although my progress was slow, I have been healed of many diseases. My daily prayer is for more understanding. I am truly thankful for the Christian Science literature. I am also thankful for our Leader, Mrs. Eddy.

MRS. ADA FLINT, Toledo, O.

I write to tell of the overcoming of physical ailments by the power of the Word, as revealed and applied in Christian Science. I had for years known something of this Science, and had known personally of the healing of many diseases, and yet, when disease came upon me which was considered incurable in *materia medica*, I was filled with fear. I would have gone at once to another town for help, as there were no Scientists where I was then living, but the tempting suggestion came,—Christian Science can heal you, but your case is serious, and many months and perhaps years may pass before the error can be fully met, and the rainy-day supply will have been long exhausted. So I kept my little earthly all. The pain and fear were great for a few weeks, when there came an entire willingness to sacrifice all that material sense held to be of value. I then went for treatment and was healed. The pain and the great conscious fear were gone, and in their place was a clearer thought—a sense of greater freedom—than was ever before realized. This enabled me, the following day, to speak audibly the Word of Truth to one who was suffering in much the same way as I had been, and again the error was met, this time by the power of the spoken Word alone. At first there was a fear that it might not be acceptably received, then I awoke and knew my duty, and Christian Science was given all the glory.

To have a single fear removed is cause for much gratitude. Then when I think what my life would be were the little understanding of Christian Science which I have, and the privilege of gaining more, taken away from me, I realize something of the debt of gratitude I owe to her whose life-long obedience to her highest sense of right has given to this age an understanding of the truth by which the Master overcame sin, disease, and death, and which, in the very grandeur of its simplicity, even the little ones may know and demonstrate.

MARY E. BURDICK, Oxford, Mich.

About six and a half years ago, I was healed of chronic chills and fever by Christian Science. I had tried various material remedies, but they were of no avail. I was living in the country, when a position opened for me in a town where there were Christian Scientists. Before going, a lecture on this subject was handed me, and I said that if Christian Science would heal me, I would believe in it. Two weeks later I went to town and lived in the home of some Christian Scientists. In a short time my ailments manifested themselves in a severer form than ever. Christian Science treatment was then suggested, and I was ready to try it. A practitioner worked faithfully for me about four weeks, and the chills and fever were overcome and they have never returned. I gained rapidly in health, strength, and weight. I was healed and I believed, but did not then understand. The physical healing meant very much to me, but I had not yet awakened to the need of moral healing. I was of a peculiar temperament, and it seemed no one could understand me. As a child, I never cared much for play, but wanted to be alone to read. This made me selfish, self-absorbed, and morbid, and as I grew

Digitized by Google

older, I awakened to the sinfulness of all this, and I struggled to overcome it, but without success.

I was then subject to ugly moods, to discouragement and despair, and was often on the verge of committing suicide. When under the influence of these errors I was disagreeable to others and hateful to myself. In my despair I often cried to God for help, but seemingly the help did not come. I then asked for help in Christian Science. The practitioner worked faithfully and I tried my best, as I thought, to overcome, and at times I was free, but the conflict seemed to be terrible. I finally became desperate, and tried to run away from the demands of Truth, but I found that I could not do this. After several months, I turned again to Christian Science. I was led to ask for help from a Scientist whose experience had been similar to mine. The help was given, and I learned how to work mentally to overcome the error, and the moral healing was realized. My whole life was changed, and I became hopeful and happy.

I am indeed thankful, and my desire is to live the gratitude I owe to God, and to Mrs. Eddy, for Christian Science.—ALFRED GUENTHER, Lexington, Mo.

It is with a deep feeling of gratitude to our dear Leader, Mrs. Eddy, that I wish to acknowledge what Christian Science has done for me. Words but feebly express all the thankfulness I feel for the blessing that came to me in the awakening from the dream of the mortal and finite sense of being, through the call of Truth. I was led to investigate Christian Science in the year of the World's Fair in Chicago. I was persuaded by a friend to take Christian Science treatment for a very obstinate cough that had troubled me for six weeks, following a bronchial cold that had threatened to be pneumonia. Everything had been done that *materia medica* could advise, including oxygen treatment every other day, but without the desired result. In the early spring the physician had told me that when summer came, the cough would be better, stating that the weather was too unsettled for me to expect to get better, unless I would stay indoors or go to a warmer climate. This ailment was completely overcome by Christian Science treatment, in little more than two weeks' time, and I went out and in as I pleased in all kinds of weather.

I was greatly rejoiced, and with the coming of this truth into my life, the tendency to take cold easily was overcome, and no longer was I subject to the severe colds from which I had formerly suffered.

I have learned that Truth is an ever-present help in times of trouble, and also in times of tranquillity, for I find that only as we rise above the perplexities and worries of corporeal sense, can we keep harmonious. It is our obedience to the demands of Principle that tests our love and shows our gratitude.—MAUDE C. SMITH, Worcester, Mass.

I would not do without Science and Health, the *Sentinel*, *Journal*, and *Quarterly*. They keep my home harmonious and guide us on our way into health, happiness, and prosperity. This blessed truth has healed me from throat and bronchial trouble, supposed to have been inherited. When I was only three days old it was found that I had sore throat, and all my life I was dosed with medicine, until Christian Science healed me of a bad cough, and various other ailments, including tonsilitis, dyspepsia, and bronchitis. It also removed a tumor from the mouth of one member of my family, besides curing chills and fever.

I am very grateful to Mrs. Eddy for Science and Health, which, with the *Quarterly*, makes the Bible so plain and beautiful that we make it our daily companion.

M. T. BAER, Purcell, Ind. Ter.

I feel impelled to write and let others know what the truth is doing for us. I have been following Christian Science for about nine years and the way is growing brighter and brighter. I have never lived where I could have the privilege of church services, and for the past three years have been deprived of the society of Christian Scientists, yet I have our text-book and most of our Leader's other writings. I take the *Sentinel* and *Quarterly*, and am a member of The Mother Church. If I am ever tempted to feel a little lonely, I strive to realize that God is here and He is all, and then there comes the peace which passeth all understanding, and I am satisfied.

Four years ago, when my little boy was born, the birth was painless. He is a healthy, happy little fellow, and when error seems to touch him, he yields readily to Truth. Last summer he was taken suddenly with a severe pain in his back, and by night he could not move without great distress. I treated him, but he seemed to grow worse, crying out with pain whenever we touched him. I then wrote to a practitioner in St. Paul, but two days passed without a reply. On Friday morning our little boy seemed to be very near the dark valley. He did not know us, and appeared to be on the verge of convulsions. His papa felt that something must be done, for we did not even know whether the practitioner had received our appeal for help, yet I knew that the great Physician had heard my prayer, and I clung close to Him. Isaiah, 41: 10 was a great help. I read one beautiful promise after another, until fear died away and we *knew* that Truth had triumphed. In less than an hour the child spoke to me and asked for his sister and his picture-book. In two hours he was up and dressed, and before night we received word that the practitioner was treating him. He could then walk, and the terrible pain and swelling in his neck and shoulder were all gone. This had been so bad that he could not move his head or bear to let us touch him.

Last fall it was said that I was working too hard; every one who came in told me I looked sick, and that I must take a rest. One day I seemed to be overcome, and I went to bed, but I tried to realize the truth. I kept on, getting up and lying down again, for three days. On the third afternoon I was lying down, reading the *Sentinel*, when I read the demonstration that a dear sister had made while reading the words from our text-book on page 243 (lines 4 to 8), and I knew they were true. As I committed them to memory I was healed. I arose and went about my household duties, and when the children came home at night they said I was better. I told them I was well, and repeated to them the words which had conveyed the healing to my consciousness.

There are many other demonstrations over sin and sickness which I might chronicle, but these will let the world know what our heavenly Father does for His children if we but trust in Him alone.

MRS. C. E. A. McCOY, Star Lake, Minn.

After receiving untold blessings for over four years, I want to give this mite. At that time, when life seemed not worth the living, a dear friend told me of Christian Science. I had no interest in it, or in anything else at that time, but my dear mother was interested enough to go to a practitioner and ask for help. The decided improvement in her condition after three treatments, awakened an interest in me, and I too asked for help. In a very short time I was relieved of sick-headaches, from which I suffered untold agony; however, at this time I am entirely healed. I laid aside glasses, and began to want to live. Ailments of all sorts faded away; the fear of death, which a physician had said would come before long, was broken, scarlet fever was entirely healed in two treatments. In many ways has this glorious truth been proven in little things, which mean so much to us. I am especially grateful for Christian Science as a preventive. To know that God is Love brings a peace far dearer than all else.

Digitized by Google

I am indeed grateful to God for blessings I cannot count, and to our dear Leader, Mrs. Eddy, for the revelation of this wonderful truth that makes us free.

MRS. ETTA ROSS, St. Louis, Mo.

It is over four years since I became interested in Christian Science, to which I was led by a desire to know God better and be at peace. Shortly after taking up the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, I was healed of mumps. The pain seemed very real, for I had not then gained sufficient understanding to meet the case myself. My husband, who knew as little of this truth as I did, wanted to apply our old remedies, and he did, but with no benefit whatever. After suffering until two o'clock in the morning, I asked for help. My husband stated the case to a practitioner, who told him that all would be well, and that I should lie down and go to sleep. In fifteen minutes I was sound asleep, all pain gone, and I was healed! This demonstration proved to us beyond all question that God is a very present help in trouble. Since then, several other troubles have been wiped out; viz., stomach trouble, constipation, headaches, weak back, and many other ills.

Words are too feeble to express my gratitude to our beloved Leader, Mrs. Eddy, for giving us the Key to the Scriptures whereby we may unlock the treasure-house and learn of Life, Truth, and Love.

JESSIE B. CARRIGAN, Omaha, Neb.

It is now about five years since Christian Science entered our home. The joy, peace, and other blessings that have come to us since accepting this truth are manifold. About two years ago I had a wonderful demonstration over an attack of appendicitis. I had felt a pain in my side all day, and declared the truth while attending to my household duties, but did not pay much attention to the ailment as I thought it would soon pass away. By evening the pain was so severe that I was hardly able to sit up, and during the night it grew much worse. Our practitioner was absent at the time, and then the struggle came,—the temptation to turn back to *materia medica;* but I saw at once that I would receive no help there, for I knew that my life and being are in God and that He is an ever-present help. I thought I would get up and read from our text-book, Science and Health, but I was unable to do so. I then tried to repeat the scientific statement of being, but found that the only thing I could think of was the Lord's Prayer. I repeated it several times and fell asleep at about six o'clock, and at seven o'clock I awoke free from pain, and was able to get up, attend to my work, and go to church.

All that I have and all that I am I owe to Christian Science, and my heart is filled with love and gratitude to our Leader, Mrs. Eddy, who has so patiently helped us to gain this understanding of divine Principle.

MRS. F. M. PARTRIDGE, Cedar Rapids, Ia.

After fifty-five years of suffering, which a devoted mother, kindest friends, and learned and conscientious physicians could not alleviate; after being forty years a member of an orthodox church, and after having the prayers of loving pastors, I could find no relief from hopeless suffering. At thirty years of age, without a home, and too helpless a burden to inflict upon friends, I sought admittance to a hospital, but was refused, as an incurable might not enter it. Even then loving hands were extended, and loving care given that would gladly have shared the pain if it had been possible.

Five years ago, Christian Science came with healing in its wings, teaching me to know that heaven is within us; to understand that Truth wipes out suffering as though it had never been, clearing the way for a purer faith and trust in divine Love. To explain this I will mention that some of the miseries which have been erased, like chalk-marks from a blackboard, were congestion of the brain and spinal cord of fifty-five years' standing, blood-poisoning of five years, inflammatory rheumatism, paralysis of two years' duration, etc., together with sorrow and poverty.

Is it strange that the old thoughts of bondage, held for half a century, are gladly given up, to be replaced by the new and beautiful ones brought to us in the study of Christian Science, where we learn to know, not to believe; to practise, not to theorize; to prepare to live, not to die? And the most beautiful thought is, that this truth is free for all to understand.—C. E. CUSHMAN MCCARTHY, Berkeley, Cal.

For a number of years I was a weary woman, not ill enough in health to be called an invalid, but suffering more than could be told with fatigue and weakness. Feeling that this was God's will, I did not ask to be healed, although I was constantly doctoring. I suffered with dyspepsia, congestion of the liver, nervous depression, neuralgia, headaches from which I was never quite free, and weak eyesight. With all the medicine, and with different changes for rest, I never regained health, and thought I never should, so I prayed for grace to bear my cross patiently for others' sake. One day, while lying on my couch exhausted, which had become a frequent experience, the words came to me, "Whatsoever ye shall ask in prayer, believing, ye shall receive." I rose, knelt down and said, O God, make me well. I was telling a friend this and she kindly gave me a *Sentinel*. Imagine my joy when I saw the testimonies of healing! I believed them, remembering our Lord's words, "Blessed are they that have not seen, and yet have believed." I obtained a copy of Science and Health and before a week had passed I realized that if God was my all I needed no glasses. My eyes were healed in a few days, and since then I have never thought of glasses. I was also cured of dyspepsia, and nothing that I have eaten has hurt me since then. The belief in health laws was next destroyed, by knowing that our heavenly Father did not make them, and from this has come the beautiful experience of the overcoming of fatigue.

For this alone I can never be thankful enough. True indeed are the words, "They shall run, and not be weary." This was more than a year ago, and I can say that not once have I felt inclined to lie on the couch, nor have I had a headache, although I am doing more work than ever before. Fear has also been overcome in many ways. May God bless Mrs. Eddy more and more, and every one who reads her book, is my fervent prayer.

ADA LINDSELL, Chelmsford, England.

I will try to tell how good God has been to me. For about ten or twelve years, I had a growth on one of my eyes. Some called it a tumor, others a pimple. It was quite large and very noticeable. Last summer I met my old doctor one day and he at once asked what was on my eye. When we parted I did not think of his words again until the next day. I then turned my thought to our heavenly Father, and prayed for the needed help. The operation was performed that moment. The first day there was some pain which went down my cheek. I declared that God's work is without pain and it left me. The next day the growth was gone. I am indeed thankful, and will try to express it in meekness and good deeds, as taught in Science and Health.—MARGARET C. BOLLIN, Omaha, Neb.

In Christian Science the impulse to be good for the sole purpose of increasing the ability to do good avails much, and any other desire thwarts the attainment. We may read in Jesus' direct statement the way to do the Father's will: "And I, if I be lifted up from the earth, will draw all men unto me." He left us no other way if we would do the same work.—A. L. MCBRIDE.

From our Exchanges.

One of those great periods of emancipation is upon us now, a great uprising of the religious instincts of men in defiance of the prescribed forms of thought and means of culture. That which is called so fluently the irreligion and impiety of to-day, is a tremendous revival of religion in its dominant and eternal form, the outcry of men for God with no hindering agencies or conditions to get between. The crisis demands first of all to be recognized, and then we must adapt our whole religious machinery to these new conditions. To stand in the tracks of good men gone before, and by iteration of the old formulas try to curb and convert this new giant to our old ways, is a folly of which a man convicts himself by preaching so as to divide men rather than to unite them. The man who in his religious teaching seeks to separate himself and his following from the uprising of the whole people in a new impulse of worship, a new desire to know God, and to be on good terms with Him, is a type of selfishness and bigotry that has been condemned a hundred times in the last seven centuries of the Christian civilization.

The Christian Work and Evangelist.

Service is the measure of greatness. He is the greatest who does the most good. There are two methods by which good may be promulgated. There is the forcible method, but in that men spend so much time in trying to coerce each other that they have little time left in which to do good. The second method is to overcome evil with good. No power can compare in this world with the power of a good life. It is a slow process,—yes, but so sure. You can calculate the influence of a body upon another body, of mind upon mind, but not the influence of one human heart upon another. I thank God for the democracy of the heart, for it is upon the subject of the heart that we all meet.

WILLIAM J. BRYAN.

Dayton (O.) *Herald.*

A falling off in the number of students preparing for the ministry is reported in England. We have heard of one important theological seminary in this country where the students applying for the next year's class number only one. There has been a marked decrease also in the number of theological students at the German universities. In 1887 the universities had 4,634 students of theology; but this year, in spite of the growth of population, there are only 2,553, or little more than half.—*The Universalist Leader.*

There is an eternal and unchangeable difference between right and wrong, and it is proper to recognize it at all times and under all circumstances. It is not necessary to be rich. It is not necessary to succeed in business. But it is necessary for a disciple of Jesus Christ to be on the side of righteousness. We cannot accept the principle that it is right under any circumstances to do evil that good may come, or to sacrifice in the smallest degree truth and righteousness to obtain business or any worldly success.—*The Watchman.*

Public opinion may cause those who exhibit moral and social symptoms which are obnoxious to the public to shrink from observation, but the disease itself is prevented only by removing the causes of disease. When that is done, the symptoms take care of themselves. An enlightened public opinion must turn attention to the germs and conditions which cause moral disorders. That done, the diseases will vanish.—*The Christian Register.*

If there is one question more than another which should engage attention to-day, it is that of the Christian attitude toward wealth—its accumulation, possession, and distribution.—*The Congregationalist.*

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to The Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of The Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to The Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number, or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By the Hon. WILLIAM G. EWING of Chicago, Ill.

CHRISTIAN SCIENCE. Its Worth and Work. By Rev. ARTHUR R. VOSBURGH of Rochester, N. Y.

CHRISTIAN SCIENCE. Its Promises and their Fulfilment. By EDWARD A. KIMBALL of Chicago, Ill.

CHRISTIAN SCIENCE. Is it Christian? By Mrs. SUE HARPER MIMS of Atlanta, Ga.

CHRISTIAN SCIENCE. Its Work and Scope. By CAROL NORTON of New York City.

CHRISTIAN SCIENCE. The True Idealism. By ANNIE M. KNOTT.

IN GERMAN

CHRISTIAN SCIENCE. Its Promises and their Fulfilment. By EDWARD A. KIMBALL of Chicago, Ill.

CHRISTIAN SCIENCE. The Christianity of Christ. By Rev. IRVING C. TOMLINSON.

Price. Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, 75 cents; five hundred copies, $3.25; one thousand copies, $6.00. Orders for supplements may be assorted as desired.

Pamphlets

LEGAL ASPECTS OF CHRISTIAN SCIENCE. A compilation of Court Decisions, Opinions of Lawyers, etc. 72 pages.

MR. KIMBALL'S LECTURE. 33 pages.

HEALING THROUGH CHRISTIAN SCIENCE. Discourses and Editorials. By SEPTIMUS J. HANNA. 36 pages.

HEARINGS ON PROPOSED MEDICAL BILLS IN MASSACHUSETTS AND NEW YORK. 23 pages.

ANSWERS TO QUESTIONS IN CHRISTIAN SCIENCE. By EDWARD A. KIMBALL. 26 pages.

PRAYER AND CONFIDENCE. Four articles reprinted from the *Journal*. 40 pages.

THE LOS ANGELES CASE. Testimonials given in Court as to the healing efficacy of Christian Science. 63 pages.

THE CHRISTIAN SCIENCE MOVEMENT. Revised by CAROL NORTON. 23 pages.

CHRISTIAN SCIENCE IS SCIENTIFIC CHRISTIANITY. A Lecture. By Rev. ARTHUR R. VOSBURGH. 28 pages.

CHRISTIAN SCIENCE: ITS COMPASSIONATE APPEAL. Four articles reprinted from the *Journal*. 38 pages.

A CRITIC ANSWERED. By ALFRED FARLOW. Printed in German only. 31 pages.

Price. One copy or more, six cents each; twelve copies to one address, sixty cents; twenty-five copies to one address, $1.15; fifty copies to one address, $2.25. Orders for pamphlets may be assorted as desired.

Works on Christian Science

Written by Rev. MARY BAKER G. EDDY

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Enlarged and Revised, 1902. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid $3 18

Two to twelve books (cloth only) to one address, each, prepaid 3 00
Twelve or more books to one address, each, prepaid 2 75

Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid 4 00
Twelve or more to one address, each, prepaid . . . 3 75

Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid . . 5 00
Twelve or more to one address, each, prepaid . . . 4 75

Levant, divinity circuit, leather-lined, round corners, gilt edges, silk-sewed, heavy Oxford India Bible Paper, wide margins, each, prepaid 6 00
Twelve or more to one address, each, prepaid 5 75

Orders for Science and Health, in lots of twelve or more to one address, may include any or all the different styles of binding.

A COMPLETE CONCORDANCE to Science and Health with Key to the Scriptures, 595 pp., 10 x 7. Bound in cloth, marbled edges. Price, single copy, prepaid . $5 00
Twelve or more copies to one address, each . . 4 50

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth), each, prepaid 2 25
Twelve or more books to one address, each, prepaid 2 00

Morocco, limp, round corners, gilt edges, convenient for pocket, each, prepaid 4 00
Twelve or more to one address, each, prepaid . . . 3 75

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5 00
Twelve or more to one address, each, prepaid . . 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea: 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion: 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* **PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen. $2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid. 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

A new system of credit has been devised for the canal employes on the Isthmus, to be put into effect about October 1. The system comprises coupon credit slips, which will be issued to canal employes on demand, in books containing credit respectively for $2.50, $5, and $25 gold, redeemable within two months only. Employes will be allowed to get these credit books on demand at any time, up to a certain percentage of the total amount of wages due them. No liquor or tobacco is sold at the five Government commissaries along the line of the road, and it has been decided to carry in these commissaries only such articles as shall be decided to constitute the necessaries of life.

Investigation by the Keep Commission into the matter of making purchases for the departments at Washington shows that all sorts of prices are paid for identical goods. One kind of ink costs per dozen quarts in one department $5.80, in another $5.90, and in another $7.10. A better ink is made for the Treasury at $3.15. One brand of mucilage is sold at prices running from $1.65 to $3 per dozen. Red ink costs one department thirty-five cents and costs another department $1.30. The commission will report in favor of one purchasing department.

Rear Admiral Chester of the special squadron sent by the Navy Department to Spain and the northern coast of Africa to view the recent eclipse, has made his final report to the Department, in which he says the observation by all parties under his supervision was entirely successful, and the most gratifying feature of the expedition was the marked interest displayed in the work by the crews of the ships, whose intelligence and resourcefulness overcame many a difficulty in installing the delicate instruments employed in the observation.

The count of cash in the United States Treasury, which takes place every time a new Treasurer enters upon the duties of his office, was completed last week, and showed that the amount was correct to a cent, according to the figures rendered by Ellis H. Roberts on July 1, when he handed over the treasurership to Charles H. Treat. The grand total of cash, bonds, and other securities is $1,259,598,278.58 2-3. The total seven years ago, when Mr. Roberts became Treasurer, was $796,925,439.17 2-3.

A national purity conference will be held in LaCrosse, Wis., October 17 to 19, with delegates present from all over the United States and Canada. The purpose of the conference is to consider and discuss the present situation in the country as pertains to the cause of purity,—rescue work, preventive methods, law enforcement, divorce, race suicide, additional laws needed, and methods of agitation and education for promoting a higher standard of purity in family and individual life.

Former Minister to China, Edwin H. Conger, said, in a recent address, that in the failure of the Americans to build the Hankow Railway faith had been broken with China and America's good standing with the Chinese seriously impaired. The relinquishment of the concession was utterly defenceless, he said, after the representations which we made to the Chinese. It is vastly more harmful to this nation than the boycott, concerning which so much has been said and written.

Four officials of the Schwarzschild & Sulzberger Packing Company of Chicago were fined an aggregate of $25,000 by Judge Humphrey in the United States District Court last week. The fines followed a plea of guilty to indictments charging conspiracy to accept railroad rebates. The cases against other packers were continued. The outcome of this case is believed to mean the breaking up of the entire rebate evil of the country.

A majority of the foreign members of the Consulting Board of Engineers of the Isthmian Canal are said to favor a sea-level canal.

Foreign.

A second Hague conference on peace and disarmament has been called by Emperor Nicholas after consultation with President Roosevelt and the European nations. Proposals have been made to the rulers and it is believed the announcement will soon be officially made. It is understood that President Roosevelt urged the Emperor to call this conference.

The greatest number of Scotchmen under arms since the battle of Flodden Field was reviewed by King Edward on the parade ground at Edinburgh last week, when nearly 40,000 Scottish volunteers marched past his Majesty.

It is reported from Shanghai that an imperial decree has been issued ordering many of the ports in Manchuria to be opened equally to all treaty Powers.

Japan is preparing to establish a line of steamers to South America for the purpose of importing food products, especially wheat from Argentina.

Seven members of the Japanese peace embassy sailed for home on the steamer Dakota on the 21st. Baron Komura is still unable to go.

The Russian and Japanese squadrons met in Koruiloff Bay, September 16, and the admirals arranged the terms of the naval armistice.

It was reported from Panama last week that General Rafael Reyes, President of Colombia, had declared himself dictator.

A Tokio correspondent says that Japan's war losses to date are 72,450.

Industrial and Commercial.

Japan has thirty ports open to foreign trade. At four of these, in 1902, Japanese vessels registering 19,609,745 tons and foreign ships of 12,092,615 tons cleared. Osaka, sometimes called the Liverpool of Japan, with its million of people, eight years ago appropriated $11,250,000 to build docks and improve its harbor. Nine million dollars have been spent. It is thought that from fifteen to twenty millions more will be expended before the city has what its engineers deem necessary. Breakwaters, dikes, piers, wharves, warehouses equal to those of Liverpool, London, or Hamburg, are being built.

Almost thirty-two millions of eggs were shipped out of Morristown, Tenn., during 1904, representing, at sixteen and two-thirds cents per dozen, nearly $500,000 in cash. During the same period of time 12,636,000 pounds of poultry were shipped in and out of the same market, representing, at an average value of eighteen cents per pound, returns amounting to $2,274,480. The credit for this volume of business is given to the women of the section.

General.

A German explorer, who furnished seven of the museums of Central Europe with collections of African fauna, went back to Africa with a large outfit, including flashlight materials and telescopic cameras. His telescopic camera enabled him from a distance of a half-mile or more to get good pictures of the morning bath of the rhinoceros; of the elephant and giraffe browsing on leaves and twigs; of antelopes, zebras, and other animals grazing on the plains, and of birds in flight or at rest; and by means of flashlights of the animals that prowl at night, lions, leopards, hyenas, etc. The flashlight made cowards of them all, and every one of them, from lion to jackal, sprang hastily for the jungle when the flash came.

An article in the *London Times* states that already there have been cleared up two-thirds of the temple of King Mentuhetep III., of the Eleventh Dynasty (B. C. 2500), the oldest temple at Thebes. The discoveries of the year have raised important questions as regards the development of Egyptian art and architecture.

Doctors Torrey and Alexander admit that their revival campaign in London was a failure, and Dr. Torrey remarked in a recent address there, "I suppose it would be safe to say that during the last year there have not been five persons definitely converted in any one church or chapel in London."

The seventh satellite of Jupiter, discovered last March by Professor Perrine of Lick Observatory, has been under observation recently. Observatory astronomers say that its diameter is probably one hundred miles, and its period of revolution six or eight months.

Musical insects of the winged type may be divided into those which do not use their wings and those which do, for the production of sound. The latter species is by far the more numerous. All insects are tenors, and the males are always the performers.

The house in Verona in which Juliet is said to have lived and in which she received Romeo, has been sold at auction. The bidding began at $1,200 and the house was finally bought in by the city of Verona for $2,900.

The Standard Oil Company of New Jersey declared a dividend for the quarter of $6 a share, payable September 15. The previous dividends were $9 a share, payable June 15, and $15 a share, payable March 15.

Dr. Hollander, representing the President of the United States, is in Santo Domingo for the purpose of investigating the claims of various parties against that Government.

The Royal George, the Victoria, the Camperdown, the Captain, the Maine, the Mikasa,—the naval losses of peace are pretty formidable, says an exchange.

The last farm in King's County, N. Y., has just been sold. It contained 218 acres and brought about $2,300 an acre.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

"The redemption of our body."

C. W. CHADWICK.

Even we ourselves groan within ourselves, waiting for the adoption, to wit, the redemption of our body.—PAUL.

WHEN we stop to consider the thousand and one different remedies for the alleviation of bodily suffering, all promising relief and all signally failing in the hour of greatest need, we are forced to admit that the world at large is yet ignorant of an adequate means for relief. With all our boasted learning in physiology, anatomy, and kindred subjects, the human body is to-day just as much in need of "redemption" as ever before, and it will remain "the glory, jest, and riddle of the world" until explained in the light of Christian Science, from the standpoint of one perfect creator and one perfect spiritual creation.

Popular theology also fails to explain the true nature of what is termed the human mechanism, in that it believes it to be a habitation for an immortal soul which is incompetent to protect its body from the ravages of disease and sin. Left in the embarrassing position caused by belief in an immortal creator and a mortal creation, of causation in bondage to and dependent upon materiality, is it any wonder that the poor body stands in need of a redeemer? While sweet and bitter waters are supposed to proceed from the same fountain, and light and darkness to dwell together, it is manifest that in coming to the world, Christian Science has supplied a pressing want.

What more practical evidence of God's mercy and love than this, that He has in the fulness of time sent the Christ-truth to remove this contradiction of the ages; namely, the belief that a perfect God is the author of an imperfect creation. Humanity will not, cannot cease its groanings until a correct understanding of God's creation is reached. Then, and not until then, will it begin to realize man's God-given dominion over the body, and learn how to solve the problem of salvation.

The "redemption of our body" is a problem which confronts every human being, whether he has yet awakened to this fact or not; and Christian Science has come to make clear to him God's way of solving it; viz., by eliminating the sense of material embodiment. It does not begin by telling him that he has no body, as is sometimes asserted by shallow critics, but assures him that when he understands Mind's government of the body, health will be established. His fear of an uncertain future existence will thus subside, and he will begin to exercise his natural, God-intended control, thus reversing the mortal law that would make him a slave to his own body. He will then know that all that is to be lost is a false, mistaken sense, or misconception. As he begins to reason from the standpoint of spiritual creation,—a perfect cause and a perfect effect inseparable from it,—his sense of the body constantly improves, and this means a corresponding betterment of bodily conditions. The truth about God has revealed to him the truth about body. He no longer thinks of himself as governed by mortal law, but as governed by the immortal law of perfect Mind. This cleanses the body of both sin and disease, and in this way only can they be overcome. All that God creates is spiritual and perfect, and for this reason it cannot be divorced from Spirit. It is human belief that reverses and misinterprets spiritual creation, and calls it mortal and imperfect; but this does not affect or change this creation, any more than a misstatement alters a fact. It is the human belief or mentality of mortals which needs redemption, since it is directly responsible for all the ills to which flesh is supposed to be heir. This was evidenced in Jesus' admonition to take no thought for the body. He knew that divine Mind can and does care for the body as no human intelligence can, and because he understood the divine control of ever-present Mind, he did not employ or advocate the use of drugs or any other material means. And since absolute reliance upon divine power results in healing, the same now as in Jesus' time, the Christian Scientist feels perfectly secure in maintaining that it is not God's will that he should look to material sources for healing. This practical trust in a higher intelligence, as being supremely capable of caring for the human body, by no means suggests carelessness or indifference on his part, but, on the contrary, a considerate and correct attitude of thought relative to the body. It is mortal thought which always needs correction; God's thought, reflected in human consciousness, alone can heal and control the body scientifically.

Some people accuse Christian Scientists of ignoring the body; others say they make too much of it when they insist that it must be controlled through Mind. Both these accusations betray an ignorance of what Christian Science teaches. Christian Science simply insists upon right thinking concerning the body. Scientific thought, sustained by divine Love, quenches suffering and grief, heals disease, obliterates sin and its effects, reclaims the drunkard, and destroys infidelity. It would, therefore, seem to be eminently proper to pay sufficient attention to our thought respecting the body, and its control, to bring about such practical results.

Metaphysical healing is our sufficient proof that a diseased body is not acceptable to God. How shall we obey the Scriptural injunction to glorify God in our bodies unless we learn how to protect them from sin and disease? How otherwise can we present our bodies "holy, acceptable unto God," which is our reasonable service? We should understand that the only scientific control or government is vested in the creator, else cause and effect would be reversed. We should also know that spiritual causation reveals the only law of correction and restoration. The creator of all things is in touch with His creation. The true concept of body, and the mortal sense of it, greatly differ. The one is spiritual and perfect, the other material and imperfect.

Drugging and manipulating that which is primarily an effect, is like trying to rub out shadows without paying any heed to their cause. Fortunately, humanity is beginning to awaken to the fact that waiting for the body to die is not waiting for its redemption. Either here or hereafter it must be redeemed through a correct understanding of cause and effect. It is a matter of demonstration, of overcoming, and not of blind belief or profession. It involves the regeneration and Christianization of thought.

whereby divine Mind will be recognized as the only reality and the controlling power of the universe.

The closer we get to God in thought and conversation the better shall we understand spiritual causation and learn this primary fact in metaphysics, that the body's best and only friend is the divine Mind (see Science and Health, p. 176), in which humanity must find its only redemption from a false sense of existence as being material and corporeal. Paul says, "For we know that if our earthly house of this tabernacle were dissolved, we have a building of God, an house not made with hands, eternal in the heavens." Not through dying, but through right living, will this final spiritual elimination of corporeality take place, either here or hereafter.

Good, a Standard.

HORATIO W. NELSON.

MANY critics have said that the Christian Scientist's denial of evil's reality is absurd. It will, however, be found to be entirely logical if given a little earnest consideration. It may be stated without dispute that sin is evil and is simply another name for error; in other words, that it is not truth, and that the correction of an error should leave nothing to take its place.

The word truth, taken in its broader significance, and the word science considered in the same way, represent standards,—perfect Principle, fixed laws, perfect harmony, and so on. In Mrs. Eddy's writings we learn that whatever is true belongs necessarily to the essential reality of things, and as we ponder over her wonderfully comprehensive statements a clear path is opened up for the investigator into the philosophy and demonstration of Christian Science.

It is advisable in considering this subject to start with a clean page and a clearly stated premise. The primal reality, or cause of being, cannot be finite, that is to say, it is absolutely unthinkable that the creator of all could ever have had a beginning or an ending. The human mind, therefore, can only state that the origin of cause is simply unthinkable, and that a finite cause or finite creator is self-contradictory. God, the creator, cannot be finite, and therefore must necessarily be infinite.

Perfect harmony cannot include discord, and perfect good cannot include evil. Evil may be considered as a generic or an inclusive name for any and all kinds of discord and error. All evil is theoretically capable of correction; an error or discord corrected no longer exists; it has, therefore, but a temporary or seeming existence. To correct good, or to correct harmony and perfection, is impossible; intrinsically they have a fixed value, they are standards. The teaching of Christian Science that good is all, permits us to start with fixed Principle and a clean page, and if the argument and investigation be pursued on the basis of this premise, the conclusion reached will be that it is impossible to consider evil as an entity.

The agnostic, or liberal thinker, may without hesitancy take Mrs. Eddy's several works on Christian Science, and read them in connection with the books of the New Testament without offence to his intelligence, and be well repaid for the effort. He will assuredly find that the allness of good and the nothingness of evil is the basis of its philosophy and is acceptable to his reason. If he cares to apply the understanding of Principle thus gained, by denying the reality of the evils apparently surrounding him, and affirming the fixity and permanence of good, he will gain a new and higher sense of the meaning of Life; and, surprising though it may seem to him, during the process he will probably find that many physical and mental ills and discords in his personal experience, which heretofore seemed to have a fixed value,—a reality with him,—have disappeared, faded into nothingness; their supposed substance has become less than a shadow.

Getting a Living.

BERT POOLE.

THE writer has had some strenuous experiences along the line of adjusting supply and demand, which, though not expedient to enumerate in this article, have, nevertheless, been of great value to him in determining the significance of existence, apart from money-getting. It has been found that the more one looks toward wealth as the source of comfort and happiness the more will-o-the-wispish it becomes. The elusive elements of materiality are among the most baffling factors of mortal experience. Ghosts cannot rival the airiness of money when the latter is made the central object of pursuits which in themselves are innocent. It goes without saying that when one does a service for another, especially a continuous round of duties, that the employer is expected to pay a sum of money for such service, in keeping with the law of a fair exchange of values which is the basis of all legitimate business transactions.

Jesus the Nazarene demonstrated beyond question that mere wage-producing and money-getting do not constitute the getting of a living. Nevertheless, it is probable that for years he was an obscure carpenter, working like others of his class in the little community of Nazareth, and that he received wages for his labor.

The relationships existing between members of our complex civilization have to do with far more than the mere production of wheat, meat, garden-stuff, manufactured articles, etc. These multiplied opportunities are leading many, especially among the rising claimants for place, to seek easy positions where there is a minimum of work to a maximum of pay.

In her Annual Message for 1901 our Leader strikes the keynote of true living when she urges upon Christian Scientists the necessity of constant work, and if any think to evade this demand and glide along in ease, to such there must come an awakening. To have an easy lot may seem very satisfying, an occasion for self-gratulation, but no wise follower of the Master will allow this to become a habit. Work we must and work we had better, for our own good as well as for that of others. Idleness clogs thought, and is opposed to that alertness of mind which is requisite for continued usefulness and growth. Always to demand a money return for trifling service is not wise. It is better to count it a joy to do good to others without hope of reward than to live with an extended palm.

I remember once, when trying to secure a position where a man was needed to do mechanical drawing, that the proprietor proposed that I show what I could do, then and there, to prove my fitness. The opportunity was gladly accepted and a drawing was given to be traced. The thing looked easy and I felt sure the place would be secured. For two hours the work went on. No hint was given as to requirements of quality of line, or treatment of lettering. It was new work and I did my best.

While engaged on the task, much self-gratulation was indulged on securing so good an opening, but to my surprise the proprietors found that my work was not up to *their* standard. With a heavy heart, congratulations and self-thrown bouquets went to the winds, on realizing that the prize is not for him who merely asks, but for the one who actually overcomes. Two hours might have sufficed to demonstrate much, and had my previous training been on mechanical lines, that is, had I been severe with myself on the matter of fine lines, the position would have been secured. The testimony of the thoughtful is, that to achieve something worth doing, to overcome obstacles, to be found superior to the commonplace, brings a reward much to be prized.

There are those who make no special effort to obtain wealth or place but who make the mistake of being envious of others who seem to have attained to material prosperity.

Digitized by Google

These people compare notes too much as to "how easy" some folks get along. Little do they know what unrest, what longings, what disappointments their "easy-going" neighbor may be struggling with. Or even granting that not a care wrinkles his brow, "What is that to thee? follow thou me," Jesus speaks to us just as surely as he did unto Peter. We must receive the rebuke, mentally set our thoughts in order, and push on to real conquest ourselves. He who is busy with the building of eternal character is working with the Master Architect. There is in the well-balanced and spiritually-awakened man a stability and adequacy which all admire and have instinctive confidence in. Such a character contains treasures that are constantly sought after. The world of affairs needs men of strong character and they are coming to the front. Men who are conducting the leading magazines and periodicals say to the purveyors of questionable goods, "You cannot buy space in my publication for advertising your goods." Christian Science is leavening this lump and the list of fair dealing business houses is fast increasing. "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you," does not mean that men should seek the kingdom *in order* that these shall be added, but when we look to the real, which is spiritual, all good of which we are capable of making a proper use will come to us. Let us prove that we are producers of good unto all with whom we come in contact. This is living. This is getting a living and it is giving a living to others.

So many heart-beats do not constitute life. So many good deeds, *per se*, do not constitute living, but the truly honest and earnest man who works on steadily in the one thought of building an enduring structure wherein dwelleth all that makes for righteousness, for peace, for security of mind—this man is the reflection of the one God, even the Father. To one thus advancing there can scarcely come the thought of "getting a living," for the realization of Life as God effectually swallows up mere plans, devices, and methods, and produces one grand, unselfed harmony of right doing.

Simplicity.

KATHERINE KENNEDY.

IF we wish to be true followers of our great Elder Brother, Jesus, should we not strive to emulate his powerful example of simplicity in speech when delivering God's message to our fellow-men? He of the "seeing eye" and "hearing ear," whose purity of thought enabled him to receive clear visions of absolute Truth; he "who spake as never man spake," reached the multitudes through simple parables, often using the picture-language of nature as the means of conveying the potent lessons of Truth. What might be considered small and insignificant things, such as the grain of mustard seed, the little candle shedding its light, the fowls of the air, and the lilies of the field, served him as great symbols; and a simple story or trivial experience, such as the sower going forth to sow, the leaven which the woman took and hid in three measures of meal, the net cast into the sea, etc., these commonplace experiences were rich enough to serve his great purpose of explaining to the multitudes the mysteries of the kingdom of heaven, the deep things of God.

Jesus made the common things about him "friendly and sacred, all events profitable, all days holy," and so, as we preach the gospel and send out the glad tidings through the medium of our periodicals, we should try to speak the simple universal language intelligible to all. Every word should breathe forth the energizing atmosphere of Life, Truth, and Love; should aim to guide, cheer, inspire, and heal; but this does not necessarily involve the use of long words or a display of rhetoric and deep intellectuality. "A man's power to connect his thought with its proper symbol and so utter it, depends largely on the simplicity of his character, that is, upon his love for the truth and his desire to communicate it without loss;" but when it becomes necessary to employ a dictionary and perhaps an encyclopedia to read an article intelligently, the thread of thought is often broken, the interest lessened, and a great loss of good must result.

Jesus said to his disciples, "Unto you it is given to know the mysteries of the kingdom of God: but to others in parables." "Therefore speak I to them in parables: because they seeing see not; and hearing they hear not, neither do they understand." Would it not therefore be wise for us to speak simply, so that schoolboy or sage, fisherman or philosopher, commoner or king, may see, hear, and understand? In the joy of mental emancipation let us not forget that our message must go "into all the world;" not only to Christian Scientists who understand and speak the "new tongue," but also to those who have not as yet found their wings, and who cannot rise into the realm of the infinite as can those of greater experience and understanding.

A Child's Faith.

L. R. C.

THE gratitude that I feel for the light which Christian Science has brought to me and mine is unutterable. When opportunities come for proving the efficacy of this Science, I am filled with wonder how I ever lived without it. The proofs of Truth's power are so sure and convincing that the so-called problems of daily experience are worked out with ever-increasing confidence and faith. Each one who is applying his understanding of divine Principle to these daily experiences finds inspiration from contact with the thought of a child, whose unquestioning acceptance of God's allness often brings immediate healing.

A few days ago my little girl, who is three, burned her hand badly. It was her nap time, and only her nurse, who is not a Christian Scientist, was with her. It was, therefore, with no prompting that she asked if she might say the scientific statement of being (Science and Health, p. 468), which she did, and was soon asleep. That was the last we heard of the burn, although the scar remained for a few days and showed the burn to have been severe. Unquestionably the child turned to divine Love for help, and her experience brought a lesson home to me.

On hearing of this demonstration some one said, "But the child did not understand what she said to bring relief." And here is the pitiable state of mortal mind summed up in one word,—doubt! What are we older ones to do but become as little children, in making simple acknowledgment of the power of God? My children do not question the most radical statements of God's power, as revealed in Christian Science. My prayer is that in humility and meekness I may become "as a little child," even as the Master required. To Mrs. Eddy I give my hourly gratitude and love, and may these be proved by my willingness to demonstrate the truth she has revealed.

The Steps.

SEIZE your staff! beyond this height
We shall find the Infinite Light!
Gird your thigh! this sword shall hew
Paths that reach the untroubled blue!
Though dark mountains form the stair,
It is ours to climb and dare!
Law, truth, love—the peaks are three:
Sinai, Olivet, Calvary!

Verification of Scriptural Promises.

It should not strain our credulity to believe the Scriptural teachings, "With God all things are possible," and God is "a very present help in trouble." The Scriptures record many instances of marvelous protection and deliverance, and our own age may justly claim striking manifestations of divine intervention in human affairs, such as the reforming of drunkards, the overcoming of sin and sickness, and the marked supernatural guidance in every-day transactions. Such results accompanying the lives of those who have a deep spiritual trust in divine providence are convincing at least to those who believe in God, whatever they may signify to the materialist.

Considering cause and effect from a material viewpoint, one is likely to lose sight of God and credit the pleasures and pains of existence to material laws, and, consequently, yield to the supposition that we may expect no results except those which come in a material way. Therefore, the Psalmist's declaration, "Because thou hast made the Lord, which is my refuge, even the most High, thy habitation; there shall no evil befall thee, neither shall any plague come nigh thy dwelling," seems impractical and outside the possibility of fulfilment in this age, though it may appear beautiful and as having once been within the range of human possibilities.

Mortals have drifted so far away from a dependence upon spiritual power that they have almost ceased even to try in this line and have almost entirely resigned themselves to the custom of working without expectation of divine aid.

Here Christian Science comes to the rescue, and with its clear, comprehensive, definite explanation of the nature of Deity reveals the possibility of utilizing our understanding of divine Life, intelligence, and power in all the legitimate experiences of mortals, and demonstrates that the Scriptural promises are not only beautiful but capable of fulfilment in all ages.

Christian Science proves by its marvelous effects upon evil and discord that it is possible to live "in the secret place of the most High," and that this secret place is no more nor less than the consciousness of the divine presence which is hidden from the human concept; that in proportion as we realize the divine presence do we enter into that safety so graphically described by the Psalmist.

We do not claim that Christian Scientists have attained to perfect immunity from evil, but that they are proving the possibility of such attainment and are well started in the way.

ALFRED FARLOW.
Boston Times.

There is nothing farther from true Christian Science teaching or practice than "the emotional." It would be as reasonable to say of the student of mathematics that emotion produces in his mind the requisite understanding and application of its basic law, and thus enables him to obtain right results. Christian Science is built upon the Word of God and the teaching and work of Christ Jesus.

If to "ignore the scientific, intellectual, and material side of man" means that we do not give it any power to rule our life, to make us sick or discordant, this is true in so far as we are able to go. On the other hand, Christian Scientists do recognize the physical world with its beauty and grandeur as the only expression the material senses are capable of perceiving, but they see in it only an imperfect concept of the true spiritual creation of which the apostle speaks thus: "Eye hath not seen, nor ear heard, neither have entered into the heart of man, the things which God hath prepared for them that love him." Christian Scientists admit with sorrow that sin and disease do exist to this same mortal sense, but know that they are not real to God or to the true man, for God did not create them. "God saw everything that he had made, and, behold, it was very good."

The great trouble with your correspondent is that he attempts to compare his material reckonings with the spiritual facts; and, because they disagree, he immediately repudiates the claims of Spirit. As well might he attempt to mix oil and water as to adjust spiritual laws to material calculations. For centuries mankind has been delving in materiality and been subject to its supposed laws. How much has been accomplished towards the realization of man's birthright: Dominion over all? Simply nothing.

To state that suggestion of any nature enters into Christian Science is to claim the very opposite of its teachings, as any careful reader of the text-book can prove for himself. Christian Scientists claim to have reached only a modest understanding of the Science of Life, but they are quite willing to compare results, case by case, with the drug system. The following statistics are applicable to every locality:—

"A recent investigation in the State of Texas, as well as in the State of Maine, showed that seventy per cent of those who had applied to Christian Science during the past year had already failed to recover or to receive permanent benefit through medical treatment, and that ninety per cent of these were either healed or permanently benefited through Christian Science treatment. Now, since seventy per cent of those who have applied to Christian Science had already exhausted their hope in material remedies, no complaint ought to be made if a few of them still continued their downward course after taking up Christian Science. To be consistent your correspondent should chastise the medical fraternity for their failures to cure the sick who in desperation have fled to Christian Science."

It has been said that Christian Science is not Christian. If reforming the drunkard, cleansing the immoral thought, destroying hate, malice, and dishonesty, uplifting the sorrow-laden, and healing the sick are not the works that Jesus indicated as the signs of a Christian, what are they? Christian Science is doing all these things.

CHARLES K. SKINNER.
Michigan Christian Herald.

The dilettante may assure himself he knows all about Christian Science, even that he knows more about how the work is done than the Christian Scientist himself, but really no one is competent to say what constitutes Christian Science healing unless he has actually demonstrated the rules laid done in the Christian Science text-book. That book says that Christian Science practice is a revival of primitive Christian healing; that in a modest degree it is a repetition of the work done by Jesus and his followers; that it is based on the same Principle, and that Principle is God. The Christian Science text-book says that Jesus healed because of his transcendant goodness; that nothing but a good mind or a mind filled with goodness can heal, and that hypnotism, or the action of the human will, is no more a part of Christian Science healing than it was a part of Jesus' work.

The hope of a suffering world is supported to-day by the growing conviction that there is something outside of human ingenuity and drugs which can and does heal disease, and that this divine power heals one disease as readily as it does another. Jesus' ministry proved this to be true. We are in a hopeless and helpless state if neither matter nor immortal Mind can destroy certain types of ailment, such as those caused by bacilli. If this be true, we are forced to the melancholy conclusion that these are non-destructible, hence, eternal, and that they will accompany the human race throughout eternity. From such darkness and superstition, Christian Science is lifting mankind by healing the very things hitherto considered incurable.

Among the Churches.

El Paso, Tex.

Our growth in El Paso is very encouraging. At our semi-annual business meeting it was reported that there had been more Christian Science literature sold during the first six months of the present year than in the twelve months preceding.

During the same period the increase in our membership was seventy-five per cent. In a financial way this little tendril of the vine has been wonderfully cared for, and we are all grateful for the blessings that have come to us, collectively and individually, through the gospel of Christian Science.—N. BESSIE NUCKOLLS, *Clerk*.

Word from Leavenworth, Kan.

We are glad to report to headquarters the awakened thought of this branch to its privilege of giving to The Mother Church. Our church of about fifty members bought its edifice just before the building of The Mother Church extension was decided upon. The members pledged to finish paying for the church in semi-annual instalments, and these payments have been very satisfactorily made.

At a called meeting of the church, which was very largely attended, it was unanimously voted to approve the action of the Board of Directors in replacing the loan on our church, so that the semi-annual payments could be discontinued till The Mother Church Building Fund was completed, and to place the money (one hundred dollars) already collected to pay on our church to the credit of The Mother Church Building Fund; and further, a sufficient sum to enable us to send three hundred and fifty dollars at this time was pledged.

It is our purpose to make no more payments on our church till the word comes that nothing more is needed for The Mother Church, but to make monthly contributions to that fund. In doing this we know our church will lack in nothing.—ANNA C. WYETH, *Clerk*.

The Distribution of Literature.

In the distribution of Christian Science literature, experience shows that in addition to the individual activity of the members, a systematic and collective effort has much value. First Church of Christ, Scientist, of Hartford, has for some time been realizing the truism that we find our own in seeking another's good, and one of the means by which the universal good has been sought, is through the distribution of literature. Public libraries in this city and neighboring towns have been supplied with copies of Science and Health, "Miscellaneous Writings," and other works by our Leader. Sometimes several copies have been placed in one library, where the demand required more than one. Other institutions have been supplied with Science and Health, and wherever it has proved acceptable, the *Sentinel* and *Journal* have been given, a year's subscription being entered in the name of the library or institution.

The branch of the work which has seemed to have the most definite and practical results, is our free circulating library. This work is now in its infancy, but the future possibilities loom large. The library contains, at present, a total of fifty-nine volumes, and is being constantly added to. It includes only Christian Science literature. There are twenty-three volumes of Science and Health in this library, eight copies of "Miscellaneous Writings," and all the other works of our Leader, including her Messages to The Mother Church, and six copies of the Christian Science Hymnal, which are frequently in use.

This library is maintained by the church, and was originally formed by voluntary contributions. Most of the volumes are distributed from the Reading Room, which is in one of the office buildings on the principal street of the city, but several volumes are also kept at the church. At each church service it is announced that all who desire to study Christian Science literature may procure books from this library, either after that service or at the Reading Room. The system is simple. The applicant for a book need not necessarily be known to the attendant in charge. The name and address of the applicant is entered in a memorandum book, with the date of issue. A card in the volume issued gives the date when it is returnable. Books may be taken for two weeks and renewed for two weeks. As yet it has not been found necessary to impose fines, and the generosity of the church is seldom abused. Books are, as a rule, returned promptly, they are well taken care of, and none have been lost or damaged. The demand for this library has been remarkable from the first, and has necessitated additions from time to time. Many visitors and strangers at the services have been greatly helped by the opportunities offered by this free library for study and development. Those in charge of the library have noticed that in many instances strangers and inquirers have purchased Science and Health upon returning the copy which they had borrowed from the library.

In addition to the circulating library, a table containing literature, such as old *Journals* and *Sentinels*, reprints, pamphlets, and supplements, is placed in the lobby of the church, and in the public notices it is announced that this literature is for free distribution to strangers.

MYRON G. MARSH, *Clerk*.

A Lecture.

Sacramento, Cal.

Mr. Edward A. Kimball lectured here on Christian Science July 24. He was introduced by Judge Peter J. Shields of the Superior Court, who said in part,—

I take much satisfaction in presenting a man of such distinction to an audience so representative. This audience represents persons of various positions in society, of many religions, of most of the professions. Some of you have come here with full faith in the doctrine which our guest will expound, some with inquiring minds to hear the proofs he will present in support of it, others in doubt and criticism. But all have come in respect and in that broad spirit of tolerance which is the proudest product of twentieth-century progress. The world has now reached that point where no person with any claim to breadth or culture can afford to say of anything when first advanced that it is not true. When Christ came and taught charity and brotherly love, he was scorned and crucified, but his word has come to be the universal law. When Columbus claimed that the earth was round, he met with no belief or sympathy, only with ridicule. One hundred and thirty years ago, when the fathers of our country proposed a government founded upon freedom and in which all should be equal, the astonished world denied its possibility, but it came to pass and has blessed the world. So when slavery was challenged it was said that it always had been, and consequently was right. But Lincoln wrote the verdict of a more enlightened morality when he proclaimed emancipation, and, better taught, we now all marvel that it ever could have been. I need not multiply instances. They are so numerous that they have taught the world tolerance, and the folly of denying a cause unheard. So it is with Christian Science, we will hear its cause with respect and decide its claims in justice. If it is all wrong it will perish, if all right it will live; but, live or die, we will praise or condemn it according to its merits and not according to blind prejudice.—*Correspondence*.

Every day look at a beautiful picture, read a beautiful poem, listen to beautiful music, and, if possible, say some reasonable thing.—GOETHE.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

An Apology.

WE regret that the article, "Watching *versus* Watching Out," which appeared in the *Sentinel* of September 16 and was corrected by Mrs. Eddy in last week's issue, should have found a place in our columns. It is the duty of the Editor and his associates rigidly to guard our columns against the intrusion of any article or statement which misstates the teachings of Christian Science and its text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy. That this duty was not performed in this instance is deplored by the editorial staff, and it is but proper that this apology should be made.

It is fortunate for Christian Scientists that our Leader is watchful over our Cause, and alert to detect and correct the errors which creep into the work of her followers. For this loving care and watchfulness and for her prompt and satisfying correction of this erroneous article she has our thanks.

ARCHIBALD MCLELLAN.

A Manly Protest.

THE extent to which mankind has been impressed with the fear of disease is shown in the address of Sir Henry C. Burdett, of London, at the hospital superintendents' annual conference in Boston. We copy the following from *The Boston Herald's* report of this conference:—

"Let us protest," said Sir Henry Burdett, "against this running amuck at everything that is believed to be consumption. I have already seen a case in a family where a daughter who suffered from the disease has been put into a separate room and the family has looked at her through a window.

"The result is that the poor girl, who is the daughter of an officer in the army, is now longing for death. Surely, people of education, at any rate, ought to have more common sense and more humanity. What shall we do in regard to this abominable, unwomanly, and unmanly fear of what is called the infectiousness of tuberculosis? . . . I believe that many poor people have already been done to death by their friends because of this panic fear of consumption."

This manly protest does Sir Henry Burdett much credit, and it is to be hoped that it will do something toward breaking down the intense fear which has grown out of the inability of medical practice to cope successfully with this much dreaded disease.

It will not do, however, to place the entire blame for this alarming condition upon the layman. The physicians themselves have had a great deal to do with fostering the fear felt by so many, and the well-meant efforts of those who believe that consumption is infectious have contributed their share toward just such lamentable and inhuman conditions as Sir Henry Burdett refers to.

A more cheerful side of the picture is given in the following excerpt from the testimony of a lady who has been healed through Christian Science. She says,—

"Christian Science healed me seven years ago, in San Diego, California, when in the last stages of consumption. I had previously spent a winter in Florida, and then, as my one last chance for recovery, I had been sent to the warm and equable climate of the Pacific coast. At the end of four months my last hope had failed, and the doctors said nothing more could be done for me. While in the depths of despair, a dear friend urged me to try Christian Science. I did so, and in a few months was healed." (*The Christian Science Journal*, Vol. 23, p. 313.)

ARCHIBALD MCLELLAN.

The Whole Gospel.

THE humanity of Christ Jesus which made it possible for him to be "in all points tempted like as we are," found a human setting that is common to every clime and every age. It is the picture of suffering and despair awaiting the healing touch and the inspiring word. Despite the elaborate provisions for the prevention of disease and the alleviation of pain which to-day characterize all Christian countries, despite our hospitals and sanitariums, our health boards and physicians, our trained nurses and hygienic legislation, the saddening appeal for help is still heard in every mart and byway, and the healing Christ is now, as of old, the world's supremest need.

If, therefore, the conditions which impelled the Master to send forth his disciples with the two-fold commission to preach and to heal are still present, and if we accept his teaching that the Father's love is constant, His law unvarying, how shall we dare to say that the obligation to heal no longer rests upon discipleship, but is wisely and legitimately transferred to such as may have none of that faith or spiritual fitness which Jesus so insistently demanded of those whom he appointed to this high calling?

It is to be noted as a very interesting fact, that the dual nature of the ministry of the early church has been recognized by all Christian bodies in their mission labors among non-Christian people. Christian ministers who have thought to equip themselves for healing the sick, have been sent to all lands, and despite the fact that their remedial agencies have been so unspiritual, their humanitarian endeavor has seemed so fitting, so in keeping with the spirit of the gospel they preach, that these workers have invariably found unusual freedom of access to the hearts of those to whom they have gone. Some hint is thus given of what would occur if this effort to heal the sick were made in conformity with the teaching and practice of Christ Jesus.

When, however, missionary societies thus associate the ministry of healing with that of preaching, and demand that those who undertake to relieve physical distress shall also be worthy and fitted to preach the gospel, they greatly emphasize the incongruity of the conditions which so generally obtain "in the home field." Not only is spiritual relief from sickness denied place and consideration by the majority, perhaps, of the Christian people about us, but the healing, which all must allow was a vital part of Christ Jesus' work and which he impressed upon his disciples as an essential duty, is committed by Christian custom and consent to the hands of those upon whom no spiritual requirements whatever are laid. While it is happily true that a large number of the physicians in Christian lands are religious men, it is equally true that very many others are not regarded as in possession of those spiritual attainments which Jesus insisted upon as essential to the healing work. It therefore happens not infrequently that those are called by Christian people to fulfil this divinely appointed service who by reputation neither honor a Christian faith nor live an exemplary life, and this without protest either from the pulpit or religious press.

That one part of Christ Jesus' work should be thus committed to those of whom exacting demands as to faith, purity, spiritual aspiration, and loyalty to the Master are made, while another part is left to those upon whom practically no moral requirements whatever are placed, is sufficiently startling to awaken the thought of all to the

Digitized by Google

consistency, the importance, and the pressing need of the teaching of Christian Science that the garment of Christ cannot thus be rent asunder, and that by virtue of their apprehension of Truth, and their entire reliance thereon, all true believers are called to bear both the healing and the redemptive word "into all the world."

Surely no other commentary upon the fateful folly of trying to divorce that which God hath joined in one (the healing of sickness and of sin), is needed than the story of the suffering of the unnumbered men and women of holy aspiration who, through their educated indifference to the healing power of Truth, have suffered many stripes, and been all their lifetime "subject to bondage."

As so beautifully expressed by Mrs. Eddy (Science and Health, p. 242), Christian Science has come to restore the perfect garment of Christ, to establish, through demonstration, the comprehensiveness and completeness of his salvation, and to disclose anew the richness and fulness of the meaning of that divine call, "Look unto me, and be ye saved, all the ends of the earth: for I am God, and there is none else."

JOHN B. WILLIS.

Prayer as a Healing Agent.

IT has been said that all things come to those who wait, and in keeping with this familiar adage we note the admission made before the British Medical Association, by one of its members. It seems that at its annual meeting, Dr. Hyslop, a specialist in neurology and in the treatment of mental disease, said, among other things, "As an alienist, and one whose whole life has been concerned with the sufferings of the mind, I would state that of all hygienic measures to counteract disturbed sleep, depressed spirits, and all the miserable sequels of a distressed mind, I would undoubtedly give the first place to the simple habit of prayer."

In last week's issue of the *Sentinel*, attention was called to the recent utterances of an English bishop with respect to the efficacy of prayer, and now we have this admission from the medical profession. Not very long since, it was customary for ministers who admitted that Christian Science heals the sick, to find fault with it for teaching the causal relation of prayer to this healing. On the other hand, a good many doctors admitted that as a religion Christian Science was all right, but they have denied the efficacy of prayer in the healing of the sick.

Christian Scientists are always glad to observe the disappearance of prejudice, whether theological or medical, and see a hopeful sign of the times in Dr. Hyslop's statement that prayer should have "the first place" in the treatment of what are called mental or nervous ailments, inasmuch as it can do more for sufferers from these disorders "than any other therapeutic agent." They welcome even this slight concession, and regard it as a promise of the ultimate recognition of true prayer as the only "therapeutic agent," not only for nervous disorders, but for all the ills of a stricken human race.

It is quite likely that many may smile when they read this new medical prescription, and some may wonder whether the efficacy of prayer will be increased by the authority of the schools. One might almost fancy that people had ignored its possibilities until thus aroused. This, however, was doubtless far from the doctor's thought. From the earliest days sufferers have sought divine aid, though usually after material means had been exhausted. Then, with faltering faith, many have asked for help only to be seemingly denied, in spite of our Lord's unequivocal promises to all who should seek it.

A religious writer of prominence has said that unanswered prayers are responsible for much infidelity, but he does not thus imply that the Almighty fails to hear or heed prayer; on the contrary, he tries to show that the human methods are wrong. That such is the case is proved by the experiences of the many who are healed in Christian Science after they had prayed long and unavailingly, as it seemed, before they understood the deep import of the Scripture teaching,—"He that cometh to God must believe . . . that he is a rewarder of them that diligently seek him,"—also, that God must be worshiped, not materially, but in spirit and in truth." Too many have blindly prayed God to bless the use of material remedies,—not knowing that they were thus denying the all-power of Spirit, denying the truth which makes free from both sin and sickness,—and then wondered why their prayers were unanswered, as in the case of one who, because of many such disappointments, could only cry out in anguish, "O God, if there be a God."

Those who are healed in Christian Science shake off in large measure their old superstitions and fears with their diseases, and they at the same time gain a deepened sense of love and reverence for God, whom they now approach by "a new and living way,"—in spirit and in truth,—even as the Bible teaches. They also know that the truth is the only real "therapeutic agent," because it heals morally while healing physically; and they know, too, that their progress in both these respects is dependent upon their assimilation of the truth. As before stated, Christian Scientists rejoice in every indication of an awakening to the value of spirituality, and only urge the recognition of the divine Principle of healing in order that humanity may establish its trust upon the rock,—Christ, Truth,—and so survive every storm that may arise.

ANNIE M. KNOTT.

Letters to our Leader.

Douglaston, Long Island, September 25, 1905.

Dear Mrs. Eddy:—My heart goes out to you to-day in great waves of gratitude on reading your words in the *Sentinel* about "Watching." I feel as though a searchlight had been turned on my life and work, and that I can never escape or want to escape from those clear beams again. I had seen that a mortal sense of peace was a treacherous companion, but had not seen that it was a *desire* for mortal peace and ease that was at the root of the evil. In trying to destroy a sense of fear I had not seen that it might be the result of a longing for "Peace, peace; when there is no peace." All that this line of thought opens up to me, in the light of Jesus' sayings and in the teachings of our text-book, "Science and Health with Key to the Scriptures," should make me consecrate my life anew, and realize that the only title a thief has to being a thief, lies is his stealing in unawares. If he came and said, "I am a thief," he would find no opportunity to steal. With a heart full of love and gratitude that I am watching sufficiently to get a wonderful message of yours when it is given, and knowing that "Watching" is my best way of expressing gratitude to you, I am

Faithfully and lovingly yours,

CHARLOTTE H. FOSTER.

Spruceton, N. Y., August 10, 1905.

Rev. Mary B. G. Eddy, Concord, N. H.

Dear Leader and Guide:—I cannot withhold any longer a few words of love and gratitude for what your dear book, Science and Health, has done for me. For seventeen long years I was a sufferer, and during this time I passed through deep sorrow. I was also under the surgeon's knife, and tried almost everything I could hear of, to find rest and peace from the tortures of pain, but everything failed to give me relief. All this time, however, I kept praying and reading my Bible, and the more I studied it the more disturbed my mind became. I was constantly seeking something I could not find, but I never gave up reading my Bible or praying, and in June, 1903, God led me in a most won-

Digitized by Google

derful way into Christian Science. I never shall forget that dear woman (to me a stranger, and the only Christian Scientist I have ever met personally), who loaned me the "little book." It has been my only practitioner, and to me it is the pearl of great price, for it has cleared away all mysteries, and it helps me to love my dear Bible more than ever before. It has brought to me perfect health and happiness. I am a firm believer in the Christian Science faith, and am growing stronger day by day. I am satisfied now that it is the religion of our Lord and Master, and thanks be to God, our loving Father, for your great love and sacrifice to such a great and good Cause. Trusting this may bring to you another blessing, I am now and always

Your faithful follower,

MRS. LOIS BONESTEEL.

Changes in the Hymnal.

In future editions of the Hymnal new music will be substituted for that now used for Mrs. Eddy's hymns, 161, "Shepherd, show me how to go," and 179, "O'er waiting harp-strings of the mind." Words and music not heretofore published in the Hymnal will be substituted for 163, 180, 183, and 184.

All the above hymns with the new music will be furnished in suitable form for pasting in old Hymnals, at the following prices: 1 to 25 sets, 5 cents per set; 25 or more, 4 cents per set; 100 or more, 3½ cents per set.

Mrs. Eddy's hymn, "Christmas Morn," with the two present settings printed on one sheet, will be furnished for insertion in copies of the Hymnal which do not contain it, at the following prices: 1 to 25 sheets, 2 cents per sheet; 25 or more, 1½ cents per sheet; 100 or more, 1 cent per sheet.

When inserting the first six hymns mentioned, the old ones should be cut out and the new ones pasted on the stubs.

Send orders to THE CHRISTIAN SCIENCE PUBLISHING SOCIETY, 250 Huntington Avenue, Boston, Mass.

Meeting of General Association of Teachers.

The annual meeting of the General Association of Teachers will be held in First Church of Christ, Scientist, 96th Street and Central Park West, New York, at 9 A.M., Monday and Tuesday, October 23 and 24. Admission to these meetings will be by card only. The Secretary will mail cards to all members now enrolled. Members who have changed their addresses since the meeting of last year will please notify the Secretary, Mrs. Ida G. Stewart, 5209 Washington Avenue, Chicago, Ill.

All non-members, including those who were not present at the meetings of 1903 and 1904, who are eligible according to Section 1, Article XXXIII., of The Mother Church By-laws, and who desire to become members of this Association, should apply by letter to WILLIAM B. JOHNSON, C.S.D., Secretary of the Executive Board, 239 Huntington Avenue, Boston, Mass. These applications must be in his hands on or before October 9.

Application has been made for reduced rates on the railroads. Members who wish to avail themselves of this reduction must secure certificates from their local ticket agents.

Admission to Membership.

The next admission of candidates to membership in The Mother Church will be November 7, 1905. Applications must be in the hands of the Clerk on or before October 23, 1905.

An application sent to the Clerk of the Church does not constitute the applicant a member; he must be elected to membership by the Christian Science Board of Directors, in which event notice of election will be sent.

Testimonies of Healing.

Being deeply grateful to God, I would like to tell a few of the blessings He has sent me. About one year ago a friend gave me the first intimation I had ever had concerning Christian Science. On my way home, the same evening, I was healed of kidney trouble which I thought was caused by the water I was compelled to drink. After my healing I continued drinking water from the same source for seven months without the slightest return of the ailment referred to. The healing of the friend and my own experience seemed so wonderful that I wrote my brother about the power of divine Love, and after a second letter he began to study Christian Science. He has been "born again" in Christ. Though his progress has been slow, his diseases, which were numerous, are gradually disappearing.

About five months ago, I began to attend the meetings of First Church of Christ, Scientist, Dayton, Ohio, for the purpose of gaining a better understanding of Christian Science so that I might help my brother, who had become very much discouraged. During one of these meetings the truth was presented so forcibly to me that I was almost instantly healed. The next morning I laid aside the glasses which I had worn for eighteen years. I could never do without them longer than ten minutes without suffering from a severe headache, and could not use my eyes, even with the aid of glasses, longer than four hours per day. Since my healing at the services referred to, I have been able to use my eyes freely, and experience no inconvenience whatever. I sincerely praise God and thank Him for this great blessing.

Since having gained a better understanding of God's laws, I have learned that I can eat meat again. This, as I formerly believed, caused me to suffer with constipation. I consider my healing beautiful, but the spiritual uplifting that my brother and I have experienced through Christian Science is grand beyond expression, far surpassing the great physical benefits. The change in my own life and the transformation in his home have been wonderful.

To me Wednesday is always a day of special rejoicing, for on this day I look forward to the evening feast which awaits the hungry soul. Sometimes I regret that there is but one Wednesday in the week, for I feel that so many of us who are beginners need the courage and strength one may gather from the testimonies. I wish again to give thanks to God and to Mrs. Eddy for the grand and glorious truths in Science and Health.

ALBERT E. FISCHMAN, Dayton, O.

It is over a year since I first saw any Christian Science literature. A friend who had been healed in Christian Science gave me some *Sentinels*, and loaned me a copy of Science and Health. I have never once failed to read at least a few lines each day in this wondrous book, a copy of which I bought as soon as I had read the borrowed one. I felt I could not afford to be without it. After attending church a few times, I procured the *Quarterly*, and since then have always read the Lesson-Sermon for each week. I find great help and inspiration from reading the *Sentinel*. I think each week as I read the articles that nothing can be better than these, and I find nothing that is, until the next *Sentinel* comes. I feel very grateful for Christian Science. I awoke one morning with an unaccountable sense of lassitude, and a disagreeable feeling generally. I could eat no breakfast and continued to feel worse, but tried to keep up, all the time denying, rather feebly, I am afraid, my sense of illness. However, I persisted in keeping about, doing my marketing, etc., alternated with periods of rest. Chills kept shaking me from head to feet, but I did not go to bed until after luncheon. Then I sent word to a practitioner, for by that time I recognized a well-developed case of the grip. I knew

Digitized by Google

the sensations, as I have had it before. I was burning with fever and racked with pain in my head and body. Right in the midst of my severest suffering I fell asleep, but awoke in about an hour, only to have all the symptoms return. My daughters tried to aid me by reading to me, but I could find no ease from the pain, so I sent word again to the practitioner. After a time I again fell asleep and awoke only when she stopped in to see me on her way to church. With the exception of about an hour's suffering in the night, I slept well. When I was awake, I was so happy to be free from pain; it seemed too good to be true, and I just lay there, trying to realize it. The next morning I felt better than I had for several days. I arose, dressed, and got through the day very comfortably. I am a physician's daughter, brought up in an atmosphere of *materia medica*, and prior to this had always been treated by a physician, so the experience seemed all the more wonderful to me, as my healing, in previous cases of grip, was always much slower. My suffering then lasted much longer and I was always in bed several days instead of one half day as at this time. Formerly, when I did get up, it was always with a sense of deadly weakness following the malady, but this time I neither looked nor felt much, if any, the worse for the battle with error. This was my first experience of healing in Science, and I feel very grateful for it.—LYNNE EDIE BAKER, Everett, Wash.

I first learned of Christian Science fifteen years ago, through the healing of my sister of neurosis and many other troubles from which she had ceased to look for relief in *materia medica*. She had failed to receive help or even encouragement from any of the best authorities within reach, a specialist included. Soon after my sister's healing, I was healed of chronic diarrhœa, through her understanding of the truth, after dieting and doctors had failed to help me. I have always found Christian Science a present help in trouble.

The Friday before Communion Sunday in June, 1902, my little daughter, between two and three years old, was playing on the back piazza of the second floor, when all of a sudden she leaned over the railing, and in an instant fell to the rough, unsodded yard, a distance of sixteen feet. Both my husband and I were on the piazza at the time, but it happened so quickly that we were powerless to prevent it. I prayed as I ran down-stairs to get my darling, realizing that God was the only presence and the only power. In spite of opposing evidence, I continued to realize the truth as I carried her up-stairs, thanking God for His goodness. She soon became conscious and her first words were, "Mamma, treatment!" The accident happened about seven o'clock and soon after eight she was sleeping quietly in her crib. I telephoned my sister, in another town, for help as soon as I could. The child had a restful night, but when I set her down on her feet, in the morning after dressing her, she drew up one foot and said, "Mamma, I can't walk." I assured her of Truth's power, and took her by the hand, and she did walk, though there was strong evidence of lameness on one side. After that she played as usual all day. There was no discoloration on any part of her body, and on Sunday we went to Boston, as we had planned, to attend the annual Communion, and the little one sat or stood through the long service. The limping was overcome in a short time through the power of Truth.

I could only sing, "my cup runneth over," so full was I of joy for this proof that divine Love does care for us. The little one is now nearly five years old, and has known no other help than that of Christian Science, to which she ever looks. Last summer whooping-cough was on every side of us, and even in the house, down-stairs; but both the little one and I realized the truth each day, and many times some days, when we heard the coughing all about us, and even though she was directly exposed, she did not take it.

I can never express all the gratitude I feel for this blessed truth,—for Science and Health, and the other works of our dear Leader, Mrs. Eddy. I also wish to acknowledge the great good that comes to me from the study of the Lesson-Sermon and the *Sentinel* and *Journal*.

MRS. E. JULIETTE PRENTISS, Worcester, Mass.

I want to tell what Christian Science has done for me and my family. My son, fifteen years of age, has lately been healed of catarrh of about ten years' standing. The disease became so obnoxious that it was very disagreeable to have him sit in the room with the family. His throat was affected, indeed his whole system was more or less diseased from the catarrh, and he had become quite deaf. Being very much distressed at his condition, and knowing that other members of my family had derived great benefit from Christian Science treatment, some years ago, I wrote to a practitioner for help. The boy improved from the first, the disagreeable odor was soon overcome, and he is now well and going to school. I am very grateful for the healing of my son.

I also wish to say that four years ago Christian Science destroyed some very inharmonious conditions in my family. My daughter was almost a total physical wreck from an abscess in her left side, from which she had suffered for five years. She had had an operation performed, which only left her worse than before and with another running sore in her side. The practitioner whose help we sought at that time lived near us and came regularly to see my daughter. Treatment was commenced in February, 1900, and by the following April she was entirely healed. Another little daughter was healed of gravel.

The physical healing of my children has been wonderful, but the spiritual healing that has come to me through my son's healing is more wonderful. Through this demonstration I have been awakened to a greater desire for right living, and to know more of this healing truth. Can I ever be thankful enough to God, and to our dear Leader, who has shown us the way to gain all these blessings?

There are no other Christian Scientists here, so my family and I read the Lesson-Sermon on Sunday mornings in our home.—J. W. ISAACS, Thompsonville, Ill.

I glean so much good from the *Sentinel* that I want my testimony to be counted with the thousands which are leading despairing ones from darkness to light. About ten years ago, when I was visiting relatives in Sheboygan, my mother and sisters mentioned Christian Science to me; but I scoffed at it, for I had heard that it taught that sickness was imaginary, so I did not want anything to do with it. Before I left, however, la grippe got me into its clutches. The night before my return home I was indeed badly off, but felt as if I must go home. On my way to the depot my sister and her husband persuaded me to see a Christian Scientist and take a treatment, which I did. I am glad to say the grip left me in a few days, also kidney difficulty and neuralgia, which had caused me a deal of trouble in years past. About six months later I took a week's treatment, which freed me from all my old complaints. On my return home I brought Science and Health with me, and began to study it. Before long I could see the light, and since then I have made many good demonstrations for myself and family, as well as for others. My wife and oldest daughter are with me in the work.

Tongue cannot express the gratitude I feel towards our Leader, Mrs. Eddy, who through love and self-denial has been able to bring health, happiness, and peace to mankind.—HERMAN KUETHER, Marshall, Wis.

Christian Science came to me about eight years ago. I had never been strong, and was under a physician's care at the time for a spinal trouble. In addition to this, a few

Digitized by Google

months before, a surgeon who had assisted at an operation I had a few years previous, told me that one of the wounds had not healed perfectly, and while it might give me no trouble, it might at any time necessitate another operation. My stomach was troubling me, and I was afraid to eat many kinds of food, and altogether life seemed a heavy burden. A friend then told me of Christian Science and asked me to take it in the spirit of a little child, which I tried to do. I was soon better than I had ever been in my life, and with the healing came the earnest desire to help others. With little understanding, but with boundless faith in God's power, I was enabled to heal a serious stomach trouble for a friend. I had belonged to an orthodox church from childhood, and had gotten a great deal from its teachings, but this was the most wonderful truth I had ever known. I felt that I must know more of the Principle. As soon as I attempted to study earnestly, a warfare with scholastic theology began, which lasted two or three years. I even tried to forget Christian Science, but I had felt the healing power of Truth and I could not get away from it. Over and over the thought came to me during those years, If God has offered you a higher and truer understanding of Himself, and you reject it, how are you going to answer for it?

At last, after months of illness and bereavement, I turned towards the light, determined to know the truth at any cost. Then the light came, and I knew I had found a satisfying truth. My daily and almost hourly prayer during that time was that I might accept nothing less.

When I returned to the Science I was suffering from nervous prostration, intestinal troubles, and another trouble that could not be met in *materia medica*. I went to a Christian Science practitioner for treatment and began to improve immediately.

Words are inadequate to express the gratitude I feel to our dear Leader, and "this one thing I do, forgetting those things which are behind, . . . I press toward the mark for the prize of the high calling of God in Christ Jesus."

ALICE H. WOODWARD, Norwich, Conn.

Several years ago I had what the doctors called consumption. I was so weak as to be unable to sit up but a short time during the day, and at night I was troubled with the asthma so that I was unable to sleep lying down. I also coughed most of the time. As the physician who was treating me at the time passed on, my father was at a loss to know what to do for me. He was then advised by my aunt to try Christian Science for me, and although he knew nothing about it himself, he was willing to have me try anything that would help me. I received treatments some time without seeming to receive any benefit. Later, I learned that the lady who was treating me in the name of Christian Science was not a Christian Scientist, and I discontinued the treatment. She gave me much false literature, but did not speak of Science and Health. Through the advice of my aunt I made arrangements for treatment with a faithful Christian Scientist, and in eight weeks' time, after a hard struggle, I was healed.

The Bible and Science and Health are now my constant companions. My heart goes out in gratitude to God for all the blessings that have come to me through the teachings of Science and Health, given to us by our dear Leader.

LUCIE M. LELAND, Worcester, Mass.

Ten years ago, Christian Science found me, an invalid of five years. Everything had been done for me in a material way, and I thought I was a Christian, but my prayers had availed nothing. I had become reconciled to my miserable condition, if God would only spare me to raise my two boys. It seemed as if I had every disease that flesh is heir to, especially stomach trouble. I could not eat vegetables or meat; for six months I was kept on milk, bread, butter, tea, and other foods caused me great suffering. I was almost starved, and when the weather got cold I was shut in until spring. I could not walk a half block without having a bad spell.

I shall never forget the day when a dear old lady who visited me, told me it was not necessary for me to lie there and suffer, that Christian Science could do for me what it had done for her. I could not think of giving up my many gods, however, for I thought medicine was all that kept me here. About a week after her visit, my husband begged me to try Christian Science and I refused, but one day my two little boys stood by me, and the older one, then thirteen years old, begged of me to just try it. He said, "Mamma, if they only pray for you, you know prayer won't hurt you." For their sakes I consented, and they were delighted. They went for a practitioner and soon returned, saying that I would get well. The lady gave me an absent treatment, and I slept that night like a child, something I had not done for years. I did not try to eat anything until she came next day. She told me that food could not harm me, and the next morning I ate a hearty breakfast and felt fine. After that I ate anything I wanted, and never suffered from it. I was healed of all my ills, and soon attended church. I got a copy of Science and Health, and read it almost day and night. In three weeks I made a trip of eighty-three miles on the train, then rode four miles in the country over a rough road, nursed an invalid sister for three weeks, and returned to my home. It was a marvel to all that knew me. I then walked to and from church, which was sixteen blocks, and did nearly all the work for my family of four.

The Bible is a different book to me now. I have not words to express my gratitude to our Father-Mother God, and to Mrs. Eddy, who has made it possible for even me to know a little of this wondrous truth. I have had many proofs that God is an ever-present help.

MRS. NANNIE LAWSON, Des Moines, Ia.

Over six years ago my father, who was then living in another State, wrote, asking me to try Christian Science treatment. I, however, hesitated for two months, until our little girl, who was at that time suffering intensely from ear trouble, became so bad that I almost despaired of her recovery, as nothing we could do gave her any relief. We then wrote to a Christian Scientist, and as she was nearly one thousand miles away it seemed a long time to wait for help from such suffering. The same day that the practitioner received our letter, help came, although the gathering on the outside did not discharge for two days.

I had worked earnestly in a church for years, trying to show others a better way, and then believed that I loved God and trusted Him. When the practitioner wrote me that if I would remove the bandages from the little girl's head, and trust God, she would not take cold, I said, "I will trust God;" but when she was better, and wanted to run out without a wrap or rubbers, and to wade in the snow, I had to turn away and try to see that God is the only power. I cannot describe my feelings at such times. I felt I had been a hypocrite, for I trusted Spirit, God, scarcely at all. Only the power of good could have removed the awful fears I had. For several days this battle had to be fought, until my fears were gone and I could leave her in God's hands. I had a copy of the *Journal* and some other Christian Science literature, which I read almost constantly, trying to see how God heals the sick. In one week we were both healed—I, of the fear of consumption and stomach trouble, also of female trouble of twenty years' standing. In a short time we got a copy of Science and Health by Mrs. Eddy, and have never had any desire for medicine since.

We have had many troubles to meet, but these all teach us to follow more closely the instructions in our text-book.

Digitized by Google

We rejoice that in some measure we have been permitted to help others to realize harmony, their true inheritance.

MRS. MARY J. JOHNSTON, Cambridge, Neb.

To others who have felt the power of Christian Science, and have had a feeling of disappointment that those near and dear to them do not accept it, I would say, Wait, we cannot tell when the seed will spring forth. This wonderful truth, that has been brought to our understanding through the faith and purity of our loved Leader, was presented to me many times in past years, without my giving it much thought, until the dark clouds of material sense so engulfed me that I longed to be free. My life was saddened with discouragement and doubt of ever being really well after much doctoring. My home, servants, and much that was dearer to me, were one after the other taken from me. The world's beauty seemed far from me, and in my anguish I cried to God for help. I went to a friend, who took me to a Christian Scientist, and as I entered her room, I said, "I don't think I want Christian Science; no one but God can help me." The sweet woman took my hand, and with a look of great kindness said, "My dear child, that is just who you do want;" and she told me of His wonderful power to overcome all these ills. The soil that seemed so barren was full ready, and the truth found lodgment. After a few months, hope and health were restored. I have now a happy home, and the property which was lost is being regained, with the knowledge that God supplies all our needs and that there is no lack in His kingdom.

As we are faithful and obedient to the truth we are assured of God's love and care, and as the years go on our dear ones will come under the shadow of His wing.

M. EMMA OLDFIELD, Sebastopol, Cal.

I have long wanted to express my gratitude for what Christian Science has done for me and my family. God has indeed been good to us, in showing us the way, through our noble Leader, Mrs. Eddy. I was a sufferer for years from severe stomach trouble, appendicitis in its worst form, and several other ailments, but I was healed by the truth as revealed in "Science and Health with Key to the Scriptures,"—the truth that makes us free. When the practitioner was sent for, I could not turn over in bed, nor even move a finger, without pain; and I had not slept in weeks. I was so filled with morphine to deaden the pain that I could not hear when spoken to. After the first treatment I slept like a child and enjoyed my rest. In a little over two weeks I was out riding a bicycle. I had, from the age of fifteen years, when I taught a Sunday School class, firmly believed that we would know, sometime, how Jesus performed the healing he accomplished. After being so wonderfully helped, I was very anxious to get to work and prove for myself the Principle of Christian Science. My husband is one with me in the work, and though we have not demonstrated out of all the seeming obstacles, we know that God is faithful, and we know in whom we have believed. I have received much help from the periodicals and am deeply grateful to Mrs. Eddy for Science and Health, that inspired book which is revealing to so many the understanding that enables them to work out their own salvation. Our highest desire is that we may keep in the way pointed out to us and be worthy to be called Christian Scientists.

MARGUERITE ESHBAUGH, Chicago, Ill.

I have been healed of epilepsy of several years' standing, and its accompanying disorders, through Christian Science, after receiving treatment for it without avail from a number of the best physicians. For this cure, as well as other substantial benefits received through this truth, whereby I have become a better man, morally, physically, and spiritually, I am deeply grateful to God, and gladly make this acknowledgment, hoping thereby that some sufferer may be led, as I have been, to investigate Christian Science, which is made plain in "Science and Health with Key to the Scriptures" by Mrs. Eddy. I know that as a result of such investigation, when made with an unprejudiced and receptive mind, the blessings received by me will also be received by others.—CHARLES R. FIFE, St. Louis, Mo.

I give my testimony with great pleasure and a very thankful heart, that others may know what Christian Science has done for me. I have been healed of nervousness, stomach trouble, constipation, and minor ailments. I had depended on *materia medica* for four years, and failing to get any relief from it, I was advised by my physician that the only thing which would help me would be a change of climate. I did not, however, think this would benefit me, or that I would ever be strong again. My mother then heard of Christian Science and insisted upon my seeing a practitioner. I did so to please her, but did not then believe it would cure me. Although I only sought the physical healing, I was willing to be obedient and to do whatever was required to get the best results. In a few days my friends noticed a change in me, and in six weeks I was entirely cured.

I am now learning something of God as Love, and that He is our ever-present help. My aim is to know more of the truth, and follow faithfully the example of our beloved Leader, Mrs. Eddy.—MISS VONA CLAY, Tulsa, Ind. Ter.

I wish to express a small part of my gratitude and love to God for Christian Science, and to our Leader who has made it possible for me to live. One of the most beautiful things about my Christian Science experience has been its ever-ready answers to my questions. It is more than three years since I came to Christian Science. I was instantly healed of sick-headache, and since that time I have had many beautiful demonstrations, one of which was painless childbirth. Another was the raising of my father-in-law from what seemed to be his death-bed, through Christian Science. After all this, I failed, but I was again lifted from death's door through Christian Science. This proved to me that I owe my life to no other power than that of Truth. I hope to work more earnestly for our grand Cause in the future, than I ever have in the past, and my greatest desire is that my life may be a shining light for the glory of God.

MRS. ANNIE MCLEAN, Bridgeport, Ont.

[Written for the *Sentinel*.]

Thy Will be Done.

ANNIE L. FISHER.

How often, when some cherished wish
Love's wisdom has denied,
We, in our wilfulness, have mourned
And were not satisfied;
But when the Horeb heights we gained,
Love's wise withholding was explained.

And often, when our stubborn will
Accomplished what it planned,
When what we thought earth's fairest flowers
Were ashes in our hand,
We learned, when forced to drink the gall,
Love's way was better—after all.

'Tis not blind fate which marks our path,
But Love's unerring hand
Which brings us—oft by unsought ways—
Into the dear Home Land.
Through pastures green, o'er hillsides bare,—
Love guides our footsteps everywhere.

Digitized by Google

From our Exchanges.

The moral consciousness of the world lies fallow for the call of one who shall be so filled with the power of the Spirit that he shall be completely indifferent to that whole mass of stuff which criticism is discrediting, and who shall dare to make his appeal to the moral idealism of mankind independent of verbiage. Here lies the path the new age must travel, straight through the wilderness of doubt and sin to the naked soul of humanity, which cannot and will not reject Jesus when he is brought to it in the nakedness of his own spiritual beauty. That Man, that Master, that love so tender and true will yet some day triumph over the halting, compromising arguments of doubting disciples, and the intellectual agnosticism of the world, with the charm and insistence and inspiration which will ever go forth in human experience from his great heart and faith. We shall keep our faith in Jesus when the last word of criticism has done its perfect work in making clear the difference between the immortal message of the Son of Man and the man-made arguments to prove that message true. When logic loses its clue to the divine Life, the soul will find it hid within its own deep hunger after righteousness and love.—*The Universalist Leader.*

Do we need such a religion?—a religion whose first article is the translation of the Gospel into daily life, a religion whose primary task is the practice of Jesus Christ? It seems to us that we *do* need it—that it is the overwhelming need. It seems to us pitiful that so many are missing the real issue and are on the wrong side of the battle. But truth always wins and it is only a question of time when the thoughtful and honest will see and will say "amen." The greatest epoch of Christianity is just ahead.

The American Friend.

It may be asserted with entire safety that no assumption is more baseless than that salvation and church membership are equivalent terms. We need a revival of obligation. When the Church of the living God comes to a place where those who compose it are doing their utmost, when Christians come to feel that indifference is sin and that failure to do one's best will bring upon us the condemnation of our Lord, then will the kingdom enlarge and the forces of evil be defeated whenever and wherever the battle is joined.

The Standard.

If the love of God is in the heart, that love will serve as a moving, living force that will ultimately bring man's life into order and bring all the affairs of the world into proper shape. It is the function of the Church to work upon the conduct of men by means of the truth operating from within through their understanding and conscience, to make life more beautiful and the state of human society more heaven-like.—*New-Church Messenger.*

Among the Christian people of the United States a great spiritual awakening has already begun. It is not yet a revival; it is an awakening. It is the new perception of a common problem, of a great opportunity, and an intense desire to rise to the great occasions which God's providence unfolds.

W. J. DAWSON, D.D.
The Congregationalist.

Let us not think of salvation as something coming to us as a reward hereafter, but as a glorious possession to be enjoyed—aye, and to be lived up to—now. "Behold," wrote the apostle of love, "now are we the sons of God." We have not yet entered into the full inheritance; but we have enough to make life rich and joyous and well worth living.

The Examiner.

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of Branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to The Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of The Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to The Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number, or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By the Hon. WILLIAM G. EWING of Chicago, Ill.

CHRISTIAN SCIENCE. Its Worth and Work. By Rev. ARTHUR R. VOSBURGH of Rochester, N. Y.

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid; one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

As the result of the vigorous prosecutions of land fraud cases in Oregon about twenty thousand acres of school land situated in the Blue Mountain forest reserve in eastern Oregon have been abandoned by locators, who forfeited in the neighborhood of $10,000. It is assumed that in most of these instances land had been located by "dummies," and that the persons who provided the money became frightened and quietly abandoned all the claims at the same time.

Federal Judge Humphrey at Chicago last week sustained the demurrer filed by the United States District Attorney to the plea in abatement made by packers seeking to have indictments for alleged restraint of trade declared void. Judge Humphrey said he made his decision on broad grounds without taking into consideration technicalities which the Government advanced against the plea in abatement.

The United States cipher code is known to some Power in Europe and important instructions transmitted in cipher to American officials there have become known to outsiders. Both the enciphering and deciphering is considered difficult even to those familiar with the code. A change has already been made in those in charge of this work and the cipher may also be changed.

Late reports indicate that the boycott of American goods in China is over, and it is likely that within a few weeks the negotiations for a new exclusion treaty, which were abandoned a few months ago because of a difference of opinion as to the classes of Chinese to be admitted, will be taken up again.

The President has signed an executive order creating the Dixie Forest Reserve in the southwestern part of Utah. The new reserve embraces 465,900 acres, ninety-four per cent of which is public lands.

The honorary degree of Doctor of Laws has been conferred by Columbia University on Baron Komura and Sergius Witte, the senior peace plenipotentiaries of Japan and Russia.

Fifty Filipino students arrived in Chicago last week preparatory to registering in various western colleges and universities.

Foreign.

The Chinese Government has made a formal protest to the Russian and Japanese Governments concerning two of the conditions set forth in the treaty of peace signed at Portsmouth,—the length of time, eighteen months, allowed for the evacuation of Manchuria, and the provisions made for an armed guard for the railroad lines owned by Russia and Japan in Manchuria. China believes that nine months is entirely sufficient. The provision made for guarding the railways actually means an armed force of perhaps fifteen thousand men in Chinese territory. China has pledged herself to protect the railroads and their employes, and has requested both Russia and Japan to relinquish that stipulation of the peace treaty, pointing out that not only is the guard far too great, but that it is unnecessary.

A protocol was signed at Karlstad last week by the delegates appointed to arrange the details of the dissolution of the union of Norway and Sweden, subject to ratification by the Storthing and the Riksdag. Its five articles deal with arbitration; with the neutral zone and the demolition of the fortifications; with reindeer pastures, etc.; with intertraffic, and with common waterways. The agreement provides for the compulsory arbitration before The Hague Court of all disputes except matters of vital interest for the period of a decade, with extensions for other periods of ten years unless two years' previous notice is given of an intention to abrogate it.

The text of the new agreement between Great Britain and Japan, which was signed on August 12, was issued by the Foreign Office last week. The document is brief, comprising less than eight hundred words. The preamble states that the object of the treaty is the maintenance of general peace in Asia and India and the protection of the interests of all the Powers in China by insuring the integrity of China and equal opportunity for the commerce of all nations, the maintenance of all the territorial rights of Great Britain and Japan in eastern Asia and India and the defence of their special interests therein.

A collective note from the six Powers has been handed to the Porte, declaring that their decision to assume international control of the finances of Macedonia is unalterable. The note informed the Ottoman Government that the foreign delegates appointed as comptrollers would arrive at Salonica October 1, and requested that the necessary instructions be sent to the provincial authorities.

A conference will be held in the near future in Calcutta at which it is hoped that the difference between China and England in regard to the treaty of the latter country with Tibet will be adjusted. China has never recognized the treaty Colonel Younghusband made with the Tibetan authorities, and protested against it as soon as the military expedition returned from Lhassa.

Fifty thousand Bengalis assembled at the Temple of Kalighat in Calcutta last week and swore by the goddess Kali to boycott British goods as a protest against the partition of the Province of Bengal, which the heavy administrative work has made necessary. The Bengals interpret this as an attempt to split the population and impair the Bengalis nationality.

More than 2,500 Chinese students are at present studying in Japanese institutions. The movement began in 1897. Scarcely a steamer brings less than one hundred, and three or four times that number are always waiting at Shanghai. They include those who go at the expense of the Government or of the public, or at their own expense.

A resolution signed by ten deputies has been introduced in the Storthing for the summoning of a constituent Storthing before the middle of November to decide on the future form of the Norwegian Government, and that a final decision of the matter be postponed until after the elections of 1906.

The Franco-German accord regarding the Moroccan conference was signed at Paris last week, thus definitely terminating the difficult negotiation.

The Cuban elections have resulted in a complete Government victory through the entire island.

King Alfonso last week signed a treaty of general arbitration between Spain and Belgium.

M. Witte has been created a count.

Industrial and Commercial.

Competition among the builders of locomotives recently has developed a new type of engine which promises to rival the mogul now used by the Baltimore and Ohio Railroad on its heavy grades west of Cumberland. This is a ten-wheel passenger engine built at Schenectady for the Delaware, Lackawanna, and Western. These engines are said to be remarkable for their strength, weight, and tractive force. Their weight on drivers is 155,000; on truck, 45,000 pounds; total weight, 200,000 pounds; weight of tender, loaded, 120,000 pounds.

It is estimated that seven hundred thousand range cattle will be shipped from South Dakota points to eastern markets during the present month. The stock men expect to realize close to $60,000,000 as the proceeds of the unparalleled harvest.

The province of Milan is one of the important industrial centres of Italy. It contains 300 silk mills, giving employment to 40,000 workmen; 200 cotton mills, with 25,000 workmen, and twenty woolen mills, with 3,000 workmen.

The twin tunnels to connect New York and New Jersey, started twenty-seven years ago, but abandoned for a time because of engineering problems which it was thought could not be overcome, were completed last week.

Florida expects to harvest two million crates of oranges this season.

General.

The vanilla plant, says *The World's Work*, is grown in Bourbon on the east coast of Africa, in the Seychelles Islands, Tahiti, Fiji, and Mexico. The Mexican vanilla bean is the best and the Tabitian the poorest product, the former fetching from four to twenty dollars a pound, while the latter does not bring more than half a dollar a pound in the market. More recently the region near Kona in the Hawaiian Islands has been found suitable for the culture of the plant. The chemistry department of the University of California has analyzed the vanilla beans of Kona and has pronounced them equal in commercial value to those grown in Mexico.

The five original open ports of China were Amoy, Canton, Ningpo, Shanghai, and Foochow. From time to time, by operation of treaties and otherwise, but generally for the purpose of pledging the customs duties therein collected on behalf of foreign loans, other ports have been opened until the list now includes thirty-six ports.

The lowest estimate of the yield of corn in the State of Kansas this season is 250,000,000 bushels, while corn experts say it will go 25,000,000 bushels above that figure.

The debt of France, including the debts of the communes, amounts to about six billion dollars.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

The Burning Bush.

SUE H. MIMS.

As each week the Spirit of truth, through our wonderful Lesson-Sermons, unfolds the beauties as well as the power of the Scripture to heal, illumine, and bless humanity; as through the interpretations of our text-book the "hidden mysteries" are explained and the Word demonstrated in the healing of sin and disease, we realize more and more that the prophetic hour in its fulfilment has arrived, "and they shall all be taught of God." The responsive reading of a late Lesson-Sermon was full of deep and significant meaning. Not only was the strange phenomenon of the burning bush made clear, but we learned what were the mental qualities that made Moses a leader of the children of Israel. The Spirit of truth had already led him aside with the flocks of Jethro, the priest of Midian, in the desert of mortal belief, and then he turned his face towards the Horeb heights of Truth and Love. When the idea of indestructible Life as substance appeared to his consciousness in the burning bush, the crucial hour had arrived. Would he pass it by as some strange, inexplicable phenomenon,—return to the old routine,—or had he "the open eye to see, the open ear to hear," that he might receive a new and higher idea of Truth? Was he willing to leave the past and enter into a larger sense of good? "Moses said, I will now turn aside, and see this great sight, why the bush is not burnt. And when the Lord saw that he turned aside to see, God called unto him out of the midst of the bush, and said, Moses, Moses. And he said, Here am I."

In Science and Health, p. 202, our Leader tells us what may be accomplished by the study of the "Science of Mind," and points to the redemption of humanity "through the merits of Christ,—the perception and acceptance of Truth." Recognition of the voice of Truth, and obedience to it, open the door to spiritual illumination, hence there was poured into Moses' receptive consciousness the glorious revelation of God as the "I am that I am."—the one individual supreme Mind, or infinite Being, the one intelligence that guided Abraham, Isaac, and Jacob, the "strong Deliverer" from the bondage of Egypt.

Now, did not our dear Leader manifest the same responsiveness to Truth when the life-giving power of the Christ was manifested in her marvelous healing from an injury that, according to human sense, must be fatal? She "turned aside to see" what this wonderful manifestation of divine power might mean. In these latter days, and in other times, there have been occasional healings from the Word of God, but those who were restored have usually been content to be healed; she alone "turned aside to see." Retiring from the world, putting aside the old material beliefs and theories, she sought for three years the solution of this strange phenomenon. Inspired by a sublime passion for the knowledge of God, and a divine compassion for sorrowing humanity, she pondered, sought and found God. This purity, this self-abnegation, this deep and loving search have made her the Revelator and the Leader for this age. Through her has come, not the "ministration of condemnation," but the exceeding glory of "the ministration of righteousness." This revelation of the Science of infinite being is for all ages—universal, eternal—"the same yesterday, and to-day, and forever." Through throes of anguish, struggle, victory, and the unutterable joy of doing the will of God, while bringing to human consciousness this great and omnipotent truth, our dear Leader has gone steadily forward, and the crown of rejoicing is hers, for through her writings, her prayers, and her ceaseless work, the world is awaking to righteousness. The advancing spiritual idea in Christian Science is revealing the fact that all may become the sons of God in proportion as they awake to this knowledge of revealed Truth,—of scientific being, wherein man is perfect, even as the "Father which is in heaven is perfect."

This Christian warfare wherein the flesh is put off,—this turning aside to face the divine light with the open eye to see, the open ear to hear and apprehend the spiritual facts of being, through our Leader's teachings, is the privilege and heritage of all who with humility and love see and obey the "heavenly vision." The sublime warfare, which is characterized by the healing of sin and disease in its successive stages, must lead us to the Horeb heights of immortal harmony. As we put off mortal thought for the immortal idea, the belief that there was or could be a corporeal personality or a personal history, and learn the meaning of the words, "Before Abraham was, I am,"—that Spirit is, and ever must be, the only Mind of man and the universe, and that man reflects this Mind, eternal and indestructible substance,—we recognize the unchanging realities of being, the new heavens and the new earth.

The Right Concept.

GENEVA MARY CLIPPINGER.

PRINCIPLE is variously defined as "That from which anything proceeds: a source or origin. An original cause: an operative cause: a fundamental truth or tenet: a comprehensive law or doctrine from which others are derived, or on which others are founded." (American Encyclopedic Dictionary.)

Mrs. Eddy, in Science and Health (p. 465), gives a clear, comprehensive definition of Principle, a definition which bases all her deductions as to being and its laws. From this we learn that Principle and all its manifestations are of necessity harmonious. It is surely reasonable to believe that God, infinite Principle, expresses the law of His own perfect nature in all His work, and that His work must therefore be infinitely good, as declared in the Bible, "And God saw every thing that he had made, and, behold, it was very good."

Remembering that infinite perfection and omniscience must express the law of His being, we are compelled to acknowledge that man must be perfect and good because made in His image and likeness and continually upheld and sustained by changeless Principle, and that the Principle, origin, and operative cause of man and the universe must remain perfect throughout eternity, though the misconception thereof has darkened all human history. This misconception has been set aside only a few times, as with

Copyright, 1905, by Mary Baker G. Eddy.

Digitized by Google

Moses, Elijah, the prophets, in varying clearness, up to Jesus' perfect comprehension, and the present scientific understanding of the truth about God and man, discovered by Mrs. Eddy.

Under a material misconception, human sense attributes qualities and conditions to man which seem to make him the reverse of God's image and likeness, the reverse of that which God declared to be good, and which must necessarily possess all good qualities. Many have most earnestly desired to be free from this sense of evil, the opposite to God's creation, and have prayed, doubtingly, to overcome it, have willed, humanly, to rise above it, and then have sought consolation in the belief that these qualities were God-bestowed, or a necessary part of individual character. This misconception of man involves a deluded sense as to his intelligence, but as we awaken from this delusion we see that man reflects divine intelligence, wherewith he is guided in all his activities, therefore he possesses perfect ability and character. Christian Science also reveals the fact that God is absolutely the only Principle.

Many agree that this is the only consistent theory of God and man, but they pause before the evidence of injustice and evil manifested to material sense, and ask what is to be done about it. In answer to this, Christian Science teaches how each must destroy to his own consciousness, by a scientific process, all belief in the reality of evil or its manifestations. He must see, prove, and rely upon the ability which God bestows upon all His children. He must not accept the suggestion that there is any other Principle or power, such as chance, hatred, human will, or evil in any form. He must no more believe that divine Principle can be opposed or thwarted, than that the basic law of mathematics can be set aside. When beliefs in other powers or forces seem to tempt through untoward conditions, then must we turn from them, with the might which God gives, for we can face every circumstance as its master, when we accept as true and real only that which has its origin in divine Principle. With God-given endurance we can labor till the night of error is past, ever cheered by the vision of man's dominion through Christ, Truth, and with perfect assurance of success, because it is God that worketh in us "both to will and to do of His good pleasure." It is important for us to keep constantly before us the fact that the power is not in ourselves, but that it is forever in divine Principle. As the truth grows clearer to us, we gladly share with others the blessings of this understanding, which reveals the infinite Father-Mother, God. The true knowledge once gained, inevitably begins to manifest itself in harmony, goodness,—the reflection of Truth and Love.

Freely Give.

M. G. KAINS.

On no occasion has the loyal, active Christian Scientist better opportunity to reveal the dominant thought of Christianity—selfless love—than at the Wednesday evening meetings. At those meetings weary searchers for spiritual food come with the hope of receiving some fragments from the Master's table. Whether the visitor be prompted by what is called curiosity, or by some higher motive, he is a guest and is to be so treated. It is for him that the feast is spread, not primarily for ourselves; we are the dispensers of our Lord's viands. In ministering to our guests' needs we have each an individual duty to perform, and to perform it adequately we must be as alert, prompt, and efficient as possible.

Whether there be many or few guests, it is a helpful thought to bear in mind that there is one person present whom it is our special duty and privilege to serve, and that so far as this duty is concerned the other guests do not count. If our duty lie in the public expression of the truth, in the usual way, it is also helpful to bear in mind that the individual whom we are to reach may be in the remotest part of the room, and that we must speak as clearly, slowly, distinctly, and forcefully as if only he and the speaker were present and yet occupied the same positions. Those accustomed to speaking in small churches or halls will find this attitude very helpful when they have opportunity to speak in the large churches, where the mere size of the place might suggest difficulty in making themselves heard and thus deter them from speaking.

In addressing one's self to this visitor, it is also helpful to him as well as to the speaker to be direct, simple, concise, and above all to use language that can be understood—his language. One would think it folly to talk English to a Frenchman rather than his own tongue. How much worse, then, to use a word familiar in sound to him but with a totally different meaning from the significance he attaches to it. Is he not likely to accuse the speaker of perverting language? He does not associate the same meaning as do Christian Scientists with "mortal mind," "false belief," "demonstration," or even "claim." Therefore, to be effective the speaker must needs talk to him on *his* level.

In this connection, too, it is the part of wisdom to select such simple truths and proofs of God's power and love as will appeal to the listener as logical, sane, and convincing; for it is not always true that a demonstration or a truth wonderful to the Christian Scientist is similarly impressive to a non-Scientist. "God hath chosen the foolish [simple] things of the world to confound the wise." Neither is the force of a wonderful truth or demonstration effective unless it be cogently and artlessly expressed; for unless the listener apprehend the philosophy and explanation of a simple truth or demonstration, what likelihood is there that he will comprehend a marvelous one? Conviction is not dependent upon statement, but upon proof; and what appears to be proof to the initiated is often not so to the uninitiated.

A brief declaration and not an elaborate picture of one's condition prior to the advent of Christian Science in his life, then a clear portrayal of the improvement due to Christian Science, followed by a heartfelt expression of gratitude, all spoken with the power of sincerity, will carry conviction and blessing. With these thoughts in mind one will learn to be always ready, to choose the proper occasion for a particular statement, to have the consciousness that he is speaking and acting as God's representative, and to know that when the request is made, "Open thou my lips; and my mouth shall show forth thy praise," God's praise will be shown forth, whether the speaker sees the result or not, for God has said, "So shall my word be that goeth forth out of my mouth: it shall not return unto me void, but it shall accomplish that which I please, and it shall prosper in the thing whereto I sent it."

Love's Gifts.

ALMEDA N. TRACY.

Paul said, in speaking to the elders of the church at Ephesus, "Ye ought to support the weak, and to remember the words of the Lord Jesus, how he said, It is more blessed to give than to receive." I have received so much since coming into Christian Science, my blessings and gifts have been so manifold, that I have been glad when I read this passage that it did not say it was not blessed to receive, but only that it is *more* blessed to give. Soon after we began the study of Christian Science, we moved to the far West, and were, as I believe, the first Christian Scientists in Arizona. The never-failing love that was reflected to us by the little band of Scientists whom we left behind in the East, cannot be described. It led us to realize what the spiritual interpretation of the Lord's Prayer means. Divine Love was indeed reflected in the love which was manifested to us in many ways.

Being young in the study of Christian Science, we did not

Digitized by Google

possess many of the books, and there were not so many published then (some twelve years ago) as there are now. Our hymnal had only been issued a short time, but a dear Scientist gave us a copy as a parting gift. Another gave "Retrospection and Introspection" by our Leader. Afterward, "Pulpit and Press" was sent to us, also a later edition of Science and Health. A letter was received asking if we had "Miscellaneous Writings," and saying that we should have it. Again, one sent two dollars, saying that perhaps our subscription to *The Christian Science Journal* had expired. Afterward, through the love of that dear band, we received a copy of "Christ and Christmas" as a Christmas gift, one of the very first issued.

I can never express the joy and the blessing which these gifts brought to us, cheering and inspiring us to live the truth they taught. For all these benefits we are indeed grateful, and in the last few years we have not been unmindful of the beautiful lesson thus taught us, and we have been ever ready to receive the greater blessing which comes to us from giving in like manner to Christ's hungry and thirsty ones. Neither do I fail to remember with gratitude our beloved Leader, who has unlocked the treasures of Truth for us and whose teaching makes all good things possible. In our experience the love that is commended by her was expressed and was not found wanting.

Peace.

JENNIE WALBRIDGE BRIGGS.

PERHAPS no one word is more expressive of that for which the whole world is seeking, consciously or unconsciously, than is the one little word peace, which is just the opposite of all the strife, turmoil, and discord of material sense, the opposite of discontent and dissatisfaction, of disease and fear, of envy, jealousy, and hatred. No doubt many a rich man would give half his wealth for sweet peace. Many a weary one has wandered the world over, seeking health of body and peace of mind, only to find that the world cannot give them; and yet all the time the voice of Christ, Truth, is saying, "Peace I leave with you, my peace I give unto you: not as the world giveth, give I unto you." The trouble is, that mortals seek the peace which the world giveth, that which is not peace at all, but only a false sense of it. Jeremiah says that the priests and prophets have dealt falsely in that they have healed "the hurt of the daughter of my people slightly, saying, Peace, peace; when there is no peace." The worldly way is not Christ's way, which is the way of meekness and lowliness of heart, and it can only be found through the denial and destruction of pride, self-love, self-will, and all that comprises a supposed selfhood apart from God. "Great peace have they that love thy law: and nothing shall offend them," says the Psalmist. Thousands to-day are proving that as they love the law of good and demonstrate it in love for God and their fellow-men, they find that peace which passeth (human) understanding. It does not discourage such an one that the storms of error rage, if he be conscious that good alone is real, and that Love is ever-present and omnipotent.

Again the Psalmist declares, "Thou wilt keep him in perfect peace, whose mind is stayed on thee: because he trusteth in thee." How often, before gaining an understanding of Christian Science, have we sought in vain for that peace, and when trials pressed us sore, we have repeated that passage over and over, but the trouble would persist, and the wound was not healed,—the ability to make nothing of error was lacking. How many times since have we found truth to be our protection, when error has tried to "slay the righteous" endeavor, and it has kept us in perfect peace. Blessed peace! and thrice blessed truth! that reveals to us the way of peace and insructs us how to walk therein.

Job's exhortation, "Acquaint now thyself with him, and be at peace: thereby good shall come unto thee," tells us how we may overcome sin and fear, the foes to peace. When instructing his disciples, Jesus said, "And into whatsoever house ye enter, first say, Peace be to this house." This corresponds exactly with the instructions given in our text-book, wherein we are taught to begin our healing work by destroying the patient's fear. (Science and Health, p. 411.) When fear is destroyed peace reigns, and harmonious conditions begin to manifest themselves.

At the Master's "Peace, be still!" the sea was calmed, and Christian Science proves the presence of the same power whenever and wherever Truth is recognized and loved.

The Song of a Bird.

BERTHA JENNINGS AMES.

EARLY one morning, as I was passing through the garden, the shrill, sweet notes of a brown thrush attracted my attention, as he sang in the walnut tree. Some sparrows, seemingly envious of the beautiful song, were fluttering about, and trying to drive him away. With scarce a missing note he flew to the top of the tree, and there, uninterrupted, he finished his song. Morning after morning he came to the tree, always singing from the highest branch, to which the little sparrows had driven him. Though the redbird sang from the cedar and the wren from her house in the tree, the robin and many other birds blending their sweet voices in this early morning chorus, it only seemed to inspire the thrush to give forth more freely his beautiful song.

Here I learned a lesson. Though difficulties and annoyances may surround us, this should only serve to lift our thoughts higher, and thus we would lose sight of these annoying, petty trifles. Like the thrush, having once attained a high position, we should never be content with a lower one.

The thrush ceased not his singing because the sparrows harassed him, nor because the robin's or the redbird's coats were a more beautiful color than his own, nor did he attempt to imitate their songs.

In our daily living we should realize that we each have an individual place in God's plan,—not strive to do as others do, or cease to do, because we think we cannot do as well as others. We should live our own individual lives; harmony will thus be increased and, like the thrush with his song, we shall be content only when we sing, or live, on the highest branch.

A Sure Defence.

ELIZABETH KATZ.

ERROR in any guise may try to frighten, but it can never make us offenders unless the thing suggested find some response in us. Christian Science shows us how to defend ourselves against all "the wiles of the devil"—evil. Our beloved Leader assures us that "Good thoughts are an impervious armor; clad therewith you are completely shielded from the attacks of error of every sort" (*The Christian Science Journal*, March, 1899), and the 91st Psalm goes hand in hand with this superb utterance. Jesus, our blessed Master, said, "The prince of this world cometh, and hath nothing in me."

The suggestions and allurements of this world lose their hold upon the consciousness which begins to apprehend the truth as taught by Christian Science. Christ, Truth, comes to the temple of our thought and casts out "whatsoever worketh abomination, or maketh a lie." Then is our thought renewed after the image of Him that made all good, and becomes a fit dwelling-place for Spirit,—God.

Selected Articles.

"Tempted in all points."

We read that Jesus, though "in all points tempted like as we are," was "without," or "apart from sin." This expression (*χωρὶς ἁμαρτίας*) occurs twice in Hebrews (see 4 : 15, and 9 : 28).

These words should, in our opinion, have more weight than they ordinarily do. It seems a monstrous perversion to make Hebrews, 4 : 15 mean that our Lord's temptations were at every point precisely similar to ours, the result alone being different. Part of our temptations are from within, found not in the outside enticements, but in our being drawn away of our own lust (James, 1 : 14). Satan and the world might present a suggestion of evil to a perfect being; but no perfect being can know those inward drawings of lust toward sin which are the outcome of a nature wholly corrupt and bad! If Christ was tempted literally in all points like as we are, he must have known the power of sin within—a corrupt nature whose gravitation is toward evil. But the exact word of the Greek is *apart from sin*, so that, as Alford says, "throughout these temptations, in their origin or suggestion, in their process, in their result, sin had nothing in him; he was free and separate from it." He was on all points tempted like as we are, so far as this is possible to a being who is apart from sin; *i.e.*, has in him no sin. The temptations addressed right or innocent desires, but suggested wrong methods of gratification. It is sufficient for us to know two things,—

1. That he suffered, being tempted.

2. That he is able to sympathize with and to succor those who are tempted.

ARTHUR T. PIERSON, D.D.

The Homiletic Review.

Errors in Translation.

To the Editor of the *Herald*.

In your issue of September 2, while commenting upon the communication of "Uncle Toby," who maintained that honest men and women are above temptation,—and I fully concur with him,—you quote "Lead us not into temptation" as appropriate to the subject. With sincere deference to your opinion, as well as to the opinions of all educated men, however much their opinions may differ from mine, I hold the alleged text to be an ancient error and that Christ never uttered it.

Analyze the words and consider their true meaning. Clearly, that God has made us weak, erring children and placed us here to learn in a strict school the alphabet of existence; that He has permitted us to be surrounded with snares and pitfalls, and we must pray that He "lead us not into" them! The text as it stands clearly implies a reproach to the Almighty and constitutes a libel on Christ's teaching.

What has been the origin of the error? Christ was a Jew, and spoke in the Aramaic tongue—the Syro-Chaldaic dialect of the Hebrew. He was a scholar and understood Greek. Pure Hebrew was practically a dead language before the birth of Christ. The compilers of the Bible and the early fathers of the Church were not acquainted with Hebrew, and Jewish scholars refused to teach their language to any one not of their own faith. Hence the compilers had to rely upon Jewish translators, who, through incompetence or carelessness, discharged their duties in a very indifferent manner. An erroneous translation—and such were many—being thus once established it was carried throughout the sacred Book from Genesis to Revelation.

In the Aramaic language the word temptation as we employ the noun does not occur. Even when that language had attained its meridian—before the fourth and eighth centuries—we look for it in vain, and nowhere in the valuable Greek translations of that literature do we find it. The original is an Aramaic idiom having no equivalent in any known language. It may be justly translated by the words, "Bring us not into probation," or "bring us not into trial," or "judge us not severely for our faults," the first version being the most accurate.

Another unhappy mistranslation, for which there is less excuse, also occurs in the prayer of prayers, "Give us this day our daily bread." For "daily" we should read supersubstantial, to signify sustenance for spirit and body.

P. J. MCCOURT, M.D.

New York, September 7, 1905. *New York Herald.*

We all understand the ideal man in proportion as we gain a true knowledge of God, of whom he is image. Christian Science, affording a clear spiritual and demonstrable understanding of God, greatly aids mortals in the task of becoming Godlike. By teaching what God is, this Science informs us what we have to do to be like Him. Practising our knowledge of God's likeness necessitates putting "off the old man with his deeds," and as we continue to put off evil we are enabled to perceive more of God's image and are thus furnished continued employment in the line of working out our salvation.

It should be observed from the foregoing suggestion that "practice makes perfect." It avails not to learn the way unless one advances accordingly.

It is evident that when Christian Science is universally practised—when all men busy themselves trying to be Godlike—sin will rapidly disappear, and the kingdom of God will be rapidly established on earth. Men will then love as God loves, the universal brotherhood of mankind will be in actual existence, and the commandment, "Love thy neighbor as thyself," will dominate the lives of all men.

ALFRED FARLOW.

Boston Times.

To dispute Christian Science because it pleads the unreality of evil is in effect to question the reality of good. Our Saviour did not teach evil to be eternal. He predicted the final destruction of all evil; and the fact that it will eventually be relegated to the realms of the unknown, shows it to lack the inherent stability of good which proves good to be imperishable and eternal. There is nothing in the teaching of our Saviour which, if understood and demonstrated, fails in any way to coincide with Christian Science on this question of evil.

In his endeavor to prove that Jesus did not intend his command to preach the gospel and heal the sick to be taken as a unit, our critic insists that all minor commands uttered in connection therewith should be considered a part of this unit, if it is to be taken as such. This is begging the question which Christian Science raises; namely, "Why do Christians follow the command to preach the gospel but ignore the command to heal the sick?" The Christian Scientist, as did Jesus and his disciples, heals through preaching and preaches through healing.

Let the reader contemplate for a moment the distress and suffering which is seen to-day on every side; the multiplicity of diseases and sins, and the unhappiness and poverty which attend these conditions; then let him ask himself whether Jesus' command to heal the sick should be ignored, if there is any possibility of its fulfilment. Is there no need to-day for the compassionate ministrations which drew the attention of all Palestine to the work of Jesus and his disciples?

Aside from the fact that it is illogical to believe that evil can be as real and eternal as good, and that God is either negatively or positively the author of the former as well as the latter, it is fair to ask what satisfaction is to be gained from making this belief active in the consciousness of mankind. The hopelessness of believing that there exists no escape from sin, is not apt to drive men to seek righteousness; and again, if evil is as real as good, and God is the author of both, then one is as eternal as the other and there will never

Digitized by Google

be a time when men will be free from the influence, in some degree, of sin, because of the supposed co-existence of these opposites.

The atonement of Christ Jesus was in vain if men are not thereby shown the way of escape from all evil. His life-work manifested the one ardent purpose of showing mankind the way to escape from sin and its ill effects. To him sickness was purely the manifestation of error in human consciousness. The stand which Christian Science takes on this question is unassailable, if Jesus' teaching be taken as authoritative; and it is in order for our critics to explain why it is that they are not making some effort to heal the sick instead of casting unfriendly missiles at those who are endeavoring to fulfil all of Christ's demands.

Mrs. Eddy claims no more for the efficacy of her teaching than the results warrant her in doing. That which has brought health and happiness to thousands who have despaired of ever regaining such a state, needs no defence; and whatever explanation is needed as to the method of gaining it is obtainable through studying the writings of the Discoverer and Founder of Christian Science.

Some may say that the fulness of the promise of Christian Science has not been achieved, but it is nevertheless true that enough has already been accomplished, through even the limited understanding of its possibilities which at present obtains, to more than justify the efforts made to teach and practise this doctrine. ALBERT E. MILLER.

Johnstown (Pa.) *Democrat.*

Christian Science is not "practised in defiance of the laws of nature," as this reverend critic asserts, but logically sustains the laws of nature in the understanding of the fact that laws of nature, so-called, cannot properly be disassociated from the laws of God. Christian Scientists understand that obedience to God's laws is a necessity and pre-requisite to all true Christianity; and it is their earnest effort to honor and obey these laws.

The suggestion made, that "everything possible should be done to secure some law to place a ban on the practice of this doctrine," is akin to the efforts of ecclesiastical monopoly throughout all ages, from that of the Pharisees of Jesus' time to the present date, efforts which are responsible for some of the blackest pages in the history of so-called Christianity. It is safe to assume that this preacher of the gospel would strenuously object to the suggestion or intimation that his particular form of religion should be placed under the ban of the law, and its adherents declared criminal; yet this is what he proposes in the case of Christian Scientists, who are Christian in all points which are fundamental to the Christian religion and whose only alleged crime is the effort to make practical to the needs of humanity the healing truths of Christ's gospel. I will say, without fear of successful contradiction, that such suggestions evidence intolerance, are un-Christian, uncharitable, and belong to the Middle Ages rather than to the enlightened thought of the present day. JOHN L. RENDALL.

Dubuque (Ia.) *Globe-Journal.*

Perhaps the strongest proof we can offer that Christian Science healing is not produced by the power of one human mind over another is the fact that thousands have been healed of sickness and sin simply by reading the Christian Science text-book.

That Christian Science discourages and eventually destroys the practice of hypnotism must be proved in the personal experience of every student of Christian Science. This follows as a result of being willing to part with sin. It is a desire to be Christlike, to forget self, and to be temperate, humble, and pure. ARTHUR E. JENNINGS.

Toledo (O.) *Blade.*

The Lectures.

De Kalb, Ill.

Mr. Bicknell Young of Chicago delivered a lecture on Christian Science in Chronicle Hall, Sunday, September 10, under the auspices of the Christian Science Society of De Kalb. He was introduced by Dr. J. W. Cook, President of the State Normal School of Illinois, who said in part,—

Ladies and Gentlemen:—I think it is not difficult to understand what may be called the modern spirit. I mean by that the prevailing habit of thought, the dominant mental attitude of the modern world. I think you will agree with me when I say that it is essentially scientific. We are seeking a rational explanation of the world and are endeavoring to discover law, for we believe ourselves to be under the dominion of invariable, persistent reason, which expresses itself in those substantial forms which we dignify by the name of law. When I have declared it to be a scientific age, I have in the same breath characterized it as an age that is essentially practical. We measure everything in terms of usefulness, in its ability to contribute to the welfare of man.

We are here this afternoon to hear an exposition of what is called Christian Science. While I must confess myself ignorant in a large part of its philosophy and practice, I understand that its main contention is that it is fundamentally scientific and fundamentally Christian. Nothing could be more desirable than a happy union of two great systems of thought that have often been regarded as hostile. If Science can find itself in harmony with religion, and religion under the form of Christianity can really become scientific, we may indeed believe that the world is approaching the long-hoped-for millennium. I feel that I am honored in having the privilege of introducing to you one who is esteemed capable of instructing us in this new and interesting philosophy of life.—*Correspondence.*

Pueblo, Col.

Before a large audience at the Grand last night [September 14], Edward A. Kimball delivered an address on Christian Science. The speaker was introduced by C. G. Seelye, First Reader of the local church, who, in explaining the nature of the gathering, said, "We desire to give an intelligent conception of this old, yet new religion. Many people are earnestly seeking for truth, yet have erroneous ideas of what Christian Science presents as truth. Many fear Christian Science as something mysterious or supernatural. Many regard it with wonder or distrust, as something overdrawn or an evil influence in the lives of men. It is to correct misconception and to supply information that the Christian Science church has established its Board of Lectureship."—*Pueblo Chieftain.*

East Aurora, N. Y.

Rev. Arthur R. Vosburgh delivered a lecture on Christian Science before a good sized audience in the East Aurora Opera House Sunday afternoon, September 17. Charles Hunter Miller of Pittsburg, Pa., introduced the speaker, saying in part,—

Our Master has given us the promise, "Ye shall know the truth, and the truth shall make you free." Christian Scientists feel that in this revelation of Christian Science they have found the truth which makes free, and in their gratitude for the effects of this truth their hearts go out in a loving desire that their friends and neighbors may have the truth of this teaching. It is with no thought of building up a membership or personal following that you have been invited here this afternoon, but in response to the loving wish that you too may know this truth which sets free from bondage, sorrow, sickness, and sin.—*Correspondence.*

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

"Thou shalt have no other gods before me."

AN erroneous belief regarding Christian Science is held by many persons; viz., that it is merely a means of healing sickness, but we believe this narrow concept of its mission is fast giving place to the understanding that this Science heals both sickness and sin just as our Master healed them at the dawn of Christianity.

It was hard for those who persecuted Jesus to understand that his ministry involved the destruction of all error, the salvation of mankind from every false belief concerning God and the universe, yet that was his work, and it was for this work that he was reviled, persecuted, and crucified.

Jesus made clear the intimate relation existing between sin and sickness when he said to the "man which was taken with a palsy," "Man, thy sins are forgiven thee," and to the scribes and Pharisees, "What reason ye in your hearts? Whether is easier, to say, Thy sins be forgiven thee; or to say, Rise up and walk? But that ye may know that the Son of man hath power upon earth to forgive sins, (he said unto the sick of the palsy,) I say unto thee, Arise, and take up thy couch, and go into thine house."

The immediate healing of this man proved our Master's understanding of the unreal nature of all that which is unlike God, Spirit, but because mortals have been unwilling to give up all their sins, his doctrine has been preached with less effect than is needed for the redemption of the race.

"Thou shalt have no other gods before me" is the keynote of Christianity, and the consequent recognition of God, Spirit, Mind, as the only creator, forever annuls the possibility of either sin or sickness existing as a reality. It is upon this basis that Christian Science has been given to the world, and it is upon this basis that the wonderful works which it is doing "in the name of Jesus Christ of Nazareth" are accomplished.

Every Christian must follow in the path our Master trod, and he must successfully contend with every evil, whether it be sickness or sin, if he would win the reward of righteousness. Of this our Leader has said in Science and Health (p. 22), "Final deliverance from error—whereby we rejoice in immortality, boundless freedom, and sinless sense—is neither reached through paths of flowers, nor another's vicarious effort." ARCHIBALD MCLELLAN.

The Right to Life.

I know no life divided,
O Lord of life, from Thee;
In Thee is life provided
For all mankind and me.

KARL SPITTA.

IT has been said that the cure for the ills of constitutional liberty is more liberty, and with equal propriety it may be said that the cure for the ills of our false sense of life, as we experience them, is a larger, truer sense of Life.

Phrased in terms which appeal strongly to national aspiration, Moses and the prophets after him presented the true Israelite as one who, having escaped the bondage of Egypt, and having overcome all obstacles to his progress, in the wisdom and strength of God, has at last come to his own,—to the land and life which were promised, and to "Mount Zion, the city of the great king." No longer a prey to his enemies, he is to rule in righteousness as he walks and talks with God. Thus, too, at the end, and at the beginning of the years, Christ Jesus summed up the purpose and end of his ministry in the inspiring declaration, "I am come that they [men] might have life, and that they might have it more abundantly." He denied the legitimacy of every thought of life as commonplace or contracted. He exalted and vitalized the concept, gave it unlimited expanse, and the greatness and richness of his meaning were made known in his daily overcoming of sin, sickness, and death. He linked life to God, thus separating it from every thought of weakness and imperfection, and his own splendid virtue and victories witnessed before all men to the ideal. If the most impressive demonstration of his love seemed to make the *tasting* of death a necessity, as St. Paul has said, even here life was given new and transcendent significance, for in sundering the bonds of death he gave the highest possible evidence of the lawfulness of life alone. "In him was life; and the life was the light of men," and in this light, radiated through Christian Science, men are seeing, as they have not before, that in them the Christ is to assert and manifest "the power of an endless life." It is to exercise authority over all that is in league with death.

St. John presents this ideal of life in a picture of great breadth and beauty. In a vision he beheld a mighty river "issuing from the throne of God," and on either side of it were the trees of life that bear fruit continuously, and "their leaves were for the healing of the nations." Nourished and sustained by the mighty going forth of the infinite Life, man knows neither barrenness nor decay, but in perennial freshness and beauty he bears unfailing fruitage while his every thought reflects divine Truth,—the comfort and cure for all mankind.

The life of unbroken union with God is revealed in Christian Science as the legitimate inheritance of all men. It is presented not as a possibility of an indefinite future, but as our normal condition and experience in the kingdom which Jesus said "is come." This nobler sense of man's privilege and possession is to be our light-flooded living-room, from which the darkness and miasma of mortal thought—belief in the naturalness of sickness and death, with all its attendant pain and fear—is forever excluded. Through Christ we *now* have right to the ideal life; to everything which adds to our spiritual enrichment, and to freedom from everything which limits our efficiency, our triumph, and our holy joy, and Christian Science is a divine call to the immediate and persistent assertion of this right. With earnest and loving appeal Mrs. Eddy voices this call when she says, "Citizens of the world, accept the glorious liberty of the children of God and be free! This is your divine right." (Science and Health, p. 227.)

The effort to beget an earnest and controlling purpose to live a high, fine life is made in vain so long as men are left a prey to belief in the naturalness and power of that which is at war with such a life; but when through Christian Science we come to understand that the Christ-life is attainable, that its saving sovereignty is ours by God-given right, then for us the true life has dawned, and nothing shall be able to separate us from its perfect day.

JOHN B. WILLIS.

"Waste Places."

When the poor and needy seek water, and there is none, . . . I the Lord will hear them, . . . I will open rivers in high places, and fountains in the midst of the valleys: . . . That they may see, and know, and consider, and understand together, that the hand of the Lord hath done this.

ISAIAH.

AMONG other undertakings which illustrate the progressive spirit of the present time is the effort to reclaim the waste lands of the West, and thus to provide homes

Digitized by Google

for many who might otherwise exist throughout their earthly days, "cribbed, cabined, and confined" in the poverty-stricken districts of large cities. As we read of the vast amount of thought and energy, as well as money, which is annually expended in carrying on devastating warfare that leaves only desolation in its track, and then consider the relatively trifling outlay required to convert the barren desert into a fruitful field or a watered garden, we may well wonder at the blindness of selfishness and hate. Nation lifts up sword against nation, and sacrifices its own sons and those of its foe, that a few miles of territory may glut the false sense of possession; all the while forgetting that "the earth is the Lord's and the fulness thereof," and that within the borders of every land there are undeveloped possibilities for good, awaiting the energizing touch of intelligence and the far-seeing wisdom which begets love for our fellow-man.

In the old Prophets many references to waste and desolate places are to be found, but these are closely linked to glorious promises of what shall be when "the Spirit of the Lord God" is known among men. In words that glow, Isaiah tells of the good tidings which shall bring liberty to the captives and joy to those that mourn, and that these shall "build the old wastes," and "raise up the former desolations." Well might the Master read this promise at the beginning of his public ministry, prepared as he was to effect its fulfilment. Many indeed were the "waste places" reclaimed by him,—lives which had been made desolate by the belief in sin, disease, and death, but which became, at the transforming touch of Truth, as gardens wherein "righteousness and praise" were made to "spring forth before all nations."

After many centuries of mortal darkness, our Leader has spoken in the name of Spirit, God, with the result that "the desolations of many generations"—the sins and diseases of human descent—are disappearing before the Word of Truth. As in the reclamation of waste land it is necessary to clear away the useless and noxious plants which are of no value to man or beast, so also in this ministry of truth the rank and poisonous growths of mortal belief—sins, diseases, sorrows—must be removed. "Every plant, which my heavenly Father hath not planted, shall be rooted up," said Christ Jesus. After the clearing away of noxious growths, mountain streams are brought by new channels to water the barren deserts. Thus in Christian Science are the living waters brought from the heights of Truth and Love, to refresh lives long desolate and cause them to bring forth the fruits of the Spirit,—health, purity, and peace.

When the spiritually scientific process of restoration is accepted, time and energy are no longer wasted in seeking health and happiness by material means, for every effort is directed to the unfoldment of the kingdom within. With our healing in Christian Science we begin to recognize the fulfilment of prophecy in universal progress, and we see that the same power which bids the weak be strong, which opens the eyes of the blind, and which makes the lame man "leap as an hart" also causes streams to break forth in the desert; that it bids sorrow and sighing flee away, and bestows "everlasting joy" upon those who are ransomed by Truth. We also learn the vital importance of knowing and acknowledging that all good comes from God, divine Mind, otherwise we shall have only barren lives,—waste places,—unreclaimed by Truth.

ANNIE M. KNOTT.

Services in The Mother Church.

The rapid increase in the congregation attending The Mother Church has made necessary an additional Sunday morning service. Services are now held each Sunday at 9.30 and 11 o'clock in the forenoon and 3 o'clock in the afternoon.

Letters to our Leader.

Canyon, Tex., July 20, 1905.

Mrs. Mary Baker G. Eddy, Concord, N. H.

Beloved Leader, Teacher, and Guide:—May I ask a moment of your time, that I make known to you, even if it be but feebly, my appreciation and gratitude for your noble life-work. I owe my happiness and every breath I draw to the Principle revealed in your Key, Science and Health, which has illuminated the Scriptures to me. I have often thought of writing you, after a decided victory of Truth over error, but did not wish to intrude on your valuable time. I feel, however, that I must tell you this. On Monday, a lady, Mrs. M. S. Morgan of Amarillo, Tex., fell, and the doctor who was called to set the bones, said, "Every bone in your ankle is crushed, and if you don't want to be a cripple for life, you must not put your weight on it for a month." The lady knew something of Christian Science. It was decided in the Texas legislature last winter that a surgeon must be called to set broken bones, so she did according to State law, but knowing that there is a higher tribunal, she wrote me, asking my advice. I answered her by quoting what you say in regard to bones on page 423 in Science and Health, and on accidents, on page 424, and I referred to some other passages in your wonderful book. I also told her that God needed no aid. She received my letter on Thursday, and after reading it she took off the plaster cast, put on her shoes and stockings, and walked out in the yard. I did not even give her treatment. The following Sunday she came twenty miles to our services in Canyon City. She walked in unexpectedly, perfectly healed. I must tell you, dear Leader, my silent prayer that morning consisted of tears of gratitude. I thought of many blessings, and this passage from Science and Health (page 3) was uppermost, "The only acceptable prayer is to put the finger on the lips and remember our blessings." Five years since, this lady had no place to look to except the grave, and hers was the first case of healing, outside my home, at this place.

For this, and for many other blessings which we enjoy through your tireless labor for humanity, I give thanks and desire to show my gratitude by "fruits" which will prove my worthiness to be called a Christian Scientist.

Your humble and loving follower,

V. EDNA HENSON.

Salt Lake City, Utah, April 17, 1905.

Beloved Leader:—I thought you would enjoy hearing of our experience in the legislature during the past winter over a medical bill. The section of the bill that was designed to affect Christian Scientists read as follows:—

SECTION 11. "PRACTISING MEDICINE" DEFINED.—Any person shall be regarded as practising medicine within the meaning of this title who shall diagnose, treat, operate upon, prescribe, or advise for, any physical ailment of another for a fee, or who shall hold himself out by means of signs, cards, advertisements, or otherwise, as a physician or surgeon; but nothing in this title shall be construed to prohibit services in case of emergency, or the administration of family remedies, nor to prevent medical officers of the United States army from the discharge of their official duties, nor to prohibit visiting physicians in the act of consultation.

We had three long hearings before the House Committee on the subject, and the following were some of the points emphasized by our attorneys, Messrs. Van Cott and Stephens.

"If the Saviour were on earth now, and went about healing the sick, he could be fined and sent to the penitentiary under Section 11 of this bill."

"Under this law, Christian Scientists might treat thousands; . . . and, if they charged nothing, it would be

Digitized by Google

all right. This proves that the bill is not for the protection of the public."

Mr. Van Cott argued that if spiritual treatment is bad for the public, if it is harmful to try the influence of good thoughts, then the treatment would be as harmful when given free as when paid for.

"The other night I asked Dr. Baldwin," said Mr. Stephens, "if a Scientist who treated a patient after he, the doctor, had pronounced him incurable, would come under the provisions of the bill and be subject to fine and imprisonment. Dr. Baldwin said he would. In other words, Dr. Baldwin tells an incurable patient: 'I have told you that you can't get well, and you ought to have sense enough to go out and die.'"

We succeeded in getting the House Committee to amend Section 11 with the following clause: "Nor shall any thing in this bill be construed to apply to any one except those who use drugs and perform surgical operations." This clause confined it to the regulation of medical practice. When the measure came to a final vote in the House, only two of the forty-four members voted against our amendment. After this experience, the doctors turned against the whole bill, and asked the Senate Committee and the Senate to kill the whole thing, as they did not want any of it. Their fight was very determined along this line. On final vote in the Senate, we had a majority of those present for the amendment, but lacked one vote of having a majority of the entire Senate; hence, the measure was lost and the whole bill killed thereby. This left us under the old law passed in 1892. The exhaustive discussions in the legislature and before the committees, together with the thorough airing which the subject received in the newspapers, was a great help to the cause of Christian Science. We feel that it was a marked victory in many ways.

Yours lovingly,

LEWIS B. COATES.

Durham, N. C., September 7, 1905.

Rev. Mary Baker G. Eddy.

Beloved Leader:—This being our annual meeting, and knowing that we, as a society, have grown in the knowledge of God, gained by the study of "Science and Health with Key to the Scriptures," we wish to thank God and to express our love and appreciation that your teachings have come into our lives as a benediction, showing us that Truth, the great physician, has not changed, but is the same yesterday, to-day, and forever, healing all our diseases, destroying our sins, and enabling us to demonstrate heaven, here and now. Sincerely,

THOMAS WILSON POSTELL, *Clerk.*

New York, April 11, 1905.

Dear Mrs. Eddy:—As I sit thinking of you to-day, I am inspired with an overwhelming sense of gratitude, which prompts me to write and tell you how I have longed, all my life, to be a Christian, but not until I found Christian Science did I realize what it is to be a disciple of Jesus. Words cannot express how grateful I am for the spiritual uplifting and the understanding of Life, as you have explained it to me. May this light shine forever and illuminate the whole earth. Lovingly yours,

ROBERTA V. SANNER.

Admission to Membership.

The next admission of candidates to membership in The Mother Church will be November 7, 1905. Applications must be in the hands of the Clerk on or before October 23, 1905.

An application sent to the Clerk of the Church does not constitute the applicant a member; he must be elected to membership by the Christian Science Board of Directors, in which event notice of election will be sent.

Testimonies of Healing.

About three years ago I became interested in Christian Science, having been sick for twenty-eight months with heart trouble and nervous prostration. My physician called in a specialist, who examined me, and the verdict was that I could not live three months. I afterwards had another doctor, and I remember well the morning when he told my husband and son that my life-work was ended. Sometimes I would feel a little better, but in a short time I would be as badly off as ever and would be obliged to go to bed again. The last time, I was for ten weary months so sick that I could not leave my bed at all. It was at this time that a friend wanted me to try Christian Science. A practitioner called, and after taking a few treatments I tried to walk, as a little child begins, by holding on to articles of furniture. My ankles would turn, but I kept on, and in a few weeks I could walk quite well and help myself, and I have been able to care for myself ever since. When I could get out in the sunshine again it seemed as if the sky had never looked so blue. One day I met one of my former doctors. He was greatly surprised to see me looking so well, and asked me a great many questions about my healing. At another time I went into a store and the wife of the proprietor, who knew all about my sickness, asked me how it came about that I was so well, and I told her it was all through Christian Science. As we came out of the store we met the same doctor again, and the lady, calling his attention to me, said, "Look at the resurrection!" His answer was, "Yes, and I wish that every one could do as well as she has done." It would be impossible to tell all that Christian Science has done for me. While I was being helped by the study, my husband met with an accident. He sprained his ankle severely, but through the help of Christian Science he was able to get about again on the third day. He was also enabled to leave off a truss which he had worn for three years. These latter demonstrations came to us through the study of Science and Health without other help.

For all these blessings I am grateful to God, and to the pure, noble woman who has given her life to show us the way out of the darkness into the light.

MRS. VIRGINIA A. DYER, Boston, Mass.

I have desired for some time to send a testimony, telling of the power of Truth, and of what Christian Science has done for me. I was a total wreck, as I had a severe cough, besides asthma, cramps, and many other ailments. I tried everything I heard of, but found no relief. I had almost a drug store in my house, and had employed several doctors, but they said they could not help me. They told my friends that I could not last long. I had these complaints about fifteen years and grew worse all the time. I was a member of an orthodox church, and asked some of the pastors why it was that God would not hear my prayers. They said, "Your faith is not strong enough." They would tell me to trust God, and if it was His will He would help me: but I found no help until I heard of Christian Science and took treatment. In three days I was healed of my cough, cramps, and pains, and slept all night without being propped up in bed. This was in July, 1900, and there has been no return of these troubles, for which I thank God. I have used no material remedies since. I have had some good demonstrations of the power of Truth over error, and I desire to know more of divine Truth.

I feel grateful for Christian Science, and to Mrs. Eddy, our dear Leader, who has labored so hard to give us this truth which proves that God is an ever-present help and that sin and sickness are not real.

JOHN BAUCOM, Lexington, Mo.

Over eleven years ago I was healed, through Christian Science, of spinal trouble, astigmatism, and other ail-

Digitized by Google

ments from which I had suffered many years. Doctors gave me no encouragement, saying nothing more could be done, only to try to keep up my strength by the best tonics. I was unable to keep house, and was boarding at that time, and the only outlook was the grave. My suffering seemed unbearable. I had been told of Christian Science, but was afraid of it, thinking it was only some new *ism* which would draw me away from God. How little I knew that through its teachings I would find God,—the only Physician. I finally yielded to the persuasion of my landlady and called a Scientist to talk on the subject, and during the talk I was greatly helped. I found that Christian Science is the teaching of Christ Jesus. I soon began to take treatment and in a few weeks was strong and well. I was able to do all my work, and to walk miles if necessary. Since that time we have never used one drop of medicine in our family. We find the truth sufficient for all our needs. Pneumonia, mumps, grip, rheumatism, and many other troubles have appeared, only to fall before the truth.

I cannot tell half that has been done in our home, and how we have been able to help others. One demonstration which occurred last fall I will mention. The gas had been escaping into the oven of a gas range through a loose valve, and not being aware of it, I lighted the oven burners and opened the door. Instantly a sheet of flame burst forth with a loud noise, and my clothing caught fire. I did not then notice that I was burned so badly, but instantly realized God's care and protection. After a moment I found that my face and neck were burned, the eyebrows were burned off, and the hair from the front and sides of my head. This happened about noon, but by three o'clock there were no traces of it left, except the burnt hair. The inflammation and swelling had all gone, and callers who came in did not notice anything.

"Who is so great a God as our God?" I feel grateful to our dear Leader, Mrs. Eddy. The Bible and Science and Health grow clearer and dearer each day.

MRS. LUCIE BROCKWAY, Batavia, N. Y.

It is now two years since I became interested in Christian Science, and I desire to testify to the benefits received. Prior to taking up the study of Christian Science I had for ten years or more suffered constantly from chronic constipation and from frequent attacks of indigestion. I had taken many kinds of medicine, without any lasting relief. Plenty of exercise was supposed to be the only thing that would result in permanent benefit, and my work kept me sitting in an office all the time. I was brought up in an orthodox church, although I had drifted out of it, and my father was a doctor, so that I was thoroughly prejudiced against Christian Science. When I was finally induced to attend a Christian Science church, I did so with no expectation of going more than once. However, as it turned out, I did not miss a single meeting for many months. I took up the study of Science and Health, and although I did not do so with any faith that I would be healed, or with that as my main object, within a couple of weeks the troubles mentioned had been entirely overcome and I have not taken a drop of medicine since. I have also been greatly benefited in other ways. As so many others have said, the physical benefits which I received were as nothing compared with the improvement in myself, morally and spiritually, and in my changed views of life, and my feeling towards others.

It is my earnest desire to live every day more of the truth as made clear to us through Science and Health and Mrs. Eddy's other writings, and thus to show my gratitude for all the benefits I have received through Christian Science.

C. J. TURNER, Chicago, Ill.

Six years ago Christian Science came to me in an hour of great need, and I was healed in four treatments of old chronic troubles, one of these being farsightedness and unequal focusing of the eyes for which I was sentenced to wear glasses the remainder of my days, by two different specialists. I have never worn glasses since my first treatment in this Science. It has become all in all to us, and we need no other physician. For five years our three children have not taken a drop of medicine, Truth being sufficient in every case of need.

Words are inadequate to express my gratitude to our beloved and honored Leader, Mrs. Eddy, whose gift to a sin-sick world is our text-book, Science and Health. I thank God daily for the understanding which enables us to speak with authority to error of every sort.

SARAH B. STRASSBURGER, Green Bay, Wis.

Many years ago, before Christian Science was practised in this city, I was suffering from what is called the after-effects of diphtheria, which the doctor did not help. A friend who heard of Christian Science in Boston, advised my sister to try it, telling her of the lady here who, though not a practitioner, was able to help others by the understanding gained through reading Science and Health. I applied to her for help, and was quickly healed. I was also healed instantly of toothache. Since then I have had untold benefit in every way.

I rejoice in the study of the truth, brought to us by our dear Leader, Mrs. Eddy, in her books, Science and Health, and "Miscellaneous Writings." My heart is filled with gratitude to her for all God has enabled her to do in establishing this saving religion, Christian Science.

BLANCHE S. SHANNON, Montreal, Can.

Although the blessings which Christian Science brings to us are manifold, we always remember with an especial sense of gratitude our first healing in the truth. I did not come into this Science for physical healing, but because I recognized that it was the religion of Christ Jesus. Nevertheless, I have every reason to remember my first experience of healing. Several years ago there was an epidemic of diphtheria in this city. Four members of my family, including myself, came down with it. Coming home one afternoon from a card party, I arrived just in time to see my brother carried out to the ambulance. The next noon I followed him. I spent three weeks under the most heroic medical treatment, returning home almost in a state of nervous collapse. Not a great while after that another epidemic of diphtheria appeared, which was considered a much more serious one. Again the unmistakable symptoms began to manifest themselves upon me, and they developed rapidly. This time, however, instead of sending for a doctor and an ambulance, I went to bed and had a Christian Science practitioner notified. This was at eight o'clock in the evening. I went directly to sleep and slept until half past ten. When I awoke I was healed completely, with the exception of a slight throat discomfort, which passed off two days later. The treatment had been absent. Thanks to the wonderful and ever-present power of divine Love, revealed to this age through Mrs. Eddy's understanding, I was saved in less than three hours from one of the most painful and dangerous diseases in the category of human ills. It was my first call upon God for physical healing, and I found that He is indeed ever-present in time of trouble. When I compare these two experiences, my sense of thankfulness for Christian Science beggars all speech. This truth has given me spiritual peace, saved me from physical disease, brought me contentment of mind. I know that if I am obedient to its teachings, God will protect and direct me in all my ways. We can give adequate thanks for the truth only by living it as well as professing it.

WINIFRED LEE WENDELL, Detroit, Mich.

Digitized by Google

Before we began to study Christian Science, I had always been subject to throat trouble. One night, ten years ago, and shortly after we commenced to study this Science, I had a very severe attack. I immediately called to my mother and told her my trouble. She became frightened, knowing how hard these attacks had been, and started to come to me, but the thought of Christian Science came to her, and she commenced to realize the truth for me. In half an hour I was asleep and the next morning I was as well as ever. I have never had a return of the ailment since that time.

About eight years ago I had a tumor. Some of our friends said I would never get well, and I was seemingly very sick, but I was given Christian Science treatment, commencing in January. During this time the opinion was held that I was in great danger and that it was doubtful if I would ever get well. All this, however, only made me want Christian Science the more, as I felt that Truth alone could heal me.

By the following spring I was entirely healed, and I feel very grateful to Mrs. Eddy for giving us this wonderful Science which heals all disease and overcomes all evil.

GERTRUDE HOWELL, Fort Dodge, Ia.

It is now about eight years since I first learned of Christian Science, through a dear friend who loaned me Science and Health to read. In the last six years I have not taken any medicine, and have seen many diseases yield to the power of divine Love. I have found Christian Science invaluable in the management of a large family, and with the most of my family drugs have been laid aside,—the dear ones almost unconsciously yielding to the truth.

I want to express my thanks for great help received from the testimonies in the *Sentinel* and *Journal*, but above all for the understanding of the Scriptures that has come to me through the Lesson-Sermons and the study of Science and Health by Mrs. Eddy, to whom my heart goes out in great thankfulness for the blessings that have come to me through the study of her writings.

MRS. J. H. BUTTENHEIM, Madison, N. J.

Some time ago I had retired for the night when I was suddenly seized with a severe pain around the heart. After suffering intensely for more than two hours, and not being able to destroy the sense of fear and of danger, I sent for a practitioner, and by a clear realization of the truth I was soon greatly relieved. After a time I was able to lie down, which had not been possible before, and I rested well the remainder of the night. The joy and peace that comes after such a demonstration, brings very quickly to mind the passage, "God is our refuge and strength, a very present help in trouble." To me, one of the very pleasant thoughts connected with Science is the fact that so many children are being taught the realities of being and its consequent harmony, and that they will thus be spared much we older ones have to meet.—SARAH T. WILSON, Wilmington, Del.

Having a desire to do as I wish to be done by, I send this testimony. One year ago I was an invalid, without much hope that there was any help for me. I had heart trouble, cancerous sores on my face and nose, rheumatism, rupture, and various other ailments. In this condition Christian Science found me, and to-day I can truthfully say that I am a well woman, through the help of a faithful practitioner and the reading of "Science and Health with Key to the Scriptures" by Mrs. Eddy, to whom we surely owe heartfelt thanks. My greatest desire is to live the truth our dear Leader has labored so faithfully to give us. My husband wishes me to say that he also has been wonderfully helped in many ways,—in fact, in all ways. Typhoid fever, rheumatism, heart trouble, and many other ills have been overcome for him in a very short time by applying the truth.—MRS. ELIZABETH MCKINZY, Swan Creek, Ill.

I feel that I must not longer withhold an expression of gratitude for the ministry of Christian Science. About three years ago I was afflicted with a return of an ailment with which I had suffered for about twelve years, and which the most conscientious efforts of several physicians, during that time, had failed to relieve permanently. I was advised, as a last resort, to undergo a severe surgical operation. Filled with fear and anxiety as to the result of the operation, I turned to Christian Science for help, although in my ignorance of what it was I had said many unkind things against it. From the first treatment I was benefited, but it was some time—about six weeks—before the treatments were discontinued. I was like a child learning to take its first steps. I feared to walk alone without personal aid from my practitioner.

A deep sense of gratitude to our dear Leader fills my heart,—gratitude for her consecrated life, which enabled her to discern this Christ-truth, and for her loving self-denial in breaking this bread and giving it to us.

MRS. E. T. WESTON, St. Louis, Mo.

I came into a knowledge of Christian Science at the age of eighteen, not through healing but simply by reading its literature. About a year before this, my sister had been healed of nervous troubles by reading Science and Health. During the following winter, while she was away from home, I became very much interested in revival meetings which were held in the country near our home. I went night after night, working and praying for relief from a sense of worldliness and sin. One evening I seemed to be filled with a consciousness of peace and assurance, and the thought came immediately with it, that God can heal. The next day I picked up a *Christian Science Journal*, and for several hours everything else was forgotten, so deeply interested was I in its contents, and from that time I have never doubted that Christian Science is the truth. I then felt that I must have the time all to myself to learn more about this new-found treasure. I wrote my sister that I was now ready for Science and Health, and when a copy came I could hardly read it fast enough. For days I was on the mountain-top. I had such a feeling of humility and gratitude for the privilege of being one to whom the word of Truth had then come (at that time I knew no other Scientist than my sister and there were none nearer than eighty miles), and when I thought of the many sincere servants of God, devout men of pure lives, who had not been able to find this saving truth that seemed to have come so easily to me, I wondered. Later, in studying the Bible I found the Master's words, "For verily I say unto you, That many prophets and righteous men have desired to see those things which ye see, and have not seen them; and to hear those things which ye hear, and have not heard them."

I soon had some physical demonstrations which proved the power of Truth, and from the moment of my first decision I have never taken a drop of medicine. Once, while teaching far from home, I noticed that my thumb was paining me, and later I found that a felon had grown upon it. This was healed by Christian Science, and during the healing I did not lose a moment's sleep, and I used my hand as I needed to, without pain, even playing the piano for choir practice. I am very grateful to God for this truth, and to Mrs. Eddy for a life so pure as to let the light shine through.

NELLIE L. JOHNSON, Lincoln, Neb.

It is nearly two years since I was led to try Christian Science treatment for physical ailments. I had for years suffered many things from many physicians. I was healed of nervous headaches, dyspepsia, constipation, and paralysis

Digitized by Google

of the lower bowel. I was also healed of heart trouble, which had been pronounced incurable by the doctors. I had worn glasses for astigmatism for sixteen years, but in less than two months' treatment I laid them aside, and have had no need of them since. I was healed of chronic throat trouble, also pronounced incurable. I had had a sense of growing deafness for some eighteen years, and had tried every known remedy. This trouble has seemingly been slow in yielding to the power of Truth, but before I began Christian Science treatment my hearing was growing worse. The specialist whom I last consulted had given me the discouraging assurance that there was no help for me, and that in time I would be totally deaf. Since taking up the study of this Science, my hearing has greatly improved, and I find myself growing in understanding. I know that divine wisdom has been leading and teaching me for my profit.

I am very grateful for the many helps received in Christian Science. I love the *Sentinel* and *Journal*, and I have no words to express my gratitude for what our Leader, Mrs. Eddy, has given to all mankind.

MRS. A. C. MAY, Kansas City, Kan.

Several months ago, while living in Arizona, I had a severe attack of acute indigestion and gastritis. I tried to help myself through my understanding of the truth, but was overcome by fear, and the demonstration was not made. At times the suffering which I endured seemed more than I could bear. I was ill for nearly a week—could neither sleep nor eat. One day my husband came home and said that as there were no Christian Science practitioners where we lived, he had spoken to a physician, telling him how I was suffering, and was told that it was a very dangerous case. My husband asked me to prepare for the coming of the physician. I then felt that the time had come for me to take my stand; I was, or I was not, a Christian Scientist. I asked my husband to send a telegram to my teacher in Denver, Colorado, for help, which he did with many doubts and misgivings. The message was sent at 1.30 P.M., and during the afternoon I fell into a quiet, restful sleep. I awoke at half past four and found myself healed, and had no return of the pain or distress. Only those who have suffered in like manner can appreciate how grateful I am to God, and to our Leader, Mrs. Eddy, for showing us how to make His truth practical in our daily lives.—MARGARET A. CORSER, Denver, Col.

I should like to tell some of the things that Christian Science has done for our family. I was healed first of what the doctors called a very severe case of catarrh of the stomach and bowels, after being an invalid for years. Four years ago this winter there were four of us in the house, down with diphtheria, and two were the worst cases I ever saw. Christian Science healed us then, and has helped us many times since. I feel very grateful to our dear Leader, Mrs. Eddy, for giving us this great truth.

MRS. FANNIE E. WILLETT, Brookline, Mass.

I came to Christian Science because I was hungering and thirsting for love, and for a religion which I could understand, as something seemed to be lacking. One trouble after another came to make me fearful and sad, and finally there came an hour which brought more than I could bear, which seemed to crush my very soul. It was then that I turned to God, asking to have His way revealed to me, to have the raging waves stilled, and there came the "Peace, be still." It was then I first learned of Christian Science, and for five months I read Science and Health. I had some beautiful demonstrations of the power of divine Love from the very first. I had found the Love for which I had been looking. Although I have had trials and trouble, my heart no longer feels the sharp stings and aches, for Love is always with me to brighten all my paths and wipe away all my tears. I have been a constant student of the Bible and Science and Health for over five years, and my family is gradually coming into this Science; so my prayers are being answered, one by one. I am thankful to our Leader, Mrs. Eddy, for Science and Health, for what it has done for me and mine.

MRS. J. LUELLA VINSON, Portland, Ore.

Within the past year I came into Christian Science. I took it up as a last resort, having given the best physicians a trial for my complaint, which was stomach and liver trouble. They finally said an operation would be necessary in order to save my life. I had never believed in operations, and would not consent to such a thing. Christian Science was brought to me by loving friends, and I accepted it, for I knew that others had been healed by this treatment, and why should not I? Within a week I was able to be up, and to walk around. I gradually grew better, both spiritually and physically, and to-day I am perfectly well and strong, and very grateful for the opportunity of knowing the truth that makes us free.

MRS. IDA PRUYN, Chicago, Ill.

I had always been a delicate woman, and finally arrived at a point where the physician told me that I must undergo an operation which was a matter of life or death. At this stage my husband gave his consent to let me have Christian Science treatment. The tumor disappeared. My healing was slow but sure, and thanks be to our revered Leader, for twelve years this understanding of God has been our only remedy. It has planted our feet firmly on the rock,—Christ. It has established with me the sure confidence that my redeemer liveth.

MRS. SYLVESTER SMITH, Covington, Ky.

[Written for the *Sentinel*.]

Be Not Afraid.

LAURA DUNBAR.

THE Love that breathed out "Peace, be still!"
O'er stormy Galilee,
While error's wave made swift response—
'Tis this Love loveth thee,
Loveth and calmeth thee.

The Love that fed the wanderers
With heavenly manna free,
With loaves and fishes fed the hosts—
'Tis this Love loveth thee,
Loveth and feedeth thee.

The Love that held a Daniel safe
In Spirit's purity,
'Mid lions hungry but for *flesh*—
'Tis this Love loveth thee,
Loveth and keepeth thee.

The Love that Bartimæus thrilled
And bade his eyes to see
The Christ, the healing power divine—
'Tis this Love loveth thee,
Loveth and calleth thee.

The Love that whispered, "Ephphatha"
Speaks, oh! so tenderly,
To every list'ning, waiting one—
'Tis this Love loveth thee,
Loveth and healeth thee.

From our Exchanges.

Every important doctrine ever held in any age or nation, and every form of worship, of sacrifice, or religious observance of any kind, has come in the demand to answer some question asked by the mind of man, or to supply the demand of some human longing and desire. And the thing that has come in response to human seeking has been some form of truth, some glimpse of the reality in which the human soul is to find its rest and peace. All the differences which separate the churches of Christendom to-day are differences in ability to see the truth, and differences in the forms in which the fragments of truth already attained to are made portable and fit for common uses. These differences are natural. They were inevitable. They are indications of praiseworthy efforts in the past to know more and do better than ever before. But the pause, the suspense of faith about the right path to take, and the plan of campaign against the sin and sorrow of the world, is due largely to the fact that, the time having come for the half-truths to go, they are not allowed to give place to the better thing which has been provided.—*The Christian Register.*

One can easily picture the scene which the evangelist's simple narrative describes: The crowd thronging Jesus; the leper's cry, "Unclean, unclean!" heard from a distance and drawing nearer; his peculiarly loathsome appearance—for Luke tells us he was "full of leprosy;" the crowd separating to let him pass; the leper, to the horror of all observers, making his way direct to the Master; and the Master, to their amazement, stooping down and touching him, while he says, "Be thou clean." Why this touch? Surely he might have healed without the touch—as he healed the ten of whom Luke gives account; as he healed the centurion's daughter without even coming into his house. I believe that this touch was the natural expression of Christ's sympathy; and incidentally is a rebuke of our panic in the presence of contagious diseases which so often dehumanizes us, and of our prejudices which make us forget the real man in our regard for his mere outward guise and circumstance.

LYMAN ABBOTT.
The Outlook.

Those are the truest representatives of God who have not loose and liberal ideas such as to belittle sin, but broad-minded, full-hearted, helpful-handed consideration of men as fellow-beings and needing the divine grace. Some men regard themselves as vindicating God by criticising, condemning, and excommunicating their fellow-beings, and fail to comprehend the larger revelation of God in which He does not desire the death of a single sinner but that all should have eternal life.—*The Watchman.*

The real failures in the industrial world are seldom recorded in Bradstreet; they are the cases of men whose revenues are advancing while their souls are shriveling; the men who are making money, but losing peace of mind, health of body, and love of home; the men who are driven through anxious days and sleepless nights by the interests and anxieties of their own creation.

PRES. W. H. P. FAUNCE.
The Standard.

Jesus' kingdom is to come as an inner process. It is a leaven, a germ, a feeling, a thought, hid deep in the individual soul. There is no outward formula for tracing the fruition of this germ. It lies there hid in the lump of things until its day comes. Its increase is unmarked of men. It spreads like a contagion. It is a spark which ignites from mind to mind and spirit to spirit. Its power is an inherent enthusiasm. Its dynamic is love.

The Universalist Leader.

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to The Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of The Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to The Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number, or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By the Hon. WILLIAM G. EWING of Chicago, Ill.

CHRISTIAN SCIENCE. Its Worth and Work. By Rev. ARTHUR R. VOSBURGH of Rochester, N. Y.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* **PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

It is reported that much of the feeling in China against the Exclusion Act is rather against the construction placed upon the act than the act itself. This makes it desirable that important changes be made in the regulations relating to the application of the law. The present requirement, that American consuls identify Chinese seeking certificates admitting them to American ports, imposes a task upon these officers beyond their ability. The Chinese applicant frequently comes from some place far distant from the American consulate, and the consul is consequently obliged to refuse to identify as proper persons to be admitted to the United States many worthy Chinese, which leads to bitter complaint and fosters the boycott feeling. Chinese living in the British, French, and Portuguese Asiatic colonies, being really citizens of those nations, do not see why they cannot be admitted to America under proper passports.

The report of the Paymaster General of the army for the past fiscal year, points out that the enlisted men, through the system of savings deposits now in vogue in the army, during the year deposited $1,531,020, making the total amount since the establishment of the system, $26,294,326. The amount expended on account of the pay of the army during the year was $31,361,132. The last complete pay schedule for the army was passed by Congress thirty-five years ago and the report contends that it is not sufficient for present demands. The fact that the army is under-paid, the report adds, makes it impossible to recruit out of such classes as might be wished.

M. Yamaza, director of political affairs of the Japanese Foreign Office, and H. W. Denison, the adviser of the Japanese Foreign Office, arrived at Yokohama October 5, on board the steamer Dakota, from Seattle, September 20, bringing the peace treaty signed at Portsmouth, N. H., September 5, and left immediately for Tokio.

According to present arrangements, the ratifications of the treaty of Portsmouth will be exchanged at Washington between Baron Rosen, the Russian Ambassador, and Mr. Takahira, the Japanese Minister, as soon as these important documents are received from St. Petersburg and Tokio. The ratifications will contain the French and English texts of the treaty.

There are said to be in New York State 500,000 Italians and of these 400,000 are in New York City. The South and Southwest afford opportunities, it is said, that will enable this class of people, long accustomed in sunny Italy to agricultural pursuits, to buy farms and become permanent and contented farmers. This is believed by Ambassador Baron des Planches to be the solution of the problem of their congestion in large cities and of the removal of the prejudice against them.

The new star recently discovered at the Harvard Astronomical Observatory through examination of one of the Henry Draper memorial photographs, is the eleventh discovered within the last twenty years. Of these eleven eight have first been reported by the university observatory. From the name of the constellation in which it appears, the new star has been called Nova Aquilæ No. 2.

The Treasury Department tacitly admits that there is a loss of revenue of almost $2,000,000 a year in the collection of duty on wrapper tobacco imported from Cuba. There is a discrepancy between the amount of wrapper tobacco actually required according to sales and that imported of more than 1,500,000 pounds on which the duty is $1.20 more than on plain filler leaf.

After an absence of more than three months Secretary of War Taft returned to Washington last week, establishing a record from Yokohama to Washington by making the trip in fourteen days and arriving two days ahead of schedule time. Of the original members of the congressional party only one returned to Washington with the Secretary.

The monthly circulation statement issued by the Comptroller of the Currency shows that at the close of business September 30, 1905, the total circulation of National bank notes was $516,352,240, an increase for the year of $60,272,832, and an increase for the month of $4,131,873.

The monthly statement of the public debt shows that at the close of business September 30, 1905, the debt, less cash in the Treasury, amounted to $906,578,009, which is a decrease for the month of $8,946,586.

Foreign.

The Republic of Panama is reported to be prepared to offer to Colombia $1,000,000 as settlement in full of any liability which she may bear in connection with the $15,000,000 foreign debt contracted by Colombia while Panama was a member of the Colombian Federation, as the price of her independence. She desires to establish amicable relations with Colombia, and to enter into commercial relations with her, and makes this proposition on her own initiative. Negotiations have been entered into looking to a settlement of the question of foreign indebtedness on this basis, and the agreement, if reached, will be made in Washington between the representatives of Colombia and Panama, the United States acting practically in the role of mediator. The Panaman Minister to Washington has received instructions from his Government to make every proper effort to reach an agreement with Colombia.

Venezuela and her troublous conditions are now the subject of earnest consideration by the Washington and Paris Governments. At the conclusion of a recent conference the announcement was made that the Venezuelan situation had not entered on "an imminently critical stage." While firm in her intention to protect the rights of her citizens in Venezuela as elsewhere, the French Government continues its traditional policy of courteous recognition of the special interest of the United States in the question. France wishes to find, and to share with the Government at Washington, some effective means of insuring justice for foreigners in Venezuela.

The Federal Council of Switzerland has accepted the invitation of Russia to participate in the second peace conference at The Hague. The official reply says the question of the Red Cross is reserved, and that Switzerland will seek the earliest opportunity to take up the revision of the Geneva Convention.

Count Okuma, Foreign Minister, states that when the withdrawal of the troops is completed Japan will find herself confronted with a debt of $1,250,000,000, the interest on which alone, roughly speaking, will be $75,000,000.

Sir W. C. Armstrong & Co., shipbuilders and ordnance manufacturers, are reported to have accepted an invitation from the Ministry of Marine to establish branch works in Japan. A site has been chosen near Hiratsuka.

Industrial and Commercial.

The item of loans in the daily statement of the New York Clearing House, says *The National Review*, represents only the loans in the banks, but there are trust companies in New York City which have a thousand million dollars in loans and these are not reported to the clearing house. These trust companies, it is pointed out, are not required to keep a definite reserve as in the case of the National and State banks, but they may increase their loans to and beyond the danger point. Recently, when the National banks were required to call in some of their loans to protect the reserves, the trust companies increased their loans. This in part explains the great power of these trust companies in the financial affairs of the world. The clearing house has appointed a committee to try to induce the trust companies to resume relations with the clearing house and to conform generally to banking rules, since they are so largely engaged in banking operations.

Chicago capitalists have given to the financial world something claimed to be distinctly novel in the opening of a new institution to be known as the Mutual Bank. The Mutual profit-sharing plan contemplates sharing profits equally between stockholders and savings depositors, after the usual guaranteed three per cent semi-annually has been paid to savings depositors and three per cent has been distributed to stockholders. This profit-sharing goes to the point where if at any time the management of the bank desires to carry any surplus out of earning to the profit and loss account, it must be done out of the stockholders' share of the deposits and not from that of the depositors. The new departure promises to be popular. Over five hundred accounts were opened the first day.

The first freight steamer left Vladivostock on Sunday, October 1, for Chee Foo, thus reopening regular commerce by sea with other ports. A Russian transport sailed simultaneously with relief stores for the people on the Kamchatkan coast. Navigation is still a little risky in consequence of floating mines.

A new steamship line to ply between Russian ports and the United States has been formed. The company will be known as the Russian Lloyd. The Czar's Government is behind the plan, having promised to subsidize it, and guaranteeing its bonds to the extent of $51,000,000.

The Allan Line Steamship Company has decided to build two new turbine steamships. The two turbiners, the Virginian and Victorian, running to Montreal, have given satisfaction, but the new steamships will be of greater tonnage and a sea speed of eighteen knots.

It is officially announced that the Grand Trunk Pacific Railroad Company has given an order for $4,000,000 worth of steel rails to the Dominion Iron & Steel Company of Sydney, C. B. The contract calls for the delivery of the rails within five years.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

No Place for Discouragement.

SAMUEL GREENWOOD.

HUMAN experience has made it a truism that heaven, the consciousness of harmony, "is not reached at a single bound;" and Jesus has admonished us that it cannot be taken by violence. It is well to keep this in mind, lest failure immediately to reach that perfect state tempt us into discouragement. As mortals journey from their material sense of being toward the spiritual, it seems a difficult and uphill road, no matter how strong their desire to attain to it may be. The thought that Christian Science has awakened to perceive somewhat of the falsity of material things would sometimes fain spread its wings and soar at once to the heights of spiritual consciousness, but their earthly affections, the love of the world and the things that are in it, seem to hold mortals down to materiality. These conditions cannot be left behind through mere will or desire, but must be overcome to lose them. As our thought becomes more spiritual we learn how this may be accomplished.

In the first flush of joy at finding in Christian Science the way out of suffering and sin, it may have seemed that we could not see evil any more; but we emerged from this heavenly glow to find ourselves still on the plain, and that looming up before us was the ascent of our own overcoming of evil, our own conquest of the flesh. Mortal mind has no wings to reach that summit. No one, however loving, however self-sacrificing, however desirous, can bear another up those heights. Our own feet must tread to its end that narrow "rugged way," before we can realize perfectly man's freedom from error and his likeness to God.

Those who find the way in Christian Science hard should remember that even Jesus did not find it easy. To him it was one of disappointment, desertion, sorrow, persecution,—the way of the cross; but it was one of triumph also, else he had not been the Wayshower for us. The Scriptures tell us that it was through his sufferings he learned perfect obedience; so that we, who are only his followers, need not complain that we find difficulties in the way or that it is sometimes slow progress. We must begin our individual work of overcoming evil just where we are, not where we would like to be or where we think others are. The way is waiting for each of us, just as Jesus walked in it; and those who would advance in it must encounter and overcome the same enmity and antagonism to good which ever makes up the nature of evil.

The pilgrim on an earthly journey cannot make his feet keep pace with his eyes; and though he take the swiftest vehicle, his sight will ever far outstrip his progress. But this does not discourage him, for he knows the intervening distance will diminish and disappear as his steps increase or his conveyance performs its work, and that only thus can he reach the distant scene. Neither do we in our human affairs plan for more than one meal in its proper place, although provisions for months to come may be waiting at our hand. Each day demands its own quota of food and needs no more. More would be useless because more could not be used.

It is likewise the same in our spiritual experience. We cannot use more truth than we are able to receive, although Christian Science has spread before us more than we can assimilate for years to come. Each day's need is supplied and is sufficient for the day. And as with the pilgrim referred to, so our understanding or demonstration may not keep pace with the mental glimpses we sometimes get of the Promised Land of our spiritual dominion. Our mental perception may be far in advance of our mental feet, our ability to assimilate; but we should not be discouraged because of this, for as with our earthly journeys we know the intervening distance will be overcome and left behind when all the steps comprising it have been taken in their turn.

There are some who seem especially discouraged because they have not yet received the physical healing they desire in Christian Science, and who see so many others pass them on their way in this respect, seeming to get so easily what they have waited and struggled for so long. But because some particular trouble has not been overcome as rapidly as they have desired, it does not follow that all has not been done that they were ready to receive, or that is within the present understanding of those working for them. One cannot set the limits of time in which truth must do its work. One cannot draw a circle of so many months or years and say that within that circle one's salvation from any form of evil must be accomplished. Christian Science is more than a system of physical healing. It is the Science of being which mortals must understand and practise in order to correct the errors of their material sense and rise above the consciousness of discord.

The fact that Christian Science is new to the human understanding is sufficient reason that some problems have not yet been solved by its students, although this Science contains the perfect solution of every problem embraced in human salvation. Science can be understood only by degrees and cannot be utilized in a greater measure. Human thought has not yet grasped Christian Science so as to bring out in demonstration all the truth it involves; but this only emphasizes the need of a better understanding, and does not detract from the value of what has been learned, however small that may seem in comparison with the whole.

To Truth there can be no error, of either short or long duration, for in the knowledge of God, man must have remained from the beginning as His own perfect idea or creation. The human sense that does not perceive this is the only sense that experiences sickness and sin. The recognition of the perfect man, the Christ-ideal, may seem long in coming, and even then may come in almost imperceptible degrees, but what other way is there into the kingdom of heaven? What is there for us to do, in the face of prolonged effort, but to keep on enduring and working until truth triumphs? The longest night passes. The false belief of material man, fettered to sin and burdened by sickness, cannot always hide the truth of spiritual man, God's likeness, which Christian Science reveals.

Digitized by Google

Discouragement is often but the disappointment of those who do not find harmony on the plains of material sense without the effort of climbing to more spiritual altitudes. Such as these are not ready for progress and should not murmur if they make none. It is anomalous to Christianity for its followers to toil all night on the right side and catch nothing. No one goes to God with honest heart and pure desire and gets nothing in return, if he is willing to work for it. God's goodness is infinitely abundant, but there is always some work to do in bringing this truth into our consciousness.

It may be that we do not progress faster because we are trying to carry along some of the "baggage" which our Leader teaches must be left behind. (Miscellaneous Writings by Mrs. Eddy, p. 327.) We may be trying to pull an unwilling husband or wife or child up with us, or perhaps are waiting till we think they will be ready to accompany us, thus sacrificing our own progress to personal affection. Or we may be clinging to some pet error, some selfish fault, which we are too proud or too stubborn to cast aside, forgetting that Christ demands of us the renunciation of all worldliness and evil if we would be his disciples.

It is better not to be discouraged, no matter how dark or rough or long the road, for heaven lies not at the end of any other. It is a long step Godward to have found the right way in Christian Science and to be willing to walk in it, even though it means toil and difficulty and patient waiting. Some time it will bring us into all that the Master has promised.

Christ the End of the Law.

WILLIS F. GROSS.

In his epistle to the Romans the apostle declares that "Christ is the end of the law for righteousness to every one that believeth." That it is necessary to gain a higher and more spiritual sense of righteousness than could be gained by keeping the letter of the ceremonial law is evident from the Master's words when he said, "Except your righteousness shall exceed the righteousness of the scribes and Pharisees, ye shall in no case enter into the kingdom of heaven."

The Pharisees had gone as far as it was possible for mortal man to go in the observance of rites and ceremonies, but they were far from the kingdom of heaven. They seemed to have lost sight of the purpose for which divers laws and ordinances had been given to the children of Israel in the wilderness. Instead of striving to look beyond the sign and symbol they were content to observe the letter, even though this observance brought no increase of spiritual perception. To Moses the offering of sacrifices and the observance of ceremonies was but a means to an end; to the Pharisees it was the end to be attained, and they were so self-satisfied in the keeping of fasts and the giving of tithes that they thanked God they were not as other men. As Paul says, "Being ignorant of God's righteousness," they went about "to establish their own righteousness."

The man who would to-day find the kingdom of heaven within must "exceed the righteousness of the scribes and Pharisees." The law will be his schoolmaster to bring him to Christ, but unless the Christ be discerned heaven is not gained. If the law is understood and its precepts obeyed the Christ is revealed and man begins to comprehend "the way, the truth, and the life," and in proportion to his faithfulness he finds the kingdom of heaven on earth.

Moses went down into Egypt and delivered the children of Israel from those that oppressed them. It was not in his own strength that he was able to do this great work, for had he not received wisdom and strength from on high he would have been as powerless as his brethren to break the shackles that held them in bondage. He had the assurance that God would be with him and he doubted not that he would be able to fulfil his appointed mission. Pharaoh and his army were overthrown in the sea, and so far as the enslaving conditions and environments of Egypt were concerned, the children of Israel were free men. But there were other evils to be overcome before the Promised Land could be gained, and it was necessary that the children of Israel should be equipped for their work.

During their sojourn in Egypt they had gradually lost sight of the true God. Deliverance had come through another's understanding of the God of their fathers, and now they must begin to know God for themselves. Moses was their wayshower and through him was given the Ten Commandments. The various rites, ceremonies, and observances included in the law of Moses, all served a purpose in revealing the nature and character of God, and helped them to understand and keep His commandments.

Truth must be presented in such a manner that a man can comprehend it in some degree, or he is not benefited thereby. The purpose of the Decalogue was to reveal the true God to the children of Israel and to save them from the idolatrous beliefs and practices of the Egyptians. Its mission to-day is to uncover and destroy the various forms of idolatry which have caused humanity to erect an altar to the unknown God. When truth first appears to human consciousness it often comes as a rebuke to that which is believed to be true, but which is in reality false. The "Thou shalt not" of the law serves to arrest thought and action and to turn the gaze in the opposite direction.

To many it may seem that there is little, if anything, in the Ten Commandments that can make God known to man. Let it be understood that it is not the commandments, but obedience to the commandments that enables humanity to comprehend and love God. How can the man who has gods many comprehend the one infinite God? The man who knows God can have no desire or inclination to worship idols, but the man who believes in other gods and serves them is blind to the truth and reality of the one God who "made all that was made" and pronounced it good.

The first right conception of God forbids man to have other gods. The revelation of God to the individual consciousness comes as a direct command not to do a certain thing. If the divinely awakened one is obedient he begins to see why he should obey, and his obedience is rewarded by a clearer realization of God present with him; but if he continues in the error of his way because he cannot see why he should do otherwise, the revelation of God to him ceases.

All the commandments are embodied in the first. Those which follow point out the errors of thought and action which make it seemingly impossible for man to keep the "first and great commandment." Among these errors are the serving of that which is not entitled to service, applying the name of God to that which is not good, failure to worship and honor that which is entitled to honor; murder, adultery, theft, giving utterance to malice, falsehood, and covetousness. The overcoming of all that is unlike God is possible because the destruction of each error brings the wisdom and strength necessary for the next conquest. The God who is all-power and all-intelligence becomes known as the illusions of mortal belief disappear.

In order the more clearly to show how it is that the Law reveals God to man, let us make use of that familiar illustration,—mathematics. The basic law of numbers, when understood and applied, will solve all mathematical problems. If the beginner is unfamiliar with it, he must be taught it. He can learn only through application. He must use what he knows, he must even make use of that which he does not fully understand. To do this he must do as he is told. In other words, he must work according to a rule expressed in such terms as he is able to comprehend. By doing as the rule directs, he applies the law upon which it is based and solves the problem. When he obtains the desired result he learns from experience that the rule is correct. When he understands the fundamentals

Digitized by Google

he becomes a law unto himself and involuntarily works in accord with the rule. So long as these are not understood, he is compelled to rely upon the rule to point out the way for him. We have all seen pupils who could repeat the rule, but who were helpless when called upon to solve a problem for which they could recall no rule; they had gained no real understanding of mathematics.

The guide-board points out the way to the one who knows it not, and the traveler who takes the right road to his destination must follow the way it indicates. When he leaves the way by experience his faith in the guide-board ripens into understanding, and he knows that it points out the way, and that it was placed by one who knew the way.

God is the divine Principle of man's being. The promise is that all men shall be taught of God, and from time to time in the record of man's spiritual progress those who stood on the mountain peaks have sent a message to their brethren toiling in the valley. The men and women who were pure enough to be taught of God have repeated in human language what they heard and understood.

Moses delivered his message and the world felt the rebuke of truth. The humble Nazarene rose to greater heights, and he spake to a people prepared for the more emphatic declarations of truth. He said that he came not to destroy the law but to fulfil the law, to give humanity a more spiritual concept of the God revealed in the law of Moses. His was a stern rebuke for all error; his was also a command to do all good. As mortals do not fully realize why they should not do evil until they cease to do it, so they cannot understand why they should do good until they do it. The words of Jesus are not understood until they are obeyed.

The teachings of the Master are the rules making possible the application of divine Principle; they are the guide-posts pointing out the way from earth to heaven. These rules were formulated by one who understood the Principle of man's eternal and harmonious being. These guide-posts were placed by one who knew the way, and who gave such convincing proof that there is a way out of sin, sickness, and death into health, holiness, and life eternal. It is the privilege of all who walk in this way and apply these rules to know for themselves the truth about God and man.

When the Christ is revealed to individual consciousness then comes the end of the law, whose restraining influences are no longer needed because man is taught of God to do what is right and to refrain from that which is wrong. The one to whom the risen Christ has not appeared is still under the law, and it is required of him that he do the things contained therein. Obeying its precepts, he attains unto the righteousness of the law, and if he perceives that the purpose of the law is to lead him to Christ, he is ready to be guided into the understanding and demonstration of Truth.

Civil law is based upon the Ten Commandments and its purpose is to point out the way for man to do right by his fellow-men and at the same time gain the greatest good for himself. If human thought were spiritual enough to hear the voice of Truth, and all men were taught of God, State laws would not be needed, for men would do by nature the things contained in the law, and the harmonious state of affairs which civil laws seek to bring about would be an established fact.

In religious organizations there are rules and regulations designed to help the members of those organizations to gain the spiritual good they would probably not gain without them. Our own church has its rules and by-laws, formulated by the one who discovered Christian Science and who understands the divine Principle thereof. The members may not always immediately understand the why and wherefore of the by-laws, but obedience to them reveals the divine Principle of Christian Science and makes progress possible. That condition of thought which hesitates to do because it does not understand why, robs itself. We must walk by faith before we can walk by sight. Implicit confidence in a wise and loving Leader begets obedience, and obedience insures progress.

We have faith in the man who formulated the rules of mathematics as we demonstrate those rules; we have faith in the man who placed the guide-board when we follow whither it directs; and we also have faith in the one who has given, and is giving, to us the rules for demonstrating Christian Science, and we shall endeavor to walk in the strait and narrow way which Science points out until Christ has become for each one the end of the law.

Another Summer Experience.

REV. JESSE L. FONDA.

I WAS on a steamer, going across Lake Michigan to have a little outing with some friends. It is my custom to go all over a boat that I travel on, so I was on the lower deck, trying to see what was there. As I looked down into the dark at something, I came close to a little iron pipe that looked innocent enough, and quite naturally put out my hand to lean against it. I let go quickly, for it was a real live steam pipe! Of course the old sense of being burned asserted itself, and the thought of pain was much in evidence. I met the sense of pain with the usual scientific denials and the assertion of Mind's control over all.

In my early study of Christian Science, a friend referred to the old idea that nature is really benevolent in providing pain, which, like a sentinel, stands guard over the body to tell when harm comes to it. I was asked, How would one know that he was hurt except for pain? How would he be led to take care of an injury except for the pain? To this it may be answered that if we had a full understanding of spiritual being, we could not be burned any more than were the three Hebrew children, nor the bush that burned, but "was not consumed." They body would then reflect the divine government, so that injuries would be impossible. Even with our present immature understanding of Truth, we find in Christian Science a far more benevolent provision for our need, in cases of injury, than that which makes pain a necessity to our safety.

In the care of an injury, no less than in disease, the scientific, spiritual method is greatly superior to any medical method. In applying the former there is only a brief period of pain, if any at all, seldom any soreness or swelling, and no abiding fear of being hurt. If some of the kind-hearted doctors and nurses knew the quieting power that there is in the understanding of divine Mind, the healing that flows from divine intelligence and the uplifting that comes from a sense of the presence of divine Love, they would not toil so anxiously and laboriously with mindless matter, which has no inspiration to ennoble thought.

To God *all* is present, both that which was before, and that which is now, yea, and that which shall be after us. All is present to Him. His abundance never waxeth, nor doth it ever wane. He never calleth aught to mind, for He hath forgotten naught. He looketh for naught, pondereth not, for He knoweth all. He seeketh nothing, for He hath lost nothing. He pursueth no creature for none may flee from Him; nor doth He dread aught, for none is more mighty than He, none is like unto Him. He is ever giving, yet He never waneth in aught, He is ever Almighty, for He ever willeth good and never evil. He needeth nothing. He is ever watching, never sleeping. He is ever equally beneficent. He is ever eternal, for the time never was when He was not, nor ever shall be. . . . Pray for what is right and needful for you, for He will not deny you. Hate evil, and flee from it. Love virtue, and follow it. Whatsoever ye do is ever done before the eternal almighty God. He seeth it all, and He judges and will requite.—ALFRED THE GREAT.

The Lectures.

Topeka, Kan.

A good audience heard the lecture on Christian Science given at the Auditorium last night [September 14] by Bicknell Young, under the auspices of First Church of Christ, Scientist, of this city. Mr. Dell Keizer introduced the speaker of the evening, and spoke in part as follows:—

Never were dogmas and creeds so unimportant and unnecessary as now. The only religion which meets the accepted idea of true Christianity at the present time is that which practically applies to every-day life and work the gentle, loving spirit and teachings of the lowly Nazarene. Under these conditions, in little more than thirty years, a very great company of people have accepted Christian Science as the true religion of Jesus Christ. Everywhere you find them ready to stand up and testify that through it they have found not only "the peace of God, which passeth all understanding," but health, happiness, and even life.

These are signicant facts, and they bespeak for the distinguished lecturer who will address you on Christian Science to-night, the earnest consideration which his subject deserves.—*Topeka Herald.*

Kansas City, Mo.

Second Church of Christ, Scientist, the home of the Christian Scientists at Thirty-first Street and Troost Avenue, was crowded to the doors last night [September 19] by an audience which had gathered to hear Edward A. Kimball of Chicago expound the tenets of the Christian Science faith. Not only was the main auditorium filled, but the space behind the speaker was also taken up with chairs and late comers were accommodated in the choir-loft.

The introduction of the speaker of the evening was made by ex-Governor Thomas T. Crittenden, who is, as he himself said, a Presbyterian of the old school. Pressure had been brought to bear upon him from various sources, he said, to keep him from appearing at the Christian Science gathering, but he was not to be deterred from fulfilling the promise which he had made to the members of the church. Ex-Governor Crittenden said, in part,—

I have been invited to introduce the honorable speaker to this audience, not as a member of this organization, not as a Christian Scientist, but as a citizen of Kansas City, whose broadness of views is limited to no church, is prejudiced against no church, a friend to all whose object is the elevation of man and the reformation of society. I am a Presbyterian of the old school, both from inheritance and belief; that ancestral belief reaching back beyond the Revolution, and you intelligent people well know how difficult it is, if not impossible, to change those views. I stand beneath its venerable teachings with the same attachment that I stand beneath the old roof of my father and mother. I am not asked to change that faith on this or any occasion in being invited here; if so, I would not be present on this occasion.

The corner-stone of this organization, as announced in its books and proclaimed from its sanctuary, is, "Be kindly affectioned one to another with brotherly love." He that loveth another hath fulfilled the law, "Thou shalt love thy neighbor as thyself." If these great precepts are followed in spirit, if not in the letter, then there is a greater peace established on this earth than that declared from Portsmouth between Japan and Russia. I have been asked not to appear here on this occasion by some not belonging to this church. It is to be regretted that some people cannot draw the distinction between courtesy and conviction.

If I am in error, then I stand with multiplied thousands of my countrymen, who are as lofty in their citizenship as they are pure in their vows. I am not here as a Christian Scientist, nor even bordering on that; I am not here as a Presbyterian representative, but I am here as an American citizen among Americans, as a Missourian amongst Missourians, doing unto others as I would have others do unto me. The great membership of this organization, from Maine to California, may not compel a recognition of its basic truths in the minds of thoughtful people, yet in my opinion we cannot overlook the fact that a large part of its followers are intelligent people, earnest people, clean people in character and in dress, well behaved people who have not gone idly and thoughtlessly into these churches, but are here from as lofty convictions as ever prompted men and women to enter into any body, whether social, political, or religious. One thing is absolutely true—those numbers, large as they are, increasing as they daily are, will demand and receive a fair consideration of its doctrines, whether we accept them or not.

Who can say that this church, this organization, is not developed, is not called forth by God in the twentieth century to perform its part of His great work. I cannot, I dare not, say why it is here, what will be its life, and what good it will do. God alone can judge. God raises up His instruments whenever He is ready to inaugurate a forward movement in His cause.

> God moves in a mysterious way
> His wonders to perform.

What those ways are I am unable to say; what His great methods are I am unable to say, but here before this immense audience I do say, "His will be done." I commend the good in all the churches, and if there be evils, I condemn the evil in all the churches. If there be good in this great organization, then God will commend it, which is above man's commendation, and if there be any evil connected with it, in belief or action, then God will condemn it. At the last it is not left for man to say who is right and who is wrong.

If the wonderful cures of human ailments are true, as reported here and elsewhere, I with hundreds of others will say, All hail Rev. Mary Baker G. Eddy, all hail to this church, all hail to her followers from the sunny slopes of golden California to the classic halls and valleys of old Massachusetts. Whatever relieves pain, misery, and sorrow in this life commends itself to our admiration.

You ask me as a Presbyterian how long this sect or church will last. As a man I cannot say. As was said by the town clerk, when Paul was stirring heathendom from turret to foundation-stone, if the doctrines proclaimed be of men they will come to naught, if of God they will stand forever. I say the same thing of this and other churches. I do not believe it is wisest to have only one church, one dominant church, in this or any other land. God raises up churches as He raises up men, for certain purposes, at certain times, to reach certain classes of people. Who can say that this Christian Science church is not a part and parcel of His omnipotent plan? It is not for me to say and it is not for any man to say. I believe in giving each one an opportunity to worship God according to his conscience, and I further believe society will be wholly indifferent whether the founder is a woman or man. It will be a dark day for the church or churches and for our whole country when the women of our land are excluded from the primary or other positions in our great religious bodies. They are the vestal virgins who keep alive the fires on our altars and in our homes. With these views, I have the honor of introducing to this church and audience Mr. Edward A. Kimball of Chicago, whose ability and reputation as an orator should command your profoundest respect.

Among the Churches.

Lexington, Ky.

The Christian Scientists of Lexington have just occupied new and more commodious and attractive quarters in the Southern Mutual Investment Building, and increasing interest and a bright outlook is reported.—*Correspondence.*

Coronado, Cal.

The Christian Science Society of Coronado Beach will soon be in a home built for the use of Christian Science and its upbuilding in our midst. The spirit of loyalty and love for our Cause and its Leader is active among us, and we are called to increased spiritual effort and overcoming for Truth.—MARY E. O'HARRA, *Secretary.*

Oneida, N. Y.

Those in Oneida, N. Y., who are yielding allegiance to the teaching of Christian Science, met on June 12 and organized as an incorporated church. The new church starts with a membership of sixteen and an increasing attendance, which is now above thirty.

We are very grateful that we can report this one of the many evidences that human thought is being educated to a better understanding of God and His will toward man.

EDWIN PARK, *Clerk.*

Purchase of Property in Asheville, N. C.

An important real estate transaction was completed here to-day when First Church of Christ, Scientist, of this city became the owner of the Sharpless property at 64 North French Broad Avenue. The purchase includes the large dwelling, together with ground one hundred and twenty feet front by two hundred feet deep. The location is one of the best in the city. The present building is to be partially remodeled at once and used for worship until the congregation is ready to build, which it is said will be in the near future.—*Gazette-News,* Asheville, N. C.

Geneva, N. Y.

There is a great sense of humble gratitude, that Love has overcome all obstacles and has provided a place for us, with enlarged opportunities for doing good. We now have a pleasant room with accommodations for about seventy-five people. The furnishings and decorations are simple, peaceful, and harmonious. Our aim is to keep the place sacred for Love's work, so that the hungry and thirsty may come here and be filled, and the weary and heavy laden find rest. Our effort is to so study, live, and prove the truth of Chistian Science that all our members may be found worthy to be counted among the faithful followers of our beloved Leader, Mrs. Eddy.

ELLA FAIRFIELD, *Clerk.*

Building in Springfield, Mass.

Shortly before sunrise yesterday [August 28] the corner-stone of the new Christian Science chapel at the corner of State and Orleans Streets was laid in the presence of the board of directors and the building committee. The only ceremony in connection with the laying of the stone was the reading of the Lord's Prayer in unison after the stone had been put into position, and its spiritual interpretation according to the Christian Science text-book, which was read by the First Reader. The chapel is nearing completion, and will be ready for occupancy during the early fall.—*The Springfield Republican.*

Sowing and Reaping.

[The following letter is of interest to all workers in Christian Science, as it shows the importance of placing our literature in all educational institutions where it is possible to do so.—EDITOR.]

Ann Arbor, Mich., May 10, 1905.

Dear Mrs. Pierce:—Several months ago I read in the *Sentinel* that the University Library had received from you a complete series of the *Journal,* from volume nine to twenty-one. These volumes have all been bound by the University binders in dark blue cloth. The back part of the *Journal* and the covers are put at the back of some of the volumes. One of the students at the library desk has been at the Sunday service, and also at the Reading Room. Permit me to thank you personally for these *Journals.*

Respectfully yours,

RAYMOND C. HERBST.

Growth in Braintree, Mass.

On May 7 First Church of Christ, Scientist, began holding its Sunday services in Pythian Hall. Three years ago, soon after the organization of the church, a lease was obtained of a house, a part of which was remodeled into a large room, known as Christian Science Hall, with a reading room added. Recently, however, this hall, with a seating capacity of about eighty, has proved inadequate to meet the demands of a steadily increasing attendance. It became necessary, therefore, to seek larger quarters for the Sunday church services, as well as for the Sunday School, and Pythian Hall, with a seating capacity of over two hundred, was secured: also an adjoining room adapted to the needs of the Sunday School. The hall is centrally located, and easy of access from the steam and electric cars. From its inception the church has made steady progress, and the work has been characterized by unanimity of purpose and loyalty to the cause of Christian Science and its Leader.—*Correspondence.*

Changes in the Hymnal.

In future editions of the Hymnal new music will be substituted for that now used for Mrs. Eddy's hymns, 161, "Shepherd, show me how to go," and 179, "O'er waiting harp-strings of the mind." Words and music not heretofore published in the Hymnal will be substituted for 163, 180, 183, and 184.

All the above hymns with the new music will be furnished in suitable form for pasting in old Hymnals, at the following prices: 1 to 25 sets, 5 cents per set; 25 or more, 4 cents per set; 100 or more, 3½ cents per set.

Mrs. Eddy's hymn, "Christmas Morn," with the two present settings printed on one sheet, will be furnished for insertion in copies of the Hymnal which do not contain it, at the following prices: 1 to 25 sheets, 2 cents per sheet; 25 or more, 1½ cents per sheet; 100 or more, 1 cent per sheet.

When inserting the first six hymns mentioned, the old ones should be cut out and the new ones pasted on the stubs.

Send orders to THE CHRISTIAN SCIENCE PUBLISHING SOCIETY, 250 Huntington Avenue, Boston, Mass.

Admission to Membership.

The next admission of candidates to membership in The Mother Church will be November 7, 1905. Applications must be in the hands of the Clerk on or before October 23, 1905.

An application sent to the Clerk of the Church does not constitute the applicant a member; he must be elected to membership by the Christian Science Board of Directors, in which event notice of election will be sent.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

A Loving Benediction.

Grand Forks, N. D., September 28, 1905.

Rev. Mary Baker Eddy.

Dear Leader and Friend:—The new edifice of First Church of Christ, Scientist, in this little city was dedicated last Sunday, September 24. The structure is of brick and stone, with a seating capacity of four hundred, and cost thirteen thousand dollars, including the site. The membership of fifty-four contributed all but two thousand dollars of this amount. When your article disapproving of birthday commemorations came out in the *Sentinel*, some thought you therein also decided against any special dedicatory services. We did not so understand it, as you had, in the past, lent them your approval. However, they thus called our attention to the fact that societies having new church buildings were simply announcing their openings, and so we sent out announcement of our church *opening*, instead of using the word dedication. We now learn that this indicated to others, and doubtless to you, that the building was not paid for.

We know that since divine Love has enabled us to take this step, He will also be sufficient unto us in meeting the greater responsibilities which now appear. A word from you to this band of builders would be very dear, and therefore helpful.

Lovingly and loyally your student's student,

MARTHA SUTTON THOMPSON.

MRS. EDDY'S REPLY.

Beloved Brethren:—If your church is chartered, your church edifice should be dedicated when it is paid for. May heaven's rich blessing crown your faithful labors, and unity and praise dwell within your walls and in your hearts.

M. B. G. EDDY.

An Interesting Article.

"CHRISTIAN SCIENCE and Legislation" is the title of a very interesting article which Judge Clifford P. Smith of Iowa contributes to the October number of *The Christian Science Journal*, and it will be well for Christian Scientists to see that it is widely circulated. The article is a concise statement of the legal and constitutional rights of the members of our denomination in the practice of their religion, and it has special timeliness in view of the near approach of the assembling of many State legislatures.

Judge Smith is himself a beneficiary of Christian Science, and his statement that those who have turned to it for the healing of disease have found it "to be a superior curative agent, even curing the diseases which other systems deem incurable," is based upon his own personal experience and observation. The following extract from his article presents sufficient reasons for the defeat of every bill which in the slightest degree menaces the freedom of Christian Scientists to practise the Christianity of Christ Jesus, and we commend it to those legislators who may be called upon to consider and vote upon any proposed legislation which so vitally affects the liberty of the people as do the bills which are frequently introduced under the misleading caption, "An act to regulate the practice of medicine."

Judge Smith writes:—

"Christian Science is 'a system of religious teaching, based on the Scriptures, which originated with the Rev. Mary Baker Eddy about 1866. Its most notable application is in the professed cure of disease by mental and spiritual means.' (Century Dictionary.) Christian Scientists rely on the practice of their religion to prevent and cure disease, and for very good reasons. The principal reasons which obtain with the great majority are these: 1. They have had need of relief from sickness or bad habits and have failed to obtain it by other means. 2. They have found Christian Science to be a superior curative agent, even curing the diseases which other systems deem incurable. 3. They believe it to be the curative agent ordained of God; that Christ Jesus used the same method, and commanded all his followers to do likewise. 4. They believe that the practice of Christian Science will ultimately overcome and abolish evil, sickness, and suffering, and thus deliver the human race from the law of sin and death. For these reasons and others—such, for instance, as the fear of ill effects from drugs—a large and ever-increasing number of intelligent and law-abiding citizens rely on Christian Science to prevent or cure disease, and others are constantly turning to it after *materia medica* has failed to heal or relieve them.

"We submit to all fair-minded persons, and especially to those who cherish American traditions and respect constitutional limitations, that the facts just stated ought to preclude the enactment or existence of any law calculated to forbid or hinder citizens from relying on Christian Science or employing Christian Science practitioners in case of sickness.

"Aside from the constitutional questions which are involved, we assert that the drugging system has not become so certain in its results as to be entitled to prohibit people from going outside and employing other means and methods to obtain relief. When any system of healing reaches the stage of development, and its practitioners exhibit the uniform success which will warrant them in asking a monopoly, they will not need or want an act of the legislature for that purpose. Chief Justice Clark of the Supreme Court of North Carolina sums up this aspect of the matter as follows: 'An eminent medical authority in this State has said that out of twenty-four serious cases of disease, three could not be cured by the best remedies, three others might be benefited, and the rest would get well anyway. Stronger statements could be cited from the most eminent medical authorities the world has known. Medicine is an experimental, not an exact, science. All the law can do is to regulate and safeguard the use of powerful and dangerous remedies, like the knife and drugs, but it cannot forbid dispensing with them. When the Master, who was himself called the Good Physician, was told that other than his followers were casting out devils and curing diseases, he said, "Forbid them not." ' (State *v.* Biggs, 133 N. C. 729, 46 S. E. 401, 64 L. R. A. 139.)"

ARCHIBALD MCLELLAN.

The Call of Truth.

ONE of the most striking incidents in the ministry of Christ Jesus is that recorded in the seventh chapter of John's gospel. From this we see that the leading exponents of a materialistic sense of religion—the learned rabbis and the priests—found that they were fast losing their influence with the people. The pride of earthly learning was as nothing before the living words of this Teacher who had arisen in their midst, one who not only gave a new meaning to the familiar words of the law and the Prophets, but who spake as never man spake, and who dared to say of his own utterances, "They are spirit, and they are life."

Digitized by Google

His wonderful words only served to illuminate his more wonderful works, and together they proved that apathy, or content with the untrue and the unspiritual, is impossible in the atmosphere of Truth. The priests, who thus found themselves at a great disadvantage, sought every opportunity to destroy his influence and stop his work, but their attempts only proved the impotence of error.

At the feast of tabernacles all who could do so went to Jerusalem, for this feast commemorated the transition from the unsettled tent life of the wilderness to that of permanent homes in the Promised Land. It seems that on these occasions the city was illuminated, there was music and dancing, and each morning, for seven days, priests and people went to the spring of Siloam, at which the priests filled a golden vessel with water, to be poured out as a libation in the temple, thus reminding the people of the water which flowed from the rock in the days of the desert wanderings. John tells us that on the last day of this feast, Jesus stood in the temple and cried, "If any man thirst, let him come unto me, and drink," and the apostle adds, "This spake he of the Spirit which they that believe on him should receive." This bold statement aroused many to recognize the presence of the Christ, but led the rulers to send out officers to arrest Jesus. The inevitable conflict between the "mind of the flesh" and the spiritual idea expressed by Christ Jesus could have no armistice, and mortal belief was aroused to resist the truth which threatened its annihilation. It required supreme courage for the lowly Nazarene to call to the people at an hour when they seemed most content with formal religion, yet he did not appeal to those who were satisfied: he said, "If any man thirst, let him come unto me, and drink."

In Christian Science we find the counterpart of this experience and this call, and we learn that supreme courage is needed to-day, in order to be fearless and faithful in meeting the demands of Principle, for whenever and wherever the voice of Truth is heard above the clamor of mortal belief, there will be an attempt to crush out the idea of Truth. Although a material sense of the Scriptures, with a correspondingly material sense of existence, has ever failed to prove the presence of the kingdom of God, yet mortals cling to their delusions; they not only refuse to enter into this kingdom, they forbid others to enter. The call of Christ, Truth, to those who thirst, cannot, however, be stifled by error, and the present hour is proving what is possible to the right understanding of God and man. In spite of the "mental opposition to the spiritual and scientific meaning of the Scriptures," referred to by our Leader in Science and Health (p. 534), those who are weary and thirsty are coming to know the truth and are drinking of the water which heals both sin and sickness. Like the multitudes at Jerusalem, these have failed to find in creed or symbol that which "giveth life unto the world," but in Christian Science they have learned what it means to come to Truth, and drink and live.

ANNIE M. KNOTT.

Letting the Light Shine.

JESUS could never have counseled men to be and to do the impossible. He urged upon them the greatness and glory of a career which was shown to be both theoretically and demonstrably practicable, and Christian Science makes it clear that in commending a luminous life to his disciples he declared not only for the fact that the light of Truth was beaming upon them, but that it was theirs to utilize, theirs to understand and interpret in their life and conduct, and thus fulfil the ministry of the sons of God. Jesus said relatively little about the philosophy of this spiritual radiation, but he continuously illustrated it in his living, and it thus reached and awakened men,—was made a practical basis of confidence and faith. Referring to the nature of his own work, he said to the Father, "The glory which thou gavest me I have given them;" and the realization and acceptance of this exalted privilege of transmitting the glory—the truth, beauty, and love—of God, it was this that freed them from their bondage to the commonplace of human experience. When the capacity, the culture, and the aspiration of humanity all become serviceable to Truth, then men have entered upon the true life in the ministry of Christ.

It has been said that the worth of life is found in this capacity to express the truth of God to men, and this also determines its satisfaction and its joy. Christian Science amplifies and emphasizes this thought in its recognition of man as a divine idea, the going forth of God,—as neither having nor being anything apart from God. Jesus distinctly said this of himself: "The Son can do nothing of himself, but what he seeth the Father do: for what things soever he doeth, these also doeth the Son likewise." He knew no power or activity apart from God. Not mechanically, but consciously and willingly he let the light of Truth shine,—so willingly that he was impelled to say it was impossible for him to do otherwise. He thus became our example in that glad consecration, that immediate responsiveness to God which amounts to a spontaneous impulse. This is the abandon of love which removes every seeming impediment to the divine manifestation. Let your light shine,—every light-house keeper understands that this is his governing law. Be the weather fair or foul, he knows that the command of the Government is backed by the expectation of every mariner on the seas, and he knows nothing else but to utilize the resources supplied him for light giving,—to keep his lamp trimmed, his flame bright. This command to give forth light is a clarion call from the Master to his every follower, and to the faithful student of Christian Science it must bring a sense of exalted privilege, as well as of deep responsibility, since for him the way of obedience has been made clear as never before.

When called to manifest the nature and activities of good, to radiate that light which is above the sun, men are wont to cloak their irresponsiveness in the garb of a false humility, and it is apparent that so long as they thus deny the practicability of the Christ-life, so long will they lack the inspiration and assurance which initiates and gives nerve and persistency to spiritual endeavor. No man can enthusiastically address himself to the accomplishment of that which he believes to be impossible, and in re-affirming and demonstrating that men may escape the deadening beliefs of materiality, may live the Christ-life of purity, unselfishness, and loyalty to Truth, and may do the works of the Master, Christian Science has re-interpreted Christian living and re-awakened its triumphant song. As we begin to realize that the truth and wisdom and love and beauty of God are to appear in our lives, that this is our natural function, prerogative, and duty, in that measure our ills and fears begin to disappear, our usefulness and joy to increase, our hearts to gladden and our faces to glow. The light of Truth is beginning to shine through us, and we understand as never before those revealing words, "The glory which thou gavest me I have given." This is life's most imperative duty, its noblest aim, its sweetest joy, that in the spirit of a little child, and in fulfilment of the demands that are laid upon every follower of Christ Jesus, we *let* the beauty and blessedness of the light of Truth be manifest in our every thought, word, and deed.

JOHN B. WILLIS.

Letters to our Leader.

Cleveland, O., September 21, 1905.

Rev. Mary Baker G. Eddy, Concord, N. H.

Dearly Beloved Leader:—For several years the children of First Church of Christ, Scientist, have had in the summer-time a half day's outing. The subject came up again this year, and the teachers, feeling that the thought, as well

Digitized by Google

as the money saved for that purpose, might be turned to better account, conceived this plan: The relation of our Church and Sunday School to The Mother Church, was taken as a subject for a brief talk to the children, each Sunday for a month. At the end of that time the scholars were to decide for themselves where their money should go. (This plan was, however, unknown to the children.) The universal good which their money, small as the amount was, would assist in accomplishing in The Mother Church, and the short-lived pleasure of the half day's outing for themselves, were lovingly contrasted in the last talk, and when the vote was taken to decide the matter, every little hand went up to send the money to The Mother Church. This little gift, consecrated by the self-immolation of the dear lambs, we know will give you pleasure, and we venture to send it with loving gratitude to you for teaching all the sweetness of giving up self. We bless divine Love daily for our Shepherdess who is leading us to the one fold.

With grateful hearts, your loving students, the teachers of the Sunday School of First Church of Christ, Scientist, Cleveland. A. H. LEONARD, *Supt.*

MRS. EDDY'S REPLY.

In the words of Christ Jesus our Lord: "For of such is the kingdom of heaven." Give my love to the Sunday School children. MARY B. G. EDDY.

Philadelphia, September 19, 1905.

Our Beloved Leader:—Frequently, in our home Bible study, my good wife and myself have wondered whether you possessed the few volumes (now issued) of the "Polychrome Bible," and, if not, how the way might be opened for us to present them to you; when lo, through the very kind effort of our esteemed friend, Mr. Kinter, we are informed that, with your permission, we are to have that privilege and pleasure. The six volumes, Leviticus, Joshua, Judges, Psalms, Isaiah, and Ezekiel, were to-day shipped per Adams Express to your address. A volume of love attends them.

Of all the Biblical translations with which we are acquainted, we love this one for its clear, positive, scientific use of the present tense in conveying all the promises and assurances of the protecting and guiding care of infinite Love. The rendition of the twenty-third and ninety-first Psalms, also Isaiah, 41 : 10 (page 68), are especially impressive and helpful. A clear explanation of the newness and thoroughness of the translation is given in the "Introductory Remarks" in the several volumes. The exposition of the origin of the name "Jehovah" (which the Jews disown) is a revelation. (See Joshua, "Introductory Remarks," page viii., foot of first column; also notes on Psalms, foot of page 163.) The notes on Isaiah give an interesting historical account of its authorship and compilation. Through lack of interest and financial support on the part of Bible students, the publishers were obliged to discontinue this very expensive work, and as we were informed that the next issue was to be the book of Genesis, this decision is very disappointing; we will hope, however, for a resumption of the work, that we may send you any new volumes as they appear.

That this translation may cast another ray of light and joy along the rugged pathway of the one who has labored, and is laboring, so assiduously and unselfishly to make plain the way for us, is the earnest hope of my dear wife and myself. Gratefully your loving follower,

C. H. FAHNESTOCK.

He who contributes as best he can to the happiness of the world is the peacefully religious man; who does so in the name of Christ is the practical Christian.

W. B. SMITH.

Testimonies of Healing.

I have the most convincing reasons for being a Christian Scientist. When a young man I drifted away from my old church, began to investigate all manner of theories, philosophies, and beliefs, but found nothing that would give me any satisfaction, nothing to which I could subscribe.

I immersed myself in my professional work, and so tried to keep the perplexing problems of life and destiny out of mind if possible. My health, which was never very robust, began to give way under the intense application, and only half-realized dreams of ambition brought on a despondent mental condition, until, after several years of such dreary existence, life became a burden which I would just as soon have given up as not. Friends said, "Why don't you try Christian Science? It will make you healthy and happy," but this advice seemed very foolish to me. Had I not investigated almost everything and found nothing? So I paid no attention to my friends' kind appeal, and tried to endure a little longer. One day, however, I asked for the loan of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and began to study it with the same earnestness that I gave to every other subject I undertook. I could not understand it at first, as I had too many opposing opinions to get much good out of it, but I persisted, and one by one my prejudices gave way, and I began to perceive some of the spiritual truth contained in the book. Still I lacked the real understanding. The day before Christmas I had an attack of an old physical ailment. I was tempted to take some medicine, such as I usually took to relieve this suffering, and which I had in my pocket at the time. But no. Here was an opportunity of testing Christian Science, and I was determined to do so. Going to my studio, I dwelt upon the thought of God's omnipotence and man's relation to Him, and like a flash the last obstacle was removed. I felt the healing power of Truth and was well, and surely as happy as any man on earth, for I had found God; Christian Science had revealed Him to me after weary years of searching in matter, all of no avail. Going home to dinner, I told my wife, who was studying the text-book with me, of the great truth which at last had come to me, and she was healed then and there of stomach trouble from which she had suffered almost eighteen years.

The next day was Christmas. We refrained from buying any presents for each other, we wanted none; we knew the Christ was born to us, and we ourselves had entered into newness of life. Words cannot describe the bliss and happiness that was ours. This was all brought about by reading the text-book of Christian Science, uninfluenced by any one. Can any one censure us for being deeply grateful to our beloved Leader, Mrs. Eddy, through whose teaching we were helped and healed in such a marvelous way? It was this good woman who pointed out the way to us that we might claim our birthright, "the glorious liberty of the children of God." A few years have passed, and we are still relying entirely upon Christian Science. We have always received help in the most varied circumstances, and we depend on nothing but our understanding of Truth to guide us.—MAX J. SEIFERT, Dayton, O.

I have been helped by Christian Science both spiritually and physically. I was healed of a disease of twenty-five years' standing by reading Science and Health, after doctors and medicine had failed to help me. I have had many demonstrations in my practice of obstetrics, and many over diseases of different kinds. My little grandson had been under the doctor's care all his life till he was six years old, when they said they could do nothing for him, and that it was not possible for him to live. I was called from home one day to help a neighbor. I was not gone more than two hours, and when I returned I found the little boy very sick. When I came in he was unconscious, and could

Digitized by Google

not speak or move. They all thought he never would again, but I declared the truth,—that God is Life, that there is no death,—and for eight long hours I stood over him and did the best I could to realize God's allness and the nothingness of matter. At the end of that time I was rewarded by seeing him move. He answered when I spoke to him. We then sent to a practitioner for help. His father did not believe in this Science and called a doctor to diagnose the case. The doctor said he had been a very sick child, and asked what we gave him. I told him I had not given him any medicine. He then gave him a thorough examination and said, "He cannot possibly live, for he is a complete anæmic." He said he could not give him any medicine that would help him, and that he had never seen a case like it. Thanks to God, and to Mrs. Eddy through whom He has sent this blessed truth, this child is alive and well and has not been sick to amount to much since. This was two and a half years ago, and he is now going two miles each way to school daily, and does not mind walking six miles to go to church. He does not even complain of being tired. I am a member of The Mother Church, for which I am more than thankful. I trust this may help some poor hopeless mortal to take courage, for when God is for us "who can be against us?"—Mrs. Ida A. R. Stevens, Levy, Ark.

For over three years before I knew anything of Christian Science I was a hopeless sufferer from many diseases. I had been treated by some of the best physicians, and finding no permanent relief, I had almost given up in despair. During these three years of my burdensome life I was afraid to go on the streets alone, and many times I had to be helped back home. After my first treatment in Christian Science, I felt able to go out alone, and after one week's treatment I was almost entirely healed of all my diseases. Before knowing of this truth, as given us in Science and Health, I always felt worn and fatigued, and was scarcely able to do any work, but now I do more than I ever did in my life, knowing that God is my strength. For over three happy years I have been blessed with almost perfect health, and I give thanks to God for the day I accepted Christian Science, for in it I have found peace and rest. The Bible is a new book to me, and I love it more each day. I have had very many proofs that God is a present help in time of need. I have seen many wonderful cases of healing through this great Truth. I feel that I owe my life, my all, to this dear Cause. My heart overflows with love to God, and to Mrs. Eddy, through whom this light has come.—Mrs. Nona Phelps, Berkley, Va.

I wish to express loving gratitude for Christian Science as revealed through Science and Health, and for our Leader's constant, watchful care that the light may so shine that those who have even the smallest glimmering of this glorious truth may, by strict obedience to her teachings, grow into the true understanding of God and man. The release from an incurable disease is much to me, but the release from the teachings of my childhood—of a wrathful, personal God, and of man doomed to eternal punishment—is more than words can express.

The day before our last Christian Science lecture was given here, these words from the Christian Science Hymnal kept coming to my thought,—

> Look now, for glad and golden hours
> Come swiftly on the wing;
> O rest beside the weary road,
> And hear the angels sing.

When the lecturer paid to Mrs. Eddy one of the most beautiful tributes I ever heard, a great wave of gratitude went over me, and I said, Thanks be to God for this woman who has made it possible for us to "hear the angels sing."

Emma Letchfield, Salt Lake City, Utah.

Having received such blessings and benefits from Christian Science, I feel it my bounden duty to give my testimony, with the hope that it may prove beneficial to some poor erring mortal, and show him that though he may be among the ashes of degradation, he can by clasping the outstretched hand of Truth, as revealed in Christian Science, rise again and become a new man in Christ Jesus. On Sunday, November 6, 1904, I was like a man walking in the valley of the shadow of death, dragged down by the terrible demon of the liquor habit to which I had been a victim for twenty-five years. I had been drinking very heavily on that Sunday, but in the evening a divine impulse induced me to go to Christian Science for aid. I sought out a practitioner with whom I was already acquainted, and although I was considerably under the influence of liquor, she gave me treatment and I went to church that night. She continued to help me for a week, and I never took another drink after that first treatment. I had also been a slave to tobacco for the same length of time as to liquor, and I treated myself for that habit, with the help of our dear Leader's divinely inspired book, Science and Health. I am now cured, and I am so grateful that I cannot fully express my joy in words, except to say that from the depths of misery I now stand on the sunny slopes of God's holy mountain, and with the hope that is born of Christian Science, I ever look up and strive to attain to greater heights. I rejoice to say that First Church of Christ, Scientist, of this city has accepted me as a member.

I am truly grateful to our beloved Leader, Mrs. Eddy, that both through her book, and the knowledge she has imparted to her students in the faith, I have found the truth and the truth has set me free. I also feel it my duty to express my heartfelt gratitude to God for guiding me to the help I so much needed.

Charles J. Bentley, Memphis, Tenn.

I wish to acknowledge the benefits I have received through the teachings of Christian Science. Nearly five years ago I first heard of this Science. I was then a very sick man and had been doctoring for over two years. During that time I was taking medicine of various kinds. I had consulted a number of doctors and specialists and they always gave me hope that they could cure me. I took a course of baths at a health resort three different times, and each time, on leaving, I was told by the doctor that I was cured. I had taken the medicine in good faith and expected I would be cured, yet I was disappointed from time to time, until at last the critical moment came. I was again confined to my bed and told by my doctor that all was being done that could be done and that it would be months before I could go to work again.

When I first heard of Christian Science I had no faith in it, but later it was presented again by an aged couple of whom I thought a great deal, and I felt that if Christian Science could keep them in good health, and as happy as they were, it might be a good thing for me, and like many others I said that some time I would look into Christian Science. It was only a few weeks before I was brought low and forced to prove that now is the time and that it is God's time.

For two years I had suffered with muscular rheumatism, astigmatism, and organic affections, yet with one week of Christian Science treatment I was at work again. After the second treatment, I attended the Wednesday evening meeting and church on Sunday, leaving Monday on a four-weeks business trip. On my return I had gained eighteen pounds in weight. Through reading "Science and Health with Key to the Scriptures" by Mrs. Eddy, I gained some knowledge of divine Love, and saw that I could not overcome the tobacco and drink habits with will power, as I had tried to do. I had stopped their use many times, because the doctors forbade me to use anything of the kind, yet I wanted them all the more; but through Christian

Digitized by Google

Science I have overcome all those appetites, and it was the knowledge of the truth that made me free. I have also been helped financially and greatly uplifted morally and spiritually. It has given me a higher aim in life, for before coming to Christian Science I never read the Bible, indeed I did not have one, but now I have a Bible and it is my companion with Science and Health. I give all credit to Christian Science—God has been the healer.

I find the study of the Bible Lessons a wonderful help. They give me a better understanding of what God is and our relations to Him. Before closing I wish to express my gratitude and love to our dear Leader.

F. VAN GORDER, Sioux City, Ia.

I can never tell how much Christian Science has done for me and mine. I did not know anything about it until six years ago, when I went on a visit to my daughter. She was living with her husband's mother, who is a devoted student of Mrs. Eddy's book, "Science and Health with Key to the Scriptures." I am more thankful than words can express for her kind and loving forbearance with my intolerant stupidity, and with my many questions, which were not always asked in a kindly manner. While there I was healed instantaneously of nervous sick-headache with which I had suffered from childhood. Hardly a week passed in which I did not suffer. I was not ready to give up my gods, but later, when my baby, a weakly little one, was healed of spasms as quickly as I of headache, then I wanted to know more of Christian Science. I wanted it, but was very skeptical, and could hardly believe it was true. I had been taught that God sent suffering to His children to make them meek and obedient. This I could never fully believe and was always asking the pastor of my church why it was God's will we should suffer so, and he would answer that it was to make us love Him more. Then I would read my Bible, but I could not find anywhere in it that it is God's will that we should suffer. I found plenty of places where it says that He heals suffering, and when I told my pastor so, he replied, "Really I believe you will be an infidel yet." I was searching for a perfect God, and I found Him in Christian Science six years ago. Till then I was always taking medicine, but I have not had any for myself, husband, or baby since.

I would like to relate a demonstration I had recently. The grip was quite prevalent in our town, and one morning I woke up at five o'clock with the symptoms of this disease. I asked my husband to help me, and we silently declared God's allness and the nothingness of evil, till in about an hour and a half I was able to move. Then I got up and did a much larger day's work than I had done for months, and felt better at night than in the morning. To me the physical healing, great as it is, seems small, when compared with the spiritual uplifting, and the understanding how to read the Bible in the light of Christian Science.

Thank God for a woman pure enough to hear the still, small voice and then give the message so that others might be benefited thereby.

MRS. L. S. GORBETT, Neosho Falls, Kan.

It is now about eighteen months since I tried Christian Science. Like many more, I had tried material remedies, thinking that if they failed to cure me I must submit to God's will. When I first heard of Christian Science I laughed, and thought it very ridiculous. That was about three months before I decided to try it. I went to the meetings and tried hard to find fault with what I heard, but I was convinced that what was said must be true. I used to fear that my ailment (which was eczema) would break out again, and I was also afraid that I might have to leave my situation through it. My healing has been slow, but I would never give up now. I hope to go on gaining more understanding and overcoming all kinds of error. It is not only for the healing of my body that I feel so thankful, but for the clearer insight into spiritual things. The Bible, with Mrs. Eddy's wonderful book, Science and Health, has become a dearer book than before. They are my two greatest treasures, and I learn their value more every day. Christian Science is a very great blessing in many ways, and I only wish more people would accept its grand truth. I feel very grateful to Mrs. Eddy for showing us the way.—CLARA BARTLETT, Mansfield, England.

I was healed by reading Science and Health. I had been in poor health for years when my husband's health began to fail. He was a man weighing over two hundred pounds, and by the time five different physicians had pronounced their verdict upon him he had five different diseases. The last doctor said he had Bright's disease. In speaking of it to a friend, she told us about Christian Science, and left her copy of Science and Health with me to read. This was on a Sunday evening, and I became so interested that I went to the following Wednesday evening meeting with her, and purchased a copy of my own. To me it was the truth for which I had been looking all my life, and it filled a long-felt want. I then got a *Quarterly* and began studying the Lesson-Sermons and attending the services regularly. Inside of three months my husband and I were both healed.

Through the study of the Christian Science Bible Lessons, I was healed of stomach trouble and sick-headaches of years' standing. My husband came home one evening with a broken finger. We tied it up and he slept fairly well with it the first night. In one week's time he took off the wrapping, and in two weeks it was entirely healed. This trouble was met by the understanding of Truth, as we found it in Science and Health, for which we are very grateful to God, and to our dear Leader, Mrs. Eddy, who so patiently shows us the way.

MRS. ELENA C. KING, Cedar Rapids, Ia.

I had for eight years been troubled with spells of erysipelas. The doctors worked on my case continually but to no effect. At last a bad spell came on which seemed to be final, and my suffering was intense. The doctor treated me for three months straight. I was put on a diet and deprived of all my favorite dishes. After a time the conditions were greatly aggravated, and I was made to take hot-water baths. The water became gradually hotter, until the flesh was almost blistered. I was well-nigh starved, and was in misery. I was in complete darkness, and knew that I must have light soon or something would happen.

At last I grew a little better and was able to go out. I went to see my grandmother, who took me over to visit a Christian Science friend. She talked to me and explained many things that I never knew before. I asked to be treated, and was at once referred to a practitioner, to whom I went the next day and took a treatment. She told me to go home and eat anything I wished, which I did. In three weeks I was entirely healed and was never troubled again. I have had almost perfect health ever since.

Last spring I was troubled by a slight attack of pneumonia. I could not sleep, eat, or study. I kept on declaring the truth, and the third night of the attack I was suddenly seized by a strange fear. I kept up as long as I could, but at last I broke down completely. My mother was at the same time affected by the same fear and went to work at once. A practitioner was notified and took up the case. At six o'clock on the fourth night I was entirely healed.

I am very grateful to Christian Science and to our kind benefactor, Mrs. Eddy.

RALPH ERROLL SMITH, Chicago, Ill.

Christian Science first came into my life a little less than a year previous to my marriage, and my husband and I have acknowledged no other healing power than that of Truth in

Digitized by Google

our seven years together. Our little daughter of five and a half years has been reared a Scientist. When she was six months of age an epidemic of pneumonia spread throughout the neighborhood in which we lived, carrying away a number of young children—all of whom were in the care of physicians. It finally attacked our little one, and although we applied all the understanding of Christian Science we had, she seemed to become rapidly worse, until the situation was so alarming that it seemed to us she might not live. At this point we telegraphed a Christian Scientist, early in the morning, and at noon the next day she showed a desire to play. That evening she was fully restored and we notified him to discontinue treatment.

About a month after the above experience, my husband went away on Monday morning as usual, his business at the time being that of a traveling salesman. It was cold, wet weather, and exposure to the elements seemed to develop a very severe attack of the grip on Wednesday. When he arrived home Friday night he was delirious. This illness was completely overcome through my understanding of God's law, in Christian Science, so that on the following morning he was down town attending to business. Christian Science is also teaching me how to overcome false pride, how to be unselfish, how to be patient, how to correct the little errors of daily life, and how to let divine Love govern.

All honor and praise to God, and loving gratitude to dear Mrs. Eddy for this revelation of Truth!

MRS. IZAH WHITEHOUSE CARTER, Lincoln, N. H.

I became interested in Christian Science some eleven years ago, after seeing the wonderful healing of my oldest boy. He was healed of spinal meningitis when he was but three months old, after a physician had said that he could do no more, and that the child could live but a short time. We then decided to call in a Christian Science practitioner, and with the first treatment there was a change for the better. In a few days he was perfectly healed, the disease leaving no after effect. I then commenced to study Science and Health, and while reading the book I was healed of throat difficulty that had troubled me for years. I thank God for these, and many other blessings which I have received. I am also very grateful to our Leader, Mrs. Eddy, for giving us this great truth which, when understood, destroys all errors.

MRS. EMMA BARSALON, Kankakee, Ill.

It is now a year and a half since I first studied Christian Science and was healed by its means. I had been in a thoroughly wretched condition, mentally and physically, for many months before I turned to the true source of help. I was on the verge of nervous prostration, suffered from indigestion, loss of appetite, slept very little, and was in such a depressed, morbid state, that I had no desire to live. I had been to several physicians, but received no benefit from their treatment. I felt that it was mental help that I needed, and not then knowing of the power of divine Mind to heal, I trusted to mortal mind, that broken reed, the source of all ills that flesh is heir to. I had been a member of an orthodox church for some years, and a regular attendant, but my religion seemed to fail me in my greatest need,—why, I could not understand,—and at times I felt that I must give it all up.

At this crisis I was advised to try Christian Science treatment, with the result that I bought a copy of Science and Health and commenced reading, at first with little hope. I soon felt, however, that here was something which would help me. At first it was a case of groping blindly for the light, but thanks to the help of a friend I was enabled to progress, slowly at first, but with increasing hope and confidence. I gave up the use of all tonics and medicines, which before it had seemed impossible for me to do without, and from the first I improved mentally and physically. I have had no illness since, with the exception of a slight cold. Not the least of the benefits derived from the study of Christian Science is that it brings religion into our daily lives and makes the Bible a guide to our every thought and act.

I am very thankful to God who guided me through a dark and stony path to the light, and to our brave Leader who has reinstated the teachings of Christ Jesus. I have been enabled to help others, and desire to forward the good work to the best of my ability.

ELOISE B. ROBBINS, Douglaston, N. Y.

It is eight years since I was healed in Christian Science of a very severe internal injury received during a runaway, but, like many others, I was not ready to give God thanks. Four years later my husband moved to Shawnee, Okla., where I found a Christian Science church and began to attend the services. I have had many, to me, beautiful demonstrations, and am daily proving the power of Love over all earthly ills. I have seen prejudice, hate, envy, worry, and the sense of lack, all give place to tolerance, loving-kindness, patience, and a precious sense of the Father's love and care for us. Among the many demonstrations I may mention the power of Truth over contagion, grip, ulcerated bowels, accidents, and also over a sense of discord among the boys in a large family. The birth of a little son was a perfectly natural one. I did my own work and cared for my babe from the fourth day. The child is now a picture of perfect health. Several slight ailments appeared, but they were soon destroyed by the power of Truth. It is my earnest desire to live each day nearer to divine Principle, thus proving my gratitude to our beloved Leader in the way that I believe would best please her, by overcoming the ills of sense by the law of Love. I also feel very grateful for our periodicals.

MRS. NELLIE R. HOSBROUGH, Winfield, Kan.

When we first came into Christian Science I had very weak eyes, so that I had to wear glasses all the time, but when we found the truth this was quickly overcome. I had treatment and soon realized that I did not need my glasses. I have not worn them for three years and I never could see so well before. My mother, too, was very nervous, but this was all overcome. Since then we have had wonderful demonstrations. My brother once came home, and could hardly speak. His throat was very bad. My mother treated him, and in a few hours the trouble had entirely disappeared. Another time, lately, I was all broken out and had to go to bed, feeling very sick and miserable. Mamma treated me, and I realized God's allness and error's nothingness. I felt better right away, and I went to school on Monday. My little brother has also been much benefited by this Science. He was cutting teeth and had fever. Mamma treated him and the next day he was running about playing. I am very thankful to Mrs. Eddy for bringing this truth. I am reading Science and Health, and every day I find more truth in it. We have the Church Manual, "Pulpit and Press," etc. We read Science and Health every night and morning, and it would not be like home without it.

MINNIE OLSEN, Englewood, Col.

About six years ago I was healed of flux by the reading of a Christian Science lecture on the allness of God. I have since been healed of insanity by this blessed truth. Being the mother of a large family, I have had many severe tests, but find cause for rejoicing in that God has been an ever-present help. The truth has been victorious over many physical ailments—colds, croup, and contagion—in our home. I have received many blessings through the study of our text-book, *Quarterly*, *Sentinel*, and *Journal*, for which I can best express my gratitude and Love, to the one who made this possible, by a life of obedience to Truth.

MRS. MARY E. LAMPTON, Los Angeles, Cal.

From our Exchanges.

The doctrine of eternal punishment, and the beliefs which seem to make it an essential doctrine of Christianity, had really lost their foundation so long ago as the Civil War in America. While there are in all parts of the country, and more especially in the South, men who boast of their belief, in even literal forms of future and eternal punishment, the tendency throughout the land is to let the doctrine drop quietly into the background. While it is not denied, it is not advocated. While it is on formal occasions assented to, it is never forcibly presented. It will never be disproved, because no one can disprove a fact which lies in the future. It cannot be argued down, because there is always the possibility of asserting that there is an infinite Being who is capable of governing in that way; but, when once a generation has grown up unfamiliar with the doctrine, it will quietly take its place with witchcraft, possession of the devil, and other delusions and half-truths of former ages.

The Christian Register.

How blessed the thought that we cannot pre-empt, monopolize, or limit the possibilities of human and divine fellowship. From wherever we start there is an open way to Him. Whenever we reach out after Him, whenever we go earnestly in search of Him, we find some traces of His presence. What others have seen and felt we may not duplicate, but we may have our own original experience. There is no rule of faith which will cover even a majority of cases. There is infinite fertility and variety in the ways of God's spirit. Temperament itself, with all its contradictions, and often as it sets at naught the conventionalities, is only another evidence that what God desires is not some stereotyped form of religious experience, but the sincere, simple, direct fellowship and trust of each individual soul.

The Universalist Leader.

The time has clearly come for liberal theology to justify itself in the eyes of the people, if it can, for the people are weary of negations. Can liberal theology justify itself? It can do it in one way only—by showing its capacity for spiritual zeal. For liberal theology has also been guilty of wrong emphasis. It has emphasized its doubts rather than its faiths. It has been destructive of error, but not constructive of truth. It has told people what to reject, but not what to believe. It is not surprising that it is distrusted by people who above all things crave a positive faith; yet it has a faith, a real and deep faith, founded on a real spiritual experience, if it would but have the courage to declare it.

REV. J. W. DAWSON.

The Congregationalist.

The *Churchman* asks, "Shall nations make peace and Christendom continue divided and discordant? Do Christians at all realize how their divisions minimize not merely their power, but the cause that they profess to represent? Do they observe how many great movements for the betterment of mankind steer clear of Christian organizations? And why? Because Christians are so divided that the choice must be made between a small and narrow movement in one Church, or of working independently of all Churches."

Living simply has received emphasis of late, but living largely must not be forgotten. The two are in perfect harmony. We should live largely, not in material things, but in ideas, in spirit, and in deeds. Many in narrow circumstances have a wide horizon of thought and experience. A Christian life is one of simplicity, but large in its comprehension of things that are eternal.—*The Watchman.*

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to The Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of The Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to The Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number, or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each: $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* **PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

250 Huntington Ave., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,
Associate Editors.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.

Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month.

The date of expiration may be found on the address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

A petition signed by fifteen hundred summer guests at the White Mountains and asking that a special session of the State Legislature be called to consider "the best methods of preventing the impending devastation of the forests on the Presidential Range," has been sent to Governor John McLane of New Hampshire. The petition says in part: "It seems to your petitioners that this noble range should be kept as a State park and a monument to New Hampshire's foresight and liberality. Aside from the importance of the forests to the water supply of this and other New England States, and aside from the pleasure which their beauty gives to those that visit them, they are important to the State itself in many ways, among which not the least is the annual revenue they bring its citizens by attracting summer visitors. This revenue is put in jeopardy by the destruction of the forests—and that without any adequate compensation from the mere sale of lumber. In view of the alarming rapidity with which the cutting has proceeded in the last two years, and is now proceeding, we believe that any action to be effectual should be immediate."

President Roosevelt has directed, or will direct, that proceedings be commenced to put an end to the bridge monopoly at St. Louis by action against the fourteen railroad companies which own the terminal system. The old Eads bridge became the property of the Terminal Company. The monopoly was so offensive that the business men of St. Louis built the Merchants' bridge, with a proviso for perpetual competition. Now the Terminal Company has acquired the Merchants' bridge and the only ferry, and the company levies a tribute of twenty-five cents for each passenger over either bridge and a heavy toll for each car. Under the charter the Merchants' bridge may be taken over by the Government.

President Roosevelt recently called together for a conference at the White House a number of the prominent athletic directors and coaches of college sports for the purpose of considering and advocating measures that will eliminate professionalism, money-making, and brutality in college games. His slogan is "clean sport." The President has suggested the adoption of drastic rules in an intercollegiate code, under which any college team guilty of brutality or unsportsmanlike conduct shall be excluded from participating in contests with other colleges.

The names of John Greenleaf Whittier and James Russell Lowell have been chosen to be inscribed in the Hall of Fame of the New York University in addition to those already chosen. There was no election in the class of teachers, none of the names submitted receiving the required number of votes, fifty-two. The nearest to an election was the name of Phillips Brooks, which received forty-nine. In the authors' class the name of Edgar Allan Poe, over which there had been considerable controversy, received forty-three votes.

Determined efforts will be made this winter to secure a repeal of the existing duty on works of art, which is twenty per cent in most cases and fifteen per cent on the products of countries with which we have a special reciprocity arrangement. These are France, Italy, Portugal, and for the present Germany. An association has been formed, which will organize systematically in every State and prepare to maintain the campaign as long as necessary.

As one outcome of the discovery of the Schuylkill Arsenal frauds, Secretary Taft has issued an order insuring that Government supplies for the War Department shall be kept up to sample; that sub-contracting shall be discouraged; that irresponsible bidders shall be excluded from competition, and that honest and competent inspection shall be made at every stage of the process of manufacture of goods furnished the Government.

It has been decided and arranged that the treaty of peace between Russia and Japan will become effective upon its approval by the respective Emperors, without waiting for the formal exchange of ratifications at Washington. The exchange of the ratifications signed by the Emperors will be made in Washington as soon as possible, but will be devoid of all formalities.

It was voted by the Massachusetts Institute of Technology Corporation last week to withdraw any and every proposal looking to a merger with Harvard University. This action was taken without contest and is the outcome of the recent decision of the Supreme Court that the Institute could not legally sell the land which it now occupies.

The chairman of the House Committee on Printing expresses the opinion that if proper measures are passed by Congress, $1,000,000 a year can be saved on the appropriation for the Government Printing Office. "There is no dishonesty in the office," he says; "it is simply extravagance."

The report of the Bureau of Immigration for August shows that 63,409 aliens landed during the month. The greatest number arrived from Russia, with Italy second and Austria third. From China there were 215 landed. Immigrants debarred were 1,311, of which 930 were paupers.

By reason of what appears to be dissatisfaction with the situation in the Philippines, Luke E. Wright, Governor-General of the Philippines and President of the Philippine Commission, will retire from that position about December 1.

The California State University has just received from Mrs. Hearst an archæological and anthropological collection which she has been gathering during the past seven years from all parts of the world. It cost over $400,000.

It is reported that discussions at recent sessions of the Board of Consulting Engineers of the Canal Commission show that a majority, including the European engineers, favor a sea-level canal.

Foreign.

American capitalists are reported to have secured the lease of a number of Russian shipbuilding wharves in the Baltic and Black Seas. The concession will last for a few years only, and is for the purpose of building Russian warships, the work to be done almost exclusively by American engineers and workmen under the formal supervision of Russian officials.

The steamer Tartar, which arrived recently at Victoria, brought news from Japan that the story was current that the accident to the battleship Mikasa at Sasebo was occasioned as the result of a mutiny on board, because of the crew's resentment over the peace terms. When the men mutinied and attempted to seize the ship, some officers fired the magazine.

John Henniker Heaton, Conservative member of Parliament for Canterbury, known as the "Father of the Imperial Penny Postage," established in 1899, published in London last week a strong plea for a universal two-cent postage.

The Russian Government has decided to lend the Baku oil men the money necessary to repair the damages caused during the recent rioting there, but has declined their request that the loans be without interest. The sum necessary is estimated at $15,000,000 to $20,000,000, on which five per cent interest will be charged.

The Chinese Government, it is expected, will introduce a bill in the Legislative Council providing for a $2,000,000 loan for the Kowloon-Canton Railway and other railway purposes.

The Russian Foreign Office is engaged in drawing up the programme for the second peace conference at The Hague.

Industrial and Commercial.

The Commercial Cable Company's fifth Atlantic cable from Canso, Nova Scotia, to Waterville, Ireland, was completed and put in operation on October 6. This makes seven trans-Atlantic cables worked in direct connection with the lines of the Postal Telegraph-Cable Company. All of them are duplexed, so that their combined capacity is fourteen messages at one time. The new cable is said to be the best and most expensive submarine cable ever laid. At some points the cable was laid at a depth of nearly three miles below the surface of the sea. The quantities of material used in the manufacture of the cable were 1,411,200 pounds of copper, 790,088 pounds of gutta-percha, 16,845,000 pounds of brass tape, jute yarn, iron wire, and preservative compound. The cost of the cable varied from $1,000 per mile to $6,000 per mile, according to the character of the ocean bed and depth of water, the great variation in cost being due to the different diameters and weights of the sections of the cable, the cable which is laid in the deepest water being the lightest. The sections laid near shore are of massive construction and very expensive. In the neighborhood of the fishing-grounds off the coast of Newfoundland, a type of cable midway between deep-water and shore cable is used. This intermediate size is made strong to resist injuries from the anchors of fishing craft, and heavy enough to afford reasonable prospect of retrieving it in the event of its being damaged.

A novel irrigation plant has been started at Bisbee, Ariz., by a company of men interested in the Calumet and Arizona Companies. All the claims were bought up on what was known as the Don Luis flats, the rights to the water pumped from the mines, a thousand gallons a minute, were secured, a practical farmer engaged, and ditching, planting, and fencing begun on four or five sections of land. It is expected that the farm will soon supply Bisbee with everything in the dairy and vegetable line.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

The Wrong Road and the Right.

HON. CLARENCE A. BUSKIRK.

CAN a wrong road lead to a right end?

Although the negative answer to this question is as indisputably self-evident as would be the folly of expecting to reach Chicago by means of a train which is going directly away from it, yet the history of human thinking discloses that somehow many intelligent men and women have always been cudgeling their reasoning faculties for the purpose of convincing themselves that an affirmative answer to this question is frequently the correct one, after all, and a brief consideration of some of the errors which have thus crept into popular opinion and thought may be useful.

Probably the most serious of these errors is the theological concept that God has taken the wrong road to attain a right result, by directly or indirectly creating sin, sickness, suffering, death, as instrumentalities of good. Various persuasive phrases have been coined as the currency by means of which this theological dogma gets more easily into circulation and acceptance. One of these phrases, for example, is the one so frequently heard, "The mysterious dispensation of divine Providence." The chain of reasoning leading to this erroneous theological concept, that God is the author of evil, is made up of the following chief links: that God is all-powerful and the creator of all that is, and that evil (of which sin, sickness, suffering, death are forms) is a real existence; therefore, God created evil. If the two premises in this syllogism be admitted to be true, the deduction that God is the author of evil is inevitable. Hence, the fault of the syllogism, if it be untrue, must be found in one or both of its premises. If either premise be false the syllogistic deduction is thereby falsified just the same as if both premises were false. The fault in the syllogism we are considering is the premise that evil is a real existence. It is easy, in a survey of human thinking, to perceive how this false premise, that evil is a real existence, has been so largely accepted. It has come through the failure to distinguish between appearances and reality. This failure has been a prolific source of error in human thinking. Take one very familiar example: For ages men believed that the sun rose in the east and set in the west, because it appeared to do so, and a prison immediately gaped for the discoverer who announced that this appearance was not true. It required the passing of several generations before the masses of mankind were willing to reject the daily appearance that the sun rises in the east and sets in the west as unreal. The truth respecting it needed to be demonstrated thousands upon thousands of times through scores upon scores of years before popular incredulity began even to abate, or "the pointed bayonets" of ridicule (which is always most severely dogmatic when most den ⁄ y ignorant) to be turned aside. Other salient examples will readily occur to the reader, and show how frequently and how stubbornly popular opinion has accepted false appearances for truth or reality.

The philosophical definition of reality is that it is a truth or fact as differentiated from an appearance of a truth or fact, and that it is likewise a truth or fact whose existence is wholly self-dependent. This leads us to state and consider another syllogism as follows: first premise, the material universe, including its incidents, which we term evil, is reality; second premise, reality is a fact which is wholly self-existent and self-dependent; therefore, the material universe, with all its incidents, must exist without God as its cause. This, of course, is crass atheism. Yet the syllogistic conclusion is unavoidable if both the premises be sound. The second premise cannot be assailed, because it is the only logical, even thinkable, definition of reality. We are driven to search for the fault in the first premise, which states that the material universe is reality, and here our search becomes successful in two ways. First, physical scientists are now compelled to admit that the material universe is wholly phenomenal, or a universe of appearances, and not reality. This is well known to every one who keeps in touch with the current literature of physical science. Again, to affirm that anything which is not eternal, but is constantly mutable (for instance, water, which this instant congeals into ice and the next instant may disappear into unperceivable vapors or gases), is a fact which exists independent of any outside cause, leads at once to an absurdity. Which is it that has such an independent existence,—the vapor, the water, or the ice? Mutability and reality are irreconcilable. The teaching of Christian Science is based on a syllogism whose premises are universally accepted by Christian believers. They are these: 1. God, Spirit, is infinite self-existence, the source of all being. 2. All the manifestations of Spirit must express its essential nature; be spiritual. Hence, that which is not spiritual—matter, evil, and all that inheres in them—can have no real existence. This conclusion is invulnerable if the premises of all Christian faith be true.

From one point of view it is truly amazing that after the best thinkers had been grappling for thousands of years with the momentous question presented by the phenomenon of evil, it remained to the author of the Christian Science ext-book to show that they had been upon the wrong oad, and to point out the only right road, by taking which all reasonings upon the subject become capable of sound logical statement.

There are many other wrong roads which have been taken in human thinking with the expectation of arriving at right results. A brief consideration of one of them is of great importance.

Men think they can employ evil means and methods and obtain good results for themselves, and is it not perfectly natural for them to think so when they are taught that God uses evil to accomplish good? Why should not men imitate God so far as they are able to do so? Although the Scriptures recommend the straight and narrow road, yet if men are led to believe that an all-wise and all-powerful God, instead of taking the direct road takes a circuitous and crooked road for the accomplishment of His divine purposes, is it to be wondered at that men so generally take a circuitous and crooked road to accomplish their purposes likewise? The Scriptures also declare that God is Love, but if men believe that God employs means and

Digitized by Google

methods which are the very opposites of love, is it to be wondered at that hate, vengeance, and their like are regarded by men as profitable and legitimate means and methods, or, at least, that they are efficient? It is impossible to estimate the calamitous effects upon our race of such lines of wrong thinking, all of which are a natural sequence of the notion that God is the author of evil. When men are brought to the understanding that God never takes the wrong road, that He never uses evil as an instrument for the accomplishment of good, they are then more happily open to the understanding that hate, revenge, greed, and their like can never truly benefit them. National and individual histories have been furnishing abundant evidence that in human affairs the wrong road can lead only to wrong ends. Appearances deceive in this as in many other matters; wealth and power gained through indefensible methods seem to most men to justify their belief that selfish wisdom teaches their use. Jesus taught that there is no selfish wisdom; but so long as men accept the false theological dogma that God has created evil for a wise use, so long will men seek to make use of evil to benefit themselves; and while doing so they only "believe that they believe" the teaching of Jesus.

Pulpits may advise fervently and sincerely against men taking the wrong road in their individual affairs, but such advice is too largely deprived of consistency and usefulness, if it be accompanied with the teaching that God makes use, or has ever made use, of evil for any purpose whatever. Under the logical test of a syllogistic statement, this *reductio ad absurdum* appears: first premise, God, being all-wise and all-good, does only what is wise and right, and what all men can righteously imitate; second premise, God uses evil to accomplish good; conclusion, it is wise and right for all men to use evil to accomplish good.

Emerson, wise poet and profound thinker, once wrote,—

> The lone seaman, in the night,
> Sails astonished among stars.

A few decades ago, a lone navigator, with thought withdrawn from material surroundings, thus moved among celestial things, and afterward proceeded to teach men the astronomy of Truth. Through her immortal pages, the eternal and unwearied splendor of Truth's constellations has been revealed for the inspiration and benefit of all mankind, and, guided by her clear vision of God and man, we may go forward from a right beginning to a right end.

The Practicability of Christian Science.

ALBERT E. MILLER.

No one disputes the fact that the whole world has need of healing. Not a single inhabitant thereof can truthfully claim to be entirely free from ills of some sort, either physical or moral. The question is, How shall these ills be healed? It is conceded by all right thinking people that Jesus the Christ was the greatest physician the world has ever known. Why, then, has there been so little study given to his teaching respecting disease by those who have appointed themselves administrators of the art of healing? Do we not find, two thousand years after the Saviour's departure from the flesh, the same blind search as prevailed before his coming, for virtue in some material substance "of the earth, earthy" wherewith to heal the sick and bind up the broken-hearted? On the basis of common-sense, Christian Science appeals to all who think. It points out that disease can be exterminated only by attacking the cause, and it lays bare the fact that all causation must of necessity be found in the mental realm.

While Christian Science exhibits a marked departure from the beliefs of the hour, in its process of dealing with disease, it cannot be said that in a single degree this departure is more marked than was the teaching of our Saviour with respect to the popular theories of his day. Through our apprehension of Christian Science we learn that sickness is invariably the product of sin,—using this term in its broadest sense as including, in addition to wilful transgression, all those myriad forms of unconscious infringement upon righteousness which go to make up human experience. It follows, then, that only through the continual exercise of our mental faculties toward the complete elmination of all sin, do we control the source of disease or handle it in its incipiency. This task is not so arduous as would appear at first glance, when we understand the Science or practical truth which underlies the process employed; for the assurance of positive results invariably lightens our burden and inspires us with fresh courage for the fray.

To possess the knowledge that our work is being done in obedience to Principle, and according to an established rule, energizes our efforts and renders the struggle short and decisive. To get away from the thought of supplicating a God whose action for or against our welfare depends upon the amount of influence we can bring to bear upon Him, so to speak, makes the path straight, and encourages us to enter in and possess that which is rightfully ours. Unless we can conceive of God as infinite, He is of little practical use to us; and unless we pray aright we can hardly expect an answer to our prayers. If man is the image and likeness of God, it is our business to be as near like Him as possible and to make manifest this likeness. The declaration of man's oneness with the Father must precede the realization of Immanuel, or God with us.

"I will hear."

W. B. T.

THE long, brown line of the "Pacific Express" was drawing steadily over the great plains which stretch, in fertile farness, eastward from the foot-hills of the Rockies. They were traveling alone, the dear old couple in the section opposite; and they had thus far stood it well. The hopes and fears of eighty years had left their lights and shadows on the patient faces. "Father" had closed out the old home in the East, disposed of all his effects, and he and "Mother" were on their way to distant Washington, where they looked forward to passing the ripened autumn of their days with the baby of their flock. She had left the familiar scenes of her childhood, some little time before, to make, with her young husband, a new home in the golden West. But the journey was long; the rays of an unclouded sun had beaten mercilessly on the stifling coaches all day long; for it was midsummer, and road and field were parched and dry. The passengers had subsided into that peculiar silence which, on the part of humanity in general, betokens a stolid acquiescence in conditions which they would rather had not been, but which, for the time at least, they feel themselves quite powerless to alter. Late in the afternoon the porter was summoned; and in a few minutes, with his help, the old gentleman had taken refuge from the dust-worn throng about him, to seek shelter behind the curtains of his berth.

I had some hours earlier changed my seat, and was sitting farther down the car. Several times I had noticed the gray-haired wife passing back and forth through the aisle; and something in the expression of the pale, tired face had hinted to my mind that possibly all was not quite well. As I sat working against a growing feeling of foreboding, it became noised through the car that the old gentleman was very ill, and more than that, quite likely to succumb. It seems he had not been feeling well for hours, and now sinking spells had set in, and were following each other with alarming rapidity. The faithful wife, foreseeing the culmination of a thing she long had dreaded, made known her anxiety to those about her. At once the sympathy of her fellow-passengers was enlisted, and went out to her in every way, in her seeming helplessness and trouble.

Digitized by Google

It happened that the section occupied by the old people bore the number thirteen, and this, in the mind of the colored porter, linked an ill omen with what, in the thought of others also, seemed fast settling into a foregone conclusion of a saddening event. Fear and superstition threatened to paralyze the faculties of everybody in the car. What to do was the question which through all this had been presenting itself to me, for matters had moved rapidly, and a critical situation had been most precipitately and unexpectedly thrust upon us.

At this point a physician, whom a hasty search through the train had brought from under cover, appeared, hastily following in the wake of the troubled conductor. He had with him, however, no remedies, only a bit of stimulant, and to the administering of this the good wife objected timorously, protesting that her husband had ever been most rigorously abstemious. But the big-hearted physician, feeling that he must do something, and explaining to the wife and to the train officials that something had gone wrong with one of the arteries in the patient's brain, pressed some of the contents of the bottle between the unconscious lips. He remained in the car for some little time, and then, doubtless feeling that he had done all in his power to do, he quietly but as kindly as possible withdrew, leaving the old people amid willing hearts and hands, but hearts and hands which knew not what to do, for the physician had seemed to offer little consolation. Meantime the proper course to pursue had been coming to me. Events had transpired quickly, but in the midst of the confusion there had been time to realize partially that harmony and order are the law of God; and that "where the Spirit of the Lord is, there is liberty." Conditions seemed unfavorable for much of speech, but I was remembering now, and with a deep sense of gratitude to God, and to our Leader for the adequate and available truth brought to us in her wonderful book, that "The power of Christian Science and divine Love is omnipotent." (Science and Health, p. 412.)

In my own consciousness I felt everything quite suddenly lift. Stepping over to the white-faced watcher, I said, very quietly, that I felt that matters would soon come out all right. "But I have never seen him like this—so low—before," she said. "Never mind," I replied assuringly, "you believe in God, and God is right here; and I feel sure, in His goodness, He will take care of you both, and take care of us all if we trust." "You *believe* that, do you?" she asked simply. "I do," I replied. A change, almost imperceptible, swept over the care-worn countenance, a mingling of hope and doubt. And then, to change the current of her thought to a less sombrous view, I went on: "Your husband is advanced in years, and this in his thought, together with the fatigue of the journey, has, no doubt, made him succumb to the pressure of the hour; but only for a bit, I feel sure." I met the traditions of her long-cherished concept of things on their own plane, so far as words may go, and voiced a few reassuring thoughts to those watching apprehensively in the adjoining sections, since the old gentleman was already beginning to show signs of revival. In a few minutes, under the guise of doing little, helpful things, the quickly responding "mother" and I walked him down the aisle and back. The people speedily grew quieter, the anxiety of the faithful porter and conductor melted away bit by bit; and, as the shadows of passing things outside grew longer, the old gentleman fell softly asleep; and in a sweet, unbroken quiet, like that of childhood, he continued his rest, till the morning sun, in higher and cooler altitudes, rose over the dewy mountains to bid him bright welcome to himself again.

I had given no treatment, in the usual sense of the term. I held quietly to what I knew and felt, and trusted God as Love,—that is all.

I was obliged to leave the train at my "stop-off" quite early in the morning; but after the manner of elderly people, my neighbors were already astir. The look of quiet and relief on the countenance of the old gentleman, as I peeked a good-morning and a good-bye to him between the portieres, was peace unspeakable to me. Then, as I had not spoken the name of "Science," I pressed a *Sentinel* into the hand of the faithful wife, stretched out to me in parting, to speak for me when I had gone. As I did so, she lifted her sweet old face to mine, and said, very softly, "I have sought always to hold to my belief in God, and yesterday, when all things looked so dark, I lifted up my heart to God and I said, 'O God, we are old and alone! Now is the time we need Thy help: oh, send us help and now.'" And the Father had heard.

An Appreciative Letter.

Chapman School, Boston, Mass., September 28, 1905.

My Dear Mrs. Eaton:—Your favor was duly received and gladly I respond, although my opinion is worth little. I certainly did enjoy the singing of "Christ my Refuge" very much indeed. It brought a beautiful spiritual uplift. Mrs. Hunt's fine, rich voice added much to the beauty of the composition. I thought Mr. Conant played the accompaniment very finely,—with taste and expression.

When I first heard Mr. Johnson's music, nearly two years ago, when we first began to attend The Mother Church, it came to me with a great deal of a shock. As church music it seemed very strange to me,—very new, modern, and unusual. If I had given expression to my thought at that time, it would not have been in its favor. I thought I should have the more enjoyed hearing the soloist render the same words with simple melodies, as given in the Hymnal. But since then, with each rendition of one of Mr. Johnson's pieces, my thought has been changing. The music is no longer strange, my thought is no longer centered on the music, voice, and organ, but upon the sentiment and deep sense of worship brought out by the sweet words of our beloved Leader.

It is now very apparent to me that the music is inspired by a great love and appreciation of the thought contained in the words. With every changing idea, the theme changes with instant sympathy. If the thought is simple and homely, so is the music; if the thought is grand and lofty, the voice is not behind. The development of the organ accompaniment is anther beautiful feature, elaborated so finely to reflect the sentiment of the words. This last song, "Christ my Refuge," seems to be the culmination of all these things. I certainly think it is Mr. Johnson's masterpiece.

I never shall forget the singing of "I love to tell the story," by Miss Marshall, at the Communion service a year ago last June. It was wonderfully beautiful and spiritual.

That and Mr. Johnson's music are examples of two extremes in church music. The one appeals to the heart, the other to the understanding. Both have their places and will survive in the understanding heart.

Sincerely yours,

T. A. MEAD.

[Written for the *Sentinel*.]

Pleasant View in Autumn.

GRACE WHITE.

FROM tree, and field, and shady nook
The birds their southward way are wending.
Beneath their weight of ripened fruit
The orchard trees their branches bending.
To leafy walks a fairy charm
The trees their new-found tints are lending,
And with the sunset skies aflame
Their wondrous colors now are blending.

A Russian on Peace.

Morris Weber, a Russian, of Roseburg, Oregon, has written the following letter to the Rev. Mary Baker G. Eddy, Discoverer and Founder of Christian Science, in comment on the peace recently concluded between Russia and Japan:—

Dearest Teacher and Guide:—Never before have I felt in such full measure the great import of the glad tidings, "On earth peace, good will toward men," as when an extra edition announced peace concluded between Japan and Russia. Instantly my heart went out in deepest gratitude to you, dear Leader, for your prayers have made the result possible, when to mortal sense rupture seemed inevitable.

If you had not given to the world Science and Health, teaching that the God of nations is the one perfect Mind, Intelligence, Love that rules and guides them, peace would not have been concluded now.

Nor are these idle words. I was born and raised in St. Petersburg, Russia, and ever since the beginning of hostilities I have tried to view the situation from a Christian Science standpoint. Nevertheless, with every Russian reverse the mental struggle within myself was very severe, for I love the Russian people dearly.

When you asked us to pray for the conclusion of peace, a sense of utter inability to do so seemed to take hold of me; but from experience I had learned to obey you, and I did then. Great peace came to me in that hour, for I could see the brotherhood of God's children, perfect and eternal, and this conviction ruled out all prejudice and let Love reign supreme.

"There is neither Jew nor Greek, there is neither bond nor free, there is neither male nor female, for ye are all one in Christ Jesus."

Rulers of nations, emperors, and plenipotentiaries will have the credit from the world for what has been done. Will many think of you? Yes, the heart of every loyal Christian Scientist will go out to you in loving gratitude for what you have done and are doing for mankind.

The world's reward you need not; God has blessed you.

Concord (N. H.) *Evening Monitor.*

Should Doctors be Named as Sole Guardians of the Public?

The proposition as to whether or not the sole guardianship of the public health should be placed in the hands of the M.D.'s is important, and involves a great many questions of detail. If medicine had proved itself an absolute cure for all the ills of the flesh, it might be looked upon as a necessity, and its disregard might be considered a neglect; but, as a matter of fact, thousands die daily under the care of reputable physicians, and no school of medicine has proved itself sufficiently successful to justify the condemnation of others. Christian Science, for example, has healed hundreds who had formerly failed to recover under medical treatment, and it is safe to assume that there are millions who are in need of the same sort of rescue, and any law prohibiting the practice of Christian Science would, therefore, be a detriment to the public good and would result in the death of many thousands whom we may logically conclude could be saved through its ministry.

Again, Christian Science has not only been efficacious in healing those chronic cases which medicine has failed to reach, but it has proved itself to be a more efficacious method of curing acute troubles, not only in the treatment of adults but of children also, than any other known system.

It is needless to say that the prohibition of the acceptance of a fee is only another expression of the endeavor to prohibit the practice of Christian Science altogether. If the practice of Christian Science is wrong, withholding a fee would not make it right; on the other hand, if the practice is right, the acceptance of a monetary return does not make it wrong. The advisability of permitting the practice of Christian Science does not depend upon the question of accepting a fee therefor, and there could be no other possible motive for preventing the acceptance of a fee than the curtailment of the practice itself.

ALFRED FARLOW.

Boston Times.

If we believe in the teachings of the Bible, we cannot divorce physical and moral healing, for the entire Bible, and especially the teachings of Jesus, lays great stress upon healing as well as upon reformation. If the sinner can look to God and receive help while the sick man cannot, it would certainly seem that the sinner, however guilty he may be, is better off than the sick man. To refuse to call upon God for healing is to infer that Deity either cannot or will not heed the plea of His creatures. To make the first inference would be blasphemy; to imply the second condition would be to impugn divine justice, if not to eliminate Deity's essential quality, love.

The only healing sanctioned by Christian Scientists is that which results from a transformation of the mind of the patient, lifting him into a realization of his God-given right to harmony and dominion over his own body, according to the admonition of St. Paul, "Be ye transformed by the renewing of your mind." Christian Scientists understand that the cause of sickness is ignorance or wilful sin, and therefore that a transformation of morals must result in physical healing. The admonition of Jesus to many whom he healed was, "Sin no more, lest a worse thing come unto thee." This treatment is therefore always safe and potent and as incapable of misuse as is the application of a mathematical law and rule; whereas the employment of the system of mental suggestion is wrong, inasmuch as it is practised upon the basis of the despotic control of one individual over another, and so is neither safe nor potent. In Christian Science treatment, the patient is lifted to the point where he is able to grasp and appropriate to his own need a higher law of health and holiness, beyond and above himself or his practitioner, even to conscious communion with God, who is the source of all good. Without the operation of such a process of moral and spiritual uplifting there never was and never can be a case of genuine healing.

R. STANHOPE EASTERDAY.

Elkhart (Ind.) *Truth.*

All that Christian Scientists want is fair play,—to be known for what they do. They don't ask any favors, but they expect to be treated with Christian courtesy. It is neither right nor reasonable to treat them with rude opposition simply because their methods are entirely new and different from those of the old schools.

Christian Scientists are convinced of the truth of Mrs. Eddy's discovery, but they have no desire to thrust their beliefs upon those who do not desire them. Like other people, they understand the material laws about contagion, and that they must be grappled with until destroyed.

ARTHUR F. JENNINGS.

Toledo (O.) *Times-Bee.*

If unreserved and lasting faith in Christ Jesus and full belief in and adherence to the inspired word of the Bible, together with a practical effort to live in accordance with its teachings, constitutes Christianity, then Christian Science is Christian. If Science is a department of knowledge in which the results of investigation have been worked out and systematized, then Christian Science is undeniably a science, for through practice it has been found to be accurate, efficient, and in the degree that it is understood, unerring.

The Lectures.

Independence, Ia.

A large audience greeted Bicknell Young at the Gedney Opera House on Sunday afternoon, September 17, when he spoke in the interest of Christian Science. Mr. Milton Smith, County Attorney, introduced the speaker as follows:

The Bible is the rule and guide of faith of all Christian religions. Denominations differ somewhat in their interpretation of the Scriptures, but all are striving for the uplifting of humanity and for the ultimate salvation of the human family. Any church or society that has this end in view is deserving of our careful consideration and support. The Christian Science sect is comparatively new. I am free to say that I know but little of its teachings, but, wherever I go, I see magnificent edifices dedicated to its faith and attended by multitudes of thoughtful men and women. A creed that satisfies so many must have in it much of merit.—*The Bulletin-Journal.*

Great Falls, Mont.

"Christian Science, the Religion of the Bible," was the subject of Judge Septimus J. Hanna's lecture at the Grand Theatre last evening [September 22]. Wm. C. Kaufman, First Reader of the church, introduced the speaker, saying in part,—

Friends:—Christ Jesus said that he came not to destroy but to fulfil. The Scriptures tell us that his practice of truth destroyed, but this destruction was not the destruction of good but of evil,—sin, disease, death. In fact, it was the destruction of ignorance,—ignorance as to what God is, and what man, His image and likeness, is. Christian Science is again preaching this gospel of Christ. It is bringing unselfishness, brotherly love, happiness, and health into the lives of mortals, here and now, who are in disease and misery.—*Great Falls Tribune.*

Saginaw, Mich.

A large audience gathered at Masonic Temple Sunday afternoon [October 1] to hear a lecture by Professor Hermann S. Hering of Boston, on the subject, "Christian Science, Humanity's Helper." The speaker was introduced by Attorney James B. Peter, who said in part,—

Any form of religion which has the Bible for its foundation must be good, and any form of religion which is fundamentally based upon the study of the Scriptures must do good. We who are associated with other denominations and claim to be simply Christians, not Christian Scientists, may wonder why it is that the Bible should be studied in the light of but one exponent of its meaning, but only those who are unobservant or ignorant will say that a study so limited has not wrought a marked change in the lives and thought of a great body of intelligent and useful people, and is to them a great source of happiness and a sustaining power for good. The temples they have reared, their sincere worship, and their persistent study of the Word, are influences which have produced inevitable results in the characters and lives of our friends. It is evident that they remember Paul's admonition: "Finally, brethren, whatsoever things are true, whatsoever things are honest, whatsoever things are just, whatsoever things are pure, whatsoever things are lovely, whatsoever things are of good report; if there be any virtue, and if there be any praise, think on these things."

Saginaw News.

Denver, Col.

Edward A. Kimball of Chicago delivered two lectures in First Church of Christ, Scientist, in this city on the evenings of September 7 and 8 to large and appreciative audiences. On Thursday evening he was introduced by Judge Charles D. Hayt, former Chief Justice of the Supreme Court of the State of Colorado, and on Friday evening by Mrs. Ella Peck Sweet.

Judge Hayt spoke as follows:—

Ladies and Gentlemen:—Before entering upon the pleasant duty of introducing the speaker of the evening, I want to pay a well-merited tribute to those who have contributed this magnificent building to the churches of Denver. I watched its construction from the laying of the foundation-stone to the putting in place of the last of the decorations, and I have always been an admirer of the sublime courage that overcame all obstacles and carried to success the completion of this beautiful house of worship. I know that this recognition is rather tardy on my part, but it is the first opportunity I have had as a citizen of Denver to express my admiration for this artistic structure.

There must be some, nay, there is much good in a movement that can accomplish so great a result in the material world, but the result is not to be mentioned in comparison with the good work accomplished by this organization in the minds and hearts of many of our people. I am not a Christian Scientist, but I know many of that faith, and they are among my most valued friends. The best of citizenship of this city is represented in this organization. It seems to me that they look to the future with more courage than is given to others, and courage is necessary to success in any walk of life.

Mrs. Eddy is regarded by many as one of the greatest characters for good before the Christian world to-day. This gifted woman, with those having this great work in charge, has displayed great ability and deserves great credit for the manner in which the work has been brought up to its present high standing. This is disclosed to the outsider in the wise selection that has been made of those who have been chosen from time to time to present the work to the public. We have with us to-night a lecturer in this field, one who has given his life to this work, who will present the subject to you in a manner that is logical, convincing, and eloquent. He has always helped me, and I know he will help you, whether you are a Christian Scientist or not.—*Correspondence.*

Admission to Membership.

The next admission of candidates to membership in The Mother Church will be November 7, 1905. Applications must be in the hands of the Clerk on or before October 23, 1905.

An application sent to the Clerk of the Church does not constitute the applicant a member; he must be elected to membership by the Christian Science Board of Directors, in which event notice of election will be sent.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Church By-law.

ARTICLE XXII., SECTION 11.

SHOULD a member of The Mother Church publish, or cause to be published, an article that is false, unjust, or injurious to his or to her Leader, Mrs. Eddy, upon the complaint thereof, by another member, this offence shall be acted upon by the Board of Directors, and if the offender is not dismissed from this Church, his or her membership shall be suspended for not less than three years.

A Progressive View.

THE case of Rev. Dr. Samuel T. Carter of New York, which has been before the public for some time, serves to show the great change now taking place in the world's concept of God. Quite a remarkable feature of this case is that Dr. Carter does not stand alone in his changed views; on the contrary he has the support of his Presbytery, and this support, it is said, will be continued even before the Synod of the State of New York.

The matter is again brought to public attention by the statement recently made, that the opponents of Dr. Carter will try to have Nassau Presbytery disciplined at the coming meeting of the Synod, and in connection with this report the *New York Press* publishes some further extracts from the letter written by Dr. Carter about a year ago, which is at the bottom of the difficulty. We quote as follows from the *Press*:—

"Some of the statements made by Dr. Carter in his letter were as follows, in substance:—

" 'The whole scholastic theology, and the Calvinistic system that is built upon it, is untrue from the base upward.

" 'The doctrine of the fall of man in Adam, upon which the whole scholastic theology depends, is a blunder fraught with most disastrous consequences.

" 'The God I love to-day is very far from being the God of the Calvinistic theology. His love has become to me beyond all bounds and limits, infinite and unsearchable in its profound depths of goodness.

" 'The doctrine of the Trinity has never brought to me one ray of light, and when I see how it has divided Christendom and cut off from the general church fellowship many of the most beautiful souls, I wish devoutly that it had never been formulated. But I fully accept Jesus Christ as the well-beloved Son of God, and can worship him and adore him with a glad, free heart.

" 'As I cannot accept the basis of scholastic theology in the fall of Adam, so I cannot accept one of its chief results —the endless punishment of the wicked. I can in no way make it fit in with the love of God. The dogma of endless torment is the most impossible of all things to believe. My denials pertain to ecclesiastical theology and not to the New Testament Gospel. That I accept with my whole heart and as cordially as any man.' "

That Dr. Carter has not changed his views since his letter was written, is shown by the statement issued by him a few days ago, which the *Press* reports as follows:—

" 'To me this whole subject is one of truth or falsehood. To my own mind the character of God as portrayed in our received Confession is simply false. I believe that the biggest and worst lie of all the big, bad lies of the world is the lie about God. . . . The Confession has a God without a heart, and a God without a heart is the greatest monster in the universe. This is a glorious universe, because it is a universe under a God with the biggest heart of all. Put the Westminster God on the throne and we choose annihilation.

" 'Some weakly cry, "Have done with the whole business, and devote yourselves to peace and work." . . . Peace with a bad theology means war. Work with a bad theology is worse than idleness. . . . Let us try the love of God. Let us sweep away with one hand the bad God and lift up with the other the good God, better than any human or angel heart knows, and lo, the transformation!

" 'The conservatives are engaged in a hopeless endeavor to keep the God of the Confession on the throne of absolute dominion. Let them have done! It is like trying to substitute Aaron's calf for the God of Sinai. Let there be an end of making heretics of the apostles of love. We want a thousandfold more faith and trust in the unspeakable goodness of God. Let the reign of love begin!' "

That these views have found official endorsement is proof that the theological world is revolving rapidly and that thinking men are becoming more and more dissatisfied with the old concept of God, and many are coming nearer and nearer to the acceptance of Mrs. Eddy's definition of God as given in the Glossary of Science and Health (p. 587):—

"God. The great I AM; the all-knowing, all-seeing, all-acting; all-wise, all-loving, and eternal; Principle; Mind; Soul; Spirit; Life; Truth; Love; all substance; intelligence."

ARCHIBALD MCLELLAN.

Love's Sword.

Divine Science is absolute, and presents no half-way position in learning the Principle, and establishing the rule by demonstration.

SCIENCE AND HEALTH, p. 274.

JESUS used the expressions of the highest human sense of love to convey to men a nobler thought of the Supreme Being. To those who had been regarding God as a mighty potentate, he brought the parable of The Prodigal, the story of The Good Shepherd. He indicated that we begin to acquire a true concept of God as we gather up the good, the beautiful, and the true in human affection, free it from every flaw, and give it infinite expansion and intensity. He thus awakened the thought of kinship, of possible affiliation and companionship between God and humanity.

As not before since the early days of Christianity, the actual creeds and convictions of men are now being shaped by this teaching of the Master respecting the inherent nature and impulse of God, and rightly interpreted it proves the strength and stay, as well as the comfort and consolation of all who receive it. Its misapprehension, however, may tend to lessen the sense of the inflexibility of divine law, and of the certitude of the exactions of divine justice.

It is well, therefore, to remember always that Love is infinite Truth as well as infinite tenderness, and that Truth is absolutely uncompromising. The symbol of the divine presence in the desecrated garden was a flaming sword, "which turned every way to keep the way of the tree of life," and in unnumbered experiences the children of Israel were made to understand something of God's incorruptible insistence upon the fulfilment of his righteous law,—that law of Love which is as "inflexible as the will of God, and terrible as his purity." The law of the annihilation of sin, its avenues and occasions, which obtained among the children of Israel, and which, apart from spiritual interpretation, may seem unjustifiably harsh, was re-affirmed by Jesus when he addressed the hypocritical Pharisees in terms of scathing and unreserved condemnation. Jesus said, "I came not to send peace, but a sword." His mission was not to put material sense at its ease, but rather to

Digitized by Google

destroy it utterly. He made it clear that the greatness of Love's affection for its children is best indicated by its manifestation of good alone. Says a poet, Two things love has learned, an innate tenderness and perfect loyalty to truth. Love's tenderness is indeed sweet to the sons of men, but it is theirs to learn that Love's severity is an essential saving power. The faults that human sympathy would condone, true love would cure, and our friends are they who are ready to sacrifice our good-will, if it must be, for our good.

Christian Science makes supreme demands upon its every student and beneficiary. There is no misunderstanding, no escaping its frank and unyielding imperative. Its plummet is the ideal, its standard perfection. It makes no exception, accepts no excuse, abates no requirement, and all this because it is the Word of God, the going forth of Truth and Love. Speaking of the exactions of truth, a wise man has written, "You say, 'I can never think of some act of neglect, of selfishness, or of passion without pain.' Well, that is as it should be. That is the police of the universe: the angels are set to punish you, so long as you are capable of such crime." The "good works" of Christian Science give convincing evidence that its rule is adequate to the solution of humanity's every problem, and to her who, by unswerving loyalty to the Principle and requirements of this demonstrable truth, has inaugurated so great and beneficent a movement, and who with unfailing alertness and unfaltering zeal has maintained its integrity despite the bitter antagonism of its enemies and the sorry stumblings of its friends,—to her who in the long years of her leadership has stood unflinchingly for the saving gospel of Christ Jesus, and reflected so much of the wise tenderness and healing severity of divine Love,—to her the world owes an unmeasured and abiding debt of gratitude. Love's keen blade alone can pierce "even to the dividing asunder" of truth and falsity in human consciousness, and he who wields it faithfully to the end, shall be held in everlasting remembrance.

JOHN B. WILLIS.

What of the Night?

THE thinker's query, What of the night? is being variously answered. On the one hand we have a ready admission that the age is too material; on the other, the statement that people are growing weary of the burdens imposed by materialism. It is conceded that the love of material possession leads to evil of every sort,—to rivalry, envy, jealousy, hatred, revenge, and death. It is not, however, generally seen that material belief is alone responsible for all the ills which afflict mankind; on the contrary it is supposed that a moderate pursuit of the material is consistent with altruism and progress, though the limitations to this pursuit are never clearly defined by those who protest against absorption in materiality. The failure to apprehend the vital purpose of religion is due to the belief that we are material, for the present at least, and that such being the case, we had better "seek first" the things of materiality,—a course directly opposite to that endorsed by Christ Jesus.

It is now being very generally admitted, however, that a deeper interest in spiritual things will not harm any one, nay, that it will do much good, if this interest does not become too absorbing and lead to dreaminess and neglect of the duties and obligations of the present time. It cannot be denied that many religious theories have had this tendency, and have produced a condition which was compared by a popular preacher to that of a stove which sent all its heat up the chimney, instead of radiating warmth throughout the household. Such a mistaken sense of spirituality lacks the inspiration which is needed to displace the darkness of materiality by the light of Truth and Love, and it has no place in Christian Science.

Many sincere seekers after truth complain that religion demands an assent to much that is utterly incapable of proof; *i.e.*, the supernatural, and that this sort of belief does not effect the moral uplift of those who hold it. Christian Science meets all these objections with the proof that the religion of the Bible, when scientifically understood, is demonstrable in every condition of human experience. This understanding, which is gained through the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, gives, first of all, freedom from sickness and fear, without which no one is ready to work out the problems of life. It also gives freedom from sin, and this leads to the unfoldment of mental and spiritual faculties which can never be utilized while thought is darkened by selfishness and sensuality. The revelation of God as divine Principle makes mighty demands upon us for the demonstration of universal goodness, and as these are recognized and obeyed new opportunities for being and doing good continually present themselves. We do not need to seek the material, for it is perpetually crowded upon the weary sense of humanity, but we do need to seek God and things spiritual, though, as Paul said, "He be not far from any one of us," and in this search there is nothing indefinite or unsatisfying. Christian Science is indeed the religion for those who would prove as they pray. With true prayer comes spiritual illumination, healing, the desire and the opportunity to live the truth and to help (not merely let) others live it. This Science is making the sick whole, the dreamer practical, the agnostic devout, and it unites all of these in the bonds of a demonstrable and satisfying religion, thus bringing in the dawn of that day which has no night.

ANNIE M. KNOTT.

Letters to our Leader.

Concord, N. H., October 11, 1905.

Rev. Mary Baker G. Eddy.

My Dear Leader:—I have your kind note of inquiry as to why I do not write and publish something over my own name on the absorbing question of Christian Science, and I feel grateful beyond expression to you for remembering me in such a way.

I am peculiarly constructed, and I hesitate to urge my crudities, and trespass where those so eminently better fitted tread. I am a radical in every sense of the word, and radicals are poor followers; as a rule, where they try to conform to fixed laws, rules, or conditions, however good, they botch the undertaking; hence, fear of offending makes a coward of me, in this.

From early manhood I had been a sort of free lance in religion; exploring the nooks and corners of every creed and cult, condemning here, commending there, eliminating this from, and embodying that in, my reverential thought, until six years ago, when by what seemed an accident I came into possession of your book, Science and Health, wherein I found so much that appealed to me and so little of that which in the past I had quarreled with, that it became my anchor and has since held me fairly fast.

I am not as loyal as those who write seem to be; I am not as good as I should be; I am learned to the extent of realizing my thousand shortcomings, but not to the extent of knowing how to overcome them.

From this you can see why I do not write. "Physician, heal thyself," keeps constantly intruding upon me, and until I am my own master how can I hope to play instructor to others or pose as such? Until I learn how to obey, how can I be obedient,—how am I to write?

Some day I hope to honor myself by attempting something in return for the blessings that have come to me through you.

Yours in truth,

M. MEEHAN.

[The above letter from the editor of *The Concord Patriot* to Mrs. Eddy was accompanied by the following very in-

Digitized by Google

teresting letter to her assistant secretary when it reached the *Sentinel*.—EDITOR.]

Concord, N. H., October 13, 1905.

Mr. Gilbert C. Carpenter,
Pleasant View, City.

My Dear Mr. Carpenter:—I wish you would say to Mrs. Eddy, in due seasonableness, that when those governors, judges, and railroad men from the South were in Concord, during the State Fair, opportunity was made for them to view the exterior of her beautiful church, and to drive past Pleasant View and admire the site, the grounds, the flowers, the plants, and evergreens, which seemed that evening in their pride of glory.

Tell her that the presence of these gentlemen gave choice occasion for favorable answer to many questions touching Christian Science,—the cardinal truths upon which it rests, its "far-flung" line of membership, the positive good in the way of peace, health, hope, and happiness it has brought to its understanding followers; and the pure and sympathetic womanhood, the ideal citizenship, and the wise leadership of its Founder.

Say that these men made clear by their remarks that they had read much about our religion, and that their comments showed much familiarity with Christian Science advocacy, and a well-tempered charity and benevolence; in addition, the subject was considered seriously (a thing, to me, meaning much), and only the kindest expressions regarding Mrs. Eddy were uttered by them.

I would have told this before, but having referred to it at a Wednesday evening meeting, I felt our Leader might have heard of it.

Very truly,
M. MEEHAN.

Ottawa, Ont., October 12, 1905.

Beloved Leader:—I was organist of an Anglican church in this city for over twenty-five years, and I thought it would please you to know that the new tunes to "Shepherd, show me how to go" and "O'er waiting harp-strings of the mind," struck me as being prayerful, simple, dignified, and grand, and, therefore, appropriate to the beautiful words.

We remained after the Wednesday evening meeting to practise them, and it was a loving and joyful practice: we all seemed to realize that this addition to our Hymnal was another step in advance.

Yours sincerely,
E. Y. STEELE.

Pleasant View, Concord, N. H., September 21, 1905.

Dear Leader:—I have read the sixth and seventh chapters of John, which you pointed out to me this morning, and here is one of the lessons contained in that Scripture for me: At a time when the disciples were hungry, they bethought them of the probable hunger of the multitude, and becoming anxious in their behalf, they besought the Master on behalf of the people, and when he said to them, "Give ye them to eat," they understood him not. Then when he prepared the meal for the hungry hundreds, he did not tell his disciples to *eat*, but to *serve* those waiting to be fed; and *afterwards*, when the multitude was satisfied, he told the disciples, not to eat their supper, but to gather up all the fragments, and they "filled twelve baskets," which may mean that they found their own want satisfied in obediently serving, and then each had a *basket full* that might be taken away for future use, consisting of the parts (broken bits unpalatable to the multitude, but savory to them, now that they had begun to understand him); so that by their fidelity to his word they found they were much better off. Hence our work is to hear, heed, and follow; thus shall we be blessed abundantly.

Faithfully your student,
GEORGE H. KINTER.

Testimonies of Healing.

After eighteen years of suffering, from what the doctors pronounced a complication of incurable diseases, my attention was called to the healing of several cases of physical diseases by Christian Science. Being ever watchful of the spiritual welfare of the dear ones committed to my care, it seemed an imperative duty that I should know if there was anything in this wonderful power that would injure those whom I must soon leave, according to the verdict of many physicians. With a prayer to God to keep me from any wrong influence, I began the study of "Science and Health with Key to the Scriptures" by our beloved Leader, Mrs. Eddy, and as I studied, comparing its statements with those of the great Master, Christ Jesus, light began to break in upon my thought, and great peace, such as I had never known, came to me. I was so full of joy that I voiced it to every one who came in, and was surprised that no one was glad, except my two little daughters, who were my willing assistants when I was not able to read for myself.

At that time I did not understand clearly the teaching of Science and Health with respect to physical healing, and my troubles seemed to assume an acute form. I then called a young student, who never failed in his faithful work for five months, and one day in early spring the power of the Word was verified. I sat alone, thinking of the beautiful teachings of Science and Health, and I said aloud, If this be true, I am well now. For a moment my whole thought was filled with the light of Truth and Love, and I arose from my chair, healed! I went about my home duties, to the amazement of all, save the two little helpers. That was seventeen years ago; since then I have had many wonderful proofs of the loving care and the power of God to bless and heal.

With ever grateful love for the untiring efforts of our dear Leader, I pray that a true life may be the evidence of my appreciation.—MRS. FRANCES A. FOX, Wolfboro, N. H.

When in Malta, at the beginning of last March, I first heard of Christian Science. I was then in a weak state of health, having suffered from Mediterranean fever, accompanied by a disease of the knee, the preceding summer. I was an invalid for two months, but in September I was able to return to my duty. I still continued to take tonics, *et cetera*, but up to the time I first heard of Christian Science, I had not regained my health, and had become quite convinced that I could not do so until I returned to England. One day, however, Christian Science was brought to my notice through a messmate, who knew a lady at Malta that was a Christian Scientist. When he explained that Christian Science is the practical application of the teachings of Jesus, especially as regards the healing of the sick, I never for one moment doubted its truth. I had never understood the Bible, and until explained in Christian Science, Jesus' saying, "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do," was absolutely puzzling to me. My messmate and I decided to send to London for the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and in a few days it arrived. I at first found it difficult to read, but gradually and surely I began to grasp its meaning. It was delightful to learn that sickness is unreal,—only an erring belief. I had always felt that if God is good, it was strange that His likeness should have to suffer sickness, and that there must be some reason why such was the case; but in Christian Science all is explained. Gradually I found my health improving, and I wish to state that the reading of Science and Health has been the sole means of complete restoration to health, and to-day I enjoy such health as I do not remember ever feeling before. From the very beginning I gave up all tonics and medicines, and have never used any since.

Digitized by Google

For four months (with the exception of a few *Journals*) the only Christian Science literature I read was our text-book, and until I returned to England, in June last, I had never met a Christian Scientist. Shortly after my return, I visited the Reading Room of First Church of Christ, Scientist, in London, and there I was deeply and helpfully impressed by the wonderful kindness of all with whom I became acquainted, and I have learned to understand better what helps we can be to one another.

No words can ever express the debt of gratitude I owe for being brought into the knowledge of the truth. I am very thankful to God that through Mrs. Eddy the way has again been pointed out for mankind. It only remains for me to reflect divine Love in my life, and earnestly strive to obey Christ's commands—preach the gospel, heal the sick. The aid Christian Science has already been to me has far exceeded my highest hopes, and I know it will continue to do so increasingly. I little thought at first that there was much in its teaching beyond physical healing, but to be able to apply it to whatever one does is such a sweet comfort, to feel and to know that God is omnipresent to protect—"lest thou dash thy foot against a stone,"—and to have the peace and happiness which pass all understanding, I scarcely thought possible in this life.

Two undesirable conditions I have noticeably lost, nervousness and fear, for which I am especially grateful. Truth has also overcome seasickness and several minor ailments. I should like to relate one incident which to me is a proof of the truth of Christian Science. I fell from the back of a horse, galloping at his topmost speed, without being hurt, except for some slight bruises which very soon disappeared. On the same occasion I was able to ride for the rest of the afternoon with little discomfort. My friend, who started to investigate Christian Science when I did, has accepted the truth, as did another messmate two months later. They also are deeply grateful.

WILLIAM H. COOMBER, H.M.S. "Good Hope," Portland, England.

For six years I was a sufferer from nervous prostration. In the fall of 1900 I had a very severe attack of palpitation of the heart. A physician was called, and after the examination I was told that the heart made one hundred and eight beats a minute. I could eat but very little. I tried different physicians, and everything else that I could hear of, but with only temporary relief. In December, 1903, I heard of Christian Science, but did not become interested at the time. I grew worse all the time, and was not able to take care of my household duties. Then I was ready to give up my medicine, but the next morning I was unable to go to a practitioner, and I asked my husband to do so. He saw the practitioner and she promised to help me. I began to improve from the very first treatment. I could eat anything without distress, my strength returned, and I could do all my work, for which I am very grateful. The Bible means much more than ever before, through the study of our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. I am grateful for all the Christian Science literature; it is a great help in every way. I have been a student of Christian Science less than a year, and my husband has also taken up the study. I am grateful to God, and also to our dear Leader.

MRS. M. E. JENKINS, Decatur, Ill.

I was undressing my three-year-old boy for bed, when suddenly he stumbled and fell against the hot stove, striking it with his bare leg, his arm, and the side of his face. Involuntarily I cried out, but the child did not scream, and his sister immediately declared, "Brother can't be hurt." A little Christian Science friend, who was present, also declared the truth. I gathered my boy up in my arms, and the first words he said, were, "Love is all power. Say Christian Science, mamma." I then began repeating the 91st Psalm. He clung to the words, "Thou shalt not be afraid." "He shall call upon me, and I will answer him." "I will be with him in trouble," and there was such a sweet, trustful look on his baby face; he did not seem to doubt a word of it. He went to bed, repeating our Leader's prayer for the little children (Miscellaneous Writings, p. 400), and saying over and over again the last lines. His sleep was undisturbed, and he seemed to suffer no pain whatever. There was no mark or scar left, simply the black from the stove, to tell of his experience.

I could not express the joy this demonstration gave me. How sweet the little child seemed to us next morning, and how loving and tender we felt toward him. It indeed proved to me that "the standard" of Truth was uplifted against the enemy and that spiritual joy is infinitely greater than any pleasure the senses can give. I felt that the demonstration was given me as a reward for the faithful study of our Lesson-Sermon, and for striving to impress upon the children the truths contained therein. It is my hope that this demonstration may reach some mother who has not yet learned of Christian Science, and who perhaps suffers as much, if not more than one of her little ones, "when the enemy shall come in like a flood,"—that is, when one of her little children is in distress and material means prove powerless.

Thanks to dear Mrs. Eddy, and thanks to those who are contributing their experiences to the *Sentinel* and *Journal*.

MRS. ROSE B. WHEELER, Oklahoma City, Okla.

Christian Science is very dear to me, as it has brought back my sight which was fast leaving me. When a friend came to see me one evening, my condition was such that I was kept from the light and was blindfolded. She kindly told me how she had been healed by Christian Science, and I decided to try it for myself. This was on Monday night, and she took me to a practitioner the next afternoon, with my eyes all bandaged up and colored glasses on. I received treatment, and went home without the colored glasses. The next day my sister took me for another treatment and the third day I went by myself. It is five years since this took place, and since then I have had a great many demonstrations with my little ones. I could write much more, concerning the benefits I have received through Christian Science.

I cannot be too thankful to Mrs. Eddy for giving us this truth.—MRS. MARY E. MUNDT, Washington, Ia.

I would like to express my gratitude to God for Christian Science. While I am taking only the first steps, yet through the understanding of Truth I have been healed of rupture, quinsy, and bronchial trouble of long standing. I am very thankful for the physical benefits received, but through Christian Science I have been spiritually helped out of a condition of hate, fear, and dread, to a realizing sense of God as Love, that divine Love can and does heal, and into my life has come a sense of peace and rest that I never expected to realize. I wanted and expected instantaneous healing, and had a hard lesson in patience to learn before I saw that I was looking for results without being ready to receive them. I am very grateful to our dear Leader.

MRS. EMMA F. JONES, McLeansboro, Ill.

For years I suffered physically and mentally, till this condition terminated in nervous prostration. I had heard of Christian Science, and had read Science and Health, but it did not then seem to be of very much benefit to me. I will not try to describe my sufferings,—the long sleepless nights, when it seemed as if my mind would certainly give way under the strain of nervous forebodings, and I at last turned to Christian Science in desperation. Then,

Digitized by Google

when the wondrous beauty of this truth poured in upon my awakening consciousness, it seemed to touch with new life every fiber of my being. Physical health was no longer the main object of my seeking,—it was rather to learn of the deep things of God. I may still have some battles to fight, but I have learned that each trial of my faith in God has been the stepping-stone to higher understanding. This testimony is an expression of gratitude to God, and to our beloved Leader.

MRS. CANDACE GAMBLE, Brandon, Wis.

When I first heard of Christian Science I was in bondage mentally and physically, but was not quite ready to turn to God, so I kept on in the old way, hoping for health and happiness, though all the time I felt and knew there was a better way. I was at this time under medical treatment, and was advised to become a physician, but when I asked for help and was told that only time could effect a cure, I turned to God through Christian Science and found relief. As my thought was awakened and I became conscious of the omnipotence of God, Love, I was healed. All that I am and all that I have, I owe to Christian Science. Many times the way has seemed rugged, but Truth has always been the victor. I am deeply grateful to God, and to His messenger, Mrs. Eddy.

GENA N. DORSEY, Brookline, Mass.

Last summer, when in the woods transplanting a fern, which happened to be in the midst of poison-ivy, I cut my wrist, but did not think anything of it at the time. Before long, however, my wrist and hands became very much inflamed, swollen, and blistered, and of course greatly irritated. At that time I had a number of mosquito bites, and they also became inflamed. Instead of using material remedies, I went to a practitioner for Christian Science treatment, and the result was that all the inflammation disappeared, and in a very short time my hands were perfectly well.—M. LOUISE CARROLL, Toronto, Ont.

Before I came into Christian Science, my heart was troubled very often with the thought that my profession of Christianity was anything but satisfactory. I knew well that I did not have the peace of which Jesus spoke. Ten months ago, through Christian Science, I found the peace for which I had been looking, although for some years I had given up trying to find it. My heart is full of gratitude to God, and to our dear Leader who made it possible for me to see and understand in part God's great love to man. I did not come to this Science for the physical healing, but I very soon found that sickness is no more of God's creating than is sin, and that both have to be destroyed. With four children I found plenty of work to do, as one ailment after another presented itself. Bronchitis, scarlet fever, measles, stomach trouble, earache, and chicken-pox have been met and overcome by the truth. In the case of scarlet fever, I found myself afraid, so called in a practitioner. The child was up and dressed every day, with no bad symptoms except a sense of weakness, which gave way at the third treatment. The practitioner handled contagion so well that none of the others took it, although they were always together. Seeing one disease after the other go out under the blaze of Truth, has given me a clearer and firmer understanding of God's allness. There are many other demonstrations I could give, for I utilize this Science every day and for everything. My prayer is, that my life may prove my gratitude to God, to Jesus the Wayshower, and to our dear Leader.

LIZZIE GAMMIE, New York, N. Y.

It is now fourteen years since I was healed by reading "Science and Health with Key to the Scriptures" by Mrs. Eddy. From childhood I was always considered delicate, and as I grew up I had a lame side and sick-headache which troubled me once or twice a week. I had also another ailment, for which I never went to a physician, as I dreaded the thought of taking medicine. I am happy to say that all these troubles have disappeared by reading Science and Health, and words fail to express my gratitude to Mrs. Eddy, its author, for the many blessings I have received through Christian Science.

MRS. O. W. INGERSOLL, Fergus Falls, Minn.

After two weeks in a hospital, the result of appendicitis, I suffered greatly from having had the afflicted parts frozen, —a new and supposedly scientific form of treatment. I had continual pain in my right side, and the doctor told me all the organs had grown to that side as the result of my treatment in the hospital. I was treated for this condition, but did not grow much better. Later, the digestive organs became involved, and the duct leading from the stomach to the bowels became so inflamed that no solid food could pass through it. This caused me intense agony whenever any food, solid or liquid, was taken into the stomach. My only relief came from opiates, and a friend, who was not a Christian Scientist, urged me to try Christian Science, and, thank God, I was healed in the first treatment, eating a meal of solid food the same evening. The doctor had said I must not go out during the cold weather, but, although it was February when I took the Christian Science treatment, I went out every day and in all kinds of weather. I took about seven treatments at that time, as I wished to learn more of this wonderful truth and get rid of my fear, which was great. I was also cured of life-long constipation, and have enjoyed almost perfect health for the year I have been in this Science.

I cannot express my thankfulness for all Christian Science has done for me. It has been a great help and comfort to me in many ways, and I am truly grateful to God, and to Mrs. Eddy for this wonderful truth. I study the Lesson-Sermon almost every day and find this a great help.

MRS. H. B. WADE, St. Louis, Mo.

It is now almost four years since I became interested in Christian Science, and it has brought me many blessings. I have been healed of indigestion, of constipation of many years' standing, and of ear trouble. This latter ailment, which was quite serious, was entirely overcome through the application of Christian Science, and has never returned. Sick-headaches and other physical troubles are also gradually disappearing. While I rejoice in the physical healing, it is the very smallest part of what Christian Science has done for me. For the spiritual awakening, for the better understanding of God and the Bible, gained through the study of Science and Health, I am unspeakably grateful to our beloved Leader.—BERNICE F. BARKER, Chicago, Ill.

The teaching of our text-book, that to divine Love there is no sin, sickness, or death (Science and Health, p. 567), came to me as a message from God, when two of my children were attacked with scarlet fever. When they came in from school one night they complained of sickness. After I treated them, they seemed much better, but during the night other symptoms appeared, and in a few hours the fever was raging. We held firmly to God as our present help, and tried to see them as God's children, not ours. The eldest child's condition became very bad indeed during the second night, and fear seemed almost to overwhelm me for a while. At this time my husband came to the

Digitized by Google

bedroom door, and I told him that fear would creep in. He answered me, "In Love is peace; I will pray with you; just know we have God with us." In a very short time I was helped to rise above the fear. The next morning I asked a Christian Science practitioner to help me; she told me that I must report the cases to the medical officer. We did so at once, and the officer came and pronounced it to be scarlet fever. He advised us to have the children removed to the sanitorium, as he thought the elder girl's condition serious. After some consideration we decided that they should go, and the doctor telephoned for the fever van to be brought at once, but for some reason it did not come that day, and we had the unspeakable joy of seeing the children improve in a most wonderful manner. That night they slept, and in the morning they were bright and happy. The doctor, having to pass our house on his rounds, called in, expecting that the children had gone to the sanitorium. He saw them and was much surprised to find them so very much better. The throat he was so anxious about, only the day before, was quite well. Here words utterly fail me to express what we felt of Love's power and presence. In the four days the children were healed. When the van did come they were sitting up in bed enjoying themselves, and told me they were "well and wanted a good breakfast," which was given them. They asked why they should be sent away, now that they were healed. They were told that as Christian Scientists we must be law-abiding, and that divine Love controlled all. We received little letters from them almost every day, saying they were quite well and happy.

My gratitude cannot be expressed in words for the help received through this experience. It did not leave me where it found me; many valuable lessons were learned.

MRS. HARRIET MASON, Manchester, England.

Five years ago Christian Science healing was introduced to me by way of relief from seasickness. I then had little knowledge of its true power and value, but gave it a trial during a four-weeks voyage, the first week of which conditions seemed worse than ever. After that, I had three delightful weeks at sea, and for the first time was sorry when the voyage was over. Many times before, this journey had been taken with continued illness all the way. I usually needed help to get dressed and on deck. On the return journey I was quite well and enjoyed it. This, however, is the least of my healing; a year ago Christian Science treatment removed a stone from my kidney about the size of a sparrow's egg. For fifteen years I was accustomed to undergo terrific attacks of pain, lasting about twelve hours at a time, and I would be ill for a week. These were more frequent during the winter, three or four always coming during that season, or whenever I got a seeming chill at any time. The kind attention of leading medical men, both in Australia and India, had failed to remove the difficulty permanently.

Living away from a practitioner,—some distance up country, where telegraph communication was difficult,—my healing appeared slow. I found that instead of having treatment when the error was manifest, my best course was to have continued treatment, with the result of complete healing. I may add that most of my treatments were absent ones. In exchange for a very small fee indeed, I have received—in place of fear and pain—contentment, happiness, and health, and a wealth in that little book, Science and Health by Mrs. Eddy, that I value beyond any possession to be obtained on this plane of existence. I cannot express my gratitude and thankfulness enough to our Leader, for this truth. My greatest aim is to gain a fuller understanding of Christian Science and help others. In the words of Swinburne,—

> To fill this worn old world with spring,
> And heal its heart of pain.

NED WATSON, Melbourne, Australia.

The comfort and strength which I have derived from the messages of hope in the *Sentinel* and *Journal*, and coming from those who had been healed of suffering similar to mine, prompt me to send my testimony. Four years ago I turned to Christian Science as a last hope. Five years had then been spent searching for a remedy for a muscular disease of the eyes, for which two operations had been performed by an eminent oculist, with the result of only temporary relief. This oculist told me I would always have to wear glasses for astigmatism, even if the other trouble were relieved. During this search for health I spent six months in a sanitarium, hoping through the treatment to find my health, but all of no avail.

Through the aid of a Christian Scientist, these difficulties were met in one week, my glasses never being put on after the first treatment. This freedom from years of bondage and suffering, when I could neither read nor sew more than a few moments at a time, brought such joy that I felt I should never fear again. Greater than all else was the comfort of finding God a living, loving presence, whom I dared to prove and trust in proportion as I lived the truth.

It soon became apparent, however, that there was more work to do before perfect freedom was gained, and it required three years of faithful work, with occasional help from a practitioner, to enable me to overcome chronic constipation, and to know my dominion over it. This disease had been fastened on me when a child through a long siege of inflammation of the bowels.

One of our little sons was born under Christian Science treatment, and I was enabled to be up the day he came and to be down-stairs in four days. Christian Science has given me unspeakable comfort in bringing up my children. It delivers from the bondage of temper as nothing else can. Measles, chicken-pox, whooping-cough, croup, and other ailments have yielded to the power of Truth in a marvelous way.

I feel that the only way to prove my gratitude to our Leader for the great light I have found is to be more consecrated each day in striving to bring into the lives of other sufferers what has been brought into mine.

MRS. EDNA W. THIELENS, Peoria, Ill.

I feel grateful to God, and to Mrs. Eddy, for Christian Science. I have been healed of extreme nervousness and astigmatism. I had "lords many," but with the understanding gained by the study of the Bible and Science and Health, they are being destroyed. This Science has shown me how to prove that God is a very present help in all trouble. I realized from the first that it was the truth.

MRS. LINA APPLEGATE, Denver, Col.

Changes in the Hymnal.

In future editions of the Hymnal new music will be substituted for that now used for Mrs. Eddy's hymns, 161, "Shepherd, show me how to go," and 179, "O'er waiting harp-strings of the mind." Words and music not heretofore published in the Hymnal will be substituted for 163, 180, 183, and 184.

All the above hymns with the new music will be furnished in suitable form for pasting in old Hymnals, at the following prices: 1 to 25 sets, 5 cents per set; 25 or more, 4 cents per set; 100 or more, 3½ cents per set.

Mrs. Eddy's hymn, "Christmas Morn," with the two present settings printed on one sheet, will be furnished for insertion in copies of the Hymnal which do not contain it, at the following prices: 1 to 25 sheets, 2 cents per sheet; 25 or more, 1½ cents per sheet; 100 or more, 1 cent per sheet.

When inserting the first six hymns mentioned, the old ones should be cut out and the new ones pasted on the stubs.

Send orders to THE CHRISTIAN SCIENCE PUBLISHING SOCIETY, 250 Huntington Avenue, Boston, Mass.

From our Exchanges.

We live in a time of strong controversy over all the greater issues of life. The most passionate tempest of all beats on the Bible. But this wondrous Book breasts all the raging billows of theological agitation. Churches rise and wane, sects have come and gone, schools of thought have been created and superseded, systems have been evolved and extinguished; and in the midst of all, this monument of inspiration and embodiment of revelation remains intact as when first the complete Canon was sent forth. It has been forcibly said that the Bible is the incarnation of the Holy Spirit. The world at last seems to realize that in it there is something invulnerable and imperishable. It is the Gibraltar of truth, on which storms of opposition can only beat themselves to death.—*The Christian Commonwealth.*

There comes a report from England that the five Methodist denominations there—the Primitive, New Connexion, United Free, Wesleyan, and Bible Christian—will perhaps, in another year, be united into one body. Action agreeable to this proposition has been taken by all the Conferences, and it is probable that an act of Parliament will allow the consummation. Such an amalgamation and unity will be something to be devoutly wished for, and will have its effect in this country, just as the bringing together of the several Methodisms in Canada has had. Unification and consolidation for the purpose of greater efficiency and the realization of a larger fraternity are in the air, and represent what we believe to be a Divinely inspired movement.

Western Christian Advocate.

A worldly Christianity is in contempt even with the worldling. There is always in man, even when he is least a man, the recognition of the worth of truth. The unclean man at heart acknowledges the nobility of the pure life. A religion which he can drag down to his own level, which he can make subservient to his own desires and tempers, which presents no heights, no future, by which out of his lower self he may climb to a higher self, such a religion cannot attract any man, nor claim the loyalty of any soul with a spark of virtue in it. The reason why Christianity has so strongly appealed to the noblest natures is because of all religions it is the most unworldly.

The Christian Advocate.

The world is hungry for faith. Do not doubt this for a moment. More men and women to-day would rather believe in the few fundamentals of the Christian religion than have any other gift that lavish fortune could bestow on them. But these millions want to *believe;* they do not want to argue or be argued at. They want to believe so utterly that their faith may amount to knowledge. Doubtings are disquieting. We want certainty, we laymen.

The Universalist Leader.

A new age of faith is coming and a new revival of religion will take place, when the religious instincts of holy souls turn with gladness to the new knowledge and put first of all the truth, so long seen through a glass darkly, but never fully acknowledged, that the eternal wisdom, which makes of holy souls friends of God and the prophets, has never been absent from those who are teachable and obedient.

The Christian Register.

It is a mighty business we are in as Christians, and we ought to esteem it above any power we will ever possess to express the magnitude and glory of it. Hence, we should not only strive to develop to the highest efficiency our powers, but to direct them in the very best way for the accomplishment of the highest purpose.—*Pacific Baptist.*

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to The Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of The Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to The Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number, or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth), each, prepaid 2 25
Twelve or more books to one address, each, prepaid 2 00

Morocco, limp, round corners, gilt edges, convenient for pocket, each, prepaid 4 00
Twelve or more to one address, each, prepaid . . . 3 75

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5 00
Twelve or more to one address, each, prepaid . . . 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

250 Huntington Ave., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,
Associate Editors.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.

Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month.

The date of expiration may be found on the address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

President Roosevelt on the 18th began a tour through the Southern States. Everywhere he has been royally and cordially received. At Atlanta he was given a reception, such as has never been extended to a President or any other honored guest in Georgia. It is estimated that there were more than 100,000 people there, from all parts of the State and other States, in addition to Atlanta's population. His visit was responsible for the first public appearance of Joel Chandler Harris, better known as "Uncle Remus," of whose writings the President is a great admirer. At the luncheon at the Piedmont Driving Club President Roosevelt called him forth from the crowd and insisted upon his taking a seat by him.

It is announced at the Treasury Department that it is the intention of the Government to sell bonds to secure funds with which to construct the Panama Canal. The total amount of the bond sales will be $135,000,000, and $60,000,000 of this will be covered into the treasury to wipe out the deficit. This amount has already been expended by the treasury. One of the first acts of Congress will be to pass a resolution correcting an error which prevents the sale of these bonds until there is some legislation on the subject. They will be sold in lots of $25,000,000 and the bonds will be delivered in small lots and paid for, the interest to begin when the bonds are actually sold.

It is considered probable that the President in his address to Congress will recommend the creation of a new department, the Bureau of Insular Affairs, and the appointment of a new cabinet member. This will be the result of a state of affairs which dates back to the conclusion of the war with Spain. At that time the control of the new possessions was placed in the hands of the War Department, since those possessions were under military control. Cuba, Porto Rico, and the Philippines were first governed by military rule and then by a composite of military and civil government, in which there was frequent friction.

When the gates of the Lewis and Clark Exposition closed on October 15, a total attendance of 56,960 for the last day of the fair had been registered, making the grand total attendance for the entire fair period 2,545,509.

A jury in the land fraud case at Portland, Ore., last week returned verdicts of guilty against two more men charged with conspiracy to defraud the United States of a part of its public domain.

Foreign.

The State Department made public on October 14th the invitation of the Russian Government to a second conference at The Hague, and the President's response. These take the shape of two memoranda, one dated September 13, being an unsigned memorandum delivered by Baron Rosen to the President at Oyster Bay; and the other a memorandum, dated October 12, also unsigned, delivered by the President to Baron Rosen in Washington. The first memorandum is a mere recital of the opportuneness of another conference, with the promise to submit a detailed programme by Russia when the congress meets. The President's memorandum is a hearty acceptance of the invitation, and directs attention to the fact that his previous circulars to the Powers appeared to be precisely in line with the Russian papers.

The fine new thoroughfare formed by Kingsway and Aldwych, connecting the Strand and Holborn through the heart of congested London, was opened October 18 by King Edward with considerable ceremony. The new street is considered to be the most important improvement carried out in the metropolis since the construction of Regent Street in 1820. The work occupied six years and cost over $30,000,000, of which it is estimated that two-thirds will be recovered by the sale of building sites. The thoroughfare is three-quarters of a mile in length and a hundred yards wide. The notorious slums of the neighborhood have been eradicated. Underground trolley cars run beneath the new street.

The final payment on the latest Japanese loan of $50,000,000, financed in this country some three months ago, was payable October 16. It amounted roughly to about $40,000,000, but inasmuch as a great number of subscribers availed themselves of the privilege of paying in full on the first call, the final payment hardly exceeded $17,000,000.

The German Naval League, with its 600,000 members, is said to be moving vigorously for a new naval programme that shall greatly increase Germany's defensive resources.

The Yasuda Bank of Tokio proposes to add a trust department to its business, to facilitate the introduction of foreign capital into the country.

Industrial and Commercial.

The Amerika, the latest vessel added to the Hamburg-American fleet, just arrived in New York, is regarded as the most luxurious and largest vessel now afloat. Some of her chief characteristics are: Equipment with the Lloyd-Stone system of water-tight doors, which are all automatically closed from the bridge by turning one handle; great steadiness, owing to her immense displacement; submarine bell signals, automatic fire extinguishing apparatus; wireless telegraphy; balanced engines and no vibration; ventilating system to automatically change the air every few minutes; hot and cold fresh water throughout the ship; three ample promenade decks, the upper known as the Kaiser, the one below it as the Washington, the next beneath as the Roosevelt, and the one beneath that the Cleveland. The vessel has accommodations for 3,057 passengers, her crew complement being 520. The Amerika's length is 687 feet, breadth 74 feet 6 inches, and depth 53 feet, displacement 42,000 tons, gross tonnage 23,000 tons, and carrying capacity more than 16,000 tons of cargo, equal, it is stated, to the load of ten miles of freight cars.

In Shanghai, China, there are six companies operating flour mills, and as two of these own double mills there are in reality eight in active operation. The erection of a ninth mill has just been completed, and the machinery, which is in part American and part English, is now being installed. This mill, it is reported, will begin work in the near future, and its output, it is estimated, will amount to seven hundred barrels a day. Of these eight mills, all are owned by the Chinese with the exception of one, which is controlled by both foreign and native capital. The mills are operated under foreign supervision. The combined output of the eight mills is three thousand barrels a day.

The International Harvester Company of America has purchased the Vulcan Works, near Noorkoeping, Sweden. A Swedish corporation will be formed to manufacture harvesting machinery.

General.

A correspondent in the *New York Post*, writing on a possible substitute for the mariner's compass, says it is proposed to maintain in rotation, by means of an electric motor, a heavy-rimmed wheel, mounted in gimbals. He says: "When the rate of speed amounts to three thousand revolutions per minute, or thereabouts, the plane in which the ring revolves will maintain itself constantly in one direction. If the navigator starting from the port of New York were to set the wheel of the gyroscope revolving in the plane of the meridian, it would continue to revolve in that plane with great regularity. An ordinary compass could be compared at intervals with the fixed directions marked out by the wheel of the gyroscope, and so the error of the compass could be 'checked up' from time to time. This is the conservative prediction, making the gyroscope useful as an auxiliary, to secure greater accuracy. This is not merely a theoretical proposal. Tests have been undertaken at the instance of the German naval authorities on board the war-ship Undine, lasting two days, and made with a view to determining with what accuracy the gyroscope shows alterations in the ship's course, and how well it would stand violent concussion. The result of these tests, the American consul reports, was the acknowledgment by disinterested parties that no inaccuracy arises in the instrument on account of the earth's rotation, that the angles of changes of course are shown with the greatest exactitude, and that shocks or vibration which would render a compass inaccurate or even useless have no effect upon it."

In the recent international race for the Vanderbilt Automobile trophy, a French car, an 80-horse-power Darracq, covered the course of 283 miles in an elapsed time of 4h. 36m. 8s. The Automobile Club of France, which conducted the race in France last year attended by so many fatalities, will not accept the cup, owing to the decision which that disastrous race led the club to adopt. The representative of the club hopes it may be turned into "a trophy for a great touring event."

The Pennsylvania Railroad is about to place an order for 1,500 steel passenger cars. Their use will eliminate the telescoping of cars as well as reduce to a minimum the possibility of fatalities. The management will use a part of them in operating their many limited fast trains between New York and Pittsburg, while others will be built for suburban service. The cost will be about $7,000,000.

The traffic record of the Sault Ste. Marie ship canals is beyond all precedent this season. Up to October 1, freight to the amount of 31,947,443 net tons had been carried through the waterways since the opening of navigation this year, compared with a movement of 20,089,664 net tons during the same period of 1904.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

Advancing Conditions.

C. W. CHADWICK.

THE immature thought of many students is doubtless responsible in no small degree for prevalent misconceptions which tend to prejudice people against Christian Science and to blind their eyes to a just recognition of the great good it is accomplishing throughout the world. In his over-anxiety to have his friends share the peace and happiness that have entered into his own life, and actuated, perhaps, by the novelty of the "new tongue," he too often ventures upon the quicksands of inexperience by attempting to explain certain abstract statements, the truth of which he has not proven and consequently does not fully understand.

The natural inference, especially on the part of those not inclined to hear of anything beyond the range of the physical senses, after listening to such premature discussions, is that Christian Science is not at all practical, not at all adapted to meet the every-day needs of humanity, and can we wonder that such is the case? Although their statements may be correct in premise, it is oftentimes overlooked, by outsiders and by students themselves, that they are dealing with absolute truths, which cannot be rightly comprehended from a purely intellectual standpoint, but must be understood by degrees, through earnest and continued effort to spiritualize thought and action. The constant application and practice of its rules can alone elucidate Christian Science, and nothing else will ever make us its practical and effective representatives.

Another most important point, often overlooked, is that there must be a willing mind to receive even the first faint lispings of scientific thought,—the soil must be prepared to receive the seed, else one's most sincere and honest efforts to expound metaphysical propositions are liable to be misjudged or even maligned. The problems to be worked out in every-day life are clearly defined in the Christian Science text-book; and as in mathematics we cannot expect to understand cube-root before we do multiplication and division, so in Christian Science we need to begin with the simplest problems, and to know that if we understand the Principle and apply its rule we shall ultimately be able to solve the greater ones.

Every sinful or erroneous thought overcome, is a step heavenward, and it is a prime essential to our growth that we do not ignore or undervalue the resultant improved beliefs and conditions, for they evidence to the world the advance of Christ's kingdom on earth. How have they been wrought, is the important question to be settled, for, until each individual understands the one absolutely correct standpoint from which to reason, and to demonstrate the power of Truth to overcome error, he will necessarily fail to give God the glory, and will find his door closed to further recognition of spiritual truths. Argument alone can never demonstrate a statement of eternal truth or make it a realized fact. Not through believing that there is no matter, sin, or death, but through understanding scientifically the allness of God, good, do we bring about improved conditions for ourselves and for others. One single demonstration over sin or disease from the standpoint of the supremacy of God, absolute good, should settle forever the vexatious problem of the origin of evil to the one who makes it, and be prophetic of higher demonstrations, yea, of the final conquest over all belief in evil. While it is just as true to-day as it ever will be, from the standpoint of true metaphysics, that matter is but a figment of false sense, alias, the mortal mind, and therefore unreal, the understanding of this truth can be attained only by degrees and through spiritualization of thought. A material sense cannot explain or understand the unreality of matter, any more than one mistake can correct another. It is a positive knowledge of what is right and true that can reveal the nature of what is false and untrue. The correction of some mistaken belief, the abrogation of some asserted mortal law, is a step forward, though it may not be the immediate realization of absolute conditions.

The learned censors of Christian Science will accomplish nothing for humanity so long as they are content to quibble over its letter, and to ignore the practical benefits that accrue from a demonstrable understanding of its truth. There is little hope for the individual who stubbornly refuses to try to apprehend the Principle of Christian Science healing, and who criticises and condemns its teaching, oftentimes without even opening the covers of its text-book. The only consistent attitude of thought is one that will acknowledge the improved conditions that are in evidence among Christian Scientists, and be willing to find out how these changes have been brought about. The wisdom of mortals will argue after this manner, If there is no such thing as material sight, then pluck out your eyes and throw them away. Christian Science demonstrated is a law of restoration and readjustment, and, instead of robbing man of his sight, it gives him better sight; it gradually instructs individual consciousness to discern the great spiritual fact, that man's true sight is spiritual, not material, and that the same law is applicable to all bodily conditions. This discernment is at first manifested in what our Leader designates as an improved belief (Science and Health, p. 442, lines 23 to 25), a condition or state of consciousness between the discord of finite human sense and the perfect harmony of absolute reality, to be attained through further purification of thought.

The Christian Scientist has no indefinite or uncertain goal, but he lays no claim to having already reached ideal conditions. He has simply been shown the one and only way by which to overcome evil with good, and, like the student in mathematics, he begins to apply the rules which one wiser than himself has laid down for the solution of the varied problems of earthly existence. His heart is full of gratitude to God, and to the Discoverer and Founder of Christian Science for her untiring efforts in making this great work of redemption practicable to the whole world. He is content to take one step at a time, and to look to the future for the attainment of absolute conditions; but is meanwhile profoundly grateful for the numerous blessings of divine Love, manifest in the healing of all manner of

Copyright, 1903, by Mary Baker G. Eddy.

Digitized by Google

disease and in the overcoming of worldly desires and tendencies.

It is the province of every true Christian to follow in the footsteps of the great Master, and, through patience and perseverance, to win his way to heaven, the consciousness of absolute good. It took the Saviour thirty-three years to reach this goal, and it is reasonable to suppose that his followers will find it a gradual process and not a sudden transformation, here or hereafter. It is the daily improvement of the individual and of society in general of which the world is in need, and Christian Science is meeting this need. Improved beliefs, expressing better moral and physical conditions and an increasing desire for spirituality, greet us on every hand, and they are the natural outcome of the rediscovery of Christian healing in this age.

Christian Scientists have a perfect ideal to work from, a perfect creator and a perfect creation from which to draw correct conclusions concerning the reality of being. When all professing Christians learn to think and to work from this standpoint they will understand Christian Science and will heal the sick in obedience to the Master's command, and thus reveal the kingdom of heaven on earth. It is an undeniable fact that thousands of the world's best people have been healed by Christian Science of so-called incurable disease, and their influence is being felt on all sides, for they are not only learning to control and safeguard their own bodies with healthful, life-giving thoughts in the way mapped out by the Saviour, but they are helping others to understand and to do likewise. Love, purity, and good-will now dominate their thinking, where malice, hatred, jealousy, dishonesty, and kindred thoughts once held sway. They are beginning to realize the practical import of the Golden Rule and to obey that most important injunction of the Master, "Seek ye first the kingdom of God, and his righteousness." Having proven in a degree the omnipotence of good in the healing of physical ailments, they have begun for the first time to understand what they have for years believed, that "with God all things are possible," and this enables them to rely confidently and implicitly upon divine Mind for health and strength, and these demonstrations of the power of Truth are commending Christian Science to the world. It invites comparison with other systems, in full assurance that it is already demonstrating for humanity more practical and comprehensive results than have even been promised by other systems. True metaphysical healing will alone satisfy the needs of humanity, in that it deals with causation, thus laying the axe at the foot of every tree of error, and thereby healing the moral fault which is so often the direct cause of disease.

God speed the day when professing Christians will no longer be disposed to condemn that which they do not understand, but will lend their influence in arousing a dormant world to the fact that Christian Science is all that is claimed for it, an exact and comprehensive statement of the Science of Christianity to this age. True Christian honesty and sincerity will demand that they judge it alone by its fruits, and rejoice in every improved belief as evidence of Truth's corrective influence upon human consciousness. Only as we learn to be truly grateful for our most humble attainments, and to give credit where credit is due, shall we ever attain to the stature of perfect manhood in Christ, and realize our spiritual at-one-ment with God, good.

An Allegory.

Behold, the kingdom of God is within you.—LUKE, 17: 21.

G. C. C.

AN uninteresting looking pebble was placed in a bag with a number of others of the same kind, differing only in shape and size. This pebble was comfortably satisfied with himself, because he felt that he was quite as good as his neighbors, until one day, when he was removed from the bag and saw near at hand the most beautiful stone he had ever seen, clear and transparent, reflecting the most exquisite hues. It was then that he became much dissatisfied, and a strong desire took possession of him to become like the beautiful stone, which he afterwards learned was a diamond. With this desire constantly in view, he prayed night and morning, believing that God could bring about the transformation; but when at the end of a year he could perceive no change, he stopped praying, having lost faith in his petitions. He was in this faithless, dissatisfied condition, when, on a never-to-be-forgotten morning, he was again taken from the bag, closely examined, and he heard a voice say, "I think this is a stone of rare promise." The pebble could not believe that the remark applied to him, and looked about to see who the voice referred to. He then noticed that he was within speaking distance of a number of the same beautiful diamonds he so longed to be like. Seeing his look of inquiry, one of the diamonds said, "It is you that was meant; you are a diamond, like myself, only in the rough." On hearing this the pebble became wild with joy, confidently expecting to experience an immediate change, thinking that the transformation would be effected in some extraordinary, miraculous manner, without discomfort or effort on his part. But the diamond explained that it was a work of time, that he would have to be cleansed of the accumulated dirt, have the rough edges cut off, and be polished with great care. If he would be patient, however, and steadfast under the seemingly uncomfortable but necessary process, his true self would be brought to view and he would reflect the glorious light with the same beauty and color. "You may get discouraged," the diamond told him, "and find yourself tempted to think you were more comfortable as a pebble; you may sigh for a shorter and less dis-eased method of eliminating the false; but you must remember that the penalty for entertaining an untrue condition is the pain caused us in getting rid of this condition."

These kindly, helpful words encouraged the pebble to resolutely and unreservedly follow in the way pointed out, and the results were just as the diamond had said. Then how ashamed the pebble felt to think he had beseeched God to give him something that was already his, and had accused this loving Father of being unable or unwilling to help him, simply because in his own ignorance and blindness he had failed to recognize this fact. He was thus taught the great truth that "Discomfort under error is preferable to comfort" (Science and Health, p. 101), and that his prayer should have been to gain the understanding that as God's children we always have possessed every good thing, and the ability to make it manifest, for is not God's work finished, as the Bible tells us?

"All things whatsoever ye pray and ask for, believe that ye have received them, and ye shall have them." (Revised Version.)

Aweary of the World.

REUBEN POGSON.

IF the winds did but store the sighings and sobbings of the sad hearts of all the ages, and did the clouds but hold the bitter tears wrung from the eyes of the countless millions who have fretted through a futile material existence, then, surely, joy could breathe no more in such a burdened air, and sensual pleasures would be drowned in floods of rain, salt with anguish.

Tennyson, unconsciously perhaps, has portrayed in his poem, "Mariana," humanity's sorrowful waiting for a fulfilment of that seductive promise of permanent pleasures which is given so glibly by the carnal mind to the sense-deceived. Is this a too pessimistic view of material existence? No! the material sense of life is a synonym for pessimism; its very optimism is often like the hectic flush on the invalid's cheek, an indication of its own hopelessness. The tragedy of it all is, that when mortals think they

Digitized by Google

are most alive; namely, in the early stage of expectancy, they are then really in a worse condition than when they see the hopelessness of it all and long for release from its deceitful promises. Then, if from the depths they cry feebly for help, if instead of longing and looking down the sufferer would but turn his gaze upward and look for a star of heavenly hope, then will he commence to live. He will commence to breathe a new and rarer atmosphere. Mortals often say, "I am aweary of the world," but are they? No! for they love the world and nothing else. They say, "I wish that I were dead," but put them on a bed of sickness and they make frantic efforts to get well. Truly this is a state of "deceiving and being deceived." How often has a fashionable woman said, the morning after a reception, "Ah! if the poor people who envy me only knew how weary I am of it all, they would change their envy into pity." Would they? Not in the least; they would probably say, "Why don't you give it up and let us have a chance?" And why does she not give it up? Simply because she is not weary of it all, she is self-deceived; so are all mortals, until perchance one day, when in repeating the oft-spoken falsehood their conscience is awakened; then there is hope.

What is it really to be aweary of the world? Is it to be in any of the foregoing states of mind? No! The last state mentioned is only a premonitory sign of an awakening to the fact of self-deception; it yet remains for the individual to analyze his motives, aims, and desires, to see if he is really aweary, as he has said.

To be indifferent to things in general; to assume a cynical attitude to most of the pursuits and pleasures of others; is this to be aweary of the world? No, indeed! To be truly aweary of the world one must be in a condition to see the absolute vanity of materiality, with its hopes and disappointments, its pleasures and pains, to know that even if the devil would fulfil his promises, which he never does, and give us all the kingdoms of this world, that then we should have but dead-sea fruit and our last state would be worse than our first. The true weariness of the world is not accompanied by a painfully sad visage and a loose, dejected mien; no, those who are really most weary of the world have a sunny smile, an erect form, and an elastic step. It may be remarked, "But this is not weariness, it is a mere straining of a word to justify the title of the article." Not so, this is the only legitimate use of the word in Christian Science, for when we are most weary of the world we are most refreshed in the consciousness of an ever-present heaven; when we are aweary of evil we are resting in good, and when we are truly awearied of the flesh, "the prince of this world" will come and find nothing in us.

Those who are heavily weighted with mortal beliefs say they are aweary of the world, but it is because they do not know how much of the world they are still content with, that causes the trouble. To say we are aweary of the world is to say practically that we have no sin, and this condition of mind is rebuked by the apostle, who says, "If we say that we have no sin, we deceive ourselves, and the truth is not in us. If we confess our sins, he is faithful and just to . . . cleanse us from all iniquity." Why are our sins so difficult to get rid of? Because we are not really aweary of them; our difficulties are ours simply because we have made them so. Another student might scorn some of the habits with which I am yet struggling,—they are not difficulties to him,—and quite probably he has things to overcome which do not cling to me. There is certainly no hope for one while he finds any degree of satisfaction in the aims and affections of corporeal sense; not until he begins to see that the material sense of joy is a deceiver, is he likely to become aweary of the world, the flesh, and evil. When he begins to see the nothingness of materiality, when he begins to separate it in thought from his real self, then can he truly say of its falsities, "I am aweary of them."

The Reflection of Substance.

ELOISE CAMERON MAC GREGOR.

As the spiritual concept of substance appears to us, we see how often the seeming power of self-mesmerism has excluded us, like "gates of brass" and "bars of iron," from many advantages,—from the opportunity to work, from happiness, and from the privilege of bestowing happiness upon others. Christian Science speedily shows us how, through Love alone, we may be liberated. It teaches us how to demonstrate that active, unselfish love which is the reflection of substance and whose potency is great enough to break the fetters of evil, thus practically proving the allness of good.

Viewed pedagogically, the forerunner of all attention, knowledge, and obedience, is interest. Looking closely at interest, we find that it springs from sympathy. A great thinker has even gone so far as to say, "The measure of one's sympathies is the measure of his life." On through and after the school period each receives from travel, study, or experience, an enrichment proportionate to his sympathy, —his ability to put himself in another's place. His sympathetic interest is a fund, or working capital, from which he may contribute to his needy fellows and to society; and he is sought out or neglected in keeping therewith.

A self-centered mortal, even when not aggressively "self-made," is always taking, never giving,—a social parasite, neither satisfied nor satisfying. He finds himself, after all his self-seeking, unable to receive, for the very good reason that he is unwilling or unable to give. However much he may mingle with his fellow-men, he remains isolated and is considered a trial and a drag on every one, yet burdening no one so much as himself. Matter, the false sense of substance, or Spirit, cannot be acquired without burdening mortals. Witness the struggles and strifes of history over the "land question" and "property rights," all because of humanity's false sense of matter as man's "real estate."

This false and selfish mentality, or self-mesmerism, burdens and oppresses mankind, crushing out health, happiness, and harmony. Observe, in contrast, the true mentality of the children of God as exemplified in the purity, unselfishness, and affectionate compassion of the great Master. His reflection of the one divine Mind, the true substance, wherein is no room for self-love and self-will, revealed the truth which made free from bondage and enabled him to bestow upon others the "liberty of the children of God." He said, "My yoke is easy, and my burden is light."

The true idea of substance is attained through self-forgetful love. This idea never burdens man, but is purifying and inspirational to such an extent that it lifted Jesus' consciousness above all sickness and sin, and enabled him to triumph eventually over death. He looked to the one Mind, the one substance, Spirit. Faith in God, good, as all powerful, "the substance of things hoped for, the evidence of things not seen," raises mentality out of self-mesmerism, both for ourselves and others. Said Jesus, "And I, if I be lifted up from the earth, will draw all men unto me."

Our most important work, then, is to see to it that the "I"—consciousness—is being lifted up to perceive this true idea of substance.

To spur our lagging footsteps, Truth calls to us from every page of our text-book, and, like the prodigal, we must leave behind us the false sense of substance, otherwise how can we hope to be met by our Father? When we see the nothingness of the husks of materiality, and really arise to go to our Father, then, although yet a great way off, divine Love comes to meet us.

METHOUGHT I built upon a rock
A palace, high and grand;
My pride-blind eyes Truth touched,
And lo! a hut upon the sand.

AMY RUTH WENZEL.

We fail to see any good grounds for the enactment of laws prohibiting Christian Science healers from practising, or charging fees for their services, or prohibiting people from employing them if they wish to do so. Such laws are based on the ground that people should be protected from their fallacious belief, as non-believers would term it, in Christian Science, and from charlatan healers; but we don't see why the State should feel called upon to adopt such a course. There would seem to be less reason to prohibit Christian Science healing, in which no drugs are used, than to prohibit deleterious and positively injurious beverages, medicines, and adulterated foods. The laws permit the sale of almost anything in the shape of patent medicines, and permit the people to buy and drink them; then why should the State interfere and prohibit Christian Science or any other healers, who, if they do not do any good, at least do not give their patients anything to injure them?

While we may not believe in Christian Science, nor care to employ Christian Science healers in case of illness, why should the State step in and forbid any person employing such healers if he does have faith in them and wishes to be treated by them? The law permits people to eat and drink what they please, to wear such clothes and live as they see fit, regardless of the effect upon their health, so long as they do not make themselves objectionable to society: then why not permit people the same liberty of action in the employment of healers of the sick under restrictions prohibiting dangerous practice and the use of dangerous drugs in incompetent hands? Whether or not there is any merit in Christian Science healing, there is good reason to believe that less harm is liable to result from it than from the indiscriminate use of injurious patent nostrums and deleterious beverages and foods, and that there is no urgent necessity for laws prohibiting its practice.—*Dell Rapids* (S. D.) *Tribune.*

Never has the church needed the priestly work of woman as now. We need that work pre-eminently in our homes, in the leadership of the church, in the molding of society, in the shaping of our civilization.

You may discount sentiment as you will, nevertheless it stands out on history's page—and nothing can erase it—that the only act to which Jesus decreed universal fame, of which he established an imperishable memorial, was a thoughtful, sentimental deed by a woman of poetical temperament—the breaking of a box of ointment on his feet as an expression of her devotion to him whom the world hated and was about to crucify. Jesus established that day a memorial to all such, and with it a memorial to Christian womanhood. As Calvary neared, woman seemed to set herself to be exceptionally loyal to Christ. It was so at Bethany; so during the trial and condemnation of our Lord, and so also at the cross.

Of all this series, his recognition of Mary at the feast was the most significant. That day woman became a priestess in the temple of Christianity.

The bulk of the work of the church to-day is done by woman, and she carries with her a gentleness and devotion, a sweet simplicity of faith and a delicate touch of love that Jesus recognized and honored in Mary.

REV. JOHN BALCOM SHAW.
St. Louis (Mo.) *Dispatch.*

Christian Science teaches that the truth about everything in the universe may be known, and that this truth, when understood, reveals harmonious, sinless conditions. Christian Science goes on to teach that sickness and sin are not the true and lasting conditions to which man must subscribe, and that an understanding of the truth touching these conditions will, if applied, bring about their annihilation, thereby demonstrating the supremacy of Truth. A misconception of Life, as of mathematics, produces discord to human sense, and permeates whatever line of endeavor is involved with the mistake.

In the sense that an error in the application of mathematics is not true or real, in other words is not to be accepted as of value or relied upon, so Christian Science regards all conditions which do not measure up to the premise of the absolute truth taught by Christ Jesus.

Christian Scientists deplore and condemn all war and pestilence as earnestly as do all others; and because they do not regard these conditions as necessary or founded on an understanding of Truth, they are prepared to consider them the products of the human ignorance of Truth, in fact the opposite of that which is real and good, and, therefore, in this sense unreal.

Christian Science is known by the good results attending an honest study of its teachings, and its phenomenal growth is the outcome of these teachings. Its followers are improved physically, morally, and mentally since adopting its Christian ethics, and certainly their attitude toward the world and their fellow-men is more loving, unselfish, and compassionate than before gaining the understanding of Truth as divine Principle which is revealed in Christian Science.

H. CORNELL WILSON.
The Truth Seeker, New York, N. Y.

It is stated in the Scriptures that God visits the iniquity of the fathers upon the children unto the third and fourth generation of them that hate Him, and that He shows mercy unto thousands that love Him and "keep" His "commandments."

This Scripture hints that the human law of heredity will exist until overcome by Love. Christian Science inspires the keeping of the commandment, "Thou shalt love the Lord thy God with all thy heart," and "thy neighbor as thyself," through its comprehensive definition of the nature and essence of Deity. If parents are afflicted, it is not by reason of any divine law, but because they are not sufficiently awake to a realization of the divine protection; because through ignorance or carelessness they fail to break the material law of discord and fail to claim their God-given rights to health and harmony.

It was the mission of Jesus to demonstrate the possibility of spirituality and health, and it is the mission of Christian Science to accomplish the same result. If children partake of the discordant bodily and mental conditions of their parents, these can and must be destroyed through the understanding of truth, the divine law which deals with disease by destroying it. Evidently Jeremiah saw this possibility when he said, "In those days they shall say no more, The fathers have eaten a sour grape, and the children's teeth are set on edge; but every one shall die for his own iniquity."

Through Christian Science, thousands have been saved from inherited diseases by learning that God is the only real parent, and that that only is real and lasting which is inherited from God. The children of practical Christians ought to be free from inherited discords. Multitudes of cases are recorded where so-called inherited diseases of long standing have been destroyed under the benign influence of the teaching of Christian Science, that man inherits only the characteristics and attributes of his heavenly Father.

ALFRED FARLOW.
Boston Times.

If it is reasonable to blame Christian Science for its failures, by the same token it is right to criticise *materia medica*, which has, as the records show, a greater proportion of failures on its books. Conversely, if for any reason *materia medica* is considered exempt from attack for failing at all, then any curative system, honestly applied, which can show as good a record, must also be exempt, the

fact or circumstance of the death of the patient remaining practically the same in all cases; that is to say, presenting no unusual or distinguishing features in one case which are not found in all others. WILLARD S. MATTOX.

New London (Conn.) *Telegraph.*

No matter what form sin may assume, its existence and continuity depend entirely upon its indulgence by the sinner. If a thief reforms and stops stealing, what then becomes of the sin in his case? It ceases to exist. If for the same reason all gamblers should stop gambling, the sin of gambling would be no more. When the practice of sin ceases, through the reformation of the individual, the sin also ceases, for it has not the means to perpetuate itself, and falls for lack of support. If all the sin and sickness in the universe could be instantly removed and forever blotted out, no part of God, man, or the universe would be taken away, and nothing that is real or true would be lost or destroyed. The Scriptures say, as a man "thinketh in his heart, so is he." If sin were eradicated from the thought of mortals it would cease to appear outwardly, and thus prove conclusively that sin has no entity of its own, and no existence, save a temporary and wrongful sense in the experience of the sinner. The power of sin can be overcome only to the extent that we render it powerless. Its presence will continue to annoy us until we enforce its absence, and its somethingness will intrude itself upon our thought until we demonstrate its nothingness. ADAM H. DICKEY.

The Word and Way.

The world is sick and tired of doctrinal opinions. Christian Science has no place nor time for them. The Founder of Christianity showed forth the Father, not theologically, nor by condemning others, but by casting out evil and healing the sick. Christian Scientists are striving to follow in his steps and stand for judgment, on the basis of their obedience to Christ's command: "Preach the Gospel and heal the sick." "By their fruits ye shall know them," and know that their God is Love. D. C. PENDERY.

Cincinnati (O.) *Inquirer.*

It is not necessary to hold a brief for Christian Science in order to declare that it is not going to be injured by tirades like that delivered by a clergyman at the Winona camp meeting last Sunday. Opinions may differ as to the claims and achievements of Christian Science, but it is plain that the creed makes unexampled progress and attracts the most intelligent people. Mere polemic denunciation must be utterly ineffective against such a movement.

Editorial in *Chicago Chronicle.*

One of the most fretful, fidgety women I ever knew has been converted to Christian Science. Skeptic as I am, I have to acknowledge the tremendous change in her nature and the pleasure there is now in her companionship. She is amiable and serene, and I doubt if any but a great shock would shake her calmness. Whatever I may or may not believe, I insist that any belief or study that teaches women to govern themselves is admirable, and it is a pity that converts are not more numerous.—*Boston Traveler.*

What an act of infinite wisdom it was on the part of the Senate to concur in the House Bill to squelch Christian Science—a belief or practice that has lifted thousands from misery to health and comfort. While one may prefer medicine for healing, he should be liberal enough to concede the right of another to pursue health in the manner deemed most expeditious and permanent.

Wayne (Neb.) *Herald.*

The Lectures.

Troy, N. Y.

Music Hall was crowded by a cultured audience last night [October 16] to listen to Bicknell Young's lecture on Christian Science. However little or much appreciative hearers may have sympathized with the lecturer's convictions, they must have been impressed with his scholarship, lucidity of exposition, argumentative power and high order of oratory. Without the magnetism which made a Beecher, or an Ingersoll, irresistible; without the story-telling or appeal to the gallery which popularizes many a clever but inferior speaker; without recourse to dramatic gestures, striking inflections, or attitudinizing, Bicknell Young made a modest and masterful presentation of his subject, culminating in tributes to Mrs. Eddy so full of force, richness, and beauty of language as to evoke the admiration of all present. Without passing any comment upon the teachings advanced, it is only just to say that as an eloquent, erudite, and intellectual effort, Mr. Young's lecture is surpassed but rarely on any platform.—*The Troy Press.*

Canton, Ill.

With the exception of the galleries, the Canton Opera House was filled Friday evening [September 22], when Edward A. Kimball of Chicago delivered an address on Christian Science. The speaker was introduced by Attorney Jesse Heylin, who spoke as follows:—

Ladies and Gentlemen:—Probably that which differentiates ancient and modern civilization the most is the tolerance and freedom of human thought and human actions. In contradistinction from ancient civilization, to-day any man who has a message that appeals to reason and conscience will have a respectful hearing, and, in fact, modern civilization demands that such a man shall be given respectful attention. We who are not of them must admit that the Christian Scientists do appeal to our reason and that they do come with a message filled with love and tenderness devoid of terror. We may not agree with them, but we must concede to them earnestness and sincerity.

Canton Register.

Fargo, N. D.

The lecture delivered by Judge Septimus J. Hanna at the Fargo Theatre, Sunday afternoon, September 24, was very largely attended. Hon. George E. Perley presided, and in his introductory remarks spoke in part as follows:—

Truth is many sided, and we, in our ignorance and narrowness of vision, often see but one side, or at best two sides, one of which we are inclined to dispute and oppose. Truth, to us, too often means something that we like to believe, and which comes to us along our own lines of thinking and through channels which we ourselves have constructed. We ought, rather, to remember that all truth is of God, and hence is as boundless and eternal as God himself. I assert that the proper attitude of mind toward a new thought, or creed, or system is not, Does this agree with what I and my friends have been thinking and believing; or will it, if adopted, controvert and perchance overthrow old thoughts and beliefs? but rather, Is this the truth? If so, what message has it for me? If the truth, then I want it; truth though the heavens fall; truth regardless of consequences. I do not appear to-day as an advocate of Christian Science. She needs no advocacy of mine and seems abundantly able to take care of herself. I am not a member of that church; but I am a lover of the truth, a believer in fair play, and broad enough, I hope, to receive with gladness truth from whatever source, or however accredited; and I give it as the result of my calm observation, that the message which this church brings to humanity, is ever one of blessedness and helpfulness, and to me it seems stamped with the Divine approval.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

An Expression of Thanks.

Washington, D. C., Monday, October 23, 1905.
Rev. Mary Baker G. Eddy, Concord, N. H.

Dear Leader:—I want to thank you for a wonderful spiritual uplift through reading the recently revised Section 9 of the Platform in the 361st edition of Science and Health.

Through all my fifteen years' study of the Bible in connection with this wonderful commentary, I have never gained such a clear concept of the relation of Christ Jesus to humanity.

Lovingly and faithfully, your student's student,

DR. JOHN WARNER KEYES.

Good Cannot Be the Product of Evil.

WE occasionally find persons who try to justify the doing of evil upon the plea that good has resulted from it, or will result from it; but this is an impossibility. To assert that good can be the product of evil is to assert that "sweet water and bitter" can proceed from the same fountain, a logically unthinkable proposition which necessarily assumes the reality and desirability of evil.

It cannot be supposed that persons who desire good to prevail in the affairs of men will voluntarily resort to the practice of evil, unless they believe that evil is more powerful than good and that good cannot do as much for the welfare and prosperity of the race as can evil. The logical outcome of this belief would be the postulate that evil is primary and good secondary, a postulate to which no Christian can assent and which finds no justification in the teachings of Jesus. Our Master in nowise sanctioned evil in cause or effect, and to be consistent Christians his followers must avoid even the semblance of evil.

The text, "Surely the wrath of man shall praise thee," is sometimes warped to do duty in support of the erroneous belief that evil can result in good, but this use of the text will not bear analysis. The fact that the wrath of man can be checked and made to praise God is one of the most convincing proofs that evil has no inherent power and that its use is inconsistent with true Christianity. The supposition that evil has any quality upon which goodness can be based, is a harmful illusion that does not harmonize with right reasoning, and that leaves no unvarying standard by which conduct may be judged and morality enforced.

Christian Scientists should be especially alert to detect the error which seems to say that evil has a place and a use in our "passage from sense to Soul" (Science and Health, p. 566). Christian Science presents no halting, changing, obscure method of salvation, which needs to be, or can be, re-enforced by evil. On the contrary, it moves along the strait and narrow path of righteousness which admits no evil. The statement, "All is infinite Mind and its infinite manifestation" (Science and Health, p. 468), the truth of which Christian Scientists demonstrate daily, leaves no place for evil and no need for its aid in Christian living and Christian teaching. ARCHIBALD MCLELLAN.

An Aspect of Error.

ERROR is always error and never becomes truth or truthful. It belongs wholly to false mortal sense and disappears only as this sense disappears. This distinguishing feature of all falsity is sadly forgotten or ignored among men, many of whom overlook the fact that its least increment is wholly unlike truth, that no subdivision of falsity can make it other than false. It is smitten in its "babes and sucklings," just as surely and unhesitatingly by truth, as it is smitten in its "strong men and cattle." The willingness to tell a fib has been regarded as an entirely different thing from the disposition to tell a lie, and a little bit of that which would be promptly condemned in bulk, is often clung to as though it were not only desirable but necessary. This human tendency is revealed to-day in the effort of many who have broken away from the hard and fast dogmatism of Miltonic theology, and who are trying to escape the incubus of matter by etherealizing it. They are ready and glad to part with the hard lump which they have believed to be a divinely provided basis for the activities of Spirit, but they hold tenaciously to a highly attenuated form of the same old stuff, as a medium for the transmission of mental forces.

In distinct contrast to all this thought and endeavor, Christian Science teaches that "the higher stratum of mortal mind is more potent to injure than its lower substratum, matter." "The more material the belief, the more obvious its error, until divine Spirit, supreme in its domain, dominates all matter." (Science and Health, pp. 198, 97.)

We can no more escape from material sense by its refinement or sublimation than we can from immoral habits by their indulgence in an artistic atmosphere, for the less repulsive error is made, the more seductive and deceiving it becomes. Christian Science makes it clear that the essence of materialism is belief in the reality of that which is not spiritual,—which does not manifest Life, Truth, and Love. The materiality of human sense does not depend upon the kind of material substance it posits as the so-called basis of natural phenomena, much less upon the size or mobility of the atoms of which this substance is supposed to be composed. Furthermore, it is manifest that the statement of material beliefs in high-sounding terms and polished phraseology in no wise renders them less opposed to the spiritual interpretation of the universe, or less incompatible with the divine idealism of Christian Science. The two orders of thought are inherently contradictory to each other, and there can be neither co-operation nor companionship between them.

The vain attempt to escape the pains and penalties of matter by etherealizing it, is a serious and far-reaching mistake, which is avoided by every earnest and faithful student of the Bible and of Science and Health. The call of Truth to come out from all materiality and be separate,—to know, and know only, the allness of Spirit and its manifestations,—is imperative and uncompromising, and it is the glory and gain of Christian Science that it counsels an immediate, unreserving, and continuous obedience thereto.

JOHN B. WILLIS.

Feeding the Hungry.

THE account of Jesus' feeding of the five thousand, as given in the four gospels, may well remind us of the angel's declaration to Mary, "With God nothing shall be impossible." As students of Christian Science advance in the understanding of Truth, they become more conscious of the world's great need and long to aid in meeting it, and thus they find a supreme opportunity to prove to themselves how much of the truth they have made their own.

We are told by the evangelists that at the close of an eventful day which was spent by the Master in healing the sick, the disciples came to him and reminded him that the people needed food. His reply is very significant. He said, "Give ye them to eat." Their response indicates that they had not then learned to look away from matter to

Digitized by Google

Spirit as the true source of supply, for they began to talk of their limitations, and to say how little even two hundred pennyworth of bread would be, wherewith to feed such a multitude, and then they pointed to a few barley loaves and two small fishes. This unpromising outlook was, however, illumined by the Christly love which had compassion on the sick and the sinful,—the love that had power to draw thousands from the weary ways of mortal experience to listen while he told them of the kingdom of God. He would not send them back fainting to those ways, and though his disciples, so soon after their call to this service of Truth, were not yet rich enough toward God to obey his command, "Give ye them to eat," he did not deny them the privilege of serving his guests. He bade them bring him the scant viands which betokened human poverty, and when all were seated, for no courtesy was overlooked at that never-to-be-forgotten banquet, he blessed and brake the loaves, and the five thousand partook of his bounty,—"as much as they would."

Nowhere in the gospels do we find a more striking contrast between the material sense and the spiritual, than here. "What are these among so many?" said the disciples, as they looked at the insufficient supply, and counseled the sending of the people away from the one who healed all their diseases, and who was as ready to satisfy their hunger by the utilization of the same spiritual law. The vital lesson for the student of Christian Science is found, however, in the Christly command, "Give ye them to eat," and in the clear light of Truth we can find no excuse for evading it and parleying about "two hundred pennyworth" of materiality, since, after two thousand years of experimentation with it, humanity is still starving for the true bread.

If, like Jesus' disciples, we be dull of spiritual perception when the world's need faces us, and have little to offer, —if our sense of Truth's power and our realization of Love's sufficiency be as small as the barley loaves and the little fishes, then is the time to hear and heed the command, "Bring them hither to me." Obeying this command, we, too, shall feed the hungry and heal the sick as did the Master. Our revered Leader comes near to the heart of this question, when she uncovers to the student the culpability of "spiritual barrenness" and "mental penury." (Science and Health, p. 366, lines 5 to 12.) Truly these have no place and no excuse in Christian Science, for in the faithful demonstration of its rules we not only learn how to heal the sick and give them the bread of life, but in obedience to the same law our own "baskets" are filled with spiritual blessings.

ANNIE M. KNOTT.

Letters to our Leader.

Aberdeen, Wash., August 30, 1905.

Rev. Mary Baker G. Eddy, Author of "Science and Health with Key to the Scriptures."

My Dear Mrs. Eddy:—Seven years ago I was healed through the reading of Science and Health. Since then I have longed to tell you how much gratitude I have that there is in the world a volume the reading of which dispels and destroys disease. Such a restoration to health has been my experience, and I am glad to bear testimony to the fact, not alone of the healing but of the permanency of it, as I have since enjoyed obust health. For several years I had suffered with many diseases and complications, chronic, acute, functional, organic, and hereditary, and during the last five years of this period I was slipping away quite rapidly. While some of my troubles were pronounced incurable, and it was generally understood that I would never be well again, I tried to keep hopeful, pinning my faith to drugs, hygiene, diet, air, and exercise, but there came a time when despair was in the ascendancy and the end appeared not far off.

I had heard that people were healed through Christian Science; still I knew nothing of the way this was effected, so I had no expectation of being healed. It seems, however, that divine Love was leading me, for I decided to look into the subject. Science and Health was at hand, and although I was somewhat of a student of all current subjects, I had had no inclination to look into this book, which four years before had been a present. From the first page of the 40th edition of the book, I read on and on. I soon found hope, and in a few days felt that I was changed. It was a great surprise to find that my aches and pains were gone, and to realize that I was well and could eat anything without fear of bad effects.

While I was very enthusiastic over my healing, I felt I had gained a greater treasure which could not be taken away. The "Peace be unto you" had come into my life; I had for the first time known the Christ, the true spiritual idea, the Saviour; I now knew that it is the Christ only which heals and saves mankind from disease as well as sin, that he is present, that I had just touched the hem of his garment and was made whole. It was a wonderful experience. Since then I have studied your book diligently, in order to learn from its pages all that I can of this healing and saving Christ. I have been trying earnestly to live this Science and practise it. During the past year the following results have been accomplished, which could not have been done by me except for the understanding gained from our text-book. The first case was that of a man whose guilt and self-condemnation for wrongdoing hung so heavily upon him that he wished to die. Another was where a physician had diagnosed the disease of a young man as tuberculosis and said it was incurable. He had then purchased a revolver to end his wretchedness. The third was that of another young man who felt he could not bear life longer, mind and body were giving way, and that he would like to drown himself. These three people came to Christian Science for help. Each was transformed, is now well and happy, and "in his right mind."

Yours very gratefully,

JOHN E. PLAYTER.

Boston, Mass., September 30, 1905.

My Dear Mrs. Eddy:—I have so long desired to write to you, that now, on my return from a little sojourn in Concord, I am sending you this letter, trusting it may please you to hear of the prosperity and growth of Christian Science in the sunny Southland of Jacksonville, Florida. As I cannot send you flowers from my distant home, will you not accept the roses I am sending you from Boston? They go to you freighted with love and gratitude. It will interest you to know that Christian Science is well introduced into Jacksonville. Senator Mann and his wife are regular attendants at our services when in our city.

I was in Tallahassee during the pending of a medical bill last spring and found a number of our lawmakers kindly disposed toward our work; and at present, there is little prospect of un-Christian legislation. Our church services are well attended. We own a most desirable lot; and after the completion of the new auditorium at Boston, we hope soon to demonstrate a church edifice. Healing is beautifully manifest among us, and is the mainspring of the degree of success we have attained.

Dear Mrs. Eddy, when in Concord two years ago last June, one of that vast throng visiting Pleasant View, I recall how, at the close of the dear Shepherd song, I was thrilled with desire to labor for you and for what you are teaching us. The inspiration of that moment has many times since then been a help to me. May I tell you the words of a Southern poet which then came to me forcibly, and which seem to express my sense of then and now? In speaking of the Christ he says,—

> Man shall sing thee a true love song,
> Voiced in act his whole life long.

My prayer is that I may increase in worthiness and watchfulness, in my endeavor to serve Truth. My little son

Digitized by Google

loves you dearly. His father being a judge, also his grandfather, I trust this little one will be in a measure fitted to uphold the standard of Christian Science in our Southland. With great love and reverence for your blessed work, Faithfully your follower,

KATE G. BAKER.

Lexington, Mass., September 20, 1905.

Beloved Leader:—Half in doubt as to whether I ought to intrude upon your time and thought, I am venturing, nevertheless, to send you, in the same mail with this letter, a small book which is to appear before the public this week, Saturday, and which it may content you to glance through as containing many radical scientific statements uttered by him of whom you speak in "Miscellaneous Writings." Had my father-in-law [William Lloyd Garrison] studied your little, great book, I sincerely believe he would have accepted its platform and given it his allegiance. He truly manifested much of the Christlike spirit, and his "non-resistant" convictions were most scientific, I believe you would say. The volume is a centennial one, gotten out by my husband, the youngest son of his father, and by his brother Wendell, for whom our son is named. The brother, as you may know, wrote a four-volumed life of their father and of his time, in 1885.

I am daily praying to live the greatest of all reforms in my dear home, and in the midst of a dear family of reformers where skepticism, spiritualism, and agnosticism and excessive hero-worship would mightily reign. When I think of your Christ-love and patience, and of all you have faced as a reformer, my daily struggles along the "rugged way" are as naught, and I know that we must have more love, and the infinite compassion that opens the eyes of the blind.

To Christian Science I have given my allegiance for six years, and to you in all that time, beloved and loving Leader, my heartfelt reverence and gratitude and steadfast faith.

Most tenderly and lovingly,

THERESA H. GARRISON.

Magnolia, Mass., August 23, 1905.

Dear Mrs. Eddy:—We, the resident Scientists, and those who are guests at the hotels here, believe it would give you joy to know that the directors of the village church, called the Union Congregational, have granted us the privilege of holding services in their church building, and that we are so doing, every Sunday of this month. We feel sure that the appreciation of such Christian courtesy and brotherly love manifested toward us will be shared by you, and we rejoice that the Word of Truth, as revealed in Christian Science, has been spoken publicly in this beautiful seaside resort. Gratefully and sincerely yours,

SARAH E. BRADLEY.

Changes in the Hymnal.

In future editions of the Hymnal new music will be substituted for that now used for Mrs. Eddy's hymns, 161, "Shepherd, show me how to go," and 179, "O'er waiting harp-strings of the mind." Words and music not heretofore published in the Hymnal will be substituted for 163, 180, 183, and 184.

All the above hymns with the new music will be furnished in suitable form for pasting in old Hymnals, at the following prices: 1 to 25 sets, 5 cents per set; 25 or more, 4 cents per set; 100 or more, 3½ cents per set.

Mrs. Eddy's hymn, "Christmas Morn," with the two present settings printed on one sheet, will be furnished for insertion in copies of the Hymnal which do not contain it, at the following prices: 1 to 25 sheets, 2 cents per sheet; 25 or more, 1½ cents per sheet; 100 or more, 1 cent per sheet.

Send orders to THE CHRISTIAN SCIENCE PUBLISHING SOCIETY, 250 Huntington Avenue, Boston, Mass.

Testimonies of Healing.

I feel it my duty to relate a few of the many blessings I have received through Christian Science. Four years ago, when I sought Christian Science, I was a wreck, both physically and mentally. From a child I had doctored with the best physicians in the city where I was then living, and had taken various patent medicines, but to no avail. Six months previous to taking Christian Science treatment I was under the care of a physician, suffering from indigestion, catarrh of the stomach, and liver trouble. At the end of this period I was in a worse condition than ever. I had lost faith in material remedies, I was seemingly without hope and without God in the world, thinking my only relief would be the grave. I was in darkness and despair, and my mother and friends were afraid I would lose my mind. I had always believed in a God, and was a member of an orthodox church, but since gaining some understanding of Christian Science I find that my former concept of God was very limited. I formerly believed God to be in some far-off place; and to trust Him in sickness I thought absurd, but the old adage was fulfilled in my experience, for I found it to be true that "man's extremity is God's opportunity." After a week or more of intense mental suffering I asked my mother to pray for me, and I myself prayed to the best of my understanding, to be relieved from the awful suffering. My grandfather, a minister, was called, and prayed for me and read from the Bible. A few days later my mother sent for the kind pastor of the church of which I was then a member, and he also prayed for me. I did not get relief from suffering, yet I believe that through their prayers I was led to ask help from a Christian Scientist. Having an aunt who was a believer in Christian Science, I asked her if she thought I could be helped by it. She assured me that I could, and her talk inspired me with hope and led me to take treatment of a regular practitioner. I did so, and was healed of all my troubles, physical and mental, although it required patience on my part before all these were overcome. To prove that Christian Science has given me hope, health, happiness, and courage, I would like to say that since my healing I have taken a commercial course in one of the business colleges here, and have been able to fill successfully a position of trust in a bank for almost two years.

Christian Science has not only benefited me in a physical way, it has also been a wonderful help spiritually; it has given me a better understanding of the Bible and a desire to study and read it. For these and many other blessings, I am very thankful to God for sending His beloved son, Christ Jesus, to reveal the truth; and I am grateful to Mrs. Eddy, who has re-discovered and taught us the Christ-way of healing not only from sin, but from sickness, and has taught us to rely upon God in our health and in our sickness.

HOMER H. BECKER, Dayton, O.

Nearly all my life I had suffered from some physical ailment, and for the past eight years I had suffered untold agony from muscular rheumatism, there being at one time several weeks that I could not walk. Then again I could not use my arms for days at a time. I was in this condition when I had occasion to call on a Christian Science practitioner, and as I left, she said, "I wish that I could help you." Those words rang in my ears for several days, and I thought nothing of the pain I was suffering, but of the spiritual help I needed. I knew nothing of Christian Science, only that a friend had told me she had been benefited by reading Science and Health. I borrowed a copy of the practitioner, who told me to read it carefully and prayerfully, but I took it simply to see if its teachings were right or wrong. As soon as I began reading, I knew it was right. Such a wonderful inspiration came to me and remained

Digitized by Google

with me while I was reading it, and I feel that the Father knew what things I had need of before I asked Him.

During the past two years I have not had one moment's pain from rheumatism or any other ailment that I had formerly been subject to. Words cannot express the deep gratitude I feel for the spiritual uplifting which has upheld me ever since, and for all these blessings I realize that I owe endless gratitude and love to God, and to Mrs. Eddy, who, being led by divine Love, has given to the world this healing truth.—ELIZABETH MOODY, Jonesville, Mich.

I wish to express my gratitude for what Christian Science has done for me. Though I have not risen above all my ills, I am indeed grateful for what I have overcome. In 1893 I was invalided from the army, having been found medically unfit for further service, and from that time till the year 1901 I was constantly under the care of doctors. I also tried almost all the remedies that I saw advertised, but all to no avail, and I gradually grew worse. During this time I joined an orthodox church, and there they told me it was God's will that I should be afflicted, that it was to try my faith, and that I should be all right when I got to heaven. I could not tell any one what kind of a God I used to believe in, but I know it was not the God who is Love. At this time the Bible was my chief companion. I read it through and through, but could not think that all the promises were for me, and nothing but Christian Science has given me a right understanding of the Bible. At that time my sight failed, so that I could not read; then I became desperate and began to say hard things about God. I had lost the use of my hands, too. Then a dear friend gave me a copy of Science and Health. I had never heard of Christian Science, so I could not have much faith in a thing I knew nothing about. I was, however, willing to try anything that was recommended to me, and this friend told me a little about Christian Science; so I tried to read the book, and in a fortnight I could see to read and have been able to do so ever since, though to mortal sense my eyes were bad. I had my eyes tested, but glasses were of no assistance. The tobacco habit in which I had indulged over twenty years, both smoking and chewing, and which I had tried to give up several times, was speedily overcome: in fact, I always say I did not give it up; this time it gave me up, for the time came when I did not want tobacco any more. Words fail me to express my gratitude to our Leader. I can but make one frank statement and say, Thank you, dear Mrs. Eddy, for what you have done for me and for all the world. My prayer is that I may in turn help others.

GEORGE DRAYTON, Welton, Yorkshire, England.

The first ray of light which shone into my darkened consciousness, through the understanding of Christian Science, convinced me that it is the pearl of great price. All my life I had been a slave to the most intense fear, as a result, I now know, of my early religious teaching. I was taught of a God of vengeance, who had sacrificed His own Son to appease His wrath, and who had prepared a place of eternal torture for those who did not love Him. The more I heard and read of this God the more firmly convinced I became that I never could love Him, so I could see no way to escape eternal torment. The thought of my fate filled me with terror, which manifested itself in almost every ill that mortals know. I was always sick, always taking medicine, always praying that I might learn in some way to love God. Nothing, however, but the most terrible haunting sense of fear filled my thoughts. My parents were devout people and I joined their church and tried to live a Christian life, but my fears were only increased from the fact that I had thus made a public profession that I loved God.

The one thing that seemed to me stranger than all else, was that only a part of Jesus' teaching was applied to the Christian life. I noticed that many of those who professed to love God most had the least love for their neighbors, and that the most eloquent preachers did not even attempt to heal the sick. I asked those whom I thought ought to know why it was thus, but no one seemed to know. I then began to wonder how they knew they were Christians. It gradually dawned upon me that I was slowly but surely losing faith in the theology of the church, and this greatly disturbed me, as I had been taught that to doubt was an unpardonable sin. My life became a weary wilderness of doubt, fear, and uncertainty, although day after day was spent in secret longing and prayer that I might know what was right.

Years went by, and receiving no answer to my prayer I became weak, sick, and despondent, with no hope of relief either here or hereafter. At this time I heard of Christian Science, and though I heard but little, it attracted me as nothing else had done for years, and I at once began an investigation, which resulted, after two years of struggle, opposition, and almost insurmountable obstacles, in finding myself at the home of one of Mrs. Eddy's students, in Kansas City, asking for help. I was filled with fear and trembling, for I had no idea of what a treatment meant. The method was very simple: I had often seen people sit with closed eyes in silent prayer, but what I never had before experienced was the glorious result of that seemingly simple process. By it I was transformed. The long night had passed, the morning was come, and all the glories of earth and heaven were revealed! Love filled all space and Love was revealed as my God. There was no fear, sin, sickness, or death in all the glorious universe. All that I have found, as a result of Christian Science prayer, eternity alone can tell, and it would be impossible to write all my blessings down. I daily thank my heavenly Father for the proof of His protecting care in giving us our brave, self-sacrificing Leader, Mrs. Eddy. For years I have read every article in our *Sentinel*, and in the *Journal*, with loving thanks for the help they have been to me. I am thankful to be able to point others to the loving Father, who healeth all our diseases, and I try to realize, as did David, that "Thine, O Lord, is the greatness, and the power, and the glory, and the victory, . . . all that is in the heaven and in the earth is thine."

MRS. MARTHA COLE, Rich Hill, Mo.

Twelve years ago I came from Ohio to the State of Washington, in ill health. I came here for a change of scene and business. I had been actively engaged in the practice of law in Ohio for fifteen years, and my ill health was said to have been brought about by overwork. After coming West I did not experience the improvement in health which I had hoped for, but on the contrary grew gradually worse. I seemed to be afflicted with a complication of diseases which baffled medical skill. About three years ago these culminated in nervous prostration, accompanied with severe and serious attacks of heart failure, which became more and more frequent and severe. Medical skill, electricity, osteopathy, and hygiene had been exhausted, and my condition had become desperate. Friends had advised me to take Christian Science treatment, but I was skeptical. However, one year ago, I determined to give it a trial. I experienced marked improvement after the first treatment, and am glad to say that I have not used a material remedy since taking my first treatment and am now fully restored to health. I am fifty-two years of age, and am stronger, better, and more vigorous than when I was forty years of age. It goes without saying that I owe an immense debt of gratitude to Christian Science.

S. S. GARDINER, Everett, Wash.

Digitized by Google

Before coming into Christian Science I suffered very much with my feet and limbs. They were so bad that I had to give up wearing boots, and then I could bear to have shoes on only a short time. On one occasion my doctor asked me if my legs felt numb. I thought at that time if they were cut off below the knees I would not have felt it, so great seemed my suffering. It was in this state that Christian Science found me. My work seemed very hard and life was most wretched, but after having a few weeks' treatment I soon began to feel like a new woman, and as the light of Truth began to dawn on my darkened sense I was freed from the bondage that had so long held me. I feel thankful to say that through Christian Science I have been made free indeed. I am glad for the rest that Christ, Truth, gives, and I am striving for the Mind to be in me that was also in Christ Jesus. My heart goes out in gratitude to God for His goodness, and to our Leader, Mrs. Eddy, for her labor of love in bringing to us this great truth. I am also most thankful for the help I have received through the *Sentinel* and *Journal*.

MRS. MARY A. GIBSON, Newcastle-on-Tyne, England.

During the winter of 1904 I was sadly crippled for many weeks with a festered thumb. The pain was intense, and the disease developed rapidly. I seemed too dull of spiritual sight and hearing to meet and master the conditions, and suffering, prolonged inconvenience, and the loss of the thumb nail were the mournful results.

A few weeks since I was again confronted by a similar ailment. The symptoms were alarming to mortal sense, but I so longed to gain the true consciousness that I at once set about it scientifically. I studied the words of our text-book, so entirely applicable to the case (Science and Health, p. 373), and almost at once there was an abatement of every painful symptom. I pursued my household duties, and in a few days the entire victory was won.

ALICE MARGUERITE TAYLOR, Valley City, N. D.

I am very glad and very grateful for the blessings which have come to me through Christian Science. All my life I had been under the shadow of physical troubles which were supposed to be hereditary. Various material remedies had been tried for me without success, and I was discouraged. I felt very rebellious, because I was often physically unable to carry out my plans, and when the frequently recurring attacks of illness interfered with my college course and thwarted my ambitions, I was bitterly disappointed and unhappy. About two years ago I became interested in Christian Science, through a dear friend, and some months later, while spending the winter in Berlin, Germany, I asked for treatment and began attending the services. Help was lovingly given, and I soon began to feel happier and stronger than I had been for years. Every treatment was indeed a blessing. The testimonies I heard in the meetings and those which I read in the *Sentinel* and *Journal* were also most helpful, teaching me not only of the benefits to be received through Christian Science, but also of the great good which one may bring into other lives through an understanding of divine Principle.

I was entirely healed after having treatment for about two months, and this demonstration of divine Love brought me great happiness. I had, however, learned that Christian Science means infinitely more than mere physical welfare, for with my healing there came a spiritual awakening, a desire to understand this Science which teaches us to know God, and I studied the Christian Science text-book earnestly. I have thus learned that to live Christian Science requires unceasing diligence, but the work is joyous and refreshing, for we know whom we serve, and the daily demonstrations afford a sweet assurance that we are working in the right direction.

I thank God daily for Christian Science, and my thought is full of loving gratitude to Mrs. Eddy.

ALICE M. ROWE, Wiesbaden, Germany.

Several years ago I was healed in Christian Science of a supposedly incurable disease. I at once began the study of Science. At that time I was a member of an orthodox church, and it was a great surprise to me to find out that I was in so much error, that my suffering was the result of wrong thinking. I am thankful that I was ready to receive this truth, for I have found it a present help in every time of need. I have been able to help others as well as my own family. I am a member of Third Church of Christ, Scientist, in Chicago. I have found the *Sentinel* and *Journal* a great help, also the *Quarterly*. The spiritual uplifting has been more to me than the physical healing, and I am grateful for both, to God and to Mrs. Eddy.

MRS. E. LOWES, Chicago, Ill.

It is only a little over three months since I heard of Christian Science, but since then I have given it a great deal of study and have derived great pleasure and benefit therefrom. I had a remarkable demonstration lately which it may help others to know. Whilst using a pump containing a very powerful solution of lime and carbolic acid, the pipe got obstructed momentarily, and on unscrewing it, the contents were discharged into my eye with great force. The pain was intense. I went to my room and sought divine aid. I returned to my work, although in great pain, but was compelled to give up on completing the particular duty in hand. I went into the house again, and a lady who was there was very much frightened when she saw my eye, and wanted to telephone to my sister, twenty miles away, to come and help me; but I declined, as I felt that Truth had already delivered me from what might have caused me total blindness. After a very short time I returned to the lady, and told her that I was free from pain, and my eye showed very little indication of having sustained such an injury. Two hours later I showed the eye to a doctor, who ridiculed the treatment and probably disbelieved my story, as he said that if such were the case I could not possibly be out driving and have my eyesight. I trust that my experience may help other young students of Christian Science to know what they may expect if they trust in the omnipotence of God, as revealed in Science and Health by our Leader, Mrs. Eddy.

HARRY G. SEALE, Decoto, Cal.

Christian Science came to me when I was a physical wreck and kept up by will power alone. I was afraid to live and afraid to die, afraid to be left alone and afraid of everything. I had a sense that the trouble was mental, but my body was racked with pain before I found this truth. I had nervous prostration, neuralgia, constipation, and catarrh, but all have vanished, like dew before the morning sunlight. Can words ever express my gratitude to God? My deliverance was brought about by the faithful study of the Bible and Science and Health; and the mental and spiritual uplifting is far greater than the physical. I am overcoming selfishness, anger, jealousy, malice, and revenge, and great is the joy and peace for each victory over sin. Words can never express my thankfulness.

MRS. MARY A. DENHAM, Holden, Mo.

It is nearly sixteen years since the first shower of blessings came through the reading of our text-book, Science and Health, by our loved Leader, Mrs. Eddy. Health had failed, our financial affairs seemed at a standstill, in fact, life was not worth living, except for the experience which led out of these conditions. I then heard of a neighbor who had gone to a lady for treatment for a lost voice. I had formerly made up my mind that if I ever had the opportunity to be healed by faith I would certainly avail myself of it. I did not know how the faith was to be attained, as I had prayed for it for years without practical results. When the neighbor came home he had a book, and

Digitized by Google

the lady said that many had been healed by reading it. I read this book, which was Science and Health, at every opportunity. The mental conflict was for some time very severe,—a mental upheaval, uprooting everything that was not based on the truth, destroying everything "that exalteth itself against the knowledge of God."

As I continued to read, I saw that we cause all our own discords—sin, sickness, disease, and even death—by believing in more than one power, more than one creator, and by accepting the testimony of the physical senses. I saw that we do not need to believe this testimony, and as the spiritual facts of being opened up to me, I was able to prove their truth by a pure mind and a healthy body. I was so thoroughly healed from that moment that it was a year and a half before I ever had any sense of weariness, and then I was helping many others out of their bondage to false sense. I had for fifteen years been a slave to a sense of sickness, both physical and mental, but when I found my birthright I was free. May God bless our Leader, and may this testimony help some other weary pilgrim to rise out of sense into Soul.—Mrs. Ida Nixon, Riley, Kan.

Chief among the many blessings which Christian Science has given me, is the Bible, which had been a closed book. Now, with the Bible telling me what to do, and Science and Health telling me how to do it, I am gaining each day glimpses of God as an ever-present help, to whom I may turn in all the experiences of life. The solution of every human problem is to be found in these two books. Christian Science is teaching me how to separate all error from my thought, and for this I am profoundly grateful. As a mother I find this truth of infinite value, and I wonder how I ever did without it.

To say that I am grateful for Christian Science, and to our dear Leader, who has so abundantly shown her faith by her works, is but a poor expression of what my heart feels. I have only just begun to know how to live, and to reach the goal means work; but for this end I shall earnestly strive, and whether it be slow or fast I shall surely reach it.

Jessie B. Lape, East Orange, N. J.

I began the study of Christian Science twelve years ago, hoping to be healed of hereditary paralysis of long-standing, and was also anxious to learn how to read my Bible understandingly. From infancy I had been treated for extreme lameness. Electricity had been used, surgeons had operated on a crooked foot for drawn cords, and liniments had been applied to cause a better circulation, as the limb was cold and diminishing in size. It ached much of the time, and I had no control of the ankle. I used a brace that extended above the knee, with an ankle support inside the shoe. I also used a cane.

In 1893 I began the study of Christian Science, and had treatment. I soon laid aside the brace and cane, the limb became warm, and the aching was entirely overcome. My healing has been seemingly slow, but I know I gain strength as I gain spiritual understanding. For eight years I have lived on a cattle ranch in North Dakota, many miles from any Christian Scientist, and I find great comfort in the study of Christian Science. I offer heartfelt thanks to our dear Leader, also to the editors and contributors for the splendid literature that is placed within the reach of all, and may each one of us put into practice the truths taught therein.—Mrs. Carrie E. Goodall, Goodall, N. D.

Nearly seven years ago I was healed through Christian Science of nervous, stomach, and liver trouble in a very bad form, after being under *materia medica* about twelve years. I had tried six different methods and was no better but rather worse, and so discouraged that I lost all faith in drugs, but I was healed in this Science in a few weeks' treatment. One year ago I was taken very suddenly and severely with typhoid malaria, and was entirely healed so that I have never had a symptom of it since. Before we knew of Science my husband had trouble with his back and with rheumatism, besides having the grip several times. These ailments have disappeared. For a number of years my son used to have hay fever all summer, every year, and so badly that the doctor said he never saw any one worse than he was, but we have not heard anything about that for three years.

These are only a few of the things that have been overcome by the understanding of Christian Science, for which I feel very thankful. I never can be grateful enough to our dear Leader, Mrs. Eddy, for what she has done. I hope I may be a faithful follower in this blessed truth.

Mrs. C. A. Skinner, Brockton, Mass.

Like the woman who was healed through touching the hem of the garment of Jesus, I, too, wish to acknowledge the manifold healing received through touching "the hem of Christian Science" (Retrospection and Introspection, p. 37). I have no words to express the light which the life and works of Mrs. Eddy have thrown upon the Bible and the mission of Jesus; upon God's purposes for His children, and how they may be made a living, glowing, practical rule of life. A university medical course, and fourteen years of active practice, have been of value to me, in showing me the difference between the highest human methods and those of God as revealed by Christian Science.

My debt to Mrs. Eddy, to the workers at headquarters, and to the entire Field, can only be paid by obedience to infinite Love.—Louise Eleanor Chapman, Dayton, O.

It is with gratitude to God that I tell of my healing in Christian Science. When it was first presented to me it seemed very strange, but I have since learned to identify all that is good and pure with this truth. I was a weak, nervous child, and grew up in this way. I had suffered agony from chronic headache, which had not ceased in years, and the pain in my head made it seem impossible to read or study. My life was a burden, and I often thought the insane asylum would be my last resort, but I was led to investigate Christian Science, and was instantly healed through the realization of God as ever-present. I hope my testimony may help some one to see the truth.

Grace Leavitt Underwood, Peoria, Ill.

I feel that I owe to Christian Science a debt of gratitude which I can never repay. I was a sufferer for some time, from indigestion, and despaired of ever being cured, as doctors and material remedies could give me no relief. I was advised by friends to take treatment in Christian Science. I did so, and to-day I feel like a new creature, being completely cured after having had seven treatments.

Addie Moore, Dundalk, Ont.

[Written for the *Sentinel*.]

The Brave Pioneer.

HON. CLARENCE A. BUSKIRK.

The brave pioneer on the rugged frontier
Is a happier man, after all,
With his thoughts leaping free as the waves of the sea,
Than the man whom the town holds in thrall.
The brave pioneer on the rugged frontier
Of the world's slow but sure thought-advance,
Grows noble and strong with each conquest of wrong,
And God smiles in his conquering glance.

From our Exchanges.

The *Boston Transcript,* in an editorial entitled "What Have the Churches to Say?" suggested by revelations of mal-administration in the great insurance companies, says, —"During the next decade the pulpit of this country is to be tested on issues which are not sectional as the slavery issue was, but are national. Clergymen are to be called upon to decide between democracy and oligarchy, between denunciation of evil or acquiescence in it, between maintaining churches solely as resorts for mystical devotion and rational edification or as power-houses for ethical and civic regeneration, and in the process of choice and consequent action a marked re-alignment of men and leaders and followers within the churches will come to pass."

The suppression of God's word in the conscience does not dismiss its message forever. The handwriting on the fleshly tables of the heart is brought out in more visible form as one goes on in sin. A man who does not heed and read the first gentle intimations in his conscience loses power to interpret God's handwriting as it becomes plainer. Moral and spiritual obtuseness grows upon him. He cannot discern the finger of God in his experience, although a vague terror may fill his mind. There is necessity for a Daniel to point out clearly the meaning of divine signs.

The Watchman.

The world is living so fast because it fears it has only a little time. Fix the thought of eternal, enduring life in the minds of men, and they will shape their lives differently. It is because of its immediate effect that we urge the preaching of immortal life. Enrich the earth-life with the heavenly until natures are heavenly, and heavenly thoughts and heavenly acts shall come from those lives as naturally as they came from Jesus, who was already in the kingdom of heaven while here upon the earth.

The Universalist Leader.

God does not ask for brilliance, or genius, or even education, much as we admire them all. He asks for something more lasting, more penetrative, more like himself. He asks for love, and if we give Him that we shall live in blessed unbroken fellowship and service with Him every day. Love is the golden key which opens up the vistas of eternity. Love is the hand which lifts the curtain of reserve from the face of God and reveals His glory.

WILLIAM KIRK BRYCE.
The Standard.

The demand of our age is not only for a kind of religion that will bring the sense of forgiveness to the individual heart, the immediate sense of divine peace for the individual life, but our country is asking for the kind of evangel that shall change bad men to good men, that shall make hard men kind and sympathetic. It is asking that public enemies shall be turned into public friends, and from the churches shall go forth a new light that shall leaven the whole lump of society. REV. F. J. GOULD.
The Christian Register.

The impatience of the common man with theology arises from the fact that so much of it seems useless for the purposes of life. It awakens no emotion. It prompts to no endeavor. We cannot get on without theology—though possibly we could spare much from our current theologies and suffer no loss.—*The Examiner.*

Science is breaking up the old beliefs; but it is giving no sound spiritual convictions in their place, nothing on which the faith of the mass of men can rest.

The Christian Register.

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half-dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to The Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of The Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to The Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number, or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Works on Christian Science

Written by Rev. MARY BAKER G. EDDY

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Enlarged and Revised, 1902. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid $3 18

Two to twelve books (cloth only) to one address, each, prepaid 3 00
Twelve or more books to one address, each, prepaid 2 75

Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid 4 00
Twelve or more to one address, each, prepaid . . . 3 75

Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid . . 5 00
Twelve or more to one address, each, prepaid . . . 4 75

Levant, divinity circuit, leather-lined, round corners, gilt edges, silk-sewed, heavy Oxford India Bible Paper, wide margins, each, prepaid 6 00
Twelve or more to one address, each, prepaid . . . 5 75

Orders for Science and Health, in lots of twelve or more to one address, may include any or all the different styles of binding.

A COMPLETE CONCORDANCE to Science and Health with Key to the Scriptures, 595 pp., 10 x 7. Bound in cloth, marbled edges. Price, single copy, prepaid . . $5 00
Twelve or more copies to one address, each . . . 4 50

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth), each, prepaid 2 25
Twelve or more books to one address, each, prepaid 2 00

Morocco, limp, round corners, gilt edges, convenient for pocket, each, prepaid 4 00
Twelve or more to one address, each, prepaid . . . 3 75

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5 00
Twelve or more to one address, each, prepaid . . . 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.

Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month.

The date of expiration may be found on the address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

Dr. E. D. Durand, special examiner for the United States Bureau of Corporations, in the conference on commercial education at the University of Illinois, in the last session which completed the installation of President Edmund J. James, made some interesting admissions in the course of a discussion on "Training for the Government Service." "The majority of people little dream," he said, "as they gaze with awe at the beautiful compilations sent out by the Government Department, of the slovenly manner in which individual items are drawn up. Many of the reports sent out are worthless and meaningless because of this. The trouble is that the Government has put cheap clerks on the work that should be done by expert statisticians. The economic work of the Government is growing rapidly. We need large numbers of good men trained in the schools of commerce. The desirability of having these men is realized more every day by the powers that be. That the Government pays too much to clerks and too little to men in responsible positions is a well-known fact."

Secretary Taft, whose department has charge of the building of the Canal, left last week for Panama in company with a number of officials, to make a personal investigation of the needs there in order that he may be able to report to Congress intelligently on any necessary legislation. He will have a personal interview with Governor Charles E. Magoon, the administrative officer of the Canal Zone, and will consult with Chief Engineer Stevens. Secretary Taft timed his visit so as to be in Panama on November 3, the second anniversary of the independence of the Republic of Panama.

Incomplete returns already show that more letters, packages, and newspapers were handled and more money went through the mails from June 30, 1904, to June 30, 1905, than in any like period since the Government was established. During the twelve months 600,000,000 more postage stamps, stamped wrappers, and postal cards were used than in the preceding year, resulting in an increase in receipts of approximately $10,000,000.

The President has returned from his journey to the Southland, where he addressed large audiences in many cities and was received with expressions of the heartiest enthusiasm. His return was made from New Orleans in company with a naval squadron, which made a fast trip, steaming about twenty knots an hour. By means of wireless telegraphy the progress of the squadron along the coast was constantly followed.

The formal but hearty expressions of thanks from the Russian and Japanese Emperors to President Roosevelt for his services in the cause of peace in the Far East, have been made public by Secretary Root. The Russian Emperor's message was contained in a letter of instruction to Baron Rosen, the Russian Ambassador; the Mikado addressed the President personally.

It is now probable that some of the Panama Canal digging will be done under contract.

Foreign.

On Wednesday, October 18, says the *London Times*, King Edward opened the new thoroughfares of Kingsway and Aldwych, the construction of which forms the principal part of the important undertaking known as the "Holborn to the Strand improvement." The work has been in active progress for a long time past, the changes wrought being so great as almost to bewilder even those to whom the neighborhood is most familiar. Lofty buildings and time-honored landmarks have been swept away, whole streets demolished, and the face of London in this locality completely transformed. The improvement is, indeed, the largest which has been carried out in London since the construction of Regent Street in 1820. The inconvenience in the past, resulting from the existence of the congeries of tortuous and narrow streets connecting these two great arteries of traffic, has been experienced, grumbled at, and endured for at least a century. In 1889, after a number of unrealized schemes in the preceding years, the London County Council took the matter in hand. The royal assent to the improvement was not received until 1899. Kingsway, the new street, starts from Theobald's Road and proceeds southward along the line of what was formerly Southampton Row. Then, crossing Holborn, it passes through what was once Little Queen Street, proceeding in a straight line to the site of the old Olympic Theatre, which fronted Wych Street. At this point the street divides and forms Aldwych, a crescent with a bold and extensive sweep, the eastern horn of which opens into the Strand at St. Clement Danes Church, while the western horn enters the Strand at Wellington Street, almost opposite Waterloo Bridge. By St. Clement Danes Church a site has been allotted by the Council to the Gladstone memorial by Thorn, which will thus be placed in a very conspicuous situation. The complete thoroughfare is about 4,200 feet in length and the width one hundred feet.

The Russian Emperor, in a manifesto dated October 30, in which he touches upon the conditions in the Empire, continues as follows: "We, therefore, direct our Government to carry out our inflexible will in the following manner,—

"First, to extend to the population the immutable foundations of civic liberty, based on the real inviolability of person, freedom of conscience, speech, union, and association; second, without suspending the already ordered elections to the state Douma, to invite to participation in the Douma, so far as the limited time before the convocation of the Douma will permit, those classes of the population now completely deprived of electoral rights, leaving the ultimate development of the principle of the electoral right in general to the newly established legislative order of things; third, to establish as an unchangeable rule that no law shall be enforceable without the approval of the State Douma and that it shall be possible for the elected of the people to exercise real participation in the supervision of the legality of the acts of the authorities appointed by us."

The announcement that King Edward had charged Prince Arthur of Connaught to proceed to Tokio, early in 1906, on a special mission to bestow the Order of the Garter on the Emperor of Japan, has caused great satisfaction there.

An imperial manifesto has been issued at St. Petersburg proclaiming the ratification of peace between Russia and Japan.

Industrial and Commercial.

Under the caption "Record Breaking Orders for Railway Equipment," the *Railway Age* says: "Contracts reported this week show that the high records of 1901 and 1902 for freight equipment and locomotives will easily be surpassed before the close of 1905, although the volume of orders in those years was exceptional, and notwithstanding the high prices and the difficulty in securing prompt deliveries. Orders placed by the Pennsylvania recently for 21,500 cars, in addition to the 10,100 ordered in August, made a new record of contracts placed by a single company, and practically pre-empts all steel car building facilities during the entire year of 1906. It is stated that all car manufacturers are crowded with orders, and that one company alone has unfilled contracts aggregating over 60,000 cars, while no company can promise delivery before the middle of next year unless the order is for a few wooden cars. Orders for freight cars for the first forty-one weeks of the current year are in excess of any previous year, while the contracts for passenger cars and locomotives, if continued at their present rate, will also exceed any previous record."

An order for twenty-five electric locomotives has been placed with the Westinghouse Electric and Machine Company by the New York, New Haven, and Hartford Railroad. These will be driven by alternating current, single phase. Each locomotive is to weigh seventy-eight tons, and is to be equipped with four motors, each of 400 horse-power, making a total of 1,600 horse-power for each locomotive. This is 600 horse-power greater than steam locomotives in present use. The motors will be able to maintain a speed of twenty-six miles an hour in local service, reaching a maximum speed of forty-five miles an hour between stations, and hauling two hundred tons. In express service a speed of sixty to seventy miles an hour can be maintained with a train weighing two hundred and fifty tons.

A statement issued by the Director of the Mint concerning the production of gold and silver for the calendar year 1904, shows a total of gold valued at $347,150,700; an aggregate of 168,403,538 fine ounces of silver, and a commercial value of silver totaling $97,726,300, the coinage value of which is $217,850,200. Of the total the United States produced $80,723,200 in gold and $33,510,000 in silver. Australasia produced the greatest amount of gold, $87,767,300; Africa, $85,013,900. The greatest silver producing country was Mexico, the commercial value of whose output was $35,260,200. The United States ranked next. Russia produced $24,803,200 in gold, and $100,300 in silver. Japan produced $3,084,000 in gold, and $1,801,000 in silver. Canada's output was $16,400,000 in gold and $2,156,800 in silver.

The plan to spend $161,000,000 in order to secure a 500,000,000-gallon daily water supply for New York City, by increasing the present supply 250,000,000 gallons daily, was approved recently by the Board of Estimate and Apportionment. The water will come from the Catskill Mountains.

Lake Titicaca, the highest navigable lake in the world, is to be tapped for electric power to run the Peruvian railways and to supply a surplus sufficient, it is believed, to enable Peru to take a prominent place among the manufacturing countries.

The Mesta Machine Company of Pittsburg has shipped to the Alabama Steel and Wire Company the largest engine ever made, so it is claimed. It is built to develop seven thousand horse-power, and has a fly-wheel weighing one hundred tons.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

The Neglected Garden.

M. G. KAINS.

MANY years ago I became interested in renovating a garden which had long been neglected. Tall, dead weeds hid much of the surface; a very heterogeneous assortment of castaway articles were scattered about, and it looked as unpropitious an undertaking as one could wish to avoid. Possession was taken late in the autumn and work commenced at once. The debris was cleared away, the weeds cut down and burned, wagon-loads of stones and refuse were hauled away, and the place became almost unrecognizable from the improvements then made.

In the spring, when operations began, plowing and harrowing brought more stones to the surface. When these were removed the seed was sown, part in rows, part broadcast. In a few days countless weeds appeared, and the steel rake was at once started upon the rows. Upon the broadcast area, however, the rake could not be safely used, for fear of injuring the young plants. One plot, broadcast with lettuce, showed minute seedlings in a very short time. The plantlets bore first leaves like those of the sunflower family to which lettuce belongs. Everything looked promising, but the delight at this apparently quick germination was short-lived, for when the third leaf appeared the seedlings were recognized as burdock, and every one of them had to be removed with thumb and finger. In a few days the garden was clear of the early spring weeds, but soon more appeared. These were destroyed only to make way for a horde of other varieties which require higher temperatures to germinate. Thus weed crops of many kinds succeeded each other throughout the summer, each appearing when the time and other conditions were favorable, and it was not until after three years' unremitting effort that some of these pests disappeared.

None of the crops suffered, however; indeed, the yield was remarkably large, far beyond what the croaking neighbors had predicted and even greater than the sanguine gardener had expected. Especially was this true of the tubers,—potatoes, carrots, etc. No vegetables have ever tasted so delicious as those wrested from this untoward weed and rubbish rendezvous, and none have given the gardener more pleasure when presented to neighbors, all of whom acknowledged the triumphs over obstacles which previous occupants had thought insurmountable.

Since becoming interested in Christian Science this homely experience has proved a very helpful lesson. The consciousness of each one who comes to Christian Science is a neglected garden strewed with broken resolutions and the outworn falsities of education; overgrown with the rank weeds of wrong thinking; filled with the stones of bigotry and selfishness. Its renovation seems, indeed, an unpropitious undertaking.

In the autumn of his discontent, when other helpers have turned renegade and the owner seeks in vain for assistance, he finds that the human soil cannot be cleared of debris except in God's own way. In despair with some so-called incurable physical ailment or mental trouble, perhaps unknown to him as the effect of wrong thought, he turns as a last resort to Christian Science, and finds that in proportion to the honesty and persistence of his efforts he sees the surface made presentable. Thus he receives the "sign" in the destruction of his distress, and the conclusion is forced upon him that the only true method of rejuvenation or renovation is mental reform. He thereupon proceeds to clear up visible manifestations of wrong practice and neglect. With the removal of the more evident of these he is astonished at the improvement and seeks to discover more of the method by which the work is done. His search turns up hidden proofs of forgotten, unheeded, or unrepented sins —for all departures from the true way are sins. These must be removed, and the true method adopted and adhered to.

But many seeds of erroneous belief and of wrong education still remain, to sprout when conditions favorable to their germination are presented. As they appear each must be destroyed by the realization of truth. Some, however, so closely resemble the true mental plants that they may at first not be recognized, but when their nature is discerned, then they must be removed with precision and despatch, lest the true growth be injured. Last are those seemingly inherent mental weeds which like quack-grass spring again and again from the same rootstock, threatening to overrule the individual and bring back the former state of mental demoralization. If the quack-grass is not allowed to form green parts it will not be able to elaborate its food and will starve; similarly, if the seemingly persistent mental weed be starved by denying its gratification, it will perish.

Upon well-tilled farms weeds are trivial incidents; if known at all, they are promptly destroyed. In Christian Science we learn that in minds filled with Truth and Love there is no room for mental weeds, and if the seeds of such gain entrance they are choked out by the abundance of the crop and the faithfulness of the tilling,—they cannot find lodgment. (See "What our Leader Says." *Sentinel*, February 4, 1905.)

But what of the results in this mental garden? Is human consciousness made bare and barren by these weed-destroying methods? By no means; it is being planted anew. As in nature plants will grow in every place if given favorable conditions of temperature, moisture, atmosphere, and light, so in the higher nature every one can grow, and under the influence of Life, Truth, and Love, produce all the fruits of the Spirit. As in nature plants rush in to possess the land made bare by a fire, so in the higher nature the destruction of mental weeds is immediately followed by the occupancy of their place by plants of God's creating. These grow to perfection, their usefulness often seemingly unperceived by the mental gardener. It is when some of these fruits are given to others that the magnitude of the harvest is revealed. Then the reward is reaped in the expressions of gratitude for the benefits given, benefits which only the faithful are able to confer. This giving does not impoverish the donor, but by the good accruing to him through gratitude he is enriched.

By an intelligent application of the methods taught in the Bible and explained by Mrs. Eddy in Science and Health, the student of Christian Science gains mastery over his

mental self and his environment, and proves from small beginnings the verity of its teachings. He learns that the doing of God's will brings forth a harvest of health, holiness, and happiness.

Scientific Healing.

LEWIS C. STRANG.

PERSONS who are experiencing for the first time the wonderful spiritual uplifting which follows even a slight insight into the realities of being as revealed by Christian Science, are apt to confound revelation with demonstration, and to believe, because they have been shown a part of the answer, that they have worked out the whole problem. In consequence of this self-deception, a period of exaltation is often succeeded by a time of depression, when the clouds of materiality seem thicker and more impenetrable, if such a thing were possible, than they were before Christian Science brought them a glimmering of light.

At such times, those who have not yet learned something of the stubbornness of personal sense—also the difference between apprehending the Science of being as a theory and actually knowing it as a fact—are likely to add unnecessarily to their burden of discouragement by unwarranted self-condemnation, or worse still, in a spirit of self-righteousness, they may blame Christian Science because it has not instantly brought them full exemption from false belief.

A recent experience, while traveling, brought home forcibly to me the obstinacy of personal sense, and also showed me the difference between intellectually comprehending a condition as a theory, and positively knowing it so thoroughly and so soundly that understanding could not be shaken by any arguments of material sense. Furthermore, the experience has given me a clearer idea of what Christian Science treatment really is—that it is not a strange, mysterious, or occult process by which natural law is obviated, but a simple, logical, and eminently sane mental procedure by means of which intelligence, armed with truth, asserts and proves its dominion over error.

At a certain railroad station in New Hampshire, northbound trains, in order to connect with trains on a branch railroad, go through a curious manœuvre. The northbound train stops first at the station in question and then proceeds in a northwesterly direction to the station where the connections are made. After this, instead of backing to the first station, the train takes what is known as a "Y." That is, it backs up a branch track, a switch is shifted, and the train advances engine first on another branch track. The effect of this operation is to turn the train completely around, so that it reaches the station, which it originally left to make the connections, headed south instead of north.

It will be readily seen that passengers, unexpectedly undergoing this experience and ignorant of just what has occurred, would naturally be confused when, fifteen minutes after leaving a station on their left hand, they find the same station on their right hand. It will also be seen that the trainmen, who have been through the experience many times and therefore absolutely understand what has taken place, would not be at all confused or mystified. They know the facts, and deceived personal sense, which argues to the ignorant passengers that because a train starts north it cannot possibly be headed south, simply does not exist for the trainmen. In other words, a mistake has power to disturb the passengers because they believe in its reality. It has no power to disturb the trainmen because they know its unreality.

My own case, however, differed from that of either the passengers or the trainmen. I had been over the road before, but it had been my custom to leave the train at the station and await its return. Theoretically I knew exactly what the train did—that it left the station, backed on a "Y," and returned to the station headed in the opposite direction; but I had never actually been through the experience and therefore never had been called upon to demonstrate practically my theoretical knowledge.

One night I stayed on the train, and because it was too dark outside to see much of anything, personal sense failed utterly to grasp the situation. The result was, that when I, in common with the other passengers, was confronted with a railroad station on my right hand, which a few minutes before I had seen on my left, my intellectual comprehension failed to meet the issue. Personal sense declared that I was confused, and the temptation was strong to believe that personal sense told the truth. But my plight was by no means as bad as that of my wholly ignorant fellow-passengers, for I did know the truth as a theory. Therefore, an intelligent sense of the situation eventually assumed control, and with the irresistible arguments of fact quickly brought the erroneous sense into subjection.

Simple and inconsequential though it is, this experience is characteristic of the whole panorama of mortal existence, with its multitudinous tragedies of sin, sickness, and death. Why was personal sense fooled by the train manœuvre? Solely because, ignorant of the facts, it mistook its irresponsible and entirely unwarranted illusions for an actuality. So, whether the manœuvre be that of monumental sin, of devastating disease, or of death itself, personal sense is fooled because, devoid of understanding, it accepts the illusion as a fact. Personal sense is a monstrous egoist, instinctively ready to believe that God has blundered rather than to acknowledge its own unreliability.

Moreover, it is plain that mortal man is by no means freed from the assaults of personal sense simply because he knows something of the truth as a theory. He must prove his right to be free by overcoming error with truth. How is this overcoming accomplished? Reverting to the train incident, it will be perceived that the first step in the destruction of false belief is the recognition of the unlawfulness of the claims of personal sense, arguing in favor of confusion and alarm. It is evident that until this unlawfulness is seen, there is no substantial base from which to begin operations against the enemy. It will be noted that the second step in a successful assault consists in attacking personal sense from the vantage-ground of knowing exactly what it is—a liar, and that the third step is keeping up the attack—piling in the rightful evidence and arguments—until the illusion utterly vanishes.

It is emphatically evident that until intelligence is recognized as the potential master of personal sense, no confident nor effective battle can be made against this arch-tyrant. An equally emphatic essential in truly scientific healing, of which Christian Science is the only exponent, is the same masterful control of the more terrifying claims of personal sense, against which it is the Christian Scientist's privilege and duty to wage unceasing warfare. This masterful control is secured through the conscious presence in the face of all evil of that serene confidence which is bred in humility and fortified by an adequately demonstrated understanding of God and His laws which can only be gained by the study of the Bible and the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy.

Christian Science maintains the demand of Principle—absolute right, established fact, certified truth—by which all acts of mankind can be accurately gauged, and Christian Science treatment is the means for meeting and mastering in human consciousness all modes of thought which fail to accord with the essential harmony of Principle.

The calm and convincing presentation of the case is all that the human agencies involved in the case can do. The healing itself—the destruction of the erroneous beliefs and the consequent disappearance of their material manifestations—is accomplished by Christ, Truth, operating not miraculously, but according to the established order of divine law.

Spiritual Sense our Need.

E. H. HALL.

THE world is in extreme need of the truth which is taught in Christian Science. The belief in materiality, and dependence upon it as a source of blessing and comfort, or a true basis of evidence, has long since been recognized as unreliable, transient, and deceptive. The false testimony of the material senses, with the doubts and fears which accompany them, hinders mortals from seeing the supremacy of spiritual thought (their true God-given selfhood) and leads them into the by-ways of sin, suffering, doubt, and despair,—for which there is no remedy in materiality, the carnal mind.

When Peter recognized the Master coming toward the tempest-tossed ship on the sea, his true selfhood, or spiritual consciousness, was awakened, and this enabled him to walk on the water and to give ample evidence that it is right for men to expect, and possible for them to obey the injunction, "Let this mind be in you, which was also in Christ Jesus." After Peter had walked a portion of the way toward the Master he began to sink. Why? The water was no deeper or less buoyant, and Peter was no heavier than when he began to walk. What was the explanation? This: he had taken into his thought the material conditions and "he was afraid." The Master then aided him in his incomplete demonstration, but said, "Wherefore didst thou doubt?" showing clearly that it was the acceptance of the sense testimony which was the sole occasion of Peter's failure. The Israelites' submission to false material thought brought corresponding discomfort to their bodies as well as stagnation to their progress,—out of bondage into freedom, out of sense into Soul.

From the early dawn of the Christian era the Bible has taught the necessity for the transformation of the body by the "renewing of the Mind." But this has not been comprehended, taught, or practised by mortals until the truth of Christian Science was set forth by Mrs. Eddy, who has herself proven, and taught thousands of others to prove, that health, peace, joy, and security which may be realized through the recognition of the allness, the omnipresence of Truth, the awaking to that spiritual selfhood which is the kingdom of God within.

Helps from Object Lessons.

NANCY M. DUNN.

The trivial round, the common task,
Will furnish much we ought to ask;
Room to deny ourselves, a road
To bring us daily nearer God.
Christian Science Hymnal.

FINDING that the bulkhead of the cellar had been left open until late one night, I took a candle and went down to shut it. After doing so, I turned toward the stairway to ascend, and walking too fearfully and hastily, the air blew the candle light so nearly out that an object in the corner assumed the appearance of "a burglar," at error's suggestion. As one error (accepted) opens the door to another, the next suggestion was that I had better turn and retreat through the bulkhead stairs, into the yard. This I hastily started to do, the candle light almost disappearing again. Seeing this to be a mistake, however, and realizing to some extent that divine Love is man's wisdom and protection and is ever near, I turned and walked fearlessly and steadily in the right direction, and the light then burning brightly, sending its rays into all the dark corners, revealed—no burglar.

Meaningless as this incident would once have seemed to me, it now brought an increased conviction, gained from the study of our Leader's writings, that important lessons may be gleaned from "The trivial round, the common task."

Since God has created man spiritual and perfect, all the footsteps that lead us toward an understanding of this fact must be taken. This truth came to me with a clearer sense and gave a courage greater than was ever realized before, for I saw that divine Love and law protect man, and so direct us that we can take these advancing steps from wherever the truth finds us. He who knows that it is by divine authority that we advance toward good, will neither proceed too hastily nor too slowly, nor will his light grow dim.

We give the mathematician and the musician credit for ability to demonstrate the higher problems in their different lines, which proves that they must have taken every step from the lower before reaching the higher, yet, while men have believed that God did create man in His own image, they have not given Him the credit of being able and willing to heal a little child of illness, which is, humanly speaking, a much simpler problem than the reformation of the wilful sinner. At the same time, men have believed Him able to reform the wilful sinner but not to heal the willing child. Mankind has thus believed that God is able and willing to perform the greater act, but not the lesser. Jesus, the Wayshower, did not so teach, however. He said, "Suffer the little children to come unto me, and forbid them not," and the beloved disciple said, "Whosoever will, let him take the water of life freely,"—the unwilling sinner as soon as he will.

God surely does understand His own creation, and is always guiding and protecting His children. He suffers no obstacles to retard our growth when we accept His guidance and understand that He not only has greater power than has aught else, but is the only power. We rejoice that this truth is proven to us by the life and work of the Founder of Christian Science, and by hundreds of loyal Christian Scientists who are daily healing both sickness and sin.

Unity.

GEORGE D. MC KAY.

O magnify the Lord with me, and let us exalt his name together.
Psalms.

A CHURCH edifice is the outward symbol of a meeting-place where the worshipers draw near to each other through their desire to draw near to God. It is also an expression or manifestation of agreement to reach the divine ideal. The real meeting-place is in the unity of good, where we are drawn together by the power of Truth and Love. All true building is spiritual, and consecration of thought destroys all that would seek to divide the children of God through a belief in many minds, with separate and widely diversified interests. In spiritual purity is true unity of thought and purpose; in this purity, love for one another is manifested, for we are truly united if we love each other, and we are thus equipped with "a mind to work" effectually on our problem, and we get our answer in patience, perseverance, meekness, humility, unselfishness, brotherly affection, and a home for all God's children.

We are all builders; first building that character in consciousness which is according to the Christ-idea in divine Mind; then through spiritual agreement in the bonds of love we come into and realize the fruition of united effort toward a definite end; viz., the building which is actually and "fitly framed together," and which "groweth unto an holy temple in the Lord." It is said of an Eastern nation, that in times of trouble the whole of the people act as one man to uphold the rights of their country against foreign invasion, and that they are ready to withstand the world if need be. How much more should we, as Christian Scientists, be ready to express to the world that unity of purpose and effort of which Paul says, "Forbearing one another in love; endeavoring to keep the unity of the Spirit in the bond of peace."

A Doctor's Tribute.

To the Editor of the *Daily Dispatch.*

Sir:—The Rev. W. S. Swayne, in his paper on Christian Science, is reported to have said,—

"The failures of Christian Science are numerous and disastrous. It is responsible for failures which might have been treated with success by a doctor."

I would like to call attention to the recognized fact that in medical practice there are failures, and that we have been accustomed to quietly accept such as inevitable. In fact, it is believed that certain diseases are from the outset bound to prove fatal. Is it such a matter of surprise, then, that Christian Scientists are not successful in every case? There have been four thousand years of medicine and about forty of Christian Science.

However, my own experience on these points is decidedly in favor of Christian Science as against medicine, and I write as a man who for nearly thirteen years was a general medical practitioner. Under the very best that medicine and surgery had to offer, my daughter, suffering from tubercular disease (joints and lungs), was slowly and steadily dying five years ago, losing weight and strength daily, and it is due to nothing else than Christian Science that I am able to say she lives to-day a healthy, strong girl. This case would have been a failure under medicine, but has proved a success under Christian Science.

Again, under medicine a patient of mine was certainly, and in much suffering, going down to her grave, with valvular disease of the heart, and complications. This case also—a would-have-been failure in medicine—became a complete success under Christian Science. Surgery had nothing better to offer a young man, who had disease of the bones of the knee joint, than excision of the diseased bones and joint; thereafter, at best, a stiff, shortened limb. Naturally we would have accepted this measure of success as a very good thing. Yet under Christian Science treatment this man retains the whole joint in a perfect, healthy, and active condition.

When I first put Christian Science to the test with these cases I was not a believer, and knew practically nothing about it. I thought much as other medical men, until the proofs of the superiority of Christian Science healing convinced me.

The conclusion at which Mr. Swayne arrives, that "Christian Science leaves no room for works of mercy, spiritual or bodily, no reason to feed the hungry or tend the sick, dying, and outcast," is one with which I totally disagree, and I think the foregoing cases justify the position I take in thinking that Christian Science "does feed the hungry, tend the sick, dying, and outcast." Surely those who are left without hope of relief from material means can be classified in this category, and these Christian Science is relieving to-day.

W. S. W. WILDING, M.R.C.S., L.R.C.P.

London (Eng.) *Daily Dispatch.*

The Healing Power of Christian Science.

Christian Scientists do indeed claim that their system of healing is "a rediscovery of the healing power employed by Christ Jesus," and their claim is ably substantiated by thousands upon thousands of authentic cases of healing without the use of drugs or mesmerism, but as Jesus healed, through divine power. If the Church, throughout the intervening centuries of the past, had continued to practise Christian healing through the understanding of Jesus' teachings, as was done for three centuries after Christ (see Gibbon's Rome), there would have been no need of a "rediscovery." After thirty-five years of study and research since her wonderful discovery, she declares "herself still a willing disciple at the heavenly gate, waiting for the Mind of Christ" (Science and Health, Pref., p. 9). This statement carries with it a deep significance for thinking people.

Mrs. Eddy does not claim this Science to be new, nor that it originated with herself, any more than did Newton claim the law of gravitation to have originated with himself, or Copernicus that he originated the stellar system. These men simply discovered facts which had existed since "the morning stars sang together," but which were unknown to human consciousness. Yet doubtless there were those in their day presumptuous enough to declare, "Why, that is nothing new." And in this connection may we ask our readers: "If the truth taught in Christian Science was taught in the philosophies of Berkeley and others, why did not the same results accrue from the study of these philosophies as from the study of Christian Science? Why did not the study of these philosophies result in physical and moral healing?

R. STANHOPE EASTERDAY.

Marion (Ind.) *News-Tribune.*

When the Christian church awakens to its God-given opportunities, it will welcome Christian Science, and recognize the practical nature of its teachings. These teachings emphasize the necessity for and the divine efficacy of true prayer, and prove what Christianity preaches; viz., the certainty of God's loving presence, power, and willingness to save to the uttermost, not only the sinner, but the sick, the diseased, the despondent and heart-sore one who turns to Him for succor and relief.

Is it an "impertinent question," as our critic states, to ask, "Is it God's will that we should be sick?" If so, is it not equally "impertinent" to ask, "Is it God's will that we should be sinners?" If the fact that "Jesus left the vast bulk of sickness and sorrow of his age unrelieved," indicates that it was not the part of the Christian religion to remove it, what does the same process of reasoning indicate concerning the greater bulk of sin, left "undestroyed" when Jesus departed? That it was not the duty of Christians to destroy it? No! and yet one conclusion is as reasonable and logical as the other. Is it not rather the fact, that both sin and sickness were to be healed, eliminated by the active operation of the Christ-truth, in proportion as it became understood in its fulness.

This is what Christian Science is accomplishing. Its healing work is inseparable from its regenerative work, incidental to the spiritual uplifting, part and parcel of its plan of "complete salvation." It is essentially a religion, not a therapeutical system "competing with doctors for fees," as our critic mistakenly asserts.

JOHN L. RENDALL.

Dubuque (Ia.) *Telegraph-Herald.*

Christian Science is a demonstrable religion, which, when understood, reforms the sinner and heals the sick. Unless one can furnish these fruits as proof of his understanding of the subject, one has not the right to attempt its explanation. It is essentially a religion, not so much of words as of works; and these works are more eloquent and convincing than could be any contest or combat of words which human ingenuity might display. Columbus might have debated with his opponents his belief that the earth is a sphere till the end of his days, with little benefit to humanity, but he chose the wiser course, and made his voyage of investigation, which discovered a new world and demonstrated the truth of his teaching. Christian Science illumines the Scriptures, thus revealing the world of Spirit, which, though intangible to the senses, may be discovered by the unbiased Christian who can learn what Christian Science is and what it is accomplishing for the liberation of humanity.

The Lectures.

Concord, N. H.

The annual lecture under the auspices of First Church of Christ, Scientist, in Concord, was held last evening [October 29] in the beautiful edifice of that faith, the gift of the Rev. Mary Baker G. Eddy, Discoverer and Founder of Christian Science.

The lecturer was Judge William G. Ewing of Chicago, and his audience completely filled the spacious auditorium, both upstairs and down. Among those present were delegations from Lancaster, Laconia, Lakeport, Manchester, South Newbury, and other New Hampshire points. A large party came from Boston, returning by special train at the conclusion of the lecture.

Rev. Irving C. Tomlinson, First Reader of the church, greeted the audience in the name of the Church and presented Mayor Charles R. Corning as the presiding officer. Mayor Corning spoke as follows:—

It affords me pleasure and a sincere personal gratification to say here publicly what I have often said privately respecting Mrs. Eddy's relationship to Concord. Not every one, I fancy, among our citizens comprehends the full significance involved in Mrs. Eddy's residence in this city. But, on the other hand, this good lady's friendly partiality to Concord is, I am certain, appreciated and comprehended by us all. It was, indeed, a happy turn that persuaded her to choose Concord as her home and thereby confer on the city a distinction rare and perhaps unparalleled. It is our Concord rather than our Massachusetts namesake that today attracts strangers and visitors not only from all parts of our own country but from lands beyond the sea. Surely no citizen of Concord is too blind to recognize this fact. The Revolution, perhaps, did not do more for the Massachusetts Concord than did Ralph Waldo Emerson the philosopher, and so in our case who cares to deny that the future will regard Concord more for its being the center of a great moral-religious movement than for the city's deeds in peace and war?

But in a material sense we owe a debt of gratitude to the generous donor of this superb edifice, one of Concord's fairest ornaments. Here it will stand, as a perpetual memorial not only to her faith but to her affection for Concord, and both are now inseparably interwoven. Although I am not a member of this society, that circumstance in no wise lessens my appreciation of what Mrs. Eddy has done for our good city. I thank her for what she has done, and in doing this I am certain that I express the sentiments of my fellow-townsmen. Here is an influence and an individuality, and may we not congratulate ourselves that this influence and this individuality are so intimately associated with our municipal welfare?

Concord has always given warm welcome to orators and earnest speakers, and long is the roll of eloquent lips that have delighted our people. To-night, in keeping with our benign tradition, we have a distinguished lawyer, an eminent judge, a prominent member of the Board of Lectureship of The First Church of Christ, Scientist, of Boston. It gives me pleasure to present Judge Ewing of Chicago.

The lecturer began by referring to the gracious words of Mayor Corning in reference to Mrs. Eddy. He said that Concord had in its honored citizen, Mrs. Eddy, one who had reversed the ancient proverb, for she is a prophet who hath honor in her own country. He spoke of Mrs. Eddy's wonderful work for humanity and of the million and more who have been restored from sickness to health through her revelation. He spoke of her own wonderful healing through turning aside from all earthly remedies to her heavenly Father for comfort and relief. Through her subsequent prayerful study of the Scriptures and the Revelation, she has given to the world the method of Christ Jesus for healing the sick. He paid a beautiful tribute to the might and meekness of her character. Notwithstanding the great good she had accomplished, she had kept her own personality from her work. Many religious reformers had given their names to the religions which they founded, as did Luther and Calvin, but the church of which Mrs. Eddy is the Founder and Leader is known only as the Church of Christ, Scientist.—*The Concord Monitor.*

[In addition to the above the *Monitor* and the *Patriot* each published extracts of about three thousand words from Judge Ewing's lecture.—EDITOR.]

West Chester, Pa.

Last evening [October 3], in Memorial Hall, over five hundred interested people listened to a lecture on Christian Science by Mr. Bicknell Young. Isabel Darlington introduced the speaker, saying in part,—

The motive which prompts the invitation to this lecture is not one of proselytism, but is akin, I think, to that which led the woman, when she had found, after diligent search, the lost one of her ten pieces of silver, to call her neighbors together, saying, "Rejoice with me; for I have found the piece which I had lost." Christian Scientists believe that in Christian Science is found and restored the Christ method of healing, practised and taught by Jesus, his apostles, and the early Christian Church. If this be true, it is indeed cause for rejoicing, and we assert that it is demonstrably true, and has been demonstrated in our midst; that in the language of the beloved disciple, we are declaring unto you only that "which we have seen with our eyes, which we have looked upon, and our hands have handled, of the Word of life."—*Local News.*

Lincoln, Neb.

Prof. Hermann S. Hering of Boston, last night [October 5], lectured to a large audience at the Oliver Theater, his subject being "Christian Science." Rev. John E. Tuttle, pastor of the First Congregational Church, introduced the lecturer, saying in part,—

We present in this audience the spectacle of diversity in opinion. But ours is also, and we believe with equal clearness, unity in diversity; for does not the name Christian, which we bear, mean that we are all one in the love of, and the quest for, the truth? If this be not true, then we are not Christ's in spirit. We find our unity, not in a common name, not in thinking alike, but in a common hunger and thirst after the truth, that we may know and live it. That unity which makes people love one another as brethren has its roots in the things of the Spirit. On this high level we come together as the children of God, who wish to know His will, to obey His law, and to reproduce in ourselves, in our day and generation, the life of Jesus Christ. And more and more, it seems to me, must we regard the love of truth as the basis of unity among men. The unity of the children of God is no dream of a theorist. It is a solid fact, toward which the race has been slowly but surely tending and which it will at last realize.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Individual Rights.

SOME things are amusing *per se,* while others, serious in themselves, are rendered so by being brought into juxtaposition with each other. An example of the latter is seen in the two paragraphs of a press dispatch which recently appeared in a number of newspapers. We quote from the *Boston Transcript* as follows:—

"Atlantic City, N. J., October 5.—The State homœopathic doctors in convention here yesterday adopted a scale of fees to be charged for operations. The fee for stomach operations shall not exceed $500, nor be less than $50. A patient can have a finger cut off for $5, or a leg removed for $150.

"A committee was appointed to oppose in the State Legislature any attempt of the osteopaths to become a recognized medical body."

The fact that this action was taken in the State which has become known as the home of the trusts, detracts nothing from the unconscious humor of the proceedings. Much as we are amused by this aspect of the doings of the convention, we cannot afford to ignore the evident intention of the doctors who have established themselves within the protection of the law, to bar out all competitors, if such a thing were possible.

As a rule, an effort is made by those who seek restrictive medical legislation, to prove that it is demanded by the people for their safety, but in this case there is no intimation that the public at large is asking that the monopoly of the "regulars" be not invaded. It seems to be a plain case of the "ins" trying to remain in by keeping the "outs" out.

There is no popular demand that a monopoly of the healing art be given to any one class, and it is useless for interested parties to pretend that there is such a demand. Every healing system must stand upon its own merits, and the right of every person to make his own choice in such matters should be so thoroughly recognized by this time as to make class legislation entirely out of the question.

Judge Clifford P. Smith, writing in the October number of *The Christian Science Journal,* summarizes the foundation upon which popular government rests, in the following words:—

"The first and most important consideration is that the American system of government is founded upon the individual and his independence. The constructive statesmen who brought this nation forth, conceived government or the State to exist 'merely as a legal entity, created and organized solely for the protection of the individual.' (Thorpe, Constitutional History of the United States, Vol. 1, p. 43.) 'In the revision and new definition of the State by Adams, Jefferson, and their associates, the individual was recognized as the center of the political system. . . . The American Revolution differed from all preceding revolutions in the history of the world, in its enthronement of the individual and its subordination of the State to him. For a proper understanding of the character of the American constitutions of government, this idea cannot be too well mastered.' (Idem, p. 42.) In the United States, 'organized government has for its object the protection of the individual against undue interference on the part of others with his enjoyment of life and the beneficial employment of his faculties. . . . The purposes of government will not be carried out in accordance with the principles of the Declaration of Independence, unless all men are guaranteed equality before the law, that is, the equal right to protection under the law in the enjoyment of individual liberty, so far as it can be secured without depriving others of substantially the same degree of freedom and opportunity.' (McClain, Constitutional Law, pp. 289, 290.)

"The underlying basis is that men are endowed with rights, 'not by grace of emperors or kings, or by force of legislative or constitutional enactments, but by their Creator; and to secure them, not to grant them, governments are instituted among men.' (Powell *v.* Pennsylvania, 127 U. S. 678.)"

ARCHIBALD MCLELLAN.

"The prayer of faith."

IT has never been denied that faith in God is an essential element of the higher nature, and yet few have had clear views as to how it is to be brought into realization and applied in the varied problems of human experience. Jesus' statements respecting faith leave no doubt as to its vital importance, and in the eleventh chapter of Hebrews, which has been named the great epic of faith, we are told that without it we cannot please God. It is readily seen that success in any human undertaking is largely dependent upon faith of some sort, but while this is well known, it is also true that the rightful significance of the word has been so obscured as to seriously lessen its value, so that many Christian people have come to speak of faith apologetically, as if it were something antipodal to reason. Victor Hugo but voices a popular sentiment when he says, "Faith dissolves under the action of fate."

Christian Science comes to restore the true sense of faith, to remind us that it is one of the fruits of Spirit, and that it cannot therefore grow in a material soil. The mortal belief which is misnamed faith ofttimes "dissolves under the action of fate" and is found to be of little or no value in the crises of human experience. It is, however, none the less true that the kind of faith which the Master exercised and commended is indispensable to our progress, and we owe our revered Leader a boundless debt of gratitude because she not only teaches what it is and how it is to be attained, but her whole career reveals what is possible to those who grasp the true sense of Jesus' words, "Have faith in God."

In our text-book we learn that we must use scientific methods if we expect scientific results, even as in chemistry it would be impossible to make a successful demonstration were any of the necessary elements lacking. A late religious thinker caught a glimpse of the necessity of science to religion when he said, "Shall a mechanical experiment succeed infallibly, and the one vital experiment of humanity remain a chance? . . . If we cannot calculate to a certainty that the forces of religion will do their work, then is religion vain."

Christian Science declares in no uncertain tones that we can so calculate; it shows that every incomplete demonstration is due to the fact that some of the necessary elements are lacking, and that "mental and moral chemistry change the material base of thought, giving more spirituality to human sense" (Science and Health, p. 422). If more faith be needed to complete a demonstration, it must be sought in the Christ-way. If we would have an enlarged sense of faith in God, good, then good must predominate in all we think and do. We shall have faith in the power of Truth and Love, when we live in obedience thereto; and we must see to it that we are not robbed of our faith in the power of good and so made to disappoint those who rely upon us for help. If we have the faith which springs from obedience to divine Principle, it will be reflected by

Digitized by Google

our patients, and as of old, our word will be "with power." There can be no question that this faith, expressed in Christian Science, is reaching all mankind as never before, and the one important consideration is to apply it faithfully in every emergency. Well may we pray as did the disciples, "Lord, increase our faith." ANNIE M. KNOTT.

The Harvest.

THE husbandman may rejoice in the prophecy of the fresh young grain, even though his profit is not yet negotiable, but he cannot plan and provide on an assured basis, until the well filled shocks stand at "attention" in their impressive autumnal parade; then he is prepared to remove all doubt as to the wisdom and success of his labor. Thus, too, in matters of religious faith, the final and convincing basis of declaration is a demonstrated proposition. Truth manifest is the one thing of which we can speak unhesitatingly, and it is in this that unmeasured advantage has been conferred upon all Christian Scientists. In their appeal to men they can stand upon the unmovable rock.

In the absence of unquestioned knowledge a promising theory may be very useful as a working hypothesis, but it furnishes ground for nothing better than hope and experimentation. He who is unable to solve its problems can never speak definitely or enthusiastically of his knowledge of mathematics, for he cannot question the fact that if its law were apprehended and applied it would work things out. Jesus clearly taught that garnered results are to be our first and final argument if we would convince men. "By their fruits ye shall know them." There is a gospel of hope and a gospel of expectation, but they serve only as stepping-stones to that gospel of achievement which the world most longs for and needs. Nothing is more pitiful than profitless heroism, unless it be listless indifference, and though discontent be ever so unideal, it is a wholesome mood for those who have faithfully tried to make a theory work and found it incapable of demonstration. The ministry of Christ Jesus was distinctly one of results. His instructions to his disciples make it clear, moreover, that he expected their faith and labor would likewise bring immediate returns, and Christian Scientists accept and act upon this teaching. They find a pertinent rebuke of the willingness to wait indefinitely, and with torpid content, for the fruitage of faith, in Jesus' words, "Say not ye, There are yet four months, and then cometh harvest? behold, I say unto you, Lift up your eyes, and look on the fields; for they are white already to harvest." Jesus proved that Truth's effectiveness is not subject to time limitations; he taught both in word and in works that we are to have that expectancy of immediate results which in Christian Science is recognized as an essential of faith, a logical outcome of the realization that God's will is done, and that its demonstration is effected for us the moment we awaken to the Truth of being.

The normal harvest time in spiritual things is continuous, and he whose faith is intermittent, who thinks of Truth's appearing as a periodic event, at auspicious times for seeking the divine favor, has forgotten the nature and impulse of infinite Love. In the measure of our genuine faith in God, our understanding of the all-presence and power of Spirit, we will have unyielding expectancy of the triumph of good. To lift up our eyes and "look on the fields," is to anticipate Truth's overcoming whenever and wherever the healing word is declared. The church services, the Sunday School and class teaching, the public lectures, together with our spiritual conversations with the hungry-hearted,—all these present opportunities for Truth's effectual working whereby, as Paul says, "he is able even to subdue all things unto himself," and we come far short of our privilege and duty if we are not anticipating and witnessing the healing of sickness and sin on all these occasions.

Nothing conduces more surely to the success of Christian endeavor than that keen sense of the immediateness and naturalness of the redemptive activities of divine Mind which is awakened by the study of Christian Science. When thought is fixed upon the ideal overcoming as the purpose and goal of our every ministry, then we are more sure to remember, and the more careful to faithfully master all the details of that ministry, and thus the days are made more and more joyous with the reapers' song.

JOHN B. WILLIS.

Letters to our Leader.

Portland, Ore., October 9, 1905.

Rev. Mary Baker G. Eddy, Concord, N. H.

Beloved Leader:—I desire to express to you the special praise and gratitude I felt to God, when reading your article, "Watching *versus* Watching Out," for it not only embodied within itself answers to questions that had arisen, but it brought a wonderful illumination, and added strength to keep closer and more untiring vigil, lest I enter into temptation. While I do not begin to conceive the full import of this message of wisdom, yet a profound sense of gratitude—requisite to fuller comprehension—struggles for expression, for this gleam of light, which if followed will lead to complete and perfect understanding.

With deep, unquenchable love, I long to be a nearer follower of the blessed truth you live "to bear witness unto."

MRS. MARY W. WELDON.

Oakland, Cal., October 11, 1905.

Rev. Mary Baker G. Eddy.

Dearly Loved Leader:—From across the continent, I send you loving greeting, and beg to report to you this lecture trip, so unusually eventful and full of happy experiences. I left Minneapolis September 2, and since then have given fourteen lectures, one in South Dakota, eight in Oregon, one in Washington, one in British Columbia, and three in California. Two of the last named were given in a remote section of the State, reached by a sixteen hours' boat ride from San Francisco. One of the Oregon lectures was at Merrill, in the far interior of that State, necessitating thirty-six miles of staging over rough and rugged mountain roads, and twenty-three miles more by carriage.

I know it will give joy to your loving heart, to be reassured by an eye-witness, that even in these remote and almost inaccessible places, the blessed light of Christian Science has penetrated; many longing eyes are turning eastward, Christward (Science and Health, p. 575, l. 27), and many honest hearts beat in loyalty to our beloved Cause and its peerless Leader.

If one needed any added proof of the verity of Christian Science, such would be furnished in the fact that it does so find its way into the far-away nooks of human consciousness. Nothing but an idea of eternal Truth could do that.

The little town, Merrill, Oregon, contains but one hundred and fifty inhabitants, and the audience at the lecture numbered two hundred and fifty,—showing that the attraction of Truth reached beyond the town limits; indeed some people drove more than twenty-miles to attend. The Scientists of Merrill have recently built a neat frame structure of churchly pattern, capable of seating about one hundred people; and, strange as it may seem, this is the only church building in that town. Needless to say, this work is founded upon the demonstration of the Christ-healing which you have revealed,—some of the most wonderful cures having been wrought in that community. In Portland, Oregon, where just now many nations are represented, the lecture was given in their best theater; and it was packed to the last row in the upper gallery, with about two hundred and

Digitized by Google

fifty Scientists seated on the stage. A little boy was healed during the lecture of a severe sense of pain. It was also my privilege to speak to our brethren across the (imaginary) line, in Vancouver, British Columbia, and I found the same earnestness and devotion there.

Returning from the north, my next appointment was in Oregon's capital city, Salem. On the way there, through no fault of mine, except lack of understanding of man's complete dominion, my trains missed connection, and, rather than fail in meeting my appointment, I hired a special train, consisting of an engine and one coach, to go a distance of fifty-three miles, so that I arrived *just* in time. Thus do obstacles melt away before the onward march of Truth. Here in Oakland we have had another demonstration of the great interest in Christian Science. The theater, one of the largest, was packed and about five hundred people were turned away. Each morning, anew, I put my work into God's care and keeping, and it is nothing less than wonderful to see how each step is shielded and directed by His all-loving power.

I trust I have not burdened you with too long a tale, but out of my deep gratitude to you, and the recognition that this is all a part of your great work, I could not refrain from telling you about it.

Very lovingly and gratefully, your student,

MARY BROOKINS.

MRS. EDDY'S REPLY.

"No good thing will he withhold from them that walk uprightly. O Lord of hosts, blessed is the man that trusteth in thee."

M. B. G. EDDY.

Kansas City, Mo., October 13, 1905.

Rev. Mary Baker G. Eddy,

Pleasant View, Concord, N. H.

Beloved Leader:—I have just received a copy of the new Hymnal, and am impelled to write you of the joy it gives me. For a number of years I have longed to see better music for your words. The new hymns are most admirably written for congregational singing. They are melodious, rich, stately. And the new solo! my heart o'erflows with untold gratitude. It is beautiful, rich, and full of the dignity which is so much needed in our music. It has been my privilege to study with one of the world-renowned instructors in the theory of music, and to enjoy the friendship of many other musicians, thus you can realize my appreciation of the new music, when I say that in this and in past work for you, Mr. Johnson has succeeded in expressing the sentiment of your most beautiful words in a better manner than would have any other. A detailed study of any of the solos is a conclusive argument against any criticism which may be offered by casual observers.

To show you to what extent I am fitted to criticise musical compositions, I send these few facts:—

My musical education was obtained in Boston, which was my home up to four years ago. My instructors were the best obtainable, one of whom was the world-renowned authority on musical theory, Percy Goetschius, Mus. Doc. One of his greatest organ compositions has been dedicated to me. I was selected as one of the organ soloists at the Pan-American Exposition in Buffalo, and I understand that I was the youngest organist to be selected. It was my privilege to represent the Commonwealth of Massachusetts on Bunker Hill Day, at the Exposition. My recital work has taken me both East and West, and a year ago I was called to the position of organist, in Second Church of Christ, Scientist, Kansas City, Mo.

Again expressing my appreciation of the new hymns and solo, and also the new By-law relative to the organ music in our churches, and your unceasing watchfulness over our noble Cause, I am

Your humble follower,

E. RUSSELL SANBORN.

Testimonies of Healing.

I wish to express my appreciation for the many very beautiful articles which appear in the *Sentinel* week after week. I have just closed my season with a theatrical company, having traveled from the Atlantic to the Pacific coast, from Canada to the Gulf, and back again. The trip was a very pleasant one, for it gave me opportunity to meet a great many Scientists, and I took advantage of every opportunity to visit the Christian Science churches. When I first heard of Christian Science in November, 1898, I was a wreck,—physically, mentally, financially, morally. I did not know what to do, and was very despondent, when a friend (God bless him) said to me, "Why don't you try Christian Science?" I had never heard those blessed words before, so I asked him what it was, and he told me it was the truth, explaining to me as best he could what he knew of it, and what he knew it had done, and what he thought it would do for me. I was very sick, and tired of the many kinds of medicines I was taking, which were doing me no good, in fact I was getting worse all the time; so I made up my mind to try Christian Science. I went to the Reading Room in Minneapolis, where I was playing at the time with an opera company, met some Christian Scientists there, and bought a copy of Science and Health. In a few days we moved over to St. Paul, Minn., and there I looked for a practitioner. I was led to a lady, who talked very kindly to me and gave me so much hope that I at once asked for treatment. That one treatment did so much for me that I went to her for three days, and then I was convinced that this was the truth, and I was determined to give it a good trial. I threw away all my medicine and started in to study the Bible, which I had not read since I went to Sunday School, and Science and Health. We had a long trip that season, going to the Pacific coast, and I was digging away all the time with my books, so the time passed very quickly. In the autumn of 1899 I was in Chicago, where I was located with an opera company, and received class instruction. Since then it has been one glorious struggle, climbing up the strait and narrow path.

Leaving Chicago in 1901, I traveled with a small opera company through Illinois, Iowa, and Missouri. I carried my Bible, Science and Health, and *Quarterly*, and attended service, inviting my associates to go with me, whenever we spent the Sunday in a town that had a Christian Science church or society; and when we spent the Sunday in a town where there were no Scientists, we had our little service in my room or in the hotel parlor, where the entire company would assemble, excepting three or four of the members.

I have had many beautiful demonstrations of Truth over error, and I want to say that all I am, all that I have to-day, I owe to Christian Science. Although the physical healing has been cause for much rejoicing, it is of little moment compared with the moral and spiritual healing. My heart is filled with love for dear Mrs. Eddy, since it was through the study of her writings that I was led to see the truth which makes free. I thank God each day that I am able to at least touch the hem of Christ's garment.

GEORGE BEE JACKSON, New York, N. Y.

While an inmate of the State asylum for the insane at Middletown, Conn., an epileptic, and at times confined to my bed with bilious attacks, pronounced incurable by the doctors (at least six in number), the book "Science and Health with Key to the Scriptures" by Mrs. Eddy was placed in my hands. After reading a few pages, I became very much impressed with the truth therein stated, and although I was surrounded with opposition, I knew that "underneath are the everlasting arms." Since that time —past the middle of the year 1899—I have kept pressing

Digitized by Google

on, until I have been healed by reading Science and Health. At times I was beset by what seemed unconquerable opposition, until the first week in October, 1904, when, upon going to my home in Darien for a visit, I was given my liberty, and I am now earning my living in this city. After having been subject to epileptic attacks since 1892, and at one time pronounced dying by the doctor in charge, I am now well. I have had no fit, or symptoms of any, since the first week in May, 1904.

I trust that this testimony to the healing power of Truth, realized by reading Science and Health (for I had no treatment), may reach the eye of some to whom the battle seems long, and inspire them with fresh courage and a realization of the worth of the victory. I am filled with inexpressible gratitude and love to God, and to Mrs. Eddy.

MRS. BELLE B. COLEMAN, Stamford, Conn.

I feel an unutterable sense of thankfulness that I am permitted to live in an age when we can realize the fulfilment of the promise that Love will destroy fear, when we apply this truth as directed in our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. Recently one of our children came home from school, and seemed to be suffering from an attack of grip. The truth was immediately declared, and it was but a few moments until she was at work. That same evening she got her lessons as usual, and the next morning went to school, walking a mile. To material sense the attack seemed very serious, and others in the neighborhood were kept in bed under medical treatment for the same conditions. I speak of this with a heart full of gratitude, and because it may be interesting to some one in need. I also had an experience in overcoming an attack of grip for myself. The power of Truth enabled me to rise above the conditions which presented themselves, so that I could do the farm work, even when the weather was very cold, and I did not suffer any inconvenience from so doing. At the same time my wife seemed to be taking the same ailment, but the truth, spoken audibly and firmly, destroyed it, so there was no further manifestation of the disease, proving to our satisfaction that what our text-book says is true.

I thank God, who has given to us the unlimited treasures of Truth, revealed to us through Science and Health by one who is laboring unceasingly and untiringly to bring a blessing to all men and turn thought into the right channels, that all may behold their rightful heritage and dominion. May the rich blessings of Love rest with her ever.

J. E. BOUNDY, Melvin, Ill.

Two days before last Thanksgiving, when I was preparing for our family gathering, I had what was to me a wonderful demonstration of Truth's power. A crate had been left in the hatchway of the cellar, and I thought best to bring it in. About two o'clock I stepped into the hatchway, which was quite dark, and as I was holding the crate in front of me I caught my foot and fell with terrific force over the crate to the cement bottom of the cellar, badly bruising one knee and bending the foot back, almost under me. I was so shaken that it seemed to me every bone in my body was broken and the muscles in my foot all torn loose. I cried out in pain, but my mother, who was the only person in the house at the time, did not hear me. I gathered myself together, and vehemently denied the thought that I was injured, and after a little was able to crawl up the steps and sit down. Over and over I declared the power of Truth, and my sense of suffering was overcome so far that I was able to get upstairs. When my daughter returned from school the pain in my ankle had become so great that I was obliged to remove my shoe, and soon the foot became greatly swollen and too sensitive to be stirred.

Owing to the fact that there was so much depending upon me, when preparing for Thanksgiving, my fear was great, and I sent for a pair of crutches, but the effort to walk, even with them, caused me torture.

Upon retiring for the night the weight of the bed clothing upon my foot seemed more than I could bear. All this time I was feeling almost certain that I could not overcome this trouble without help, and there was no practitioner nearer than twenty-five miles. Suddenly the words, "O ye of little faith!" flashed over me, and at once I cast aside every fear and declared the allness of God, and that nothing could harm me, as we are taught to do in our text-book (Science and Health, p. 397, line 10), and in a short time I fell asleep and slept sweetly. In the morning I dressed myself, and after a little found that it did not hurt my foot to move about, and I realized the blessed truth that it was well, for I could walk with perfect ease.

I was on my feet most of the day without any suffering whatever. The next day (which was Thanksgiving) the swelling was down so I could wear my shoe, although for two weeks or more the flesh was badly discolored.

I rejoice to think of the unnumbered lives into which Mrs. Eddy has brought sunshine and joy in setting forth the scientific truth contained in Christ's teachings, which enables poor, struggling humanity to overcome sickness and sin. Words could never express the joy it has been to me, and the help it is in our home. Old things are indeed "passed away," and all things are become new!

MRS. CORA L. RICKER, Fillmore, N. Y.

I first came to Christian Science in 1901. A friend gave me two copies of the *Sentinel* to read, and I became interested in the testimonies. I wrote to a practitioner for treatment, and received a kind letter, telling me many wonderful things of God that were new to me. She treated me, and I was healed of many ailments through her understanding of divine Love. She also told me that I must read Science and Health, but I had no money at hand to get it, and the rest of the family were very much opposed to what they thought Christian Science to be. I knew I need not look to them for any means, and I did not then know that the source of all supply is divine Mind. I was, however, led to a way by which I could get the book. I have been through deep waters and much darkness, but God has been very good to me, and I am indeed grateful for the truth that makes free. God bless Mrs. Eddy for her faithful work.—ROSIE RHOADS, Arapahoe, Neb.

About twelve years ago I met with an accident by falling down-stairs and after that I experienced a roaring noise in my head, so loud that I thought people near me must hear it. My eyes were dimmed, and my hearing inpaired so much that I could only communicate with my customers by writing, because I could hear but part of what was said. I was under the care of four specialists for the eye and ear, each of them for several months, but I found no relief from any of them. Feeling discouraged and disappointed, I wrote to my relatives in Germany. They answered that they knew some ladies who had studied Christian Science in New York, and advised me to go to a practitioner for treatment. I went to a Christian Science church and found the atmosphere so congenial that I left the church of which I had been a member for several years. After a time I took treatment and found a gradual improvement, and I can say now that I have no more trouble with my eyes and my hearing is much improved, so that I can enjoy the meetings and hear the Readers when sitting in any part of the church. I gratefully give testimony that I have not only been helped physically, but Christian Science has made me a better man in every way. I desire to express thanks to God, who is ever present, and

Digitized by Google

to our beloved Leader, Mrs. Eddy, who so bravely faced the world to awaken mankind to seek and find the kingdom of heaven within. God bless her.

WM. SCHROEDER, New York, N. Y.

When quite young I formed habits that were in direct opposition to the teachings of Christ Jesus, and when told that they were sinful, my excuse was that I was just as God had made me. Years passed, and our only child was taken from us. My wife said God had taken her, and I thought it was the wrath of God that had taken our darling little girl on account of my sins. I then joined a church and tried to live a Christian life. I remember the consoling words of the minister who spoke of the love which Jesus had for little children. Time passed and I found myself in the same old rut, and thinking all the time that I could not help myself. I moved to another city, but my thought did not change until I read "Science and Health with Key to the Scriptures" by Mrs. Eddy. As I studied it, I found that God never made a sick and sinful man, and I also learned what it means to be God's child and a joint heir with Christ in everything that is harmonious. I may never see Mrs. Eddy, but the thought of that exalted woman will always have a place in my heart, and inspire me to keep the Commandments and live up to the teachings of Christian Science.—W. M. CAMP, Clinton, Ill.

It is a little over two years since I was healed through the knowledge of the truth, as taught in Christian Science. Words cannot express my sense of gratitude for the rest and peace it has brought to me. I was healed of many diseases, in their worst form. These had made their appearance six years previous, while I was quite young. I was treated by three doctors, from whom I received no benefit. My condition became worse, and they told me that I would have to undergo an operation, so I was taken to Keokuk, Iowa, to a medical college, and had the best surgeon in the State of Iowa. The operation was a severe one, as an incision was made which required twenty-four stitches to close up the wound. The doctor told me that I must not go up and down stairs fast, and that I must not do any hard work, or the trouble would come back. I was in the hospital three weeks, and came home in a worse condition than when I went. Instead of gaining, I grew worse; then we called in another doctor, and he said that another operation was my only hope, but that I was too weak to have it at present. For this I have been very thankful. After consulting the sixth doctor, I was given only a short time to live.

Then, when all hopes had failed, I was told about Christian Science, which I was slow to take up. It was two months before I would consent to try it, as I had spent so much money and time with the doctors. When I was at last persuaded to try Christian Science, I was carried one Wednesday about a half mile, and placed in a buggy and taken to the boat, then to the train, and finally reached the practitioner's house. The next morning I came home, feeling no better, but by Sunday evening I felt the effects of Christian Science. I was like a little bird just out of the nest,—I wanted to fly. Christian Science has done wonders for our family, and I feel as though I cannot praise God enough. I am very thankful to Mrs. Eddy, the Discoverer and Founder of Christian Science,—the one who has revealed to the world the healing power of Truth.

MRS. LEOTA MILLER, Nauvoo, Ill.

I am led to acknowledge the truth of Christian Science, which has healed me of neuralgic headaches, paralysis, inflammatory rheumatism, and other troubles. I feel that I owe to Christian Science, my life, health, and happiness. The understanding of God as Life, Truth, and Love, has brought a joy I cannot express in words. For all my blessings, physical, mental, and spiritual, I am grateful to God, and to Mrs. Eddy. The Bible, Science and Health, *Quarterly*, *Sentinel*, and *Journal*, are my companions. I love them, and the truth they contain is growing clearer and dearer to me, and when shadows fall upon my pathway I can now look up to my "Father-Mother God," and say, "I know that my redeemer liveth."

MRS. B. J. RANDALL, Sea View, Mass.

It is not possible to tell in a few words the benefits which I have derived from Christian Science. I wish to express my deep gratitude for our text-book, Science and Health by Mrs. Eddy. I am also grateful for our services, for many times I have gone to them with a great sense of weariness and discouragement, and have come away uplifted and refreshed, and often healed of physical inharmony. Through this glorious understanding of man's true relationship to God, as taught in Christian Science, I have been healed of many ailments. About four years ago I was healed of lockjaw, against which *materia medica* is so helpless, and since then of the grip, tonsilitis, neuralgia, and great trouble with my eyes; also of frequent and severe headaches, which I had had all my life. From having been considered a very delicate woman and always limited because of this, I am now able to do anything and everything that comes to me to do, knowing that my health and strength are in God. Not only for my own healing am I thankful, but also that through a slight understanding of this truth it has been my privilege to help others. There is no circumstance, no matter how trivial it may seem, in which we cannot use our understanding of divine Mind, and meet every situation as its master.

Is it surprising that our hearts go out in love and gratitude to our beloved Leader, for the patience with which she has revealed to this age the Christ-idea, through which we can scientifically demonstrate over inharmony and discord, whether it be manifested as sickness or sin.

THEODORA S. BOLLES, East Orange, N. J.

I read Science and Health through, five years ago, just as I would any other book, but laid it aside, saying that I could not understand it. Two years later I came to New York City for the purpose of going into a hospital to train for a nurse. I boarded with Christian Scientists and was asked to attend their services. I went a number of times before any impression was made upon me, then I began to see that Christian Science is the truth. I then went to the hospital and told my friend I had given up the idea of being a trained nurse.

I found another way to earn my living, and in all my spare time I studied Christian Science. Many were the battles I fought, but Truth was the victor through all. I have found that when I looked to Principle, and not to personality, I have never looked in vain. I have learned not to despise the day of small things, and that everything is of importance which helps to bring out harmony. Sometimes it has seemed as if I have had to stand with folded hands and wait for Truth to move upon the troubled waters, but when I have shut out material sense what a calm there has been! I have been able to turn away from what the physical senses said, and prove the nothingness of fever, a broken nose, sprained wrist, and faintness, also whooping-cough, sick stomach, and other ailments. I have helped myself most when I have reached out to help others. I am indeed grateful to God, and to our Leader, Mrs. Eddy.

LUCILLE PORTER, Williamsport, Pa.

It is nearly five years since I became interested in Christian Science, and we have had many beautiful demonstrations in our family. In the first place, I was healed of a

Digitized by Google

trouble of ten years' standing, with three weeks' treatment. My husband and little girl were also treated at the same time, he being healed of a severe stomach trouble of several years' standing, and my little girl was healed of chronic constipation. She was at that time five years old, and had been troubled with this since she was two weeks old. I had two children before coming into Christian Science, and had a great deal to endure. I had to undergo very severe treatments from physicians, and was not able to do my work for five months and sometimes longer after my babies were born, but when our baby was born to us after we were in Christian Science, I got up the second day and walked to the dining-room and ate dinner with the family. We can only give God the praise, for in Him is our strength and health. There is another demonstration which I will mention. My husband slipped on the ice and injured his hip so that he was compelled to use crutches, and he seemed to be in great pain. I gave him a treatment and in a few moments he was resting easy and was soon sound asleep. Next morning he thought it best to have assistance, so he procured the services of a practitioner, and in the course of five days he laid his crutches aside. We are thankful for this blessed truth which makes us free and happy and gives us a true understanding of God and our relation to Him. I never understood the Bible, and it seemed an uninteresting book to me. I read it, though, because I thought it my duty to do so. I now read it in altogether a new light, in connection with our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. We cannot be too thankful for Christian Science and the many blessings we have received through this understanding. Language is inadequate to express my gratitude for this wonderful truth which has been revealed to us by our dear Leader.

MRS. W. S. BRUTON, Clyde, Col.

Looking back over eleven years, I discern that each day since I began to read "Science and Health with Key to the Scriptures" by Mrs. Eddy, I have gained some good; and in proportion to my faithfulness to its teachings, I have reaped spiritual and physical blessings. Through it I have come from invalidism and never-ceasing pain to normal health. I am grateful to parents who reared me in an environment which enabled me to gain all there was to be gained from faithfulness to the orthodox teaching, but my questions were never answered to my satisfaction. I groped in darkness, and caught at everything that promised light, until Science and Health was offered me. Since then the way has many times seemed dark, but from afar I have always discerned that first gleam of light, and I have been encouraged to toil on.

Science and Health and Mrs. Eddy's other writings teach me my true responsibility as a mother; and how good it is to know that if we are faithful, our children need never cry vainly for light.

MRS. LOUISE SHERWOOD ANDREWS, Chicago, Ill.

Almost six years ago I came to Christian Science for help, having been a great sufferer since childhood. I had tried many physicians, and had a surgical operation performed which they promised would make me a well woman, but nothing relieved me. As a last resort I tried Christian Science and was healed in about one month's treatment. In the first treatment I was healed of chronic dyspepsia, also of nearsightedness, for which I had worn glasses for six years. For all this I am very grateful, and yet Christian Science has brought much more into our home; it has brought happiness, peace, prosperity, and a right understanding of God. Words are inadequate to express my gratitude to God, and to our dear Leader, for giving to us this truth that does make men free.

MRS. S. S. HUBBARD, Chicago, Ill.

When quite young I was impressed that the Bible was not properly interpreted by the preachers, for I could not conceive of a God of wrath who was unjust enough to allow His little ones to suffer pain, misery, and death. I had hope, however, that some day the truth would be revealed to an awakening world, but little did I dream that even then there was one of God's noble women who reflected sufficient purity and holiness to entertain the "angel of his presence," and commune with the true God.

I was believed to be predisposed to scrofula, so that I was not a strong or attractive child, and my girlhood and womanhood were scarcely ever free from dread of the laws of matter and lack of strength. The climax was reached when a physician informed me, after weeks of treatment, that I had a fibroid tumor, which required an operation. The conditions were most trying and I was heartsick and discouraged when, in January, 1893, I heard of Christian Science through a letter from a dear sister who had been greatly benefited thereby, and I resolved to go at once to a practitioner, for I believed it to be the long-lost truth that would make me free. It meant a great effort and sacrifice for me to go to Chicago at that time, but divine Love opened the way and I reached there in March. I had been in my sister's home but a few days, reading Science and Health almost constantly, when I asked her if I had not better have treatment for the tumor which had given me so much trouble. She said to me, "You feel well, do you not?" I assured her that I never had felt so well as I had since reaching there. "Well," she said with decision, "your tumor is gone, for God never made it," and her statements were true, for it has never been heard of from that day. Since then I have been healed of chronic sore throat, bilious attacks, erysipelas, hay fever, and other troubles, and I know that Christian Science is the truth. I would express my gratitude to Mrs. Eddy for her life of consecration and devotion, and I feel that only a life wholly devoted to the cause of Christian Science can fitly express our thanks to her for the truth brought to us in Science and Health and her other writings, all of which are so plain, pure, and helpful. I have recently been made more appreciative of the depth and wisdom of the Manual, and know that its strict observance has been a source of strength to me in my work. In the By-laws she has shown us "how to go." May we "follow and rejoice all the rugged way" (Miscellaneous Writings, p. 397).—B. W. STOWE, Coldwater, Mich.

It would take me a long time to tell all the blessings Christian Science has brought to me in destroying both sin and sickness. From the time I was fifteen till I heard of Christian Science I practically never knew a well day. The chief error was female weakness. This led to many other troubles, among them chronic constipation, sick-headache, and a tendency always to reject my food,—the last mentioned, ever since I can remember. This was the first ailment to be healed. Chronic sick-headache has been the slowest to disappear. It is only slight now. Many times I have been in the very depths of mental and physical distress, but Christian Science has brought into my life such a blessing, it has stilled the storms of error and shown me there is nothing to fear. At first the physical healing was what I thought most about. I thought it would be so nice to be free from pain, but now I realize that this is only a small part of the good to be gained. Christian Science has helped us spiritually, physically, and financially. I am truly more thankful each day to God, and to Mrs. Eddy for showing me the way to apply Jesus' teachings to my every-day life.—MRS. ANNIE ELIZABETH ECKLES, Cass Lake, Minn.

Pleasure comes of its own accord in the right way of life, and the simplest, the cheapest, and the most inevitable pleasures are the best.—CARL HILTY.

Digitized by Google

From our Exchanges.

One cannot do well with life as a whole unless he does well in the infinite array of small affairs out of which life is composed, and he cannot do his best in these unless he is interested enough to do them with all his heart; but most of them are so simple, so commonplace, that they have in themselves no power to stir the heart. Here, then, lies one of life's supreme problems. Whence shall we bring to these little commonplace things the enthusiasm without which one can never do them finely? The answer is, of course, that the interest which belongs to life as a whole must be attached to each of its minutest parts. Every great achievement is composed of multitudes of trifling details, any one of which, standing by itself alone, would be insignificant enough. Ten thousand little, simple touches of brush to canvas, each guided by a great thought, each tempered by a vast emotion, each co-ordinate with all the others, have given us the Sistine Madonna.—*The Congregationalist.*

The power of a Christian life is determined by its likeness to Jesus Christ. Spiritual life is begotten of spiritual life and by nothing else. We have every right to expect that a Christian will be Christlike, and failure of church members to conform to the likeness of their Lord is one of the most serious hindrances to the progress of the kingdom. The main evidence of likeness to Christ is not found in devotion to forms of worship or correct theological statements, but in the common relations of every-day life. Whenever a Christian man contents himself with a credal statement and fails to illustrate the graces of the Christian character in his daily relations, whenever he is found faithful in his attendance upon the public services of the church but unfaithful to the great laws of brotherhood and forgiveness and love, so often do we have a testimony to the low valuation placed by this professed Christian upon those things which Jesus made of primary importance.—*The Standard.*

When our religious formulas and services do not attract and satisfy, when men turn away from worship to get comfort and joy in the other interests of life, let us not hasten to credit this to depravity or unspirituality. We ought rather to ask ourselves bravely if some of this indifference may not result from the too narrow philosophy of our devotions. It may be that our point of view is entirely unsatisfactory to some who have felt the swing and rhythm and thrill of the mighty processes of creation and of human history. It is a deplorable and demoralizing situation when in the last analysis, in its deepest life, at any point, the human spirit finds itself at war with the only conception of religion and the only formula of faith with which it has ever become familiar.—*The Universalist Leader.*

There is no authority or reason to-day for applying any other than the test of Christ. Those who show his spirit, obey His commandments, honor His name, and seek the advancement of His kingdom are entitled to be treated with the consideration enjoined upon the followers of Jesus in their relations to each other. From the Christian point of view there are only two parties in the world: those who are for Jesus Christ, and those who are against him.

The Watchman.

Attacks on Christianity are often simply attacks on ecclesiasticism, the human perversion of the divine ideal. Those who make these assaults ought to be wise enough to distinguish the one from the other.—*The Examiner.*

To wait for God is not faith. To do the little we can do and leave the rest to God—that is faith.—*The Outlook.*

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 505 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to The Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of The Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to The Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number, or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement. It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By the Hon. WILLIAM G. EWING of Chicago, Ill.

CHRISTIAN SCIENCE. Its Worth and Work. By Rev. ARTHUR R. VOSBURGH of Rochester, N. Y.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* **PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

Preparations are already being made by the contractors for building the large irrigation dam at Roosevelt, Ariz., for the United States Government under the reclamation act. The dam will, when completed, be one of the highest in the world. The Cheesman dam, which supplies Denver, Col., with pure mountain water, now holds that distinction, but this one will be higher by at least twenty-five or thirty feet. Its height will be 236 feet. Its length across the top will be 800 feet, with a width on top of 16 feet. The length at the bottom will be only 20 feet, with a width of 160 feet. The reservoir that will be created will have a capacity of 1,000,000 cubic feet, and will hold sufficient water to irrigate 250,000 acres of land. After the first year, when the ground has become thoroughly saturated, it is expected that the water supply will be sufficient to irrigate considerable in excess of the 250,000 acres.

Duties amounting to $194,606 were levied and paid upon the works of art imported for the Boston "Fenway Court" by Mrs. John L. Gardner. This payment was made because the Secretary of the Treasury ruled that the exhibition at the "Court," for which at stated intervals a limited number of admissions at one dollar each are issued, did not allow the art treasures to come in free of duty as is the case when intended for a public museum. Pertinent to this is the remark of Sir Caspar Purdon Clark, who was recently elected Director of the Metropolitan Museum of Art, and has just arrived from Liverpool. "The American," he said, "is artistic as the Englishman. The greatest mistake and discouragement over here is the heavy duty imposed on art objects. I cannot see the reason for putting a duty on an object two thousand years old. There can be no competition."

Secretary Taft has transmitted to the Treasury Department his estimates of the appropriations required for the War Department for the fiscal year 1907. These estimates aggregate $104,088,267.75, being $9,717,922.52 less than the total appropriations made by Congress for the use of the War Department for the current fiscal year ending June 30, 1906.

Capiases were served last week on seven residents of Washington and Yuma Counties, in the northeastern portion of Colorado, based on indictments returned by the Federal Grand Jury sitting at Pueblo, charging forgery and perjury in the location of Government lands in those counties.

The President, on October 31, appointed Charles A. Stillings of Boston as public printer.

Foreign.

Yu Chuan Chang, a member of the Chinese Commission which is to draft a constitution for the Chinese Empire, arrived in the United States last week. He is the secretary of a branch of the Commission which will study the Constitution of the United States. Prince Tasai Tsche is the head of this section. Other sections will investigate simultaneously the constitutions of foreign countries. Secretary Chang said: "When these special ambassadors have finished their work and submitted the draft of the constitution for China to the Emperor, China will step out of the ranks of absolute monarchies and enter that of the constitutional empires. The Chinese constitution will embrace all the best features of the constitutions of America, Japan, Great Britain, France, Germany, and Austria. The travels of the special embassy will be ended in about eight months, after which the envoys will draw up a constitution." Mr. Chang added that this departure from ancient usages was due to the gradual spread of Japanese influence over the Empire since the Japanese-Russian War.

The old union flag was struck throughout Sweden November 1, and the new Swedish ensign was hoisted to the accompaniment of salutes, the ringing of church bells, and parades of troops. In Stockholm the whole garrison paraded and most of the population thronged the streets. At nine o'clock, the flag flown by Sweden before the union with Norway, nearly a century ago, was again hoisted over the palaces, church steeples, public and private buildings, and steamers and sailing vessels.

The exchanges of communications going on between the Powers have reached a stage where a joint naval demonstration against Turkey is probable unless the Sultan promptly accepts the plan of the Powers for financial reforms in Macedonia.

Constantine Petrovitch Pobiedonostseff, Chief Procurator of the Holy Synod, has resigned his position as head of the Russian Church. Prince Alexis Obolensky, a member of the Council of the Empire, has been appointed to succeed him.

Industrial and Commercial.

President Carroll D. Wright of Clark College, at a Teachers' Convention in Springfield recently, declared emphatically against competition between colleges in athletics. "There should be a prohibition of such competitive games," he said. "A college having a three-year course, which will be the custom in the future, cannot afford the time necessary for competitive games. One need not make any argument relative to the demoralizing influence of such games, or to the physical consequences of severe contests. Such arguments can be set aside at once, for they are ample, it seems to me, to warrant any college in taking a course that will reduce athletics to their proper standing." President Eliot of Harvard, in an article in a recent issue of *Success*, has also spoken emphatically of the evils of football.

The Pilgrims, the English association football players, sailed recently for their homes after two months' missionary work in introducing "socker" to the American public as it should be played. During the trip, which began in Canada, September 2, the team played matches at Montreal, Quebec, Toronto, Hamilton, Berlin, Rosedale, Detroit, Chicago, St. Louis, Philadelphia, Boston, Fall River, and New York, in all twenty-three games, winning twenty-one and losing two. The mission of the visitors was to introduce association football to the American public, more particularly the colleges, with the hope of supplanting the present style of football as played by the big teams. Plans are already under way for a return visit next year.

The Universalists, in the recent General Convention at Minneapolis, received greetings from Rev. R. W. Boynton of St. Paul and Rev. F. F. Southworth of Meadville, Pa., theological school delegates from the Unitarian National Convention, both of whom expressed in plain language their wish that the Unitarian and Universalist Churches might unite in one creed and organization, forget their doctrinal differences and, united, advance the great fundamental truths of Christianity in which both sects believe. Dr. John Coleman Adams of Connecticut responded for the convention, rejoicing in the "increasing spirit of common fellowship in Christ growing up between these two denominations."

The threatened strike of the 20,000 operatives at the cotton mills at Fall River, Mass., was compromised last week by an arrangement which is regarded generally as a considerable victory for the operatives and is thought to mean a virtual increase of about ten per cent in wages. Both sides agreed upon a straight advance of about four per cent in wages, to reduce from 75 to 72½ the margin between the cost of cotton and the price of print cloth, on which a profit-sharing dividend will be paid, to compute the dividend weekly instead of monthly, and to make no change in the minimum of wages for a full year.

The *Manufacturers' Record* of Baltimore says the capital invested in cotton mills in the South in 1880 was $21,000,000; in 1905, $225,000,000; the number of spindles in the same years was 667,000 and 9,205,040; the value of the cotton crop in the respective years was $313,000,000 and $680,000,000; the capital invested in manufacturing was $257,000,000 and $1,500,000,000; the value of the products $457,000,000 and $1,700,000,000; assessed property increased from three billions to more than double that amount.

In order not to be dependent upon lumber shipped from territories far from the line, the Pennsylvania Railroad Company is planting 600,000 locust seedlings on the company's properties at a number of places along the Susquehanna and Juniata Rivers. In the last two years the road has set out about 800,000, and next year proposes to plant about 300,000. About 620,000,000 cross ties are required to furnish the railroads of the United States annually.

As the result of experiments it has been demonstrated that cotton can be grown successfully on what was formerly known as the Staked Plains of Texas, a region embracing an area 200 miles wide by 300 miles long. It is claimed that this undeveloped region is capable of producing more than 2,000,000 bales of cotton.

This has been a banner year for timothy and clover in Indiana, the value of these two crops aggregating $34,000,000. This, when added to the value of the wheat, oats, and corn crops, makes a total of $166,000,000 for the year.

According to a despatch from Dawson the gold shipments of the Yukon territory for the season of 1905, just closed, will amount approximately to $6,000,000.

The production of lead in the United States for 1904 was 307,000 short tons, valued at $26,402,000; the production of zinc was 186,702 tons, valued at $18,670,200.

It is reported as probable that the great southwestern branch of the National Steel and Wire Company will be located at Los Angeles, Cal.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

President Roosevelt's Thanksgiving Proclamation.

WHEN nearly three centuries ago the first settlers came to the country which has now become this great republic, they fronted not only hardships and privation, but terrible risk to their lives. In those grim years the custom grew of setting apart one day in each year for a special service of thanksgiving to the Almighty for preserving the people through the changing seasons. The custom has now become national and hallowed by immemorial usage. We live in easier and more plentiful times than our forefathers, the men who with rugged strength faced the rugged days; and yet the dangers to national life are quite as great now as at any previous time in our history. It is eminently fitting that once a year our people should set apart a day for praise and thanksgiving to the Giver of good and, at the same time, that they express their thankfulness for the abundant mercies received, should manfully acknowledge their shortcomings and pledge themselves solemnly and in good faith to strive to overcome them. During the past year we have been blessed with bountiful crops. Our business prosperity has been great. No other people has ever stood on as high a level of material well-being as ours now stands. We are not threatened by foes from without. The foes from whom we should pray to be delivered are our own passions, appetites, and follies; and against these there is always need that we should war.

Therefore, I now set apart Thursday, the 30th day of this November, as a day of thanksgiving for the past and of prayer for the future, and on that day I ask that throughout the land the people gather in their homes and places of worship, and in rendering thanks unto the most High for the manifold blessings of the past year, consecrate themselves to a life of cleanliness, honor, and wisdom, so that this nation may do its allotted work on the earth in a manner worthy of those who founded it and of those who preserved it.

In witness whereof I have hereunto set my hand and caused the seal of the United States to be affixed.

Done at the city of Washington this second day of November, in the Year of Our Lord One Thousand Nine Hundred and Five, and of the Independence of the United States the One Hundred and Thirtieth.

(Seal) THEODORE ROOSEVELT.

By the President: ELIHU ROOT, *Secretary of State.*

The Sunshine of Christian Science.

W. D. MC CRACKAN.

CHRISTIAN SCIENCE shines into every nook and corner of the human consciousness, and chases away the shadows which otherwise lurk there, unseen and undisturbed. It exposes the dark and hidden places and effects a species of mental housecleaning all the year round. Before its beneficent rays not only do false race beliefs disappear, but hurtful idiosyncrasies of personality also shrink back into the nothingness of oblivion. The sunshine of Christian Science thus delivers men from the routine and rut of evil ways of thinking, which bring in their train moral and physical ills, and substitutes for them the divinely natural thoughts of good, which result in happiness and health.

All mankind love happiness and health and seek them in that particular way which it is thought will enable the seeker to capture and keep these priceless possessions. No one consciously desires to destroy the available stock of health and happiness, therefore humanity's prevalence of ill health and unhappiness can only be ascribed to the pursuit of wrong methods, or to ignorance of "the way," the Christ-truth, or Christian Science, which is revealed in Science and Health. All men are united at least in their desire for health and happiness, even though they may be deceived into by-paths, or lured upon the dangerous quagmires of vain hopes by material will-o'-the-wisps. If men and women feel that they have suffered enough, each in his own way; if they have placed their ambitions on mere phantoms, so that their desires have not borne the right fruit; if they have been disappointed in friends, in theories, possibly in their study of the arts and sciences, their expectations of conventional charities, or of special reforms, from which they had hoped so much; if they have thought in the still hours and wondered, perhaps have fought for their convictions, though right did not seem to conquer,—then surely the call has come to them to let in some of the sunshine of Christian Science, in order that it may change their thinking. Let them take possession of their surroundings, rather than let their surroundings take possession of them.

Christian Scientists believe in wholesome happiness and in its realization here and now. They desire to share this happiness with all men. Though they once sought satisfaction in other fields of endeavor, and in other ideals, they now find that this new interpretation of life makes them healthier, happier, and better. Can any one receive greater gifts than health, peace, and an abiding sense of safety?

"How can I learn about Christian Science?" asks the reader. The text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, contains the whole of Christian Science. If the inquirer has questions to ask, where else can he expect to have them answered, except by those who already understand Christian Science in a measure and strive to practise it? One thing is ever needful; namely, a sincere desire for the truth. The impressions of every honest inquirer have value. If he has entered upon his investigations with a sense of the need of mental, moral, or physical health, he will almost invariably find himself benefited through his desire to understand, though possibly without knowing how; in any case he will be cheered by the general air of hope and courage which pervades the Christian Science ranks. Christian Scientists naturally display joyousness and good nature towards all men. Moreover, they grant to every critic the full right to his own opinions, although, in common with all other people, they also demand that the critic's opinions shall be based on correct statements of fact, and shall be honestly presented.

The sunshine of Christian Science is the best-known cure for pessimism. It dissipates this deplorable habit of thought

Digitized by Google

by exposing its asserted cause in the human mind and by leading its seeming victims from barren theories to practical good works.

The tendency to look forward to evil instead of good is checked, corrected, and reversed by Christian Science, which proves to humanity that evil, far from having reality, has no real existence or actuality at all; that it is reasonable and logical to accept the truth; that life and love are eternal and indestructible entities; that God's creation is complete and "God saw that it was good;" and that true optimism, or the tendency to anticipate the best instead of the worst, is altogether the most sensible attitude of thought for men to cultivate, for it is based on sound reason and leads to normal results. Optimism, springing from the spiritual understanding of God, man, and the universe, as they are revealed in Christian Science, spells common sense of the most approved kind.

There is a very prevalent supposition that evil must exist in order to contrast with good, or to "set it off," as the saying is. The question is sometimes asked, How can good be known except by contrast with evil? This question, by its very nature, presupposes the priority of evil and the subordination of good to evil, so that, according to the view implied by this question, good must perforce be dependent upon the existence of evil first and be susceptible of measurement, description, and definition in terms of evil. As well say that mistakes in arithmetic are necessary in order to prove the correctness of the multiplication table, or that discords prove the science of harmony. It would be more in accordance with logic and the facts of being, in a universe created by an infinitely good God, to recognize that good is first and foremost, established and firmly founded, and that in contrast with good the belief of evil can be exposed as nonentity, fraud, and pretence of being.

Harassed and haunted by the fabulous fears of mortal experience, prodded into spasmodic activity by the seeming immanence of danger, mankind tends to fall back upon its own resources, until such time as the strain and terror grow too great, and mortal man cries out for help to a power beyond himself. When Christian Science is first presented to such an one the sense of limitation is often still so great, that God and His creation seem too good to be true, until the inherent, essential naturalness of health, holiness, and happiness are made evident, and suffering and sorrow are uncovered as false beliefs, having no basis, no initiative, no effectiveness, no reality.

Those who treat disease from any other standpoint than that of Christian Science are hampered by their bias of thought in favor of the reality and inevitable nature of sickness and death. This bias in itself constitutes a species of pessimism, although those who accept it may be entirely unconscious of this fact or of its harmful effect, and may outwardly manifest the usual signs of optimism.

Such states and stages of human belief as sin, sickness, sorrow, catastrophe, and downfall provide the opportunities for proving the metaphysical unreality of human experience with all its phenomena of rise and fall, origin and decay, including the accidents that lie between a supposed beginning and ending of mortal existence. But to indulge in the opinion that sin, sickness, and death are necessary and inevitable is to lay the basis for pessimism of the darkest dye and to fall into the mistake of supposing that evil has divine origin and sanction.

It is by declaring and demonstrating that evil, contrary to common opinion, is not necessary and not real, that Christian Science has flooded a sin-sick world with sunshine, warmed the hearts of multitudes, clarified the mental atmosphere of homes, purified the work of business men, and lifted the shadow of melancholy from those who once brooded over sorrow and disappointment. Far and near, its rays of health, hope, and happiness are lighting men and women to their daily tasks, and revealing joy and gladness as natural and spontaneous, real and reasonable.

A New and Living Way.

J. M. S.

"And why," I asked, as I looked toward a rise of ground on the New England shore commanding a broad, beautiful stretch of ocean, sand-dunes and islands, sky and clouds, "why should it be called 'Heartbreak Hill'?" The answer to my question pictured the Puritan maiden who day after day had climbed to the brow of the hill, with the vain hope that the sail which should bear a loved one home would whiten the horizon. The beauty was not for her, hers only the sense of loss. That which she deemed necessary to happiness was gone—her heart was broken.

It was a Sabbath morning, and with my books and a dear friend I took my way toward Heartbreak Hill. One said to me as I started, "Go by the carriage road. It is not on the ocean side and you will get no view, but it's easier climbing than by the path;" and another added, "If you do go by the path, be very careful, for it is overgrown with poison-ivy." We chose the path, however, and now and again we caught bright glimpses of the sparkling sea, ever growing broader and larger the higher we climbed. Once we stopped, thinking we had reached the summit; but no! there was yet another climb, yet a grander view! The spirit of Truth came very near to us that morning as we read the lesson, and Heartbreak Hill became for hearts open to "pure thoughts from God, winged with Truth and Love" (Science and Health, p. 298), a Mount of Revelation.

I did not then know that my way in the days to come was to lead up one of the long "heartbreak hills" of mortal existence. The months following brought a sense of loss of much that this world holds dear; brought a load of care with responsibilities and duties too heavy, it seemed, for one to bear, and error would have crowned its work, I doubt not, with bitter and rebellious thoughts, had I not known the "new and living way" to meet such trouble, had I not chosen to climb my hill of difficulty, alone with God, by the narrow path of Christian Science, which teaches us *how* to "meet every adverse circumstance as its master" (Science and Health, p. 419), *how* to "overcome evil with good." Walking in the light which its teaching has shed upon life, I knew I could ever gain glimpses of the ocean of Love to cheer and strengthen me. Over and over, as the clouds of error settled down and mortal sight could see no path, I declared "My path in life *is* free," and took the only step that I could see ahead. How truly I proved that "When evil cometh upon us," if "we stand before . . . thy presence [Truth], . . . and cry unto thee in our affliction, then thou wilt hear and help;" and when I felt as though the problem was too great for me to solve, and fear tried to creep in and say, "You have not the understanding necessary, there are errors of thought too deep-seated, of too many years' standing to be overcome," I turned ofttimes to the admonition in the same chapter, "Be not afraid nor dismayed by reason of this great multitude [the errors of a mortal sense of things which try to assert their reality and power]; for the battle is not yours, but God's. . . . Ye shall not need to fight in this battle: set yourselves, stand ye still, and see the salvation of the Lord with you, . . . fear not, nor be dismayed; to-morrow go out against them: for the Lord will be with you." Then the fear would be stilled, as a sense of the presence of divine Love changed the darkest hours to light, even to joy, and I was led to know, through experience, that in the time of greatest trial Truth and Love are savingly near.

One error, among others which tried to hinder the solution of my problem, asserted itself in the belief in many minds—the belief that, since my problem was so interwoven with that of others who were governed by very diverse thoughts, it was impossible either to free myself or to raise them. This I met with the constant assertion that there was but the one Mind which governed the thoughts of men. One instance among many will serve to illustrate the

Digitized by Google

result. After constantly holding to the thought of the government of the one Mind and seeing no evidence of it in a certain crisis, the moment came when a step must be taken and I seemed left alone, not only with my own burden but that of another who seemed unwilling to assume it. In the moment at my command I closed my eyes and realized that God's children reflect justice, courage, freedom, love. A step approached, and as the door opened I was greeted by words which showed a right attitude of thought and bore evidence that the leaven of Truth had been working, though until now unseen. It must not be thought that this is in any way a bringing of others to our way of thinking. As high as are the heavens above the earth, so high are God's thoughts above our thoughts. The first work is with self, to see that we have no thoughts or desires but such as are in accord with divine Principle and manifest Truth and Love. Then must we know that nothing can hinder our manifestation of God, and that every thought of every child of the same Father, Spirit, must come from the same divine source, God, and be in harmony with Him.

Each day, as I took up my problem, I prayed that my spiritual sight might be undimmed by even a moment's belief in the reality of the dream through which I was passing, or by a single thought of ingratitude to God, but that I might rise into clearer understanding of the truth which was bringing to light and proving the impotence of what had seemed insurmountable error. I must not waste one moment in bitterness over the lessons I had to learn; rather must my "heartbreak hill" be to me only one grand Mount of Revelation.

When to-day I look back and still more clearly see how carefully I have been led, what mountains have been laid low before me, there dwells with me a deep sense of the divine love, and a gratitude that is beyond words goes out to God and to our Leader for the "new and living way" through Christian Science. It has been proven to me that the birthright of God's child is dominion through Love; that it is his to conquer sorrow and sickness, bitterness and the most adverse human conditions, to fill his place in this world and at the same time to know only peace and love, —to dwell in the realm of Mind.

Truth Solves all Problems.

BEULAH G. HINES.

In working out the problems of mortal experience it would sometimes seem that an error of long standing is more difficult to overcome than one of recent appearance, and with this belief comes the thought "too late." Many a heart's hope has gone down at this thought, and it is surely time to begin the destruction of such a depressing belief. It is never too late to do good, or to rise and be saved, if we take with us the Christ to the place where mortal belief says our dearest hope is buried. When Jesus raised Lazarus from the tomb he had already lain there four days; everything seemed to stand in the way of his resurrection, especially the sense of time. Martha said, "Lord, by this time he stinketh: for he hath been dead four days," although Jesus had said to her, "Thy brother shall rise again." To her mourning sense of loss he did not say, Lazarus shall rise, but "Thy brother shall rise again."

This spiritual lesson of the Master was not intended for that incident alone, but like all his acts and sayings its deep teaching unfolds to those who follow him to-day. Every belief in something separate from God is a stone to be rolled away from human consciousness, and the false sense of time, in connection with our work, is a great stone. Sometimes this is the first thing we should remove. To know that time has nothing to do with Life, that it neither weakens nor strengthens the power of Truth,—this hastens the healing, and the process becomes shorter.

Another stone that must be rolled away is the belief of a limited understanding. Error may whisper into thought: If some one else would do the work for me; I haven't the understanding to bring out such results. This is almost like saying, I haven't any God. It is a belief in a mind in matter,—an error which must be given up before we can rise to the true understanding of man's divinely-bestowed capacity. Jesus said, "Take ye away the stone." In the presence of Truth, we learn how to get rid of the stones of limitation, of feebleness, of a self apart from God, and we then rise to a truer, higher consciousness, which recognizes the Saviour in Mind,—omnipotence, omnipresence,—and which knows that this Mind governs our thinking, speaking, and acting. Thus we find self, limitation, and fear all gone; and we are lifted up above all the error that had seemed to exist. "When ye have lifted up the Son of man, then shall ye know that I am he, and that I do nothing of myself; but as my Father hath taught me, I speak these things."

God can always show us a way to overcome error, even though to human sense it may seem impossible, and this is the best way, for we then recognize the Saviour, and give glory to God, knowing in whom we have believed. The impotent man at the pool of Bethesda was waiting for some one to put him into the water, but Christ Jesus came and commanded him to rise and walk. The gentle Master would not have thus commanded if he had not known that the man could obey, and we are many times required to rise and do our own work, because we must learn that we have the ability given us from God.

Every condition of mortal mind, every erroneous belief, is destroyed by the demands of Truth at some time and in some way. If error presents a personal enemy or a personal affront, we should always be ready to take the Christ there, and meet the conditions as we know the Master would have done. If we discover some hidden serpent of sin in our own consciousness, then is the time to take the Christ there, and to stifle the error before it can go abroad to harm others. The publican wail that smites its own breast, denies and casts out its own secret sins. This cry to be healed of sin leads to deliverance; Christ, Truth, enters, and so fills the room made for him that nothing else has any place. After a sin is destroyed we are not only saved from it, but we have more love, more patience, more purity, more spirituality than before.

There may be times when, after a peaceful, uplifting realization of divine Love, error tries us sorely, presenting a sense of hate, while all that had before been so lovely, now seems to be the exact opposite,—no sweetness anywhere, no joy, even the flowers are robbed of their beauty. In such experiences an earnest prayer to God will explain the reason of this. In Science and Health (page 564) we discover why greater faithfulness is demanded and further progress needed to ensure our safety. We must fearlessly meet the foe in ambush, and then rejoice in new victories. God will not forsake His children. He does not leave them to battle alone in the dark, but always shows them the way out of error when they turn to Him earnestly and cling to His omnipotent aid.

[Written for the *Sentinel*.]

Law.

WILLIS VERNON COLE.

A truth most strange hath been revealed,
In our Creator's perfect plan;
When willing to become a child,
One issues forth a mighty man.

Unto another mystic law,
Immortal mind hath given birth;
Man freely giving all he hath,
Doth then inherit the whole earth.

The Mid-week Testimonial.

The mid-week testimonial meeting at the Christian Science church last Wednesday evening may well be denominated as having been distinctly western in nature, from the fact that all the testimonies and remarks were by visiting Scientists from the far West. As such it was intensely interesting to the local adherents and attendants, for it gave them a taste of the robust enthusiasm which characterizes the work of these people.

Rev. Mr. Tomlinson, First Reader of the church, chose for the Scripture reading, portions of Acts, including the remarkable record of the healing by Peter of the impotent man "whom they laid daily at the gate of the temple" to beg for alms. The Scripture was supplemented by correlative readings from the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy.

The quotations from the latter volume and the opening remarks by Rev. Mr. Tomlinson directed special attention to the fact that Christian Scientists regard the stone which was mentioned in the fourth chapter of Acts, as set at naught by the builders, as the Christlike manner of healing the sick. This rejected stone is considered by them to be at last restored as an essential part of true Christian doctrine, and has "become the head of the corner"—a firm foundation or basis upon which the superstructure of spiritual building or growth must rest.

Mr. Tomlinson incorporated in his remarks a brief reference to the healing through Science of Judge William G. Ewing, who lectured in the church last Sunday evening. This instance occurred twenty years ago.

Among the speakers of the evening and those who gave testimonies of healing were Mrs. Blanche K. Corby, C.S.B., of Los Angeles, Cal.; Mr. and Mrs. Gilbert Hunt of Walla Walla, Wash.; Mrs. Lucretia H. Kimball, C.S.B., of Salt Lake City, Utah, and Mr. Clarence C. Eaton, C.S.B., of Tacoma, Wash.

Mr. Eaton is a member of the Board of Lectureship of The First Church of Christ, Scientist, in Boston, Mass. He was called to lecture in New York City last week, and came on to Concord this week to visit the local Scientists and to see the magnificent church edifice which their Leader, Mrs. Eddy, gave to our citizens of that faith. He expressed his appreciation of the beauty and grandeur of the structure and its significance as a gift which speaks to all of the donor's loving loyalty and devotion to God, a tender regard for and watchfulness over the interests of her followers, and a sacrifice and love for humanity which shall endure forever.

Mrs. Corby tendered a cordial greeting from Second Church in Los Angeles, and cited instances of the healing through Christian Science of her mother, brother, and herself, the results of which had been far-reaching in influencing others to apply for and receive aid from the same source. She also mentioned the complete healing from alcoholism of a well-known newspaper man of California. She expressed her gratitude to Mrs. Eddy and the joy experienced in attending a meeting in the Concord church.

Mr. Hunt, who is mayor of the city in which he resides, and one of its most influential and wealthy business men, spoke of the great good which the Science is accomplishing among the traveling men. He cited the speedy healing through its means of a child afflicted with a fever, and also the almost instantaneous restoration to health of a man suffering from consumption.

Mrs. Hunt supplemented her husband's testimony in the latter case with several minor details familiar to her, which showed that the case was certainly a marvelous one. She also related the instance of the healing of a sick Chinaman. This one has never allowed an opportunity of expressing gratitude for his healing to pass unimproved. Both Mr. and Mrs. Hunt spoke feelingly of Mrs. Eddy and her great work for mankind.

The last speaker, Mrs. Kimball, told of the gratifying progress of the Science work in Salt Lake City. Mrs. Kimball spoke of the inspiration which her visit to Concord had given her, and offered a loving tribute to Mrs. Eddy.

Mr. S. L. Bowman of Seattle, Wash., and several other visiting Scientists were also present. At the conclusion of the meeting the visitors repaired with a number of the local Scientists to the room in the church set apart for Mrs. Eddy's use. The comfort, convenience, utility, and beauty of its appointments appealed alike to each one.

Concord (N. H.) *Patriot.*

From an English Paper.

To say that the Christian Scientists are indignant at the attack made upon their faith at the Church Congress, on Saturday, would not be correct. The Christian Scientists could scarcely be indignant at anything, it seems. But they are none the less willing to refute the charges brought against them.

Lady Victoria Murray, First Reader at the church in Victoria Park, Manchester, was seen at her home by a *Daily Dispatch* representative.

Lady Victoria Murray, a daughter of Lord Dunmore, was herself the recipient of the blessings that she claims flow from the faith. Ten years ago she was dangerously ill with consumption and spinal disease. All other hope failing, she was given into the care of Christian Scientists, in whom she did not believe. To-day she is a quiet lady, who, in the midst of an active, busy life in connection with her church work, can spare time patiently for inquisitive pressmen. Traces of past suffering there may be, but there are no present bodily pangs. Her father, too, was cured of a bad injury. She related some cases within her own knowledge of people being cured. They were generally skeptics when they came—they came as a last resource.

The Scientists were accused of not believing in the Divinity of Christ, in the crucifixion, the resurrection, and the ascension, "but," said she, "these seem to us to be the essence of Christianity. Our work depends upon understanding the divine Christ. Our converts do believe thoroughly, not merely in the faith as a cure, but because Christian Science gives them a perfect God. We teach that all good and only good comes from God, and therefore that we have no right to believe in the negation of goodness. And it works out that our time is so taken up with good that we have no time for evil."

With regard to the criticism that if Christian Science were true there would be no charity or sympathy in the world—that no one would have anything wrong with them—Lady Victoria Murray pointed to the fact that Christian Scientists were devoting their lives absolutely to the amelioration of sickness and suffering. Modestly she said that in her five years in Manchester she had not been to a single social event.

Lady Victoria Murray spoke as one pleased of the circumstance that she had seen Mrs. Eddy, the Founder of the faith, four times, and had talked with her. Mrs. Eddy was born probably about the same time as the late Queen Victoria, but she was still active and able to run up and down stairs,—a proof of her theory that old age was not inevitable.

"Do you hold, then, that we need never die?" asked the pressman.

Lady Victoria Murray smiled. "Ah! death," she said, "is our final enemy, and some day may we not overcome this enemy as we have done others?"

The Lectures.

The Mother Church in Boston, Mass.

The semi-annual lecture of The First Church of Christ, Scientist, in Boston, was delivered by Rev. William P. McKenzie, C.S.B., in Symphony Hall, Thursday evening, November 2, before a representative and attentive audience which filled this large building. The lecturer was introduced by Mr. W. D. McCrackan, First Reader of The Mother Church, who said,—

Ladies and Gentlemen, Friends:—You have been invited this evening to listen to a lecture on Christian Science. The time has come when no one who desires to be well informed can any longer afford to be ignorant concerning Christian Science, what it teaches and what it practises. Everywhere people are asking each other what it is that is performing these modern marvels; those who have been looked upon as hopelessly engulfed in sin have been reformed, those who have been called incurably sick are now well and strong, and the sorrowful, who have grieved for years in melancholy and despair, are comforted and made happy and useful members of society. The lecture will deal with ultimate Truth, and at its close we shall know more about God, and man in His image and likeness, and more about the universe as it really is, than we know at this moment. Christian Science is at work in the world with its blessed ministrations. Here in Boston we are all more or less going to school. It is characteristic of this great center that everybody is at work learning something, —active in the pursuit of knowledge and reaching out for a clearer understanding of truth. No wonder, then, that an audience of this magnificence and size has gathered here this evening to learn more about Christian Science. It is not without special significance, therefore, that the headquarters of Christian Science, its Mother Church, and attendant activities, should be located here in this alert and hospitable Boston; that Mrs. Eddy, the Discoverer and Founder of Christian Science and author of its text-book, should have planted in this city of learning her Metaphysical College, from which emanates the knowledge and understanding of practical Christianity so greatly needed by the world at large; and that the text-book of Christian Science should here be published for distribution to all portions of the habitable globe, in response to the urgent demand of those who need mental, moral, or physical help.

The lecturer of the evening is one well qualified by years of practical experience to explain the subject of Christian Science, and I take great pleasure in introducing to you the Rev. William P. McKenzie, C.S.B., member of the Christian Science Board of Lectureship.

[Mr. McKenzie's lecture will appear in full in the December *Journal*.—EDITOR.]

Chicago, Ill.

Edward A. Kimball lectured on Christian Science last night [September 28] at Fifth Church of Christ, Scientist, explaining the teachings of Christian Science concerning the nature of sin and disease and of the saving mission of Christ.

The new edifice of Fifth Church, 4840 Madison Avenue, was filled to overflowing, and hundreds were turned away who were unable to gain admittance. The large audience listened attentively to Mr. Kimball, who spoke particularly in refutation of many of the misrepresentations which are prevalent regarding Christian Science. The audience manifested the closest interest, and evidently was much impressed by the statements that were made.

Chicago Post.

Mr. George Shaw Cook, who introduced Mr. Kimball on the 28th, and again the following evening at the same place, said in part,—

This lecture is not for the purpose of proselytizing; for Christian Scientists understand that each individual must in his own time and in his own way, and as the result of his own peculiar need, seek the kingdom of God, and that thus seeking he shall find. This lecture is not for the purpose of disturbing the religious belief of any one; for Christian Scientists recognize that every man is entitled by right to the undisturbed pursuit of his particular belief, whatever that may be, so long as he is satisfied with the results thereof. The fact that Christian Science heals the sick as well as the sinful is already well established.

The effect of this lecture will be to allay antagonism, to correct misrepresentation, to destroy prejudice, to quiet fear, and to heal, purify, and uplift the thought of every one in exact proportion to his receptivity.

The lecturer will say something which will make you happier, more hopeful, less fearful, more courageous; something which will give you added assurance that there is present here and now an understandable, demonstrable, irresistible potency which is delivering men from the fancied "power of darkness" and transforming them "into the kingdom of His dear Son." He will tell you something, but not all, of the Science of that truth which makes men free, and of its discovery and revelation to the world by a gentle, loving, God-crowned woman.—*Correspondence.*

Merrill, Ore.

A large and interested audience greeted Miss Mary Brookins of Minneapolis, who lectured on Christian Science Thursday evening [September 21] at the Opera House at Merrill. The Christian Scientists have recently erected a very creditable church building at Merrill and are in a very flourishing condition. In introducing the speaker, Judge H. L. Benson of Klamath Falls said in part,—

I must confess to a degree of embarrassment in introducing the lecturer, because of my ignorance of the doctrine of Christian Science. However, special ignorance is no crime, if unaccompanied by presumption, and our friends will doubtless pardon our ignorance, since we all belong to the class of American citizens who like fair play, and who will gladly give ear to any worthy organization bringing an important message to us. Christian Science is a system of theology, or philosophy of religion which is attracting the attention of the thinking world, and we are fortunate in having so able an exponent of its doctrines to address us to-night.—*Klamath Republican.*

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

"By their fruits."

THOSE who are asking the question, Why is the Christian Science denomination growing at such a rapid rate? will find an answer in the experience of Dr Wilding of Manchester, England, which he details in a letter to the *Daily Dispatch* of that city. He writes,—

"My own experience . . . is decidedly in favor of Christian Science as against medicine, and I write as a man who for nearly thirteen years was a general medical practitioner. Under the very best that medicine and surgery had to offer, my daughter, suffering from tubercular disease (joints and lungs), was slowly and steadily dying five years ago, losing weight and strength daily, and it is due to nothing else than Christian Science that I am able to say she lives to-day a healthy, strong girl. This case would have been a failure under medicine, but has proved a success under Christian Science.

"Again, under medicine a patient of mine was certainly, and in much suffering, going down to her grave, with valvular disease of the heart, and complications. This case also—a would-have-been failure in medicine—became a complete success under Christian Science. Surgery had nothing better to offer a young man, who had disease of the bones of the knee joint, than excision of the diseased bones and joint; thereafter, at best, a stiff, shortened limb. Naturally we would have accepted this measure of success as a very good thing. Yet under Christian Science treatment this man retains the whole joint in a perfect, healthy, and active condition.

"When I first put Christian Science to the test with these cases I was not a believer, and knew practically nothing about it. I thought much as other medical men, until the proofs of the superiority of Christian Science healing convinced me."

Our Master said, "Ye shall know them by their fruits," and it is because of such fruits as those named by Dr. Wilding that other fathers and mothers are accepting for their children and for themselves Christian Science as the Christianity of Jesus, the Christianity which healed the sick and reclaimed the sinful during the first three centuries.

These wonderful works are being done in the name of Christian Science through righteous prayer, the prayer our Master commended to his followers when he said,—

"Have faith in God. . . . What things soever ye desire, when ye pray, believe that ye receive them, and ye shall have them. And when ye stand praying, forgive, if ye have ought against any: that your Father also which is in heaven may forgive you your trespasses."

ARCHIBALD MCLELLAN.

There is Hope for All.

IT is a pitiful thing to be sick even when there is promise of speedy recovery, but when conventional authority has rendered its decision, and the solemn sentence of "Incurability" has been pronounced, then indeed does mortal experience become a tragedy whose presiding genius is despair. Upon those thus condemned, however, a great light hath shined in our day. The hopeless pessimism of the well-nigh universal thought respecting them, is being replaced by that glad assurance and expectation of their freedom and joy which Christian Science brings as the benediction of heaven.

When we remember that a large proportion of the incurable are being tortured from their childhood in punishment for offences which they have not committed, and that they have been taught to accept their fate and patiently endure their suffering, by those whom Jesus has commanded to heal; and when we know that numbers of these unfortunates have been set free through Christian Science, and therefore that others now in shackles might be freed, but for the ignorance or prejudice which forbids,—then the awryness of mortal sense and man-made theology begins to appear in its true proportions, and we are stirred both by a mighty protest against false belief and a mighty longing to save its unfortunate victims.

Happily the hearts of men have ever been more logical than their heads, and human sympathy has hastened to succor those whom human belief has beaten and enslaved; nevertheless, individual and organized expressions of a humanitarian spirit have been found wholly incapable of remedying the wrong, and their very multiplicity has served to intensify the mortal sense of the vast sadness of the situation, and render doubly dark the prospect of its indefinite continuance. In bringing something of light and cheer to the darkened chambers of many a "shut-in" life, human sympathy has expressed a sincere interest and a worthy motive, and, therefore, the expectation was entirely legitimate that every lover of men would rejoice in the unquestionable proofs which Christian Science has brought, that there is health and happiness for those who hitherto have all their lifetime been subject to bondage; and human history has never presented a more surprising and incongruous spectacle than that witnessed to-day, when many professed Christians unite in decrying and resisting a faith which in Christ's name questions the asserted incurability of disease, and which would bring to otherwise hopeless invalids the realization of that freedom for which they are praying in tearful agony.

This asserted offence Christian Science can "neither palliate nor deny." At the moment when in the world's great arena the victim of false belief had fallen to his knees, and his appeal to the crowded galleries was met with the doom-sealing answer "To the death,"—then came this messenger of Truth and Love to deny the authority of humanity's fateful verdict, and to shield the bleeding sufferer from the final stroke of a relentless mortal law.

In the name of Truth and justice, and in the spirit of brotherly love, a great company of Christian Scientists are to-day waging a heroic struggle for the rescue of those who are now remitted to the bondage of so-called irremediable disease. They honor, as eternal truth, the declaration of Scripture that justice and judgment are the habitation of God's throne, that mercy and truth ever go before his face, and they consequently declare that no injustice or wrong can be attributed to Him. They accept with humble and dutiful purpose all the responsibilities and privileges which Christ Jesus conferred upon his every true follower, and they must, therefore, continue to voice their appeal to humanity's nobler sense in behalf of those who at so many firesides are denied even the expression of a hope that as of yore Truth may bring them its blessed freedom. They remember with gratitude the splendid daring and unfaltering zeal of their Leader, who for long years "fought a good fight" for "incurables," single-handed and alone, and they rejoice in the strength and beauty of the song which in all the world to-day is rising from lips that were erstwhile sad and silent,—a song which is ever multiplying the comforting ministries of Christian Science to mankind.

True Helpfulness.

THOSE who come into Christian Science find themselves regarding all things from a changed viewpoint; for them old things have indeed "passed away," and often they are led to pause and ask how they shall most consistently fulfil their obligations, as followers of Christ Jesus, when the problem of poverty confronts them. Christian Science brings a quickened sense of sympathy for all human need, and the realization that material methods have fully proved their inability to supply that need. The Psalmist says, "The earth is full of thy riches," yet in spite of the evidences of divine bounty, dire distress and want prevail among mortals. Jesus' words, "The poor always ye have with you; but me ye have not always," may be taken as a reproach to that poverty-stricken condition of thought which fails to discern and appropriate "the unsearchable riches of Christ." One thing is sure, viz., it is a Christian act to help those in need; the question is how we can best do it. No one can be blamed if he give of that which is to him most precious.

The student of Christian Science, to be consistent, must ever keep in view the basic teaching of this Science, not only in working out his own problems, but also in his efforts to help others. He can no more accept the testimony of material sense in respect to poverty than to sickness. In Genesis we are told that when Adam complained that he was naked, God asked him, "Who told thee that thou wast naked?" and this question was followed by a stern inquiry as to whether Adam had eaten of the forbidden fruit of the tree of the knowledge of good and evil. With the Adam-sense comes the belief in poverty and all other ills; with Christ, Truth, comes the only remedy.

This question was once discussed by some young students of Christian Science, and the thought was brought out that if we offer for human want anything less than the best, we only prolong the struggle with error. Soon after, one of these students had an opportunity to test her understanding of Truth in the case of a man who was, according to sense-testimony, very ill and very poor. She freely gave her services in overcoming the first-named condition, and then was tempted to offer material aid for the other, but she saw the wisdom of leading the patient's thought up to where he could claim his spiritual inheritance. The result was that he soon received a sum of money which had been due him for a considerable time, and he thus recognized the operation of the law of justice and the law of Love. In another case, a student went on for weeks supplying the material wants of a family, but felt too timid to offer the truth, lest they should consider this aid intangible. She then woke up to the fact that no advance was being made, and asked another worker to take up the case. This was done, and in a week the sick father of the family was healed, and after a successful struggle with the stupefying influence of tobacco, which he had indulged in, even when his children were without food, he sought and found remunerative employment.

Here, as in all else, the Golden Rule may be applied. We would not like to be pauperized and held under a belief of poverty, but we would be profoundly grateful to the one who could make the truth sufficiently clear to us to enable us to "work out" our own salvation and rise above all sense of limitation. If those whom we seek to help are left with a material sense of the blessing received, we may well recall Jesus' reproachful words, "Ye seek me, not because ye saw the miracles, but because ye did eat of the loaves, and were filled."

On the human plane one gains the supply for his own need by supplying some need of others, and from this a lesson may be learned which points to higher attitudes of thought. There, too, the law is, "Give, and it shall be given unto you." Obedience to this law reveals the fact, made so clear in our text-book, that in order to be healed of either sickness or poverty, thought must be turned away from self. Our Leader says, "We should forget our bodies in remembering God and the human race" (Science and Health, p. 261). In this holier service we find the secret of Love's supply for all human need. ANNIE M. KNOTT.

Letters to our Leader.

[Telegrams.]

New York, November 2, 1905.

Rev. Mary Baker Eddy,
Pleasant View, Concord, N. H.

The association of my students, in annual reunion, unite with me in expressing to you, our beloved Leader and Teacher, our obedience, our loyal love, and our grateful recognition of your continued guidance of mankind to the realization of eternal Love. AUGUSTA E. STETSON.

MRS. EDDY'S REPLY.

Concord, N. H., November 4, 1905.

Mrs. Augusta E. Stetson, C.S.D.,
1 West 96th Street, New York City.

Thanks to you and your association for telegram and your grand glorious work for humanity. This reply delayed by mistake.

Lovingly yours,
MARY BAKER EDDY.

Augusta, Me., August 7, 1905.

Rev. Mary Baker Eddy,
Pleasant View, Concord, N. H.

Dearly Beloved Leader:—For many weeks I have desired to write to you, and may I tell you of my love and gratitude? I owe to your labor of love for mankind, all of comfort and joy that I have in this earth-life. I desire to express to you my gratitude for the sacred privilege which was mine, of receiving instruction in the May, 1905, class of the Massachusetts Metaphysical College. There, dear Leader, I received a higher sense of God, of Love, of true humility, and of your God-appointed mission. Your telegram to our class is very precious to me. Your words, "Watch, pray, demonstrate," ring in my consciousness, and may I ever be obedient to that heavenly message, is my prayer. Since my return from that class I find in my daily study of the Bible and Science and Health that truth unfolds to my understanding as never before. As I enter the hall where our Christian Science services are held, the flowers placed there by loving hands always seem to speak of your unselfed labor of love; their beauty and fragrance seem a tribute to you.

We see signs of a new awakening to Truth in this place, and we feel to praise God. I would like to tell you, dear Mrs. Eddy, that since I was healed of a so-called incurable malady by the study of our text-book, I have found the same truth to be a balm for sorrow and the sense of loss. I have longed to write you, but much more is in my heart than I can express in words. I hope you will see this letter and know that I love you and am grateful to you. I know that God's richest blessings will ever rest upon you.

Gratefully and lovingly yours,
EMMA ELLIS.

Denver, Col., May 6, 1905.

Beloved Teacher and Leader:—Twenty years ago to-day I first heard Christian Science explained and took my first treatment in Christian Science, and in looking back over these years I am prompted to write to you. We were then living in Beatrice, Neb. At that time there was only one practitioner west of the Missouri River, and she had been practising less than three weeks. The evening of the following Fourth of July, eight persons met at our home to talk over the advisability of starting meetings to study the Bible and Science and Health together. We decided to

Digitized by Google

hold weekly meetings and from these sprang the organization of the church in Beatrice in 1889,—the sixth Christian Science Church organized, and the first west of Chicago. I speak of these things just to show how God has blessed and prospered our Cause in the West.

In looking over the April *Journal* of 1885, I find just fifty practitioners' cards and one teacher's card. I started with the eleventh edition of Science and Health. The happiest days of my life were when I first realized that Christian Science is the Christ-truth, and that the theology of Christian Science heals the sick as well as reforms the sinner.

I wish I could express to you my gratitude for the blessed privilege of going through two of your classes and hearing the unadulterated teachings as no one else can give them. Each day I pray for wisdom and guidance that I may be constant and faithful. There has never been one moment since this day, twenty years ago, that I doubted that Christian Science is the truth; I have never questioned your wisdom as the Leader of our Cause; and as the years go by I see more clearly that God is directing every step you take.

With grateful heart I am your loving student,

SARAH E. BENFORD.

Boston, Mass., October 15, 1905.

Rev. Mary Baker G. Eddy,

Pleasant View, Concord, N. H.

Dearly Beloved Leader:—Assembled in annual meeting, the Bay State Christian Science Institute Association extends to you loving greetings, and, trusting that it may gladden your heart, sends to you a word of grateful appreciation for the knowledge of Christian Science that has come to us as a result of your early normal teaching, through your devoted, loving student, Mrs. Mary W. Munroe, C.S.D. As our association meets each year, we have a clearer realization of the priceless value of this enlightenment, received through your revelation in "Science and Health with Key to the Scriptures," and a higher line of demonstration is unfolded as we recognize and appreciate the magnitude and import of your noble life-work. Our earnest endeavor is to give a practical support to the various demands for the Cause of Christian Science. During the past year we have been enabled to continue our contributions to the Building Fund for the new auditorium of The Mother Church. We recognize you as God's chosen Messenger to this age, and we know that His blessing rests upon you. Divine Love upholds and sustains you in your ceaseless vigils, your untiring labors for humanity, and divine Love alone can reward you. May this simple message of love throw a beam of brightness on your way. Love and gratitude from the Association.

EDWARD T. BLANCHARD,
CAROLINE S. WELCH,
DELMER GODING,
Committee.

Ottawa, Dominion Day, July 1, 1905.

Beloved Leader:—The Ottawa Christian Science Students' Association, of which Mrs. Elizabeth W. Higman, C.S.B., is teacher, desires to tender to you an expression of loyalty and love. For the many blessings of health and happiness which we have experienced through Christian Science, for the wisdom which safeguards our Cause unceasingly, and for the noble example of your holy life, we are sincerely grateful.

It is our earnest prayer to be faithful to all your teachings, to The Mother Church, the Church Manual, and every message of divine Love which you have given us.

Yours faithfully,
EVELYN Y. STEELE, *Secretary.*

Testimonies of Healing.

Divine Love does indeed supply all our needs. My son, fifteen years of age, was taken ill with all the symptoms of typhoid pneumonia. The veil of material sense was so thick that the divine idea seemed to be completely hidden from me, and although I had almost from the first, since studying Christian Science, been able to make my own demonstrations, this time I seemed to be quite willing to stand aside and let some one else do the work, when suddenly I recollected that I had not even tried to help the boy, but was in every way contributing to the weaknesses and burdens of materiality which were now holding him in bondage.

At once I began work, by first casting out the fear which held me down, and then I was able to take my seat by his bedside and treat him. Hardly was I seated when he fell into a quiet sleep, from which he awoke feeling somewhat better. The following two days were trying ones, but on the third day he made his final exit from bed. That evening he ate a hearty supper, and at about eleven o'clock he sat down to a lunch, then went to sleep. In a few days he was in his usual place in school, although he was so deaf that he could accomplish but little there. I kept on treating him, and in less than two weeks his hearing was wholly restored.

When asked by friends for what I came into Christian Science, I think I can truthfully say, for everything. It was first brought to my notice a little more than four years ago, soon after I had returned from a health-seeking excursion of almost three years in the southern States. Instead of accepting the truth, I reviled and laughed at it, but "sorrow ends the laughter of fools." The following year I was forced to ask for treatment for my son, who was suffering from a disease which brought great anxiety to me. His recovery awakened an interest in Christian Science, and I borrowed a copy of Science and Health and commenced to study it. The result was that I soon began to demonstrate what I had learned. A chronic complaint, from which I had suffered since childhood, and for which I had used so much opium in thirteen years that my last physician had told me I was threatened with insanity, was the first to leave me. I had worn glasses for twelve years, and these were soon laid aside. I had all my life suffered from laryngitis and a bad cough, but these, too, were soon overcome. My husband had been subject to severe bleeding of the nose all his life, and this left him after a year's study of Christian Science. With all this to encourage me the "little book" soon became my daily companion. In Christian Science I have found the pearl of great price. In sickness it is our physician. In cases of accident, and these were many during my first year of study, it was our surgeon. In an hour of bereavement, grief, and desertion, it became the still, small voice which said, "I will not fail thee, nor forsake thee." It has also helped us in a financial way, for our bill for doctors and medicine would run from one to fourteen dollars a week, not mentioning the hundreds of dollars we spent for travel, all of which can now be used in the family. I have also been able in a small way to help others, and my heart goes out in gratitude to God, and to our dear Leader, who has given to the world a religion which is raising so many from lives of bondage to sin, sickness, and selfishness to lives of purity and usefulness, through the spiritual understanding of the Bible.

ANNA DELIND KARSEBOOM, Muskegon, Mich.

In June, 1903, when our dear Leader, from the balcony of her Concord home, looked into the upturned faces of thousands of her followers, and uttered those memorable words, "Trust in Truth, and have no others trusts!" she knew the injunction would be heeded and bear fruit. A notable instance is the case of Robert Waddell of West Mitchell,

Digitized by Google

Ia., whose testimony appeared in the *Christian Science Sentinel* of February 11, 1905. He had been drawing a pension of fourteen dollars per month, but when healed through Christian Science could no longer truthfully remain on the list of invalid pensioners, and so surrendered his claim, and at his own request was dropped from the rolls.

When the truth of Christian Science dawned upon my vision, there was so much moral housecleaning to be done that quite a chemicalization was induced, which it is to be hoped will continue so long as there are errors to be thrown off. First, my banker failed; next, land values suddenly declined and my holdings left me, some by mortgage foreclosure, and the balance through forced sale. Then a life insurance policy became worthless, through the defalcation of the company's president, and a house and barn I had builded were hastily hurried away, so far that I never after saw a stick of either. All this was in the far West, where I had gone with the hope of securing the health denied me by Eastern doctors, drugs, and travel,—foreign and domestic. After the healing of my wife and myself through the recognition of Truth, I closed my two dental offices, supposing I should never practise again, held an auction, and departed for another State, there to commence the practice and preaching of that which had so blessed us. We followed this pioneer work for several years, in several fields, and with varying success, but there was always something wrong, though what it was, we did not (strange as it may seem) know. I had been healed of so-called incurable diseases, was able to, and did, daily ride my bicycle up hill and down, yet each three months, in full accord with the laws of the land, I took oath before a magistrate that I was an invalid through disabilities incurred during the Civil War in the service of the United States, and that I was thereby entitled to a pension of twenty-four dollars per month! But things did not go right; plenty and poverty alternated, and the practice of dentistry was necessarily resumed. Surely we had Jonah aboard.

Proportionate to the disappearance of pensionable ills came the demands of conscience, which were somewhat quieted by the vivid memories of the hardships and dangers incident to service in the field, but when I read in Science and Health, to myself and others, "The divine method of paying sin's wages involves unwinding one's snarls, and learning from experience, through pangs unspeakable, how to divide between sense and Soul" (p. 240, l. 29), it somehow seemed to apply to me. When I would commend Christian Science to my suffering comrades of the Grand Army, the subject of pensions was usually avoided.

The reluctance of a veteran soldier to forfeit his place on the pension roll, aside from the financial element, a civilian cannot know, and I am sure that the widespread belief that the United States government owes to its soldiers who were in active service a debt that money cannot pay, was for me a quietus to an accusing conscience. Besides, in my case, the pension seemed the most stable, and often the only remaining asset, but the testimony of Comrade Waddell awoke me, and I saw that the pension was my Jonah! Then came the test. Mortal sense argued that if ever I needed a pension, it was now, in my sixtieth year; that it was legal, and that thousands were doing the same thing, etc.; but Truth won a victory, and though I was reduced to my last hundred dollars, I immediately sent my pension certificate to the commissioner, with a letter stating that having been healed of the disabilities for which I had been pensioned, I could no longer draw an invalid pension without perjury, and asked that my name be dropped from the rolls.

The results in the short time that has elapsed, correspond with the experience of Comrade Waddell, to whom I am sincerely indebted; and I am inexpressibly grateful to our Leader, who by her life of selfless love has made it possible for me to uncover and cast out this sin.

JOHN WARNER KEYES, D.M.D., Washington, D. C.

I desire to acknowledge what Christian Science has done for me, although words are inadequate to express the blessings I have received or the gratitude I feel to our dear Leader for having given us Science and Health, which makes plain to us the Scriptures. I began to study our textbook about six years ago. I had for several years been seeking sanctification in an orthodox church, but could not feel that peace of mind which I knew ought to come. I finally met a Christian Scientist, and she loaned me Science and Health to read. I asked her how long I might keep the book, as I could not read long at a time because of weak eyes. She said it would not hurt my eyes to read that book or the Bible. I refrained from telling her that I read my Bible daily, but that it pained my eyes to do so. I hurried home, for I was anxious to see what the book contained. After supper I took it up, and in my haste to read it I forgot to put on my glasses, which I always used when reading. It was eleven o'clock when I looked up. I had been reading by lamplight all this time without my glasses and without any pain, and I have never had any use for glasses since. As I read, day after day, the whole world seemed illumined; to me it was indeed the second coming of Christ.

Although I had not sought Christian Science for physical help, I was healed of many ailments before I had read Science and Health through. One which I will mention, besides weak eyes, was a discharge of the ear which was very painful when I took cold. This was supposedly caused by having measles when a child. I had tried several doctors and two specialists without receiving any relief. I had often prayed to be healed of this trouble, and wondered why God did not answer. I did not know that I was asking blindly. Since I have learned how to pray aright I have had many demonstrations in my own family and for others, although there have been times when God seemed hidden from me and I alone in the wilderness of mortal belief; but He has always led me through, and it proves to me that divine Love will never forsake us.

MATTIE BRISCO, Burns, Ore.

As far back as I can remember, I have suffered from terrible headaches,—inherited, so the doctor said, my grandmother and mother having suffered before me. I tried many physicians during the past twenty-one years, and all, without a single exception, gave me morphine and atrophine hypodermically. I was opposed to these drugs and would suffer untold agony before I would take them. I seldom went over three weeks without having a headache; and have lain for six days without eating or swallowing anything except an occasional sip of water.

My health grew worse, and I suffered more and more; for now it was not only my head but my heart and spine. The last six months of this existence (I cannot call it life) I was in bed most of the time, and took a strychnine tonic so strong that the pharmacist who filled the last prescription said one dose would kill a man; I took three doses a day. This was my condition in October, 1903, when heart-failure set in. I had three attacks, and sent for a Christian Scientist. I began taking treatment the 31st of October, and the 4th of November I was able to be up.

More than a year previous, while on a visit to a loved one who was taking Christian Science treatment, I had read Science and Health to her and was struck with the beauty and purity of Mrs. Eddy's teaching. Though I did not doubt the truth of her statements, I thought it was not for me. I had been trying to live a Christian life for thirty years, and through all my suffering I knew that God is Love, and trusted Him. Though I thought my afflictions were sent by Him, yet I did not doubt His wisdom, and would rather have died than to have lost faith in God.

November 4, about ten o'clock in the morning, I was reading the 91st Psalm. When I came to the last clause in the fifteenth verse, "I will deliver him," it did not seem

Digitized by Google

to me I had ever read it before; I re-read it; yes, it was there. I read it again, then I closed my Bible,—it was enough; it was God's promise and it was to me. My whole being was filled with that precious promise. My breathing said, "I will deliver him," my heart beat it, my pulses throbbed it over and over. The joy and peace that came to me are beyond words to describe. How I wished that the dear woman who was treating me would come, but it lacked three hours of the time for her visit. Then this thought came, Why should I wait for her to come? Why not get up now? God has delivered me. At once came the Saviour's words, "Take up thy bed, and walk." I obeyed. All of a tremble I started to a chair by the fire, when this beautiful truth came to me, "The Lord is my strength," and as I silently affirmed it, my strength came. The trembling ceased, and I knew for myself that Christian Science is of God, the way that Jesus taught.

Since that time I have studied faithfully, that I may be able to help others as I have been helped. I find Science and Health a guide and counselor at all times. I derive great good from studying the *Quarterly*, and am greatly helped by reading the *Sentinels*, *Journals*, and other literature. Though I cannot express in words my deep gratitude for what Christian Science has done for me, I have written my experience as a testimonial of my gratitude to God our Father, to Christ Jesus our Lord and Master, and to our faithful Leader, Mrs. Eddy. I sincerely hope this may help some one.—Mrs. Etta J. Beavers, Chickasha, Ind. Ter.

Eight years ago, feeling that medicine could not help me, I turned to Christian Science for physical relief. The trouble was indigestion, and it disappeared only after a month of faithful work on the part of the practitioner. Since that time I have always gone to this Science when in need of physical healing.

During all these years, however, with practical proof of the truth of the teachings of Mrs. Eddy, mortal mind has been very slow to yield, very slow in giving honor where honor was due. But at the birth of my child, a birth which in *materia medica* would have been accompanied by serious injury to the mother, under Science there was proof that in the one Mind all things are possible. I want to publicly express my reverence for and my gratitude toward our Leader. "By their works ye shall know them." How can we give aught but honor to one whose teaching gives us health, supplies our needs, and regenerates us spiritually.

R. Colby, San Francisco, Cal.

Through the understanding that God is divine Love and ever ready to meet all human needs, many blessings have come to me. I was taught from infancy in a strict orthodox church by a devoted mother and teachers. During the past few years, however, I was not fully satisfied with my church, feeling that it lacked the spirituality that God would have among us. I had visited other churches, but with the same results. I had practically never heard of Christian Science.

A few months ago I came to Chicago, met some Scientists, became deeply interested in the study of Science, and soon realized it was that for which I had hungered. I felt that I had found the Christianity which satisfied my wants. I had worn glasses off and on ever since I was eleven years old, but discarded them as soon as I became interested in Science. I was healed of inherited catarrh. My mother, sisters, and brothers soon took up this study, and our home is one of harmony and happiness.

I am thankful to God for these teachings, which are made clear to us by one so unselfish that divine Love, through her, has lighted the way for all humanity. I am not as grateful as I should be for all I have received, but my one desire is that I may be worthy to be called a true Christian Scientist.

Anna R. McMahon, Chicago, Ill.

For nearly sixteen years Christian Science has been my refuge and rock of defence in the different experiences that have come to me. When it was first brought to my notice, I had been an invalid for several years. I had been treated by different physicians, but was no better, and I was tired out and discouraged,—of no particular use to myself or any one else. Notwithstanding my great need, and the fact that I had seen some of the work which this Science had done, I did not accept it readily. Science and Health was left on the table near by, and I would not look in it; but God was leading me, and finally one day I opened the book, and the more I thought of what I had read the more reasonable it seemed to me. I continued my reading, and my antagonism soon faded away. I very soon had treatment, and was quickly healed of the different troubles that had held me in bondage so long. I had attended churches all my life, more or less, but did not feel drawn toward any of them. Now I feel that my need has been met. I have found a very practical religion, good for every day in the week and every hour in the day. My growth in Christian Science has been slow but steady, and I feel, as the days go by, that it becomes more and more woven into my life. I feel a deep sense of gratitude to God, and to our Leader, through whose faithful work this blessed truth is revealed to suffering humanity.

Mrs. Florence A. McConnell, Pierrepont Manor, N. Y.

I have often thought that I would like to send to the *Sentinel* the story of my healing, which to me was most wonderful. When I look back to the bondage from which I escaped seven years ago, through Christian Science, my heart overflows with thankfulness. I was in a most miserable mental condition, as the result of a disease that had clung to me for over fifteen years. It was pronounced chronic ovarian trouble, and caused me much suffering at times. I also had severe attacks of rheumatism and constipation of long standing. Another trouble presented itself five years before I resorted to Christian Science, which steadily increased, until a year before I began treatment I could not lie down at night. I would bolster myself up with pillows, and even then, after a few hours, I would be obliged to walk the floor in great distress. I thought I did not care to live unless I could be cured. A friend suggested that I try Christian Science. I knew nothing of it, never having investigated it, but decided to try it, as medicine had failed to cure me. I consulted a practitioner, told her of my ailments, and asked if she thought she could heal me. She said that God did the healing. I rather doubted that, for I felt that God had taken very little interest in my sickness, or He would have helped me long ago; but I told her that I would take treatment, that she might as well experiment on me as on others. She told me to go to bed that night like other people, and to put only one pillow under my head. I thought to myself that she knew very little of my condition; nevertheless, I was willing to be obedient, and did as she advised, and to my surprise rested better than I had for a year. I took four treatments, and found myself a well woman.

I then began to study "Science and Health with Key to the Scriptures" by Mrs. Eddy, to learn what had healed me. My memory had been extremely poor for a long time, but my physician said that need not alarm me, as that was caused by the ovarian trouble, but as I grasped the meaning of our text-book this difficulty vanished, and I have never been troubled with it since. As the realization of God's power entered my consciousness, my joy was unspeakable. My whole thought was changed. I realized that I had at last found the Great Physician who healeth all our diseases. My heart was overflowing with the desire to help others, and as I prayerfully studied, the understanding came which enabled me to enter into the Master's vineyard. I am striving for a greater understanding, that I may accomplish more for my fellow-men.

Digitized by Google

Through my healing my husband became interested in Christian Science. Sick-headaches, to which he had been subject for years, vanished. Pleurisy, also, which he had for thirteen consecutive winters, has never returned since he began this study. I wish to express my gratitude to our faithful Leader, Mrs. Eddy, who has shown us the way to Truth.

MRS. MARIAMNE H. WITHERSPOON, St. Louis, Mo.

"And ye shall seek me, and find me, when ye shall search for me with all your heart." This passage of Scripture had always meant a great deal to me. I tried faithfully to fulfil its requirements according to my best understanding, and I devoted myself to church and Sunday School work, kept the Lenten season strictly, and lived up to all my duties as a church member. I thought this the only way, yet I was not satisfied. I was not searching for a God who healed the sick as well as the sinner; my church did not teach this.

During four years of invalidism, "afflicted, tossed with tempest, and not comforted," losing all faith in *materia medica*, the burden of my cry was, "Is there no balm in Gilead?" In the latter part of the year 1886, I first heard of Christian Science, but my thought of it was that it healed the sick without drugs through some mysterious agency. In reading the literature, however, I found it was practical Christianity, the theology Jesus taught. The Bible became a new book to me, and through this light I gained a glimpse of the true meaning of this text; I learned that it required the destruction of error, selfishness, pride, envy, and hate; this was the purifying process, and without this He could not be found.

I thank God for this new light, and words cannot express my gratitude to the Discoverer and Founder of Christian Science, the one who has shown the way for all mankind out of bondage to the flesh into life eternal. I am glad to know this is a warfare of extermination to every form of evil, to everything unlike God, and I rejoice that I am in the battle.—ROWENA E. ROWLSON, Hillsdale, Mich.

At the time when Christian Science was brought to my attention I was suffering from what specialists called far-sightedness, which commenced about fourteen years ago and steadily grew worse until it hindered me from attending school. I was finally compelled to take treatment under a specialist, which I did for about six months. This brought me no relief and he gave me up to become blind in a few years. My last resort was to an oculist, and this gave me relief for a time, but each year I was compelled to get new lenses, and each time a stronger lens was needed. At last I could not read without the use of my glasses and of a reading lens also, the time being limited to about one half hour per week.

At the time I heard of this Science I was a member of another church, and did not believe in it, thinking it to be the work of the devil. As a result I did not accept it until the wonderful healing of a relative, when I finally decided to take a trial treatment. As a result, in one day's time I was healed so that I could read without my glasses and without pain. At present I am attending school and spend many of my evenings in reading. I also find that it has brought me great relief in many other ways, and having given it a trial of eighteen months I have found that in general my health is very greatly improved. For the light that I have thus far received; for my clearer understanding of God as the only Mind and of my relationship to Him; for the certainty I have that perfection will eventually be reached if I am faithful, I am thankful. I can now realize the truth in the statement that "God is Love," and I feel that it is a duty to express my gratitude to our dear Leader, Mrs. Eddy.

ENNO E. MURREY, Grelton, O.

When I first heard of Christian Science I was in great need of physical healing, but I rejected the idea that it could cure me, and asked the Scientist who had ventured to speak of it to me, "What do you believe about God?" In her answer were the words "divine Principle, Life;" and I said that I believed it was the religion for which I had been searching so long. She loaned me her copy of Science and Health, by Mrs. Eddy, that night, and I sat up until morning, reading it, for the first page convinced me that it was the truth. It was many years before I saw that woman again, and could thank her for telling me of Christian Science, for I immediately returned to my home in a distant city, where I procured a copy of Science and Health from the library, and read it constantly for about two weeks, without once thinking of my physical condition, so happy was I that my long hunger and thirst for a true knowledge of God and man was being satisfied.

One day when I had tried to walk a little down town, I had returned depressed and suffering, and was lying down in a despairing frame of mind. I turned and saw Science and Health on the bed beside me, where I had been reading it before going out, and the thought came to me like a flash, "You have accepted this as your religion, why do you not let it heal you?" I knew nothing at the time of churches or of practitioners, but I stopped all my medicines and put aside the many false beliefs I had accumulated through three surgical operations, rest-cure, massage, and other so-called remedies. I then went to work again, reading Science and Health with the desire for healing, and I received it immediately. The morning of the third day I realized that I was perfectly well and found I could go everywhere with strength and freedom.

I then sought the church, and soon received class teaching. This occurred eight years ago, and while my experiences have been varied, and many times I have been far away from Christian Scientists, I have been learning the lessons most needed for my individual unfoldment into spiritual sense. My understanding that Christian Science is the Word of God to this age has grown into a loving reverence for this revelation, which is at once most practical and most transcendental. My gratitude to its Discoverer and Founder, Mrs. Eddy, comes next to my gratitude to God.—BESSIE LEONARD YOUNG, New York, N. Y.

Changes in the Hymnal.

In future editions of the Hymnal new music will be substituted for that now used for Mrs. Eddy's hymns, 161, "Shepherd, show me how to go," and 179, "O'er waiting harp-strings of the mind." Words and music not heretofore published in the Hymnal will be substituted for 163, 180, 183, and 184.

All the above hymns with the new music will be furnished in suitable form for pasting in old Hymnals, at the following prices: 1 to 25 sets, 5 cents per set; 25 or more, 4 cents per set; 100 or more, 3½ cents per set.

Mrs. Eddy's hymn, "Christmas Morn," with the two present settings printed on one sheet, will be furnished for insertion in copies of the Hymnal which do not contain it, at the following prices: 1 to 25 sheets, 2 cents per sheet; 25 or more, 1½ cents per sheet; 100 or more, 1 cent per sheet.

When inserting the first six hymns mentioned, the old ones should be cut out and the new ones pasted on the stubs.

Send orders to THE CHRISTIAN SCIENCE PUBLISHING SOCIETY, 250 Huntington Avenue, Boston, Mass.

From our Exchanges.

It is now an obstacle to belief to hold that since the closing of the New Testament no one upon the earth has been authorized to speak in the name of God or has been inspired by Him to utter divine truth fit to be called holy Scripture. It is an obstacle to belief to say that any person could be a passive agent in the communication of truth direct from God, who was not himself prepared for his utterances by high resolve and holy life. It is now an obstacle to belief to be told that all inspiration is miraculous in its origin, and dependent for its credentials upon evidences which make it impossible for ordinary persons to expect similar revelations of the Holy Spirit.

The new belief that the infinite energy of the Holy Spirit is everywhere pressing upon human souls, awaiting to be received into them and waiting to express itself through them whenever they are prepared in thought and action to receive the divine gift, gives us back our Bible glorified, because its most glorious heights of spiritual attainment are seen to represent the possibilities of human nature, everywhere and always, when it comes into right relations with the life of God.—*The Christian Register.*

The *Christian Register* quotes the following from a sermon on "The Divinity of Christ" by the Rev. O. D. Sewall:—

"The intellectual exercise of fixing Christ's place in the Godhead, while significant and important, sinks into absolute insignificance in comparison with the worship which his great life should inspire. In relation to the great doctrine of which we are speaking, there is to-day among many people a conviction of the head, but not of the heart. . . . Many, giving weight to certain supposed infallible testimonies of Scripture, have yielded assent to the doctrine of the divinity of Christ. But it is a creed without substance, a confession without power. . . . They have absolutely no appreciation of those perfectnesses of character which make up the glory of the Master's life, and which it is so necessary that they should worship as holy qualities if they are to come themselves to such excellences. It is positively dangerous to found your belief in the divinity of Christ primarily upon anything else than his moral perfectness."

In the future, then, we may expect that less stress will be placed upon creed and upon the particular forms of worship, and a great deal more stress will be placed upon life, and especially the spirit of a man's life. In other words, religion will become more spiritual and less formal. Right opinion will count less than unselfishness. To give one hundred thousand dollars for foreign missions will count less than justice and righteousness. The lust of money will be accounted a worse thing than staying away from church.

H. Symonds, D.D.
The Homiletic Review.

If in this life only we have hoped in Christ, then we are of all men most pitiable, for we have missed our chance, we have wasted our opportunity, and gone hungry and naked and sombre through a world of plenty and joy; but in the radiant light of immortality which shines down through ages from the open tomb of Christ, we see the elements of eternity glorified in time, and the nature of God shining through the face of man, and the children of men are become the sons of God, no longer to live after flesh, but after the Spirit.—*The Universalist Leader.*

The strength of the Church is in her purity. Her attractive power for good souls is in her goodness. Her evidential value does not depend upon her numbers or her wealth, but upon her likeness to Jesus Christ.

The Standard.

The Christian Science Text-Book.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

The New Concordance.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of Science and Health, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

Church Manual.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to Joseph Armstrong, 250 Huntington Avenue, Boston, Mass.

Church Tenets.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to William B. Johnson, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

Building Fund of the Mother Church.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

Stephen A. Chase, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

Church Treasurer.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to The Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of The Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to The Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number, or number of post-office box.

Stephen A. Chase, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

National.

The Secretary of the Interior has awarded the contract for the construction of the Belle Fourche dam, South Dakota, and distribution canals. The dam, when completed, will be one hundred feet high in the highest place, one mile long, and twenty feet wide on top. The area of water surface will be nearly nine thousand acres, and the water will be sixty feet deep, and will irrigate about eighty-five thousand acres of land. The bid on the dam was $874,164.

In the year 1901 an officer of the United States Department of Commerce and Labor, says the *Scientific American*, suggested that for the furtherance of export trade it would be an excellent idea to equip a large steamer as a floating exposition of American products, and dispatch it on a tour of the principal ports of the world. Great Britain and, we believe, Germany have already tried the experiment. A strong company has been formed in New York and has decided to adopt the suggestion. It is proposed to equip a steamer of about eight thousand tons for the special purpose of the expedition, and fit up the various decks with exposition booths of much the same character as those to be seen in any of the great industrial exhibitions, with the one important exception, however, that only exhibits of a thoroughly serious character will be accepted, those of a trivial or purely speculative and doubtful character being refused. The steamer, in addition to devoting three decks to exhibits, will have living accommodations for about two hundred representatives of exhibitors. A route has been laid out which will include a visit to practically every port of importance in the world, and will involve a journey of about sixty thousand miles, the trip around the world being made in about fifteen months' time.

Chairman Shonts of the Isthmian Canal Commission, in a speech last week at the New Willard Hotel, Washington, before the American Hardware Manufacturers' Association, said: "In my opinion it is a mistake to handicap the construction of the Panama Canal by any laws save those of police and sanitation. I want to go on record here that the application of the eight-hour law, of the contract labor law, of the Chinese exclusion act, or of any other act passed, or to be passed, by Congress for the benefit of American labor at home, to labor on the Isthmus, is a serious error. Over eighty per cent of the employes of the Canal will be aliens. A majority of the other twenty per cent employed will be in a clerical or supervisory capacity. The application of these laws on the Isthmus will benefit a very small number of American laborers, but will enormously add to the cost of construction, and American labor at home will have to pay its share of the consequent increase in taxation."

The total area of the Federal forest reserves at the present time, exclusive of Alaska and Porto Rico, is about ninety-one million acres. These reserves, ninety-two in number, are situated in the West, in Arizona, California, Colorado, Idaho, Montana, Nebraska, New Mexico, Oklahoma, Oregon, South Dakota, Utah, Washington, and Wyoming. Strong influences are now at work to create a reservation in New England, in the White Mountains, an area of about eight hundred thousand acres, and another in the Appalachian Mountains. Both for sentimental and economic reasons these proposed reservations are receiving strong backing from various organizations, industrial and otherwise, and favorable action by Congress is anticipated.

There seems to be ground for thinking that the Board of Consulting Engineers of the Panama Canal will recommend a sea-level Canal. The five foreign members of the Board seem inclined to lay little stress upon the extra time and cost involved, when compared with the consequent advantages. Three of the seven American members have already gone on record as favoring the sea-level project. The cost of construction along those lines would be, according to estimates, $230,000,000.

A cablegram received from Governor Magoon at Panama last week stated that Secretary Taft, after a personal inspection of the Canal work expressed his gratification at the progress made and at the present condition.

Foreign.

The misunderstanding between Venezuela and France has been so far adjusted through the good offices of the American Minister that the French Cable Company will be permitted to transmit cables from Caracas and coast offices if the Company will undertake to make a satisfactory arrangement with the Venezuelan Government within eight weeks, but failing to do so, the Government will proceed with the execution of the mandate closing the offices of the Company.

Practically all the Powers have now accepted the invitation of Emperor Nicholas to be represented at the second Peace Conference, and the programme which Russia will submit for the consideration of the delegates at The Hague is being elaborated at the Foreign Office. The date of the conference has been tentatively fixed for May next.

The diplomatic representative of the South American Republics to the United States will decide on December 7 which country will be designated as the meeting-place of the next Pan-American Congress, which is to assemble in 1907. It is likely that Venezuela will be chosen and that Caracas will be the convention city.

Arrangements are already well under way, under concessions granted by the Mexican Government, for the early entrance of the United States Packing Company into that branch of commercial activity in Mexico. Packing plants and cold storage warehouses are now in process of construction.

Industrial and Commercial.

King Leopold of Belgium strongly urges the project of making Antwerp one of the greatest ports of the world. In 1865 there cleared from the port of Antwerp 3,010 vessels, the total tonnage being 776,343 tons, but in 1904 5,841 vessels cleared, with a total tonnage of 9,340,669 tons. During the past year thirty steamship lines could not find accommodations in the port. With the view of enlarging the port the Government has elaborated a comprehensive plan. First, a new bed will be dredged for the Scheldt for a distance of four miles; ten new basins have been planned, which will be sixty-five hundred feet long and nine hundred feet wide; a new city has been laid out which is in front of the old Antwerp and which extends along the new docks. The new basins will give one hundred thousand feet of basin wharfage, while the new Scheldt bed will give thirty thousand feet of new deep-water wharfage. The cost of the work is estimated at $37,000,000.

J. H. G. Becker, an American who went to German East Africa two years ago under contract with the German Government to instruct the natives in growing cotton, has returned, and reports that the lands in German East Africa possessions are well adapted to growing cotton. "The short staple cotton like that grown in the United States does not do very well there," he says, "but the Egyptian long staple variety does remarkably well. Last year on the demonstration farms three thousand bales were raised. The colonial department of the Government is under obligations as well as contract to see that all the cotton raised in the possessions is marketed at fair prices, so every person who raises cotton in said possessions is safe in this direction, which means a great deal to the people who raise it."

The St. Mary's ship canals, for the season up to November 1, carried 37,099,030 net tons of freight, a record amount.

The total value of rice of domestic production exported by the United States in the fiscal year 1905 was $5,301,641.

General.

Prince Borghese, the Marquis Ferrarinati, the Duke of Sermoneta, and the other great Roman nobles owning the Pontine Marshes, have, after many years of negotiation, at length concluded a contract with a German syndicate, headed by Baron von Donath, for the draining of the marshes and their conversion into arable land. These marshes, from the earliest times considered pestilential, extend over a distance of thirty miles from near the sea to the Alban hills. The law sanctioning the Baron's project was enacted a number of years ago, but until now the great territoral magnates have stood in the way of the execution of the project, preferring to use the marshes as game preserves. The marshes are to be drained without expense to the State or to the land owners, the syndicate asking only a certain percentage of the land reclaimed. It is said that Julius Caesar had several schemes under consideration for this purpose when laid low by Brutus.

In felling the giant California redwoods for timber, tons upon tons of the foot-thick bark accumulated and often seriously interfered with the removal of the logs. It was allowed to remain on the ground until it rotted or was burned. This waste now, however, is utilized in many articles of service, and among them are pin cushions, pen wipers, table mats, flatiron mats, bathroom non-absorbent mats, fishing floats, temporary corks, life-buoy filling, "cork" jackets, cold-storage insulation, house sheathing, heat insulation (it will burn under great heat, if attacked on both sides, but is about six times more efficient as a heat insulator than woven asbestos), coin mats, moisture-proof match safes, bicycle handles, silk-hat brushes, chair seats, sound-deadening insulation, mattress fillings, cork carpet substitute, and a variety of other uses.

The attempt to acclimate in England the famous blue poppy of Tibet has proved a failure.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

Christian Science Treatment, the Practice of Christianity.

SAMUEL GREENWOOD.

OBJECTIONS have been raised against the practice of Christian Science healing, on the ground that it cannot properly be classed as a religious or Christian practice. Attention has been called to the use by Christian Scientists of the word "treatment" in place of the word "prayer," and it is claimed that this denotes a professional rather than a religious act. The conclusion that Christian Scientists are therefore amenable to the laws regulating the practice of medicine is hasty and unwarranted unless the premises can be sustained by fact. No profession, system, method, or religion can claim proprietary use of common words; neither can medical nor other curative systems claim suzerainty over the healing of the sick. Both common usage and human rights are opposed to all such monopoly.

In defining the practice of the Christian religion the court or the legislature cannot accept or be guided by the tenets or beliefs of any particular denomination or organization. To allow equal rights to all, and permit the freedom of religious conviction so sacredly cherished by our forefathers, and guaranteed by the constitution of nearly every civilized country, the only definition that is broad enough to cover every case is that given by the Founder of Christianity as recorded in the New Testament. To deviate from his standard in judging any particular case would be a serious menace to the integrity of any constitution which aims to safeguard the religious freedom of the citizen. The only limitations which can legitimately be exercised are where the peace, safety, or morality of the community is endangered.

The charges which have been made against Christian Scientists concerning their method of caring for the sick are based on the assumption that healing, legally considered, is not a feature of Christianity. The decisive question, however, regarding these charges, is not what any medical school may believe regarding the treatment of disease, but whether there is anything in Jesus' teachings, or in the history of Christianity, which will sustain Christian Scientists as within their rights, when they treat the sick without drugs or other material agencies. It is noteworthy in this connection that no objections have been urged against the means employed by them in healing the sinful and depraved, although identical with the means employed in healing the diseased. The debauchee, the thief, the vicious, may resort to Christian Science without fear of protest or prosecution, although in greater need of the right remedy than the physical invalid.

Those who have the welfare of mankind uppermost should rejoice at the great good Christian Science has brought to so many thousands of sufferers, instead of prosecuting its adherents because they no longer follow the undemonstrable beliefs of the past. The best defence of Christian Scientists, one which should meet every objection and satisfy every scruple, is the success of their work. But apart from this they have an impregnable defence in the liberty granted to the citizen in the practice of his religion, so long as it does not interfere with the rights of others. If the healing of disease without drugs constituted a feature of original Christianity, it cannot be legally objected to as constituting a feature of Christian Science; for that Christian Science is Christianity is admitted in the high estimate placed upon the character and conduct of its believers, and the reformatory and elevating influence of its teachings. Other denominations surely do not claim to be more Christian nor more religious than Christian Scientists because they do not heal the sick while Christian Scientists do.

Faith in Christ is commended as an excellent thing, and is the main essential of a Christian life. The natural construction placed upon orthodox church teaching is that the more faith one has in Christ the better Christian he is and the nearer he approaches to the life of Jesus. Then wherefore should a Christian be placed under the ban of the law of a Christian country because his faith is such that he relies unreservedly upon Christ for his salvation from sickness as well as sin.

The exception taken to the word "treatment" as used by Christian Scientists is a mere technicality, too trivial to influence decision on a subject so important. A good dictionary and an impartial study of Christian Science would remove this objection, as well as the distinction made between this term and prayer, for it would be seen that the effort of the Christian Scientist to overcome sin is described by the word "treatment" as much as his effort to overcome disease; and this sustains the purely religious significance of the word in Christian Science. However mortals may be prejudiced concerning words, or concerning the new use of old words, it surely can make no difference to God whether the individual refers to the mental process of communing with Him as a "prayer" or a "treatment." The decisive point in the case is not one of phraseology but of fact. Do Christian Scientists pray when they treat, that is, as they understand prayer? If they do, the choice of words to denote this act rightly rests with themselves. Their own testimony should settle this question, for who can better decide than the individual himself how and when he prays? One could as reasonably decide that other Christians do not pray because they do not stand or kneel at their devotions.

The prayer which heals disease and sin is without doubt the best treatment the sick or sinful can receive; but if the word "prayer," as generally used, signifies that man can never get nearer to God on earth than as a suppliant, as one who pleads with the unknown, it might follow that its use could not properly be styled a treatment of the conditions involved. One of the definitions of the word "treat," as given in the Standard Dictionary, is "to handle with a view to a result;" while the word "pray" is given no definition apart from soliciting or beseeching, or other synonymous meanings. Given a higher knowledge of God and of His relation to His offspring, the word prayer must necessarily take on a higher significance. It must be admitted that Jesus had a higher understanding of what constitutes prayer than that which generally obtains to-day among his professed followers, for he could not only say, "I knew that thou hearest me always," but "All things that

Copyright, 1905, by Mary Baker G. Eddy.

Digitized by Google

the Father hath are mine." His prayer at the grave of Lazarus was certainly a most effective treatment. All his prayers were likewise offered "with a view to a result;" that is, to the accomplishment of what was desired. Jesus is the model of the Christian Scientist in his prayers as in everything else. The Scientist's whole religious practice is "with a view to a result," that is, to the working out of his salvation every hour of the day and from every form of evil. The Christian Scientist in his "treatment" does not beseech nor implore the help of an unknown being called God, and then with little or no faith expect little or no result. He does not use formulas, does not essay to mesmerize or will himself or his patients into health; but he does enter into his mental closet, where he can shut out the things of the material world, and there, turning his thoughts to the truth of God's omnipresence and omnipotence, seeking earnestly to realize, as Jesus did, that the will of the Father is ever done in the destruction of all evil, he reverently, intelligently, and confidently applies these basic truths of Christianity to the case before him, whether his own or another's, whether it be sin or disease. He does this between himself and God alone. He does it because he believes it to be his duty as a Christian and as a follower of his Master, and he does it with a view to the same result that Jesus realized and taught his students to expect; that is, the destruction of the evil work. You can call this a "treatment" or you can call it a "prayer," for it is both in one when properly understood. Jesus treated all phases of evil thus with good, because there is no other effective treatment for it.

All forms of evil have their primary or causative existence or action in the human mentality, and therefore call for mental or spiritual rather than material treatment. Jesus treated disease just as spiritually as he did sin, and his treatment was remarkably potent in results. Although he gave a large part of his ministry to the healing of the sick, one would not therefore call him a professional healer in the sense that a physician claims to be. The charge has not been urged against our Saviour nor against his disciples that their treatment of disease was a trespass on the rights of physicians, or of the people, or in opposition to any law that could be justly framed, simply because they did not conform to the material methods of their time. On the contrary, it is generally recognized that the healing practised by the primitive Christians was a feature of their religion and not separate from it. Then for Christian Scientists or other Christians to treat disease to-day as their Master did, that is, so far as they understand his method, is legitimately a religious practice, and cannot otherwise be truly defined.

While the law allows the citizen the right to believe in and practise the Christian religion, and while it accepts the teachings and life of Christ Jesus as the basis of that religion, it cannot justly discriminate against Christian Scientists, because in their understanding the practice of Christianity embraces the overcoming of disease as well as other forms of discord and sin. The case is not altered because they eschew the popular and prevailing modes of treating sickness, unless it can be established that these modes are superior in action and results to that of Jesus and the early Christians. It cannot be a violation of the law of any Christian country for Christians to follow, so far as they are able, in the way their great Teacher pointed out. In sanctioning the Christian religion the law has placed no restrictions upon any denomination as to its interpretation of Jesus' teachings, or as to what it shall believe of them. The New Testament narratives give convincing testimony as to the important place which Christian healing occupied in the establishment of Christianity, as well as to the directions Jesus left for its continuance. If Christian Science practice presented no evidence of genuine healing, or did not compare favorably with the methods in common use, it would stand self-condemned before the world. But the fact that it has been healing the sick for years, that it has healed thousands of cases which other methods could not cure, and that it is doing this work every day, makes it imperative for those who would be just, to cease their condemnation of healing or of Christian Science as practised to-day, and render a decision on the merits of the case.

Before any court or legislature assumes to discriminate against Christian Scientists it should clearly define how much of Jesus' teaching may be lawfully practised and how much of it may not. It should enlighten the citizen beyond a reasonable doubt as to what part of Jesus' example may safely be followed by the Christian to-day, and what part of it the legislature would consider dangerous to the welfare of the individual and the State. In order to do this, it must first sit in judgment on the teachings of the Founder of Christianity, and on his wondrous godlike life and works. Although such a suggestion or possibility may sound irreverent in a Christian age and country, it is not more so than would be a decision against Christian Scientists for healing the sick, which would prohibit them from doing so on the basis of their Christianity and their faith in God. The irreverence of such a position has surely not come to the consciousness of those who seek legislation against the practice of Christian Science, or they would not thus impugn the wisdom of almighty God in choosing as the Saviour of the world one whose precept and example have become so unsafe to follow that human lawmakers must be asked to step in and say, "Thus far and no farther."

Christian Science treatment is the application of Christian truth to human needs; and so is prayer when properly used. Then wherein is the difference in the terms, except as characterizing the degrees of intelligence in which this application is made? The mental process, or act of realizing the good which God has already given to man, is no less a prayer than the daily repetition of asking Him to give what He has thus already given. In the first instance the individual strives to rise to the perception and acceptance of what God, good, is to man; while the second is too often that of a weary belief, too blind to see that the blessing asked for is waiting and has waited long for recognition. Christian Science treatment is the prayer of the Christian Scientist, it is the prayer of the Christian Science church, and in its application it covers all the conditions from which mortals need salvation, and in its intelligent understanding includes all that a Christian can practise. In its detail it is an amplification of the Lord's Prayer as spiritually understood and explained in the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, a book which thoroughly and simply explains Christian Science and its practice, showing them to be wholly Christian and wholly Scriptural.

First Impressions.

E. F. P.

MUCH may be said as to the character of testimonies to be given at our Wednesday evening meetings,—not that any should be barred, but that wisdom should govern their telling: and this in view of the fact that there may be many who are taking their initial steps in Christian Science by attendance at these meetings. First impressions are strong with many people, and those who are yet "babes" may be won or repelled, according to the nature and expression of the testimonies presented. Paul says to the "babes in Christ," "I have fed you with milk, and not with meat." The matchless wisdom thus displayed may, perhaps, apply more particularly to the smaller congregations, where the presence of strangers is quickly noted.

I remember my own first impressions of Christian Science. I was shocked at the idea of any one claiming to

Digitized by Google

heal as Christ Jesus healed, and I so expressed myself. It seemed a sacrilege that I could not consider for a moment. I was not at the time a church-going man, and had not been for many years, yet early orthodox training by excellent parents had left a vivid impression upon me that spiritual healing was confined wholly to the personal ministry of Christ Jesus, hence my startled surprise at the character of the testimonies I heard given. A loving wife held me to the meetings, and I gradually began to realize that these people must have a reason for the faith that was in them, so I started to study into it for myself. I have often thought since how easily I might have been repelled, for the time being, had I early heard extreme statements, as I was not then ready for "strong meat." A parallel case occurs to me, and I will give it, as it helps to emphasize the injunction from Paul.

A business and social friend who knew of my growing interest in this Science and who tacitly disapproved of it, although in his loyal friendship he made no sign, other than quietly turning the subject to avoid discussion, finally asked to attend a service with me, and as Love directed the opportune time, it proved to be the Wednesday evening at Mechanics Hall, immediately following Communion Sunday. He listened intently to several testimonies, with a look of growing astonishment and doubt on his face, and as one "strong meat" testimony of a seemingly incredible character was recounted by a gentleman who announced himself as from California, my friend turned abruptly to me and asked, "Do you expect me to believe that?"

It is generally conceded that among traveling men there is scant courtesy with one another in the matter of argument, and I instantly knew that I had to nail him then and there, or lose him, so without a moment's hesitation I said to him, "There are just two points for your consideration; the first is, that this man is a liar, that he has come clear from California, at an expense of several hundred dollars and several weeks' time, simply to stand up here and tell a deliberate falsehood to an assemblage of several thousand people, most of whom he never saw before and many of whom he never will see again. The second point is, that he really has been healed, and out of sheer gratitude to an omnipotent God, for his physical and moral wholeness, has spent his time and money to come on here and tell it."

Well, he was silenced for a moment; he hesitated, then said, "Of course I can't believe he would come here to lie." "Very well," said I, "now, furthermore, if one is truthful, they are all truthful. Look them over and see if they appear like a lot of romancers or whether they are like a gathering of honest, earnest, intelligent people, who have found the answer to that question which Pilate put to Jesus nineteen hundred years ago,—'What is Truth?' These people think they have found in Christian Science the answer to that question, and it devolves upon you, as a student of men and affairs, to know why they think so. There are thousands of people on this floor from all parts of the world, all animated by the one supreme thought that God is just what the Scriptures declare Him to be, spiritual, eternal, forever expressed, Life, Truth, and Love; that man as His image and likeness is forever spiritual and not material, however much we may think so, and that Jesus was the type of attainable Sonship, not to be found in the unreliable, fleeting, and kaleidoscopic sense of mortal existence or the dream of life in matter; that as we are transformed through spiritual understanding we become like him, materiality drops away because we are putting off the old man,—working out our own salvation and being 'renewed' by the transforming of our minds,—just as the Scriptures declare."

A few weeks passed with no further mention of the meeting between us, when one day he came to me, a new copy of our text-book in hand, with a perfect volley of questions, asking me to explain this and that to him. This onslaught was so impetuous that I laughed aloud with joy, but I answered his questions as best I could, reserving some of them for one to whom we afterwards went and were kindly received, and had our questions splendidly answered. To-day his immediate family are interested in the study with him and attend our church services.

In this instance the first adverse impressions were promptly met, and the listener made to see that a new thought had come into his life, to be followed up and studied into. I realize now that divine healing is wrought by the governing eternal Principle, whether the healing be large or small; that the spiritual understanding of Christ's mission as the Way-shower, effects the healing, either through the tried and found *not* wanting practitioner, or through our own clarified consciousness; but at my first visit I was not yet ready for anything more than small quantities of milk, and even that mortal sense threatened to reject.

Our weekly and monthly literature is invariably full of many excellent things for our earnest consideration, when once we have grasped the hem of the garment,—understanding. The continual study of our text-book, together with the Bible lessons, opens up a subject with a center but no circumference, unfolding a delightful and unending realm of study,—the study of spiritual man and his relation to his creator and the spiritual universe. It seems to me that none of us can be too thankful that we are living in the same day and hour with the Discoverer of Christian Science,—the Leader in this new realm of spiritual knowing.

Fear.

A. R. F.

I will fear no evil: for thou art with me.—PSALMS.

FEW of us yet realize what a glorious state this is—*to fear no evil.* No man, whether he be Christian or atheist, will deny that fear enslaves, and that its conquest gives happiness and freedom. Could we dethrone fear permanently, and place courage in its stead, a great step toward the ideal life would be taken. By "courage" is meant that mental quality in its highest significance, that state of mind which comes with the realization, not of the mortal sense of strength, but of that divine power which is ever near,—"for thou art with me,"—and what degree of mere animal courage can approach that which comes to us with the knowledge that the unlimited source of all power is available to us. Then why should we fear, and what is fear?

In all human experience and in our own individual lives we have often noted that great fears, which bound and gagged our happiness and put us into a state of mental thraldom, were mere hallucinations when we came to look backward upon them. Trouble which in prospect seemed mountain high looked small in retrospect; in fact, often insignificant.

In Christian Science we learn how to gain a sense of security, even when approaching supposedly impending ills. We understand that no harm can assail us while we place our trust in divine Love and wisdom, and how much more smoothly we thus progress. If, when the rapids appear in sight, we entrust our little craft implicitly to the great Pilot, instead of trying by our own strength and skill to avoid the rocks, we shall pass safely through the threatening danger in the current of divine protection, into "the still waters."

GOD grant there be some one in all the earth
Grateful to Him that my feet pressed life's ways.
Else would it prove I had not understood
The tender duties of true brotherhood.
But if so much as one small child give praise,
Then has the earnest effort been of worth.

GERTRUDE RING.

Selected Articles.

A View from the Outside.

Every day in the week the great metropolitan dailies come to the *Star* desk. We read all that the headlines indicate is of vital interest in these messages from the world as it exists outside our little circle. There are no influences in the material world to-day so powerful to allay or excite prejudice as are the press and the pulpit, and yet we find occasionally a great movement, sustained by a vitalizing truth, standing the test of experiment, and proving by its "fruits" that these two dominant forces have no mortgage upon the hearts and consciences of people which intelligence and right reasoning cannot cancel when the day of foreclosure arrives. It is still clear in the memory of the writer when the great Christian church was ridiculed and condemned by people who boasted membership with some old established orthodox denomination. He also remembers how unkind and unjust were the criticisms on homœopathy when its voice was first heard in the land. He has been very much interested in recent years in reading criticisms by pulpit, press, and *materia medica* of the new movement known as Christian Science. But for these criticisms it might have been years before this subject came to his attention. Some time ago an account was given in one of the metropolitan papers of an orthodox minister who preached a lengthy discourse against Christian Science to his audience, which had been growing smaller for several months. One of his members asked him, after the services, if he had ever read the Christian Science text-book, Science and Health, by the Founder of Christian Science, Mrs. Eddy. He answered that he had read and studied it thoroughly, but could not understand it, nor could he understand Christian Science, which the text-book is supposed to teach. The day he preached that sermon there were five large churches in his city filled to overflowing with people who say they understand the text-book and have been healed by Christian Science. At the time he preached the sermon, also, there were a number of good, faithful men and women in his small congregation who were suffering mentally and physically, greatly in need of the healing which unkind criticism and "unrighteous judgment" could never bestow. I am not a Christian Scientist. I have never studied the text-book. I have never met Mrs. Eddy. I do not intend to declare myself in favor of or against the movement she established something like forty years ago, and which is gathering into its ranks the very best and most thoughtful people in this country as well as in Europe, Australia, and other lands; but the criticism of the good minister above mentioned makes me wonder if his people had not been more benefited that Sabbath day had he dwelt at length on the commands of the Saviour, "Go ye into all the world, and preach the gospel" and "heal the sick," instead of criticising a people whose greatest offence was the fact that they were doing what they could to obey these commands.

Suppose a minister should announce from the platform that every man who claims that by an understanding of mathematics he can stand on the bank of a river and measure exactly the distance to the opposite shore without rod or line is a fanatic, a man whose claims are pernicious, and it was afterwards learned that the minister did not know the multiplication table and could not compute the area of a rectangle, what importance would thinking people attach to his statement? Suppose he should say that whoever claims to understand the science of music sufficiently to coax out of the silences a symphony so sweet and beautiful that it has been known to win the love of a savage whose arm was raised to strike a death blow, is deluded and misled, and it was afterward learned that the good minister did not know one note from another, what importance would thinking people attach to his statements? What, in fact, must be the impression created by a statement to the effect that a people who claim to have an understanding of the Bible that heals all manner of disease are demented, impostors, and irresponsible, and it is afterwards learned that the man who makes such statements admits that with his understanding of the Bible he cannot cure a single case of illness, however slight? Is he prepared to criticise a people who do heal the sick and the sinful?

Having read so many unfavorable comments regarding Christian Science, I decided when recently in Chicago to make some investigations in that city, with a view of ascertaining the kind of fruit which this new tree bears. I called at the office of J. E. Fellers, who some years before he went to Chicago was principal of our public schools, and who has a large circle of friends in northeast Missouri. He is not a fanatic. He is a thoughtful, successful business man, and he is a Christian Scientist. He does not intrude the subject upon you, but when you ask him how he came to accept the teachings of this new religion, he stops his work and answers your question. I expressed a desire to see the new Fifth Church. It was Wednesday. He closed his desk, telephoned to the Reader of the church asking permission to go through the edifice, and went with me. We were gone several hours, for we also visited First Church. I shall not soon forget the impression these buildings created upon me that day, and I was glad of the opportunity to attend one of the testimony meetings that night. There were fourteen hundred people present. The reading from the Bible and Science and Health, the congregational singing, the soulful, splendid organ, and the silent prayer search the heart for the truest and best, and certainly these people respond to the service, for I have never before seen so large an audience in which all seemed happy and well. I was told that nearly every person in the audience had been healed of some mental or physical disability, the only exceptions, perhaps, being those who, like myself, had gone there through curiosity or to investigate. I saw more men there than women, I think, which is not usually the case with orthodox congregations, and they were high grade, intelligent men, who hold good positions in business circles, many being at the head of the city's largest industries.

There is one thing that is noticeable among Christian Scientists which is greatly to be admired. However bitter and uncompromising may be the criticisms passed on Christian Science, they never reply except in a kindly, temperate, and tolerant manner. They cannot be disconcerted. They appear to have that fixity of purpose which a deep-seated conviction always bestows. They are uniformly cheerful; they are generous; they are healthy and happy. They are so prosperous as often to provoke the criticism that none but the rich can get into the ranks. This is as widely removed from the fact as the Christian Science teachings are separated from the theory that God is the author of sin, sickness, and death. The poor are there; but not having any expenses for physicians and medicine now, they dress better and live better than formerly. They mingle with the rich and each is happy in the company of the other. Money is not the measure of a Christian Scientist, or of his influence in a Christian Science church. "How closely are you living to the Bible, and are you demonstrating its teaching?" "How thoroughly do you understand Jesus as the true Way-shower?" "Do you understand that man is saved through Christ, and are you striving each day to overcome sin?" Whoever gives and lives the best answer to these questions is considered a good Christian Scientist, and no one asks whether that person is rich or poor. Whatever the Christian Science movement may eventually accomplish I do not pretend to say, but I can find no fault with a system of religion which enthrones God as the author of all good and the healer of sickness as well as sin, and which makes hopeless invalids happy and well.

Among the Churches.

Oswego, N. Y.

To-morrow [October 8] First Church of Christ, Scientist, will occupy its new home, the Pettibone house in West Second, between Oneida and Mohawk Streets. The house has been leased for a series of years by the society. There are now about seventy-five worshipers every Sunday.

Oswego (N. Y.) *Daily Palladium.*

Laying of Corner-stone in Joplin, Mo.

The corner-stone of First Church of Christ, Scientist, which is in course of construction at the corner of Sixteenth and Wall Streets, was laid Tuesday evening at five o'clock.

The ceremony was simple, but beautiful and impressive. There was no one present other than the official board of directors.—*Joplin News Herald.*

Union of Churches in Atlanta, Ga.

As the result of an exchange of kindly communications between First and Second Churches of Christ, Scientist, Second Church was dissolved October 9 and its members have united with First Church. An era of increasing growth and usefulness is anticipated and will surely be realized.—*Correspondence.*

Church Organized in Ashland, Ore.

Christian Science has made rapid strides among the people of Ashland and the organization of First Church of Christ, Scientist, which was perfected September 11, is the crowning event and marks a new epoch in the life of this organization.

The church was organized with twenty members, all of whom are ardent and loyal to their belief. If it were possible to include in the charter membership all who have accepted this faith in Ashland, the membership would number more than fifty, but many have moved away and consequently the charter membership cannot be regarded as an index of the work which has been accomplished.

Ashland Times.

Growth in Salem, Mass.

The advance of Christian Science has been very marked here of late, and there is a steady increase in the attendance at all our services. At our last annual meeting in January, 1905, it was voted to contribute our own church building fund to the Building Fund of The Mother Church.

It has been our custom to take up a collection each quarter for our church fund, and on June 8 it was voted to send this quarterly collection and also the regular collection for that Sunday to The Mother Church, and to continue this collection each quarter until the needs of The Mother Church are fully met. The first collection was taken July 2, and amounted to one hundred and sixty-one dollars, which was forwarded to Mr. Chase. The Sunday School has also contributed liberally from its fund. The outlook for the spread of Christian Science in Salem is very encouraging, and we are expecting great things of the future.

WILLIAM C. KEITH, *Clerk.*

Ascension toward the unreached—an ultimate companionship with what at present transcends observation and overtops thought—is man's instinctive impulse and hope. Whatever denies that, or lures or drives from it the thought of the world, will lower the heights of human aspiration and throw discredit on a spiritual instinct than which none nobler has been shown.—RICHARD S. STORRS.

The Lectures.

Albert Lea, Minn.

That faith which would banish from human experience all thought of sin, sickness, death, and affliction, and raise the great family of men from the slough of a gross materialism to the actual heaven of happiness and content—such a faith is certainly calculated to appeal to the finer sensibilities of man; and such a faith it was that found an eloquent exponent in the person of Bicknell Young, as he presented its beauties at the Broadway Theatre last Sunday afternoon [September 24]. The gathering was only fair sized, but every auditor who heard the tenets of the Christian Scientist's faith so ably and logically set forth, learned much to add comfort and cheer to his doubting heart.—*The Enterprise.*

Ashland, Ore.

Sunday afternoon [September 24] at the Opera House a large and representative audience greeted Miss Mary Brookins of Minneapolis, who lectured on Christian Science. The lecturer was introduced by Hon. E. V. Carter, who said in part,—

Whether we accept the doctrines as taught by the Christian Scientist or not, we can but commend the means and methods they employ to attract our interest and attention. "With malice toward none and charity for all," and this to all denominations as well as individuals, they only ask that they be given a respectful hearing and that the evidence they submit and the arguments they advance be given our earnest, honest, unprejudiced analysis. As men and women seeking for the truth in all things we ought to welcome the opportunity given us to-day of hearing the doctrines of the Christian Scientists explained by one authorized to speak in their behalf.—*Ashland Tribune.*

Syracuse, N. Y.

Edward A. Kimball of Chicago addressed a large audience Sunday afternoon [October 8], in the Wieting Opera House, on Christian Science. Charles I. Ohrenstein, First Reader of First Church of Christ, Scientist, in this city, introduced him, saying in part,—

The greater part of the large following which Christian Science has, is made up of those who have been healed by its holy ministry from physical diseases and disabilities, which other curative methods had failed to heal; of those who have been reclaimed by its spiritual ideal from lives of sin, from depraved habits and appetites, from poverty and degradation from which other reformatory and religious methods had failed to reclaim them, and of those who have been comforted by its Gospel—or good news—in the time of grief and sorrow when their former beliefs or philosophies had failed to comfort them. It is not to be wondered at, then, that Christian Science is very dear to these people, —that it is their pearl of great price. While they do not wish to urge or force its acceptance upon you or any one, it is but natural that they should wish to have it better understood, better appreciated, and more kindly thought of. It is for this purpose that these lectures are given from time to time.—*Correspondence.*

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

An Unsupported Position.

THE following extract from a sermon recently preached in Brooklyn, "The City of Churches," from the text, "Then Peter said, Silver and gold have I none; but such as I have give I thee: In the name of Jesus Christ of Nazareth rise up and walk," is an example of the arguments which have been used to justify the non-healing nature of modern religion, but we think it will not bring to many a conviction that the healing which Jesus performed is duplicated in the work of the physicians of to-day, or that the Master's command to heal the sick is fulfilled in the building of hospitals.

The minister is reported to have said,—

"Our text introduces us to a lame man who lay day by day at the gate of the temple in Jerusalem, begging for sufficient money to keep him in life. This is a very common scene in the New Testament, where we are constantly meeting the lame, the halt, the blind, and the lepers, and there is no wonder, for we must bear in mind those were the days when there were no hospitals, no scientific medical schools, no homes for incurables, nor any societies of aid. Since that day Christianity, without boastfulness, has had a magnificent share in the creation of those centers of relief. We see no such spectacle on our streets as did the Syrian of old upon his. Our Christian sentiment and Christian love have provided the hospital, and our lame men are sent there. And not only the hospital, but we have to-day enlightened scientific effort, societies of charity and helpfulness on all hands; and because the modern method of dealing with sickness is not the same as that of the apostles, never think that it is not Christian, for the same Christian spirit plays about the treatment of physical ills to-day. We have to be delivered, it seems to me, from the idea that God is only in the extraordinary; that He is only in the large. It seems to be hard upon our reason to comprehend. God is as much in the ordinary as in the miracle. It is the same God, and God is as much in the hospital, in His spirit, and in the modern methods of curing sickness. God is there just as truly as He was in the days of old. So Christianity has in a large measure solved the question of the physically lame man."

The healing work of the disciples after the departure of their Master was of the same kind as that which he had done, and it was the result of the prayers of understanding which he taught them.

The healing work of to-day must be the same as that of Jesus and the apostles if it is to be classed as Christian. To say that the methods of the hospitals and of the "enlightened scientific effort" of modern times is this work, is to utterly ignore the fact that the physicians who employ medicine and surgery do not themselves claim anything of the kind, and the further fact that spiritual enlightenment and moral reformation do not follow the use of these material means.

ARCHIBALD MCLELLAN.

"That they all may be one."

IT was in the twilight of his earthly ministry, when, as John tells us, Jesus knew his hour was now come, that he drew his nearest followers close about him in an upper room, for a last heart-to-heart talk with them. In the simple but sublime appeal to God and man which closed his loving counsels, he seemed to anticipate the distractions and divisions which so soon appeared among them, and which have dishonored all subsequent Christian history, and in the earnestness of his great heart he prayed for their unity in love, that they might be one even as he and the Father were one. That this solicitous hope embraced the Christian believers of every age is apparent, for he said, "Neither pray I for these alone, but for them also which shall believe on me through their word," and therefore his appeal rebukes the religious estrangements and separations of the twentieth century no less surely than it did those of the first.

There are many indications that this rebuke is being felt more keenly to-day than in the past. The unseemliness and disadvantage of sectarianism are impressing broad-minded men of all classes, and especially business men, who have learned full well that success imperatively demands centralization, and who are prepared to estimate rightly the seriousness of what has been termed "the waste of church rivalry and competition." Yet more significant, however, is the protest of the native Christians in mission fields, who have long since discovered that, with the gospel of Christ, missionaries have brought them a lot of conflicting and confusing opinions about that gospel, and they are insisting that the denominational differences and disagreements which have so greatly impeded the advance of Christianity elsewhere shall not be perpetuated in their midst. In Japan this insistence has expressed itself in a firm demand for a United Church of Christ which shall embody all Christian believers; and having taken hold of the situation with the vigor and self-sufficiency which has characterized their conduct of other affairs, matters are rapidly moving toward a consummation which will convey a merited rebuke to the Christian people of the West, whatever it may ultimately signify to the advancement of Christianity in the East.

As a result of all these influences an unusual degree of interdenominational comity is being manifested, and progress is being reported throughout the Christian world in the line of federation for service, and the removal by concession and pre-arrangement of the many troubles which have grown out of territorial interference. While all this gives occasion for rejoicing, it also stimulates thoughtfulness respecting a question of supreme importance; namely, what shall constitute the basis of a vital and permanent union of Christian believers? Shall it be a spirit of comity,—a liberality of thought which consents to a brother's entertainment of whatever beliefs he may, so long as he is correspondingly tolerant and good natured; or is it to be found in a strenuous and persistent effort to remand unessentials to the background, to ignore differences and emphasize the common factors of denominational beliefs?

To Christian Scientists it is apparent that while these things may do much to make co-operation possible, unity must find its permanent resting-place and support on the bed-rock of demonstrable truth. Jesus' prayer for his disciples contemplated a unity like that between him and God, a unity in understanding and love, the oneness to which Paul referred in his letter to the Ephesians, and which he describes as that of "faith and of the knowledge of the Son of God." In harmony with this Christ-thought, Christian Science teaches that "Having one God, one Mind, establishes the brotherhood of man, and fulfils the divine laws: 'Thou shalt have no other gods before me,' and 'Love thy neighbor as thyself.' When these divine commands are understood, they unfold the foundation of brotherhood, wherein one mind is not at war with another, but all have one Spirit" (Science and Health, p. 276).

If God is one, then there is one Truth, which is ever true, and true for all alike. Therefore, to know God is to understand Truth and its manifestations, and since there can be no conflict in Truth, there can be none among Truth-

Digitized by Google

knowers,—those who are governed by Truth. With logical and convincing clearness Christian Science teaches that this Truth-knowing, or "faith," is the only possible basis of Christian unity; it insists that all truth is demonstrable by those who have attained to an adequate understanding, and hence that right apprehension is capable of proof, in keeping with the words and works of Jesus. The truth that makes free is the truth that heals, and the truth that heals dispels in its healing the ignorance and prejudice which have begotten doubt and division. It is by doing the works of the Master, in verification of our understanding of his teaching, that the beginnings of the bane of human conflict are to be removed, and his prayer, "That they all may be one," is to be answered. JOHN B. WILLIS.

Health Scientifically Sought.

A RECENT theory respecting disease, which has found utterance by no less an authority than Sir Frederick Treves, is to the effect that "the motive of disease is benevolent and protective," and that if it were not for disease "the human race would be extinct." In his address before the Philosophical Society, in Edinburgh, he elaborated the foregoing statements, and referred, by way of illustration, to different forms of disease, including coughs and colds, which, he maintained, "were in the main manifestations of a cure." This theory is by no means new; it comes up from time to time, but never to remain, nor even to meet with temporary acceptance, so far as its practical application is concerned. It is all very well to tell sufferers that a cough and the usually attendant fever have come for the benevolent purpose of driving out a cold; it is too evident that they are worse than the cold, and the question is, What is to drive them out?

It often happens that conscientious physicians, who have come to doubt the efficacy of drugs, advise their patients to abandon their use and rely upon "nature" for their healing; but this is like telling a frightened child to go out into the dark in quest of needed help. The patient may well ask how nature can restore the health it did not preserve. Such advice practically takes away the lame man's accustomed crutch, and suggests his seeking help from an unknown source.

We learn in Christian Science that it is not possible for mortals to have continued health and strength while they are ignorant of God as Life,—the only source of health and strength. The fundamental error of belief in a life separate from God, and the belief that health is dependent upon material conditions, must inevitably lead to mental and physical discord,—to dis-ease. It may be asked whether the ill-condition is worse than that which preceded it, when the human mind and body were at ease in error. To this Christian Science answers, "The pains of sense are salutary, if they wrench away false pleasurable beliefs, and transplant the affections from sense to Soul" (Science and Health, p. 265, l. 31).

Never for a moment does this Science intimate that disease is its own remedy; on the contrary, it teaches that the only remedy for error is Truth, which does not leave us at ease in error, but by a scientific process drives out all error, both mental and physical, when we seek its omnipotent aid. Those who seek and find healing in Christian Science are not sent out into the darkness for help, nor asked to rely upon an unknown or unknowable power. They learn that it is God, divine intelligence, who heals all disease and sin, and that it is the *knowing* of God as Life and Truth which sets them free. Many who are thus healed express thankfulness even for the dis-ease of the mortal mind and body which impelled them to seek and find freedom and peace in Truth.

A patient who had failed to gain relief for physical suffering by material means, and who then sought help in Christian Science, was counseled to watch his thoughts in order to keep evil therefrom. The result was that he said his thoughts were more fearful and wicked than ever before. He was then led to see that he had become conscious of the tremendous demand for righteousness which accompanies the healing in Christian Science, and that he was no longer at ease while indulging in evil thoughts. Thus are many made to cry out, as did St. Paul, "O wretched man that I am! who shall deliver me from the body of this death?" and, as in his case, the healing and the purification alike come from Christ, Truth. In this healing process it is no blind or destructive force which is at work, as where one evil succeeds another, but it is the power of divine Mind—Life, Love—which is removing all the dross of mortal belief, that the pure gold alone may remain and bear the impress of the Father's image and likeness. ANNIE M. KNOTT.

Letters to our Leader.

Kansas City, Mo., October 16, 1905.

To Mary Baker Eddy.

Our Dear Leader:—The students of General Erastus N. Bates of Kansas City, Mo., have this day sent to the Building Fund of The Mother Church at Boston, Mass., the sum of two hundred dollars as a testimony of love to this great truth and also to one whose every thought and deed was loyal to the Cause he loved. We are all members of First Church of Christ, Scientist, Kansas City, Mo., and have been sending our contributions through that channel to the Building Fund. This simple act of justice presented itself; letters were sent out to the students (sixteen in number), the response was loving and a great wish expressed to be more united, to be of one mind, to feel more love for one and all. If this demonstration brings one drop of joy to you, our beloved Leader, we will feel happy indeed.

Your loving students,
MARGARET S. HOWLETT,
SARAH E. ROTH,
ANNA EDWARDS.

MRS. EDDY'S REPLY.

Beloved Students:—I seal your desire with great gratitude. Your tribute to the memory of my departed and *beloved* student, General Erastus N. Bates—one of God's own noblemen—brings a flood of joy to me. M. B. G. EDDY.

Toledo, O., October 1, 1905.

Rev. Mary Baker Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—It is with hearts full of love and gratitude to you for the beautiful Christ-teaching you have given us, and our love for the church you have established, that we tell you of this beautiful demonstration of love that has come to us; and desire you to share with us the joy and harmony of this hour.

When we began our church services, sixteen years ago, we purchased a hundred dollar organ. When we dedicated our beautiful stone church edifice on Easter, 1901, we still used the same organ. In the early part of 1903 we considered the question of starting an organ fund, but decided to give all to the dear Mother Church, and made a pledge of fifty dollars a month so long as it was needed. A year passed by when we discovered that our pledge was falling short; then we began to work on the promises of the Bible and Science and Health, "No good thing will he withhold from them that walk uprightly," and "Giving does not impoverish us in the service of our Maker." After careful work for several months, the church decided to increase the pledge to The Mother Church to one hundred dollars, to redecorate the walls and clean the carpets which we had used for six years, and also make pledges for a new organ.

Digitized by Google

To show that this thought of activity in our own church work did not limit our pledge to The Mother Church,—the first six months of this year we sent twelve hundred dollars to The Mother Church (four times our first pledge); we have made our own auditorium sweet and refreshing, and have our beautiful organ filling the place with harmonious notes of praise and thanksgiving for the blessing bestowed upon us.

At the recital just given, the organists and singers from the churches of the different denominations in the city were present; and all, with reverence, united in singing at the close, "Shepherd, show me how to go,"—your dear appeal to each weary one for courage and strength to go higher. May not this be a harbinger of the near approach of the gospel teaching, "One Lord, one faith, one baptism"?

Words are meager to express our deep love and gratitude for God's goodness, and your tender, self-sacrificing love to show us how to go "O'er the hillside steep."

Lovingly and gratefully,
SARAH J. CLARK, *Chairman of the Joint Boards.*
MARK KUEHN, *Secretary of Joint Boards.*
JOSEPHINE FISH, *Clerk.*

MRS. EDDY'S REPLY.

"Not by might, nor by power, but by my spirit, saith the Lord of hosts." MARY B. G. EDDY.

Stamford, Conn., October 2, 1905.

Rev. Mary Baker G. Eddy.

Beloved Leader:—With glad and loving hearts, we this day send to Mr. Chase for The Mother Church Building Fund, one hundred dollars and eighty-three cents, our "mite," which constitutes our building fund. In July we sent to Mr. Chase for the same purpose one Sunday's collection, amounting to one hundred and eighty-two dollars, to which the Sunday School children added eighteen dollars—every cent in their treasury—thus making two hundred dollars in all. When the superintendent asked the little children how much money they were willing to send, they quickly replied, "All of it." As a branch cannot bear fruit of itself, except it abide in the vine, we are grateful for the interest of our Society in the building of The Mother Church, not unmindful of the greater understanding we are gaining through this experience.

Recognizing the great benefits which have come to us through your discovery and your life of consecration, we extend to you our heartfelt gratitude, and pray that we may prove worthy followers of your teachings.

Lovingly yours,
AUGUSTA SARTOR, *Clerk.*

MRS. EDDY'S REPLY.

"Thou hast been faithful over a few things, I will make thee ruler over many things: enter thou into the joy of thy lord." M. B. G. EDDY.

Boston, Mass., September 22, 1905.

Rev. Mary Baker Eddy.

Beloved Leader:—Last Sunday I had the privilege of hearing your beautiful words, "Christ my Refuge," sung in The Mother Church. Mrs. Hunt, our soloist, sang beautifully, and says she loves to sing Mr. Johnson's music. The music expresses the thought in your wonderful poem in a marvelous way, and I am grateful to you for giving us the privilege of hearing your words in song. How thoughtful of you to give us the new music for our Hymnal, "Feed my sheep" and "Christ my Refuge," which we so love to sing; and surely all will enjoy the music Mr. Johnson has written for your words, as it is so beautiful and easy to sing.

With never-ceasing gratitude for all the blessings I have received through your unceasing prayers, I am striving to be worthy to be called

Your student,
MARY E. EATON.

Testimonies of Healing.

My recent healing makes an acknowledgment of the same a duty and a pleasure. Through this wondrous truth my life has been given new pinions, my physical diseases have been healed; and by my recent demonstrations, in taking up my work, which I had supposed must be permanently laid aside, I know that whatever I have of dominion or freedom I owe to this Science of Christianity.

For six years I had been in bondage to what different specialists called spasmodic, refractory, and weak muscles of the eyes, and for which at last, after some experiment with other methods, an operation was declared to be necessary which involved much expense and much uncertainty. I could not read a half dozen lines without losing control of my nerves. I was miserably pondering over this problem, in fact I had done little else for several years, when, while accompanying a friend on a business trip in the country, I happened to meet a lady with whom I talked for a short time. I explained to her why it was frequently necessary for me to close my eyes, not wishing her to think I was wearied by the conversation. Our talk drifted to the subject of afflicted humanity, and she spoke to me of Christian Science. This lady strongly advised me to see a Christian Science practitioner, who, she said, would be glad to talk with me about my case. I procured a copy of the text-book, "Science and Health with Key to the Scriptures," from our library, but could not read it. A few days from that time I called upon the practitioner and enumerated my ills. She told me the surprising news that God is really All and that there is no other power. That God is All in all I had always been taught, but never before did I think that evil is left out entirely. Passages from the Bible and Science and Health were brought to bear upon the subject with such force and consistency that this religion seemed indeed beautiful to me. I went home with the words "God is All in all" ringing in my ears, and I wished it could be true. Household duties took my attention for several days and then I thought I would try to read, and when I thought to stop I had read a page. My eyes had not yet ached and I was in control of my nerves; so I continued and finished several pages. The next day, to my surprise, I found I could read just as well, so I decided to try without glasses. That did not stop my reading at all, so I went on and on, and in less than four days I dispensed with my glasses. I soon found that my eyes were well, and my work could be easily taken up again. The only difficulty I had after my first visit to the practitioner was a fear that the trouble might return. The falsity of mortal mind was, however, proven, for with the sudden restoration of good eyesight I was enabled to use my eyes almost constantly,—something I had not been able to do for years.

Subsequent treatment has proven to me in other ways that God, good, is my Life, and at the fount of understanding we may drink freely. It is difficult to express the gratitude that fills my heart. I can only say that I have found in Christian Science a wellspring of Life and Truth.

MISS AGNES DEWITT, Almond, N. Y.

It is almost a year since Christian Science came to me, and I have been helped so much, and in so many ways, that I feel I must express at least something of my gratitude by a public acknowledgment of what Christian Science can do for one who seemed to be almost helpless. The Sunday before Easter, 1904, I had a fall which appeared to be the last straw, as it injured a limb on which I had had several operations performed, which would seem to help for a short time, but never permanently. After the fall, I was told by my doctor that it would probably be a great many months before I could walk even as well as I did before; that a bad sprain was hard to heal in a knee which was perfectly sound, and that it would be worse where the knee had been stiff for almost twenty years.

Digitized by Google

About this time a lady, whom I did not know to be a Christian Scientist, came to our house, and I asked her if she could heal me. Her reply was that she could not, but that God could. She then explained what Christian Science teaches. In a little less than five weeks' treatment I could walk very comfortably with a cane, and in less than two months could walk as much as I pleased and could bend the knee almost as well as I could the other one. At the same time an old weakness of the eyes disappeared, so that I have not had to wear glasses since. To say that I am grateful for these blessings, and for the better understanding of the Bible which has come to me through the study of Science and Health, is not saying half that I feel. I know that the only way in which I can ever thank our dear Leader for giving us this glorious truth, is by living a pure and Christlike life.—IDA HIMMELREICH, Waukegan, Ill.

In April, 1902, I was healed in five Christian Science treatments of what had been variously diagnosed as chronic peritonitis, appendicitis, and enteritis, according to the locality of the physician, not of the disease, so far as I could judge. For nine years I was under the most rigid diet; at one time subsisting for thirteen months on nothing but sterilized milk, living in every way a most restricted and careful life, yet subject to these severe attacks, and in such fear of them that I never went so far as across the street without opium or morphine and a hypodermic needle. For nineteen weeks I was in a rest-cure, preparatory to two major operations, which were performed at the end of that time, one of these being for the removal of the appendix, yet the attacks continued with the greatest regularity. Since receiving the help of Christian Science I have not experienced any of this trouble, have not dieted in the smallest degree, nor taken drugs.

I had been injured in a runaway and was bandaged for months, later wearing a jacket especially made for the purpose. Without actual treatment, I have been healed by Christian Science of this trouble as well as of insomnia, after months, reaching into years, of inability to sleep without chloral or some other stupefying drug. I think still, with the deepest gratitude, of the gentleness and the patience shown me during these years by my physicians, and of the loving care given me by my dear nurse through months of suffering,—but I was not cured, and added to the sufferings of the body were those of the mind; rebellious thoughts kept coming in when I saw so much in life to enjoy and was unable to appropriate it. In disappointment at the futile efforts of *materia medica* to make me well; discouragement at the failures of both will-power and stimulants to overcome that horrible fatigue, due not to exertion but to weakness and disease; and useless attempts to be resigned and uncomplaining, that I might not become unbearable to those around me,—from all these things divine Love has saved me.

It is with deepest reverence that I think of her whose loving example and wonderful teaching could make such changes possible, and I thank God for bringing my life in touch with Christian Science.

HELEN ALICE SCHEFFER, Sands Point, L. I., N. Y.

I have long felt it to be a duty I owe to God, to Mrs. Eddy, and to my fellow-men, to add my grateful testimony, to what Christian Science has done for us as a family. Four years ago last October, a friend, whose home is in New York State and who knew nothing of Christian Science previous to this time, came to visit me. She was taken with chills, which developed rapidly into inflammatory rheumatism of such a severe type that the physician who had treated her for several days said that her case was an extreme one, and that it would be weeks, perhaps months, before she recovered. At this time she was suffering greatly, and in her extremity she remembered that on the evening of her arrival my husband had spoken of meeting a friend who had told him of his wonderful healing through Christian Science. He said he had not walked for over two years, and finding no relief from *materia medica*, he was persuaded by a friend to try Christian Science, which he did, and was quickly healed of this and many other troubles.

With my friend this was "God's opportunity," and it so impressed her, that after the doctor's verdict of trained nurse and hospital, despite my efforts to persuade her that she was too ill to be experimenting with something she knew nothing about, she insisted on my seeing the practitioner who had healed this man. I did so, and she came immediately. After putting away all medicines for internal and external application, and removing all the bandages, at the request of the practitioner I got my friend a nice substantial tea, which she ate without any ill results. All this I did in fear and trembling, not knowing anything of Christian Science myself, and not daring to think what the consequence might be. Finding, however, that she was much better next morning, I felt encouraged, and at the practitioner's request we went that day on our wheels to her home, which was four or five blocks distant. Every day after this my friend was able to be out, and in about two weeks was perfectly well.

The first evening she brought Science and Health to our home. I asked her if she would like to have me read to her, and I began at the Preface. I have often felt since, that a new sense of life came to me with the reading of the first sentence. It certainly came as the first faint ray of dawning day to my consciousness, so faint that, as I remember it now, all the realization I had was a feeling of joy and gladness that I had read it, and a desire to read this book at every available opportunity. It has been my daily companion ever since, and through its teaching I have found a greater realization of health, happiness, freedom from anxiety, deliverance from a great sense of fear; also an understanding of Principle as the only governing power, which will solve all the problems that daily and hourly confront us. My husband, who was a constant sufferer from sick-headaches, is entirely free from them now. One of our children, who from infancy was subject to from one to three attacks of bronchitis every winter, has not had an attack since Science and Health has been studied in the home.

For the physical blessings of health and healing I am truly grateful, but I feel that only in a true life can I express my gratitude for the spiritual illumination which has come to me through this wonderful revelation of Truth, and my heart goes out in gratitude to God, and to our dear Leader, Mrs. Eddy, through whom I have been so greatly blessed. It is my desire to follow to a higher sense of Life and Love, until that first faint ray shall develop into the noonday of spiritual understanding.

I would like to add a word of loving gratitude to our Publishing Society, and to all who contribute to our periodicals, for the spiritual food which they send out to us in such richness and variety to meet the varied needs of humanity.

MRS. AMELIA KENNEDY, Ottawa, Ont.

For many years prior to my coming to Chicago in 1901, I had been trying to find pleasure and happiness in the flesh. I was given to the liquor habit, sometimes drinking to excess, was also a heavy smoker, although I saw that the life I was living would eventually lead me into total darkness, but I did not know what would take the place of these indulgences, or what I could do to overcome the habits. I left New York City and came to Chicago with the thought that if I were surrounded by new environment I could begin life anew. On arriving in Chicago I found that the old friends with whom I was to live were Christian Scientists, and I attended the meeting with them on the first Wednesday evening that I was in town. I was at once impressed with the truth I heard, and I have relied on

Digitized by Google

Christian Science ever since, with the result that it has destroyed all my false appetites and given me a peace I never knew before. The overcoming of the tobacco habit was a great proof to me of the power of Truth, for I had smoked almost continually and it was always in my thought. I continued to smoke for almost two years after becoming interested in this Science, but the appetite left me a year ago, and I have never wanted tobacco since. Many things come up for me to meet, but all error is quickly overcome when the truth is properly applied. I know that this truth does heal and overcomes all sin, and I am very grateful to our Leader, Mrs. Eddy, for her writings, which open the Scripture to our understanding and show us the way.

FRANK ACKLEY, Chicago, Ill.

No one has more reason to be grateful for Christian Science than have I. From earliest childhood I was considered an invalid, never being well more than a few days at a time. I suffered from almost every ill that flesh is heir to. One trouble, which caused me the most intense suffering, was with my eyes,—an ailment I was supposed to have been born with. As I grew older it became so aggravated that I was obliged to spend most of my time seeking relief, —the best physicians and oculists in Chicago being consulted. Nothing, however, proved of any avail. I suffered from pain in my head and eyes for fifteen years; this being only one of the many troubles with which I was bound. It was not until I had exhausted every known remedy, travel included, that I turned to Christian Science, and was healed in a few treatments. This was nine years ago.

My father is one of the oldest Baptist clergymen in Chicago. I was not, however, satisfied with the explanation he gave me of God, man, and the universe. I knew, after the first talk I had with the Christian Scientist who had been called in to treat me, that Christian Science is the truth for which I had been longing. It has not only healed my physical ills, and is still healing me of sin, but best of all it shows me how to reach out and help others.

Deeds more than words will have to express my gratitude to God, and to Mrs. Eddy for this wonderful revelation. The literature of the Christian Science Publishing Society has been such a source of help to me that I feel impelled to send this short testimony.

BERTHA J. QUINLAN, St. Louis, Mo.

I desire to express my deep gratitude for the many blessings I have received in Christian Science. I came to this Science for the physical healing, and God was indeed bountiful in giving me so much more than I had asked for. For five years I had been a sufferer from nervous dyspepsia and chronic constipation. I had been under *materia medica* four years, and osteopathy for nine months, with only temporary relief. Finally my stomach trouble grew worse, to such an extent I could not take any kind of food that I did not suffer afterwards. I had had constipation all my life, but in the last few years the physician pronounced the lower bowel paralyzed, and this seemed to cause great suffering at times. He told me that he could only give me relief, and that I might get better as I grew older. I knew not which way to turn for help, when one day I met an old acquaintance, and she looked so well and happy that I remarked upon it: then she went on to tell me that she had become a Christian Scientist, and she related her wonderful healing. It impressed me so, I felt at once that Christian Science could help me also, and inside of two hours I was in the presence of a practitioner, taking my first treatment. In six weeks I was healed of extreme nervousness and all the other troubles. Christian Science has been my only physician for two years and a half, and I am enjoying better health than I ever had in my life.

For all these blessings I am indeed grateful. I am grateful to Mrs. Eddy for having brought us this blessed truth. I am, above all, grateful to God for healing me.

ALMA HUPP, Kansas City, Mo.

I wish to add my testimony to those of the many thankful ones who have been freed from heavy burdens through Christian Science. I was subject to frequent and very severe colds, but through Christian Science treatment I have been made entirely free from them, and for this I am most truly thankful. I have several times applied for help in other ailments, and have always received it. Our family is the only one in this town, so far as I know, that is interested in Christian Science.

I thank God for this wonderful truth. I am also sincerely grateful to Mrs. Eddy.

MRS. F. H. LOTT, Springville, Pa.

I realize that all should express their thankfulness for blessings received. I was interested in church work for fifteen years prior to 1898, but I became conscious of a lack of practical knowledge of God which would satisfactorily meet our daily needs. Through a spiritual longing to know more of God, I began to read "Science and Health with Key to the Scriptures" by Mrs. Eddy. From the first "it satisfied my longing" and I felt sure that its pages were revealing to me the Truth of being. Before I had finished the reading of the book, I suddenly remembered that my medicine had been totally neglected, and fear seemed to be uppermost at the thought of the suffering which must ensue. Then the thought came, that as no bad results had yet been experienced, why need I fear, if this "little book" gives the right understanding of God? So, leaving all for the truth taught therein, I became conscious that sick-headache, constipation, with its attendant evils, as well as astigmatism, had all fled before the light. Although I am very grateful for the physical healing, which was unlooked for, I am much more grateful for the spiritual healing, and for all this I wish to express love and gratitude to our dear Leader, through whose loving sacrifice the rediscovery of this great healing truth has been made possible to all mankind, making them "every whit whole."—MRS. ELLEN L. COLEMAN, Cotuit, Mass.

I wish to add my testimony as to the healing power of Truth as revealed in Christian Science. I am a carpenter, and was caught on the main shaft of a silk mill in October, 1903. I was drawn between the shaft and a post and was very badly hurt. There was a cut in my side about fourteen inches in length, made by the set screw in the shaft, and the side of my face, my back, and neck were also injured. I could not move my head without taking hold of it and turning it. I was helped into the engine room and sent home in a cab. One of the employes came with me and he thought I ought to have a physician to examine me. Finally, to please him, I told him he could send one, and when the doctor examined me he said there was a ligament of one of my ribs broken and I had better go to bed for a couple of weeks. This I refused to do. He also wanted to prescribe for my nervousness, but I said, No.

I was under Christian Science treatment, and on the seventh day I went down town by trolley car, over two miles, on the eighth day I walked over a mile, and in six weeks' time I was able to go to work. The proprietor of the mill told me that my escape from death was marvelous. I am very thankful for Christian Science.

J. N. CAPWELL, Scranton, Pa.

Digitized by Google

It is now several years since I received my first knowledge of Christian Science through being wonderfully healed. When only a child of twelve years, my eyes began to trouble me. It was thought that I had strained them by reading too much, and I was provided with glasses to be used when doing work that required close application. For several years my eyes remained in about the same condition, until my studies at school required a great amount of evening work. Then they became rapidly worse, and I realized that something must be done or I should have to leave school. I then went to the best oculist in the State, who examined my eyes and fitted them with glasses to be worn constantly. He told me that the trouble was with the muscles of the eyes. In less than a month I had a very severe attack of measles. As is usually the case with this disease, the eyes were affected, and during my illness they were kept bandaged, as it seemed painful to have the light reach them, and it was found necessary to keep them bandaged for some time after I was able to sit up. I looked for improvement, but was disappointed. For months I could read or sew but very little: my attempts to do so usually resulted in intense pain in my eyes and such severe headaches that I became discouraged. My eyes were so sensitive to light that I had to wear smoked glasses when out in the sunlight, and frequently in the evening. During the winter following the attack of measles, I had to remain in a darkened room whenever there was snow upon the ground, only going out of doors after sundown with my smoked glasses on. This continued with only a slight improvement for two years, although I went to the oculist several times and followed his directions carefully. A friend then advised me to try Christian Science, and at last I was persuaded to do so.

I went to a Christian Science practitioner, and I asked her if she thought I could be helped so as to leave off the smoked glasses, and be able to read with my other glasses without suffering afterward. I did not expect complete healing. I told her that if I removed my glasses I could not go more than half an hour without suffering greatly. She then asked me to remove my glasses and not put them on until I felt the need of them. I did so, expecting to prove that I had not exaggerated my statement, but instead I received a proof of the healing power of divine Mind, for I have never needed the glasses since. From that day, over ten years ago, to the present time, I have used my eyes, unaided by glasses, as I had never used them before. The evening following my healing I sewed for two or three hours by gaslight, and the next evening attended a concert, where I sat in the gallery with the lights shining directly in front of me, and experienced no pain or discomfort.

The old sense of pain, smarting, and weakness left me, and even the appearance of my eyes changed. Whereas they had looked dull, faded, and lusterless, they became bright and clear. Upon my return home my friends spoke particularly of this change.

I knew from the first that I could not express too much gratitude to God. Since then I have realized that I owe a debt of gratitude and love to our Leader, Mrs. Eddy, who has brought to this age the divine message of healing, and has made my experience possible.

HARRIET B. BROWN, Gales Ferry, Conn.

I first heard of Christian Science in 1887. I had been an invalid for nearly twenty years, and had never known what health was. There was no limit to the doctors, water cures, hot springs, etc., that I tried, but they did not effect a cure, or even abate my suffering. My sickness was very distressing. The trouble that the medical world considered absolutely without remedy or cure, was instantaneously healed by Christian Science. In my girlhood days I had lived with an uncle who was a physician, and everything that medical skill could do was done. The diseases which seemed most stubborn affected the stomach, heart, bowels, and spine, and I had nervous prostration. Most of my married life I had been a hopeless invalid. In the fall of 1887 I grew worse so rapidly that the physicians attending me were perplexed as to what more to do.

Surgery and medicine had failed. This was God's opportunity, and my husband sent for the only Christian Science practitioner in our city. I was convinced by her talk that there must be something that I did not have, but a fear that I would die without my tonics prevented my taking treatments then. The time came, however, when there was not one ray of light. The end of all my sufferings seemed very near. The darkest night of my suffering had passed, and to every one's surprise I was still alive. There was no more delay in securing the Christian Science practitioner, and it gave some hope to the discouraged ones. When she came in and talked with us a short time, I understood the value of her words and believed I should be healed. I felt so relieved and uplifted by her visits, that I began to awaken to a new sense of life. The transformation was marvelous, for I was up and dressed in a few days. The peace, joy, and happiness I experienced words could not describe. I was healed in fifteen minutes of a trouble that physicians had worked to cure for nearly twenty years, and then had failed. The quick healing of this one ailment was sufficient! I believed that Christian Science was the truth that Jesus taught and practised, to free humanity. I was perfectly dazzled, as was Paul when the light came to him,—so sudden and glorious. I read my Bible to find what I had omitted seeing and understanding, but I could not find anything more than I had always seen. I asked the practitioner what she read to get this understanding, and she loaned me a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy. I read all night, and the next day until it was time to return the book. I sent for a copy that same day, and I need not say that this book revealed to me clearly the true idea of God, for all who read it know this better than I can explain it. What beautiful sunshine I lived in, revealing a new earth and a new heaven. I never can forget it, nor do I wish to. This sudden emergence from darkness into light, from sickness to health in less than one week, seemed miraculous. I was perfectly healed in three weeks. I had been a strong Calvinist, and on account of my religious belief had refused to investigate Christian Science until every other help had failed. This new teaching, as it seemed then, was so beautiful and comprehensible that I was sure my church friends would be glad to have me tell them all about it,—they could see for themselves I was a new creature, that "old things had passed away;" but they did not want to talk about it, and I was forced to keep all of this good to myself and family. When this truth had freed me from the many illusions of sense, the call came to demonstrate for others its power to make free. I wish I could tell of all the good that Christian Science has brought to me and my family, and the hundreds of cases that I know have been healed. My prayer is that I may be found worthy to be called a Christian Scientist.

I do not think any one can possibly love our dear Leader, Mrs. Eddy, as those of us do who have been rescued from the grave. My gratitude to her can best be shown in my earnest work in the Cause of Truth.

MRS. SARA E. MYERS, Ripon, Wis.

I am always happy. The natural gladness of soul with which children are born is the rightful manner of a true child of God, one who believes that the divine will has its way in human life, that Christ is always present with us, that we can answer his love with ours and his authority with obedience. This gives us a sober and serious happiness which nothing can invade, a joy which no man can take from us. Every man should be like a ray of sunlight and joy in a world in which God reigns supreme and is responsible for the ordering of life.—PHILLIPS BROOKS.

From our Exchanges.

In the seven parables of Matthew, 13, Jesus presents the kingdom in terms of action rather than being. He represents it as an activity rather than an entity, as a procedure rather than a thing. He likens it to that which takes place rather than to that which simply exists. Verbally and grammatically, to be sure, he likens it to a person or a thing—a sower, a grain of mustard seed, leaven, treasure, a merchant, a dragnet. But in the actual thought he does not liken it to any of these, but to something done by them or in connection with them. In every instance the heart of the parable is to be found in the activity described. This fact estops or exempts us, according to our predilections, from identifying the kingdom with anything local, institutional, or static, such as the visible church, the perfected social order, or the place of future happiness. Any of these may have a connection with the kingdom, but none of them *is* the kingdom.

REV. THOMAS C. STRAUS.
The Homiletic Review.

The Outlook, commenting on the action of the committee of the Inter-Church Conference on Federation (meeting in New York, November 15–21), in refusing admission of delegates of the Unitarian and Universalist denomination, says,—

We regard the omission of the Unitarian churches as an exhibition of narrowness, but it is a narrowness inherited from past conditions, and is characteristic not peculiarly of this Conference, but of the sentiment in evangelical denominations as a whole. It is a narrowness, however, which is surely disappearing as the churches are learning to substitute as a test, in place of the creeds which say, "Lord, Lord," the fruits of character as exhibited by those who "do the will of the Father."

The greatest difficulty in getting Christianity rightly understood has been in getting people to live the life which it describes and practise the truth which it teaches. Simply to believe a series of doctrines which are termed Christian and assent intellectually to the teachings of Jesus, cannot be called Christian, for Christianity implies the practice of these things. Every precept and doctrine of the New Testament is not some abstract thing, but has the capacity of being lived, put into practice, and only in the measure in which it is practised does it claim to be Christian.

The Standard.

When men have risen above the misconceptions of worldly standards and realized that praise is no proof of worth; above the perversions of religious affectation and seen that Jesus did not seek pain, men still are prone to the delusion of self-pity. They will claim for themselves the reward of the persecuted solely because they are sufferers. They forget to ask whether theirs is oppression for righteousness' sake or punishment for unrighteousness' sake.

Pacific Baptist.

Jesus Christ has founded his kingdom among men upon heart forces, not head forces. This world is not going to be saved by intellectual culture, but by heart culture. Love, faith, obedience, service—these are fundamental in character.

W. C. MERRITT.
Pacific Christian Advocate.

As we see it, nothing in this world does pay for men or women like prayer, when we understand that the prayer is the preparation of the whole being to receive and to use the divine energy which is present to every one of us.

The Christian Register.

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church.—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to The Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of The Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to The Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number, or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5 00
Twelve or more to one address, each, prepaid . . . 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* **PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

250 Huntington Ave., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,
Associate Editors.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.

Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month.

The date of expiration may be found on the address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

With the purpose of offering a permanent career in the diplomatic and consular service to competent young men, and of improving those branches of the Government service so as to make them more valuable than they are now to the business interests of the country, the President announces that hereafter any applicant for appointment as Secretary of Embassy or Legation must possess a knowledge of at least one other language than English, and must be otherwise examined as to his competency; and an examination will be required of such consular officers as are limited in compensation to the maximum of $2,500 per annum and a minimum of $1,000. The result will be to take the consular service away from political preferment and to make promotion as well as appointment dependent upon absolute merit, and is in line with English practice.

The Attorney General denies unqualifiedly all but one of the statements made by the packers in the eight pleas in bar filed by the defendants in the Government's Beef Trust prosecution, and in regard to the eighth plea he admits the facts as stated, but denies that they form a bar to criminal prosecution. The Government will proceed with the prosecution, the pleas in bar filed by the packers to be decided by the District Court.

The association of presidents of State universities which was in session in Washington, failed to come to any agreement in regard to endorsing or condemning football as it is played in American colleges. A resolution introduced by the president of the Ohio State University, deploring the "brutality and waste of time" resulting from the game, was tabled owing to wide differences of opinion.

The American inhabitants on the Isle of Pines have revolted from Cuba, declared their independence, taken steps for the establishment of a territorial government, and asked to come in under the United States Government. The Administration at Washington, it is understood, regards the affair as one that is entirely domestic and to be dealt with by President Palma.

The report of the Board of Lady Managers of the St. Louis Exposition has been printed at the Government Printing Office. It is a handsomely bound volume. The cost was defrayed by drawing upon their unexpended appropriation.

The examination and appraisement of the presents received by Miss Roosevelt during her visit to the Orient has been begun at the Georgetown Custom House. Their valuation, it is expected, will scarcely exceed a few thousand dollars.

Not more than half as much printing is coming to the Government Printing Office this year as is usually sent there from the departments at this season, the result, it is thought, of the investigation of the Keep Committee.

Foreign.

In his report on the Berlin telephone system Consul General Mason says: "The telephone system at Berlin is a branch of the Imperial Postal Service, and is administered throughout by employes of the Government, who hold their positions for life or during good behavior, and receive pensions when they finally retire by reason of old age or disability. From a beginning somewhat tardy, in comparison with other large European and American cities, the service here has grown to one of the largest in the world, not less than eighty-six thousand telephones being now installed in the public system of greater Berlin. The long-distance telephone service of this city embraces within its scope more than twenty-six hundred cities and towns in Germany and other European countries, including capitals like Paris, Brussels, Rome, Vienna, and St. Petersburg. For this branch of the service the central telephone bureau is equipped with a staff of operators, mostly women, who are competent in the various European languages. The cost to subscribers per annum for a telephone installation in Berlin is from one hundred and eighty to two hundred marks, while for certain suburbs, where the instruments are less frequently used, the cost varies from eighty to one hundred and sixty marks. In the organization of the various exchanges one female operator is required to attend to the calls of from one hundred to two hundred telephones. The operators are carefully educated and selected, ably directed, and are for the most part alert and efficient. The rates for long-distance service vary from five cents for a radius of fifteen miles to forty-eight cents for a radius of six hundred and twenty-five miles. The rates for telephone service to foreign countries are specially arranged with the Governments of the several neighboring nations, and are relatively higher than those between points within the German Empire.

According to the alleged plan of the Czar to distribute part of the imperial domain among the peasants, the land will be supplied to the landless peasants in fifteen-acre allotments, not as a free gift, but on easy terms, the payments to be made through the peasant bank during a period of thirty-five years. More than one-third of European Russia proper is the property of the Emperor and the imperial family. It covers an area of 626,275 square miles. The peasants, according to late statistics, own but a trifle more land than the Emperor and his kindred, 697,001 square miles. On the land which is credited to them the peasants owe the State more than a billion dollars. Previous to the emancipation act of February 19, 1861, all peasants were serfs of the State, of the Crown, or of the nobility. In 1861 the State bought of the serf owners the lands upon which the serfs were settled, later liberating the serfs and selling to them the land in consideration of forty-nine annual payments.

The second payment by Venezuela on the Plumley arbitration award of $650,000 in favor of France for damages sustained from revolutionary troubles prior to 1903, was not paid on the 15th when due. Apparently the Venezuelan President's failure to pay was on the ground that diplomatic relations between France and Venezuela are interrupted. The incident is considered in Paris to be a further provocation.

The final result of the plebiscite in Norway shows that 259,563 votes were cast in favor of Prince Charles as King of Norway, and 69,264 against him. On the 18th the Norwegian Parliament unanimously elected Prince Charles of Denmark to be King of Norway. There were one hundred and sixteen members present. The fortress fired a royal salute of forty-two guns in honor of the new King.

The Government of Peru has arranged with a number of capitalists for the formation of a company, with a capital of $2,500,000, which will construct a great dock at Callao, organize a steamboat service for the coasting trade, and build or acquire two modern boats for traffic with Panama. The company will receive a Government substention of $150,000 annually.

The ultimatum to Turkey on reforms in Macedonia covers the acceptance of the Powers' plan for the financial reform of Macedonia and the extension for two years of the terms of the financial agents appointed by Austria and Russia in behalf of the Powers.

General.

Unmistakable evidence exists, says the *Scientific American*, that twenty-five hundred years ago certain Hebrew engineers (in the time of King Heze-Kiah) executed exactly the same kind of work which was carried out in the Simplon tunnel, though perhaps on a slightly smaller scale. Dr. Bertholet, a professor at the University of Basle, is the gentleman who claims to have made this discovery. The Jewish records state that King Heze-Kiah, or Ezekias, who reigned at Jerusalem 727 B. C., was much troubled at the bad state of the water supplied to the people of that city. He accordingly had a vast reservoir made at the gates of the city, to which water was fed from various springs lying at greater or less distances from the reservoir in question. At first his project seemed doomed to failure, as there existed between Jerusalem and the springs from which the water was to be derived a high chain of hills, over which it would be impossible to convey the water. It was therefore determined to open a passage for the water through the solid rock. Recent explorations have identified this tunnel with the Shiloah tunnel by means of which water was brought down from a source to the east of Jerusalem and poured into the pool of Siloam. This conduit is three hundred and sixty yards long. The floor of the tunnel is finished with the greatest care, and the workings vary from five-eighths of a yard to one yard in width by from three to nine feet in height, more or less, according to the hardness of the rock. In the light of modern engineering science, the following questions suggest themselves: How did those old-time engineers gauge their direction, recognize and remedy their errors in alignment? What tools did they use to execute a piece of work which has remained without equal or rival for twenty-five hundred years?

The United States is the only great nation in the world which does not derive a surplus revenue out of its postal service, in 1903 the deficit being $4,356,000. During that year the following surplus receipts are shown by other great nations: United Kingdom, $22,781,000; Russia, $15,054,000; Germany, $14,668,000; France, $14,489,000; Spain, $3,088,000; Hungary, $2,895,000; Belgium, $2,500,000; Japan, $2,316,000; Netherlands, $956,000; Italy, $272,000.

A news despatch says an immense subterranean cavern, which promises to surpass in size and beauty the famous Mammoth Cave, has been discovered near Glasgow Junction, Barren County, Ky. One arm has already been explored for a distance of seven miles. Further progress was stopped by a wide and swift river. It was not possible to tell the magnitude of this stream.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

The Perennial Bloom of Truth.

REV. WILLIAM P. MC KENZIE.

In some gardens one finds only such flowers as have grown from seeds planted in the springtime. When the frosts come the leaves are withered, and when the year is again warmed by the sun, no green shoot comes up from the place where last year color rioted, unless once again the seed be sown. There are other gardens where flourish perennial growths. Should the gardener be gone for a year's space, leaving no hand to tend his much-loved plants, they would still appear to greet the sun in the spring, and their blooms would open at the appointed time. The iris would disclose her royal purple, the fragrance of the shy lily-of-the-valley would pervade the tree-shaded corner, and like a string of pearls the white bells would lie upon the long green leaves. Roses, roses, roses, would be everywhere,—shell-pink like the hues of dawn, or those redder than flame that clamber in ruddy billows upon walls and trellises, or roses with a coloring which surpasses in beauty the finest gold. Perchance you have visited an old home whose tenants had long departed, and in the garden found, among weeds and decay, a June rose, perfect, exquisite. Then you have witnessed the wonder of perennial bloom offering its yearly beauty because of its own life and nature.

Thus are we reminded of the offerings made by truth. They are not like human sentiments, theories, and ideals, which bloom and pass with the season. Let the seed of truth be once implanted, and its growth will become perpetual. It may appear as a prophet's vision or a poet's song, and the days of the seer or singer may long ago have ended, but the truth he has sown blooms renewedly for later generations. In the quiet time of thought, in reverie, in the deeps of joy or the depths of sorrow, when the noise and clamant confusion of life has become as it were distant from us, we may enjoy the fragrance of truth's perennial bloom.

What would the writer who implanted in words that comforting truth regarding the divine omnipresence, "Fear thou not; for I am with thee: be not dismayed; for I am thy God: I will strengthen thee; yea, I will help thee; yea, I will uphold thee with the right hand of my righteousness," think of the restless tumult of modern life? He dwelt as one in a quiet garden, at whose foot flowed a placid river, mirroring when night fell the stars of the peaceful heavens. Yet we are the same sort as he, with the same need of God. This was proven to an aged friend, who came to a climax in life when fear almost prevailed. The swift-flashing pulse of the telegraph brought to her ken the words of the old prophet, and then she entered into the garden of peace, and saw the perennial bloom of truth, the rose of ten thousand years: and in all the turmoil of temptation, in all the confusion of crossing currents of thought, when fear was in the way, dread behind, and anxiety whispering near by, the fragrance of that bloom brought assurance and peace, confidence and quietness, till the fear was overpast, and the joy of the Lord had brought restoration and strength.

If any ask why Christian Scientists are happy, they will learn that it is because they have found the way into the garden where blossoms perennial truth. Their text-book has significance in its very title, "Science and Health with Key to the Scriptures;" and when over eight hundred citations from the Bible are found in its pages, then this significance is readily understood. Furthermore, as one studies he will be continually reminded of the parallelism of truth. The meaning of Scripture phrases which lay dim and useless in memory, will suddenly appear, and the reason will be known why they were valued by past generations. If dried tulip bulbs, unvalued and cast aside, were discovered by one who knew their worth, with what a throb of joy would he rescue them and bring them to their bloom. Then others would be able to rejoice in their beauty. Something like this has our Leader, Mrs. Eddy, accomplished through her discovery of Christian Science. When passages of Scripture are used for controversy, or extracted for polemic creed-making, they are like tulip bulbs taken from the soil. They are considered unbeautiful and valueless by the busy people who are doing the world's work; but what a discovery they make when through Christian Science they see these very dry-as-dust phrasings (as they estimated them) come to beauty of bloom. They learn that in making life's journey it is not necessary, as they supposed, to keep to the uninteresting, dusty highway, and to find day after day of travel devoid of charm or delight; they learn this because the perennial truth, or wisdom, is revealed, and "her ways are ways of pleasantness, and all her paths are peace."

Thankful for Gratitude.

REV. JAMES J. ROME.

Among the many specific reasons for gratitude to which our thoughts may revert at the Thanksgiving season, there is perhaps none more worthy of our attention than gratitude itself. What would the world do without it? How cold, dreary, and uninteresting would our earthly existence be, if there were no grateful response to the love which is manifested in a kind, generous heart and life. How long would it take the bloom of charity and philanthropy to fade and wither away, in the chill of such an atmosphere?

It is true that our generosity should be actuated by higher motives than the mere expectation of thanks, praise, or flattery, nevertheless there is a reciprocal relationship existing between men which demands an honest, hearty, and grateful recognition of every act or word of unselfish kindness. It is this recognition, and the appreciation of such word or act, which constitutes the real pleasure experienced in the acceptance thereof. Thankfulness always gives pleasure, both to the donor and the recipient of the kindness. Like mercy, "It is twice blest: It blesseth him that gives and him that takes." Not only so, but it gives out an aroma of cheer that brings pleasure to all within its environment. Who can hear an earnest expression of thanks without feeling better for it? We cannot even listen to a hearty "Thank you," spoken on the street as we pass along, without feeling a thrill of satisfaction. And what shall we say of the peace and joy that is felt when one who

Copyright, 1905, by Mary Baker G. Eddy.

Digitized by Google

has been delivered from some distressing condition takes his benefactor by the hand, and, mayhap with tear-dimmed eye, endeavors to express the deep and sacred impulse of overflowing gratitude. As nature responds to the sun's tender rays, in the soft shimmer of the lake's rippled bosom or in the perfumed breath from the petals of the blushing rose, so does the heart that is ready to respond in gratitude to an expression of unselfish love, reflect the glory and beauty of a divine impulse.

In the proportion that we appreciate a gift will we be grateful, and, conversely, in the proportion that we are grateful will we be appreciative. That a great blessing has been brought to us to-day, in the revelation of Christian Science, cannot be denied: are we ready to accept this gift of love? Are we desirous of appreciating it more fully, of understanding it better, and of appropriating more of its gracious healing and saving power? Then let us be grateful to God for the help it has already brought us, and let our gratitude to her who has labored so earnestly, incessantly, and patiently to impart to us this precious gift, stimulate us to follow her more closely in the way, as she has revealed it to us in our text-book. Then will we be thankful indeed for gratitude, for through it we shall be fitted to receive more of divine Truth and Love, and so be led on and up "unto the measure of the stature of the fulness of Christ."

Our Warfare.

MARGUERITE TEBBS.

THE thought is often expressed by those who have no knowledge of Christian Science, that the Old Testament is uninteresting, or at least that portion of it which deals with the history of the Jewish people, their journeys, victories, and defeats. To the student of Christian Science, however, this part of the Bible, read in the light of our text-book, "Science and Health with Key to the Scriptures," abounds with helpful lessons. In the forty years' journey in the wilderness, we find a type of our journey out of the bondage of material sense into the "glorious liberty of the children of God;" and in the battles of the Hebrews with the enemies around them, we see a type of our warfare with error,—not with personalities, but with the wrong thoughts, the multitude of false beliefs assmbled under the name of error. In "Miscellaneous Writings," page 8, Mrs. Eddy clearly defines "enemy" as that which "defiles, defaces, and dethrones the Christ-image" which we should reflect.

A helpful lesson may be learned from the story of Jehoshaphat's battle, as given in 2 Chronicles, 20. Word was brought to him that a multitude of the enemy was coming up against him. At first he is filled with fear, but turning to God for help, he acknowledges that He is all-powerful,—that none can withstand Him. He remembers God's promise to hear and help His people when they call on Him in trouble, and then, referring to the approaching enemy, he asks God to judge them, saying: "For we have no might against this great company that cometh against us; neither know we what to do: but our eyes are upon thee." So with the beginner in Christian Science; when his enemy is first uncovered to him, and he realizes that there is work to be done, he, too, may be fearful, but the same promise is for him, and the same God is waiting to help him.

While Jehoshaphat and all the people waited before the Lord, the answer to their prayer came through one of the Levites: "Be not afraid nor dismayed by reason of this great multitude: for the battle is not your's but God's. To-morrow go ye down against them: . . . Ye shall not need to fight in this battle: set yourselves, stand ye still, and see the salvation of the Lord . . . fear not, nor be dismayed; to-morrow go out against them: for the Lord will be with you."

"Fear not!" "Be not afraid!" How these same words ring out through all the pages of our text-book, cheering the timid follower of Truth and sending him onward with renewed hope and trust.

Having received the answer to his prayer, Jehoshaphat proceeds to act in accordance with it, in perfect confidence that it will be as God has said. Instead of waiting till the enemy had been met and overcome, he appoints a band of singers to praise God for His mercies, and these he places *in front* of the army. Already two enemies had been conquered,—fear and doubt,—and so, giving thanks, he starts forth, and what was the result? While one army was engaged in singing praises to God, the alien army was engaged in a battle among themselves, one helping to destroy another, and when Jehoshaphat reached the watch-tower in the wilderness, and looked down upon the multitude, he found that they were utterly destroyed,—self-destroyed,—and not one remained alive.

In Christian Science we learn the wisdom of giving thanks for every victory over error, even "for victory over a single sin we give thanks" (Science and Health, p. 568), and go forward to the complete triumph of good over evil. In confidence and trust we go on our way, and when we reach our watch-tower in the wilderness, and look back over the past, we, too, shall see the salvation of the Lord, a salvation which is for us here and now, and which is both revealed and demonstrated in Christian Science.

Trusting in God.

EDWARD EVERETT NORWOOD.

As Christian Scientists we understand somewhat of the Science of being, through and by which God governs man and the universe, and know that to the divine Mind, operating through His own spiritual law, all things are possible. We also know that error has only the power which we give it by our faith in it and fear of it. Then why not go on and trust, depending upon Him who saves to the uttermost, until all error is overcome?

We can do this, and have the strength, courage, hope, and faith to trust God always and all the way. Then let us do it. We should declare valiantly for our spiritual and physical freedom as children of God, hold to it in the face of all error, and Truth will make us free. The battle is the Lord's, and therefore we must know it is already won and thank Him for it. The one Mind, the one Love, is the only power and presence of the universe; He fills all space, supplies every need, and will show us the "way of life" as we are willing to walk in it.

The good alone is the real, and that which is not good has no reality; it has no action, power, or personality, and can never deceive a child of God into believing it for a moment. The claim of disease that sense would fasten upon mortals has no principle. If it had, it would be real, and we could never hope to overcome it; but all that is real and good has Principle underlying it, and that is God. Mind is the motive power that moves all things, and we can draw upon this power and never fear that it will be exhausted. It is foolish and sinful to doubt the goodness and power of God. He is the only Mind there is, and the true man is like Him, harmonious and perfect. As we reflect divine Mind, infinite possibilities become infinite probabilities, and then realized facts. As we cling closely to God, to the understanding of Truth, we gradually find peace. In Christian Science, promise and fulfilment go hand in hand. We do better as we know better. The true knowing is reflection, and reflection is possession. As we grow in understanding, we find what it means to be a Christian Scientist,—the strict demands which this Science makes upon us in every way,—and we should remember, as our Leader has said in the 1899 Message, "We have it only as we live it."

Digitized by Google

The denial of intelligent matter sooner or later creates a moral revolution in our consciousness, before we can realize the immortal fact that we are at one with good. This causes, or seems to cause, the undestroyed human will in us to rage and try to do something. Thus when we have an assembly of people, all at work upon these higher lines of effort, in demonstrating the power of Principle and law, error may seem to enter through various channels and to confuse things, but as we hold to the true idea of Church as defined in our text-book (Science and Health, p. 583), and uplift it in our individual thought, we shall help to maintain order, and our congregations will grow and prosper, a healing influence will go out from our services and draw all men unto Truth.

We know where our strength is,—in God, in whom we have put our trust,—and we shall not be afraid of what error can do unto us. The way may sometimes seem narrow and our progress slow enough, but it is God's way, and we therefore love to walk in it, and listen for the voice which says, "This is the way, walk ye in it, when ye turn to the right hand or to the left." To those who overcome is promised the crown of life, and our Master said, "Lo, I am with you alway," even unto the end of all error. We must be brave and strong; trust God in all things, and never be weary in well-doing nor in waiting on Him. God blesses us in proportion to our worthiness to be blessed, and Love leads us all the way. The one Mind alone is to be obeyed, understood, and loved; this purifies, heals, and saves. It brings a peace the world can neither give nor take away, and a joy of living indescribable to those who have not experienced it.

As we fight "the good fight of faith," Love makes all our burdens light. Many others will feel our wrestlings and trials and fierce heart-beats, though their eyes may be holden to their full import. Others will say, "A sower is going forth to sow," and will desire to partake of our fruits. As we learn this lesson of truth, it will lift us out of the seeming shadow into understanding of our union with divine good, that indeed supplies abundantly all needs. "Lift up your heads, O ye gates; and be ye lift up, ye everlasting doors [of thought]; and the King of glory shall come in."

The Mission of Our Sermons.

E. P. F.

At a recent Wednesday evening experience meeting I was deeply impressed with testimonies given, which told of healing received through the study of the Lesson-Sermon, and the value of these Lessons was again borne in upon my thought. Two young men said they had come home from business, feeling ill, weary, and discouraged, and each said, in substance, that he knew where to go for help, for the refreshment, the courage, the healing which were needed; namely, in the Lesson for the week. In my own experience I have often found the present help for present need in the Lesson-Sermon.

How carefully and lovingly the Bible Lesson Committee are thus breaking the "bread of life" for a hungering world, and how eagerly and gratefully we Christian Scientists are partaking of it, and finding that it sustains and satisfies.

What a difference there is between these and the old Sunday School lesson, which many of us knew, our interest often being more in some past historical event than in ever-present Truth. Our grand Lesson-Sermon ever leads thought to the Truth of being, the understanding of which will solve every problem, meet every need, bless and heal, as we seek and find the message it has for each of us.

There is also a great inspiration gained as we realize the unity of purpose and unity of effort all over the Field in the study of these Lessons. The greater our interest in any subject, and the more we study it, the greater the result; and can we place too much importance upon the study of these Lessons, when our Leader has declared in Science and Health (p. 345) that "When the omnipotence of God is preached, and His absoluteness is set forth, Christian sermons will heal the sick"?

The Light and not the Glass.

EMMA C. SHIPMAN.

Recently a commonplace experience brought home a lesson in Christian Science. Finding my room rather cold one morning, I turned to the sunshine which was streaming through an eastern window. The light was so warm and cheery that I went nearer the window and leaned on the pane, expecting more heat. A sudden shiver was the result. The glass was quite cold. Instantly thought grasped a lesson which often comes to the beginner in Christian Science. Finding the realm of mortal sense cold and cheerless, he turns toward the light and warmth of Truth as found in Christian Science. After the first joyful sense of comfort and light, he is apt to lean on the personality of the practitioner, through whom the light seemed to come. Very soon a mental chill is the result.

The novice learns from this that it is Truth which warms, comforts, and enlightens, and not the personality of the one who may be a channel for Truth. To lean on personality is to miss the comfort of the everlasting light and Love. George Herbert wrote,—

A man that looks on glass,
On it may stay his eye.
Or, if he pleaseth,
Through it pass,
And then the heav'n espy.

God Revealed to Man.

J. E. WHITAKER.

There sometimes comes a time in the lives of men when every material support fails; when they are brought face to face with the fact that either God must save them or they go out into a night without the guidance of a ray of light,—into a long, cold night of discord,—helpless and alone. What a thought, and yet if God does not reveal himself in some way, how can it be otherwise with mortals? We cannot know there is a God unless God acts through man. All the opinions and theories in the realm of mortal thought cannot change one single, solitary fact: either God is, or He is not. If He is, then where is He? The history of mortal man shows that he has delved into materiality for ages, seeking health and happiness; but his search has been in vain, he has not found a single remedy that is consistently successful or even ameliorative. If this be true, and I do not think it can be truthfully disputed, then it is evident that God, the Giver of all that is good,—of all that man needs,—is not in the material, else would men have found Him long ago; therefore common sense and reason then lead us to look for Him in the mental, the spiritual realm. There we find Him revealed as divine Mind, the intelligence that controls and governs all that is true, real, and eternal. When man awakes to this grand and glorious fact, he has learned a lesson in Christian Science, and when the arrows of criticism, shot at him by the worldly-wise, strike upon his shield, they fall broken and harmless.

Never lose an opportunity of seeing anything beautiful. Welcome it in every fair face, every fair sky, every fair flower, and thank Him for it who is the fountain of all loveliness, and drink it simply and earnestly with all your eyes; it is a charmed draught, a cup of blessing.

Charles Kingsley.

Selected Articles.

Critics mistake the end for the beginning, and claim for the present ability of Christian Scientists what the Scientists do not claim for themselves. These critics do not consider that advanced spirituality is requisite to divine healing and that theory must always precede practice. The logic of mathematics leads to infinite solutions and calculations, but the beginner can solve only the most simple problems. The insistence that the neophyte in mathematics, simply because he believes in the whole system, is inconsistent with this belief because he cannot demonstrate the most advanced propositions, is quite as sensible as the claim that a Christian Scientist is inconsistent with his belief because he cannot raise the dead and restore a limb which has been amputated. It is likewise as unreasonable to suppose that a pupil in mathematics is a menace to the schools because he may undertake the solution of problems which are years in his advance, as it is to suppose that a Christian Scientist is a menace to the public health because he may undertake that which appears to be in advance of his present understanding. Christian Science is no more likely to rob its devotees of their common sense than is mathematics. The Christian Scientist should be allowed to speak for himself in a matter of this kind. He makes no special claims beyond that which he has already proved by demonstration can be performed. He insists upon infinite possibilities only to those who fully realize the omnipotence of God and that any want of ability to demonstrate the divine power is due to exactly the same reasons which explain the failure of others. Those who understand but little of Christian Science are imperfect in their ability to heal, for the same reason that those who understand none of it are not able to heal at all.

ALFRED FARLOW.
Boston Times.

It is related that the scribes and Pharisees once said to Jesus, "Master, we would see a sign from thee." But he answered and said unto them, "An evil and adulterous generation seeketh after a sign; and there shall no sign be given to it, but the sign of the prophet Jonas."

Jesus claimed no power of himself, for he said, "I can of my own self do nothing." Neither do Christian Scientists make such claims, but they do claim that the promise of the Master to all "them that believe" (understand) his teaching shall be verified. They do not believe that any earnest follower of Jesus Christ can divorce his command "Preach the gospel" from "Heal the sick, . . . raise the dead, cast out devils" (evils), and be obedient. They do not claim to have more than touched the hem of the Master's robe in their understanding of the Science of Life, but they are striving to use the little they have, and they hope to grow into a fuller realization. What they have and hope to have they know belongs to every true follower of the Christ.

Christian Scientists do not refuse to go to the aid of any who ask help in the true spirit, but they know that any who ask in the spirit of bravado could receive nothing. It is written of Jesus that "He did not many mighty works there because of their unbelief."

CHARLES K. SKINNER.
Grand Rapids (Mich.) *Herald.*

Isaac Newton recognized a need for the law of gravitation, and forthwith proceeded to supply it. Christian Science is a discovery, a revelation, if you please, in the same sense that all great fundamental truths unfolded to the human understanding are revelations. Because it is a divine impartation to man, it came in God's time, when the human consciousness was somewhat prepared to receive it; but no human ingenuity or planning dictated the time or the terms of its appearing.

It is misleading to say that Christian Science denies matter, without explaining the exact meaning of such a radical statement. We deny matter exactly as St. Paul denied it, when he said that "the things which are seen are temporal, but the things which are not seen are eternal."

WILLARD S. MATTOX.
Hartford (Conn.) *Courant.*

The mere fact that healing is accomplished through the spiritual understanding of Christ's teachings, as demonstrated by Christian Scientists, does not in any degree lessen their claim to recognition as a Christian church, but rather does it constitute a valid and sufficient reason for this claim, if the Scripture is to be accepted as authority. The early Christians were all healers of the sick as well as the sinful, and it may safely be predicted that the time is approaching when all Christian denominations will recognize this necessity.

JOHN L. RENDALL.
Oskaloosa (Ia.) *Daily Herald.*

Critics should take into consideration the fact that Christian Scientists, in the majority of cases, speak from the standpoint of experience with both *materia medica* and Christian Science, and having found this Science more efficacious in the treatment of physical ills than the methods previously employed, naturally prefer it. The Bible says, "Prove all things; hold fast that which is good." As Paul, like Jesus, proved his faith by overcoming sin, binding up the broken-hearted, and healing disease by spiritual means alone, we are safe in assuming that an attempt to prove one's faith by the use of material remedies would not be an exhibition of "works" authorized in precept or example by either Paul or the Master.

CALEB CUSHING.
Camden (Me.) *Herald.*

Christian Science emphatically and consistently maintains that because sin has no divine origin it should be accorded no rightful place nor irresistible power in the world; that it is an unlawful enormity which should cease to victimize mankind because it is not of God, the one and only creator. The Christian Scientist has learned that in proportion as he confidently contests the sovereignty of sin and evil, even to the extent of a refusal to give it place or contemplation in thought, he gains mastery over it and its effects, and to this extent does he prove its powerlessness and unreality, at least to some degree, in his own experience. He who indulges sin is loudly proclaiming its reality, and will therefore suffer its consequences, no matter to what extent he may profess otherwise.

DAVID B. OGDEN.
In *Exchange.*

Christian Science does not teach that individuals have no responsibility, as our critic avers. In Christian Science personal responsibility is a very important matter. Man's responsibility to God is enhanced through his understanding of the nature and character of Deity. The line of demarcation between good and evil is clearly defined in Christian Science teachings, and mankind is not exempt from the punishment which sin inflicts simply because it has been discovered that sin is not eternal and therefore not real; in other words, that God is not the author of sickness and sin. Mistakes are not a component part of the basic law of mathematics, but the individual who makes the mistake in his figures suffers accordingly. God's laws are based upon perfect Principle, and inevitable punishment follows the violation of any one of these laws. It will, therefore, be seen that Christian Science does not excuse sin, and that the individual is not relieved of a single responsibility.

The Lectures.

Portland, Ore.

The announcement that Miss Mary Brookins of Minneapolis would discuss different aspects of Christian Science at the Marquam Grand last night [October 1], had the effect of filling all the available space of the big house. In introducing Miss Brookins, Willis S. Duniway said in part,—

No idea, no doctrine, no Gospel can make progress if it fails to appeal to the love of truth and right that God has implanted in every human breast. "Faith," says Henry Cope, "is not a fence about a man; it is a force within him." So the doctrine of Christian Science makes headway because it is an expression of sincere belief and purpose by thousands who seek an answer to the ever new and ever old question, What is Man, and Why?—and because Christian Science has a basis of truth for those who receive and accept its precepts, that makes them better and nobler men and women.—*The Oregonian.*

Grand Forks, N. Dak.

A representative audience filled the new edifice of First Church of Christ, Scientist, on Monday evening, September 25, to listen to the lecture given by Judge Septimus J. Hanna. Dedicatory services had been held the previous day. Both the home Scientists and those visiting were full of joy in the actual occupancy of this new and beautiful house of worship, and were very earnest in their expressions of gratitude toward the lecturer who crowned the dedicatory services with this lecture. He was introduced by Judge Guy H. Corliss, who said in part,—

The world is no more wrangling over immaterial questions of the motive and nature of Christ, but we have come together upon a common ground as to what he was in his spiritual nature; and what were the kind of truths that he taught regarding purity, love, and right living. I do say that in the peculiar emphasis which the Christian Science church has placed upon this particular nature of man, there is a platform upon which I can stand and upon which I believe every member of the human family can stand. Now it is the peculiar stress which the Christian Science church has laid upon these spiritual qualities that stands out as a distinctive feature, and to this I believe is accountable its extraordinary growth within the last few years. The more I study the question and the more I study the character of the communicants of this church, the more I am induced to believe that it is perhaps closer than any other Christian denomination in the lead which was marked out by the great Nazarene when he made his memorable reply to the woman of Samaria at Jacob's well, "The hour cometh, and now is, when the true worshipers shall worship the Father in spirit and in truth."

Correspondence.

Grand Rapids, Mich.

On the nights of October 2 and 3 Edward A. Kimball of Chicago delivered strong, logical, absorbing lectures to audiences which taxed the seating capacity of our large and beautiful new church auditorium. The audiences were representative of our city and were very attentive. The lecturer was introduced the first night through a few brief remarks by Mr. John Carveth. On the second evening he was introduced by Mr. Luman A. Field as follows:—

The widespread attempts during the last fifty years to produce a revival of religion, the great religious movements of the past twenty-five years among the young people of our country, the marked impetus of recent times in Bible study, the strong uprising of the religious instincts of men in defiance of old prescribed forms of religious thought, and the awakening of the whole people in a new impulse of worship,—these and many other "signs of the times" bear witness to the fact, not only that men to-day pant for God "as the hart panteth after the water brooks," but also that the world stands at the dawn of a great emancipatory movement which is destined to lead humanity out from the bondage of erroneous beliefs into the "glorious liberty of the children of God."

That the extended efforts of the past have not produced satisfactory results, is now frankly recognized and acknowledged by leading religious workers of the day; and this outcome of past endeavors, together with the doubt and discontent abounding on every hand, are (strange as it may seem) proofs that the world is being prepared for a fuller recognition of the things which pertain to God. The advance out of discontent, inspired by a vision of "the man God meant," is irresistible.

Many have believed with Hawthorne, "that at some brighter period, when the world should have grown ripe for it, in heaven's own time, a new truth would be revealed. . . . The angel and apostle of the coming revelation must be a woman, indeed, but lofty, pure, beautiful; and wise, moreover."

Some forty years ago, to Mary Baker G. Eddy, the pure, lofty, beautiful, and *wise woman* of Hawthorne's prophecy, there was revealed this new—yet old—truth of Christian Science, which enables men to see God's "face in righteousness," to "awake in his likeness," and to know that here and now "God shall wipe away all tears," and "there shall be no more death, neither sorrow, nor crying, neither shall there be any more pain: for the former things are passed away."

Starting with very small beginnings, the Christian Science movement has taken on strength and proportions with astonishing rapidity, until to-day we find ourselves face to face with the greatest revival the world has experienced since the days of Jesus and his apostles. The religious awakening for which Christendom has longed is here, and, clothed in the beautiful and shining garments of Christian Science, it is quickening the ability to discern between Truth and error, healing the sick and reforming the sinner. This truth has dawned on human consciousness with so little observation, and has made its advent among men by ways and methods so unexpected and so at variance with popular conceptions, that many have misunderstood its divine purpose and its beneficent work. In order that these misunderstandings concerning Christian Science may be corrected by those duly qualified and authorized to perform so important a work, there has been organized the Christian Science Board of Lectureship of The First Church of Christ, Scientist, in Boston, Mass. We have with us this evening Mr. Edward A. Kimball of Chicago, a member of this Board, who will now speak to us on the subject of Christian Science.—*Correspondence.*

Omaha, Neb.

Prof. Hermann S. Hering lectured at Chambers' Academy, October 9. He was introduced by Mr. Aaron Chadwick, who said in part,—

In these glad days of advancing thought, when all the nations of the earth, as with one acclaim, are rejoicing that peace hath won her victory, we have assembled here this evening to listen to a lecture on Christian Science, the Science that is destined to overcome, aye, that already is overcoming, the world; the Science that ever proclaims the allness of God and the nothingness of all things material; the Science that first defined God as divine Principle, that is lifting humanity up to a higher plane of thinking, and hence up to a higher, better, purer plane of living,—the Science that heals the sick and reforms the sinful, that inspires with faith and hope and trust, that brings to all who embrace it a goodly measure of that peace referred to in Scripture as "the peace of God, which passeth all understanding."—*Correspondence.*

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

[From *The Boston Herald.*]

Mrs. Eddy Aids Church of Her Youth.

The Rev. Mary Baker G. Eddy, Founder of the Christian Science denomination, received a card of invitation to be present at the observance, which closed yesterday, of the one hundred and seventy-fifth anniversary of the Congregational Church in Concord, N. H., in which her parents worshiped and in which she received baptism. In replying to the invitation, after expressing her pleasure at receiving it, she enclosed a check for five hundred dollars to aid in repairing the edifice.

The card of invitation read as follows:—

The honor of your presence is requested
at the observance of the
One Hundred and Seventy-fifth Anniversary
of the organization of the
FIRST CONGREGATIONAL CHURCH,
Concord, New Hampshire,
November seventeenth, eighteenth, and nineteenth, nineteen hundred and five.

REV. FRANKLIN D. AYER, D.D., *Pastor Emeritus.*
REV. GEORGE H. REED, *Pastor.*
EDWARD A. MOULTON,
JOHN C. THORNE,
WILLIAM P. BALLARD,
HENRY K. MORRISON,
Deacons.

Mrs. Eddy's reply was,—

Pleasant View, Concord, N. H., November 14, 1905.

To the Rev. Franklin D. Ayer, D.D., Pastor Emeritus: the Rev. George H. Reed, Pastor of the First Congregational Church, Concord, N. H.; Edward A. Moulton, John C. Thorne, William P. Ballard, Henry K. Morrison, Deacons:—

Beloved Brethren:—I have the pleasure of thanking you for your kind invitation to attend the one hundred and seventy-fifth anniversary of our time-honored First Congregational Church in Concord, N. H., where my parents first offered me to Christ in infant baptism. For about forty years, and until I had a church of my own, I was a member of the Congregational Church in Tilton, N. H.

To-day my soul can only sing and soar. An increasing sense of God's love, omnipresence, and omnipotence enfolds me. Each day I know Him nearer, love Him more, and humbly pray to serve Him better. Thus seeking and finding (though feebly), finally may we not together rejoice in the church triumphant?

I would love to be with you at this deeply interesting anniversary, but my little church in Boston, Mass., of thirty-six thousand communicants, together with the organizations connected therewith, requires my constant attention and time, with the exception of a daily drive.

Please accept the enclosed check for five hundred dollars, to aid in repairing your church building.

Sincerely yours, in Christ,
MARY BAKER EDDY.

Appreciation.

Philadelphia, Pa., July 6, 1905.

To Rev. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—We are assembled in our regular quarterly business meeting and we desire to send to you a message of love.

We appreciate more than we have ever done your work of love for the world, to which you have consecrated your life for so many years. Under your wise counsel and guidance our Cause has achieved much for man's liberation from the slavery of the senses. We know, if we follow the example which you have given us in your devotion to the Master's commands, we shall continually achieve more. We appreciate, also, how earnestly you have striven to have us destroy in our individual consciousness the suggestions of evil; to have us worship but *one* God, the eternal good; to put aside the things which hinder our spiritual growth, and be *united* in *brotherly love*, in our work for the Church and for each other. We know that if we are obedient to your teaching we will never disobey the Golden Rule; we will never be unjust, unloving, selfish, or false to the highest call to a noble manhood or womanhood.

We have a membership of four hundred and three. Twenty-four new members join with us at our next Communion. It has been joy to us to turn over our building fund to the Treasurer of the new church in Boston, and it may interest you to know that our contributions thus far have amounted to twenty thousand three hundred and sixty-five dollars.

We know that good healing work is being done here, and that it is being recognized and acknowledged by a greater number of representative people than have heretofore considered it, not only in our own city but also over the State of Pennsylvania. We have united in *one church*, to remain so until Love bids us divide our forces for the greater service which we can thereby perform.

Our gratitude goes out to you, our revered Teacher and Counselor, in inexpressible measure for the clearer interpretation of the Christ, Truth, which we have received and are enabled to put into practice. You have taught us the sacredness of the Scriptures, how to worship God in spirit and in truth. Accept our love and be assured of our loyalty.

Faithfully yours,
First Church of Christ, Scientist, of Philadelphia, Pa.
WILLIAM HAMMERSLEY, *Clerk.*

MRS. EDDY'S REPLY.

Pleasant View, Concord, N. H., November 13, 1905.
First Church of Christ, Scientist, Philadelphia, Pa.

Beloved Brethren:—Your munificent gift, twenty thousand three hundred and sixty-five dollars, to The Mother Church, spared from your own church building fund, speaks for itself of the unselfed love that bases the bounty and is the beauty of holiness. In the words of the Scripture: "Ye are God's husbandry, ye are God's building,"—"A spiritual house, an holy priesthood." "Grace be unto you, and peace, from God our Father."

Yours in Christ,
MARY BAKER G. EDDY.

The Building Fund.

WE are prompted to state, for the benefit of those who have inquired about the progress of the work on the extension to The Mother Church, that the erection of the building is proceeding rapidly: in fact, it is being pushed with the utmost energy, and at the present time there are no less than fifteen different trades represented. The beauty of the building, and the substantial and enduring character of its construction, have been remarked by the many visitors who have recently inspected the work, and

Digitized by Google

they have gone away with the conviction that the structure is worthy of our Cause and that it will 'meet the needs of The Mother Church as well as this can be done by a building with a seating capacity of five thousand. The recent rapid growth in the congregations attending the Sunday and Wednesday services in The Mother Church, indicates that the new edifice will prove none too large for the demands which will be made upon it, and it may safely be predicted that its accommodations will be taxed to the utmost from its opening.

Those who are in charge of this important work are alive to the necessity for completing the new edifice at the earliest possible date, and in order to do this they ask that there be no cessation or diminution of the contributions to the Building Fund. Indeed there should be a marked increase in the amount received by the Treasurer during the next few months, since the character of the work now being done is such as to call for heavy payments, and it is too early in the undertaking to make any considerable inroad upon the balance in hand.

It therefore occurs to us that there could be no more appropriate time for completing the Building Fund than the present thanksgiving season; and it is suggested to our readers that there would be great propriety in making a special effort during the coming week to dispose fully and finally of this feature of the demonstration.

Christian Scientists have reason to be grateful for health, happiness, and prosperity, and they know that these blessings have come into their experience through the teachings of their text-book, Science and Health. Because of their gratitude to God, and to their Leader, for these improved conditions, they have been liberal in their contributions heretofore, and we feel confident that they will now see the necessity for completing The Mother Church Building Fund without delay. ARCHIBALD MCLELLAN.

The Moral Factor.

EVERY thoughtful person who reads President Roosevelt's Thanksgiving proclamation must be impressed by the emphasis given to the moral and spiritual element,—that which alone makes for the true prosperity of a nation. Clearly does he point out the fact that the foes to be overcome are "our own passions, appetites, and follies." A great poet has said of one of the nations of the past,—

> no foreign foe could quell
> Thy soul, till from itself it fell;
> Yes, self-abasement paved the way
> To villain bonds and despot sway.

It would seem that if the necessity for obedience to moral law had been clearly recognized by mankind in all time, the records of the disintegration and decay of one nation after another would have been absent from the world's history. It is easy enough to see, in retrospect, the causes which have led to national ruin; no one denies that the pursuit of wealth and mere material learning, with their offspring of selfishness and luxury, have "paved the way" for degeneracy and death, but the all important thing is to see to it that these admittedly evil beliefs and their outward manifestations be not allowed to dominate us as individuals, until we are made to forget immortal realities in the pursuit of that which but induces yet more maddening thirst in those who drink from its unsatisfying cup.

In spite of great political upheavals there is much cause for thankfulness at this time, in that so many are awakening to the priceless value of righteousness, that men are coming "to call upon the name of the Lord" with a quickened sense of the vital necessity for an understanding of God's law, and for obedience to it.

As Christian Scientists we gladly unite with other religionists in returning heartfelt thanks to the Almighty for the many blessings we enjoy in this most favored time, not the least of which is freedom *to* worship God; but even more do we prize the freedom which we gain and enjoy *in* worshiping God as revealed to us in Christian Science. In this new light, which has brought us both physical and spiritual healing, we see "the gathered beams of ages shine,"—all the splendor of the truth revealed to prophets and apostles and demonstrated by the Master; and it is not only lighting each one's path, up and away from the gloom of sense, sin, suffering, it is also revealing to the nations of the earth the eternal fact, so long obscured by false material evidence, that God reigns and that in the universal kingdom of good there is "found no place" for aught but holiness (wholeness) and righteousness. Well may we give thanks that we know these things, for, according to the teaching of Christ Jesus, this *knowing* constitutes eternal life.

In our giving of thanks for this truth, which is each day revealing to us new possibilities, we recall the days when we did *not* know, when in our own suffering, or by bedsides of pain, we knew not how to apply the healing truth with which the Bible is filled; and so, when we express our gratitude to our loving Father, we can but think upon the one through whom has come to us that which we to-day count our richest blessing,—the understanding of divine Truth. It is because of Christian Science that we are now healthy, happy, and contented citizens, and we assuredly owe it to Christian Science to be, like our Leader, pure patriots, loving and living the righteousness which "exalteth a nation." ANNIE M. KNOTT.

Letters to our Leader.

Foxcroft, Maine, October 27, 1905.

Rev. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Dear Leader:—First Church of Christ, Scientist, Dover and Foxcroft, Maine, has a membership of seventeen. June 18, 1904, it was voted to send to The Mother Church Building Fund, the amount, although it was not large, which we had saved toward building a church. It was also voted to apply the collections of the first Sunday of each month to the same purpose. This was done until January 1, 1905. At that time it was deemed wise to increase the salary of our Readers, and owing to this additional expense it was decided to discontinue sending the collections of the first Sunday of each month, but that the Directors should send from time to time any surplus remaining in the treasury after the expenses had been paid. For the six months following not one dollar was sent, and at the end of that time there was a deficit in the treasury of $32.64. This was at once contributed at an informal meeting of the church. At the next meeting of the Directors it was voted to again apply the "First Sunday" collections to The Mother Church Building Fund, and to continue to do so until the building was completed. Since that time our collections have increased and we have had ample funds to meet all regular expenses, also some unusual ones, such as printing church by-laws. We have sent to The Mother Church Building Fund $1,054.70. This includes the amount of the collection taken July 2, 1905, three hundred dollars, when several who were intending to attend the Communion service in Boston, had the privilege of contributing this offering of love instead.

We certainly have proven the statement, "Science and Health," p. 79, l. 31, and the words of our Hymnal, "True, the heart grows rich in giving." Thinking it would please you to know of our demonstration over limitation, and trusting that it may help others, is the reason for this letter. Yours gratefully and lovingly,

O. H. BRAGG, *Clerk.*

Concord, N. H., November 1, 1905.

Rev. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Dearest Teacher and Leader:—I have essayed to claim this day and to-morrow as my opportunity, in connection

Digitized by Google

with attendance upon the recent annual meeting of the General Association of Teachers in New York City, to visit your home city. I felt that I wanted to look upon the scenes here that are so dear to every Christian Scientist's heart. It was indeed a rare privilege to enter and view the beautiful temple here that you have given these dear people in which to worship God aright, and to proclaim the mighty message of Truth so signally received by your discerning consciousness. Certainly such a tabernacle and gift speak to those who would follow in your footsteps of a devotion, a sacrifice, and a love for humanity which must endure forever!

Then just this brief word to tell you so and of the inspiration of your life to me, and that because of this visit I shall return to my lecture work in the distant West with renewed consecration and greater courage and joy.

Believe me your loving student,

CLARENCE C. EATON.

[Telegram.]

Boston, Mass., November 11, 1905.

To Rev. Mary Baker G. Eddy, Pleasant View.

Beloved Leader:—We, the students of the association of Eldora O. Gragg, in annual meeting assembled, desire to express to you our deepest gratitude and love. We thank our heavenly Father for His wonderful gift to His children, in you, our dear Teacher, Friend, and Guide. In following your teaching and the example of your life, we know that we follow the teachings of Christ Jesus, and shall manifest in our lives the charity which suffereth long and is kind, and the love which heals the sick and reforms the sinning. Through your teaching, incurable disease is fast losing its claim to power, and in its place we find with practical certainty that He healeth all our diseases. With grateful hearts we press on.

Lovingly yours,

ELDORA O. GRAGG, for the Association.

Boston, Mass., September 23 1905.

Rev. Mary Baker G. Eddy, Concord, N. H.

Dear Leader:—I thank you with all my heart for your article on "Watching *versus* Watching Out," dated Pleasant View, Concord, N. H., September 18, 1905. This is my first real glimpse of the true "watch." A man who purchased at the Reading Room in Boston the *Sentinel* containing your article, returned in about an hour and bought a copy of your book, Science and Health. He had discovered, as he put it, through reading "Watching *versus* Watching Out," that in the belief that he could not afford Science and Health he had been watching error instead of truth.

This concise and compact article is a masterpiece, and I shall study it with profit for a long time.

Gratefully your student's student,

LOUIS N. BENNETT.

Concord, N. H., October 8, 1905.

Dear Mrs. Eddy:—I suppose you will be surprised to have these few lines from me, but I feel so grateful for your kindness to the poor children every year, in giving them shoes, that I thought I would send you a note of thanks. I have four little children, and being a widow, I have to work hard for them. I do find the shoes come in very handy every year. My little children would not have any to wear now but for your kindness in giving them away. I have had very hard times this last summer. I hope I shall not offend in writing you this note of thanks, as you do not know me, but I am a decent, hard working woman, and I thank you with a heart brimming over with gratitude to you. I remain your humble servant,

MARTHA J. POLLARD.

Testimonies of Healing.

Twice lately I have had a return of an old complaint, which had recurred at intervals for thirteen years. It usually began with a sense that something had given way in my back, which grew stiffer and stiffer, until I could only use it with difficulty and in some movements with pain, while there was the ever-present suggestion, Take care, or you will strain it more. Before I came into Christian Science, when the strain occurred, I used to be laid up for a week or ten days at a time, and even after it appeared to be more or less cured, I could feel it for a long time. I had to be careful when lifting anything heavy, and wore a broad stiff belt when playing polo. I thought I had got over it completely, as it had not appeared since I was first treated for various diseases by a Christian Scientist three and one half years ago. However, the old complaint appeared some four months ago, when we were getting ready for a journey, so that I did not seem to have the opportunity or indeed inclination to fight the ailment at once, through Christian Science. It accordingly took some days to defeat it entirely, though it did not trouble me much after the first day or so, when my back was stiff and painful. I carried out my plan for the journey, which included four days' ride on horseback.

Again, about six weeks ago, when shooting on the Rifle Range, the same old trouble appeared. As I was in charge of the range I had no opportunity to work against the strain at once, and indeed I remember bending about to see if my back was getting stiff (as of course it did) instead of resolutely denying it. However, when I had finished range practice I worked hard against it, and read our textbook, Science and Health by Mrs. Eddy. I carried out my various duties, and also played golf, but by bedtime my back was stiff and painful, to sense. I could not lie in bed with comfort, and I only moved with pain, but I continued working against it and declaring the truth. I went to sleep, and woke up in the morning very much better and with no pain except when I used the muscle which appeared to be hurt, and in two or three days my back was quite normal and has continued so. I carried on my usual work and played games throughout. I must add that I used no artificial support in the way of belts, no liniments, and no medicine but Mind.

Last July, when traveling by sea between Madras and Rangoon, our little girl had a high fever and was delirious. I treated her as well as I knew how, chiefly by realizing the truth and by repeating the Lord's Prayer, with our Leader's spiritual interpretation, and the scientific statement of being. (Science and Health, pp. 16, 17, and 468.) She fell asleep, but woke up delirious several times during the night. Each time I treated her and she fell asleep again. In the morning she was well, but for a slight feverishness which soon passed off. She had no material medicine. On another occasion, when she complained of a headache and was crying with pain, I took her and tried to realize that God's child could not suffer. She fell asleep in less than five minutes and complained no more when she awoke. I remember then wondering how I ever again could doubt God's love and power.—MAJOR B. TRYDELL, Burma, India.

The first benefit I received from Christian Science was in 1900, when I was cured of a severe stomach trouble and bad cough. I had never been strong, having had repeated attacks of lung fever and grip until my physician told me that my lungs were affected and that I could never be well. At the time of beginning treatment, I had been in bed almost three months, with stomach trouble and what we then thought was appendicitis. I could not take any solid food without intense suffering, was living upon a very limited diet, and was in constant fear of pain. A lady who

Digitized by Google

visited me had heard of Christian Science, and suggested that I try it, but I told her that I did not believe in faith cures and thought no more about it until I met a Scientist who told me that my stomach trouble and cough could be healed. She asked me what I knew of Christian Science or against it, and knowing nothing about it I could make no argument against it, so I began treatment, with no expectation of being benefited. The practitioner asked me if I believed in the Bible, which I thought that I did, being a member of an orthodox church. She then asked me if I accepted the life of Christ Jesus as an example to us, and if I did not believe that the sick should be healed now, for Christ expressly commanded that we should "Heal the sick, cleanse the lepers, raise the dead."

After these questions I began to look more closely into the Bible, and to see that what Christ had done for others could be done for me. I was told that I should take no thought of what I ate, and to partake of food without fear, which I did, and rapidly regained my health and strength. I am very grateful to Christian Science, and to the noble woman who has so fearlessly upheld the banner of Truth. Besides the physical benefit, I am striving to overcome all sense of unhappiness and financial embarrassment. I try to remember that God is Mind and is not limited, and that God is Love.—MARGARET KEPHART, Atlanta, Ill.

I desire to make a public acknowledgment of the benefits I have received through Christian Science. I was so great a sufferer, for four years, through severe hemorrhage of the stomach and the general breakdown which followed, that I looked upon death as the only avenue of escape from the unspeakable miseries I endured. I had numerous doctors in Europe, as well as here, but they could only afford me temporary relief. About the time that I had reached the limit of suffering, a friend persuaded me to try Christian Science, and being about ready to grasp at any hope of relief held out to me, I put myself under treatment, though without much hope. I was healed in a day, and since that time I have been practically well. Surely this is much to be thankful for, but the great change it has made in my thought of God, and the illumination it has thrown upon the Bible, calls for a gratitude greater than words can express,—gratitude to God, and to the grand, brave woman who has so fearlessly proclaimed the truth in the face of so much criticism.

ELLEN S. BEALL, New York, N. Y.

When I reached the St. Louis Exposition, in May, 1904, from South America, I knew nothing whatever of Christian Science. I was then anticipating two operations, one for cancer in my right breast and another for an abnormal growth in the abdomen. The lady with whom I stopped had received help through this truth, and she advised me to try it for my troubles. The excitement of getting our exhibit in proper shape, and numerous disappointments, had brought on great nervousness and neuralgia of the face.

My friend told me of a Christian Science practitioner in Denver, and I wrote to him for help. The pains in my face were overcome almost immediately and in less than three months the cancer was cured. Shortly afterwards the unnatural growth in the abdomen disappeared, as did also the nausea caused by it. The practitioner and his wife wrote me most helpful letters, telling me of the healing power of Truth, which had been revealed to Mrs. Eddy through her pureness of heart, and of the Science which she had given to the world.

I have passed through deep waters in business and financial matters, and my daily comfort has been Christian Science. My desire is to continue to advance step by step, and to be obedient to all our dear Leader's teachings. I am very grateful to my heavenly Father, and to Mrs. Eddy for the blessings received through Christian Science. I feel that divine Love led me to the United States, where I have learned that God is all-powerful and ever-present and that He never fails us.—ALICE JACOBSEN, Brooklyn, N. Y.

My earnest desire for many years was for a better understanding of God than I was able to find in the orthodox church. I loved the church, and never listened to a sermon without getting much good from it. I had on one occasion, several years before knowing of Christian Science, gone through such a severe trial that none but an unseen power could give me help. I called so earnestly for my heavenly Father to manifest himself to me, that the answer to my prayer was an almost overwhelming sense of the presence of divine Love. This completely destroyed all sense of grief, as light dispels darkness, and the consciousness of God's presence was as real to me as that of my earthly friends around me. From that time I studied the Scriptures to know more of Him, and when, many years after, I had become almost discouraged, thinking that there was no more for me to learn this side of the grave, Christian Science was presented to me. I grasped its teaching as eagerly as one who is thirsty takes in a cooling draught of water. It was what I had been seeking, and a new world opened up to me, both physically and spiritually. Now I had found something to do, and a given rule whereby I could work out life's problem and prove divine Principle to be an ever-present help in all times of trouble.

How glad I am for this knowledge of Christ, Truth; my heart is full of gratitude every time I think of it. I want to express my gratitude to the dear ones in the Field for the many helpful things they are continually giving us, cheering us and helping to clear the way for others by relating their experiences in overcoming error. Above all, I want to express my love and gratitude to dear Mrs. Eddy, for her courage and loyalty in bringing this blessed revelation of Truth to hearts in great need of it. May she continue to reflect this precious knowledge of the Father, until all shall know Him from the greatest to the least, and may His choicest blessings rest upon her.

EVA C. FISHER, Miami, Fla.

An early experience lingers in thought as a beacon-light, radiating peace, and an assurance of God as omnipresent in time of need. We had been interested in Christian Science but a short time when my husband was taken with an ailment that did not yield at once to treatment. After a time our finances began to dwindle, and we were forced to prove that the true source of supply is spiritual, not material. Up to this time we had supposed we were provided for in any emergency, as my husband belonged to a benefit order which paid a liberal sick benefit, also to a benevolent order that furnished whatever was needed in the home of a disabled brother. There were, however, several reasons why we did not wish to call on either of these organizations. We were learning to trust God for healing, and to do otherwise now seemed like disobedience to the first commandment. We turned to a gentleman to whom we had loaned a sum of money, asking that the interest, then overdue, be sent as soon as convenient. He pleaded reverses in business, and was unable to meet the demand. Friends who were able and would have been glad to help us, knew nothing of this method of healing and would have thought it very wrong to trust a case of this kind outside of *materia medica*. The practitioner had said that much depended upon my living up to my highest sense of right, that the balance might not be thrown on the wrong side, but she knew nothing of this part of the problem. The rent had consumed a good deal of our ready money and was nearly due again. If paid it would deplete our home treasury.

Well do I remember the morning we found ourselves for the first time face to face with the financial question. Taking the Bible and Science and Health, I sat down by my husband's bedside to talk the matter over. The first chapter

Digitized by Google

of Joshua was very helpful to us, and many pages of our text-book encouraged us to trust wholly to divine Mind. We decided that it was no more wonderful for God to supply our need than to heal, and we were trusting to Him for that. After reasoning along this line, things looked brighter and a sense of peace came into our home. After our reading this morning, I went out on an errand and met our landlord. He asked after my husband, then said if it were not convenient for us to pay our rent at once, we could wait until my husband got to work. I thanked him heartily, and hastened home to tell my husband that I had a sure proof God was caring for us. So the days went by; the manna fell, and every need was met.

One day, as I was going out, I asked what I should bring home to eat. My husband said, "Not very much, according to the size of the pocket-book." I answered, "You forget that we are drawing from the treasury of divine Love, where there is enough and to spare." We had reached our last dollar, however, and were walking by faith rather than sight, wondering what the next turn would reveal of divine care. I had not long to wait, for on my return home I was surprised to find that my husband had left his couch and was writing at the desk. I saw at once that a great change had taken place for the better, and soon learned that the interest money had come in my absence. The improvement was most rapid after this; all our bills were met and the usual amount of cash was on hand when my husband returned to his work, which he was soon able to do. We withdrew at once from every organization and for several years have trusted wholly to Truth. When the by-law came out,—"Church Organizations Ample,"—we felt that its fitness had been proven in our home, for Christian Science has taught us how to work out all our problems by the understanding of divine Principle.

Our dear Leader's life is a monument of steadfastness, for which our hearts overflow with ever-increasing gratitude.

ADDIE T. ARNOLD, Roxbury, Mass.

Like many others, I came to Christian Science in search of help from physical suffering. For years I had tried to gain and ensure health by a careful application of the rules laid down by leading authorities on diet, hygiene, physical culture, and hydropathic treatment, and yet I was a constant victim of dyspepsia, rheumatism, and catarrhal colds. For eight sucessive winters I suffered from attacks of the worst type of influenza, which so shattered my nerves that I became a prey to violent outbursts of temper, and was readily influenced by the event of the hour. I was in turn hopeful or despondent, as the circumstance inclined me. Happily a relative, who was a Christian Scientist, knowing my need, suggested that I try Christian Science, and gave me a few of the periodicals to read. I found in them so much which appealed to me, that I wanted to know more, and I purchased the text-book, Science and Health, the reading of which brought me much help. Meantime I had given up all material remedies, and with the little knowledge I had gained, tried to follow implicitly the teaching of Christian Science. Just at this period I had a recurrent attack of influenza, and after trying ineffectually to overcome it I wrote to one of our practitioners for absent treatment. The result was instantaneous relief from the ailment, and I have not had an attack since. This experience, coming so soon after my first acquaintance with Christian Science, made a deep impression on me. From that time I became more earnest in my reading, and have been able to overcome the fear and troubles which for so long had held me in seeming bondage.

My joy for the deliverance has been great, for I had come to look upon my ailments as inseparable from my human experience; but the gain of freedom in this respect is small compared with the freedom brought to me by having learned to overcome the fear, the cares, and the worries ordinarily accounted inseparable from business. At first I was slow to apply the Christian Science teaching, as I looked upon business affairs at that time as altogether outside the range of Christian Science, but occasion came when I was in extreme need of help, and I was led to make my first demonstration, and like the first treatment for my physical need, the appeal to Truth was instantly effective. Since then I have learned to rely constantly upon Christian Science, to see how the truth may be applied to every circumstance in business life, and the harmony I now enjoy no words can adequately express, for now I am free and know no dominion but that of divine Love.

My gratitude to Mrs. Eddy deepens day by day, as I grow to a fuller understanding of the priceless blessings she has opened up to all by her discovery of Christian Science, and by her ceaseless labor of love in unfolding its treasures so that each one who will may come into the full fruits of her labor and self-sacrifice. I pray that my gratitude may find a full expression in my emulation of her loving, selfless life.—WILLIAM ROYLE, Manchester, England.

Before coming into the knowledge of Christian Science, I found that the time spent on the street car four times a day did me more harm than good. If I was worried or in a hurry, as was usually the case, I would arrive at my destination actually tired from the nervous strain and often car-sick. Now it is far different. I joyfully look forward to the twenty-minute ride as moments of rest, and as an opportunity for reading the *Sentinel* and *Journal*. In fact it is the only time I have to read them, as I am employed during the day and the Lesson-Sermon and the daily portion of the Bible and Science and Health which I have laid out for myself evenings, consume all the time I have been able to set aside for reading. When I find myself on the car without my helpful reading matter, I bring from the storehouse of memory some of the beautiful truths I have read, and thus dwelling "in atmosphere of love divine," I am daily learning how to enjoy my birthright of freedom, health, and happiness.

To say that I am grateful is not sufficient. I realize that Christian Scientists must prove their gratitude by their actions, so I am endeavoring to be more useful and helpful, and to reflect more love each day.

LOIS E. BOUCHER, Los Angeles, Cal.

A short time before Christmas I had a very peculiar experience. At that time I was living alone over a store and had gone down on a lower roof to empty a large boiler of water which was resting on a jar. I attempted to slip the jar out and let the boiler down gradually to the roof, but instead it slipped off the jar with a quick jerk, throwing the whole weight suddenly on my arms and back, and I, being under the stairway and bent over to one side, could not stop it. As the sudden strain came, something in my back gave way, and everything became black before me. As I felt myself falling, I grasped at the stairs and declared the truth. As I did so, I was able to get out from under the stairs to the platform and cling to a post. By this time I had grown very faint, but I declared over and over that God was my strength, and I finally got up the seven steps to the platform above and walked the entire length of that hundred-foot building to my rooms. I then sent for our First Reader, and as soon as he began treating me I was able to lean back in my chair. He worked for me twenty or thirty minutes and I was by that time much better. This was at nine o'clock Tuesday morning, and after he left I took my books and went over the Lesson-Sermon. I then had such a realization of the omniscience and omnipotence of God that in two hours after the accident I was able to walk nearly three blocks to the post-office. When I came home it seemed as if I could never get up that long flight of steps, but I realized that Mind, not matter, lifts the body, and governs it; then I walked up those stairs

Digitized by Google

as though there had been no accident. It was midnight before I was able to retire that night, for there was a fear that if I were to lie down I might not be able to get up again, but I overcame it all and went to bed, sleeping until morning. On waking, how grateful I was to God,—how thankful that He took care of me. I was able to carry water and coal up the stairs, and did all my housework. Wednesday morning, when I had finished going over the Lesson, I leaned forward to rest my head on the table, and as I did so I felt something snap as the bones in my back slipped into place again.

My heart goes out with love and gratitude to God, and to our beloved Leader, who has given to the world this blessed truth which makes free. I am thankful for all Mrs. Eddy's works, for the *Sentinel*, the *Journal*, and *Quarterly*.—MRS. JEANNETTE E. SPURCK, Winfield, Kan.

[Translation.]

Der Herold der Christian Science is a great help and joy to me in my study of the German language, a study which I commenced since its publication. I therefore desire to express my gratitude for the blessings which Christian Science has brought to me. For several years I suffered with a weeping sinew on my right wrist, which caused me much trouble in my work as a stenographer. At times it seemed better and then again worse, and on different occasions I went to Christian Science practitioners for treatment, but noticed no improvement. A year ago last summer I went with two friends to the mountains to spend my vacation, and the day after our arrival I fell downstairs and sprained both ankles. I worked in Christian Science from four until eight o'clock as earnestly as I knew how, but could not realize my dominion as a child of God. I tried to know that there are no accidents in Truth,—yet to all appearance I received no benefit; both feet were swollen and I was unable to stand without great pain. I felt that I must not go to bed before I realized some improvement and I did not wish to mar my friends' pleasure nor my own. I took up a copy of the *Sentinel*, hoping to find something that would help me. I turned to a short article and read just the words that met my need, and I went peacefully to bed with the assurance that our "labor is not in vain in the Lord." The next morning there was no swelling and I was able to walk down-stairs for breakfast. The third day all ill effects had disappeared, except the discoloration, and I took a walk of several miles over rough roads and fields. After I fell the swelling on my wrist disappeared immediately, and for the last fourteen months there has been no trace of it.

How important is this revelation of divine Truth to the world; through the understanding gained in Christian Science we may experience the joy of overcoming all evil.

EVA J. COX, Boston, Mass.

It has been over two and a half years since we began to rely upon Mind instead of matter. We had tried everything in the way of medicine to cure our little daughter of catarrh of the stomach. The different doctors whom we employed said she must not eat anything either sweet or sour, as so doing would cause large hives to come out all over her body, and we were in despair when we decided to have Christian Science treatment. We called a practitioner, and to our astonishment our little girl was healed in three treatments and was able to eat anything she wished with no ill effects. Since then we have had many beautiful demonstrations of God's power to destroy all forms of error in our family, such as chronic liver complaint, croup, constipation, and catarrh of the appendix. My mother was healed also of gall stones. My baby girl was born under Christian Science treatment, which was another beautiful lesson to us of God's love. At this time I was up the third day and took charge of my household duties on the seventh day. Our baby is the picture of health and a genuine little Scientist. Every mother ought to be a Christian Scientist, as it takes away fear and leaves a sense of Love's power in its stead. To take away our small knowledge of Christian Science would leave us in utter darkness, as we are constantly using our dear Leader's teachings, with the Bible.—MRS. J. H. WISE, Ashland, Ore.

Fourteen years ago I was healed of what the doctors called consumption. I was so weak that I could not go up-stairs without resting on the way. I know it was Truth alone that healed me. I have not taken one drop of medicine in fourteen years, and in that time many other ailments have been overcome. I feel thankful to God for this truth, also to Mrs. Eddy. Christian Science has given to the world the whole garment, without seam or rent. I am thankful for all Mrs. Eddy's works, especially "Science and Health with Key to the Scriptures," and the *Sentinel* is like a message of Love to me each week. I try each day to be more worthy to be called a follower of Truth.

MRS. LOLA MESSACAR, Kingsville, Ont.

I wish to express my gratitude to God, and to our Leader, for the many blessings that have come to me and my family through the study of Christian Science. I came to this Science for the healing of several diseases, among which were lung trouble and heart disease. My healing did not come at once, but it is possible that if I had realized an immediate recovery I would have been like the nine lepers whom Jesus healed. I can truthfully say to those who are wrestling with sense and self as I was, that Christian Science is the only way out of this condition into health and happiness. All that I am, I owe to Christian Science.—GEORGE W. NICCUM, Anderson, Ind.

It is five years since I began the study of Christian Science. I have seen stomach trouble and rheumatism disappear before the truth. My wife had a slight stroke of paralysis, but was healed in ten days. She was also healed of congestive chills and other troubles in three weeks. For the most part we have relied on our own understanding. There are only three of us here, and we have no opportunity to attend church. The Bible has become a new book to us, and God is a different God from what we used to think Him. May all praise be given to His name.

JASPER L. VAUGHAN, Mio, Mich.

I began reading Science and Health a little over three years ago. I had tried all kinds of medicine and received no help. I could not walk over two blocks without stopping to rest, I was so weak. Now I can work at anything I wish to do; I am working on the railroad at all kinds of hard labor and I do not get tired. I feel twenty years younger than I used to, and I am praising God for such health. The Bible is a new book to me now. Thanks be to God.—W. M. GOODBODY, Chanute, Kan.

I have been reading Science and Health for five or six years. I have been healed of several diseases, and have had some beautiful demonstrations. I hope to live such a life that I can be able to help others. I am thankful to God, and to Mrs. Eddy for the truth taught in Science and Health, also for the many helps of the *Sentinel* and *Journal*.

MRS. MARY S. BURKS, Midlothian, Tex.

Each man finds his highest spiritual development, not by working out his own salvation alone and for himself, but by losing the thought of self in the thought of others. This is the Christian life; this is the faith by which men are saved.—PRESIDENT HADLEY of Yale University.

From our Exchanges.

You take a wire and stretch it on a frame and attune it to some given note, and let it stand there silent in the air. Then go to the piano, strike the full chord of the note loud and strong. Lifting your hand, the piano is silent, but the wire that no one touched is singing, singing its own note, the song which was latent when you strung it to that pitch. That is what God does with us. That is what environment does with humanity. The note of the great life is in us, but it is not singing until God plays about us on every side the great full chord which is our environment. Then, if we will, we may become responsive, may vibrate with the song of larger living, of serener strength, of a more splendid quiet. The great eager life which is the keynote of God all through the world, awakes in us at the challenge of circumstance. Then we lay hold of God, make God about us that to which God within us responds.

REV. W. HANSON PULSFORD.
The Christian Register.

Given a man receptive, deeply receptive, inwardly free, and the Word of the kingdom will prove its power and reveal its divinity by its divine effect on the experience and life of the man. Given a man unreceptive, superficially receptive, inwardly cumbered by fettering rival growths, and the effect of the Word will fail to be commensurate with its potency. The message is to be judged not by its unfruitfulness in the inhospitable soul, but by the quality of its fruitage in the soul that is thoroughly open to it. The reign of God gives no guaranty of efficacy when the Word of God comes to unreceptive souls. REV. THOMAS C. STRAUS.
The Homiletic Review.

There are four written Gospels. The fifth is writing now. The world may forget the four, and the leaves of the book may never be turned, but the fifth Gospel men are sure to read. That fifth Gospel is your life of Christ; that is, your life in Christ. Men may forget Christ; they never forget the Christian. Christ lives in heaven and on earth. The world's dull eyes have never gazed upon his heavenly glory, but they are looking eagerly for him on earth. Christ in men is the most powerful preaching. The world has had many lives of Christ. Each Christian is writing his own, and the very children read it. We are either revealing or veiling Christ to men.—*Selected.*

What our churches need, and what all churches need, is to place the passion for the doing of God's good will toward every person so clearly in the foreground of our religious life that all teachings that are true and all institutions that are useful shall stand transparent in its radiant light, and all that is incredible in ancient creeds and untenable in current tenets may be consumed by its fervent heat.

PRES. WILLIAM DE WITT HYDE.
The Outlook.

The reason for Christian union in Christian work is simple. The schism which divides the Christian people into competing bands is a deadly sin. The body of Christ is rent and maimed by these divisions; the Church is crippled and enfeebled. We ought to repent of this sin and do works meet for repentance. REV. WASHINGTON GLADDEN.
The Congregationalist.

The perfect life gives force to the exalted truth. Every faithful disciple contributes to the ever broadening and deepening current of spiritualizing influence that eventually is to spread over the whole earth as the waters cover the sea.—*The Universalist Leader.*

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to The Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of The Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to The Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number, or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By the Hon. WILLIAM G. EWING of Chicago, Ill.

CHRISTIAN SCIENCE. Its Worth and Work. By Rev. ARTHUR R. VOSBURGH of Rochester, N. Y.

Written by Rev. MARY BAKER G. EDDY

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Enlarged and Revised, 1902. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid $3 18

Two to twelve books (cloth only) to one address, each, prepaid 3 00
Twelve or more books to one address, each, prepaid 2 75

Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid 4 00
Twelve or more to one address, each, prepaid . . . 3 75

Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid . . 5 00
Twelve or more to one address, each, prepaid . . . 4 75

Levant, divinity circuit, leather-lined, round corners, gilt edges, silk-sewed, heavy Oxford India Bible Paper, wide margins, each, prepaid 6 00
Twelve or more to one address, each, prepaid . . . 5 75

Orders for Science and Health, in lots of twelve or more to one address, may include any or all the different styles of binding.

A COMPLETE CONCORDANCE to Science and Health with Key to the Scriptures, 595 pp., 10 x 7. Bound in cloth, marbled edges. Price, single copy, prepaid . . $5 00
Twelve or more copies to one address, each . . . 4 50

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth), each, prepaid 2 25
Twelve or more books to one address, each, prepaid 2 00

Morocco, limp, round corners, gilt edges, convenient for pocket, each, prepaid 4 00
Twelve or more to one address, each, prepaid . . . 3 75

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5 00
Twelve or more to one address, each, prepaid . . . 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* **PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

Political and Governmental Notes.

The United States auxiliary cruiser Yosemite was wrecked on November 15 as the result of a typhoon which swept over the island of Guam two days previously. After her cables had parted, on the 13th, she drifted on a reef near the harbor of San Luis d'Apra, and stove in her bottom. Five of the crew were lost; the rest were transferred to the collier Justin. The typhoon wrecked thousands of houses, among them being the headquarters of Governor Schroeder. The towns of Indrajan and Terrafero were swept away, and it is estimated that hundreds of the native population in various parts of the island met their death. The cocoanut crops were rendered absolutely worthless and the vegetation of the island was killed by salt water.

Congress met on December 3 for the beginning of the short session. On December 3 the President's message was received. The leading Republicans of both houses have been conferring with one another and with the President and members of his Cabinet ever since election concerning legislation to be put through during the short term. Senator Allison, chairman of the committee on appropriations, says there are three measures which must pass during the present session. They are the appropriation bills, an army reorganization bill, and a reapportionment bill. Under present statutes the volunteer army will be disbanded next July, leaving a regular army of only about twenty-seven thousand.

The largest stock of gold coin and bullion ever held in the United States is now accumulated in the treasury and its branches. The total has been rising steadily during the present year, and the amount is now $474,108,336, or about $76,000,000 greater than at the close of 1899. The increase up to June 30 was about $23,000,000, but since that time has been about $1,000,000 for July, $6,000,000 for August, $10,000,000 for September, $18,000,000 for October, and $17,000,000 in November.

Signor Marconi's proposition to flash messages without wires between Europe and America may prevent the passage of the bill for a Pacific cable. Chairman Hepburn of the House committee on interstate and foreign commerce, who reported a Pacific cable bill in the last session of Congress, said recently: "What is the use of putting $15,000,000 or $20,000,000 under the ocean in a cable plant, if an invention has been perfected that will render all submarine cables useless?"

Civil Service Commissioner Proctor has formulated a plan for educating large numbers of the brightest Filipino boys in American colleges. Fifty colleges, including four or five in Pennsylvania and several in New England, have agreed to accept Filipino students under the plan proposed, and four of the fifty colleges have agreed to defray the expenses of the young Filipinos who come to them. The others have offered exceptionably favorable terms.

Secretary Long received, on November 30, from the Carnegie Company and the Bethlehem Company signed contracts to deliver eighteen thousand tons each of armor plate for eight battleships and six armored cruisers to be finished during the next few years, the total amount to be divided by the two companies being $160,300,000. The contract is unprecedented in terms and extent.

Foreign News

Under date of November 28, Lord Roberts cabled from Johannesburg that the British garrison of four hundred men at Dewetsdorp was compelled to surrender on November 23 to a force of twenty-five hundred Boers, after severe losses. The Boers have been very active lately, carrying on operations on a small scale, but so successfully as to cause uneasiness in the minds of the British public because it was confidently believed quite generally that the Boers were too badly beaten to muster any considerable forces in the field. The War Office in London announced on November 30 that Lord Roberts had handed over the command of the British troops in South Africa to Lord Kitchener on the previous day.

Japan will shortly be the strongest naval power in the far East. Three new warships have lately arrived from England, France, and Germany, and the Hatsuse is expected from England. In mere tonnage alone the four new vessels surpass the total tonnage of the eleven Japanese or the twelve Chinese ships that were present at the great sea fight in the Yellow Sea. In case of hostilities the Japanese could now put eight vessels in the line of battle, and these would be more than a match for the combined forces of any two powers in the far East.

A news telephone service has been established at Budapest, the object of the scheme being to supply subscribers with reports of all the important occurrences which are ordinarily chronicled in the daily papers. The service has a main line one hundred and sixty-eight miles in length, and is connected with private houses and various public resorts. Between 7.30 A.M. and 9.30 P.M. twenty-eight editions of news are spoken into the transmitter by ten individuals, who work in shifts of two.

During Mr. Kruger's stay in Paris last week he called on the prime minister, who returned his call, and both chambers of the national legislature passed resolutions of sympathy with the Boers. He was treated with marked respect by both officials and citizens. He went to Cologne, Germany, December 1, and from there intended to go to Berlin, but he received an intimation that Emperor William would not receive him and decided to go direct to Holland.

M. Yermoloff, Russian Minister of Agriculture, estimates that the coal deposits recently discovered on the Black Sea coast, in the government of Kutais, will yield 1,640,000 tons annually for sixty years. He considers the quality excellent.

The Chinese problem took on a more favorable phase last week, by the general acceptance of the American view as expressed in a note to the powers, that the demands on China should be moderated.

Japan is to have an international exposition in 1902.

Industry and Commerce.

More failures in proportion to the number engaged are to be found in the history of the packing interests of Chicago during the last thirty years than in any other line of commercial activity. There are but nine active plants left out of sixty-three that were in existence prior to and established after the big fire. The tendency of business in the stock yards has been toward a consolidation. During the last ten years the greatest changes have taken place in the packing interests. It has been the era of the rise of the "big four"—two of whose constituent members had no existence prior to 1890.

Since the public quotation of the Pittsburg Stock Exchange for Carnegie stock, recently, there has been considerable guessing as to Andrew Carnegie's wealth. The quotation was $1,500 a share and no sales were made. The capital stock of the company is $160,000,000, with the same amount of bonds. Mr. Carnegie holds five-eighths of the total issue of each. If the offer of $1,500 a share establishes the market price, the stock is worth $129,568,500. The bonds would probably sell at 110. This would make Mr. Carnegie's holdings worth $95,016,900.

"Along the high voltage transmission line running from Provo, Utah, to Tintic, the 'salt storms' from the plains often produce remarkable electrical displays," says the *Western Electrician*. "On account of the moisture in the air and the thick covering of the poles with salt, powerful discharges occur at frequent intervals; short circuits are momentarily caused, the lights dip, and sometimes the operation of the motors is interfered with. These discharges are usually of dazzling brilliancy, and at times startling."

An American railway man, who was recently in Europe, reports that a new railway is being built in Northern Sweden under the Arctic Circle. He says there have been discoveries of extensive iron ore deposits in that region, and the new road, which now extends two hundred and fifty miles from the iron range to the Baltic, is designed to enable the ore to be shipped to Atlantic tide-water.

General News.

Negroes the country over have been invited to assist in the organization and incorporation of the West African Trading Company, which, it is proposed, shall operate a steamship line between Philadelphia and Liberia. Rev. William H. Heard, former United States consul-general at Liberia, is at the head of the movement, which also has the support of leading colored men of Philadelphia, New York, New Jersey, and Georgia. A meeting has been called for January 10, 1901, at which time the stockholders will meet to elect permanent officers and decide upon the time to commence business as importers of rubber, coffee, ginger, palm oil, palm kernels, hides, and cocoa.

In a lecture before the New England Women's Press Association in Boston, Gerald Stanley Lee of Smith College recently said: "Men cannot write inspired things without living inspired lives. This disease of self-support is on almost every face one meets in our daily walk. If the demands of personal appearance were less, greater personalities would be developed and the world would know more great souls than it does. From an economic standpoint, there are towns in Europe whose entire living is made out of some famous artist's name, who lived there in seclusion centuries before."

John A. Johnson, a manufacturer of Madison, Wis., has offered forty thousand dollars to the Board of Supervisors of Dane County, Wis., for the purpose of erecting and maintaining a home for aged people. In addition to the regular method of entering the home, by the payment of not less than two hundred dollars, Mr. Johnson has conceived the idea of issuing admission policies similar to insurance policies, which may be taken out by people in youth or middle age, to provide for their support and comfort in old age, or which may be taken out by any one for the support of a friend.

Indians' Queer Ways.

Their Primitive Life in British Columbia.

WHEN a new Longfellow arises western America will constitute his Arcadia. Folk lore a-plenty, traditions the most far-reaching, relics, and sombre reminders of ancient glory and greatness abound in the extreme Northwest.

During the last three years the American Museum of Natural History has conducted extensive investigations among the native tribes of the Pacific coast. The valleys of the high mountains are inhabited by an endless number of tribes, and hundreds of distinct languages are spoken.

It is a fascinating problem to unravel the history of the tribes inhabiting this region, and to trace the obscure origin of these tongues that are doomed to early extinction. Many a one that was spoken thirty or forty years ago by hundreds or thousands of individuals is now known only to a piteous remnant of a few souls. There are even languages which are now extinct, and others the knowledge of which is confined to a single living person.

For this reason the American Museum of Natural History has endeavored to contribute its share in the preservation of all that can be learned of the languages, habits, and industries of the early Indians, and it is largely through the munificence of Morris K. Jesup, president of the Museum, that it has been possible to carry on this work on a large scale.

In previous years much material has been collected in the state of Washington, in northern British Columbia, and in Alaska. The field work of last summer was directed toward a thorough investigation of the tribes of Vancouver Island.

Dr. Franz Boaz, who has been in charge of this work, has just returned from the Northwest. He prepared the following account of his trip for the *Boston Herald*:—

Early in June I reached the field of my operations, and renewed at once the acquaintance of my old friends, whom I had not seen for several years. Here we still see the Indian in quite primitive conditions.

He still lives in his old house, built of cedar planks, the front painted with designs which represent the crest of his family. The roof of his house is supported by heavy posts and enormous beams, some of which are more than five feet thick and forty feet long.

It is a most interesting scene to witness the raising of a house. The whole tribe assembles, invited by the man who intends to build, and the work is opened with a splendid feast. First the people are seated in the form of a square and the host steps to the middle and tells them about his plans. He praises the achievements of his ancestors in most bombastic phrases, speaking of them as the pillars of heaven, upon which rests the welfare of the world, as steep mountains from which rush down avalanches of wealth; their house he describes as the centre of the world, and themselves as the liberal supporters of every one who is in need.

The guests listen carefully to these boastful speeches, at the conclusion of which songs are sung. Dishes containing the food are then passed around, and at last the guests are ready to take up their work. By the combined efforts of all the men the beams are pushed upward on slanting posts leaned against the uprights of the house, until, after much shouting, pushing, and quarrelling, the heavy logs reach their final resting-place.

The manufacture of planks for the sides of houses used to be an important industry of these people. In early times, when they had no metal tools, they selected large cedar trees, and after climbing up some thirty feet, they chipped with their stone chisels a long transverse cut into the tree. A similar cut was made at the bottom, and then the planks were split from the living tree.

The houses are from thirty to forty feet square. Each corner is inhabited by one family, each having a fireplace of its own. Often the mother may be seen sitting next to the fire, and not far away we see the trunk of a small yew tree, with a stout branch attached to it, from which is suspended the cradle. The mother rocks the cradle by means of a cedar bark rope, which is tied to her toes. At the same time she occupies herself with preparing the meal, or with other household occupations.

In preparing food it must be carefully washed. It is seasoned with certain herbs. In smoking fish, great care is taken to keep it free from dust. Clams, which are dried and used as winter food, are put on long poles, which are made of the wood of a certain kind of raspberry, which is believed to give them a nice flavor. The length of time required for boiling certain kinds of roots is exactly determined; and in storing food for winter use great pains are taken to use boxes made of wood which will give a pleasant smell and taste to the provisions.

The Indians are also very particular in regard to their table manners. It is considered very inappropriate for a person of noble birth to eat hastily or to take large bites. The mouth must not be opened so that the teeth or tongue may be seen. Some water ought to be taken after each meal. On the other hand, it is considered presumption on the part of people of lower rank to imitate the table manners of the nobility. Such people ought to eat quickly. When invited they are expected to smack their lips in order to express their appreciation of the nice taste of the food offered to them, and they are expected to eat great quantities.

In the same way the Indians expect on the part of well-educated persons of noble rank a behavior different from that of other people. Girls belonging to the nobility, for instance, are expected to stay at home most of the time and to be industrious. They ought to know everything pertaining to housekeeping, so as to enable them to entertain their fathers' guests properly.

When going out they are expected to walk slowly and to take short steps. They must look down to the ground and not look about much.

Common people, on the other hand, are allowed all kinds

Digitized by Google

of freedom, and while girls are expected to become expert housekeepers and boys learn to be expert fishermen, the rules in regard to their behavior are not by any means so rigid as those enforced upon the nobility of the tribe.

Most of the people, particularly the older ones, have not adopted the white man's costume, but they still wear the blanket. On a sunny day, at a time when most of the people are at home, the street of a village presents a bright appearance. The houses all stand in a long row. Most of them are whitewashed, many painted with more or less elaborate designs.

In front of the houses stand high carved poles, showing the crest of the house owner. On top of some is carved a bird with spread wings; others are carved all over with human and animal figures, which represent a tradition referring to the origin of the family.

The street in front of the house is carefully levelled. A steep grade leads down to the beach, which is covered with canoes. These are cut out of trees.

Over the steep grade leading down to the beach are built a number of platforms surrounded by a low balustrade. These are the summer seats of the Indians, on which they spend most of their time. Here they squat down, wrapped in their gaudy colored blankets, and gossip about the events of the day. The children are playing on the beach, some are bathing, and their parents look down upon them and encourage them when they endeavor to learn to swim and to dive, or to manage the canoe. The younger people often assemble at one end of the village playing games.

One day I visited the site of an old village, now deserted. At the time of Vancouver's first visit to these regions, more than a hundred years ago, this site was inhabited. The famous navigator found here a small village, situated on the top of a hill, and surrounded by a high stockade. Warriors were detailed to watch the gates. I landed at the foot of the deserted hill and climbed up under the guidance of an old Indian.

Thus the old picture of the village which is preserved to us in the description of Vancouver's travels received new life by the tales of this old man. On the place that had been the street of the village I found a large granite boulder, showing a number of small, cuplike depressions. These were made at the time when the first guns reached the Indians. They used to buy copper from distant tribes and hammered bullets out of it in these small cups.

At this place empties a large river, which the salmon ascend every year. Late in the fall enormous numbers of dog salmon are found here, and during this season the Indians come from their villages all along the coast and camp on the banks of the swift river.

In the course of my investigations during the past summer I had to make a journey up this river, which rises in the interior of Vancouver Island. The glaciers of the steep mountains of the interior of the island feed a number of small rivers, which empty into a long, narrow lake. From the lower end of this lake the rapid river runs down into the sea. According to tradition, a tribe of Indians was located in early times on the small rivers in the interior of the country. Traditions tell of their encounters with the coast tribes and of their gradual descent to the sea.

It was with the intention of seeing the points that are mentioned in these traditions, and of examining a number of old village sites and fishing stations, that I made the ascent of the river. At high water the canoe reaches easily the foot of the lowest rapid, which is formed by a large island. Here the canoe is unloaded, and is pushed upward by the boatman, who stands in the water. The rapid is not very long. Just above it a deep pool is reached. Here the river cuts through a small ridge, forming a short, deep canon.

My companions pointed out to me, on the east side of the river, a long cave, in which the ancient inhabitants of this region used to bury their dead. On the opposite side, in the crevices of the rock, is an interesting place.

The Indian infant is embedded in a cradle made of wood, and is wrapped in bedding and cushions of soft cedar bark. As soon as the child leaves the cradle its wrappings are suspended from the rafters of the house. They are kept until the child is grown up and then carried to this place, where they are pushed into the crevices or deposited in baskets. This custom has been continued for generations, and every little crack in the rocks is filled up with the remains of infants' bedding.

When I was ascending the river the water was quite low, and in the canon it was smooth, but it is said that in times of high water the river runs impetuously through the gorge. After passing out of the canon the valley suddenly widens, and two small rocks are seen in the river. Behind these there is a little hill, forming a peninsula. This spot, which is about three miles from the sea, is one of the historical points around which innumerable traditions cluster.

It is said that in the beginning of the world the ancestor of the tribe whose home is on this river emerged from the bottom of the sea, standing on the back of a huge halibut. He built his house on this hill. After the posts were erected a large eagle descended from heaven, which placed the beam upon the posts. Then the eagle took off his eagle dress and became a man. These two heroes became the ancestors of the tribe.

In later times the t ibe waged war against the Indians who lived on the small island north of Vancouver Island. In one battle they were almost exterminated. But two brothers escaped to the woods, and by prayer and fasting obtained supernatural powers. The one was given an arrow. By pointing it at his enemies the owner was able to kill them. The other hero had his hands transformed into stone, so that he was able to kill his enemies by striking them down. Every rock and every village site on the river has its tradition referring to the deeds of these two men.

In traveling along the coast of Vancouver Island the spot is pointed out where the salmon was created, where the first people, during the deluge, tied their raft or canoe to the top of a mountain, and where they regained the ground after the waters had disappeared. You may see the place where the Creator, with mighty step, walked from island to island, and where the muskrat dived to bring up the leaves out of which were created the trees which cover the hills.

And you may see the island where, in ancient times, the fabulous owl jealously watched the fresh water, and where the raven succeeded, by crafty tricks, in obtaining the water for the benefit of mankind. The Indians will also tell you proudly of the places where their ancestors came down from heaven or arose from the bottom of the sea. But there are also places made memorable by savage fights, and fortresses which resisted fierce attacks of the enemy.

On going further up the river we reached an ancient village site, in front of which there are a great number of salmon traps, which supply the principal part of the winter provision of the people. Each family group had their own traps, which no one except members of this family are allowed to use.

Selected Articles.

Wednesday Evening Meeting at Winchester, Mass.

PERHAPS few people realize the character of the Wednesday evening meetings that are held in the Town Hall by First Church of Christ, Scientist.

The writer attended the meeting last week, November 7, and was much impressed by the services, and the good that could be derived from them by one who did not understand the doctrine.

The service consisted in singing of hymns, reading selections from the Bible and the Christian Science text-book, and interesting personal testimonies of healing and spiritual benefit that had been gained through Christian Science.

The first person to speak was a lady, who said: "I think there is no one more grateful for Christian Science than I am, for it indeed has been a blessing to me. I had gotten to that point described by St. Paul as 'having no hope, and without God in the world.' An attack of the grip had left me with a troublesome cough which had kept me awake nights, and was very annoying to my family; but my physical ailment was nothing compared with my mental condition. I felt that God was going farther and farther away from me, and that I was drifting out to sea. One day my husband found me crying bitterly, and he asked me to tell him just how I felt, and I said I was wretched and did not know which way to turn. We talked together for a while and he asked me why I did not try Christian Science? and as a result in a few days I went to a healer. I did not then know that Christian Science was a religion, so I did not mention my mental state to the healer, simply telling her of my bodily ills, but she soon discovered my state of mind. That night I lay awake wondering at the peace and calm that had suddenly come over me and my cough had entirely left me. The next night I went to sleep as soon as I touched the pillow and slept all night, the first time in many weeks. I found a religion and a God that is All-in-all to me, and I am trying to live worthy of the name of Christian Scientist. I often stumble and sometimes even fall, but I am never discouraged, for I know if I am faithful over a few things, God will make me ruler over many."

Another lady spoke of the first time she came to Winchester, a good many years ago. She said she was called to give Christian Science treatment to a little baby who seemed to be passing away. The nurse said to her afterwards, "I am not in the habit of burying my patients until they are dead, but if ever a child was brought back to life, that one was. Now make me whole, too."

She also told of a patient who, when she came to her, said she had been praying to God sixteen years for health, and asked if we (Christian Scientists) believed in Christ? She was assured that Christian Science was all Christ, and in living Christian Science we should show to the world what the Christ-life really is. She is now reading Science and Health, and although not entirely healed, is fast becoming so.

A gentleman testified to a case of healing of paralysis. The patient was a man who had gone to a resort for his health, and while there his wife heard of Christian Science, and persuaded her husband to take treatment, which he did, and although he had never seen his healer, he was cured in three weeks by absent treatment. Soon after, this gentleman went to Port Angelus, Washington, and there found one Christian Scientist. To-day, through their efforts, a church with fifty-seven members and reading room nicely furnished, all free from debt, are established.

A young man told of a case of inherited eczema in a child that was healed through the understanding of Christian Science which the mother had. Afterwards the same child, a little girl, healed herself of a fever, by repeating the Scientific Statement of Being, which she had learned at a church service.

One lady spoke of a brother who had always disliked her. From the time they were children until they grew up and married, he had taken every opportunity to show his dislike, even telling her at one time that he never had liked her and never should. This was a great grief to her and she often asked God for help, and after she became a Christian Scientist, it was entirely overcome with Truth, so that now there is perfect harmony between them. She said, "I do not think you could find a brother and sister anywhere who have more love for one another than we have now."

Another lady said: "Our text-book, Science and Health by Mary Baker G. Eddy, says, 'Disease is fear made manifest on the body' (page 489). This was made very plain to me one evening when I was obliged to leave my little girl who was suffering with a sore throat. I had treated her, and felt that it was right to leave her to keep a necessary engagement. On my return I went directly to her and found her much worse, being hardly able to make me understand a word, but I learned that a great fear had been planted in her thought by one of the family who was not a Christian Scientist. I took my Bible and seating myself beside her, began to read the ninety-first Psalm. This quieted her, and shortly I found her repeating the psalm aloud with me, her voice growing clear and distinct. In the morning she was well. This was proof to me that this disease was 'fear made manifest on the body.'"

A gentleman told of a case of a New York business man who was subject to severe attacks of suffering at intervals. He had consulted a number of physicians without being relieved, and while traveling at one time was seized by one of these attacks and given up to die by several doctors who were present.

A traveling salesman who was a Christian Scientist, happened to be stopping at the same hotel with this man, and hearing of his case asked if he could see him, which request was granted. He talked to him of Christian Science, and the man was willing to be treated, and in three or four days he was healed and ready to go home.

This same gentleman also told of the case of a woman who was suffering with a cancer, and for whom the physicians could do no more. Her husband wished her to try Christian Science as a last resort. She was treated, and in three weeks was completely healed.

A lady told of the healing of a friend of what the doctors pronounced gall stones. She had been everywhere to the very best physicians and had come to Boston to be under the care of a specialist, when she met with a Christian Scientist and was healed.

Several other good testimonies were given, as proof of the sincere earnestness of these people, and their firm belief that they have found a religion that will meet and overcome every trouble.—*Winchester Star.*

Blessings of Christian Science Recognized.

IN a signed article in your issue of October 21, Mrs. George Archibald discusses Christian Science, and propounds questions which she attempts to answer. Your contributor is not a Christian Scientist, and for that reason she cannot have that understanding of this subject which is necessary to reply to these queries. Of Christian Science Mrs. Archibald asks:—

"Is its effect on society satisfactory?" Those who con-

Digitized by Google

scientiously and earnestly study Christian Science and understand what it teaches, are satisfied with it. Those who know nothing of it cannot be expected to recognize its blessings.

"Does it unite or divide mankind?" The brotherhood of man, and the gospel of the golden rule are insisted upon in Christian Science. Where else can such a teaching tend than toward perfect unity? When we understand what Christian Science teaches, that there is but one God, "Who is the father of us all," the whole race will be drawn together in the bonds of universal love.

"Does it harbor rancor and encourage egotism?" Malice and hate and self-love are qualities of mortal thought, which divine Love destroys. The Christian Scientist daily strives "to put off the old man with his deeds," and to have that Mind which was in Christ Jesus, wherein the thought of personality or of self is given no place. The Christian Scientist knows that God governs him, and such realization dissipates the false sense of rancor, envy, or jealousy.

"Does it strengthen character and fit men more intelligently to do their duty towards themselves and their fellows?" There can be no doubt as to the effect of Christian Science on the individual and on the human family. When we acknowledge one God and one Christ, when we make our lives conform as nearly as possible to the life of the ideal man, Christ Jesus, the result must be to purify, ennoble, and strengthen character, and fit men to regard themselves and their fellows as God's children. This is what Christian Science does.

It is noticeable that in this article there is an evident absence of any knowledge of healing instituted by Christ. Christian Science is based on a demonstrable Principle, that is, upon the teachings of Christ, and this must be recognized at the outset of any discussion. We meet here on a metaphysical plane, and that view-point must be kept constantly in mind.

The position taken by Mrs. Archibald on this question of healing is logically not tenable. If the power to cure is admitted at all, as she does admit it, it must be accepted *in toto;* for "the Lord's hand is not shortened, that it cannot save; neither his ear heavy, that it cannot hear."

This healing power will increase as we gain more of the Mind of Christ. The Science of Life is becoming understood, and it is as capable of proof as the science of mathematics or harmony, because the Principle of this healing is God.

There is nothing in history, and nothing in the present to warrant any evil prophecy as to the disintegration of the Church of Christ, Scientist. The majestic march of Truth cannot be impeded by the petty human will of one man, or of many. All the might of Pharaoh, with the organized military forces of an empire, could not stay the progress of God's children.

Jesus had occasion to reprove those who opposed his work, and he did it fearlessly. He rebuked sin in every form, and for this he suffered persecution and crucifixion. When he healed the sick, those opposers declared that he cast out devils by Beelzebub, the prince of devils, and his answer was clear and sharp: "If I by Beelzebub cast out devils, by whom do your sons cast them out?" The accusation of evil did not deter Jesus in his denunciation of sin.

Christian Scientists are engaged in a contest against sin in all its forms, and through the power of the Christ-Mind, which alone destroys error, they succeed in healing the sick and in casting evils out of themselves and others. Strongly intrenched in the citadel of divine Love, the Christian Scientist meets every attack of the opposers of Truth, and waits patiently for the final destruction of evil.

The power of Truth and Love as reflected by the Christian Scientist is a strong rebuke to the sinner, and the angry cry of baffled error is still heard: "Art thou [Truth] come hither to torment us before the time?"

Christian Scientists do not treat any one for physical or mental discord without being requested by the patient to do so. This disposes of the absurd accusation of malpractice. Mrs. Archibald has answered this as clearly as could a Christian Scientist, when she says that Mrs. Eddy teaches how to destroy the influence of malpractice. "If Satan also be divided against himself, how shall his kingdom stand?" Mrs. Eddy's followers, possessing the understanding which destroys evil, could not practise evil, knowing its unreality. Malpractice is hypnotism, or the act whereby one human will takes possession of and controls another human will without the latter's knowledge or consent. This is diametrically opposed to Christian Science, which never employs the human mind, but subordinates it to the divine Mind, and reflects only God.

No one has a right to question the veracity of those testifying to cures in Christian Science, and thousands will continue so to testify. "The laborer is worthy of his hire," and those who practise Christian Science are justified by every civil, moral, and religious law in accepting payment.

The final conclusion of your critic is that one must belong to the "established organizations of Christian churches," to be free from the charge of arrogance and dissension. This is taking a limited and dogmatic view of the power of good to leaven the whole lump. Christian Science preaches the absolute unity of all men with one another and with their divine Principle, God. This admits of no separation, in thought or practice. This sentiment is powerfully set forth by Mrs. Eddy in the Christian Science text-book, "Science and Health with Key to the Scriptures," p. 235:—

"One God unifies men and nations; constitutes the brotherhood of man; ends wars; fulfils the Scripture, 'Love thy neighbor as thyself;' annihilates Pagan and Christian idolatry; all social, civil, criminal, political, and religious codes; equalizes the sexes; annuls the curse on man, and leaves nothing that can sin, suffer, be punished or destroyed."

Yours truly,

WILLARD S. MATTOX.

Instinct—Imitation—Ideas.

IN the higher types of civilization, where advances in every department are rapid, where education is widely diffused and opportunities of all kinds are numerous, we might, with reason, look for a corresponding progress in the growth of ideas in the individual and in their practical outcome in his actions. We might expect that customs themselves would be brought to the bar of personal thought, and that they should be judged as good or bad, not on account of their long continuance or the number of their adherents, but because of their intrinsic worth or worthlessness. We fear, however, that this is the exception and not the rule. Take the lighter things of life, for example, as how we shall eat or drink or what we shall wear, what kind of houses we shall dwell in and how we shall furnish them, how we shall manage our expenses, regulate our time, conduct our hospitalities, our charities, our amusements—in all such things are we thinking out for ourselves the best ways and practising them, or are we merely imitating our neighbors? Do we follow custom or work out ideas?

Then, too, in the matter of our beliefs or opinions, are they really our own? Have we worked them out for ourselves, earned them by faithful mental labor, tested their truth to the best of our ability? or are they only appropriated from the brains of others, copied from our party, or our sect, or our newspaper and passed off as true coin,

Digitized by Google

when, in truth, they no more belong to us than any other borrowed possession?

How is it in our occupations? Are we doing our best work, in the best way, so far as we can discover it, or are we content to do as others do? Do we search for a surer method or a shorter road to a given end, or do we follow monotonously on in the beaten track, be it ever so long or crooked? Have we formed conclusions of our own as to the claims of honesty and the principles of justice, from which we will not swerve, or are we satisfied to conform to the common standard and glad to escape active disapproval? Are our dealings with one another governed by our own cherished ideals of human brotherhood, our own highest conceptions of mutual kindness, helpfulness, and sympathy, or do we simply imitate what we see done in the ordinary intercourse of people? Are we, in fact, rising into true manhood, putting forth our faculties, exercising our powers, making determined efforts for good results in all departments of life, or are we sinking into mere transcripts of other people, mirrors to reflect their thoughts, echoes to reproduce their words, puppets to imitate their deeds?

These are questions which each one will do well to ask himself from time to time. They are vital matters to the vigor and energy of his life, to the development of his character, to his value in the world. Emerson says:—

"There is a time in every man's education when he arrives at the conviction that imitation is suicide; that he must take himself for better, for worse, as his portion; that, though the wide universe is full of good, no kernel of nourishing corn can come to him but through his toil bestowed on that plot of ground which is given to him to till. . . . What I must do is all that concerns me, not what the people think. This rule, equally arduous in actual and i intellectual life, may serve for the whole distinction between greatness and meanness. It is easy, in the world, to live after the world's opinion; it is easy, in solitude, to live after our own; the great man is he who, in the midst of the crowd, keeps, with perfect sweetness, the independence of solitude."

[Extract from an editorial which appeared in a recent issue of the *Public Ledger,* Philadelphia.]

Popularity of the Bible.

LONDON, October 27.—Statistics issued this week show a vast increase in the circulation of the Bible. It has been stated that the opposite is the case in the United States, where publishers and booksellers are cited as having said "there is no money in the Scriptures." A talk with Mr. Henry Frowde of the Oxford University Press corrects this statement very materially. He says it is true that the business of some American publishers has been largely reduced, but this is not the result of any falling off in the popularity of the Bible in America. The explanation given is that new and more economical machinery has been introduced by other publishers of the Bible. Never was there, he says, such a demand for Bibles as at present; three times as many Oxford Bibles have been sold as in any previous year. The British and Foreign Bible Society, which prints the Scriptures in four hundred languages, representing the speech of seven tenths of the world, issued in the twelve months ending with last March 5,047,000 copies of the Bible—a bulk absolutely without precedent and considerably more than half a million in excess of the corresponding period previously. Of that huge mass, over thirty per cent or 1,521,000 copies are in English.

In themselves those figures are sufficiently significant, but even more striking is the record privately compiled and not yet published, of the growth during the last decade. In 1889–90 the number of complete English Bibles sent out was 534,980. Each year showed a consistent, steady rise up to last year, when it was 618,215. Ten years ago the New Testaments were 599,613, and last year 614,719, the intervening figures having somewhat fluctuated with a general tendency to increase. Of portions of the Scriptures, such as the Psalms or the Gospels, twenty-five thousand were issued in 1889–90, and last year they numbered 467,482, not a little of that great increase being due to the fact that one hundred and twenty-six thousand copies were distributed to the troops as they left these shores for South Africa. The penny English New Testament is sold at less than cost price. Since it was first brought out in 1894 over seven million copies have been issued at a loss of £25,000, as it cannot possibly be produced at its selling price. At the Oxford and Cambridge University Presses which, together with the Queen's Printers, alone have the right of printing the Bible in this country, the finest typography, the choicest paper, and most artistic of bindings are requisitioned for the sacred volume, and there is not the slightest diminution to be observed in the demand for sumptuous copies.

Mr. Frowde says that the total annual output of Oxford Bibles for some years past has been upward of a million copies, and even before there was an American branch of the Oxford University Press, the weekly shipment of Bibles to the United States often exceeded five tons in weight. The Americans take the keenest interest in Bibles and Biblical matters, as was shown very clearly at the time of the publication of the revised Testaments. Not only the authorized Bible holds its own, but the revised version is slowly but steadily increasing in popularity.

Origin of Alphabets.

A unique volume has just been presented to the Smithsonian Institution by Professor J. C. C. Clarke of Upper Alton, Ill. The work is on the origin and evolution of the alphabets. For many years Professor Clarke was at the head of the department of Greek at Shurtleff College, which was named in honor of Dr. Benjamin Shurtleff of Boston. Since retiring from active work in that department Professor Clarke has spent most of his time in travel and original research work. The materials for the work just finished were gathered for the most part during travel in foreign lands and by correspondence with specialists. Professor Clarke published in 1884 a volume of twenty pages of illustrations on "The Origin and Varieties of the Semitic Alphabet." In the new work, which is folio, elegantly bound in morocco and gilt, the compilation of the alphabets of the world is so tabulated as to show the origin of all of them in the Egyptian hieroglyphics, and to exhibit the development of each from its earliest to its latest forms.

The volume contains about a thousand varieties of the alphabet, of which two or three hundred may be called distinct alphabets. They are arranged according to dates and geographical and racial connections. All the Hebrew, Arabic, and Syric, and the European alphabets are traced from the Egyptian. The many Rumi alphabets are traced from the Greek. The Persian, Indian, Manchu, Thibetan, and Malay are traced from the Syric. Not the least curious feature of the book is the exhibition of the six Philippine alphabets, and those of the other islands, as Sumatra, Java, the Celebes, and Formosa. The exhibition of the evolution of the alphabet of Java alone fills two pages. The volume also exhibits the numeral cyphers of all the world. The latest European books on this subject say that the origin of the numerals and the zero is unknown. Professor Clarke shows that they are Syric letters of about the Christian era, and are the first ten letters of the alphabet. The figures four and eight are older forms than the others, and our circular zero has been made from the Syric "I" enlarged.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Christian Science Thanks.

THE following was contributed by the Rev. Mary Baker G. Eddy to a symposium on Thanksgiving which appeared in the *Boston Globe,* November 29, 1900. There were twenty-three articles written by prelates of various denominations, and Mrs. Eddy's was the only one contributed by a woman.

The communications were sent in answer to the following telegraphic inquiry from *The Globe*:—

> On the threshold of the twentieth century, will you please send through *The Globe* to the people of New England, which is the birthplace of Thanksgiving Day, a sentiment on what the last Thanksgiving Day of the nineteenth century should signify to all mankind?

New England's last Thanksgiving Day of this century signifies, to the minds of men, the Bible better understood and Truth and Love made more practical; the first commandment of the decalogue more imperative, and, "loving thy neighbor as thyself," more possible and pleasurable. That Love, unselfed, knocks more loudly than ever before at the heart of humanity and finds admittance. That revelation, spiritual voice and vision are less subordinate to material sight and sound and more apparent to reason. That evil flourishes less, invests less in trusts, loses capital, and is bought at par value. That the Christ spirit will cleanse the earth of human gore. That civilization, peace between nations, and the brotherhood of man should be established and justice plead not vainly in behalf of the sacred rights of individuals, peoples, and nations. That the Science of Christianity has dawned upon human thought to appear full-orbed in millennial glory. That Scientific religion and Scientific therapeutics are improving the morals and increasing the longevity of mankind—mitigating and destroying sin, disease, and death. That religion and *materia medica* be no longer tyrannical and proscriptive. That divine Love, understood in Divine Science, impartial and universal, forms the coincidence of the human and divine, which fulfils the saying of our great Master, "The kingdom of heaven is already within you." That the atmosphere of the human mind, when cleansed of self and permeated with divine Love, will reflect its subjective state in clearer skies, less thunderbolts, tornadoes, and extremes of heat and cold. That agriculture, manufacture, commerce, and wealth should be governed by honesty, industry, and justice, reaching out to all classes and peoples. For these signs of the times we thank our Father-Mother God.

MARY BAKER G. EDDY.

Christian Science and the Episcopal Congress.

THE following article from the pen of the Rev. Mary Baker G. Eddy appeared in the *Boston Herald*, Sunday, December 2, 1900.

The Church Congress of the Episcopal Church, recently convened at Providence, R. I., smiled mildly on some features of Christian Science, but its arrangement of the programme for the discussion of the subject was unfortunate, in the interests of strict justice and fair play. The discussion was opened, first, with an address by Professor Theodore F. Seward of New York, author of "The Brotherhood of Christian Unity," and a member of the Episcopal Church, which was able, compact, courteous, and altogether logical and ample. It was a conscientious tribute from one whose heart is manifestly full of the love of Christ and love for his fellow-men; who has studied Christian Science from its spiritual standpoint, with a firm belief in Christ Jesus, his example, and his teachings; and who has aimed to get to the very bottom of his subject. It is reported that he was listened to with rapt attention, from its beginning to its close, by an audience of fifteen hundred persons. His opening of the discussion gave unlimited opportunity for unbridled criticism from those who followed him, without possible reply; and a lawyer, who referred to Christian Science in objectionable phrase made the argument against it, and made his exit from the Congress, substantially uncorrected and unrebuked.

As Christian Science is founded strictly on the life and teachings of Christ Jesus, it may be pertinent to ask why a doctor or a lawyer, who evidently has no aggressive faith in Jesus and his life labors for humanity, and who seldom reads a chapter from the Gospels and rarely enters a Christian house of worship, should be asked to address such a Congress on such a subject? Is it not obvious that the religious side of the question—its important and vital side—would be studiously ignored? Note the addresses of Dr. William M. Polk and Mr. W. A. Purrington, as reported in the *Providence Journal,* for a definite answer. Lawyer Leavitt's reply to unjust criticisms against the Christian Science text-book was a spiritual sunburst on the darkness.

As an interesting illustration of the lack of spirit and breadth, and nobility of Mr. Purrington's address, the following is quoted from it verbatim:—

"It is only just to say that Mrs. Eddy's practice is in accord with this part of her teaching. She says there is no pain and no disease, and that she can restore decaying bones to healthy condition (Science and Health, 16, 359), yet she had her teeth extracted by Dr. Fletcher of 77 North Main Street, Concord, N. H., under the so-called painless method, by local anæsthesia, and she now wears artificial dentures made by him."

The following over Dr. Fletcher's own signature is also given verbatim:—

"The story told by the Rev. Dr. Whitaker and others, to the effect that Mrs. Mary Baker G. Eddy called at my office in Concord, N. H., in great pain, and had a carious tooth extracted, requesting me to use a local anæsthetic before extracting the tooth, is incorrect. Mrs. Eddy did call at my office and had a troublesome tooth extracted. But it was not a carious tooth, neither was she in pain at the time. She did request me to extract the tooth, allowing me to use my own painless method for extracting teeth, which I had recommended.

"I shall take no further notice of inquiries on this subject.

"(Signed) JOHN M. FLETCHER.

"Concord, N. H., November 22, 1900."

I have a copy of a letter which Dr. Fletcher received, in which the writer proposed a bribe of $200 if the doctor would authorize a story about Mrs. Eddy concerning this remarkable episode (!) such as the correspondent might dictate. But Dr. Fletcher said practically, "Get thee behind me, Satan." The doctor is a man of repute—a native of my native state—a man that cannot be bought or sold.

Those familiar with my writings know that long ago I instructed Christian Scientists not to interfere with methods

Digitized by Google

of surgery, but if they should call a surgeon, to submit to his methods without discussion. Those who are unfamiliar with them, or misconstrue them, should hesitate to criticise without personal knowledge. The following is extracted from the Christian Science text-book, page 400, and has been published in said book since its first issue in 1875: "Until the advancing age admits the efficacy and supremacy of Mind, it is better to leave surgery and the adjustment of broken bones and dislocations to the fingers of a surgeon, while you confine yourself chiefly to mental reconstruction, and the prevention of inflammation."

I have always instructed students in Christian Science to be wise and discreet, conforming, where conscience is not offended, to the usages of men. The practice of surgery is not introduced into Christian Science, whose rules and methods are based upon the examples of Jesus and his followers. Bishop Berkeley and I agree that all is Mind. Then, consistently with this premise, the conclusion is, that if I employ a dental surgeon, and he believes that the extraction of a tooth is made easier by some application or means which he employs, and I object to the employment of this means, I have turned the dentist's mental protest against myself; he thinks I must suffer because his method is interfered with. Therefore, his mental force weighs against a painless operation, whereas it should be put into the same scale as mine, thus producing a painless operation as a logical result.

Matter is but the objective state of mortal mind. It has only the substance and reality in our day-dreams that it has in our dreams by night. It is all the way the Adam-dream of mind in matter, which is mortal and God-condemned; it is not the spiritual fact of being. When this Scientific classification is understood, we shall have one Mind, one God, and we shall obey the commandment "Love thy neighbor as thyself."

If nineteen hundred years ago Christ taught his followers to heal the sick, he is to-day teaching them the same heavenly lesson. God is the same yesterday, to-day, and forever. "God is Love"—the ever-operative divine Principle (or Person if you please) whose person is not corporeal—not finite. This infinite Person we know not of by the hearing of the ear, yet we may sometimes say with Job, "but now mine eye [spiritual sense] seeth Thee."

God is one because God is all. Therefore there can be but one God, one Christ. We are individually but specks in His universe, the reflex images of this divine Life, Truth, and Love, in whom "we live, and move, and have our being." Divine Metaphysics is not to be scoffed at; it is Truth with us—"God manifest in the flesh"—not alone by miracle and parable, but by proof—even the divine nature of God, which belongs not to a dispensation now ended, but is ever present casting out evils, healing the sick, and raising the dead—resurrecting individuals buried above-ground in material sense.

To-day this Bethlehem star looks down upon the long night of materialism,—material religion, material medicine, a material world,—and it shines as of yore, though it "shineth in darkness; and the darkness comprehended it not." But the day will dawn and the day-star appear, lighting the gloom, guiding the steps of progress from molecule to mortals outward and upward in the scale of being.

Hidden electrical forces annihilating time and space, wireless telegraphy, navigation of the air, in fact, all the *et ceteras* of mortal mind pressing to the front, remind me of my early dreams of flying in airy space, buoyant with liberty and the luxury of thought let loose, to rise higher and forever higher in the boundless blue. And what of reality, if waking to bodily sensation is real and it makes us captives? The night thought, methinks, should unfold in part the facts of day, and open the prison doors and solve the blind problem of matter. It shows us rationally that even mortals can mount higher in the altitude of being, till they cease to be mortal, and Christ hath led captivity captive and immortality is brought to light.

Robert Ingersoll's attempt to convict the Scriptures of inconsistency made his life an abject failure. Happily, misquoting "Science and Health with Key to the Scriptures," or quoting sentences or paragraphs torn from their necessary contexts, may serve to call attention to that book, and thus reveal truths that otherwise the reader would not have sought. "Surely the wrath of man shall praise Thee."

The nature and truth of Christian Science cannot be destroyed by false psychics, crude theories or modes of metaphysics. Our Master Metaphysician, the Galilean Prophet, had much such a class of minds to deal with as we have in our time. They disputed his teachings on practically the same grounds as are now assumed by many doctors and lawyers. But he swept away their illogical syllogisms as chaff is separated from the wheat. The genuine Christian Scientist will tell you that he has found the physical and spiritual status of a perfect life in his text-book.

The text-book of Christian Science maintains primitive Christianity, shows how to demonstrate it, and throughout is logical in premise and conclusion. Can Scientists adhere to it, establish their practice of healing on its basis, become successful healers and models of good morals, and yet the book be absurd and unscientific? Is not the tree known by its fruit? Did Jesus mistake his mission and unwittingly misguide his followers? Were the apostles absurd and unscientific in adhering to his premise and proving his conclusion logical and divine?

"The Scientific Statement of Being" may irritate a certain class of professionals who fail to understand it, while they pronounce it absurd, ambiguous, unscientific. But that Christian Science is valid, simple, real, and self-evident, thousands upon thousands attest from their individual demonstrations, they themselves having been healed and having healed others on the Principle of Christian Science. Science has always been met in this manner. A fiction or a false philosophy flourishes for a time where science gains no hearing. The followers of the Master in the early Christian centuries did just what he enjoined, and what Christian Science makes practical to-day to those who abide therein and build on its chief corner-stone. Our religious denominations interpret the Scriptures to fit a doctrine, but the doctrines taught by Divine Science are founded squarely and only on the Scriptures.

"Science and Health with Key to the Scriptures" is not inconsistent in a single instance with its logical premise and conclusion, and ninety-nine out of every hundred of its readers—honest, intelligent, and scholarly—will tell you this. The earnest student of this book, understanding it, demonstrates in some degree the truth of its statements, and knows it contains a Science that is demonstrable when understood, and is fully understood when demonstrated. That Christian Scientists, because of their uniform pure morals and noble lives, are better representatives of Christian Science than the text-book itself, is not in accordance with Scriptures: The tree is known by its fruit. The student of this book will tell you his higher life is the result of his conscientious study of it in connection with the Bible.

A book that has won its way through the good it does into the palaces of emperors, kings, and the president of the United States, into the chief cities and the best families in our own and in foreign lands, that lies beside the Bible in hundreds of pulpits and in thousands of homes, that heals the sick and reclaims sinners in court and in cottage, is not less the evangel of Christian Science than he who studies it and thereby is healed of disease, or who practises its teachings. About a quarter of a century ago this book was first given to the public; since then two hundred editions, of

Digitized by Google

one thousand copies each, have been sold, and the sale continues to increase. Can such a book be ambiguous, self-contradictory, or unprofitable to mankind?

St. Paul was a follower, but not an immediate disciple of our Lord, and he declares the truth of the complete system of Christian Science in these brief sentences: "There is therefore now no condemnation to them which are in Christ Jesus, who walk not after the flesh, but after the Spirit. For the law of the Spirit of life in Christ Jesus hath made me free from the law of sin and death." Was it profane for St. Paul to aspire to this knowledge of Christ and the demonstration thereof—healing sin and sickness—because he was not a disciple of the personal Jesus? Nay, verily. Neither is it presumptuous or un-Scriptural or vain for another, a suckling in the arms of divine Love, to perfect His praise.

A child will demonstrate Christian Science and have a clear perception of it. Then, is it a cold, dull abstraction? or is that unscientific which all around us is demonstrated on a fixed principle and given rule, and in proportion as these are understood men are found casting out the evils of mortal thought, healing the sick, and uplifting human consciousness to a more spiritual life and love? The signs of the times emphasize the answer to this in the rapid and steady advancement of this Science among the scholarly and titled, the deep thinkers, the truly great men and women of this age. In the words of the Master, "Can ye not discern the signs of the times?"

Christian Science teaches: Owe no man; be temperate; abstain from alcohol and tobacco; be honest, just, and pure; cast out evil and heal the sick; *in fine*, Do unto others as ye would have others do to you. Has one Christian Scientist yet reached the maximum of these teachings? And if not, wherefore point the people to the lives of Christian Scientists and decry the book which has moulded their lives? Simply because the treasures of this text-book are not yet uncovered to the gaze of many men, the beauty of holiness is not yet won.

My first writings on Christian Science began with notes on the Scriptures. I consulted no other authors and read no other books but the Bible for about three years. What I wrote had a strange coincidence or relationship with the light of revelation and solar light. I could not write those notes after sunset: all thoughts in the line of Scriptural interpretation would leave me until the rising of the sun: then the influx of divine interpretation would pour in upon my spiritual sense as gloriously as the sunlight on the material senses. It was not myself, but the divine power of Truth and Love, infinitely above me, which dictated "Science and Health with Key to the Scriptures." I have been learning the higher meaning of this book since writing it.

Is it too much to say that this book is leavening the whole lump of human thought? You can trace its teachings in each step of mental and spiritual progress, from pulpit and press, in religion and ethics, and find this step either written or indicated therein. It has mounted thought on the swift and mighty chariot of divine Love, which to-day is circling the whole world.

I should blush to write of "Science and Health with Key to the Scriptures" as I have were it of human origin, and I, apart from God, its author. But, as I was only a scribe echoing the harmonies of heaven in divine Metaphysics, I cannot be super-modest in my estimate of the Christian Science text-book.

The Lectures.

At Syracuse, N. Y.

Carol Norton, C.S.D., of New York City, lectured yesterday afternoon (Sunday, November 18) before a large audience in the Wieting Opera House on the subject, "Christian Science: Universal Christianity."

The address was for the purpose of giving those interested in Christian Science correct information concerning its principles and beliefs. In this city, as elsewhere, such lectures are always delivered by a member of the Board of Lectureship, hence the statements are always authentic. Judge William G. Ewing of Chicago lectured on a similar topic at the Wieting last December before an audience of fifteen hundred people.

Every seat in the entire lower part of the house, the boxes and the entresol, was occupied yesterday. The balcony was also well filled. In attendance at the meeting, besides members of the Syracuse Church and people interested in its work, were out-of-town members from Albany, Rochester, Rome, Utica, Lyons, Geneva, Auburn, Phœnix, and Fulton.

Upon the stage were seated Carol Norton, Mr. E. P. Bates, President of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., Rev. Mr. Vosburgh, and C. I. Ohrenstein, the First Reader at First Church of Christ, Scientist, of this city.

Mr. E. P. Bates was chairman. After extending a welcome to those present and speaking briefly on the purpose of the meeting, he introduced Rev. Mr. Vosburgh.

The Post Standard.

The preliminary remarks by Mr. Bates were as follows:—

Dear Friends:—I am requested by First Church of Christ, Scientist, in Syracuse, to welcome you at this time. This church, in harmony with the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., and other branch churches, desires that you may be properly advised as to what Christian Science is. To this end the Mother Church has instituted a Board of Lectureship, and the speaker of this evening is an honored member of that Board. Christian Science is the subject before the people, and it must stand on its merits, not on any opinions which we may have regarding it. The local church desires that this community may know the facts regarding Christian Science, and that they may be presented by authorized speakers and those conversant with the subject.

We thank you for accepting the invitation given you, and it is gratifying to see so large an audience assembled to listen to this interesting subject.

It is my great pleasure at this time to present to you the Rev. Arthur R. Vosburgh, C.S.B., of Rochester, N. Y., who is also a member of the Board of Lectureship, and who will introduce the speaker of the day.

The introductory address by Rev. Mr. Vosburgh was as follows:—

What is Christian Science? Our critics a few years ago were almost unanimously saying it was the work of the devil. To-day this attitude is very radically changed, and the critic who, from study of the writings and acquaintance with Scientists, has prepared himself to speak with any degree of intelligence, acknowledges Christian Science as a Christian movement.

Christian Science claims to be the heir of the ages, the true interpretation and demonstration of the teachings of the Christ, and this is certain, that if Christian Scientists did not believe that this work is founded on the teachings of the Bible, and is the explicit unfolding and application of the doctrine of Jesus, no such movement would to-day be in existence.

All the questions that arise regarding the merits of Christian Science focus themselves in this: Is it rightly named? has it the logical, orderly, demonstrable character that belongs to science? and does it embody the high ideal of righteousness and love which constitutes Christianity?

Digitized by Google

Science is founded on facts. Science lives and moves only in the realm of facts. All that is recognized as scientific thought is that which gives an explanation, or an attempted explanation, of facts. We know how what is recognized as scientific teaching has changed and advanced as human experience has developed new facts, for the impossibilities of yesterday are the common experiences of to-day.

Not many years ago the notion that men could talk hundreds of miles over a wire, or see through a solid substance, would have been relegated to the realm of dreamland. To-day these are a part of the most common knowledge, and we find that all human progress has been a bringing of the unknown into the known, and a doing of the impossible. For Christian Science there stands this palpable, irrefutable fact,—that by it "the sick are healed, the sorrowing are comforted, and the sinful are reformed" (Science and Health with Key to the Scriptures by Mary Baker G. Eddy, p. 244), and it is found that these works are the outcome of a divine Principle and a spiritual law that may be understood; and to the extent that they are understood can be demonstrated. Whatever has such a rational basis and such a demonstrable character is inevitably Science.

Its claim to be Christian is only to be tested by the standard of the Master: "By their fruits ye shall know them." Does it make men more reverent toward God and more kindly toward their fellow-man? Does it lead its followers to do justly, to love mercy, and to walk humbly with their God? Does it hold to the essential principles, the fundamental truths, of Christianity? Now what are these fundamental truths that must be emphasized in whatever has a right to be called Christian? They are four: First, the Being of God,—God as revealed in the Bible and seen through Christ; Second, the Bible as God's revealed Word; Third, Christ Jesus the one mediator—the Way-shower—between God and men; Fourth, the necessity of a radical conversion, a deep, sincere repenting, and receiving and living the Christ-life. These constitute the essentials of orthodox Christianity, and Christian Science does so include and enforce these vital principles that every Christian Scientist finds them renewedly and increasingly emphasizing themselves in his life.

From this basis the speaker will to-day address you. The subject of his message is, "Christian Science: Universal Christianity," and we know that the worth of the message and the merit of the messenger will unite in gaining your most cordial and careful attention.

It is now my pleasure to introduce to you Carol Norton, C.S.D., of New York City.—*Correspondence.*

At Leavenworth, Kan.

Judge William G. Ewing of Chicago addressed a large audience at the Opera House Friday night (November 16) on the subject of Christian Science. He is one of the best-known lawyers and judges of Illinois, and his address was greatly appreciated. Major McClaughry, warden of the federal prison, an old friend of Judge Ewing, was introduced to the audience by E. H. Keach, First Reader of the Christian Science Church here, and Major McClaughry in turn, presented his old friend to the audience. Major McClaughry spoke as follows:—

Ladies and Gentlemen:—A good many years ago—so many that out of consideration for the judge and myself, I will not state—Judge Ewing and I knew each other in western Illinois, he as state's attorney in a judicial district, and I as clerk of a court in the same district. We were also actively engaged at that time, in opposing political parties, in the work of "saving the country," and, that we succeeded in saving it, is evidenced to-night by the present satisfactory condition of the country, notwithstanding the severe "jolts" that it has lately received.

From that district he drifted to Chicago and I to the penitentiary. From my seclusion I could keep track of him, and I marked his rise through the successive stages of a successful lawyer and United States Attorney, to the position of an able, upright, fearless, and eminent judge, and—best of all—to that of a true Christian, American citizen. He resigned the judgeship for his present work. He comes to address you to-night on higher themes than law or politics. It is not my province either to approve or criticise his views. He will present and ably defend them. I do, however, take pleasure in assuring you that his utterances, whether you agree with him or not, will be worthy of your respectful consideration, for they will represent the honest convictions of an honest man.

I now take pleasure in presenting to you, Judge Ewing.

Leavenworth Times.

Major McClaughry is a man of exemplary Christian character and stands high as a prison official. He is generally regarded as one of the best superintendents of convicts in this or any other country. He was at one time warden of the state penitentiary at Joliet, Ill.—ED.

At Joplin, Mo.

At the Club Theatre Sunday afternoon (November 18) Dr. Silas Sawyer of Milwaukee delivered a lecture on "True Sonship in Christian Science." A large audience assembled in spite of the disagreeable weather, and that they were profoundly impressed with Doctor Sawyer's remarks was evident from the close attention with which they followed the speaker.

F. S. Yale introduced the doctor in the following words:

Not being a member of any religious or anti-religious society or sect, I esteem very highly the honor conferred upon me by the Christian Scientists of Joplin in selecting me as the chairman of this meeting. It is evident to me that they believe in religious freedom and willingly accord to others every right and privilege which they ask for themselves. They seem to be aware of the fact that there are some six or seven thousand different religious societies in the world, each one of which believes that it is right and all the others are wrong. This society realizes that all are not right, as it is an established fact that when the truth is seen as it really is there must be perfect agreement. When two persons disagree as to a fact it is evident that one of them is wrong, and possibly both.

The Christian Science Church is a society whose religion is to do good and whose good is truth, justice, and love personified; a society that believes in going forward, onward, and upward toward a given goal, and that goal the uplifting of mankind everywhere; that believes in building and not in destroying, in overcoming error with truth, evil with good, vice with virtue, and hatred with love; in short, a society devoted to the cause of truth, justice, liberty, and love.

The members follow their conscientious convictions, and believing that they possess the truth have the courage to proclaim it to the world, well knowing that if correct they can wait for success. They believe with the poet who said:—

> Truth crushed to earth shall rise again,
> The eternal years of God are hers.

I now have the pleasure of introducing the speaker, Dr. Silas C. Sawyer, C.S.D., of Milwaukee, Wis.

A Hymn.

BY M. C. S. W.

LEAD me gently, Love Divine,
Through this maze of mortal strife;
Let thy brightness round me shine,
Breathe in me thy Perfect Life.

Selfishness and pride remove,
Drive impatience from my heart,
Fill me with forgiving love,
More of Good and Truth impart.

Love Divine! O let me know
That the everlasting arms
Where earth's dark, deep waters flow,
Hold me safe from all alarms.

When my spirit cries for bread
And I only find a stone,
When in thorny paths I tread,
Let me say Thy will be done;

Know that every seeming ill
Worketh in the end for good,
Love Divine my spirit fill,
Feed me with thy heavenly food.

Infinite Eternal Power!
Source of Being! Fount of Life!
Lead and guide me every hour
Through this maze of mortal strife.

Reflection.

BY A. P. BLACKLER.

How much do we understand of what is meant by this word reflection in Christian Science? It covers the whole ground in our work. Webster gives several definitions of the word, some of which exactly fit the Christian Scientist. In fact, a Christian Scientist is simply a "reflector." In the degree that we understand that we are a reflector pure and simple, with no power of our own, are we Christian Scientists.

A few of the definitions of Webster that fit our case particularly well, are: "Reflect. To give back an image of; to attend earnestly to what passes within the mind."

Are we giving to the world in our daily life an image of our dear Master? Are we reflecting his life in ours? Are we following his example thereby reflecting Good and Love? In just the degree that we are reflecting his Life, are we truly Christians.

This is the standpoint from which God judges. Never mind what the world thinks or says of you; the world cannot work out your salvation; you have this to do, and it can only be done by reflection. Even our Master claimed no goodness of his own; but merely reflected the goodness of God. We must go and do likewise. Remember there is "no good thing" in mortal selfhood or mortal sense.

We must get above any thought of self-love or any influence of personality, and be governed by the Principle of goodness and love in every act, motive, and thought.

In the definition of reflection by Webster he says, "That which is produced by reflection, especially thoughts suggested by truth." We know these are the only thoughts that have any reality, and the *only* thoughts we, as Christian Scientists, should have anything to do with. Paul sums it up briefly in Philippians, 4 : 8: "Finally, brethren, whatsoever things are true [real], whatsoever things are honest, whatsoever things are just, whatsoever things are pure, whatsoever things are lovely, whatsoever things are of good report; if there be any virtue, and if there be any praise, think on these things."

Our work is all in thought. Jesus declared the Truth again and again to dull ears, until they began to see and reflect the Life and Love, that he came to teach and live. We must strive and pray for that mind to be *in us* that was also in Christ Jesus, to gain the understanding of what Life, Truth, and Love *are*, before we can expect to reflect them. We cannot expect to give to some one else what we do not ourselves possess; neither can we expect to give love to one and the opposite to another; it must be love to all.

The same fountain cannot send forth sweet waters and bitter. That Mind which was also in Christ Jesus did not express love one moment and hate, anger, and malice the next. It was love first, last, and all the time, because Love was all he knew.

We cannot reflect Love until we have first learned the lessons of Love; in trials, in meekness, gentleness, kindness, forgiving our enemies as we would be forgiven. No mortal has this Love and it is gained only through this purification and chastening. "Whom the Lord loveth he chasteneth."

Do not complain if trials come. If you would be able to reflect Love, you must take each lesson and learn it well. A student in mathematics does not work one problem in addition, one in subtraction, and then stop; he keeps working until he has learned, or understands the principle thoroughly, then he is ready for something higher. So we must not cease from our labors when we have solved one problem, but must continue until all problems are solved according to the one Principle, Love. If anything but Love is influencing us, we have departed from our Principle. We shall fail to gain the answer to our problem, and will have to come back, and work it out in the right way.

The more Love you reflect the more there is for you. When you see some one who seems to do better work than you do, they have learned the lessons necessary to be able to demonstrate it, or they would not have "the signs following." Working in this way there is no danger from self-righteousness. Jesus said: "So likewise ye, when ye shall have done all those things which are commanded you, say, We are unprofitable servants: we have done that which was our duty to do." "If ye abide in me, and my words abide in you, ye shall ask what ye will, and it shall be done unto you."

Here are the promise and conditions. The first is sure; you alone can take care of the latter. Rest assured that in just the proportion that you really and truly abide in him, will the "signs follow."

"Prove all Things."

BY GEORGE L. BRETT.

IN conversation with a business man the subject of Christian Science was introduced, and he made the remark, "I do not think religion or Christian Science should be brought into business." At present, myself a business man and also a Christian Science healer, I wish to give a little experience of my own.

Some years ago the doctors had said that unless I complied with certain rules—to work only a few hours each day, to be very moderate in all things, to avoid all excitement, etc., I might die at any moment. I laughed at it all and continued to do as far as I could everything that I wanted to, until, through fear, I tried to be obedient to the doctors, but at the same time grew weaker day by day until I was hardly able to get to the store. This all proved that what the doctors had said was true on their plane of

Digitized by Google

thought. But what medicines and obedience to the so-called materiai laws failed to do, Christian Science has accomplished, and for four years or more I have been able to attend to business, and not one day has sickness kept me from being on my feet and at work.

Sick thoughts were ever-present with me until, through Christian Science, those thoughts were forced out, proving that to ever-present Life, Truth, and Love, there can be no room for sin, sickness, and death; and in so far as we hold fast to the good thoughts they must be manifest on our bodies and in every branch of our business.

A certain man had the reputation of being a mean, dishonest, selfish man, never known to settle his accounts when due. A Christian Scientist had occasion to call on this man; the Christ-Spirit of Love went on before, and when the Christian Scientist arrived he found a man that stood ready to settle his account because it was right that he should, and nothing existed between the two but love and harmony, and the account was settled then and there.

Another instance: A business man, through seeming reverses, poor collections, sickness in family, etc., was discouraged and decided to make an assignment. He went to the largest creditor, who was a Christian Scientist, and made known his decision. He made a clear, honest statement. The sick and discouraged thoughts were met and destroyed; his thoughts were changed; he began to see light, and with new courage he tried once again. He went home happy, not knowing at the time what had been done. He did not fail but succeeded in his business. Instead of looking into darkness and failure, his thoughts are good and of success, and the good results do and must follow. "Whatsoever a man soweth, that shall he also reap."

A Word to Beginners.

BY MINNA TRAIN.

OUGHT we to expect our lives to work in harmony if we let all the worries and absorbing cares of the every-day material existence come into our thoughts first?

When we learn to begin our day with the consciousness of the omnipotence of God, eternal Good, and to realize that in this government there is no place for discord or trouble, I am sure it will bring to each one of us wonderful results. When we are young in the Christian Science thought it seems very easy to say "I must attend to this or that duty or pleasure first, but later in the day I will find time for my study of the Sunday lesson and for the reading and work so vital to our progress in the understanding of God." The only *sure* way, is to *start* the day with the God-thoughts, even though you may have to rise earlier to secure the extra time. By so doing you will find that many seeming difficulties are smoothed away, and you will have a keener sense of the presence of divine Love, always near at hand, protecting and guiding your every footstep.

To those just looking into Christian Science who seem to find our text-book difficult to understand, I would say: Take the *Quarterly* and study the carefully prepared lessons for each Sunday, and then see if the Bible does not become illuminated and a new book, through the wonderful explanations of Science and Health. Every week these lessons grow stronger and clearer, and by this constant and sincere study I am sure that little by little the glorious truths of Christian Science will dawn upon human consciousness and you will gradually awake to the realizing sense of the inexhaustible treasures of this wonderful book.

God's hand within the shadow lays
The stones whereon His gates of praise
Shall rise at last.

WHITTIER.

Testimonies.

Wonderfully Sustained by Truth.

When thou passest through the waters, I will be with thee; and through the rivers, they shall not overflow thee.—*Isaiah.*

It was on September 8 last, at the time of the Galveston flood, that I found *more* faith in God, and I am prompted to write my experience that others may see what Christian Science can do, and has done for us in the storm and darkness.

The tempest was raging and our home was situated only a short distance from the Gulf. At half past two o'clock in the afternoon my husband came home from town with great difficulty. At that hour the rain was falling in torrents and the sea water was gradually covering the streets in the lower parts of the city. However, we were not apprehensive of any danger, having always lived on the coast and being accustomed to ordinary coast storms. During the remainder of the afternoon we read the Bible and Science and Health constantly. As night came on, a neighbor sent for us to come over to her house as she was alone and becoming alarmed; but before we could get away, the water had risen to such a height and the storm increased in violence to such an extent that we were unable to leave our house. This was something altogether unexpected, as we had never, for a moment, thought the water would reach our yard. It was right here that we began to appreciate what Science was to us, as conditions were becoming very serious from a mortal standpoint, but through the constant realization of Truth, we remained perfectly calm and felt safe in our own home.

We had our house girl (who is a Scientist) come in with us; and with Nezzell, our little six-year-old daughter, we all sat quietly down to realize the Omnipotence of God. My husband read the ninety-first and ninety-third Psalms. I read Science and Health, p. 189, and we ceased to concern ourselves about our safety but left that entirely with God. The elements now seemed wrought up to their highest point, the house was rocking like a cradle, and it seemed almost beyond human belief that it could withstand such a terrific wind for even a single moment. Still there was no fear. Soon I discovered that the water was coming through the floors. My husband scuttled each room, while the water rose rapidly. In a few moments we felt an awful jar, and as the water came pouring in through the door casings, we knew that the house was off its foundations. The lights had gone out and we were groping in total darkness, in water to my waist. Here the following verse from Isaiah came to me: "Fear thou not; for I am with thee: be not dismayed; for I am thy God: I will strengthen thee; yea, I will help thee; yea, I will uphold thee with the right hand of my righteousness."

My husband took our little girl in his arms and we went to one door but failed to open it, quietly but swiftly we went to another and through it reached the kitchen, there a door had blown open and we discovered that we were floating. Soon the water reached my chin, and we found that every piece of furniture in the house was floating. Something must be done, and that quickly, for in a very short time the water would be too deep for me. For just one brief moment fear tried to take possession of me, but its sway was brief, for almost with the next breath the thought came to me: "Underneath are the Father's everlasting arms." My husband told me to get up on the kitchen stove, which was two feet under water but was the only thing in the house that was stationary. So I was lifted above the wave. All four of us stood on the stove without difficulty.

It was suggested that each of us say aloud something Scientific. My husband repeated the Scientific Statement of Being (Science and Health with Key to the Scriptures,

Digitized by Google

p. 464). C. repeated those dear consoling words of our Leader, "Peace, be still! our Father is at the helm." Then I repeated the first verse of the ninety-first Psalm: "He that dwelleth in the secret place of the most High shall abide under the shadow of the Almighty," and I was followed by our little one, who, throughout it all had been so courageous and brave, with the first verse of our Mother's beautiful poem "Satisfied:"—

> It matters not,
> What be thy lot
> So Love doth guide;
> For storm or shine—
> Pure *peace* is thine—
> What'er betide.

We then silently tried to realize God's Allness and to know that "He holds the wind in His fist."

About eleven o'clock Nezzell noticed that the water was receding, and in some unforeseen way we found a lamp and some dry matches and were thus enabled to see.

Our experience lasted from five o'clock in the afternoon until half past two the next morning. Most of that time we were in the water. We never experienced the slightest trouble of any kind. Once, while standing on the stove, Nezzell (who was very thinly dressed) complained of being cold. Mr. C., without knowing how it got there or where it came from, reached out and found a coat of his floating around on something. It proved to be a heavy one, and although soaked with water, kept her warm nicely. Again, when I seemed to be chilled, he was able to reach a pair of portieres, which served to keep us warm, wet as they were.

But not until we were able to leave our house did we realize how wonderfully we had been protected and how much we had to be thankful for. We found that our house had floated a distance of two squares, and upon going around to where it had stood a realization of the awful destruction that had been wrought dawned upon us, for where, that afternoon, we had looked out upon hundreds of pretty homes in front of us, was now a barren waste, the houses were piled up in mountains of wreckage all around us, while our house had been carried to the highest part of the highest street in the neighborhood and there it stood perfectly intact, out of harm's way from the floating debris which would surely have demolished it had we not gone when we did. Surely did we feel grateful that we had placed our safety in our Father's hands, with the feeling that "not my will, but Thine, be done," knowing full well that "He doeth all things well."

We attribute our safety entirely to Christian Science, and we are striving to show our gratitude to our Leader by following more closely in her footsteps, learning of her greater humility, deeper love, and broader charity for all mankind.—MARY E. CHRISTIE, Galveston, Tex.

Healed Physically and Saved from Infidelity.

Two and a half years ago, Christian Science came to me, when my way was so hedged about that I could not get out. I had been a great sufferer from physical ills. I had exhausted all remedies known to the local medical skill, including, electricity in all its forms, but with all this I was "nothing bettered, but rather grew worse." I was hungering for Truth, yet I was comparatively an infidel. My suffering had been of such a nature that there seemed but little hope for me; I was merely drifting along aimlessly, suffering as much as it was possible for a mortal to suffer and exist.

Finally, Christian Science came to me, bearing the good tidings, "Ye shall know the Truth, and the Truth shall make you free." Involuntary antagonism to Christian Science was in my thought when I was brought face to face with the signs that follow them that believe. I had seldom given any form of religion a thought. I had heard of Christian Science, but had never heard any good of it, and, had I been called upon to give my views of the subject, they would have been very uncomplimentary. Now I find myself singing the highest praise to the good work of Christian Science, not, however, as a mere profession, but because I have been healed. "As a vesture shalt thou change them, and they shall be changed."

A friend who had been a sufferer from ailments very much like those which afflicted me, was healed in a short time under Christian Science treatment; in this case, I beheld unmistakably the proof of faith by works. This proof affected me like the opening of the eyes of the blind. I placed my case in the hands of a Christian Scientist. After three days' treatment I experienced an uplifting which caused me to feel as though I were literally lifted off the ground to be carried along by a gentle breeze. It would seem that this experience alone should have been sufficient to dispel all doubts from the mind of the most sceptical; but error was in me, and it must be gotten out. After a few weeks' treatment, all of which time it seemed that I could almost discern the outlines of the new heaven and new earth spoken of by the Revelator, there came the demand, "Work out your own salvation." Here is where the real battle began.

From a physical, and I might say a moral, wreck, two and a half years ago, I am now a healthy man, and much happier. Of the God whom, before coming into Christian Science, I regarded as the author of unjust laws, I now say, "Just and true are thy statutes, Lord God Almighty."

Appetite for tobacco, which had claimed power over me for eighteen years, has entirely left me; for nearly two years I have had no desire for tobacco. I have also lost the appetite for coffee.

Among the numerous troubles of which I have been entirely healed may be mentioned nervousness, dyspepsia, spinal trouble, headaches, and melancholia of the very worst form, and I might add, infidelity of a rather mild form.

I wish to add in conclusion, that with my limited understanding of the great Principle which Christian Science teaches, I have been able to do some very good work for the suffering. I was called upon a short time ago to treat a patient who was bedridden with the grip. Error endeavored to make me believe that I could do nothing with this particular case, but realizing the allness of God and the nothingness of error, my efforts were abundantly rewarded, as the patient was up and about her work the following day after my efforts in her behalf.

Wonderful indeed is the power of Truth over error. Thanks to God for this great Truth and to our Mother in Israel, Mrs. Mary Baker Eddy, for that great book, "Science and Health with Key to the Scriptures."

ROBERT CALVIN HUMPHREY, Knoxville, Tenn.

A Testimony for our Text-Book.

Truth is ever at work as is evidenced by the healing of the sick, the binding up of the broken-hearted, and the reforming of sinners. Some months ago I presented an inmate of our poor farm with a copy of Science and Health, and although I had apparently forgotten it, he came in this morning to remind me of the work that the volume had done, for although rejected by some, yet to him it had been the Great Physician that healed him of rheumatism, boils, and an attack of bone erysipelas, and now he is not only happy but more active than for twenty years before.

J. E. BURNHAM, Unionville, Mo.

When one has learned to seek the honor that cometh from God only, he will take the withholding of the honor that comes from men very quietly indeed.—MACDONALD.

There is no peace when our life is revolving round self.
Anon.

Religious Items.

In a review of "The Life and Letters of Thomas Henry Huxley," the *Church Standard* quotes the following interesting extracts from Huxley's letters to his friend Charles Kingsley: "I have the firmest belief that the Divine government is wholly just. . . . The ledger of the Almighty is strictly kept, and each one of us has the balance of his operations paid over to him at the end of every minute of his existence."

"Kicked into the world, a boy without guide or training, or with worse than none, I confess to my shame that few men have drunk deeper of all kinds of sin than I. Happily, my course was arrested in time—and for long years I have been slowly and painfully climbing, with many a fall, towards better things. And when I look back what do I find to have been the agents of my redemption? The hope of immortality or future reward? No——"

In the juvenile department of the (Swedenborgian) *New-Church Messenger* we find the following: "It certainly is not so difficult to live a life which leads to heaven as is supposed, and the more thought one gives to the subject the plainer it becomes that this is true. We have wound ourselves up so deeply in snares and snarls that we think we are very badly off. We say we cannot cast off this fetter or that. We cannot rise to this or that standard of conduct. We cannot feel for others as we do for ourselves, and we work ourselves very severely to maintain the truth of our assertions. The snarls which look so thick and close while we are in them and in the acknowledgment of them, disperse with surprising ease once we see that there is a simple way out of them. They wind about us just as thickly as we will permit, and unravel when we make it possible."

F. A. Christie, in the *Christian Register* says: "The kingdom and the judgment were at the door; but the old, half-hearted, compromising life went on. Men were sentimentally religious, but they were living the life of a perishable world. They hoped for the predicted perfection, but the eye was open to the solicitations of gain and corrupt desire. They looked on two contrasted, alluring pictures, and won neither as a controlling motive. They were in confusion. Life was divided, irresolute, vacillating. Belief in eternal interests succumbed to fears inspired by the present. They dickered with God as an uncertain power. They served two masters,—God and Mammon. The call of Jesus was: 'Break loose! Serve God alone! Have a single eye!'"

In an article on "Sober Living," published in the *Congregationalist*, Rev. Isaac Ogden Rankin says: "It is the unprosperous time that tests men's souls. Then the weak man shows his weakness and the sober-minded man his strength. What follows its deliberate purpose through discouraged times like sober-mindedness? Christian found the Slough of Despond his hardest trial, but while Pliable floundered back to the City of Destruction, he kept his face toward the wicket gate until at last he found firm footing on the side of hope. How can a man be brave in hours of solitude and depression, unless he has the peace of faith born of a great decision?

The (Methodist) *Christian Advocate* says: "One reason why so many men and women fail to love the Bible is because they have never tasted the sweetness of its truths. They may have read some of it; they may have read all of it, but not with an understanding mind. There is a wide difference between tasting the kernel and chipping off the shell. Reading the Bible may be nothing more than chipping off the shell, while the truth so rich and sweet lies far within, unobserved and untouched. The word of the Lord is sweeter than honey and the honeycomb, but not to all. To some it is dry and bitter."

With a majority of one vote, that of the moderator, the New York Presbytery on November 12, decided against a revision of the Westminster creed. The number of votes cast was 142, of which 109 were recorded as votes of clergymen and 33 as votes of elders. The Presbytery of Philadelphia on the same day voted against revision of the creed, and recommended to the General Assembly that the whole matter of revision be dismissed. The vote stood 70 against 65, divided as follows: Against revision, ministers 48, laymen 22; for revision, ministers 45, laymen 20.

The *Standard* says: "If we do what we know to be wrong, or if we refuse to do what we know to be right, we have reason to reproach ourselves afterwards with the results of our error. But if, in a prayerful desire to do right, we act in the light of duty as it presents itself to us at the time, we have no reason to reproach ourselves, whatever be the result. Duty for the hour is in the light of the hour. God takes care of the consequences of such duty-doing."

Edward Everett Hale says in the (Unitarian) *Christian Register:* "Is there, perhaps, a new ripple in the eternal discussion why the people who do not go to church on Sundays stay at home? It has been rather a favorite topic in the newspapers in that 'off period' which in my boyhood the editors called 'cucumber time.' For myself I have never doubted for a moment that, if the preaching were better, more people would go to hear it."

The (Baptist) *Examiner* says: "Having done the work of the day, prayerfully, conscientiously, earnestly, we can in confidence commit it to God; and it becomes our duty then to restrain the divinely prohibited apprehension that borrows trouble, and ruptures present peace by anticipating ills that may or may not belong to the future. Worry indicates two things with certainty: (1) neglect of worship; and, (2) while the worry lasts, incapacity for worship. Where there is worship there is faith, and faith restrains foreboding."

A writer in the (Baptist) *Watchman* on "The Terror of Love," says: "We practise self-deception without realizing what we must meet in the day when we can no longer hide our sin from ourselves or from God. Sin is itself the terror of the Lord. Then we shall see what now we fear the revelation of,—our own hearts. It will be enough to see that we have sinned. The terror will be the unmasking of the soul, and the sight of it in the light of the life and the love of God."

The *Christian Register* is a consistent defender of the present age. In an editorial it says: "They who carelessly rail at the degeneracy of the age forget that, in ninety cases in a hundred (or more) we are depending upon each other for our comfort and safety, and trusting everybody to such an extent that, with all its complications, life could not be carried on did we not act upon the belief that the men and women about us are trustworthy."

In an editorial on "The Cultivation of Charity" the (Swedenborgian) *New Church Life* says: "Theoretically every one desires the growth among men, of charity, harmony, and good-will toward the neighbor; but practically, in the wear and tear of daily contact with the neighbor's shortcomings and offences against us or against our notions of what is right and fitting, the spirit of good-will gets a great many set-backs."

The *Universalist Leader* says: "It is the progress of Christianity that has made our present civilization what it is and which has led men to cry out against war and conquest. The spirit of Christ is not confined to his church, but is beginning to flood the world and mould the thoughts and conduct even of those who call themselves unbelievers."

In an editorial on "Cheerful Thanksgiving" the *Congregationalist* says: "The secret of the happy life is found in the direction of our eyes and the order of our thoughts. Which do we look for first, complaint or praise? Which goes first into our scale for estimation, trial or mercy? Are we looking part way up to compare ourselves with more successful men, or far beyond success to the centre of our life and joy?"

An æsthetic English Vicar will not allow the word "died" to be put on the tombstones of the people buried in the cemetery. He insists on phrases like "departed this life" or "passed away" or "entered into rest," and says that "died" is a denial of the Christi n teaching of immortality.

Seneca Co. Journal.

A writer in the (Baptist) *Watchman* says: "You can sing sacred music profanely; that is often done. I would not give you anything for music, however sacred may be the words which it expresses, if it be not sung in the spirit of its own sacredness."

Rev. George D. Herron, in a recent speech, said: "It is a strange superstition that makes men regard what they know to be elementally good as dangerous in practice, and what they know to be elementally wrong as practically safe."

Notices.

Rules to be Observed.

We request our co-workers throughout the Field carefully to observe the following rules in sending in their orders to the Publishing House:—

All remittances should be by express money order, post-office money order, or exchange on *New York* or *Boston*, but not on Chicago. Individual checks cannot be received, as a charge is made by the Boston banks for their collection.

All orders for Journals, Sentinels, Quarterlies, Hymnals, Manuals, Bibles, "The Mother Church," "Communion Hymn," "Mother's Evening Prayer," tracts, pamphlets, personal cards and Church notices, should be sent directly to The Christian Science Publishing Society.

All orders for the publications of our Leader, Rev. Mary Baker G. Eddy, should be sent directly to Mr. Joseph Armstrong, Publisher, 95 Falmouth Street.

Remittances for goods ordered from The Christian Science Publishing Society should be made payable to The Christian Science Publishing Society. Remittances for the publications of our Leader should be made payable to Joseph Armstrong. Remittances should always accompany orders, and should not be made payable in any case to the Editor or the Editorial Department.

Do not mix orders belonging to The Christian Science Publishing Society with those for the publications of our Leader or *vice versa*.

Articles for publication and communications relating thereto, belong to the Editorial Department and should be addressed to that department.

Full name and address should be given in each communication. Matter intended for publication cannot be used unless name and address of writer are given.

The Christian Science Publishing Society does not receive money for Church dues or per capita tax; this should, in all cases, be sent directly to the Treasurer, Mr. Stephen A. Chase, Box 56, Fall River, Mass.

The Clerk of the Mother Church, William B. Johnson, C.S.B., receives many letters of inquiry, etc., relative to matters not within his knowledge or line of duty. It is obvious that, with his onerous duties, he should be relieved of this. We bespeak for him but fair, brotherly consideration, when we request the Field to write to him only upon matters pertaining to his duties as Clerk of the Church.

We again ask that no money remittances whatever be made to the Editor or Editorial Department.

Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.

Single book, prepaid	$3.00
Twelve or more books to one address, each, prepaid	2.50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science: its growth and fundamental idea: 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

MESSAGE TO THE MOTHER CHURCH. The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckle-edged. Price, 26 cents; per dozen, $2.50, prepaid.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

Thanksgiving Day was celebrated in London in the time-honored manner by a reunion of leading Americans at a banquet in the Grand Hall of the Hotel Cecil.

Thanksgiving Day was observed for the first time in the Church of Oxford University. The sermon was preached by Rev. G. H. S. Walpole, vicar of Lambeth, who formerly was a professor in the Union Theological Seminary at New York. Dr. William Osler, formerly of Johns Hopkins University, Baltimore, and now regius professor of medicine at Oxford University, presided at the dinner of the American Club of Oxford.

Three hundred Americans celebrated the day by a banquet at the Kaiserhof, Berlin. Dr. Francis Greenwood Peabody, of Harvard University, who is at Berlin as the delegate lecturer of American Colleges, made the principal address.

The Stars and Stripes flew from the American Embassy at St. Petersburg in honor of Thanksgiving Day, and Spencer F. Eddy, the Chargé d'Affaires, gave a dinner to the American colony.

The day was celebrated at Rome by a service at the American Church. The American College gave a Thanksgiving luncheon. Ambassador and Mrs. White gave a dinner to the personnel of the Embassy and Sir George Trevelyan, author of "The American Revolution."

James R. Garfield, Commissioner of Corporations, has in hand a report covering the investigations of six or eight of the great "trusts" of the country. Officials have been making an inquiry into the methods of the coal trust and the lumber trust. The examinations of these two were undertaken as part of the routine of the Department and not because of any complaint that had been lodged. Besides the oil corporation, those dealing in sugar, steel, tobacco, beef, lumber, and coal will be investigated. The findings in all these inquiries will go direct to the President, although several of them were ordered by Congress. The law requires the Commissioner of Corporations to show his reports to the President, who may send to Congress such parts of them as he sees fit. The officials report that there is little difficulty now in receiving satisfactory and ready answers to all inquiries submitted to the corporations by the Department.

A bill in equity has been filed in the Federal Circuit Court at St. Louis to break the so-called "terminal monopoly" in that city. The action is directed against the Terminal Railroad Association of St. Louis and its directors, the subordinate corporations of the association, and the fourteen railroads owning terminal stock. The court is asked to dissolve the combination existing between the defendant concerns, to enjoin them from voting stock in one another's meetings, and to take such other action as is necessary to the complete abolition of the unlawful conspiracy alleged to exist between the railroads and several terminal companies.

The chairman of the Ways and Means Committee, who says he once befriended the artists of America by having inserted in the McKinley tariff bill at their request a clause removing the duty on works of art imported from abroad, which duty was afterward replaced, also at their request, is reported as saying that in his opinion there is no chance of Congress taking up at this session legislation to repeal the tariff on works of art.

The hopes of the little band of American colonists on the Isle of Pines, who have been working towards the separation of the island from Cuba and its inclusion in the United States, were dashed last week by the letter of Secretary Root to the President of the American Club, in which he stated pointedly the position of the Administration.

The monthly statement of the public debt shows that at the close of business November 30, 1905, the debt, less cash in the Treasury, amounted to $999,752,831, which is a decrease as compared with last month of $12,893,294.

King Edward VII. has offered to the New York Yacht Club a trophy, to be held forever by the club. It is to be called the King's Cup, and it is to be raced for annually during the annual cruise—preferably off Newport.

Columbia University has abolished the game of football, as at present played. This action was taken at a recent meeting of the Columbia University committee on student organizations.

The number of employes on construction work for the Panama Canal now aggregates seventeen thousand. About fifteen hundred are white Americans.

Foreign.

Because of the refusal of the Turkish Porte to accept the ultimatum of the Powers in regard to Macedonian reforms, the Powers, on the 28th ult., occupied Mitylene. Two hundred Austrians, one hundred French, and one hundred British and Italian sailors landed there and occupied the custom house, telegraph office, and other public buildings. On the report that the Porte would accept the demands with modifications, reply was made that modifications were out of the question, and that if by Sunday at midday the Porte had not definitely accepted the demands the international fleet would occupy the islands of Lemnos and Imbros. A London despatch, commenting on the situation, says: "The outside world, including European statesmen, takes little cognizance of Moslem public opinion. It is a factor, nevertheless, which the Sultan himself does not dare to ignore in its present condition. Intelligent Mussulmans deeply resent the attitude of Europe at this juncture. They point out that the Christian nations propose to discipline the Turks while they look on with indifference to the massacres of Jews by Christians in Russia, worse than any Macedonian outrages on record. They deduce from Europe's policy that the pretended motives of reform are shams; otherwise similar tactics would have been adopted toward Russia. The present movement is, in their opinion, simply a disguised plan to drive Turkish rule from Europe.

The announcement to the Foreign Officers of Korea that the American Legation would be withdrawn and that American interests would be placed in charge of the Consul General, was the first recognition by the Powers of the Japanese protectorate over Korea. The recall of the American Minister greatly strengthens Japan's hand. While the American Legation remained it was thought possible that America's intervention might be secured to effect the repudiation of the Japanese protectorate.

King Haakon VII., before the Norwegian Parliament, on the 27th ult., took the oath to support the constitution. In a subsequent speech his Majesty said his motto was "All for Norway." He said he would govern according to the constitution and the people's will as represented by Parliament.

It is estimated that the portion of the Japanese loan reserved for London has been covered twenty to twenty-five times over.

Industrial and Commercial.

Special Agent Poole of the Bureau of Corporations, who has been instrumental in introducing American goods to foreign markets, gives some information of the shoe trade abroad. He writes: "American boots and shoes have been the rage in London and other cities of Europe, particularly in Germany. Regent Street in London has been lined with so-called American shoe stores, and a great reputation has been built up for American footwear because of its superior quality and fine workmanship. Now the market is likely to be lost or seriously impaired by shipping large invoices of inferior shoes and trying to force them on the British trade. Manufacturers of low-grade goods have taken advantage of the reputation of American boots and shoes to unload stocks of poor material and badly made goods upon a confiding public. American manufacturers, however, are not altogether to blame, for English manufacturers have also taken advantage of the craze for American goods and have flooded the market with cheap imitations, made with American machinery and marked with American labels. The same is also true in Germany."

The garbage, ashes, and rubbish of New York were a few years ago taken out to sea and dumped. Much of this rubbish was eventually carried by the tides to the beaches, which were thereby rendered unsightly and unclean. The garbage is now burned and the ashes are used in filling in the lowlands of New York. In this way 83½ acres of new land have been made, worth to the city about one million dollars. In the borough of Brooklyn some eighty acres have been thus reclaimed. The rubbish is burned and used to generate heat and electric lighting. Contractors pay $240 a week for paper and iron saved from this rubbish.

The Cunard liner Carmania sailed from Liverpool on the 2d for her first trans-Atlantic voyage. Her performance will be watched keenly, both by naval architects and engineers and by the traveling public, as she is the largest turbine-propelled vessel in existence. The Carmania, so far as her hull is concerned, is a sister ship to the Coronia, the largest vessel of the Cunard service. The Carmania is only expected to equal the moderate speed of her sister ship, which is propelled with reciprocating engines. Her designers hope, however, that she will do considerably better.

Silver is now 65⅞ cents per ounce, the highest price since 1896. Two months ago the market quotation was fifty cents. Demand is greater than supply, brokers say, in accounting for the higher price; but they also say that in addition to a legitimate business demand there is also a speculative demand.

It is now stated that it has been almost certainly established that the "canals," "lakes," and "seas" of Mars are bands of vegetation, and not water, as has been generally supposed. The peculiar formation of the "canals" has led astronomers to believe that these bands are artificial.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

Thanksgiving Day Services.

The Mother Church, Boston.

A Thanksgiving service was held at The First Church of Christ, Scientist, on the corner of Falmouth and Norway Streets, at 10.30 A.M. yesterday, Mr. W. D. McCrackan, First Reader of the church, presiding.

The service was after the usual order, opening with singing, Scriptural reading, and prayer. Then followed a solo by Mrs. Hunt and a Lesson-Sermon, prepared for the occasion, consisting of a compilation from the Bible and "Science and Health with Key to the Scriptures" by the Rev. Mary Baker G. Eddy.

An opportunity was then given for testimonials from members of the church, appropriate for the occasion, after which the following despatch was read, adopted, and sent to the Rev. Mary Baker G. Eddy, Pastor Emeritus of the church, at Pleasant View, Concord, N. H.:—

Boston, Mass., Thanksgiving Day, November 30, 1905.
To the Rev. Mary Baker G. Eddy, Pastor Emeritus of The First Church of Christ, Scientist, in Boston, Massachusetts, Pleasant View, Concord, N. H.

Beloved Leader and Teacher:—Assembled in your church, in accordance with the proclamations of the President of the United States and the Governor of the Commonwealth of Massachusetts, and in pursuance of a wise provision made by you for such occasions in the churches of our denomination, we, on this happy Thanksgiving Day, send you words of joyful greeting as you keep vigil in your constant prayer.

The keynote of this hour is gratitude, and we esteem it a privilege to be permitted to enumerate to you some of the chief reasons for our special thanksgiving. We rejoice in the widespread bounty which God has vouchsafed to mankind at large; in the evident growth of kindliness and cooperation between peoples and nations, and in the constantly increasing value set upon woman's work. We are grateful to know that the teachings of Christian Science go to the root of all problems, both individual and collective, and promise and provide the means whereby that Mind which was also in Christ Jesus, may be brought to bear upon the complications and entanglements of human affairs.

That which makes our hearts overflow in this greeting to you, dear Leader, is our growing perception that Christian Science is really redeeming the world. It is healing mankind of sin and sickness, banishing its sorrows, undermining the causes of its fears, and substituting courage for despondency, peace for pain. To-day as never before we are enabled to look down the vista of the ever-increasing activity of Christian Science, and see its inevitable advance from promise to fulfilment and from hope to achievement.

In assembling to-day to thank God for His bounties, in accordance with traditional usage, we are not forgetful to thank Him for you and your noble living, for your discovery of Christian Science, for your founding of this Science upon the sure basis of the Church of Christ, Scientist, and for the writing of your immortal work, our text-book, "Science and Health with Key to the Scriptures." The harvest which forms the culminating theme of rejoicing in our thanksgiving is the spiritual harvest of good works resulting from your teaching based upon the sacred Scriptures. The leaves of this healing are being carried to the ends of the earth by the power of God, good, for they are the leaves which are for the healing of the nations.

In behalf of the congregation assembled in The Mother Church. WM. B. JOHNSON, *Clerk.*

The sermon expressed in part that it may always be assumed that there is gratitude where appreciation exists, and the strongest evidence of true appreciation is the good use one makes of his blessings. Hence, the sacredness of silent thankfulness, which, though seldom or never manifested in words, abounds in good and generous deeds.

A large number testified to having been healed through Christian Science. Some had been healed of bodily ailments; others had been lifted out of various forms of sin. A lady said she was thankful for a woman who could present the truth to the world in a clear enough manner to make it practical. A gentleman said he was not willing to rest his thanksgiving upon a mere recognition of bodily benefits; he laid far greater stress upon the wonderful spiritual uplift and the regenerating influence which Christian Science has brought into the world.

The service closed with a benediction.

The Boston Herald.

Concord, N. H.

The Thanksgiving Day services which are held in all Christian Science churches are largely attended, and that in Concord yesterday was no exception to the rule. The subject of the sermon, very appropriately, was Thanksgiving, and the discourse consisted of selections from the Bible and from the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy. The service was conducted by Rev. Irving C. Tomlinson, First Reader, and Miss Mary E. Tomlinson, Second Reader.

At the conclusion of the sermon, opportunity was given for testimonies of blessings received through Christian Science from those present. A large number voiced their gratitude for restoration to health and witnessed to the spiritual benefits which had come to them through the prayerful study of the writings of Mrs. Eddy.

Visitors were present from New York City, Boston, Worcester, Roxbury, and elsewhere.

By unanimous vote the church sent the following letter of thanks to their beloved Leader, Mrs. Eddy:—

Rev. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—Your grateful followers in your home city, on this glad Thanksgiving Day, which is the symbol of that perpetual thanksgiving we feel to the Giver of all good, send to you, God's faithful servant, our word of greeting and of gratitude.

We have just been fed with the spiritual feast which your love and wisdom have ordained, and have listened to many feeling testimonies of spiritual healing and regeneration, from Concord citizens and visiting friends. We thank you for your consecrated labors, which have garnered such abundant fruitage, and for the bread of Life which you

Copyright, 1905, by Mary Baker G. Eddy.

Digitized by Google

are breaking day by day for those who hunger for the heavenly manna.

We assure you also of our growing gratitude for our precious church home, the grand granite edifice, your magnificent gift to First Church of Christ, Scientist, in Concord.

We may thank you also, as fellow-citizens, for your continued generosity, which knows no class or creed, to multiplied institutions and individuals within our fair city and State. Justly has our honored mayor, Judge Charles R. Corning, in introducing Honorable William G. Ewing, on the occasion of his recent lecture in our city, feelingly said: "I thank her [Mrs. Eddy] for what she has done; and in doing this, I am certain that I express the sentiments of my fellow-townsmen. Here is an influence and an individuality, and may we not congratulate ourselves that this influence and individuality are so intimately associated with our municipal welfare?"

We rejoice with you in the continued growth and prosperity of Christian Science in your native State and throughout all lands, and we thank God for the vigorous health and unabated strength with which you carry forward to certain victory your great religious movement for the betterment of all mankind.

IRVING C. TOMLINSON, *First Reader*,

Religion and the Library. Helpers One of Another.*

REV. IRVING C. TOMLINSON, A.M., C.S.B.

ARM in arm two prominent clergymen of New Hampshire, one a liberal, the other an orthodox, appeared before the desk of their local public library, with a list of books, which they had prepared in common, to be procured from the Boston Theological Library. The local library made the requisition on the Boston institution, and the needs of the two brother ministers were promptly supplied.

This concrete example illustrates one way in which the public library is the helper of religion. It is a common meeting ground for the common and the uncommon people. Before its genial influence barriers give way. In the white light of truth sectarian differences vanish and fraternal agreements appear. Creeds and confessions may separate and antagonize, but the library of the people makes men mutual helpers. Bigotry begets a breed of clannish ecclesiastics who grow hungry and hollow-eyed on doctrinal husks. The learning of the library leavens the lump of denominationalism and a nutritious loaf nourishes a hearty brotherhood.

There is growing up a helpful co-operation between the Sunday school and the public library. It has been discovered that the public library may be made a helpful adjunct of the work of the children's department of the church. From a very carefully prepared article by George F. Bowerman in *The Library Journal* for June, 1904, we take the following useful extracts:—

"The custom is widely prevalent among public libraries of issuing to public school teachers special cards on which six or more books may be drawn for school use. In many libraries the same privilege has been extended to pastors and Sunday school teachers. In this way or similar ways increased privileges are granted to religious workers in need of several books for personal study or class use. One interesting feature of the work at Hagerstown, Md., is the fact that the clergy of the county can have ten books sent back and forth free of expense, and retain them as long as desired, with the privilege of recall by the library if necessary."

"My investigations have brought out the fact that a small but increasing number of libraries have undertaken the work of supplying Sunday schools with books for circulation to their pupils. In some cases the public library books no doubt supplement the Sunday school collection, but more often they probably supplant it, and the Sunday school books are either discarded or chiefly confined to reference use. The system as applied to Sunday school libraries offers a useful field for further experiment."

"For several years the Berkshire Athenæum of Pittsfield, Mass., has been successfully co-operating with Sunday school libraries in furnishing them with books. The plan involves the turning over to the public library by the Sunday school of all books it cares to spare, the giving to the library each year of the money heretofore appropriated for new books, and the provision of means of transportation. In return the library sends each week books chosen by the Sunday school committee, who select for purchase books up to the amount of their annual contribution."

"In Baltimore one Sunday school has recently begun taking books from the Free Library on Saturday, returning them two weeks from the following Monday morning."

"The Buffalo Public Library has five traveling libraries in five different Sunday schools, which are regularly supplied with books selected by the public librarian and the committee of the Sunday school. The circulation statistics are kept in the same manner as with other school traveling libraries. Library assistants have visited the schools to give instruction in keeping the circulation record and in methods of caring for the books. The plan has proved moderately successful. Besides the five libraries already mentioned as being in Protestant Sunday schools, the library supplies collections to two Catholic institutions for use in connection with their classes in religious work."

"The Dayton Public Library is about to begin the sending of traveling libraries to Sunday schools. It is now making up a home library for children, which is to be under the direction of a Bible class, whose members will act as visitors."

"In St. Louis several Sunday schools depend altogether on the public library for their supplies of books. Their pupils and teachers select books from "finding lists." The books are sent on Saturday, and the exchanged books are returned to the library on Monday. One Sunday school, which has been carrying on the plan for three or four years, pays a library assistant to come to the school regularly each week to distribute and charge the books. When the plan was first tried, collections of fifty to two hundred books were sent to be kept for the season. This did not prove satisfactory, as the chief use of the books appeared to be to fill the book cases and thus furnish the Sunday school rooms."

"The Somerville (Mass.) public library has groups of one hundred books in six different Sunday schools. They may be kept as long as desired, though it is expected that they will be returned at least once a year. As a matter of fact, they are exchanged about once a month. The librarian reports that the plan is working satisfactorily and appears to be doing good."

"The Springfield (Mass.) city library loans collections of from twenty-five to one hundred books to seven Sunday schools, to be returned in six months. The books so loaned are not distinctly religious in character. One feature of the plan for co-operation between this library and the clergymen of the city, already referred to, includes the preparation by a committee of ministers and laymen of a list of children's books in the library that are particularly suitable for Sunday schools."

We have presented the silvern side of the shield—how the library may help religion. It also has a golden side—how religion may help the library. That the library is in

* This very interesting article, which appeared in the December issue of the *Bulletin of the New Hampshire Public Libraries*, is one of a number contributed by prominent clergymen upon the subject, "The Library from the Standpoint of Religion."

Digitized by Google

need of help none will deny. The first to so acknowledge are the librarians themselves. Better books, better readers, and a better use of the books read, is the aim of every progressive library worker. The friend and careful observer of the library is glad to note the improvements in many directions.

The conclusion is reached, as the result of a symposium of able writers in the *Outlook* for December, 1903, that "every year, as it appears, more people are reading better books, while the means of distribution and the area of influence of the better books are constantly increasing."

We may here remind ourselves that the public library has a mission not only with the improvement of our own people, but it has a great work with the host of those of foreign extraction, who know nothing of American institutions and customs.

Herbert Putnam, the librarian of congress, said, when president of the American Library Association, "One third of the people in our six large cities are of foreign birth. Seventy-one per cent were either born abroad or born of foreign parentage. In the assimilation of this foreign element no single agent is perhaps so potent as our public libraries." In this momentous enterprise what help can religion render the public library?

It is a truism that the help which books are to men, lies not in the number of books on the shelves, but in the character and the quality of the book read and the use made of it. As Ruskin puts it: "We may read all the books in the British Museum and not be a well-read person." And some one has said that "The value of a book depends upon the number of times that it can be read with profit."

The library which equipped Martin Luther and fitted him to be the leader of the Reformation, which has given us modern civilization, consisted of one volume,—the Bible chained to the monastery wall. The library of which Abraham Lincoln was a constant patron, and the library in which he received his training for the presidency, contained three volumes.

The practical help which religion can be to the reading public is not to provide more books, not to cultivate a spirit of book gormandizing, but so to transform the individual that he will be satisfied to read only that which promotes his highest welfare.

In this connection, it will be most helpful and instructive to recall the wise words of President Richardson, spoken in his annual address at the Portland conference: "Without tangling ourselves too deeply in philosophy, we may note that there are two facts which lie very near the foundation of things: First, the fact that a man and his ideas are one and the same thing; second, the fact that the unity of a nation or any society lies in the ideas which its members hold in common, in the like-mindedness of its individuals." He then quotes the Sanskrit philosopher of three thousand years ago: "We are our thoughts, we are made up of our thoughts." Concluding, President Richardson well says, "The vital thing, therefore, about a man is the sort of ideas that he holds; the vital thing about a nation is the set of ideas in which all its members agree."

This is in close accord with the declaration of Scripture concerning man: "As he thinketh in his heart, so is he." If religion has any mission whatsoever, it is to provide mankind with the right sort of ideas. Wherefore the Founder of the Christian church said, "Ye shall know the truth, and the truth shall make you free."

The library which the Founder of the Christian religion read consisted of the books of the Old Testament scriptures, particularly the law, the Psalms, and the Prophets, as we know from his frequent quotations from these books. These writings, together with one other volume, formed the first library of the English people. This library was instituted in the year 600 A.D. at Canterbury. It was the gift of Pope Gregory and brought by St. Augustine. It consisted of nine precious volumes, and was made up of parts of the Scriptures with commentaries, and a volume of "Lives of the Martyrs." Compared with the modern public library, this first English library is voluminous on the side of religion, and has a low percentage on the side of fiction and non-religious works. It is not cited as a model for the modern library, but in view of the part which the Bible has played in the upbuilding of the English people, we may ask if in this age of the newspaper and the periodical the Bible has its rightful place. The answer is an emphatic "No." The help, then, which religion may be to the library is to give to the Bible the place it deserves.

As President Richardson says, "The vital thing about a man is the sort of ideas that he holds." To help a man to a love for the Bible is certainly to help him to the right "sort of ideas."

I cannot speak for others, but I rejoice to know that the vital thing about the denomination of which it is my privilege to be a member, is that it is helping the public to possess the right sort of ideas by making its own members constant and appreciative readers of the Bible.

History records that the first book which came from the printing-press was the Bible. As we have seen, the first library of the English-speaking people was made up of various parts of the Bible and one other work. May it not be that the next great reform on the part of readers is a return to the reading and the study of that book in which our highest ideals and noblest civilization are embodied?

It is a source of satisfaction to remember that New Hampshire, which is a leader in the public library movement, is the native State of the Discoverer and Founder of Christian Science, Mrs. Mary Baker G. Eddy. Mrs. Eddy has said that the Bible has been her only authority, and it is significant that all her writings instil a love for the Bible. The works of this New Hampshire citizen have had a remarkable circulation. The text-book of Christian Science, of which Mrs. Eddy is the author, "Science and Health with Key to the Scriptures," has passed through its three hundred and seventieth edition of one thousand copies each, and her fifteen other works have a circulation of more than a half million copies.

New Hampshire has been fittingly called the pioneer State in the public library movement. She had the first public library. She was first in America to adopt free public library laws; the first to enact a law making it compulsory on every town in the State to collect taxes to establish and maintain a free public library; the first to found at the public charge a State library. It likewise seems fitting, to the followers of Mrs. Eddy, in this and foreign lands, that New Hampshire should be the home of a religious author and pioneer, who is leading a great moral reform which is giving to the Christian religion and to the Holy Bible the places of honor they richly deserve, not only in the public library, but also in the homes and daily life of the people.

Righteousness versus Self-righteousness.

PROF. JOEL RUFUS MOSLEY.

Whosoever exalteth himself shall be abased; and he that humbleth himself shall be exalted.—JESUS.

For I bear them record that they have a zeal of God, but not according to knowledge. For they being ignorant of God's righteousness, and going about to establish their own righteousness, have not submitted themselves unto the righteousness of God.—PAUL.

RIGHTEOUSNESS in ordinary usage means being and doing that which is right and just; in a word, right-living. Righteousness is justice and holiness manifest in love. Righteousness and mercy, instead of being opposed to each other, are harmonious attributes of divine Love. All that is righteous as God is righteous, is also merciful as He is merciful; and nothing is merciful as God is merciful, that is not also righteous as He is righteous. The meekest and most merciful of men was "Jesus Christ the righteous." Paul speaks of the superiority of "the righteousness of faith" to the righteousness of dead works, and he makes faith a means of attaining rather than escaping "the righteousness of God."

Digitized by Google

The author of 1 John sums up the whole Christian conception of conduct in his implied and oft-repeated contention that what God is, God requires. "To be in fellowship with God, we must be like Him, and do as He does." (Tolstoi's rendering of 1 John, 4 : 13.) Since God is righteous, those who are begotten of Him must also be righteous. Since God is sinless, those who are born of God must also be sinless. Since "God is light and in him there is no darkness at all," to be in fellowship with Him we must be free from darkness and walk in the light. Since God is Love, the children of God must be loving.

If righteousness be right-living and right-living is the reflection of divine Life, the Son doing what he sees the Father do, then we can understand all the better why it is that self-righteousness is a form of unrighteousness (wrong-living), that is the distinguishing vice of all forms of pharisaism, and that humility is the genius of true Christianity. Self-righteousness, being a false, perverted pharisaical sense of righteousness, is as much unlike, as antagonistic to true righteousness as self-will is to God's will, and as self-love is to the love which God requires. Like all other forms of selfishness, self-righteousness is an effort to substitute an imperfect human standard of right for the perfect divine standard, the counterfeit for the genuine, the false for the true, and the unreal for the real.

The self-righteous, in their efforts "to establish their own righteousness," not only fail to submit themselves unto "the righteousness of God," but in order to justify themselves they find it necessary to condemn others. They fail not only to seek "first the kingdom of God, and his righteousness," but they hinder them that are seeking and entering. Instead of lifting the heavy burdens and letting the oppressed go free, they impose "heavy burdens too grievous to be borne." The ministry of pharisaism, at its best, is one of condemnation rather than one of true righteousness, of healing and saving love. At its worst, it crucified the best man of all the ages, and has continued to crucify, and often in His name, the meek, the just, and the Christ-like.

Since "there is none good but one, that is, God;" since, apart from God, "there is none righteous, no, not one," the only righteousness that is possible for man is to be at one with God and to reflect His righteousness. This is the teaching of Christian Science, that to be at-one with God and to reflect His righteousness is to see as God would have us see, to love as He would have us love, and to do as He would have us do; and God would have us see, love, and do, as He sees, loves, and does. He sees perfectly. He sees all that is real, all that is, was, or can be, like Himself, good and "very good." His righteousness is in His right view of himself and His creation. We reflect His righteousness, His right point of view, as we see Him perfect, His man perfect, His universe perfect. This does not mean that we are not to be quick to see, to rebuke, and to destroy the false claims and appearances of evil; but it does mean that as we attain to perfect purity of heart and mind we shall not only see God, but see as He sees. We reflect God's righteousness as we do anything according to His right and perfect will. In perfect obedience there is perfect righteousness.

Is this standard, the Christian standard of righteousness, too high? Nothing that is true and perfect is too high; if it were, it would neither be true nor perfect. With God the ideal and the real must be identical; and whatever is real, is right and perfect. God's standard of righteousness is just the same as ours will be when we awake, and as we awake to the Truth of being. In fact, as we come to know and conform to God's standard, we can no more think of having it changed than can the mathematician think of having the fundamental law of mathematics changed, or the musician the law of harmony. It is simply a problem of perfect conformity to perfect law, of perfect obedience to perfect good, of perfect unity with a perfect Father. Jesus demonstrated this perfect conformity, obedience, and unity. The Christ-light which lights up our lives also makes it possible for us to demonstrate it. It even reveals that we cannot be completely satisfied except as we awake in His likeness.

In the light of what God is, requires, and makes possible for us, we can see still more clearly why self-righteousness is no righteousness at all; and why self-knowledge, humility, and love are the mental and spiritual qualities which enable us to attain unto and do the works of true righteousness. (See "The Way" in "Miscellaneous Writings" by Mrs. Eddy, pages 355–358.)

Every one who is not living with the Father, who is not abiding in His love, who is not conscious of the presence and power of divine Truth, who is feeding on the husks of sensuality and sin, even those who are seeking any selfhood apart from God, must come to themselves. They must be aroused from the awful delusion of a belief of life and sensation in matter and of any real success and pleasure in evil. They must be awakened to the fact that there is no good but what the Father has and bestows; that it is only as they abide with the Father, as they recognize and rejoice in the all-power, presence, love, and bounty of God, that they can have real righteousness, wisdom, pleasure, life, and being. Then they are not ready to abide with the Father, but they come to Him in that humility and meekness which make them long to be as one of His servants.

The penitent, the humble, and the meek are received, however, as sons and not as servants. All that the Father is and has is theirs, to know, to love, and to enjoy. No good thing does He withhold from them. No mention is made of their wanderings, their transgressions, their sins. The purpose of God in Christ has been accomplished in their reconciliation and union with Him. Even while they wandered, and wasted their substance in riotous and sinful living, His loving kindness drew as well as welcomed them home. Now that they have found true living their joy is full as the Father's joy is their joy; His righteousness is also their righteousness.

Thus it is that humility, the mental state which triumphs over the temptations and sins of the flesh, causes us to seek, follow after, and abide in that which is pure, right, and good.

When we refuse to dignify the claims of evil by withholding any belief in their verity, and are able to prove evil untrue by overcoming its temptations, we grow in the apprehension of God's immanence, and are then working out our salvation in the way of His appointing.

Jesus suffered in all points like as we. Jesus bore in his body the sufferings induced by the world's hatred of the truth which he presented. All who follow his example will have to drink of his cup of sorrows.

This experience, however, will chasten and purify, when it leads one to Christ, whereby he learns that the suffering sense is temporal. Christian Scientists are coming to learn that matter is not substance; that it has neither intelligence nor sensation. They are learning that God is infinite Mind, the only consciousness: and that, in proportion to one's ability to realize the allness of the divine Mind, he is being ushered into the "secret place of the most High," right here, and now; and thus the pangs of pain have less and less dominion over him, in consequence of increase of spiritual understanding.

JAMES D. SHERWOOD.
Palestine (Tex.) *Visitor.*

Think truly, and thy thoughts
Shall the world's famine feed;
Speak truly, and each word of thine
Shall be a fruitful seed;
Live truly, and thy life shall be
A great and noble creed.

The Lectures.

So. Omaha, Neb.

At the High School Auditorium, Tuesday evening, October 10, Prof. Hermann S. Hering delivered a lecture on Christian Science. He was introduced by Hon. James H. Van Dusen, who said in part,—

Amidst the progress, the extension of the horizon of human knowledge, the tendency has been to establish as a fact the control of an all-wise creator rather than to disprove such fact. Materialism, so-called, as advocated by Professor Haeckel of Jena and by him borrowed from Büchner and de la Mettrie, has but few adherents or advocates, even among those quite indisposed to accept the gospel of Christ. No one to-day would think of quoting with seriousness the remark of Lalande, that he had "swept the entire heavens with his telescope and found no God there." This age has outgrown, to some extent at least, the theory of an anthropomorphic God, but it has not outgrown the idea of an ever-present, omnipotent, and omniscient creator. This creator, even to those who have given but superficial thought to the subject, is spiritual and not material.

The subject upon which the speaker is to address us is of a spiritual character; it deals with our relations to Him in whom "we live, and move, and have our being." I know but little of it, but this I do know, that it is based upon the teachings of the purest man that ever trod the earth: the one who gave us, if viewed from a purely ethical standpoint, the highest code of morals ever outlined to the human race; an ethical code so pure that it would seem to be impossible for mankind ever to outgrow it. I speak of the gospel of Jesus Christ.—*Correspondence.*

Hornellsville, N. Y.

At the Christian Science lecture given by Edward A. Kimball of Chicago, at the Universalist Church, Tuesday evening [October 10], Mayor Charles introduced the speaker in a beautiful manner, saying in part,—

We need as never before teachers and examples of higher ethics. Such I believe the Christian Scientist attempts to be. Every movement, every effort by individuals or societies to elevate the ethical standard of the people is of public concern. From a public and utilitarian standpoint all broad-minded men must be well-wishers of religion and religious societies and churches. Religion is a force that preserves and continues present attainment on the moral plane and leads to higher things; a force greater for peace, harmony, and stability of government than all the machinery of justice. I am not overlooking nor palliating the waste of energy, the loss of opportunity, and the dangers which arise from the disunited condition of the religious world to-day. I do not believe that a multitude of religious sects is best nor that it is the Scriptural ideal. I am firmly of the opinion that in due course of time a wise Providence will bring unity and, consequently, a greater good out of chaos.

Our Scientist friends are not great in number, but comprise an intelligent, cultured, and progressive portion of our community. They are endeavoring to promulgate the truth as they see it, as they believe it to be. It is not necessary that we should believe as they do in order to respect their work and their belief, and to wish them well. In this country all can worship God according to the dictates of conscience.—*The Times.*

Salem, Ore.

On Sunday afternoon [October 8] Miss Mary Brookins of Minneapolis delivered an address at the Grand Opera House on Christian Science. In introducing Miss Brookins, ex-Governor Geer said in part,—

Education, experience, and observation have combined to teach men that justice and common sense demand the widest possible latitude for individual opinion. The intellectual world has embraced and is occupying a higher plane than it did five hundred years ago, or one hundred, or even fifty. This is the result of a growing liberality, an increasing tolerance of the views of others, which is an admission that while we think we are right, there is always the possibility that the other man may in fact be right. Every discovery of science has been the result of some man's disregard for alleged facts hitherto considered firmly established, and has, therefore, been proof of former mistakes; while all progress depends upon a departure by some brave soul from a satisfying condition that some other brave soul had felt was based upon a revelation from heaven.

We have come together this afternoon to listen to an address upon an interesting theme, which has forced itself to the front against great opposition, based upon misinformation largely, and prejudice to an extent which is rapidly and happily disappearing. We may not believe all we hear, but we are honoring ourselves by becoming listeners. No man has the right to even claim that his conclusions are correct until he has heard all that may be said against them.—*Oregon Statesman.*

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

General Association of Teachers of England.

[The following loving greeting was received by our Leader from the General Association of Teachers of England, through the Earl of Dunmore, Secretary of the Association. Our readers will rejoice in this report of "greater unity and love."—EDITOR.]

London, November 14, 1905.

To the Reverend Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Our Beloved Leader and Teacher:—We, the undersigned, members of the General Association of Teachers of England, desire to take this opportunity of expressing our gratitude to you for your untiring energy and loving watchful care so abundantly manifested during the past year. Through your spiritual teaching and continual example of self-sacrifice and devotion to God, we are learning the deeper meaning of consecration and obedience which is resulting in greater unity and love being demonstrated amongst us.

Your loving students,
MARJORIE COLLES, C.S.D.
GERTRUDE DUNMORE, C.S.B.
MILDRED FOLLETT, C.S.B.
HESTER M. GRANT, C.S.B.
VICTORIA MURRAY, C.S.B.
FREDERICA L. MILLER, C.S.B.
WILLIAM N. MILLER, C.S.B.
CLARA M. S. SHANNON, C.S.D.
C. VIOLET SPILLER, C.S.B.
E. BLANCHE WARD, C.S.B.
DUNMORE, C.S.B., *Secretary.*

Healing through our Text-book.

IT is interesting to note that in the great number of testimonials of healing through Christian Science which come to us for publication, there are many in which this healing has been the direct result of reading the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and in this issue of the *Sentinel* a number of such cases are reported. It is the history of this book, that ever since its publication the sick have been healed by it; and this healing is one of the most tangible proofs that Christian Science is the truth. The healing of the sick through the perusal of this book is also a tribute to the simplicity and logic of its teachings and the lucidity of its literary style.

The appeal of Science and Health is not alone to the intellectual and the cultured, but also to the simple and unlettered; and its healing ministry has manifested itself in the destruction of all manner of disease,—the so-called incurable as well as the seemingly trivial. Mrs. Eddy's place as a benefactor of the race does not, however, rest solely upon the fact that thousands of persons have been healed of bodily sickness by this book. The testimony is overwhelming that through it men and women have been redeemed from the enslavement of sin, and that they have been turned from agnosticism and infidelity to the understanding and worship of God and His Christ. Through the study of this book interest in the Bible has been revived, and not a few copies of the "Book of books" have thus been rescued from the obscure shelves and corners to which they had been consigned.

Those who are studying the Bible with Science and Health as their commentary and text-book, are finding in it the spiritual food which they have never found before, and by the illumination which this text-book throws upon the Scriptures they are enabled to heal others of their pains and sins and sorrows even as they themselves were healed. Since the publication of Science and Health, thirty years ago, unnumbered cases of healing through the application of its teachings have been recorded, and the mission of Jesus is no longer minimized to include only the hope of a far-away salvation, to be won through death. This book has proclaimed to the world that our Master's command to preach the gospel and heal the sick is indivisible, and it has shown us how this command can be obeyed. Salvation from all evil has become a present fact instead of a future possibility.

The scientific understanding of the Scriptures which this book has brought to those who are seeking the truth about God and His creation, has raised up a body of people who are proving their faith by their works; and thus the growth of Christian Science goes on, and its adherents continue to follow their Leader as she follows Christ.

ARCHIBALD MCLELLAN.

The Importance of Knowing How.

THE ideal life of freedom, purity, and peace to which man may and should attain, is very clearly set forth in the teaching of Christ Jesus, and has always been entertained as a theory by professed Christians. More than this, very many sincere men and women have honestly desired to realize this ideal and have made intermittent efforts to do so; but finding only repeated failure and defeat in their attempts, some have practically given up the struggle and accepted what seems to be an inevitable material order. They no longer entertain expectation of a radical improvement in their habits of thought and living, until it is effected in some unknown way by death. The end to be reached has been seen very clearly, but the nature of the problem and the successive steps to be taken in its solution have not been understood.

A great body of Christian ministers of high character and capabilities are bringing to their congregations a splendid delineation of what a Christian man ought by all means to be. They speak with such learning and logic, such force and finish that their hearers are not only pleased and impressed, they are strongly impelled to strive for the ideal presented, and many of them set about it in all good faith. When, however, they come to meet the trials of human experience, they speedily find that they do not know what to do. It is much easier to theorize than to practise, and since a demonstration of truth has not been demanded outside of Christian Science, the academic and purely theoretical nature of much pulpit reference to the Christ teaching, and the consequent lack of knowledge upon the part of the people, is readily explained.

Not long since, one who is known as a great orator appeared before a metropolitan audience, bearing in his hand a full-blown rose, which in its sweet purity and perfectness was made the symbol of the fragrant and beautiful Christian life that he commended to his hearers. With matchless eloquence and in periods that were fashioned with all the art of a scholarly and poetic imagination he pled for the living of the ideal life. Many of his hearers were sadly thoughtful as they walked to their homes, and one of them said, "If he had only told us the how of it, wouldn't it have been splendid." The minister was thoroughly sincere; but he did not know the "how of it" himself, and

Digitized by Google

this was the explanation of his silence respecting a tremendously important point.

In the case of multitudes of earnest believers whose Christian experience has been barren and wholly unsatisfactory, ignorance of the way fully accounts for their defeat. Having become tired and discouraged with profitless efforts to get ahead, the average man, be he ever so saintly in purpose and strenuous in disposition, is tempted simply to quit. When, however, Christian Science has been providentially brought to these discouraged souls, they see, and see at once, that it supplies that essential knowledge of the way which Jesus imparted to his disciples by both words and works; and the significance of Truth's demonstration in healing sickness and sin, to the spiritual life of the individual and of the church, is for the first time made apparent. The beauty, logical completeness, and power of the life of the great Nazarene is presented in a new light, and aspiring hearts rise up to make life a like glorious symphony, with an entirely new sense of their power and privilege in Christ Jesus. Christian Science not only enlarges and enriches humanity's thought of the possible freedom and sovereignty of the spiritual life, it shows how they are to be attained through a strictly consistent adherence to the teachings of our Lord. Among its many practical gains is this, that it awakens a new, glad hope and assurance where there was once but the deadness of discouragement, for it opens the door of achievement to those who before have had only the vision of an unattainable ideal. JOHN B. WILLIS.

The Discipline of Christian Science.

A VERY singular objection to Christian Science has recently been voiced by a popular preacher, and discussed by the press. It is to the effect that this Science does away with mental and physical suffering to a considerable extent, and that mankind is in consequence deprived of a needful discipline. This is a peculiarly short-sighted criticism, since it fails to note the fact that people in general endeavor by every means within their reach to evade this supposed discipline. Those who have not studied this Science or been healed by it have very incorrect ideas as to its mode of operation. Some suppose that a quiescent state is induced, in which the patient comes to submit to conditions against which he formerly rebelled; but this is the very opposite of the fact. It is true that many weary sufferers find a new and wonderful sense of resting in God, but at the same time they are aware that a hitherto unknown power is at work, for the torpid and obstructed condition of the organs and functions of the body gives place to an activity and harmony resembling that of a spring day when the trees put forth bud and blossom. Then they learn that this changed condition has come because the human thought has been liberated and is responding to the divine power which, St. Paul said, "worketh in you to will and to do of his good pleasure."

This is the first stage of the healing work in Christian Science, but in a very short time the demand "Work out your own salvation" must be obeyed, and then comes the awakening of mental faculties hitherto unknown. A mother's experience may help to illustrate this. One night her youngest child manifested all the distressing symptoms of a severe attack of croup. Some months before, he had been dangerously ill with this ailment, and had been attended by a physician for two weeks—a period of great distress to mother and child, which was followed by a slow recovery. In the mean time Christian Science had come to the home, and the mother's dawning understanding of God and His law were now to be tested. There was a great longing for human aid, for the help of some one more advanced, but this help could not be secured; there was only God to call upon, and the danger seemed imminent, but what a rousing of all the faculties this situation brought! For two or three hours the struggle lasted; the false testimony which denied the omnipotence and omnipresence of God was resolutely and ceaselessly denied, with the result that the child was then entirely freed from every symptom of this dreaded disease. The vital part of the demonstration was, however, in the revelation of what wonders may be accomplished when the human mind is quickened—not put to sleep—by the influence of the divine Mind, as revealed in Christian Science.

The whole subject hinges upon the question whether it is suffering which causes humanity to advance, or the efforts put forth to overcome the suffering. Take the sense of sorrow: some sink under it, are wretched themselves and make those around them miserable because grief has come to them, while others rise to the occasion, and grow stronger and sweeter because of the demand to overcome personal considerations. This surely proves that the suffering was not the redeeming power, but that which made the overcoming possible. Those who have wrestled in Christian Science with the beliefs of sin, sorrow, and pain, can testify that never before was such mental and spiritual effort called forth as in seeking the victory through Truth alone, unaided by material means. They know that only by divine aid can a real and decisive victory be gained, and like Paul they take heart and say, "I can do all things through Christ which strengtheneth me."

To the faithful Christian Scientist, Christ, Truth, means more each day, and man's possibilities as they unfold point to the divine source of his being. The way out of materiality, with its attendant beliefs of sin and suffering, is not a flowery pathway, but it leads to freedom and bliss. It is followed with greater and greater clearness of vision, and as expressed by our Leader in "Christ and Christmas,"

> Through understanding, dearly sought,
> With fierce heart-beats.

ANNIE M. KNOTT.

Letters to our Leader.

[Telegrams.]

Chicago, Ill., November 29, 1905.

Rev. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

The limitless bounty of infinite Love becomes more apparent to us, as we grow in the understanding of God; and we wish on this occasion to express what we daily feel,—our deep thankfulness for what has been given us through you,—a present evidence being the wisdom that prompted you to advise, a few years since, that Christian Scientists in large cities should own their church edifices. In this, the metropolis of the West, five stately buildings have been erected, the last of which opened its doors for its first service last Sunday; and although the service was repeated three times, many seeking admission had to be turned away.

First Church, from which these several churches separated themselves to relieve its crowded auditorium, is again filled, and in this season of thanksgiving pours forth its loving gratitude to you who made this growth a possibility. We shall strive to keep inviolate the trust confided to us in your dedicatory address to this church, saying: "May this beloved church adhere to its *Tenets*, abound in the righteousness of Love, honor the name of Christian Science, prove the practicality of perfection, and press on to the infinite uses of Christ's creed; namely, 'Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy strength, and with all thy mind; and thy neighbor as thyself.'"

FIRST CHURCH OF CHRIST, SCIENTIST, OF CHICAGO.

MRS. EDDY'S REPLY.

Pleasant View, Concord, N. H., November 30, 1905.

Members of First Church of Christ, Scientist, Chicago, Ill.

Your despatch lifts the curtain on a scene of my early trials and triumphs, indelible on the tablet of time and enriched with eternal reward. MARY BAKER EDDY.

Concord, N. H., November 23, 1905.

Among the interesting testimonies last evening, from home and abroad, was one given by Miss Ballou of Boston, a graduate of the Massachusetts Metaphysical College. Miss Ballou is the great-granddaughter of Rev. Dr. Hosea Ballou, who was, as you know, one of the founders of the Universalist church, pastor of the leading Universalist church in Boston, and first president of Tufts College. Miss Ballou holds a certificate from a medical college, and at the time of coming into Science was a lecturer on subjects allied to *materia medica*. She told us last night something of her coming into Science and her gratitude to you. She had trouble with her eyes, having to wear glasses with the strongest lenses, and had been pronounced incurable. She was fully healed and now has splendid health. She related a remarkable cure of insanity of one who had been ten years among the so-called incurables. He was perfectly healed through Christian Science while still in the hospital, and is now at home, well. On my asking, she told me that she was the practitioner in this case. Miss Ballou is now giving her whole time to the healing work and she says that she loves it.

Dr. Worthen of Concord told of his healing of acute indigestion after medicine had failed. He said that the physicians told him that the trouble was beyond the reach of medicine, as it went through a chemical change before coming to the seat of the disease. He was healed in this Science in two weeks, and is most grateful for the spiritual help given him. IRVING C. TOMLINSON.

Chicago, Ill., November 15, 1905.

Rev. Mary Baker Eddy, Concord, N. H.

Beloved Leader:—Does not the parable of the great supper recorded in the 14th chapter of Luke's Gospel illustrate Christian Science? In establishing a plan of salvation, Jesus prepared a great feast for all mankind, and for centuries they found excuses for declining to partake of it,—chief of which has been a love for the material, and a desire to cling to it, rather than turn to that which means eternal life, and peace, and riches. But again, one was sent to "bring in hither the poor, and the maimed, and the halt, and the blind," and these are coming to the great supper,—coming to Christian Science for healing and for life. "And yet there is room," but none of those who were bidden, yet who cling to the material, shall taste of the supper. In this connection, the Master said, "And whosoever doth not bear his cross, and come after me, cannot be my disciple."

By reason of a life consecrated to God, you were selected to bring in hither those who were ready for, and in great need of, the spiritual feast. How well you have executed the sacred mission intrusted to you is attested by hundreds of thousands of happy men and women throughout the world, who have been lifted out of gloom and despair, whose tears have been dried, whose heart-aches have vanished, who have been delivered from sickness and suffering, and freed from the bondage of sin by accepting the truth, which your spiritual perception and purity enabled you to reveal to this age. Christian Scientists have accepted the invitation to the great supper, and they find that the spiritual, life-giving food satisfies.

As one who has been greatly benefited by the study and application of Christian Science, to-day finds me with but one aim, one ambition, and that is to know more of the truth and to live it. For the blessings that have come to me, I am deeply grateful to you as God's Messenger.

Lovingly yours,
R. M. STROTHER.

[The second signature to one of the letters to our Leader, which appeared in the *Sentinel* of November 18 (page 185), should be Sarah E. Roll.—EDITOR.]

Testimonies of Healing.

It affords me pleasure to give my testimony to what Christian Science has done for me. In June, 1901, my attention was called to it and cases of healing were cited. I investigated a number of these cases; some of them were of persons known to me and others were of strangers. I became satisfied of the genuineness of the healing and attended the Wednesday and Sunday services. I had suffered for more than thirty years with bronchial trouble and asthma, and during the last twenty years I had at different times severe hemorrhages of the lungs and bronchial tubes, which very nearly ended my earthly career. I had heart trouble, so pronounced by a number of reputable physicians, was greatly reduced in weight and strength, and there seemed no hope for me from the view-point of *materia medica;* indeed my friends generally expected my early demise. At the suggestion of a Scientist I began the study of Science and Health, and placed myself under the treatment of a practitioner. Nearly all my life my home had been in St. Louis, where for twenty-five years I was managing principal of one commercial college and president of another. During this period I became extensively acquainted in and out of my profession, and desiring to do whatever of good I may have opportunity to do, I earnestly urge all who are afflicted to try Christian Science, believing that the same beneficial effects will follow as did in my own case. I owe my life, perfect health, and ability to do more and better work in my sixty-third year than at any previous period of my life, to this old-new truth,—the gospel that heals the sick and saves the sinner.

I am a daily student of the Bible and Science and Health, and have not since June, 1901, taken any material remedy, knowing that Truth as of old is the ever-present healing power. Truthfully may it be said that Science and Health is the voice of God to this age, and it contains the whole of Christian Science, or the Science of healing through Mind.

J. W. JOHNSTON, Kenosha, Wis.

I feel it a duty and pleasure to give my testimony to the benefits derived from Christian Science. I had had poor health for several years, doctored most of the time, tried dieting, bathing, etc., and was at a noted sanitarium nearly two months. Only those who have had similar experiences can imagine my suffering, both physical and mental. I was reduced almost to a skeleton,—weighing but one hundred pounds, my former weight being about one hundred and forty pounds. Last July a friend advised me to try Christian Science, and loaned me her book, Science and Health. I at once became interested in the reading, and sent to a practitioner for an absent treatment. I began to improve, and during the first three weeks gained fifteen pounds, and had a corresponding mental improvement—I seemed like a new creature. After that I improved more slowly, but in seven months the change was wonderful. In the mean time I kept on reading Science and Health, and other Christian Science literature, but took no more treatments. I am now stronger and healthier than ever before, and the spiritual awakening I have had through Christian Science I consider worth more than the physical improvement, which is very great. To those who are prejudiced against what they believe Christian Science to be, I would say that I was, also, before I investigated it; but I have learned it is best to find out what a thing is before we condemn it, lest we reject our best friend. I feel a deep sense of gratitude to God, and to Mrs. Eddy, and I love the noble Cause which is lifting mankind from sickness and suffering to health and holiness.

FRED J. MORLEY, Baroda, Mich.

I wish to add my testimony to the long line which I see in

Digitized by Google

the *Sentinel* from week to week, and which I enjoy so much. Although we live on the desert we have Sunday School at home, for there is no Christian Science church here yet. I have had measles, and other ailments, but they have all been met by this beautiful truth. I am only a little boy, twelve years old, but I have learned to demonstrate the truth for myself, and I like to hear from other children through the *Sentinel*.—ROBERT G. RECORD, Calexico, Cal.

I shall never forget the sense of freedom and joy that came to me after having read for the first time "Science and Health with Key to the Scriptures" by Mrs. Eddy. This was more than ten years ago. Before the reading of the book was half finished I found that I was free from headaches—a trouble which I had from childhood. Other ailments, such as rheumatism, neuralgia, and heart trouble, left me. Later a throat difficulty was overcome with the aid of a practitioner and the study of our text-book. To know that one can be free from the drug habit brings great joy, but best of all are the spiritual gifts and the understanding of God's word that comes to us through the study and practice of Christian Science.

I am thankful to God, and very grateful to our Leader for her loving, patient work.

GRACE V. FITCH, Cedar Rapids, Ia.

I wish to express my gratitude to God for Christian Science, also my thanks to Mrs. Eddy for her untiring love and faithful labor for all the world. Words cannot tell the gratitude I feel in my heart, but I will strive to let my life and deeds prove it. I was scalded seriously by an explosion of boiling water. I had placed a gallon pail of water, which was air-tight, on the stove. The moving of the pail to one side caused the explosion. The boiling water went all over my face, and I was unconscious for a few moments. After I became conscious I began to realize the truth at once, but my face was swollen and my eyes were closed for three days. With my own realization of the truth and my mother's help in declaring it, my face did not blister at all, for by the power of God my face and eyes were healed in a week's time. Only those who were around me and witnessed the terrible occurrence, can understand how wonderful my healing was. How beautiful it is to read understandingly the Master's words, "Ye shall know the truth, and the truth shall make you free." It has indeed made me free and led me to love God.

MISS TILLIE PEGOREK, Oxford Junction, Ia.

When Science and Health was given me by a dear friend in April, 1903, I little realized the change two years' study of that wonderful book could bring about in my consciousness. The possession of many material things is supposed to make life worth living, but though I had these I was unhappy, discontented,—struggling to make the best of things, but often wondering what the purpose of existence might be. Happily a kind of inherent optimism and pride kept me from voicing the queries that seemed unanswerable. Now all is changed. I have learned that life is worth living, and that there are innumerable opportunities for doing good in the best way, helping others to help themselves by knowing Truth.

By studying Science and Health I have been healed of astigmatism, after wearing glasses eight years; of hereditary kidney trouble, rush of blood to the head, and nervousness; but words are inadequate to express the wondrous spiritual awakening and uplifting which has come to me. I can only say, with deepest gratitude and joy, that while I have often wished Christian Science might have come to me before, I am truly thankful it came no later. Through our dear Leader's discovery of Christian Science the Bible is no longer a sealed book and I know that God is omnipresent.—ALMIRA WINSLOW, Waltham, Mass.

It is with humble, loving gratitude to God, that I acknowledge the great benefits I have received since hearing of Christian Science. I left England sixteen months ago, to visit my sister living in Vancouver, B. C., and during the journey I stayed with some relatives in Ontario. Here it was that Science and Health was put into my hands, and before I had finished reading the first chapter, I knew it was the truth I had been longing for, and seeking, some time. A deep sense of overwhelming gratitude filled my consciousness, and ere I was aware of it, a physical trouble, which I had had for seventeen years, was healed. All I could say was, Oh, it is wonderful! No words can ever express my feelings, as with silent footsteps I entered this new world of Spirit, and though I have since had to come down from the Mount of Transfiguration, and work my way up, that same abiding peace has remained. I can say that the voice of Truth is becoming clearer all the time, and my prayer is that I may become more and more like a little child, in order to enter the kingdom of heaven. I have been healed of indigestion through the study of our text-book, and though at times other old ailments have tried to assert themselves, through the loving and faithful work of a practitioner here they have been reduced to nothingness.

I am grateful for the physical healing, but it is as nothing when compared to the spiritual uplifting. I am thankful to God, and to our dear Leader, through whom has come the revelation of this truth which Jesus said should set us free. It is my ever-increasing desire to reflect the love of our Father-Mother God, so that others may be led to enter this promised land of peace and rest.

BEATRICE HUTCHINSON, Vancouver, B. C.

I was taught in early childhood that God had seen fit to remove my father by death, and thus a strong tie to the far-away city was formed. I studied the Bible as the guide-book thither. I sorrowfully doubted my ability to reach it, and in order to be of some use in the world, and to practise self-denial, I chose the training of a medical nurse, and applied all my energies to make a conscientious and proficient one. The duties of this profession caused me to break most of the health laws; consequently, in a few years, my not very strong constitution was broken down, and *materia medica* failed to build me up, although I was faithful in using all the remedies prescribed. This made me miserable in mind and body, and the next thing in order was a change to a lower altitude. Circumstances placed me in the vicinity of a religious institute in Chicago, where I availed myself, when able, of the free lectures given there by eminent divines. I took up the study of the Bible with renewed interest, being impressed with the verse from Psalms, "Who forgiveth all thine iniquities; who healeth all thy diseases." Slowly but surely this led me to lose faith in *materia medica*, and I decided to use only simple home remedies and dieting, meanwhile bearing my ups and downs as patiently as I could. Gladly I returned to Colorado, only to be again disappointed. Finally, after bearing this ill health for eight years, I saw one whom I had known to be seriously afflicted, healed by Christian Science. I laid aside my prejudices and made some inquiries. On being told that it was the same truth that Jesus and his disciples practised, I thought it too good to be true, but I decided to investigate. "Science and Health with Key to the Scriptures" by Mrs. Eddy was loaned me, and I began to give all my spare time to the study of the Bible and the Lesson-Sermons. I made quick work of everything else, which previously had dragged heavily. As I read, peace came and my ills fled away; namely, insomnia, organic stomach

Digitized by Google

and bowel trouble, which commenced as a functional disorder, pain in back, and kidney trouble; also sick-headaches,, which had increased in violence until they were the dread of my life. Thus I had the proof which shows that divine Truth heals all our diseases. I was convinced that a belief in material remedies, no matter how simple, shuts out from us the true sense of God, who is able to perform all He has promised, even to the binding up of all our wounds. For this wonderful revelation of Truth we can but love our Leader, Mrs. Eddy, who points suffering humanity to the Christ.—EMMA WEBB, Denver, Col.

I was taken ill in January, 1904, and in five weeks was unable to leave my bed. I had a constant hemorrhage, and became so weak that I could not turn myself in bed, and could only speak with great difficulty. The physician was calling two and three times a day, but I grew steadily worse. Finally a consultation of physicians was held, and they decided there was a growth, either a cancer or a tumor, and advised that I be taken to a hospital for an operation; but in the mean time blood-poisoning developed. I grew worse so rapidly that all thought of an operation was abandoned. I could not even have survived the trip to the hospital.

At this point I decided to have Christian Science treatment, and a practitioner was called. Treatment was begun June 17, about five months from the time I was first taken ill. After receiving one treatment I had such a clear sense of God's power and presence that I asked for my clothing, arose and dressed myself. Every one who knew of the case thought I was dying, but in three days I was able to attend to light duties. During the second week's treatment the hemorrhage stopped and the growth disappeared. In three weeks I had fully regained my strength, and was doing all my own work. I wish also to speak of the healing of my baby. He had been troubled for a long time with a distressing scalp disease, which the physicians had been unable even to relieve. As soon as I began to improve, I placed him under treatment, and through the power of Truth he was made entirely free from this ailment.

I wish to express my gratitude to Mrs. Eddy, who has revealed to this age the healing truth, and made possible such demonstrations as this experience of mine.

MRS. F. W. GONDER, Caseville, Mich.

I desire to tell what Christian Science has done for me. It found me full of sin and disease. I had dyspepsia, constipation, heart and kidney trouble, and catarrh. About four years ago a friend came to make me a visit, and when she saw me in such poor health she asked me if I would try Christian Science. I told her I would, and she gave me treatment. She told me not to take any material remedies; that I must trust in God for my healing, and read my Bible. She gave me treatment every day while she was here, and before she went away I was better. I could eat anything; could also drink cold water and it did not hurt me, so I felt that God was healing me. There seemed to be a great burden taken from me and I felt very happy. My healing was slow, and I feel thankful for this, as it has compelled me to read the Bible and the Christian Science text-book. This truth has healed me in many ways, and I want more of the understanding. I believe that Christian Science is the true religion of Christ Jesus. I thank God for leading me to the truth, and I thank Mrs. Eddy for Science and Health, which helps us to understand God.

ANNIE J. THOMAS, East Concord, Vt.

It is difficult for me to find words to express my gratitude for the benefit I have received from Christian Science. I have been healed from several very severe attacks of sickness, one of which was inflammatory rheumatism. I was healed almost instantaneously, and felt very grateful, although I did not then take up the study of Christian Science; but a few months later I was taken sick with Saint Vitus' dance. I received Christian Science treatment, but did not want to study the literature at all. I grew worse; in one month I was entirely helpless, and was even unable to speak. At this time I concluded that the time had come for me to take up the study of Christian Science. I began to read the Bible and Science and Health, and in about one month I was entirely healed, although it was a few months before I gained my perfect strength. I was thankful for the physical help I had received, but I find that the spiritual healing is much more to me, for through it I am learning every day that no matter what my seeming trials may be, I am guided and delivered by divine Love, and by going on in this truth we are enabled to overcome these trials.

I am grateful to Mrs. Eddy for so earnestly seeking this truth, which is a sure guide on the strait and narrow path to life eternal.—BENHART C. NAHNSEN, Cedar Falls, Ia.

A little less than two years ago, I was very despondent and depressed over business affairs. Not being able to meet my bills, the constant worry over financial problems brought on a morbid condition, and the world looked very dark indeed. I had been a member of an orthodox church and taught in the Sunday School for years. This church was very dear to me, but at this time it seemed impossible to get any help or comfort from it, although I was faithful in attendance and prayed very earnestly for deliverance from my seeming difficulties. My spiritual life seemed on the wane, and I could find no way out of this condition.

In this frame of mind I called on a Christian Scientist friend with whom I had previously tried to argue about Christian Science. I always acknowledged that the Scientist had something better than I, in the healing power, but I also felt that I could never be a Christian Scientist, because I believed material baptism and communion were essentials without which no one could enter the kingdom of heaven. I called on this friend, and asked her if she thought Christian Science would help me. I needed something to lift me out of the gloom, and if there was anything good in Science and Health I must have it. I decided to purchase a copy, and I have never regretted the amount invested, for the benefits received therefrom can never be paid.

I feel that I owe our dear Leader an everlasting indebtedness for bringing such a blessing to mankind. Science and Health was a revelation to me. I could not leave it, I devoured its contents from morning until night. I had thought before that I knew the Bible; but studying it in connection with Science and Health I found that heretofore I had eyes and saw not, and ears and heard not. I knew it was the truth which makes free.

Although I did not come to Christian Science for physical help, I have been healed of sick-headaches, from which I had suffered since childhood. I have been enabled to overcome much error in myself and others, for which I feel very grateful.—MRS. ROSE J. WEBSTER, Minneapolis, Minn.

I came into Christian Science a year ago, and up to that time I had suffered with severe colds, coughs, and numerous other ailments. I was one of ten children, and had a brother and sister pass on with consumption. I myself seemed to be the most delicate of all the children, and the thought was held over me continually that I would be the next to go, and I had quite a time to rid myself of this fear. When our folks would look at me with that sad expression,—feeling there was no hope for me,—I would say that I need not go into consumption, just because my brother and sister had gone; but shortly before Christmas of 1904, I was very sick, and coughed so badly that I was on the verge of giving up. I then had a Chicago friend visit me, who asked me to look into Christian Science. I told

Digitized by Google

told her I would, and the following Sunday I attended the service in St. Louis, my home city at that time. I felt at once that Christian Science was the true religion. I had looked for it, it seemed, for years. I consulted a practitioner and made arrangements to have treatment. I had not told my parents that I was interested in this Science, but after I had a week's treatment, my mother remarked to my aunt that I looked like a different person since I had stopped taking medicine. I then told her I had taken up Christian Science and that I owed this change in myself to God's all-power.

I am trying to live this truth in my home and to prove that there is only good in Christian Science. I thank our dear Leader, Mrs. Eddy, for all she has done in bringing us this healing truth.—Eva Orman, Wilder, Mont.

Three years ago a trial came to me which was the occasion for proving God's omnipotence. It was a second stroke of paralysis, so severe that a trained nurse said I could not live twenty minutes unless brandy was given at once, and she gave me three doses. That was the only time material remedies were used. A Christian Science practitioner was asked to help me, and her prayer was answered. Many times that day it seemed as if I should pass on, but Truth was victorious. Six days later there came a crisis when Christian Science alone conquered. Every symptom that usually accompanies this disease was present, but all were overcome by the operation of divine law. The trained nurse who cared for me said I would never ride my bicycle again, but early the next spring I rode my wheel, and continue to use it. At times my progress seemed slow, but I learned that wrong thinking is the only hindrance to our progress, and I am more thankful to-day for cleared views of God and my relation to Him than for any physical benefit. I take long walks, and my healthy color has called forth comment many times.

I cannot better express my deep, abiding love for our Leader than in trying to live nearer to Christ.

Miss Emma L. Pease, Grand Rapids, Mich.

Many years ago I was asked to go to the home of a neighbor, with others, for the purpose of hearing what my friend called a strange doctrine. I was deeply impressed, and ordered a copy of Science and Health, which indeed proved to be a Key to the Scriptures, as it unlocked hidden treasures for me. Its logical and spiritual interpretation appealed to me, and I also recognized the healing power of Jesus the Christ, which is as applicable to this age as it was eighteen centuries ago. Notwithstanding my convictions, I did not then leave all for Christ. I was not continually about the Master's business, but was trying to serve God and the world,—living in awe of the world's opinion. I soon began to realize that I had received the truth mainly from an intellectual standpoint, although I had yearned from infancy for spiritual understanding which I did not possess. The leaven had been doing its work, and was only retarded by my not yielding wholly to the demands of divine Love. I now thank God that I was brought to a clear understanding of the truth, through the healing of physical infirmities. My ailment was heart trouble, the attacks becoming more frequent in the night. In desperation I called for medical aid, but received no permanent help. I then secured the services of a practitioner, who remained in our home for one month. During her stay she enabled me to discern that we are healed by laying "aside every weight, and the sin which doth so easily beset us." After passing through many struggles, six years have elapsed, and I have never had a return of the malady.

During the past year I have become fully aroused to my sense of duty, have been a faithful student, and no longer place human knowledge before divine understanding, or social pleasure before sacred duty. I have had many practical demonstrations, and my daily desire now is to yield myself wholly to the care of divine Love. How can I express sufficient gratitude to our Leader, who has brought this truth to suffering humanity, and who, through her consecration and demonstration, has enabled us to penetrate within the veil which obscures mortal vision.

Mrs. Kate C. Strickland, Waupaca, Wis.

I wish to express my gratitude to God, and to our Leader for Christian Science. Gratitude is also due for benefits received from the *Sentinel* and *Journal*. My attention was drawn to Christian Science nearly fifteen years ago, through the healing of a life-long friend of my parents of a chronic disease of many years' standing. A young lady friend and myself then determined to try it. I had been told by one of the most prominent doctors here, that I had not six months to live if I persisted in remaining in this section of the country. My special trouble was so far advanced that it did not occur to me to try Christian Science for it, but I was also subject to terrible headaches and thought it could be trusted to cure me in my next attack. However, my friend was to make the first trial. She was taken with a severe sore throat and we called on a practitioner. Finding her away, my friend called in a doctor a few hours after, and he pronounced it a case of grip. She rapidly grew worse, the illness developing into pneumonia.

After an anxious night with her, for she was staying at my home, I asked my father's views as to the advisability of trying Christian Science. It was then very new here, but he thought it would do no harm to try it a few hours. I accordingly called a practitioner. At this time the patient had been delirious for forty-eight hours at least, could not retain even a spoonful of water, and rejected medicine entirely. About half an hour after the arrival of the Christian Scientist she became rational, asked for a glass of water, and drank all of it. I was surprised to see this followed by no ill results. A few minutes later she called for food. I gave her an egg in milk and she seemed almost convalescent in manner. I asked the Scientist what food I should give her, and she replied, "Just what you have at table, if she likes it." This was about nine in the morning, and at noon she had a hearty dinner.

Upon witnessing this demonstration I determined to eat whatever I liked, and if I became sick from it, have Christian Science. I was sure even then that it could successfully care for all ills. I had been nearly starved, having no desire for food most of the time and taking medicine all the time. That day saw my last dose of medicine. I began a few days later to take treatment. My healing was slow, but I never lost courage nor doubted. The truth as revealed by Christian Science has ever since then been my guide and Comforter, helping me through many dark hours. It is indeed the light that never faileth.

Laura E. Harwood, Concord, N. H.

[Written for the *Sentinel*.]

Teach Me.

WINIFRED BORLEE.

O teach me, Love, to see Thy face,
Though storm and tumult rage around:
To know where truth is, Thou art found,
Thy glory filleth every place.

O teach me, Truth, to hear Thy call
And follow, though the stubborn ear
May catch but faintly, there and here,
The watchword, God is All in all.

O perfect Love, and Truth supreme,
Thou Principle and Life divine,
Now yields my erring thought to Thine,
And knows all ills a baseless dream.

From our Exchanges.

God is speaking in these recent years with no uncertain sound, and herein, rather than in any prosperity of lands, or factories, or ships, lies the good fortune of our time. Through the deafening noise of machinery and trade and pleasure come once more those divine tones which, whether in righteous indignation or in yearning tenderness, are the precious evidence of the sonship of man and the fatherhood of God. The happy hour for the prodigal was not that which found him feasting with his fellows, crowned with flowers and lying in the arms of pleasure; but that which came to him when he herded with the swine, and his father's voice suddenly called him from the far country home.

The Outlook.

The message of the Church must emphasize the message of Jesus. He taught that no outward form, no confession of the lips, no assumption of piety can make one a citizen of the kingdom of God. That which God demands and will have in His children is unselfishness, forgiveness, the spirit of brotherhood and love and service. It should be made plain by every man who speaks for God to his fellow-men, that to be unloving, selfish, dishonest is to be unchristian. Jesus Christ came to make men righteous; not merely to lead men to call themselves by his name.—*The Standard.*

How many of us have seen women and men whose lives are beautiful and helpful, though they do not recognize the divinity of the mission of the Church nor the deity of our Lord. They do listen to the voice of the Master within, and are like him because they live like him. They do not know his name or they do not pronounce it the same way we do, but they heed his voice and follow his steps.

Pacific Christian Advocate.

The actual imitation of Jesus in the Church and business would create a gigantic revolution, and the signs of the times seem to point to such a revolution. I believe that somewhere within the twentieth century the world will witness this transformation out of the formal and the nominal into the living and real Christianity of Christ.

Rev. Charles M. Sheldon, D.D.
Homiletic Review.

The Christian Register quotes this from Rev. Charles A. Allen: "While intellectual truth, appealing to the inquisitive mind, can be apprehended quite as well by the knave as by the saint, and merely stimulates thought, spiritual truth, appealing to the good instincts of our moral nature, is most clearly apprehended when the character is faithful and loving, and it always 'demands, not a careful investigation, but our devout submission.'"

Not a few people imagine that the utterance of certain phrases is prayer. It may be prayer and it may be as far from prayer as the filing of a saw is from music. All depends upon the heart of the supplicant. If there is earnest purpose, real desire, the form of speech matters little; but no words, however aptly framed they may be, which are not the expression of back-lying reality, can justly be considered as prayer.—*The Standard.*

The greatest thing in life is not to get money and be wealthy, but it is to have the opportunity of doing good and to have the power to do it. He who is able to do good and to make the world better for his living in it, has in his hands the great and golden opportunity of life, by the side of which mere pecuniary and material advantages appear mean and tawdry.—*Herald and Presbyter.*

Not until we have combined thought with action shall we have the highest success. Not until praying is coupled with doing, will God put His resources at man's service.

The Pacific Baptist.

The Christian Science Text-Book.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

The New Concordance.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of Science and Health, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

Church Manual.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to Joseph Armstrong, 250 Huntington Avenue, Boston, Mass.

Church Tenets.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to William B. Johnson, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

Building Fund of the Mother Church.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

Stephen A. Chase, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

Church Treasurer.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to The Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of The Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to The Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number, or number of post-office box.

Stephen A. Chase, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By the Hon. WILLIAM G. EWING of Chicago, Ill.

CHRISTIAN SCIENCE. Its Worth and Work. By Rev. ARTHUR R. VOSBURGH of Rochester, N. Y.

Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea: 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

The President, in his annual message, said to be the longest ever given to Congress, recommended: Governmental supervision and limited regulation of the railroads; making Washington a model city; Government investigation of labor conditions; Government supervision of insurance; flexibility in tariff rates; election reform; international peace founded on international righteousness; extension of the Monroe Doctrine; maintenance of the efficiency, but not increase in size, of the navy; improvement of naturalization laws; revision of the United States criminal law; regulation of immigration; complete revision of copyright laws; prohibition of inter-State commerce in adulterated foods; preservation and improvement of National parks, including Niagara; better schools for the Indians and their protection from the liquor traffic; reduction of tariff on Philippine products; special appropriation, but no special legislation, for Hawaii; admission of Porto Ricans to American citizenship, but no material change in present form of government; increased franchise privileges in our insular possessions; admission to Congress of a delegate from Alaska; the Joint Statehood Bill; emergency appropriation for present needs to Panama Commission; improvement of the consular service.

Secretary of the Navy Bonaparte in his annual report recommends the authorization of two battleships, two scout cruisers, four destroyers, two submarines or submersibles, one gunboat of the Helena type, two river gunboats; total cost, $23,300,000. He advocates the substitution of five new battleships and two new armored cruisers for the oldest vessels of these types on our register, and five more battleships for the ten coast defence vessels of the monitor type, and that these substitutions should be made within the next six years. He recommends that the old frigate Constitution, now lying at the Charlestown Navy Yard, by reason of her state of decay and disintegration be towed out to sea and used as a target by the North Atlantic Squadron and given a warrior's grave. This has aroused a storm of sentimental disapproval and the suggestion will not prevail.

At the opening of the present fiscal year the employes of the forest service numbered eight hundred and twenty-one, of whom one hundred and fifty-three were professional trained foresters. Field work was going on in twenty-seven States and Territories, from the Atlantic to the Pacific and from Canada to Mexico. Over nine hundred thousand acres of private forests were under management recommended by the service, and applications on file for advice from owners contemplating management covered two million acres more. During the year nearly sixty-two thousand letters were sent out from the offices in Washington, the majority of them in reply to requests for information and advice from the public of a kind which could not be met by printed information.

The President some time ago directed that five islands off the southeast coast of Louisiana be set aside as a game preserve, under the title of the Breton Reservation. Supplementing that action the Lake Borgne levee board of Louisiana has rented to the Audubon Society of the State seventeen islands in the vicinity of Breton Reservation, with a total area of three thousand acres. The purpose of the Audubon Society, as well as that of the Department of Agriculture, in whose charge the Reservation has been placed, is to raise wild sea birds.

In a discussion before the National Conference on Immigration, in New York last week, Andrew Carnegie declared: "If I owned America and was running it as a business operation, I would admit here every man who has the ambition to enjoy the rights of American citizenship; not only would I admit him, but I would give to every such man a premium to come, and consider it the best bargain I ever made in my life."

Land frauds, more serious than those already brought out in the investigations in Oregon, have been charged in a letter to the Governor of the State, in which it is asserted that by means of forged certificates of sales of school lands Eastern bankers have been swindled out of large sums of money. "It is possible," says the writer, "that for every genuine certificate outstanding there may be from two to a dozen fraudulent ones."

By a compromise the canal appropriation bill before the Senate was passed, authorizing eleven million dollars for immediate needs, five million less than asked for. There were evident symptoms of unwillingness to voting millions under such indefinite headings as "miscellaneous."

The subject of campaign contributions by insurance companies came up for consideration before the Senate last week, in connection with a resolution calling for an investigation of National banks' aid in politics.

The United States Minister to Japan, just arrived at San Francisco, confirms the report that Admiral Togo proposes to visit foreign waters, taking a Japanese fleet to England and the United States next year.

The valuable presents and trophies of Miss Roosevelt's trip to the Orient were placed in her possession last week, upon the payment of the duty based upon examination and appraisement.

All over the United States, on Thanksgiving Day, the people of the Jewish race celebrated the two hundred and fiftieth anniversary of the settlement of Jews in this country.

The California delegation in the Senate and House has agreed on a bill for the exclusion from the United States of Japanese and Koreans.

The Democratic leader of the House has introduced a bill proposing tariff reductions and revisions.

During the last year the Germanic Museum of Harvard University was visited by 23,157 people.

Foreign.

The Turkish Council of Ministers has agreed to yield to the demands of the Powers. The Ambassadors of the Powers have accepted some of the modifications proposed by the Porte to the original scheme for the financial control of Macedonia. The modifications accepted apparently in no way affect the efficacy of the scheme.

The Norwegian vessel Gjoa, which left Norway June 17, 1903, to seek the Northwest Passage, has succeeded, and is now at King Point in McKenzie Bay, at the mouth of McKenzie River. The Gjoa is commanded by Captain Roald Amundson.

The French Government, through its Council of Ministers at Paris, has accepted the invitation to be represented at the celebration to be held in the vicinity of Jamestown, Va., in 1907 in commemoration of the colonizing of America.

The French Senate last week, after a long debate, adopted the bill for the separation of Church and State by a vote of 181 against 102.

Industrial and Commercial.

The Union Pacific Railroad Company has produced a railway car equipped with a one hundred horse-power, six-cylinder gasoleneengine that has been giving excellent results. The car is fifty-five feet in length, carries fifty-seven passengers, weighs twenty-eight tons, and is of steel construction. In a run of 34.8 miles from Omaha to Valley, Neb., the distance was covered at an average speed of thirty-seven miles per hour.

It is estimated that not less than ten million dollars in gold will be expended in Mexico during the next twelve months in the construction of new lines of railroad, in the extending of existing lines, and in making repairs and improvements.

Cotton merchants of Memphis are negotiating for the purchase of a suitable location for the erection of a system of co-operative cotton compresses to cost half a million dollars and with a capacity of two hundred thousand bales.

The Pennsylvania Railroad Company and the New York Central and Hudson have issued orders which cut off all the free transportation. The Western roads have not yet taken action on similar lines.

General.

At Mill Creek 5,200 horse-power is developed under a head of water of 1,000 feet fall, delivered in a pipe about two feet in diameter. The water strikes the buckets with a pressure of 850 pounds to the square inch. At Butte Creek, Cal., a single jet of water, six inches in diameter, issues from the nozzle at the tremendous velocity of twenty thousand feet a minute. It impinges on the buckets of what is said to be the most powerful single waterwheel ever built, causing the latter to travel at the rate of ninety-four miles an hour, making four hundred revolutions a minute. This six-inch stream has a capacity of twelve thousand horse-power. The water for operating the plant is conveyed from Butte Creek through a ditch and discharged into a regulating reservoir which is fifteen hundred feet above the power house. Two steel pressure pipe lines, thirty inches in diameter, conduct the water to the power-house.

Of all the prehistoric Indian mounds excavated within fifty years none has developed more interesting features, says a news despatch, than the mounds on the McEvers Farm, in Pike County, Ill. Professors of ethnography say that the McEvers group of mounds, only one of which has been opened so far, will furnish relics far beyond those unearthed in the past.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

The Golden Rule in Practice.

G. C. C.

THERE appeared in a *Christian Science Sentinel* of recent date, an invitation from the First Congregational Church of Concord, N. H., to the Rev. Mary Baker G. Eddy, requesting the honor of her presence at their one hundred and seventy-fifth anniversary; in the same issue was printed Mrs. Eddy's reply. This exchange of Christian courtesy is noteworthy; it marks another mile-stone along the way toward the fulness of that Christ-spirit which is the foundation of the Gospel of love as taught by our Master. In Mrs. Eddy's answer we see a reiteration of the love she holds for all that tends to the betterment of the race, irrespective of doctrine, creed, or belief. Her instructions to her followers are, and always have been, to maintain the true spirit of tolerance towards all forms of Christianity, irrespective of "name or sign;" and her own life and writings point to this Christian duty, as well as to her tender regard for the orthodox church.

A true follower of Christ, Truth, can readily see that genuine love for God must include love for all that points the way to Him. Whatever makes one better, or helps to destroy the claims of sin, even though differing from our own method, must be honored, not condemned, if we would be consistent, for does not the Bible say, "By their fruits ye shall know them"?

That historic body of worshipers known as the First Congregational Church in Concord, N. H., must attribute a part at least of their prosperity, exemplified in a long, successful career, to that same liberal religious tolerance which prompted them to invite, as their guest, the recognized Founder and Leader of the Christian Science faith, and God does bless such unbounded congregationalism and love. Would not human parents rejoice to see their children express unity, in spirit if not in mode, brotherhood and affection, mutual regard and helpfulness? What a sure prediction would this be of victory over our common foe,—the sin that claims the power to obstruct and annul God's eternal law, "Love thy neighbor as thyself," and its absolute government of all mankind.

One holy Church, one army strong, one steadfast high intent,
One working band, one harvest song, one King Omnipotent.

The Naturalness of Spirit.

C. W. CHADWICK.

To "the natural man" referred to in Scripture good seems to be intangible, unnatural, and unreal, while evil seems tangible, natural, and real. When called upon to believe in the practical healing efficacy of Spirit, he finds his faith centered in "the things which are seen" rather than in "the things which are not seen;" and not until he becomes in a measure dissatisfied with himself, does he become receptive to higher thought, willing to be "taught of God." That he must honestly desire to be dispossessed of his belief in mortality before he can understand the nature of immortality, is clearly evidenced in these words from Saint Paul, "The natural man receiveth not the things of the Spirit of God: for they are foolishness unto him: neither can he know them, because they are spiritually discerned."

This so-called "natural man" is anything but natural: rather is he the personification of all that is discordant, abnormal, unnatural, and unreasonable. His characteristic moral lethargy and lack of interest in spiritual things, and his unwillingness to learn about God and His perfect creation, only corroborate the truth of the above text, and suggest the unnaturalness and unreality of this supposed selfhood apart from God. From his exalted spiritual discernment the prophet Isaiah admonishes us to surrender all belief in this unnatural claim to manhood. He says, "Cease ye from man, whose breath is in his nostrils: for wherein is he to be accounted of?"

Christian Science has come to the world to show humanity how to obey this important injunction, how to cease believing in the supposed life and intelligence in matter. It has come as a law of correction and removal to every perverted sense, to convey to individual consciousness the true concept of God, man, and the universe, which will alone reveal the divine naturalness and practical availability of Spirit in every-day life. "Man, whose breath is in his nostrils," his little or no faith in Spirit, because to him Spirit seems to be supernatural, inaccessible, and practically indefinable. To him the physical is the only practical reality, and in his ignorance he calls it natural and good, and thus is laid the foundation for all the ills that flesh is heir to.

Christian Science reverses this misinterpretation of "nature and nature's God," by giving a practical demonstration of the naturalness and allness of God, or good, in the healing of disease and sin, which is proof positive that there is a perfectly natural law through which the divine activities of good may be utilized in human experience.

It was the mission of Christ Jesus to reveal to humanity the divine naturalness of good, which would rid them of their belief in a suppositional opposite of Spirit. To Jesus good was supremely natural, and evil unnatural and impotent. It was this positive, scientific understanding of God that made possible his wonderful healing works. It was as natural for Jesus to heal the sick as it is for the sun to reflect light. His thoughts were spontaneous, positive, and exact, redolent with the divine naturalness of life, goodness, virtue, health, strength, and happiness. He dwelt constantly in the consciousness of good; he acknowledged no other power, presence, or activity. We, too, must learn that good is supreme, all-in-all, before we can subjugate evil. Disease is not overcome so long as it is believed to be natural and necessary and that there is a law of God through which it may obtain and operate in human consciousness. Fear and sin are not mastered so long as we believe that there is a law of nature by which they are sanctioned or permitted to exist. The image and likeness of God is not manifest so long as we admit that it is natural and lawful for man to be sick, sinful, decrepit and dying.

Copyright, 1905, by Mary Baker G. Eddy.

Digitized by Google

Christian Science defines natural law and natural good as inseparable companions. Where one is the other is. The activities of good are always made manifest according to law, never by chance or accident. Evil, being unlawful, unnatural, and unnecessary, has absolutely no law through which it can act. The educator, the philanthropist, the lawyer, the physician, the preacher should be able to prove by healing that "the laws of nature are the thoughts of God," if he would confer the greatest blessing upon his fellow-man. Working from the standpoint of natural evil, or matter, will never lift thought into the realm of Spirit, will never regenerate mankind, will never reveal the kingdom of heaven on earth. Christian Science demands a radical mental departure from the *modus operandi* of the material senses. "Come out from among them, and be ye separate" means a thorough separation of thought from the realm of the material if we would reach a demonstrable understanding of what is natural and real. Because Christian Scientists are obeying this command of Scripture and are thereby demonstrating the ever-operative power of Spirit to correct and nullify physical and mental inharmony, the materially-minded, in their ignorance of God and of His spiritual laws, may go so far as to scoff at Christian Science and to call it irrational and absurd, when in reality, it is the exemplification of natural spiritual law.

Christian Science does not make the mistake of trying to interpret Spirit through matter. It does not look to the changeable and unreal for information concerning the immutable and real,—it does not look into darkness for an explanation of light. It abandons this futile search of by-gone ages and makes all its calculations from the standpoint of the supremacy and naturalness of Spirit. From this basis of mental activity the true relationship between God and man is established in human consciousness, and the individual finds himself in actual possession of a power which he did not and could not understand while believing it to be supernatural and unavailable for human needs. He will no longer try to assist nature in caring for the body, but will give God the right-of-way in all things, by silencing every suggestion of a supposed power or intelligence opposed to Spirit.

Cleanthes has said, "The Divine Mind presides over nature." The position maintained by Christian Science is, that God, the one infinite intelligence or Mind, rules and governs the universe through spiritual law, and that this government is at all times perfectly normal, harmonious, and natural. Whatever contradicts the testimony of Spirit and looks into matter for law, causation, or effect, Christian Science designates as unlawful, unwholesome, and unnatural. Professing Christians, laboring for the establishment of Christ's spiritual kingdom on earth, ought to be found enlisting their services in support of this teaching instead of questioning or resisting the power of Spirit to correct and annul so-called natural law which validates and dignifies matter as being endowed with vitality and power. The fact that the entire healing ministry of Christ Jesus was in perfect accord with spiritual law, ought to encourage them to think charitably, to say the least, of a Science that accepts Christ Jesus as the Wayshower, and is teaching mankind to think and to act from his standpoint of spiritual law and causation.

Speed the time when all mankind shall recognize that the one thing needful and natural is to realize man's sonship with God, and to reflect the divine naturalness of Spirit in thought, word, and deed.

"Lest we forget."

ISIDOR JACOBS.

ONE of the principal points of interest to tourists traveling up and down the German Rhine, is the great "Denkmal" monument on the heights above Rudesheim. As one ascends the mountain from the village below, and reaches the grounds surrounding the monument, he cannot help being impressed by the grandeur, the awe-begetting magnificence of the scene which unfolds itself to view. Away below, like a veritable stream of silver, glistening in the early morning sun, flows the Rhine, winding its way around and between the background of high mountains. Impressed by the sight, we turn to the monument, looming up to its vast height before us, and see inscribed upon it the words of the song "Die Wacht am Rhein." This monument is called the "Denkmal," a German word which signifies "The Memorial," or, as Kipling would put it, "Lest we forget."

In thinking of this monument and these words, we are naturally led to consider the significance and purpose of the various monuments erected throughout the world. The one just mentioned is intended to commemorate the victory of the Franco-Prussian war of 1870. Others throughout the world were similarly raised to celebrate great historical events, religious or otherwise, while many have been set up in honor of individuals who have left an imprint on the world's civilization through some great achievement. All these monuments have been erected for the purpose of keeping alive in the memory of man something that had been achieved or accomplished. This is also true of religious ceremonies, fast days, or feast days. These stand largely for memorial or remembrance,—"Lest we forget."

Every year, people of the Jewish faith, wherever dispersed throughout the world, celebrate the observance of the Passover, about the same time that many Christian sects meet to celebrate the anniversary of Easter and the Resurrection. These are but monuments to keep alive the memory of religious epochs in the world's history. On the annual recurrence of the Jewish Passover, from days immemorial, it has been the custom to have a narrative read in the synagogues, and in the homes of all Jewish people, giving in detail the history of the struggles, the trials, and tribulations of the children of Israel, in past ages, when they were held in bondage, also telling of the departure from Egypt, under the leadership of Moses. This narrative also details the wanderings of these people in the wilderness for forty years before reaching the promised land. It tells of their murmurings, their complaints, and how they forsook the worship of the one God to return to their idols, and how some even petitioned Moses to permit them to return to the slavery, with all its sufferings, from which they had been rescued. All this is set forth in detail year after year, so that old and young, from generation to generation, shall be impressed with the lesson, lest they forget what their forefathers had suffered, when they "forgat the Lord their God."

The Easter festival is celebrated by Christian people for the purpose of commemorating the history of the "Risen Saviour," while Christian Science to-day stands as a living monument, teaching that the "Risen Saviour" is, and has always been with us, for Spirit never dies; and that the real resurrection is not a past event, but is going on as we awaken to Truth. This spiritual resurrection which is effected through the teachings of Christian Science, is a demonstration to all mankind that to the real man there is no death.

While all monuments stand for the remembrance of victories on land or sea, for achievements of noted individuals, or some great event in the world's history, how much greater are the thousands of monuments, not made with hands, which are coming into existence daily and hourly by the works now going on throughout the world in Christian Science. These monuments or memorials do not commemorate the victories of one nation over another, but they commemorate the more lasting and beneficial victory over self, the victory over anxiety, fear, poverty, sin, disease, and death. Even as Moses led the children of Israel from bondage to freedom in ages past, so in our time does divine Truth lead the civilized world from bondage into freedom through Christian Science, as discovered by Mrs. Eddy;

Digitized by Google

from darkness (ignorance) into light (understanding); from sin, pain, disease, and death into the true sense of Life that knows no death; from bondage into freedom,—into the peace that passeth all understanding.

In addition to the living monuments of Christian Science, there are other monuments to the healing and saving power of Truth, which are being erected throughout the world; namely, Christian Science churches. It is right and proper that The Mother Church edifice, which represents the Christian Science movement, should stand as a monument to the nations for what Christian Science has done and is doing throughout the world, and it is right and proper that all Christian Scientists should generously contribute towards the completion of this monument to Christian Science, just as in their respective communities they contribute towards the building of monuments to Christian Science in the way of church edifices. All these monuments are representative of what Christian Science is accomplishing.

At the entrance to New York harbor stands the Bartholdi statue as a monument to "Liberty, enlightening the world." It reminds the Christian Scientist that Truth is indeed enlightening the world, giving liberty and happiness to all mankind.

The True Church.

A. L. MC BRIDE.

THE declaration, "Thou art the Christ, the Son of the living God," expressed what was at that moment present in the consciousness of Peter. This truth had been spiritually discerned. Jesus' demonstrations of the power of Spirit over the material claims, which this disciple had witnessed, made it possible for him to realize and express this fact, in answer to the question of Jesus which called it forth. Through a similar spiritualization of thought we must be led to the same consciousness of the absolute truth of Peter's statement which shall lead us to affirm it for ourselves, with that understanding which shall make it a permanent state of consciousness in us. In following up the declaration quoted above, Jesus clearly indicates that the foundation rock upon which his church must be built is spiritual. The revelation of this basic truth was also individual, being expressed through Peter. To the others present it was only a revelation in the sense that it is so to us; that is, to the degree that we make Peter's experience our own do we become conscious of that which Jesus termed the rock upon which he should build his church. It was manifestly his intention that all the disciples should profit by the teaching, but only the apostle Peter had then the responsiveness which called forth the Master's benediction "Blessed art thou."

The establishment of the Church of Christ is manifestly spiritual, coming to us and through us as a revelation from God, in the same way that it did to Peter. It is, necessarily, then, an individual work to attain that spiritual, right consciousness which forms the foundation rock. To have in consciousness the true foundation is to start aright. Daily to know that we are progressing toward the constant realization of the ever-presence of the Christ is a part of our daily work for the church, and this is the work that we can do which shall not infringe upon our brother's right to do the same work for himself. Jesus attributed to "my Father which is in heaven" the unfolding to Peter's consciousness of the great fact which he expressed as to the Christ. He recognized the one Mind as the only source of truth, and the one who was spiritual enough to perceive and express that truth, as blessed in giving expression to what could only be spiritually conceived. We cannot come into the true church through material means. The right concept of this church is gained only through spiritualization of thought and life, that it may be said of us as Jesus said to Peter, "Flesh and blood hath not revealed it unto thee, but my Father which is in heaven."

The structure which The First Church of Christ, Scientist, is erecting in Boston is an outward expression of the right concept of the Church of Christ, as revealed to our beloved Leader, and to the extent that we are individually conscious of being in accord with that of which the structure is an expression are we assisting in the work of its unfoldment. To erect in individual consciousness a superstructure that shall be of the same spiritual substance as the foundation rock is the Christian Scientist's daily work. This work is individual and it is spiritual. It aids in the unfoldment of the universal church, for every one may come into that consciousness which constitutes the foundation rock. It is the church for all time, and of it Christ Jesus has said, "The gates of hell shall not prevail against it."

Wait and Murmur Not.

MARY V. LITTLE.

SOME one has said, "The world needs not so much to be taught as to be reminded." There may be other wayfarers in Christian Science who need to be reminded of these words of our Leader, which have given me great strength lately,—"Remember that human pride forfeits spiritual power, and either vacillating good or self-assertive error dies of its own elements. Through patience we must possess the sense of Truth; and Truth is used to waiting" (Miscellaneous Writings, p. 268).

If we are consciously working to bring forth the fruits of Spirit in our daily lives, we may be reasonably free from human pride; but many of us feel, when we honestly question our own hearts, that our sense of good is vacillating. There is not always that calm, sure sense of right in our lives that we are taught to manifest. There are moments of strength and clear spiritual vision, but how easily we let discouragement in, as a vague, impalpable mist, something that not quite obscures yet dims to our sense the spiritual reality. Positive good does not admit any vacillation, but holds its representative immovably firm and staunch. In our zeal to make naught of error, we sometimes lose sight of much that our Leader has said of the need for patient unobtrusive work and waiting. There seemed to me a certain quiet humor about that clause, "and Truth is used to waiting," when I first read it. It seemed to say that we need not worry over the fate of Truth. It is nineteen hundred years since Christ Jesus voiced to the world what we are striving now to demonstrate, and the integrity of Truth has not suffered, nor need we fear it will suffer in the days to come.

With the Psalmist, our intense longing for Truth's recognition is daily uttered: "Oh that men would praise the Lord . . . for his wonderful works to the children of men!" and yet our work is not merely to sit and listen to the demonstrations of others. Our prayer for the universal realization of the truth will be answered when we scientifically obey the command, "Be still, and know that I am God."

Most of the highest truth of life is old-fashioned. Brotherhood is none the less a desirable sentiment because the word has been in the mouths of men for two thousand years. Sometimes we serve more by a smile than by a brilliant sentence or a deed meant to win applause. We are ever too anxious to exalt the self and to think the world is going wrong if we fail in our petty personal schemes. Broaden out. Few of us appreciate how much the seasoning of charity sweetens the cup of life. Forgetfulness of self and helpfulness for others constitute the philosophy of happiness.—*Exchange.*

Selected Articles.

Christian Science and Its Assailants.

Mrs. Eddy and her advanced theory have had no easy course to travel. Both have been assailed again and again, but, for all of the attacks, the cult has extended its influence and increased its power. With the virtue of Mrs. Eddy's theories, with the truth of them, and the certainty of their application, this article does not deal. It would merely call attention to the assault most recently made upon Christian Science tenets. This comes from Dr. Gunsaulus, the eminent president of the Armour Institute. Dr. Gunsaulus finds cause to condemn Christian Science because, he says, Christian Science minimizes pain and sorrow.

"And pain and sorrow," continues the learned doctor, "are the incontestable witnesses to life and strength. There is no progress without them." These words seem very deep, and the thought behind the most subtle, but, after all, closer analysis reveals a hollowness that robs the utterance of strength. First of all, Dr. Gunsaulus apparently admits that Christian Science as a healing influence actually accomplishes its purpose. He admits that it "minimizes" pain and sorrow; but, says he, we need pain and we need sorrow, and we must have them if we would not stand still or go backward.

Here indeed is a new theory. It is newer by far than Mrs. Eddy's. It is the newest theory that we have ever heard expounded. But why stop here? Why not continue to the end? Why not carry on the argument, complete the links in the chain? Why not say that we could walk better if we broke our legs? Why not say we could speak better if we split our tongues? Why not insist that virtue, if a product of sin and unhappiness, comes only as a consequence of grief?

Really, when a man of such eminence as Dr. Gunsaulus opens his mouth to utter argument against a thing, we have a right to expect sounder utterances than this. We used to believe something of this kind—believed it long years ago, when darkness was still upon the world and progress was blocked by superstition and ignorance; but a light came and we discovered a new viewpoint. We discovered that life was not altogether hideous, that we were not put in the world to suffer and be miserable, and that we were not to look upon our earthly careers merely as preparatory for an eternity of paradise or torture. But now Dr. Gunsaulus would revert to the old tenet. He is wrong. Everything proclaims him wrong. The visible forces of nature declare he is wrong. The injured tree attempts to mend itself. It strives for perfection. The soulless beast crawls away to lie in its pain until the skill with which nature equipped it enables it to drive pain away.

With all the world striving for perfection, is it true that only man should be obliged to suffer that he may learn and grow and develop? No; the truth is, we achieve in spite of pain. The perfect man is the man who is free from disease,—disease of body, disease of mind, disease of thought, disease of conscience, or disease of soul. So much is true; so much all of us must admit, all religions and all creeds must admit. If this argues in behalf of Mrs. Eddy's tenets, then well and good for Mrs. Eddy's tenets. They seem logical. But, as it was stated in the beginning, it is not the object of this article to concern itself with a discussion of Christian Science contentions. Whatever may be thought of Christian Science, let it be set down as universally commendable if it does minimize pain and sorrow. The world can advance with gigantic leaps and bounds if it is rid of both. They hamper progress; they do not assist it.

Dr. Gunsaulus has not made even an impression upon Mrs. Eddy's school. Mankind innately considers that it has a right to health and happiness, and that sickness, disease, and misery are all its enemies. It follows, then, that Dr. Gunsaulus has enlisted himself in a losing cause and, incidentally, in a wrong cause. Whether Mrs. Eddy's tenets are right or wrong, it is certain that Dr. Gunsaulus' theory is altogether without virtue.

Editorial in *The Indianapolis Sentinel.*

What a Clergyman Says.

When we look around us to-day we find that there are many movements in society that are known by various names. They are called "fads" by a good many people, and yet, you know, when we apply the word "fad" to anything, we may simply be betraying our own ignorance; it need not describe the thing we call by that name at all. There are many vital movements in society, a few of which I want to briefly refer to, because of their significance in this connection.

The Christian Science propaganda, which has sprung up and grown so rapidly within these last few years, is one of the clear indications of the returning age of faith. It is foolish for us to say that there is "nothing Christian or nothing scientific in it." It is perfectly absurd for us to point the finger of ridicule at these good men and women, in our community and elsewhere, and talk about them as being queer and fanatics and unbalanced, in order to accept the philosophy they do. All this is superficial and unjust and untrue. I want to ask you what is the deep significance of the Christian Science movement in our country and in England, an organization that has built these beautiful temples of worship, that has during these years attracted these hundreds of thousands of intelligent men and women, and that seems to hold them together with a devotion and a spirit of self-sacrifice that puts to shame the orthodox church in the community? You cannot brush it away lightly and say that these people are possessed of fewer brains than you and I. What does it mean? To me it is one of the clearest, surest signs of the returning age of faith. When the materialistic *ipse dixit* dared to stand up in university hall and on lecture platform, and through countless books affirmed that all was matter, that thought was simply the product of the brain,—that it was impossible for man to ever think of himself as being possessed of a soul, that the future life was only a fairy dream,—when, in other words, science in many quarters was telling men that the only meaning of life was to be found in terms of matter, then it was, do you not see, that the reaction came. And it is a splendid thing about man that this reaction does come again and again through history as the pendulum swings backward. So the Christian Science movement comes into being: it stands confronting the materialistic hypothesis and says to it, If you affirm that all is matter, we dare to stand and affirm with equal positiveness that all is Spirit. I thank God for such a movement, if for nothing else, that it dared to throw the gauntlet back into the face of a crass, materialistic philosophy. We may feel that the Christian Scientist takes certain truths or certain facts out of their relation with others and emphasizes them unduly, gives them a prominence perhaps that they should not have, out of relation with other things. You and I may criticise their philosophy from one point of view or another, but I am not here to do that this morning. I am here to point out the significance and the deeper meaning of this great movement for our age, and to me it is found in that fact. It is the splendid protest of man's spiritual nature against all the facts and against all the forces that would seek to relegate and push him down to where he would be as a beast of the field.

Extract from a sermon by REV. J. HERMAN RANDALL.
Grand Rapids, Mich.

The Lectures.

Youngstown, O.

Rev. Arthur R. Vosburgh of Rochester, N. Y., delivered a lecture on Christian Science in the Grand Opera House on Sunday afternoon, October 15. He was introduced by Judge Joseph R. Johnston, who spoke in part as follows:—

Of comparatively recent origin,—less than forty years having elapsed since the doctrines of Christian Science were first promulgated by its Discoverer and Founder, Mrs. Eddy,—its growth has been marvelous. This growth is to-day attested by more than eight hundred churches and societies, organized quietly and without ostentation, with more than a million adherents in almost every civilized community and from every walk and condition in life. These churches and societies were organized quietly, as the temple of Solomon was built, without the sound of hammer or chisel, all the elements having been prepared with such certainty and accuracy that each part fitted into the place designed for it. So even now we have reason to believe that the hands of the great Master builder are preparing, silently, in the wilderness, the characters that in the end will become component parts of this great structure, the Church; which when placed therein will constitute one harmonious whole, cemented together by divine Love, and which will stand as did that great temple,—a monument to its founder. This growth has largely been produced by reason of the fact that the healing of physical ailments has been and is one of the cardinal doctrines of this Science. Its advocates believe that the injunction to "heal the sick" was a continuing one, as much in force now as when given, and that this duty was not enjoined without conferring the power to discharge that duty. Aside from this, another distinguishing feature is the idea entertained in reference to Deity. In many phases of the views of Scientists upon this subject there is no substantial difference from the views entertained by those who denominate themselves as orthodox. With them we agree that God is omniscient, omnipotent, and omnipresent. Scientists also believe that God is all Life, Truth, and Love. This in a great measure constitutes their trinity; and you will observe that this eliminates all error, all of what we have heretofore been taught to believe constitutes death, and all the elements of anger, hatred, and revenge. Such a Deity as this, all can consistently and conscientiously worship, and call upon with an unfaltering trust for the correction of every seeming error, for the righting of every fancied wrong, and for the establishment of that harmony which will drive discord and disease from our midst and establish those true relations so essential to that which is the best and most to be desired in life.

Upon this rock of eternal and divine Love is this church built, and the wholesome and beneficent results that have followed from the practical application of these ideas, has not only attracted the attention of the civilized world but has commended them to all thoughtful and earnest seekers after truth. If it will correct one single error, remove a single pang of pain, wipe from the cheek of sorrow a single tear, lighten a single burden, or make the life of a single individual purer and better, it is worthy of your consideration; but when proof incontrovertible is presented of innumerable instances where such results have been attained, we feel justified in asking you to consider carefully and impartially the views which will be presented to you this afternoon.—*Correspondence.*

St. Johnsbury, Vt.

A lecture on Christian Science was given in Music Hall, Friday evening [October 13], by Edward A. Kimball of Chicago. The lecturer was introduced by L. S. Channell of the *Sherbrooke Record*, who spoke in part as follows:—

My friends, with all that your country has given and is giving to the world to help humanity, there is one of your citizens, a woman, whom I look upon as the greatest benefactor to the human race since the time of Jesus Christ; one who is responsible for this gathering to-night, and whose influence extends to all quarters of this globe. I refer to Mary Baker G. Eddy, the Discoverer and Founder of Christian Science. Her work has not been heralded with the blare of trumpets or with the shouts and huzzas of the multitudes, but it has been accomplished through her simple love for all those in bondage to sin, sickness, and the fear of death.—*The St. Johnsbury Caledonian.*

Oakland, Cal.

A large audience greeted Miss Mary Brookins last night [October 10] at the Macdonough Theatre. Long before eight o'clock every available seat had been taken and many were turned away from the doors. In introducing Miss Brookins, Rev. Elmer McBurney, First Reader of First Church of Christ, Scientist, said in part,—

Curiosity aroused by weird and unwarranted misrepresentations of Christian Science, or by its universal and unparalleled success in healing sickness and detroying sin; dissatisfaction arising from the meagre results of Christian effort; rebellion instigated by the unreasonable requirements of creedal formalities of the musty past; obedience to the injunction of the apostle Paul, "Prove all things; hold fast that which is good,"—each or all of these thoughts may in some measure enter as factors into our motives in coming to hear this lecture. If we would gain the scientific solution of the problems which come to us in our daily experience, if we are striving to grow in the understanding of the spiritual sense of God's words, if we are looking for a satisfactory answer to that great question of the ages—"What is truth?"—we will not be disappointed to-night.

Oakland Enquirer.

Williamsport, Pa.

Clarence C. Eaton of Tacoma, Wash., last evening [October 26], in the Opera House, lectured on Christian Science. N. M. Edwards, Esq., in introducing Mr. Eaton, said in part,—

We have been invited here this evening, through the courtesy of the Christian Scientists of our city, to hear one of their teachers, who claims to bear a message of truth. Christian Scientists worship the same God, believe in the same Bible, and acknowledge the same Saviour as all other Christians. They come preaching the universal Gospel of Love. They claim that the power given by Christ, when he was upon the earth, to his disciples,—to heal the sick, open the eyes of the blind, unstop the ears of the deaf, and to cure all manner of diseases,—has never been withdrawn; that the command of Christ to his followers—to go into the world to preach the kingdom of God, and to heal the sick—is of the same binding force and effect now as then: that God is infinite Love and does not send sickness and disease into the world to afflict and destroy His children. Claims and assertions of this kind, coming as they do from a body of intelligent and devout people, are worthy of the consideration of all thoughtful persons.

I am not a Christian Scientist. My church and religious training have been of the most orthodox kind, but I hold that none of us can afford to reject the truth, it matters not from what source it comes. If this message which Christian Science bring to us is founded upon error, its life is short; if on the other hand it is the truth, then it is as immortal as God himself, and the churches should be the first to receive and welcome it. Would it not be well for us, taking the Bible as our guide, to give it a fair hearing at the bar of our conscience and intelligence before we condemn?—*The News.*

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

A Question.

MARY BAKER G. EDDY.

Do Christian Scientists love God so much as they love mankind? Aye, that's the question; let us examine it for ourselves. Thinking of person implies that one is not thinking of Principle, and fifty telegrams per holiday signal such thinking. Are the holidays blest by absorbing one's time writing or reading congratulations? I cannot watch and pray reading telegrams; they only cloud the clear sky, and they give the appearance of personal worship which Christian Science annuls. Did the dear students know how much I love them, and need every hour wherein to express this love in labor for them; they would gladly give me the holidays therefor and not task themselves with mistaken means. But God will reward their kind motives and guide them every step of the way from human affection to spiritual understanding, from faith to achievement, from light to love, from sense to Soul.

Church By-law.

ARTICLE XI.

DUTY TO GOD.—SECTION 4. Members of this Church who turn their attention from the divine Principle of being to personality, sending gifts, congratulatory dispatches or letters to the Pastor Emeritus on Thanksgiving, Christmas, New Year, or Easter, break a rule of this Church and are amenable therefor.

The Significance of Christmas.

IN the Christmas Section of the *New York World* of December 10, there appeared a symposium entitled, "The Significance of Christmas. Notable Comments by Prominent Representatives of Different Creeds," to which Rev. Mary Baker G. Eddy contributed an article worthy of notice for the exalted spiritual concept of Christ and of Christmas which it presents. The teachings of this article should not fail to elevate the world's thought of Christmas from a material to a spiritual plane. Mrs. Eddy's article follows:—

CHRISTMAS AS IN CHRISTIAN SCIENCE.

Certain occasions, considered collectively, individually, and observed properly, tend to give the activity of man infinite scope; but mere merry making or needless gift giving is not that wherein human capacities find the most appropriate and proper exercise. Christmas respects the Christ too much to submerge itself in merely temporary means and ends. It represents the eternal informing Soul recognized only in harmony, in the beauty and bounty of Life everlasting,—the truth that is Life,—the Life that heals and saves mankind. An eternal Christmas would make matter an alien save as phenomenon, and matter would reverentially withdraw itself before Mind. The despotism of material sense, or the flesh, would flee before such reality to make room for substance, and the shadow of frivolity and inaccuracy of material sense would disappear.

Christmas, in Christian Science, stands for the real, the absolute and eternal,—the things of Spirit, not matter. Science is divine; it hath no partnership with human means and ends, no half-way stations, nothing conditional or material belongs to it. Human reason and philosophy may pursue paths devious, the line of liquids, the lure of gold, the doubtful sense that falls short of substance—the things hoped for and evidence unseen.

The basis of Christmas is the Rock, Christ Jesus; its fruits, inspiration and spiritual understanding of joy and rejoicing; not because of tradition, usage, or corporeal pleasures, but because of fundamental and demonstrable truth, the heaven within us. It is love loving its enemies, returning good for evil, that suffereth long and is kind. It elevates medicine to Mind, it casts out evils, heals the sick, raises the dormant faculties, appeals to all conditions, and supplies every need of man. It leaves hygiene, medicine, ethics, and religion to God and His Christ, to that which is the Way, in word and in deed,—the Way, the Truth, and the Life.

Hitherto there is but one Jesus Christ on record. Christ is incorporeal. Neither the you nor the I in the flesh can be or is Christ. MARY BAKER G. EDDY.

Pleasant View, Concord, N. H.

On another page of the same issue of the *World*, appeared the following editorial note:—

CARD FROM MRS. MARY BAKER G. EDDY.

No person of prominence in the country has been more sought after for magazine and newspaper articles than Mary Baker G. Eddy, the Discoverer and Founder of Christian Science. In recent years she has almost uniformly refused requests of this kind.

This year, however, she consented to write an article for the Christmas *World* on "Christmas as in Christian Science." This remarkable article from this remarkable woman appears on the second page of the Christmas section of today's *World*. A subsequent letter from Mrs. Eddy to the editor of *The World*, possibly explains why she is averse to writing for publication. Her statement is as follows:—

NOTA BENE.

I hereby certify that counterfeit letters frequently follow my contributions to newspapers, letters representing the opposite of my views, feelings, and nature, the contents of which are so subtle that I expose this lawlessness to save those to whom they are addressed from being misinformed.

MARY BAKER G. EDDY.

An Exact Science.

MOST of those who object to Christian Science do so upon the ground that its teachings are at variance with long-accepted doctrines and methods, and because of this variance they cannot accept it, but in urging this objection they ignore the fact that the old methods which have been in operation for so many years have proved inadequate for the salvation of humanity from sin or sickness. No doubt similar objections have been raised to every discovery in the world's history; but time-worn theories have always given place to demonstrable facts, and thus progress has been constant.

Others allege that Christian Science is narrow, and they do not accept it because they cannot combine with it the beliefs and theories which they hold. They take this position because they do not appreciate the fact that Christian Science is an exact science and its rules are as inflexible as the rules of mathematics. What would be thought of a mathematician who insisted that he could find the product of two times three by subtracting two from three, or by adding these two figures?

If Science and Health presented nothing beyond what has been written and taught for ages, it would be of no more value than other books. It is because this book presents the demonstrable rule of Christian living and Christian

Digitized by Google

healing practised by our Master, that it is healing the sick and reforming the sinful. Our Master said, "By their fruits ye shall know them," and it is because of these "fruits" that Christian Science is taking its place in the world, and its Discoverer and Founder, Mrs. Eddy, is beloved by an ever-increasing number who, through her ministry, have been rescued from sin, sickness, and misery of every name and nature. ARCHIBALD MCLELLAN.

"How long halt ye between two opinions?"

AT a recent religious gathering in the English metropolis, the Bishop of London gave his views on the subject of Christian Science at some length, and is reported to have said, among other things, that "by invigorating the faith, the hope, and the courage, they had great effect upon the bodily condition of the patient in many cases," and he added that in this sense he was "in agreement with Christian Science." He also said that church workers "ought to approach sick persons with far more faith; they ought to pray for their recovery, and those who were priests ought to lay hands upon them with far more expectancy that they would recover." In conclusion the Bishop advised "those who thought they had special gifts of healing never to try to exercise those gifts apart from the medical profession."

It is very certain that our brethren across the sea are much impressed by the teaching of Christian Science relative to the healing of sickness, and that they are now aware of the fact that no professed follower of Christ Jesus can consistently ignore the demand for this healing. There is undoubtedly a great awakening of interest on this vital question to which Mrs. Eddy called the world's attention forty years ago. The pity is that any should doubt the divine source of this power which is reforming sinners while healing their diseases, thus enabling them to bring forth the fruits of Spirit.

The Bishop's remarks, while evidently intended to be complimentary to the medical profession, indirectly admit its inability to inspire patients with "faith, hope, and courage," much less to heal them without the prayers of the clergy and church workers. It is quite likely, too, that the doctors would resent any such invasion of their special domain, for they would naturally hold that if drugs have an inherent power (and this must be believed in order to justify their use) prayers could not add to their effectiveness, especially when the admission was made that prayers without drugs were not to be trusted.

Although an attempt was made on this occasion to discuss Christian Science, it does not appear that its fundamental teaching was even touched upon. The fact that spiritual law is at every point opposed to the asserted laws of materiality, of sin and disease, was evidently not taken into account. It is in its acceptance of the supremacy of spiritual law that Christian Science parts with all material theories and wins its great victories. It stands by St. Paul's triumphant declaration that "the law of the spirit of life in Christ Jesus" sets "free from the law of sin and death." What is more, it proves at the same time that this "law of sin and death" has no divine authority. Even when sentence has been passed upon a poor sufferer, it says with reverent assurance, in the words of the Master, "Fear not: believe only."

A testimony from England, that of Mrs. Alice Heathcote, in this issue of the *Sentinel*, shows that in spite of prejudice and misunderstanding Christian Science is surely proving its divine origin, and there are many the world over who are ready to echo the sentiments of this grateful mother, when she says, "I knew what had healed my son, and I resolved to go forward and give this glorious truth to others." As we read of many such experiences in Christian Science, we may well ponder the Master's words, "The kingdom of God shall be taken from you, and given to a nation bringing forth the fruits thereof,"—words spoken in the temple when the chief priests called him to account for the healing which he was doing in that holy place. As we think upon his solemn warning and prophecy, we turn to the equally solemn words of our revered Leader, on page 571 of Science and Health,—"He enthrones pure and undefiled religion, and lifts on high only those who have washed their robes white in obedience and suffering." ANNIE M. KNOTT.

Letters to our Leader.

New York, December 6, 1905.

Reverend Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Dear Mrs. Eddy:—May I add my quota of love and gratitude for all that Christian Science has done for me? Three years ago I was healed by this truth of an hereditary disease, which the doctors had pronounced incurable. I am indeed grateful for this, but most of all I want to tell you how this truth is taking root in Sweden. Two years ago last May, I made a trip to Stockholm, and while being entertained at a luncheon one day, many questions were asked about America. In the course of conversation, a sweet-faced little gentlewoman said, "Can you tell me anything about the new American religion they call Christian Science?" "Yes, I can," I replied, "for I am a Christian Scientist." I then told her of my own miraculous cure, and explained briefly some of the teachings of Christian Science. She was simply hungering to know more, but as I noticed that the other guests listened out of courtesy rather than interest, I said to her, "Come to the hotel with me after the luncheon and I will give you some of our literature and talk further with you on the subject."

Eagerly she came with me, and drank in every word I had to say. It seemed to me that Love and Truth had never before come to me in such rich measure, and she was ready for the blessing. The lady told me that for twenty years she had been dieting for stomach trouble. "Eat what is set before you to-night, it will not hurt you," I said. We talked on Christian Science during the dinner, and the lady ate her dinner without the slightest distress. She began at once to read Science and Health. About a month after my return to America, I got a letter from her, telling of the wonderful demonstration that had been made over her physical condition.

On my return to Stockholm last winter I found her a well and grateful woman, working to help others. With no Christian Science church or society, and with bitter antagonisms to meet, she worked it out alone with the Bible and Science and Health, and an occasional *Sentinel* and *Journal*. A number of Swedish ladies and gentlemen, with whom I came in contact last winter, became interested to read and investigate this truth. I am a journalist, and while I was in Stockholm I wrote a good deal for Stockholm's *Dagblad*, the leading paper there. After writing on several current topics, I finally asked the editor if he would accept an article on Christian Science and its growth. He demurred at first since the subject had already been presented there in an unfavorable light. I got his consent, however, and the article appeared last April. Letters began to pour in from people who wanted to know where they could get Science and Health, even booksellers wrote that clients were asking for the book. Many persons came to see me, anxious to learn more of Mrs. Eddy and her discovery. Yesterday I visited the Reading Room to get *Sentinels* to send to Sweden. The lady in charge handed me a letter from a teacher in Stockholm, who had been reading Science and Health. She was very deeply interested and asked many questions about statements in the book that seemed to puzzle her. When I got home I asked God for wisdom. Light came on the instant, and I sat right down and answered every question in a spirit of love. Another lady, a well-known Swedish author to whom I

Digitized by Google

had sent a copy of Science and Health, writes me that she finds the "little book priceless," in fact "a revelation!" So you see, dear Mrs. Eddy, that even in the chilly Northland, with its long, dark winter nights, the light and warmth of your inspired teachings are beginning to penetrate.

In the name of my country people, and for myself, let me thank you for the glorious truth which you have brought home to us.

Devotedly and gratefully yours,
VELMA SWANSTON.

[Cablegram.]

Manchester, England, December 5, 1905.

Mrs. Eddy, Pleasant View, Concord, N. H.

Several thousand people at to-night's lecture manifested deepest interest in the loving account of your noble life of love and self-sacrifice on behalf of humanity.

FIRST CHURCH OF CHRIST, SCIENTIST, Manchester, Eng.

[Cablegram.]

London, England, December 12, 1905.

Mrs. Eddy, Pleasant View, Concord, N. H.

We desire to express gratitude for three successful lectures by Bicknell Young in London. Reference by lecturer to your life's work deeply appreciated by large attentive audience.

JOINT LECTURE COMMITTEE of the three London Churches.

Salt Lake Route, November 15, 1905.

Beloved Leader and Friend:—Last evening I lectured at a town in the Utah desert. At the close I talked with a man from a mining town in Nevada. I asked him if he and his family read the Bible Lesson on Sunday. "Every day, sir," he replied. Then he recounted the story of his healing from blood-poisoning when medical aid was unavailing. I also met a railway man whose foot was smashed by a heavy rail falling on it, who found surcease from pain at the first treatment, but better, came to know God, who before that had been to him altogether unknown.

Is it not beautiful that in what seems a desert, there should be mental changes like the blossoming of the rose, and that by unknown beneficiaries you should be loved for the truth's sake.

With tender affection,
WM. P. MCKENZIE.

Gulfport, Miss., November 20, 1905.

Mrs. Eddy.

Dear Leader:—May I write and tell you of the good you are doing for me in a far-off part of the country. I have no teacher but the Bible and your book, Science and Health, and some of your other writings. They are my only practitioners and my daily companions. They have brought me up from the verge of the grave. I was in the last stage of consumption. I have read nothing else but the Bible, your books, and the periodicals for nearly seven years, and to-day I am a well and stout woman. I have had many wonderful demonstrations over sickness, sin, and accidents, and for this I owe endless gratitude to God and to you. I am so glad that I got into Christ's church and your church, into at-one-ment with divine Principle, God. I could tell much more, though I will not intrude on your time. Blessed woman thou art, blessed above all women on earth to-day; your home is heaven. I am so glad that I welcomed the stranger, the truth you teach, for to-day I am entertaining angels that at that time I was unaware of. Truth is no longer a stranger, but a friend. All my family join me in sending you love.

MRS. EMMA DARNELL.

Testimonies of Healing.

I first heard about Christian Science two and a half years ago. I was feeling quite miserable, both physically and mentally, when a friend told me that Christian Science teaches that God is Love. They were only a few words, but they struck me so forcibly that I longed to hear more. Notwithstanding this, it was half a year before I read any Christian Science literature. Then my friend gave me a *Christian Science Journal*, and a few days after, Science and Health. I had bad eyes from my childhood, and several doctors who treated me warned me to be very careful not to tire them, because they were so very weak. For two years before I heard of Christian Science I stopped reading altogether and did nothing that could harm my eyes except drawing. I am a student of art in the academy in The Hague, but the last year I could work only a few hours each day. Then I got a copy of Science and Health and began to read "Prayer" that very evening. I read on and on, although the English language was a great difficulty to me. In a fortnight my eyes were healed. I was able to work the whole day long and read in the evening without tiring them, but I still wore my eyeglasses, being short-sighted. One day I said to my friend, "If everything in Science and Health is true, and I know it must be, I do not need my eyeglasses." She answered, "No, you really do not need them, but you may not put them off before you know that you do not need them." The next day was Sunday. I thought a great deal about what she told me, and read in Science and Health. On Monday, when going to the academy, I left my eyeglasses at home. Arriving there, I sat down before my model, but seemingly could not see anything. Then I began to declare the truth for myself, knowing that sight is spiritual. After a quarter of an hour I could see just enough to begin my drawing, and I began to pray and continued doing so all the time. Every minute I saw better, and I worked on happily until my drawing was finished, and by that time my eyesight was completely recovered. Since then I have been healed (simply by reading Science and Health) of rheumatism, severe headaches, cough, and every day I feel more and more the truth of these words of our Lord, "Ye shall know the truth, and the truth shall make you free,"—free from everything that is unlike God, good.

I thank God every day that I know He is Love and Truth and Life, and our dear Leader, that she revealed it to me.

MISS ANNA SCHROOT, The Hague, Holland.

I wish to express my thankfulness for the many benefits which have come to me through Christian Science. Like many others, I sought this Science hoping for relief from pain and suffering, and I wish it were possible for me to express the gratitude I feel for benefits received since then, personally and by members of my family. When quite young I had a very severe attack of what was called inflammatory rheumatism, which left me in a very weak and badly crippled condition, with a much impaired use of my lower limbs. After some years' cessation, the ailment again became manifest in a very aggravated form. I suffered terribly, and was at times utterly helpless. Relief was sought through many remedies; I was at different locations, and tried water, air, medicines, and mud. I was experimented upon by many physicians, but was not cured. For years I suffered thus.

Coming from the doctor's office one day, I met a friend from New York, who commented upon my bandaged and crippled condition, and suggested that when I was satisfied of the worthlessness of medicines, I try Christian Science. While her remedy was not at all intelligent to me, it was something new, and I was ready to try it at once. Hav-

Digitized by Google

ing made a god of the doctors and medicines so many years, I hesitated when she told me it would be necessary to abandon both to make the trial; but I finally promised to let both alone, and she consented to help me.

She went home that afternoon and I did not see her again for over two years, but the pain disappeared before night, the swelling receding quickly. In three days I was entirely well, and never have had a rheumatic pain since, now over six years. I was, of course, thankful for the relief, but it never occurred to me that it might be beneficial to ascertain how I was cured.

About two years after this I was again a great sufferer, from what two of the best physicians in Chicago pronounced, after a thorough examination, to be gall-stones, or Bright's disease. Their diagnosis frightened me, and I decided to try Christian Science at once. The practitioner to whom I applied next morning asked me two or three questions, then in a pleasant but positive and convincing manner assured me that I need have no fear of what the doctors had said. Directing me to abstain entirely from the use of medicines, she asked me to call again if necessary. I have never had a recurrence of those terrible attacks since leaving her office, nearly five years ago.

Since then I have been a student of Science and Health and am very thankful for an understanding sufficient to know how I was healed, in both instances mentioned, and for many other physical benefits; also for spiritual uplifting and healings, which are by far the most important. To our loved Leader, Mrs. Eddy, I am more grateful than it is possible to express, for her discovery of this beautiful truth.

BURTON A. BRANCH, Chicago, Ill.

Christian Science came to my notice through the instantaneous healing of my son. His leg had been injured some years before in the football field; the doctors had done all they could for him, and finally ordered him into the Manchester Infirmary, where he remained three weeks. When he came out he thought he was better, but after a short time his leg was as bad as before. Again they took him into the hospital, and he was dismissed, no better. Several operations had been performed, and he had suffered agonies. He was told that he was incurable and must have his leg amputated. He was just beginning life, so it was a terrible blow to him, and we were all about as miserable over it as we could be. The doctor of our district heard of his sad condition and came to see him. This doctor told him how his own child had been cured by a lady in Manchester and advised him to try the same treatment. My son said to me after the doctor left, "Mother, I am going to Manchester in the morning to see a lady doctor and have Christian Science treatment." I replied, "Don't go, it is the devil's work;" but he answered, "I am going." My son went next morning and returned—healed—after one treatment!

I was in bed when he came home that night, and was much surprised to hear him running up-stairs. He flew into my bedroom and said, "Mother, I have brought you a present," and when I put out my hand to receive it, he gave me the bandage which he had had to wear so many years. He danced up and down the room, as if trying to realize his freedom. This was four years ago. He has never had a return of the trouble and has been able to play footfall and cricket and attend to his work. I had been an active church worker for many years, but when I studied Science and Health by Mrs. Eddy, I found it expressed a higher and clearer understanding of Truth. I knew what had healed my son, and I resolved at once to go forward and give this glorious truth to others. My heart goes out in gratitude to God, and it is impossible to express the gratitude and love we feel to our dear Leader, who has brought this healing truth to all the world.

MRS. ALICE HEATHCOTE, Hindley, England.

I commenced the study of Science and Health about two years ago, and had not studied its sacred pages more than a month before I was fully convinced that Christian Science is the primitive Christian religion regained and put into practice. After I had arrived at this conclusion I devoted every available moment to the study of the subject, and hungrily devoured the *Sentinel* and *Journal*. I am the clerk of the Circuit Court of Knox County, Indiana, and it is a part of my official duty to see that the insane are taken to the asylum. The case that I am about to relate occurred some time in February, 1905.

I was notified that a man had been captured at Wheatland, Ind., a town about twelve miles from our city; that he was a stranger, and no one seemed to know him. He was ordered into court, and when he arrived he was in a sorry plight; in fact, he seemed like a wild man. Among his papers we found his name, and I at once communicated with the superintendent of the asylum, who examined his register and found that a man by that name had escaped some time previous. He instructed me to keep him in confinement for the time prescribed by law, so that the sheriff could make an affidavit that he was free from any contagious disease. During his incarceration he was so wild that the neighbors around the jail could not sleep; in fact, the sheriff declared he had not closed his eyes in sleep for five nights and days. On the seventeenth day of February his time in quarantine had expired, and the sheriff was instructed to take him to the asylum. The sheriff said he must have ample help, and I arranged to go with him. He said we should have all we could do to manage the man. When we went to him early in the morning, we found that he had turned the water on, had flooded his cell, and was soaking wet. We had to carry him out, and it required five of us to get the handcuffs on him. When we arrived at the station the train was an hour late, a crowd gathered around him, and he acted terribly. As soon as the train arrived he was hustled by force into the coach. It was then that the thought came to me that I was a Christian Scientist and should be about our Father's business. I commenced to declare the truth. I had not been doing this more than three minutes before he became quiet. I knew that the prayer had been heard, and that the arm of Christ was outstretched even as when the Master bade the waves be still, when the disciples thought their lives were in danger. He soon took an interest in what I was reading and said his head hurt him. I again declared the truth, and in less than two minutes he said he was sleepy. I fixed a rest for his head, and he slept soundly until we reached the station, when I awoke him. He asked the name of the place, and when I told him, he said, "You are taking me back to the asylum; please take off these handcuffs, they humiliate me." The asylum is four miles from the city, and he asked me to ride alone with him. As soon as we were seated in the hack he said, "If I were not afraid I should soil your overcoat, I should ask that I might lean my head upon your shoulder." I told him to do so. When we arrived he walked into the reception hall and shook hands with the doctor, and said he remembered running away, but that his life had been a blank most of the time, and that he wanted to make amends for his ingratitude. To-day this man is a "trusty" at the asylum, can come and go as he likes, and as he is a competent florist they keep him there.

Any one who doubts this statement can write to A. J. Westfall, Sheriff of Knox County, Vincennes, Ind., and he will verify it. He is not a Christian Scientist, but is anxious that all shall know the truth. This particular demonstration is only a small fraction of the fruits of Christian Science in our work here.

To say that I am thankful to God, and to Mrs. Eddy for the opportunity of thus showing to the world the truth, only half expresses my gratitude for her life, which has been so pure that this wonderful revelation was given the world through her. I love to assimilate this truth; it is my life,

Digitized by Google

so to speak. I have read Science and Health through eighteen times in two years.

JAMES F. LEWIS, Vincennes, Ind.

It is now almost two years since my attention was attracted to Christian Science, through a dear friend who gave me some *Sentinels* to read. My little son, then seven years old, was lying at the point of death with lung trouble, and our physician said that it was only a question of a short time before he would pass on. We were persuaded to try Christian Science as a last resort. My husband consulted a practitioner on Monday, and on Wednesday the child got up, dressed himself, went up and down stairs, and never was in bed again on account of illness. We bought a copy of "Science and Health with Key to the Scriptures," and through its study my husband was healed of sick-headache and dyspepsia that he had had all his life. My eldest son was healed of kidney and stomach trouble that he had been afflicted with ever since he had the scarlet fever ten years before, and I was healed of severe heart trouble and several other complaints. All this took place within a short time after we began the study of Science and Health, in connection with the Bible.

Since that time, with a few exceptions when we thought it best to call a Christian Science practitioner, we have been able to overcome all the ailments that have come up in our family,—some of which, to mortal sense, seemed very severe, —and also several accidents, by studying the Bible and our text-book, and understanding God aright. All our many physical healings, however, seem small as compared to the spiritual uplifting and the understanding of man's true relation to God. The Bible seems a new book to me.

Mere words fail to express my love and gratitude to God, and to Mrs. Eddy for the revelation of the truth to this age. What joy it is to know and feel the ever-presence of divine Love.—MRS. ADDIE E. KELLER, Spokane, Wash.

Words cannot express my gratitude for what Christian Science has done for me. It is nearly eighteen months since I first heard of it. At that time I was in a very weak and critical state, suffering from a spinal complaint which I had had for well-nigh fifteen years. I had tried nearly every remedy that *materia medica* could suggest, but all to no purpose. The pain in my back and head was most acute, and I never knew what it was to have a night's rest; the pain was always there. When Christian Science was mentioned to me I was most anxious to try it, as a doctor recommended it to me. I sent to Manchester, and asked a practitioner to come to me. After the first treatment I felt much better, and slept all night, a thing I had not done for years. In less than a week I was healed, and was able to walk a distance of four miles to attend the Christian Science testimony meeting in Manchester, without feeling the least bit tired. For nearly four years before that time I had always had to be taken out in a bath chair. I feel very thankful to God for this manifestation of His love, and to Mrs. Eddy for the understanding of this truth which we know will make us all free.

ALICE SUTCLIFFE, Halifax, England.

When I came to Christian Science for help, now over ten years ago, I had been in wretched health for several years. I had been treated by many physicians, in five different States, and none of them ever gave me any hope of being a strong woman again. They insisted on an operation for internal troubles, but said even that would never make me entirely well. I went to a hospital in Chicago and lay in bed three months after the operation, but there was not much benefit derived from this treatment. About a year later I was brought to Christian Science through my husband being healed of tonsilitis while I was away from home. When I returned he told me of his healing, and I at once asked for treatment. In two weeks I was a different woman; I was able to do work I had not dared to do for years. Christian Science healed me of many ailments, among them rheumatism, neuralgia, anæmia, constipation, heart trouble, besides the internal troubles for which I had been operated upon. I can say Christian Science has done more than heal me physically; it has given me an understanding of God, of ever-present Love, and it helps in every time of need. I am striving daily to be a better wife and mother, and am grateful beyond expression to our dear Leader for our text-book, Science and Health. It brings blessings to me and my little ones daily. When they have any ailment they run for the book and ask me to read to them. They have been healed of earache, headache, and many other ailments by reading aloud to them. It is our companion, and I could not get along a day without it. It explains the Bible, and the Lesson-Sermons do me much good.

My love and gratitude go out to God, and to Mrs. Eddy, for this grand truth,—Christian Science. I have been lifted from the deepest sorrow by Christian Science, and I can never be grateful enough.

ALICE M. MCKEE, Congress Park, Ill.

I desire to express my thanks for the many blessings I have received through Christian Science. I owe all to this wondrous truth which has been revealed to us through our dear Leader, Mrs. Eddy. Four years ago, my husband, baby, and I moved to a new location, and were stopping at a hotel, where the proprietor proved to be a Christian Scientist. I was then in a critical condition with a so-called incurable disease,—a diseased condition of the blood and bones. I was hardly able to be around at all, and this dear Scientist saw my need immediately and gave me some literature to read. I had not known of this truth before, and it seemed lovely when she would tell me of the wonderful things it was doing, but from day to day I neglected looking any farther into it. This kind lady almost always helped me to my room after meals, and she never left me without speaking a word for Truth in some way. One day, after having helped me up some steps, as she started back, she said, "Now look into Christian Science, don't put it off too long."

Soon after we were settled in our own home, but I was unable to do anything, and our baby girl, ten months old, not very much better than I was. I had tried almost everything that *materia medica* could offer, but no help came. One day it certainly seemed that the end had come. My husband wanted to go for a doctor, but I asked for the Scientist at the hotel. She came, gave me all the help she could, and said she would call a practitioner for me. The practitioner came, talked with me a while, read from Science and Health, and gave me treatment. I immediately got up, had my supper, and all sense of pain left me. This was such a proof to me of some unseen power, that I told the practitioner to call the next morning and I would order the *Sentinel* and a copy of Science and Health. I began the study, and from the very first I knew it was the truth and what I wanted. I never for one moment doubted a word of it.

Science and Health is my hourly companion, and my growth in understanding has been growth in strength. Now I can truthfully say that we are a healthy and happy family, my husband, baby and I. While the physical healing has been cause for rejoicing, it is of little moment compared with the moral and spiritual uplifting. I have been lovingly and patiently shown the way, and I am truly thankful to our Father-Mother God, the giver of all good.

MRS. NINA WITTMAN, Biggsville, Ill.

Digitized by Google

It has been about six months since I first became interested in Christian Science, and I feel most grateful for the benefits I have received through the reading of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and other Christian Science literature. Christian Science was first brought to my notice by a dear sister, who had been healed through its practical ministry. For several years she had earnestly endeavored to interest me in Christian Science, but like many others who are living in utter darkness regarding its helpful teachings, I would reject and even ridicule what to her seemed the greatest blessing. Last fall, while visiting at my home, she renewed her patient labor of love, and a new light began to break in upon me. I have subscribed for the *Sentinel* and *Journal*, I have read Science and Health through once, and I daily read the Lesson-Sermon before going to my business. I realize that the dawn of Truth is appearing to me in all its beauty. I had used tobacco for thirty-five years, and for the last ten years had been an inveterate smoker, using from five to ten cigars daily. Through the reading of Science and Health this habit has been entirely overcome, as well as the use of profane language and unbecoming expressions. I also find that hatred, revenge, and selfishness, which have been among my characteristics, are disappearing from consciousness.

For the manifold blessings which have come to me in this brief time, I return sincere thanks to God, and to Mrs. Eddy, through whose pure life, spiritual thought, and exemplary living the Christ-teaching has been re-discovered.

F. J. Brown, Mason, Mich.

Thinking that my experience may be of help to some one else, I give it as a testimonial of gratitude for the healing power of Truth, in consciousness and in body. Following a mistaken diagnosis of disease, in childhood, that resulted in weakness, came a trouble called lateral curvature of the spine, with all its attending miseries, which were endured for twelve years and were treated by *materia medica* without success. I then received Christian Science treatment for a year, and during that time a disease of the lungs, which had been decided by physicians to be an entire destruction of the right lung, was healed. The actual change in spine and hip did not take place until I began the study of the Bible and Science and Health for myself, after which time the change was very rapid and marked, corresponding to the changed state of my consciousness. The demonstration of the one intelligence in educational work has been remarkable. Although the physical healing is not wholly complete, I will no longer withhold a just acknowledgment of the benefits received.

My cup is full and running over with gratitude to Mrs. Eddy for her unselfish love of mankind—and my daily prayer is, "Grace for to-day."

Miss Margaret E. Miller, Buffalo, N. Y.

Christian Science was presented to me about five years ago. I then told my husband what my intention was,—that if I lived till morning I would see a Christian Science practitioner. He replied that it was all right, as I had taken so much medicine without help. When I was told that in Christian Science it is Christ, Truth, that heals, I gladly accepted it without a doubt. I was ready to give it a trial, having been a constant sufferer, knowing no method of cure except drugs and tonics, my husband being a druggist. After I began with Christian Science my husband would look at me in astonishment, seeing the change I was going through. Some of my ailments yielded slowly, but surely, and I have not taken one drop of medicine since. I was a member of an orthodox church for many years and for twenty years a teacher in its Sunday School. I prayed beseechingly that God would open my eyes, and surely He has delivered me from the bondage of sense, for Truth has not only enabled me to help myself but others. My daily prayer is for more light, and to know more of the truth.

It is with sincere gratitude to God, and to our beloved Mrs. Eddy, that I write this.

Mrs. George W. Rule, Goshen, Ind.

Last New Year's eve I retired without any evidence of an ailment that wakened me before morning. About one o'clock I was suffering severe pain, and after declaring the truth for four hours, as I understood it, I called on a practitioner for help. Relief came almost instantly. At two o'clock, Sunday afternoon, I was up and dressed and partook of a New Year dinner. On Monday I went to the office, did considerable work, and felt no signs of the struggle except a sense of weakness. I will say that before taking up Christian Science I had a similar experience with altogether different results. Then I had medical treatment and was confined to my bed for one week.

I was also healed in Christian Science of the tobacco habit of many years' standing, and have been able to lay aside glasses, after wearing them for seven years, besides being healed of many smaller ailments.

I thank God for the understanding I have of Christian Science, and I hope to demonstrate my gratitude to Mrs. Eddy by living a Christian life.

A. H. Pinkerton, Chicago, Ill.

Those who choose God for their portion, who trust Him for salvation, love Him above all created objects, renounce worldly interest and connections for His glory, and count nothing too valuable to part with, too hard to do, or too sharp to suffer for His sake and to promote His cause, shall be honored by Him; but those who despise His authority, His salvation, His cause, in comparison with the interests, credit, or pleasure of themselves, will be dishonored.—Scott.

Christian Science and Legislation.

Orders will now be received for a new pamphlet of one hundred and twelve pages, entitled, "Christian Science and Legislation." The main article, which gives title to the pamphlet, is a carefully prepared argument by Judge Clifford P. Smith; this is preceded by an introductory article by Edward A. Kimball, "The Endeavor to Handicap Truth," and followed by an article by Judge Septimus J. Hanna, "Christian Science: a Practical Religion." Following these articles are representative testimonies, which show how Christian Science has proved itself to be an effective curative agency when other means had been tried and found unavailing. Several pages are devoted to pertinent editorial comments, and the appendix is a record of attempts made to frame laws adverse to Christian Science practice, with satisfactory amendments finally adopted, or annulment of the attempt by vote of legislators or by a governor's veto.

The pamphlet is a timely discussion of the rights of citizens to secure such aid as they have reason to rely upon in cases of sickness, as well as a proclamation of the rights of man to practise the Christian religion according to the teachings of Christ Jesus. The following prices will be made: Single copies, ten cents each; twelve copies, one dollar; twenty-five copies, $1.85; fifty copies, $3.50. Address all orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

List of Members.

The List of Members of The Mother Church, including those admitted November 7, 1905, is now on sale. Single copies, 50 cents; six copies to one address, $2.50; twelve copies to one address, $4.50. Address all orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

From our Exchanges.

The modern theology gives us God, only it is a God near at hand, and not afar off. It is not an angry God, who has hid himself from His children until eternity, but it is the visible Life of the universe, folding us close to himself, with the warmth of the true Father. The modern theology is just as far from discarding the doctrine of sin as it is from discarding the doctrine of righteousness. It does not even discuss the problem of wrong-doing; it undertakes to cure it. It has little use for the future hells and heavens as places of punishment and reward, for it seriously proposes the creation of a present heavenly state in this world. The atonement is just as vital with a liberal believer as with the soundest orthodox; but it is a literal, real atonement, that brings man and God closer together. It does not consist in the death of a victim, but in the awakening of love and honor.—*The Christian Register.*

Blessed assurance! The Spirit is with us as it was with the disciples of old—as it was with Paul when his spiritual vision was amended, as it was with John when his spiritual vision was unsealed; and this spirit of Christ is doing, as of old, wonderful things,—subduing human passions as he calmed the waves of Galilee, opening blind eyes as he did in those other days, unsealing deaf ears, loosing dumb lips, healing the crippled limb and the withered hand; aye, calling out of their graves many and many a Lazarus, though they be foul with corruption; giving beauty for depravity, peace for war, comfort for sorrow, life for death,—in other words, saving the world from sin. When the great Sabbath of the moral world shall come, it is not for us to say; but it will come, and Christian teaching and the spirit of the Master shall complete the work, that God may be all in all.

The Universalist Leader.

We preach Christ not alone or chiefly as a teacher or an example, not even as the incarnate Son, but as a personal Saviour. While, therefore, sin must not be slighted in any pulpit, this must be remembered, that there was something which existed before sin crawled its slimy way into the world's garden of purest blossoms, which was before man or star was created; namely, love. This we must never forget in our preaching; we start, not with the fact of sin, but with the prior fact of the love of God. When we go to our pulpit we go not from Sinai's storm-swept, lightning-riven, wrath-blackened summit, but from bathing our souls in Calvary's flood.

PROF. E. S. TIPPLE, D.D.

The Christian Advocate.

Finally, the spirit of the [recent interchurch] conference, as it developed, was distinctly in the direction of Christian fellowship. The disposition was positive, and the conference adjourned with no heritage of bitterness, as of old, when sections of Christians have met to discuss co-operation. The fruits of this conference, therefore, are deeper convictions on the question of unity, a more comprehensive conception of the Church of Christ, and a deeper consciousness of the family tie that binds and should bind all who claim to be members of His One Body.—*The Churchman.*

The one condition of teaching with power is dwelling near the source of power. If men abide in Him and His words abide in them, they shall say what they will and their fellows will hearken. He who, knowing the truth as it is in Jesus, lives it, shall speak not as the scribes, but as one having authority.—*The Pacific Baptist.*

The human race, if it has not lost its productive power, ought now to be producing men of the moral stature and grandeur of the prophets, the apostles, and the heroes of the ages who have made human life illustrious.

The Christian Register.

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to The Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of The Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to The Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number, or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By the Hon. WILLIAM G. EWING of Chicago, Ill.

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

For the fiscal year 1905 the total postal receipts from all sources, according to the report of the Postmaster General, were $152,826,585, and total expenditures $167,181,959, leaving a deficit of $14,572,584. In connection with these figures he directs attention to the 12.58 per cent of free matter handled, a loss in revenue of $19,822,000. "Manifestly," he says, "had the matter now carried free been required to have been prepaid, notwithstanding the large expenditures for the rural free delivery service, there would have been no deficit." As a remedy for the franking evil the Postmaster General suggests that there are sound administrative reasons why it would be better business policy for each department to pay postage upon its mail matter according to its class, than to return to the practice of requiring Government free matter to be prepaid by postage stamps in the same way as similar matter mailed by the public. The tendency to use the mails for matter that ought to be otherwise transported would be restrained.

The report says an effective domestic parcels post system could be organized on the same plan substantially as express companies conduct their service and as parcels post service is conducted in other countries. While he does not deem it wise at this time to ask Congress for such a system, he earnestly recommends that third and fourth-class mail matter be merged at the rate of one cent for two ounces.

Dealing with second-class matter, Mr. Cortelyou declares the statute to be inherently wrong. He bases this opinion on the fact that during the last fiscal year the total weight carried at one cent a pound and free was 663,107,128 pounds. "If," he says, "it cost the Government as much as five cents a pound to handle this matter in the mails, it will be seen that the amount paid out was $33,155,356, while the actual revenue was $6,186,647." He recommends a thorough review of the whole subject by Congress. June 30 there were in operation 68,131 postoffices. The number of employes in the service is 280,000.

Dr. Henry S. Pritchett announced his decision to retire from the presidency of the Massachusetts Institute of Technology at a recent meeting of the Corporation. He has been at the head of the Institute for five years. He resigns from the sole desire to devote himself exclusively to the work of promoting the objects of the Carnegie Foundation, of whose Board of Trustees he is the president, and which Andrew Carnegie recently endowed with a fund of ten million dollars as the nucleus of a great educational pension system.

The Attorney General of the United States has sent a circular letter to all the United States District Attorneys, eighty-five in number, directing them to enforce vigilantly the provisions of the Elkins act against rebates and discriminations of all kinds by carriers. Eight indictments were returned by the Federal Grand Jury last week in Philadelphia, against shippers, freight agents, and common carriers, in rebate cases brought to their attention by a United States District Attorney.

It is hoped that legislative action will be taken by the present Congress that will make it possible for the better class of Chinese to be allowed admission to this country. It is thought that this action would allay the strong feeling of the merchant class in China aroused by what they regard unjust discrimination, and that it would save that immense market.

A resolution has been introduced into Congress asking for an official investigation into existing conditions at the Naval Academy, Annapolis, which are believed to be demoralizing. The recent fatal fisticuff affair and cases of hazing have aroused the attention of the country.

Yale University has received from two anonymous donors, not connected with the University by graduation or otherwise, a gift of $75,000 to found a new and somewhat novel lectureship entitled "The Inter-relation of Religion, Science, and Philosophy."

Foreign.

Prince Min, the Korean Minister to France, called by appointment upon Secretary Root at the State Department last week, and lodged with him a protest against the Japanese action in forcing a protectorate over Korea. "Japan," he says, "has surrounded our officials with soldiers and forcibly placed her officials in control of our Government. We have suffered not only the confiscation of much property, but harsh and unjust punishments. We do not wish to resist Japan's plans for reforms when they do not bring gross wrongs and injustice on us. If, as during the past twenty months, the Japanese who have overrun Korea have shown such contempt for the rights of Koreans, the Koreans may well ask what will be the attitude of these aliens now that they know that there is not one friendly nation in the world to hold up its hand and ask the Japanese Government to take a more humane and reasonable policy in Korea."

Victor Emmanuel, King of Italy, last week received in private audience Dr. Joseph Spencer Kennard of New York, painter, lawyer, novelist, critic, and traveler. His Majesty and Dr. Kennard discussed the project of encouraging American students to study in Italian universities and for the exchange of professors between Italy and the United States. The latter part of the project involves the sending to the United States of prominent Italian lecturers to urge the study of the Italian language and to work in accord with the Dante Aligheri Society.

Turkey has at last formally surrendered to the demands of the Powers and accepted the scheme providing for the financial control of Macedonia. A communication to this effect was handed by the Porte to the Austro-Hungarian Ambassador, Baron von Calice, and the question which has been the subject of negotiations for eleven months was closed. The international fleet will promptly be withdrawn.

President Castro of Venezuela has taken a step by which amicable relations with France, recently strained by reason of the Venezuelan annulment of the French Cable Company charter, will be resumed. Both parties to the asphalt trouble also are willing to reach an amicable settlement, and there is strong probability that this will be the result of the conference.

An imperial edict has been issued in China appointing twenty-four provincial boards, under the Board of Commerce, to handle the forests and mines of the Empire.

The Norwegian Government has fixed June 24 of next year for the coronation of King Haakon and Queen Maud.

Industrial and Commercial.

The Carmania, the first of three ocean liners destined to be leading ships of the Cunard fleet, a great triple turbine propelled vessel, ended a successful voyage from Liverpool and Queenstown last week. Her entrance into New York harbor was a signal for an ovation for the initial arrival of a merchant ship driven by turbine engines into any port of the United States. Her time was 7 days 9 hours 31 minutes. The average speed was approximately sixteen knots an hour. "Every part of the engines worked perfectly on the voyage," said Mr. Maxwell, a director of the line. "We had not given the Carmania her final trial in service conditions, but this ocean voyage has proved the worth of the turbine and justified all criticisms that we have made. We are extremely confident that the twenty-five-knot liners now building will come up to all specified requirements."

The Menominee River (Mich.) Sugar Company has consumed this fall about fifty-five thousand tons of beets, producing about forty thousand barrels of fine granulated sugar, valued at some six hundred thousand dollars. Of this sum more than two hundred and fifty thousand dollars has been disbursed to the farmers in Michigan, Wisconsin, and Minnesota, and more than seventy-five thousand dollars has been paid the railroads for transporting the beets to the factory.

Steps have been taken towards establishing a large irrigation system in the valley of the Mimbres River in New Mexico, by which one hundred and ten thousand acres of arid land are to be reclaimed. The Rio Mimbres Irrigation Company, which has charge of the enterprise, will expend about one million dollars in carrying out its plan.

The *Journal of Commerce and Commercial Bulletin* says: "Careful inquiry among manufacturers and agents in New York develops the fact that more than five hundred thousand horse-power of steam turbines are now in operation in the United States, with in the neighborhood of one million additional contracted for and building.

The sugar brought into the United States in the year about to end will exceed $150,000,000 in value. More than $50,000,000 worth of this comes from Hawaii, Porto Rico, and the Philippine Islands, and more than $100,000,000 worth from foreign countries. The total value will far exceed that of any preceding year.

Following the lead of the Pennsylvania Railroad in abolishing all free passes, nearly all the railroads in the eastern part of the country have fallen in line.

The annual report of the State Fish Commissioner of Washington shows that the value of the fisheries' output for 1905 was $10,361,363.80.

The ore season on the Bessemer Railroad of the steel corporation has closed, and for the year shows an aggregate freightage of 5,840,000 tons.

The total shipment to December 1 of the 1905 crop of Aroostook County potatoes was 2,358,098 bushels

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

The Rich Young Man.

LOUISE DELISLE RADZINSKI.

Jesus beholding him loved him, and said unto him, One thing thou lackest: go thy way, sell whatsoever thou hast, and give to the poor, and thou shalt have treasure in heaven: and come, take up the cross, and follow me. And he was sad at that saying, and went away grieved: for he had great possessions.—*Mark*, 10: 21, 22.

THE story of the rich young man frequently recurs to me when great riches are spoken of, and I have wondered whether he really was prevented from following the Master he sought so eagerly and humbly, by the love of riches, as many people seem to believe. He sought eternal life and inquired of Jesus what he might do to possess it. He had obeyed the law, and had fulfilled all the requirements of tradition as a faithful son of Israel from his youth up, yet he was not satisfied that this observance of law and form was sufficient to bring him into life eternal and blessed; his loving thought made him crave a more loving religion than that taught in the synagogue by the doctors, or teachers of the law, who spent long days disputing over questions of philosophy instead of helping the people to a true sense of the nature of God. Of this divine nature the works of Jesus had given him an idea which met his need, undoubtedly, for he came to the Master, running, and throwing himself at Jesus' feet proffered his request, "Good Master, what shall I do that I may inherit eternal life?"

But when Jesus told him what to do, "he was sad at that saying, and went away grieved: for he had great possessions." In that day, as it is still in many regions of the old world, great possessions meant great responsibilities: servants to be trained for war, for agrarian or domestic uses; lands to be tilled, vineyards to be pruned, and all to be protected from the invasion of outlaws or unfriendly neighbors, till the harvest season brought in the reward of labor and vigilance.

To sell all he had, meant to the rich young man, I think, to renounce all ancestral traditions and ties, to sell to some one who might not treat them with loving care,—men, women, and children who belonged to him by inheritance; servants born in his father's house, many of them having grown up with him, as the custom was, his companions in war, in the chase, in the care of his lands; friends who loved him and depended upon him for all their material well-being,—selling all he had, would be to give up his family, those he loved; and this young man must have reflected much love, for the gospel narrative tells us that "Jesus beholding him loved him," and in his love called him to the highest demonstration of understanding and of love, above the human plane; "and he was sad at that saying, and went away grieved." He was not ready for this demonstration of obedience.

He did not know Jesus well enough to understand that in following Christ he would not be called upon to neglect any duty really his; that the responsibilities he had been brought up to consider of paramount importance, lay with divine Love, not with the true but limited sense of love he cherished for his servants and his possessions. Had he realized this truth he would, like Mary, have dwelt at Jesus' feet, in the state of trustful dependence upon the divine Love that would have cared for all his dependents, to the least of them, as it does for the birds and blossoms of the fields; he would have rejoiced to see his best beloved in the hands and at the service of him whom he trusted to show him the way to eternal life, but whom he did not trust with the problems of human life. His finite sense of service and of love prevented him from seeing the truer, greater service he could render his people by selling all things he possessed; that is, yielding up all his material cares and responsibilities, to assume that dependence upon Love which brings man into his freedom as the child of God.

Many of the best, most loving and devoted people we know, sacrifice their sense of life and happiness, and much of the comfort of others, through this devotion to a human sense of duty, of responsibility to material possessions or conditions which, under the light of Christian Science, the right understanding of God and of man's relation to Him, would be reduced to true proportions. In following the teaching of "Science and Health with Key to the Scriptures," and the example of our revered Leader, we learn how we can take all we possess to the feet of Love, bring to that safe refuge all those we love. Then material riches cannot be missed, for he is true and faithful who promised, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you."

"All these things" enumerated in the sixth chapter of Matthew, cover all the things that make for life and happiness, freedom from material cares, through the understanding and the abiding consciousness of God as Father and Mother of all, cherishing and protecting all, and calling all to the demonstration of obedience, in order that room shall be made in man's consciousness for the indwelling of that Truth which is freedom, of the Spirit which is harmony.

The Belief in a Human Mind.

FRANK H. SPRAGUE.

THE apotheosis of the so-called scientific spirit has been a distinctive feature of the thought of the century just closed. Within that period the application of the inductive method has been so extended as to embrace within its scope every conceivable field of research and experimentation.

Although for several decades the impulses and tendencies which have found their fulfilment in this intellectual awakening have been the most potent factors in shaping the educational and social ideals of western civilization, indications of the passing of certain phases of thought peculiar to this epoch are already at hand. Representative thinkers are beginning to acknowledge that these influences have failed to reveal a satisfactory solution of the fundamental problems of existence, or an adequate explanation of many of the more important aspects of human experience. Under a searching scrutiny the modes and methods of this type of thought are found merely to satisfy the demands of a transient phase of human inquiry.

In all theories and systems resting on an empirical foundation, the center of gravity tends to fall without the base and precipitate their downfall; for without a recognition of the plumb-line of Truth, no available standard is known by

Copyright, 1905, by Mary Baker G. Eddy.

Digitized by Google

which the vagaries and aberrations of human speculation may be corrected.

The utterances of certain contemporary thinkers identified with a broader school of criticism are prophetic of a new era in human perception. In his essay on modern science, Edward Carpenter says,—

"The theories of science generally . . . mark the direction which the human mind is taking at the moment in question, but they mark no limits. At each point the *appearance* of a limit is introduced—which becomes, like a mirage in the desert, an object of keen pursuit; but the limit is not really there—it is only an effect of the standpoint, and disappears again after a time as the observer moves."

In a vein equally suggestive, Stanley Jevons declares it as his "strong conviction that, before a rigorous logical scrutiny, . . . the certainty of our scientific inferences will prove to a great extent a delusion."

Impressions received through the medium of physical sensation, and inferences gathered from the results of human experimentation, afford no clew to the real facts of being. It is manifestly impossible to arrive at an understanding of the rationale of existence by ascending a ladder of inductive reasoning supported by data the value and significance of which are purely problematical. And, moreover, from the very nature of the case, data of the class accessible to the physicist and psychologist must ever remain in this category. The verities of existence are as incomprehensible to the unillumined human mind as are the phenomena of solar physics to the uninitiated observer on the surface of the rotating earth. No adequate criterion of truth is discernible amid the fluctuating theories of current scientific and philosophical systems. Human thought is powerless to extricate itself from the maze of misapprehension in which the subtleties of its analytical processes have involved it. The recognition of a point of view outside the inferred limits of the so-called human mind is prerequisite to a right understanding of the situation. From such a position alone is it possible to discriminate between the genuine or pertinent and the spurious or irrelevant elements in the heterogeneous mass of descriptive data gathered in the drag-net of human observation. Clearly such a point of view can be apparent to human consciousness only as the result of a revelation independent of and transcending the processes of inductive reasoning. The apostle James said, "Every good gift and every perfect gift is from above, and cometh down from the Father of lights, with whom is no variableness, neither shadow of turning."

From the point of view established in Christian Science, through its Discoverer and Founder, the Rev. Mary Baker G. Eddy, it becomes possible not merely to judge rightly as to the character of specific phenomena as they are cognized by the so-called human mind, but, furthermore, to discern the status of this mind itself. To his disciples, who gauged existence by a merely human standard, Jesus said, "Ye can discern the face of the sky; but can ye not discern the signs of the times?" Viewed in the light of Christian Science the phenomenon defined and described as the "human mind" is found to represent not a real entity, but merely an unreal and fleeting sense of mentality or selfhood, which melts away and disappears to the extent that understanding supplants belief. (See Science and Health, p. 281.) Starting with revealed spiritual premises, Christian Science, by logical deduction, defines the real phenomena of existence as spiritual; and this conclusion is confirmed by demonstrations which refute the false testimony of materialistic sense and disclose the spurious character of the species of phenomena to which this type of perception bears witness. The concrete aspects of error are thereby proved to be no more real and substantial than its abstract formulations. As we lose a false sense of things, the real creation begins to come into prominence, divested of the materialistic aspect which mortal belief ascribes to it. The ostensible phases of evil are then found to represent the progeny, not of Mind, but merely of a mistaken notion of minds many.

Paul says, "In me (that is, in my flesh,) dwelleth no good thing." The concept of man as possessing a separate mentality, which he is privileged to exercise in and of his own right, contradicts the spiritual fact. In the light of Christian Science, the functions of will, intellect, and feeling, which psychologists attribute to the human mind, are seen to represent counterfeit aspects of man in his normal capacity as the reflection of Life, Truth, and Love. Self-will, self-consciousness, and self-love are theoretical opposites of Life, Truth, and Love. The concept of a "human will" denotes a false sense of Life or power, which finds its logical ultimatum in self-annihilation; similarly, a recognition of the so-called human intellectual and emotional faculties, as real elements of man's nature, evinces a false estimate of Truth and Love. In his normal estate man is found in possession of the Mind "which was also in Christ Jesus." Like the moon, he radiates a reflected light. (See Science and Health, p. 336.) Only as impulses, thoughts, and sentiments which purport to originate in a mentality of a finite, personal order, and independent of the one, infinite Mind, are eliminated from human consciousness, can man's real status be apprehended.

The freedom of the human will is a misnomer; for the sense of freedom thus designated is born of delusion, and furnishes the basis of division, separation, discord, death. Ascending the scale, from its lowest exhibitions in the fury of the elements and bestial ferocity, it assumes the more refined forms of personal impulse and self-conceit, until in the guise of devotion to duty it passes into the realm of self-sacrifice and altruism. Yet while its flowers, unfolded in the atmosphere of idealism, exhale the perfume of nobility and aspiration, its root remains deeply embedded in the mire of a false sense of things. The realization individually or socially of true freedom and harmony is impossible on such a basis.

Any effort at reform which contemplates the removal of the symptoms of evil without first seeking to destroy the false sense of mind in which they are grounded, leaves the essential factor in the case untouched. The Master said, "Whosoever shall not receive the kingdom of God as a little child shall in no wise enter therein."

The "one thing needful" must be complied with, even though it involve cutting off the right hand (the sacrifice of a human sense of will or power), or plucking out the right eye (the sacrifice of a human sense of perception, abandonment of the most cherished views). Only by relinquishing a false, mortal sense of mind, and acknowledging allegiance to immortal Mind, can human consciousness come into touch with the infinite resources of Spirit, and realize true individuality. The basis of unity, on which the fruition of human hope depends, is attainable only through exemplification of the spirit of obedience voiced by Jesus in Gethsemane, "Not my will, but thine, be done."

Taking the Time.

ADALAIDE SCOBEY BLOUNT.

Come and hear, all ye that fear God, and I will declare what he hath done for my soul. . . . If I regard iniquity in my heart, the Lord will not hear me: but verily God hath heard me; he hath attended to the voice of my prayer.—PSALMS.

THUS sang the ancient Psalmist, and through the study of Christian Science I have come to realize how much has been done for my soul,—my consciousness,—and this is proved in a new sense of all that comes up in daily experience. When I first became interested in this Science, I was teaching, and it seemed impossible to apply its rules always, as occasion arose in the schoolroom, for, as I argued to my practitioner, were not my thoughts already more than occupied with the fifty children before me

Digitized by Google

demanding every moment of my attention? "I cannot take the time," I said. "But," she answered, "you take time to think the wrong thought."

One day, when I was very young in both teaching and Christian Science, I was afflicted with a severe headache. At first my only thought was how to continue my work in some fashion,—for the pain seemed maddening,—how to endure it until the session should end and I could get home. "Apply your understanding of Principle now," came the voice of Truth. "But I can't stop a moment," was the counter-argument. The pain increased, and I remembered the words, "You take time to think the wrong thought." Instantly I turned from my acknowledgment of material sense and acknowledged God, good, as supreme. This all took place in less time than it takes to tell it, and without interrupting my work. When next my thought reverted to myself there was no ache, no pain! I had ceased from "regarding iniquity in my heart," so that the Lord could hear my prayer and I could hear His word.

At another time during a school session, I became much disturbed; I was disappointed and angry. The tempter whispered, "You have good reason to be angry and do very well to control yourself." But well I knew that this Science demands nothing less than love. Just at this time there was a two-minute recess. I turned from regarding the iniquity in my heart—and it seemed full—to prayer, as I had come to understand it through the study of Science and Health. After a few seconds, thought was momentarily brought back to myself, and it seemed to be the same old self, full of resentment and anger; but again I turned to acknowledge the reality of good and good only. The recess was over and I was conscious only of love and peace and was very happy.

These incidents are small perhaps in themselves, yet they show that even in the midst of our most engrossing cares, we can, if we will, cease from regarding iniquity in our hearts and pray the prayer of Christian Science. Then, without regard to time or place, comes the answer which is the sign of Immanuel, "God with us."

"I have learned."

ELINOR F. EDWARDS.

WHAT a depth of meaning is disclosed in this simple statement of Paul's, "I have learned." It is as if his entire Christian experience were summed up in these three significant words. After years of toil, privation, and hardships, of conflict within and without, he is able to say, "I have learned, in whatsoever state I am, therewith to be content."

In the light of Christian Science it seems strange that this passage should ever have been used as an argument in favor of submission to circumstances, for such is evidently far from the writer's meaning. Paul was neither a fatalist nor a moral coward. His experience is an object-lesson in overcoming evil, through the understanding of the power and presence of God. "Be not overcome of evil, but overcome evil with good," is his encouraging counsel to the Roman Christians. Paul practically says that in whatever state he found himself he always learned from it, not to be content with that state or in it, but to find in every experience, however distressing, an opportunity to prove the supremacy of God, good. It is as if he said: I have learned that God is equal to the occasion, whatever the occasion may be, and therewith I am content. To Paul, stripes, imprisonment, distresses, calamities, tumults, and perils without number, were but so many opportunities to strengthen his faith in the unfailing goodness of God and His power to deliver those whose trust is in Him. Through all his tumultuous history he was learning the one supreme lesson, that "there is no power but of God;" therefore he could say, I have learned to be content anywhere and everywhere, because there is no place or condition where this power is not adequate and available.

In the Twentieth Century Testament this verse reads, "For, however I am placed, I, at least, have learnt to be independent of circumstances. . . . Nothing is beyond my power in the strength of Him who makes me strong." All that Paul suffered in gaining this independence he counted as light affliction, because of the understanding of God which he gained with each experience.

Another translation of this passage reads, "I have learned to master myself." Science and Health tells us (p. 569): "He that touches the hem of Christ's robe, and masters his mortal beliefs, animality, and hate, rejoices in the proof of healing,—in a sweet and certain sense that God is Love." When Paul had learned to master his own pride, prejudice, intolerance, impatience, fear, hatred, and contempt for those who differed from him,—all the evil within which goes to make up the false self,—his purified consciousness enabled him to master evil without, wherever and however it was presented. He could heal the sick because much evil had been cast out of himself. When shipwreck seemed inevitable, he turned away from the overwhelming evidence of the senses, and said to the shipmaster, "I believe God," and this sublime faith saved them all. He was not afraid of the viper's sting nor of prison walls, because he had learned to trust the unfailing protection of the divine ever-presence.

The way of salvation from evil has not changed. The way that Paul learned is ours. Obstacles are still opportunities to those who approach them with the understanding given through the inspired teaching and life of our heroic Leader, Mrs. Eddy. She has turned what seemed insuperable obstacles into opportunities for us all, and we must follow her example and precepts, until we can say with Paul, I have learned to be master of myself; I have learned to be independent of circumstances.

When obstacles and trials seem
Like prison walls to be,
I do the little I can do,
And leave the rest to Thee.

A Correction.

The sentence commencing on the fourth line from the bottom of the first column, page 245, the *Sentinel* of December 16, should have read, "We cannot come into the true church so much through material means as spiritual," and the sentence immediately following the above should have read, "The right concept of this church is gained through spiritualization of thought and life, that it may be said of us as Jesus said to Peter, 'Flesh and blood hath not revealed it unto thee, but my Father which is in heaven.'"

[Written for the *Sentinel*.]

The Mountain Path.

AGNES FLORIDA CHALMERS.

I FOUND a path upon the mountain-side,
Winding and long;
I found a path upon the mountain-side,
And, with a song,
Began my journeying. I prayed to see
Only the verdant, sunny peak ahead of me.

Trusting the rugged mountain path, my slow
And painful steps I did not count, and lo!
Father, o'er jagged rocks,
I reached the sun-crowned height,
And saw Thy glory in the wondrous light
Of Truth.

Safe on the heights, mine eyes now longed to see
The toilsome path my feet had climbed to Thee;
But, looking far, it seemed a glorious way,
Love-hallowed in the light of falling day;
Each jagged rock below appeared to be
A guide-post, pointing to Eternity.

The Passing of Intolerance.

"Blessed are ye, when men shall revile you, and persecute you, and shall say all manner of evil against you falsely, for my sake. Rejoice, and be exceeding glad: for great is your reward in heaven: for so persecuted they the prophets which were before you." Truth in its purity meets only with the approbation of those who see it as it is and appreciate it. A true statement must of necessity array itself against every falsehood, misconception, or misapprehension concerning the same proposition. There are but two facts which will check or restrain the criticism of new, though true ideas, and the persecution of those who advocate them; namely, a correct understanding of the idea, and toleration. The chagrin occasioned by hasty denunciation of new things, which afterwards are found to be not according to one's first estimate, but on the contrary as genuine as they are represented to be, teaches one to be slow in the condemnation of the new and to deport himself according to the Scriptural admonition, "Be not forgetful to entertain strangers: for thereby some have entertained angels unawares."

Criticisms of Christian Science have been frequent and sometimes bitter. The prophets, said Jesus, were persecuted before you. Those who have advocated anything unusual or "irregular" to their particular age have met with more or less opposition, and since mortals have not yet attained to that exalted state wherein they are willing to wait on God and allow the teachings and beliefs of those who differ from them to stand or fall on their own merits, it may be expected that opposition will exist; but the experiences of mankind, hitherto, have been of such a nature that whatever of antagonism may now exist and whatever of persecution may be instituted amounts to little more than a discussion. Men are not burned at the stake or led to the guillotine in these days because they happen to differ from others in their opinions, although one might believe that there are a few who would be pleased to imprison those who differ from them in religious beliefs. The consensus of public opinion, however, will not justify any opposition stronger than mere talk, and even that must be courteous and kind to meet with the general approbation of the people. When we take all these points into consideration we can mark great progress. So many new, startling, and seemingly improbable and impossible things have been invented, discovered, or instituted, that it is not wise to denounce hastily anything which may be offered for our consideration. We are living in an age when expectation compasses the most astounding manifestations and events, and yet it is an age when almost everything that happens is beyond our expectation. ALFRED FARLOW.

Boston Times.

Good and Bad in Us.

In confirmation of the homely truth that there is much of good in the worst of men, comes the assertion of Judge Cowing of the New York Court of General Sessions, that in his twenty-seven years' experience on the bench, sitting at the edge of the never-ceasing stream of crime and vice and evil, he has "found in every man more to praise than to condemn." Not less than thirty-five thousand men and women have passed before Judge Cowing in the twenty-seven years, to plead, to stand trial, to receive sentence, and the crimes of which they have been accused include every act counted as a crime in the penal code.

Certainly the Judge has reason to be a pessimist, if any one has, and yet he has no patience with people who are all the time talking about the total depravity of certain classes. He declares it is not in accordance with the truth. There is plenty of good in the worst men and women that come before him.

To lie, to deceive, to cheat, is not the rule. On the contrary, people generally tell the truth and deal honestly. An overwhelming majority of us do so, and each of us does so in an overwhelming majority of instances. It is in the nature of man to tell the truth, to deal honestly, and to do what he deems to be right, just as it is his nature to have physical health. Crime is to the moral realm what disease is to the body.

We get a better understanding of life by seeing good and evil in the right perspective. It is more pleasant and profitable, more strengthening and elevating, to think good than to think ill. He has the truest view of life and leads the happiest and most useful one who can be generous in his estimate of others, broad-minded, large-spirited, and kind, thinking well of everybody, meanly of nobody, and overlooking the little faults, believing that there are other qualities in the man that overwhelm the deficiency.

It is best to talk like an optimist, laugh like an optimist, and move about like an optimist, conscious of the fact that in so doing you will radiate cheer and sunshine and make yourself and everybody about you better and happier.

The Atlanta (Ga.) Journal.

Christian Science denies that matter is a part of immortal being. If the material body is necessary to immortal existence, then individual immortality must be a myth; because this material body is dissolved after death, and is then no part of the conscious or unconscious identity of man. Although the material body, at death, ceases to exist, yet the idea of man's individual immortality is inseparable from Christianity; wherefore Christianity teaches that man's permanent identity must be independent of a material body, and therefore wholly spiritual; *i.e.*, in the image and likeness of God, Spirit. It is therefore reasonable to believe that matter is no part of man. How clearly Jesus saw this when he said, "It is the spirit that quickeneth; the flesh [matter] profiteth nothing." Beholding this same great fact, Paul said, "Wherefore henceforth know we no man after the flesh," and, "the flesh lusteth against the Spirit, and the Spirit against the flesh [matter]: and these are contrary the one to the other." JOHN CARVETH.

Adrian (Mich.) Times.

Metaphysical truth is a statement of the eternal realities of being. Christian Scientists contend that what is absolutely true is eternal and does not change. Absolute truth is not one thing to-day and another thing to-morrow. Christian Scientists also contend that Truth is synonymous with Mind, God. The infinite Mind does not think finite thoughts. He does not know one thing to-day and unknow it to-morrow. God knows the truth as it eternally is; and what God is, what God knows or thinks, is the reality of being, and the reality of being constitutes metaphysical truth. REV. G. A. KRATZER.

Fitchburg (Mass.) Sentinel.

Christian Science does not deny that the physical body is real and tangible to the mortal senses, nor that its suffering is real to those senses, but it does deny that they are real to God, or to His image and likeness, the perfect man. It is because Christian Scientists understand the birthright of dominion that they are able to apply it to the destruction of sin and suffering. Mrs. Eddy in her writings shows plainly how impossible it is for matter to emanate from Mind, and in this she is supported by many well-known authorities. CHARLES K. SKINNER.

Among the Churches

Progress in Berkeley, Cal.

First Church of Christ, Scientist, held its initial service on Sunday, March 12, 1905, and its present membership—October, 1905—is forty-eight. A lot was bought in June, and a church building will be erected later on. Up to October first $975.10 has been sent to The Mother Church Building Fund. All the services are well attended.

Correspondence.

Laying of Corner-stone in Wilmette, Ill.

At six o'clock on Thursday morning, October 5, before the busy world was fairly astir, the corner-stone of the new church building of First Church of Christ, Scientist, Wilmette, Ill., was laid in the presence of the board of directors, the trustees, the building committee, and a few other members, in strict accord with the Manual of The Mother Church.

The location of the church is a very desirable one; the lot is one hundred feet front by two hundred deep. Since the beginning of the year this church has donated to The Mother Church Building Fund the collections on the first Sabbath in each month. These collections are uniformly the largest in the month, thus proving that our membership is alive to the demands of the Cause at large, and loyal to our Leader, who has given us so unstintingly of her love.—HORACE G. DRURY, *Clerk.*

The Distribution of Literature.

In references to the subject of distributing literature we have not seen it mentioned that public rooms in hotels are used for the purpose. We have found it a valuable, as well as fitting means for spreading the truth, to leave a *Journal* in such places, on some ready table, with "Read and leave for others, please," neatly stamped on the cover, also prominently on first page the address of the church and of the reading room. Of course the consent of the hotel manager first obtained.

Literature Distributing Committee, Cincinnati, O.

True Fellow-feeling.

[The following extract from a letter recently received, discloses a feeling of brotherly kindness which is most commendable.—EDITOR.]

"At the union service of First and Second Churches of Christ, Scientist, in Portland, Ore., held Thanksgiving Day, an opportunity was given those present to contribute to a fund which is being raised in this locality for the Jewish sufferers in Russia. While there had been no previous preparation by the church members for this collection, it was most heartily responded to, and $130.76 was contributed and later turned over to the committee in local charge of the relief fund.

"The following appreciative letter has been received in acknowledgment:—

"Portland, Ore., December 6, 1905.

"Mr. David B. Ogden, President.

"*My Dear Sir:*—On behalf of the unhappy persecuted Jews of Russia, as well as on behalf of the committee, I desire to tender their heartfelt thanks, not alone for your generous contribution of last Thanksgiving Day, but also for the noble sentiment that prompted its giving.

"Be good enough to extend our sincere thanks to both Societies of First and Second Churches of Christ, Scientist, and greatly oblige.

"Very sincerely and gratefully yours,

"BEN SELLING, *Treasurer.*"

The Lectures.

Hyde Park, Mass.

On Thursday evening, October 26, Judge Septimus J. Hanna delivered a lecture on Christian Science in French's Opera House. Mr. F. B. Homans introduced the lecturer, and said in part,—

The only reason there are not more Christian Scientists to-day is simply because there are not more who understand its teachings. This Science is not a patent right for a certain sect. It is the open door for all the world to know and understand God aright.—*Correspondence.*

Battle Creek, Mich.

At the Christian Science lecture Thursday evening [October 26], Rev. George Buckley introduced Rev. Arthur R. Vosburgh in part as follows:—

To the request to introduce the speaker of the evening, I respond with pleasure. I do so, however, not as a Unitarian or Trinitarian, or Christian Scientist; but rather in the eclectic spirit of one who endeavors to keep open-house to truth, believing that no sect has a monopoly of it; wishing heartily to receive it and be thankful for it, whencesoever it cometh or under whatsoever name. I welcome Christian Science as a modern expression, both theoretical and practical, of a very old, fundamental, and comprehensive truth, that giveth light and life to men. I welcome it because it is on the right side of things,—the side of spiritual law and an ennobling hope and faith—a great spiritual force and handmaid of the church, helping to lift the men and women of this generation out of materialistic thought and a pagan, dualistic Christianity.—*The Enquirer.*

Utica, N. Y.

An audience that filled the Majestic to overflowing listened attentively and with pleasure yesterday afternoon [October 29] to a lecture on Christian Science delivered by Mrs. Livingston Mims of Atlanta, Ga. Mrs. Mims was introduced by C. F. Hackett, who spoke in part as follows:—

The subject of religion touches the heart of every human being. The question, What is God? is one which every individual must answer. The eternal God remains the same. But as the rotation of the earth on its axis hides the glory of the ever-shining sun and we call it night, so our earthly views may hide the majesty of our God, and groping in the darkness we may not know where He is nor how we may find Him. Humanity, in its sorry plight, weighed down by the monstrosities of sickness and sin, is sadly in need of a savior to rid it of its ills and woes, and everything which promises relief is worthy of candid and careful consideration. We who have accepted Christian Science find enacted in our lives and thoughts the promise and prophecy of Isaiah, wherein has been given us "beauty for ashes, the oil of joy for mourning, the garment of praise for the spirit of heaviness."—*Utica Observer.*

Lectures at Other Places.

Wichita, Kan.—Hon. Clarence A. Buskirk, October 29.

New Haven, Conn.—Bicknell Young, October 29.

Duluth, Minn.—Rev. Arthur R. Vosburgh, October 29.

Beaver Falls, Pa.—Prof. Hermann S. Hering, October 29.

Oklahoma City, Okla.—Hon. Clarence A. Buskirk, October 30.

Atchison, Kan.—Hon. Clarence A. Buskirk, November 3.

Beloit, Wis.—Rev. Arthur R. Vosburgh, November 3.

New Berne, N. C.—Edward A. Kimball, November 3.

Winchester, Mass.—Prof. Hermann S. Hering, November 5.

Elkhart, Ind.—Rev. Arthur R. Vosburgh, November 5.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Take Notice.

Members of our Church that have not read the By-law, "Duty to God," in the issue of our *Sentinel* of December 16, 1905, are not amenable for disobeying it until they have read it, but they will be thereafter.

MARY BAKER G. EDDY.

Pleasant View, Concord, N. H., December 21, 1905.

Church By-law.

ARTICLE XI.

DUTY TO GOD.—SECTION 4. Members of this Church who turn their attention from the divine Principle of being to personality, sending gifts, congratulatory dispatches or letters to the Pastor Emeritus on Thanksgiving, Christmas, New Year, or Easter, break a rule of this Church and are amenable therefor.

Greetings from Germany.

Bad Sachsa am Harz, Hermannklause, Deutschland,
November 24, 1905.

Mrs. Eddy.

Dear Revered Leader:—About a year ago I asked you to allow "Science and Health with Key to the Scriptures" to be translated into German, and though my wish is, and ever will be, the same, I have seen since then how wise it was of you not yet to give that permission. I admire your wisdom, and I am waiting silently and patiently, knowing that the right time will be revealed to you. I am full of joy to have become now a member of The Mother Church, full of thanks to belong to the great brotherhood of Scientists, and do see in you a wise and beloved Leader. In thinking of you there is always the one thought coming to me, that by you "Love is reflected in love." My desire is to do the same, to give up self-will and to do nothing but the will of my Father, to overcome personality, and to be nothing but "reflection." This is the goal which I am wanting to reach, and I think that in striving for it I can best prove my gratitude to you, for what you have done and are doing for me and mankind.

I am, dear Mrs. Eddy, yours in reverence and love,

COUNTESS FANNY VON MOLTKE.

MRS. EDDY'S REPLY.

Pleasant View, Concord, N. H., December 11, 1905.

To the Countess Fanny von Moltke, Christian Scientist.

I thank you for your excellent letter, and reply in the words of Scripture:—

"The meek will he guide in judgment: and the meek will he teach his way. All the paths of the Lord are mercy and truth unto such as keep his covenant." "Endeavoring to keep the unity of the Spirit in the bond of peace." "Unto the upright there ariseth light in the darkness." "For as a prince hast thou power with God and with men, and hast prevailed."

Lovingly yours,

MARY BAKER EDDY.

A Full Salvation.

THE healing of the sick through Christian Science is now largely acknowledged and accepted as the legitimate outcome of the teachings of Science and Health, but many who are cognizant of this healing are not so well informed regarding the reforming and spiritualizing effect the teachings of this book have had upon a large number who had drifted away from their faith in God and to whom the Bible had become a closed book. A few extracts from testimonies of healing published in recent issues of *The Christian Science Journal*, covering this phase of Christian Science, will be interesting to those who have not been impressed with the evangelistic results which have accompanied Mrs. Eddy's ministry. A man who has been healed of nervous prostration writes, "Before my healing I was a pronounced skeptic on religious matters, and though for appearances' sake a Bible was allowed to remain in my home, it was never read. Now it is in daily use, and through its spiritual interpretation, revealed by our Leader, I am gaining wondrous knowledge." A lady who was healed of a spinal trouble complicated by other diseases, writes, "What it [Christian Science] has done for me physically is but a shadow of the benefits received spiritually." Another man, who testifies that he "was healed of a physical ailment of many years' standing," writes, "It is, however, for the spiritual healing that I am particularly thankful."

A lady who "had been subject to bronchitis for fourteen years," and was healed by Christian Science, writes, "The healing of the body is not the most important, however. The wonderful teachings of Christ Jesus are made clear through the study of our text-book, and this fills my heart with gratitude to our Leader." Still another man writes—"When I first heard of Christian Science, I was attracted to it at once by the beauty of its thought and the logic of its reasoning. I was not suffering at that time, except with a restlessness in regard to religion, as I often wondered why our religion was not practical, and if we were to obey the Gospel command to heal the sick. The reading of the Scriptures in the light of Christian Science was a new and pleasant experience. It took away from them the sense of mystery and unreality which they had before held for me, and gave them, instead, the sense of being the actual Word of a loving Father to His own children,—the message of 'On earth peace, good-will toward men.'"

And still another, a veteran of the Civil War, writes, "My religious thought was as hopelessly chaotic as my body was sorely afflicted. From my earliest recollection I had been in an attitude of mental protest toward religion, as interpreted by its exponents within the range of my acquaintance and reading. I had passed through many stages of unbelief, until I landed in the ranks of the agnostics. The position of negation, 'I don't know; do you?' fairly expressed my own thought concerning the weighty questions of God, man, and the universe. . . . When I sought healing of a Christian Science practitioner, it was with no intention of surrendering any portion of my antagonism to religion." This man was redeemed from agnosticism, and he closes his testimony in the following words: "I am filled with a profound sense of gratitude to Mrs. Eddy for the revelation of this great truth to this age, for it has come to me as a most precious blessing, endowing me with health and capacity for usefulness and redeeming my life from barrenness and misery."

We might continue indefinitely to quote these testimonies, but the above are sufficient to emphasize the spiritual illumination which is accompanying the healing work of Christian Science.

ARCHIBALD MCLELLAN.

The Gain of a Spiritual View.

A MATERIALISTIC interpretation of history always tends to lessen the inspiring and uplifting influence of its great events. The matter-medium in and through which, as it

Digitized by Google

is claimed by many, all truth must be expressed, can but localize in human thought even the greatest manifestations of intelligence and of Life, thus robbing them of their larger significance and value.

This is well illustrated in the practical effects upon mortal thought of much theological teaching respecting creation. Christian dogma has declared in effect that creation is simply the stupendous initial fact of all things. By the fiat of divine will, world substance, the apparently infinite extension of matter, came into existence. This has not been declared to be a manifestation of Spirit, but a product of nothingness, and its relations to the creator are summed up in the facts that He spake it into being, set it going upon an appointed way, and, when occasion demands, may assert final and supreme authority over it. This view of creation places it at an infinite distance, separates it wholly from the present activities of Deity, and thus classifies the universe as a gigantic material mechanism whose law and order it were vain indeed for man to oppose.

In contrast with this view Christian Science declares that creation is the perpetual going forth of omnipresent Life, Truth, and Love,—the supreme incident of an eternal *now*. In this Christianly scientific view, all substance is the manifestation of Spirit, and hence spiritual and good, for it inheres in the ceaseless activities of divine Mind.

The materialism of theological dogma has distorted religious philosophy, and in its practical effects would rule a sense of the ever-presence of God out of Christian faith and experience. Christian Science, on the other hand, declares the universe to be the present achievement of Spirit. It brings the allness of good into determinative relation with all things and all thought. It affirms the logical impossibility of an evil substance or mind. It dethrones the dragon that has ruled in all the unseemliness of human history, and brings the ideal consciousness, and the sequent conditions of an ideal kingdom, into demonstration.

Further illustrations abound of the dwarfing effects of this material, localizing sense of revelation or the manifestations of Truth. At this Christmas time one can but note how the limitation of the Christ-coming to the birth of Jesus has led the Christian world to think of the incarnation as a historical fact of the long past, rather than the assured experience of every truth-seeking heart.

The gain attaching to so glorious an incident of revelation is determined for each by his perception and glad acceptance of the possibility of its repetition in consciousness. Students of our text-book and the other works of Mrs. Eddy will find the greater emphasis laid upon the spiritual aspects of the event, the identification of the Christ-coming with "the new birth." As we come to apprehend that the consciousness of each is the epitome of humanity, and that every salient feature of racial history may therefore be found in individual experience; when we see that the providences of the world's narrative are ever repeated in the lives of men; then our faces are set toward Bethlehem, thought is lifted to the appearing of Immanuel, the Christ-truth spiritually understood, and we begin to realize how sadly religious teaching has minimized the significance of this great event by its failure to grasp the fact of its continuity.

The end of all spiritual discipline is to make our rare and exalted moments continuous, and Christian Science is revolutionizing Christian thought by insisting upon the great self-certifying fact of Christian experience; viz., the reappearing of the Christ in human consciousness.

JOHN B. WILLIS.

"The effect of righteousness."

Upon the land of my people shall come up thorns and briers; . . . until the spirit be poured upon us from on high.

DOES any one question what must be the "effect of righteousness"? If so, he will find the answer given by the prophet Isaiah in the telling words, "quietness and assurance for ever." On this point the prophet is most definite. He outlines in panorama the desolations of mortal experience, comparing them to a land overgrown with thorns and briers that invade even the palaces and the "houses of joy,"—a condition which shall remain for many days and years, "until the spirit be poured upon us from on high," when the scene is changed and the wilderness becomes a fruitful field, righteousness is established, and the people dwell in a "peaceable habitation, and in sure dwelings, and in quiet resting places."

As time moves on it is being more and more generally admitted by reformers that many of their best efforts fail to accomplish the desired end because "righteousness" is lacking among those whom they seek to benefit; consequently there is no "assurance" of any real success. While this is leading some of these workers to abandon their efforts to elevate mankind by material means, or through so-called human intelligence, many are coming to see that nothing less than the outpouring of the Spirit can accomplish this mighty work. Everywhere thought is turning to Christian Science, which bases all its activity upon the recognition of Spirit and spiritual law. As a result of unbiased investigation, many are greatly surprised at what has already been achieved through the silent but mighty workings of "the Spirit of truth," whose coming was foretold by the Master, and which is revealed in Christian Science, healing sickness and sin while unfolding to human consciousness the true idea of God and man.

When we remember that between two and three thousand years have elapsed since the prophet foretold this outpouring of Spirit and its sure blessedness, we can but marvel at the blindness and obstinacy of material sense, which has in all those years been seeking salvation from its miseries in every direction but the right one; and we at the same time appreciate more deeply the priceless worth of Christian Science, which teaches us to look up and prepare our thought for the spiritual baptism which is to-day being poured upon us from on high. As we look within and around us and see some of the effects of righteousness which are following the recognition of Spirit's activity, we can but return heartfelt thanks to God that our beloved Leader, the spiritual Seer who has spoken for Him to this age, has been heard and heeded, and that in all the seeming chaos of human conflict, "Christ's eternal dawn" (Science and Health, p. 95) is being recognized with its righteousness, and its "quietness and assurance for ever."

ANNIE M. KNOTT.

Letters to our Leader.

San Jose, Cal., December 6, 1905.

To the Rev. Mary Baker G. Eddy,

Pleasant View, Concord, N. H.

Our Dear Leader:—The members of this little branch church do not send you the enclosed invitation to the dedication of their church edifice, with any anticipation that you can either be present in person or with us in thought, but simply to add, if possible, an iota of joy to gladden your tireless labor in its never-ceasing effort for others, by a positive proof that your work has not been in vain, else this edifice would not be.

We know that all we have, we owe to your faithful love and labor for mankind. We understand that it is not words you require from your followers so much as works, and this branch has endeavored to live up to this requirement.

During the past year, besides completing our own church edifice, at a cost including the ground of about forty thousand dollars, we have been enabled to forward to the Treasurer of The Mother Church over eighteen thousand dollars. This with what we had previously sent makes almost twenty-four thousand dollars for which our church holds receipts. We know this will please you, for this branch numbers only one hundred and three members.

Our Reading Room is now selling your glorious work, Science and Health, at the rate of a copy every other day, more than double the sales of last year.

Digitized by Google

The sick are being healed and the sinful regenerated through the reading and studying of this wonderful book. For this we are deeply grateful to our heavenly Father, divine Love, and our hearts never cease to go out in deepest affection to you, our beloved Leader,—an affection we are striving to manifest through a more loving obedience.

Faithfully yours,
First Church of Christ, Scientist, San Jose, Cal.,
HERBERT W. EUSTACE, *President.*
MRS. JETTURA W. HYDE, *Clerk.*

MRS. EDDY'S REPLY.

Pleasant View, Concord, N. H., December 13, 1905.
First Church of Christ, Scientist,
San Jose, California.
Herbert W. Eustace, *President;* Mrs. Jettura W. Hyde, *Clerk.*

Beloved Students:—Words are inadequate to express my deep appreciation of your labor and success; and of the great hearts and ready hands of our far Western students, the Christian Scientists. Comparing such students with those whose words are but the substitutes for works, we learn that the translucent atmosphere of the former, must illumine the midnight of the latter, else Christian Science will disappear from among mortals.

I thank the divine Love for the hope set before us in the Word and in the doers thereof, "for of such is the kingdom of heaven."

Gratefully, lovingly,
MARY BAKER EDDY.

Boston, Mass., December 13, 1905.
To the Rev. Mary B. G. Eddy.

Dear Leader:—The College Class of December, nineteen hundred and five, thanks God, and you, our Leader, for all admonitions and blessings.

Gratefully and lovingly,
MRS. GERTRUDE G. NEWTON, *Clerk for the Class.*

MRS. EDDY'S REPLY.

Pleasant View, Concord, N. H., December 15, 1905.
To the College Class of December, 1905.

Beloved Students:—Responding to your kind letter, let me say you will reap the sure reward of right thinking and acting, of watching and praying, and you will find the ever present God an ever-present help. Thanking the faithful teacher of this class, and the dear members thereof, I am

Tenderly yours,
MARY BAKER G. EDDY.

New York, December 6, 1905.

My Precious Leader:—I am writing just to tell you of my ever-increasing love for you, and of my constant efforts to follow and obey you and your teachings. I am trying to demonstrate Christian Science and praying for grace and love to endure to the end. Our church is most prosperous in Truth. The healing is being demonstrated, and many are rejoicing in the health and peace which they find in Science and Health. Grateful and loving disciples call you blessed, and thank God. On Thanksgiving Day we contributed twenty-two thousand dollars to The Mother Church. It has all been paid in, I believe, and will be sent to Mr. Chase. This makes eighty-four thousand dollars which our church has contributed, and we want to make it one hundred thousand dollars if necessary. We have not more than four men in our large membership who can be called rich. All give all they can, and rejoice in the privilege and the sacrifice which test their faith and trust in infinite Love. It is joy to give to the Cause, and particularly to the dear mother vine. I long to do more for you and to be more worthy of your dear love.

Ever your faithful, obedient child,
AUGUSTA E. STETSON.

Testimonies of Healing.

I feel deeply grateful to our Leader, Mrs. Eddy, for the love and wisdom with which she is constantly imparting the understanding of Truth to her followers, and give my testimony hoping it may be helpful to others. It was through the healing of a near relative that I first became interested in Christian Science. About twenty years ago I accompanied my mother to California, hoping that a change of climate might prove beneficial, as she had been ill for seventeen years and had been under the care of twenty-seven different physicians, none of whom had been able to accomplish her cure. During these weary years she had been obliged to learn to walk over again, time after time. Her condition was such, at the time we started on our westward journey, that it was necessary for her to be carried on a bed, and we were frequently obliged to stop at different cities to give her opportunity to rest. Many times during our travels the thought of Christian Science was presented to her, but it did not seem to appeal to her in the least, and after an absence of about five months with no relief whatever, we turned toward home. Under *materia medica* she had many times been subjected to surgical operations for the purpose of removing cancer of the bowels, and when her physician called, on the day of our return to Chicago, she was told that the knife must again be resorted to. To this she persistently refused to submit. The same evening an acquaintance who was a Christian Scientist called, and when she told how much she herself had been benefited through Christian Science, my mother decided to try its efficacy in her own case.

The following morning she was taken in a carriage to the home of a practitioner, and in a few weeks she found herself perfectly healed through Christian Science. This seemed so wonderful to me that I became greatly interested, and in a few months' time placed myself under treatment for consumption and other troubles. For years I had worn two internal supporters, and was troubled with severe chronic constipation, having at times hemorrhage accompanied with great weakness, so much so that I was often found in a state of unconsciousness from which I did not rally for an hour. Hemorrhoids were not the least of my troubles, and altogether I felt that I was in a very miserable condition, being nervous and melancholy. I wish to state that through Christian Science I am entirely healed of all these troubles, and words fail to express my thankfulness for all it has done for me and mine. I am most deeply grateful to God, and to our Leader, for the peace and joy it has brought to me. I rejoice in knowing that "The Lord is my shepherd."

MRS. SARAH C. HATHEWAY ROBINSON, Cleveland, O.

I wish to add my testimony to those of others, and hope that it may be the means of bringing some poor sufferer to health, to happiness, and to God. I was healed through simply reading this wonderful book "Science and Health with Key to the Scriptures" by Mrs. Eddy. I had been troubled periodically for the last twelve or thirteen years with sore eyes, and had been to many doctors, who called the disease iritis and cataract. They told me that my eyes would always give me trouble, and that I would eventually lose my sight if I remained in an office, and advised me to go under an operation. Later on I had to wear glasses at my work, also out of doors as I could not bear the winds, and my eyes were gradually becoming worse. I could not read for longer than a few minutes at a time, otherwise they would smart severely. I had to rest my eyes each evening to enable me to use them the next day; in fact gas-light was getting unbearable because of the pain, and I made home miserable. A dear brother told me about Christian Science, and said that if I would read Science and Health it would help me. He procured for me the loan of the book. The first night I read it, it so interested me I quite forgot all about my eyes

Digitized by Google

until my wife remarked that it was eleven o'clock. I found that I had been reading this book for nearly four hours, and I remarked immediately after, "I believe my eyes are cured," which was really the case. The next day, on looking at my eyes, my wife noticed that the cataract had disappeared. I put away my outdoor glasses, which I have not required since, and through the understanding gained by studying Christian Science I have been able to do away with my indoor glasses also, and have had no return of pain in my eyes since. This is now a year and a half ago.

Words fail to express my gratitude to God for the great blessing that He has bestowed upon me, and to our beloved Leader, Mrs. Eddy, for the revelation of Truth which makes us whole and makes us free.

GEORGE F. STUDDERT, Liverpool, England.

Since I have accepted Christian Science it has kept me well and harmonious, both mentally and physically. It not only heals, but protects us from disease, sickness, and sin. In my own experience, my understanding of Christian Science, practically lived every day, has kept me well and happy. I can look back over more than eighteen years, in which we have been saved and protected from contagious diseases. Personally, I have many times met and overcome attacks,—when, as I am very sure, I would have been sick,—just by destroying the sick thoughts before they could express themselves on the body; therefore I know that Christian Science is a preventive; that it keeps us well, if we watch our thoughts. I feel sure that we are protected much more than we are grateful for. To my sense, it is a much greater demonstration to keep well through the understanding of Christian Science, than even to heal oneself after one is sick.

I feel very grateful for God's goodness to me. Since I have taken up this work, I have had many trials of my faith, and many temptations to battle with; but Christian Science has always been victorious. I have also had many opportunities where I have been able to help others; often one treatment has accomplished the healing work.

Last but not least, I thank God that, through the study of Science and Health and the effort to be obedient to the teachings of our Leader, Mrs. Eddy, I can say without fear that I am a better man. It was through the reading of Science and Health that I learned to love the Bible; up to the time that I studied our text-book I would only read the Bible from a sense of duty and rather superstitiously. For this regeneration I am sincerely grateful to our beloved Leader.—FREDERICK MANN, Boston, Mass.

Words could not express the blessings that have come to us through Christian Science. Nearly five years ago my wife was spending the summer in Iowa. She had been sick for years, and was suffering from anæmia, dyspepsia, insomnia, and melancholia. At the time when Christian Science was brought to our attention she was at the point where life did not seem worth living. The physicians in the Iowa town had diagnosed her case, and gave her friends to understand that it was alarming. She came back from her old home in Iowa, never expecting to see again the many dear ones left there. A physician here was called, and he told her he did not know what the trouble was, but immediately told a friend that she had quick consumption. A dear friend, whose husband had been instantaneously healed in Christian Science, told me that when my wife felt she had suffered enough, to come and see this friend, and they would take the case to God. She did this, and after the first treatment she slept soundly all night. In three weeks she was perfectly well. I believe that she was healed at the first treatment. Our little girl was cured of a very large abscess on her neck, and our little boy of catarrh of long-standing, that had become so bad he could hardly breathe. Both of them were cured of scarlet fever in a few days.

For years, up to four years ago, I had suffered every fall and spring with an attack of tonsilitis, fevers, etc. At such times I suffered terribly, not eating or drinking a drop of anything for five days. This ailment was cured instantaneously by the truth. About two years ago I was attacked with pleurisy and pneumonia, which was overcome in a little over a week.

While this healing seemed wonderful, it is only a small part of the blessedness which has been brought to our lives. The contentment and peace of mind, the satisfaction, the absolute certainty that God is Love and that divine Love will meet our every need, is so uplifting, that our greatest desire is that our understanding may increase, that we may be more and more like Him. I would indeed be desolate to-day had not this light been brought to us when it was.—EDWARD B. FRITZ, Chicago, Ill.

If I could only frame words that would find some willing and listening ear, words that would turn some weak and heavy-laden one from the false and unreal to the true and real, how gladly and willingly I would do it; however, this effort is one of the ways in which I can express my gratitude to God, and to Mrs. Eddy. I realize more and more, as I gain an understanding of the truth of Christian Science, the divine guidance of our dear Leader, and the efficacy of Truth "to save to the uttermost," from sickness as well as sin. Since I have been in Science I have not had so many attacks of sickness as I had in the old thought, and what I have had I have been able to meet; Truth has made me "more than conqueror."

The liquor habit, of which I was a victim for about nineteen years, is now no more a temptation to me than if I had never yielded to it; the smoking and chewing of tobacco has been overcome, as have other errors, such as profanity, anger, judging, condemning, etc. While "the old man with his deeds" has been put off to a great extent, there is still room for improvement, and it requires constant watchfulness on my part lest I "enter into temptation." As a safeguard the Bible, Science and Health, the *Sentinel*, and the *Journal* are indispensable.

W. E. LOWE, Connersville, Ind.

Before I heard of Christian Science I was treated for three years by one of the best oculists in New York State for astigmatism and a complication of diseases of the eyes. He gave me very little hope, and said I had only one chance of not becoming totally blind. My fear was dreadful; I thought surely I would be blind, as some of my ancestors had been. During the first year I sat most of the time in a darkened room, with a heavy bandage over my eyes. At the end of three years I had improved so that I could read with the use of glasses. I had four pairs to be used for different things, and the doctor warned me never to go without them. After wearing them for eight years, I heard of Christian Science. I was interested, and purchased a copy of Science and Health. I read it through once, when one morning I forgot to put on my glasses. I did not miss them for about three hours, and after this I soon left them off entirely, but my fear was so great I did not dare to lay aside the glasses I used for reading or sewing. Soon after this I received class instruction. I commenced to work to overcome the remaining trouble, and one morning, after I had worked for some time without my glassess, all of a sudden I could see the words distinctly. Oh, the joy and gratitude I felt; how I praised God; and I was thankful also to Mrs. Eddy, through whom this glorious truth had been revealed.

In one week I had read "Rudimental Divine Science" through without glasses, and I have not had any use for them since. The Bible and Science and Health have ever since been my daily companions, and each day I ask that divine Love will lead and guide me in the way God would have me.—HELEN E. F. WAGNER, Fort Plains, N. Y.

Digitized by Google

Six years ago I went to a Christian Science practitioner for treatment. I had not been free from some kind of pain for such a long time that I felt completely discouraged and ready to be helped. My parents had both been druggists, but I was glad to drop medicine for a better way. I took two weeks' treatment, at the end of which time I felt much improved, and I had caught a glimpse of what Christian Science meant. I began studying Science and Health for myself, and almost without knowing when, all the aches and pains disappeared, and I found myself without what the doctors had called chronic throat trouble and catarrh. I was also healed of indigestion, sick-headaches, a backache, and cough which never left me for two years after having pneumonia. I had not been without a sore throat for several years, and had taken treatment for this trouble from a throat specialist for over a year without any signs of getting better. The treatment was more painful and disagreeable than the disease itself.

I have not taken any medicine since my first treatment in Christian Science. I had never before gone a day without taking at least one kind of medicine, but it had never brought the quick or good results that came from Science treatment.

To be free from bodily discomfort is a blessing, but when I think of the greater blessings which Christian Science has brought into my life, my gratitude cannot be expressed in words. I am contented and happy, where I used to be discontented most of the time. I am glad that when Christian Science was first offered to me I had no thought about it that prevented me from accepting the blessing. The first faint glimpse which came to me, of God as the divine Principle of all good, created in me a desire to know more of Him. Before this I had never cared to know anything about God. I write this hoping it will reach some one who wants to be helped or healed. I would never have tried Christian Science if one who had been healed, through Science, had not told me that the blessings she had received were for all.—Adeline W. Packard, Oak Park, Ill.

It is now more than five years since the plague of consumption was stayed in our family by Christian Science, and I think it time to send in my thank-offering, out of love to God, and loyalty to our beloved Leader, Mrs. Eddy.

In September, 1900, I was sent, hopeless and almost helpless, from Colorado to southern California, with the medical verdict that I would never return. Not wanting my relatives to know my condition, I stayed only a short time with them, going on to a little village off the coast of San Diego. There I began asking a God, whom I believed to be far-off, to make me fit to come into His presence, little knowing of the cleansing process that was soon to be revealed to me through Christian Science. While in this place a few copies of the *Sentinel* were sent by a lady from Oceanside, marked, "Read and return." One was loaned me for a few days; it was the first Christian Science literature I had ever seen. From this white-winged messenger I learned that I was not praying aright, and I became very desirous of knowing more of this teaching.

Through great tribulation, and another experience with a doctor who plainly told me he could do nothing for me, I began the study of Christian Science. My healing was slow, but my faith never wavered; the assurance was given me from the first that this was the truth taught by Jesus, and I was healed. I write this with a desire that it may reach and gladden the hearts of all those who have helped me to begin this journey "from sense to Soul" (Science and Health, p. 566).—Inez Milton, Bloomington, Ill.

Joy and gladness fill my thought when I see how I have been led, step by step, to the truth that makes free. I came to Christian Science full of fear, for the doctors had said that I could not become a well woman without an operation, as I had a tumor that was of great weight. I was a terrible sufferer, but Christian Science brought the light, and I have found what I had been looking for in vain elsewhere, —the truth that makes us free from sin, disease, and death. I was healed, and love to tell of the benefits I have received through reading Science and Health, and the understanding which this book has brought to me. Thanks to the beloved toiler, Mrs. Eddy, who has brought this peace on earth to those who are waiting for the blessing. I will answer any questions concerning my healing.

Sophia Bond, White Plains, N. Y.

About five years ago Christian Science was first brought to my notice as a means of healing. A friend induced me to try it. I did so, and was benefited; but under stress of circumstances, and moving about from place to place, I did not regularly take up the reading of the text-book until a year or two later. I have never forgotten the impression made by the first conversation with a practitioner, nor the conviction that went with it. During the years that I have been trying to work in this Science, I have had repeated proofs of the power of Truth, thus applied, in the healing of colds, neuralgia, toothache, fever, and other ailments. I have also had a number of demonstrations in overcoming the effects of accidents, even when to sense surgery would seem to be required. Although much needed, the physical healing is really the smallest part of the good we obtain from an understanding of Christian Science. When we begin to see that God is our only source of supply, and learn that through a knowledge of Him we establish peace in the home and with our neighbors, then are we beginning to climb the heights of Science.

When I think of all the benefits I have received, I feel that I should have done a great deal more to prove my gratitude and love for our Leader, who has so faithfully worked to establish this truth for the whole world.

Lena T. Barclay, Mt. Washington, Md.

Christian Science found me five years ago, a total wreck. I had been sick ten years, had nervous prostration and many other ailments, until I became so low that I could not sit up more than one hour at a time. I had never heard of Christian Science until my sister came to see me. She told me of this truth, and began to treat me. In two weeks I was cured. Almost every day something happens to make me watch and pray, but divine Love has been victorious. I have been cured of typhoid fever, the grip, and a terrible cough. I have much to feel grateful for, both to God and to Mrs. Eddy.—Mrs. C. W. Fenn, Chicago, Ill.

About four years ago, a very dear friend, who had been healed of a so-called incurable disease, advised me to read Science and Health, and said that it would enable me to lay aside the glasses which a specialist had declared I could never go without, as I had a very bad case of astigmatism. Before I had finished the reading of the book, I was healed. Two years ago I was thrown from a carriage onto a spiked iron fence, having my nose literally cut to pieces, also a bad cut on the forehead. A physician was summoned, who took several stitches, and at my request my husband telegraphed for Christian Science treatment. In four days I sent for the physician to remove the stitches, and he expressed great surprise at the quick and perfect healing. A piece of bone or cartilage protruded on the left side of the nose, which interfered with my sight; but in three weeks, through the faithful work of the practitioner, it disappeared. I also suffered from some internal injury, but that too was destroyed, and I was made whole. Since then God has been our only refuge, and we never seek Him in vain. I rejoice that one was found pure enough to give this pearl of great price to a suffering world.

Mrs. Julia P. Robins, Cleburne, Tex.

I was healed four years ago through Christian Science, and I can no longer withhold an expression of my deep sense of gratitude for "Science and Health with Key to the Scriptures," and the love I feel for its author, Mrs. Eddy. From a child I was a member of an orthodox church, but never till I began the study of the Bible as explained by Science and Health did I understand or appreciate its teachings, which through this study have enabled me to overcome trials and temptations and to solve the problems of life as they come to me. I had had nine physicians in as many years, and changes of climate, only to grow worse year by year. Christian Science healed me of chronic stomach trouble, excruciating pain from eating even simple and carefully prepared food, chronic constipation, ulceration of the bowels and intestines, neuralgia from which I suffered agony and for which our last physician told my husband there was no medicine nor treatment that could give relief. I also had astigmatism, for which I had worn glasses about twelve years, and many minor ailments. I am grateful to God for my healing, thankful for the Lesson-Sermons, the *Sentinel*, and the *Journal*, and for all that Christian Science has done for me.

MRS. CLIFFORD S. MERRICK, Curran, Ill.

I was left an orphan at the age of ten years, and hardly knew anything of a loving mother's care, so I grew up wild, without any thought for the future or for a higher, better life. My career was checkered at its best, and after attaining manhood I traveled over this country, and crossing the Pacific, lived in foreign countries for seven or eight years. All of this time I felt a sense of desolation and hunger for something which I could not define. I drank deeply of the cup of worldly pleasure and sin, and its consequences surrounded me till I found myself like a ship on the ocean without a rudder. Sin followed sin, till in 1903 I was incarcerated in the county jail at Salt Lake City, accused of a horrible crime, of which I knew nothing. I was without friends and without money, and in February, 1904, I was taken to the Utah State Prison and committed for the long term of eighteen years.

While in the county jail I heard for the first time of Christian Science, but it then seemed nothing to me. I believed in nothing, not even in God, and my miserable condition threw me into utter despair and darkness, from which I saw no outlet. Then a fellow-prisoner spoke to me about Christian Science and induced me to read "Science and Health with Key to the Scriptures," and it seemed to me that scales fell from my eyes, after reading and studying this book. Where before I was blind and in utter darkness, I now could see and find the way to salvation through Jesus Christ our Lord. I saw that the message in John, 3 : 16 was not only meant for others, but also for me, and new courage and new hope entered my heart. I can truly say that I owe to Christian Science all that I am to-day, —a man who knows now that there is a better future for him in living a spiritual life. The Christian Science services are held here every other Sunday and I am a faithful attendant. I have found inspiration and strength to become a better man, to lead a life free of profanity, hatred towards all mankind, and other errors, and I have been able to overcome the pernicious cigarette habit to which I was a slave for over six years. If I should ever again have the privilege to enjoy the liberty for which I so much long, I know that I shall be enabled to lead a Christian life. God surely heard my prayer when I cried to Him in utter despair, and may He be praised forever. Only by constant prayer can we go to the foot of the cross where we find the peace that passeth all understanding. May God bless Mrs. Eddy, for she showed me the way to God.

THOMAS R. FULLER, Utah State Prison.

About nine years ago I was instantly healed of nervous prostration. I was then living in Chicago and had been sick for three weeks, under a doctor's care, but getting no better. I knew something of Christian Science, but none of my family would believe in it. Finally I became discouraged. The least noise would give me such distress that they would have to hold my hands. I sent for a practitioner, who came and gave me a treatment. The same afternoon I got up and went out with my sister, as well as I ever was in my life. When the practitioner left she told me to come to her house a few days later, but I did not believe this possible. I, however, went there, and also went to see my mother, who had met with an accident. I waited on her for several days, running up and down stairs all the while. Since then I have had many beautiful demonstrations. What a blessing this Science brings to all who accept it! I wish to thank Mrs. Eddy from the bottom of my heart; through her all these blessings have come to us.

EMMA D. ROGAN, Barnesville, Minn.

Christian Science and Legislation.

Orders will now be received for a new pamphlet of one hundred and twelve pages, entitled, "Christian Science and Legislation." The main article, which gives title to the pamphlet, is a carefully prepared argument by Judge Clifford P. Smith; this is preceded by an introductory article by Edward A. Kimball, "The Endeavor to Handicap Truth," and followed by an article by Judge Septimus J. Hanna, "Christian Science: a Practical Religion." Following these articles are representative testimonies, which show how Christian Science has proved itself to be an effective curative agency when other means had been tried and found unavailing. Several pages are devoted to pertinent editorial comments, and the appendix is a record of attempts made to frame laws adverse to Christian Science practice, with satisfactory amendments finally adopted, or annulment of the attempt by vote of legislators or by a governor's veto.

The pamphlet is a timely discussion of the rights of citizens to secure such aid as they have reason to rely upon in cases of sickness, as well as a proclamation of the rights of man to practise the Christian religion according to the teachings of Christ Jesus. The following prices will be made: Single copies, ten cents each; twelve copies, one dollar; twenty-five copies, $1.85; fifty copies, $3.50. Address all orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

List of Members.

The List of Members of The Mother Church, including those admitted November 7, 1905, is now on sale. Single copies, 50 cents; six copies to one address, $2.50; twelve copies to one address, $4.50. Address all orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

[Written for the *Sentinel*.]

An Eastern Vesper.

WILLIAM BRADFORD TURNER.

At evening time it shall be light.—*Zechariah*, 14, 7.

THE night winds murmur, the tree-tops croon,
The cricket chirps to a vague wood-tune,
And dusk sinks brooding.

A new hope whispers, strangely sweet,
For Bethlehem's light fills the heart replete,
Dark dreams excluding.

And Israel's promise, halcyon peace,
Of Love begot, marks sorrow's cease,
No tear intruding.

From our Exchanges.

Salvation, in this view (of nature-love), is found in obedience to law in harmony with the divine will. The only right attitude for the individual becomes that of seeking the truth and of being ever obedient in spirit and in action to the vision that may be accorded. The means of knowledge of a saving, uplifting faith are found in the convictions of truth which are given to the honest, reverent, seeking soul, likewise in the open pages of nature, and again in the testimony of the experience of earth's best and noblest souls. The teachings of Jesus are reverenced because he showed himself worthy to instruct in that he truly communed with eternal Truth. The Bible is reverenced, not as a miraculous or final announcement of all truth, but as a true record of the consensus of experience of the highest thought of the best and noblest of our race in their efforts to know God.

REV. HERBERT K. JOB.
The Congregationalist.

Preparation for the anticipated and desired blessings of God includes the faithful use of what has already been given. The knowledge, the grace, the gifts and power within present possession or reach must be diligently employed before additional supplies can be obtained. "Whosoever hath, to him shall be given, and he shall have more abundance." The moral ground of daily life must be cleared before spiritual blessing can be given. The heart must be emptied of its hatreds and prejudices e'er it can claim promised grace. Man's preparation for God largely consists in doing right and making things right.

The Watchman.

We sometimes classify the activities of life as "sacred" and "secular." We attempt to distinguish between the "divinities" and the "humanities." No doubt such distinctions may be made, but let us be sure that the basis of distinction is sound. A man who lives for himself, who ignores God, who neglects the things of the spirit, may fittingly be charged with secularism. But for him who loves God, who lives in the realm of the spirit, whatever his activities, they are sacred. When the humanities are rooted in the life of God, proceed from His impulse, seek His ends, they are divine.—*The Standard.*

It is the lack of confidence in God which causes men to attach so much value to creeds, forms, and ceremonies, elevating them to an importance which they do not intrinsically possess. Exactly as in the past, when there was not full confidence felt in the absolute integrity and unalterableness of nature, reliance was placed in spells, incantations, and sacrifices.

REV. THOMAS VAN NESS.
The Boston Herald.

The new evangelism is manifesting itself in a spirit of unity among the churches such as has never before been seen, and the purpose to make each church an evangelistic center, a power-house for righteousness, instead of a storage-house for the refuse of the religious whirlwind.

The Universalist Leader.

Purity of heart and life is the grand item running through the whole Book of God. The provisions made for it are prominent in every part of the sacred Scriptures.

REV. J. A. WOOD.
The Christian Advocate.

It is an easy matter to make a profession, but a different thing to possess the spirit of love and tenderness which was manifest by our Lord throughout his entire ministry.

Pacific Christian Advocate.

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 505 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to The Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of The Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to The Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number, or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Christian Science Sentinel

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

250 Huntington Ave., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.

Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month.

The date of expiration may be found on the address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

National.

A bill introduced by Senator Lodge is said to represent the position of President Roosevelt on the consular service. It provides that there shall not be more than two consuls general of the first class at $12,000 each a year; not more than seven of the second class, at $8,000 each a year; not more than nine of the third class, at $6,000 a year each; not more than eleven of the fourth class, at $5,500 each; not more than fifteen of the fifth class, at $4,500 each; not more than seven of the sixth class, at $3,500 each. With reference to consuls it is provided that there shall not be more than ten of the first class, at $5,000 each; not more than thirteen of the second class, at $4,500 each; not more than twenty-two of the third class, at $4,000 each; not more than thirty-two of the fourth class, at $3,500 each; not more than forty-five of the fifth class, at $3,000 each; not more than fifty-eight of the sixth class, at $2,500 each, and not more than ninety-two of the seventh class at $2,000 each.

Following the abolition of football at Columbia University comes the announcement that the university council has taken action which is likely to have in its effect the abolition of all intercollegiate contests, so far as Columbia is concerned. The announcement is made in a statement given out by the secretary of the university council. The council not only approves the action of the committee on student organizations, but recommends that President Butler prohibit the game at Columbia and take further steps to destroy the abuses in other sports by restricting them so far as possible to contests at Columbia. This will mean the practical abolition of all intercollegiate contests, except rowing, as other teams are not likely to come to Columbia without getting a return game. The council takes the stand that the evil in athletics lies in the fact that only a comparatively small number of students participate in them, and in the commercialism that has arisen.

A movement is now in progress which, if successful, may result in the discontinuance by the Department of Agriculture of the matter of estimating the yield of the great staple crops. The Keep Commission has just finished its inquiry into the crop reporting section of the Department, and will soon submit its report to President Roosevelt. Many public men believe that it is not the business of the Government to make estimates of the probable yield of the crops, which, they claim, are little better than good guesses; but that it should confine itself to the issuance of statements reflecting only the condition of crops. The Secretary of Agriculture believes that estimates should be made.

The members of the Harvard, Yale, Princeton, and Columbia chess teams held a meeting in New York last week to decide on the composition of an American team for an international match with Oxford and Cambridge. No international match has been held since 1903, because of the difficulty of securing a cable, but it is probable that one can be arranged for next March. As the Americans won the match in 1903, score 4½ to 1½, they will, if a match is decided on, be the defenders of the Rice trophy. Of the five previous inter-collegiate matches England and America have each won two, and have played one draw.

Under the auspices of the Actors' National Protective Union, it is announced that a union of Grand Opera singers, including both men and women, has been formed in New York with 182 members. The union consists of the members of the chorus, some of whom, it is averred by the officers of the union, come from the Metropolitan Opera House.

The number of students enrolled in Harvard University, according to the catalogue just issued, is 3,045. This is 191 less than last year. The Radcliffe enrolment is 422, and the summer school 1,076. The teachers number 554.

Foreign.

In accordance with the terms of a treaty agreed to between China and Japan, the latter is to have the same position in Manchuria as Russia had before the war, except that the "open door" will prevail. China consents to lease to Japan the Liao Tung peninsula, at the southern extremity of which is Port Arthur and Dalny; she concedes the control of the railway on the peninsula northward as far as Chang-Chung. This is one of the spurs which connects with the Russian Siberian Railway system, and the point named will probably mark the division between Russian and Japanese control; China also concedes to Japan the right to build a railway from Antung on the Yalu River to Youkden. It is provided, however, that at the end of a certain period the road may be purchased by China; she agrees to open to the world's commerce and trade sixteen principal ports and cities in Manchuria.

The new English Premier, Campbell-Bannerman, in a speech at Albert Hall, London, indicates the purpose of the Government to stop the importation of Chinese coolies to South Africa; his reference to "the sacred principle of the subordination of the military to civil authority" is interpreted by military men in some quarters as suggesting the possible recall of Lord Kitchener, who won with the Government in his contention with Lord Curzon regarding military control of Indian affairs; his reference to Irish affairs indicated a reiteration of the policy of home rule.

The trouble arising from the recent forcible seizure of an alleged deserter in a seaport of Brazil by a party of officers of a German cruiser, has been amicably settled by apologies to Brazil.

Industrial and Commercial.

The *Manufacturers' Record*, in a recent issue says: "While it is true that the industrial development of the South is going forward with amazing rapidity, it is nevertheless true that, by virtue of the extent of the agricultural interests of the South, agriculture is yet the foundation of the business of that section. A change from poverty to prosperity of the farmers, and a change from land without a selling value to land in demand at an advance of from fifty to one hundred and fifty per cent over the nominal price of one or two years ago, is the most far-reaching development in Southern advancement of the last quarter of a century. It is far-reaching in many ways. It means that within the last year or two Southern farm properties have increased not less than $1,000,000,000 in value, probably at least $1,500,000,000. But more than that, it means that under this improved financial condition the Southern farmer has gained new courage, new backbone; that he has learned how to market his cotton crop; that he has fought to a finish the great battle as to whether the producer or the speculator is to control the price of his staple."

At a meeting of the executive officials of all the Western railroads, held in Chicago last week, an agreement was entered into whereby every road bound itself to inform the Inter-State Commerce Commission of any illegal acts of any kind. A committee, composed of representatives of all the traffic associations of the West and Southwest, was appointed to watch the payment of rebates and to report the circumstances to the Commission.

Commerce between the United States and the Philippine Islands seems likely to aggregate about twenty millions dollars in the year which ends with the present month.

General.

One of the most important results of the voyage of Captain Ronald Amundsen, the Norwegian navigator who is the first man in history to traverse continuously the Northwest Passage from east to west, seems to have been the definite location of the northern magnetic pole. He fixes its location on King William Island. Heretofore the magnetic pole had been assumed to be in Boothia, the northernmost point on the mainland of North America. The terrestrial pole is about twelve hundred miles farther north. The boat in which Amundsen made his voyage, which commenced at Christiania, Norway, on June 16, 1903, was the Gjoa, a craft similar to a walrus boat used by Norwegian hunters in quest of ivory and oil. It is a sloop of 46 tons, 72 feet long and 20 feet beam.

Miss Alice Roosevelt has sent to the Georgetown Custom House her personal check for $1,206 in payment for duty assessed upon the presents from various personages and potentates of the Orient received upon the occasion of her trip of last summer. It is estimated that the value of the total importation was a little more than twenty thousand dollars. The list comprises probably the finest collection of Oriental fans ever brought to Washington.

What are believed by many to be the two largest meteorites in this country were discovered not long ago in a stone wall on a farm in Whitman, Mass. The largest meteorite in this country is at the Smithsonian Institution and weighs about 318 pounds. Both of the Whitman supposed meteorites stand more than twenty inches high and one of them weighs over four hundred pounds, and the other about one hundred pounds less.

In Munich men step into a cab and say where they are bound. A little machine called the taxameter before the eyes of the passenger ticks out the number of pfennigs, and at the end shows the driver's claim. If he goes beyond it he is severely punished. The same system is in operation in Berlin. There, however, cabs are graded as to comfort, swiftness, and price; but they all have taxameters.

The Secretary of Agriculture in his annual report says: "Wealth production on the farms of the United States in 1905 reached the highest amount ever attained in this or any other country—$6,415,000,000."

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

An Undivided Christianity.

SAMUEL GREENWOOD.

CHRISTIAN SCIENCE pleads for an undivided Christianity, and in this it should have the active as well as sympathetic support of all who desire to see Christ's kingdom come on earth. It stands without argument that the world needs the whole of Christianity to save it. Of what avail, then, is it to use but a fraction of Christianity and expect that fraction to do the work of the whole? How would Jesus have succeeded in his work had he used only so much of truth as is considered practicable by the Christian world to-day? How long would Christianity have survived its Founder if he had never healed the sick?

The difference between Christian Science and other Christian denominations is as to whether Christianity shall be practised in its entirety in this present world. Christian Science maintains an unqualified affirmative. It is well known that Jesus did things which he told his disciples to do, and to teach others also to do, but which are now left out of the ordinary Christian's practice. Why is it that this is so? What excuse have the Christians of this century for excluding these things, among which is the healing of disease, from their "list of Christian duties" (Science and Health, p. 31), or for condemning Christian Scientists for including them?

A part is not equal to the whole and cannot give equal service. Of what use would the finest piece of machinery be, if its parts were not complete, or were separated from each other? Yet has not Christianity, as generally accepted, been much like a dismembered engine, and has this not explained its inability to bring spiritual energy into regenerating touch with mankind? Instead of healing the sick as Jesus commanded it, the church has left this sacred duty out of its creed and its practice, giving it into the hands of material systems and beliefs that have no essential relation to Christianity at all. Instead of upholding Jesus' teaching that those who kept his word should not die, it has taken direct issue with the Master by teaching the unescapable certainty of death, no matter how closely one might follow him. It has thus left mortals in the terrifying grasp of sickness and death, and has been trying to work with only a part of Christ's perfect gospel, with the result that Christianity has still the work to do which Jesus left to it almost two thousand years ago. Is it not time that it was restored again complete, with every part in its place, so that it may be able to do what God requires of it and what humanity so sorely needs?

The division of Christendom into multitudinous sects has not benefited the world, and is not in fulfilment of Jesus' prophecy that "there shall be one fold, and one shepherd." Although each of these sects contains some element of Christian truth, their aggregate is not Science but confusion. The work of interpreting truth could not have been divinely divided among this multitude of differing beliefs, else they had been found working in harmonious inter-helpfulness, and their sum would be the perfect whole of Christianity. All of these branches of the Christian church, even if combined, could not redeem mankind from error, nor lessen the human fear of disease and death, and for the reason that they have tacitly agreed to discard one of the essentials of original Christianity, the healing of disease, trying thus to work in submission to disabilities which Jesus distinctly bade them overcome.

Christian Science is what the world has long been waiting for, the revelation of the whole truth, the whole of Christianity. To discredit it or repudiate its claims, demonstrable as they are, is to continue the weary search for that which the teachings of Jesus Christ, understood and demonstrated, alone can supply. If Christian Science were but a fraction of Christianity it could not fulfil its mission as the Comforter, to whom Jesus referred as leading "into all truth," and of whom he spoke not as many but as one. From a careful study of his words it is evident that he referred to a revelation rather than a personality, and that Christian Science is this revelation is abundantly proved in its works. It is leading human thought into that understanding of Christianity which embraces all that Jesus taught of it and all that he did in demonstration of it. It gives no reality, power, life, nor presence to anything besides God, good. It does not exclude from Christianity the deliverance from any form of evil, but accepts the Christ as the Saviour from all that renders men discordant, sinful, or ungodlike, from all that robs them of dominion over evil.

Arguments to sustain the divine origin and power of Christianity are out of place, and Christian Science does not rest upon them. The life and work of Jesus remain for all time as indisputable proof of all he taught, and as an example for all who would follow him. All that constitutes evil, all that makes earth sad and desolate and unholy, must inevitably succumb to the Christ-power as the individual travels the same road which Jesus did, up to the perfect understanding of God. With the memory of our Lord's wondrous life, his promises and his commandments ever before it, and with the spectacle of mankind unredeemed, writhing in the grasp of woes that are unutterable and indescribable in their depth and intensity, it is inexplicable how the Christian church has deliberately rejected that part of Christianity which alone can save from these conditions, and which must sometime be used to complete human salvation.

Christian Science rejects no part of Jesus' teachings, and teaches nothing that is not in conformity with them. In working to redeem mankind from sickness, sin, and sorrow, on the basis of Christianity, it is doing nothing contrary to the will of God nor to any just law of man. In presenting Christian Science to the world as the whole of Christianity, as possessing all that Jesus proved of it, as constituting the perfect plan of salvation from evil, not excepting sickness and death, and as available always to the full measure of human understanding, it is bringing to human perception the perfect idea of Christ.

The differing opinions of men, although crystalized during a thousand years into the creeds and dogmas of Christendom, are not Science nor Christianity. Those who have come into Christian Science from other religions have found in it all that was helpful in their former beliefs, as well as the help which these beliefs could not offer them and

Copyright, 1905, by Mary Baker G. Eddy.

Digitized by Google

of which they stood in such great need. Its boundless possibilities for good and its utter impossibility for evil, demonstrated again and again in the healing of every form of human suffering, sustain its position and its claims, and point to the ultimate fulfilment of its mission to redeem mortals from all error.

Consistency and Growth.

J. E. FELLERS.

MUSICIANS sometimes take a well-known selection like the "Rock of Ages" and utilize its strong and easily recognized themes, which are enlarged and given new harmonic settings in what are known as variations. If the themes are thus handled in a fitting and masterly way, they lose nothing of their original force and appeal, but take on an added charm from their new tonal treatment and associations. We hear the call of the dear old hymn as before, and we find a new interest and pleasure as we note how it dominates the surging tides of song with which we are surprised to find it surrounded.

To those who have not looked beneath the surface of popular beliefs and learned some of the facts revealed by Christian Science, the earnest attention given to the Lesson-Sermon at our Sunday services seems unusual and strange. "Why such close attention to the Bible reading?" "What do these people hear that we do not hear?" "What have they learned that we did not learn years ago in our orthodox church and at home?" are the questions they naturally ask. The words of the Bible are not strange to them. The reading is about the same as they have always heard. The congregational singing is quite familiar. They cannot see that these external things are only the variations. They do not hear amid these variations the Master calling, "Come unto me, all ye that labor and are heavy laden, and I will give you rest." The Christian Scientist, having formerly toiled, suffered, and failed in his efforts to understand the spiritual meaning of the Scriptures, has at length gained the true and satisfying sense of their meaning, as given by Mrs. Eddy in Science and Health. He therefore hears deeper than the multitude, and recognizes the "still, small voice" which speaks through the Lesson-Sermon, and this explains his deep interest which may seem peculiar to those who do not understand these Sermons.

Truth has no message for those who will not hear. Some one has said, "There is no music in the autumn winds until the listener comes. There is no order and beauty in the rolling spheres until some Herschel stands beneath the stars. There is no fragrance in the violet until the lover of flowers bends down above the blossoms."

In different ways Christian Scientists impress others as being a strange people, but it is only because through this Science they have found the deeper things which are hidden "from the wise and prudent." In a world where sadness and sorrow seem so pronounced, Christian Scientists are happy. They have learned that God made all that was made and pronounced it good. For them old things have passed away; all things have become new. Thus they may present to others a seeming inconsistency with their former position because of their growth. They have given up many old beliefs. They are progressing. They are searching for the why and the how.

The man who never changes his opinions, ambitions, and tastes, never grows. He may seem to be consistent because his conception of life, death, heaven, hell, is the same each day. He may believe that there is no more to learn. If he were to admit larger views of life, truth, and love, he would have to acknowledge growth and therefore a change. He would no longer be consistent as many understand that term.

A marble may be said to be consistently round and smooth, and to remain so. Bury it in the earth and it will lie there, smooth and round, never changing except as it crumbles into dust. But take the acorn and bury it in the soil. Soon it begins to swell. The tiny germ breaks its prison walls and grows up into the sunshine. As time passes on a tree gives shade and shelter. At no time was that germ the same, one day as another, even one hour as another. If it had ceased growing for a single day, decay would have been the result. It will thus be seen that consistency has a far different meaning than merely clinging to old beliefs. The true meaning of the word implies growth. It is consistent to grow because "Growth is the eternal mandate of Mind" (Science and Health, p. 520). Growth expresses law and order. It is natural. It is imperative. "Work out your own salvation" is a demand for growth and consistent growing.

Christian Scientists are trying to obey that command. They are consistently striving to learn more each day. If they do not seem consistent to their orthodox friends, it is because the true sense of that word is not understood. A great writer once said, "If I do not keep step with my companions it is because I hear a different drummer."

Christian Science and the Young Man.

FRED MC NULTY.

Wherewithal shall a young man cleanse his way? by taking heed thereto according to thy word.—*Psalms*.

NOTHING speaks better for a young man than a clean character. Any man who is clean, temperate, polite, cheerful, and honest will attract attention; his company, as well as his services, will be sought after, and he is bound to succeed. The best thing for him to have back of all these virtues is a religious spirit. This may seem unnecessary to some, yet we must remember that all truly great men were characterized by a religious spirit. Washington, Lincoln, Gladstone, and many other great statesmen were all models of noble, honest living, and their success and greatness was due to the fact that they possessed deep religious convictions and lived up to their highest sense of right.

Our deeply lamented President McKinley once said, "No man gets on so well in this world as he whose daily walk and conversation are clean and consistent, whose heart is pure, and whose life is honorable. A religious spirit helps every man. It is at once a comfort and an inspiration, and makes him stronger, wiser, and better in every relation of life. There is no substitute for it. It may be assailed by its enemies, as it has been, but they offer nothing in its place. It has stood the test of centuries and has never failed to help and bless mankind. The world has use for the young man who is well grounded in Principle, who has reverence for truth and religion and courageously follows their teachings. Employment awaits his coming and honor crowns his path. More than all this, conscious of rectitude he meets the cares of life with courage, the duties which confront him he discharges with manly honesty."

Christian Science reveals the fact that to be a Christian one does not have to wear a long face, nor does it imply mental weakness on the part of the possessor, but rather a sound mind. If one is a sincere Christian he may call forth the foolish sneers and taunts which Christianity has always endured, but he will win respect also. Christian Science is before the world to-day and is finding acceptance as a practical, every-day religion, a religion that can be practised in business as well as relied upon for health and character building. It removes all the sense of timidity and foolishness that so many associate with the thought of religion. It shows that there is nothing foolish, nothing to be afraid of in loving what is good and true, in being honest and pure. Men are not troubled by the ridicule of the world

Digitized by Google

when they have learned that God is Life and Truth and Love, and that He is all. One who knows that he has the truth would rather lose the good opinion of the world than he would his newly found sense of God as Life. He knows that God is the source of all health and happiness, so he goes steadily forward and fears not.

On page 128 of Science and Health our Leader points out the great benefits which the business man may derive from the faithful study and practice of Christian Science, and on page 248 she shows the vital importance of lofty ideals and pure thoughts. From this teaching many have learned to cherish and entertain only thoughts that are beautiful, good, pure, and true, only those which tend to make one noble, upright, and grand. No sensible man would think of picking up decayed fruit, garbage, or other noxious things and eating them, and one should be as fastidious in regard to the kind of thoughts he takes into his mentality. "Cleanliness is next to godliness," and this surely applies to the mental as well as to the physical conditions.

Wrong thinking is the cause of wrong speaking, and he who indulges in coarse or vulgar conversation loses friends, respect, and position, while one who voices the truth in its purity and beauty is sure to attract attention. The Christian Scientist does not refrain from evil speaking and evil thinking because he is afraid of their consequences. He strives to be pure in thought, word, and deed because he loves purity; just as an honest man refrains from stealing, not that he fears the results of such practice, but because he loves to be honest. One who refrains from evil speaking is sometimes called effeminate, but that does not alter the fact that a gentleman never indulges in such practice, and a Christian Scientist cannot be less than a gentleman. "Finally, brethren, whatsoever things are true, whatsoever things are honest, whatsoever things are just, whatsoever things are pure, whatsoever things are lovely, whatsoever things are of good report; if there be any virtue, and if there be any praise, think on these things."

The Wisdom of Modest Statement.

WENTWORTH BYRON WINSLOW.

THERE is an old Latin proverb which translated reads, "He is wise who talks but little," and on encountering it recently I was led to reflect how well it expresses our proper attitude toward the public in regard to Christian Science, which primarily is to be known by its works.

Young Scientists are frequently impelled by the overwhelming joy which comes to them with their healing, to shout from the house-tops that "Christian Science did it," and often, on being questioned by friends, they are led to speak volubly of a subject concerning which they as yet know very little. Later on they regret their presumption, and wish that they had simply referred inquirers to our text-book with the suggestion that they read and prove it for themselves.

Mrs. Eddy has told us in "Miscellaneous Writings" that those who teach Christian Science must have our text-book by them in class and teach directly from it; how much more careful should we be, as beginners, in giving expression to views which of course are meant to be along the lines of genuine Science, but which, in view of our modest experience and knowledge of the subject, may seriously vary therefrom.

It is fitting that we express our gratitude to God and to our dear Leader at our testimonial meetings and elsewhere. This is a first duty, but to undertake to explain the teaching of Science and Health is an entirely different thing. In telling a case of physical healing or moral regeneration we should always be conservative in our statements, and our testimony will be rendered far more effective thereby.

My own case is in point. Along with other things I was healed of the habit of drinking, and I may say that the appetite for intoxicating liquors was entirely and almost immediately destroyed. In writing my testimony for the *Sentinel*, I turned the very rawest side to the public gaze. Although it was literally true, my old friends said it was exaggerated, that I was not always under the influence of liquor, and so forth. Had I, on the contrary, been wise and talked but little, this could not have happened, and the statements of friends as to my recovery could but have reflected to the greater advantage of Christian Science.

As a matter of fact a simple, straightforward statement of regeneration or healing reaches the man or woman who is seeking Truth far more surely and effectively than can any other. He who has chronic indigestion does not need to be told in detail of the sufferings attending it,—*he knows* of them full well,—while those who have not been thus afflicted certainly will not be benefited by the delineation of another's miseries; hence they may be passed with nothing more than a modest statement of facts.

To those who inquire, lightly or otherwise, regarding Christian Science, we are often inclined to say more than we have proved, which is a manifest mistake. If we never told of anything save those facts which we knew to be true, we would soon be known for our wisdom, and our silence would become proverbial. Let us learn from that greatest of all men, Christ Jesus, whose sayings, though so brief, are cherished as the way-marks to Life eternal.

Our Business.

C. I. OHRENSTEIN.

The Son can do nothing of himself, but what he seeth the Father do: for what things soever He doeth, these also doeth the Son likewise.

John, 5:19.

IN these few words Jesus defined the practice of his teachings, or Christian Science, for all time. He showed that man cannot act independently, and that he acts rightly only as he is divinely impelled, when he does what he sees the Father do, when he reflects his divine Principle. In order to know what the Father does, man must know what the Father is. Referring again to Jesus' words, we find that he said, "I and my Father are one;" "I am the way, the truth, and the life;" also, "God is Spirit" (Revised Version), and he taught his beloved student, John, that "God is love." Thus he defined God to be Life, Truth, Spirit, Love,—terms which express infinite intelligence or Mind. That which has not Love is not true, is not spiritual, is not intelligent, and therefore has no mind. We thus find that the Christian revelation of God, and the practice growing out of it, are identical with the present revelation of God, Truth, in Christian Science, and its practice.

Our beloved Leader, Mrs. Eddy, tells us what God is, and how we may know Him. The marvelous comprehensiveness of Jesus' statements, and the wonderful teaching of our text-book,—both of which point to the overcoming of sin and sickness, may be seen in the fact that not only do they both reveal what the practice of Christian Science is, but both of them also clearly state *how* it must be practised; namely, by the Son doing what he seeth the Father do, by the reflection and demonstration of divine Love. All that God is and all that God does is thus brought into the experience of mankind, is made manifest by being reflected; and to reflect God—to express His image and likeness—necessarily constitutes the true business of man.

Resolve never to repeat anything unpleasant unless it is a duty and good will come of it. Probably the person who has said it is already sorry. Unpleasant words increase twofold in power with every repetition. Never put into *writing* anything unpleasant if it can be avoided. This simple rule will prevent a world of unhappiness.—D. L. P.

Truth destroys only that which is untrue, and therefore unreal, and never that which is true and real. While it is perfectly natural and scientific for truth to destroy falsehood, for reality to destroy that which seems to be real, but which is in fact unreal, it is impossible for falsehood and unreality to destroy that which is true and real. Indeed, that which is true and real is indestructible; that which is seen and proved to be untrue and unreal is already shorn of its seeming reality, and all that needs to be destroyed is the ignorance, the falsehood, the illusion, the deception, the sin, that keeps all mankind from knowing and loving God and His creation aright; from living the Christ life, which brings to light God's allness and error's unreality and nothingness.

When Christian Scientists say that God is all-in-all and that His allness excludes rather than includes all evil, they recognize that wars, famines, pestilences, and all forms of sin, disease, and death are awful and tragic errors which appear real until God's spiritual kingdom comes and His will is done in earth as it is in heaven. So long as sin is yielded to instead of resisted, overcome, and destroyed, it seems so real that it makes the good and the true and the real seem unreal. To the good and only to the good are all things good, as to the "pure" and only to the pure "all things are pure: but unto them that are defiled and unbelieving is nothing pure; but even their mind and conscience is defiled." It is only through goodness and Christliness that we can ever see and realize the allness of God, good, and the unreality of evil. "He [Christ] must reign, till he hath put all enemies under his feet." "And when all things shall be subdued unto him, then shall the Son also himself be subject unto him that put all things under him, that God may be all in all." Since God, like Christ, is "the same yesterday, and to-day, and forever," and the only cause and creator of the real universe and man, and since His creation from the beginning was good and "very good," does it not follow that all that needs to be put "under his feet" and destroyed is a false, material, sinful, sickly, and dying sense of that which is eternally good and perfect?

God does not create and sustain this false sense of the universe and man. He is the Creator of the earth and the heavens and man as they really and eternally exist as expressions of divine wisdom, Life, Truth, and Love. He is too pure and good to behold, create, and maintain evil in any of its forms. PROF. J. R. MOSLEY.

Florida *Times-Union*

Our critic contends for the reality and substantiality of that which Jesus said was of no profit. He objects to Christian Science, while it but reiterates the Master's teaching on the subject. If our critic has no other sense of substance than matter, and if he is dependent solely on matter for his existence, he is unfortunate; for, according to recent discoveries along the line of physical science, the most eminent scientific men agree that, in the final analysis, matter disappears entirely, and that which had hitherto been considered an atom or mass of stuff, is proven to be a form of energy or force.

At a recent meeting of the British Association for the Advancement of Science, Rt. Hon. Arthur J. Balfour, prime minister of Great Britain, in his inaugural address, in concluding a sentence concerning the analysis of the atom, said, "matter is not merely explained, but is explained away." If our critic finds fault with Christian Science because its text-book taught, as early as 1875, what the wise men of the world are to-day discovering to be true about the phenomenon named "matter," that is his privilege: but his contention for the reality of matter will never make matter substance. The abstract statement that "Matter is unreal," needs the following explanation. Christian Science teaches what the universe is, and that it is real and substantial. It teaches, moreover, that Spirit alone is substance, and, hence, that the universe is spiritual and not material. JAMES D. SHERWOOD.

Houston (Tex.) *Chronicle.*

In the first chapter of Genesis we read, "And God saw every thing that he had made, and, behold, it was very good." And in the first chapter of John, "All things were made by him; and without him was not any thing made that was made." It does not require a finished logician to arrive at the conclusion that God did not make sin. The average human father would not create evil and willingly inflict it upon his offspring, and why attribute such a deed to our heavenly Father, who is infinite Love, infinite wisdom?

Mrs. Eddy does not say that there is no such thing as sin in human consciousness and consequently no need of atonement. On the contrary, she points out the awfulness of sin, and exhorts mortals to cease sinning if they would be free from sin and its consequences, but in so doing she shows the unreality of sin from the standpoint of perfect Principle. If God, His creation, and His laws are not perfect they are not anything. If they are perfect, there is no room for imperfection in the realm of the infinite. Here the question naturally arises, Where does sin hold sway? According to the teaching of Christian Science, it exists and is active in the depraved mentality of mortals, and because it can be cast out, when reasoning from the basis of perfect Principle, sin is neither true nor real. A. V. STEWART.

Springfield (Ill.) *Journal.*

There was a day when the public was ready to believe that Christian Scientists said, "There is nothing ails you, for you have no head to ache;" but now the spontaneous inquiry is, Why does Christian Science grow so rapidly? How do they succeed in reforming the sinner, healing the sick, and placing the denomination on such a sound basis? How do they succeed in the face of the bitterest opposition from *materia medica* and theology that this country has ever known? The one who heals the sick in the understanding of Christian Science is the only one who can consistently undertake to interpret it, for "by their fruits ye shall know them." When results are good, the underlying rules which produce such results must also be correct and good.

Arguments never bring out the spiritual meaning of the Scriptures. Spirituality, not intellectuality, discerns the true meaning of the Scriptures. Dominion over human difficulties is the only satisfying evidence that what one believes is the truth. LEWIS B. COATES.

Salt Lake City *Truth.*

Our critic states that "what is done by Christian Science can be accomplished by other methods." In the Scriptures we find the same argument used, when the magicians in Moses' time would not be convinced that the God of Israel was more powerful than their gods, but at last were compelled to admit that the wonders performed by Moses were wrought by "the finger of God." Those who understand the Principle of Christian Science can demonstrate this by healing the sick; the inability to do this proves one does not understand its teaching sufficiently to criticise it.

Collingwood and Fitzroy Tribune.

I am not a Christian Scientist, nor is the *New Commonwealth* published in the interest of that church, but I sincerely admire the spirit of brotherly love in which Scientists always answer criticisms of their doctrine.

Among the Churches.

Brockton, Mass.

It is with a sense of gratitude that we are able to send you a favorable report of our church progress. The increase in attendance made it necessary for us to seek more commodious quarters, and a large hall in the Masonic Building, with a seating capacity of three hundred, has been secured, refitted, and refurnished, and our services are now held there. The interest grows, the attendance is increasing, and many who come to listen, come to stay.

O. M. WESCOTT, *Clerk.*

Gardiner, Maine.

The new Christian Science church, the gift of Mr. and Mrs. G. Palmer Noyes, now so rapidly nearing completion, is calling forth much favorable comment from our citizens, and certainly no one who passes it can fail to be most pleasantly impressed with the simplicity and beauty of its architectural design. The lot, which is centrally located and one of the most desirable in the city, was presented to the Scientists about two years ago by Mrs. G. P. Noyes, a student, as is also Mr. Noyes, of the Rev. Mary Baker G. Eddy.

The pulpit, and also the corner-stone, were the gifts of Mr. and Mrs. George W. Colburn, of this city. It is rather a strange coincidence that after the gifts were presented it was discovered that Mrs. Colburn was the first person in Gardiner to be healed by Christian Science.

Many years have passed since Christian Science first appeared in Gardiner, and its progress has been slow but steady. The congregation has now outgrown parlors and halls, and a church is needed to meet the demands of its growth. To Gardiner has been accorded the peculiar privilege of the erection of the first Christian Science church in the State, and it speaks well for our city that, while holding to the old, she is yet broad enough to open her arms to the new.

Gardiner (Me.) *Reporter-Journal.*

Chicago, Ill.

On Sunday, November 26, Fourth Church of Christ, Scientist, of Chicago, held the first service in its new edifice on the corner of Harvard Avenue and 67th Street. Three services were held, but notwithstanding this provision many hundreds were turned away.

In 1900, the congregation of First Church of Christ, Scientist, of Chicago, had for the third time outgrown the capacity of the building, therefore one hundred and eleven members withdrew, on February 19 of that year, to establish Fourth Church of Christ, Scientist, in that part of Chicago known as Englewood, and during the past two years the church has been very courteously cared for by the Peoples Liberal Church of Englewood, which very kindly granted the use of its building for an afternoon service.

The erection of the new edifice for Fourth Church has been due to the united efforts of all the Christian Scientists in Chicago. This is the second building completed within the last six months through the same practical unity.

During the first few years of the existence of this little church, its struggles were many along financial lines, but these were at an end when the church decided it would raise what seemed a large sum for The Mother Church Building Fund. That sum was raised in an astonishingly short time, and the church then decided to continue sending until the completion of The Mother Church. Since then the church has not only contributed liberally to its own building fund, but its treasury has always shown a balance.

We are profoundly grateful to our Leader, in following whose footsteps this "unity of action" has brought a blessing to all.—*Correspondence.*

The Lectures.

Brooklyn, N. Y.

A large audience crowded the Orpheum Theatre on Sunday afternoon, October 22, to listen to a lecture on Christian Science, given under the auspices of First Church of Christ, Scientist, by Prof. Hermann S. Hering. Mr. Frank H. Leonard introduced the speaker, and among other things said,—
