ONE of the very wise provisions made by our Leader for the proper dissemination of Christian Science is that for the giving of free lectures by an officially constituted Board of Lectureship. While the work of this Board in the way of correcting misstatements regarding Christian Science and its Founder has borne fruit in a generally better understanding of the subject and a higher appreciation of Mrs. Eddy's labors for mankind, the fact remains that these lectures are not made to accomplish all that might reasonably be expected of them. This is largely due to fear on the part of Christian Scientists that their friends and neighbors are so prejudiced against this healing religion that it is useless to invite them to attend a lecture, but in taking this stand we forget that there are very few Christian Scientists to-day who did not at some time hold equally prejudiced opinions upon this subject. Jesus said, "They that are whole need not a physician; but they that are sick. I came not to call the righteous, but sinners to repentance," and we can say with propriety that it is not the person who is correctly informed regarding Christian Science that stands in need of these lectures, but the person who is more or less prejudiced against the very name of our religion.

In looking over the political history of our country we cannot fail to be impressed with the fact that those who have risen to greatness in the esteem of their fellow-countrymen usually have been men who have had great faith in the fairness and justice of the masses, men who have relied upon the inherent right desires of their fellows and have bent their energies toward the elimination of the ignorance and prejudice which have so often obscured their vision. So must it be with the introduction of Christian Science.

It goes, almost without saying, that these lectures should be announced in such a manner as to bring them to the notice of all who may desire to attend them, and that the most ample provision should be made for the accommodation of large audiences. It has been the experience of the lecturers that small halls have usually meant small audiences, while large halls have been taxed to their utmost capacity. Another important point to be borne in mind is that many who do not take the trouble to attend a lecture are reached by the newspaper reports of it; hence the necessity for providing the newspapers with as much information as they can possibly desire, including, of course, the full text of the lecture or a carefully prepared synopsis of it. For obvious reasons this should be done as largely as possible through the Publication Committee or his local representative, who is more or less in touch with the editors and should know what is desired by them.

Last, but not least, local churches and societies, under whose auspices these lectures are given, should not fail to avail themselves of the liberal offer of The Christian Science Publishing Society to send copies of the *Sentinel* for free distribution. Intelligent attention to these and other details in connection with the giving of a lecture will add greatly to the effectiveness of the lecturers' work and amply repay the local members for their labors.

ARCHIBALD MCLELLAN.

House Cleaning.

THERE are few occasions which bring the thrifty housewife more downright satisfaction than that bright spring day when the garret is invaded and the chests and closets are made to yield up the worn-outs and castaways of the bygone year. It is the first act in the annual drama of house cleaning, and it means glad escape from the frayed, the outgrown, and the useless. This and that article may recall a pleasant experience or awaken tender memories, but they have served their day and generation, and as the tongues of a crackling bonfire lap them up we are glad to see them go; they are making way for better things. If anything is chanced upon that has yet a relic of worth, it is reserved, brought into new relations, and made to contribute to somebody's comfort and gain, but the great load of rubbish,—what a good riddance it is, and with what a sigh of relief the task is ended!

It is impossible for Christian Scientists to recall the incidents of such a day without realizing that a home which is rendered unkempt and uninviting by the nameless inutilities it may harbor, fitly though feebly symbolizes that state of human consciousness in which the gifts and gains of past mortal experience have crowded its every receptacle and corner with things that in the light of Truth have no further value, and which in large part are but the flotsam of falsity. In our ignorance we may have thought in past years that we were living in wholesome conditions and good style, but in the revealing light of Christian Science we can now see that every room and corridor of our mental habitation has been desecrated by the dust and debris of false sense. We are shocked and humiliated by the discovery, and this fact is full of significance. It witnesses to the recognition of a higher standard of purity, of orderliness, and of right living. It evidences the presence of a sincere desire for better things, that "willingness to give up human beliefs," to which our Leader has referred as the harbinger of spiritual advance (Science and Health, p. 24), and it gives sure prophecy of our ultimate escape from every bondage of traditional belief.

No one can open his thought to the light which is beaming on the world in Christian Science, and maintain a receptive attitude thereto, without speedily making the discovery that a large part of his mental furnishings are worse than worthless. Some things of good may be found, and they may need only a new setting or to be hung in a better light, but his general store of ideas, opinions, prejudices, ambitions, conceits, etc., all call for that "cleansing as by fire" which the incoming of truth alone can accomplish.

It has been wisely said that "truth is always to be preferred to our past concepts of truth," and all real progress is but the history of individual loyalty to this idea, a loyalty which every worthy Christian Scientist is seeking to maintain every hour and in every thing. He who clings to the dusty decrees of mortal sense is holding fast not "that which is good," but that which is good for nothing. To be saved is to live in the sweet freshness and effulgence of Truth's eternal now. Creedal conventionality honors the vested rights of past ecclesiastical concepts of truth. Christian Science honors truth, present and demonstrable. However helpful the service which a nobler human sense of truth may have rendered to racial advance, when truth appears it but cumbereth the ground and it is ours, therefore, not to regret, but to rejoice as we see it disappear.

Then let us seek for truth,—what matter
If, in the search, the house of old belief
Totter and crumble into nothingness:
For,—inspiring thought,—truth erects for us
A statelier and nobler habitation,
In whose spacious halls the soul may roam,
And ever-deepening inspiration find
To reach still loftier heights of thought and feeling,
And truer knowledge of the universal Father,
Whom to know is life—aye! life eternal.

JOHN B. WILLIS.

Unlimited Resources.

IN our text-book, "Science and Health with Key to the Scriptures," Mrs. Eddy calls attention to the case of a lady who was forced to submit to etherization for a surgical operation, despite her protest that it would kill her. It is further stated that the lady died in consequence, and that a trial was held which resulted in a verdict to the effect that her death was due to her fear of inhaling the ether. In citing this case our Leader asks, "Is it skilful or scientific surgery to take no heed of mental conditions, and to treat the patient as if she were so much mindless matter, and as if matter were the only factor to be consulted?" (Science and Health, p. 159).

That this question should be asked by every conscientious physician before he subjects any patient to the risk of an operation, is evidenced by a case recently reported in the papers of one of the large cities of the middle West. A man, supposedly suffering from appendicitis, was taken to a hospital to be operated upon. As the time for the dreaded ordeal approached he managed, in the absence of the nurse, to slip out by the window of his second-story room, and reached the ground in safety. He was, however, caught and brought back, with the result, as stated in the newspapers, that he died "of shock following the operation which he had tried to avoid."

This was clearly another case in which the mental condition was wholly ignored, as if matter were all, and embodied within itself the disease and the remedy, a belief which is being proved incorrect by hundreds of so-called surgical cases that are healed in Christian Science when the despairing patients refuse to submit to operations, although told by reputable physicians and surgeons that these offer the only chance of recovery, and in some instances of life. In many of these cases the entire recovery of the patient is quickly brought about through the operation of God's law as made known in Christian Science, and these cases all prove that our heavenly Father is not limited in His resources, so that humanity has nothing but an uncertain choice of danger and suffering between the remedy and the disease. On the contrary, Christ Jesus showed that God's remedy is the truth which removes fear while healing both sin and sickness; and Christian Science is proving this to be the only scientific method of dealing with the ills of suffering humanity.

A physician and a Christian Scientist once met in unusual circumstances at the bedside of a patient who seemed in desperate need of help. The doctor said courteously to the Christian Science practitioner that he felt the safety of the patient required the immediate administration of nitroglycerine. The Scientist said, "Doctor, she is having the most powerful remedy in the world, the truth which Jesus said would make free, and which does make free to-day, even from deadly peril." The physician bowed his head reverently and said, "I believe you are right," and the result quickly justified the position taken by the Scientist; nor were any material means employed.

In Christian Science the unlimited resources of infinite Mind are being brought to the notice of all mankind, and we may well rejoice and thank God that through its teaching and demonstration the Comforter is now revealed, even as the Master promised. ANNIE M. KNOTT.

Letters to our Leader.

[The spirit in which the branch churches are contributing to The Mother Church Building Fund, is shown by the following beautiful letter, which so well expresses the unfailing love, loyalty, and unselfishness of our brethren in Los Angeles.—EDITOR.]

Los Angeles, Cal., April 18, 1906.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Our Beloved Leader:—Since the first introduction of Christian Science in Los Angeles, some eighteen years ago, it has steadily increased in following, and gradually won the respect and favorable recognition of our people. To-day its avowed adherents number many hundreds, and they represent every walk of life.

Each has found in your teachings the precious Christ-truth which frees from the fetters of disease and sin, and with hearts overflowing with gratitude, prayer, and praise, Second Church of Christ, Scientist, of Los Angeles, has come to offer its gift toward the building of the extension of The Mother Church in Boston. Your heart would have rejoiced to see our members at our recent church meeting,—faces aglow with the light of a divine purpose, as through demonstration of loyalty and love they arrived at the point of voting to send to The Mother Church the cherished funds gathered for a much-needed edifice here. We rejoice that through this experience our thought has been lifted to a diviner sense of "Mother Church" and its relation to the Field. We are glad to learn a little of true giving, preparatory to the building of our own church.

As the fruits of this demonstration of love and unity of purpose, our following Sunday service was the most largely attended we have ever had. We voted to send ten thousand dollars, which has since been increased to twelve thousand three hundred and thirty-seven dollars and ninety-eight cents, including the dear children's gift of one thousand five hundred and thirty-seven dollars and ninety-eight cents, making the total offering to date, thirty-two thousand seven hundred and sixty-one dollars and eighty-three cents.

Language seems inadequate to express our gratitude and love for you, our beloved Leader and Guide, for the message you have, through your love-inspired courage, given to the world. We feel that our only approach to an expression of gratitude and love must come through right living and loving.

Gratefully and lovingly,
Second Church of Christ, Scientist, of Los Angeles.
MRS. ZAIDEE V. SMITH,
G. M. GIFFEN,
HENRY M. NEWMARK,
Committee.

Chicago, Ill., March 8, 1906.

My Beloved Teacher:—I do not want to take your time, but I do want to greet you, and to assure you of our efforts to follow, as well as we understand, the way you have shown us. I also desire to tell you that although we have been to very great expense the past year in the erection of a church edifice in Gardiner, Maine, yet we have been careful that our contributions to The Mother Church Building Fund or to the two churches which are being built in Chicago have not been any the less in consequence. These churches are very beautiful and were much needed. First Church here is again filled and running over, which will mean a seventh church before very long. My association has sent two thousand dollars, and we have about five hundred dollars more ready to send. This would have been more, but after the first, the thought seemed to be to send through the churches, which was then done by the members of my association.

I have long desired and intended to do what we have done for the Gardiner church, but I can truly say that it

Digitized by Google

was not my desire to touch it until the completion of The Mother Church building. I should be ashamed to say that I was overruled, still I am thankful that it is done. My own thought is, and has always been, that every effort and every dollar should go to The Mother Church building until it is completed, for I am persuaded that were that done, it being the higher work, the whole Field would do its own work more easily and be more blest. Christian Science "grows in favor" with me every day and occupies my thought almost exclusively. Although my thought often reverts to other things, yet it returns to the Science as to its home, finding naught but husks in other things—but I deplore my shortcomings and long so much for a higher and clearer understanding.

With love from both, your student,

CAROLINE D. NOYES.

Minneapolis, Minn., April 21, 1906.

Beloved Teacher and Leader:—My thought turns to you with great love and gratitude, and I send you most cordial congratulations upon the announcement of the date of the dedication of our new building in Boston. Besides marking such an era in the growth of our beloved Cause, this wonderful structure speaks so plainly of the matchless dignity and the eternal permanence of Christian Science—and it tells its story in language which "he that runs may read."

More than ever our nation owes a measureless debt of gratitude to you for having made known a light that is capable of penetrating such dark clouds of distress and despair as are just now overshadowing our western coast,—for, through this better way, we can and do know that ever-present Love is never nearer than in the hour of direst human woe. "Therefore will not we fear, though the earth be removed, and though the mountains be carried into the midst of the sea."

So our prayers unite with yours and with those of the staunch-hearted Scientists in the far West, that more of Love's eternal reign may be felt in every waiting heart, guiding us into the way of peace.

Truly and lovingly your student,

MARY BROOKINS.

Kansas City, Mo., April 13, 1906.

Dear Mrs. Eddy:—Two years ago I worked at my uncle's place of business and earned twenty-two dollars, and I am sending it to you for the dear Mother Church. My name is in the bee-hive and I am going to join The Mother Church in June. I attend the Second Church Sunday School and my teacher tells us that we have to sacrifice for The Mother Church. I am thirteen years old.

With a grateful heart,

CLARENCE FALES.

Indianapolis, Ind., April 13, 1906.

My Dear Mrs. Eddy:—The beautiful tribute to Masonry from your pen in the *Christian Science Sentinel* of March 10 must not go unnoticed. It sparkles like the morning dew upon the full blown rose, whose life is the Rose of Sharon; and is filled with the golden thread of love that illumines the Master's garment.

Yours respectfully,

H. A. SAMPSELL, D.D.S.

Havana, Cuba, April 7, 1906.

Dear Leader:—Our little Society here feels sure that you will be interested to know that we are to-day sending to the Treasurer of The Mother Church Building Fund the receipts of our collection for the first Sundays in March and April, amounting to one hundred dollars.

Yours in gratitude and love,

ALFRED F. BLUNDELL, *First Reader.*

To Mrs. Mary Baker G. Eddy, Concord, N. H.

Testimonies of Healing.

It is with a sense of gratitude and joy that I bear testimony to the good Christian Science has done and is doing for mankind. From early youth it had been my desire to enter a field of usefulness, but after spending some years in the orthodox ministry, religion appeared to me to be in the experimental state as much as medicine. I tried hard to be clear, but no one seemed to know the truth definitely. Why only one of the commands of Christ Jesus was recognized as valid, and that one the easiest of them,—preaching,—and why an expressed desire to obey the whole was considered fanatical, was neither clear nor satisfactory to me. The contradictions in dogmas and creeds, the inconsistencies in theory and practice, so unlike the Scriptural simplicity, became unbearable. This led to thorough self-examination, in which the hypocrisy of my own position became evident. I saw evil and its fruits in all directions, but knew no effectual remedy for the same. All this confusing uncertainty led me to look to God more earnestly, but I seemed to lose ground. Disheartened, but determined to be loyal to Truth, so far as I could understand it, I left the ministry.

My reward is rich indeed, for Christian Science is the answer to my prayers since childhood,—to know and to serve God aright. That which I sought while in the ministry, but signally failed to realize, and therefore thought an impossibility, I have found in process of actual fulfilment. Christian Science is extending its work and blessings over the whole world. I am very grateful for the demonstrations God has enabled me to make; happy to serve in the vast "nursery" of Christ, Truth.

In sacred awe and joy I acknowledge Mrs. Eddy as the Revelator of Christ, Truth, to this age. The attainment of an understanding of Truth I find to be a question of humble obedience to the Mind of Christ; a seeking after the righteousness of God, "bringing into captivity every thought to the obedience of Christ." The childlike, obedient heart will best know "the Christ of God," so it is not a question of letters but of revelation measured by one's own obedience. For this glorious possibility to follow our blessed Master in works as well as words, I thank God and our dear Leader. Truly this is the fulfilling of the Master's words, "Howbeit when he, the Spirit of truth, is come, he will guide you into all truth: for he shall not speak of himself; but whatsoever he shall hear, that shall he speak: and he will show you things to come." To the Discoverer and Founder of Christian Science was left the burden and privilege of this message, and God found her worthy and ready.—REV. GUSTAVE HAAS, New York, N. Y.

In 1875 I was thrown from a carriage and severely injured. The injury developed into what the doctors diagnosed as aneurism of the main artery passing through the bowels, and was pronounced incurable. It was also thought to be the cause of many diseases from which I was a great sufferer. I lived in constant dread of attacks which lasted from three to five hours at a time, and sometimes occurred daily for a week, until I was exhausted, and these attacks would often keep me in bed for weeks. My physicians were faithful and did all they could that I might be better able to bear the suffering. I was told by doctors of several different schools that I was liable to pass away at any time from over-exertion, still I lived on and was able to do quite a modicum of work at intervals.

In 1894 I heard of a friend who had been healed by Christian Science after having been given up by her physicians. I made up my mind that if I could go to her, I would be healed. A few months later I went to visit her. While there, I experienced the expected trouble and asked her for help. She was not a practitioner, but a faithful student of the Bible and Science and Health. While she was real-

Digitized by Google

izing the truth and destroying fear in the light of Christian Science, my medicine was thrown out of the window by my husband, who was with me. In fifteen minutes I was freed, was dressed, and ate supper with the family. The next day I walked two miles. After a few days we procured the Christian Science text-book, Science and Health by Mrs. Eddy, and I began its earnest study. At that time I had worn glasses three years, but in less than a week after beginning the study of the text-book I laid them aside, not having any use for them, nor have I used them since. Other diseases—rheumatism, chronic constipation, bronchitis, indigestion, and many minor troubles—all vanished before the light of Truth. I have had several attacks of illness in the past ten years, but have not been tempted to go back to *materia medica*, for I have found Christian Science equal to every emergency. Besides, it has for us something far higher than physical healing. About two years ago I experienced troubles that had not been wholly wiped out. I tried hard to overcome them myself, but finally called on one of our local practitioners for treatment. This was continued a few weeks, and in the mean time I was healed of heart trouble and grip, and was uplifted spiritually. The spiritual gain is the best of all.

For all these blessings I express loving gratitude to our heavenly Father, and to Mrs. Eddy, whose teachings have so wonderfully helped me over the rough places in my journey from sense to Soul.

Mrs. Emma J. Day, Dover, N. H.

With a heart overflowing with gratitude, I bear witness to the power of God, omnipotent, omnipresent good. Last June I met with an accident, sustaining a compound fracture of the right arm at the wrist. When the surgeon made his examination, he said, "It is a compound fracture and you are apt to be deformed for life." I answered at once, "Not when God does the healing."

The setting of the bone was absolutely painless. I ate my supper as usual, went for an automobile ride as was my custom each evening, and slept peacefully through the night. There was no shock, fever, or swelling, as the surgeon predicted, and during the entire time of the healing I was free from pain. When at the end of four weeks the cast was removed, the doctor said, "You have an absolutely perfect result, and I congratulate you." The following night at dinner I lifted a glass of water with this hand, and with as much freedom as ever.

I praise God, and I am conscious of a deep sense of gratitude to Mrs. Eddy, for making the truth available for me in this experience.—Annah Brooks, Chicago, Ill.

I am indeed thankful for even the small knowledge I have of Christian Science; it has often helped me to see the unreality of evil in many ways. When I first heard of Christian Science, no matter what seemingly went wrong I always asked help from the nearest Scientist. I left Ireland fifteen months ago, and shortly after I arrived here my child was taken very ill. I knew of only one Christian Scientist in Cape Town, and I was living about three miles out. The little one seemed so ill I could not take her in the train, so my husband and I walked in with her to look for help. When we got to the public gardens I sat on a seat, while my husband went on. I was alarmed at being left alone with the child, who was only two years old, but the thought came to me that God would give the help we needed. I got up and went to meet my husband and I was not disappointed to find him alone, as I knew at this time I could help my child. I did so at once, and when the Scientist came next day the little one was better. Divine Love had met our need. I have also overcome ailments such as nervousness, depression, sorrow, through the understanding that God is all. These are only small proofs of God's care over all who seek His help, believing that they shall receive. I hope I may be able to express something of the love I have for God, for Mrs. Eddy, and for all mankind.

Mrs. Minnie Anderson, Cape Town, South Africa.

My heart is filled with gratitude and praise to God for sending us Christian Science, through Mrs. Eddy. It awakens humanity to the truths which Jesus taught and practised, and over which the world had nearly lulled itself to sleep while waiting until after death for the promised full salvation. Christian Science teaches and proves that the Saviour is with us now and always, as of old; with power from on high the truth purifies and heals mind and body alike. When I first heard of this truth, four years ago, I was filled with happiness to find that God is not the author of discord and disease. It seemed too good to be true, until promptly proved by the immediate healing of my seven-months-old baby of severe vomiting, which had continued ever since receiving a bad knock on the head a week previous. I then threw away all our medicine, and determined to rely on God alone, for I knew He could and would be our healer, and that evil must disappear in His presence.

As one who was for years considered delicate, always taking medicines, and who was ill at least once a year, it is wonderful to be able to say that I have not spent a day in bed for four years; and each year I am better morally and physically than the previous. I know it is because I have learned that God is our physician that old weaknesses, including a chronic relaxed throat, have gradually slipped away like forgotten dreams. The children have been healed by Christian Science of measles, croup, dysentery, constipation, burns, etc. Now, when any symptoms of disease appear, they are promptly met by the truth.

I am indeed thankful for these blessings, but above all is the spiritual help and encouragement that has come both in big trials and little ones. I know this help always will come until all discord, hate, impurity, and fear is overcome, and I awake in His likeness.

Mrs. L. B. Hay-Grossmith, Bournemouth, England.

I did not come into the understanding of Christian Science through my own physical healing but through the healing of my mother, although I have been healed of many ailments since my acquaintance with it. Twelve years ago my mother fell on the ice and broke her hip bone, while on her way to church. A doctor was called in, who said there could be very little done for her as she was then about seventy-four years old, and the break was in a place where it could not be helped by material appliances. The doctor said the bones would never knit, and that she could never walk again. This accident happened in February, and she lingered on in a very weak state, by being lifted from the bed to a couch or into a chair, until the end of June, when a telegram reached me to come at once and see her before she passed away. I was then about two hundred miles from home teaching school, but I closed the school and came as quickly as possible. Shortly after my arrival mother requested me to go for a Christian Science practitioner. I was very unwilling to do so at first, but I felt that it was the last thing I could do for her and that her wish must be gratified. She improved from the first treatment, and by the end of the holidays, about six weeks, she was able to walk around the yard with crutches. She had not been taking treatment during the whole six weeks. She continued to grow stronger and could walk two miles away from home and back the same day. Later she was healed of paralysis of the arm and erysipelas of the head and face. She is alive and well and is now in her eighty-seventh year.

My little son, now ten years old, was healed of eczema in its worst form, when he was a baby. The doctor said he might drop off any minute in my arms. The physical healing seems as nothing when compared with the great spiritual enlightenment gained from the study of the Bible

Digitized by Google

and "Science and Health with Key to the Scriptures" by Mrs. Eddy. For these and many other blessings I give thanks to God and to the noble woman through whose pure life we are enabled to enjoy these blessings.

MRS. ANNIE EDGINGTON, Orangeville, Ont.

Last May I was taken sick with what my physician called pneumonia, which developed rapidly. After coming two or three times a day for more than a week, he told us that typhoid symptoms had set in and that my condition was quite serious, aside from another trouble which was even more alarming. This was hiccoughs, which for four days had continued steadily, and my strength was being very rapidly sapped. Although the doctor was giving me close attention and plenty of very strong medicines, he was unable to stop this trouble. At his last visit he said that if the hiccough was not stopped in a few hours he could not answer for the outcome.

After he had gone I asked my wife, who is a Christian Scientist, to telephone to the doctor not to call again and to ask a practitioner for absent treatment. I also asked her to read to me from Science and Health. This was late in the afternoon. I got up immediately, but was very weak and continued to hiccough. My wife kept up the reading and I went to sleep. At nine o'clock the hiccough stopped, at eleven o'clock I awoke with a severe coughing spell, after which the hiccoughs began again. The reading was resumed and at one o'clock the trouble was over. I slept well the balance of the night; the next morning I arose and ate my meals with the family.

For a long time I had believed that I could eat only certain articles of food, as I was a great sufferer from stomach trouble and was subject to severe attacks from neuralgia, but from the first day of my healing I have eaten anything I pleased, and with no inconvenience. I have also lost my desire to smoke, or to drink anything stimulating, even coffee and tea. I know I was healed by God's power, as revealed in Science and Health through the inspired thought of its author, Mrs. Eddy, and for this wonderful manifestation of God's goodness and love I am very grateful.—N. O. MCMAKIN, Louisville, Ky.

It is nearly three years since we began to look into Christian Science. It was when we had tried everything in a medical line to cure our little daughter of catarrh of the stomach. The different doctors said she must not eat anything sweet or sour, as this would bring out large hives all over her body. It was almost in despair that we resorted to Christian Science. We called a practitioner, and to our astonishment our little girl was healed in three treatments. Since then we have had many beautiful demonstrations in the family, of God's power to destroy the worst forms of illness,—such as chronic liver complaint, croup, pneumonia, constipation, and catarrh of the appendix. My mother was healed of gall stones of the liver. My baby girl was born under Christian Science treatment, and she is a picture of health and a genuine little Scientist. Every mother ought to be a Christian Scientist, as it takes away fear and places all trust in divine Love.

To take away even our small knowledge of this truth would be to leave us in utter darkness, as we are constantly utilizing our dear Leader's teaching, and we cannot refrain from expressing our love and gratitude for it.

MRS. J. H. WISE, Merrill, Ore.

Last May I was stricken with the grip,—having pneumonia and pleurisy in its worst form. At times I was delirious and to mortal sense suffered intense agony. I secured the services of a practitioner, and through the omnipotence of divine Love I was restored to perfect health in two weeks. Words cannot express my heartfelt gratitude to God, and to our Leader, Mrs. Eddy, for this wonderful revelation of Truth, as taught in our priceless text-book, Science and Health. Through the spiritual understanding and study of the Bible and this book I have been able to demonstrate God's healing power in our own family. Christian Science has lifted us all out of material sense into spiritual understanding.

We had a wonderful demonstration at the birth of our youngest child, now a healthy boy of sixteen months. After the birth of another child my wife was left paralyzed in the left side, from the thigh down, the doctor telling us that she would not have the use of her limb again; but thanks be to God she is restored to perfect health. At the birth of this last child she did not suffer any pain at all, was up the third day, and in one week from date of birth was able to do her housework, also to take care of the four older children.

Our gratitude goes out to Mrs. Eddy for her wonderful book. With the Bible it is our only guide to perfect health and happiness.—ROBERT A. JACOBS, Tonawanda, N. Y.

When Christian Science came to me the prophecy of Isaiah was fulfilled, "Then shall thy light break forth as the morning, and thine health shall spring forth speedily." I was in the darkness of despair and it led me to the light. For twelve years I had been an invalid and had grown to be a physical wreck; the only way I could walk about my room was by holding on to the furniture. One physician after another was called, until twelve had tried in vain. I was much like the woman of whom Scripture speaks, who "had suffered many things of many physicians, and had spent all that she had, and was nothing bettered, but rather grew worse." At last the doctors told me that my only hope was an operation, and I was sent to Laconia, N. H., for a change, hoping I might gain strength for the operation. Change of place proved of no value, but "man's extremity is God's opportunity." I met there a Christian Scientist and commenced treatment. For months I had had only liquid food, but the second day after my treatment began I could eat anything I desired. Five days after, I returned home, and walked from the train to my house, a distance of a quarter of a mile, knowing that God is my strength. I needed no operation, for it was proved to me that the "word of God is quick, and powerful, and sharper than any two-edged sword." The almost unendurable pain in my head and side were soon removed, but the growth did not all go for several months. I am now, however, a strong and free woman; instead of weighing ninety pounds, as I did when I turned to Christian Science, I now weigh one hundred and fifty.

While my healing seems almost a miracle, sweeter far is the spiritual help I have received through Christian Science. It has made me a better Christian, and I have been able to prove the promise, "The prayer of faith shall save the sick," in several cases of healing. I long for every suffering one to receive the good which I have found. I cannot tell in words the deep happiness and peace that Christian Science has brought into my life. I do thank God for it and my prayer daily is that I may live more fully in obedience to Truth.

MRS. EMMA E. BUSIEL, Franklin Falls, N. H.

I desire to express my gratitude to God for all the blessings which I have had since coming into Christian Science. About twelve years ago I was suffering from chronic catarrh, bronchitis, and many other physical ailments. I had resorted to *materia medica* for over ten years, but was relieved only temporarily. At the time I was advised to have Christian Science treatment I could not sleep unless I was in a half sitting position, as it was very difficult for me to breathe when lying down. After the first treatment in Christian Science I was able to sleep all night without the usual remedies, and found no difficulty in

Digitized by Google

breathing. At the end of three weeks I was perfectly healed of all those so-called chronic ailments. I was also healed of erysipelas. I have had perfect health ever since. I go out in all kinds of weather and no longer suffer from dampness.

The physical healing is only one of the many, many blessings which I have received. Christian Science has proved to me that the promises in the Scriptures are true; that God is a present help in every time of need, and I am indeed grateful to our Leader, Mrs. Eddy, for this wonderful teaching which destroys all fear and hate and leads us to the literature of Christian Science, which is so helpful on our pilgrimage.—Mrs. Christina Burridge, Toronto, Ontario.

About fourteen years ago I was healed without treatment by studying the Christian Science Bible Lessons. My case was diagnosed by our family physician as spinal disease and stomach trouble. I had suffered from headache since childhood, and it had grown to be constant. I was examined by another physician, who said my heart was affected; and by a third, who said my right lung was affected. I was under the care of only two of these, but my back grew weaker and more painful as well. Becoming discouraged and too weak to work, upon the suggestion of a friend I went to a kind of mental healer, who treated me several weeks, and I was relieved somewhat, for a short time, from the terrible pain in my back. Later I saw a copy of Science and Health, but was not allowed to read it, although extracts were read to me frequently. I expressed a desire to own a copy, but was dissuaded from so doing. I came home apparently cured, but I had not read Science and Health.

About four years after this I was dismayed to find the old troubles returning. For a year I fought against them, but grew worse continually and became thoroughly discouraged. About this time a friend who had heard a little about Christian Science frequently mentioned the subject to me, but I would not listen without antagonizing every statement until something arrested my attention from a theological point of view, and I said I would go with her to Boston to make inquiries. I knew of no Christian Scientists nearer. I was taken to a loyal student of Mrs. Eddy and I shall never cease to be grateful for the loving kindness with which he answered my questions. I bought a copy of Science and Health and a *Christian Science Quarterly*, and began the study of the lessons, often studying late into the night. So absorbed was I in the study, which was a revelation to me, and so quietly did the truth do its work, that I did not realize what was taking place till about three months later I noticed that I could walk a long distance, or use my arms, without having the pain in my back. Very soon all the troubles left me and there has been no return of any of them since. It was some time before I realized that I was really healed, for I had not then heard of any one being healed without treatment. Since then I have had many beautiful proofs of the power of the truth.

God bless our Leader, Mrs. Eddy, who was willing to endure that mankind might have a "key" whereby the Word that heals may be understood and made practical. For all these blessings I render to God my heartfelt gratitude.

Annie Rutter, Dover, N. H.

My little girl of four had what the physicians pronounced diphtheria. They treated her for some time, but she did not get well. She had croup and high fever for several days at a time. We kept on with the doctors for six weeks, then she grew so much worse that we decided to have Christian Science treatment. She improved at once, and had very little croup after the first treatment, and is fast outgrowing the tendency to colds. From being a delicate, puny child she has become a picture of health and happiness. I, too, had treatment for heart trouble. I did not think to tell the practitioner about a rupture for which I had worn a truss six years; but I soon left off the truss, and have never used it since, over a year ago. The doctor had told me that nothing but an operation could cure me of this trouble. The dear Scientist who treated us lives in Baltimore, and we have never seen her. I am studying the Bible and our text-book, Science and Health, also the Lesson-Sermons. Christian Science has done more for me spiritually and physically than anything ever did. May God bless Mrs. Eddy and all the dear ones who are endeavoring to follow her, even as she follows the steps of the Master.

Mrs. H. B. Moore, Rocky Mount, N. C.

It would seem when Christian Science does so much for any one he should make some acknowledgment of it. One night recently our little boy was taken very sick. He was nearly delirious, but we did not need to rush for a doctor, as Truth was with us. We gave him treatment in Christian Science, with the result that in the morning he was playing as usual. We have indeed much to be thankful for. In Christian Science we are never helpless; if discord is manifest in any way, we have only to watch and work each day and our remedy is sure.—J. L. Purkey, Oklahoma, O. T.

I was healed in Christian Science with three days' treatment, after five physicians had said they could do no more for me without a surgical operation. My son also was healed of appendicitis when seemingly there was no hope whatever. My youngest daughter was instantly healed of ulcerated sore throat attended with very high fever, and my eldest daughter was quickly healed when death seemed very near.

Words can never express my gratitude to God, and to our beloved Leader for Science and Health, through which I have gained an understanding of this truth.

Olive W. Henderson, Seattle, Wash.

I wish to return thanks for the benefits and blessings I have received through Christian Science. I was healed of heart trouble and weakness and debility of a lifetime by reading "Science and Health with Key to the Scriptures" by Mrs. Eddy, and the *Sentinel*. The Bible and our text-book are precious to me. I thank God each day for giving us such a friend as Mrs. Eddy. My entire family have been benefited by Christian Science. I am certainly waking from the mortal dream to find that God *did* create all things good.—Mrs. Ella J. Skidmore, De Queen, Ark.

I desire to acknowledge some of the benefits I have received in Christian Science. I am thankful that God has fitted our beloved Leader to give us so much in her writings. I have been relieved of much fear and many discordant physical conditions through Christian Science, but what I feel most grateful for is to see and know that God is Life, for I have found that this will vanquish all sorrow.

Mrs. Maude I. Hoffman, Jefferson, Okla.

I wish to express my gratitude for the many blessings which Christian Science has brought to me. It is over twelve years since I gave up medicine to trust this truth, and it has never failed me. I have had many proofs of God's care and wish that all might know and accept the omnipotent and ever-present aid of divine Love, as made known to us in Christian Science.

H. E. Pratt, Deep River, Conn.

From our Exchanges.

To rest satisfied with any attainment is to contradict the deepest law of life. Rest, even in its true sense, as *unimpeded* activity, is not for us while we live in time; for the Lord of life himself found none, but perpetual struggle. If we are not always rising on stepping-stones of our dead selves to higher things, we are not living our true life. No limit can be fixed for our upward progress, it seems to be infinite; for this must be what St. Paul means when he makes the goal of our journey "the measure of the stature of the fulness of Christ." Meanwhile, we must die daily, as he puts it, "crucifying the old man," and putting on the new man, "which after God is created in righteousness and true holiness."

REV. W. R. INGE.
The Churchman.

Our communion with this living Christ who is the real leader of the world's best thought to-day must depend upon our will to lead the life of holiness he led, our will, that is, to struggle up toward our ideal as he reveals it. Communion is for sinners, but not for contented sinners, and it grows clearer and dearer in proportion as our wills are strong to follow him. In our following our likeness grows and our capacity to understand his friendship. The problem of the soul to-day is a problem of obedience founded on his call to come up higher, developing love and exercising itself in service. To those who have given themselves to this life of obedience, kindliness, and love, the experience of communion becomes the salt and sweet of living, and the antidote for care and grief.—*The Congregationalist.*

The life of action seldom begets within ourselves the sense of sin. It is in the silent hour, when the soul, in the inviolable solitude of its own personality, looks, not at the things without, but at the heart within, that we gain the first step to a holy life.

But we have not alone the view that humbles us. We have still another and a better view. It is this silent hour that gives us, not alone the sense of what we are, but better visions of what we may become, disclosures of our true and better selves as preachers and as people. Its lights pass over from humiliation and contrition to prophecy and aspiration.

REV. CHARLES S. MACFARLAND, PH.D.
The Universalist Leader.

Temptation always forces a definition of aims and compels a selection of companions; and every temptation resisted involves a clearer view of what life means to us, and every closing of the door against evil an opening of the door to good. The Christ had become conscious of his relation to his Father, and of the mighty power at his command; under the pressure of temptation he was brought face to face with the alternatives between which every man must choose—the service of God or of self; and when, in that searching of his heart and testing of his spirit, he had made his choice, straightway peace and strength stood beside him, never again to leave him.—*The Outlook.*

The man who is religious only at certain times and in certain places is not religious at all. The religion which Jesus taught is a religion of relations with God and man; relations that must exist all the time. As these relations do not depend upon our moods for their validity, neither is religion conditioned upon ecstasy. We may well covet joy in the service of Christ, but that which is essential is a will centered in God. This holy disposition must be capable of maintaining itself under adverse conditions if it is to be of much worth.—*The Standard.*

THE CHRISTIAN SCIENCE TEXT-BOOK.—"Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

RUDIMENTAL DIVINE SCIENCE.—Printed in the New York point system of type for the blind. Price, prepaid, 50 cents per single copy; $5 per dozen.

CHURCH MANUAL.—Containing all the By-laws to January 1, 1906, of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of The Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the Churches and Societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to The Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of The Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to The Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number, or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By Hon. WILLIAM G. EWING.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, 50 cents per single copy; $5 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

President Roosevelt last week submitted to Congress the report of Commissioner Garfield on the inquiry into Standard Oil, and in his own message said: "The report shows that the Standard Oil Company has benefited enormously up almost to the present moment by secret rates, many of these secret rates being clearly unlawful. This benefit amounts to at least three-quarters of a million a year. This three-quarters of a million represents the profit that the Standard Oil Company obtains at the expense of the railroads; but, of course, the ultimate result is that it obtains a much larger profit at the expense of the public. A very striking result of the investigation has been that shortly after the discovery of these secret rates by the Commissioner of Corporations, the major portion of them were promptly corrected by the railroads, so that most of them have now been done away with. This immediate correction, partial or complete, of the evil of the secret rates is, of course, on the one hand an acknowledgment that they were wrong, and yet were persevered in until exposed; and, on the other hand, a proof of the efficiency of the work that has been done by the Bureau of Corporations.

"It is unfortunately not true that the Standard Oil Company is the only great corporation which in the immediate past has benefited, and is at this moment benefiting in wholly improper fashion by an elaborate series of rate discriminations, which permit it to profit both at the expense of its rivals and of the general public. The Attorney General reports to me that the investigation now going on as to the shipments by the sugar trust over the trunk lines running out of New York City tends to show that the sugar trust rarely if ever pays the lawful rate for transportation, and is thus improperly, and probably unlawfully, favored at the expense of its competitors and of the general public.

"Though not bearing upon the question of railroad rates, there are two measures, the consideration of which is imperatively suggested by the submission of this report. The Standard Oil Company has, largely by unfair or unlawful methods, crushed out home competition. It is highly desirable that an element of competition should be introduced by the passage of some such law as that which has already passed the House, putting alcohol used in the arts and manufactures upon the free list. Furthermore, the time has come when no oil or coal lands owned by the Government, either upon the public domain proper or in territory owned by the Indian tribes, should be alienated. The fee to such lands should be kept in the United States Government whether or not the profits arising from it are to be given to any Indian tribe, and the lands should be leased only on such terms and for such periods as will enable the Government to keep the entire control thereof."

Officials of the Standard Oil Company have issued a statement in which they deny the charges made against the Company.

During the last calendar year the "transactions" (as the operations of sending and receiving money are termed) at the New York Post Office aggregated $339,690,830.90. Money orders aggregating $2,323,387 were sent to foreign countries, and orders aggregating $303,038 were received from foreign countries. The largest number of orders go to Great Britain, but the largest amount of money is sent to Italy. During 1905, orders aggregating $11,092,466.60 were sent to that country. More than fourteen and a half million pieces of registered mail were handled during the year. The fees alone on these amounted to more than $187,000.

An official register, commonly known as the Blue Book, shows 25,481 people as employed in various capacities in the departments in Washington. The aggregate compensation of this army of clerks is a little in excess of $27,000,000 a year. The Treasury Department leads the list with sixty-three hundred employes, and the State Department appears at the foot with only one hundred and twenty.

A cablegram from the manager of the American athletes at the Olympian games at Athens to President Roosevelt read,—

"America, eleven firsts, six seconds, six thirds, total, seventy-five points; Great Britain and all her possessions, four firsts, six seconds, and three thirds, thirty-nine points; Greece and Sweden tied for third place. Great athletic victory for America."

The Department of Justice will immediately begin an investigation of the relations of the so-called oil trust and a number of railroads, with a view of determining whether there have been violations of the anti-rebate law. The basis for this investigation will be the information submitted to the President in a report of Commissioner Garfield of the Bureau of Corporations.

Foreign.

Queen Alexandra has replied to the appeal of the Royal Society for Protection of Birds with a letter granting that society her full support in the crusade against the practice of destroying rare and beautiful wild birds for the sake of their plumage. Her majesty's intervention is so powerful that it is considered almost certain to result in rendering unfashionable the custom of wearing birds, feathers, and plumage in millinery.

Early last month the London County Council took possession of about two hundred miles of street railway lines in the northern part of the metropolis, terminating the extending lease that had been granted to a private company some years ago. Some $25,000,000 is to be expended in connection with the change from horses to the electric trolley system. The London Council already owns and operates another hundred miles of street railways and in the near future will greatly extend the trolley network.

It is learned that the Anglo-Tibetan treaty provides for the opening of Gyangtse and Gantok to foreign trade. The telegraphs, mines, and railways will be developed by Chinese capital or by co-operation between the Chinese and British. The indemnity will be paid in three instalments, after which the British troops will evacuate the country.

The results of the latest census of the British Empire show that its population is in round numbers 400,000,000, and its area, 11,908,378 square miles, is more than one-nith the land surface of the globe.

The State Department is giving its aid in perfecting plans for the success of the Pan-American Congress which convenes at Rio Janeiro in July.

Industrial and Commercial.

The aggregate value of the annual catch of the New England fisheries is about ten million dollars, or one-fourth of the value of the total catch of the United States. The deep-sea branch of the New England fisheries is engaged in by some four hundred schooners, carrying eight thousand men, and operating on the submarine shallows, or "banks," stretching northward from Cape Cod to Newfoundland and Labrador. The inshore fishery is prosecuted by about fourteen thousand persons, while as many more are employed in the processes incident to the drying, curing, preserving, canning, etc.

The president of the California Fruit Canners' Association says: "The year has proved to be the banner year of the association, not only in the size of pack and in total volume of sales, but in the net profits, which amounted to $463,986.07. The usual monthly dividends were paid, completing a total to the end of the fiscal year of seventy-three consecutive dividends, amounting to $1,259,737.20. The surplus and reserve now aggregate $1,161,770.35. The fiscal year closed free from all bank indebtedness and with a normal stock in good condition."

Citrus fruit growers of California are expecting to make this season $20,000,000 after paying to the railroads a fortune in freight rates and icing charges. The total shipments will approximate 25,000 carloads, and the indications are that the net cash returns to California will average from $700 to $800 a car.

The Waltham Watch Company, with a capital stock of $12,000,000, of which $5,000,000 is to be six per cent cumulative preferred and $7,000,000 common stock, will take the place of the American Waltham Watch Company, the capital of which is $4,000,000.

The Government report of the beet sugar industry of the United States says the acreage of beets harvested during 1905 was 307,364, with an average yield of 8.67 tons per acre. The aggregate manufacture was 312,920 short tons.

The American Seating Company has been incorporated in New Jersey with an authorized capital of $4,000,000, of which $2,000,000 is preferred and $2,000,000 common. The company is to manufacture and deal in furniture.

General.

Professor Petrie of the newly formed Egyptian Research Account, according to a despatch recently received in Boston, believes he has discovered beyond a doubt the remains of the Temple of Onias, the fugitive nephew of the High Priest of Jerusalem, at the Mound of the Jew, the famous Tel-el-Yahoodich, eighteen miles north of Cairo, and solved the riddle of the Hyksos, thus making the most important addition of recent years to the results of Egyptian research.

The Austin Corbin herd of buffaloes at Meriden, N. H., now numbers one hundred and fifty-four; the new herd in Yellowstone Park, forty-three. The wild buffaloes in the Park at the time of its reservation numbered about four hundred, but poachers and head hunters nearly exterminated them. The Flathead herd in Montana, when divided and partly sold a few years ago, numbered nearly three hundred. A herd near Fort Pierre, S. D., numbers one hundred and eighteen.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

An Interesting Letter.

San Jose, Cal., April 25, 1906.

Mrs. Mary Baker Eddy,
Pleasant View, Concord, N. H.

Dear Mrs. Eddy:—I was instructed by the Board of Directors of First Church of Christ, Scientist, San Jose, Cal., on the evening of the day of the earthquake, after we had held our regular Wednesday evening meeting, to wire you that none of the Scientists in this community had received any bodily injury, and that our new church was practically untouched by the terrible disaster, but it has been impossible to send any satisfactory telegram, hence this letter.

We were obliged to hold our service by candle-light, for all electric and gas lines were cut off. It would indeed have gladdened your heart to have heard the testimonies given that night, and to have listened to the grateful thanks offered to our loving Father for the precious gift to mankind of Science and Health, and its loved author,—you, our dear Leader,—whereby peace, comfort, and assurance had been granted to each one, to sustain him throughout the trying ordeal. On Sunday no services were allowed in the city limits, and in consequence we held our service in a schoolhouse outside the city. The Lesson-Sermon suited the occasion perfectly, and was full of helpful, uplifting passages. There was a good attendance.

It will please you to know that telegrams offering assistance have been received from Scientists in distant cities, and from Portland, Ore., a special committee of two came down, amply supplied with money to render every possible aid. We were glad to be able to say to all these loving offers, that we did not need anything; and this we understand is equally true of our brethren in San Francisco, Oakland, and the neighboring towns. Our Portland friends were disappointed that they could do nothing, but they really did everything—expressed Love. This unbounded love, manifested on all sides and with all peoples, clearly shows, as you have taught us, who the real God is,—divine Love. Truly "man's extremity is God's opportunity."

I want to tell you of one young business man who has lately come into an understanding of Christian Science. He was buried for three hours under a mass of debris, through the collapse of a hotel; his mouth and nose were almost stopped up with mortar, and his body was crushed into a seemingly impossible space. He told me that while confined in this position, he saw more clearly than ever before the truth taught by Christian Science, that the mortal concept of himself was not the real self at all, that the real self was ever free, and was so right then. He was finally rescued uninjured, and one of the physicians who were on hand to render any assistance possible, told me that he could not understand how any "living soul could have been rescued from such a place."

I am glad to report that our church has on hand a further contribution of three thousand one hundred and fifty dollars for The Mother Church, which will be sent forward as soon as the banks resume business.

With deepest love and gratitude from us all,

Faithfully yours,

HERBERT W. EUSTACE.

From our Contributors.

Christian Science and Christian Scientists.

SAMUEL GREENWOOD.

Christian Science, as its name implies, is the Science of Christianity, the demonstrable knowledge of the Christ brought within the reach of human understanding. (Science and Health, p. 471.) Nothing that mortals may do can add to or detract from its availability and perfection; while all who live it and love it are redeemed and glorified thereby. It is co-existent with God, the same in all ages, needing nothing of man but giving him access to all good. So far as it is received and made the standard of living it destroys the tendency towards evil and sensuality. Its influence upon mankind is always for moral and spiritual betterment. The failure to obey its rules, on the part of one outwardly accepting them, is unfortunate for the individual concerned but can reflect no discredit upon the system. True Christianity, wherever taught, represents the sovereignty of good over evil, and offers mortals the only salvation therefrom, but it bears no responsibility for the disloyalty of those who forsake its divine precepts while claiming to march under its banner.

If Christian Science were the product of human wisdom it might be found capable of leading mortals into error, and be held accountable therefor; but its teachings nowhere indicate that they are the outcome of human thought, and in defining its premises Mrs. Eddy went in direct opposition to the deductions of human material reasoning. Christian Science admits not the smallest fraction of the claims of evil; it holds no ideal before its followers that could take them into any questionable enterprise or into the defrauding of their fellows. Its practice affords no excuse for wrong doing, for business dishonesty, unfair methods, immorality, or any form of sin. It knows no favored class, gives no concessions to wealth or worldly position, but has the same unchanging rule of righteousness for all. Those who would receive its blessings must walk in the way it points out, must overcome their love of sin, love their neighbor, be absolutely honest, truthful, upright every hour of the day and with whomsoever they may deal. To go contrary in any direction to the teachings of Christian Science, based as they are upon the allness of God, good, is the work of evil and is chargeable to it alone.

The name Christian Scientist is used by those who have identified themselves with the Christian Science movement to designate the nature of their religious beliefs, but not to indicate a perfect knowledge of this Science or the ability to demonstrate the full extent of its teaching. Those of its followers whose lives are the best exponents of Christian Science feel that they are entitled to the name Christian Scientist only as those who are striving for the same Mind that was in Christ Jesus, and to follow his example in healing the sick and sorrowing.

Students of Christian Science neither assert nor believe that they are humanly perfect, or that they are now in full possession of man's spiritual dominion over evil. They ad-

Copyright, 1906, by Mary Baker G. Eddy.

Digitized by Google

here to Christian Science because it offers them effectual help in working out their salvation, and because it gives them the evidences of its truth and power. If they, as mortals, were never liable to err, or if they had already risen above all sin and sensuousness, they would have no need of Christian Science or of any other religion. Instead of seeking to bring discredit upon Christian Science by exploiting the misdeeds of some few who have failed to make good their professed belief in it, it were more fitting that the world reverently thank God because so many through its help have been lifted out of their former sinfulness and discord. It is the sole purpose of Christian Science to redeem the human race from its misery and sin, and it should be judged by the good it accomplishes in that direction, and not by the failure of some to respond to its appeal or to be guided by its precepts. Its mission is not to make sick people well so much as it is to make them good.

There is one fact concerning the Christian Science movement which some fail or neglect to consider, and that is the large number of men whom it has won from agnosticism, infidelity, worldliness, and immorality to become sincere and practical Christians. However much the orthodox Christian or the skeptical materialist may differ from what he believes Christian Science to be, he must admit in all honesty that the teaching that works such transformations is entitled to honor and respect. Men are not made better except by goodness; and that which so inspires worldly-minded men with love of the ideal Christ as to make them earnest followers of the Master, and enables them to repeat in a degree his healing works, is of God and not of men. It is by such works as these that Christian Science should be judged. That it is capable of bringing out the best in human nature, of turning men from their evil habits with loathing, of healing the sick, the broken-hearted, the poverty-stricken, the separations of home life, etc., the open history of the movement bears full testimony.

But while these things are so, and while all the world is benefiting by what they have achieved, Christian Scientists should remember that more is expected of them than of others because they have subscribed to the highest teaching presented to mankind, and are insisting upon its practicability. A great trust has been committed to them to prove to the world the power of divine Truth over evil and disease, to prove through their own Christlike living the truth of Jesus' words. To this end it should be their care to remove every stumbling-block or occasion for misjudgment from the world's just estimate of their Cause; to work together harmoniously, lovingly, helpfully, realizing that the success of their mission is more than any personal consideration. The gratification of individual desire or selfish ambition is but for a moment, and takes us not one step heavenward. Let us remember that all strife, envy, jealousy, uncharitableness, wherever found, are evil, and that those governed thereby cannot do the works of God nor establish His kingdom.

The world at heart is weary of its own way, weary of its vain shine and show, its pomp and ostentation; weary of its unsatisfied ambitions and fleeting honors, its lust of power and of gold, and its unceasing pain. Mortals still pursue the bursting bubbles of their material beliefs, not knowing the better way nor realizing the satisfying substance and joy of spiritual good, and it should be our care to always let our light shine before them that they may see the way Godward. To compromise with pride or selfishness or vainglory only adds to their burden and darkness. We shall not impress men half so much in any other way as by the manifestation of that loving humility and self-sacrifice that hallowed the earthly career of our Lord.

The apostle's injunction in the ninth and tenth verses of the twelfth chapter of Romans has especial significance for Christian Scientists; let us give it earnest heed. The world will not release us from our high obligations in its judgment of us; and it should not.

Getting Rid of Burdens.

EMMA EASTON NEWMAN.

Let us lay aside every weight, and the sin which doth so easily beset us, and let us run with patience the race that is set before us.

Hebrews, 12: 1.

THE study of "An Allegory" in "Miscellaneous Writings" by Mrs. Eddy, has illumined for the writer the meaning of the first six words of the above quotation. All Christians know that sin as manifested in the grosser forms —"the works of the flesh"—must be abandoned, but if one would see progress in his own consciousness from month to month and from year to year, if he would so live that others may be won to his way of thinking and living, all "weights," all defects of character, disposition, and habit, must be discarded. Those who come in daily contact with him are constantly watching and passing judgment on him, either consciously or unconsciously. For one opportunity that he may have for proving how his faith will help him to meet and master some great temptation to sin, there will be a thousand in which to show forth the Christ-spirit in the exigencies of daily life. It is therefore important for him to drop everything which may in any wise hinder his progress. Is he carrying the weight of a stubborn will, day by day, putting it in evidence now and then, and ready to combat any one who suggests that it is not only useless baggage, but that in devoting himself to his burden he is prevented from looking up to the "vision splendid" of the will of God? He who is honest with himself can see, in looking back over his life, so many instances wherein the weight of self-will has hindered progress. Perhaps he has become so confused in his thinking as to be convinced that it is God's will which he is carrying about. If such be the case, he needs to be awakened to the fact that God's will is not an oppressive weight to carry, but is strong enough to uplift and carry him over all the rough places.

Criticism of others is a heavy weight which can most profitably be laid aside. He who dwells much on a certain fault in another need not be surprised if he finds himself manifesting the same unlovely quality, for he has taken it into his mentality as something real. Another weight which should be quickly dropped is fear,—fear of sickness, of loss, of accident,—especially when it is seen that so far from being a preventive of these ills, fear is the open door through which they enter.

Multiplied experiences should teach the traveler on the journey "from sense to Soul" (Science and Health, p. 566) to search his mentality for unlawful thoughts as diligently as a custom officer would search for contraband articles at a government frontier. The desire for social position, for amusement, pride in the possession of material things, will not these weights be not only contraband but useless in the country toward which we are journeying? A wise traveler does not provide himself with heavy furs if he is going to the tropics, nor with a camping outfit if he is to spend his time in cities. He makes a study of the conditions he is to encounter, from books written on the subject and by questioning those who have made the journey he has in view. The traveler to the kingdom of heaven—the realm of Spirit— is guided most effectually by a study of the Bible and of our text-book, Science and Health; he can also question those who are sufficiently advanced, and thus gain many useful hints.

One of the proofs that he has chosen the right equipment for the journey is his ability to heal. Of what account would be his social position or his high commercial rating if he were called to the bedside of a sick or a dying man, whom he would raise? On the other hand, there are those who lack material things, and who yet covet them in a way which is as pernicious as is satisfaction with their possession. He who has attained worldly success knows that he can heal neither himself nor others by its means, while to the poor and obscure man who has made it his god, it seems the

Digitized by Google

cure-all for human ills. It is said to be a heartrending thing to hear one in an agony of thirst call for water when there is none to give; how much worse, to hear the cry for the healing waters of Truth and to feel that but for the cumbersome baggage of wrong thoughts one could have had his hands free to give that water of which if a man drink he shall not thirst again.

The Christian Scientist who is worthy the name, is examining his impedimenta day by day to see what can be laid aside, or more properly speaking, he is finding that in reality he need have none, for the qualities necessary to heal the sick and convert the sinner are not of a nature to be put down or taken up at will. They must be realized as an integral part of his existence. We are what we reflect of Life, Truth, and Love, of unselfishness, purity, and humility, and all our struggles to burden ourselves with other and worldly things seem as unreasonable as would the decision of a man about to enter a race to load himself with heavy dumb-bells.

It is difficult to close any spoken or written reference to Christian Science without mention of the unselfed life of the Leader of the movement, Mrs. Eddy. A student who has been satisfactorily taught in music or art has a deep sense of love and gratitude to his teacher. Far deeper and more heartfelt should be the love and gratitude to the one who is showing her students, by precept and example, how in this seemingly material age the weight of wrong thoughts can be laid aside; namely, by following with her, him who said, "My yoke is easy, and my burden is light."

A living Christ is to-day more than ever on earth an aggressively unifying force. Immensely human was Christ's message to man,—Brotherhood and Fatherhood,—and in those tokens we recognize his present footsteps. Look back half a dozen centuries and make comparisons. War is recognized more and more as a barbarism, and its end is over yonder hill. The court of nations to settle wrongs is looming above the horizon. The nation that loves its fellow-nation is also born of God. We are learning that the Golden Rule and the law of self-preservation run parallel. In all these things we see just the beginnings of the results of his coming.—GEORGE CROLY.

[Written for the *Sentinel.*]

Enough.

ALICE MORGAN HARRISON.

THE thirsting of long years,
And now this draught!
The darkness of thick tears,
And now this shaft
Of radiant, beckoning light,
Missioned to banish
All the old, long night!

The wistful reaching out,
And now this touch!
The littleness, the doubt,
And now the much,—
The vastness of glad hope!
An opening pathway,
Where I used to grope!

This, then, enough to-day!
The light will grow,
The clouds all pass away,
The clear path show.
The blessedness of this
Is certain foretaste
Of Life's perfect bliss.

Selected Articles.

A Noticeable Distinction.

To an unprejudiced observer who could study all religions with an impartial veneration for the good and reprobation for the bad elements they may contain, it might appear that there is one, and only one, fundamental difference between Christian Science and other Christian teachings. The difference is easier to perceive than to state, but one may suggest it by saying that Mrs. Eddy has reduced to practice a number of beliefs which other Christians treat as pure theory. The first pertains to prayer. All religious people pray; but the followers of Mrs. Eddy expect their prayers to be answered, while other sects do not. Doubtless Dr. —— has often prayed for rain. Had he ever the remotest expectation that his petition would change the weather? Ministers all pray for the President; they pray for the sick; but without a shadow of hope for results. The Christian Scientists expect results when they pray, and in many cases they get results, just as the early Christians did.

The second of these beliefs is that the power of the all-pervading Deity is available for protecting and healing human beings, for aiding them in righteous aspiration and sustaining them in distress. The Scientists work this belief into the daily routine of their vocations; other sects hold it as an abstract proposition without practical effect. It is differences like these which seem to the outsider to mark the real distinction between Christian Scientists and other Christians.—*Portland* (Ore.) *Oregonian.*

Jesus gave but one rule in his teaching by which his followers could be known as such. He said, "If ye love me, keep my commandments;" not in word only, but in spirit and in deed. "Go ye into all the world, and preach the gospel to every creature."

He explained over and again to his disciples that the signs by which those persons were to be known who believed on (understood) him and his teachings were these: "Heal the sick, cleanse the lepers, raise the dead, cast out devils" (evils), etc. These were the only accredited signs of a true believer on the Christ, in the early Church, and it follows that if men again become obedient to all the commands of the Master, the same signs will be manifested as of old. Jesus was the greatest teacher the world ever knew, for he understood and demonstrated scientifically the true relation between God and His idea,—spiritual man. He saw with spiritual understanding through and beyond the mask of mortality which the world calls man, and recognized only the true or spiritual man, always perfect and harmonious, whose birthright is dominion over all his environment. It is this spiritual understanding for which Christian Scientists are striving to-day, and although they have but touched the hem of Christ's garment of spirituality, in so far as they have gained the understanding they are doing his works.

The world has been delving for ages in matter, and the clergy have been preaching for centuries on different plans of getting mortal man into heaven after death. Some even go so far as to attempt to explain how the many particles of the mortal body will be re-united, forgetting meanwhile the statements of Scripture, "The kingdom of God is within you," and "Flesh and blood cannot inherit the kingdom of God."

Christian Scientists accept the atonement and resurrection of Christ Jesus in the fullest spiritual sense. They accept Jesus as the great Exemplar to all mankind. He came to teach them how to live, how to overcome temptation and sin; but he did not come to do their individual work for them. Christ Jesus was continually showing the people that as they sowed, so should they also reap.

Our critic quotes from John as follows: "If we say that we have no sin, we deceive ourselves, and the truth is not

Digitized by Google

in us." Whereas John also writes, "Whosoever is born of God doth not commit sin; for his seed remaineth in him: and he cannot sin, because he is born of God." As these statements are directly opposite, it will be seen that one refers to the mortal and the other to the spiritual man.

Our critic asks: "Is it thinkable that divinely inspired religion should have remained hidden for eighteen hundred and fifty years . . . ? If it has, we have the very clearest proof that he [Christ Jesus] was untrustworthy." Jesus' words were: "If ye abide in me, and my words abide in you, ye shall ask what ye will, and it shall be done unto you." The Church did abide in this Christ-truth for the space of three hundred years, and the works specified followed. Will our brother tell us why the Church has failed for the last sixteen hundred years to bear these fruits? Is it not because the Church has not been faithful to its trust; to the command, "Abide in me"?

Our critic also says: "The religion of Christ is true, or it is not true." Christian Science says it is true, and proves it by its daily works in reforming the sinner and the drunkard, healing the sick, and bringing comfort to the sorrowing. Christian Science proves the power of the divine Mind, which was also in Christ Jesus, operating through each one of God's children who is striving to obey in spirit all the commands of the Master. Jesus said, "I can of mine own self do nothing." So the Christian Scientist claims nothing for himself, but gives all power and glory to God as the one cause and Principle of all good.

We are told we must accept God's will at all times, and by this we are to infer if God wills us to be sick we must be patient and be sick. How, then, can it be right to try and defeat God's will by taking drugs to get well? Jesus said that he came not to destroy but to fulfil God's law. How did he do it? By healing the sick, raising the dead, and destroying the works of the devil (evil thought). He did not say, "It is God's will for you to suffer, to make you patient." His words were, "Thy faith hath saved thee; go in peace."

Again our critic says, "There are many worse things in life than physical pain or death," etc. Yes, and it is just these "worse things" that Christian Science is helping to destroy. Christian Scientists know that sin in thought or action is the immediate or remote cause of all physical or mental suffering, and they are taught that the only way to escape the dire effects of sin is to stop sinning.

CHARLES K. SKINNER.

Mining Gazette (Houghton, Mich.)

In the controversy between the *Oregonian* and the rector of Trinity church, Christian Science has suffered nothing and has gained much. If the otherwise able clergyman has not been sorry he said anything it is because he fails to see himself as "ithers" see him. Indeed, before the *Oregonian* entered the field on the side of Mrs. Eddy, it was made perfectly plain to all but the blind that "people who live in glass houses shouldn't throw stones." In justice to Mrs. Eddy, whether or not the church she has founded is the ultimate word in religion, it is but fair to judge her work and teachings by results, and these are not to be denied. They are too apparent in the increased happiness, freedom from the bondage of fear and from all manner of petty worries and harassing ills. Joy is the keynote of Mrs. Eddy's teachings.—Editorial in *Eugene* (Ore.) *Morning Register*.

Admission to Membership.

The next admission of candidates to membership in The Mother Church will be June 5, 1906. Applications must be in the hands of the Clerk on or before May 14, 1906.

An application sent to the Clerk of the Church does not constitute the applicant a member; he must be elected to membership by the Christian Science Board of Directors, at which time notice of election will be sent.

Among the Churches.

San Francisco, Cal.

The edifice at the corner of Post and Taylor Streets which was occupied by First Church of Christ, Scientist, having been burned by the recent fire, it was decided that services be held on the lot owned by the church at the southwest corner of Sacramento and Scott Streets.

As building operations had begun on the new edifice, there was a quantity of lumber on the ground, and a rough floor was laid, benches and a Readers' platform were constructed, and a congregation of over eight hundred attended the first open-air service, held there yesterday morning [April 29] at eleven o'clock. The regular order of service was conducted by the Readers, and the announcement was made that a relief committee had been appointed which was prepared to render assistance to any Christian Scientist in need of help.

A temporary structure will be erected on the lot for the use of the church and Reading Room, and services will be held every Sunday morning at eleven o'clock and Wednesday evening at seven o'clock. The present Christian Science headquarters are located at 2063 Bush Street.

San Francisco Chronicle.

Warsaw, Ind.

The property of Charles F. Morris at the corner of Detroit and Main Streets, was sold recently to First Church of Christ, Scientist, of this city. It is one of the choicest pieces of property in the city. The Christian Scientists will soon erect a church on the lot.

The church of the Christian Scientists of this city was organized last June, and since that time it seems to have grown rapidly, so that the present small quarters are inadequate and unsuitable for their church assembly.

Whatever difference of thought people may entertain regarding the truth or error of Christian Science, it must be admitted by all that their religious zeal is of exceptional fervor and enthusiasm.—*Warsaw* (Ind.) *Daily Times.*

Rutland, Vt.

In loving response to the call in the *Sentinel* for the completion of the Building Fund of The Mother Church, First Church of Christ, Scientist, of Rutland, Vt., held a special meeting at the close of the regular Wednesday evening meeting, April 11, and it was the unanimous vote of the church to send the entire amount in the treasury, and also the treasury of the Sunday School, together with a special offering to be taken the next Sunday, to the Building Fund of The Mother Church. A check was sent today, to the Treasurer, Mr. Chase, for two hundred dollars, making a total of five hundred and eighty-three dollars sent from this church.

This was decided upon in view of the fact that we are about to move into a new church home, which will require largely increased financial demonstration for us, but we feel most thankful for this opportunity of expressing in a small way, by sending all the savings we have, our gratitude and love for The Mother Church, well knowing that divine Love will meet every need of this little church, as it has so many times in the past, and striving to realize the truth of the words of Jesus, "Fear not, little flock; for it is your Father's good pleasure to give you the kingdom."

Our church is growing in strength and numbers, and in steadfast love and loyalty to our beloved Leader, through whose courage and faithfulness the truth has been revealed to a waiting world.—GRACE L. BOSWORTH, *Clerk*.

The Lectures.

Dallas, Tex.

Rev. Irving C. Tomlinson of Concord, N. H., delivered a lecture on "Christian Science, Its Benefits and Blessings," at Bush Temple last Thursday night [April 5] before a large audience. The lecturer was introduced by Sam P. Cochran, who said in part,—

Ladies and Gentlemen:—In inviting you here to-night to listen to a lecture, we design to present to you an authoritative statement concerning what we claim to be a true and exact science. It is not a religious creed or theological dogma, nor a code of man-made theories and human hypotheses, but it meets all the requirements of a technical definition and understanding of what constitutes a science. It is an elucidation of the facts and laws taught and demonstrated by Jesus, the Christ, in healing the sick, reforming the sinner, and triumphing over death and the grave; hence it is called the Christ Science, or Christian Science. It deals with the great problem of life, that mighty question which constantly confronts mankind and which concerns all humanity.

This Science has been brought to the comprehension of mankind in this age through the discovery or spiritual perception of a meek, loving Christian woman, Mary Baker G. Eddy; and her self-sacrifice and consecration have enabled her to prove its practical utility to-day in healing sickness and elevating the thought of mankind, making her the greatest benefactor to humanity in almost nineteen centuries.—*Dallas Times Herald.*

Erie, Pa.

Bicknell Young of Chicago delivered an address at the Majestic Theatre Sunday afternoon [April 8]. The lecturer was introduced by Mr. Clinton Burgess, First Reader of First Church of Christ, Scientist, of this city, who spoke as follows:—

Every observant person who has watched the trend of modern thought has seen indications of a widespread spiritual awakening, both in this country and abroad. We hear of revivals and increased religious activity, and from many quarters the call has gone forth for Christians to leave the husks of dogma and formalism and return to a more practical religion and the simple spiritual teachings of the gospels. We are witnessing also at this time another awakening—a moral awakening in the business world; and there is a vehement demand that conscience and justice, at least, be considered as factors in all business relations.

All this is very apparent to the observer of human affairs; but how many among those who have followed with interest this spiritual and moral awakening have noted in their midst a large, rapidly growing, and intelligent body of Christians who are already so fully awake spiritually that they are willing to put more trust in spiritual means than in material—more faith in prayer than in prescriptions; a body of people who would consider it criminal negligence in themselves to depend, in time of sickness or trouble, on any means less spiritual and trustworthy than the almightiness of God, "who healeth all thy diseases;" that would consider it infidelity to doubt the eternal truth and application of that promise which is also a command, "He that believeth on me, the works that I do shall he do also."

How many have noted in their midst a body of business men so morally awake, and so certain of the practical value of their religion, that they gladly adopt as business rules such precepts as these: "Seek ye first the kingdom of God, and his righteousness," "Love thy neighbor as thyself," and "All things whatsoever ye would that men should do to you, do ye even so to them"?

How many have appreciated, amid the changing theory and thought of the past forty years, the life and influence of a certain New England woman whose name is to-day spoken with gratitude by thousands in many lands? I refer to the dearly beloved Leader of the Christian Science movement, Mary Baker G. Eddy,—a woman pure enough to discern the truth, daring enough to follow it on paths that led away from the beaten tracks of worldly wisdom and speculation, faithful enough to protect it and keep it pure through the tempests of abuse, misrepresentation, and personal slander so well known to every uncompromising reformer, and loving enough to consecrate even now every waking hour to her chosen work of lessening poor humanity's load of suffering and sin.—*Erie Dispatch.*

Lectures at Other Places.

Palo Alto, Cal.—Mrs. Sue Harper Mims, Feb. 5.
Americus, Ga.—Edward A. Kimball, March 13.
La Grange, Ill.—Rev. Irving C. Tomlinson, March 23.
McKenzie, Tenn.—Rev. Irving C. Tomlinson, March 30.
San Rafael, Cal.—Clarence C. Eaton, March 31.
Junction City, Kan.—Judge William G. Ewing, April 1.
Wilmington, Del.—Prof. Hermann S. Hering, April 5.
Denison, Ia.—Rev. Arthur R. Vosburgh, April 5.
Corsicana, Tex.—Rev. Irving C. Tomlinson, April 6.
Omaha, Neb.—Rev. Arthur R. Vosburgh, April 6.
Portersville, Cal.—Clarence C. Eaton, April 6.
Hanford, Cal.—Clarence C. Eaton, April 8.
Girard, Pa.—Bicknell Young, April 8.
Ottawa, Ill.—Judge Septimus J. Hanna, April 8.
Grand Rapids, Mich.—Rev. Arthur R. Vosburgh, April 8.
Long Beach, Cal.—Clarence C. Eaton, April 9.
Hamilton, O.—Rev. Irving C. Tomlinson, April 10.
Menominee, Mich.—Judge Septimus J. Hanna, April 10.
New Orleans, La. (First Church).—Rev. Arthur R. Vosburgh, April 12.
Rochester, N. Y. (First and Second Churches).—Bicknell Young, April 12.
Saline, Mich.—Judge Septimus J. Hanna, April 12.
Chicago, Ill. (Second Church).—Rev. Irving C. Tomlinson, April 12 and 13.
Flint, Mich.—Judge Septimus J. Hanna, April 13.

The lecture credited to Ottawa, Kan., in the *Sentinel* of April 28 should have read Ottawa, Canada; and in the *Sentinel* of April 7, Tremont, O., should have read Fremont, O.

Preliminary Arrangements for June.

A COMMITTEE has been appointed to find rooms for those attending the June meetings of The Mother Church, and it is expected that this Committee will be able to provide rooms for all visitors who give advance notice of their needs. Those who have not made definite arrangements for rooms are requested to communicate with this Committee as early as possible, stating their precise requirements, the price they are willing to pay, etc., in order that an approximate estimate may be made of the amount of accommodations which will be required. This Committee will not undertake to engage or assign rooms in advance, either in hotels or private houses. Those wishing to engage rooms in advance should communicate directly with the hotels at once.

It is desirable that, where practicable, one person should act for a group from one locality. This will greatly facilitate the work of the Committee.

On their arrival in Boston, those who are depending on this Committee for rooms are requested to go to Horticultural Hall, corner Huntington and Massachusetts Avenues, which has been engaged as headquarters for this Committee, commencing Thursday, June 7.

Address: ROOM COMMITTEE, 250 HUNTINGTON AVENUE.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Amendments to By-laws.

ARTICLE XXVI.

PRIVATE COMMUNICATIONS.—SECT. 16. A strictly private communication from the Pastor Emeritus to a member of her Church shall not be made public without her written consent.

ARTICLE XXVII.

MUSIC IN THE CHURCH.

SOLOIST AND ORGANIST.—SECT. 1. The music in The Mother Church shall be of an appropriate religious character and of a recognized standard of musical excellence. Music from the organ alone should continue about eight or nine minutes for the voluntary and six or seven minutes for the postlude, the offertory conforming to the time required to take the collection. The vocal solo should not exceed six or eight minutes. The solo singer shall not neglect to sing any special hymn selected by the Board of Directors.

As to Restrictive Legislation.

THOSE who have endeavored to obtain legislation against the practice of Christian Science have usually tried to show that there is a popular demand for such legislation; but it is now pretty thoroughly understood that this is not true, and that the animus of these attempts to obtain restrictive legislation lies with the physicians.

Several years ago interested parties succeeded in having a law passed in Ohio which the Supreme Court of that State has construed to mean that Christian Scientists may practise if they do not receive fees for such practice. At the present session of the Ohio legislature Christian Scientists endeavored to have the law amended in a manner more just to them, and it was found that the opposition to the amendment was entirely from the doctors. The *Toledo Blade* says that at the hearing before the committee "there were present some thirty physicians in opposition to the amendment." The fact is that the people at large are not opposed to the practice of Christian Science, and this is because there are now very few persons who have not in some way been brought into contact with the beneficiaries of this healing truth. What Christian Science is doing in healing the sick is shown by the following typical testimony, which we copy from the April issue of *The Christian Science Journal*. This testimony was written by Stephen C. Maynard, D.D.S., San Jose, Cal., and is as follows:—

"I was taken sick about August, 1901, and was treated by a physician, who called my complaint enlargement of the liver with gastric complications. There was no improvement in my condition, but gradually I grew worse. Becoming discouraged, I changed physicians. The second one announced a complication of diseases, and there was no improvement under his treatment. In October, 1901, I went to Gilroy Hot Springs. I grew worse there and returned in a critical condition, gave up my practice and continued treatment,—medicine and washing out of the stomach, with a very limited diet. The doctor finally pronounced the ailment neurasthenia of the stomach. I got no better, and December 24, 1901, a consultation was held. They were at a loss to know what to do. I was vomiting blood and could retain nothing whatever in my stomach. My weight just before my sickness was one hundred and ninety-eight pounds. I now weighed only one hundred and forty-three pounds.

"On the 26th of December, 1901, I was taken to a sanitarium in San Francisco, and was immediately put to bed. I remained there eight weeks, and my trouble was diagnosed as gastritis. Dieting, massage, and various other treatments were used. I left there in desperation, for there was no improvement in my condition. My weight now was only one hundred and thirty-eight pounds. Returning to San Jose the 1st of March, 1902, I went to the Santa Cruz Mountains, where I remained until October, 1902, dieting, using the stomach-pump, and taking morphine tablets when in severe pain.

"At this time the doctor informed my wife I would never be able to eat an ordinary meal again, but would always have to diet, also that I never would be a strong man. I returned to San Jose, my stomach conditions being no better, though I was possibly a little stronger. In November, 1902, I went to another sanitarium, thoroughly discouraged. I remained there until February, 1903, my condition being no better. They pronounced my trouble prolapsus of the stomach, with enlarged liver and weak heart. I lost several pounds and got no better. I left there because my finances were nearly exhausted, and returned to San Jose, expecting to be an invalid until relieved by death in a few months' time.

"In March, 1903, I was told of Christian Science and was led to try it. In six treatments I was a well man and gaining rapidly in weight. Under *materia medica* I spent over fifteen hundred dollars, not counting the loss of my dental practice. Christian Science treatment cost less than ten dollars, and I was able to practise my profession at once. Recently I had occasion to be examined by a physician for a life insurance policy and was pronounced by him to be 'as sound as a dollar.'

"I am very thankful for my physical healing, but the greatest blessing is the spiritual uplifting that comes from a careful and daily study of Mrs. Eddy's marvelous book, 'Science and Health with Key to the Scriptures.'"

If a certain bill which came before the California legislature several years ago had become a law, Dr. Maynard could not have obtained the aid of Christian Science without becoming a lawbreaker. Any attempt to create the impression that there is a legitimate demand for legislation interfering with the practice of Christian Science must always be a failure. ARCHIBALD MCLELLAN.

Clearer Views Needed.

A STATEMENT of deep import to every student of Christian Science is that in which Mrs. Eddy tells of her own experience in first seeking to express the "Science of Mind" as then revealed to her. She says that "as former beliefs were gradually expelled from her thought, the teaching became clearer, until finally the shadow of old errors was no longer cast upon divine Science" (Science and Health, p. 460). If this process of change and renewal of thought and its expression was so necessary in the case of our dear Leader, who was fitted above all others to receive the truth of being and to impart an understanding of it to others, what must be the need of those who seek the truth mainly because they are impelled to do so by suffering. With few exceptions, people come to Christian Science asking only for physical help, and in many instances they are unwilling to surrender their "old errors,"—their beliefs in the reality of sin, disease, matter and its supposed laws,—to say nothing of their adherence to age-worn theories respecting a personal God and the fall of man.

Digitized by Google

In most cases a large measure of spiritual illumination comes with the physical healing, and the teachings of our text-book are then accepted as the truth. There is, however, a mighty transformation to be effected in every one before the perfect understanding of God and of man as His spiritual likeness is attained and demonstrated. If imperfection still exists to the sense of an individual, it proves that all errors of belief have not yet been eliminated from his mentality. Science shows that there is no evil in God, and none in His likeness,—the real man,—and that the acceptance of this truth is followed by wonderful results in the healing and uplifting of the human sense. Such being the case, it is surely of the utmost importance that all errors of belief be "expelled" from consciousness, in order that the truth, the Science of man's being, may be fully recognized and obeyed. We are seldom aware of the tenacity of mortal habits of thinking, until we suffer from them in some way, and gradually, perhaps slowly, overcome them,—until these habits shall have given place to the continuous reflection of Truth's ideas.

In no other way can we gain such clear views of the Truth of being,—of God and His manifestation,—as by the faithful and intelligent study of our text-book, "Science and Health with Key to the Scriptures." We may think we are clear on some point, when our views are still obscured by the materialistic opinions of former years. There is therefore the greater need that we test ourselves, not by the opinions of others, but by the study and demonstration of the unvarying statements of divine Science, as explained by our beloved Leader. St. Paul found it necessary to "die daily" to his former concepts of being, so that he might truly know Christ "and the power of his resurrection," and surely we can do no less. The true mental concept, the spiritual idea loved and lived, is its own proof of Immanuel, God with us, and it leads us within the city where "his servants shall serve him: and they shall see his face."

ANNIE M. KNOTT.

The Building Fund.

IT is necessary for the Treasurer to receive largely increased contributions immediately, and the branch churches, societies, associations, and individuals interested are requested to remit liberally and at once. The fact that any individual member has contributed within a few weeks should not be considered a full acquittance of his duty in this matter.

Letters to our Leader.

South Pasadena, Cal., April 20, 1906.

Beloved Leader:—I want to tell you of some beautiful things that have taken place since the destruction of San Francisco. It will gladden you. Out of all this will come a vast empire for God. Self was forgotten; no distinction made between the rich and poor; part of the former crowded into the street, hurriedly dressed in elegant attire; laboring people could don the little they needed quickly; some were only partially clothed. A rich man carried a poor man on his back, to the table for bread. A few days later, the same people were carried to Los Angeles; clothing had not yet reached them. The response to the call for help was wonderful. It is pleasing to know that one of our churches in Los Angeles was the first to send relief,—twenty-two hundred dollars and thirty-three cents to the Christian Science church.

Car after car of cooked food, bedding, and clothing, came on; stores and homes were almost stripped; right of way was given by railroads, and all rushed through by night. This appeared to be the nearest and most available point. The naked and hungry were clothed and fed. We are proud of our people. Sunday was spent in making such clothing as was called for. School children were asked to bring one or more loaves of bread.

The shock was very light here. I was on my bed from a fall, and wondered what rocked it so. This was 12.31 A.M. We feel as safe here as in any other place, when we know our relation to God, divine Love, and we are trusting all to His care. We fear no evil. The study of the Bible with your text-book and the *Quarterly* lessons, illumines the Bible to all who seek for the truth which will make them free.

Lovingly a member of your Church,
GEORGIANA LEWIS.

Brookline, Mass., April 25, 1906.

My Beloved Leader and Teacher:—When I realize how much I owe to you, who have not only taught me the way of salvation but have also made it possible for me to help others to find the way of health and holiness, any return that I may make seems so insignificant that I almost hesitate to take a moment of your valuable time; hoping, however, that it may give you pleasure, I do want you to know of the united work of my students' association for the Building Fund of The Mother Church.

Up to the present time, we have contributed upwards of twenty-eight thousand dollars, and shall continue to contribute. The association is not large, nor rich in material possessions, therefore this amount is evidence of the students' sincere devotion to our Cause and to you our Leader, and we feel very happy that we have been enabled to enjoy the greatest privilege of the age—that of helping, even in the least, in the building of this church.

With a few exceptions this amount has been given by the members who reside in or near Boston, as those who are associated with branch churches have as a rule contributed through these. It is a great joy for me to be able to lay this little tribute at your feet in return for the wonderful teaching which you have given to me; for the work that you so lovingly started for me some years ago has been blessed of our Father-Mother God, and does not return unto you void. If the students knew that I was writing you, they would all unite in sending you the most loving and loyal expressions of gratitude for the health, peace, and happiness which your teachings have brought into their lives.

Mr. Robertson joins me in tenderest love to you from hearts filled with gratitude for all the blessings that have come to us through you.

Faithfully your student,
ANNIE LOUISE ROBERTSON.

Houston, Tex., April 27, 1906.

Beloved Leader:—I am sure it will give you pleasure to know of the enthusiasm manifested by the Christian Scientists in Houston, in forwarding funds for the completion of the amount pledged to The Mother Church Building Fund. First Church of Christ, Scientist, Houston, with a membership of a little over one hundred, has raised about twenty-five hundred dollars, and is still at work increasing its subscription. In addition to what has been contributed by them individually, as members of this church, seventeen of my students met with Mrs. Sherwood and myself, on the evening of the 24th instant, at our home, to consider the advisability of also acting as an association. A subscription was taken up amounting to eight hundred and ninety-one dollars. Other amounts are being added by members who were not present, and a total of one thousand dollars, or more, will be reached and forwarded to Mr. Chase. Each one in giving felt it to be a joy and a great privilege to be among those who have aided in erecting that magnificent temple which bespeaks in some measure the gratitude of the Christian Scientists to their revered and beloved Leader, and also indicates the rapid growth of Christian Science since the first erection of The Mother Church edifice.

Digitized by Google

While our hearts overflow with loving gratitude to you for your many loving kindnesses to usward, we are aware that we can best fulfil your hope by exemplary lives, in practical demonstration of scientific Christianity.

Mrs. Sherwood joins me in sending love.

Very sincerely yours,

JAMES D. SHERWOOD.

Detroit, Mich., April 30, 1906.

Mrs. Mary Baker G. Eddy,

Pleasant View, Concord, N. H.

Beloved Leader:—We, the members of The Detroit Students Christian Scientist Association, in annual meeting assembled, send you greetings,—our assurance of love and loyalty, and of an ever-deepening sense of gratitude for all you have done and are doing for us, and for the great Cause of Christian Science. We rejoice that the stately Mother Church edifice is nearing completion. Our association has gladly contributed two thousand dollars toward its Building Fund. We are grateful for the visit of our faithful teacher, Mrs. Annie M. Knott, C.S.D., on this occasion, and shall endeavor to follow her reiterated counsel, —to rely less and less on human opinion, and more and more upon the unerring guidance of our inspired text-book, "Science and Health with Key to the Scriptures."

We pray that we may add to your joy and peace by faithfulness to all your teachings, and thus prove ourselves worthy of our Cause, and of our beloved Leader.

CHARLES K. SKINNER,
ALICE THRALL,
Committee.

Prophetstown, Ill., April 29, 1906.

Mrs. Mary B. G. Eddy, Concord, N. H.

Our Dear Leader:—Justice is due you, therefore we turn and thank you for your life of consecration and love to God and mankind, which has enabled you to give to humanity your book, "Science and Health with Key to the Scriptures." Through the reading of your book my husband was in a very short time healed of the tobacco habit, profanity, and an appetite for liquor. I, also, have been healed of chronic constipation, and have been helped morally and spiritually. Our health, happiness, and all the good which has come to us, we owe to Christian Science. Our desire is to know how we can best prove our gratitude to God, and to you, His Messenger, in living practical Christian lives, knowing that this is the only way we can pay our debt.

With love,

ERNEST FARRINGTON,
MRS. GRACE M. FARRINGTON.

Marshfield, Ore., April 6, 1906.

Dear Mrs. Eddy:—In response to the call for funds to complete The Mother Church, we are sending to Mr. Chase our mite,—sixty dollars and fifty cents, the entire amount on hand. It is less than four months since we began holding Sunday services here. The interest is constantly growing. Our desire is to prove worthy of the name Christian Scientists in this little remote western town.

Lovingly and gratefully,

MRS. CORA B. MCFARLAND.

Important Notice.

THOSE who approve and countersign applications will assist the Clerk, and also avoid disappointment to applicants, if they will hold until after the Annual Meeting the applications which have been sent to them by applicants for their signature at a date too late to reach the Clerk before the closing of the entries for admission, and notify them that their applications were too late to be entered.

All applications should be sent to the Clerk of the Church, William B. Johnson, 239 Huntington Avenue, Boston.

Testimonies of Healing.

One of the most delightful and sacred memories I hold of my experiences in Christian Science, and of its Discoverer and Founder, Rev. Mary Baker G. Eddy, is of her healing me of acute and severe diphtheria about 1881. I had once before been very ill with this malady, and was treated by a famous physician, some years previous to my knowing anything of Christian Science. This last attack was worse than the former. My neck was swollen badly, I could not swallow, had not eaten for twenty-four hours, had chills and fever, no sleep, and was unable to rise from my bed. On this particular Sabbath afternoon, our Pastor Emeritus, Mrs. Eddy, called, and at once came into my room. How shall I describe it all! She seemed to float lightly and fearlessly to my bedside, calmly uplifted in demeanor, spiritually confident, unaffected, no professional airs,—just sweet, quiet, and soothingly graceful. To my joy she sat upon my bedside and kissed me. In a few minutes she told me I was healed. But what had come over me? The fever was gone, I felt perfectly natural,—no soreness of throat, all swelling had disappeared; I was hungry, and was chatting and laughing. I was free, and what a glorious, exalted freedom. Nature was again beautiful; divine Love had triumphed through His truth, as revealed and applied in Christian Science by our beloved Leader and Teacher, Mrs. Eddy, whose noble and unselfish example is a divine inspiration to all who are seeking and following after God's way, —in Spirit and in Truth. I also wish to say that she did this without money and without price. At that time she was preaching Sundays without a salary; I state this because the money thought has been brought to the fore so often. I would also add that I have never had any recurrence of throat trouble since then; for all of which blessings I am most deeply grateful to God, and to our beloved Leader, Rev. Mary Baker G. Eddy.

MRS. CLARA ELIZABETH CHOATE, Boston, Mass.

[The above testimony comes from one of my early students, who has had much practice, who has learned by experience, who has done much good.—MARY BAKER EDDY.]

The undersigned had an experience several years ago, a demonstration over deafness, which she wishes to give in evidence of the healing power of Christian Science. She found herself acutely deaf, after some years of trouble leading up to that stage. She had then been a Scientist for four or five years, and her occupation was that of teacher in the public schools, where the deafness seriously interfered with her work. She would struggle with the difficulty during school time, but finally it was impossible to hear any ordinary conversation, and the members of the family had to shout and often repeat two or three times what they were saying. She then realized the necessity of overcoming the error, and took up the study of Science and Health one evening for this purpose.

She had read but a little while when she came to this statement on page 270, "One only of the following statements can be true: (1) that everything is matter; (2) that everything is Mind. Which one is it?" So clearly came the realization of the truth, that instantaneously, and without her making a conscious mental effort, the deaf ears were unstopped, and conversation which had been going on close by was heard perfectly, whereas a moment before it had been impossible to hear a word.

This new-found hearing remained a long time, perhaps months, when there was a seeming relapse, but the study of our text-book soon taught the writer how to work out of a sense of relapse. Again there was a long period of perfect hearing, then a second relapse. In this she learned that such a condition could only come from fear or sin, according to the teaching found in Science and Health.

Digitized by Google

The fear was quickly overcome and there was another long period of perfect hearing. A third relapse came, which was not overcome till a member of the family reminded her that it was decidedly unpleasant to have to shout everything to her. Again she examined her thought, and knew that as she had not had any fear there was only one other thing which could produce it—sin. Self-examination soon revealed what the sin was; viz., a known understanding of God's requirement in a particular matter had not been obeyed. They very moment there was obedience to God's law there was physical healing again.

This was the last of that trouble; for the writer learned the truth of the statement in Science and Health, page 486, "Sight, hearing,—all the spiritual senses of man,—are eternal. They cannot be lost. Their reality and immortality are in Spirit and understanding, not in matter." This experience occurred about seven years ago, and there has never been any return of the deafness. If we seek we shall find, as the Master says. In Isaiah, God speaks through the prophet and says, "Bring forth the blind people that have eyes, and the deaf that have ears, . . . I have declared, and have saved, and I have showed, when there was no strange god among you: therefore are ye my witnesses, saith the Lord, that I am God."

Miss Florence J. Scott, Honolulu, H. I.

[Translated from the German.]

With sincere gratitude for what Christian Science has done for me and my family, I send in this testimony. I had been an invalid for eight years, afflicted with several diseases, some of which were appendicitis, neuralgia, and floating kidney. I was so troubled with a cough that I could not sleep, and had night sweats. I had taken many medicines, but found no relief. I had the best physicians, and had two operations without finding help. Every one thought that I would never get well. At that time a friend advised me to try Christian Science. I answered that I would try nothing more, because I believed there was no help for me, but the following evening I went to see a Christian Scientist. It was quite a task for me to get there, because I was so weak, but after the first treatment I felt easier, and when I reached home I was hungry and ate something, and I slept well that night. In the morning I was able to do my housework and was not even tired. When the Scientist told me to get a copy of Science and Health, I answered her that I could not read English, but she said I could learn to do so, for God is wisdom. At first I could not understand it, but I continued reading until I did.

Words fail to express my gratitude to Mrs. Eddy, who has opened the Bible to us and has shown us what our heavenly Father can do for His children.

Minna F. O. Barnett, Rochester, N. Y.

About two years ago, after many years of healthy activity, I found myself suddenly broken down,—loss of vitality, loss of appetite, every indication of old age,—and I felt my life-work finished. I had seen and known a good deal of the healing that is done in Christian Science, and had read the text-book, but serious conditions seemed to develop suddenly, and as there was no practitioner within many miles, and I did not feel that I had sufficient understanding to handle the case for myself, a physician was sent for upon the urgent request of friends. After a very short time I decided to have Christian Science treatment, dismissed the physician, and requested a Christian Scientist to take the case. My recovery was rapid and complete, and for more than two years I have been able to work about my farm daily. My wife has also received great benefit from Christian Science. In both cases nearly all the treatment has been absent. We find the daily study of the Lesson-Sermons of great benefit, and are very grateful for all that Christian Science is doing and has done for us.

N. B. Gardner, Mount Vision, N. Y.

I came to Christian Science purely for physical healing. I was very ill and unhappy; very cynical and disbelieving in regard to what I heard of God and religion. I tried to live my life in my own way and put religion aside. I was a great believer in fate and in will-power, and thought to put them in the place of God, with the consequence that I was led to do many rash and foolish things. I am now thankful to say that my outlook on life is entirely changed; I have proved God's wisdom and goodness so often that I am willing and thankful to know my future is in His hands and that all things must work out for the best. I have found a God whom I can love and worship with my whole heart, and I now read my Bible with interest and understanding.

I was healed of very bad rheumatism simply by reading Science and Health. I had tried many medicines, also massage, with no result, and the doctors told me that I would always suffer from this disease, as it was inherited, and also because I had rheumatic fever when a child. I suffered day and night, and nothing relieved me until Science proved to me the falseness of this belief by removing it. I gave up all the medicines I was taking and have never touched any since, and that is more than two years ago. Before this I had often tried to do without a medicine that I had taken every day for ten years, but was always ill and had to return to it, until I found out that the one Mind is the only medicine, and then I was freed from the suffering.

I had also suffered constantly from bilious attacks, colds, and a weak chest, and had been warned not to be out in wet weather, etc., but now, I am glad to say, I am quite free from all those material laws and go out in all sorts of weather.

I am very grateful for the *Sentinel* and *Journal*, which have proved such a great help to me. I am realizing more each day what a great work Mrs. Eddy has done for humanity, and I thank her for the example she gives us of a pure, loving, self-sacrificing life. I pray that I may have courage to walk in the path she has pointed out and to give a helping hand to all I meet on the way.

R. Dingwall Fordyce, Edinburgh, Scotland.

I was ill more or less for a period of sixteen years. Part of the time I was confined to the bed, but I did what I could, working a little while and then lying down to rest. Three of the physicians who attended me said that I had injured my spine by a fall. I suffered very much with pain in my head and back, for which blisters and irritating lotions were used. I also suffered from several other very serious ailments. I could not walk half a mile without great suffering, and work that required constant use of the arms had to be avoided. Seven doctors treated me during the sixteen years, and we paid hundreds of dollars for their services, but with no encouraging results. The time for several months was divided between the couch and hammock through the day, while the weary nights were relieved by the use of an opiate.

It was here that Christian Science found me,—sick, discouraged, and tired of living,—and it came as balm to the weary soul. By its gentle ministrations I found rest and peace. A friend who had witnessed some of the healing, asked me to give it a trial, and after careful consideration I sent for a practitioner. My healing was rather slow, but I began to improve at once, and at the end of seven months I walked to the meetings and returned,—a distance of nearly two miles,—and suffered no inconvenience from so doing. After that, I walked wherever I liked, and have done so ever since.

My treatment began in August, 1889, and my health since then has been better than ever before. I realize a peace and rest that I never experienced before I gained a knowledge of this truth. I thank God for the healing and for the blessings that have come to me through Science and

Digitized by Google

Health and the other works of Mrs. Eddy. Their price is indeed above rubies.

MRS. MARY B. MOSHER, Oneonta, N. Y.

For years I had heard of Christian Science, but held some erroneous opinions concerning it. I was a member of an orthodox church, but from infancy I was never well. Everything was done that kind parents could think of —doctors and specialists were tried, but with no permanent result. One would send me to this place, another to that, in search of health. Two years ago I was taken to the Pacific coast to recover from pneumonia, and while there some dear friends told me more of Christian Science. I was almost persuaded to try it, when I suddenly became afraid that it would lead me away from my church, and I went to see another surgeon instead, this time to seek relief from pain in the hip, which had been broken six years before. The surgeon doomed me to go on crutches or perhaps not be able to walk at all.

Before leaving my Science friends I had promised to get a copy of Science and Health when I reached home, but I thought it would not matter so very much, and so procrastination ruled. Last May I had what the doctors called acute gastritis, and after suffering untold agony, with no relief from drugs, in sheer desperation I sent for a Science practitioner. In less than a week I was out of bed, and before two weeks were over I was doing all the general housework,—something I was never known to do before. People marvel at the change in me, and indeed I do too. I have been on crutches twice in the past two years, but now I go all around without even a cane. Blind sick-headaches were another trial, but they have gone with the crutches; also a constant cough, neuralgia, rheumatism, and chronic bronchitis have disappeared. Is it a wonder that I guard as a treasure the "little book," Science and Health, and that I have grown to love its author, our dear Leader, whose teaching is leading humanity out of bondage?

ANNA MITCHELL LEAVITT, Marseilles, Ill.

With a heart overflowing with thankfulness I wish to give my testimony to what Christian Science has done for me. In August, 1905, I had an attack of what the physicians called stone in the bladder. It was very painful, sometimes it seemed as though I could not endure it. After suffering for four days, I wrote to a practitioner in Pittsburg, and the next afternoon the pain was gone, but it left me with a terrible backache, which, however, disappeared in a few days, and I have had no sign of a relapse. This is to me a beautiful and positive proof of the allness of God. I have a deep sense of gratitude to our beloved Leader, for giving to us this practical Science, and my prayer is that I may so live that I may truly be worthy the name Christian Scientist.

MRS. MAUDE ANSTRAW, Ligonier, Pa.

Seventeen years have passed since I first heard of Christian Science. At once it appealed to me as the means by which the sufferings of others could be alleviated. Later, its explanation of man's creation and the miracles of Jesus gave it an immeasurable value, as the orthodox teachings on these subjects had never satisfied me. I had united with a church, in which membership was retained until I came into Christian Science. That church is still fondly remembered as having been the avenue through which much love and kindness came into my life when a young girl comparatively alone.

Just as a course of instruction which promised to be of great value in my chosen life-work (grade teaching) was completed, an abnormal growth in an internal organ became very annoying. At different times and places, ten eminent physicians were consulted. Each arrived at exactly the same conclusion. The last one advised me to discontinue the use of medicine; to forget self as nearly as possible; to continue to teach until compelled to give it up; and to travel as much as possible. He then said, "When life is despaired of we will act; you have but one chance in a thousand. At most it can only be a very few years." Teaching was continued for three years, then followed a year and a half of forced inactivity, and the discovery that membranes, growing from the corners of each eye, were soon going to meet on the pupil. An oculist was consulted. Immediate treatment or total blindness was the verdict. Treatment was commenced but soon discontinued, as the sight seemed to grow worse.

About a year later Christian Science treatment was received, which resulted in the sudden vanishing of all foreign growths, together with a very annoying cough and other unnatural conditions; and active work was resumed. In the intervening years God has never failed to sustain me, through His word contained in the Bible and made so beautifully plain through our Leader's teachings.

A volume would be required to tell of all that Christian Science has enabled me to do for myself and for others. I rejoice in the hope that the day draws near when the knowledge that Christian Science imparts shall wipe away the tears from all eyes.—MISS LIZZIE BURNS, Toledo, O.

It is now almost two years since I began to study Christian Science, and manifold are the blessings which I have received, both physically and spiritually. In November, 1903, I was running downstairs, when suddenly my knee gave way and I fell and had to be assisted to bed. I experienced great pain, but I struggled on for a few days, when, finding that it was getting worse, I called in a physician. He informed me that I must wear an elastic knee-cap, and later he put the leg in splints, saying that I had torn the ligaments. This necessitated my staying in bed for about five weeks; with no sign of improvement, the doctor stating that on no account must I put my foot to the floor.

While in this state of mortal wretchedness I wrote to a relative who is a Christian Scientist, and the answer of love and hope was as light shining in darkness, but still I kept on with the medical treatment. At last, getting despondent, I expressed the desire to have other advice, and my husband suggested Christian Science, as he had seen its effects in the home of the relatives before mentioned. I consented, and the same day that I discarded medical advice I was helped out of bed and took a twenty-six mile journey to Manchester, where I could receive Christian Science treatment. My husband telegraphed and treatment was begun before I started, for it was with much difficulty and assistance that I was able to walk at all. Now came the testing of my faith, for the leg seemed to swell to double the normal size and pain was most severe, but in about ten days I was home again, without pain and able to do a good share of the housework, and three weeks later I was able to do all my own work, including all necessary kneeling, etc.

About this time I slipped, and the other knee was injured in the same manner as the first; but knowing a little of Christian Science, I held to the truth, wrote for treatment, and the injury soon disappeared. I can now say that I am perfectly healed and have been for some months.

We have had many demonstrations in our home with the children. Truth removes all error, and we are now rejoicing in the light, striving to be worthy of the name Christian Scientist, and with an ever-increasing desire to know more, so that we may reflect something of the love, power, and joy of Christian Science, as expressed in the life and teaching of Christ Jesus and revealed to us through our faithful Leader, Mrs. Eddy.

MARGARET MASON, Elworth, Sandbach, England.

Before I began the study of Christian Science I had dyspepsia very badly, used tobacco and liquor, was a sensualist, and thought evil continually. I desired to do better, but could not; I seemed to be at the mercy of passion and appetite. Since I began the study of Christian Science, three years ago, the dyspepsia has disappeared, the desire for liquor and tobacco is gone, I abhor evil thoughts, and am turning from the so-called pleasures of sense to the joys of Soul.

What a joy to break the shackles and say with Paul, "I am free born." In this work I have been aided by noble practitioners. I was perfectly astonished at the love they manifested. They did not condemn me because I was sinful, but told me I could be free. They turned my thought continually away from the imperfect belief about man to the perfect man of God's creation. Surely the fruits of Christian Science are good. From the depths of my heart I thank the noble, unselfish woman through whom this great truth has been revealed.

PAUL WALSH, Lincoln, Neb.

It is over a year since a friend of my wife recommended Christian Science to us. This was a Jewish lady, who had been healed of rheumatism after suffering twelve years. I then had a complication of diseases,—indigestion, constipation, rheumatism, etc. I was healed of these, and also cured morally. The liquor habit was given up, also cigarette smoking. I had used them for about thirty years, and could not do without tobacco. I was the only member in my family who took Christian Science treatment, but my entire family, my wife and three children, were benefited by it. We have not used any medicine since I was healed, and we are all well and happy by knowing that divine Love who governs the entire universe governs us also. We have learned that Truth overcomes sin, disease, and death, and I am able by divine grace to make very convincing demonstrations, for which I thank God. I also thank Mrs. Eddy, and gladly recommend Christian Science to all who are in need of physical, moral, and mental healing. I am indeed grateful for "Science and Health with Key to the Scriptures" by our Leader, and for all the Christian Science literature.—S. NEWMAN, Brooklyn, N. Y.

Christian Science was first brought to us in the summer of 1897, but everything then seemed so lovely to me that I did not accept it, though I would listen when my dear father read from Science and Health. I was never sick, and at that time had nothing to trouble me, though in a few weeks I was a young mother, and five days after this my beloved husband was shot and killed instantly. I was then in deep mental darkness and grief; my brightest hopes were crushed; every one that heard it expected I would die, but I was ready to turn to Christian Science, and in my darkest hours I felt the peace that passeth understanding. My dear father applied his understanding of the truth at the time when I broke down with sorrow, and I was soon able to rise above it. For a long time, however, I could not bear to hear my husband's name spoken, but as soon as I could be up my father took me and my baby to his home, and there we would read Science and Health and the dear ones would console me in every way they could. I soon began reading the Bible and Science and Health together, and I can never forget those heavenly hours, though they came through bitter mortal tears. My heart cries out to God to bless Mrs. Eddy for following Him so closely that we could receive such blessings through her work.

A few months later my little babe was covered with sores called eczema. I began applying Christian Science, but my fear kept me in a half-way attitude for some time. I was visiting relatives who would urge me to use material remedies, but all the time I was dissatisfied and wanted to be alone with God. After a little I wrote to a practitioner, and in about three months the dear child was perfectly healed. No one but those who have had experience with such a stubborn disease can imagine how thankful I was to see my little one's face healed. The travail of the new birth had begun, and Jesus said, "Ye shall be sorrowful, but your sorrow shall be turned into joy." I can thankfully and truly say that my sorrow was turned into joy. Through watching and working in the truth I have had many beautiful demonstrations. Christian Science becomes more hallowed to me after each trial. I love these words from our text-book, "The sinless joy, the perfect harmony and immortality of Life . . . without a single bodily pleasure or pain,—constitute the only veritable, indestructible man, whose being is spiritual" (Science and Health, p. 76).—IONE ASHBY, Ochiltree, Tex.

In our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, we are told of "the all-hearing and all-knowing Mind, to whom each want of man is always known, and by whom it will be supplied" (p. 7). I had an experience about three years ago which unfolded to me the meaning of this statement. I had a financial obligation to meet, and as the time drew near I began to worry for fear I should not be able to cancel my indebtedness. One night, as I was thinking about it, these words of David came to my thought: "My soul, wait thou only upon God; for my expectation is from him." They comforted me and quieted my anxious thought, until I fell asleep repeating them. The next day I had a visit from a friend whom I had not seen for over two years. During our visit she asked if I had ever received anything from some stock which I held in a western company. I said no; that I had almost ceased to think about it. "Well," she said, "I have heard that the president of the company, the friend who interested you, has become a rich man, and I know of an instance where he recalled a certificate from a woman and gave her in exchange stock that paid dividends; why not write to him about yours?" I did so and by return mail received a check for the full amount of my investment and a request that I should keep my certificate in case the company should ever pay any dividends.

As I looked at the check I again thought upon the psalmist's words,—"My soul, wait thou only upon God." I make this public acknowledgment of the divine goodness to one who is trying to love and obey Him in all things.

I wish also to express my ever-growing love and gratitude to our Leader, who has made it possible for me to understand in a degree that we have access to the infinite Mind in all our trials.—MARY H. BARKLEY, Chicago, Ill.

I wish to tell of my healing of constipation of eighteen years, supposed to be caused by paralysis of the bowels; also of ovarian trouble and floating kidney. I am healed, and have been for four years, of all these things, also of a case of rupture which was overcome within twenty-four hours. A life of study and demonstration may fittingly express my thanks to God, and to our Leader for all that Christian Science has done for us.

MRS. J. C. DRESSLER, Boise, Idaho.

It is a curious thing that I remarked long ago, and have often turned in my head, that the old word for "holy" in the German language—*heilig*—also means "healthy." And so *Heilbronn* means "holy-well," or "healthy-well." We have in the Scotch "hale;" and I suppose our English word "whole"—with a "w"—all of one piece, without any hole in it—is the same word. I find that you could not get any better definition of what "holy" really is than "healthy—completely healthy."—THOMAS CARLYLE.

From our Exchanges.

What will in the end prevail in the world of opinion is the reasonable view. Mere denunciation of opponents convinces nobody; just to shout out one's opinions very loud from the housetop impresses few auditors. When we are sure, after candid examination of a theory or a position, then we are strong, and our strength will be in proportion, not to our positiveness but to the inherent strength of our position. The world needs more positive teaching, but the emphasis must be upon that which is indestructible because built of the very character of God himself. Such reasonable positiveness will win the world and prove constructive of the highest interests of humanity in the age-long run of human experience.—*The New York Observer.*

We may notice how it was or when it was that Jesus drew nigh and talked to the disciples as they journeyed. It was "while they communed together and reasoned." Perhaps if we "communed together and reasoned" more constantly and faithfully on the things which pertain to the spirit and to life, we should have a deeper apprehension of the things of the spirit and of life, and we should have a more open vision to see the risen Christ. Perhaps if, in the solitude of our spirits, we pondered more upon the teachings of Jesus, upon the possibilities of faithful discipleship in every day, on his commands to forgive one another all our real or fancied injuries, on the chance almost any day to say a little word or do a little deed that would gladden the heart of a neighbor, we should be thus most effectually preparing our spirits that Jesus might draw near and walk with us, and our eyes be not holden when he is risen, when he is so near and yet we cannot see him.

REV. GEORGE WALLACE PENNIMAN.
The Universalist Leader.

As sectarianism appears to-day it is a compromise, and its successes are due to its spirit of compromise. In each section of these variously named organizations there is already a wide territory on which they come in touch with some other section, where they work, if not concordantly, at least without antagonism. The demand for closer cooperation or for federation rests as much on conditions as it does on ideals. It is the working out of the ideal on the basis of actually existing facts.—*The Churchman.*

Heaven is that union which is established between the Father and the child, here and now. You have no key that can lock the Paradise of a modest and pure soul, who can only pray with honest deeds and a kindly spirit. In this world the most glorious heavens are not those that are unlocked to us by creed believing, but those that are opened by the simplest deeds conceivable. Little children are more often intrusted with the golden keys than the wisest seers, statesmen, or priests. All about us and everywhere there lire paradises of hope and love that we must unlock with charity, patience, purity, honesty. And, when you sum it all up, you have come only to the position of Jesus,—"The kingdom of God is within you."—*The Christian Register.*

It is in the vision and by the vision that men live great lives and are able to lead other men into strength and peace. It is the men of vision who rise above the dust of the highway, who see the stars, and charge their tasks, their duties, and their work with the spirit of sacrifice and with the consciousness that all tasks and work are part of the spiritual education which makes men willing to endure routine, to bear drudgery, and to give their strength out in a thousand details of daily toil instead of the one great adventure for which they long.—*The Outlook.*

Every task is noble when it is done unto the Lord. Without this distinction nothing is noble.

The Christian Advocate.

THE CHRISTIAN SCIENCE TEXT-BOOK.—"Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

RUDIMENTAL DIVINE SCIENCE.—Printed in the New York point system of type for the blind. Price, prepaid, 50 cents per single copy; $5 per dozen.

CHURCH MANUAL.—Containing all the By-laws to January 1, 1906, of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of The Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the Churches and Societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to The Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of The Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to The Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number, or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

Morocco, limp, round corners, gilt edges, convenient for pocket, each, prepaid 4 00
Twelve or more to one address, each, prepaid . . . 3 75

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5 00
Twelve or more to one address, each, prepaid . . . 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, 50 cents per single copy; $5 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

National.

The Northwestern Paper Trust, on trial at St. Paul, Minn., surrendered its case last week. This may lead to the dissolution of other trusts and combinations. The recent decision of the Supreme Court of the United States makes this possible. This decision was to the effect that corporations that are accused of violating the law cannot plead the right of immunity. The court held that a corporation could not be imprisoned, that it was a creature of the public and that it must disclose its books and papers and other documentary evidence bearing upon an alleged infringement of the law.

Suit against this combination was begun by the Attorney General Dec. 27, 1904. It was alleged that manufacturers of paper, controlling and supplying the entire territory west of Chicago and east of the Rocky Mountains, had entered into an agreement to cease competing and to sell for one price, and for that purpose recognized as their selling agent the General Paper Company. Twenty-three independent firms and corporations engaged in the manufacture of paper entered into an agreement, and in consequence the price of printing paper and papers of other kinds was gradually advanced.

President Roosevelt has sent to Congress the report of the International Waterways Commission on the preservation of Niagara Falls. The report contains recommendations for the restriction of the amount of water to be diverted for power purposes, and suggests that the amount of water to be diverted be limited either by treaty or by legislation. The limitation is placed at 36,000 cubic feet per second from the Canadian side, and 18,500 cubic feet per second from the American side, in addition to 10,000 cubic feet per second authorized for the Chicago drainage canal, or more than one-quarter of the entire amount which leaves the river.

The Lick Observatory on Mount Hamilton, above San José, reports that the seismograph there has recorded twenty-four shocks since the morning of April 18. Most of these shocks were slight, making hardly a mark on the plate. During the first half hour after the great shake there were eight distinct shocks. On the next day there was a slight tremor between ten and twelve o'clock. No more shocks were felt there until April 25. The big shock was recorded at twelve minutes and twelve seconds after five o'clock.

Last November the Inter-Church Conference on Federation, representing a membership of sixteen million people, passed resolutions urging the Government to "take action for the promotion of an international inquiry" into the alleged abuses in the government of the Congo Free State. In March of this year similar action was taken by the National Council of Evangelical Free Churches of England, representing the entire constituency of the non-conformist bodies of England and Wales.

It is possible that, in rebuilding San Francisco, the lines of the "Burnham plan," which has been before the people several years, will be followed. It proposes wider thoroughfares, more substantial structures, a park system, and the division of the city into several districts separated from one another by boulevards. The end sought is utility no less than beauty, for the plan is meant to safeguard the city against the very calamity which has befallen her.

An agreement has been reached between the coal miners and the operators. By its terms the award of the Government Strike Commission is continued for three years or until March 31, 1909. The miners are to go back to work as soon as the collieries are ready. The agreement was signed at a meeting of the operators' committee of seven and the miners' committee.

The Board of Overseers of Harvard College has taken favorable action upon the question of intercollegiate football and the game will be given a trial under revised rules of play. No games are to be arranged for after December 1.

The Agricultural Department is to be investigated. The House by vote has empowered the Committee on Expenditures in the Agricultural Department to conduct such an examination.

The Lodge amendment, making pipe lines common carriers, has been adopted by the Senate.

Foreign.

The Czar's formal reception of the members of the Douma, May 10, passed off without any untoward incident. The tone of the speech from the throne was conciliatory. It expressed the Emperor's wish that relief be given to the peasants in their present conditions, and called on the members of Parliament to put their hearts into their work and to co-operate with him in solving the problems of Russia and in handing down a united and prosperous empire to his successor.

At the second session of the lower house of Parliament, there was a demonstration in favor of amnesty which was not mentioned by the Czar in his speech from the throne. The drawing up of the draft of the reply of the House to the speech from the throne at the opening of Parliament had not been completed for submission to the House. The Constitutional Democrats invited two representatives of the peasants, one Pole and one Jew, to participate in drawing up the draft, in order to secure solidarity. The main difference of opinion is in the wording of the intimation to the Emperor that the Council of the Empire, as constituted, is an anachronism. The reply will declare for a constitutional monarchy with full parliamentary rights; a responsible ministry chosen from the majority, full amnesty for political prisoners, universal suffrage, equality before the law, and the abolition of the death penalty.

The Council of the Scottish Geographical Society has submitted to the Secretary of State for India an appeal for the completion by the Indian Government of the exploration of the Brahmaputra River where it bursts through the eastern ranges of the Himalayas to flow across the plains of Assam and Bengal to the Ganges. Here is a stretch of probably more than two hundred miles through the mountain valleys, that has never been explored. The petition expresses regret that the Tibetan Mission did not carry out its original plan, after it had completed its work at Lhasa, of returning by way of the Brahmaputra to Assam. Since about 1888 the Sangpo of Tibet has been believed to be the upper course of the Brahmaputra. The known difference of levels renders it certain that the river must descend from Tibet to the plains of India by great waterfalls exceeding all others in height and volume, falls which are said by the Tibetans to exist.

The Hamburg-American Line steamer Kaiserin Auguste Victoria, the largest vessel afloat, sailed from Dover, England, last week on her maiden voyage across the Atlantic. She is 704 feet long and her beam is 77 feet. Her engines are capable of developing 17,200 horse-power and her cargo capacity is 10,000 tons. With her crew of 650 men she can carry a total of 4,150 souls.

The Portuguese warship Baptista Andrado, which was carrying a new governor to Mozambique, disappeared some months ago. It has now been found that she was driven ashore by a cyclone on an uninhabited African island. When found all hands were living Crusoe-like. All were well.

The output of the Transvaal gold mines for March was 443,723 ounces, valued at $9,324,075, which constitutes a new record, being 12,129 ounces over the previous highest monthly output.

Count Witte has resigned as Russian Premier and his resignation has been accepted by the Czar. He is succeeded by M. Goremykin.

Industrial and Commercial.

Trade of the United States with Brazil aggregates $110,000,000, and is only exceeded by trade with the United Kingdom, Germany, France, Canada, and Cuba. Brazil stands third in rank among the countries from which our imports are drawn but twentieth in our export trade. The United States uses in manufacturing industries practically one-half of the crude India rubber produced in the world, and her people consume more than one-half of the coffee grown. As Brazil is the world's largest producer of India rubber and coffee, her sales to the United States are large, but her imports, through custom and convenience as well as affiliation, are mostly from European sources.

Contracts have been closed for the erection at Bogalusa, on the Bogue Loosa River, Louisiana, on the line of the New Orleans and Great Northern Railway, of the largest sawmill in the world, so it is asserted, having an annual capacity of 150,000,000 feet.

A concession embracing five billion feet of pine timber has been secured in the Bahama group of islands by Lake Superior lumbermen. It is of the long leaf variety, similar to the old-fashioned Georgia pine.

Plans have been made for the construction in South America, Mexico, and China of rice mills to be equipped with American machinery.

General.

Mauve's painting, "The Return of the Flock," at the sale of the late Joseph Jefferson's collection of pictures, sold for $42,250. Mr. Jefferson bought it for only $2,500 in 1892. The entire collection of seventy-four paintings brought $220,135. Another Mauve, "The Loggers," brought the second highest price, $28,100.

The Cunard line steamship Campania recently sailed from Queenstown for New York with what is said to be the largest consignment of specie ever sent across the Atlantic on one vessel. The total value of the specie is £1,250,000 (about ($6,250,000) and it weighs close to twelve tons.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

A Letter from England.

Darlington, England, May 3, 1906.

Mrs. Mary Baker Eddy,

Discoverer and Founder of Christian Science.

Precious Leader:—There was so much help in the words you penned to me last summer, that I felt them to be an everlasting benediction; but gratitude bids me write again. Up to that time I had never seen that the "scoff" of mortals was no more harmful than their "praise."

Ever since I received the healing through our text-book, I have wanted to share Christian Science with the children of my native county. The opportunity came. Experience had taught me patience. I crossed the ocean twice. The last time I was better prepared. Now I am beginning to see what has been done for us through your love. The Cause of Christian Science is established in two places in this thickly populated county. My thanks are also due to my mother and brothers and sisters. Our young friends are also taking it up, and they show willing hands.

On the 7th of March there appeared in the leading daily paper here, a report of the Parliament of Free Churches held in Birmingham, England, at which over two thousand preachers were present. The retiring president, Dr. Horton, preached at the morning service, taking for his text: "God is Love." The report read in part as follows: "Dr. Horton somewhat startled his hearers by stating that one of the methods by which it [the teaching God is Love] could be tested was along the lines of Christian Science."

This same paper shortly after asked me for half a column on Christian Science, and gratefully accepted the enclosed.

With increasing love and gratitude,

Yours affectionately,

ARTHUR E. JENNINGS.

[The following is the article enclosed in Mr. Jennings' letter.—EDITOR.]

The question is often asked: "What is Christian Science?" The Hon. Charles Carrol Bonney, President of the World's Congress Auxiliary in 1894, said, "No more striking manifestation of the interposition of divine Providence in human affairs has come in recent years than that shown in the raising up of the body of people known as Christian Scientists, who are called to declare the real harmony between religion and science, and to restore the waning faith of many in the verities of the sacred Scriptures."

Christian Science! This name was given by Mrs. Mary Baker Eddy, a New England lady, to an important discovery made by her in the year 1866. Mrs. Eddy was the first in this age to conceive the idea of a purely metaphysical healing, based upon the Bible and the life and teachings of the Master and the apostles.

One need only pause a moment over the definition of these two words to perceive their significance. The word "Christian" means pertaining to Christ; and "Science" expresses knowledge, comprehension, or understanding. Hence the term "Christian Science" correctly explains the system which Mrs. Eddy has been called to establish—the Science of Christianity.

Her discovery was consequent upon restoration to health by metaphysical means, after a period of invalidism. Since this occurrence, some forty years ago, she has done a marvelous work for humanity. Her early religious training and rare intellectual gifts particularly fitted her for her life-work. Born of devout parents of English and Scotch extraction, at the early age of ten she was a writer of poetry. Her elder brother, Albert Baker, who was a prominent lawyer and Congressman, taught her Hebrew, Greek, and Latin. Mrs. Eddy studied medicine, theology, and art, and was widely known as a writer on current events long before the Civil War in 1861.

For the first three years after her sacred discovery in 1866 the Bible was her only companion. The promises contained therein were found to be as true to-day as when they were written, and capable of actual demonstration—when understood, and purity and goodness had been attained. Her first pamphlet on Christian Science was copyrighted in 1870, although this did not appear in print until 1876. Mrs. Eddy had then demonstrated and tested this Science fully, before imparting it to others.

The Christian Science text-book, "Science and Health with Key to the Scriptures," was published by her in 1875. Mrs. Eddy was the first to teach Christian Science Mind-healing. She founded a college, under the seal of the Commonwealth of Massachusetts, and taught over four thousand students therein. Many of these students have established themselves in different parts of the globe, and are at present engaged in Christian Science teaching and practice. In April, 1883, Mrs. Eddy had to protect her discovery in the law courts of Boston, and it was then legally recognized that she is the Discoverer of Christian Science.

Mrs. Eddy has stated that she thought the churches would gladly welcome her discovery; viz., the lost element of Christianity,—healing by the understanding of the Bible,—but in 1879 she was compelled to organize her own church, The First Church of Christ, Scientist, in Boston. This church alone has a membership of over thirty thousand, and it is growing rapidly. There are over nine hundred churches and societies established throughout the world. The membership of these churches is made up almost entirely of those who have been healed physically, morally, or spiritually through Mrs. Eddy's discovery. This proves, to any one who honestly cares to investigate, that the command given for all time, "Preach the gospel . . . heal the sick," is capable of fulfilment.

In the summer of 1898 Mr. Arthur E. Jennings brought the Christian Science text-book to his relatives and friends in this county. He had been in the United States for five years. Shortly after his arrival there he was helped physically and morally by the study of this book. This made him feel it was his imperative duty to bring it home. He remained here about three years, and some of his brothers and friends became interested, but not finding conditions quite ready to start the work, he went back to the United States, and at once entered actively into Christian Science work. For three years he was Reader in one of the Christian Science churches. At the end of last year he came home again. Services were started in the home of his brother (Mr. F. Jennings), in Darlington, during April of last year. The congregation soon outgrew the accommodation there, and public services were then started in the Temperance Institute.

Who are the Spiritually Minded?

CLARENCE W. CHADWICK.

To be carnally minded is death; but to be spiritually minded is life and peace.—PAUL.

THE true standard of spirituality was exemplified in Christ Jesus, "who went about doing good, and healing all that were oppressed of the devil." Jesus was the broadest-minded man who ever appeared on earth. Why? Because he possessed a scientific knowledge of God as infinite Mind, and of man as created in the image and likeness of this Mind; and this spiritual understanding enabled him to extirpate sickness and sin, and to annul every so-called law of matter. He knew that the real man could not be separated from the Mind that conceived him, and this gave him divine authority for rejecting the erroneous testimony of the physical senses, which deny the spiritual perfection of God and man. The natural effect of his scientific thought upon the health and morals of men is still styled miraculous by those who misinterpret spirituality.

Jesus' own words, "Blessed are the pure in heart: for they shall see God," clearly express the keynote of all spirituality. It is the mission of Christian Science, moreover, to lift the thought of purity above the level of physicality to the plane of pure spirituality, where it is just as incumbent upon the follower of Christ to eliminate from consciousness the thought of animate matter as it is the thought of sin and disease. Ethical and moral teachings of the past have advocated a spirituality which has left undisturbed humanity's belief of life, substance, and intelligence in matter; while Christian Science begins at once to uncover the false foundations of this belief as being the sole cause of all the troubles of earth. Christian Science does not rob mankind of one single thing that is good, pure, or true. It simply corrects a mortal, finite sense of that which is called good, and, clothing thought with spiritual power and understanding, brings it in touch with man's Maker, thus making it possible to apprehend and demonstrate the practical utility of the Principle of all health, goodness, purity, and righteousness in every walk of life.

We are told in Scripture that "a double minded man is unstable in all his ways." Surely such an one understands neither himself nor man's Maker. He is little else than a compound of erroneous beliefs, some of them called good and others evil. He unquestionably believes that he has a mind of his own, capable of thinking both good and evil; and this asserted dual capacity is upheld as a manifestation of intelligence. He believes it easier to think evil than good, and more natural to sin and be sick than to be righteous and well. He believes in the reality of both good and evil, both mind and matter, and yet will tell you that he knows "no man can serve two masters." Double-mindedness is really only another term for the "carnal mind" which is "enmity against God." Whoever believes in more than one Mind, or that omnipotent good is not all-power, is dead to the practical application of truth to the daily affairs of life, even if the world does believe him to be religiously inclined or broad-minded. Great is the difference between a belief in personal goodness or spirituality, and a demonstrable understanding of the one good,—God.

Christian Science insists that the tree shall be known by its fruits. The so-called spiritually minded must be able to prove their faith by their works. If the works do not follow, there is but one conclusion to arrive at; namely, that they believe in God but do not understand His allness. On the other hand, if the healing signs follow, we know that the Christ-mind and not the human intellect is asserting itself. Just to the extent that we reflect the one Mind can we be called spiritually broad-minded. Demonstration alone must determine our spirituality or lack of it. If we are dwelling in the thought of the conscious activity of the one good; if we are reflecting only such thoughts as belong to this "one good" and are inseparable from Him; if we know in whom we believe, it can then be said that we have entered into the true sense of Life and are at peace with God and man. Then shall we acknowledge no other power, presence, or reality but good.

There are many notable instances in history of individuals who have devoted their entire lives to the study of religion, who have read the Bible many times through, who have striven earnestly to live the Christ-life, and yet have failed to seek the practical immunity from disease which the Bible promises to the followers of Christ. These good people have, according to the world's religious opinion, been possessed with a marked degree of spirituality. Others have even thoughtlessly declared that they were "too good for this world," or "too good to live." Christian Science does not sit in judgment upon such as these, but it does draw a distinct line of demarcation between a non-healing belief in God and a demonstrable understanding of the power and presence of divine Mind; between a limited sense of intelligence which may think and talk fluently of or about God, and the spiritual understanding that reflects God's thoughts; in other words, "think God's thoughts after Him." Christian Science has come to reinstate in individual consciousness the prime essentials of Christian healing; viz., a spiritually scientific knowledge of God, and the conscious ability to reflect Him in thought and deed.

A healing consciousness is a law of exclusion to every thought that does not point heavenward. It is perfectly attuned to Life and harmony. It has no time for idle gossip, amusement, or entertainment. Sincerely and continuously it inquires of the Lord for instruction and wisdom. It "dwelleth in the secret place of the most High," "under the shadow of the Almighty." It is the charity that "suffereth long, and is kind," that is constantly about the Father's business, healing sickness, pain, and sorrow, and destroying sin of every kind. This is the consciousness that entitles one to the claim of spirituality. The spiritually minded are not consenting martyrs to false law and evidence; they are active mental workers, dwelling ever within the realm of spiritual activity, resisting evil intelligently, as a false claim of the carnal mind, and not as a tangible reality endowed with power and intelligence to defeat the purposes of the Almighty. Only "to him that overcometh" does God give "the fruit of the Spirit."

Wrest'ing Alone.

WILLIAM CAPELL.

SOME time ago, a woodman and myself stood near a giant oak tree, admiring its stately appearance. Its trunk was immense, its huge branches extended far out over the surrounding pasture-land, while above the ground could be seen portions of its large roots. In viewing this king of the field, the woodman exclaimed, "Any one could see that this tree grew apart from all others." It had been exposed to the raging storms of many New England winters, and had withstood, again and again, the sudden summer hurricane, yet it stood a conqueror, giving grateful shelter to man and bird and beast.

As we contemplate the experiences of the world's great moral and spiritual leaders, we are impressed with the fact that at the crises of their careers they have been, to human sense, alone. Jacob wrestled alone with the angel, and in our text-book we are given the wonderful significance of this struggle. (See Science and Health, p. 308.)

Moses was alone when the command of God was given him to take up the mighty task of liberating his brethren from Egyptian bondage. Elijah, fleeing from the wrath of Jezebel, went alone into the wilderness, where the supremacy of God, good, was revealed to his consciousness.

Digitized by Google

Jesus gained strength to resist the onslaughts of error, directed against his mighty works, by wrestling in the might of Spirit; alone in his greatest experiences. This was also true of Paul, and no less of John, the beloved of the Master.

Our revered Leader, in giving to the world the precious gift of spiritual healing,—the gift which Jesus bestowed, and which for many centuries was hidden from mankind,—labored long and alone with God, growing stronger at each successive stage to prove that her work was "rooted and grounded" in divine Love.

Every Christian Scientist has his times of testing. Alone, to human sense, he must wrestle with error. He must withstand the wintry storms of persecution and the summer hurricanes of envy and ill will, but none of these things can overthrow the loyal follower of Christ. Rather, they cause him to send his roots more deeply into the soil of divine Truth.

The New England colonists never forgot they were a chosen people. It was a community that believed in its own divine mission. It traced the existence of its settlement to the very hands of God, the God who led Israel out of Egypt. The settlers on the Bay of Massachusetts were certain that their providential exodus was one of the capital events in human history, that it had been predesigned from eternity to plant here, in a virgin world, the only true form of church government, and to cherish a church that should be a model to the old world in turn, and a kind of foreshadowing of the new heaven and the new earth. Some dreamed that the second coming of the Christ would take place among the rocky woodlands of New England.

"The Beginners of a Nation," by EDWARD EGGLESTON.

[Written for the *Sentinel*.]

The Call.

A TRIBUTE TO THE DISCOVERER OF CHRISTIAN SCIENCE.

BY KARL SUTTER.

Across the strands, across the lands, across the waste of years,—
A Voice called low, a Voice called sweet, a Voice spoke to our fears.
Kept calling, calling, loud and clear,
Still calling sweet and low,—
To follow where the Master trod, tho' none would hear or go.

Across the years, across the fears, above the time and tide;
In every age, in every clime, in lands both far and wide,
That still, small Voice kept calling,
Still calling sweet and clear,
But fell upon unheeding ears and lives of woe and fear.

O fearful years! O needless fears! gone now, despair and dread,—
There was an ear to heed and hear, a life that would be led.
And longing, longing, heard the Voice;
And trusting, found the Way,—
Then walking in it, reached the heights, the heights where dawns the day.

[When this poem was shown to Mrs. Eddy, she wrote the following uplifting and characteristic stanza.—EDITOR.]

Come, endless day,—no night, no site,
No climbing and no tire,—
The ascent made, the burden laid,
Nor yoke, nor tear, nor bier.

M. B. EDDY.

Selected Articles.

An Explanation.

Pleasant View, Concord, N. H., May 14, 1906.

To the Editor of *The Patriot:*

Such exaggerated prominence has been given by the press of the country to the gift of a six-thousand-dollar span of horses to the Rev. Mary Baker G. Eddy, that a plain statement of the facts is due the public. As Mrs. Eddy's Associate Secretary, I am familiar with every phase of the transaction from its incipiency until now.

About a month ago, Mr. T. L. L. Temple of Texarkana, Ark., a Christian Scientist, addressed Mrs. Eddy in reference to presenting to her the span of bays, Tattersall and Eckersall. Mrs. Eddy was naturally gratified by this expression of Southern chivalry, but her decision was to thank Mr. Temple for his kindness, to take the will for the deed and not accept his proffer.

In speaking of the matter, she said to me: "I should not feel right to drive behind such handsome and expensive horses when I should pass those who were perhaps suffering for the necessities of life."

Two things finally induced Mrs. Eddy to revise her first decision. The first was the desire of her coachman to "try out" this magnificent pair of Kentucky thoroughbreds, and the second was her characteristic thoughtfulness for the sensibilities of others—the fear that if she declined absolutely his sumptuous gift, Mr. Temple might feel that his generous kindness was not appreciated.

The outcome was that Mrs. Eddy wrote to Mr. Temple, thanking him warmly for his whole-souled Southern spirit and telling him that he might send the horses. In her letter she did not definitely accept the gift, reserving her final decision until she learned whether the horses were fully suited to her requirements. Mrs. Eddy has seen the span and admired their perfection of match, style, movement, and appearance, for she loves a good horse and knows one when she sees it.

The following telegram, sent by Mrs. Eddy to Mr. Temple upon receipt of the horses, will fully explain her feeling in regard to them:—

"Your munificent gift, the span of beautiful bay horses, arrived safely. As seen from my window, they are perfectly exquisite. Accept my deep-down thanks for your kindness and generosity."

It is but just to Mrs. Eddy to state that the pride of possession has never entered her thought. Not a word regarding the horses has been made public by her. On the contrary, she was much embarrassed when she learned the widespread advertising that had been given this simple, unostentatious act of a Southern gentleman.

Respectfully yours,

LEWIS C. STRANG.

The Concord (N. H.) *Patriot.*

Mrs. Eddy's Tribute.

The *Masonic Constellation*, published in St. Louis, reprints our Leader's letter to Mr. John C. Higdon which appeared in the *Sentinel* of March 10, and comments upon it as follows:—

Mrs. Mary B. Eddy, the great Leader of Christian Science, places herself on record in support of Freemasonry in a letter to Sir Knight John C. Higdon of St. Louis. It has often been said that the followers of Mrs. Eddy were antagonistic to Masonry; that as members of the church they could not retain connection with Masonry. Mrs. Eddy is the widow of a Mason, whose membership was held in St. Andrew's Lodge, No. 10, and Union R. A. Chapter, No. 3, of Wilmington, N. C.

A Critic Criticised.

Christian Science has its own advocates and apologists, and, if one may judge from the results of their labors, they are fully equal to their task. Perhaps no other religious sect in the world is growing so fast as this one; none gathers so many adherents from the folds of its opponents; none excites such consternation among the shepherds of those folds. To attempt a defence of Mrs. Eddy's faith is, therefore, unnecessary, and the secular pen is spared all temptation to assume that supererogatory task. In the interest of clear thinking, however, one may without presumption, and possibly without impiety, advert to certain logical deficiencies in the current criticisms of this victorious faith.

For the moment a well-known minister stands forth as the champion of evangelistic Christianity against Christian Science; and, since he is a man of acknowledged erudition and a master of polemics, it is fair to take the half dozen arguments which he made on last Sunday night as the strongest which the Christian pulpit can produce against it. While reading them one is impressed with their destructive force; they are just as valid against Christianity as against Christian Science. . . . We must not blame in Christian Science what we praise in other religions. The critic's assertion that Mrs. Eddy's revelation contradicts the Bible is made by each Christian sect against all the others, and by all of them against geology, astronomy, and biology. It cannot be supposed, therefore, that he made it very seriously. Let us turn to the more important matter of her miraculous cures. It is useless to deny that these occur. The evidence for them is overwhelming. It is claimed that the cures are only apparent, a sort of self-deception, and that "the disease is, of course, present" after the patient thinks he has been healed. This cannot be admitted. Christianity in its early days claimed, and indeed still claims, to make cures of precisely the same sort and by the same methods as Christian Science. The critic alleges that it is a baneful practice for Mrs. Eddy's followers to work these miracles. What, then, shall we say of the early Christians, and some later ones, who did the same thing? Is the principal evidence for the superhuman power of Jesus to be classed as "criminal malpractice"? . . . Concerning any religion, new or old, one pertinent question may be asked, and only one—"What does it do for its followers?" If it makes them healthier and happier, more at peace with themselves and the world, better to live with, sweeter in character and gentler in conduct, then it is a good religion. Whether Christian Science does this or not is a question of fact. Theoretical arguments are irrelevant to the issue.—*Portland* (Ore.) *Oregonian.*

Christian Science, though simple with the simplicity of truth, is not superficial, nor can it be said of true Christian Scientists that they call all human ills "imaginary." That would be a travesty of divine healing or Science. The divine Mind, when understood and obeyed, does more for man than any mortal, material method. Christian Science is not reactionary, but progressive. Its growth is best in those communities which are most permeated with truth-loving Christian enlightenment and beneficence.

GEORGE R. LOWE.

Ottawa (Ont.) *Free Press.*

Important Notice.

THOSE who approve and countersign applications will assist the Clerk, and also avoid disappointment to applicants, if they will hold until after the Annual Meeting the applications which have been sent to them for their signature at a date too late to reach the Clerk before the closing of the entries for admission, also notify them that their applications were too late to be entered.

All applications should be sent to the Clerk of the Church, William B. Johnson, 239 Huntington Avenue, Boston.

Among the Churches.

New Orleans, La.

First Church of Christ, Scientist, of this city, formerly holding services at 816 St. Charles Street, have purchased the property of the First Christian Church, on the corner of Coliseum and Melpomene Streets, and will hold its opening service in the newly purchased edifice this morning [April 15].—*New Orleans Picayune.*

Liverpool, England.

The Christian Scientists of Liverpool, England, having needed a Reading Room, removed lately to new and commodious quarters in Leece Street, an excellent situation in all respects.

The opening of the new hall took place on April 7, when friends from Manchester, Rochdale, Southport, Warrington, and also from some of the large Yorkshire towns, were present. Many interesting testimonies were given, illustrative of the saving, healing power of Christian Science. The meeting was a very happy one, especially to the workers at Liverpool, who, having organized only last November, were feeling deep gratitude that the pleasant hall and Reading Room had so soon been secured.

May the Liverpool church prove worthy of the blessings which have come to it through God's protecting care and His dear gift to this age, our Leader!—*Correspondence.*

The University of Michigan.

There has recently been established at the University of Michigan, a Christian Science Society, in accordance with The Mother Church By-law, "Privilege of Members." The Society has been very successful in the work it has undertaken, and enjoys an energetic and increasing membership. Its purpose is to further the Cause of Christian Science in the sphere of our university life. It is recognized as one of the active Christian societies of the university, and enjoys the privileges accorded to all student organizations of a similar character. Most of the work to date has been in the line of distribution of literature, carried on extensively and with good results.

Meetings are to be held monthly throughout the college year. Alumni of the university who are members of The First Church of Christ, Scientist, in Boston, Mass., are eligible to membership, and the society will be pleased to hear from them.—H. B. YOUNG, *Secretary.*

Troy, N. Y.

First Church of Christ, Scientist, of this city has had an exceptionally rapid advance to prominence and substantiality. It is doubtful if any church in Troy had so small a beginning as this. It is told as a singular fact connected with the building of their attractive chapel, that with a total membership of thirty persons this whole property, costing thirty thousand dollars, was donated to the trustees free of debt, having received no financial aid from any one who had not experienced and acknowledged help from Christian Science.

On the first of January, 1901, the free Reading Rooms connected with the church were formally opened. Great encouragement is often found here by those in trouble, and any assistance that can properly be rendered to the afflicted is cheerfully given. Hundreds of visitors attend these rooms, yet the place is so large, so well arranged, and so well conducted that it is quiet and peaceful.

In the very heart of our busy city, and during its business hours, these thriving, independent, and singularly happy people are endeavoring to make their religion intensely practical.—*Troy* (N. Y.) *Times.*

The Lectures.

Rockland, Mass.

Bicknell Young lectured on Christian Science at Grand Army Hall, Friday evening [April 6]. He was introduced by Ezra W. Reid, who spoke in part as follows:—

To-day we hear of the love of God and the brotherhood of man; we see an unmistakable movement away from creeds and doctrines and traditions, towards a religion of Spirit. Jesus foresaw this, and said, "The hour cometh, when ye shall neither in this mountain, nor yet at Jerusalem, worship the Father: . . . the true worshipers shall worship the Father in spirit and in truth." Every step which has been taken in the theological world towards a higher ideal is an indication that mankind is reaching out towards perfection, Truth, God, and away from creed and speculation. It is now forty years since a woman standing alone began to proclaim to humanity a religion which was practical and operative, and during these forty years it has stood the test. Christian Science is nothing if not practical. The human mind of the present time demands something more than mere thories; it is, unconsciously to itself, throwing off every unreasonable and speculative belief and is demanding that which is consistent with the idea of God as an all-powerful and all-wise creator.—*Rockland Independent.*

Redlands, Cal.

The Contemporary Club auditorium was well filled with people yesterday afternoon [April 15] to hear a lecture on Christian Science by Clarence C. Eaton of Tacoma, Wash. He was introduced by R. Holtby Myers, who spoke in part as follows:—

I am told that over fifty thousand people in the United States have, during the last twenty-five years, adopted Christian Science as their religious belief. No one can contemplate such a religious movement without recognizing it as a force worthy of careful consideration by every thoughtful man. This is an age of spiritual as well as scientific inquiry. It behooves us to weigh carefully new evidences of spiritual development before rejecting that which may be new truth. A religion which accepts the teachings of Jesus of Galilee, whose resurrection we commemorate to-day, and which brings comfort to so many thousands of our fellow-countrymen, should command at least our respect and friendly tolerance. Any religion which contributes to the happiness, the joy, and gladness of human life, which ameliorates and relieves suffering, sorrow, grief, and distress in this world of ours, is surely entitled to a fair, patient, and generous hearing.—*Redlands Facts.*

Houston, Tex.

Rev. Irving C. Tomlinson of Concord, N. H., lectured before a highly appreciative audience at Turner Hall last night [April 7] under the auspices of Second Church of Christ, Scientist. The speaker was introduced by Judge Sinclair Taliaferro, whose preliminary remarks were in part as follows:—

The question was often asked in Jesus' day: "By what power doth this man do these things?" It has been often repeated since, but the answers made have been generally vague and unsatisfactory. Some have contended that the power by which this man accomplished these great and beneficent results was a power God-given, and peculiar to the man himself, or at least limited to those individuals upon whom he in person conferred the right to use it—hence, we hear of the "days of miracles." Many a child seated on the knee of a loving mother has had recited to it the wonderful acts of kindness and love done by this man, beneficial to suffering humanity; but when to the question: "Can they do those things now?" the reply has been given, "No, those were miracles, and the days of miracles have passed," the children have been led to feel in their infantile hearts that God and His goodness belong not to the present, but to the realms of the past.

A new sect of the Christian church has unfurled its flag and now offers a new-old creed to the thought of the civilized world, and I am informed that one of its chief items of belief and teaching is that the same power exercised by the wonderful man of some nineteen centuries ago is yet a living, vital force, and capable of being utilized now for the benefit of the human race, to the same extent that it was invoked by the Man of Galilee in the shadowy ages of the past. I know not how this may be. If the teaching be true, the blessings which will flow from its discovery and propagation will soon impress its truth upon the thought of the civilized world with ineffaceable distinctness and character. If it be false, then it will share the fate of the many ideas and creeds which have, in centuries past, been promulgated by man, only to receive a passing thought, and then be forever buried among the wrecks of time, disproved and dishonored.

Houston Post.

Lectures at Other Places.

Oil City, Pa.—Rev. Arthur R. Vosburgh, Jan. 14.

Preliminary Arrangements for June.

A COMMITTEE has been appointed to find rooms for those attending the June meetings of The Mother Church, and this Committee will be able to provide rooms for all visitors. Those who have not made definite arrangements are requested to communicate with this Committee as early as possible, stating their precise requirements, the price they are willing to pay, etc., in order that an approximate estimate may be made of the amount of accommodations which will be required. This Committee will not undertake to engage or assign rooms in advance, either in hotels or private houses. Those wishing to engage rooms in advance should communicate directly with the hotels at once.

It is desirable that, where practicable, one person should act for a group from one locality. This will greatly facilitate the work of the Committee.

On their arrival in Boston, those who are depending on this Committee for rooms are requested to go to Horticultural Hall, corner Huntington and Massachusetts Avenues, which has been engaged as headquarters for this Committee, commencing Thursday, June 7.

Address: ROOM COMMITTEE, 250 HUNTINGTON AVENUE.

Railroad Rates.

Almost all the railroads have agreed to make a reduced rate of practically one fare for the round trip to Boston for the Communion season. It is suggested to those intending to visit Boston that they consult their local ticket agents a sufficient time in advance of their intended departure to enable the agent to secure tickets, etc.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

True Appreciation.

[The following letter so ably supplements Mr. Strang's article, "Lest we forget," which appeared in the *Sentinel* of April 28, that it is worthy of careful attention on the part of Christian Scientists, and we are glad to accord it a prominent place in our columns.—EDITOR.]

New York, N. Y., May 5, 1906.

Beloved Teacher and Leader:—I read Mr. Strang's splendid tribute to you, published in the last *Sentinel*, with great interest and appreciation. The warning is timely, and such danger signals as this, placed at perilous points in our heavenward journey, I am sure will save us many mistakes and much unnecessary suffering. I am at times overwhelmingly impressed by the thought of the true relationship which exists between Christian Scientists and you, and how imperative it is to maintain these sacred ties pure, clear, and inviolate. I am impressed with the great need of understanding this relationship and forever demonstrating this understanding in humility and obedience to Principle, to insure the perpetuity of this great Cause. I am convinced that the future integrity and effectiveness of this powerful movement must be, as it has been, dependent upon the loyalty, love, and distinguished meekness of its individual members, and this can only come as the result of a right apprehension and recognition of you, and a constant recollection of the everlasting indebtedness and gratitude which are your due.

As one contemplates the allurements which beset Christian Scientists on every hand during these days of formation,—the temptation to indulge personal sense at all seasons, particularly the summer season; the suggestions which would lull to sleep with laws (lies) of old age, usefulness past; withdrawal to country homes, mountain, and seaside; rest in foreign and home resorts; the subtle temptations to procrastinate,—failure to improve the moments, the *now;* the habit of vacillation, of ebbing and flowing, manifested in bursts of activity, soon lapsing back into periods of indifference and lethargy; in general, the common tendency to shirk the divine responsibility to perform the greatest good to the greatest number and through such effective means as written articles contributed to our periodicals, through spoken testimonies on Wednesday evenings, and above all through readiness to be about the Father's business in healing the sick and the sinner,—I say, as one observes these ominous signs during these times of apparent prosperity, one can but shudder at the dire result, did the future of Christian Science depend upon these wavering efforts.

It should, moreover, be well apprehended that your demonstration for humanity,—marvelous, vast, and comprehensive as it is,—while showing the divine way to this age, can never relieve a single individual of a single responsibility, nor atone for the errors, omissions, or faithlessness of a single follower; for, as you say regarding the great example of the beloved Master, "Jesus spares us not one individual experience, if we follow his commands faithfully; and all will have the cup of sorrowful effort to drink, in proportion to their demonstration of his love, till all are redeemed through divine Love" (Science and Health, p. 26). May this redemption draw nigh as God would have it, that the wise and faithful whose lamps are kept replenished, trimmed, and burning may "inherit the kingdom prepared for you from the foundation of the world."

Humbly and gratefully your student,

JOHN C. LATHROP.

The Healing Sense of Nature.

THE student of acoustics speedily learns that the air waves which have contributed to his sense of sound represent but a very small fraction of the tonal scale which he would be able to hear were his aural sensitiveness more refined, and in a kindred way students of Christian Science soon realize that they can apprehend the truths of the universe about them only in the measure of their spiritual perception, and that as yet they have compassed but a trifling arc of that perfect circle of divine manifestation which it is theirs to apprehend as they awaken to the truth of being.

The cry, "Back to nature," which is being heard on every side, is in large part the expression of an impulse that would eschew the haste, pretence, superficiality, and extravagance of modern life, and that would find the more satisfying in the more simple and genuine,—those conditions and experiences which ever affiliate themselves in thought with birds and flowers, the sunshine, and the sky. As never before, the gain to those who are privileged to get into close touch with nature is being emphasized in the schoolroom, and in unnumbered philanthropic endeavors to bring the sweet out-door within the reach of the shut-in and the debilitated, and all this witnesses to a more general recognition of the truth which Chaucer expressed long ago when he wrote, "Nature is the vicar of Almightie God."

In these days when we of the north-land stand "hushed and wondering before the epiphany of Spring," the fragrant call of fell and field is peculiarly winsome and there is ready response to its "fine impulsion." With a common instinct and common joy would we turn away from the complexity and congestion of conventional experience, "come forth into the light of things," and "let nature be [our] teacher." That this drift in thought and impulse is wholesome none will question; nevertheless, it offers a temptation against which Christian Science counsels an alert watchfulness. The enamored nature-lover who finds satisfaction with that sense of the beautiful which identifies it with material conditions and phenomena, inevitably suffers disadvantage. Content with the delight of physical sense witnesses to spiritual barrenness and decrepitude. It is an absorption in the glamour of that expression of beauty which takes no thought for the source of beauty, and the more refined the intoxication of this sense the more subtle and harmful it becomes. Christian Science teaches that our thought of nature as of man should be spiritual and healing. "Nature voices natural law and divine Love, but human belief misinterprets her." "Mortals must look beyond fading finite forms, if they would gain the true sense of things" (Science and Health, pp. 264, 240). In these and many kindred passages Mrs. Eddy directs thought to that explanation and interpretation of nature in which beauty like truth brings both inspiration and health. The glories of the sunset sky and the flowering trees bring something of pleasure to all, but they yield real nourishment to those only who, escaping the thrall of material sense, "look beyond" and discern the manifestations of that divine "Love which paints the petal with myriad hues, glances in the warm sunbeam, arches the cloud with the bow of beauty, blazons the night with starry gems, and covers earth with loveliness" (Science and Health, p. 247), and it is apparent that this perception cannot be reached so long as we think of beauty as an incident of material change.

Digitized by Google

Furthermore, the realization of the oneness of Life, apart from matter, awakens an otherwise unknown interest in all living things, a new sense of kinship not only with all creatures but with the trees and plants,—those growing wonders in whose sweet unfoldment the expressions of omnipresent wisdom and beauty are less obscured, perchance, than in mortal man. One thus learns to love every gentle and innocent thing in a way that is distinctly elevating to thought and that brings a new and abiding gladness into every hour's experience.

Wandering amid the prodigalities of nature in golden summer days, we shall not go astray if we follow the guidance of spiritual sense alone, while on every hand we shall be able to gather, for ourselves and for others, the honied sweets of Love's limitless manifestation.

JOHN B. WILLIS.

Man Revealed in Science.

THE psalmist's query, "What is man?" is often voiced by those who are confused by material sense testimony, but who honestly desire to know what man really is. Of old, the prophet said, "Cease ye from man whose breath is in his nostrils: for wherein is he to be accounted of?" and this is the injunction of Christian Science to-day. In spite of this warning, mortal sense clings to its own false concept instead of giving it up for the true idea revealed in Science. It would certainly seem as if students of our text-book, "Science and Health with Key to the Scriptures," could not mistake the mortal concept for man as therein revealed. Well may our revered Leader say, "Mortals have a very feeble and imperfect idea of the spiritual man. . . . Never born and never dying, it were impossible for man, under the government of God in eternal Science, to fall from his high estate" (Science and Health, p. 258).

Science shows the necessity for a perfect model in all our work, and it is of the utmost importance surely that we gain and maintain clear views on this vital question, in order to do the most effective work in the healing of the sick. We therefore cannot be too familiar with the statements concerning man which are given on pages 475 to 477 of our text-book, especially the statement, "Jesus beheld in Science the perfect man" (p. 476). Through Science alone can we behold the perfect man, never through sense.

It is scientific to know and declare that man, as God's likeness, is spiritual and perfect, and as the sick and weary mortal sense looks away from self and beholds this perfect man, the mortal concept, which has no reality except to belief, begins to vanish like a dissolving view; the manifestation of Truth is revealed in Science; and as our text-book (p. 477) says, this "correct view of man" heals the sick. This process is beautifully described by Paul, who says, "We all, with unveiled face reflecting as a mirror the glory of the Lord, are transformed into the same image from glory to glory" (Revised Version).

It sometimes happens that students of Christian Science, in their eagerness to advance, seize upon statements which are supposed to be scientific, and therefore of value, but which are incorrect because they predicate of mortals what can only be declared of the real man. A more careful study of Mrs. Eddy's writings would render such mistakes impossible; for they never teach that mortal man is good, much less perfect, but that he is the unreal counterfeit which disappears as Truth is understood, and the sooner the better for suffering mortals. The perfect model revealed in Science is to-day uplifted before humanity through our Leader's work, even as when Moses lifted up the serpent in the wilderness, and the suffering people who looked up to it were healed. The psalmist says of man that God has "crowned him with glory and honor," and has given him "dominion" over the works of His hands. This man, Christian Science reveals!

ANNIE M. KNOTT.

Letters to our Leader.

Manchester, England, April, 1906.

Mrs. Mary Baker G. Eddy.

Beloved Leader:—"Neither space nor time can separate genuine Christian Scientists." "Behold, how good and how pleasant it is for brethren to dwell together in unity." This message that you sent through the *Sentinel* to First Church of Christ, Scientist, Manchester, England, lives ever in our thought, and we desire to realize more fully the real import of those words. At the present moment they have been brought more vividly to mind by a loving and united effort for the Building Fund of The Mother Church. In response to the urgent appeal for funds which reached us through last week's *Sentinel,* the branch churches and societies in Manchester, Liverpool, Leeds, Sheffield, Birmingham, Bradford, Rochdale, Warrington, and Southport, co-operated in raising a fund, the amount of which has been forwarded by this mail to Mr. Chase, making the total amount contributed by these branch churches and societies for the building of the extension of The Mother Church £508 13*s*, 8*d* ($2,441.68).

It will interest you to know that all these branch churches and societies have only been established since Christian Science was brought to Manchester, five and a half years ago, so that we feel sure you will the more rejoice, knowing that though some of us are but tiny tendrils, yet that in our earliest days we are growing up with our noblest and best thoughts lovingly and gratefully entwined in the Mother Vine. Yours in the bonds of Christ,

THOMAS MACLURKIN.

Treasurer for The Mother Church Building Fund, for the joint churches and societies in Lancashire, Yorkshire, and Warwickshire.

[It is inspiring to note the love felt for our Leader and for The Mother Church by these far-away friends.—EDITOR.]

Copenhagen, Denmark, April 27, 1906.

Our Beloved Leader:—May we, the devoted followers of Christian Science in Denmark, take up one moment of your precious time to express our heartfelt gratitude for all the blessings God has given us through your consecrated and loving work. We are as yet but a small band, trying to demonstrate love, health, and holiness in our lives. Our eyes are being opened, and light and harmony are beginning to enter our homes through the revelation given in your blessed book, Science and Health. It is being proved to us, through demonstration, that neither sin nor sickness are according to divine law and that they disappear before the light of Truth.

Our meetings are held in Danish, our services in English and Danish, and we are striving to realize that "the new tongue" of Spirit is universal, and that Spirit will teach us to understand. Our little Sunday School numbers eight pupils. A few of us have rejoiced in sending every year our small mite to the Building Fund of The Mother Church, and simultaneously with this letter we are happy to forward to the Treasurer the sum of kr. 300 as a small manifestation of our love and gratitude. It is our earnest desire to be found faithful and true.

In behalf of the Christian Scientists in Copenhagen, Denmark. Lovingly and gratefully,

JOSEPHINE LAKJER.

Collins, Miss., May 1, 1906.

Mrs. Mary B. G. Eddy, Pleasant View.

Beloved Leader:—On March 4, 1906, I was in Collins, having been called here to treat a patient. On that Sunday, seven Christian Scientists, myself among the number, met at the home of a gentleman and his wife to read the Lesson-Sermon. This couple had read the Lesson-Sermon

Digitized by Google

every Sunday for a year or two, but this was the first time they had ever had any one else to meet with them. I returned to New Orleans, and the little body of earnest seekers for Truth continued to meet for the service each Sunday.

On April 22, 1906, I was again here and met with them, there being twelve present. After the Lesson was read I proposed that a collection be taken for the Building Fund of The Mother Church. This met with a hearty response, and resulted in a collection of twenty-three dollars, which was forwarded to Mr. Chase the next day.

All of these dear people (ten adults) have felt the healing touch of Truth. All, excepting two who have needed no treatment, have at different times been under my treatment, and I can testify, from the love which they express to you, our dear Leader, that they felt it was a pleasure to give to the Fund for the extension of our Church edifice, which stands as a type of the healing and regenerating work that is being done as a result of your labor for mankind. I know that an account of this, the starting of another branch of The Mother Vine (should you ever read these lines), is dearer to you than the material structure—for that is dear to you only because it is an expression of love and gratitude from earth's weary ones who have been healed of sin and sickness through your words and works. We are endeavoring to follow you as you follow Christ.

In humility and sincerity your student's student,

M. Elizabeth Lengsfield.

Asheville, N. C., May 6, 1906.

Beloved Leader:—We were so grateful for Mr. Strang's loving reminder: "Lest we forget." I read it in church Wednesday evening, and there followed one of the most helpful meetings we have ever had, and all expressed such deep love and gratitude to you.

We are now sending both of our Sunday collections every week to Mr. Chase, for the Mother Church Building Fund. We thought it might prove more helpful to send the contributions weekly, and in this systematic way.

Dear Leader, I cannot tell you how full of love to you my heart is, for what you have given us, and for urging us on to reach the goal of scientific demonstration, and for encouraging and watching over us all the way. The way never seems hard nor the cross heavy when I think of you. Truly, blessed are the eyes that see the things which we see, and the ears that hear the things which we hear. The meaning of this step upwards, which we are now taking in completing the new Mother Church building, seems to deepen and broaden in my thought daily. I see such a wonderful explanation of this hour, and its parallel with Jesus' glorious mission and ministry, in the eleventh chapter of Revelation. It points ever more clearly to what you are, and what God is doing for the world through you, our blessed Leader. God bless you, beloved one.

With devoted love,

Elizabeth Earl Jones.

The Communion Hymn.

The Communion Hymn, "Saw ye my Saviour?" the poem by Mary Baker G. Eddy, the music by William Lyman Johnson, is now published for *high* and *low* voice, soprano and tenor in G, and for low voice in E, range from A to E. Price, 50 cents per copy, $5.00 per dozen.

Pictures of The Mother Church.

The Christian Science Publishing Society is not yet ready to announce the sizes and prices of the pictures it will publish, but hopes to give this information in the next issue of the *Sentinel*.

Testimonies of Healing.

In December, 1904, about 2 P.M., while stepping from a ladder to a roof, I fell backward a distance of seventeen feet, breaking my left collar-bone close to the shoulder, also experiencing the usual results when a heavy man falls that distance. As soon as I had recovered consciousness, I went to the office of a surgeon and had the bone set. When offered tablets to induce sleep, I told the doctor that I believed in Christian Science and needed nothing but to have the fracture reduced. I walked to my home and at four o'clock sent for a Christian Science practitioner. She came at once, left me about six o'clock, returned about nine, left again at ten, and in that short time the sense of suffering had been so completely overcome that I retired and slept the greater part of the night. During the rest of my trial I suffered no pain from the fracture. I was told by the surgeon that six weeks would find my arm in splints, but I returned to my work in two weeks; in three weeks the free use of my hand was given me, and in thirty-one days the surgeon removed the last trace of his handiwork and pronounced my arm entirely sound. I was told it would be a year, at least, before I could have complete use of it, but in two months after the splints were removed that prediction was set aside. Considering the distance I fell, my weight, age, and temperament, I am more than gratified with the healing. In the four weeks that I was in the hands of the Christian Science practitioner I found new ideals, also an incentive to attain them, and sunshine has taken the place of the shadow.

Frank Herbert Clark, Dover, N. H.

Some months ago, while attempting to board a street car, I was thrown to the pavement and rendered unconscious for a time. I never asked how long I was in this condition, but when I began to notice my surroundings I was in a strange house with a Scientist sitting beside me, and I shall never forget the feeling of peace and comfort that came over me at this evidence that I was in the loving care of infinite Mind,—divine and ever-present Love. I cannot find words in which to express my sense of the power with which the truth cleared the atmosphere in that room and let into my thought the consciousness that there is no power apart from God.

My daughters remained calm enough, in the midst of others' excitement, to do all that was necessary to secure my treatment in Christian Science, without antagonism from the attending physicians who had been called in by friends in the absence of my wife. The proposition to take me to a hospital was vetoed, and I was taken home in an ambulance and put in my own bed. Can one realize how grateful I am when I remember that my youngest daughter, aged fifteen, came to my side in that house where strangers were assembled, and said to me, "Papa, you know the *real* child is not hurt," and that my oldest daughter, aged eighteen, stood out firmly for the supremacy of Christian Science in the hour of my seeming inability to decide such matters for myself; and that my wife, recalled by telegram, only a short time after she had bidden me good-bye, was enabled by her knowledge of the truth to overcome her own fear, and arrive at my side confident in the power of divine Principle to heal "all our diseases"?

I had been put by friends under the care of two physicians immediately after the accident, and when my wife reached home, about five o'clock in the afternoon, my right arm and shoulder had been bandaged, one of the three or four cuts in my head had been stitched, and I was resting easily, with a professional nurse in attendance upon me. I was conscious of the gentleness and kindness of these professional friends who, according to their best judgment, had ministered to my comfort. They were informed that we were Christian Scientists and desired no

Digitized by Google

medicines to be given, and no professional assistance except such as they had seen proper to give surgically, and which they had already performed in the setting of a seemingly broken shoulder and the stitching of a scalp wound. It is due these good people to say that our wishes were cheerfully acceded to during the short time I received their visits. While it is quite certain they voiced some dark thoughts on the day of the accident to others, nothing of the kind was spoken of in the family, and, on the other hand, pleased surprise was openly expressed at the rapid healing witnessed.

I was under the treatment of a brother Scientist from the time of the accident for about a week, and worked constantly myself, with the happy consciousness that divine Love was ever with me. I stayed in my room two days and in the house a week, at the suggestion of the physician, whose recommendations I acceded to in the spirit of "suffer it to be so now," and because I had no reason to oppose him so long as he did not prescribe for me or insist on my taking material remedies. The wounds in the scalp healed promptly and all signs of them were easily gotten rid of in less than a week. The shoulder knit so promptly that the surgeon had no further work to do, even from his own standpoint, than to renew the bandages and keep them from slipping.

Ten days after the accident I attended the Sunday morning service in our church; the following Wednesday evening I was able to take my part of the church service, the physician having taken off the bandages on the right arm and shoulder which I had been wearing, practically without pain, one day less than two weeks. Three weeks from the time of the accident, I shaved myself with a safety razor, using my right hand and the arm which had been broken. I told the doctor, the day he took the bandages off, that some doubt had been expressed as to whether I had a fractured shoulder, because I recovered the use of the arm in so short a time; to which he replied, "I told Dr. ——, who helped me bandage your shoulder, that your break was so unusual that unless one saw it he would hardly believe it could occur." I send my humble and grateful testimony to the Field, that it may help some others to see that our needs will all be met in the very best way possible in view of the individual's present attainment. Thank God for Christian Science, through which I was enabled to overcome evil and return to my place in the church and in my office, all within two weeks and a half of my temporary disablement.—ELLIOT HOWARD GILKEY, Columbus, O.

It is through Christian Science that I am alive to-day. I was suffering from hereditary consumption with its attending ills. The last trouble that developed was in my right side. The doctor said my liver was hardening. We had tried many physicians, but they could not do anything for me. The last one said that there was no help, and I probably would not live three months. He did all he could; blistering and outside applications were resorted to, but failed to relieve the pain. It was at this time that a kind neighbor came in to ask us to attend a lecture on Christian Science, and talked with my husband about my case, telling him I could be healed; but as I was so far gone and everything had been tried without benefit, he thought she did not know what she was talking about. She then asked to be allowed to bring in some reading matter, to which he consented, and it was my reading in the *Sentinel* and *Journal* of the wonderful cases of healing, that gave me new hope of life. We each felt thankful to God for this; it was indeed a revelation to us to learn that God is here and now healing the sick and reforming the sinner,—ready to help all who come to Him. I looked in the *Journal* for the name of a practitioner and asked for help, which was lovingly given. I received treatment for two weeks. On the third day I was healed of chronic constipation; the trouble in my side and consumption were healed in two weeks.

This was over six years ago, and I have never had any return of these diseases, in any way. I have been entirely free from them since that time, and many minor troubles have also disappeared. We have proved many times that God is a very present help in time of trouble. For the physical healing I feel very thankful, but my greatest blessing through Christian Science is the spiritual uplifting and the understanding of the Bible gained through "Science and Health with Key to the Scriptures" by Mrs. Eddy. Now we go daily to the Bible and Science and Health for our health and comfort. They have revealed to our understanding the living God, good. I feel an ever-increasing sense of gratitude to God, and to our dear Leader for Christian Science, and for what it has done for us when everything else had failed and I was facing death. It has proved the words of Jesus to us many times,—"Ye shall know the truth, and the truth shall make you free."

FLORENCE E. WEBB, Oneonta, N. Y.

About two years ago Christian Science was brought to my notice, and after reading some *Sentinels*, I purchased a copy of Science and Health and began reading it at every opportunity which I could find, but being a traveling man my time was pretty well occupied. At first this book seemed very difficult to understand, but the more I read the brighter grew the way, and the Bible, which had been little understood, and seemingly full of contradictions, became a new book to me. While traveling in Arkansas I visited a Christian Science church at Little Rock, for the first time, and was very much impressed with the services and the welcome I received. The next day I purchased a Bible to carry in my grip, that I might learn more of both the Bible and Science and Health, for the two are inseparable. I had been a member of an orthodox church, but the Bible had only been read as a matter of duty; while it is now becoming a pleasure to read it. Inside of six months I was healed of a serious ailment of nearly two years' standing. Last spring, while moving our piano, I sprained my side, and it seemed to grow worse for several days, until I felt I must have help, and telephoned to a practitioner. I kept on at work, moving and lifting, yet in three hours I discovered that all trace of my lameness and soreness had disappeared, and it did not return.

During last winter I came home and found our little girl, nine years old, with a very high fever. With my little understanding I did the best I knew how for her, and in half an hour she was quietly sleeping and was free the next day. Recently I was overcome with chills, fever, and night sweats. After twenty-four hours my own efforts failed to give relief, so I wrote to a practitioner for help, and after she received my letter all these disappeared.

Over a year ago my wife was confined to her bed most of the time for nearly three months with great suffering and sleepless nights, from serious internal inflammation. The doctors did all in their power to alleviate her suffering, but could give no encouragement except by an operation, which she would not consent to, but determined to try Christian Science. I wrote a practitioner to come and see her. She gave one treatment, and before night all suffering was gone, my wife slept like a child, and by the next day all trace of her trouble had disappeared. No operation was required, and she was wholly cured, which seemed wonderful to me. Our little girl had a bunch on the side of her neck, half the size of a hen's egg, which was removed with the help of a practitioner in three days. We have been able with our little understanding to help each other many times.

We are indeed grateful to Mrs. Eddy for the great light she has brought to the world through her untiring efforts, and that we are privileged to be partakers of these blessings. We know we are made much better through the help of divine Love, and our daily prayer is that we may do God's

Digitized by Google

will and practise the two great commandments, to love God, and our neighbors as ourselves.

E. S. FULLER, Wellsville, Mo.

During last August, after some three weeks of intense suffering, I was taken to St. Luke's hospital for the purpose of being operated on for what was diagnosed as an internal abscess. My family physician and two others agreed that an operation was absolutely necessary. At this time I was in great agony, which was relieved only by taking morphine. On arriving at the hospital four other physicians examined me and pronounced the same verdict, and said that an operation was the only way of saving my life. I stayed there one day and then decided to return home and try Christian Science. I told the nurse of my decision to go home, but did not mention Christian Science. She called one of the physicians, who expostulated with me and predicted my death in a few days in the most dreadful agony unless I submitted to an operation. On failing to impress me he called another, whom I understood to be the head surgeon, and he also tried to convince me of my folly in leaving the hospital. I, however, persisted, and ordered a carriage, after which I was required by the hospital authorities to sign a paper, releasing them from any possible charge of negligence or blame in the matter. Having so done, the nurse put me in a reclining chair and wheeled me to the carriage door.

For a day or two I was better; then the terrible pain returned and I seemed to be sinking into a state of coma. Three days after this the abscess began to discharge, but blood-poisoning did not set in, and in a few weeks I was entirely healed. Furthermore, I am still well.

I am deeply grateful to Mrs. Eddy for having brought this truth to a waiting world, and I rejoice in knowing that God is the only power,—a very present help in trouble.

SOPHIE VON S. CHAPMAN, New York, N. Y.

It is now nearly five years since I first heard of Christian Science. At that time I was healed in one week's treatment of a severe form of stomach trouble from which I had suffered greatly for over eighteen years. At the same time I was healed of a bowel trouble for which I had medical attention for many years and which had grown steadily worse instead of improving.

When first I heard of this truth I was preparing for an operation in a hospital, but after having treatment in Christian Science there was no need of the operation, and since that time no material remedies have been used in our home. The teaching of Christian Science appealed to me as no other had ever done, and the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, has many times brightened and illumined the way. There have been great peace and happiness in our home since we have learned of this blessed truth, and I am thankful to add one more testimony to the many already told. I have been able to help others to "fight the good fight" and to lay hold of eternal life.

My heart is filled with love and gratitude to our dear Leader, Mrs. Eddy, through whom we have gained an understanding of divine Principle as revealed in Christian Science.—MRS. SARAH ROGERS, Toronto, Ontario.

Since coming into Christian Science, ten years ago, the truth has been our only physician, and I rejoice because I have found what I had so long been looking for, that is, a practical religion. Through its teaching we have seen the power of Truth destroy many ailments. Last June, our boy, now fourteen years old, was taken with a severe case of measles, and it seemed for the first two days that fear would master us. On the third day I sat by his bedside and read the Lesson-Sermon to him, from the Bible and Science and Health. The fear was destroyed, and he then dressed himself and came downstairs. For this healing, and for many other blessings which we have received, we are truly thankful to God, and I wish to express my love and gratitude to our faithful Leader, Mrs. Eddy, who has shown us the way to Truth.

MRS. CAROLINE PLUMB, Bracebridge, Ontario.

During seven years of my early married life I endured many ills of the flesh and "suffered many things of many physicians." I was afflicted with a chronic liver trouble, and with indigestion so acute that I ate no solid food for four years without a penalty of extra suffering. In addition, there were complications of female trouble requiring the aid of surgery, and an operation was performed. This combination of ailments reduced me to a state of complete invalidism. Four physicians, among the best and most competent in the city, had been in attendance upon me, sometimes singly and sometimes in consultation. They at last pronounced my condition hopeless; they told my husband they had exhausted their skill, that it was useless to give me medicine as the system had ceased to respond and the vital forces were too exhausted to build on. The final hope held out to me was another surgical operation. In reply to my asking for an opinion as to its result, they said, "It will perhaps make you more comfortable, and it is all we can do for you." I refused to go to the infirmary on this slim chance of relief. These doctors were most kind in their treatment of me and I was grateful to them for their interest, but I felt a great thrill of indignation that they had put a limit on my life, and had said that I must be resigned to die. I rebelled at this verdict, for I felt that they were usurping the power of omnipotence in this decree of death for me and orphanage for my little ones, and I refused to accept it. I blindly believed that there is a God of Love who does not willingly afflict the children of men, and who could save me, and I prayed constantly for three months that He would lead me to the physician who had the skill to cure me. I still leaned on an arm of flesh, and thought a doctor must be the agent for my deliverance. I do not now recall the cost of my long illness; but I know that it took almost all our living, even when the doctors made reductions in charges, in view of the chronic conditions. The drug bills alone were always more than those of the grocer.

About this time I heard that a Christian Scientist was in the city, and was told of some wonderful cures. Though I knew nothing about the subject (sixteen years ago Christian Science was almost unknown in this city), I sent for him to come to see me. I asked him, "How do you cure people?" He replied, "By following as nearly as we can in the footsteps of Jesus and doing the works he commanded us to do." The answer convinced me that this was really the way that God heals our diseases, and I asked for immediate treatment, with the result that whereas my husband had left me in the morning a helpless invalid, he returned at night to find me dressed and ready to preside at the supper table. He exclaimed, "What miracle is this?" and learning of my treatment in Christian Science said, "Though it seems impossible, I must believe the evidence of my eyesight." We both began the investigation of Christian Science and accepted its teaching. We have raised our children, all adults now, in Christian Science, and my household has been united in the one faith since my healing sixteen years ago. I have been able to do my household work with ease and have suffered no ailments that have not readily yielded to Christian Science. My heart is always full of unspeakable gratitude to God, and to Mrs. Eddy for the revelation of Christian Science. I know that through it the Comforter promised aforetime has come to relieve a suffering world.

MRS. MAGGIE COX, Memphis, Tenn.

I wish to express my heartfelt gratitude for the benefits and blessings I have received from Christian Science. My attention was directed to the subject about a year ago. At that time I had occasion to change my lodging and took a room with a family whom I found to be Christian Scientists. At this time I was in a deplorable condition, mentally and physically. I was suffering from a complication of diseases—rheumatism, piles, heart trouble, indigestion, and kidney disease. I had been twice on the operating table for piles. Two army surgeons performed the operation in this city, but in two years I was in a worse condition than ever. I then went to San Francisco and was operated on by a celebrated physician, but after a few years the trouble came back. I spent a large amount of money, first and last, and finally gave up in despair and was calmly waiting for death to end my misery, when Christian Science came to my relief. The people of the house commenced talking Science to me, but I did not take much stock in it. I saw they meant kindly, and after hearing the testimony of their own healing, I commenced reading Science and Health. The lady of the house gave me some help, and I began to improve in health at once. In a week I was able to do light work, and in a month was working regularly at my trade, that of a carpenter. I was not entirely well, but getting along finely, when in some way I got careless, neglected my reading, and was soon as bad as ever. My friends then advised me to go to a practitioner for treatment. I did so, and after three weeks' treatment was healed, and now, considering my age, seventy-five, I am much stronger and healthier than men usually are at that age. My mind is clear, I am happy and cheerful, and I look forward to the future hopefully.

I have been completely cured of the tobacco habit of sixty years. I have had several demonstrations of the truth of divine healing since taking up the study of Christian Science. On one occasion I had a severe cold which I neglected, and I began to fear pneumonia. I awoke in the night in great pain. Suddenly the thought occurred to me that God was an ever-present help, that man is His child, made in His image and likeness. I declared the truth and to my great joy I was instantly healed. I went to church the next day without a symptom of a cold. The next occasion was a severe attack of diarrhœa. The healing was instantaneous, as in the first case. These instances of the effectiveness of divine Truth banished all doubt from my mind. I no longer had to say "I believe" and "I think," but I could say, "I know absolutely that Christian Science is true." I have read many books in my life, but never one like Science and Health. It is truly a scientific work; its logic is pure, its premises correctly stated, and its conclusions properly drawn. By its interpretation of the Scriptures the Bible seems a different book to me, and the two belong together.

I owe my healing to Christian Science and the teaching of that wonderful book, Science and Health, by Mrs. Eddy. Language is not adequate to express the gratitude I feel to God and to her.—WILLIAM H. BRACKETT, Portland, Ore.

I was brought up in an orthodox church, but the time came when I was a great sufferer, with many ills, yet trying to be resigned to what my religion had taught me to be the will of God. While I was willing to suffer, I was also willing to trust mortal man for help, which the Bible tells us not to do, but I had a false sense of God. A lady called at my home one day, and seeing my condition asked me to read some Christian Science literature. I did so, and found a religion that gave me a true sense of God, as a present help in trouble. The more I read, the more I received; I found my ailments leaving, and I was free. A short time after this I was taken down with the grip. The only Scientist in the place was out of town, and as I seemed to be very sick, and not knowing enough to handle my own case, I called a doctor but received no help. I kept growing worse all the time, but the Scientist came home in a few days and was called to take the case. I was relieved at once.

This was twelve years ago, and Christian Science has been our only physician since that time. While we have gone through some sore trials, we have never failed to find that God is All in all. I am deeply grateful to God, and to our wise Leader for bringing us this truth. Science and Health has indeed been a "Key to the Scriptures," for through its teachings we have been able to find the truth which Jesus said should make us free.

MRS. M. W. BOYER, Galion, O.

God alone knows the depth of my gratitude for deliverance from bondage, and for this gift of divine Love it is pleasant to express my heartfelt thanks to God, and gratitude to her who has with such courage kept the trust given unto her. Before learning of Christian Science my sorrows were many, mental and physical discord having left me after many years a complete wreck. I had been brought up in an orthodox church, but never felt at rest, for I wanted all that God had for me. I believed I should only know Him when death had set me free from my pains and aches, yet when death seemed near I feared it, and sought help from Christian Science, doubting somewhat, yet hoping to be healed of my diseases.

I was not disappointed, for with the first treatment they began to fall away, one burden after another, beginning with chronic constipation; also lung trouble with attending ills, cough and heart pangs; ulceration of the stomach and bowels,—all culminating in nervous prostration and neuralgia at the slightest approach to a cold. My healing seemed slow at the time, but more beautiful than all else to me was the understanding of the risen Christ, and the healing truth which the Master promised to those who love his appearing. I no longer weep when Communion season is here, but rejoice, because the Comforter abides with me.

I did not reach this realization at once, but had glorious glimpses from the heights where God showed me the beauties of Christian Science. It was only after repeated warning concerning zeal without knowledge, and gentle remonstrance against impulsiveness, that I found I had a work to do, that I must work out my own salvation; and when I began to knock, to seek, the door was opened. My great desire to know God was granted, and the knowledge brought sweet assurance, peace, and joy. This understanding upholds and keeps me amid the shadows and seeming obstacles that make up the sum of mortal existence, and just in proportion that I live this truth is heaven brought within my experience and divine Love is supreme.

MRS. LAURA VINSON, Portland, Ore.

Words fail to express my gratitude for Christian Science. It has taught us how to work out many problems through the understanding of divine Love. Twelve years ago I was instantly healed of very severe pain; this was my first trial of the truth for physical healing and I found that it does indeed make free. Although error seemed to hold us in bondage for a few years, and we saw dark days of anguish and sorrow, we knew that what Truth had done for others could be done for us and we are indeed thankful that we are no longer held in bondage. About three months ago our little girl was stricken with what seemed a severe form of typhoid fever, and we feared that she was passing on, but, thanks to divine Love, she was instantly healed. Three weeks ago we had a wonderful demonstration at the birth of a child. The birth was natural, and I was out of my room the third day with no bad results.

We are thankful to God for His many blessings and grateful to Mrs. Eddy for giving to the world the knowledge of the truth. We are also thankful for the Christian Science literature, which helps us on our way toward eternal harmony.—ETTA M. WATTERS, Turtle Creek, Pa.

From our Exchanges.

If we believe in the risen Christ, if there is a resurrection for us, there will be abundant evidence of it in our lives. If the spirit of Christ dwells in our hearts it will animate our lives, and our lives will have somewhat of the purity and courage and devotion of Jesus' life. Our deeds, our dispositions, the way we get along with our neighbors will be better testimony than all the "articles of faith" which were ever framed. We shall feel new strength, we shall believe that we can do whatever we ought to do. We shall believe in the realities of the spiritual world, the spiritual life, the spiritual strength. We shall not think that to eat and drink and pile up our goods is all there is to life. We shall know that it is not the best of life. We shall know that to stand by what we believe is the truth and to do what we think is right, is better. We shall know that truth and righteousness and love are not idle dreams and fancies but the very stuff life is made of, and we shall believe in these things and serve them more than houses and lands, and fine clothing and good dinners. We shall see how such a spirit dwelling with us and talking to us by the way will make life seem richer and grander than we had thought it could be. We shall begin to see and understand, better than we could by reading it, how Jesus was stayed up and enabled to do his work, and even to set his face steadfastly toward Jerusalem and martyrdom, because he knew his was God's cause, and his strength the strength of the spirit which God had given him. REV. GEORGE WALLACE PENNIMAN.
The Universalist Leader.

Sympathy is essential to a true theology. No man can be understood by his enemy. He will not bare his secret self to one who hates him. Even if he did, the unsympathetic could not have the qualifications for knowing him. This is more true of God and our knowledge of Him than of our understanding of one another. Only the pure in heart see Him. One must love Him to see Him anywhere, here or in heaven, just as one must love the flowers to know botany, or æsthetics to know music and art, or love his friend to know him. It is both morally and intellectually impossible to know God if we ignore Him, and rule Him out of life. Theology is not a matter of sheer brain. It demands moral sympathy just as unity of selfhood with the facts of any realm is a necessary condition of knowing that realm. The unspiritual man must always have a false theology.
W. C. BITTING.
The Standard.

Why is it that while the world loves and honors Jesus Christ to-day, as never before, it does not love and honor his Church in anything like the same proportion? Largely because the world perceives that the Church has departed from the purposes of Jesus and is not actuated by his great democratic spirit. Do you suppose Christ intended that the Church's whole activity and influence should be confined to a pitiful hour or two on Sundays? Do you imagine that the Master spent the whole week in idleness and retirement wondering what he should say to the people on the Sabbath? We know that he did not. Is not the reason why people do not take the Church seriously—the sad fact that the Church does not take herself more seriously?
The Churchman.

The seeker after a revelation from God finds it in the New Testament. He who speaks there speaks in our own hearts, and we know him. What is of highest value in the written Word is its testimony, illumining our own experience as to our fellowship with God through Jesus Christ. Scholarship may help us to interpret that experience but cannot deny it.—*The Congregationalist.*

THE CHRISTIAN SCIENCE TEXT-BOOK.—"Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

RUDIMENTAL DIVINE SCIENCE.—Printed in the New York point system of type for the blind. Price, prepaid, 50 cents per single copy; $5 per dozen.

CHURCH MANUAL.—Containing all the By-laws to January 1, 1906, of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of The Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the Churches and Societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to The Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of The Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to The Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number, or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By Hon. WILLIAM G. EWING.

Works on Christian Science

Written by the Author of the Christian Science Text-book, MARY BAKER G. EDDY

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Enlarged and Revised, 1902. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid $3 18

Two to twelve books (cloth only) to one address, each, prepaid 3 00
Twelve or more books to one address, each, prepaid 2 75

Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid 4 00
Twelve or more to one address, each, prepaid . . . 3 75

Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid . . 5 00
Twelve or more to one address, each, prepaid . . . 4 75

Levant, divinity circuit, leather-lined, round corners, gilt edges, silk-sewed, heavy Oxford India Bible Paper, wide margins, each, prepaid 6 00
Twelve or more to one address, each, prepaid . . . 5 75

Orders for Science and Health, in lots of twelve or more to one address, may include any or all the different styles of binding.

A COMPLETE CONCORDANCE to Science and Health with Key to the Scriptures, 595 pp., 10 x 7. Bound in cloth, marbled edges. Price, single copy, prepaid . . $5 00
Twelve or more copies to one address, each 50

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth), each, prepaid 2 25
Twelve or more books to one address, each, prepaid 2 00

Morocco, limp, round corners, gilt edges, convenient for pocket, each, prepaid 4 00
Twelve or more to one address, each, prepaid . . . 3 75

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5 00
Twelve or more to one address, each, prepaid . . . 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea: 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science: containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 25 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, 50 cents per single copy; $5 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.

Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month.

The date of expiration may be found on the address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

The Hepburn railroad rate regulation bill passed the Senate last week by a vote of 71 to 3. It authorizes the Interstate Commerce Commission to fix rates, which take effect in not less than thirty days, and continue in force two years. These rates may be contested only in the United States Circuit Courts and cannot be suspended by temporary injunction, except on five days' notice. Appeals from such injunctions can be taken within thirty days and have precedence. The Government is given authority over pipe lines, express, and sleeping car companies, which become common carriers. The granting of passes is forbidden, on penalty of a fine ranging from $100 to $2,000, but numerous exceptions, including railroad employes and families, and a long list of other persons, are made. Railroads are forbidden, after May 1, 1908, under heavy penalty, to transport from one State to another coal from their own mines. Switch connections with side tracks must be built when requested. Imprisonment penalty for railroad officials for rebating is restored, and heavy fines provided for shippers who accept rebates.

Secretary Taft was before the House Committee on Interstate and Foreign Commerce last week to urge the military necessity of a Government cable to Guantanamo, Cuba, Porto Rico, and the Isthmus of Panama. "We are proceeding," he said, "upon the theory that we are to fortify the Panama Canal. With the conditions there as they are, and the United States under the responsibility of suppressing insurrections, and in a country where they have insurrections once a year, it makes communication a necessity." The total cost of a cable to touch at Cuba, Porto Rico, and Panama is estimated at $1,300,000. It could be laid by converting the army transport Sumner into a cable ship at nominal cost.

Before thirty members, representing the Merchant Marine League of the United States, who called at the White House last week, President Roosevelt said he heartily favored the ship subsidy bill passed by the Senate and earnestly hoped the House would see its way clear to putting the bill through at this session.

The majority report of the Senate Committee on Interoceanic Canals, as reported last week, favors a sea-level canal. The earthquake at San Francisco, it is thought, had considerable weight in influencing their conclusion.

It has been decided by the clearing house banks of San Francisco to open the commercial banks on May 23. The savings banks will open May 28.

Foreign.

The draft of the address to the throne, in reply to the Emperor's speech at the opening of the Russian Parliament, was submitted to the lower house of Parliament last week by the committee. It consists practically of the following ten demands: General amnesty; abolition of the death penalty; suspension of martial law and all exceptional laws; full civil liberty; abolition of the Council of the Empire; revision of the fundamental law; establishment of the responsibility of ministers; right of interpellation; forced expropriation of land; guarantees of the rights of trade unions.

The reply concludes as follows: "Your Majesty: On the threshold of our labors one question agitates the soul of the whole Russian people and prevents us, as their representatives, from calmly entering upon our legislative work. The first word pronounced in Parliament was amnesty. It was met with cries of sympathy. The country is thirsting for it. It is a demand of the people's conscience which it is impossible to refuse or delay. Second, the people want full political sympathy as the first pledge of a mutual understanding of the future and concord between the Emperor and the people."

This speech is regarded by many as almost revolutionary and containing points that it will be impossible for the Emperor to grant. Others regard it as quite temperate, in view of the demands that might have gone into it.

The Japanese Government has decided to erect a tourist hotel, costing $1,500,000, at Tokio, as a national venture for the encouragement of tourist travel. Similar national hotels will follow at other cities.

Industrial and Commercial.

Some time ago a popular lecture was given in the Ateneo at Madrid, presenting the value of the construction of the Dakar-Ceuta Railway in Africa. The Spanish delegate at the recent conference at Algeciras was instructed to bring it up before the delegates assembled there. This was done. Such a railroad would greatly shorten the commercial distance now separating the ports of Buenos Ayres, Montevideo, and Rio Janeiro from such industrial centres as Liverpool, Hamburg, Paris, etc. Up to the present time boats leaving Pernambuco, the most northeasterly point of South America, have taken from fifteen to twenty-five days to reach Lisbon, London, and Hamburg. But, by the construction of a railway line running from Dakar in the Senegal to Tangier or Ceuta in Northern Morocco, the same trip would last only seven to eight days. From Pernambuco to Dakar would be a distance of about two thousand miles; the train journey from thence to the Straits of Gibraltar, about twenty-five hundred miles; the crossing of the Straits would last half an hour, and from Gibraltar, Algeciras, or Tarifa to Madrid, to Paris, Lisbon, Hamburg, London, etc., a matter of from one to three days.

The problem of human flight, says the *Technical World*, is solved. One hundred and sixty times have the motor-driven flying machines invented by Orville and Wilbur Wright of Dayton, O., carried a man safely through the high air. The Wright flyer weighs about 925 pounds, including the operator. It is a true flying machine—not a dirigible balloon—and owes nothing to the lifting power of any gas. It seems to be completely under the control of the operator, who can send it up or down, ahead or to either side at will. Driven by a gasoline engine, said to be of 24-horse-power, it flew on its last trip a distance of 24 1-5 miles without a stop. The speed during this flight averaged a trifle over thirty-eight miles an hour.

President Faunce of Brown University, as umpire, has settled a dispute between the Carpenters' District Council and the Master Builders' Association, relative to the granting of a half-holiday every Saturday in the year. This concession the masters would not grant, and it was decided to leave the question to Dr. Faunce, who decided that the carpenters should have the half-holiday during the summer without decrease of pay. The decision affects about one thousand workmen in this city.

In a recent two-gallon fuel efficiency test conducted by the Automobile Club of America, a loaded car weighing fifteen hundred pounds covered a distance of 87 miles. This represented a cost of 0.613 cents per ton-mile. The second car, weighing 3,270 pounds, covered 47.9 miles at a cost per ton-mile of 0.517 cents; a twenty-passenger bus, weighing 9,325 pounds complete, covered 17.13 miles with its two gallons of gasoline fuel.

Building and pulp timber to the amount of forty million feet is expected to be cut in Newfoundland this year. Much of the timber goes to Buenos Ayres for consumption in the Argentine Republic. An English syndicate contemplates erecting large pulp and paper mills there.

The world's international commerce will aggregate fully $25,000,000,000 in the year 1906. In 1900 it aggregated, in round terms, $20,000,000,000; in 1890, $17,500,000,000; in 1880, $14,750,000,000; in 1870, $10,500,000,000; in 1860, $7,750,000,000, and in 1850, $4,000,000,000.

It has been estimated that over thirteen thousand miles of new railroad are now being built in this country and that about eighty-five hundred miles of "live" projects are under consideration.

It is estimated that the output of steel rails for 1906 will be about 3,600,000 tons.

General.

A recent cable despatch from London says: Doctors Grenfel and Hart, during continued researches of the ruins of Oxyrhyncus, whose ancient monasteries some years ago yielded the famous Logia of Christ, found a fragment of a supposed lost Gospel, which is now in Queens College, Oxford. It is a tiny scrap of vellum, perforated by worms and yellowed by sixteen centuries, but the writing is perfectly legible. It is written in Greek characters which are almost microscopically minute, with scarlet initials. There are about three hundred words. It is certainly no part of any extant Gospel, but its theological value must be left to theologians. It is unusually well written from a literary viewpoint. It begins in the middle of a speech. Jesus and his disciples have entered the temple and met a Pharisee, who rebukes them for omitting the home ceremonial of ablution. Jesus asks the Pharisee what the latter has done to comply with the ceremonial. The Pharisee's reply minutely describes the process of purification, of which no previous authority has given the details. Then follows an eloquent denunciation by Jesus of mere outward purification, in which he says that he and his disciples have been purified by the waters of life. There is also a mention of a hitherto unknown part of the temple called the Hegneuterian, or place of purification. Theological circles are greatly interested in the discovery, which promises a sensation equal to that created by the Logia of Christ.

A wireless telegraph message which traveled a distance of 2,080 miles was received by the steamer Moltke while at sea on a recent trip. The message was sent from the Poldhu wireless station on the English coast and was eighty-three words long.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

Victorious Warfare.

W. D. MC CRACKAN, M. A.

THE attempt to destroy evil by admitting it at the start as a very real and very terrible entity promptly places one's sense of good at a disadvantage. Viewed merely from the standpoint of strategy this method is faulty, because it is as if one were to turn over to the enemy a strong position without even a struggle, and then assume the necessity of an advance and attack upon a fortified intrenchment.

This particular kind of warfare has been, and is now, largely carried on by Christians of various shades of opinion. As a mere matter of practical experience it has proved disappointing, and tested on the score of expediency it has been found wanting. The enormous effort and outlay necessitated by such a plan of campaign has not produced corresponding victories, but rather a slaughter of innocents.

All Christians are devoted to the destruction of evil, and it is evident that the nature of the attack must largely depend upon the nature of the enemy. When we enter into an examination of the essential nature of evil, as disclosed in the writings of the Discoverer and Founder of Christian Science, and find that it it not positive, is not a power at all, but only negative, a pretence, all doubt as to the proper method of overcoming it vanishes at once. Along with this doubt disappears also every danger of making tactical blunders. Instead of intrenching evil by admitting it as an awful reality, Christian Science combats the assumption of reality from start to finish, by reducing the pretended entity of evil to non-entity.

Mrs. Eddy's writings make clear the essential unreality of evil in contradistinction to the eternal reality of good. No superficial or glib statement as to this fact can bring conviction. Only careful study, carried on in the light of practical demonstration, can do this. Practice in reforming the sinner and healing the sick, according to the teachings of Christian Science, is the one thing that brings the sense of authority over evil in its various forms.

It must not be supposed that the teaching of evil as nonentity can lead to a weakening of the necessary courage and resolution to attack, or act as an opiate to put the soldier of good to sleep. The facts show the very opposite. Christian Scientists, fortified by the understanding of the omnipotence of God, good, and the consequent powerlessness of evil, go forth to victory armed with hope and faith against sin, sickness, and death. As is constantly being proved, Christian Scientists do conquer sin for themselves and others: they do vanquish evil appetites, pride, and self-will; they are enabled to meet and master sickness, and they have in so far overcome the last enemy that shall be destroyed, the "king of terrors." It is as a result of the spiritual perception of the indestructible reality of good and the unreality of evil that success crowns their efforts and the promised signs follow their work.

This is the victorious warfare in which Christian Scientists have enlisted. They are, however, as yet only recruits. They are learning their A B C, but they have found the true Principle which will eventually make the brotherhood of man a living fact instead of a mere theory. They face sin boldly in all its forms, and by this means unmask it. They dispel its pretensions to power by proclaiming the omnipotence of God, good. There is no superficial and deceptive optimism in this method, for it succeeds. Its blessed results are open for inspection to any sincere inquirer.

Faithful Christian Scientists can be found everywhere along the line of battle, watching from the bulwarks and buttresses of good. It is their duty to detect the first signs of any attempt on the part of evil to make itself real, or to storm the eternal ramparts of Truth. Then the bugle call resounds, and from the vantage-ground of secure intrenchment the enemy is discovered in the open. The hosts of evil may advance with much show and fury, but seeing the alertness of the sentries and the invincible position of Truth's fortress, their courage fails. Their challenges become empty boastings and their threats vain declamation. They are met by the orderly forces of good and ere long they are obliged to beat a full retreat. Thus evil's powerlessness is proven, and victory remains with good, where it always belongs.

The True Concept of Law.

GENEVA MARY CLIPPINGER.

IN the Bible we find an almost continuous record of events which prove that God's law is supreme over all, and which disprove the theory that real law or power exists in matter or material conditions. In spite of this fact, however, human belief has set up many asserted laws, physical, psychical, and hygienic, and is constantly condemning those who do not obey them to suffer or even to die. But like Shadrach, Meshach, and Abednego the Christian Scientist can say, "We are not careful to answer thee in this matter. If it be so, our God whom we serve is able to deliver us from the burning fiery furnace, and he will deliver us out of thine hand." We know that the understanding of Truth will deliver us from the fiery furnace of mortal belief, and all the attacks of error will fall harmless before the active consciousness of God with us. In the case of the three young Hebrews who insisted upon worshiping God according to their highest understanding, even though it seemed that their very lives were endangered, yet were they thereby impelled to declare their trust in God even to the ultimate, and they steadfastly declined to worship according to the popular but idolatrous concept of deity. In this age the so-called laws of nature are held to be laws of God, but a close study of Scripture shows us that in all times God has been teaching men that law is wholly spiritual, that it is independent of matter, that there is nothing in matter upon which to found law, and that therefore human belief is utterly powerless to condemn to suffering and death those who rely upon and assert the supremacy of God, good, and observe His laws alone. There is not an asserted law of matter that is not proved powerless through one or more of the instances given in the Bible, and the multiplicity of these examples cannot be accidental.

Copyright, 1906, by Mary Baker G. Eddy.

Digitized by Google

All thinkers admit that the Bible contains the truth which provides for the salvation of mankind, but it remained for the consecrated thought of our Leader, Mrs. Eddy, to show wherein this salvation lies. She has shown us conclusively that the record of the overcoming of the so-called laws of matter by God's spiritual law and presence does not testify to the occasional interference of a capricious deity but to the operation of an unchangeable Principle by whom man is always governed. These unnumbered instances of God's power have not remained through the centuries merely to astonish mortals with the thought of His ability, but rather to show from every standpoint that God is supremely good, and that His law is accessible and operative at all times, in spite of the manifestations of evil resulting from the belief in material laws.

Thoughtful men and women are coming to see that infinite Love could not have left His offspring subject to the cruel vagaries manifested through material law. The inspiring consciousness that power, or law, abides only in God, who is good in every manifestation,—"altogether lovely,"—is coming to humanity, and is bearing the precious fruits of health, happiness, harmony. That the true significance of Immanuel may soon penetrate the consciousness of all mankind, is the daily prayer of all those who follow Christ in thought, word, and deed.

The Condition of Having.

EDITH AZALIA ADAMS.

How true it is that when we cease to use we cease to have. If we use what we have, we make room for just so much more, and the infinite supply is always forthcoming. If we plow and plant and cultivate, some time we shall reap the harvest. If we put not the seed into the soil, and thus use it, there will be no crop to garner; but if we sow our seed, withholding not our hand, it may bear a hundredfold. If we use our strength in service, in obedience to Truth, it will be renewed; and we shall find each new task the lighter for having done well the one preceding. If to-day we do something that seems almost beyond our strength, yet do it in reliance upon God, the next time we have that same task to do it will seem much easier.

To love God with all the powers of our being, and our neighbor as ourselves, will make our lives both broad and deep. True love ever blesses both the loving and beloved. As a child, it troubled me because I could not understand how, if I loved God with all my heart, I could love any one else; but as I understood Love as divine Principle, even though dimly and imperfectly at first, yet more and more clearly as the days went by, I came to realize that by loving God I increased by just so much my capacity for loving all His children.

In the parable of the talents, we are told that unto him who has shall be given and he shall have abundantly. From the context I take this to mean that he who uses what he has shall increase his possessions, because he is demonstrating that he is capable of caring for more. Science and Health says, "Soul hath infinite resources wherewith to bless mankind" (p. 60), and as we realize this we gratefully acknowledge it. What we use rightly is infinitely replaced, whatever it be.

If we would know the truth in its fulness, we must use what knowledge of it we already have in order to clear the way for further enlightenment. The knowledge of others may help us, but the truth is not ours until we have demonstrated it in our own experience. Each new thought thus proved opens our understanding to the fuller entrance of eternal verities, and leads to that perfect knowledge which is the most precious possession that we can desire.

Around us are the blessings provided by Truth and Love —ours for the taking. They belong to all God's children, yet, to have them, we must make them our own. Simply to believe that they belong to us is not enough. We must know it by proving it. Shall we be deprived of these blessings because in our ignorance we fail to reach out a hand to take what is ours in Truth?

Suppose some friend gives me a beautiful picture which is wrapped up, and I lay the gift away without even looking at it. It is mine because my friend has given it to me, but I have not taken possession of it. I have not opened it and made it my own by my enjoyment of it. I must look at it. I must study it and seek to discover what was the thought of the artist when he painted it. Only as I live with it and appropriate its teaching can I make it my own.

And thus it is with the truth; we must study it and learn, little by little, what it has to teach. We must live it, as far as our knowledge of it goes, before it is truly ours. To keep it as an ornament to be looked at and admired will never help us in our daily life. The things that we use and use again demonstrate to us what they are and what their value is. If we have been thinking how much good the truth will do us some day when we need it, the best thing we can do is to utilize our present understanding of it. Now is the time. There is no to-morrow, or next day, or next week. Now is eternity.

Let us use what is ours to-day, knowing that we have divinely bestowed resources so that we can never lack. Let us use our time, our talents, our lives, knowing them to be the reflection of God, good, and we shall thus find that we have all. Grudge not to give thy seeming all; thou shalt not lack. Such is the law. Use and spare not, and thou shalt find out truly the infinity of having through the limitlessness of the "infinite resources" revealed by Christian Science.

Another Minister Accepts Christian Science.

AT the quarterly meeting of the local preachers, held in Paradise chapel, United Methodist Free Church, Darlington, England, Feb. 23, 1906, the subject of Christian Science was introduced.

The secretary, Frank L. Hastwell, who has been preaching in this circuit for twenty years, announced that he had accepted the tenets of Christian Science as taught by Mrs. Eddy, and he found it impossible to keep the truth it teaches out of his sermons. It had given him a better God, a present Christ in place of a far-off heaven, and he is gradually overcoming his false beliefs through this new-old understanding.

The teachings of Christian Science improved every text he handled, and as he had no wish to sail under false colors he took the opportunity of speaking with his brother preachers face to face and candidly telling them his views.

He did this by reading passages from the Christian Science text-book, "Science and Health with Key to the Scriptures," which explained clearly the subjects he wanted to bring out; viz., 1. The nature of God. 2. The unreality of matter and evil. 3. The purpose of the atonement. 4. The function of faith. 5. The duty of Christians to heal the sick.

An interesting conversation followed. The preachers were evidently desirous of getting below the surface, and discovering the rock bed of truth, which was common to them all. The general feeling of the laymen was one of interest, rather than pronounced hostility.

The meeting, which was in a kindly spirit throughout, expressed no desire to interfere with Mr. Hastwell's views, and left him to take what course was open to him.

Correspondence.

The nimble lie
Is like the second-hand upon a clock:
We see it fly; while the hour-hand of truth
Seems to stand still, and yet it moves unseen,
And wins at last, for the clock will not strike
Till it has reached the goal."

LONGFELLOW.

Selected Articles.

Christian Science in Business.

I have found Christian Science a wonderful aid in solving the knotty problems of every-day experience, since it has helped me to set aside such annoyances as fear, anxiety, and indecision. Nevertheless Christian Science has not always enabled me to carry out the plans which my judgment has outlined. This has probably been in some cases due to the insufficiency of my trust in God, while in other cases it has doubtless been because the plan was not wise from the standpoint of supreme intelligence. I believe that in some instances my own prayers in behalf of the prevalence of the right course have defeated my own human judgment as to what ought to be accomplished.

One can depend upon God to help him only in a right course, and, therefore, the only intelligent prayer is that right shall prevail. Paul may plant and Apollos may water, but God alone can give the increase, and He will not give it if the planting and watering are not as they should be.

Christian Science is not based upon human will. It cannot be employed to aid un-Christian schemes or produce evil results. Any mental *modus operandi* that may be employed for selfish or wicked purposes must be the direct opposite of Christian Science, and its fancied power will be counteracted and destroyed through the operation of Christian Science.

To demonstrate Christian Science means to bring out that which is right. Therefore, one's effort to trust and realize that divine intelligence shall govern his actions and that they cannot be interfered with by human opinions or suggestions, might bring apparent adversity into one's business schemes; consequently one might be led to believe that his application of Christian Science is a failure, instead of a success, while in after time it might be manifested that his apparent ill success was a blessing in disguise. For example: a Scientist once lost his position in business. He came to me in his sorrow, and, more for the purpose of saying something comforting than because of any special faith that a good thing had happened, I suggested that perhaps it was well that he had lost his position; that perhaps it was meant simply to detach him from the place where he was employed, in order that he might be free to seek and find a better position. On the same day or the day after he did secure a position which paid him almost twice as much as the first. This illustrates the fact that sometimes what appears to be a calamity is really in the line of progress, and it is difficult to know just when a change in one's experience is a calamity and when it is a blessing. Therefore the wisdom of doing one's best and leaving the consequences with God. Of this much we are certain,—that if we lean as heavily upon divine wisdom as we are able and seek to be guided by supreme intelligence at every step, we shall be safe in deciding that our reward, whatever it may be, is according to our deserving, for nothing can thwart divine justice.

I do not wish to leave the impression that one should look upon adversity as a proper answer to prayer, but this is what I would say: That what appears to be adversity is not always a proof that our prayers are not being answered or that Christian Science is not benefiting us. Sometimes we misinterpret an experience and call that adversity which, in the day of a brighter sense of what is proper and desirable, we may learn to recognize as a blessing. The principal benefit to a business man in Christian Science is that it brings peace and harmony, makes one's judgment more keen and accurate, strengthens one's manhood, one's faith in God and in the final triumph of right, and gives one an ability to go forward, to endure, and to persevere, that he would not have without Christian Science.

Thousands of business men, on the verge of collapse and failure, have been strengthened and uplifted by Christian Science in such a manner as to stand the test and ultimately succeed. Christian Science will help every individual to do right, and will insure to him a just reward, whatever that may be.

ALFRED FARLOW.

Somerville (Mass.) *Journal.*

Christian Science in Alaska.

The Mother Church, The First Church of Christ, Scientist, in Boston, the church which was founded by Rev. Mary Baker G. Eddy, who made the discovery that religion is a fact rather than a theory, and who was for long pastor of the First Church congregation, is being added to. The new building is nearing completion now, and is one of the largest and most beautiful church buildings in the United States. The funds for the building are supplied by Christian Scientists throughout the world—all the churches contribute what they will—and the result has been one of the notable church edifices of the world, one in which all Christian Scientists feel a pride in having helped to build.

Last Sunday—Easter Sunday—the little congregation of the not yet organized church of this new religion in Fairbanks directed that one hundred dollars of the funds in its treasury be sent to The Mother Church as its contribution to this fund. This little congregation holds its services every Sunday in an inconspicuous log cabin at the corner of Barnette Street and Seventh Avenue, somewhat off the most beaten paths.

The log house was built by Mr. Robert Thompkins for the purpose to which it has been since used, though at the time he built it Mr. Thompkins did not know that he would be able to secure here the First Reader that it is necessary, according to the simple ritual of the organization, to have, nor that there were any of the belief in this city who might attend if the Reader were here; however, he built the log house. That was last summer. This summer he will have to build an addition in order to accommodate those who wish to attend. The arrival of Mrs. Parsons, wife of W. H. Parsons, president of the Washington-Alaska Bank, who is a member of The Mother Church, removed the first difficulty. Mrs. Parsons has been an active worker in the ranks of Christian Scientists for years, having been in the work in Dawson before coming here. It was in Dawson that Mr. Thompkins became interested in this new religion. Since coming here he has given his whole time and attention to its study.

During the winter the services have been held regularly in the little log house and the room has been kept open and warmed and with an invitation to all to go there and make free with the literature there supplied. From a membership that for many weeks did not exceed half a dozen, the capacity of the place is tested every Sunday afternoon. The music there to be heard has become a feature of the service, and is not perhaps to be excelled in any church of the city.

The need of larger quarters has already brought up the question of building an addition to the little church, which will probably be done this spring. The church will also be formally organized shortly.—*Fairbanks* (Alaska) *News.*

It may be said that Christian Scientists, in common with other religionists, recognize that in mortal experience there is a claim of evil to be dealt with. Christ Jesus taught his followers to pray to be delivered from evil, and in John, 8 : 44, our Master tersely and comprehensively defines the devil, the father of all evil, as a "liar," having "no truth in him;" and shows him to be, not a creation of God or of man, but a self-constituted falsity. Christian Science is in strict agreement with the Master in this definition of evil, and logically holds to the conclusion that evil is unreal in the sense of not being a God-created entity.

Paul tells us in Romans, "Be not overcome of evil, but

Digitized by Google

overcome evil with good," and a Christian Scientist realizes that to fully understand the unreality of evil as well as of disease, he must grapple with and overcome them; and that Christian Science enables him to do this more effectually than any other teaching. Christian Science shows that a belief in the reality and power of evil must of necessity lessen one's faith in God as omnipotent, omniscient, omnipresent good. It has been aptly said that we should not fear sin but fear to sin. Christian Science teaches that sin brings inevitable suffering, that the only way to escape the misery of sin is to cease sinning, and emphasizes the fact that one can never be rid of sin by ignoring it, for one must cease sinning in order to have it absent from consciousness.

Christian Science does not encourage or tolerate any form of immorality, but demands absolute purity of conduct and thought. After all, the test of Christianity is contained in Matthew, 7 : 20, where Jesus says, "By their fruits ye shall know them;" and in Galatians, 5 : 22, 23, we find "the fruit of the Spirit is love, joy, peace, long-suffering, gentleness, goodness, faith, meekness, temperance." It is the desire of every conscientious Christian Scientist to add from day to day to his store of these spiritual fruits.

CALEB H. CUSHING.

Portland (Me.) *Evening Express.*

The best definitions of the word "miracle" give it as something that is extraordinary—above or beyond the ordinary comprehension, not necessarily in contravention of law and order but that which may bring out higher concepts of law than had heretofore been known. This definition would seem to fit Jesus' works. He came not "to destroy, but to fulfil," the complete law, to "destroy the works of the devil."

It is inconceivable that a religion which in its practical workings includes a return to primitive Christianity should be considered as a "relapse into a lower spiritual level," or that such religion can by any right process of reasoning be construed into a calamity. What the world needs most of all to-day is a revival of the Christ-teaching in its original purity. The attainment of this end is the primary object of Christian Science. If in this laudable effort it heals the sick, how can a Christian consistently condemn it on this ground?

The Psalmist says, "I shall be satisfied, when I awake, with thy likeness." "Complacency," when based upon such experiences as have entered into the lives of most Christian Scientists, is entirely justifiable. The wise man said, "When a man's ways please the Lord, he maketh even his enemies to be at peace with him."

The gospel of freedom from bodily discords, as preached and practised by Jesus and his disciples, was coincident with the gospel of freedom from sin. To the twelve disciples, Jesus said, "And as ye go, preach, saying, The kingdom of heaven is at hand. Heal the sick, cleanse the lepers, raise the dead, cast out devils: freely ye have received, freely give." This command has never been abrogated, but stands to-day as a fundamental teaching of the Master. That sin and sickness were to be destroyed by one and the same method was evidenced when Jesus said to the one "sick of the palsy"—"Son, . . . thy sins be forgiven thee." That this law of healing was to be perpetuated and remain as an essential part of the Christian religion was made plain in Jesus' last words to his followers: "And these signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover."

That freedom from pain, sorrow, and distress is promised to God's people is plainly indicated in Revelation: "And I heard a great voice out of heaven saying, Behold, the tabernacle of God is with men, and he will dwell with them, and they shall be his people, and God himself shall be with them, and be their God. And God shall wipe away all tears from their eyes; and there shall be no more death, neither sorrow, nor crying, neither shall there be any more pain: for the former things are passed away."

It may perhaps be argued that all this belongs to some future dispensation, but as Christian Scientists understand the Scriptures, it is for all mankind now as well as for every age everywhere. The promises contained therein are perpetual, positive, and enduring. It is not, however, to be supposed that Christian Scientists believe they can by any means enter into the kingdom of God on earth without consistently striving for it. They understand that the promises are "to him that overcometh," and that only as sin in all its hideous forms is overcome is there any positive assurance of freedom from its thraldom. In Christian Science there is no room for "self-complacency" in sin, but only through the destruction of sin and all that it includes.

Patience, meekness, Christ-likeness are fundamental qualities of Christianity. It is the consistent effort of each Christian Scientist to bring out these qualities in his daily living; so to live that he may be enabled in some measure to help his fellow-man escape from the bondage of sickness and sin.

JOHN L. RENDALL.

Dubuque (Ia.) *Daily Globe Journal.*

Christian Science treatment includes the understanding of God and His laws, as well as faith in God and His laws. It is a moral force that reforms and heals; it is Truth's utterance, known by its fruits.

Belief in the existence of more than one mind is a denial of the infinity of God—infinite good—and leads to the belief that evil is as real as good, and sickness as real as health; whereas righteousness and health are the normal states of man, and sin and sickness the abnormal, unnatural, and illusive. Man is governed aright when governed by divine Mind. Any human attempt to control others by mental suggestion, etc., is a trespass upon the rights of Mind, and should be discouraged and abandoned.

JAMES D. SHERWOOD.

Houston (Tex.) *Post.*

The Congregational church was filled last evening [April 4] by those who desired to listen and learn of the "Evils of Christian Science" as promulgated by the pastor. The speaker was very pronounced in his views and backed his statements from the Bible. The Christian Scientists also take their doctrine and belief from the Bible, and it might be well for all who heard the discourse to withhold their verdict until they hear the other side of the question.

We do not believe, notwithstanding the aspersions cast upon the cult by this pastor, that any society which teaches us better living, purer morals, the upbuilding of the human race, and generally a higher plane of living, comes from the devil.—*Wheaton* (Ill.) *Press.*

[Written for the *Sentinel.*]

"Father, I thank thee."

AGNES FLORIDA CHALMERS.

"FATHER, I thank Thee." Many children say
These joyous, grateful words at morning's call;
And, by the tender mercies over all
The work God gives His loved ones, day by day,
They know He richly blesses them that pray,
"Father, I thank Thee."

"Father, I thank Thee." Just this grateful word
Fed weary multitudes, and raised the dead.
Our Master lived his thanks, and broke Life's bread
To hungry hearts. Yea, Love has ever heard,
And hears to-day, this prayer on land and sea:
"Father, I thank Thee."

The Lectures.

Jackson, Mich.

Bicknell Young of Chicago lectured before an audience which filled the Atheneum last night [April 17]. He was introduced by Leonard H. Field, Jr., who said in part,—

Any thoughtful and sympathetic observer, as he walks along and sees on every hand men crippled by misfortune, burdened by every conceivable phase of disease, enslaved by sin in all its myriad and hideous forms, bowed down by poverty, by sorrow, by failure, can but long, with a heart-felt longing, for a shorter and more certain way out of bondage than the way which the world has been taking. Is it not possible there may be somehow, somewhere, a definite, universal, demonstrable, and scientific way of binding up the broken-hearted, of undoing the heavy burdens, and letting the oppressed go free?

Nineteen hundred years ago one came to this earth who said, "Come unto me, all ye that labor and are heavy laden, and I will give you rest." "I am the way." "Ye shall know the truth, and the truth shall make you free." About forty years ago there was one in our own age, and in our own country, Mrs. Eddy, pure enough in her thought, consecrated enough in her life, to discern this Christ-truth.

Jackson Patriot.

Elyria, Ohio.

Sunday afternoon [April 22] a large audience gathered in the Elyria Theatre to hear Judge Septimus J. Hanna of Colorado Springs deliver a lecture on Christian Science. The speaker was introduced by City Solicitor W. B. Johnston, who said in part,—

That Christian Science is exciting considerable comment and interest throughout the breadth and length of the land, cannot be denied. The fact of the large attendance here to-day testifies to the interest our own people are taking in the subject. And this is but one example of what the people of the whole country are thinking about, along the lines of religious sentiment. The people are investigating the claims made by Christian Science. I have had occasion to examine the text-book of this teaching, and I am ready to admit that, second only to the Bible, it is the ablest work of religious literature that it has ever been my pleasure to examine.

Mankind are living in a sort of religious and physical bondage, because of ignorance of the truth. Christian Science claims to loosen the fetters of this captivity and to bring out the true, spiritual sense of man as our Maker intended him to be. The ideal of Christian Science is a pure and beautiful one, and I am sure we shall all listen to this lecture with good attention.—*Elyria Chronicle.*

St. Louis, Mo.

Judge Clarence A. Buskirk addressed a large congregation last night [April 30] on "Christian Science, the Gospel of Divine Love," at First Church of Christ, Scientist. The lecture was repeated May 1. Arthur P. DeCamp, First Reader of the church, introduced the speaker, saying in part,—

The doors of the Christian Science church are ever open wide to those who seek truth for truth's sake; and its most earnest endeavor is to "give a cup of cold water" in Christ's name. If there are those here whose interest in this great subject and movement is just being awakened, and who, perchance, approach it timidly, half fearing to be wrenched away from old moorings, let me assure you that Christian Science will anchor you more securely to God, the rock of our salvation; that its Christianity is the Christianity of Jesus; that the Bible is its chart and compass.

On the other hand, to those to whom the holy Scriptures have grown dim and seem to have lost the power to guide and comfort, I can say from the depths of conviction and experience that through this Science of divine Mind reason and revelation are reconciled, and he whose faith in spiritual things has waned and who can only reach conviction by walking in the paths of reason and logic, he also may sit at the feet of Jesus and learn of him.

St. Louis Globe-Democrat.

Preliminary Arrangements for June.

Horticultural Hall, corner Massachusetts and Huntington Avenues, has been secured as headquarters for all committees, from Thursday, June 7, to Wednesday, June 13, inclusive, and all necessary information for visitors can be obtained there. Cards of admission to the Annual Meeting (for members only) will be issued at this place, and all mail and telegrams received for visitors will be distributed there, but such mail and telegrams should be sent in care of The Christian Science Publishing Society, 250 Huntington Avenue.

Almost all the railroads have agreed to make a reduced rate of practically one fare for the round trip to Boston for the Communion season. It is suggested to those intending to visit Boston that they consult their local ticket agents a sufficient time in advance of their intended departure to enable the agent to secure tickets, etc.

A Committee has been appointed to find rooms for those attending the June meetings of The Mother Church, and this Committee will be able to provide rooms for all visitors. Those who have not made definite arrangements are requested to communicate with the Room Committee, 250 Huntington Avenue, as early as possible, stating their precise requirements, the price they are willing to pay, etc., in order that an approximate estimate may be made of the amount of accommodations which will be required. This Committee will not undertake to engage rooms in advance, either in hotels or private houses. Those wishing to engage rooms in advance should communicate directly with the hotels at once. It is desirable that, where practicable, one person should act for a group from one locality. This will greatly facilitate the work of the Committee.

On their arrival in Boston, those who are depending on this Committee for rooms are requested to go to Horticultural Hall, corner Huntington and Massachusetts Avenues, where this Committee will have its headquarters, commencing Thursday, June 7.

Hours for Services on June 10.

In order to provide an opportunity for all who wish to attend the services upon the occasion of the Communion, and the dedication of the extension of The Mother Church, six services will be held. The hours will be 7.30 and 10 o'clock A.M., and 12.30, 3.00, 5.30, and 8.00 P.M. At the 12.30 service, the children will be given preference in seating the congregation.

Picture of The Mother Church.

The picture of The Mother Church and its extension which The Christian Science Publishing Society will have for sale is a half-tone reproduction, 12 x 15 inches in size, of a view giving the St. Paul Street frontage and Falmouth Street side.

The picture is mounted on a white mat, 21 x 25 inches, and will be sent to any address in a mailing-tube for fifty cents a copy. A dozen copies will be sent to one address for $4.50. Address all orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Inconsistency.

To teach the truth of life without using the word death, its opposite, were as impossible as to define truth and not name its opposite, error. Straining at gnats, one may swallow camels.

The tender mother, guided by love, faithful to her instincts, and adhering to the imperative rules of Science, asks herself: Can I teach my child the correct numeration of numbers and never name a cipher? Knowing that she cannot do this in mathematics, she should know that it cannot be done in Metaphysics, and so definitely name the error, uncover it, and teach truth scientifically.

MARY BAKER G. EDDY.

[The above words of loving admonition and instruction were called forth by a paragraph of the following letter, recently received by our Leader.—EDITOR.]

Indianapolis, Ind., May 10, 1906.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Dearly Beloved Leader:—Several months ago the question of contributing to the Mother Church Building Fund was presented to our children. They were told to consider that such contribution might delay their own future church building, but to remember that The Mother Church is an outward manifestation of the "structure of Truth and Love" (Science and Health, p. 583) being built in each consciousness; also that not one thought of criticism or selfishness must accompany our gift, else it would not be perfect in the sight of God, nor worthy to assist you in your great work for mankind. The children were very quiet in silent prayer for a few moments, and when the vote was called for, rose unanimously. When the call for prompt responses from the Field came, we decided to send what we had raised to date, and with the help of some others, who had heard of the demonstration and wished to follow the child thought, we were able to send one hundred dollars to Mr. Chase.

The "milk" with which we are striving to feed His lambs is our highest understanding of the spiritual meaning of the Lord's Prayer, Ten Commandments, and Sermon on the Mount; and we realize that our success must be measured by ever-increasing attendance, punctuality, attention, and obedience.

From the question often asked by parents, "What shall I read to my children?" and from my own realization that the Scriptures cannot be spiritually explained until the little ones are familiar with the exact text, grew the plan of announcing each Sunday in the school a chapter from the Bible to be read during the week. Those unable to write are given written references to carry home. Each week I study the references for the next week's Lesson-Sermon and choose a chapter suggested by one of these references; for example, Noah and the Ark, Daniel in the Lions' Den, the Fiery Furnace, etc. The parents were asked to remain after a Wednesday evening meeting and it was explained to them how much they could further the work of the school.

This reading at home does not interfere with the teachers' work. During the ten minutes allotted to me as superintendent, I try to have the main points of the story brought out by the children themselves, with the spiritual interpretation thereof. I believe it would have pleased you to hear the thought they brought out that the lions were hungry for flesh, but that, through Daniel's understanding of God all that was present was the manifestation of Life, Truth, and Love; and again, that neither fire nor water can ever destroy the manifestation of infinite Mind.

Once, when the chapter was Matthew, 2, a young mother said, "My child has never heard the word death, so I did not read about Herod's killing of the children." It seemed to me to attempt such a course was impracticable and really suggested by fear; that instead, the child needed the protection of the spiritual explanation.

Several testimonies given prove that these references have been the means of spiritual growth to both parents and teachers. A number of parents have thanked me personally and added that their children dearly love the reading. To you, who have taught us all to better understand and love the Bible, these fruits belong.

Our organist, a true musician, has continued the labor of love, begun by two young girls, of training the children in singing during the half hour before the school opens. Poems from the *Journal* and *Sentinel*, as well as some of our own hymns, have been set to simple music, suitable to childish voices. But the last and best loved hymn each morning is "Shepherd."

I would like to add also that copies of the *Christian Science Sentinel*, furnished by church members as soon as they are through with them, stamped with our Reading Room address, are to be had in the hall at each church service, and our secretary sees that each child is given one every Sunday as they pass out, where it is not subscribed for in the home. The children seem to appreciate the *Sentinels* very much.

Lovingly and reverently yours,

CLARA P. WALES, *Superintendent.*

Sunday School, First Church of Christ, Scientist, Indianapolis, Ind.

An Amended By-law.

ARTICLE XIX.

TEACHING IN SUNDAY SCHOOL.—SECT. 5. Children may be received in the Sunday School classes of any Church of Christ, Scientist, up to the age of twelve years, and by transfer from another Church of Christ, Scientist, up to the age of fifteen years, but no child shall remain in the Sunday School of any Church of Christ, Scientist, after reaching the age of fifteen. None except the officers, teachers, and children should attend the Sunday School exercises.

The Mission of the Churches.

MR. ARTHUR HENDERSON, M. P., of England, Chairman of the Labor Representation Committee, has recently said: "The exclusive concern of the churches should not be with a future state of existence. Rather should they be concerned with this world. Their mission should be to bring to pass *here* a kingdom of righteousness and peace, and to carry redemption into our social relationships;" and in this, it seems to us, he expresses in a large degree the need of the hour. Jesus prayed, and taught his disciples to pray, "Thy kingdom come. Thy will be done in earth, as it is in heaven;" and he was much concerned with the eradication of both sin and sickness from the lives of those who came under the immediate influence of his ministry.

The churches, to be effective in their labors for the masses, must not neglect the example of our great Master in the healing of sickness and the establishment of righteousness on earth. They must be about their Father's

Digitized by Google

business, just as Jesus was about his Father's business; and it is recorded of his earthly career that "he went about all Galilee, teaching in their synagogues, and preaching the gospel of the kingdom, and healing all manner of sickness and all manner of disease among the people." They must awake from the belief that this healing ministry is a closed chapter in the history of Christianity. Mrs. Eddy, the Discoverer and Founder of Christian Science, has demonstrated that the healing of the sick as our Master healed them is not only a present possibility, but an accomplished fact, and this is amply proved by the testimony of thousands who have been healed. A typical testimony to this fact is that of Leonora Heale of North Yakima, Wash., which appeared in *The Christian Science Journal* for May. She writes as follows:—

"A little over one year ago my body was racked with aches and pains innumerable. I suffered from chronic tonsilitis, hay fever, rheumatism, cancer, and nervous prostration. Two years before, my tonsils had been removed, but the sore throat was not healed. Six months before, I had an operation for piles, but the suffering still remained. Having been a trained nurse for many years, I knew what a season of drugging and doctoring awaited me, were I to begin medical treatment, and how little assurance of permanent healing there was for me, even then. Besides all this, there was a debt, a sick father, and much unfinished work which I had no strength to accomplish.

"One of my friends now picked up a little pamphlet among the literature at hand, and read the title aloud, 'The Los Angeles Case.' A patient had given it to me to read several weeks before, after relating some accounts of healing through this Science which to me seemed incredible. Now, however, it was read aloud to amuse us, and we made various criticisms on it, until that portion was read where the defence referred to the healing of the blind man who said, 'Whereas I was blind, now I see.' All at once the conviction came to me that what had been read was true, that undoubtedly I had long been blind,—spiritually blind,—and a great desire to *see* came over me.

"Our jesting words seemed all at once to be in very poor taste, and quite as much to call forth opposition as for any benefit I expected to receive, I startled my friends by declaring that I intended to visit a practitioner. I went the next day, but could not find him; this, however, only increased my desire to be treated. Again I sought him, obtained a treatment, borrowed that blessed book, Science and Health, which is indeed a 'Key to the Scriptures,' and read with all my might for a week, when I felt such a revivifying return of courage and strength that I was able to do more work in one day than I had been able to accomplish in a whole week before. I took only four treatments; my study of the book accomplished the rest.

"To-day it would be hard to find a healthier, harder-working woman than I am. In less than two weeks' study of Science and Health I was able to begin demonstrating this blessed truth for myself and others. Ailments of all sorts have given way before the declarations of the truth, as Mrs. Eddy has shown it to us in her book. A month after I was healed, my father threw away his medicine bottles and has been renewing his youth ever since. The debts which so worried us are being dispelled. Divine Love sent us work to do, and gave the strength to do it. Discouragement and other discords in the home life have disappeared before the prayer of faith that availeth much.

"To that noble woman, our Leader, I know not what word of gratitude to say, other than has already been said by the thousands who have been healed and purified through her truth-revealing words and works. I can only resolve so to live as to bring no dishonor to the sacred Cause of Christian Science. I gratefully acknowledge the *Journal* and *Sentinel* as a continual source of refreshment, and the Lesson-Sermons are my daily meat.

"I would this meager acknowledgment of some of the benefits received through Christian Science could reach all those to whom I aired my opinion of it in former days,—an opinion which only expressed my utter ignorance of the subject; yet I know God will not despise 'a broken and a contrite heart.'"

The Church of Christ, Scientist, is endeavoring in a practical way "to bring to pass *here* a kingdom of righteousness and peace, and to carry redemption into our social relationships;" and it recognizes that this can be accomplished only through the practice of the entire gospel of Christ Jesus.

ARCHIBALD MCLELLAN.

Notice.

"RUDIMENTAL DIVINE SCIENCE," printed in the New York point system of type for the blind, has been withdrawn. Please do not send orders for the same. Those who have received copies please return them and money will be refunded. We intend to issue soon a pamphlet on Christian Science to be printed in the type for the blind, that will be better for the learner because more easily understood than "Rudimental Divine Science."

Letters to our Leader.

[The following loving greeting to our Leader, and the liberal contribution to the Building Fund which accompanied it, testify to the affection and gratitude of our brethren across the sea, and foreshadow that happy day when "nation shall not lift up sword against nation, neither shall they learn war any more."—EDITOR.]

Hurst Lodge, Berks, England, May 7, 1906.

Beloved Leader:—The enclosed note for £10 (fifty dollars) is a loving offering from the handful of people meeting here every Sunday. We are emboldened to send it, in spite of the smallness of the amount, as there is much affection and true gratitude behind it, and the unity of thought and desire to aid, even among the very poor of our little congregation, will surely help build The Mother Church, to which we owe so much.

Your loving student,

ALICE MARTINEAU.

Hyde Park, Mass., April 24, 1906.

Mrs. Mary Baker G. Eddy.

Dear Madam:—I wish to express to you through this letter just a little of the great appreciation that I feel for the blessings which Christian Science has brought to me in healing, through your faithful servant, Herman Neschkolofsky of Dorchester, who has been instrumental in showing me the true attitude in which I stand toward God, good, and has given me such a sense of security and confidence in God's love and care that my life has been completely changed. So clearly has the truth come to me that I have been able through the reading of Science and Health, your great work on Christian Science, to overcome many claims of illness which hitherto had led me to seek the aid of a physician; and although I feel very ignorant of Christian Science and its wonderful truths, I feel that still greater good will come through a more thorough and conscientious study of its teachings. I see now only a faint light of Truth, where I may yet behold marvelous truths and possibilities. This is the blessing I crave and which I anticipate when I shall have overcome the difficulties which at present obstruct my way, so that I may enter into Science as I wish to do,—give my whole time and what little talent I may possess in spreading the "good tidings of great joy, . . . to all people" with whom I may come in contact. I know that Christian Science, as revealed to the world through your great works and by your loyalty to truth, fidelity to right, and sacrifice of self for

Digitized by Google

your love to mankind, is the true Christianity, that will ere long find its way into the lives of all who profess to follow Jesus of Nazareth, and to so effectually change the conceptions of men regarding religion, love, justice, as to give an entirely new and healthful interpretation to our Bible, the teachings of Jesus respecting the brotherhood of man and the fatherhood of God. As a minister of the church of Jesus, of a large faith in God's eternal and unchanging goodness, I see what a tremendous force the Christian Science thought will surely have in shaping the spiritual life of coming generations. This letter can but imperfectly express my admiration for your untiring zeal and perfect faith. As I study Science and Health new truths are constantly revealed to me. May I ask you to accept my sincere gratitude for your teachings, which have enabled me to see and experience the blessings of healing of disease; and a thousand times more, for the happiness that my little knowledge has brought me of the truth as revealed in Science and Health.

I think my friend, Rev. Irving C. Tomlinson, has mentioned my name to you, so that you may not be unfamiliar with it.

With loving gratitude to you and for your teaching, I am

Very truly yours,

REV. C. F. ANDREWS.

Los Angeles, Cal., April 15, 1906.

My Dear Mrs. Eddy:—This letter is written to you in gratitude, love, and appreciation of your teachings found in Science and Health, which also taught me how to read and love the dear Bible. I was sick for many years, —hopelessly so to material sense, as several physicians had passed upon my case as incurable. The healing was slow, and sometimes the seeming lack of progress was discouraging, but I never thought of going back to the old way of material remedies. I did trust God, and the truth did heal; and I have learned many beautiful lessons, as my thoughts and ideals of life are now so different. In this constantly regenerated thought I shall endeavor to continue, and always try to show forth the glory of God. Please accept the enclosed amount for The Mother Church.

My prayer is, dear Mrs. Eddy, that you may be given grace and courage to go on with your good work for the human race, to lift them out of bondage.

Yours sincerely and gratefully,

MRS. LIZZIE G. BONFILIO.

[The amount enclosed for The Mother Church was one hundred dollars.—EDITOR.]

Jackson, Mich., May 7, 1906.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—The members of First Church of Christ, Scientist, Jackson, Mich., desiring to once more give expression to their gratitude for what Christian Science has done for themselves and for the whole world, the Board of Directors appointed Sunday, May 6, as a day for a special contribution to the Building Fund of The Mother Church, with the result that to-day a draft for twenty-three hundred and seventy-five dollars was forwarded to Mr. Chase as a thank-offering, of which thirty-one dollars and thirty cents was given by the Sunday School. There was great joy in this service, and we realized the truth of the saying, "True, the heart grows rich in giving;" and we further realized that it was only a part of the "reasonable service which all Christian Scientists can render their Leader," in thus making "deeds, not words, . . . the sound test of love" (*Sentinel*, April 28).

Yours most gratefully,

OLIVE E. PETTIT, *Church Clerk.*

Testimonies of Healing.

For twelve years I was a victim to the whiskey habit. I reached the point where I wanted to be free of this disease, and after proving to myself that I was not able to cope with it I decided to take a well-known cure. At the end of this treatment, thirty days, I was told by the physician in charge of the institution that I was a well man. I had been at home only a few weeks when the desire returned, stronger it seemed than ever before. The only way I kept from taking a drink was in not going where liquor was sold. I did this for a few weeks, but the day came when I was unable longer to battle with the desire; I went back to whiskey, and was worse than ever before. I then felt that my case was hopeless, because I had tried the best that *materia medica* held out for this disease, and it had failed to cure me.

It was at this time a very dear friend mentioned Christian Science to me. I replied that I would perhaps look into it some time, not thinking that I ever would; but the day soon came when I knew that something must be done for me. I recalled how gently my friend had spoken of Christian Science. I then decided to put aside my opposition to it and give it a trial. I applied to a practitioner for treatment, told her my case and bought a copy of the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. This was over two years ago, and from that day to this I have not taken a drink of any intoxicant. Later, Christian Science healed me of a terrible case of eczema in three treatments; whereas three doctors had worked for several months without results. I had been reading Science and Health three evenings, when the desire to use tobacco left me, and for more than two years I have not used it. I had been reading the text-book several months when I awoke to the fact that a case of catarrh of years' standing had left me. For years I had used for this disease atomizers and inhalers of all makes and sizes, besides many other remedies. I had gotten to the point that I dreaded to see the night come,—I could not sleep because I could not get my breath. This condition all passed away so quietly I did not notice the passing of it. I have been well now over two years without medicine, before which time I was almost always sick and taking medicine.

To be free of the appetite for whiskey is a small part of the healing. It is to be free of all that goes with whiskey and makes one unclean. I would say to any one who may read this, and who is a victim to whiskey drinking, Put aside your misconceptions of this blessed truth, and be healed. God healed me, and He will heal you if you will accept the truth. Since being healed I am not only able to help myself but others. To dear Mrs. Eddy my heart always goes out with the best love it knows, because she has awakened the world to the religion which Jesus taught,—to the truth that makes free—free from all that is unlike God, good. I am glad I live in an age in which the world is beginning to know God as omnipresent good, filling all space, all time; not a God afar off,—but here and now, without variableness or shadow of turning.

CHARLES HENRY PEEBLES, Richmond, Va.

It is over six years since I was healed by Christian Science after I had been given up by four doctors. My sickness began with inflammation of the bowels, and soon after that I found a hard lump on my right side which caused me great pain all the time. The doctors said I must go through an operation, which I did. After the operation I was not able to eat or sleep, and every organ in my body seemed to be out of order. The doctor said one kidney was twice as large as it should be; my heart was so weak that I often had fainting spells, and there had been no natural action of the bowels for months. I often had convulsions for two hours at a time, so that at last it was

Digitized by Google

necessary to have a man as nurse, to hold me when these attacks came on. In five months I was only out of my bed once. I could not retain any food, either liquid or solid, and I was like a skeleton.

At this time I was living on a farm in Wallace, Ontario, and often when my husband left me for a little time to attend to his work, he did not expect to find me alive when he came back. Twice I was so far gone that they thought I was dead. I was in this condition when as a last hope I asked to have Christian Science treatment. When the Scientist came and saw so many bottles of medicine on my table, she explained that I must choose between Science and drugs. In my weakness this seemed a very hard thing to do, and my husband would give me no help as he was opposed to Christian Science. The Scientist told me not to worry, that I should be led to do what was best, and she read to me that evening from the Psalms. I slept quietly that night, and in the morning I said, "I will have Christian Science and nothing else."

I told my husband to take away all the medicine, that I would have no more of it. At the first treatment I began to improve, and could retain solid food the first day, which I had not been able to do for five months, and in four days I walked to the kitchen. At the end of the week, to the amazement of every one, I went to Berlin, where I had friends, taking a drive of five miles over rough country roads and a railway journey of several hours. At the end of a month I came home well. Although the doctors said the healing would not last, and that I would never be able to work again, I was able to do all the work of a farmer's wife, and sometimes helped the men to throw sheaves into the barn. In threshing time I did the cooking for eighteen men all alone. A month's treatment in Christian Science had healed me physically and mentally. Since that time, over six years ago, I have done a great deal of hard work, and have felt stronger than ever before. The Bible tells us that it is God who girdeth us with strength, and I have found through experience that it is true. In all this time I have never used medicine of any kind, and every need has been met by divine Love.

I thank God that I ever heard of this great truth. It has not only healed my body, but it has made my home happier, and I find it an ever-present help. Since I have learned to read that wonderful book, Science and Health, the Bible has meant much more than ever before. Words cannot express my gratitude to God, and to our dear Leader for all the good I have received.

MRS. NETTIE REIST, Berlin, Ontario.

I feel it a privilege, as well as a duty, to contribute my heartfelt thanks for Christian Science, and for what it has done for me. About ten years ago I was an invalid. I had been under the doctor's care for three years, suffering with stomach and liver trouble, also from a displacement for which I was obliged to wear an internal supporter. As I did not improve, but rather grew worse, the doctor advised a surgical operation. As soon as I was strong enough I went through with the operation, expecting to be well and strong again, but was disappointed to find myself in a short time as badly off as before. I could not eat anything without its causing great distress and nervousness. My doctor then told me that in order to be well I would have to go to the hospital and experience the same treatment again.

While waiting to decide what would be best for me to do, I was advised to try Christian Science by one who was then under treatment. I had no faith in it, or in anything else, but decided I would try it. I was healed in a short time of the stomach and liver trouble, being able to eat anything and everything I wanted, and have remained so ever since. The other trouble did not seem to yield as readily, owing to the unwillingness on my part to give up the supporter. I felt that it would be impossible for me to go without it, as I had tried it many times, while under the doctor's care, and had to have it replaced, on account of the severe pain. When I felt ready and willing to leave the old way for the new, the healing commenced. It was slow, but I gradually grew stronger, and the suffering less, until I was healed. I have been able to do all my housework, washing and ironing included, sometimes being on my feet nearly all day.

I wish also to say that there has not been a drop of medicine used in my family for the last eight years. I wish to express my appreciation for all the Christian Science literature. It has afforded me comfort and joy. To our dear Leader, who is bearing the truth to a needy world, I would express my deep gratitude.

MRS. HELEN MOULTON, Dover, N. H.

Having received so many blessings through reading the testimonies of others, I wish to show my gratitude by giving my own experience. In early boyhood I became a member of an orthodox church, and enjoyed my church life for a number of years, but when I grew to manhood, certain questions came up which were not answered to my satisfaction, and at last I ceased to attend the services. About three years ago my wife was advised by a friend to be treated by a Christian Science practitioner, and also to procure a copy of Science and Health. We commenced reading it, and after going over a few pages, I said to her that it was that for which we had been looking for years. With what joy and deep thankfulness we have studied this wonderful book, only those can know who have had the same privilege. The Bible is a new book to us, for now it is truly "the Word of God," and as its wonderful beauty and truth are revealed to us, we drink of the living water which heals from sin and disease. As the grandeur of Christian Science was revealed to us, it seemed almost too good to be true, but we now know that only the good is true. It has brought to us much physical help, but what I rejoice in the most is the revelation of God's nearness and of His tender love for His children.

I thank God for the unfoldment of Truth that comes to us through the study of the Bible and Science and Health, thankful that I am living in the age which has given us one so pure, so brave, and fearless, that she has been the means of bringing to us this truth.

VINCENT W. BAKER, Lordsburg, Cal.

A few weeks ago, while on my way to our Reading Room, I was thrown out of a light wagon, striking heavily on my wrist. As the wagon was broken, I was compelled to walk quite a distance, but I received treatment at the Reading Room and the pain was immediately relieved. A trained nurse who was in the same house with me advised the use of warm water to remove the discoloration, but I declined, and did my housework without much trouble for two weeks, although the wrist was quite stiff. At that time, as I was preparing for church, the wrist bones snapped into place and I was entirely free. The nurse would not believe it until I allowed her to examine it. She found it in place and then said that in addition to the dislocation one of the bones had been cracked, and that she had wanted to put the bones in place at first,—but knowing I was under Christian Science treatment, had not done so. When a young girl I had a similar injury, and under a physician's care the arm was bandaged and in a sling for six weeks and I suffered considerable pain. In the present case, under Christian Science, I had no pain after the first treatment.

I am grateful to God, and to our Leader for this healing truth.—MRS. LULU MORSE, Oneonta, N. Y.

Nine years ago my four-year-old boy was taken with a severe cough, which gradually grew worse to the point of threatened strangulation. He had been a strong, healthy child, but six months of distress and coughing had reduced him to a mere skeleton. He continued to grow worse, until my wife and I took turns at night holding him in our arms in an upright position that he might breathe. We employed four of the local physicians on his case; each gave him medicines, but differed as to the nature of the trouble. Finally we saw that something had to be done speedily for his relief. Christian Science as a healing agency had been brought to our attention, and as material means had failed to give our child relief, we decided to give it a trial. I wrote to a practitioner, describing the case and asking for treatment. A slight improvement was noticed during the next two days, and on the next evening my wife and I were out. To our surprise, on returning home, we found the child heartily enjoying a game with the other children. On Friday morning he had a severe coughing spell and coughed up something white and hard, which upon examination proved to be a tooth. Six months prior to this time the boy had been taken to a dentist, and while under the influence of ether he had two teeth extracted. His mother had asked the dentist for them, but he could find only one. The other had lodged in the lungs, though this was not suspected at the time. After the tooth had been coughed up the boy found immediate relief, and soon regained his normal strength and health. Six months of medical care and attention had given but little relief; while he was entirely relieved with one week's treatment in Christian Science.

Since our child's healing Christian Science has been our only means of relief from physical and mental troubles, and we have found it sufficient unto all our needs.

CHARLES G. MIESS, Salamanca, N. Y.

Last summer one of my boys cut his foot very severely on a piece of heavy glass. His playmates brought him home, and one of the boys said that one of the toes was nearly cut off. The foot was bleeding terribly and the child seemed very weak. A great sense of fear came over me and I at once sent for a practitioner. Help was immediately given, and in a very few minutes the blood stopped flowing but there seemed to be a great deal of pain. My husband dressed the toes and in less than an hour the pain was all gone; the child retired at bed-time and slept as usual all night. Next day he had a great deal of walking to do, and also rode his wheel. There was no swelling or soreness at all, and three days afterwards he wanted to put on his shoe and asked me to look at the toes. I had never seen wounds heal as those did, it was truly wonderful to me; the flesh grew back and healed up perfectly.

We are indeed thankful to God, and to Mrs. Eddy for the understanding of this truth that makes men free.

MRS. MARY L. MORRIS, Champaign, Ill.

It was in 1902 that I first heard of Christian Science. I had not been able to sit up all day for six years. Many doctors had treated me, but with little or no relief. I had given up all hope of ever being well again, but thanks be to God I am well and happy. I was perfectly healed through Christian Science, although I seemed to have all the ills that flesh is heir to. I do all my work with perfect ease. I am thankful to God, and to our dear Leader, Mrs. Eddy, for this great blessing.—MRS. M. J. CURTIS, Allerton, Ia.

I am happy to have the privilege of adding my grateful tribute to the healing benefits and spiritual uplifting received in Christian Science. For twenty-five years I was a sufferer, going from one distressing disease to another with the final result of a dreadful operation which left me a wreck, both physically and mentally. After reading Science and Health for a week or two, I found myself cured of all the acute forms of my trouble, and with the help of a kind practitioner, in addition to the diligent study of the Bible and Science and Health, in less than one year I was able to do my own housework and to be a well and happy worker in our Lord's vineyard. My prayer is that I may always be as grateful as I should to God, and to dear Mrs. Eddy, that my feeble footsteps were led to the blessed way of Truth.—MRS. EMMA P. STONE, Cheyenne, Wyo.

For many years before I knew anything of Christian Science I was a hopeless sufferer from what physicians had pronounced cancer, chronic constipation, piles of the worst form, besides kidney trouble and terrible suffering from heart disease. I also had a good deal of sickness in my family. My eldest daughter passed away when a year and a half old, from the result of an injury; then my third daughter was ill and under the doctor's care until she was four years old. At the end of twelve years my husband was sick for over a year and was then unable to work. One thing followed another, until a comfortable fortune was swept away and we left our home where plenty had always reigned,—I to earn a living for three small children and an invalid husband. Then commenced the battle of life. My youngest, a boy, began to teach before he was seventeen, and could have been admitted to the bar at twenty, but he went West in his eighteenth year, and after two years of suffering, having tried the skill of all physicians in that vicinity, he passed away from heart trouble. For two years I watched him day and night, as he could never be left alone. Seven months after, my husband was taken from me. I then went to take care of my third daughter, who, after the first year of married life, was laid up for three years, and after that was an invalid. My second daughter lay six months with a fever, and I had the entire care of her little babe, who never seemed well.

During my early days I had joined an orthodox church, and for thirty-five years I had tried to be a meek and lowly follower of the Master, but for twenty years I was constantly under the care of *materia medica* and there were times when all courage would fail. These were dark days. I was treated by some of the best physicians in New York State and later by physicians in the West. The final verdict was that death alone would bring relief. After an unsuccessful operation I was under treatment for two months, with no lasting benefit. No tongue can describe the suffering of those years. Then Christian Science was recommended to me, and when I learned that it was God's healing I never had a doubt but that I should be healed. Although my healing was very slow, I have been thankful that it was so. It is not for the physical healing alone that I feel thankful. I felt that the healing of all my physical ailments was as nothing compared to the spiritual uplifting which I received. For years I had groped in darkness, living in a sense of worldly pleasures even with all the troubles I had endured. This took away the thought of God as Love, and left in its place a sense of fear, but the Truth has changed it all and words are inadequate to tell even the hundredth part of the good that has come to me and to the world through our dear Leader. I cannot express the gratitude and love that go out to God, and to dear Mrs. Eddy for this truth which has brought to me light and peace. My daughters were both healed in Christian Science. In the old way I had many glimpses of God in answer to sincere, earnest prayers, but now God is not far away. He is an ever-present Friend. I am seventy-three years old, and not a week passes but I have proofs of the healing power of Truth. The Bible and Science and Health are my constant companions.

MRS. L. A. SEARS, Abercrombie, N. D.

My heart prompts an expression of gratitude for what Christian Science has done for me. I consider my wonderful healing, after an illness of six months, to be the direct outcome of a lecture delivered by Judge William G. Ewing in our town a little over two years ago, Christian Science literature being an agent in the case. At this time I knew absolutely nothing of Christian Science. I had been suffering the most excruciating pain, accompanied by intense nervousness, for over two months, and was still confined to my room, and to my bed for the most part. My daughter attended this lecture, returning, not only with "good reports," but with two *Sentinels* and a *Journal*, which I read and re-read. The religion appealed to me, and I felt that the testimonies had a true ring. It would often come to my consciousness, that if such wonderful healing could come to others, why not to me? While I had been a member of an orthodox church since girlhood, and my father a physician, I was not bigoted; still I had much to overcome, and it was not until nearly four months later that I sought treatment.

Three leading physicians had done what they could for me, only to commend me to the hospital and operating table. Every arrangement was accordingly made, except the date, but owing to my horror of it all, and my weak condition, it was delayed. In this extremity I sought Christian Science, with no one to influence me pro or con. Taking the *Journal*, I looked through the list of practitioners, to find that there were three within a radius of a few miles. Knowing nothing of either, I wrote one, requesting her to call the following afternoon and talk with me. She did so, and I loved her as soon as she spoke. I asked her if she thought she could cure me, to which she replied, "No, dear, I cannot; but God can." She gave me a treatment before leaving, and with that first treatment my intense nervousness and the terrible pain left me, and have never returned. In three weeks I was a well woman. This means much to me, as I was never considered strong. A tumor had dissolved into its "native nothingness." Later I found that I was also healed of a hacking cough with which I had been troubled ever since I had a slight hemorrhage at the age of twenty-two. A tendency to take cold has also been overcome.

Now the "old, old story" has become the "new, new song" to me, for much that before was vague, mysterious, and contradictory is made plain, and "I know in whom I have believed." So I find my gratitude, which is great, branching out in many directions,—to Mrs. Eddy, who rediscovered the way, so overgrown with the materialism of centuries; to the Board of Lectureship; to The Christian Science Publishing Society, and most of all to God, whom I have found, through our Leader's writings, to be a very present help in time of trouble.

MRS. MAY R. LEE, Hyde Park, Mass.

It is impossible for me to express in mere words my gratitude for Christian Science. I was an invalid and a constant sufferer for two years, and after submitting to surgery, I had eight months of hospital life. Electricity, osteopathy, and mineral springs had all been tried in vain when the opportunity to try Christian Science came to me. I was relieved at once, and in a month's time I could walk a mile. For six months, however, we waited, to be assured that this seeming miracle was permanent before I returned to my college work. The realization of the nothingness of that hydra-headed monster, fear, the understanding that there are no limitations for God's children, and the knowledge of what we may attain spiritually by understanding and by constant endeavor, has given me something of the peace that passeth understanding.

My heart goes out in gratitude to God, and to Mrs. Eddy, which I will earnestly endeavor to express in my daily life.

MARY B. VALE, Bonaparte, Ia.

For several years I was under the fear of consumption,—my father, one brother, and three sisters having died from this disease,—and as it had manifested itself in the generation before this, I supposed of course I could not escape it. In 1873 I made application for life insurance, but was rejected on account of my family record. At that time I was thirty-five years old. I began to experience cough and night sweats, and could do but little work. My physician advised me not to risk another winter in that climate, so in September of 1873 we came to Nebraska. The change seemed to benefit me very much for a time, but in the summer of 1886 I began to run down again, being able to work but a few hours a day on account of the severe pain in my lungs.

In August of this year we heard of Christian Science, and my wife and myself went to Omaha for the treatment, when after three weeks I was healed, and have been perfectly free from this fear of consumption ever since. I am now well and weigh two hundred and fifteen pounds. I am entirely free from pain in my lungs and all the attendant symptoms. When will the people awake to the great fact, that in God, good, and not in matter, we live, and move, and have our being.

A. W. BEACH, Weeping Water, Neb.

Some years ago I was compelled to visit an eye specialist. It was impossible for me to see to read or sew by lamplight, and after an examination it was pronounced a severe case of astigmatism. Glasses were ordered, and I was informed that I should always have to wear them. In the course of time I became interested in Christian Science and discarded my glasses, being full of zeal and earnestness, but I have since learned the profitable lesson of "making haste slowly." Last spring I felt that my eyes were not in a normal condition and it seemed as if I could not handle my own case. I struggled on for about two months and at last I found it necessary to have help. I could not distinguish one person from another on the street, could not read or sew, and was in great distress. The eyeballs seemed to be badly inflamed and there was a consequent depression of spirits; but now, I thank God He has revealed himself in Christian Science, and to-day I can see to read and sew, and that too at night. My demonstration was made in one week's treatment. All the inflammation and other trouble faded like mist before the sun, and every day I became stronger.

For this demonstration I feel deep gratitude to God, and for our Leader a reverence too deep for mere words. I only wish to be faithful and true to this sacred Cause.

MRS. ELIZABETH DUMBRILLE, Hamilton, Ontario.

I did not come into Christian Science for physical healing, but I yearned to gain a higher understanding of God. I was, however, healed of chronic headache through the study of Science and Health, and with the aid of a dear practitioner I was healed of ovarian trouble of long standing, in one treatment. My husband was healed of cancer of the throat, after *materia medica* had failed. His case had been pronounced incurable by eminent physicians. I am deeply grateful to God, and to our dear Leader, Mrs. Eddy, who has so lovingly shown us the way.

MRS. LEOLA A. GOODIN, Los Angeles, Cal.

One day I saw in a neighbor's flower-bed a little plant that, as it pushed its way above the ground, had brought with it the mother seed from which it grew. That was a literal reappearance of the planted seed; but it was not *the* reappearance, not *the* resurrection of the seed from which a seed grows.—GEORGE CROLY.

From our Exchanges.

It is not wealth that is going to move the world. It is not intellect, nor culture, nor education, nor argument, nor material equipment. No, there is only one thing in which the Church can ever hope to outclass the world, and that is in the possession and exercise of spiritual and moral power. The world bows to that as to something utterly beyond it, mysterious, invisible, terrific, and unknown. Nothing captures men like the display of spiritual power. It paralyzes opposition and makes argument ridiculous. Money and intellect are nothing before it. The world will believe that God has appeared unto us when we can turn the rod into a serpent, and not a moment before. It holds that no man has seen God who cannot do the works of God. "What sign showest thou?" To the question, "Art thou he that should come, or do we look for another?" Jesus had one answer: "Go and show John again those things which ye do hear and see: the blind receive their sight, and the lame walk, the lepers are cleansed, and the deaf hear, the dead are raised up, and the poor have the gospel preached to them." These are the credentials of the Church, and in the sight of God and universal man there are no others.

F. W. WALKER PUGH.
The Standard.

Of course Christ's language is figurative in speaking of yokes, somewhat less so, perhaps, in speaking of burdens. Burdens are peculiar to individuals. Christ does not say, "Take my burden upon you." A yoke represents a harness for burden-bearers, and an easy yoke is the most effective way in which any given burden can be carried. But, while this yoke of Christ's, as a matter of course, is a thing of the spirit, it does not thereby drop out of the realm of reality and become a thing of shadows. It remains a prime reality in all the deeper experiences of life. We cannot have gone far with life if we have not found out that it makes all the difference in the world what sort of a spirit we carry into its activities and responsibilities, and it is in this power of the spirit that we find the secret of Christ's easy yoke.

REV. I. F. PORTER.
The Christian Register.

We have a right to expect that the Church will be true to its witnessing office as the representative of Christ on earth. For what men read of Christ, they will mainly read in the words and actions of his declared followers. Where else should the world read of him who told his disciples, of all teachers, that "by their fruits ye shall know them"? We have no right to complain, we have every right to expect that men will judge the Master by his disciples. And if the world to-day thinks more highly of Christ than it does of Christians, that is a tribute to his supreme excellence of character and a condemnation of our failure to approximate to the pattern he has set.—*The Congregationalist.*

It is an old and true saying that godliness with contentment is great gain. Godliness is the great thing, and the concomitant of godliness is contentment. In one sense godliness renders a man discontented—discontented with himself, with his attainments, and with his present growth in character. There is a divine unrest which persists in every life that is at all touched by the grace of God. Paul of Tarsus had that unrest of spirit, who cried, I press toward the mark! All great souls in history have been discontented in that supreme sense.—*The New York Observer.*

God understands a heart sentiment, a soul yearning perfectly; He whispers reply, and though no word is spoken, we know that He has been revealing himself to us.

Western Christian Advocate.

THE CHRISTIAN SCIENCE TEXT-BOOK.—"Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

RUDIMENTAL DIVINE SCIENCE.—Printed in the New York point system of type for the blind. Price, prepaid, 50 cents per single copy; $5 per dozen.

CHURCH MANUAL.—Containing all the By-laws to January 1, 1906, of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of The Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the Churches and Societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to The Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of The Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to The Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number, or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By Hon. WILLIAM G. EWING.

CHRISTIAN SCIENCE. Its Worth and Work. By Rev. ARTHUR R. VOSBURGH.

CHRISTIAN SCIENCE. Its Promises and their Fulfilment. By EDWARD A. KIMBALL.

CHRISTIAN SCIENCE. Is it Christian? By MRS. SUE HARPER MIMS.

CHRISTIAN SCIENCE. Its Work and Scope. By CAROL NORTON.

CHRISTIAN SCIENCE. The True Idealism. By ANNIE M. KNOTT.

IN GERMAN

CHRISTIAN SCIENCE. Its Promises and their Fulfilment. By EDWARD A. KIMBALL.

CHRISTIAN SCIENCE. The Christianity of Christ. By Rev. IRVING C. TOMLINSON.

Price. Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, 75 cents; five hundred copies, $3.25; one thousand copies, $6.00. Orders for supplements may be assorted as desired.

Pamphlets

MR. KIMBALL'S LECTURE. 31 pages.

HEALING THROUGH CHRISTIAN SCIENCE. Discourses and Editorials. By JUDGE SEPTIMUS J. HANNA. 36 pages.

HEARINGS ON PROPOSED MEDICAL BILLS IN MASSACHUSETTS AND NEW YORK. 23 pages.

ANSWERS TO QUESTIONS CONCERNING CHRISTIAN SCIENCE. By EDWARD A. KIMBALL. 26 pages.

PRAYER AND CONFIDENCE. Four articles reprinted from the *Journal*. 40 pages.

THE LOS ANGELES CASE. Testimonials given in Court as to the healing efficacy of Christian Science. 63 pages.

THE CHRISTIAN SCIENCE MOVEMENT. Revised by CAROL NORTON. 28 pages.

CHRISTIAN SCIENCE IS SCIENTIFIC CHRISTIANITY. A Lecture. By Rev. ARTHUR R. VOSBURGH. 28 pages.

CHRISTIAN SCIENCE: ITS COMPASSIONATE APPEAL. Four articles reprinted from the *Journal*. This pamphlet is also printed in German. 38 pages.

A CRITIC ANSWERED. By ALFRED FARLOW. Printed in German only. 31 pages.

Price. One copy, six cents; twelve copies to one address, sixty cents; twenty-five copies to one address, $1.15; fifty copies to one address, $2.25. Orders for pamphlets may be assorted as desired.

Works on Christian Science

Written by the Author of the Christian Science Text-book, MARY BAKER G. EDDY

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Enlarged and Revised, 1902. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid $3 18

Two to twelve books (cloth only) to one address, each, prepaid 3 00
Twelve or more books to one address, each, prepaid 2 75

Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid 4 00
Twelve or more to one address, each, prepaid . . . 3 75

Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid . . 5 00
Twelve or more to one address, each, prepaid . . . 4 75

Levant, divinity circuit, leather-lined, round corners, gilt edges, silk-sewed, heavy Oxford India Bible Paper, wide margins, each, prepaid 6 00
Twelve or more to one address, each, prepaid . . . 5 75

Orders for Science and Health, in lots of twelve or more to one address, may include any or all the different styles of binding.

A COMPLETE CONCORDANCE to Science and Health with Key to the Scriptures, 595 pp., 10 x 7. Bound in cloth, marbled edges. Price, single copy, prepaid . . $5 00
Twelve or more copies to one address, each . . . 4 50

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth), each, prepaid 2 25
Twelve or more books to one address, each, prepaid 2 00

Morocco, limp, round corners, gilt edges, convenient for pocket, each, prepaid 4 00
Twelve or more to one address, each, prepaid . . . 3 75

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5 00
Twelve or more to one address, each, prepaid . . . 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

The San Francisco banks, on the day they opened for business, May 23, had in their vaults about $45,000,000 more than they had at the time of the earthquake. This is the estimated amount of money transferred to the city through the Sub-Treasury and by express from New York City and in various ways from Chicago, Denver, and New Orleans. The President of the San Francisco Clearing House Association said, regarding the financial situation: "The banks are all solid, money is abundant, and the situation financially is excellent from every point of view." An official of the Wells Fargo Nevada Bank said: "It is the old story of the perversity of human nature. What we can have we want not; what is difficult to obtain we set our hearts upon. Our bank has in its vaults immediately available in cash $20,733,346.26. So while we expected somewhat of a rush we were prepared for it. We have had little or no calls for money."

The tax collector supports the statements of bankers that cash is not scarce in San Francisco, and citizens are not at all backward about paying their taxes. He says that the indications are now that the delinquents' list will not exceed at most $250,000, whereas in normal years it is $200,000. Of $1,000,000 due on April 18 more than one-half has been paid.

A statement made that the day of the cable road in San Francisco is past has been sustained by the action of the Board of Supervisors in granting to the United Railroads the privilege of converting the cable lines into electric roads, with overhead trolleys.

The committee having in charge the drafting of a new building ordinance has concluded its labors. Concerning the height of buildings the ordinance provided that no building shall exceed two and one-half times the width of the street upon which it fronts.

Secretary Root, for the United States, and Ambassador Casasus, for the Mexican Government, have signed a treaty regulating the use of the waters of the Rio Grande. For almost a century the Mexicans living along the lower river have made large use of its waters for the purpose of irrigating their lands, but in recent years private companies on the upper waters in the United States have, by the construction of wing dams, diverted a large part of the water to this side of the river. The Mexicans have preferred claims for the damage sustained, but so far without success. Now the plans of the reclamation service have made it certain that practically all of the water will be retained on American soil unless some proper scheme of division can be arranged. It is stipulated that sixty thousand feet of water, which is to make arable about twenty-five thousand acres of land, will be delivered on the Mexican side of the border each year. For its part, the Mexican Government guarantees the United States Government against any suit for liability on account of claims of individual Mexicans who have so far suffered through the diversion of water.

Protection for the home market from tainted and diseased meats is provided for in an important bill introduced in the Senate last week by Senator Beveridge of Indiana This measure has been prepared after consultation with Secretary of Agriculture Wilson, Attorney General Moody, and Commissioner Garfield of the Bureau of Corporations, and contains twenty sections, which provide for a rigid inspection of livestock before slaughter and of meat after the animals are killed. The shipment of canned goods is also regulated. All violations of this law are punishable by a fine not exceeding $10,000, or by imprisonment not exceeding two years, or by both. Appeals from the decision of the inspector shall be made to the inspector in charge and from the latter's decision an appeal shall lie directly in the chief of the Bureau of Animal Industry of the Department of Agriculture.

A group of graduates of Brown University recently organized a conference of college graduates, called to consider the feasibility of forming the alumni of the country, who number over three hundred thousand, into a federation for the periodical consideration of the affairs of the country. Representatives of nineteen institutions of learning were present at Springfield, Mass., some of them directly sent there by their clubs and associations, and others attending from a faith in the results which may be attained by arousing college men to a keener sense of their duty as citizens.

A proclamation has been issued by the President announcing the opening to settlement and entry of one million acres of the Crow Indian Reservation in Montana. Registration of applicants will be filed at Miles City and Billings, Mont., and at Sheridan, Wyo., commencing June 14 and ending June 28, 1906.

Officers of the coast artillery are gratified with the order which permits them to exercise their own discretion in admitting within the limits of coast fortifications visitors who are not of the service. Hitherto ironclad rules have prevailed against the admission of visitors in general.

Foreign.

In an interview with General Nogi, in reference to the report that General Stoessel had been sentenced to death by court-martial for surrendering Port Arthur, the general declared that he could not have done more in defence of the place. He underwent unimaginable trials and hardships. It is true that there were enough provisions and ammunition to have lasted beyond the time of the surrender, but General Stoessel lacked the whole-hearted, loyal co-operation of his officers and men. There were occasions when both refused to obey orders.

The Simplon Tunnel was inaugurated May 19 by King Victor Emmanuel, who left Domodoesola, Italy, at 10.55 A.M. for Brique, on the Swiss side of the mountain. The royal train passed through the twelve miles of tunnel drawn by a steam engine, the electric motors not being ready. It is the result of seven years of work and the expenditure of nearly $15,000,000.

The Central Committee of the Russian Constitutional Democrats has completed the drafts of the laws to be introduced in Parliament, including universal suffrage irrespective of sex; equal rights for all citizens; laws guaranteeing immunity of the person and inviolability of domicile without due process of law; the guarantee of habeas corpus.

Wu Ting-fang, the former Chinese Minister at Washington, who was intrusted with the task of codifying the laws, is memorializing the throne for jury trials, for permission for native lawyers to practise before the courts, and for the electrocution, instead of decapitation, of criminals condemned to death.

During the twenty-one month ending Nov. 30, 1905, there had been returned from Manchuria over the Trans-Siberian Railway 20,000 officers, 1,270,000 men, 230,000 horses, and over 1,600 guns, besides a vast quantity of stores and supplies.

The financial statement of the Canadian Minister of Finance shows for the present year an apparent surplus of $12,500,000, and a surplus for the past nine years of $64,000,000.

The Cuban House of Representatives has appropriated $500,000 as subventions for about half a dozen branch railroads in various parts of the Republic.

Industrial and Commercial.

The *Iron Trade Review*, in a recent issue, presents statistics of the world's production of pig iron for 1905 as 53,700,000 tons. The output has doubled in the past fifteen years, the production for 1890 being 26,980,810 tons. Russia has made the best showing, having more than tripled its output in that period. The United States and Germany have run quite evenly, the United States increasing its production in the fifteen years by 149.8 per cent and Germany by 147.0 per cent. In 1890 these two countries made 51.1 per cent of the world's pig iron, of the total increase in fifteen years they furnished 74.9 per cent, so that in 1905 they made 63.0 per cent of the world's total.

The *Manufacturers' Record* says: "A carefully revised list of the cotton mills of the South shows a total of 642 cotton mill companies and firms, with 9,470,647 spindles and 216,293 looms. Since 1900 this industry, as represented by the number of spindles and the capital invested, has more than doubled, and but for the scarcity of labor which has prevailed for a year or two it is quite probable that at least 1,000,000 more spindles would have been added to the total in the South."

All records from Havre to New York were broken recently by the run of the new French liner La Provence in six days, three hours, and thirty-five minutes, breaking by five hours and thirty-five minutes the best previous record, which was also held by La Provence, and was made on her maiden voyage to New York.

The British and Foreign Bible Society now distributes the Scriptures in no fewer than four hundred languages. During the last year the output of the Scriptures was six million copies.

The contract for draining the Pontine marshes in the Roman Campagna has recently been assigned to a Berlin syndicate by the principal owner of the land, the Roman Prince Borghese.

It is reported that new railroad construction in the Northwest and Canada offers employment for twenty-five thousand men.

In 1905 the production of anthracite coal in the United States amounted to 69,339,152 long tons, valued at $141,879,000.

Commerce of the United States with Argentina aggregates over $40,000,000 per annum.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

The Lesson of the Dove.

SUE HARPER MIMS.

IT is already being conceded that Christian Scientists are perhaps of all denominations the most constant and devoted students of the Bible, and not only so, but they depend on Truth, or the Word of God, for their health and their deliverance from all forms of error. The question of healing is essentially a vital one, and an object of the deepest research, study, and profound meditation. The correlated study of the Bible and of "Science and Health with Key to the Scriptures," unlocks a great storehouse of wisdom and love, heals sickness and sin, and uplifts and spiritualizes all human consciousness, so that "the world feels the alterative effect of truth through every pore" (Science and Health, p. 224).

It still remains, however, for the human mind to behold with interest and admiration the more complete unfoldment of this wonderful book, the Bible; to see that it is not a mere compilation of the historical narratives of a chosen people, which has been looked upon with a sort of blind fetish-worship; but that in the light of divine Science its spiritual meaning is now being revealed, so that we may understand the one Science—outside of which "all is unstable error" (Science and Health, p. 202). Christian Science is a system of spiritual philosophy which explains with impressive simplicity spiritual causation. Until its advent the whole world had been wrestling with illogical theories and false deductions, trying to reconcile material phenomena with a spiritual Cause. To-day a woman has arisen who, uniting the simplicity of a child with the acumen of a logician, has aroused the world to see that a spiritual cause must have a spiritual effect. Both science and philosophy insist that cause and effect must correspond, and in proportion as this simple yet profound statement is realized, is practised, and lived in Christian Science, the sick are healed, the sinner is reformed, and the kingdom of God appears on earth. This is the truth that makes free; it is the way of eternal life. This is the Logos, the Science which opens the door that no man can shut, through which all must enter into the realm of Spirit, Soul. A "little strength" is gained even in holding on to the letter of the Scriptures, some merit in not denying the name of Christ Jesus, as the angel says to the church at Philadelphia; but woe to those who enter not in at the open door of scientific demonstration, where mysticism and mystery vanish.

We often hear it said among Christian Scientists, how wonderful are our Lesson-Sermons; how they seem to be fitted to our every need—feeding us with the bread of heaven. But is this surprising,—are they not fulfilling the prophecy, "They shall be all taught of God"? Is not the Spirit of truth teaching the world through these lessons?

How expressive of this hour is the story of Noah's experience. In truth, time vanishes,—is seen to be only a "mortal concept;" and in the ever-present *now* we see a greater than the Noah consciousness, rising higher and higher, proving that "the Lord on high is mightier than the noise of many waters, yea, than the mighty waves of the sea." Resting after conquest, on the mountain-tops of victory won and exaltation attained, this consciousness sends out the dove, a symbol of love and peace. At first the turbulent sea of mortal thought offers no resting-place to this tender evangel, and it returns to that spiritual consciousness from which it was sent forth, reminding us of what Jesus said to his disciples,—"Into whatsoever house [consciousness] ye enter, first say, Peace be to this house. And if the son of peace be there, your peace shall rest upon it: if not, it shall turn to you again."

How expressive is this lesson of the dove, metaphysically understood, of our dear Leader's pioneer work, when at first there seemed no abiding-place for the heavenly message which is now illuminating the earth—in that hour, to which she pathetically refers when she says that Bronson Alcott, of the Concord school of philosophy, was the first to re-assure her with words of comfort and encouragement. (Pulpit and Press, p. 9.) Then followed further realization of Love's allness, a further grasp of omnipotence and its supreme, omnipresent care of all. The pure, perfect, and immortal was seen to be the only real; then were the sublime declarations of Truth again sent forth, and these returned with the olive branch, testifying to a spiritual receptivity,—consciousness yielding to the divine, making ready for the abiding recognition of ever-present Love. In Jesus' experience, too, an hour came when the Holy Ghost descended like a dove from heaven, and abode on him. To-day it comes again in Christian Science "as a permanent dispensation, to remain forever among men" (Science and Health, p. 150).

As our dear Leader has thus touched the thought of universal humanity, changing, uplifting, and spiritualizing it, do we not, as followers, meet the same seeming error, when in our own individual experiences the surging sea of erroneous concepts, the raging waves of materiality try to overwhelm our spiritual perception? How desolate would be those hours did we not know and cling to the rock,—Christ, the spiritual idea,—till we learn that behind the cloud the sun is ever shining, the dove of peace has descended, the storm is stilled. Above the roar, at first faintly, then grandly, sublimely, the voice of Love reverberates throughout the universe, saying, "When thou passest through the waters, I will be with thee; and through the rivers, they shall not overflow thee."

What a great privilege it is to live in this culminating hour of human history, in which a "peculiar people" is revealed who speak the new tongue of Spirit, which corrects the illusions of a false material sense, which strengthens with the Word of Life, and sustains with the truth of a deathless, progressive existence, eternally in God; comforting with the sweet assurance of Love's all-embracing, tender care; holding up on spiritual pinions the feeble hands, and energizing thought with the declarations of divine reality.

Only through devout consecration to God and humanity can we recompense in a degree our dear Leader for the sore travail through which she has brought to mankind the priceless boon of Christian Science—the Christ ideal—the radiant truth of perfect and immortal being.

A Loving Appeal.

NETTYE NACHMAN.

As a Jewess, two articles in the *Christian Science Sentinel* of March 17 made my heart leap with untold gladness, for they reveal to me the fact that the day of sects and creeds is indeed far spent, and that "the kingdom of God is at hand." Away with prejudice, that spectre which tries to separate God's children from each other. One of the articles to which I refer is headed, "Growth in San Francisco, Cal." (page 455). It announces the opening services of First Church of Christ, Scientist, which were held Dec. 31, and states that this building was formerly occupied by Sherith Israel congregation. This makes me think lovingly of my former co-religionists, the Hebrews, and I would say to them: We all know that God should be worshiped "in spirit and in truth," and in a temple not made with hands. It therefore follows that when the teachings of Christian Science pervade the human consciousness, that temple—that building of God—will become manifest to Jew and Gentile alike. The old structure of mortal doctrine and belief is even now passing away, and many are coming to recognize the allness of God, good, and the nothingness of superstition and dogma. We Jews should show a greater desire to know more of God, whom so many "ignorantly worship;" and I have found that this knowledge can best be gained by studying the Bible in the light of the teachings of Christian Science as found in Mrs. Eddy's book, "Science and Health with Key to the Scriptures." This book is also the key to health, happiness, holiness, heaven.

We as Jews pray for the day "when God alone will be recognized and His name alone." Because of my own experience I say, Try the healing, read the book; "seek, and ye shall find; knock, and it shall be opened unto you." My health was restored by Christian Science treatment after I had been an invalid for five years. My ailment was diagnosed as very serious, and all the doctors whom I had consulted said that even an operation would not entirely eradicate the trouble; they could promise no permanent relief or cure. They were at least honest. I was, however, healed in Christian Science in one treatment. That was two years ago. Thank God, I am perfectly well! More than this, I have come to know God,—our Father-Mother God,—who loves, protects, comforts, and sustains me and my family, and all. For this I sing a continual song of praise to God, and feel an unbounded love for and deep gratitude to our revered Leader, Mrs. Eddy.

The scientific understanding of the relation of God to man is the blessing of the age. On page 315 of Science and Health, Mrs. Eddy explains this very fully, and sets the mission of Jesus of Nazareth in the clearest light. Any one who is willing to read this page carefully will understand the true sonship of Christ Jesus. None need be timid about procuring this book. All are welcomed to the Christian Science Reading Rooms and churches, and a single visit to one of these places will be convincing proof of the good that Christian Science is doing. God will give all wisdom to see this light,—the Christ,—the Truth that heals the sick, reforms the sinner, binds up the broken-hearted, and uplifts the downtrodden.

On the same page of the *Sentinel* above referred to, I notice that Dr. Max Heller, Jewish rabbi, unselfishly, and with the right spirit, introduced Mr. Bicknell Young of Chicago, a Christian Science lecturer. Is not this a lesson to all who profess to love God, who desire the inspiration of the truth in order to know more of God, whom we say we adore?

I pray that my brothers may not allow prejudice to deprive them of their rightful inheritance. Let us remember the words read from the pulpit of every Jewish congregation on the Sabbath day, either in Hebrew or translated, which declare, "Nation shall not lift up sword against nation, neither shall they learn war any more. Oh house of Jacob, come ye, and let us walk in the light of the eternal." Christian Science is "the light eternal;" the light that "shineth in darkness; and the darkness comprehended it not." This truth will end war, prevent race hatred, abolish prejudice, and will reveal to all the kingdom of heaven on earth.

Purified Thought.

CORA S. NILES.

One does not pursue the study of Christian Science long before he perceives that many of the thoughts which he had harbored, considered worthy and right, are unworthy and wrong. What is to be done about it? Sometimes there is even a lack of willingness to change the wrong thinking until it brings suffering, escape from which is much desired, and we are finally ready to go to work, deep down in that consciousness which no one but self ever really knows, and patiently labor hour by hour that every plant which our heavenly Father hath not planted may "be rooted up." One of the most troublesome, dangerous, and prolific of these "plants" is resentment. To resent an injury or injustice has ever been considered perfectly justifiable, and ofttimes even praiseworthy, by mankind in general. "An eye for an eye" has called forth no objection from mortal mind. Now comes Christian Science, the gospel of peace and good will, knocking at the door of our thought, and reiterating the words of our dear Master, "Resist not evil: but whosoever shall smite thee on thy right cheek, turn to him the other also." This is not a new saying to us, but it seems to bear a new meaning, and instead of passing it by as impracticable if not impossible, it sinks deeper and deeper into our thought, until we find ourselves earnestly striving to bring our actions into accord with it. Our loved Leader, Mrs. Eddy, has said, "The Christian Scientist cherishes no resentment; he knows that that would harm him more than all the malice of his foes" (Message to The Mother Church, 1902, p. 32). The conviction grows that the successful accomplishment of this step—the uprooting of this one weed—is but a small part of what must be done to work out our salvation.

The word salvation, viewed in the light of Christian Science, loses its mistiness, and as defined in Science and Health, p. 593, becomes a clear and definite end toward which to work. In pondering the questions how we can cease to resent a seeming injury, how forgive an injustice, how understand and demonstrate love, one finds food for much thought. For a perfect example we have but to look to the life of our dear Lord and Master, note the sweet gentleness, the love that restored the ear of the high priest's servant severed by Peter's resentful thought, and hear the meek yet forceful words, "Suffer ye thus far."

Does it perhaps seem that the Master's mission was so great, and so much more important than ours, that he could rise to the accomplishment of his great task while we cannot? What was that mission? Was it not to prove to sin-ensnared and suffering humanity the omnipotence of God, good? Is not this also the mission of every Christian Scientist? and is not the omnipotence of good proved every time an evil is destroyed, be it sin or sickness? "Whosoever doth not bear his cross, and come after me, cannot be my disciple." This statement is surely clear, and it places no limitation on the distance we are to follow, hence we know that we are to "come after" him all the way. To do this we need to watch and pray that we may accomplish our task so that there be found no unworthy thought in our consciousness which would prevent us from bringing forth the fruits of Love. We cannot justly claim to be Christian Scientists unless we overcome every thought which is unlike God and thus be fitted to heal the sick and the sinful.

Freedom through Growth.

JESSE B. TWISS.

I REMEMBER the time when I seemed to stand before a great wall, over which I could not climb, round which I could find no way; and in whatever direction I turned I seemed to see one of these forbidding signs: Lack of funds; No friends; Health destroyed; Work unobtainable; Judgment poor; Tact unknown. While I halted before this dreary wall, asking God to save me before it should fall and crush me utterly, there appeared a "star in the east," which led me on, while distant angel voices seemed to sing, "God is Mind; God is Love; God is All." Like the shepherds and the wise men, I listened and followed till I came to where the Christ was. I began to learn the Science of Christianity, as taught in "Science and Health with Key to the Scriptures" by Mrs. Eddy, and I discovered that man is not material or sensual, but material; not an image of clay, vainly striving to reach Life through a gateway called death, but already the image and likeness of God.

Then was unfolded to my eager thought the ease, the joy, the gain of holding that image and likeness in my consciousness, watching and training my thought until it should be in harmony with the "one Mind," whose wisdom would thus inspire me with wisdom, whose love would teach me to love, whose peace would enlarge my peace, whose infinite resources would thus become my supply. From that time on my consciousness gradually changed. I learned from Science and Health that intelligence cannot be confined to a cranium cavity, dependent on radiating lines of discordant nerve matter for its concept of life. Thought began to reach out, to blend with the infinite Mind, to seek unity with the Father, even as taught by Jesus.

Thus came to me the deeper, fuller meaning of the angel song, "On earth peace, good will toward men." I perceived that man's consciousness is truly "the temple of the living God," wherein is no lack indeed, but abundance of all good.

Now that once terrible wall is but a memory of years gone by, for God has led me by ways divine, through a growing understanding of Christian Science, out from the shadows of poverty into the sheltered haven of health, happiness and hope, peace and prosperity,—a joy that had never before seemed possible since the first bright dreams of youth had been proved illusive and impossible.

And what wealth indeed! What are fortunes of land and gold as compared with fortunes of health, peace, and wisdom! Are millions in money to be compared to boundless faith, hope, and love?

Christian Science has made clear to thousands that the kingdom of heaven is attainable to all who comply willingly with its simple but scientific rules; and this is the secret of its influence, growth, and vital results upon health, longevity, prosperity, and moral character.

I formerly thought I knew much of the "kingdom of heaven" and the way to attain it, for during many years I was honestly active in church work wherever I lived; but the clear rules, the mental and spiritual discipline, the consequent higher spiritual understanding, and the resultant daily proofs of the truth of Christian Science, show me a vast, immeasurable distance traversed in my moral and spiritual progress during the six years since I first discerned in Christian Science the faint gleams of that "star in the east" whose light has merged into a glorious dawn, in which the angelic harmony continually grows sweeter and clearer.

The Christian religion explicitly disavows a dependence upon the powers of this world. It flourishes without the assistance of human laws,—in spite of every opposition from them. It is plain that if it was not invented by human policy it must have existed before it was established by human policy.—JAMES MADISON.

Selected Articles.

Mrs. Eddy's Horses are Blue Ribbon Winners.

The following extract from a letter written to Rev. Mary Baker G. Eddy by one of her students, Mrs. M. Bettie Bell of Chicago, relates an interesting episode in which one of Mrs. Eddy's new horses figured. It may be said of this famous show span that Eckersall, the nigh horse, who is trained to the harness only, has never been beaten in the show ring, while Tattersall, the off horse, who is a fine saddle as well as driving horse, has never been beaten but once, and that was under saddle by the famous stallion, Bourbon King.

Chicago, Ill., May 17, 1906.

My Beloved Teacher and Leader:—I do not like to take your valuable time reading letters, but I want to say to you that my niece, Miss Mamie Stone of Georgetown, Kentucky, was invited by the owner of Tattersall to drive him in the ladies' ring at the Elks' fair in July, 1905. The premium was to be given to the finest horse driven by a lady, and Tattersall received the blue ribbon. She little thought when driving him and seeing him honored that her dear Leader would own him.

We rejoice that you have these beautiful Kentucky horses, and may the giver be blessed in his gift to the best woman on earth. Accept our love.

Affectionately your student,

M. BETTIE BELL.

Concord (N. H.) *Evening Monitor.*

Mrs. Conger and the Empress of China.

There have been stories printed to the effect that, while her husband was United States Minister at Peking, Mrs. Conger devoted herself to the effort to make a convert to Christian Science of the Empress of China. That story may be dismissed since the publication of the correspondence between Mrs. Eddy and Mrs. Conger on the subject. It is a long and charming letter which Mrs. Conger writes to Mrs. Eddy, published in the *Christian Science Sentinel;* and we learn from it that the only woman's daily paper in the world is published in Peking.—*The Independent.*

A Right to Health and Happiness.

Editor of *The Globe.*

Sir:—The recent letter-writers in *The Globe* who are having a little fun with our friends the Christian Scientists, might be interested, if they have absolute faith in the infallibility of medicine and surgery as useful curative agents, to hear what some of the eminent surgeons and physicians have discovered in relation to their "science."

Dr. J. F. Baldwin of Columbus, O., declared recently before a Senate committee that it had been his observation "that nineteen-twentieths of all the cases a doctor is called upon to treat would get well without a doctor."

Dr Skeels of Cleveland, before the same committee, declared: "I am satisfied that many doctors are using remedies which are utterly useless and positively harmful."

Dr. Benjamin Rush, the famous Philadelphia teacher of medical practice; Professor Waterhouse of Harvard University, Professor Chapman of the Institutes and Practice of Physic in the University of Pennsylvania, Sir John Forbes, M.D., F.R.S., Fellow of the Royal College of Physicians, London, have all written along the same line, and their papers, showing the absolute unreliability of surgery or drugs, make "mighty interesting reading."

I am a manufacturing chemist, and it is most humiliating to have to admit that in the course of four thousand years of experiment we have not one specific to-day for any one of our diseases, and drugs of last year are in many cases being discarded. What a poor showing we have made!

Digitized by Google

Whatever you or I think of Christian Science, mankind feels instinctively that what they teach is true; viz., that we have a right to health and happiness; that somehow these are man's birthright, and that sickness and misery, the result of hate, envy, fear, greed, jealousy, doubt, graft, self-righteousness, conceit, selfishness, play no legitimate part in God's plan, and must be got rid of, blotted out of our consciousness, to let in the opposite positive and legitimate mental qualities or characteristics.

MANUFACTURING CHEMIST.
The (New York) *Globe.*

Christianity has not changed, and that which the Master came to establish is just as imperative and applies with just as much force to-day as it ever did. Yet millions are taking a very superficial view of life and existence, trying to find health and happiness in a material and mortal sense of things, seeking wealth, fame and all that human sense of things can desire, only to find that it all ends in sorrow and disappointment. The wise man said, "All is vanity and vexation," and his experience had been to the full in this direction. Jesus knew too well the fallacy of all that a material sense of things could afford, and when told that he would be given all the kingdoms of the world if he would fall down and worship, he said, "Get thee behind me, Satan." He sought to turn his followers from a material to a spiritual sense of things—even the reality of existence. Jesus' command was to deny self, not merely the pleasures of material sense but the claim of their actuality and reality, and thereby gain the spiritual sense.

There are many religions, but only one Christianity, and that is for all mankind and presents the perfect model of God's creation. Every one is bringing out his ideals, whatever they may be. If all had the perfect ideal which Jesus presented and that Christian Science presents to the world to-day, and all were working to bring out this ideal,—not at a single bound or by trying to force things out of their proper channel, but in daily living and earnest striving through love, meekness, gentleness, returning good for evil, loving more than any one can hate,—this would soon be a very different world. CHARLES M. HOWE.
St. Joseph (Mo.) *Gazette.*

Christian Science prohibits no one from eating or drinking any of those things ordinarily recognized as articles of food; intoxicating liquors and tobacco do not, however, come under this classification, and while the tenets of the Christian Science church do not specifically prohibit the use of these things, yet the logical result of their practical application means the establishment of such conditions of thought as will absolutely eliminate all desire for either intoxicants or tobacco. Christian Science is a religion of love rather than an arbitrary "thou shalt not;" its teachings inculcate purity and spirituality of thought to such an extent that evil can find no lodgment. The Christian Scientist recognizes that fear and sin are the greatest procurers of disease, and his effort is to eliminate both.

It is very evident to the Christian Scientist that one cannot indulge in questionable practices, intemperance either in eating or drinking, in word, thought, or deed, and expect to enter into the complete harmonies which are guaranteed only to those who love God and keep His commandments. This religion includes regeneration, morally, spiritually, and physically, by the elimination from thought of all evil desires, thus making it impossible that the one healed should continue in the questionable practices which in the first place result disastrously. In other words, Christian Science is practical Christianity,—it inculcates purity of thought, holier desires, and those aspirations for goodness which alone are consistent with the highest ideals of Christianity.

Among the Churches.

Battle Creek, Mich.

An indication of the growth and prosperity of the religious organization known as First Church of Christ, Scientist, which is and has for some time been holding its assemblies in the Gas Company's building, is shown by the fact that it is soon to worship in a church of its own, having secured the desirable Kingman homestead located on the northwest corner of beautiful Maple and Adams Streets, the purchase price, eighty-five hundred dollars, being secured without solicitation in two days' time.

Morning Enquirer.

Redlands, Cal.

A little over a year ago First Church of Christ, Scientist, of Redlands was organized with nineteen members. We held Sunday services in a hall, and the house of one of our members was utilized for the Wednesday evening meeting and for the Reading Room. In September of the same year, a large vacant room on the ground floor was brought to our notice, and although the taking of this room meant an advance of about fifty-five dollars in our monthly expenses, it was unanimously decided to rent it. Our thought was, "Launch out into the deep. Have faith." The increased expense has been met and the work is advancing harmoniously. Our present membership is thirty-two. The highest attendance has been one hundred and five, the average during the winter months being about eighty-five. We have thirty to fifty-five on Wednesday evenings.

In April we had a lecture which was well attended and very helpful. A few days after the lecture the San Francisco disturbance made another demand upon us and one hundred dollars was raised. Then the *Sentinel*, asking for a further demonstration in the Mother Church Building Fund, made us feel it necessary to do our part immediately. The Sunday School gave ten dollars and the church ninety dollars, which was raised in the course of three weeks.

We never cease to rejoice that through Science and Health we have found a demonstrable Principle, and we cannot forget to be grateful to Mrs. Eddy, who, when we were astray, pointed the way toward the New Jerusalem.

Correspondence.

Sioux City, Ia.

The blessings which Christian Science has brought are so abundant that our hearts naturally overflow with love and gratitude, and we are glad of the privilege of giving in every way towards the propagation of Christian Science. We were able to send two thousand two hundred and thirteen dollars, at one time, to the Building Fund of The Mother Church, while the Sunday School sent one hundred dollars; and later, the Sunday School sent one thousand dollars and the church one hundred and forty-three dollars. At the same time, we have been making payments on our own church building fund, sent two hundred dollars to the Concord church, and carried on all necessary expenses. Our church membership is now one hundred and fifty-eight, and the Sunday School enrollment, fifty-eight. The present church edifice, holding two hundred and fifty, is being filled so rapidly that work on the new building will be commenced very soon.

We all feel that our debt of gratitude to Mrs. Eddy can never be measured, and if we can help even a little "to establish the stately operations of Christian Science" (Science and Health, p. 464), we shall be thankful. To this end, we are trying to "put off the old man with his deeds," until the demonstration of harmony may be complete and the Love that "seeketh not her own, but another's good" reigns in all hearts.—*Correspondence.*

The Lectures.

Cadillac, Mich.

An audience of about three hundred people listened to a lecture by Judge Septimus J. Hanna on Christian Science April 26 at the Opera House. The lecturer was introduced by Judge Fred S. Lamb, who said in part,—

The trend of Christian thought to-day is towards less of theory and more of truth. That truth and theory may be and often are united, is beyond question; but that theories have been expounded without even the semblance of truth is abundantly exemplified in the history of the past. The constant groping for truth in its highest sense, regardless of its effect on established tenets and dogmas connected with our faith in a definite religion, has culminated in a broader view of the essential truths underlying moral and spiritual life. Viewing things from this broader plane has brought us to realize not only the singleness of truth, but also its various manifestations, and we are being brought to realize that there is more than a spirit of tolerance towards these manifestations, which argues well for the ultimate triumph of truth.

No doubt you who have come here to-night to hear this lecture represent almost every phase of Christian thought. You are here for a purpose,—to listen to the thoughts and views of another; to accept or reject his conclusions according to your light. Viewed from the standards of Christian Science I should be classed as an heretic, for I have never given the matter any serious consideration; but I do say that any system, either religious or secular, which can shed any ray of hope upon any life, or lift the dark veil of error from any soul, is entitled to our consideration.—*Correspondence.*

Vancouver, B. C.

Clarence C. Eaton of Tacoma, Wash., lectured on Christian Science at the Opera House April 29. He was introduced by J. Burtt Morgan, who spoke in substance as follows:—

I presume that the majority of those present, like myself, are not Christian Scientists. Representing, as we doubtless do, various shades of religious belief and conviction, we may not accept many things taught by these people, but I am sure that we will all gladly admit that they are emphasizing at least some truths which, if not entirely ignored, have become largely obscured to the consciousness of Christian people in general. Chief among these I may mention the new emphasis which they have put upon the supremacy of the spiritual over the material. In this age of unprecedented material development and progress, when character has come to be measured by the standard of material success, it is not to be wondered at that materialistic ideas should have insinuated themselves into our very churches. Indeed some of us have almost forgotten the words of the Master, who declared that "a man's life consisteth not in the abundance of the things which he possesseth." At such a time it is a matter of congratulation that a body should have arisen to call for a return to first principles.

Another truth, which is really a corollary to the one already mentioned and which is firmly insisted upon by Christian Scientists, is that of Christian healing. Not having had sufficient opportunity of personal observation, I am not prepared to say to what extent they are able to exemplify the healing as taught and practised by Christ Jesus, but this I do know, that there is no Scriptural authority whatever for the relegation of this healing to the ages of the past. Let us rejoice, therefore, if anything is being done to re-establish the fact that God's power to heal the sick and dispel the thousand ills to which our flesh is heir, is just as great to-day as it was nineteen centuries ago.—*Correspondence.*

Arrangements for the June Meetings.

Horticultural Hall, corner Massachusetts and Huntington Avenues, has been secured as headquarters for all committees, from Thursday, June 7, to Wednesday, June 13, inclusive, and all necessary information can be obtained there. It will be free to visitors as a central rendezvous both day and evening. All mail and telegrams received for visitors will be distributed at this place, but such mail and telegrams should be sent in care of The Christian Science Publishing Society, 250 Huntington Avenue.

Almost all the railroads have agreed to make a reduced rate of practically one fare for the round trip to Boston for the Communion season. It is suggested to those intending to visit Boston that they consult their local ticket agents a sufficient time in advance of their intended departure to enable the agent to secure tickets, etc.

A Committee has been appointed to find rooms for those attending the June meetings of The Mother Church, and this Committee will be able to provide rooms for all visitors. Those who have not made definite arrangements are requested to communicate with the Room Committee, 250 Huntington Avenue, as early as possible, stating their precise requirements, the price they are willing to pay, etc., in order that an approximate estimate may be made of the amount of accommodations which will be required. This Committee will not undertake to engage rooms in advance, either in hotels or private houses. Those wishing to engage rooms in advance should communicate directly with the hotels at once. It is desirable that, where practicable, one person should act for a group from one locality. This will greatly facilitate the work of the Committee.

On their arrival in Boston, those who are depending on this Committee for rooms are requested to go to Horticultural Hall, corner Huntington and Massachusetts Avenues, where this Committee will have its headquarters, commencing Thursday, June 7. They will please leave their checked baggage at the depot and bring their checks to the hall, where an agent will be in attendance to arrange for its delivery when their location is settled.

The hours for services in The Mother Church, Sunday, June 10, will be 7.30 and 10 o'clock A.M., and 12.30, 3.00, 5.30, and 8.00 P.M. At the 12.30 service, the children will be given preference in seating the congregation.

The Annual Meeting will be held in The Mother Church, Tuesday, June 12. This meeting is for members only, and none will be admitted without cards, which will be issued by the Committee at Horticultural Hall.

In addition to the Wednesday evening meetings which will be held in both the new and the old auditoriums and the Sunday School rooms of The Mother Church, June 13, at 7.30 P.M., meetings will be held at the same time in Jordan Hall, Huntington Avenue and Gainsborough Street; Horticultural Hall, Massachusetts and Huntington Avenues; Chickering Hall, 239 Huntington Avenue; and Potter, Howe, and Woolson Halls, 177 Huntington Avenue.

The Annual Meeting of the Executive Members will be held in The Mother Church, Saturday, June 9, at 9 o'clock in the forenoon.

Picture of The Mother Church.

The picture of The Mother Church and its extension which The Christian Science Publishing Society will have for sale is a half-tone reproduction, 12 x 15 inches in size, of a view giving the St. Paul Street frontage and Falmouth Street side.

The picture is mounted on a white mat, 21 x 25 inches, and will be sent to any address in a mailing-tube for fifty cents a copy. A dozen copies will be sent to one address for $4.50. Address all orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

A Question Answered.

De Funiak Springs, Fla., April 19, 1906.

Mr. Calvin A. Frye, Concord, N. H.

Dear Friend:—Has Mrs. Eddy given out any orders recently—or at any time—that Christian Science practitioners are not to take Roman Catholic patients or give them any of her writings? As I am sometimes called to treat in a community where there are many Catholics (Pensacola), and as this rumor has recently caused some mischief among my patients, I am anxious to know if such an order has any foundation in fact, before giving up some cases now in my charge. I doubt the truth of any such report, as it is not consistent with Christian Science teaching, but for the satisfaction of others I think it my duty to inquire at headquarters about the matter. I shall continue the treatment of the cases on hand until I hear from you. Thanking you for any help you can give me in this matter, I am Very sincerely yours,

MRS. CLARA DREYER.

Pleasant View, Concord, N. H., May 4, 1906.

Mrs. Clara Dreyer, C. S., De Funiak Springs, Fla.

Dear Sister in Christian Science:—In reply to your question, "Has Mrs. Eddy given out any order recently—or at any time—that Christian Science practitioners are not to take Roman Catholic patients or give them any of her writings?" will say: Mrs. Eddy has issued no such orders. She takes no patients, but through her writings gladly helps all those who will receive her help.

Yours fraternally,

CALVIN A. FRYE.

A Timely Word.

[The following letter to Mrs. Eddy from one of her old and faithful students is so full of loving appreciation of her watchful, prayerful, inspired leadership, and of the great results to mankind from her ministry, that it will evoke an immediate "yea, and amen" from all other Christian Scientists, for they too have received the blessings of Mrs. Eddy's ministry and know somewhat of her untiring and unselfish labors for humanity. It does us good to read a letter such as this.—EDITOR.]

Brooklyn, N. Y., May 22, 1906.

My Beloved Leader and Teacher:—As the work on the extension of The Mother Church nears completion, I am almost overwhelmed with what I even dimly see, in connection with this grand demonstration! The beauty of the structure, pleasing to even the most critical eyes, not only dignifies our loved Cause but expresses a greater degree of unselfed love, and consecration of thought and energy on the part of Christian Scientists—those who are striving to earn their right to this name and high calling. These efforts must gladden your heart in a degree; but "down deep in my heart" is a very strong sense that we could have done even better work, if all had been fully awake to the subtle argument of procrastination which leaves much work to be done at the "eleventh hour." Truly, this arises "not so much from lack of desire as from lack of spiritual growth" (Science and Health, p. 243). I see more clearly than ever before, the demand of Truth to turn away from the allurements of personal sense, under whatever guise, in order that we may be true followers of Christ, according to your teachings.

An incident in connection with the Mother Church Building Fund may interest you. Last week I called my students together to see what more we could do in this line in expressing our love and loyalty, although all have been contributing regularly through the church treasury and forwarding to Mr. Chase from a thousand to twelve hundred dollars weekly for some little time. At the conclusion of our meeting, and when it seemed as if there was nothing more to give, the sum of eleven hundred and fifty dollars was lovingly pledged, and has been forwarded to Mr. Chase in conjunction with a contribution from other church members,—in all, about twenty-one hundred dollars. Some even expressed their willingness to give up the long-cherished trip to Boston, and contribute their expenses to the fund, if necessary.

We do love you, our dear Leader, also the truth you have brought us, though it is so feebly expressed by us as yet, and we hope to grow to that point of demonstration where you will be able to call us "not servants but friends," because we shall enter more fully into your work, understand better Wisdom's call, and rise higher.

I read with joy of the gift of love to you from our faithful Directors in Boston. No matter what your need may be—our need is to express in some form, pure affection and sincere gratitude toward one who has left all for Christ, in order to uplift and benefit mankind. Mr. Strang fitly expressed it when he wrote, "The church can never do for its Leader what its Leader has done for the church!" I am learning that words are meaningless, if there is nothing back to give them life, but I do believe that the approaching Communion will not only be a joyful occasion because of victories won, but will mark a greater degree of consecration of thought, and action in our work.

Love is omni-action, and never ceases to be, in expression of constant and untiring work. The future will call for our highest and best efforts, and these will be fruitful if we are "watchful, sober, and vigilant," and love God and man better, as you are ever teaching us. As I turn the searchlight of Divine Science within, I can see with sorrow how I have unconsciously, at times, left you as a lone sentinel at your post of duty, while thought failed to rise to the point of your expectant hope for all, manifest in more consecrated lives,—*living* what we profess and believe. I am grateful for the fact that you always return good for evil, and constantly stimulate us through your writings and example to higher and better demonstrations of divine Love. May we, your professed followers, heed the lessons we must learn, and "now is the accepted time." With renewed acknowledgments of benefits received, I am striving to be Your faithful and loving student,

EMILIE B. HULIN.

A Practical Philosophy.

CHRISTIAN history has always been illumined, in some degree, by the torch of holy aspiration and endeavor, and as one thinks of the number of brave hearts which in the past centuries have struggled on and on in the dark, he finds himself moved by a deepening sense of gratitude that upon his pathway and problem has shone a great light.

There can never be any mastery until the truth is known about the thing to be mastered, and therefore we cannot hope to overcome evil until we have a right sense of its nature; namely, that it is untrue and hence unreal to all truth-knowers. One might expect mortals to be glad to learn this fact regarding the source of all their miseries,

Digitized by Google

but experience shows that, on the contrary, human sense resists this teaching; hence the necessity of that line-upon-line emphasis which Mrs. Eddy has given it in her statement and exposition of Christian Science.

Among Christian peoples, the teaching that God is infinite Spirit, the source and explanation of all being, would be universally conceded, and all who think logically must accept the conclusion that the going forth or manifestation of Spirit is spiritual; but until the coming of Christian Science, practically the whole earth was filled not with this "knowledge of the glory of God," but with the belief that Spirit created and has ever sustained His opposite, matter, a proposition which involves the declaration of God's responsibility for all that inheres in materiality; and the significance of this colossal mistake to the past inefficiency of organized Christianity is being vividly impressed upon Christian thought by the word and works of Christian Science.

To those who are governed by this false belief, *materia medica* very naturally seems not only the logical, but the only available remedy for physical ills. When a man wants to move what he thinks of as a big stone, he reaches for a crowbar, but when he wants to dispossess and destroy what he regards a big lie, he does not seek material aid, he simply begins to think and declare the truth. Thus it is that so long as one looks upon sickness as a material phenomenon so long will he look to matter (drugs) for its removal, and it is therefore clear that confident and unreserved dependence upon Spirit for the cure of sickness cannot be attained while we hold that sickness is an abnormal condition of reality.

Christian Science insists upon the reality of the ideal alone, and teaches that whatever is unideal is of the nature of untruth. In so far as our false beliefs respecting the reality of sin, sickness, and death have yielded to the true sense of reality as wholly spiritual and good, in so far we are impelled to look to Truth for all healing, since it is impossible not to know that Truth and Truth alone can annihilate error. Christian Science thus not only gives a philosophical basis and explanation of the *modus operandi* of spiritual healing, but it supplies the calm confidence and stimulus to individual endeavor which are essential to spiritual vitality and progress. If, when the senses are clamorously insisting upon the presence of disease, one can truly and understandingly say, "I know that life is not in matter nor subject to it; that this sense testimony is false and cannot abide in the presence of Truth," then the words of the great apostle will again be verified: The law of the spirit of life in Christ Jesus will make free from the law of sin and death.

A very practical gain is realized just here in the fact that our firm and unquestioning acceptance of the being and nature of God, good, is thus made to lend its aid to our far less clear sense of the unreality, the oppositeness, of evil. Approaching the problem through the avenues of material sense, one finds it quite impossible to free himself from the belief in the reality of the abnormal, but when he approaches it from the divine side and adheres to the readily acceded, because consistent, requirements of his thought of God, then by deduction the untruth and hence the powerlessness of evil at once appears; its asserted reality becomes simply unthinkable.

Christian Science commends itself to all thoughtful people not only because of its practical efficiency but because of its reasonableness. It has a tenable and satisfying philosophy, which is both revolutionary and inspiring in its teaching that sin, sickness, death—all abnormity—is but the testimony of false sense, and hence that it may be dispelled by a right apprehension of the Christ-truth, and the patient and illuminating way in which our Leader has explained and demonstrated all this can but lead every sympathetic student to think of her as his personal benefactor.

JOHN B. WILLIS.

Letters to our Leader.

Los Angeles, Cal.

Dearly Beloved Leader:—In behalf of the Sunday School of Second Church of Christ, Scientist, of Los Angeles, I beg the privilege of expressing to you our great love and gratitude. We have always received with gladness any word you have found it advisable to give the Sunday Schools, so you may know with what pleasure we read the words given by you, through Mr. Strang, in the *Sentinel* of March 3. We thought that you in turn might be glad to know we were already following your suggestion in regard to the study of the commandments and beatitudes; at all times remembering and proving that, through the study of your writings, our interpretation could be given "unfettered by human hypotheses."

Our Sunday School has sent to the Mother Church Building Fund, as a love offering, two thousand one hundred and fifty-eight dollars, twenty-five cents. Of this amount, one thousand three hundred and eighty-two dollars and ninety cents had accrued from our weekly collection and was designed to be used for the local building fund. It was, however, overwhelmingly voted by the children to send it to The Mother Church. The remaining seven hundred and seventy-five dollars and thirty-five cents was collected especially for the Mother Church Building Fund. We do not wish to draw unduly upon your time, but thought it would perhaps gladden your heart to know that the little ones in this western Field are striving to keep awake to the greatest privilege of the present day; namely, to follow in the footsteps of the inspired author of Science and Health. May I add my individual word of love and thanks? Since I was thirteen years old, after seeing my mother raised from a consumptive's grave (see Science and Health, p. 693) through the reading of our text-book, I have been a student of Christian Science. During that time I have repeatedly proven that the greater work of Christian Science is not the cure of disease but its prevention, and that its greatest work is its revelation of a God whom we do not "ignorantly worship."

Yours lovingly and gratefully,

MARY E. YOUNG BROWN, *Superintendent.*

Winnipeg, Manitoba, May 15, 1906.

Mrs. Mary Baker G. Eddy,

Pleasant View, Concord, N. H.

Beloved Leader:—With hearts overflowing with gratitude to you for your priceless discovery, Christian Science, and desiring that you should know what it has been our privilege and demonstration to give toward the Mother Church Building Fund, Second Church of Christ, Scientist, Winnipeg, in annual meeting assembled, begs to submit the following report, and let you know somewhat of the present fruits of Christian Science in this Field, which fruits have only been possible through your ceaseless self-denial. The contributions of our church amount to two thousand seven hundred and thirty-eight dollars, which includes our local church building fund, and we are continuing our contributions, feeling that we cannot relax our efforts until the complete demonstration is made. From Winnipeg the truth has spread throughout our prairie province, until now services are held in most of the important towns, and in several there are practitioners who devote their entire time to the work. In this city scores have been cured of many different phases of sin and disease.

For revealing to us the divine Principle, which, when understood, frees us from all forms of disease; for setting forth for us so lucidly, in "Science and Health with Key to the Scriptures," and your other writings, the Science of Christianity, which when applied enables us to annihilate sin in ourselves and others; for giving to us a knowledge of the truth which directs us hourly in our various paths in

Digitized by Google

life; in short, for making it possible for us *here* and *now* to realize heaven (harmony) on earth, we humbly express to you our profound gratitude, which we are endeavoring to manifest in good deeds and loyalty to the Cause of Christian Science. Yours in truth and love,

WILLIAM GALLIE,
AINSLIE G. MCDOUGALL,
L. H. JORDAN,
Committee.

Toronto, Ont., May 6, 1906.

Beloved Leader:—I thought it would please you to know of the blessing that came to me, in reading your card in the *Sentinel* of April 14, in regard to the dedication of The Mother Church. At a time when error seemed to be surging within and without, I turned to the *Sentinel*, with a prayer for help. As I read I caught a glimpse of the selflessness and activity of thought to which you have attained. The selfishness and apathy in my own thought were uncovered, and in the humility which followed divine Love flowed into consciousness, destroying physical discord and making my heart glad.

Since attending a recent meeting of Kindergartners in this city, the thought has come to me persistently of the work that can be accomplished by teachers who possess even an inkling of the omnipotence of God, and I long to see the yoke of bondage broken for the little ones. Jesus said, "Feed my lambs." Surely these are his lambs! Dear Mrs. Eddy, for your writings, and example, and the life that lies before me, I thank God daily.

Your loving follower,
MARION A. BASTEDO.

New Braunfels, Tex., May 2, 1906.

Mrs. Mary Baker G. Eddy, Concord, N. H.

Beloved Leader:—Just a few words, that will feebly express our sincere love and desire to let our light so shine that others may see our good works, by letting that Mind be in us "which was also in Christ Jesus." At present there are but few here interested in Christian Science. We have a room rented in which to hold Sunday service, and expect our number to increase in time, according to our work. The power of Truth has been beautifully demonstrated in several cases in this vicinity. We are to-day sending to Mr. Chase forty dollars—our love-offering for the Building Fund of The Mother Church. It is a small amount, but it represents much love and gratitude from a few followers of Christ, Truth, in New Braunfels, Tex.

Most gratefully yours,
MRS. WILLIE R. COMBS,
Treasurer and First Reader.

St. Louis, Mo., May 9, 1906.

Beloved Leader:—Thinking it might be of interest to you to know that the children of First Church of Christ, Scientist, of St. Louis, Mo., have been quietly working for the Mother Church Building Fund, I write the following for your information: Within a period of thirteen months they have raised eight hundred and forty dollars. I am to-day sending to Mr. Chase the third instalment of one hundred and fifteen dollars, this amount being contributed since April 11, 1906, on which day the second instalment of two hundred and twenty-five dollars was forwarded. The first instalment of five hundred dollars was sent on Dec. 22, 1905, as a "Christmas offering." Our children are loyal little workers and take a deep interest in their duties.

All send their love and an expression of gratitude to you. Cordially yours,

ADOLPH A. MAYNE, *Treasurer.*

Testimonies of Healing.

I went to the Rochester (N. Y.) City Hospital on March 1, 1899, and was there until the end of May; during that time four operations were performed for ovarian tumor. At the end of May, three days after the last operation, I was sent home on a stretcher in the ambulance. Notwithstanding that the operation had been pronounced a successful one by my physician, they told me, after I was healed by Christian Science, that they thought I had been sent home to die. The trouble following the operation was that the wound did not heal, but left a running sore. This wound they cauterized every other day, besides giving other supposedly necessary treatment, until at last, in response to my questioning, my physician said it might never heal unless I became strong enough to submit to another operation, and that he thought I might be sufficiently strong by fall. The operating surgeon and consulting physician agreed with this view of the case. After my return home, and before I could walk, a strong abdominal bandage was put on, with the instruction that I must not at any time stand on my feet without it. These conditions continued unchanged up to the latter part of July, at which time the subject of Christian Science was brought to my attention. I knew nothing whatever about it, therefore had little faith, at least not enough to wholly dismiss my physician. Shortly after this, however, I decided to give Christian Science a week's trial, and so told the doctor that I would not be in for a week.

The lady who told me of Christian Science loaned me some *Sentinels*, and in these I saw frequent reference to Science and Health, so asked the lady if she had the book. In the morning her husband left her copy with me, saying he would call for it at four o'clock on his way home. Up to this time I had for two years been obliged to wear glasses for reading and sewing, but in my haste to see the book I forgot that I did not have them on, and began to read, not stopping even for lunch. I was alone in the house until the gentleman called at four o'clock for the book. After reading some hours, I discovered the absence of my glasses, also the fact that I was seeing to read without trouble, and have not worn glasses from that day to the present time, as my eyesight has been normal.

Then I went to take Christian Science treatment. The first day I took the abdominal bandage off, after my return home; the second day there seemed little change; the third day the discharge ceased, and on the fourth day I felt I was healed; the fifth day I *knew* I was healed and needed no further help! I had told my doctor that I would see him on the following day, Saturday, and when I called, he asked me how I was, and wished to make the usual examination. I told him that I had felt no discomfort, and further that I was perfectly healed. He expressed great surprise and doubt. Upon examination he admitted frankly that the wound seemed to be healed, but to make sure that it was not a surface healing he wanted to examine it again the following week. I returned to the practitioner, who gave me another and last treatment. The following week I again visited the doctor to let him satisfy himself that the wound was naturally and normally healed. While he could not understand it, and said that nature had done it, he pronounced it perfectly healed.

I had been in the hospital fourteen weeks, at a very considerable expense. An added item of expense was that during these three months and the two following months at home, and up to the week of Christian Science treatment, I had to employ a housekeeper. In Christian Science I had but one week's treatment and purchased a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy. My healing occurred the last week in July, 1899, and I have had good health ever since.

MARGARET K. BOSTWICK, Rochester, N. Y.

Digitized by Google

I have long felt that I would like to express my gratitude for what Christian Science has done for me. I was led to investigate this wonderful truth by the need of physical healing. I was suffering from malignant cancer in the left breast. I had tried five of our local physicians, but with no relief; in fact I became much worse. I consulted a noted physician in Albany three times, and used the remedies which he prescribed. I had known something of Christian Science, but each time I expressed a desire to try it, I met with family opposition. Finally, on returning from my last visit to this doctor, I said, "I knew that he could not help me, and why should I not be permitted to try God?" The opposition was then overcome, because they were discouraged and ready to let me try that which seemed to be the last hope. My husband suggested going after a practitioner, but I already had the wonderful book that Mrs. Eddy has given to the world,—Science and Health,—and the next morning I began to read it. In just three days I removed the plasters, and in three weeks there was not even a scar left. Two ladies, hearing about my healing, called to see if it were true, and asked me to show them the evidence, so that they could tell their friends that they had seen for themselves that there was no scar. I was most grateful that I could do so.

My heart is filled with gratitude to God, and to Mrs. Eddy, for this wonderful truth that has been revealed to us, by which we may find the peace that passeth all understanding.—Mrs. Nellie C. Cramer, Oneonta, N. Y.

I regard it as a great privilege to be able to testify to my healing through Christian Science. A year and a half ago I did not believe in God, I did not believe in good. I could not find good in anything, I could only find bad in everything. It goes without saying that my views made me extremely unhappy. All I lived for was the thought of dying, and I was only twenty-two years of age! Over two years ago my mother became interested in Christian Science, and I took it upon myself to ridicule it without ever having opened Science and Health, but one day I went with her to the Reading Room of First Church of Christ, Scientist, New York City. There, without having any treatment, without even speaking to a practitioner, but merely by hearing the truth voiced, I was instantaneously healed,—physically, mentally, and above all, morally. Up to that day I had been smoking and drinking, but on that day I stopped both, for good and all, without any effort whatever. All desire for these things had evaporated into its native nothingness. For several years I had worn a thick woolen abdominal band. On two occasions, when I had attempted to leave it off for a single day during August, I had immediately been taken with such violent cramps and colic that I had to call in a doctor and was in bed for several days. On the day that I went to the Reading Room, though it was in the beginning of March, I took off the band and threw it away. I threw out all the material remedies on which I had been depending, tonics and indigestion tablets. I tore down certain pictures from my wall and threw out books from my bookcase. I opened the Bible for the first time in my life, and started studying "Science and Health with Key to the Scriptures" by Mrs. Eddy. I began attending the church, and going over the Lesson-Sermon every day. In a short time I became a member of The Mother Church.

Every day since that time I have had cause to be grateful to God for Christian Science; every day I have had cause to be grateful to Mrs. Eddy, that inspired woman who has voiced this truth to the world. My healing was surely as "miraculous" as was that of Mary Magdalene, who had been "a sinner" and out of whom Jesus cast "seven devils." After Mary Magdalene was healed, she called Jesus "Master." After I was healed, I called Mrs. Eddy Leader. To-day I call her beloved Leader, and it is my constant prayer that I may prove my love for this great Leader by being a faithful and worthy follower.

Harold Susman, New York, N. Y.

In grateful acknowledgment of the many blessings received through Christian Science I send these words to others seeking the truth. Six years ago this summer, a Christian Scientist sent for me, to tell me she had heard of the sad and disappointed life I had led for many years, and that I could be lifted out of it through Christian Science. After an hour's conversation with her on the teaching of Christian Science, I felt somewhat convinced of its truth. My sad condition had been brought about by the fact that my husband had been drinking steadily for eight years of our married life. He had taken the "gold cure" without any permanent results; his friends and relatives had labored long and patiently to reform him; but alas he was growing worse all the time, until it became necessary for us to separate. A few days after my visit, I called with my husband upon this lady, and she talked with him many hours. To say that it interested him would but mildly express it, for he left her home a new man. He was healed of that depraved appetite which had dogged his footsteps for many years. He at once began the study of our textbook, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and commenced to apply its teachings in his every-day experience, having each day satisfying proofs of the efficacy of Christian Science in the healing of sin, disease, and discordant conditions. While my husband has given his experience to the *Sentinel*, I can but repeat it, for his salvation was certainly mine. While I felt that I had been somewhat of a martyr, suffering from another's wrongdoing and not my own, I found, after I had learned but a very little of Christian Science, that I was anything but perfect, as I had thought myself to be. I found that there was just as much in me that needed to be improved as in my husband. I took the rebukes of Christian Science quite hard, for I had thought myself good when my husband knew he was not good. Self-righteousness, self-will, self-pity, selfishness, and all the claims of mortal self had to be struck out before I found peace in the new way, but my husband and I labored constantly together in the truth, helping each other over the rough places, until now we find that our labors are more for others than ourselves.

This wonderful truth has certainly brought blessings to our household. Instead of the discordant, unhappy family of four that we were, our home is a constant sunshine, for all its members are striving to be faithful "followers of God" in the way that has been revealed through our Leader.

Mrs. Blanche G. Woodall, Detroit, Mich.

About six years ago I was a hopeless invalid, having suffered off and on for years from hemorrhages of the lungs. The last three or four years before hearing of Christian Science, I had been unable to do any kind of work. I had tried everything of which I ever heard without any benefit. Several of the best doctors here said I had consumption, others said it was a wonder how I could live and have these hemorrhages. I was taken to a hospital with the hope that better care and perfect quiet might benefit me, but after leaving there I was worse than before. I did not leave my bed for seven months, and never expected to be well again. When morning came I wondered if I should live through the day, and at night I did not expect to see morning.

One evening a lady called on me, and said I could be healed. She spoke to me of Christian Science and gave me a *Sentinel*. I read the testimonies and saw so many cases of healing that I felt there might be help for me. I concluded to try it, and went to see this lady, who gave me a treatment, and from that time I was healed. I was able to run my sewing-machine all day the very next day, and

Digitized by Google

every day after, also to do my housework, which I had not been able to do for years. I am a well woman to-day and a picture of health. Not only have I been healed, but my whole family have received help many times. My husband, who was a hard drinker, was healed; he has not tasted intoxicants of any kind for six years. He is very grateful, as he had tried to conquer the habit many times and had failed, but there is nothing, either physical, mental, or moral, that Christian Science cannot heal. We are indeed grateful for the knowledge of Christian Science,—grateful to God, and to Mrs. Eddy who brought it to us. It is grand to know that in whatever form error may appear, we always have a remedy with us; that this truth does destroy error of every kind.—Mrs. A. Bulley, Racine, Wis.

About a year and a half ago I became unable to work, and the doctors said I had heart disease, caused by smoking cigarettes. I also had kidney trouble, and rheumatism so bad that at times I could hardly get out of bed. After I failed to get any relief from our home doctor, I went to Wichita and consulted a doctor who was considered very fine, but I got no help. I seemed to be growing worse day by day, and became convinced that the medicine was not doing me any good. On my way to Wichita I had stopped to visit my aunt, who is a Christian Scientist. She told me about Christian Science, and planted the seed of Truth in my consciousness, but not until I got so ill that I could hardly get out of the house would I yield to Truth for help. There were times when it seemed I would pass on, but I finally got help to go to the train, and after a day's ride I reached Hutchinson. My aunt met me, took me to her home, and began to work for me. I slept better that night than for some time; ate a good breakfast, which was something unusual for me, and in a day or two I felt like a new man. My healing was about the last of November, 1904, and from that time on, with the exception of a few slight attacks, I have been well and able to work. In less than a month after I came under Christian Science treatment I was employed by a telephone company, and have never failed to be at my post of duty.

I think my healing wonderful, and I am glad that I have found the truth. I am indeed grateful to God, and to Mrs. Eddy, for the great blessings I have received.

Rufus King, Hutchinson, Kan.

Soon after I was healed in Christian Science my little girl fell, and as she did so, she screamed with pain, and said her arm hurt badly. I took her in my arms and declared the truth for twenty minutes before she ceased crying. I worked on, as I feared the arm was broken, for when she moved it seemed to be loose. We told no one and I did not call for help until the following day. The arm was so swollen by bedtime that I could not remove her dress, but the next day she went to school. Her teacher excused her from writing, but when she came home I took off the dress and found the arm very black. I sent a message to my teacher to come at once. She did so; and said that the work was done, for the child had not suffered since the first twenty minutes. The arm is now as strong as the other.

After I had been in Science about three years we moved from El Paso, Ill., to Fonda, Ia. There was a great deal of sickness and many fatal cases among the children of the town, and I felt afraid, for our little girl had been complaining. I worked earnestly, but realized that I needed help and again sent to my dear friend. I worked until four o'clock in the morning, then the fear was destroyed and the child was freed from what seemed the last enemy. A few years after this demonstration another child complained of a sore throat, and we worked in Science until the ailment disappeared. In the fall an attack of typhoid fever appeared. I declared the truth till late at night, until the fever disappeared, and she did not even lose a day in school.

On another occasion, our little son, about two years old, swallowed some lye which had been left within his reach. I declared the truth for a half hour before relief came. That evening he ate toast; he was healed. The maid, who saw this demonstration, asked for treatment soon after and was healed. I was healed of a so-called incurable disease thirteen years ago, and we have had numberless demonstrations for the children, overcoming whooping-cough, measles, etc., but we have been free from contagious diseases for several years, and many have learned of the power of Truth because of what they see it do for us.

We thank God for Christian Science and for the life of our dear Leader.—Mrs. Ida M. Straight, Fonda, Ia.

"Some people yield slowly to the touch of Truth" (Science and Health, p. 450). For more than three years I read Science and Health and smoked my pipe night and morning. In the early fall of 1900 my wife urged our application for membership in The Mother Church, but I opposed it, thinking we had better wait until the next June. As we had always gone together in everything, it was a great trial for her finally to decide to proceed without me, and things seemed all wrong with me, without my being able to tell why. One evening I was reading and smoking, when I suddenly realized that it was the smoking habit which made me refuse to send in my application. I was thinking over this, and carelessly turning the pages of Science and Health, when these words on page 192 caught my attention: "We are Christian Scientists, only as we quit our reliance upon material things, and grasp the spiritual. We are not Christian Scientists until we leave all for Christ." That decided the matter and my application went as soon as it could be mailed. I knew I could not stop smoking in my own strength, for I had tried and failed too many times, but by relying upon Truth, the habit was overcome in three days, indeed it was offensive to me. I had none of the awful pangs which smokers talk about, and I had no desire to smoke. It was very startling, very convincing, and very uplifting, for I had been a slave to tobacco for more than twenty-five years. For more than seventeen years I had depended on glasses for sight, but since Jan. 5, 1903, I have depended on God for sight and the result has been most satisfying. I have never needed glasses since. My wife and I are both enjoying the best of health.

Words fail to express my gratitude to Mrs. Eddy for all she has done and is doing to show mankind the way out of slavery. It gives me great joy to turn every one who is seeking the truth to Science and Health, knowing that the right message is there to meet every need.

W. M. Gates, Geneva, N. Y.

Nine years ago I caught my first glimpse of the true light, when I was healed after eleven years of bondage. For five years I had been helpless from so-called incurable spinal trouble and a complication of diseases, and with prayers seemingly unanswered. When *materia medica* —hygiene, electricity, massage, and sanitariums—had no more to offer, when I had given up all hope, then a dear friend brought me the message of Truth as found in Christian Science. She placed me under the treatment of one of Mrs. Eddy's students, who turned me to God, the Bible, and Science and Health. I wish I might express the joy and hope that our text-book brought to me. It was like giving to a starved child its first satisfying food. My healing was slow, and for this I am thankful, because it gave me ample opportunity to prove the truth. There was much to overcome of which I was unconscious until the searchlight of Truth entered my consciousness. It seemed to be a battle, but every step of the way was full of blessings unspeakable.

While the physical healing was wonderful the spiritual

Digitized by Google

awakening was best of all. The Bible is a new book to me, and I now know that God's promises are sure. My heart goes out in deep gratitude to God, and to our beloved Leader, Mrs. Eddy. I know of no better way to express my gratitude than in obedience, and in trying to give to the world through my life the same good that has come to me.

MRS. IDA M. GATES, Geneva, N. Y.

I wish to express my gratitude for what Christian Science has done for me. When it found me, a little over two years ago, I was to mortal sense surrounded by error of nearly every sort, but it has nearly disappeared and such a spiritual uplifting has come to me as never before seemed possible. I have been healed of a stomach trouble which was supposed to be inherited; have taken off glasses that had been worn for more than three years. I had been told that it would be impossible for me to get along without them on my special work. This was over a year ago and my eyes are now perfectly well. I feel very grateful for my physical healing, but more grateful for the clearer understanding of the Bible and man's relation to God. I wish to express my profound thanks to God, and to our dear Leader, Mrs. Eddy.—M. E. MEACHAM, Somerville, Mass.

Eighteen months ago I think it would have been hard to find one more unhappy and sin-burdened than myself. One never-to-be-forgotten Sunday, when laboring under the sense of what seemed to me a frightful injustice, and its attendant ills, I was asked to go and visit a Christian Science practitioner. I did so, not realizing why, but since that day I have to acknowledge it was God leading me, for in that quiet room I found what I required. That same night I attended the church service, and afterwards took treatment, and since that time my study of Science and Health has been constant.

What have been the results? Within two weeks I was healed of astigmatism, which had been pronounced one of the worst cases a doctor had seen; indigestion and its usual accompaniments absolutely gone. The desire for tobacco, to which I was a slave, and from which I had for long years tried to break away, simply left me without any effort on my part; and this is not all, for the moral cleansing puts the physical into the shade. I have been relieved from a sense of hatred for one whom I had for years looked upon as my arch-enemy, and I have been shown most clearly that the only real enemy I ever had was myself. I had a temper so fiendish that when I gave way to it I had no control of myself, and I am satisfied that it is only by God's mercy that I was prevented from coming to harm as a consequence of it. From other sinful desires, which I cannot state here, I have also been delivered, and I know that none of these can have any further power over me, and this because of the understanding of Truth which Christian Science has brought to me.

Can I ever be grateful enough to God, and to her who has been the means of bringing to light this teaching; who through weal and woe has stood so bravely, never flinching. Gratitude to her can only be expressed by striving to follow in her footsteps, thus proving ourselves to be Christian soldiers in deed and in truth.

WILLIAM R. BEST, New York, N. Y.

Christian Science does heal the sick and reform the sinner. Four years ago I suddenly made up my mind to pay my mother and sisters a visit at Thanksgiving. I had never heard of Christian Science but once before, when they had written to me and told me that my sister had been healed of consumption by it. I only made light of it, and I landed home on Monday night in my usual condition—drunk. I do not believe I had drawn an absolutely sober breath for three years. My prospects in life were gone, and they had been very bright. Tuesday I went out in the little town in which my mother lived and came home that night, drunk again. The next morning as I was dressing I saw on the stand a little book which my mother had placed there. It was "Science and Health with Key to the Scriptures" by Mrs. Eddy. I picked up the book and began to read it, and that morning I forgot to get a drink before breakfast. I read the book all that day and was healed. Never, from that day to this, have I taken a drink of any intoxicating liquor, nor have I had a desire for it. I had made my living by gambling for some years, and was an inveterate user of tobacco. Of all these habits I was healed, and the healing is going on daily and hourly in my consciousness. No words of mine can express the gratitude I feel for this truth, but I am trying to learn how to express it by daily deeds.—L. E. HUTCHENS, Chicago, Ill.

For about fifteen years I was an invalid, seeking relief through various physicians and methods of cure. I had an internal trouble which several doctors said could not be cured without an operation, and which brought with it a long list of attendant ills, such as violent headaches, backache, neuralgia, several attacks of nervous prostration, lasting for months, followed by melancholia and insomnia. Finally acute indigestion set in; then I felt I had more than I could bear, and life seemed a burden most of the time.

One of my doctors had told me he was giving me one of the most powerful drugs known to medical science for nervousness, and that it was no more to me than so much cold water; that I had exhausted the whole list, and that I would probably go insane. Indeed the fear of insanity hung over me like a cloud for years, destroying any small chance of peace which I might otherwise have known. Several cases of sickness in my immediate family, which resulted in death, did not tend to lessen the anguish of those years, and I had become an irritable, discontented wreck of a woman, having almost lost faith in a loving God and dwelling much upon the thought of suicide as a means of getting rid of my troubles.

Three years ago a kind friend induced me to try Christian Science. One treatment, taken for indigestion, cured me completely of it, and since then all my other ills have disappeared, so that to-day I can truthfully say I am well, —well physically and mentally,—taking the care of my family, doing all my housework, my endurance being greater than it ever has been.

I cannot be thankful enough to God for my release from the burden which I carried so long, and my loving gratitude goes out to Mrs. Eddy who, through Science and Health, has shown me how to live and to love Christ's teachings.—CECILIA MORSE, Winthrop, Mass.

I have long wished to express my thankfulness for what Christian Science has done for me; it has healed me of many physical troubles, one in particular being sciatica, which has never returned since I was healed over six years ago.

I am indeed very grateful to our beloved Leader, Mrs. Eddy, for giving to the world this wonderful truth which makes free, physically, morally, and spiritually.

MRS. EMMA THORMAN, Jamestown, N. Y.

It is a little over two years since we first became interested in Christian Science; at which time my wife was healed of constipation and other troubles of many years' standing. About one years ago my wife's mother was healed of a cancerous sore which was causing her much trouble. I, also, have been healed of blood-poisoning. For these cases of healing we are very thankful to God, and to Mrs. Eddy.—A. J. BIEGEL, Ashland, Ore.

From our Exchanges.

A convention has just been held in Toledo, O., which, though it caused no stir in the city and passed almost unnoticed by the rest of the State, was not without significance in the religious development of the nation. It was the State Convention of the Young Men's Christian Association. During the sessions there was a very earnest and, on the whole, intelligent attempt to understand the duty of the Association toward the pressing social problems of the day. Instead of the old question, How can we rescue more individuals from an evil world? the question was, How can we get at the evils of the world itself and cure them? A large part of the sessions was thus devoted to a discussion of the place the Association can have in making municipal government sounder and more Christian in spirit. The resolutions adopted indicate the spirit of the Convention. They assert that "the Associations as a rule have taken no sufficient part in the investigation of social conditions," and recommend that "each Association, through some department already organized, or by some special committee, make a thorough study of social conditions in its own locality, and propose some definite workable scheme for making our Associations Christian Associations in fact as well as associations of Christians."

The Outlook.

The coming of the Lord into the world and his fulfilment of the Law and the Prophets threw a great flood of light on all previous revelation. And still further openings of the Word were promised by him to those who should live at a later period. Such was the meaning of his declaration, "I have yet many things to say unto you, but ye cannot bear them now." The time would come when a better knowledge of Scripture, and a deeper insight into it, would be given. Then would it manifestly show itself to be "the everlasting Gospel," divine and holy from beginning to end.

Rev. James Reed.
New-Church Messenger.

To live well is to be the child of God. Jesus interpreted his position as a teacher, as an aim to give us more life. He did not propose to get us ready to die, but to live more broadly and more truthfully. The more Christianity of the right sort that enters into the make-up of a human being, the more wholesome, healthy, and vital he will be. So far we are in sympathy with those Christian Scientists who abhor disease as unnatural, and we are thankful for the influence they have exercised in the way of creating a love for physical righteousness.—*The Christian Register.*

The English-speaking peoples are getting tired of war. Military authorities in both Great Britain and America are complaining of the difficulty of getting voluntary recruits. The shortage of officers in the volunteers and militia in England is twenty-five per cent. In this country thirty-five hundred men are lacking for our navy. The service is unattractive. War is losing its illusions. Political economy condemns it; Christianity condemns it. Men and angels cry out for peace on earth.—*The Independent.*

The assumption that it is only in an atmosphere of prayer and praise that the soul grows strong is untrue to facts. In the storms of life, under the stress of temptations, in the round of daily duties, where choice must be made between good and evil, there the soul develops likeness to Jesus Christ as nowhere else.—*The Standard.*

The royal road to high service for Christ is not by way of sin and recovery, but by constant and earnest holy living.

Frank K. Sanders, D.D.
The Watchman.

The Christian Science Text-Book.—"Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

The New Concordance.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of Science and Health, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 595 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

Church Manual.—Containing all the By-laws to January 1, 1906, of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to Joseph Armstrong, 250 Huntington Avenue, Boston, Mass.

Church Tenets.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to William B. Johnson, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

Building Fund of The Mother Church.—Contributions to the Building Fund of The Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the Churches and Societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

Stephen A. Chase, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

Church Treasurer.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

Per capita taxes, contributions to The Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of The Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to The Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number, or number of post-office box.

Stephen A. Chase, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By Hon. WILLIAM G. EWING.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Lea herette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

National.

The members of the Supreme Court of the United States attended the dinner given on the 31st inst. to the retiring member of that court, Associate Justice Henry B. Brown, by the Bar Association of the District of Columbia. The occasion was especially notable in that the guests were made up of representatives of the three branches of the Government—executive, legislative, and judicial. The President, Vice President, three members of the Cabinet, the Supreme Court, the Speaker of the House, and the more eminent lawyers of the Senate and House made an impressive array of legal ability and political power. Recalling the pleasure which he had in a record of thirty years upon the bench, the retiring justice said with great reverence: "I have noticed that if you examine the opinions of any one judge upon any particular subject you will find a particular thought underlying them all. I have left the bench with a profound reverence for the Constitution of the United States as the greatest constructive legislation ever accomplished."

At the Lake Mohonk Peace Convention the following resolution and comment was presented by the Massachusetts Board of Trade:—

Resolved, That in the judgment of the Massachusetts State Board of Trade the time has come when by treaty neutral zones should be established from the ports of North America to the ports of Great Britain and Ireland, and the continent of Europe, within which zones, steamships and sailing vessels in the conduct of lawful commerce shall be free to pass without interruption.

The Board is firmly impressed with the belief that the time is ripe for this advanced step. The lines of commerce between these two continents are well defined, and there is nothing in the nature of things why, by treaty, this great highway of commerce should not be removed from the disturbing influence of a possible war. The basis upon which the laws of neutrality rest, is the idea that peace, and not war, is the normal condition of mankind.

It is expected that the work of delimiting the international boundary between British Columbia and the States of Montana and Washington will be completed this season. The Canadian surveyors are already in the field, working jointly with their United States associates. The distance from the easterly boundary of British Columbia to tidewater on the Pacific, over which the surveyors are working, is four hundred and ten miles. Iron pillars have been placed at a distance of about a mile and a half apart. Five Canadian parties are at work delimiting the boundary between Canada and Alaska. The labor is very difficult, and as the summer season is short only slow progress is made. Dr. King, Dominion astronomer, says it will be three or four years before this work is completed.

Philippine students who came to this country in 1903 for education at Government expense are to have an opportunity to make their own living this summer preparatory to entering upon their fourth and last year of school work next fall. W. A. Sutherland of the Bureau of Insular Affairs, who has charge of the Filipinos, has written them a letter urging that those who have been here three years find some employment and have a few months of actual work and learn American customs and methods. Most of the students who are in agricultural colleges and normal schools will go to work on farms. Those who are studying law will go into law offices, and many others will enter shops and factories. Board and room rent will be paid them by the Government.

Mrs. Williamina Paton Fleming, curator of photographs at the Harvard Observatory, has been elected an honorary member of the Royal Astronomical Society, and is, therefore, the first American woman to receive such distinction in the world of astronomy. Only two other women, Lady Huggins, widow of Sir William Huggins, and Miss Agnes M. Clerke, have been granted a similar distinction. Of the ninety-eight fifth-type stars which are known to the astronomical world, Mrs. Fleming discovered all but fifteen. Since 1887 there have been eleven new stars discovered, and of this number the location of eight stands to the credit of Mrs. Fleming.

The Senate last week passed as a rider to the Agricultural appropriation, without reference to a committee, debate, or a dissenting vote, the meat inspection bill introduced by Senator Beveridge of Indiana. By its provision the entire beef packing and canning industry of the United States is placed under the supervision of the Secretary of Agriculture. That official is given absolute control over the "inspection, examination, and supervision of live cattle, sheep, swine, and goats, and the carcasses and food products thereof which are the subject of interstate or foreign commerce." It is a most important piece of pure food legislation.

The Lake Mohonk Conference on International Arbitration has adopted resolutions petitioning President Roosevelt to instruct the delegates to the Peace Conference at The Hague to urge three measures to conduce to the peace and welfare of the world. The measures are as follows: A plan by which The Hague Conference may become a permanent and recognized congress of the nations with advisory power; a general arbitration treaty for the acceptance of all nations; a plan for the restriction of armaments and if possible for their reduction by concurrent international action.

The new Copyright Bill, which has been compiled by the Copyright Committee under the direction of Librarian Putnam of the Library of Congress, was introduced in Congress last week. The bill is intended to be a complete re-enactment of the copyright laws of the United States, together with many changes in existing laws.

The two racing yawls, Lila and Tamerlane, which withdrew from the race to Bermuda for the $1,000 Lipton cup after the Lila's mast was broken on Saturday, the 26th ult., made a fresh start on the 29th. The Tamerlane crossed the finish line on June 3 at 3.28 P.M. The Gauntlet crossed the line at 4.50 P.M. the next day. The Lila withdrew from the race on account of rough weather and put in at Hampton Roads.

The dry dock Dewey, since passing the Suez Canal, has made on an average over one hundred miles a day. This is regarded by the naval authorities as particularly good time, especially in the Indian Ocean, as it was there that heavy weather was expected which might delay the progress of the craft.

On May 24 the Senate passed by a unanimous vote the bill which provides for the freeing from taxation after Jan. 1, 1907, of denatured alcohol used for industrial purposes. Alcohol is used extensively in the production of many articles of manufacture.

The treasury surplus for May amounted to $2,131,812; for the eleven months of the fiscal year it is $6,102,000. The deficit a year ago was $36,649,000. The public debt has been decreased $2,458,555.

On request of counsel for the Standard Oil Company, an opportunity will be given at Cleveland on Thursday, June 14, for it to offer evidence in rebuttal of testimony taken by the Commission.

The Navy Department has under consideration the question of using oil in place of coal on board all ships of the navy.

It is estimated that the cost of changing the Panama Canal from a lock to a sea-level plan would be $206,000,000.

The House has passed the diplomatic and consular appropriation bill, carrying an appropriation of $2,754,869.

Foreign.

A valuable optical invention is reported by Consul General A. W. Rublee of Vienna, who states that a Hungarian chemist, after years of experiments, has produced a fluid optical lens of great power that can be produced cheaply. A fluid substance is enclosed between two thin crystals, overcoming defects of ordinary lenses. The largest glass lens hitherto manufactured out of massive glass for astronomical purposes required several years at a cost of many thousands of dollars to produce. Such a glass can now be made in a few weeks for about five hundred dollars. Lenses of smaller diameter for photographic purposes, for opera-glasses, etc., can be produced at correspondingly low prices.

Premier Goremykin's speech outlining the Russian Government's program was a disappointment to the Douma. It reiterated that general amnesty was impossible, but promised the release as rapidly as possible of those who had been arrested by administrative order. There could be no question, it was pointed out, of the abolition of the Council of the Empire, or upper House, as that is an institution covered by the fundamental law and is beyond the competence of Parliament. Most important of all, the Premier declared that the basis for solution of the agrarian problem proposed by the lower House was completely impossible. There could be no forced expropriation of land.

Three committees of native Chinese and foreign missionary scholars are now working at Shanghai to prepare three new versions of the Bible with which to make an appeal to all classes of the Chinese Empire. One is a high classical, another the low classical, and a third the mandarin colloquial version. The last is the one which will reach the greatest number, as it is the spoken language of three-fourths of the people.

Moukden was formally opened June 1 to international trade. The occasion was widely celebrated. The Chinese general, Chao, and the Japanese Consul General, Hagiwara, representing their respective Governments, exchanged cordial greetings.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

"One thing thou lackest."

LOUISE DELISLE RADZINSKI.

Then Jesus beholding him loved him, and said unto him, One thing thou lackest: . . . take up the cross, and follow me.—*Mark*, 10: 21.

EVERY age, every period, brings its own responsibilities in proportion to its development. As more is required of the adult than of the child, so, in a period of religious freedom like this of the twentieth century, one's duty to himself and to his fellow-man involves more individual study and digestion of the demands of Truth. God, Principle, supreme wisdom, is ever-present, ever-operative, changeless! It is according to the state of our spiritual perception that God seems nearer and dearer, or farther off and sterner; and mankind, judging God from what they see but darkly upon the plane of human belief, can be led to desire growth through spiritual perception only as they learn to think of God as good; as Love, instead of merely power.

This question of growth in the understanding of Truth and its demands is most important. Again has a great light dawned upon the world, that it might see God. This light is dispelling the shadows of evil belief which had gradually obscured the radiance of the Christ-teaching, but mortal man, not yet ready to forsake his gods of habit, of sensuousness, of false intellectuality, is disposed to close his eyes to the light, and cheat himself into saying, "There is no light—there is no truth," for he can neither see any evidence of them nor grasp any tangible result of their action. Self-deception is one of the greatest evils of the times; through its agency men beguile themselves into believing that they are doing all their duty, all that can be reasonably demanded of them, when they really know in the depths of consciousness that they have done only part of their reasonable duty, and are simply waiting to see if they may not content the divine law with that fraction of its demands, and reserve the rest of their time, strength, and resources for their own pleasures; thus placing the Giver of all blessings in the light of a tax-gatherer, whom it is clever to avoid and to cheat.

If it were only realized that the more we give of our good things, the more abundantly blessings flow unto us; if it were only realized that every effort to serve Love is blessed a thousand-fold, we would not make these reserves of things that worms and rust devour and corrupt, but we would learn to give up material possessions for Love's sake, take up the cross and follow Jesus, as he bade the rich young man to do.

To "take up the cross" is usually understood to mean to bear with resignation, if possible with content, the trials of human life, whether these trials arise from the conflicts of human desire, of temperament, of social and domestic conditions, or from the religious beliefs and attitude of others. To "take up the cross" is also used to express humility, the cross having been in eastern lands the instrument of death for criminals. Therefore, when Jesus bade the young man who begged to know how he could be saved, to sell whatever he possessed and give to the poor, to take up the cross and follow him, he not only asked him to give up wealth and power, home and friends, as the condition of spiritual blessing and freedom, but to take up the practice of humility; to become one of a wandering company of men and women who, devoting their lives to the Master they believed in and loved, followed him from one town to another, never knowing whether he would be greeted with kindness or with stones, whether he would be given the seat of teacher in the synagogue or be cast down from the walls of the city. His disciples were to share in all the humiliations showered upon him; *this* was to be their cross. The recognition of Jesus' Messiahship, the conviction that he and his followers were under the constant protection of God, so long as they served Him, and the perfect faith or loyalty needed to endure all these conditions,—this evidently was what the young man lacked.

To-day, if Jesus the Christ were visible among men, the same reproof and command would be uttered by him: "One thing thou lackest: . . . take up the cross, and follow me."

Be humble and loyal, seems to be the watchword of Christian Science to all who, through the unveiling of divine Love to human consciousness, have been healed of doubt and despair; who, in their flesh, see God, Life, through the healing of that divine Love which meets all human need.

Faith does not mean mere belief, the acceptance of a truth as a reasonable thing; it means consecration, devotion, loyalty to duty,—all those virtues which speak for honesty, sincerity, conscientiousness of heart and purpose. A man who is not loyal to his convictions is despised, while a man who is true to his fellow-man, and to his ideal of manhood, is reverenced by all. This is mere truism, but it helps one to measure and to realize what our duty is to that Science of God which dispels not only evil and suffering, but the fear of them, and implants in their stead the ever-living seeds of honesty, temperance, faith, hope, and love, which, springing up, will make human consciousness as a watered garden.

Can any one be indifferent to the reverence due to the Discoverer of this Science, this knowledge of God as All in all? Does not the faintest gleam of this Science irradiate life with a celestial light in which we see all things made new and beautiful,—a new heaven and a new earth, a new motive for action and a new plane of action? Led by Love she has watched faithfully through the darkest hours of the night, and in the brightening to-day she still labors that all the world may be blessed. A faithful disciple, she was found with her lamp trimmed and brightly burning when the call of Truth came, and in this she became the servant and benefactor of all.

Christian Science in Business.

ALBERT E. MILLER.

THERE can be no question that many of the ailments from which business men suffer, are due to the erroneous methods which they employ in their efforts to achieve worldly success. As mortal mind is but the supposititious opposite of immor-

Copyright, 1906, by Mary Baker G. Eddy.

Digitized by Google

tal Mind, we find that in their every-day affairs men employ methods which are the direct opposite of those which express immortal Mind. For instance, there is in Truth but one right way of doing business; namely, obedience to the Golden Rule. Mortals take an opposite view and argue that there can be no success unless it is realized through the defeat of a competitor. The result is that instead of helping, men prey upon each other, and their rivalry and strife are likely, sooner or later, to externalize themselves in some form of disease. Since, as all admit, everything material manifests more or less error, it follows that in the exigencies which result from present abnormal pressure in the business world we must faithfully and persistently cultivate the habit of always choosing the lesser of two evils if we would make steady progress in our approach to the ideal.

To attribute power to anything but good is surely to invite defeat. When we recognize that it is necessary for us to look to God for everything, inasmuch as everything good comes from Him, then indeed will we receive nothing but good. To realize that there is but one law,—the law of Love,—is to recognize the fact that every mandate which is not in harmony with this law, has no authority and no power. Thus we finally acknowledge and submit to the law of Love alone, and refuse to obey any other claim to law, just as we would dispute any asserted law of the commonwealth which was found to be at variance with the Constitution of our country.

In Christian Science it is not so much with physical sickness that we need to deal as it is with the habit of arraying thought on the side of wrong, so that we may learn to cast out of human consciousness everything which is unlike God. As we succeed in doing this, we find improvement in physical health, as well as improved conditions in business. We should not center our thought upon the wrongdoing of others, unless we find opportunity to wisely rebuke and help them. The brother who errs will some day be brought to see his mistake and will have to pay the penalty for any suffering which he may have caused. We may help him by knowing always that any error which he manifests is no part of his true self. We need to walk as closely as we can with God, seeking Him in every avenue and event, and leaving all to the unerring guidance of divine law.

We need not fear results when we have started rightly, and since results already achieved have shown the possibility of making a complete demonstration we need not falter. In realizing the truth for ourselves it is necessary to hold constantly to the fact of man's perfection—that he is not dependent upon material conditions nor is he deficient in intelligence and judgment. In working along from day to day, and doing the best we can, we shall find a constantly lessening inclination to doubt that Truth will ultimately vanquish all error; that gradually, but surely, we shall awaken to that knowledge of perfection which leads to the actual possession of all that God has bestowed upon His children.

The Consciousness of Good.

FRANCES HOLBROOK PFEIFFER.

WHEN first I heard a Christian Scientist say that God knows good only, I could not see the truth of it, but experience had taught me that there were some things which in all probability I did not know, and it occurred to me that this might be one such truth. About a year afterwards I read the first chapter in "Unity of Good" by Mrs. Eddy, and while there came to me a clearer sense of the glorious truth, I still wondered how God could heal us of sin and disease if He did not know about them, so I left it for another few months, until the study of the Lesson-Sermon, "Are Sin, Disease, and Death Real?" made it yet clearer to me. I now see how God heals us of that of which He has no consciousness.

Any thoughtful person, in or out of Science, must admit that God—Life, Truth, Love—does not experience sin, sickness, and death. If He does not experience them, they are not in His consciousness, for actual knowledge is only in the ratio of experience. I have come to see that neither the experience nor the knowledge of evil are a part of divine consciousness. God did not create sin, disease, and death, and hence He surely is not conscious of them. If He did not create them, they do not exist. He is omniscient,—knowing all there is to know. The results of belief in matter, sin, disease, and death, all inharmony, exist only in mortal mind, and God, being all wisdom, is not touched by false knowledge, and so He is not aware of that which has its existence only in falsity. Everything unlike God exists only in falsity, if it is not in Truth and wisdom,—God.

The study of our text-book shows that God heals us of sin and disease not by knowing that which does not exist, but by remaining God, good,—ever-present Life, Truth, and Love,—the source of unchanging, everlasting goodness and harmony. As we get even a glimpse of what God is, and as we shut out all that is unlike God, and which cannot exist because God is all, we are healed. It also becomes clear that God is not conscious of our illusions but conscious of man as he really is,—spiritual; reflecting Life, Truth, Love, health, harmony, holiness. He knows this, for He knows all there is to know about us, and when we know this same truth we know all there is to know about ourselves; the illusion—sin, disease, and death—ceases to exist to us and we are healed. We cannot know more than God knows, and God being Truth cannot for an instant be conscious of untruth. When we realize this, we have rid ourselves of our own lack of understanding,—of illusions,—the only abiding-place of sin, disease, and death.

That this is no mere theory was proved to me most conclusively when my little girl, who had been ailing for several days, with fever coming and going, grew suddenly worse. I became greatly alarmed, because I recognized symptoms which asserted mortal law assigns to a special, and to me, frightful fever. Upon second thought I saw that the most alarming symptom of all was my own fear. I was alone and could not send for help, so I thought that since I had to wait for some one to come home, I would try to destroy my own sense of fear. I felt that I had not much understanding of Truth, but I knew that my fear must be checked at once. I took the child in my arms and she seemed very hot and was delirious. I read from Science and Health, which helped me to "know the truth," that good is the only power, and in a half hour matter and all inharmony became to me as if it were an aggregate of nothingness and did not exist in reality. I saw through the shallow pretence. I became more conscious of God, of good, and that I could leave my child perfectly safe in the care of divine goodness,—in the arms of God.

If the fever had remained it could not have frightened me, but it had in that instant been broken. Her little body was all moist, and she was rational and quiet. In a few minutes she was playing about, unusually lively and perfectly well, and she remained so. When her father returned there was harmony and peace instead of wild fear and confusion. I then realized the truth of our Leader's teaching, and saw that if God had been conscious of the fever which I had believed did exist, and therefore feared, my consciousness of God would necessarily have included the fever, and it would have remained to my sense as unchanging as himself; but I proved for myself that He is not conscious of evil, and that it does not exist, since it is not included in infinite intelligence and Love.

If only the mothers of the land had cause to be grateful to Mrs. Eddy there would still be reason for great rejoicing, but one of the most convincing things about this appearing of Christ is, that since the Christ has always been present, every place in human life is touched with light and love.

The Fallacy of Pantheism.

The principal feature in this old university city, Heidelberg, where I studied two years, 1858 and 1859, is the castle, of which I had an excellent view from the rooms I occupied. Behind its marred walls is a high mountain, which obstructs the prospect in that direction. A long shadow is often thrown by it during part of the day or night over the closely built city below.

High above the only remaining tower that stands out solitary against the sky stretches the bright canopy of heaven, filled at night with innumerable stars, which the astronomer at the university has carefully mapped out with regularity, demonstrating the rotation of all the spheres comprised in the solar system with mathematical exactness. Mathematics being purely metaphysical, astronomy becomes a science of mind, leading into the limitless domain of the infinite, proving through the harmony and precision of the heavenly bodies that all is governed by the supreme Mind.

The University of Heidelberg is one of the oldest in Europe, and at the time when I was there was more especially noted for the advantages it had for the general education of the young nobility and European gentry of fortune.

We often hear at this late day of pantheism. Its chief exponent was Spinoza. This philosopher lived between the years 1632 and 1677 and was offered a professorship in Heidelberg, but did not live to accept it. Still the university, at the time I was there, had the reputation of promulgating ideas which to-day are considered the antithesis of a purely spiritual religion.

When the wise professor at Heidelberg commenced lecturing me on this philosophy I had no answer for him except what I had learned from the sayings of Jesus Christ. I could not discover anything expressed or implied in his sayings which taught pantheism. He stated that "God is a Spirit; and they that worship him must worship him in spirit and in truth." The professor said I was too primitive, and that as I advanced to higher methods of thought I would become better informed. He quoted Spinoza, who states in "The Ethics," proposition XI., part I., that "God or substance consisting of infinite attributes of which each expresses eternal and infinite essentiality, necessarily exists;" proposition XXV., part I., that "God is the efficient cause not only of the existence of things, but also of their essence."

Pantheism is the doctrine that the universe, taken or conceived of as a whole, is God—"The doctrine that there is no God, but the combined forces and laws which are manifested in the existing universe." I quoted what Jesus Christ said, "The wind bloweth where it listeth, and thou . . . canst not tell whence it cometh, and whither it goeth: so is every one that is born of the Spirit," and told the professor that Spinoza had undertaken in part I. of "Ethics" to analyze God, or his conception of God, as he would analyze water or quartz, writing down his analysis in a book.

Now, Spirit or God cannot be circumscribed in books or creeds. Spirit is independent, intangible, and not adulterated by material elements. The professor continued his discourse on the conception of Spinoza, but I told him that with all his philosophy he could not explain how the impotent man at the Pool Bethesda was instantly healed when Jesus Christ told him to rise, take up his bed and walk, thus manifesting the power of divine Mind. Neither did he grasp the significance of Jesus Christ's discourse, in which he said that those are blessed who are pure in heart and merciful; the peacemakers and those who hunger and thirst after righteousness. Neither did he explain that the daily bread asked for in the Lord's Prayer was not material bread, but spiritual and emanating from God, for Jesus said, "I am that bread of life . . . which cometh down from heaven." "It is the spirit that quickeneth; the flesh profiteth nothing: the words that I speak unto you, they are spirit, and they are life."

The professor quoted proposition XXIX., part I., that "nothing in the universe is contingent, but all things are conditioned to exist and operate in a particular manner by the necessity of the divine nature." "Whatever is, is in God." This would make God responsible for all evil as well as good. He would create the earthquake as well as fruit and flowers. His God is a mingling of spirit and material substance.

A book written two hundred years after "The Ethics" refutes the arguments of Spinoza and shows the fallacy of the philosophy of pantheism. This book is called "Science and Health with Key to the Scriptures" by Mrs. Mary Baker G. Eddy.

Philosophers like Spinoza, Descartes, Bacon, and Locke exercised a great influence over the universities of their time and gave an impetus to free thought, research, and criticism.

BARTOW A. ULRICH.

Chicago Record-Herald.

In considering the charge of inconsistency made by your correspondent, it may be well to remember that Christian Scientists in their theory are no farther in advance of their practice than are the Christians of other denominations, for Jesus' sayings, "Take no thought for your body"—"Be ye therefore perfect, even as your Father which is in heaven is perfect"—and "Seek ye first the kingdom of God, . . . and all these things shall be added unto you," are incumbent upon all of his followers, and quite as radical as anything to be found in the Christian Science text-book. Here the Master declares that our first duty is to seek the kingdom of God and His righteousness, and yet all Christians suffer to be so now many material habits, practices, and indulgences which do not belong to the kingdom of God nor express His perfection.

DAVID B. OGDEN.

Pacific Baptist Advocate.

Christian Science maintains that the birth, life, crucifixion, and resurrection of Christ Jesus were among the greatest events of the world's history and point to the ultimate triumph of the spiritual nature of man over every material concept of his true being. Jesus' spiritual insight and understanding of God enabled him to heal sickness and destroy sin, to uplift the fallen and raise the dead, and reveal to man his spiritual sonship with God. It is in the emulation of his example and in fulfilment of his commands that Christian Science is, in a measure, repeating the wonderful works which our Master did, and said all who believe in him should do.

CHARLES A. VAREY.

The World (Vancouver, B. C.)

Christian Scientists do not condemn or criticise other denominations or their methods, but leave them to work for the reclamation of erring humanity as their apprehension of the spiritual truths of the Bible shall direct them in their warfare against wrong. It is believed there is warrant for this in the teachings of Jesus. At one time his beloved disciple said to him, "We saw one casting out devils in thy name, and he followeth not us: and we forbad him, because he followeth not us. But Jesus said, Forbid him not: for there is no man which shall do a miracle in my name, that can lightly speak evil of me."

Among the Churches.

Battle Creek, Mich.

The Sunday School children of our church are very happy in sending another contribution to the Mother Church Building Fund. They forward a love-offering of twenty-five dollars to-day. They are earnest and enthusiastic in their devotion to our Cause and to our dear Leader.

MRS. N. F. ADAMS, *Superintendent.*

Seattle, Wash.

The children of First Church of Christ, Scientist, Seattle, wish to express through the *Sentinel* their deep love and gratitude to our dear Leader, Mrs. Eddy, for giving to the world our text-book, "Science and Health with Key to the Scriptures."

Knowing what the building of The Mother Church means to the world, the Sunday School has forwarded to the Treasurer of The Mother Church, seven hundred and ninety-four dollars and thirty-seven cents. It is our daily effort "to strive, watch, and pray for that Mind to be in us which was also in Christ Jesus; to love one another; and to be meek, merciful, just, and pure" (Science and Health, p. 497).

LAWRENCE M. PIXLEY, *Secretary.*

Hattiesburg, Miss.

First Church of Christ, Scientist, of Hattiesburg, was founded five years ago, with eighteen members. Our present membership is forty. Realizing our great debt to The Mother Church, we have rejoiced in sending six hundred and thirty-one dollars for the Building Fund, the sum including our own small fund and also forty dollars from the Sunday School.

Since the opening of our Reading Room, we note a decided increase of interest in Christian Science among the townspeople, which is shown in the sale of Science and Health and other literature; larger attendance at the services; friendliness of the local papers, and in other ways. We have given four lectures, which also have done much to destroy prejudice in the town and vicinity.

Though Christian Science is comparatively new in this part of the South, and our progress has seemed slow, a firm foundation is laid. Our prayer is to build upon this, through watchfulness and obedience, the true church, the "structure of Truth and Love" defined by our Leader on page 583 of our text-book.—*Correspondence.*

St. Joseph, Mo.

First services were held yesterday [May 13] in the magnificent new First Church of Christ, Scientist, Twelfth and Felix Streets. Scores of visitors attended the meetings, and there were a number of Scientists from out of the city.

The regular order of services was followed in the morning, in the Sunday School room of the new edifice. This room, in which four hundred persons can be seated, will be used for services until the main auditorium is completed. Every chair in the room was taken when the services began. An address was made by Rev. Mr. Tomlinson, a member of the Board of Lectureship of The Mother Church, Boston. The large audience listened to the words of the speaker attentively and with appreciation.

The church is one of the finest in the State and when finished it will represent an outlay of about one hundred thousand dollars. Work on this will be pushed as rapidly as possible, as the members are eager to get into new quarters. The work on it has not been continuous, the Scientists strictly adhering to their policy to be free from debt. All who visited the new house of worship yesterday were well pleased. The members of the congregation do not think they will be compelled to use the Sunday School room save for a short time.

There is a Reading Room in the new church and one on Francis Street, in the Tootle Block. Both will be open daily hereafter. First Church of Christ, Scientist, St. Joseph, has now more than three hundred members. The church was organized in 1889 and has grown steadily since that time.—*St. Joseph Gazette.*

New Haven, Conn.

Advance steps were recently taken by First Church when, larger quarters being required, Republican Hall, with twice the seating capacity of the old hall, was secured for church services and the Reading Room removed to the Malley Building, a more central location.

This year's offering to The Mother Church was twice the usual amount, which makes us happy in the indications of a more active appreciation of what it spiritually represents. A marked increase in the number of applicants for membership at our next Communion expresses the result of the work of the church for the past year. In the fall of 1902 all pledges (payable monthly) made to our own building fund were diverted to the Mother Church Building Fund and forwarded regularly to the Treasurer. A large special extra fund was also raised and sent during April of this year. The Sunday School has taken part in these offerings and also in the annual love-offering.

The Sunday School has given yearly subscriptions of the *Sentinel* and *Journal* to two libraries and two hotels. The attendance of the Sunday School has been steadily increasing. The number of visitors to the Reading Room is daily increasing and twice as much literature in amount was sold during the year ending Nov. 1, 1905, as during the year ending Nov. 1, 1904. A very gratifying feature of the increased sales is the fact of the greater proportion of increase in the number of copies of Science and Health, showing an awakening to the great value of Christian Science to this city. The sale of literature has increased over sixty per cent during the last six months. The appreciation of the circulating library is indicated by the fact that the books are usually all loaned.

Copies of Science and Health given by this church and Sunday School to the free library, Young Men's Institute, and three libraries at Yale University, were recently duplicated by the latest editions. As a matter of interest we may mention that a copy of the first edition of Science and Health which was placed in one of the Yale libraries by our Leader, is still there. A new classification of all Mrs. Eddy's works, also given by this church to the libraries mentioned, under the head of Religious Works, has been secured. Copies of our text-book have also been placed in two hotels and the county jail.

The best expression of general spiritual growth is seen and felt in a marked degree in the moral and physical healing. In many instances, it is coincident with the unfoldment of the saving truth in a receptive consciousness while the Christian Science text-book is being read.

MABEL A. TYRRELL, *Clerk.*

Picture of The Mother Church.

The picture of The Mother Church and its extension which The Christian Science Publishing Society will have for sale is a half-tone reproduction, 12 x 15 inches in size, of a view giving the St. Paul Street frontage and Falmouth Street side.

The picture is mounted on a white mat, 21 x 25 inches, and will be sent to any address in a mailing-tube for fifty cents a copy. A dozen copies will be sent to one address for $4.50. Address all orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

The Lectures.

Watertown, N. Dak.

Judge William G. Ewing lectured on Christian Science Sunday afternoon [May 6] in the Grand Opera House. He was introduced by Hon. G. W. Case, who said in part,—

Glancing back into history, we learn that the discoverer of new things and the promoter of new ideas has been looked upon with doubtful eyes and considered with misgivings as to his logic and soundness of doctrine. Jesus Christ was a plain and practical teacher of God's simple plans of life. We need to study and learn more of these plans as taught by him. To this end we give ear to modern thought, and accept the light whenever we find it. I am glad that we can, in addition to our own concept of God's truth, seek more light from God's truth, seek more light from every source. Christian Science has become one of the acknowledged Christian religions, and is given much consideration in every part of our land. Its basic teachings are not well understood by the people generally, and to this end the church sends abroad its lecturers, that its beneficence may become better known.—*Public Opinion.*

Peoria, Ill.

Bicknell Young addressed a fair audience at the Grand Opera House last night [April 23]. The Hon. Dan R. Sheen introduced the lecturer, saying in part,—

True religion is duty done; and love of God and love of man are but the two ends of the same cord. To love God and to hate or to harm men would be as inconsistent as to serve Satan and eschew sin. Christ said, "Whosoever shall do the will of God, the same is my brother, and my sister, and mother;" and that "these signs shall follow them that believe; In my name shall they cast out devils; . . . they shall lay hands on the sick, and they shall recover." Christian Science has spread over the whole world, and can produce anywhere and everywhere those who will certify that it has benefited them mentally, morally, socially, and physically. I am not a member of this church, but I do not plume myself on that account, for I know that there is music in a piano although I cannot get it out. I know that the world is full of good, whether I get any of it or not; and so I look and listen and suspend judgment. To hear all sides and then decide is the duty of every honest person, and as there comes to us this evening a man with a mission, and a message concerning this new religion, I bespeak for him candid and thoughtful consideration.

Peoria Herald-Transcript.

Scranton, Pa.

At the Family Theatre yesterday afternoon [April 22], to a very large audience, Rev. Irving C. Tomlinson, of Concord, N. H., delivered a lecture on Christian Science. Charles Dawson, Esq., in introducing the lecturer spoke in part as follows:—

That in the human mind are sown all the seeds of health or disease, I am firmly persuaded. Disease following conditions of great mental worriment or fear seems to tend to prove that the one is the cause of the other; in other words, every sickness or physical unrest we experience may be traced by careful analysis to some mental disturbance. Love is the greatest thing in the world, and love at work is God's law.

We are here to-day to learn if possible something of this law, to listen to the teachings of a woman who, loving humanity much, has spent her life in endeavoring to know the law that she might impart it to others, to give the cup of cold water to the thirsty, to reflect a sunbeam on the moldy wall of the prison cell. Her reward is secure. I speak of Mary Baker Eddy.

The main facts that three hundred and ninety-eight thousand copies of her text-book, "Science and Health with Key to the Scriptures," have gone forth, and that many have accepted her doctrines and found relief from disease and surcease of sorrow in their practice,—these call us to a careful consideration of her teaching.—*Scranton Republican.*

Vermillion, S. Dak.

Judge Septimus J. Hanna lectured on Christian Science at the City Hall, May 6. The speaker was introduced by Dean Clark M. Young, who spoke in part as follows:—

If it were within my power to banish two words from the English language and eliminate them from our lexicons, I think I should do so without any hesitation. These two words are "orthodoxy" and "heresy." These terms stand for ideas around which has centered very much of desperate human conflict and bitter strife. Again and again have the battle-fields of the world testified to the partisanship and the feuds, to the malevolence and hatred which these antithetical ideas have inspired in the human heart. For over five hundred years the progress of civilization has been marked by the struggle of humanity to establish religious toleration. We have not yet achieved that degree of liberty and that spirit of truth-seeking which are inculcated by the teachings of Christ Jesus. When we shall have succeeded in banishing the terms "orthodoxy" and "heresy" from our lexicons and freed our minds from the ideas for which they stand, then we may replace them with the simple but broad and comprehensive terms of right and wrong.—*Dakota Republican.*

Montrose, Col.

Rev. William P. McKenzie of Cambridge, Mass., lectured on Christian Science at the Opera House, Sunday, April 22. He was introduced by Judge T. J. Black, who said in part,—

Does the world move, in the sense that there is intellectual advancement, and in the sense that at the same time the dictates of reason, justice, and conscience are obtaining greater sway? No matter what our intellectual or material progress, unless there is also a quickening of the soul, the net result is against man.

In the domain of right and wrong what is the answer of the centuries? Is our sense of justice more acute? Is the individual putting forth his best effort, or any effort, for the common good? Is the mantle of charity becoming broader? Does woman more quickly extend a helping hand to her erring sister, or treat her with a more sympathetic or forgiving spirit than she did a century ago? Have any of us the courage to cross swords with those who, wearing the garment of a little brief authority, champion wrongs which custom, cunning, craft, and undue advantage have put upon the throne? Do we not all prostrate ourselves in the presence of gold? Is there not a crying need for greater activity in things spiritual—for a spirituality that is unselfish, that leads to higher and better things?

The Christian Scientist, as I understand it, is again assailing our ears, that are so fortified against the story, with a theme that has been told by countless tongues in every age; namely, the greatness of God—the littleness of the mortal. He would tell us again of the supreme importance of a just cause, a clean mind, a pure heart, a healthy body. He would impress upon us that truth is eternal and must prevail, and that right thinking and right living are like the coming together of the truly natural and the perfectly divine.—*Correspondence.*

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Notice to the Contributors to the Building Fund.

THE contributors to the Building Fund for the Extension of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., are hereby notified that sufficient funds have been received for the completion of the church building, and the friends are requested to send no more money to this fund.

STEPHEN A. CHASE, *Treasurer of the Building Fund.*
Boston, Massachusetts, June 2, 1906.

The Extension of The Mother Church.

CHRISTIAN SCIENTISTS will read with much joy and thanksgiving the announcement made by Mr. Chase in this issue of the *Sentinel* that sufficient funds have been received by him, as Treasurer of the Building Fund, to pay all bills in connection with the Extension of The Mother Church, and to most of them the fact that he has been able to make this announcement coincident with the completion of the building will be deeply significant. Our Leader has said in Science and Health (p. 494), "Divine Love always has met, and always will meet, every human need," and this has been proved true in the experience of many who have contributed to the Building Fund. The Treasurer's books will show the dollars and cents received by him, but they can give no more than a hint of the unselfish efforts, and in many instances the loving self-sacrifice, of those who have given so generously to the building of this church. Suffice it to say, however, that the giving to this fund has stimulated those gentle qualities which mark the true Christian, and its influence upon the lives of thousands has been of immense value to them.

The significance of this building is not to be found in the material structure, but in the lives of those who, under the consecrated leadership of Mrs. Eddy, and following her example, are doing the works which Jesus said should mark the lives of his followers. It stands as the visible symbol of a religion which heals the sick and reforms the sinful as our Master healed and reformed them. It proclaims to the world that Jesus' gospel was for all time and for all men; that it is as effective to-day as it was when he preached the Word of God to the multitudes of Judea and healed them of their diseases and their sins. It speaks for the successful labors of one divinely guided woman, who has brought to the world the spiritual understanding of the Scriptures, and whose ministry has revealed the one true Science and changed the whole aspect of medicine and theology.

ARCHIBALD MCLELLAN.

The Divine Refuge.

A WIDELY-CIRCULATED newspaper, in commenting upon the recent experiences in San Francisco, says, "There is nothing surprising in the report that health is better in San Francisco than ever before. Nor need we wonder that many cases of dyspepsia, torpid liver, and even paralysis are, some of them cured entirely, some greatly improved. The health officers think it is because of open-air life, the return to nature, etc.

"But we are not obliged to believe that. Is it not more probable that the invalid got well because he was given something else to think about? In San Francisco the something else was so shocking, so terrible that it drove all else out of the mind, and when the poor things dropped their little miseries out of their minds to make room for the greater, the physical miseries correspondent thereto dropped out of the flesh.

"This is not science. It is only speculation, or may be common sense. Anyhow the San Francisco sick folks are getting better and we ought to be thankful for them."

We are glad to note the statement, "This is not science," as it is possible that some might think these changes due to the operation of the same law by which the sick are healed in Christian Science. It should be understood, however, that Christian Science explains scientifically this phenomenon, which is another proof of the correctness of the position held by the author of Science and Health when she says, "Disease is not an intelligence to dispute the empire of mind, or dethrone it, and take the government into its own hands" (p. 378). It is therefore always possible to prove the unreality of disease, and the reality of health as an expression of intelligence or Mind. Mrs. Eddy admits the possibility of a greater fear taking the place of a less, as in the cases above referred to, but such a seeming cure can hardly be regarded as desirable, especially when a way is known whereby the most obstinate forms of disease may be overcome harmoniously through the understanding of spiritual law.

It is very significant that in spite of the fears of disease which were entertained in San Francisco, and even the many predictions of its serious outbreak, the people were protected in the midst of what seemed most trying conditions. Does not this show the powerlessness of the human mind, when it would either ignorantly or intentionally add to the burdens of the afflicted? In the not very remote past such predictions as those mentioned were often entertained unquestioningly, and the thing which was "greatly feared"—and predicted—often followed. Now, through the teachings of Christian Science, unnumbered people no longer bow before any form of evil in abject and helpless submission; on the contrary, they are aroused to find safety in the provisions of divine law.

Of old the prophet Elijah learned that God was not in the earthquake and not in the fire which followed it, but in the "still, small voice." To-day we learn that God is not manifested in disease or aught that is destructive, but is made known in the "still, small voice" of Truth which heals both sin and disease. Christian Scientists are thankful that San Francisco was spared further suffering in her hour of trial, but above all they are thankful for the understanding of Truth by which they may read the signs of the times and in every hour find safety in divine Love.

ANNIE M. KNOTT.

"Now is the accepted time."

OUR true attainment and availability are determined by the content of our now; its spiritual richness or its poverty registers our realization of being, measures our actual possessions, and all this gives a larger significance to the coming of Christian Science, whose mission it is to declare and bring into demonstration the truth of the Master's startling words when he said, "The kingdom of heaven is at hand."

No one is getting that which he should get out of human experience who is not profiting by the lessons of the past and who does not entertain an ideal which calls for an infinite future; nevertheless it is true that human bondage to fear, regret, anxiety, procrastination, etc., is in large part the result of the erroneous idea that we can live in another time than the present. More than this, the displacement of good in thought often means the loss

Digitized by Google

of its vital and most inspiring truth. For example, the great body of Christian believers have been led to think of creation as an event which transpired in the indefinite past,—an enterprise which absorbed God's time for a series of days or periods and was thereupon completed. Such a view could but give rise to a mechanical sense of the prevailing order as one in which so-called natural laws or secondary causes are operating under divine provision to effect the phenomena of the universe, a sense which has practically dissipated the consciousness of God's sustaining and protecting nearness.

To this false concept Christian Science presents an antipodal contrast in its teaching that we are under both the metaphysical and the Scriptural necessity of thinking of creation as the ceaseless manifestation of that divine activity which constitutes all being and which fills the infinite present with good. All things are always becoming in Truth, and as this is apprehended in Christian Science, we realize that all reality is of God, and therefore good, the 91st Psalm takes on a new and healing significance, and the assurance of safety in Love's o'ershadowing presence rests like a benediction upon the heart. God is indeed at hand and not afar off, the old sense of things has passed away, and all things have become new.

Respecting revelation, also, we have been led to entertain the similar erroneous thought that it was long since consummated, and that to believe in the possibility of further discovery in the realm of spiritual truth is a great and dangerous presumption. To this Christian Science opposes the inspiring proofs of the present accessibility and impartation of divine Truth; that men are now receiving the Word of God which dispels the error and heals the sickness of every age and clime. Thus would Christian Science lift thought to the immediateness of all true being, the present and unlimited possibilities of spiritual knowledge, overcoming, and supremacy.

Christian theology has relegated the experience of salvation to an indefinite future and thus discouraged the aspiration and paralyzed the endeavor to attain it. Men need and the many are longing for the Christ-life *now;* for sinlessness, freedom, health, sovereignty, peace; and it is in its disclosure and maintenance of this kingdom of heaven "within," that Christian Science is bringing a hitherto unknown joy and strength to unnumbered lives. It is replacing the hope of a hereafter-heaven with that present knowledge of saving truth which Jesus promised, and which inaugurates the "heaven on earth" of redeemed human consciousness. The triumphant now of man is realized as he apprehends the eternal now of God.

To-day every worthy Christian Scientist can but be impressed with the greatness of the now of privilege, of opportunity, of responsibility, and of duty; with the meaning and appeal of this hour of consummation for our Cause, and with his occasions for profound gratitude to God, and for unforgetting thankfulness to her whose faithful seeking and heroic stand for Truth have secured to humanity the unspeakable blessings of Christian Science. In answer to the world's great need, and in the presence of an innumerable company of witnesses, it becomes every least beneficiary and representative of this great movement to arise and shine for his light is come, the glory of the Lord is risen upon him. Now is the accepted time. JOHN B. WILLIS.

[On page 629 of last week's *Sentinel*, line 15 of first column should read, "not material or sensual, but spiritual;" etc.—EDITOR.]

The hours for services in The Mother Church, Sunday, June 10, will be 7.30 and 10 o'clock A.M., and 12.30, 3.00, 5.30, and 8.00 P.M. At the 12.30 service, the children will be given preference in seating the congregation.

Letters to our Leader.

Houston, Tex., May 17, 1906.

Dear Mrs. Eddy:—It may be of interest to you to know of our efforts in connection with the Mother Church Building Fund. When the privilege of subscribing to this fund was first given us, our little church (First Church of Christ, Scientist, Houston, Tex.) pledged itself to raise one thousand dollars. This pledge was fulfilled within a few months, but the subscriptions were continued until considerably more than that sum was sent on. About a year ago, notwithstanding there was seemingly urgent need for all of our income to meet our own expenses, we voted to send our collection on the first Sunday in each month to The Mother Church, which we are still doing, and have had ample for our own needs. Last month, finding that we had a surplus of one hundred and fifteen dollars and eighty-one cents in our general fund, we decided to send the entire amount, and again on last Wednesday evening we agreed to forward a surplus of sixty-eight dollars and fifty cents which we had in our lecture fund, this last remittance making a total of two thousand seven hundred and eighty-nine dollars and fifty-six cents forwarded to date. The children of the Sunday School have ever been eager to send their little savings, and have contributed in all one hundred and seventy-seven dollars and thirty-five cents.

We have learned from Science and Health that giving freely, as we have bountifully received, is the true spirit which brings forth after its kind, and for this knowledge we feel deeply grateful to you.

Faithfully yours,
GEORGE R. CHRISTIE, *Special Treasurer.*

Cincinnati, O., May 7, 1906.

Dear Leader and Friend:—The annual meeting of the students' association of Miss Emma A. Estes, C.S.D., of Cincinnati, has been so marked by unity and harmony that our hearts instinctively turn to you, who will understand and rejoice with us. The past year has brought us many blessings, but we feel at present that the greatest is a sense of demonstrated harmony, as manifested in our field. The Pentecostal oneness of thought which was manifested by our all being with one accord in one place, has brought also a greater consciousness of gratitude for the Leader whom divine Love has given to our Cause,—for the Teacher through whom so much help has come,—and for The Mother Church whose protection and guidance we are learning to appreciate more fully. Some especial study of the Manual at this meeting has emphasized the wisdom and value of its by-laws and rules. As an association, divine Love has given us over twenty-two hundred dollars to send to The Mother Church and we have a few hundred more in our treasury which will be forwarded at once. This letter is but a feeble expression of our gratitude, but we trust that the renewed consecration and clearer understanding that has come to us at this time will find more fitting expression in our daily living of Truth.

Ever yours in truth and love,
MARY E. NEWTON,
Secretary for the Association.

Argata, Cal., May 16, 1906.

Mrs. Mary Baker G. Eddy.

Dear Teacher and Leader:—Your notice of April 28 has touched my heart to tender memories,—of your self-forgetfulness and patient labor for all your children. I am learning that it is only as we draw nearer to the absolute Truth that we learn the nothingness of material things. I thank you for all the guiding words that have been given us in the *Sentinel* and *Journal*. Tears of gratitude to God, to our blessed Master, and to yourself, came to my eyes and obscured the words, sometimes, as we met in our tiny

Digitized by Google

chapel on May 6. Six years we have met in our house, and in a storeroom. We only rent this, but our monthly contribution to the Mother Church Building Fund will open the way to buy the church. We have proven God a sufficient supply, and have given lovingly to this glorious promise of a larger thought and unity in spirit. Thanks to our heavenly Father that through Science and Health our eyes have been opened, and we see how good the Lord has been to all His children in sending this light now, when the world's need is so great.

Lovingly your student,
ELIZABETH C. BURCHARD.

Kansas City, Mo., May 24, 1906.

Mrs. Mary Baker Eddy, Concord, N. H.

Beloved Leader and Teacher:—It is my joy to send to you the enclosed draft given to me by my late class, accompanied by a tender note requesting that I forward to you this token of their love, gratitude, and appreciation for Christian Science. These students take their places in the grand army of loyal Scientists who, under your wise and loving leadership, are marching to the New Jerusalem. Loved Teacher, I am always grateful for your priceless instructions. My students and I honor and love you, and we are trying to show our thankfulness by doing all in our power to spread the glad tidings and work unselfishly for our cherished Cause.

We are looking forward with great pleasure to our Communion and the dedication of the new church, and sincerely hope that you are enjoying the harvest after your many years of preparing the soil and sowing the seed of Truth in human consciousness.

Yours in much love,
MRS. AMANDA J. BAIRD.

[The draft which accompanied this letter was for five hundred dollars.—EDITOR.]

Anita, Ia., May 19, 1906.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—We organized a church at this place on Tuesday evening of this week, and start with about twenty members. We are sending to-day to Mr. Chase the contents of our treasury, one hundred dollars, for the Mother Church Building Fund. Although this contribution is small, it is given with deep gratitude for the many blessings which we are continually receiving from Christian Science.

We also wish to express our love and gratitude to you, dear Leader, through whom this grand Truth was revealed.

Sincerely yours,
HARVEY S. DENTON, *Clerk.*

Washington, D. C., May 7, 1906.

Mrs. Mary Baker Eddy.

Beloved Teacher and Leader:—I am sending you a hundred copies of the *Washington Times*, containing a synopsis of our dear brother Tomlinson's lecture. He was introduced by your good cousin, General Henry M. Baker. Both the introduction and the lecture were *par excellence*, and the large audience, which filled the theatre, went away strengthened and uplifted. Our national capital is in line, well to the fore, keeping step in your grand army, which is ever increasing in numbers, wisdom, and strength, warring against the common enemy,—sin, materialism. Thanks to God, and to our dear, wise Leader for it all!

Tenderly, truly yours,
EDWARD EVERETT NORWOOD.

Testimonies of Healing.

Common gratitude would make me acknowledge a favor to any one, but I have waited for nearly eight years to acknowledge my gratitude to Mrs. Eddy, the first person in this world who ever told me the truth. If a publication of my testimony helps some other poor fellow to lift his head in this world and learn that there is no hopelessness,—that there is a way to drop the black veil that enshrouds him, where he may stand free in the presence of his God,—I shall in a measure make an amend for my apparent neglect and in a small degree pay a tribute to that splendid woman who has done so much for mankind.

I will relate as faithfully as I can the story of a man in hell, and how through Christian Science the black night disappeared and "there was light." Drink was the cause of all the misery I endured in my early life. I cannot tell when I began drinking, but it must have been at a very early period. I know that at first there was a feeling of horror at the thought, but my associates (older than myself) were all men who drank, and I looked upon it as a real clever thing to do, and "custom soon made it a property of easiness." I would not have any one think there was ever any pleasure in it, and the time soon came when I was referred to as a periodical drunkard; always pitied, blamed, considered of some worth occasionally, but figuratively kicked for my weakness. There would be long periods of sobriety, and then a fall that would drag me back; then a new resolve, but the tyrant would seize me again by the throat and push me under. Oh, the pain, the shame, the agony of it all! About this time some dear friends tried to interest me in Christian Science. I went to their church, but was not at all impressed. They were reading two books, one of which I never read and the other I had never heard of. As I looked about at the people, I wondered how they could be interested. I went the following Wednesday, and came away doubting the truth of the stories I had heard. The following Sunday I again sat through the service, which seemed dreadfully long, and I came away with the conviction that it was a good thing for women but it was like all the others to me,—nothing.

The periods of my horror began to come closer together. I became so untrustworthy I could not get a place in my profession. A marked change began to appear in my surroundings. In my lodgings I was moved from the best room to less and less attractive quarters, until I was given a place to sleep because they remembered me as a better man; but finally I was asked to go. Weak, helpless, and alone, I begged for a few days to look about me. I realized that I had at last reached the street. About this time I met an old friend, who arranged for my removal to Philadelphia —that was early in May. I was placed in a sanitarium, and by September I had gained sufficient strength to go to work. All the after-effects of what I had gone through soon began to appear. Memory seemed to fail, and night after night I went to my bed with the hope that I would sleep and never wake again, yet I had almost a currish fear of death. I thought I must do something to save myself from insanity, so again I plunged into the lower hell of giving way to the awful curse, and again shut myself from all good by getting drunk. It was then that I cried out to an unknown God to save me. I saw the last small remnant of human will slip away, and there I was again—in terror, helpless, and panic-stricken.

The following year a sweet young girl joined the theatrical company with which I was then connected, and something she said made me ask her if she were a Christian Scientist. She told me she was, and asked me if I knew anything about it. I told her of my experience in New York and that it did not appeal to me. She asked me if I would go to church with her on Sunday. I told her I didn't care much about church, but I afterwards thought the girl

Digitized by Google

was paying me a compliment in asking me to go, and it would be unworthy of me to refuse. So I went, listened to the same reading, was neither pleased nor enlightened, but went again the following Sunday. The third Sunday it rained, and I was very glad to remain at home and read the papers. The following morning as she met me she said, "You were not at church yesterday," and I answered, "You didn't go in all that rain?" She replied, "Yes, rain never keeps us away." It was a most ordinary little bit of conversation, yet it awakened thought in me, and I went up and bought the book to find out for myself what was so attractive to these people. I began at the first line of the Preface, and the strange part of the whole thing was that the book itself appeared to furnish me with arguments against Christian Science.

One day about three weeks after I began to read I became quite interested, when a most strange feeling took possession of me. It seemed as if the words disappeared and something began to rise up before me—something very good. I rushed down the stairs like a child, and up to the young lady's house, and said, "I now see what you know." I ran up the street, saw people passing to and fro, and said to myself, "My God, is this thing in the world and you don't know it." It was then I realized that I did not have to have human will. I had found my God, knew He was always beside me, and I had only to declare Him. Smoking, the habit of a lifetime, left me in a night. Veil after veil has been torn aside; illusion after illusion has blown away. I am now a healthy, prosperous, and happy man, and it is all in Mrs. Eddy's wonderful book, "Science and Health with Key to the Scriptures," and among its wonderful works is this,—it has unlocked and illuminated for me that great saying spoken by Jesus, "Ye shall know the truth, and the truth shall make you free."

FRANK ROBERTS, New York, N. Y.

Ten years ago I had a very bad cough, with expectoration, which continued, and in 1897 I had a hemorrhage from the lungs. My family physician then ordered me to the southern mountains and I spent five winters in Asheville, N. C., with medical attention nearly all that time. About three years ago Christian Science was brought to my attention and I was asked to read some of its literature. As it seemed very reasonable, I soon became deeply interested and began to take treatment. After about three months I was so much better that my practitioner thought it well for me to do the work myself for a time; and except for three or four short periods I have not had help from any one since. The cost of my treatment in Christian Science, which cured me, was about one-fiftieth of what I had previously spent in search of health through climate and medical treatment.

My present health is good; I do not stop for weather; I attend to my business, and often work in much dust (which my doctors said I would never be able to do again, without the greatest risk to my health), but I have seldom had even discomfort from it. Now I am not only well, but I know that "the divine Mind, which forms the bud and blossom, will care for the human body, even as it clothes the lily" (Science and Health, p. 62).

I am even more thankful for the spiritual uplifting and the knowledge of God and His creation, than for the physical healing; but these are inseparable, for as Jesus said, "This is life eternal, that they might know thee the only true God, and Jesus Christ whom thou hast sent."

I am thankful to our Leader for these glorious truths which she has opened to our understanding, and hope this may encourage some other sufferer.

CHARLES E. BOND, Spencerville, Md.

It is with a heart full of gratitude that I write of my healing through Christian Science. I had been a delicate child, and as the years passed I grew more so. I suffered almost continually from bronchitis, catarrh of the stomach, and other ailments. For ten years I was a great sufferer; treatment from three of the best physicians of San Antonio giving me only temporary relief. All said that I would never be a well woman. In 1898 I was confined to my bed, and any motion caused sinking-spells. Five good physicians were called in at different times, and all agreed that my trouble was aneurism of the aorta. One, our family physician for twelve years, advised my going to Chicago for an operation, saying I had at most only a few years of miserable existence, and that I was liable to die at any moment. Others said an operation would be useless, that no honest physician would try it. My husband had passed on a few months before, leaving me with four children to care for.

I had been a Bible student from childhood, and an active member of an orthodox church for many years. One night as I read my Bible I came to where the leper asked Jesus to heal him. The thought then came that God could heal me if He would, and this thought stayed with me. A great desire was ever present to go to San Antonio, so all arrangements were made, and my will was written in case I did not return alive. My daughter wrote to a friend in San Antonio, telling her my condition and what the doctors had said. She replied that every preparation would be made but that I would not die; I would have Christian Science treatment and get well. I knew nothing of it, but I seemed to see a faint ray of hope. A few hours after arriving, a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, was given me to read. What a revelation! I read almost day and night, and in a few days I was able to sit up and dress myself. I then had three weeks' treatment, and during the last week called upon my friends, telling them the wonderful good tidings,—that the Christ is with us to-day, to heal.

I am a perfectly well woman, have not had a physician or a dose of medicine for myself or four children since April, 1898. I can walk miles; run up and down stairs; do any housework necessary, and require very little sleep or rest. The fruits of Spirit are joy and peace; these I have in living daily the truth as taught by our beloved Leader, Mrs. Eddy.

MRS. ELIZABETH T. ARCHER, San Antonio, Tex.

It is with grateful heart that I acknowledge to the world some of the benefits received in Christian Science, which came to me in an hour of great need. I had suffered for years, going from one doctor to another, until I had lost all hope of ever getting better, and my friends were advising my wife to persuade me to get my business affairs straightened up as they believed the end close at hand. It was at this time that Christian Science was brought to my notice by a dear friend. I had suffered with indigestion for years, also constipation, liver trouble, bleeding piles, heart trouble, etc.

After taking up the study of Christian Science, with a very little help through a practitioner, I began to improve, and continued to improve, until I was perfectly healed from all these ailments. My daily prayer is that God will bless Mrs. Eddy for giving us Science and Health, which is constantly explaining the way of Life, not death, the way of Spirit, not matter, and which encourages us to press onward and upward. I am also grateful for the *Christian Science Sentinel* and *Journal*. May God bless all those who have, through these papers, contributed so many crumbs of truth and comfort to me. I am prompted to say in Bible language, "Before I was afflicted I went astray," but now my desire is to keep God's law. I hope that I may be able to do as much for my fellowmen as has been done for me, by pointing them to God, and in that way become of use in the world. When I think of the condition in which Christian Science found me, and that myself and family

Digitized by Google

have been six years without medicine, I feel like saying, "Praise God from whom all blessings flow."

GEORGE SPRUNG, Vancouver, B. C.

For many years I suffered from a peculiar and distressing nervous trouble. At first the symptoms were wholly mental. There was no physical evidence of disease, but as the years passed and no relief could be obtained, my bodily organs became gradually involved until, in December of 1899, there seemed to be a complete collapse. A physician who was treating me at that time said that every organ of the body was hopelessly diseased, and that further medical treatment was useless. He said that mortal man could not suffer as I was then suffering and live; that my brain was rapidly softening and that I could not live two weeks. Finally the day came when it seemed clear to all that the end was near, and it was at this time that my mother decided to try Christian Science. She knew that practically everything else had been tried to no purpose, and that I had reached the point where nothing could harm me. When the Christian Science practitioner arrived the delirium of death had begun to settle over me. Her treatment relieved the suffering somewhat, but my recovery was slow. However, I clung to Christian Science to the exclusion of all other therapeutic systems, and some idea of the practical results obtained may be gained from the fact that early in 1903 I was examined by a physician in the employ of a life insurance company, who pronounced me sound both mentally and physically.

I have overcome some immoral habits and many bodily infirmities, and I am grateful for the measure of Christianity that is mine.—HILL GOLSON, Prattville, Ala.

Two years ago I was doing practically all the composition on a country newspaper in northern Nebraska. After ten months of this work, without relaxation, I was compelled to take a rest, as I was then bordering on a nervous breakdown with a complication of other ailments, among them myopia in a very aggravated form, for which I had consulted two oculists. The first one told me that I would have to wear glasses but a few months, as my eyes were only strained from too close application. Later the glasses became unsatisfactory and I went to a specialist, who after an examination told me that my eyes were in a serious condition; that I had not begun to wear glasses soon enough; that it was absolutely essential for me to wear them constantly. I surrendered to what then seemed inevitable, and regarded the trouble with my eyes a secondary matter compared with my numerous other ailments. At this time I could scarcely walk two blocks without a feeling of the greatest weariness and my daily obligations were a burden to me. I came to Topeka for a vacation, hoping to ward off a complete prostration, and also to consult doctors in regard to my physical condition.

I first heard of Christian Science through a very dear friend. I knew that it had helped her over many rough places, and I intended, in a vague sort of a way, to investigate it for myself at some future time. While on the street one day, my attention was attracted by the sign on a Christian Science Reading Room, and hoping to get some light I went in. Here I was given a copy of Science and Health to read. I took it home and glanced over a few pages, thinking it perfectly absurd that a book could quiet my nerves or in any way alleviate my suffering. After a week or ten days I returned the book, telling the Scientist that it gave me no relief. During the conversation that followed I told her of my physical condition and she advised treatment, which I took, and after six weeks I was able to be at my work again, feeling like a new being. I no longer suffered any discomfort from walking any distance that I wished.

I wish to speak particularly of one experience in connection with my eyes. After being in Science several months I laid aside my glasses, much to the amazement and disgust of the men with whom I worked, and never felt the need of them until one day in the spring of 1905. On this day I was running a linotype machine in one of the daily offices in this city, when it suddenly seemed that a heavy veil had been placed before my eyes. I could not read "copy" nor tell one man from another in the room. I started at once for help. When I got out into the noonday sunlight, to my vision it was dusk, and I thought surely I was going blind. I fought this fear as best I could, but when I reached the practitioner's office, reading was out of the question. After about ten minutes' treatment I was told to take up Science and Health and see if I could read. At first the words looked like a black line across the page, then all at once it was light again and I could read clearly and distinctly the page before me. Tears sprang to my eyes and I realized then as never before that God is of "purer eyes than to behold evil." I experienced no more discomfort with my eyes and the remainder of the day I spent sewing. The next day while at my work, which is regarded by all operators as exceedingly trying on the eyes (most of them wear glasses), a "take" of "pearl" reprint fell to my lot, and I experienced no more difficulty in reading it than in reading a type-written page. The trouble was perfectly overcome by the one treatment and I have suffered no more annoyance from this source, no matter how severely my eyes are tried by the work before me.

The health and strength I now enjoy I owe entirely to Christian Science.—AGNES HENDERSON, Topeka, Kan.

I am more than grateful for my healing through Christian Science. According to the opinions of seven or eight doctors, my case was a chronic one which could not be helped. After having had two slight operations I was persuaded to try Christian Science, and I am indeed thankful that I did so. Christian Science has cured me of very stubborn chronic constipation, severe indigestion, heartburn, headaches, and of bleeding piles, which finally resulted in a cancerous growth that produced great agony and suffering. In consequence of this condition I could not eat anything at last but baked apples and milk, and the physicians whom I employed during the twenty-two months of my illness gave me no hope at all, although I had some of the best that money could secure.

Just before taking Christian Science treatment I had been urged to go to Europe with one of our leading specialists, to consult another specialist there as a last hope, because they said nothing here could save me. But thanks to God, and to Mrs. Eddy's teachings, I know and understand the truth and it has freed me from all these troubles; and besides this, my disposition is entirely changed. I was very nervous and irritable during my illness, but I have experienced a change in this and in many other ways since I came to Christian Science. I am more than grateful to God, and to Mrs. Eddy, who brought this healing truth to mankind.—ALBERT J. BOLZ, Buffalo, N. Y.

My father had very poor health, and the belief in heredity was held over me from my birth. The physician who attended me said I had no vitality, that every organ was weak, that I must have fresh air and sunshine, if I was to be kept alive. While this advice was carried out, I could never attend school regularly or play like other children. I was always frail and sickly, and the fear of consumption was constantly held over me. Twelve years ago I had pneumonia for the second time, which left me in a weak state, also suffering mentally from the loss of both parents; then came a new trouble which the physician pronounced a tumor. This was treated nearly a year, and was followed by nervous prostration and terrible headaches. In the spring of 1894 I was sick in bed five weeks with a nurse in constant attendance. After various experiments I was

Digitized by Google

taken to an eye specialist, who said that my eyes caused the headaches; that I must wear glasses constantly for two years.

In the winter of 1895 I became terribly discouraged. I asked the doctor if he could not help me, and he replied, "You will never be well, there is nothing that can cure you, but I will patch you up, and keep you as long as I can." I was suffering from extreme nervousness and constant pain. I could not use my arms to sew, neither could I lean back in a chair. I had given up hope of ever being any better, thinking I must die of consumption, when a cousin wrote me to try Christian Science. I knew nothing of it, only having heard it spoken of. We called on one of Mrs. Eddy's students, and after the second treatment I felt more quiet and rested better nights. The third time I saw her I left off my glasses, and I did not have headaches either. I was slow to give up my old thoughts, but as fast as I did so I gained, until I was well,—all the old troubles had disappeared entirely. I am well and strong, and feel that I never really knew what happiness was until I came into Christian Science. I am now able to help myself and others.

For all this words fail to express the gratitude I feel to God, and to Mrs. Eddy, who has shown us the way.

MRS. DELLA H. DAVIS, Cumberland Mills, Me.

I became interested in Christian Science over two years ago, in my native country (Chili, South America), through the healing of a friend, and my healing was not physical but a great spiritual quickening. Since childhood I had always been looking for something, I did not know what, and my mortal concept of existence did not satisfy me at all. There was something lacking in my consciousness, and nothing I had yet found could fill it.

Sometimes I was confused with the seeming power of evil; God seemed so far away and so difficult to reach. I was not satisfied with my religion either, for many things connected with it seemed too absurd to be true; I always thought that wordy prayer is foolish, and that God seemed sometimes willing to answer and sometimes not. I had read the Bible many times, but to me it was contradictory; there were too many points nobody could explain. The problem of life seemed complicated and discordant.

A few years prior to my investigation of Christian Science, I began to read a great deal and became interested in many of the so-called sciences, healing systems, and philosophies, but learning nothing of the "one thing" which could supply my lack. When, however, the divine Truth was brought me by a dear friend, I knew at once I had found what I was looking for; it satisfied entirely the craving of my life, and I rejoiced in the assurance that evil is unreal—is only a false belief. The divine law of Love discovered by Mrs. Eddy seemed perfectly logical and natural, and at the same time so simple that I wondered why I had not thought of it long ago. To know that Mind is the master, and body the servant, encouraged me very much.

The Bible was a new book. God was now to me the perfect law-giver, ruling the universe and man with justice and wisdom; and above all, God was Love, pure and infinite. As I came to apprehend these great teachings of Christian Science the world was changed. Something of the harmony of God's universe was realized, and I was born anew. I at once began to read our text-book in connection with the Bible, and to apply my own understanding in the healing of the sick. I could tell of many cases in which my efforts were crowned with success.

Words can but feebly express the sense of safety and protection which has come to me as the result of experiences which have proved to me the practical availability of divine Love in every time of need, and I feel strong in the fellowship of Truth. I rejoice in the loving care of our Father-Mother God, who never slumbers nor sleeps.

I rejoice in the healing and saving work which is being done by the faithful band of workers in Christian Science both in my country and in Buenos Ayres where I spent a few days on my way to America.

TERESA HUGUET, New York, N. Y.

One day I stepped on a rusty nail, which buried itself in the ball of my foot. It took some time to extricate the nail, but in the evening I walked a distance of about two and a half miles without any difficulty. I had no pain after the nail was removed, although I had a great fear of blood-poisoning and lockjaw, but through the little understanding of Christian Science which I had, the fear was wholly destroyed by evening. A few years before this I was healed of severe physical ailments, as well as of sorrow and doubt, through the reading of Science and Health. I have no words in which to express fully my gratitude to God, and to Mrs. Eddy for Science and Health, but I shall strive through daily watchfulness to live what I learn from its study. The physical healing was nothing in comparison with the overcoming of censoriousness. When I used to attend the Wednesday evening meetings I would mentally criticise many of the speakers,—sometimes because I could not hear what they said, and at others because I did not like what I did hear. This went on for some time, till finally I asked myself, Can I speak as well as those I am criticising? Am I so good that I should judge any one? I then saw I was not a help to the speakers or to myself and I was much ashamed when I found what I had been doing. I am thankful that this phase of error was destroyed long ago. I am pressing on and trying to overcome many other errors of a similar nature which self seems heir to. I have had abundant proof that Christian Science is the truth.

MRS. HANNAH S. COLLVER, Seattle, Wash.

At the age of thirteen I had to leave school, owing to ill health, and from that time was never long out of a doctor's care. I had heart trouble, rheumatism, and other ailments for twenty-four years. For five years I was constantly under medical treatment, and on the advice of two physicians went to Colorado, but received no benefit. After returning East, Bright's disease developed, and in spite of all the drugs I took, and the care I received, I grew gradually worse, until the doctor felt it a duty to acquaint my husband with this condition, intimating that my days would be few.

A short time after this I overheard some ladies telling of cases of healing under Christian Science treatment, and thinking it would not hurt me in any way, I determined to see if it could relieve me of my suffering, not expecting anything further. But thanks to God, I am now well, after two years in Christian Science. My healing was slow, as there were many adverse conditions in my surroundings to overcome, but the cure has been accomplished and is complete. I sincerely hope that this testimony may reach the eyes of some one who needs the healing truth as I did.

MRS. GUSSIE L. HAMMOND, New Bedford, Mass.

Before appplying for Christian Science treatment I was under the care of an eminent physician for about a year. I had been troubled with constipation from childhood, and was in a very weak, nervous condition. The year's treatment had culminated in a slight operation, but neither was of any benefit, and I was worse than before the operation. In the latter part of 1898 I took one Christian Science treatment, which healed me of constipation and I have never used any material means since. Later on, about the spring of 1899, I took several treatments, which with the reading of Science and Health, the text-book of Christian Science, completed the healing of other troubles, and I have been well and strong ever since.

SARA B. FRASIER, St. Louis, Mo.

From our Exchanges.

To the student of the New Testament nothing is more marked than the difference in tone and atmosphere between the Church of the first century and the Church of the twentieth as we know it. The difference is principally this—the loss of the sense of power. The apostles trod the earth like gods. They challenged the world with their remedy. We apologize for our existence, and are content if Jesus Christ can find a place with Buddha and Mahomet in a World's Parliament of Religions. From every page of the New Testament there breathes like mountain air, like a wind from heaven, the sense of certainty, the full, unqualified, unlimited feeling of capacity. It throbs with the sense of Almightiness. Force is in every tone, victory in every sentence. "What hast thou in thine hand?"

F. W. Walker Pugh.
The Standard.

If the chief object of our lives is to build our block houses, and to build bigger and bigger houses every year and to fight each other to try to get more houses than some other fellow, and to count ourselves successful when we have a hundred houses when we cannot by any possibility live in more than one of them, then when something knocks down a few of our houses the disaster seems very serious. Or if success means a nine-course dinner and throwing away more food than we use, and we are brought down to just enough to nourish us for a few days, then no smaller word than calamity will cover our condition. But if we have cultivated that nature in which the *life* is more than meat, and the body than raiment, then are we possessed of a different standard of values, and will get a different result.—*Universalist Leader.*

The Church of Christ must always be unsatisfied while the social state in which it lives falls short of the highest ideals of justice, righteousness and brotherly kindness. It must always forward and encourage efforts which are making to climb upward toward these ideals. The indifference of the Church to the needs of men is a reproach to Christ. . . . And the example of the church must always be a power in the community. Do we want helpful changes which shall perfect the common brotherhood? Let us then in our church life show what brotherhood really is and does. Do we believe in justice? Let us Christians, then, be just. Are we longing for the reign of social righteousness? For us, then, the main thing is to make the name of Christian conspicuously synonymous with right and helpful living.

The Congregationalist.

The highest type of Christian character is not that of the man who is merely active in good works, nor that of one who is chiefly emotional in his religious life, nor that of the thinker and student who knows all theology but has little use for any of it; but rather that in which all these elements of man's spiritual nature are combined in due proportion and in natural order. He knows, and therefore feels and therefore acts. He does good as he has opportunity, because he loves God and his fellow-man; and his love is due to his clear apprehension and strong appreciation of the relations subsisting between him and God in Christ, and of his duties as a disciple of Christ.

James D. Moffat, D.D.
The New York Observer.

To turn to another deadly inconsistency of the Church, let us look at its attitude in the matter of war. To me nothing is more disgusting and discouraging than to see chaplains marching to war with regiments organized to commit murder on a large scale. That alone is nearly enough to discredit the sincerity of the entire profession. There may be some excuse for differences of opinion as to the teachings of Christ's life in other matters, but even a dull editor knows that the title which fits Christ best is "Prince of Peace." Here is a question upon which every church, every creed, every faith ought to unite without any doubts and with inspiring power.

Oswald Garrison Villard.
The Christian Register.

Trials for heresy settle nothing. Conclusions are reached in quite another court, that of careful study and sound reason; and heresy trials confuse the real conclusion we desire, which is not whether a man's views agree with an old or a new formula, which has itself no authority, but whether they are true. This question will have to be threshed out, and we cannot help it, just as all other critical questions must be; and there is not the slightest reason for Christians to be afraid. The discovery of truth will always help and never hurt the world.—*The Independent.*

You may not always guess where God is leading or what results He is contemplating; but of this be sure—His ways are righteous, and good and not ill shall attend all who diligently seek and follow Him. Therefore, pray, desire, and pursue. Rev. Calvin Weiss Lauper.
The New York Observer.

The Christian Science Text-Book.—"Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

The New Concordance.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of Science and Health, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 595 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

Church Manual.—Containing all the By-laws to January 1, 1906, of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to Joseph Armstrong, 250 Huntington Avenue, Boston, Mass.

Church Tenets.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to William B. Johnson, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

Church Treasurer.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By Hon. WILLIAM G. EWING.

National.

The National Wholesale Grocers' Asso-tion of the United States, with a membership pledged and in prospect of more than one thousand individual jobbers, was organized in Buffalo last week. The constitution recites that the association is formed for the purpose of fostering: first, friendly relations among grocers; second, the work of securing national legislation on pure food; third, the unification of State food laws to facilitate interstate commerce; fourth, restraint of manufacturers from giving premiums; fifth, abolition of the abuse of manufacturers in subsidizing jobbers' salesmen; sixth, such other legislation as shall meet the needs and requirements of the jobbers. The association, it is provided in the by-laws, is not to interfere in any way with legitimate competition. It is not to restrain trade, nor is it to act in the matter of limited prices. It is distinctly stated that the association will not be understood as a combination.

All Japanese are to be excluded from the American navy on July 1, unless they produce citizenship papers or a signed declaration that they intend to take out the same. In the future no Japanese will be allowed in the navy unless he renounces the Mikado in favor of the Stars and Stripes. Orders to drop the names of all alien Japanese from the papers of every warship of this country have been issued by the Secretary of the Navy, who further directs that the places of Japanese who have been employed as stewards and servants are to be filled by American Negroes. It has been discovered that the Japanese Government has been able, through its subjects on board American ships, to learn too much about the Yankee service.

Dr. Carl Muck, recently conductor of the Royal Opera at Berlin, has been engaged to conduct the Boston Symphony for the ensuing season. Before signing for the engagement it was necessary to obtain permission of the German Emperor for the leave of absence. The new conductor is one of the most prominent men in his profession in Europe, and has never appeared before an American audience. He occupies a unique position as an interpreter of Wagner's works, his services as a Wagnerian conductor are much in demand, and he is regularly engaged for the Beireuth festivals.

The United States Government last year through its Forestry Service, in addition to giving an exhibition of scientific treatment of forestation, sold stumpage to the value of $273,659.82.

Vice Commodore Frank Maier, owner of the yawl Tamerlane, which won the Lipton cup offered for the race to Bermuda, at a dinner at Hamilton announced that the Lipton cup will be sailed for each year, which is taken to mean that he will make the handsome trophy which he won a perpetual challenge cup for a race from New York to Bermuda.

The House Committee on Agriculture last week gave a hearing to the Chicago packers relative to the Neill-Reynolds report regarding conditions in the Chicago packing houses. The request was made by E. Wilson, who said he was employed by the Nelson, Morris Company, but in this instance was authorized to speak for all the Chicago packers.

The steamer Tango Maru, which sails from Kobe, Japan, June 26, for Seattle, will have on board forty-five Chinese students, who will be distributed among eastern colleges. The students, who belong to good Chinese families, have been outfitted with foreign clothes and will have their queues cut before leaving China.

Foreign.

Argentina is not pleased with the programme agreed on for the third Pan-American Congress, to be held in Rio Janeiro in July. The cause of Argentina's grievance is the Drago doctrine, which was promulgated by L. F. Drago at the time of the Venezuelan blockade by Germany, Great Britain, and Italy, and holds that force cannot be used by one Power to collect money owed to its citizens by another Power. After much discussion the committee on programme for the Congress prepared the following section relating to the general subject covered by the Drago doctrine: "A resolution recommending that the second Peace Conference at The Hague be requested to consider the extent to which the use of force for the collection of public debts is admissible." It practically admitted, argued Argentina, that force was justifiable in some cases.

A majority of the Douma has decided upon a course of action should the Czar seek to carry out the Government's announced intention to adjourn the Douma on June 28 until autumn, so that the Government may prepare legislation. The Douma offers two alternatives. The first is that the present Council of Ministers retire, to be replaced by a constitutional Cabinet chosen by the Douma Council of the Empire. This would be accepted by the Douma as a guarantee of a constitutional government while it is not sitting. If this is refused, the Douma will refuse to adjourn, and will declare itself to be in continuous session.

The members of the Japanese House of Representatives who have been visiting Korea to study the cotton prospects, report that they think the crop ought to be worth $40,000,000 annually. Japan now imports yearly $56,000,000 worth of cotton, which probably will be largely replaced by Korean cotton should the estimate be correct.

A number of the German steamship lines are said to be moving for an international conference to consider the subject of submarine signaling in its widest application.

The Cuban Senate has ratified the Anglo-Cuban treaty of commerce, navigation, and industry as amended by the Foreign Relations Committee.

The Italian Government proposes to raise papyrus and make its paper money from it, because it could not be counterfeited.

Industrial and Commercial.

The enormous material wealth of the State of New York is in no way, perhaps, more clearly marked, says the *New York Sun*, than in the fact that the total amount of real estate—land and buildings—exempted from taxation is larger than the total assessed wealth of twenty-five of the forty-five States of the country. New York has $1,500,000,000 of real estate exempted from taxation. It has $185,000,000 represented in churches and church buildings; $150,000,000 in hospitals and charitable institutions; $100,000,000 in schools, exclusive of $90,000,000 in colleges, universities, and other buildings wholly devoted to the purpose of instruction. The Federal Government has $80,000,000 worth of land and buildings in the State of New York, of which $60,000,000 worth is in New York City and $6,500,000 in Buffalo. The State itself has $85,000,000 worth of property, land, and buildings throughout the State, of which by far the largest single item is at Albany. There is $90,000,000 of property within the State of New York in cemeteries and $40,000,000 worth of property in libraries and scientific and patriotic organizations. Agricultural societies own $1,000,000 worth, and township and village buildings represent $22,500,000 more.

A quantity of minerals found in Rapid River, on the borders of Lake Chibagamoo, 250 miles northwest of Lake St. John, Northern Quebec, give large traces of silver and very good traces of gold. Other assays from the same neighborhood give traces of cobalt, good traces of silver, and nickel of a very rich quality. These assays were made by Engineer Blake, who spent three months in the region after a voyage with dogs and much suffering from cold. Every creek near Chibagamoo gives traces of gold. Asbestos of number one quality is to be found, while second grade asbestos, suitable for packing, is plentiful. The engineer declares that the mineral indications are richer than in any district he has ever seen in India, Congo, Italy, Algeria, or British Columbia.

In a recent speech in the House of Representatives it was pointed out that "we are spending 63¾ per cent of all our revenues, exclusive of the postal service, for war or in preparation for war." There are under construction to-day thirty vessels of all classes, with a displacement of 381,730 tons, or more than fifty per cent of the displacement of the present navy, and that construction will not be completed until 1910 or 1912. The total amount appropriated for the navy by the fifty-seventh and fifty-eighth Congresses was $338,108,715.

The value of goods imported from the United Kingdom into Russia in 1905 was about £10,000,000, being 6.2 per cent less than in 1904. The value of imports from Germany to Russia in the same year was £54,520,000, being 3.6 per cent more than in 1904.

It required eighty-four million cross ties to supply the railroads of America last year. This is nearly three billion feet of lumber, board measure.

General.

Mexico has a cactus which grows toothpicks; another, ribbed and thickly set with teeth-like spines, furnishes the natives with combs; there is another cactus the long curved spines of which resemble fish-hooks; there is another which is an almost perfect imitation of the sea urchin; still another, says the *American Magazine*, resembles the porcupine; there is another covered with long red hair which is nick-named the "red-headed cactus." There are several varieties which serve as timepieces. One of these, the cereus nyticalus, opens its blossoms at seven o'clock in the evening and closes them at seven o'clock in the morning; another opens at eight o'clock and closes at eight o'clock the next morning; another opens at nine o'clock in the morning and closes at noon.

No less than 1,250,000 five-gross boxes of clothespins are manufactured every year in the United States.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

Dedicatory Message

BY

Mary Baker G. Eddy.

Copyright, 1906, by Mary Baker G. Eddy. Used with permission of the Author.

Choose Ye.

My Beloved Brethren:—The divine might of Truth demands well-doing in order to demonstrate truth, and this not alone in accord with human desire but with spiritual power. St. John writes: "Blessed are they that do his commandments, that they may have right to the tree of life, and may enter in through the gates into the city."

The sear leaves of faith without works, scattered abroad in Zion's waste places, appeal to reformers, "Show me thy faith by thy works."

Christian Science is not a dweller apart in royal solitude; it is not a law of matter nor a transcendentalism that heals only the sick. This Science is a law of divine Mind, a persuasive animus, an unerring impetus, an ever-present help. Its presence is felt, for it acts and acts wisely, always unfolding the highway of hope, faith, understanding. It is the higher criticism, the higher hope; and its effect on man is mainly this—that what one knows of him, on examination one is compelled to think genuine, whoever did it. A Christian Scientist verifies his calling. *Choose ye!*

When, by losing one's faith in matter and sin, one finds the spirit of Truth, then he practises the Golden Rule spontaneously; and obedience to this rule spiritualizes man, for the world's *nolens volens* cannot enthrall it. Lust, dishonesty, sin disables the student; it precludes the practice or efficient teaching of Christian Science, the truth of man's being.

The Scripture reads: "He that taketh not his cross, and followeth after me, is not worthy of me." On this basis, how many are following the Wayshower? We follow Truth only as we follow truly, meekly, patiently, spiritually, blessing saint and sinner with the leaven of divine Love, which woman has put into Christendom and medicine.

A genuine Christian Scientist loves Protestant and Catholic, D.D. and M.D.,—loves all who love God, good; and he loves his enemies. It will be found that, instead of opposing, such an individual subserves the interests of both medical faculty and Christianity, and they thrive together, learning that Mind-power is good-will toward men. Thus unfolding the true metal in character, the iron in human nature rusts away; honesty and justice, not "just ice," characterize the seeker and finder of Christian Science.

Thanks for the railroad company's courtesy; long live that railroad management, in which "man's a man for a' that!"

The pride of place or power is the prince of this world that hath nothing in Christ. Our great Master said: "Except ye become as a little child, ye cannot enter the kingdom of heaven"—the reign of righteousness, the glory of good, healing the sick and saving the sinner. The height of my hope must remain. Glory be to Thee, Thou God most high and nigh.

Whatever is not divinely natural and demonstrably true in ethics, philosophy, or religion is not of God and originates in the minds of mortals. It is the Adam dream according to the Scriptural allegory, wherein man is supposed to start from dust and woman to be the outcome of man's rib,—marriage synonymous with legalized lust, and the offspring of sense the murderers of their brothers!

Wholly apart from this mortal dream, this illusion and delusion of sense, Christian Science comes to reveal man as God's image, His idea, co-existent with Him—and God giving all and man having all that God gives. Whence, then, came the creation of matter, sin, and death, mortal pride and power, prestige or privilege? The first commandment of the Hebrew Decalogue, "Thou shalt have no other gods before me," and the Golden Rule are the all-in-all of Christian Science. They are the spiritual idealism and realism, which, when realized, constitute a Christian Scientist, heal the sick, reform the sinner, and rob the grave of its victory.

The spiritual understanding, which demonstrates Christian Science, enables the devout Scientist to worship, not an unknown God, but Him whom, understanding even in part, he continues to love more and to serve better.

Beloved, I am not with you *in propria persona* at this memorable Dedication and Communion season, but I am with you in spirit and in truth, lovingly thanking your generosity and fidelity, and saying virtually what the prophet said: "Continue to choose whom ye will serve."

Forgetting the Golden Rule and indulging sin, men cannot serve God; they cannot demonstrate the omnipotence of divine Mind, that heals the sick and the sinner. Human will may mesmerize and mislead man; divine wisdom, never. Indulging deceit is like the defendant arguing for the plaintiff in favor of a decision, which he knows will be turned against himself.

We cannot serve two masters. Do we love God supremely? Are we honest, just, faithful? Are we true to ourselves? "God is not mocked." "Whatsoever a man soweth, that shall he also reap." To abide in our unselfed better self, is to be done forever with the sins of the flesh, the wrongs of human life, the tempter and temptation, the smile and deceit of damnation. When we have overcome sin in all its forms, men may revile us and despitefully use us, and we shall rejoice, "for great is our reward in heaven."

You have dexterously and wisely provided for The Mother Church of Christ, Scientist, a magnificent Temple wherein to enter and pray. Greatly impressed and encouraged thereby, deeply do I thank you for this proof of your progress, unity, and love.

The modest edifice of The Mother Church of Christ, Scientist, began with the cross; its excelsior Extension is the crown. The room of your Leader remains in the beginning of this edifice, evidencing the praise of babes, and the Word, which proceedeth out of the mouth of God. Its crowning ultimate rises to a mental monument, a superstructure high above the work of men's hands, even the outcome of their hearts, giving to the material a spiritual significance—the speed, beauty, and achievements of goodness. Methinks this church is the one edifice on earth, which most prefigures self-abnegation, hope, faith, love, catching a glimpse of glory.

MARY BAKER G. EDDY.

The Communion Service and Dedication.

[WE are indebted to *The Boston Herald* for the following interesting account of the Communion service and the dedication of the Extension of The Mother Church of Christ, Scientist.—EDITOR.]

Five thousand people kneeling in silent Communion; a stillness profound, and then, rising in unison from the vast congregation, the words of the Lord's Prayer! Such was the closing incident of the dedicatory services of the Extension of The Mother Church, The First Church of Christ, Scientist, at the corner of Falmouth and Norway Streets, yesterday morning. And such was the scene repeated six times during the day.

It was a sight which no one who saw it will ever be able to forget. Many more gorgeous church pageantries have been seen in this country and in an older civilization; there have been church ceremonies that appealed more to the eye, but the impressiveness of this lay in its very simplicity; its grandeur sprang from the complete unanimity of thought and of purpose. There was something emanating from the thousands who worshiped under the dome of the great edifice whose formal opening they had gathered to observe, that appealed to and fired the imagination. A comparatively new religion launching upon a new era, assuming an altogether different status before the world.

Even the sun smiled kindly upon the dedication of the Extension of the Mother Church. With a cooling breeze to temper the heat, the thousands who began to congregate about the church as early as 5.30 o'clock in the morning were able to wait patiently for the opening of the doors without suffering the inconveniences of an oppressive day. From that time, until the close of the evening service, Falmouth and Norway Streets held large crowds of people, either coming from a service or awaiting admission to one. As all the services were precisely the same in every respect, nobody attended more than one, so that there were well over thirty thousand people who witnessed the opening. Not only did these include Scientists from all over the world, and nearly all the local Scientists, but many hundreds of other faiths, drawn to the church from curiosity, and from sympathy, too.

It spoke much for the devotion of the members to their faith, the character of the attendance. In those huge congregations were business men come from far distant points at personal sacrifices of no mean order; professional men, devoted women members, visitors from Australia, from India, from England, from Germany, from Switzerland, from South Africa, from Hawaii, from the coast States.

They gave generously of their means in gratitude for the epoch-making event. The six collections were large, and when the plates were returned after having been through the congregations, they were heaped high with bills, with silver, and with gold. Some of these contributions were one hundred dollar bills; without ostentation and quite voluntarily the Scientists gave a sum surpassing some of the record collections secured by evangelists for the work of Christianity.

Though the church was filled for the service at half past seven o'clock, and hundreds had to be turned away, by far the largest crowd of the day applied for admission at the ten o'clock service, and it was representative of the entire body of the Christian Science Church. In the auditorium of the church were the Earl and Countess of Dunmore and their daughter, Lady Victoria Murray; Sir Gilbert and Lady King of Dublin; Hon. Mrs. Porter of Dublin; Frau Friedrich of Dresden, Germany; Mr. Herbert Sutherland of Melbourne, Australia; Judge Ewing of Chicago; Judge Works of San Francisco; Judge Conklin of San Diego, Cal.; Mr. Clarence Clayton Eaton of Tacoma, Wash.; Mr. G. C. Crane of Spokane, Wash.; Miss Laura Earls of Brisbane, Australia; Miss E. S. Bacchenarm of Paris; Mr. and Mrs. Rennick of San Luis, Mexico; Mrs. W. J. Edwardes, Miss Edwardes, Miss D. Guinnet, and Mrs. Virtue of Sydney, Australia, and Miss Ida Krouse of Hale, Cuba. From such a list can be gathered an idea of the world-embracing character of the congregations at the dedication.

Before half past seven o'clock the chimes of the new church began to play, first the Communion hymn, succeeded by the following hymns throughout the day: "The morning light is breaking;" "Shepherd, show me how to go;" "Just as I am, without one plea;" "I need Thee every hour;" "Christmas morn;" "Abide with me;" "Day by day the manna fell;" "Oh, the clanging bells of time;" "Still, still with Thee;" "O'er waiting harpstrings;" Doxology.

Promptly at half past six the numerous doors of the church were thrown open and the public had its first glimpse of the great structure whose cost approximates two millions of dollars, contributed from over the entire world. The first impression was of vastness, then of light and cheerfulness, and when the vanguard of the thousands had been seated, expressions of surprise and of admiration were heard on every hand for the beauty and the grace of the architecture. The new home for worship that was opened by the Scientists in Boston yesterday can take a place in the front rank of the world's houses of worship, and it is no wonder that the first sight which the visitors caught of its interior should have impressed them as one of the events of their lives.

First Reader William D. McCrackan, accompanied by the Second Reader, Mrs. Laura Carey Conant, and the soloist for the services, Mrs. Hunt, was on the Readers' platform. Stepping to the front of the platform, when the congregation had taken their seats, the First Reader announced simply that they would sing Hymn 161, written by Mrs. Eddy, as the opening of the dedicatory service. And what singing it was! As though trained carefully under one leader the great body of Scientists joined in the song of praise.

Spontaneous unanimity and repetition in unison were two of the most striking features of the services. When, after five minutes of silent Communion at the end of the service, the congregation began to say the Lord's Prayer, they began all together, and their voices rose as one in a heartfelt appeal to the Creator.

So good are the acoustic properties of the new structure that Mr. McCrackan and Mrs. Conant could be heard perfectly in every part of it, and they did not have to lift their voices above the usual platform tone.

Following the organ voluntary—Fantasie in E minor, Merkel—the order of service was as follows:—

Hymn 161, from the Hymnal. Words by Rev. Mary Baker G. Eddy.

Reading from the Scriptures: Deuteronomy, 26 : 1, 2, 5–10 (first sentence).

Silent Prayer, followed by the audible repetition of the Lord's Prayer with its spiritual interpretation as given in the Christian Science text-book.

Hymn 166, from the Hymnal.

Reading of notices.

Reading of Tenets of The Mother Church.

Collection.

Solo, Communion Hymn, words by Rev. Mary Baker G. Eddy, music by William Lyman Johnson.

Reading of Annual Message from the Pastor Emeritus, Rev. Mary Baker G. Eddy.

Reading the specially prepared Lesson-Sermon, subject, "Adam, Where Art Thou?"

After the reading of the Lesson-Sermon, silent Communion, which concluded with the audible repetition of the Lord's Prayer.

Singing the Communion Doxology.

Digitized by Google

Reading of a despatch from the members of the Church to Mrs. Eddy.

Reading of the scientific statement of being, and correlative Scripture, 1 John, 3 : 1–3.

The benediction.

The subject of the Lesson-Sermon was "Adam, where art thou?" the Golden Text: "Search me, O God, and know my heart; try me, and know my thoughts: And see if there be any wicked way in me, and lead me in the way everlasting." Psalm 139 : 23, 24. The responsive reading was from Psalms 15 : 1–5; 24 : 1–6, 9, 10.

1 Lord, who shall abide in thy tabernacle? who shall dwell in thy holy hill?

2 He that walketh uprightly, and worketh righteousness, and speaketh the truth in his heart.

3 *He that* backbiteth not with his tongue, nor doeth evil to his neighbor, nor taketh up a reproach against his neighbor.

4 In whose eyes a vile person is contemned; but he honoreth them that fear the Lord. *He that* sweareth to *his own* hurt, and changeth not.

5 *He that* putteth not out his money to usury, nor taketh reward against the innocent. He that doeth these *things* shall never be moved.

1 The earth *is* the Lord's, and the fulness thereof; the world, and they that dwell therein.

2 For he hath founded it upon the seas, and established it upon the floods.

3 Who shall ascend into the hill of the Lord? or who shall stand in his holy place?

4 He that hath clean hands, and a pure heart; who hath not lifted up his soul unto vanity, nor sworn deceitfully.

5 He shall receive the blessing from the Lord, and righteousness from the God of his salvation.

6 This *is* the generation of them that seek him, that seek thy face, O Jacob.

9 Lift up your heads, O ye gates; even lift *them* up, ye everlasting doors; and the King of glory shall come in.

10 Who is this King of glory? The Lord of hosts, he *is* the King of glory.

The Lesson-Sermon consisted of the following citations from the Bible and "Science and Health with Key to the Scriptures" by Rev. Mary Baker G. Eddy, and was read by Mr. McCrackan and Mrs. Conant:—

I.

The Bible,	Science and Health,
Genesis, 3 : 9–11;	224—22;
Proverbs, 8 : 1, 4, 7;	559—8 to 10, 19;
Mark, 2 : 15–17.	181—21 to 25;
	307—31 to 8 next page.

II.

Psalm 51 : 1–3, 6, 10, 12, 13, 17.	308—8, 17 to 29;
	323—19 to 24, 29 to 1 next page.

III.

Hebrews, 11 : 1, 3, 6;	297—19;
Proverbs, 3 : 5, 6;	241—23 to 27;
Job, 28 : 20, 23, 28;	275—25;
1 Corinthians, 14 : 20.	595—20 to 28;
	536—8.

IV.

Psalm 86 : 15, 16;	345—31;
Matthew, 9 : 2–8.	337—10;
	525—4;
	494—31 to 3 next page:
	476—32 to 4 next page;
	171—4.

V.

Mark, 12 : 30, 31;	9—15 to 19;
John, 21 : 1 (first clause), 14–17;	53—8 to 11;
	54—29 to 1 next page;
1 John, 4 : 21.	560—11 to 19, 23;
	565—18 to 23.

VI.

John, 21 : 4–6, 9, 12, 13;	34—29 to 29 next page.
Revelation, 3 : 20;	
Revelation, 7 : 13, 14, 15, 17.	

During the progress of each service, First Reader William D. McCrackan read to the congregation the dedicatory message from their Teacher and Leader, Mrs. Mary Baker G. Eddy. [This message will be found on page 659 of this issue.]

The telegram from the Church to Mrs. Eddy was read by Mr. Edward A. Kimball of Chicago, and the five thousand present rose as one to indicate their approval of it.

"Rev. Mary Baker G. Eddy, Pastor Emeritus.

"*Beloved Teacher and Leader:*—The members of your Church have assembled at this sacred time to commune with our infinite heavenly Father and again to consecrate all that we are or hope to be to a holy Christian service that shall be acceptable unto God.

"Most of us are here because we have been delivered from beds of sickness or withheld from open graves or reclaimed from vice or redeemed from obdurate sin. We have exchanged the tears of sorrow for the joy of repentance and the peace of a more righteous living, and now with blessed accord we are come, in humility, to pour out our gratitude to God and to bear witness to the abundance of salvation through His divine Christ.

"At this altar, dedicated to the only true God, we who have been delivered from the depths, increase the measure of our devotion to the daily life and purpose which are in the image and likeness of God.

"By these stately walls; by this sheltering dome; by all the beauty of color and design, the Christian Scientists of the world, in tender affection for the cause of human weal, have fulfilled a high resolve and set up this tabernacle, which is to stand as an enduring monument, a sign of your understanding and proof that our Supreme God, through His power and law, is the natural healer of all our diseases and hath ordained the way of salvation of all men from all evil. No vainglorious boast, no pride of circumstances has place within the sacred confines of this sanctuary. Naught else than the grandeur of humility and the incense of gratitude and compassionate love can acceptably ascend heavenward from this house of God.

"It is from the depths of tenderest gratitude, respect, and affection that we declare again our high appreciation of all that you have done and continue to do for the everlasting advantage of this race. Through you has been revealed the verity and rule of the Christianity of Christ which has ever healed the sick. By your fidelity and the constancy of your obedience during forty years you have demonstrated this Science before the gaze of universal humanity. By reason of your spiritual achievement the Cause of Christian Science has been organized and maintained, its followers have been prospered, and the philosophy of the ages transformed. Recognizing the grand truth that God is the

Digitized by Google

supreme cause of all the activities of legitimate existence, we also recognize that He has made known through your spiritual perception the substance of Christian Science, and that this Church owes itself and its prosperity to the unbroken activity of your labors, which have been and will still be the pretext for our confident and favorable expectation.

"We have read your annual message to this Church. We are deeply touched by its sweet entreaty, its ineffable loving kindness, its wise counsel, and admonition.

"With sacred resolution do we pray that we may give heed and ponder and obey. We would be glad if our prayers, our rejoicing, and our love could recompense your long sacrifice and bestow upon you the balm of heavenly joy, but knowing that every perfect gift cometh from above, and that in God is all consolation and comfort, we rest in this satisfying assurance, while we thank you and renew the story of our love for you and for all that you are and all that you have done for us.

"WILLIAM B. JOHNSON, *Clerk.*"

By means of a carefully trained corps of ushers numbering two hundred, there was no confusion in finding seats, and when all seating space had been filled no more were admitted until the next service. The church was filled for each service in about twenty minutes; and was emptied in twelve, in spite of the fact that many of the visitors showed a tendency to tarry to examine the church.

It was "children's day" at noon, for the service at half past twelve was specially reserved for them. They filled all the seats in the body of the church, and when it came to the singing, the little ones were not a whit behind their elders, their shrill trebles rising with the roll of the organ in almost perfect time. In every respect their service was the same as all the others.

There was no more impressive feature of the dedication than the silent Communion. Devout Scientists said after the service that they would ever carry with them the memory of it.

The New Mother Church.

The dedication, Sunday, in Boston, of the new Mother Church of the Christian Science faith was a ceremonial of far more than usual ecclesiastic significance. The edifice itself is so rich in the architectural symbolisms of aspirations and faith, its proportions are so large, and its accommodations are so wide that its dedication abounds in remarkable external manifestations which must arrest public attention. But externals constitute the smallest feature of the Christian Science faith, and this beautiful temple, striking as are its beauties, is only a slight and material development in evidence of that beauty and serenity of faith, life, and love which finds its temple in the heart of all that increasing host who have found the truths of Christian Science to be a marvelous revelation given to this generation by a noble and devoted woman, to whom they rightfully turn with respect and affection.

Concord (N. H.) *Monitor.*

Picture of The Mother Church.

The picture of The Mother Church and its Extension which The Christian Science Publishing Society now has for sale is a half-tone reproduction, 12 x 15 inches in size, of a view giving the St. Paul Street frontage and Falmouth Street side.

The picture is mounted on a white mat, 21 x 25 inches, and will be sent to any address in a mailing-tube for fifty cents a copy. A dozen copies will be sent to one address for $4.50. Souvenir postals of the same design as the large picture are for sale at twenty-five cents per dozen.

Address all orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

[When asked by a *Boston Herald* reporter for his impressions of the great gathering of Christian Scientists, Hon. Clarence A. Buskirk handed the reporter the following poem (which was printed in the *Herald* of June 11), written by him after attending the dedicatory service.—EDITOR.]

The Dedication to Divine Love.

In the brave city smiling on the shore
Which, with its tossing tides, th' Atlantic laves;
Where fearless freemen, in the days of yore,—
A band intrepid, scorning to be slaves,—
Daring the utterance that made them free,
Tossed in their splendid scorn to the wild waves
The symbols of a haughty tyranny—
In this brave city, after scores of years,
The stately sign of a sublime event,
The symbol and prophetic monument
Of men's completer liberty, appears
With dominating dome against the sky,
A witness to this morning century.

Whence are these thousands thronging to its doors
To see this temple dedicate to Truth,—
These thronging thousands from so many shores,
The fervor of unconquerable youth
Quick'ning their footsteps, in their brighten'd eyes
Indomitable courage, on their brows
The radiance of high ideals? What endows
With something not of earth, but of the skies,
These joyous multitudes who dedicate
This temple to the full enfranchisement
Of all humanity? This high event
Commemorates an epoch, to translate
Whose grandest meanings is beyond our powers—
The writ of generations yet unborn,
When the grown blade shall show the ripened corn,
Accomplish'd signs in daily lives and thought
That the blest miracles of Love are wrought
Now as aforetime, that the Gospel's voice
Is to make every age and clime rejoice
That th' eternal arms of watchful Love,
Always around us, under us, above,
Never are shorten'd, but reach all our needs
In all ways, at all times; the creed of deeds
In th' Galilean's name; a faith whose rock
Is proven works, and therefore may not mock;
Love which is born of Love; keen gratitude
For hope and health and happiness restor'd,
For vices vanquished, for a shining host
Of priceless blessings; a stern brotherhood
And sisterhood in the divine desire
To free men from the slavery and mire
Of false beliefs, and lead them unto good:
These th' incentives of this multitude,
And these the ideals which still beckon on
And upward till the victory be won;
Those of the love-arm'd hosts in "the good fight"
Which cannot end until it end aright.

And whose the voice, more eloquent and bold
Than Peter's from his hermitage of old,
When Europe woke beneath his eloquence?
Whence is the voice, whose eloquence serene
And masterful evok'd this grandest scene
Of nineteen centuries? Its evidence
And message come to-day in words of cheer
And loving wisdom, while the thousands hear
In loving gratitude. A woman's voice,
Sweet, earnest, pure, hath bade mankind rejoice
And waken from their falsehoods, and move on
Higher and higher yet, till "the good fight" be won.

Boston, June 10, 1906. C. A. BUSKIRK.

Among the Churches.

Bethlehem, Pa.

The Sunday School of First Church of Christ, Scientist, in Bethlehem, Pa., wishes to express the joy which has been realized by the contribution of twelve dollars and forty-five cents to add to the amount which our church is sending to the Building Fund of The Mother Church.

We are small in numbers but large in the love we feel for our dear Leader, Mrs. Eddy, and for Christian Science, and are happy to know that by right thinking and right acting we too may prove that we have a home, our own place, in The Mother Church, and that our love for and appreciation of our relation to that dear church and to Christian Science, will be expressed in that beautiful church edifice which will ever stand as a saving light to the world. We are turning to God and His Christ with gratitude and a desire to be taught how to send more.

On behalf of the Sunday School,

EMMA WOLLE, *Clerk.*

Lawrence, Kan.

Our little church has made progress within the past year. Last fall, with a membership of only fifteen, we moved from our old quarters to the attractive hall on the second floor of the new Fraternal Aid Building, and almost immediately we had to purchase more Hymnals to meet the needs of the larger congregation. We sent the collection of the first Sunday after Thanksgiving as our first contribution to the Mother Church Building Fund. Before the end of the year we opened Wednesday evening meetings, which we have found both interesting and helpful. Six new members united with the church at the last Communion. Judge Hanna lectured for us in March, and stormy weather proved no obstacle to over four hundred people who came out to hear him. Beginning with Easter, we decided to send the collection of the third Sunday of each month to the Mother Church Building Fund as long as it is needed. Our last advance step was the establishment of a Reading Room, which was opened May 1 and is kept open every afternoon from two to five.

We thank God for so many evidences of growth in the understanding of divine Truth, and humbly acknowledge our debt to our dear Leader, Mrs. Eddy.

FIRST CHURCH OF CHRIST, SCIENTIST.

The Lectures.

Washington, D. C.

An audience that filled the National Theatre yesterday afternoon [May 6] heard Rev. Irving C. Tomlinson, of Concord, N. H., as he told of the worth and work of Christian Science. Mr. Tomlinson was introduced by Gen. Henry M. Baker, a cousin of Mrs. Eddy and formerly representative from New Hampshire. General Baker said in part,—

Christian Science needs no apology. It has demonstrated its right to exist. Within a score of years it has established itself in the hearts of thousands of educated and thoughtful men and women who rest confidently in its faith and practice. Its hundreds of beautiful churches and thousands of adherents testify to its greatness and power. Its friends and foes alike know that it has come to stay, and that to-day it is one of the most efficient factors in the world's activities, charities, and piety.

The lecturer this afternoon is a valued and long-time friend of mine—formerly First Reader of First Church of Christ, Scientist, in Concord, N. H.—the home of the Discoverer and Founder of Christian Science. With pleasure I present to you Rev. Irving C. Tomlinson.

Mr. Tomlinson said in part:—

A correct estimate of any movement depends so much upon a true appreciation of its leader that a word concerning the Leader of Christian Science will, I am sure, be welcomed. Mrs. Eddy comes from distinguished lines of Scotch and English ancestry. During a residence of more than two hundred years in New Hampshire, her illustrious forefathers and their children have faithfully served, with honor and distinction, their beloved church and commonwealth.

The influence of all Mrs. Eddy's writings is to purify and elevate those who study them. During my residence in Concord I have taken note that those who have come in contact with her have been inspired with higher ideals and nobler purposes. Her life testifies that a "good tree bringeth forth good fruit." With her strong faith firmly fixed in God, with her revered Master as her example, "with malice towards none, with charity for all," she continues, with unabated zeal, her loving ministry of blessing the human race.—*Washington Times.*

Davenport, Ia.

Some six hundred persons gathered in the Burtis Opera House last evening [April 30] to hear the lecture on Christian Science by Rev. Arthur Reeves Vosburgh of Rochester, N. Y. He was introduced by B. F. Tillinghast, who said in part,—

I am convinced that Christian Science makes for the good of those who accept its teachings. A little knowledge is a dangerous thing, and so it is our duty to get all the light we can on these great and serious subjects; to consider, and act according to our best understanding. In this spirit of fairness, with charity for all, I have pleasure in presenting the lecturer of this evening.

Davenport Democrat and Leader.

Ocean Park, Cal.

Friday evening [April 13] the Masonic Temple was filled with a large audience of representative people, who listened to a masterly address on Christian Science by Clarence C. Eaton of Tacoma, Wash. Judge Marvin R. King introduced Mr. Eaton, saying in part,—

I know but little of your faith, but I do know that you are earnest searchers of the Scriptures; that you take the Bible as your guide and that you have an abiding faith in God. Knowing this, I know that your faith is well founded. You believe and teach that sin is mortal error and that it can be overcome; that we can attain the likeness of Him who created man, and that we can become perfect even as He is perfect. If this can be accomplished by your teachings, great will be your reward.—*Evening Journal.*

Lectures at other Places.

Frankfort, Ind.—Edward A. Kimball, Jan. 18.

Berlin, Wis.—Edward A. Kimball, Jan. 26.

City of Mexico, Mex.—Judge Septimus J. Hanna, Feb. 14.

Lewiston, Mont.—Clarence C. Eaton, Feb. 25.

Olympia, Wash.—Clarence C. Eaton, March 4.

Shellman, Ga.—Hon. Edward A. Kimball, March 12.

Savannah, Ga.—Edward A. Kimball, March 15.

Winlock, Wash.—Clarence C. Eaton, March 24.

Fort Riley, Kan. (Auspices Junction City, Kan.).—Judge William G. Ewing, April 1.

Grand Rapids, Mich.—Rev. Arthur R. Vosburgh, April 9.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Our Leader's Message.

THE exercises in connection with the Communion and the dedication of the Extension of The Mother Church of Christ, Scientist, were made complete and memorable by the inspiring and satisfying message, "Choose ye," from our beloved Leader and Pastor Emeritus, which was so ably read by Mr. McCrackan at each of the six services, and we are pleased to have permission for its publication in the *Sentinel*. It will be found on page 659 of this issue.

It has been Mrs. Eddy's custom upon occasions of special moment in the progress of the Christian Science movement to send to her Church messages of instruction, admonition, and encouragement,—messages which have been of priceless value to her followers in pointing them to the way of salvation, and her latest contribution to the literature of Christian Science is no exception in this regard. "Choose ye," takes rank with Mrs. Eddy's best literary work, and the world has again become her debtor for its clarion call to righteous, Christian living. The thirty thousand people who heard this grand spiritual benediction read last Sunday are unanimous in their expressions of gratitude for it, and it is with the greatest pleasure that this acknowledgment is made in their behalf.

ARCHIBALD MCLELLAN.

Meeting of the Executive Members.

THE Annual Meeting of the Executive Members of The Mother Church of Christ, Scientist, was held in the church edifice, Saturday, June 9, and was well attended. Upon motion the following despatch was sent to Mrs. Eddy as an expression of the love and loyalty of the members.

Boston, Mass., June 9, 1906.

Rev. Mary Baker G. Eddy.

Beloved Leader and Teacher:—At this historic hour, we, the Executive Members of The First Church of Christ, Scientist, founded by you, send loving and loyal greetings.

Sitting under the shadow of a great prophecy fulfilled, we recognize that this Communion season particularly marks an epoch, not only in the history of Christian Science, but also in the history of the world.

As the boundaries of our loved Mother Church are thus extended, so should our love for all mankind be enlarged, and thus show forth our greater appreciation of your unparalleled stand for and proof of the truth taught by Christ Jesus and revealed through you,—the truth that heals the sick and saves the sinner.

We find in the realization of this great healing and saving truth the real meaning of your life's work and of your continued active labor for mankind; and so we would emulate your example of good will to man in our increasing growth of love to God.

DUNMORE (*Chairman*),
EFFIE ANDREWS,
W. D. MCCRACKAN,
Committee for Executive Members.

The Annual Meeting.

FOR lack of space it is necessary to postpone any extended report of the proceedings of the Annual Meeting until next week's issue of the *Sentinel*. Suffice it to say at this time that both sessions were fully attended and the reports received were satisfactory and encouraging. The following were announced as the officers elected for the ensuing year: President, Willis F. Gross, C.S.B.; Treasurer, Stephen A. Chase, C.S.D.; Clerk, William B. Johnson, C.S.D.

The Wednesday Evening Meetings.

WE hope to report in our next issue some of the remarkable testimonies given at the meetings held Wednesday, June 13. The ten meetings were attended by about fifteen thousand persons and a great many cures of so-called incurable diseases were reported by those who had been healed. These meetings attracted a great deal of attention and were reported at considerable length in the daily papers.

What the Boston Editors Said.

The dedication of the edifice of the Christian Scientists on the Back Bay has proved one of the most interesting and in some of its aspects the most notable of such occasions.

The attendance at the ceremonies yesterday was remarkable, probably unprecedented, as regards numbers. Not even the great size of the auditorium could accommodate the throng of participants. At each of the identical services, repeated at intervals from early morning until the evening, the attendance was greater than the building could contain. And the transportation facilities of the town have been strained to their utmost to care for the multitudes going and coming.

The temporary increase of the population of Boston has been apparent to the most casual observer. And so, we think, must be the characteristics of this crowd of visitors. It is a pleasant, congenial, quietly happy, well-to-do, intellectual, and cheerfully contented multitude that has invaded the town. There are among them visitors of title and distinction, but one does not notice these unless they are pointed out. The impression created is that of a great gathering of people we like to know and like to have here.

We congratulate these comfortable acquaintances upon the fact that they have their costly church fully paid for, and we feel that Boston is to be congratulated upon the acquisition of an edifice so handsome architecturally.

The Boston Post.

The meeting of the Christian Scientists in this city naturally takes on a tone of deserved satisfaction, in view of the announcement, which has just been made, that the two million dollars needed for the construction of the new temple, has been raised even before the building itself has been completed. The thirty thousand visitors have other evidences of the strength and growth of their organization, which has made steady gains in recent years. But of this particular example of the readiness of the members to bear each his or her share of the necessary expense of church work, the facts speak more plainly than mere assertion could. Nothing is more of a drag on a church than a heavy debt whose interest calls for practically all the resources of the institution. Many a clergyman can testify from his own experience how a "church debt" cramps and retards and holds back work that would otherwise be done. It is a rule in some denominations that a church edifice may not be formally dedicated until it be wholly free from debt.

Digitized by Google

And the experience of many generations has affirmed its wisdom.—*Boston Daily Advertiser.*

The gathering of Christian Scientists for the dedication of the beautiful structure on Falmouth Street, which is to take place on Sunday, is notable in many ways. It is remarkable in the character of the assembling membership, in its widely international range, and in the significance of the occasion.

The growth of this cult is the marvel of the age. Thirty years ago it was comparatively unknown; one church and a mere handful of members measured its vogue. To-day its adherents number probably a million, its churches have risen by hundreds, and its congregations meet in Europe and in the antipodes as from the Atlantic to the Pacific on this continent.

One does not need to accept the doctrines of Mrs. Eddy to recognize the fact that this wonderful woman is a world-power. This is conclusive: it is conspicuously manifest. And here in Boston the zeal and enthusiasm of the followers of this creed have been manifested in the building of a church structure which will hold place among the architectural beauties of the country.—*Boston Post.*

Thousands of Christian Scientists have been pouring into Boston in the past few days to be present at the dedication yesterday of their new two-million-dollar church, and to take part in the subsequent ceremonies and exercises.

Not only was every cent of the estimated cost contributed before the actual work was completed, but the treasurer of the building fund of the great temple appeals to his brethren to give no more money, since he has enough.

This must be regarded as an extraordinary achievement, and one which indicates plainly enough the generosity of the devotion that the Christian Scientists maintain toward their church.—*Boston Globe.*

It is due to the visiting Christian Scientists to say that they are as healthy and cheery a looking crowd as ever came to town. They are a great card for the treatment.

It is interesting to note that copies of the first edition of Mrs. Eddy's Science and Health are now fetching high prices at the book sales. Two cloth copies brought ninety-seven dollars and eighty-five dollars respectively at auction last week. The first edition was published in 1875.

Boston Herald.

The Earl of Dunmore's description of the phenomenal growth of Christian Science in his country is striking, but it doesn't outstrip its growth on this side. Thirty years ago there was one church here with seven communicants. Now there are six hundred and fifty-seven chartered churches, two hundred and seventy-seven organized societies, forty-two thousand communicants, and one million adherents. And Boston is its chief center.—*Boston Herald.*

Boston is near to another great demonstration of the growth of the Christian Science idea in numbers, wealth, vigor, and faithful adherence. It is a remarkable story which the gathering here tells. Its very magnitude and the cheerful optimism and energy of its followers impress even the man who cannot reconcile himself to the methods and tenets of the sect. Its hold and development are most notable.—*Boston Evening Record.*

Boston is the Mecca for Christian Scientists all over the world. The new temple is something to be proud of. Its stately cupola is a fitting crown for the other architectural efforts in that section of the Back Bay.—*Boston Herald.*

Letters to our Leader.

Jenningston, W. Va., May 25, 1906.

Dear Mrs. Eddy:—Four years ago a veritable multitude of physicians pronounced me a sick man doomed to permanent invalidism until death. Chronic indigestion had reduced my weight from one hundred and forty odd pounds to about eighty pounds. Extreme nervousness, violent headaches, etc., finally brought on convulsions. I shall only sketch in broad outlines my condition. June 20, 1900, I resigned my pastorate and spent the ensuing summer and fall at a health resort in Virginia. May 9 until Oct. 30, 1902—those months were also passed at a summer resort on the summit of the Alleghenies. Nov. 1, 1902, found me in a hospital in Philadelphia, where I remained one month. Shortly afterward, nine weeks more were passed in a hospital in Washington, D. C. Everything material was resorted to unavailingly. Sick nigh unto death—both bodily and mentally—Great God! the thought of it all sickens me even yet! Christian Science was brought to my notice by your student, Miss Antoinette P. Belden, of Collinsville, Conn., but my unreasonable prejudice against Science prevented my consenting even to read its literature for some time. I had on several occasions most bitterly denounced Christian Science from my pulpit, calling it a Satanic invention, and honesty compels the confession, too, that I referred to you in anything but complimentary verbiage.

July 18, 1904, your immortal book, Science and Health, reached me, and I began perusing it; but so deeply was I immersed in materiality that not until Jan. 10, 1906, did I even obtain glimpses of God's man, pure, perfect, eternal, and my improvement in physical health has been in exact proportion to my spiritual perception of God's infinitude. Perfect health is not yet made manifest in my case, but no material plummet can possibly sound the depths of error from which your discovery has rescued me, and I want to say, God bless you, dear one, for your great labors of love, the full-orbed significance of which this material epoch of time dreams not of.

A hundred thoughts are pressing for utterance, but my chiefest purpose in writing this was to say that because of your life I live. I should be overjoyed to see you, not because I worship you, but because I love you. Tears of gratitude for your consecrated life and pure character, this moment even, suffuse my eyes and make me repeat, God bless you.

Sincerely yours,

N. L. G. ANDERSON.

On the Way, June 3, 1906.

Mrs. Mary Baker Eddy, Concord, N. H.

Beloved Teacher and Leader:—Thinking it would interest you to know how the church in San Franscisco is progressing since the recent disaster, I write these few lines and enclose photographs showing the first four Sunday services, which were held in the open air on our church lot. In about a week the building will be enclosed. As the fire destroyed the edifice where our services had been held from Dec. 31, 1905, to Easter Sunday, April 15, 1906, and as no other place was available, our directors decided to build at once a temporary wooden structure for the use of the church, and to hold our services on the lot while the building was being erected. A rough floor, benches, and Readers' platform were provided, and the first service held April 29 with a congregation of about eight hundred. The Lesson-Sermon seemed especially appropriate and helpful, and at the following Wednesday evening meeting many beautiful testimonies were given of the realization of God's care and provision for His children.

While no Christian Scientist was injured, about one fourth of the members of our church and congregation were burned out of their homes, and all the down-town business section of the city was destroyed. Your statement in Sci-

Digitized by Google

ence and Health that "Divine Love always has met, and always will meet, every human need," was most beautifully demonstrated in the prompt sending of funds by our sister churches and societies from all sections of this country, which enabled our relief committee to help those who required assistance to become self-supporting again. We have had much of this work to do, and while more will be necessary during the next few months, the generosity of our friends has amply provided for it. For this true sympathy and help our people are very grateful.

Notwithstanding the material losses there has been much spiritual gain in a clearer realization of the ever-present good, and a greater desire for spiritual understanding. I am with a party of nine who are on the way to Boston to participate in the Communion and dedication of the Extension of The Mother Church edifice. The San Francisco church will be represented by eight members.

With love and gratitude, your student,

FRANK W. GALE.

Boston, Mass., May 28, 1906.

Mrs. Mary Baker Eddy.

Beloved Teacher:—I want to thank you for your article "Inconsistency," in the *Sentinel* of May 26, concerning the instruction to children about evil. In practice I have had occasion, from time to time, to talk with mothers on this subject, and feel sure your statement will make the way very clear for many. It has been my conviction for some time, that if parents wisely instructed their children at the crucial period of approaching manhood and womanhood, they would be doing their duty and helping their children beyond what some realize; and Christian Science should make the way very plain.

I have witnessed so much suffering, in practice, from the lack of proper and timely instruction to children about evil, that I feel very grateful for your words of instruction.

Believe me yours obediently,

GEORGE WENDELL ADAMS.

R. M. S., "Carmania," May 30, 1906.

Beloved Leader:—It is with a deep sense of gratitude, reverence, and joy that we come from Dublin to attend the dedication of the Extension of The Mother Church. Seven of us (five of whom are members of The Mother Church) arrive in New York this morning on our way to Boston. Five more are following in a later boat, from Dublin and Belfast, so that in all there will be twelve from Ireland present in Boston on the 10th of June. Having learned something of what your life and work means to mankind, and that your tender heart loves all who love Christian Science, I know that you will rejoice to hear of this evidence of the progress of the work in our dear land.

Yours lovingly,

LOUISE KING,

First Reader of First Church of Christ, Scientist, Dublin, Ireland.

Edinburgh, Scotland, May 22, 1906.

Beloved Leader:—These lines may or may not be brought under your notice, but I feel impelled to express my gratitude in words. I will not attempt to enumerate the blessings which have come to me through you, but I would like to state what called forth my first conscious gratitude, even before my physical healing, which came to me within one week of my possession of Science and Health, and only through reading it. I had been told that you were worshiped, but before I had finished the first reading of the book I saw that this must be an impossibility to any one who had touched even the hem of the robe of Christian Science. My gratitude for your selflessness has gone on increasing, and as, day by day, I see a little more of what your lonely stand for Truth must have cost you, it grows deeper and more tender. Yours most gratefully,

ALICE L. HAMILTON.

Testimonies of Healing.

Nine years ago I had a very severe attack of peritonitis, which kept me in bed for three months, and from that time until last May I had not known what it was to be free from pain. The disease became chronic, so that I had periodical attacks keeping me in bed from two to six weeks at a time, each attack leaving me in a worse condition than before. In April, 1904, my sufferings were terrible; it became impossible for me to have at home the constant care and attention I needed, and I was taken to a hospital, and whilst there the doctors decided to make an internal exploration. According to their statements, this operation revealed tuberculous peritonitis, the intestines being matted together by adhesions which must have taken years to develop, and that it was therefore impossible to do anything to help me. I left the hospital in October, and here let me express my gratitude to the doctors and nurses of that institution. I am convinced that if surgical and medical skill, combined with constant care and attention, human kindness and sympathy, could have done anything besides comforting me, I should have been restored to health. A few weeks later I was placed under the care of my old physician, and struggled along until May, 1905. During that month my condition seemed hopeless. The nourishment I was taking did not amount to half a pint of milk in twenty-four hours, taken a teaspoonful at a time, and even that amount would cause terrible suffering, which could only be relieved by vomiting. All natural action of the bowels had ceased, and added to this was a terrible craving for food which I could not take.

Let me say here, that through all this my faith in God, as I then understood, or I should say misunderstood Him, was never shaken, and May 21 I decided to take no more medicine, but simply to trust in God alone. It should be noted how God taught me that my extremity was His opportunity. The very next morning a lady, who had never been to see me before, came to tell me about Christian Science. God bless her! she was indeed to me a messenger of Truth. The same day this lady loaned me a copy of Science and Health, and the following Wednesday evening my husband visited Second Church of Christ, Scientist, in London. On Saturday I was visited by a practitioner, and at the first treatment the terrible pains I had suffered just before he came had entirely passed away, as did also the craving for food. Soon after, I sank into a peaceful sleep lasting four hours, and that night I slept soundly for twelve hours.

The next day, Sunday, was divided between sleep and the study of Science and Health. At two o'clock on Monday morning I was lying wide awake, and words fail me to describe the peace and joy which possessed my whole being. I had had no pain since Saturday, the hard places in the abdomen said to be caused by the adhesions were becoming quite soft, and I knew that God was healing me. Later on, after my husband had gone to his work, thinking I would like to read, I reached out for my Bible, which lay on a chair by my bedside. I drew it towards me, opened it, and read the first and second verses of the 30th Psalm, "I will extol thee, O Lord; for thou hast lifted me up, and hast not made my foes to rejoice over me. O Lord my God, I cried unto thee, and thou hast healed me." Those who have passed through a similar experience will best understand how in those words I recognized the voice of God. Never doubting, I got up, and without assistance dressed myself, walked into the next room, raised the window, and sat there basking in God's glorious sunshine.

From the time the practitioner called on Saturday, to the hour I retired on Monday, I had taken no food of any kind, having no desire for any, and yet I was getting stronger every hour. However, after a peaceful night's rest, I awoke on Tuesday morning with a healthy appetite.

Digitized by Google

I got up and prepared my own breakfast, realizing that I could eat anything I liked without fear. Later on I cooked our dinner, and was able to eat and enjoy it without experiencing any inconvenience whatever. The next day I was able to go out and do some shopping. From that day I have had perfect health. I have gained considerably in weight since my healing.

I have since been examined by my old physician. He could not find the slightest trace of the old trouble, and said that the whole system seemed to have undergone a complete regeneration. This good man has since listened with deep interest to the story of my healing by the power of God, through Christian Science, and his were amongst the warmest congratulations I have received.

In addition to this blessing of restored health, Christian Science has brought into my life a peace and joy I had not known before. It has shown me God as Love. Science and Health has indeed been to me the "Key to the Scriptures," and by its help I am realizing more and more each day that divine Love is sufficient for all our needs. It is impossible to express in words my gratitude to God, and to our dear Leader, who has labored to make known to us this glorious truth which heals and saves here and now.

MRS. ADA E. ROWNEY, Kentish Town, London, England.

West Hampstead, N. W.

Mrs. Rowney of 128 Leighton Road, Kentish Town, is the Mrs. R. referred to in the case I reported to the British Homœopathic Society, and which appears *in extenso* in the April number of the Journal of the British Homœopathic Society for this year (pp. 124–148). I have seen Mrs. Rowney again to-day (May 8, 1906) and can state that she is in perfect health, and has had no return whatever of her former symptoms.—T. G. STONHAM, M.D., M.R.C.

[We have been furnished with a copy of the medical journal referred to by Dr. Stonham, and in it Mrs. Rowney's statements are fully verified.—EDITOR.]

It is now more than eight years since I received my first treatment in Christian Science. The third day after confinement blood-poisoning set in; I had a very severe chill lasting more than two hours, and from that time a terrible fever, with all the agony which accompanies this disease. After three weeks' treatment by a physician who at first came daily, then twice a day, and later even four times a day as I steadily grew worse, I had a second chill that all in attendance declared to be the death-knell for me.

Another physician was called, and after a consultation they reported to my husband that there was not a shadow of a chance for my recovery, and that I would not last until morning. This was in the afternoon, and after their sentence had been pronounced my case was given to a Christian Science practitioner. By midnight those in attendance could see that there was a slight change for the better, and from that time my improvement was steady and sure. I received just four weeks' treatment, and at the end of the fifth week I was able to take care of the baby and my little boy two and half years old. Besides the frequent visits of the physician, I required two nurses part of the time, so the expense under *materia medica* was very great.

Since this healing in Christian Science my health is much better than it had ever been before, as up to that time I had never been very well, suffering greatly from headaches, backaches, and a weak stomach. Many times I was on a bed of pain with what the attending physician called bilious colic. Now all is changed, as I have been healed of all these ailments through Christian Science and can in a degree realize what the Psalmist meant when he said, "God is our refuge and strength, a very present help in trouble." I have seen croup yield quickly to Christian Science treatment, and many other ills overcome with this truth.

I am filled with gratitude to God, and to our Leader, Mrs. Eddy, for this wonderful truth.

MRS. ALLIE G. OSBORNE, Sioux City, Ia.

It was with a great deal of caution that I began the investigation of Christian Science. It was very difficult for me to believe that Christian Science was a higher revelation of God than anything we had known in the orthodox churches, in which my father and three uncles were ministers. For seventeen years, however, I was an invalid, with a complication of diseases,—weak heart, chronic liver trouble, dyspepsia, nervous prostration, sleeplessness, etc. My last illness confined me to bed for two months and to the house for three. I had treatment from physicians in three different cities; had an operation performed, and my physician said he would not be responsible for the outcome unless there was another operation at once. Instead of having the second operation I turned to Christian Science. My family thought I would die, and feared that my soul would be lost for accepting this doctrine. My healing was slow; not until months afterwards, when, in doing my own work and faithfully studying Science and Health, I could say fearlessly and confidently, I know this is the truth, did all the chronic ailments disappear. From being an invalid, weighing less than ninety pounds, I have been, as it were, literally renewed physically. But the physical healing, which calls for inexpressible gratitude, is not the greatest demonstration, which is the realization, in some degree, of my unity with God, the source of all good.

This truth is also manifest in the lessening of self-will, pride, evil thoughts, unkind criticism, and in the manifestation of more love, peace, and joy; I do rejoice that Christian Science can be proved in the destruction of both sin and disease. It was the spiritual uplifting and peace that came to me almost as soon as I began the study of Science and Health, that enabled me to continue in Science when the healing seemed a long way off, and amid bitter family opposition to wait for divine Love to do its work in destroying opposition and uniting us as a family in Science. The fear that something would be lost in turning to Science, has been replaced by the song of praise for the great good that is waiting for all who will come into a correct knowledge of God and man as His child. This God-given truth as interpreted to the world to-day by Mrs. Eddy in Science and Health, is indeed "Immanuel, or God with us."—VIRGINIA T. FENTON, Baltimore, Md.

I am a young man; I seemed old, before coming into Christian Science six months ago,—old through the belief that God caused suffering and that I must continue to be deprived of health and happiness, even deprived of a good God, until I had passed through the experience called death. For three years I suffered so much with stomach trouble that I became despondent and wished to die. No relief could I find in *materia medica*, so I turned to Christian Science and found God,—a good, all-loving God,—and in two weeks I was healed. This healing swept away all thoughts of sin and sickness, and I began to take only what is pure and good into my consciousness, and experienced something of the glory prepared for those who love God.

Through the kindness of a neighbor I was led to Christian Science, and learned of the allness of God and the nothingness of sin and sickness. I was told to take everything to God, that nothing was too insignificant to ask guidance for, and gradually my disposition changed. Through the study of our text-book, I found unselfishness and kindness to be a joy, and that by keeping thought pure, —not allowing sinful or diseased thoughts to enter my consciousness,—by knowing and declaring God's allness and the unreality of sin and sickness, I could control my body harmoniously. I have come to realize that to receive spiritual blessings I must give in proportion as I receive, and

Digitized by Google

that real happiness consists in working for God. I thank God for the blessings I have received in Christian Science. Words cannot express my gratitude to our Leader. It is only by steadfast endeavor to live the truth that I can ever express my appreciation of her.

ROLLEN HAZARD, Urbana, O.

It is with a great deal of pleasure that I can say I have been healed through Christian Science after fifteen years' sickness. When I was taken sick I called in a doctor, but he was not able to cure me, and I was getting worse all the time. I decided to try another doctor, but he did me no good, so when I was advised to take an ocean trip I sold my home and went to Scotland.

For about two years I was able to work, then I was taken ill again, and after having tried seven doctors, each of whom treated me for a different disease, I was advised to return to America, and did so. On my return here I had to place myself under medical care and finally two doctors said that it would be necessary for me to undergo an operation for bleeding piles. As there seemed to be no other way, I let them perform the operation, but after all my suffering I was no better.

It was at this time that a friend proposed Christian Science, but I would not listen and kept on with *materia medica* until I was a complete nervous wreck. I could not sleep at all and they were giving me morphine to keep me quiet. When I had about given up all hope of recovery, an aunt who is a Christian Scientist came to visit me, and I was enabled to see a practitioner. Now, after a few short months, I am healed. I am working every day and my health is excellent. The doctors were greatly surprised to see me around and well, as they had treated me for cancer, enlargement of the spleen, floating kidney, etc., but had been unable to cure me. I have been kept in poverty all my life by paying for medical treatment. I paid more each month for this than Christian Science has cost me in a year.

I never expect to be able to show the full extent of my gratefulness to God, and to Mrs. Eddy, the Discoverer of Christian Science. It has led me from the darkness of sickness and sin to know the truth as taught by Christ Jesus.—THOMAS CLARK, Dunmore, Pa.

In 1893 I first noticed a very serious affection in my child's right eye, and in talking with an eminent specialist about her, he gave me glasses, without seeing her. These glasses were not suited to her and in a short time I called in a noted oculist, who told me that a serious nerve trouble was the occasion of the crossed eyes, and said she had the eyes of a person sixty-five years old, though she was then but four. He said that glasses would have to be procured immediately and worn during her school life. The spectacles were made, and she wore them for two or three days, when I decided that I would call upon another specialist of the same place. He told me that she was too young to wear glasses, and he gave me something to use in her eyes which he thought would eventually straighten them. The drops were used for two years, when he told me he thought it was time to put the glasses on as the drops had failed in what he thought they would do. He also said that at the age of eight an operation would have to be performed. I was in the depths of despair then, for I had seen children whose eyes had been operated upon, and in every instance the eyes had been ruined.

At that time I knew of no other alternative, but when she was eight years old I heard about Christian Science through the healing of a near relative in New York. I went to that city, and remained three weeks, during which time my daughter was treated, and when we returned home she was perfectly healed. She has had no trouble with her eyes since; there is no trace of the crossed condition, and to those who did not know of her former trouble, it seems a little hard to believe that such a condition ever existed.

It is needless for me to say that I feel very grateful for Christian Science, through which my child has been healed.

MRS. FANNIE S. FISHBLATE, Wilmington, N. C.

As it is often said that Christian Science is all right for people who have only some slight ailment, I will tell of my first experience with this healing truth. When I was about nine years of age I had scarlet fever in its very worst form. I was left in a very bad condition; my whole system seemed to be diseased. Among other things I had kidney and heart trouble, and constipation, but that which I counted the worst was trouble with my head. I was so deaf at times that one would have to stand very near and shout, or I could not hear what was said. I suffered almost constantly. I was always considered delicate and could never do the things I wished to do, and about one half the time I was not able to attend school on account of illness of some kind. One specialist who examined me said he might save my left ear but that the drum of the right was perforated. This examination hurt and frightened me so badly that I told my mother if I had to be deaf the rest of my life I should never submit to another.

We returned home and after a time Christian Science was brought to our notice. I had treatment, and gradually the ailments left me, all except the trouble with my head, which continued in the same old way until, towards the last, I suffered so that I could neither sleep nor eat. One night I could not endure the suffering, so in the dead of night my father walked to where a practitioner was, as the cars had stopped running at that hour. I continued to rave for a time, but I knew when the treatment commenced, for all the pain stopped instantly and I said, "I am healed," —and so I was, thank God! As I had suffered for about ten years, I sometimes doubted, and I used to go out and stand exposed to the cold winds to see if I was really healed. I had always been very sensitive to the cold and always had to muffle up my head. It was very wonderful to me that I could endure the cold with no ill effects. The proof was thoroughly convincing that I was healed, and the trouble has never returned in these ten years.

I have great cause to be thankful, first of all to God, the giver of all good; and to Mrs. Eddy, who is the highest representative of good in these days. I have tested Christian Science in many ways, both for myself and others, since then, and have found that it always did more than I had dared to expect. I desire to live the life of a Christian Scientist in the truest sense. I might tell of many ills that have been destroyed by Christian Science, but I will only add that now I hear perfectly every word that is spoken. At the different Christian Science lectures which I have attended, I have very often sat at the back of the room and could hear when others complained that they could not.—MRS. EFFIE MCGREW, Bellingham, Wash.

In the fall of 1885 I went from Bloomington to Chicago to ask for Christian Science treatment, the trouble being a disease of the nerves which had afflicted me for several years and which the physicians had pronounced incurable. I was thoroughly healed in three weeks' treatment by Christian Science. For two years prior to this, and for one year following, my right wrist was lame. It began with occasional weakness and pain; at first for a short season only, but the attacks grew more frequent and of longer duration, until in the year 1886 the weakness became chronic and a lump appeared, which grew rapidly until it was the size of a bird's egg. A physician who had constant charge of the case said that the condition was incur-

Digitized by Google

able. During these months I had but little use of my hand. Most of the time I wrote with my left. During this time I visited London, and needing a new bandage I went to a hospital to have one made. While measuring my wrist I noticed that the physician in charge was examining it carefully, and I asked him if it could be cured. He replied that there was no known cure for it. It is not hard to imagine the unhappiness of a young girl at such an outlook.

In February, 1887, on my return from Europe, I stopped in Chicago at the home of a Christian Scientist. Early in the evening my hand and arm became very painful and I asked my friend if she could help me, expecting only to get relief from pain. Although more than a year before I had been healed of a more serious trouble by Christian Science, I did not then suppose that it could enter the domain of surgery. The reply to my request was that Christian Science could help me, but that I must take off the bandage. This I was afraid to do, but after some hesitation I told my friend that when I was safe in bed I would remove the bandage. I remember still the fear I felt, waiting till the light was out before I drew off the support in which I was trusting. Then I fell asleep and did not waken till morning. Only those who have nursed incurable pain through years can conceive of my joy when I found my wrist sound and strong. I could move it in any direction, stretch the fingers, lift weights, and I speak reverently when I say that in that hour I knew the thought of those whom Jesus had healed. Within three days the lump had disappeared, I never knew when nor how. Several months later I had opportunity to show my wrist to the physician who had tended it. When he asked, "How is the poor wrist?" I stretched out both hands and asked, "Which one was it?" He took both hands, examined them carefully and then said, "I remember which one it was, but in no other way could I have known. Your wrists are now alike. How did it happen?" When I told him, he replied, "It must be so. Christian Science, whatever it is, did it, for it was beyond material surgery." I have only to add that my health, thus established through Christian Science treatment, has been proven permanent.—CLARA E. MACMAHON, Bloomington, Ill.

When I was a very small child, dyspepsia, accompanied by vomiting, began to develop, and although I was under medical treatment continually, the disease became more aggravated. I also suffered from a severe cough, hiccoughs, and terrible pain in my head. Later, I began to have hemorrhages, and my mouth became very sore. Two physicians had said that there was no chance of my recovery. After everything in the way of medicine, dieting, etc., had been tried, and every one thought I could live but a little while, a lady, who was not a Scientist, suggested Christian Science. My mother at once arranged for treatment, although I was entirely indifferent to it. The treatment was all absent, and in ten days I was healed. I was twelve years under medical treatment, and had eight different physicians, and only ten days under Christian Science treatment, when I was healed. Since then my health has been good.

My mother and I are both members of The Mother Church. I have had no return of my ailments, have taken no medicine, in fact have been entirely well.

MISS REGINA B. M. NASH, East Lake, Ala.

I owe it to Christian Science that I am here to-day, able to "praise God from whom all blessings flow." In July, 1903, I first heard of Christian Science through a stranger coming to my home in search of lodging. At that time I was a hopeless sufferer. For nearly ten years I had been most miserable, but the last four or five I had been reduced to a mere frame, through nervousness ending in St. Vitus' dance in its most terrible form. I had no rest night or day, until at last, on July 4, 1903, I was taken with convulsions, and the two physicians attending me (one being my own father, a practising physician for thirty-three years) both said I would be unable to endure it any length of time. I had tried every known remedy in *materia medica*, besides electricity, massage, etc. After some questioning my husband gave his consent to my trying Christian Science, and to-day I am rid of the trouble, can eat anything,—a thing impossible before,—can sleep, and enjoy the freedom and liberty which God gives. I am to-day a living monument to the healing power of Christian Science. I am grateful for health and harmony, and that we can prove, as centuries ago, that God is All in all.

I have seen ills of every sort quail before the power of Truth, as revealed in Christian Science, and I have realized that it is the truth which makes us free.

ELIZABETH STICKLE, Reading, Pa.

It is a pleasure to acknowledge the great benefits which have come to me through Christian Science. I began investigating it over a year ago, when I had been in poor health for a year and a half, having been under the doctor's care most of the time. I had to undergo an operation, and I suffered greatly from it. When I had been home for a month or more I got worse, and the doctors said I must have another operation, and must not expect to be well for a year or more. I was suffering all the time, and was so nervous that I could not read or even be still. My husband spoke of taking me back East for medical treatment, but I did not care to go, as we had had some of the best physicians in Seattle and also some from another city, and their treatment only seemed to make me worse instead of better. It had cost us a great deal of money, but I gave up hope, and cried most of the time, wishing that each day would be my last, when some one suggested that we try Christian Science. I went to a practitioner at once and took treatment, and in a few days I felt better. In four weeks I was well and stronger than I was before I became sick. I had heard of this truth for a number of years, and some of my best friends are Christian Scientists, but I thought it was hard to understand. I can now see what the truth has done for me and is doing every day. Science and Health is a great comfort to me always, and I am thankful for Christian Science.

MRS. H. K. BALL, Seattle, Wash.

From girlhood I suffered with severe uterine trouble and chronic constipation. My case was diagnosed by two physicians. After the birth of two children one of these doctors advised an operation, as childbirth had left me lacerated and in almost constant pain. Some ten years later, after having tried different medicines, opiates, etc., another doctor examined me and ordered an operation at once for these troubles, and also for bleeding piles. The operation took place and for about six months I seemed to be much better, but this did not last and I began to be worse, having intense backache and pain, also acute indigestion, together with bladder trouble. My suffering was so great and the treatments were so painful that I became perfectly discouraged. Again there was an examination and the doctor said that in addition to these other complications a tumor had developed, and nothing but another operation, removing the female organs, which were all more or less diseased, would bring relief or cure. He said further, that without this relief I would probably have more serious trouble, perhaps lose my mind.

Before submitting to another operation I was induced to try Christian Science, and after the second treatment the practitioner told me that I was healed. Since then every organ of my body has fulfilled its function perfectly. My health has remained undisturbed. This was five years ago.

MRS. MAY P. SOSMAN, Chicago, Ill.

From our Exchanges.

Concluding the remarkable series of meetings in the South Congregational church, Concord, New Hampshire, where a representative of every Protestant church gave the reason for the faith that was in him, the pastor, Rev. Dr. E. W. Bishop, summed up, as the product of the composite theological utterance, as follows: "There are now more points upon which we are agreed than upon which we disagree. The chance visitor to a strange church finds it hard to tell from the preacher's words under what denominational flag he is worshiping. The blessed era is fast approaching when we as a common army will face one common foe. God hasten the day!" "For my part," said Dr. Bishop, "I would rejoice in an ideal church which should combine the evangelical fervor of the Methodists, the honest expectancy of the Adventists, the intellectual freedom of the Unitarians, the companionship and fraternity of the Free Will Baptists, the contagious optimism of the Universalists, the independence and scholarship of the Congregationalists, the beauty and dignity of the Episcopal church, the tenacity to conviction of the Baptists, the cheerful lives of the Christian Scientists, the far-reaching statesmanship and diplomacy of the Roman Catholics."

The Universalist Leader.

The same error that makes us think of the sky beginning somewhere over the tops of the hills makes us think of heaven as a distant and future fact rather than a present reality. Christ is in heaven, but heaven lies all about us. The Church needs now and again to be reminded of this. Her teachers need to be warned that because this is so it is as much their duty to make a heaven for men here on earth as it is to prepare them for a heaven hereafter. The Church can count nothing foreign to herself that makes for righteousness here. She dare not by her indifference or aloofness repel those who, whether within or without her fold, are giving themselves heart and soul to the service of their fellows. The whole life of the community, its politics, its business, its charities, its educational and municipal activities, are as much the affair of the Church as any of those things to which we mistakenly appropriate the term "spiritual."—*The Churchman.*

The statement that the days of our years are "threescore years and ten" was supposed to be given by divine inspiration, and it is still regarded with such superstition that it really sets an artificial limit to the vitality and activity of many who, when this time comes, surrender, as they think, to a decree of the Almighty. Now, if some one could say with sufficient authority that the days of our years are fourscore years, it would probably add many years to the working time of mankind. People now often apologize for "living on borrowed time," as they say, after the Biblical limit is passed.—*The Christian Register.*

That is a most beautiful proposal for reduction of armaments which the British House of Commons said the other day should be referred to the coming Hague Conference. Is it too much to hope that something may then be done? Is it more Utopian than a court of arbitration was when the first session at The Hague was held? A certain disagreeable fact is that all the so-called "Christian" governments of Europe will be very slow to act, while it is the international Socialists and their allied advanced Liberals that can be depended on to urge the policy. Where does true Christianity lie?—*The Independent.*

In our highly organized civilization, our social and industrial sins are the more vicious in their effect. In many ways we are "tithing the mint and the anise and cummin, and omitting the weightier matters of the law—justice, righteousness, and mercy." We are dealing with effects rather than with causes. We are covering vice rather than curing it.—*The Arena.*

Christian imperialism is a contradiction in terms. The Bible and the bayonet do not fit. A missionary with a gunboat behind him is no missionary, but a political agent or a commercial adventurer. "My kingdom is not of this world, else would my servants fight." F. W. WALKER PUGH.

The Standard.

CARDS IN THE GERMAN PERIODICAL.—Application blanks will be supplied by The Christian Science Publishing Society to practitioners who wish their names and addresses inserted in the advertising columns of *Der Herold der Christian Science*. These applications should be properly endorsed and forwarded to the Society. The rate for advertisement will be $2.00 for the first line, and $1.00 for each additional line. It is desirable that those who offer their names in this way should be able to communicate with patients and inquirers who speak the German language only.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with The Mother Church and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

THE CHRISTIAN SCIENCE TEXT-BOOK.—"Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing all the By-laws to January 1, 1906, of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By Hon. WILLIAM G. EWING.

CHRISTIAN SCIENCE. Its Worth and Work. By Rev. ARTHUR R. VOSBURGH.

Twelve or more books to one address, each, prepaid 2 00

Morocco, limp, round corners, gilt edges, convenient for pocket, each, prepaid 4 00
Twelve or more to one address, each, prepaid . . . 3 75

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5 00
Twelve or more to one address, each, prepaid . . . 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

National.

At a recent dinner in New York City before the Inter-Parliamentary Union, representing the Parliaments of the world, Professor John Bassett Moore, ex-Assistant Secretary of State, and now of Columbia University, took the advanced position that The Hague Conference must develop into a world government, embracing the three complete departments of legislative, judicial, and executive control. This implies that the Conference of The Hague shall be held at regular or stated periods and so become self-perpetuating, giving it permanent influence. Such a regular court or conference could appoint a commission to formulate the law of nations; devise means of punishing or restraining a nation that disobeys these laws or refuses to accept the decisions of the court relative to questions submitted to it, and draw a model treaty of arbitration.

Already the British House of Commons has made the proposal, supported by the House of Lords, that the question of the reduction or restriction of the armament of nations be referred to The Hague.

During the past year the number of arbitration treaties has risen from thirty to forty-four. Of these two, Denmark with the Netherlands and Italy, refer to The Hague all disputes.

Walter Wellman and other members of his Arctic expedition left Paris at noon on the 15th for Tromsoe, Norway. A crowd of people, including Ambassador McCormick, saw the party off. M. Foville, dean of the aeronauts and secretary of the Society of Aerial Navigation, presented Mr. Wellman with an address of congratulation on the thoroughness of his preparations. The mammoth airship with its appliances, totaling fifty tons in weight, with which the party hopes to reach the pole, occupied a special freight train. This expedition recalls that of Andree, which started from Danes Island, Spitzbergen, July 11, 1897. Four days later a carrier pigeon alighted on the rigging of a sealing vessel near Spitzbergen, bearing the only word that has ever been received from the daring adventurers. A note from Andree, well identified, read as follows,—

July 13, 12.30 P.M.—Latitude 82 degrees 2 minutes, longitude 15 degrees 5 minutes east. Good progress eastward, ten degrees south. All well on board. This is the third pigeon despatch. Andree.

A number of the South and Central American republics are showing an indifference toward the third Peace Conference to be held at The Hague next year. This is disappointing to the United States, which was instrumental in bringing about a delay of The Hague Conference until next year that it might not conflict with the Pan-American Conference next month. Panama has declined from the first to take any part in the Conference. Venezuela, Ecuador, and Nicaragua have ignored all communications, not even acknowledging the receipt of the original invitation. Bolivia, Guatemala, Salvador, and Peru have advised Baron Rosen, the Russian Ambassador at Washington, of their desire to assume the obligations imposed by the former conferences. Brazil, Argentine, and Mexico, which are treating with Russian representatives accredited to those countries, are also known to have expressed a desire to take part in The Hague deliberations under the prescribed conditions.

The Universal Postal Congress, recently in session at Rome, Italy, ordered a substantial reduction in letter postage by increasing the unit of weight, effective on and after Oct. 1, 1907, from fifteen to twenty grams, and providing that while postage on the first twenty grams shall remain at twenty-five centimes (five cents), every additional twenty grams shall be at the rate of fifteen centimes (three cents). Great Britain and the United States strongly urged that the unit of weight for them should be fixed at one ounce. Under the reduced rates a letter to Great Britain will cost five cents for the first ounce and three cents for the second ounce, or eight cents for two ounces.

In a special case charging Cudahy & Co. with accepting a rate of twenty-three cents a hundred pounds on a shipment of lard for Germany via the Burlington Railway when the legal tariff was thirty-five cents, the Cudahy Company, Armour & Co., and the Nelson Morris Packing Company were found guilty in the United States Court at Kansas City last week of rebating. The case bears importance because of the list of rebate trials to come up in this court, for it is the first time that any concern has been brought to trial before a jury on a charge affecting export rates as applied to the interstate commerce act.

A notable contest in the history of yachting in Pacific waters began on Monday, June 11, when the La Paloma, defender of the Hawaiian Yacht Club; Anemone, of the New York Yacht Club, which also sails under the colors of the South Coast Yacht Club of San Francisco, and Lurline of the South Coast Yacht Club, started from San Pedro on their long race to Honolulu. The Anemone is the biggest of the starters. She is 112 feet over all with 21-foot beam, Lurline 91 feet over all, and La Paloma 47 feet over all.

The "Agamemnon" of Æschylus, presented as it might have been in the days of the poet himself more than twenty centuries ago, was produced by the Harvard Classical Department last week in the open air in the Harvard Stadium. In 1879 the "Œdipus" was presented.

Owing to regulations adopted by the French Council of State, requiring American insurance companies doing business in France to invest in French securities, it is possible that many of the American companies will withdraw from France.

Foreign.

A contract has been concluded by the Greek Government with the Leghorn Divers' Association for the recovery of seventy Turkish warships sunk at Navarino by the English, French, and Russian fleets in 1827. The Turkish ships are believed to have carried much money. The contract also includes a search for the Roman galleys sunk between Corigo and Candea while conveying art treasures from Greece during the Latin conquests. The exact spot where the galleys lie is already known, a Greek diver having recently brought up a beautiful Greek vase, which the Government purchased for four hundred thousand drachmas.

The public schools of the Philippines opened last week throughout the islands. It is estimated that half a million pupils attended the sessions, though the accommodations are limited to about four hundred thousand. Governor Ide dedicated the new high school at Lucena, Province of Tayabas. He made a short address, advising people to educate their children, saying that the future of the islands depended on the way in which the rising generation met its responsibilities, and that education best fitted them for the duties they would be called to assume.

The first instalment of the Tibet indemnity, $283,330, has been paid in Calcutta. The Government of India is showing interest in developing trade facilities in western Tibet. The assistant commissioner at Kulu has been ordered to proceed to Gartok this month in order to investigate current conditions there.

Industrial and Commercial.

It is estimated that the imports of the United States for the fiscal year ending in June will amount to $1,225,000,000, and the exports $1,780,000,000, or a total of a little more than $3,000,000,000.

In 1890 there were in the United States sixteen cement factories, producing annually 335,000 barrels of Portland cement; in 1905, eighty-two plants, with an estimated annual output of 31,000,000 barrels.

General Gomez of Venezuela will retire on Independence Day, the 5th of July, and General Castro will resume the presidency at once.

The trade of the United States with Japan is larger than with any other Oriental country, and aggregated in 1905 $106,000,000.

The wheat crop this year is estimated to reach a total of over seven hundred million bushels.

General.

Another mammoth steamship is to be launched. The Hamburg-American Line announces that it has ordered a steamship to be built that will be eight hundred feet long, nearly one-seventh again as long as the Baltic. She is to have a beam of ninety feet and a gross tonnage of 35,000, which is 10,000 tons more than the new Cunarders and 15,000 more than the largest ship afloat. She is to be ready for the season of 1908 and will have accommodations for 600 first, 500 second, 300 third-class passengers and 2,500 steerage. She will have all the new features of the two latest vessels of this line and in addition will have a Turkish bath and big tanks where the passengers can take a swim on calm days.

Professor Charles Burton Thwing, who has been conducting researches during the past year in the physical laboratory of Western Reserve University, reports that he has discovered that all common metals and rocks have an internal temperature due to radio-activity. The heat thus being constantly generated within the rocks is sufficient to maintain the earth at its present temperature for many millions of years, according to Professor Thwing. A portion at least of the sun's supply of heat, he stated, is undoubtedly due to the same source. The probable time that will elapse before the earth becomes too cold to be inhabitable is thus extended from a few millions of years, as now held by astronomers, to several hundred millions, as contended by many geologists.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

The Annual Meeting.

THE Annual Meeting of The First Church of Christ, Scientist, in Boston, was held in the Extension of The Mother Church, Tuesday, June 12, at ten o'clock in the forenoon, and in order to accommodate those who could not gain admittance at that hour a second session was held at two o'clock in the afternoon. The meeting was opened by the President, Rev. William P. McKenzie, who read from the Bible and Science and Health as follows:—

The Bible,	Science and Health,
Isaiah, 54 : 1–5, 10–15, 17:	571—22; 574—3 to 17, 28;
Revelation, 19 : 1, 6–9.	577—4.

Then followed a short silent prayer and the audible repetition of the Lord's Prayer, in which all joined. The following list of officers for the ensuing year was read by the Clerk: President, Willis F. Gross, C.S.B.; Treasurer, Stephen A. Chase, C.S.D.; Clerk, William B. Johnson, C.S.D.

In introducing the new President, Mr. McKenzie said:—

When I introduce the incoming President, my modest task will be ended. You will allow me, however, the privilege of saying a few words of reminder and prophecy. My thoughts revert to a former occasion when it was my pleasant duty to preside at an Annual Meeting when our Pastor Emeritus, Mrs. Eddy, was present. We remember her graciousness and dignity. We recall the harmonious tones of her gentle voice. Our hearts were thrilled by her compassion, and the memory lives with us. But even more distinctly may we realize her presence with us to-day. Why? Because our own growth in love and unity enables us to comprehend better the strength and beauty of her character. Moreover, this completed Extension of The Mother Church is an evidence to us of her hospitable love. She has desired for years to have her church able to give more adequate reception to those who hunger and thirst after practical righteousness; and we are sure that now the branch churches of The Mother Church will also enlarge their hospitality, so that these seekers everywhere may be satisfied. This will imply the subsidence of criticism among workers. It may even imply that some who have been peace-breakers shall willingly enter into the blessedness of peace-makers. Nothing will be lost, however, by those who relinquish their cherished resentments, forsake animosity, and abandon their strongholds of rivalry. Through rivalries among leaders Christendom became divided into warring sects; but the demand of this age is for peace-making, so that Christianity may more widely re-assert its pristine power to bring health and a cure to pain-racked and sorrow-worn humanity. "The wisdom that is from above is first pure, then peaceable . . . and the fruit of righteousness is sown in peace of them that make peace." "Blessed are the peacemakers: for they shall be called the children of God."

Our Leader, Mrs. Eddy, has presented to the world the ideal of Christianity because she is an exact metaphysician. She has illustrated what the poet perceived when he said, "All 's love, but all 's law." She has obeyed the divine Principle, Love, without regrets and without resistance. Human sense often rebels against law, hence the proverb, *Dura lex, sed lex* (Hard is the law, nevertheless it is the law). But by her own blameless and happy life, as well as by her teachings, our Leader has induced a multitude—how great no man can number—to become gladly obedient to law, so that they think rightly or righteously. No one can change the law of Christian metaphysics, the law of right thinking, nor in any wise alter its effects. It is a forever fact that the meek and lowly in heart are blessed and comforted by divine Love. If the proud are lonely and uncomforted, it is because they have thoughts adverse to the law of love. Pride, arrogance, and self-will are unmerciful, and so receive judgment without mercy; but the law of metaphysics says, "Blessed are the merciful," and will allow no one to escape that blessedness, howsoever far he may stray, whatsoever lawlessness of hatred he may practise and suffer from.

So we see that Christian Science makes no compromise with evil, sin, wrong, or imperfection, but maintains the perfect standard of truth and righteousness and joy. It teaches us to rise from sentimental affection which admires friends and hates enemies, into brotherly love which is just and kind to all and unable to cherish any enmity. It brings into present and hourly application what Paul termed "the law of the Spirit of life in Christ Jesus," and shows man that his real estate is one of blessedness. Why should any one postpone his legitimate joy, and disregard his lawful inheritance, which is "incorruptible and undefiled"? Our Leader and Teacher not only discovered Christian Science, but through long years of consecration has obeyed its every demand, for our sakes as well as for her own, and we begin to understand how illimitable is the love which supports such selfless devotion, we begin to comprehend the "beauty of holiness," and to be truly grateful to her who has depicted its form and comeliness. We have found it true that "she openeth her mouth with wisdom; and in her tongue is the law of kindness."

It is my pleasure to introduce to you a faithful follower of this Leader as the President for the coming year, Willis F. Gross, C.S.B., one who has for many years "witnessed a good confession" in the practice of Christian Science. You are no doubt already acquainted with him as one of the helpful contributors to our periodicals, so that any further words of mine are unnecessary.

Mr. Gross, on assuming office, said:—

Beloved Friends:—Most unexpectedly to me came the call to serve you in this capacity, and I desire to improve this opportunity to express my thanks for the honor conferred upon me. With a heart filled with gratitude for the countless blessings which have come into my life through Christian Science, I shall endeavor to perform this service to the best of my ability.

It affords me great pleasure to welcome you to our first Annual Meeting held in the Extension of The Mother Church. I shall not attempt to speak of the deep significance of this momentous occasion. I realize that only as infinite good unfolds in each individual consciousness can we begin to comprehend, even in small degree, how great is

Copyright, 1906, by Mary Baker G. Eddy.

Digitized by Google

the work that has been inaugurated by our beloved Leader, how faithful is her allegiance to God, how untiring are her efforts, and how successful she is in the performance of her daily tasks.

"With a mighty hand and with an outstretched arm" were the children of Israel delivered from the bondage of the Egyptians, but this deliverance did not put them in possession of the Promised Land. An unknown wilderness was before them, and that wilderness must be conquered. The law was given that they might know what was required of them, that they might have a definite rule of action whereby to order aright the affairs of daily life. Obedience to the demands of the law revealed the God of their fathers, and they learned to know Him.

During their sojourn in the wilderness they suffered defeats and met with disappointments, but they learned from experience and finally became willingly obedient to the voice of their leader. The crossing of the Jordan brought them into the Promised Land, and this experience was almost as marvelous as had been the passage of the Red Sea forty years before. In obedience to the command of Joshua, twelve stones taken from the midst of the river were set up on the other side for a memorial. In future generations when it was asked, "What mean ye by these stones?" it was told them, "Israel came over this Jordan on dry ground."

Forty years ago the Science of Christian healing was revealed to our beloved Leader, the Rev. Mary Baker G. Eddy. A few years later she gave us our text-book, "Science and Health with Key to the Scriptures." Obedience to the teachings of this book has brought us to this hour. We have learned from experience, and to-day we rejoice that we have found in Christian Science that which heals and saves.

The world looks with wonder upon this grand achievement,—the completion and dedication of our magnificent temple,—and many are asking, "What mean ye by these stones?" The answer is, The way out of the wilderness of human beliefs has been revealed. Through the understanding of God as an ever-present help, the sick are being healed, the shackles of sin are being broken, heavy burdens are being laid down, tears are being wiped away, and Israel is going up to possess the promised land of eternal, harmonious existence.

Friends, our progress may be fast or it may be slow, but one thing is certain, it will be sure if we are obedient to the loving counsel of our ever-faithful Leader. The Christ is here, has come to individual consciousness; and the faithful disciple rejoices in prophecy fulfilled, "Lo, I am with you alway, even unto the end of the world."

Judge Septimus J. Hanna then advanced to the front of the platform, read the following despatch, and moved that it be forwarded at once to our Leader, Mrs. Eddy. The motion was carried unanimously by a rising vote.

The despatch follows:—

Boston, Mass., June 12, 1906.

To the Rev. Mary Baker G. Eddy,

Pleasant View, Concord, N. H.

Beloved Teacher and Leader:—The members of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., in Annual Meeting assembled, hereby convey to you their sincere greetings and their deep love.

They desire to express their continued loyalty to your teachings, their unshaken confidence in the unerring wisdom of your leadership, and their confident assurance that strict and intelligent recognition of and obedience to the comprehensive means by you provided for the furtherance of our Cause will result in its perpetuity, as well as in the ultimate regeneration of its adherents and of mankind.

We are witnessing with joy and gratitude the significant events associated with this, one of the greatest and most important gatherings of Christian Scientists in the annals of our history. Yet the upwards of thirty thousand who are physically present at the dedication represent only a small part of the entire body who are of us and with us in the animus and spirit of our movement

The great temple is finished! That which you have long prophetically seen has been accomplished. The magnificent edifice stands a fitting monument of your obedience and fidelity to the divine Principle revealed to you in that momentous hour when purblind mortal sense declared you to be *in extremis*. You followed unswervingly the guidance of Him who went before you by day in a pillar of cloud to lead you the way, and by night in a pillar of fire to give you light, and the results of such following have been marvelous beyond human ken. As clearly as, in retrospect, we see the earlier leading, we now discern the fulfilment of the later prophecy, that "He took not away the pillar of cloud by day, nor the pillar of fire by night," for each advancing step has logically followed the preceding one.

The great temple is finished! Its "massive pile of New Hampshire granite and Bedford stone, rising to a height of two hundred and twenty-four feet, one foot loftier than the Bunker Hill monument," stands a material type of Truth's permanence. In solid foundation, in symmetrical arches, in generous hallways, in commodious foyer and broad stairways, in exquisite and expansive auditorium, and in towering, overshadowing dome, the great structure stands silently but eloquently beckoning us on toward a higher and more spiritual plane of living, for we know that without this spiritual significance it were but a passing dream.

In the best sense it stands in prophetic verity of the primary declaration of this Church in its original organization; namely, "To organize a Church designed to commemorate the word and work of our Master, which should reinstate primitive Christianity and its lost element of healing." To rise to the demands of this early pronouncement is the work of true Christian Scientists.

To "preach the gospel and heal the sick" on the Christ basis is the essential requirement of a reinstated Christianity. Only as we pledge ourselves anew to this demand, and then fulfil the pledge in righteous living, are we faithful, obedient, deserving disciples.

On this solemn occasion, and in the presence of this assembled host, we do hereby pledge ourselves to a deeper consecration, a more sincere and Christly love of God and our brother, and a more implicit obedience to the sacred teachings of the Bible and our text-book, as well as to the all-inclusive instructions and admonitions of our Church Manual in its spiritual import, that we may indeed reach "unto the city of the living God, the heavenly Jerusalem, and to an innumerable company of angels, to the general assembly and church of the first born."

WILLIAM B. JOHNSON, *Clerk.*

The Treasurer, Mr. Stephen A. Chase, read his annual reports, showing the finances of the Church to be in excellent condition and sufficient funds in the Building Fund to settle all obligations incurred in the erection of the Extension of The Mother Church.

The Clerk, Mr. William B. Johnson, then read the following report:—

Beloved Brethren of The First Church of Christ, Scientist, in Boston, Massachusetts:—It seems meet at this time, when thousands of Christian Scientists have gathered here from all part of the world, many of whom have not had the means of knowing the steps by which this Church has reached its present growth, to present in this report a few of the stages of its progress, as gleaned from the pages of its history.

After a work has been established, has grown to great magnitude, and people the world over have been touched by its influence for good, it is with joy that those

Digitized by Google

who have labored unceasingly for the work look back to the picturesque, interesting, and epoch-marking stages of its growth, and recall memories of trials, progress, and victories, that are precious each and all. To-day we look back over the years that have passed since the inception of this great Cause, and we cannot help being touched by each landmark of progress that showed a forward effort into the well-earned joy that is with us now. For a Cause that has rooted itself in so many distant lands, and inspired so many of different races and tongues into the demonstration of the knowledge of God, the years that have passed since Mrs. Eddy founded her first church seem but a short time. And this little church, God's word in the wilderness of dogma and creed, opened an era of Christian worship founded on the commands of Jesus: "Go ye into all the world, and preach the gospel to every creature. . . . And these signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover."

Not until nineteen centuries had passed was there one ready to receive the inspiration, to restore to human consciousness the stone that had been rejected, and which Mrs. Eddy made the "head of the corner" of the Church of Christ, Scientist.

With the reading of her text-book, "Science and Health with Key to the Scriptures," Mrs. Eddy insisted that her students make, every day, a prayerful study of the Bible, and obtain the spiritual understanding of its promises. Upon this she founded the future growth of her Church, and twenty-six years later the following splendid appreciation of her efforts appeared in the *Methodist Review* from the pen of the late Frederick Lawrence Knowles:—

"Mrs. Eddy . . . in her insistence upon the constant daily reading of the Bible and her own writings, . . . has given to her disciples a means of spiritual development which . . . will certainly build such truth as they do gain into the marrow of their characters. The scorn of the gross and sensual, and the subordination of merely material to spiritual values, together with the discouragement of care and worry, are all forces that make for righteousness. And they are burned indelibly upon the mind of the neophyte every day through its reading. The intellects of these people are not drugged by scandal, drowned in frivolity, or paralyzed by sentimental fiction. . . . They feed the higher nature through the mind, and I am bound as an observer of them to say, in all fairness, that the result is already manifest in their faces, their conversation, and their bearing, both in public and private. What wonder that when these smiling people say, 'Come thou with us, and we will do thee good,' the hitherto half-persuaded one is wholly drawn over, as by an irresistible attraction. The religious body which can direct, and control, in no arbitrary sense, but through sane counsel, the reading of its membership, stands a great chance of sweeping the world within a generation."

The charter of this little Church was obtained Aug. 23, 1879, and in the same month the members extended a unanimous invitation to Mrs. Eddy to become its pastor. At a meeting of those who were interested in forming the Church, Mrs. Eddy was appointed on the committee to formulate the rules and by-laws, also the tenets and church covenant. The first business meeting of the Church was held Aug. 16, 1879, in Charlestown, Mass., for the purpose of electing officers. Aug. 22 the clerk, by instructions received at the previous meeting, sent an invitation to Mrs. Eddy to become pastor of the Church. Aug. 27 the Church held a meeting, with Mrs. Eddy in the chair. An interesting record of this meeting reads, "The minutes of the previous meeting were read and approved. Then Mrs. Eddy proceeded to instruct those present as to their duties in the Church of Christ, giving some useful hints as to the mode of conducting the Church."

At a meeting held Oct. 19, 1879, it was unanimously voted that "Dr. and Mrs. Eddy merited the thanks of the Society for their devoted labors in the cause of Truth," and at the Annual Meeting, Dec. 1 of the same year, it was voted to instruct the clerk to call Mrs. Eddy to the pastorate of the Church, and at this meeting Mrs. Eddy accepted the call. The first meeting of this little Church for deliberation before a Communion Sabbath, was held at the home of the pastor, Mrs. Eddy, Jan. 2, 1880. Most of those present had left their former church homes, in which they had labored faithfully and ardently, and had united themselves into a little band of prayerful workers. As the Pilgrims felt the strangeness of their new home, the vast gloom of the mysterious forests, and knew not the trials before them, so this little band of pioneers, guided by their dauntless Leader and Teacher, starting out on their labors against the currents of dogma, creed, sickness, and sin, must have felt a peculiar sense of isolation, for their records state, "The tone of this meeting for deliberation before Communion Sabbath was rather sorrowful;" but as they turned steadfastly from the mortal side, and looked toward the spiritual, as the records further relate, "Yet there was a feeling of trust in the great Father of Love prevailing over the apparently discouraging outlook of the Church of Christ." The Communion Sunday, however, brought fresh courage to the earnest band, and the records contain these simple but suggestive words,—"Sunday, Jan. 4, 1880. The Church celebrated her Communion Sabbath as a Church, and it was a very inspiring season to us all, and two new members were added to the Church." This was indeed the little Church in the wilderness, and few knew of its teachings, but those few saw the grandeur of its work and were willing to labor for the Cause.

The record of May 23, 1880, more than twenty-six years ago, states, "Our pastor, Mrs. Eddy, preached her farewell sermon to the Church. The business committee met after the services to call a general meeting of the Church to devise means to pay our pastor, so as to keep her with us, as there is no one in the world who could take her place in teaching us the Science of Life." May 26 of the same year the following resolutions were passed: "That the members of the Church of Christ, and all others now interested in said Church, do most sincerely regret that our pastor, Mrs. Eddy, feels it her duty to tender her resignation, and while we feel that she has not met with the support that she should have reason to expect, we venture to hope she will remain with us. That it would be a serious blow to her Cause to have the public services discontinued at a time when there is such an interest manifested on the part of the people, and we know of no one who is so able as she to lead us to the higher understanding of Christianity, whereby to heal the sick and reform the sinner. It was moved to instruct the clerk to have our pastor remain with us for a few Sundays if not permanently."

At a meeting of the Church, Dec. 15, 1880, an invitation was extended to Mrs. Eddy to accept the pastorate for the ensuing year; but, as the records state, "she gave no definite answer, believing that it was for the interest of the Cause, and her duty, to go into new fields to teach and preach."

An interesting record relative to this very early work of the Church, and its appreciation of Mrs. Eddy's tireless labors, is that of July 20, 1881, which reads, "That we, the members of the Church of Christ, Scientist, tender to our beloved pastor, Mrs. Eddy, the heartfelt thanks and gratitude shared by all who have attended the services, in appreciation of her earnest endeavors, her arduous labors, and successful instructions to heal the sick, and reform the sinner, by metaphysical truth or Christian Science, during the past year. Resolved, that while she had many ob-

Digitized by Google

stacles to overcome, many mental hardships to endure, she has borne them bravely, blessing them that curse her, loving them that despitefully use her, thereby giving in her Christian example, as well as her instructions, the highest type of womanhood, or the love that heals. And while we sincerely acknowledge our indebtedness to her, and to God, for these blessings, we, each and all, will make greater efforts to more faithfully sustain her in her work. Resolved, that while we realize the rapid growth, and welcome the fact of the spreading worldwide of this great truth, that Mind, Truth, Life, and Love, as taught and expressed by our pastor, does heal the sick, and when understood, does bring out the perfection of all things, we also realize we must use more energy and unselfish labor to establish these our Master's commands and our pastor's teachings; namely, heal the sick, and preach the gospel, and love our neighbor as ourselves."

Eighteen years ago, the Rev. James Henry Wiggin, who was not a Christian Scientist, wrote as follows: "Whatever is to be Mrs. Eddy's future reputation, time will show. Little cares she, if only through her work Truth may be glorified. More than once, in her earnestness, she has reached her bottom dollar, but the interest of the world to hear her word has always filled her coffers anew. Within a few months she has made sacrifices, from which most authors would have shrunk, to ensure the moral rightness of her book. This statement Phare Pleigh [the *nom de plume* of Rev. James Henry Wiggin] makes out of his own peculiar knowledge of the circumstances. Day after day flew by, and weeks lengthened into months; from every quarter came important missives of inquiry and mercantile reproach; hundreds of dollars were sunk into a bottomless sea of corrections; yet not until the authoress was satisfied that her duty was wholly done, would she allow printer and binder to send forth her book to the world." This book has now reached its four hundredth edition, each of one thousand copies.

On Sept. 8, 1882, it was voted that the Church hold its meetings of worship in the parlors of Mrs. Eddy's home, 569 Columbus Avenue, Boston. The services were held there until November, 1883, and then in the Hawthorne Rooms, at No. 3 Park Street, the seating capacity of which place was about two hundred and twenty-five. At a meeting Oct. 22, 1883, the Church voted to wait upon Mrs. Eddy, to ascertain if she would preach for the Society for ten dollars a Sunday, which invitation she accepted. After establishing itself as a Church in the Hawthorne Rooms, the number of attendants steadily increased. The pulpit was supplied by Mrs. Eddy, when she could give the time to preach, and by her students and by clergymen of different denominations, among whom was Rev. A. J. Peabody, D.D., of Cambridge. The annual report of the business committee of the Church, for the year ending Dec. 7, 1885, contains some very interesting statements, among which is this: "There was a steadily increasing interest in Christian Science among the people, even though the continuity of thought must have been very much broken by having so many different ones address them on the subject. When our pastor preached for us it was found that the Hawthorne Rooms were inadequate for the occasion, hundreds going away who could not obtain entrance; those present enduring the inconvenience that comes from crowding, for the sake of the eternal Truth she taught them." The *Boston Traveler* contained the following item: "The Church of Christ, Scientist, had their meeting Easter Sunday at Hawthorne Rooms, which were crowded one hour before the service commenced, and half an hour before the arrival of the pastor, Rev. Mary B. G. Eddy, the tide of men and women was turned from the door with the information, 'No more standing-room.'"

On Feb. 8, 1885, Communion was held at Odd Fellows Hall, and there were present about eight hundred people. At this time the Hawthorne Rooms, which had been regarded as the church-home, were outgrown. During the summer vacation, different places were considered, but no place suitable could be found that was available, and the Sunday services were postponed. There was an expectation that some place would be obtained, but the desire for services was so great that the Hawthorne Rooms were again secured. A record of this period reads, "It should be here stated that from the first of September to our opening, crowds had besieged the doors at the Hawthorne Rooms, Sunday after Sunday." On Oct. 18, 1885, the rooms were opened and a large congregation was present. It was then concluded to engage Chickering Hall on Tremont Street. In the previous consideration of places for meeting it had been decided that this hall was too large, as it seated four hundred and sixty-four. The first Sunday service held in Chickering Hall was Oct. 25, 1885. Mrs. Eddy preached at this service, and the hall was crowded. This date is memorable as the one upon which the Sunday School was formed.

Meanwhile it was felt that the Church needed a place of its own, and efforts were made to obtain by purchase some building, or church, in a suitable location. Several places were considered, but were not satisfactory; yet the thought of obtaining a church edifice, although given up for a time, was not forgotten. In the mean time, not only was the attendance rapidly growing in this church in Chickering Hall, but the Cause itself was spreading over the land. Sept. 1, 1892, Mrs. Eddy gave the plot of ground on which The Mother Church now stands. On the twenty-third day of September, 1892, twelve of the members of the Church met, and, upon Mrs. Eddy's counsel, reorganized the Church, and named it The First Church of Christ, Scientist. This effort of Mrs. Eddy was an inspiration to Christian Scientists, and plans were made for a church-home.

In the mean time Sunday services were held in Chickering Hall, and continued there until March, 1894, and during the last year the hall was crowded to overflowing. In March, however, the Church was obliged to seek other quarters, as Chickering Hall was to be remodeled. At this time the Church removed to Copley Hall on Clarendon Street, which had a seating capacity of six hundred and twenty-five, and in that place Sunday services were held until The Mother Church edifice was ready for occupancy, Dec. 30, 1894. During the months that the congregation worshiped in Copley Hall there was a steady increase in attendance.

Twelve years ago the twenty-first of last month, the corner-stone of The Mother Church edifice was laid, and at that time it was thought the seating capacity would be adequate for years to come. Attendance at the Sunday service gradually increased, until every seat was filled and many stood in the aisles, and in consequence two services were held, morning and afternoon, the latter a repetition of the morning service. The date of the inauguration of two Sunday services was April 26, 1896. It was soon evident that even this provision was inadequate to meet the need, and it was found necessary to organize branch churches in such suburbs of Boston as would relieve the overcrowded condition of The Mother Church; therefore three branch churches were organized, one in each of the following named places: Cambridge, Chelsea, and Roxbury.

For a while it seemed that there would be ample room for growth of attendance in The Mother Church, but notwithstanding the relief that the organization of branch churches had given, the number of attendants increased faster than ever. From the time that the three foregoing named churches were established, the membership and the attendance at them and at The Mother Church steadily grew, and more branch churches were established in other suburbs, members of which had formerly been attendants at The Mother Church. In the spring of 1905 the overcrowded condition of the morning service showed that still further provision must be made, as many were obliged to

Digitized by Google

leave the church for the reason that there was not even standing-room. Therefore, beginning Oct. 1, 1905, three services were held each Sunday, the second and third being repetitions of the first service.

This continued growth, this continued overcrowding, proved the need of a larger edifice. Our Communion services and Annual Meetings were overcrowded in The Mother Church, they were overcrowded in Tremont Temple, in Symphony Hall, and in the Mechanics Building, and the need was felt of an auditorium that would be of great seating capacity, and one that would have the sacred atmosphere of a church-home.

In Mrs. Eddy's message to the Church in 1902 she suggested the need of a larger church edifice, and at the Annual Meeting of the same year the Church voted to raise any part of two millions of dollars for the purpose of building a suitable edifice. The labor of clearing the land was begun in October, 1903, and the corner-stone was laid July 16, 1904.

The first Annual Meeting of the Church was held in Chickering Hall, Oct. 3, 1893, and the membership at that date was 1,545. The membership of this Church to-day is 40,011. The number of candidates admitted June 5 of this year is the largest in the history of the Church and numbers 4,889, which is 2,194 more than the hitherto largest admission, that of June, 1903. The total number admitted during the last year is 6,181. The total number of branch churches advertised in *The Christian Science Journal* of this June is 682, 614 of which show a membership of 41,944. The number of societies advertised in the *Journal* is 267.

Shortly after the dedication of The Mother Church in 1894, the *Boston Transcript* said, "Wonders will never cease. Here is a church whose Treasurer has sent out word that no sums except those already subscribed can be received. The Christian Scientists have a faith of the mustard seed variety. What a pity some of our practical Christian folk have not a faith approximate to that of these impractical Christian Scientists."

The fact that a notice was published in the *Christian Science Sentinel* of last Saturday, that no more funds are needed to complete the Extension of The Mother Church, proves the truth of the axiom: "History repeats itself."

These are the evidences of the magnificent growth of this Cause, and are sufficient refutation of the statements that have been made that "Christian Science is dying out."

The majesty and the dignity of this church edifice not only shows the growth of this Cause, but proclaims the trust, the willingness of those who have contributed to the erection of these mighty walls.

This magnificent structure, this fitting testimonial in stone, speaks more than words can picture of the love and gratitude of a great multitude that has been healed and purified through the labor and sacrifice of our revered Leader and Teacher, Mary Baker G. Eddy, the one through whom God has revealed a demonstrable way of salvation. May her example inspire us to follow her in preaching "the kingdom of heaven is at hand," by healing the sick and reforming the sinful, and as she has done, verifying Jesus' words, "Lo, I am with you alway."

After the conclusion of Mr. Johnson's report, announcement was made that reports from the Field would be had from members assembled. This invitation brought forth a variety of remarks on the growth in various parts of the Field, as follows:—

Second Church of Christ, Scientist, in Minneapolis, Minn., reported that 194 new members were added to the church during the past year.

First Church of Christ, Scientist, London, England, reported a total membership of 432, with great activity in the Reading Room and in the distribution of literature.

First Church of Christ, Scientist, in Sioux City, Ia., reported that its membership had increased from 24 in 1891 to 185 at the present time, and the congregation is so large that the seating capacity of 250 has been found inadequate, and a new building will soon be erected.

First Church of Christ, Scientist, of Berlin, Germany, reported "much progress during the past year, attendance at services increasing from an average of 100 to an average of 300, and the church membership shows an increase of sixteen per cent."

Those churches which were heard from in the afternoon were: First Church of Christ, Scientist, Buffalo, N. Y.; First Church of Christ, Scientist, Hoosic Falls, N. Y.; First Church of Christ, Scientist, Washington, D. C.; First Church of Christ, Scientist, Indianapolis, Ind.; First Church of Christ, Scientist, Havana, Cuba; First Church of Christ, Scientist, Colorado Springs, Col.; First Church of Christ, Scientist, Spokane, Wash.; First Church of Christ, Scientist, Wymore, Neb.; First Church of Christ, Scientist, Pueblo, Col.; First Church of Christ, Scientist, El Paso, Tex.; First Church of Christ, Scientist, Joplin, Mo.; Second Church of Christ, Scientist, New York City.

First, Second, and Third Churches of Christ, Scientist, of St. Louis presented a combined report, stating that after consideration it was decided that a proposition to unite First and Second Churches into one organization had been abandoned, as there appeared to be need for continuing the identity of both organizations and the establishing of Third Church.

First Church of Christ, Scientist, of New York City reported that it has during the past year witnessed a vigorous growth in the work incumbent upon every branch church; it had a membership, June 1, of 1,675.

First Church of Christ, Scientist, Memphis, Tenn., reported its intention to begin at once to erect its own building, now that the great Mother Church building was finished. First Church in Dublin, Ireland, expressed through its representative heartfelt gratitude for the many blessings received, especially for the privilege of sharing in the erection of the Extension of The Mother Church. First Church of Chicago reported that it had erected a large building, expecting it to meet the needs of those attending the services, but within the following ten months, Second Church was organized, and successively Third, Fourth, Fifth, and Sixth Churches were organized, each being an overflow from First Church. Five of these churches own and occupy their buildings, and again First Church is filled almost to its capacity.

An interesting report was rendered from First Church of Christ, Scientist, of Paris, France, which has also progressed satisfactorily.

The report from First Church of Christ, Scientist, Liverpool, England, stated that services had been held for several years prior to 1904. In February of that year a society was organized and in 1905 a church organization was formed.

First Church at Seattle, Wash., reported that a dozen of its members were in attendance at the dedication services. First Church of Philadelphia reported a membership of 422, and now that The Mother Church Extension was completed that it would attend to the erection of a church for itself. First Church of Belfast, Ireland, represented by the Hon. Miss Gibson, daughter of an ex-Lord Chancellor of Ireland, stated that the church was organized in May, 1904, and that constant progress had been manifested; also that three of its members were present at the dedication. First Church of Oklahoma City, Okla., reported the presence of 14 of its 72 members, and that, having directed all its attention to the present time to the building of The Mother Church Extension, it will now proceed to erect its own house of worship.

First Church of Christ, Scientist, Pasadena, Cal., reported a membership of 600, also that wonderful healing had been done, including that of every known disease.

Mr. Adam H. Dickey reported three churches in Kansas

Digitized by Google

City, Mo., with a membership of about 1,300, about 300 of whom were present at these services. He reported great success, owing to the healing work in Christian Science. Mr. Frank W. Gale presented the report of First Church in San Francisco, Cal., and reported that the past year had been the most prosperous in its history. He said he had been commissioned to express the sincere thanks of the Christian Scientists of San Francisco for the generous help given by the Scientists all over the Field in their recent severe experience.

There were also reports from First and Third Churches of Christ, Scientist, of New York, and Fourth Church of Chicago, Ill.

Members of many other churches were present, ready to report, but they could not be heard for lack of time.

The Wednesday Evening Meetings.

[We are indebted to the *Boston Herald* for the following report.—EDITOR.]

Quietly, without a trace of fanaticism, making their remarkable statements with a simplicity which sprang from the conviction that they would be believed, scores of Christian Scientists told of cures from diseases, physical and mental, at the testimony meetings that marked the close of their visit to Boston; cures that carried one back to the age of miracles. To hear prosperous, contented men and women, people of substance and of standing, earnestly assure thousands of auditors that they had been cured of blindness, of consumption in its advanced stages, of heart disease, of cancer; that they had felt no pain when having broken bones set, that when wasted unto death they had been made whole, constituted a severe tax upon frail human credulity, yet they were believed.

At The Mother Church, First Reader William D. McCrackan presided in the main auditorium; at the meeting in the Extension vestry, Willis F. Gross, the new President, officiated, and in the old Mother Church auditorium Mrs. Laura C. Conant, Second Reader at The Mother Church, presided. The other Readers were as follows: Mother Church vestry, Judge Septimus J. Hanna of Colorado Springs; Horticultural Hall (Exhibition Hall), Bicknell Young of Chicago; Horticultural Hall (Lecture Hall), Bliss Knapp of Boston; Jordan Hall, Edward A. Kimball of Chicago; Potter Hall, Rev. William P. McKenzie of Cambridge; Howe and Woolson Halls, Gilbert C. Carpenter of Providence; Chickering Hall, Rev. Irving C. Tomlinson of Concord, N. H.

At each of the meetings the introductory services were identical, consisting of hymns, an appropriate reading from the Bible and selections from "Science and Health with Key to the Scriptures" by Mrs. Mary Baker G. Eddy.

Fifteen thousand Scientists crowded into the auditorium of the Extension of The Mother Church, into the old church, into Horticultural Hall, Jordan Hall, Potter Hall, Woolson Hall, and Chickering Hall, and it took ten meetings to accommodate the great throngs who wanted to give testimony or who wanted to hear it. And when these places had all been filled, there were many hundreds waiting vainly in the streets. A few were upon the scene as early as three o'clock in the afternoon to secure seats in the main body of the church, where the largest meeting was held, and long before seven the auditorium was comfortably filled.

Upon entering The Mother Church one was immediately struck with the air of well-being and of prosperity of the great congregation. The Scientists fairly radiate good nature and healthy satisfaction with life. No pessimistic faces there! So ingrained is this good nature, so complete this self-abnegation, that at the very height of fervor, when bursting with a desire to testify to the benefits and the healing power of the faith, one of them would pause and laughingly give precedence to another who had been the first to catch the Reader's eye.

When Mr. McCrackan announced at the main meeting that they were ready to receive testimony up leaped half a dozen Scientists. They had been told to name the places they lived before beginning. "Indianapolis!" "Des Moines!" "Glasgow!" "Cuba!" "Dresden!" "Peoria!" they cried. No more cosmopolitan audience ever sat in Boston.

Those who poured out their debts of gratitude for ills cured, for hearts lifted up, spoke simply and gratefully, but occasionally the voices would ring out in a way there was no mistaking. In those people was the depth of sincerity, and when they sang, the volume of the holy song rose tingling to the great dome, swelling as one voice. It was a practical demonstration of the Scientist claims, a fitting close to a memorable week.

And what can be said of the cures that were narrated? Here are a few of the most remarkable:—

At Horticultural Hall, a lady from Harrisburg, Pa., said, "About ten years age I was healed of consumption by the reading of Science and Health. I had been given up by physicians and they gave me no hope of ever being healed. I was healed in just three months."

A man from Kansas City, Mo., said, "I was given up, in the last stages of consumption, by physicians, and told to go to California, and went there with the expectation of living only a few months. There I was advised to go to a Christian Scientist, which I did, and was healed in five treatments. This was twelve years ago, and I have not had the slightest return of the disease, nor have I had a cough."

A woman from St. Louis was blind, and now she can see. She said, "I feel that no one in this world has more cause to be grateful than I have, for whereas I was blind now I see. My case was pronounced incurable by the most noted oculist in the world. I was persuaded to try Christian Science, which resulted in a cure in three months, doing for me what oculists failed to do in over twenty years, for it healed my blind eyes. This is ten years ago, and I have had perfect sight ever since."

At Chickering Hall, a Tacoma Scientist said, "Nearly eleven years ago, after all hope had been withdrawn by four of our very best physicians, I was healed of valvular heart disease of many years' standing through the study of Science and Health."

Said another in The Mother Church: "I am from Omaha, Neb. Nineteen years ago I was healed of quick consumption, and since that time have not been confined to my bed for a single day. Three of my family have been healed through reading Science and Health by Mary Baker G. Eddy. I wish to give my very grateful testimony to our loving Leader, Mrs. Eddy."

Charles R. Frickey, Rochester, N. Y., said, "Eleven years ago I dragged my body around with locomotor ataxia, pronounced by the most eminent specialists to be incurable. At that time I did not believe in God; I could not, because I could not see why the suffering was here, why a good God should send such evils upon those whom He had created. Shortly after this a friend of mine invited me to attend a Christian Science service. I declined to do so, but being persuaded, I did; and in that service, while having a heated discussion with the First Reader, I found the pain which I had been enduring had vanished; the muscles did not relax one particle, but the pain was gone. I went home, and wondered why the pain did not come back; but it has never returned. A month after that I sought treatment for the balance of the difficulty. My healing was not rapid, because I clung to the disease. After six or seven months' time had elapsed, I found my freedom."

At the Extension auditorium Mr. Frank H. Leonard of Brooklyn, N. Y., testified that he had been healed of valvular heart disease, which he had from birth and which many physicians had pronounced incurable, and he had been

Digitized by Google

condemned to die in a short time. He was healed by Christian Science treatment in three months, and his former physicians stated that a miracle had been performed, as his heart was as good as that possessed by any other man.

Lieutenant-Colonel Hobart of Liverpool, Eng., said, "The first blessing that came to me in Christian Science was the healing of our eldest daughter, who had been suffering terribly from a child with membranous colitis. We had skilled physicians and careful nursing. She grew worse and worse, and eventually a well-known specialist in London told me it was no use doing more, she must pass away. We then heard of Christian Science. She was taken in hand by a gentle, loving practitioner, and our emaciated daughter who was to die is to-day strong, mentally and physically."

In the Extension auditorium Dr. W. F. W. Wilding from Manchester, England, said that his daughter about six years ago was suffering with disease of the hip joint and consumption of the lungs, and though eight years of age had wasted away until she weighed only forty pounds. She had to be bound in an iron splint, from shoulder to ankle. She kept wasting from day to day, and was on the verge of the grave, and nothing that surgery could do could save her. "It was at this time that treatment in Christian Science saved her from the grave. She was put under treatment, the iron splint was removed; the emaciated tissues were renewed, and day by day she regained her health and strength, and now, at thirteen years of age, she is as strong, healthy, happy, and as well as any girl in the world."

A lady from Berlin, Germany, mentioned a special case of cancer of the liver that had been healed in Christian Science after five operations had been performed by the physicians. This healing was complete and effected in Christian Science after nine treatments.

Mlle. Demarez of Paris, France, told of a case of cancer which had been taken to a hospital for an operation; the physicians and surgeons refused to do anything for her, as the case was too far advanced for possible recovery; that an operation would surely kill her, and that in any case she must die within three months. This case was healed by Christian Science.

Mr. Snook of Washington told of a child, twelve years old, having been healed of epileptic fits, the case having been called utterly hopeless by many physicians.

Mrs. Belle M. Wood of Kansas City spoke of having been perfectly well for fifteen years, after being healed of four incurable diseases.

Lady King of Dublin, Ireland, told of having been an invalid for three years, under the care of the best physicians and surgeons in London, and of being thoroughly healed during one week's treatment; also gave testimony to the healing of her mother from blindness.

A lady from California gave the following testimony: A gentleman riding up a mountain trail on horseback—a trail seldom used except for mule travel—by a misstep of his horse was thrown over the precipice, the horse rolling over him twice; both rider and horse were stopped midway down the mountain-side by a growth of underbrush. His brother, by the aid of another man, succeeded in getting him back to the camp and telegraphed for Christian Science help. The next day he was carried on a litter to his home, traveling by easy stages, because of his great suffering. Each day showed marked improvement, until at the end of two weeks he went out driving, using the reins himself; at the end of three weeks he attended a Christian Science meeting and gave his testimony, considering himself entirely healed.

A gentleman from Arkansas said he had been a great sufferer from meningitis and was perfectly healed by Christian Science.

A lady from London told of having asked for help for a child suffering with a fever, and of being healed herself, during the treatment, of a disease from which she had suffered for six years; also that she had been blind in one eye for twenty-seven years and, in order to save the other eye, was wearing glasses. Ten days after the healing just mentioned she left off the glasses, was able to read easily without them, and found, upon closing the good eye, that she could read the finest print with the eye which had been blind so many years.

A gentleman from Long Beach, Cal., said he had been healed of a very severe case of blood-poisoning and lock-jaw; also from the habit of smoking—having been in the habit of smoking from fifteen to eighteen cigars a day; this healing took place in a few minutes.

A lady from Australia testified to having been healed of sciatica and lumbago in half an hour, and of a tendency to constant colds; of the healing of her mother of a tumor on the eye; and of the healing of a violin pupil from paralysis of the arm so that she is now able to practise six hours a day without inconvenience.

A lady testified to having been healed of rheumatism of eighteen years' standing.

From California were given the following testimonies:—

A gentleman reported that during the recent earthquake and fire not one Christian Scientist was injured in any way; that about one quarter of the members of the church and congregation lost their homes, and as the entire business section was destroyed, there was need of assistance in getting many of them on a self-supporting basis once more. The second Sunday after the earthquake the church held an open-air service on the site of their own building, which had been destroyed, and have continued to hold their services regularly, while the new temporary building has gradually risen around them. His expression of gratitude for the help received, and for the understanding of Christian Science, which enabled them to pass through such an experience unharmed, was very good to hear.

A lady related the experiences of four families who lived on the four sides of what is known as Russian Hill; how they were wakened by fire and cries of terror; how they were soon able to become calm and strong, assured of the divine protection, and to help and comfort others in distress; giving thanks always, since that dreadful time, for their knowledge and understanding of Christian Science.

San Francisco, Cal.

[THE following card has been received from our San Francisco brethren and we are glad to give it space in our columns. We understand that the money so lovingly contributed by the Christian Scientists throughout the country has proved sufficient for the immediate needs of these brethren and they are now becoming re-established in their homes and in their work.—EDITOR.]

Dear Brethren:—The Board of Directors of First Church of Christ, Scientist, in San Francisco, California, wish to express to the dear co-workers throughout the Field, their deep appreciation of the sympathy and love which prompted the word of hope and encouragement, as well as financial aid, sent us in our hour of need.

Through the substantial help received we have been enabled to assist many of the members of our church and congregation to re-establish themselves, and we will continue our work with stronger courage and greater faith in, and a more abiding knowledge of, the ever-active working of divine Love, supplying human needs.

By order of the Board of Directors,

THOMAS H. LORD, *Clerk.*

Correction.

In last week's issue of the *Sentinel* there appeared on page 660, second column, the name "Miss Ida Krouse of Hale, Cuba." We are informed that this was an error and that the lady referred to is Mrs. Ida Krause Hall of Camagüiy, Cuba.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

A Contrast of Forty Years.

[THE following letter, received by Mrs. Eddy from an old friend and student, is of great interest at this time, because it contrasts so vividly the pioneer days of our Leader's work for the Cause which she was then inaugurating with these later days of her achievement. The faith and devotion with which Mrs. Eddy labored in those early days have marked the forty years of her ministry, bringing health and happiness to a constantly growing army of Christian followers.—EDITOR.]

Cambridge, Mass., June 12, 1906.

Mrs. M. B. G. Eddy.

My Dear Teacher:—Of the many thousands who attended the dedicatory services at the Christian Science church last Sunday it is doubtful if there was one so deeply impressed with the grandeur and magnitude of your work as was the writer, whom you will recall as a member of your *first* class in Lynn, Mass., nearly forty years ago. When you told us that the truth you expounded was the little leaven that should leaven the whole lump, we thought this might be true in some far distant day beyond our mortal vision. It was above conception that in less than forty years a new system of faith and worship, as well as of healing, should number its adherents by the hundreds of thousands and its tenets be accepted wholly or in part by nearly every religious and scientific body in the civilized world.

Seated in the gallery of that magnificent temple, which has been reared by you, gazing across that sea of heads, listening again to your words explaining the Scriptures, my mind was carried back to that first public meeting in the little hall on Market Street, Lynn, where you preached to a handful of people that would scarce fill a couple of seats in this grand amphitheatre; and as I heard the sonorous tones of the powerful organ and the mighty chorus of five thousand voices, I thought of the little melodeon on which my wife played, and of my own feeble attempts to lead the singing.

In years gone by I have been asked, "Did Mrs. Eddy really write Science and Health? some say she did not." My answer has invariably been, "Send those who say she did not to me. I heard her talk it before it was ever written. I read it in manuscript before it was ever printed." Now my testimony is not needed. No human being in this generation has accomplished such a work or been so thoroughly endorsed or so completely vindicated. It is marvelous beyond all imagining to one who knew of your early struggles. I have been solicited by many of your followers to say something about the early history of Christian Science. I have replied that if Mrs. Eddy thought it wise to instruct them on the subject she would doubtless do so.

Possibly you may remember the words of my uncle, the good old deacon of the First Congregational Church of Lynn, when told that I had studied with you. "My boy, you will be ruined for life; it is the work of the devil." He only expressed the thought of all the Christian (?) people at that time. What a change in the Christian world! The stone which the builders rejected has become the corner-stone of this wonderful temple of "Wisdom, Love, and Truth." I have yet the little Bible which you gave me as a reward for the best paper on the spiritual significance of the first chapter of Genesis. It has this inscription on the fly-leaf in your handwriting, "With all thy getting get understanding."

I should deem it a great privilege to meet you face to face once more. Respectfully and faithfully yours,

S. P. BANCROFT.

The Appeal of a Great Occasion.

OUR annual Communion and the dedication of the Extension of The Mother Church are over, and this happy and holy experience has become a part of our expanding consciousness of Truth, to abide with us and enable us better to work out the purposes of divine Love. It was scarcely possible to repress a feeling of exultation as friend met friend at every turn with words of rejoicing; and even the greetings and congratulations of those not of our faith seemed to say that all the world was in some degree sharing in our joy. But within our sacred edifice there came a deeper feeling, a feeling of awe and of reverence beyond words, —a new sense of the magnitude of Christian Science,— this revelation of divinity which has come to the present age. Grandly does our temple symbolize this revelation, in its purity, stateliness, and vastness; but even more impressive than this was the presence of the thousands who had come, as the Master predicted, "from the east, and from the west, and from the north, and from the south" to tell by their presence that they had been healed by Christ, Truth, and had found the kingdom of God.

As one thought upon the significance of the occasion, the achievements of our beloved Leader, and her relation to the experiences of the hour, took on a larger and truer meaning. The glories of the realm of infinite Mind, revealed to us through her spiritual attainments and her years of toil, encompassed us, and hearts were thrilled with tender gratitude and love for all that she has done. If to-day we feel a pardonable pride in being known as Christian Scientists, it is because our Leader has made the name an honored one before the world.

In her dedicatory message to The Mother Church, Mrs. Eddy says, "The first commandment of the Hebrew Decalogue, 'Thou shalt have no other gods before me,' and the Golden Rule are the all-in-all of Christian Science." In all her writings, through all the years of her leadership, she has been teaching her followers both by precept and example *how* to obey this Commandment and Rule, and her success in so doing is what constitutes the high standing of Christian Science before the world. Fearlessly does she warn all her followers against the indulgence of the sins which would prevent the realization of ideal manhood —the reign of the Christ—and now it is ours to address ourselves with renewed faith and love to the high and holy task of overcoming all that is unlike God, and thus proving our worthiness to be "living stones" in the universal temple of Spirit, and worthy members of The Mother Church before men.

ANNIE M. KNOTT.

"Blest be the tie that binds."

THE late Communion and dedicatory service of the Extension of The Mother Church will always be remembered as a notable event, not only in its occasion but in its unity of spirit, its inspiration, its enthusiasm, and its contagious joy. Divine Love was manifested in a manner and degree which gave new and nearer significance to one's thought of heaven. It was that blossoming of brotherhood which precedes and guarantees the fruitage of faith. The conscious proximity of a great idea brought a dissipating rebuke to the narrowness of self-interest. In such a presence it became easy and natural for one to be courteous, unselfish, kind, and good, and we have thus learned, through human experience

Digitized by Google

as well as through revelation, that the one place where we can all meet without fear of friction is within the shadow of that great Rock, the Christ-truth whose majesty and might alone save humanity from the disintegrating weakness of mortal sense. Truth is the cement of true socialism, the bond of true brotherhood.

In a time of increasing stress and turmoil in the world's communal life, a time when the asserted unfairness and injustice of political and commercial rule are cited as the explanation of strikes and incipient revolution, and when the pitiful living-conditions of vast numbers in all lands is pressing upon the heart of every Christian altruist, it is quite impossible to escape the conviction that a more impelling sense and a more practical expression of loving brotherhood is one of the world's greatest needs. Though eighteen centuries and more have past since Christ Jesus taught and exemplified the higher kinship, so-called Christian nations are still finding their assurance of peace only in their preparedness for war; while in their political, economic, and business relations professed Christian men are still so indifferent to the Golden Rule that the story of individual success often becomes a narrative of heartless selfishness and cruel imposition.

To this human condition Christian Science has brought healing through that true sense of God, and man in His likeness, which bases and perpetuates Christian brotherhood, and it is the inspiration, the enlargement, the uplifting joy of this realization which breaks the shackles of social caste, business selfishness, and petty personality. The world has known and talked much of the fraternity of pain; it has practically come to look upon suffering as the prerequisite and ground of sympathy, and some theologies have gone to the extreme of insisting that even God must suffer if He save, thus making the inharmonious and unideal requisite and useful. And yet how apparent it is that the confidences of the miserable but duplicate their ills, and that they can find no profit in either communion or exchange. The nobler brotherhood begins its rule when we recognize our oneness of source, nature, and possessions, and that man lives in the kingdom of good alone. Said St. Paul, "All things are yours; and ye are Christ's; and Christ is God's." For a fraternity of suffering and sorrow Christian Science substitutes that brotherhood of peace and joy whose rising tide surely reached a high water-mark as we sang together in that mighty choir on Communion day. The little things, and the belittling thoughts that would bring distrust and separation,—how they all vanished in that moment when love-for-all opened the door of song; and how blessed will it be in all the coming days if we but retain, as we surely may, this gladdening sense of love's all-embracing brotherhood. Let us not forget that if we ever seem to lose our sense of supremacy over selfishness, our spiritual exaltation or our joy, it is because we are no longer companioning with those great spiritual and redemptive ideals which have been our Leader's constant theme, and which are so splendidly symbolized in the stately courts in which we sang that day.

JOHN B. WILLIS.

Letters to our Leader.

Chicago, Ill., June 16, 1906.

Beloved Teacher:—Excuse this intrusion, but I thought you might like to hear of the following recent incident. Going into the Room of the Pastor Emeritus in your church, in front of a student of mine was a Catholic priest. Raising high his hat, he said, "I think we all should pay due respect and reverence in this the most beautiful room I ever saw." He seemed very much interested in everything.

Methinks your last message has opened wide the door of love. All who are ready and willing can find the way, even beginning with the first footstep, an honest recognition of true value. Did you know, dear Teacher, I was healed from consumption? being the third generation that manifested this dread disease. The perfect healing came from your Normal Class lessons in 1888. Again I thank God, and you, for the full deliverance from this and many other things. Lovingly and gratefully your student,

H. ELIZABETH ROBERTS.

Boston, Mass., June 13, 1906.

Beloved Leader:—Oh, if you had been present to-night to hear the testimonies from all the distant lands, the gratitude and the love and the marvels that were told—oh, the joy that this Communion time and dedication has brought to us. We are returning full of hope to accomplish more, and to consecrate ourselves more wholly than ever before. I sat down to write this letter to you, to tell you that I feel so happy to have been allowed the privilege of taking charge of your Room at The Mother Church. To hundreds and hundreds I have had the joy of showing it. I have been in charge there daily this week, and it has been one of the most precious privileges I have ever been allowed. Oh, if you could only hear and see the love and gratitude that the people expressed. Father and mother left this afternoon, and I leave on Monday next. I must have one more service in this glorious church. It is truly a marvelous demonstration.

With love, your grateful student,

VICTORIA MURRAY.

New York, June 17, 1906.

Mrs. Mary Baker G. Eddy.

Beloved Leader:—I have felt to-day, in thinking over the dedication of the Extension of The Mother Church and what it meant to the Cause of Truth and the world, that I should like to write you a line or two and thank you for the privilege of being a Christian Scientist, and thank you for the loving kindness which you have manifested in presenting and preserving the integrity of the Cause of Christian Science.

I have been a member of The Mother Church for the past six years and during all that time the sustaining strength of Truth has been most helpful in every way, and when I glance back at the work you have been doing for the past forty years I realize in some degree the struggle in which Truth has sustained you. It has been my privilege to have carried the truth in all sections of our city life, and when at times I have met obstacles, one second of reflection on what you have done has restored to me the poise necessary for Truth's work.

May God continually and abundantly bless you and strengthen you, is my earnest prayer.

Sincerely,

ROBERT E. CAREY.

West Newton, Sunday Evening.

Dearest Leader:—I cannot close my eyes without sending you a message of love and gratitude. All thoughts turned to you to-day, and all wished that you might be in our midst and see this marvelous visible manifestation of the church triumphant. We could not get into the church until the three-o'clock service, because of the multitude. We sat in the topmost balcony, where we were unable to see the Readers but we heard every word. The acoustics are fine! Although this was the fourth service, the Readers' voices rang out full and clear. Mr. McCrackan read your Message most impressively and beautifully—and what a Message! Surely, dear Leader, you would have been gratified could you have seen your grateful followers in that beautiful edifice. Some of them had waited since early morn to gain admittance to the three-o'clock service. A policeman said to one I know, "I have served thirty-two years, but have never seen anything like this. If all were Christian Scientists I should lose my job." The world has put a high estimate on Christian Scientists, but when we

Digitized by Google

look to you and your example, and see what you have accomplished, we see how much there is for us to do, and we pray for meekness and humility, knowing that by these qualities, which you exemplify, can we be fit worshipers in this temple which is the fruit of your labors.

Lovingly,
MARY TOMLINSON.

Santa Monica, Cal., June 15, 1906.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—In behalf of the church, we, the Board of Directors of First Church of Christ, Scientist, of Santa Monica, Cal., desire to express to you our heartfelt thanks and warm appreciation of your Message, read at the dedicatory service of the Extension of The Mother Church, in Boston, June 10. The Message was printed in *The Los Angeles Times*, one of the leading newspapers of the fair "city of the angels," and read at our Wednesday evening meeting by our First Reader. The pure words and deep meaning, so beautifully expressed in the Message, was a great uplift to us all, and we long to do more and better work as the days glide by, and become more worthy of the holy name of Christian Scientists.

Yours with tender love,
MRS. S. DUNN,
MRS. ACHSAH D. OSBORN,
R. F. DOCKERY,
MRS. MAY D. DOCKERY,
MRS. VIOLET J. CARPENTER.

Boston, Mass., June 11, 1906.

Beloved Leader:—My heart is so full this morning that it seems it would burst were I not to send these few lines to you, to convey at least a slight expression of my love and gratitude to God, and to you, for this beautiful Communion service, and all who have worked so indefatigably to give this vast gathering the life-sustaining truth whereby they can go forth and heal the sick and sinful.

I know God will keep His light shining, through you, for us all, to guide us on forever. For your beautiful message, "Choose Ye," I thank you.

BENJ. H. NORTON.

London, England, May 30, 1906.

Dear Mrs. Eddy:—We are sending eighty-one dollars, all the money in hand from our Sunday School, to the Building Fund of The Mother Church; first because we rejoice in the privilege of helping to build it, then because we wish to give you a token of our love and obedience.

I remain yours lovingly, for the teachers and children of Third Church of Christ, Scientist, London,
LUCY E. MANN, *Superintendent.*

[Telegram.]
Atlanta, Ga., June 14, 1906.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader and Teacher:—The heart of every Scientist who is not at the dedication and Communion echoes a fervent "Amen, and amen" to the Church's reply to your loving and wonderful message. Devotedly,
WILLIAM M. GOODWIN.

Excerpts from Editorials.

In discussing the recent great demonstration of Christian Science in Boston the editor of *The Watchman*, a Baptist paper, concludes with the statement that this system of religion engages in no work of charity in any form, and that it alone, of all the religions, therefore lacks the element of self-abnegation. It is not proposed here to enter the ranks of disputants over the issue thus raised. The Christian Science defenders are an able body, and constantly show that they can at all times stand and defend the faith and good works which they profess. We may, however, say in a dozen words, which will be indorsed by those who are intimate friends of representative Christian Science followers without being full sharers of their faith, that no people are more earnest and devoted in their efforts for the good of others, both material and spiritual. This is the fruit of love for others, and it is therefore charity. It would be unfair to say, without ample proof, that this development in the lives of individuals is not at least a part of their religion, even though it may not be the whole of it. The apparent lack of charity organization in the church body does not discredit the fact of individual charity.

Boston Herald.

The prodigious convention of Christian Scientists in Boston is a portent worthy of perhaps even more interest than it has evoked in that city, where a new temple to Isis and Osiris would be hardly more than a day's wonder. With the swift growth of the new faith the public has in a general way been familiar; it is but a few years ago that the astonishing revelation was made that since 1890 its following had increased from an insignificant number to hundreds of thousands, a rate at which every other sect in the country would soon be left behind. But mere statistics give a feeble impression in comparison with so huge and concrete a demonstration as the dedication of this vast temple. The statistics have been ridiculed by the hostile as mere guesswork, but one cannot sneer away the two-million-dollar stone edifice or the thirty thousand worshipers who entered its portals Sunday.

Springfield (Mass.) *Republican.*

The dedication of a Christian Science temple at Boston serves to call attention to one of the most remarkable religious movements that this country or any other country has ever known. It hasn't been very many years since Christian Science was announced as a discovery of Mary Baker Eddy of Concord, N. H. The few thousand persons who followed Mrs. Eddy during the first years of her preaching were the objects of much ridicule, but despite the obstacles put in the way the church has continued to grow. Its growth in numbers is remarkable, but even stranger is its increase in wealth. The temple which has just been dedicated at Boston cost two million dollars, and is one of the finest places of worship in the world, at least it is the largest in New England. This Mother Church is absolutely free from debt. After but a few years, Christian Science has congregations in every important town and city of the United States. Of course the new idea will never have determined its real position in the doctrines of the world until it has stood the test of time. But its beginning has been impressive, and that large numbers of intelligent men and women should be converted to it, makes it appear that Science can't be brushed aside by ridicule alone.—*Lafayette* (Ind.) *Journal.*

The remarkable growth and the apparent permanency of Christian Science were noted in the recent dedication in Boston of the magnificent new temple of the cult. When the doors were opened to the public, the structure was free of debt. While the dedicatory services were being held at different hours of the day, forty thousand Christian Scientists from every State in the Union and from many foreign countries were in attendance.

Although Mrs. Eddy, the Founder of Christian Science, was not in attendance, she sent greetings in which she declared that the "crowning ultimate" of the church "rises to a mental monument, a superstructure high above the works of men's hands, even the outcome of their hearts, giving to

Digitized by Google

the material a spiritual significance—the speed, beauty, and achievements of goodness."

But a few years ago, men there were who predicted that Christian Science would soon be included among the cults which flourish for a time like a green bay tree, and are then forgotten. Those predictions have not been verified. The church which has been built upon the tenets first presented by Mrs. Eddy is being constantly strengthened by members who represent the intelligence of many communities in different parts of the world.

Albany (N. Y.) *Knickerbocker.*

One of the claims made in behalf of Christian Science is that it cures the domestic nagging habit. "There are no nagging wives and mothers among true Christian Scientists," said one of the best known teachers and practitioners of that cult. "Our faith does away with nagging and the irritability that causes so many unhappy homes." A faith that will do this is surely of the sort that will "remove mountains." Yet the testimony of this witness is that she has seen "unhappy homes made happy, and tired, nervous, fagged-out women made contented and rested" by a realizing sense of the truth that "peace and harmony are the law of our being."

It is an observed fact, acknowledged by many non-believers, that the disciples of this new faith, or vivifiers of an old faith, are, as a rule, contented, cheerful, courageous, patient, and even serene. So far, at least, their faith is justified by its works. And among its triumphs the prevention of nagging and of the nervous irritability which causes this disagreeable habit is surely entitled to honorable mention. The wife who is continually nagging her husband, whether about his business, his habits, his dress, his non-observance of what she regards as his religious, social, or domestic duties, or anything else, will make "love fly out of the window" much quicker than poverty is proverbially (though often falsely said to do. When the children are the victims of the nagger, not only are domestic peace and happiness banished, but the disposition of the children is in danger of being ruined under the constant rasping. The "scold" is bad enough, but her outbreaks are apt to be infrequent, or at least intermittent, while nagging easily becomes a "continuous performance." If Christian Science will cure this the increase of its converts is not a matter to be deplored.

It is, however, unfair to connect nagging altogether with the wives and mothers. Some of the worst naggers are men. They "nag" about the punctuality or the cooking of the meals, about the conduct of the children, the expenses of the household—particularly those which do not minister directly to their own gratification—and a dozen other things that offer an opportunity for venting their disagreeable tempers. If Christian Science can subdue the chronic grumblers and naggers of the male sex it will do wonders.

Boston Herald.

The stoutest enemies of Christian Science will confess at least an esthetic debt to that great and growing cult which is implied in the building of a great church in Boston. This church is one of the largest and seemliest in America, and in its size, if not in its aspect, it may be held to symbolize that faith which is so much a faith that all facts inhospitable to it are deemed by its professors not to exist at all. The building is of light stone, with a dome over two hundred and twenty feet high, a chime of bells, and one of the largest organs in the world. The architect has joined lightness and grace to solidity, and the edifice needs only an open space about it, such as one finds in the English cathedrals, to achieve its extreme of beauty. A sect that leaves such a monument has not lived in vain.

A remarkable thing in this building is that, although it cost two million dollars, it is not blanketed with debts and mortgages. Everything, even to the flagstones in front of it, is paid for, and subscriptions are not solicited. Here is an occasion for joy that marks it as different from almost all other of the Christian churches, where petitions for money are almost as constant as petitions for divine mercy.

Brooklyn (N. Y.) *Eagle.*

There are two things to be said in favor of Christian Science. Its growth has been wonderfully rapid, and due apparently to nothing save the desire in the human heart for some such comfort as it promises. Christian Scientists, as a class, so far as the writer knows them, are happy, gentle, and virtuous. They are multiplying without efforts at proselytizing; they are in no wise at war with society; and they have little of the spirit of bigotry. The dedication of their great church in Boston is a material evidence of their prosperity; and it may be said that if their opinions seem visionary, there is nothing in them to attract any class save the moderately well-to-do, the intelligent, and the well behaved. It has been said cynically that a religion prospers according to the pledges which it holds out to its votaries; and though Christian Science promises nothing in the way of gratifying the passions or attaining dominion over others, yet it has rare lures for weary hearts,—physical health and spiritual peace.—*Rochester* (N. Y.) *Post Express.*

Christian Science, one of the most modern and certainly least demonstrative of religious bodies, has gradually spread over the country from a small beginning until its adherents can be found in every place of consequence from the Atlantic to the Pacific and from the Gulf of Mexico to McKenzie River. It may well be asked: What is the secret of the remarkable growth of the cult?

The question, like many others, is easy to ask but hard to answer. Little circles are formed whenever there are enough members for the purpose. Gradually it begins to grow in membership and influence. It seems to appeal particularly to women, this strange belief, and all of its members, regardless of sex, are as certain of its benefits, material and spiritual, as they can be of anything. Faith is the basis of all religions, and Christian Science is no different from others in this respect, but it appears to carry with it other things; a vague, ethereal something that seems rather a revival of first principles than an advance of any new line of thought.

Thousands are willing to attest to its efficacy in curing disease and lightening the burdens of life, and as it affords relief from bodily ills and inculcates right principles of living, no fault can be found with Christian Science. The meeting at Boston attracts national attention.

Helena (Mont.) *Record.*

I don't think I have ever seen more cheerful looking groups of people than I have met in Boston during the past few days. Their happy faces would make sunshine on the gravest day. If Christian Science gives such serene, beautiful expressions, it wouldn't be a bad thing if all the world turned to the new religion. There is one thing about it: it is certainly imbued with the spirit of unselfishness and helpfulness, and whatever one's special creed may be there is nothing antagonistic to it in this doctrine of health, happiness, and cheerful doing of good.—*Boston Herald.*

Twenty thousand Christian Scientists have assembled at Boston to attend the opening of their great new temple. Christian Science, as now before this continent, is the development of a short lifetime. It shows strength in all parts, and among classes above the average in intelligence.

Montreal (Canada) *Gazette.*

The Lectures.

Anderson, Ind.

Hon. Clarence A. Buskirk last night [May 24] delivered an address at the Grand Opera House, taking as his subject, Christian Science. Jacob S. Shield, a well-known merchant of Warsaw, in introducing the lecturer said in part,—

My own case will illustrate that good must come through the study and practice of Christian Science. I was rescued from total blindness and healed of other physical difficulties which physicians were unable to cure. Born and reared in the Jewish faith, I inherited and cherished all the prejudice of my co-religionists and almost hated the name of Christ, and I was firmly impressed with the belief that Jesus was the greatest enemy of the Jew, and that the Christian world was bent upon demonstrating and exemplifying that hatred by the extermination of Israel. But the practice and study of Christian Science has proven to me beyond a doubt not only that Jesus was not our enemy but that he was the best friend the Jew ever had, and that the truth of his teachings will eventually redeem all mankind and establish that much hoped for brotherhood. Seventeen of my nearest relatives are now embracing this same Christianity and proclaiming the divinity of Christ. It is on such prima facie evidence as this, my friends, that we are willing to be adjudged.—*Anderson Bulletin.*

Maryville, Mo.

A good audience listened to the address of Rev. Irving C. Tomlinson on Christian Science, given on Monday evening, May 14, in the Empire Theatre. He was introduced by Rev. Homer Cook, pastor of the First Baptist Church of this city, who spoke in part as follows:—

In these days of faultfinding and complaining, when men devote so much time to discovering and spreading abroad the failings of one another, when men insist on finding the black spots in the great whiteness and shadows in the sunshine—it is refreshing and encouraging to find a people who refuse to quit smiling—who look for and recognize only the good and beautiful and true, and believe only in goodness, and consequent health and happiness. Such a company of people we have in our midst. Though not of their membership, I rejoice that my own church stands on so broad a base that it recognizes the rights of other men to their beliefs and delights in the clear presentation of the same. We are honored to-night in that we have with us one of the eminent representatives of the Christian Science faith, a fellow-townsman and close associate with Mrs. Eddy, the Discoverer and Founder of Christian Science.—*Correspondence.*

Marshalltown, Ia.

The Christian Scientists of this city and many of their friends enjoyed a rare intellectual treat Sunday [May 20], in the lecture given in the afternoon, at their church, by Miss Mary Brookins of Minneapolis. Miss Brookins was introduced by J. V. Parker of this city, who said in part,—

Over nineteen hundred years ago there appeared in this world a unique, singular, and yet majestic character—the Nazarene. He taught the then unheard of doctrine of "on earth peace, good will toward men." His teachings and thought were new. Human nature was prejudiced against him, and he was compelled to battle for recognition. Is it not possible that Bible students of the present day attach too little weight to the promises which assure a healing gospel? Christian Science teaches the new-old gospel, and is meeting with remarkable success all over the world, as is proven by its thousands of adherents.—*The Reflector.*

Portland, Me.

There was a large attendance at Portland Theatre yesterday afternoon [May 13] on the occasion of the lecture on Christian Science by Bliss Knapp of Boston. Ex-Mayor Randall presided and his opening remarks were in part as follows:—

It affords me great pleasure to be with you this afternoon, and while I am not at all familiar with the doctrine of Christian Science, I have many fine friends who are members of your society, and I know from them that you are doing a great work, a glorious work in the name of God and for the benefit of all mankind.—*Eastern Argus.*

Painesville, O.—Judge Septimus J. Hanna, April 23.

A Sermon.

CHRISTIAN SCIENCE is producing remarkable results, especially in America, and will, if I mistake not, be producing equally remarkable results in our own country before long; and I would like to conclude this morning by simply stating in a word what seems to me the life-giving truth which is producing these wonderful results. It is possible in a Christian community, where the truth that God is love has been long known, if not yet fully understood, to appeal to the intelligence of men and ask them whether it is not self-evident, whether it may not be taken as the axiom, that God is love. I put it to a young man on Sunday night who had been a strong and even violent agnostic, leading many others astray. I put it to him: "Granted that there is God, and that God is wise, is it not evident to you that God must be love?" He looked up at me, and his eyes filled with tears, and he said: "Oh, yes; that is evident." Did you ever try an atheist with that? You try him. I have not yet met the man or woman who could look into my face and dispute it. Now, says this modern way of thinking, venture to dwell upon that, to meditate upon it, to let the thought become so familiar that you will dare to draw the natural deduction from it. Think of it! There is but one infinite, omnipresent Holy Spirit, that is God, in all men, in all times; one God, and He is love. All power is His, and the wisdom that made the world; all life has sprung from Him; all life is ordered by Him. Nothing has ever got out of His hands; nothing has ever evaded Him. Everywhere God; and everywhere the same—steady, persistent, triumphant love. Now draw the deduction from it. What does that mean? God in every man. Then that power of God vanquishes what we call sin. Sin is some delusion of the spirit, which goes when the truth of God is recovered. Think of it. This power—that is, love—vanquishes suffering, disease. Death is a shadow, is a delusion. These are false thoughts, which vanish when the truth of God fills the soul. "Ye shall know the truth, and the truth shall make you free." And so, by a renewing of the mind, as the apostle puts it, ye shall know that holy and acceptable and perfect will of God—that God is love.

From sermon by R. F. HORTON, D.D.
The Christian World Pulpit, London, England.

Testimonies of Healing.

It is now seven years since I heard of Christian Science, which came in direct answer to my prayer for more light and understanding. From childhood I had always a great desire to be good and useful. I worked earnestly in the orthodox church, but as years went on I was unable to solve the human problems which to me seemed unjust and unfair. Nov. 5, 1898, I cried in sore distress, "If there be a God, show me where and what He is." Instantly, though tears were rolling down my face, I felt such a sense of the presence of divine Love that it lifted me above all pain and sorrow. As I went on with my work there was a great spiritual awakening. The same evening a friend from America called, and told me he had a book which he wished me to read. This was the Christian Science textbook, Science and Health by Mrs. Eddy, and I read it with eagerness and felt sure that it gave the spiritual sense of the Bible. It has since been my daily companion, and has so illumined the Bible that it is dearer than ever before. It divides rightly the Scriptures, and teaches me to discern between the false and the true. In the study of the Lesson-Sermons week by week and proving in small beginnings the teachings of Christian Science, I have found it to be the pearl of great price—the truth which makes us free. Before knowing of Christian Science I suffered much from colds and bronchial affections, but since then my remedy has always been in divine Mind. Whenever the thought of a cold tempts me, this medicine is at hand and the healing is much quicker than in the old way, and without money or price. As I gained an understanding of Science I received a call to stand for Truth, and I have learned what the cross of Christ means—what it means to be misunderstood by those we wish most to help.

The understanding of God as infinite Mind, and man as His idea or expression, gives us the dominion which has been hid by the clouds of material sense. It has been my joy and privilege to meet with other Scientists in various places in England and I am always blessed by attending the meetings. I know that in time the churches will love Christian Science, as our Leader says. I am truly grateful for all the helpful literature in the *Sentinel* and *Journal*, and my one desire is to grow in the knowledge of good and to be governed by the one God,—divine Love. I can truly say that when we seek the Lord with all our heart, He is found to be our strength, health, and source of supply—ever-present and all-powerful.

MISS E. NORTH, Codnor, Derby, England.

For eighteen long, weary years I suffered with what the physicians told me was an incurable malady. According to *materia medica*, it was a disease of the nerve tissues of the face, which caused the most excruciating pain. My husband spent a great deal upon doctors and drugs, for we employed the best physicians, wrote to many specialists, and did whatever seemed likely to afford relief, without, however, obtaining any. Morphine was resorted to again and again, but always with the same result, nausea and increased distress; thus I escaped forming the drug habit.

After many years of this suffering, our old family doctor said the nerves of the face were simply dying and that the process would go on until I died, and that my age was against me. I was nearly eighty then. During one of the intervals between the attacks, while visiting my granddaughter in the East, I went with her to consult a Christian Science practitioner about her own case, but it did not occur to me that I could be benefited. I listened to her explanation of the Christ-healing, known to this age as Christian Science, when it suddenly dawned upon me that it might perhaps heal me of train-sickness, with which I had suffered ever since a child, and as I had the journey to Ohio before me, this seemed the need of the hour. I spoke to her about it and she said she would give me a treatment. Later on, when we began our trip, I found to my surprise that I was entirely healed of the distressing traveling discomfort and enjoyed every moment of the journey. From that day I have never had a return of the old facial trouble. It has been nearly eight years and I feel as young and strong as I ever did. I go about alone, making visits of several weeks' duration. While I find that old habits of thought seem hard to get rid of, yet I read Science and Health every day and am indeed grateful to dear Mrs. Eddy for showing us the way which Jesus taught to health and wholeness.

I also want to say that after I had been reading Science and Health about two years, an old trouble, called peritonitis, or inflammation of the bowels, made its appearance. I had suffered three weeks at two different times with it, the last time being obliged to have a nurse, and it left me in an abnormal condition which caused constant pain in the side and aggravated the life-long habit of constipation. The physician in charge stated that if I ever had another attack it would be my death, because of this disarrangement. When the trouble made its appearance I was a hundred miles from home, and during the journey I became so weakened that I had to be carried from the train to the carriage. My granddaughter and I reached our rooms and shut out the world. I seemed about to pass away, and she thought for family reasons that perhaps she should call a physician, but I said "No," so she worked on in the truth with renewed courage, and the next day I was able to walk to the hotel, two blocks away, and eat dinner with some friends. With this healing the pain in the side disappeared, and also the constipation. I do not see how any one could doubt that Christian Science is the truth.

MARY J. MCCLINTICK, Portsmouth, O.

Our eldest daughter was taken sick and our family doctor was called in. After attending her for some four or five days, he decided that she was suffering with appendicitis and thought we should have a consultation, as he believed that an operation was the only chance to save her life, and the sooner it was performed the better. We, however, determined to see what Christian Science could do, and to our amazement and joy we had the satisfaction of seeing our daughter restored to perfect health after two or three treatments. That was four years ago, and she has enjoyed the best of health, never being troubled with the ailment since.—W. GEORGE DUNLOP, St. John, N. B.

I was healed through Christian Science of what some of the best physicians in San Francisco called nervous prostration in its worst form. I was so depressed mentally that the future held out not one ray of hope. My fear was very great, I was afraid to be left alone a minute, so that I was almost distracted when Christian Science found me, three years ago. I had very few treatments, but through these and the study of our wonderful text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, I have been made whole. I have proven that God is ever-present and omnipotent. I am deeply thankful to our heavenly Father for having given us this understanding, and to dear Mrs. Eddy for showing us the way.

MRS. MAY BLAKELY, Ontario, Cal.

In October, 1900, I was attacked with nervous prostration. I also suffered from chronic constipation and indigestion. A physician who was called said that I would have to keep very quiet, take the medicine prescribed, and then I need not hope to be well speedily. I obeyed his directions as nearly as possible, but I grew steadily worse. Sleeplessness, which from the first had troubled me, became almost unbearable. The mental agony at this time was

Digitized by Google

dreadful, and I felt that I could not trust myself, lest I should do something desperate.

The physician changed the medicine several times, but no relief came. After three months' treatment from this physician another was called, and they consulted about the case. They said they could find no physical cause for the nervous disturbance, consequently they did not know what to do. They gave me some sleeping-powder and went away. In the mean time a friend had written asking me to try Christian Science, and I decided that if everything else failed I would try it. When I felt that I need not look to drugs for a cure, I went to Christian Science. The first treatment was a revelation to me; I knew that I had found what would heal me. Previous to this I was unable to sleep more than an hour during the night; after the first treatment I was able to sleep longer and far more peacefully. The constipation and stomach trouble gave way at once, but the nervousness was slower to yield. At first the mental turmoil was so great that I could not read, but after the first treatment I could read a little and after a few days I spent all my time in reading the Christian Science literature. I had two weeks' treatment, and I studied the Bible and Science and Health diligently. I am now free from any physical ailment. I have not taken any medicine since being healed four years ago.

I am thankful for the physical healing, but more than all for the enlarged understanding of God and my relation to Him.—MARY E. SMITH, McMinnville, Ore.

I desire to make a public acknowledgment of the benefits I have received through Christian Science. I was healed three years ago last June. I was a great sufferer for about a year, with pain in my back, extending down through the left groin, which after six months developed into internal hemorrhages, and a general breakdown followed. I employed several of the best doctors I could get in New York, and was told that I had better close my business; that I would not be here in six weeks, perhaps not four, possibly not two. About this time a copy of Science and Health was loaned me, and my wife was invited to attend the Wednesday evening meeting at First Church of Christ, Scientist, New York City. When she returned she said that I had better try to attend the next Wednesday evening, and I did. Soon after, my wife made an appointment for me with a practitioner. In three treatments I was healed. From that day to this I have never had one sign or symptom of the trouble, and have been restored to good health. I am grateful to God, and to Mrs. Eddy.

GEORGE W. MAXFIELD, Bangor, Me.

In Isaiah we find these words, "Say to them that are of a fearful heart, Be strong, fear not: behold, your God will come . . . with a recompence; He will come and save you. Then the eyes of the blind shall be opened, and the ears of the deaf shall be unstopped. Then shall the lame man leap as an hart, and the tongue of the dumb sing: . . . They shall obtain joy and gladness, and sorrow and sighing shall flee away." On the 12th day of August, 1902, I could not speak one word, nor had I talked for over eight years. During that time I never raised my eyes to look at anybody, or at anything. I could not read, I could not write. The next day I asked for help in Christian Science from the Christian Scientist under whose loving care I had been for the previous two years. I asked by means of a sign. She said, "If you wish me to help you, you must read this book," and she gave me "Science and Health with Key to the Scriptures" by Mrs. Eddy. This was about nine o'clock in the morning. I read a few lines, and at three o'clock in the afternoon I said these words, "Praise 'the Lord, O my soul: and all that is within me,' praise God's 'holy name. Who forgiveth all thine iniquities; who healeth all thy diseases.'"

During the first part of my illness I was under several specialists, also day and night nurses. They finally said they could do nothing more for me. I then had Christian Science treatment, but I was too ill to know anything about it. Exactly four months after the day I spoke, I wrote to Mrs. Eddy to tell her what Christian Science had done for me, and to thank her for this interpretation of the life and teachings of Christ Jesus which had made possible the fulfilment of his commandment to heal the sick, and this letter I was able to write without having previously written one word for over eight years. My gratitude to God, and to our Leader, for all that Christian Science has done for me, can only be expressed in my life. I should like now, when telling of my healing, to tell also of the great help I derive from reading the *Sentinel* and *Journal*, and from the daily study of the Lesson-Sermons, and to express my sincere gratitude for them all.

EVA HAMILTON, Kingston-on-Thames, Surrey, Eng.

I have received much help, both spiritually and physically, through Christian Science. I had what the doctors diagnosed as muscular rheumatism, dropsy, and constipation of thirty years' standing. A dear friend whom I had known as an invalid had been healed by Christian Science and advised me to read Mrs. Eddy's book, "Science and Health with Key to the Scriptures." I did so, having a great desire to know the truth. One of my troubles was that I could not sleep. I began reading the Bible and the Christian Science text-book, and troubles of every kind disappeared before I had read Science and Health through. The thought came, What about the old remedies? but truth prevailed, and I took all the material remedies I had and threw them away. That was seven years ago, and I have not had any use for them since. My husband was healed of the tobacco habit of fifty years' standing, also of kidney trouble, by reading Science and Health. I have not words to express the gratitude I feel to-day for the many blessings that have come to our home. My daily prayer is to do some good. I want my life to show my love to our Leader, Mrs. Eddy.—MRS. MALINDA K. OVERMAN, Seattle, Wash.

When I first heard of Christian Science my companions were bottles, pills, and powders. Wherever I went these went with me. I even took medicine because I was afraid I would be sick and could not perform my duties in the schoolroom. How happy I was when I was able to pack my trunk and have not a material remedy in it, but in their place the Bible, Science and Health, and the *Christian Science Quarterly*. To these I have gone for aid in all kinds of discord. The blessings that have come to me through Christian Science are many. I have been healed of catarrh, chronic throat trouble, and many other diseases, also of the great fear of taking cold. Not only have these physical ailments disappeared, but in times of sorrow or trouble the way has been clearer, the trials of every day have been made lighter, and business problems have been adjusted. Never has Christian Science failed to bring help and comfort.—LAURA MYERS, Chicago, Ill.

I should like to tell of the healing of our boy in Christian Science. At the age of two years he had a disease known as tuberculosis of the bone in his knee. We had him under the care of doctors for three long years, and during that time his sufferings were terrible day and night. One day the doctor told us that his leg would have to be am-

Digitized by Google

putated, for he could not live two months in that condition. As he said the boy was "very low," and he would give no assurance that the child would stand the operation, we decided not to have it done.

We had heard something of Christian Science but did not know what it meant, so we called in a practitioner, and after he had told us what Christian Science had done for his wife and children, also for himself, and what it could do for us, we had him treat the child. After the first treatment the child slept all night, which he had not done in months. In one week's treatment he was relieved from all pain. Later we moved to this city, and the boy seemed to grow much worse, his leg being badly drawn up, and an abscess formed which caused intense suffering. We again called a practitioner and the case improved from that on. The boy is now ten years old, and a perfectly healthy, happy child. For this most wonderful proof of what Christian Science can do, we are very grateful, and glad to add our testimony to its healing power.

MR. AND MRS. WILLIAM MULDER, Racine, Wis.

It is three years since I came to Christian Science. My first proof of the power of Truth was the healing of my eyes through the reading of the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. Since that time I have never used glasses. I had worn them for two years, and had suffered all my life with a supposedly inherited eye trouble. My brother, two sisters, and myself used glasses until Christian Science healed us, and now we have not the slightest need of them, for we have learned that the truth makes free. My husband is with me in the study of this healing Word, and even our two little children prove the power of this truth over error. Besides the many physical cures, I rejoice far more in the spiritual uplifting. Where once was fear, lest God would send some evil on me, now all is peace and harmony, for I know that God is Love.

The Bible has become helpful and beautiful since I have studied Science and Health. The Lesson-Sermons and *Sentinel* are priceless. I love all our Leader's works, and prize them more than anything I possess.

Words are inadequate to express my gratitude to God, to the great Wayshower, and to our beloved Leader, Mrs. Eddy, through whose pure and noble life we are led to perceive our birthright.—MRS. MAUDE FARR, San Jose, Cal.

Twice (with the hope of afterwards taking the regular medical course, and becoming a doctor) I tried to take a nurse's training, before I succeeded, as I finally did, through being healed in Christian Science. When I had been in the first hospital thirteen days, typhoid struck me down and robbed me of a year. Then I tried the training again, though the doctors said it would kill me. Their verdicts gave me very little to live for anyhow, it seemed, so I was determined, if I had to die, to meet it on my feet. I stood it for a year and a half, and it was not until after sieges of malaria, quinsy three times, and seasons of heart failure, that I broke down again and was sent home. Though I had lived in the atmosphere of the Church,—my father, grandfather, and great-grandfather, all ministers, my mother a devoted, loving Christian,—and I had prayed and been prayed over always, the time had now come when it seemed as though there was in evidence nothing but an ugly fate that always struck me down just when I was most needed and was about to accomplish some good. Pneumonia, pleurisy, diphtheria, or some such horror would seem to come up under a perfectly clear but seemingly pitiless sky and "take the life out" of me.

After being at home from the hospital six months I was much worse. I had suffered a severe strain and was in constant distress,—"constitution undermined," "nothing left," "heart nowhere," was all the encouragement the doctors had been able to give me,—when, after a night full of the one silent cry for some understanding, Christian Science came to me and I was taken at once to New York. I had spent most of the six months between my bed and the hammock, never free from suffering, and yet, in about two weeks from my first treatment and first sight of Science and Health, I was as well as any one. This was in 1899. I was so taken up with what Mrs. Eddy taught, that I forgot about my body, and when I did think of it again there was nothing there to be healed. I went right back to the hospital and finished my course. I gained twenty pounds in two months, and graduated second in my class.

Later on, from the scene of perhaps the best surgical work in this country, I more thoroughly investigated Christian Science and the way it was put into practice. In 1901 I had a greater experience. An attack of pleurisy had left me with a racking cough that seemed to literally pull me to pieces. I lost rapidly, yet tried to get along without either a practitioner or medicine. I was on night duty in a special surgical hospital in New York, and let things go, because I did not know what to do, until I was in great danger and was made to realize that all that could be done must be done at once. One morning, in the midst of a mental conflict, I said, "I will go anyhow," and went at once to a practitioner. In two weeks or less, while in the very midst of a coughing spell, I became conscious of sudden and most glowing health and joy. I could not cough and from that time there was nothing of it or of any of the other symptoms. With this healing came a clearer, deeper insight and understanding of how to work in Christian Science. Conditions that had troubled me melted. Afterwards problems came up more trying than ever perhaps, but it has been proven that obedience to our Leader's words, "Trust in Truth, and have no other trusts" (*Sentinel*, July 11, 1903), does lead us in the way where we gain more and more of the truth.

Of course I left the nursing and applied myself to the study of Science. In a very short time difficulties drifted away. Work there has been, but the change in me, and in my whole family as well, has been so great and so gladdening, the sense of irritating perplexities and cares has been replaced by such a sense of being free, that no words are adequate to voice our gratitude. There are many errors to overcome, but many have been overcome. When sickness has come it has not lasted. For instance, one day, several years ago, I had a quinsy abscess, and took one treatment. In *materia medica* it was my habit to have these once or twice a year and always the knife had to be used. Before I entered the Christian Science practitioner's office the abscess was too large for me even to swallow fluid; four days old at least, and for two days it had caused hard chills. After the treatment I left the office and immediately forgot all about it. Two hours later I was eating heartily, and it came to me that I had had the quinsy in the morning. There was now no swelling, no inflammation. I had been going about, busy and wide-awake all the time, and the abscess had not broken. It simply was not there, and never has been since.

Christian Science appeals to me largely because it is so sane; also it always demands of us the highest. God will accept nothing less. Always I wanted God—more of God, but there was no rest, for what I was offered in the orthodox church I could not accept. The spiritual haven—the sunshine within for which we have been longing—is that for which I am so grateful. The signs had to follow. It was inevitable. It is impossible to think as Mrs. Eddy teaches and remain sick. There are many cases of healing round about; the number increases, and not infrequently they are instantaneous.

We love our dear Leader, and at every thought of her there comes from a full heart, "God bless her."

HELEN ROBINSON, Hackensack, N. J.

From our Exchanges.

The world waits for the ethical manifestation of the sons of God. Dr. Charles E. Jefferson, in his sermon on "The Church of the Living God," says that the Church has something better to do than the solving of all the great social problems that like so many frogs came up out of the Nile of modern civilization to plague us; that the business of the Church is to set the human heart right. Exactly. But inasmuch as this Nile of modern civilization is a Christian Nile, and these froglike problems so many times spring out of the hearts of men supposedly already set right by the Church, we have a sure evidence, not that we have failed, but that we are not through with our task. To set the human heart right, that is the problem; but this will never be done by crushing the prophet function of the ministry in order to emphasize the evangelistic. The Church is filled with men and women who need ethical training and an enlarged conception of the meaning of Christianity. We are not to be always saving and never teaching; if so, we will never save. We are called to fight as well as to drill. Our superlative need now is a loftier ethical life in pulpit and pew, based on a clear understanding of the fact that character counts most both in heaven and on earth.—*Western Christian Advocate.*

There are not wanting signs, too, that the trend of men's practical energies, as well as their energies of thought and spirit, is changing. They are beginning to grow weary of their triumphs over matter and space in the victories of applied science, and still more weary of successfully "hunting the almighty dollar" and building up huge businesses and fortunes. "Vanity of vanities" begins to be the cry, and men long to strain their spirits to finer issues. Again, they realize that man cannot live by bread alone, still less by gold and gems, and that all the kingdoms of the world and the glory of them do not suffice his God-worshipful inner spirit. He is turning from them to truth and goodness, beauty and virtue, love and service. Principles, ideas, virtues, and graces, possessed and embodied in character and civilization, begin again to be his quest. It behooves every Christian and every Methodist to be in the van of such a movement of the human spirit. REV. S. E. KEEBLE.

Methodist (London) *Recorder.*

Do your work and do it well. No one else can ever do it for you, and the whole universe must await the doing of it by you. Think of it,—God is waiting for you to do that little duty you are just now shirking or reluctantly approaching in timidity. Sometimes we think we will let our own work go and try and manage that of some one else, or our presumption carries us to the point where we would manage even the affairs of God himself. Meanwhile the great universe must wait for us to get around to doing our own little part. It is a great deal easier to talk about international affairs than it is to saw wood in our own back yard. But most of us have a certain pile of wood to saw, and the chances are that we will be kept at it until the job is done.—*The Universalist Leader.*

In the New York *Observer* we find a statement concerning the decrease in the number of candidates for the Presbyterian ministry, and some attempt to show the causes thereof. They are, first, the growing conviction that the work of the kingdom of God can be done as efficiently in any kind of business as in the ministry; second, the growth of the secular spirit and the desire to secure the comforts of wealth; third, the growing conviction that a minister in the Presbyterian church must do all his work before he is fifty years old.

The Christian Register.

How many of us study the life of Jesus with the conscious purpose of understanding him in his spiritual aspirations? We know that he did this and said that, and there we rest. We need to look back of recorded deed and word if we would enter into the holy of holies in the life of the Son of God.—*The Standard.*

THE CHRISTIAN SCIENCE TEXT-BOOK.—"Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing all the By-laws to January 1, 1906, of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CARDS IN THE GERMAN PERIODICAL.—Application blanks will be supplied by The Christian Science Publishing Society to practitioners who wish their names and addresses inserted in the advertising columns of *Der Herold der Christian Science.* These applications should be properly endorsed and forwarded to the Society. The rate for advertisement will be $2.00 for the first line, and $1.00 for each additional line. It is desirable that those who offer their names in this way should be able to communicate with patients and inquirers who speak the German language only.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with The Mother Church and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By Hon. WILLIAM G. EWING.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* **PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

National.

Attorney-General Moody, in a statement which had the sanction of the President and members of the Cabinet, says that criminal proceedings will be commenced immediately against the Standard Oil officials. The statement reads:—

"After full consideration of all the evidence now available, including the report of the Commissioner of Corporations and the evidence taken by the Interstate Commerce Commission, I have reached the conclusion that criminal proceedings against the Standard Oil Company should be begun in certain cases where there appears to have been a violation of the laws regulating interstate commerce and prohibiting rebates and other unlawful discriminations. Accordingly, such proceedings will be begun at once in the appropriate judicial districts.

"These cases are regarded, and will be treated, as of importance, as it seems clear that in so far as the Standard Oil Company has obtained monopolistic control of interstate trade, that control has been in large degree made possible by discriminations in transportation rates or facilities, the discriminations being in some sense in violation of the law, and in other cases, though injurious to the public welfare, not in violation of law, and, therefore, only subject to such correction as may be afforded by the railroad rate legislation now pending in Congress."

Employes of the Isthmian Canal Commission on the Canal Zone will have a regular old-fashioned Fourth of July celebration in Panama. Special excursions are to run to Panama from all points along the Canal for the acommodation of persons desiring to attend the exercises. Money for fireworks has been raised by popular subscription among the canal employes on the Isthmus and in Washington, and Governor Magoon and other prominent men on the Isthmus will make addresses and lend their assistance in making the day a memorable one.

In the United States District Court at Kansas City last week sentence was passed upon the seven defendants recently convicted in that court of making concessions and accepting and conspiring to accept rebates on shipments. Judgments of $15,000 each were assessed upon Swift & Co., Cudahy Packing Company, Armour Packing Company, Nelson Morris & Co., and the Chicago, Burlington, & Quincy Railway. One man was fined $6,000 and sentenced to four months in the penitentiary; another $4,000 and three months in the penitentiary.

With the Carnegie Institute as financial backer, the director of the Dudley Observatory at Albany, a branch of Union University, has begun an astronomical research which will be of ten years' duration and which will include a three-years residence in the Argentine Republic. The astronomer's idea is to examine the stellar combinations from points in both the Northern and Southern Hemispheres, using the same instrument. Absolute accuracy is the goal which it is hoped to reach by this means.

The Eastern Yacht Club has received a cablegram from the Imperial Yacht Club of Kiel, Germany, fixing the dates for the international small boat race off Marblehead. There will be five races, and they will be sailed in the first week of September, beginning Monday, Sept. 3. There will be a race each day from Sept. 3 to Sept. 7 inclusive.

A bill which has passed the House and gone to the President for his signature, increases the appropriation for the militia of several States from one million to two million dollars, doubling the appropriation which each State has hitherto received.

The House Committee on Appropriations has voted a favorable report on the Watson Bill, authorizing an annual appropriation of $50,000 to pay the traveling expenses of the President of the United States and such guests as he may invite.

According to the official stenographers of the House and Senate, the *Congressional Record*, the official report of the proceedings in the House and Senate, will contain for this session about ten thousand pages, or twenty million words.

The House passed the meat inspection bill last week and sent it to conference. By amendments the provision to have the labels dated was waived and the cost of inspection was placed on the Government.

Foreign.

The recommendations of the reform committee appointed to advise upon the best means of giving effect to the proposed reforms in the Congo State administration, have been published in the *Official Gazette* at Brussels, together with the decrees authorizing the reforms. By King Leopold's signature the decrees have *de facto* passed into law. This reorganization is the result of long agitation by foreign agencies. Lord Lansdowne, in 1903, called the attention of the Berlin signatories to the report of abuses in the Congo, and suggested that a special commission of the signatory Powers be sent to inquire into the whole matter. This plan King Leopold rejected, but in September, 1904, he appointed a Belgian commission of three members, and their report was made last November.

The Municipal Council of Rome has unanimously voted in favor of having an international art exhibition in Rome in 1911, the fiftieth anniversary of the selection of Rome as the capital of Italy. A committee has been named to restore the Circus Maximus, the Coliseum, the baths of Antoninus and the Via Latina for the occasion. At the same time the great monument to King Victor Emmanuel II. will be unveiled. An appropriation of 6,000,000 lire ($1,200,000) will be asked, for the purposes of the exhibition, half the amount to be contributed by the city and half by the nation.

For the first time in six hundred years Trondhjem, the ancient Norse capital, on the 19th welcomed its own king. King Oscar was crowned there in 1873, but it has been six centuries since Norway, as an independent nation, installed its monarch there according to the rites of the old Vikings. In 1209 it was Haakon V. who ascended the throne. To-day it was the young sovereign Haakon VI. The Government's electoral programme, just published, declares the intion of Norway to maintain a policy of strict neutrality and arbitration, to develop more trustful relations with Sweden and to lighten the great burden of taxation; to solve the principal social questions, especially workmen's insurance against illness and old age and the perils of the sea.

The house in Florence, Italy, where Robert and Elizabeth Barrett Browning lived is to be converted by his son and interested parties into a museum in which everything pertaining to them may be enshrined. English and American admirers of Keats and Shelley are to purchase the house in Rome in which Keats lived and died, to be made another shrine.

Altogether, from 1862 to the end of 1905, the Government of Italy has granted subsidies to the maritime services amounting to over seventy-five million dollars.

A despatch from Cape Town says that the Government has introduced a new railroad bill providing for the expenditure of $17,500,000 for new extensions.

A despatch says that the Sultan on June 18 signed the Moroccan reforms convention adopted at Algeciras.

Industrial and Commercial.

Exports of meats and meat products from the United States in the eleven months of the fiscal year 1906 ended with May aggregated over $180,000,000 in value, an increase of practically sixty per cent over 1896. The increase is especially noticeable in lard, oleo oil, salted pork, fresh beef and fresh pork. The lard exports of 1905 went direct from the United States to seventy-five different countries and colonies, the largest quantity to the United Kingdom, valued at $17,500,000; to Germany about $15,000,000; to Netherlands, practically $5,000,000; to Belgium, $2,250,000; to Cuba, $1,750,000. Canned beef exportations amount to about $6,000,000 annually. Of the $75,000,000 worth of bacon, ham, fresh beef, and canned beef exported in 1905, the United Kingdom took $66,000,000 worth; of the total exports of meats, valued at $100,000,000, she took $80,000,000 worth.

M. Maurice Franck, a prominent silk raiser of Southern France, has been in Houston investigating the Texas coast country with reference to starting a silkworm plantation. He reports that conditions are ideal, resembling those of France. "Never before have I seen such a combination of satisfactory qualities as I found during a few days' investigation of conditions between Houston and Galveston," said he. He has arranged to send over cocoons and will watch their development through correspondence. Shou'l they turn out all right he will send over other cocoons, and upon their success will depend his attempt to introduce a farm of silkworms on the coast country.

All records between Seattle and Japan have been broken by the steamer Dakota, which reached Yokohama after a passage covering 11 days 20 hours and 35 minutes. The schedule time to Japan is fifteen days. The Dakota and her sister ship the Minnesota are over 20,700 tons gross burthen and are 622 feet in length. They are the largest vessels flying the American flag and the biggest vessels on the Pacific Ocean. Both vessels were built at Groton, Conn., and were sent around the Horn to the Pacific last summer.

The famous Iron Mountain, about eighty miles from St. Louis, at one time the richest iron ore region in the United States, but now exhausted, is soon to be transformed into a vast pasture for the breeding of fine stock. The Iron Mountain Company, a $3,600,0000 corporation which has netted stockholders a profit of $7,000,000, will be dissolved in July with the mutual consent of its owners. The concern was organized forty years ago.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

Christian Science and Health.

To the Editor of the *Morning Post.*

Sir:—There are perhaps few things more difficult than the attempt to express a new truth in language which shall not be open to misrepresentation. It means the rejection of accepted dogmas, the use of unfamiliar expressions, and of a terminology more exact than need otherwise be employed. The human mind, which is inherently indolent, revolts from this. It regards new ideas with suspicion, and precision with positive animosity. It would be easy to elaborate this contention, but a single illustration must suffice, especially as it happens to be peculiarly apposite to the subject of this letter.

Every one knows the spirit in which Renan approached the problem of the four Gospels, his candid predilection for the Synoptic, his fulminations against the Johannine. To-day the patient labor of the great Greek scholars of the last half century is elucidating the fact that there is in the fourth Gospel a vocabulary so distinct and a terminology so exact as to have baffled the great skeptic, and betrayed him into conclusions based on imperfect knowledge. In the light of this warning the critics of Science and Health might wisely stay to consider in what proportion prejudice and reason mingle in their arguments. The perennial platitude that science is antagonistic to revelation is based on a definition of the former term which is frankly arbitrary. When once you have committed yourself to the contention that science is concerned with physical phenomena alone, and that primary causes are in "the domain of unprovable assumptions," you have embarked on begging the question on a colossal scale. You have shut yourself out from experiencing that "science helthe" which in the translation of Wycliffe was to be shown "to his puple in to the remyssioun of hir synnes," and have reduced the promise of Jesus, "Ye shall know the truth, and the truth shall make you free," from the absolute to the relative.

Now between the absolute and the relative there is a great gulf fixed—the gulf which, as one of the greatest of scholars has shown, separates, in the text of the fourth Gospel, the declaration of Jesus, "Every one that is of the truth heareth my voice," from the half sorrowful, half cynical reply of Pilate, "What is truth?" It is this gulf which separates the doctrines of Christian Science from the doctrines of orthodox theology. The fundamental teaching of Christian Science is the absolute allness of God. This necessitates the corresponding admission that matter is unreal, or forces you to accept the illogical and pantheistic premise of the churches that infinite Spirit manifests itself in matter. Christian Science, in a word, is true idealism, idealism shorn of the last shred of dualism and pushed to its inevitable conclusion. It has of course never been denied in Christian Science that sickness and sin have a subjective existence in the human mind. Those quaint reasoners who propose to prove matter real by maltreating it, would do well to remember the contemptuous sentence in which Huxley declared that coxcombs vanquished Berkeley with a grin, whilst common-sense folk demonstrated the reality of matter by stamping on the ground or some such irrelevant proceeding. What is denied in Christian Science is that sickness and sin are of God; are, that is, the absolute and the real. It is insisted, on the contrary, that they are mere negations, the evidence of that mortal mind which is itself nothing but the negative of divine Mind.

Of course, if Christian Science stopped here, with a mere theoretical assertion of the real and the unreal, its teaching would carry no more conviction than that of the idealists who seek to demonstrate the omnipotence of mind in the use of drugs, or the theologians who endeavor to make evil good by fathering it upon God. It is here that the difference between it and other systems becomes so sharply defined. It alone pushes forward to the only possible logical conclusion of a doctrine based on the New Testament, and assumes the burden of proof in the manner demanded by Jesus himself: "Verily, verily, I say unto you, He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father."

Jesus himself came over the Galilean hills and along the Jordan valley, preaching by the roadside that wonderful Gospel, "The kingdom of God is within you." And when the material sense of his hearers revolted from the deep significance of his words, he performed the miracles or object-lessons, bidding his audience if they could believe for nothing else, to believe for the very works' sake. Those, he declared, who believed in him should do the works he did. Those who understood the truth which was to free the world, that is to say, who gained this full, exact knowledge of God, would be able to demonstrate it as all exact knowledge can be demonstrated. The healing which Jesus had taught was carried on by his disciples, or students. It lasted, in some measure, if the Fathers are to be believed, throughout the first three centuries, amidst the roaring of the lions of Diocletian, by the light of the torches of Nero, and only finally disappeared when it occurred to Constantine to wrap the purple of the Cæsars about the seamless dress, and substitute the golden fillet for the crown of thorns. In the centuries which followed, the spiritual perception of Christendom became gradually more and more clouded by materiality. Men continued to preach the Gospel, but the inseparable command to heal the sick was set aside, while the teaching of the Sermon on the Mount was relegated to the domain of unattainable transcendentalism, until at last the human yearning for something better could find expression in the words:—

> Comes faint and far Thy voice
> From vales of Galilee,
> The vision fades in ancient shades,
> How shall we follow Thee?

It was to show that "the healing of the seamless dress" should be present to-day on our English hillsides and in the streets of our cities as it was, almost two thousand years ago, by the shores of Gennesareth and on the Mount of Olives, that Science and Health, the text-book of Christian Science, was given to humanity. For lo, said the great Teacher, in the last words of his that ever fell on human

Copyright, 1906, by Mary Baker G. Eddy.

Digitized by Google

ears: "I am with you alway, even unto the end of the world."

Yours, etc.,
FREDERICK DIXON.

First Church of Christ, Scientist, Sloane Terrace, May 26.

London (England) *Morning Post.*

To the Editor of the *Morning Post.*

Sir:—The standpoint of Christian Science is clearly set forth in Mr. Dixon's letter, which you published on the 28th inst., and however difficult it may be for the average mind to grasp the significance of such teaching it would assuredly appear to deserve serious examination, inasmuch as it is increasingly attractive to many intelligent people in all parts of the world. If it were a mere form of belief its adherents might be left in their happy views, and one would not even "with whispered doubt confuse a life that leads melodious days." But the whole teaching seems to impinge so practically and at every turn on the most serious issues of human life, that sincere persons, anxious to follow the right path, are almost bound to prove such things, whether they be true or not. Besides, it is obvious that from the ordinary point of view extremely embarrassing complications may at any time arise, when, for instance, people have so far left the conventional tracks that they refuse to have medical assistance during illness. For it is quite clear that in the light of this stupendous "revelation"—if it be the absolute truth—all our cherished systems of religion or medicine pale and fade into nothingness. Whilst to the vast majority nowadays such doctrine is mere "foolishness," as it was to the Greeks of old, yet we are assured by many people not unworthy of belief that the axiom regarding an all-loving God is as demonstrable as a proposition in mathematics; in short, that the Q.E.D. can be arrived at as readily in the apparent cure of some bodily condition as in proving the angles at the base of an isosceles triangle to be equal to one another. It must be granted that Christian Science is thorough in its method. There are no half measures in dealing with the unreal phenomena which it represents as having persistently misled us individually and as a race. It would seem doubtful, however, whether many who are "in" Christian Science realize adequately the ultimate significance of its teaching with regard to the continuance of the human race or of the lower animals upon the earth. But there can be no doubt that it means an absolute reversal of all our conceptions, negation of the testimony of the senses, and surrender of nearly everything that has been universally accepted as contributory to the pleasure of living. For the new cult teaches that what we have all been regarding as the deepest instincts of our nature are absolutely unreal, deceptive, even disastrous in their consummation. If this be the true inwardness of the teaching of the Master, and as such the only reliable guide for humanity, then the sooner all the wheels of so-called material progress are reversed the better for our race. Let us get into the right track, whatever be the consequences, if we are certain that the spiritual aspect of things is the only real one. But we are never likely either to run bravely "the race that is set before us" or to reach any goal worth attainment between ungrasped Christian Science and unconfronted mortal fear. Yours, etc.

M.D.

London (England) *Morning Post.*

[The above extremely interesting articles were enclosed in the following letter to Mrs. Eddy's Associate Secretary, Mr. Strang.—EDITOR.]

London, England, May 30, 1906.

Dear Mr. Strang:—I have been wondering whether there is any greeting I could send to our beloved Leader, at this dedication season, which would really add something worthy of the occasion to the mass of congratulatory messages with which she will no doubt be overwhelmed, and it has occurred to me that the two enclosed letters from the *Morning Post*, one of the weightiest and most widely read daily papers in London, which really goes all over the world, would be an indication to her that the Church of Christ is being dedicated in the individual consciousness here in London, and is being manifested in the breaking down of many barriers,—barriers of ignorance, prejudice, superstition, fear.

Some of our friends are on their way to be present at the dedication in Boston, and all, whether present or absent in the flesh, are uniting in the joy of this wonderful demonstration of "Immanuel—God with us," and all recognize the blessing which it has been to be able to take part in its accomplishment. With all kindest greetings,

Sincerely yours,
(MRS.) MABEL S. THOMSON.

From our Contributors.

Spiritually Minded.

REV. WILLIAM P. MC KENZIE.

PEACE is the reward which crowns the effort of those who seek to be spiritually minded, but this peace has no stagnation in it, for it is the evidence of the perfect harmony of Life and its immortal activities.

When warfare has continued to the exhaustion of one of the combatants, and an agreement ends the contest, we call it peace; but, mentally considered, the humiliation of one contestant, and the exultation of the other, indicate no rest of mind, no peace. The resentment which flamed out in carnage and destruction, still burns like the sullen fire in the charcoal-burner's pit. From father to son is passed the legacy of animosity, until it is made to appear that patriotism must be nourished by the vivid and continuous recital of wrongs endured by ancestors. Since the man who would know true life must rid himself of bitterness and resentment, why should he enlarge the task by adding to his own problem the sense of wrongs nursed in the far past by those no longer actors in this drama of existence? Indeed he may also question the advantage of inoculating himself with the virus of strife and contention as found among his contemporaries. The question at issue in a contest is so often unimportant. If it were important, if it concerned the majesty of righteousness or the omnipotence of Truth, then a decision would be easy for the righteous man, whereby his own mind could find rest in adherence to what is true and right. But where a dispute begins with conflicting opinions, and enraged feelings perpetuate the strife and the contention leads to further divisions, it is impossible to find peace on either side. Why? Because each party, desiring support as against the other, is looking for adherents, for persons whose feelings can be worked upon and inflamed into antagonism against those whom they must consider adversaries.

A peacemaker is not wanted in such a case, for he would show the foolishness of the contest, and lead the contestants to Principle, God; and if they followed his leading they would have to relinquish their pride, vainglory, and boasting, as well as bitterness and ill-will, on the way Godward. There is always a way, however, for learning the unwisdom of contention. Two farmers disputed once about the price of a calf, and so sharply that they went to law. Two dollars constituted the basis of this quarrel, which involved other people, who of course took sides. Good friends were estranged, work was neglected, passions were roused, and cruel words spoken, all in a dispute about a matter involving a mere trifle. It cost the losers of the lawsuit twelve hundred dollars in expenses, not to mention time lost, money lost, temper lost, joy lost in

Digitized by Google

the silly strife. What veritably good advice was given by Jesus, "If any man will sue thee at the law, and take away thy coat, let him have thy cloke also." The coat, or cloke, is unimportant compared with harmony. Any jurist will concede that the man is wise who will suffer occasional wrong rather than engage in conflict and tedious litigation, for the enduring prosperity of such a man is sure to amend the temporary loss.

The capacity for strife and division and dispute must be parted with, be displaced by a better capacity, if man would know the joy of being spiritually minded. The philosophy which shows the stupidity of conflict, and reveals the animalism involved in rage and dissension, is not enough. This may leave with one a sense of contempt for those who contend, and contempt and peace of mind cannot dwell together. "To be spiritually minded is life and peace." Carefully and gently Paul had to bring a knowledge of spiritual things to the church at Corinth. They had too carnal, or animal, a sense of life. He says, "Whereas there is among you envying, and strife, and divisions, are ye not carnal, and walk as men?" In his new translation Fenton renders this passage thus, "For when there is rage and strife and dissensions among you, are you not rather like animals than conducting yourselves like men? While one declares, 'I am for Paul,' and another 'I am for Apollos,' are you not merely man-followers?"

The spiritually-minded man is always a God-follower; and Christian Science makes clear to us how we may be "followers of God, as dear children," and how we may "walk in love" as did Christ Jesus, because it reveals to us the ever-presence of God as divine Principle, or Love. The carnally minded judge with the animal sense, seeing only what is visible to the senses—what may yield power, or personal advantage, what pride may gloat upon, what revenge may utilize, what greed may enjoy—and death ends all the power and the pleasure and the glory! The spiritually minded man finds no rest in that which can die or change, because he begins his thinking with God, the producing cause of all that endures and lives because too good to die. He cannot be a partisan, or a man-follower, because he is obedient to Principle, which is above all. He must be loving, kind, generous, and full of good will, even to "the unthankful and the unholy," because he must truly express the nature of that which governs him. But he cannot be involved in distress when others are tumultuous or enraged over what is unimportant, because he knows that the uselessness of the tumult will eventually be discerned. He may lose the temporary regard of his friends because he adheres to Principle and escapes from their solicitations and enthusiasms by keeping undisturbed his sense of the Mind that was in Christ Jesus; but it does not matter what either friends or enemies may say or think of him, if he is blessed "with all spiritual blessings in heavenly places in Christ." While some of those who have identified themselves with the Christian Science movement may hold different opinions as to personal relations and human conditions, we need not be troubled, for there are no differences regarding the Principle that rightly governs man. None question that the revelation of God as Principle has been given, none question regarding the truth or its statement in our text-book, Science and Health, none regarding our Leader, Mrs. Eddy, and her place in the movement. We may always be gladdened and stimulated by the fact that as Christian Scientists we are permanently united in our effort to become spiritually minded, and in our love and appreciation of the Teacher and Leader who guides and instructs us by her own beautiful life as well as by precept and counsel. All grounds of difference are seen to be quite as unimportant as it would be in mathematics to contend over the question of using pencil or crayon in making our computations. However made, if the science of numbers is understood the results must be harmonious because right.

Selected Articles.

Christian Science.

Talking of symptoms, I am greatly interested in the recent case against the Christian Scientists. Without expressing an opinion on a subject of which I am almost wholly ignorant, I am unable to refrain from weighing the pros and cons of this religion in my mind.

On the one hand it seems to me incredible that intelligent men and women (and no one can doubt the intelligence of many members of the Christian Science community) can seriously say that they would call in a surgeon to replace a broken bone but would not call in a physician for a septic wound possibly supervening on an operation performed by the self-same surgeon. Neither can I understand why they should find it necessary to wash a wound with soap and water and dress it with lint and bandages if the wound is merely a disease existent in what they call the mortal mind. On the other hand, I think the outcry against their "cure failures" is unnecessarily bitter and vituperative. A doctor attends a person suffering from a disease, and after constantly treating his patient and giving an endless amount of drugs, the patient very often dies. No one has a word to say against the physician who has failed to cure. Also, it must be remembered that the person who goes to a Christian Scientist has often—I do not say always—been already given up as hopeless by the doctors. As a lover of fair play, I think too much is made of their failures. Moreover, they have, quite apart from the physical, an enormously beneficial moral influence.

I myself know a society woman who has become a Scientist, and who from being heartless and frivolous has grown sweet and unselfish and unworldly to an extent that is positively staggering; and this is by no means an isolated case. The "Science," or religion, or whatever it is called, certainly has the most extraordinary effect on the mind, and who shall dare to say that a science that has grown by such leaps and bounds, and whose followers are many of them men and women of undoubted intellectuality, is the mere charlatanism that physicians and coroners consider it to be?

No one should judge Christian Science as expounded at the coroner's inquest and misrepresented by the newspaper reporter. *Audi alteram partem!* Before condemning, go to their meetings, interview some of the "cures," and then give your opinion for or against. Personally, I have no opinion. I am a person with an entirely open mind.

I have never actually come across a Science "cure" in a case of real disease like cancer, or Bright's disease, or elephantiasis. Neither have I ever come across a cancer cure by a physician, although there are several more or less eminent medical men who not only profess to cure cancer, but who practise on patients who frequently die during the experimental "cure"!—*Vanity Fair,* London, England.

Those who have attended the Torrey-Alexander meetings here in Philadelphia in response to the urgent invitations sent broadcast through the public press, at least have a right to expect that those who address these meetings should know whereof they speak.

Recent references to Christian Science, however, as reported in *The Era* of March 15, show a lamentable ignorance of this particular subject on the part of those speakers who undertake to enlighten the assemblages on this topic. They have assailed it with ridicule and falsehood, and in so doing have ruthlessly trampled upon a most sacred possession; namely, the religious belief of a vast number of enlightened people who are striving to let their "light so shine" that glory may redound to their heavenly Father.

Digitized by Google

Christians generally are glad to see men and women spiritually awakened, and rejoice in the fruitage of a season of prayer and supplication to God for more of the divine presence; but the approbation of fair-minded people is bound to be withheld from a plan of religious campaigning which includes the bitter and senseless denunciation of those who do not conform in every part to the particular scheme of salvation offered. Christian Science has done much to revive the waning faith of many who have sought God in vain. That it has brought surcease from physical pain to many sufferers is an added but none the less essential proof of the divinity of its mission, if we cherish the example of him who said, "These signs shall follow them that believe; In my name shall they cast out devils; . . . they shall lay hands on the sick, and they shall recover."

To classify Christian Science with esoteric magic, hypnotism, and various other *isms*, shows a total lack of understanding of its import. It does not teach deliverance from sin by the mere denial of sin, but by departure from it. It pleads the supremacy of God; urges that under all circumstances evil is overcome and destroyed by good. This is its mission, and the present fulfilment of this mission—even in part—warrants the invitation of its adherents to its self-appointed critics to keep "hands off."

ALBERT E. MILLER.
The Bradford (Pa.) *Era.*

To the Editor of the *Morning Post.*

Sir:—Is not this persistent campaign of scorn and ridicule directed against the religious beliefs of the Christian Scientists becoming distinctly monotonous? Whatever their merits or demerits, they at any rate are never found engaged in such un-Christian-like and uncharitable practices as attacking, jeering, and sneering at other denominations. I am not a Christian Scientist myself, in fact I am a member of the Church of England; I have no particular affection for the Christian Scientists, nor am I beholden to them for anything; but, apart from this vexed question of physical healing, I am absolutely convinced that they, as much as any denomination, are doing their full share of the good work in the world in helping people to lead better lives, and I certainly think that they ought to be given credit for it; and further, as we all benefit by a better world, surely then should we welcome all such workers who are helping to make it so, under whatever name or theories they work.

Let us, therefore, as professing Christians, show a more just and generous spirit than that of always harping on their occasional failures, while remaining perfectly silent on their many successes. What is wanted is to have far less time wasted on talking about religion, wrangling about doctrines; far less of the letter, and much more of the acting of religion in our daily lives, this, after all, being the only true test of the sincerity of our professions.

Yours, etc.,
OBSERVER.
London (England) *Post.*

We are not disposed to enter into any controversy with the Christian Scientists, and while we cannot agree with them on many points, we are not inclined to indulge in harsh criticisms of people whose lives are as beautiful as are the lives of those who live up to the teachings of Christian Science. There are many things which seem to us absurd in their teachings, but they do enthrone love, they eschew evil, as a rule their patience is beautiful, their lives are serene, and they are enthusiastic for the advancement of their cult and the prevalence of their teachings. All this we admire, and admire very greatly. . . . We must respect people who live so thoroughly what they espouse, who are so enthusiastic over their position that they earnestly labor to have others receive the benefits which they claim will come as the results of their theories.

Pacific Baptist Advocate.

From our Correspondents.

Hawaii.

An interesting example of the way the truth of Christian Science will take hold and grow from the seed within itself, making use of whatever means are at hand, is shown in the starting of the work in Honolulu.

A Scientist went there to live who was so young in Science that she had hardly commenced to do her own work. Finding herself twenty-one hundred miles removed from the nearest Scientist (and no cable), she saw at once that she must turn to Principle alone, for help. The test came very soon, and the demonstration was made.

Later, two Scientists from The Mother Church in Boston visited for a few weeks in the Islands, and expressed a desire to meet any one there who was even slightly interested in Science. There was one gentleman in town who had been healed of consumption by reading Science and Health. He was invited to meet them, and also four or five others. These met to study the Lesson-Sermon every Sunday afternoon, and at the second meeting a lady was healed of a chronic trouble considered incurable, through the power of the truth expressed at the meeting.

After meeting for three years in this way, it was decided to rent a room. This seemed a great step to the little company, but it proved a wise one, and they have moved steadily on ever since. The growth in Honolulu has seemed slow, but now it is progressing faster. The Scientists have organized themselves into an association, with by-laws and regularly elected officers, and the business is carried on in an orderly manner. They have often been greatly encouraged and helped by tourists who were visiting the Islands for a few days or weeks. One lady who came an utter stranger to Honolulu, knowing of no Scientist there, was sitting in her room at the hotel when she heard "Shepherd, show me how to go" being sung somewhere near, and she soon found the singer. Her visit of ten days proved a blessing.

Services are held in a very pleasant room in a business block. This room is used as a Reading Room as well as for Sunday services and Wednesday evening meetings, and loving hands have made it attractive with potted palms, curtains, etc. We are buying a piano that was offered us on our own terms the very day we needed it; indeed, experience has shown all through that Love is leading always, and we have only to obey.—MRS. HELEN W. KELLEY.

Southern India.

Tirumangalam, India, Jan. 20, 1906.

I am a poor native of India. Mrs. C. C. Knowles of Corinna, Maine, was so good as to present me with a copy of "Science and Health with Key to the Scriptures," together with some other literature of Christian Science. I am also a reader of the *Christian Science Sentinel* by her kindness. Before I finished reading half of the Bible, I began to realize the truth and the wonderful revelation of this Science, and I quite appreciate the noble work of Mrs. Eddy. I am now going to give it a deeper and closer study. Christian Science is strange to our people and I hope our friends will be good enough to help us by the donation of literature, that its distribution may help the spread of Science among our folks. I am trying to live the truth in the home and to prove to our Indians that there is only truth or good in Christian Science. India is long accustomed to drug treatment, and to eradicate the poisonous habit requires a strong effort. I would be very thankful for the help of friends in my good purpose and endeavor. Mrs. Knowles was also kind enough to give me good advice and encouragement by her letters. I heartily wish for the growth and prosperity of Christian Scientists. I am thankful to the great God for Christian Science, also thankful

Digitized by Google

to Mrs. Eddy for her untiring love and faithful labor for all the world and for all she has done in bringing to mankind the healing truth. Indeed she is the great Discoverer and beloved Leader of the Science movement. I wish also to express my gratitude to my dear friend in bringing this divine truth to an unknown poor Indian family living in the remotest corner of the world. May God help me in my healing works.—R. KOLANDAIVELEE.

The Lectures.

Vineland, N. J.

Judge Septimus J. Hanna delivered a lecture in the Unitarian church last evening [May 24] upon the subject "Christian Science—the Religion of the Bible." He was introduced by Mr. Allan Schley, who referred to the recent tremendous growth among educated people the world over of the Christian Science religion. Mr. Schley also said,—

Our predilections may be life-long and sacredly cherished, our preconceptions may have the permanent stamp of heredity and environment, our prejudices, if you please, may be deep-seated and powerful, but we do not repress free discussion nor bear it false witness. There are, too, the respect and confidence which rest in the statistics of a rapidly growing religious organization of which the churches and societies in our country begin to be numbered by the thousand.—*The Journal.*

Pomona, Cal.

The annual lecture on Christian Science was held in Co-operative Hall on Tuesday evening [April 10]. Rev. Heber Rice, pastor of the Unitarian church of Pomona, introduced the speaker, Clarence C. Eaton, and said in part,—

The truth-seeker is the God-seeker, and all broad-minded persons to-day are searching for the truth for the sake of the truth. I do not share the fears nor the prejudices of those who regard the transformations that are now taking place as being hostile to the interests of mankind by reason of their antagonism to older views. We welcome the truth, from whatever channel it makes its appearance, whether from ancient or modern conditions. Christian Science throws a great white beam of light upon the fundamental teaching that spirituality is the supreme law of life.

The Progress.

Wichita, Kan.

Bicknell Young lectured to a large audience at the Crawford Theatre last night [May 17]. He was introduced by former Governor W. E. Stanley, who said,—

We are living in a great country and a great age. We are less interested in our own opinions and more tolerant of the opinions of others. The world is growing broader and more liberal all the time. We are now sometimes willing to admit that the other fellow may be right. The people of Wichita and Kansas are tolerant and always ready to give audience to any person who has a message to deliver. The gentleman on the platform this evening has a message. He is sent out with authority from his church in Boston. We are met here to hear him give a reason for the faith that is in him. The world is getting farther and farther away from creeds, sects, and denominations and desires only to know the truth. The audience will be concerned in the message to-night to know whether it is true. If it is so, I am satisfied they will accept it. I now take pleasure in introducing to you Bicknell Young of Chicago, who will deliver his message.—*Wichita Eagle.*

St. Joseph, Mo.

Rev. Irving C. Tomlinson delivered a lecture on Christian Science in Tootle Theatre yesterday afternoon [April 13]. Attorney Hugh C. Smith introduced the lecturer, saying in part,—

Doubt and opposition have met every new theory, every new invention, since time began, or that history records. Wars, rebellion, bloodshed have often followed the announcement of some new doctrine of government or religion, the tendency of the human mind being toward the retention of present forms of government, of present religious creeds, of present methods, social, commercial, and political. So the followers of that faithful, untiring, and beneficent soul, the Rev. Mary Baker G. Eddy, are opposed by the sneers and the jeers of those who have no tolerance for the opinions of others.

The speaker may not be able to convert us to his way of thinking, but in the countenances of this intelligent and attentive audience I can see evidence of a desire for truth, and firmly believing that such you have, leaving to each individual to determine for himself or herself when that truth is found, I have the pleasure of introducing to you Rev. Irving C. Tomlinson of Concord, N. H., who will speak to you of "Christian Science."—*St. Joseph Gazette.*

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

[From the *Concord Evening Monitor*.]

Greetings.

ALLOW me to say to the good folk of Concord that the growth and prosperity of our metropolis cheer me. Its dear churches, reliable editors, intelligent medical faculty, up-to-date academics, humane institutions, provisions for the army, and well-conducted jail and State prison—if, indeed, such must remain with us a little longer—speak for themselves.

Our picturesque city greatly needs improved streets. May I ask in behalf of the public this favor of our city government; namely, to macadamize a portion of Warren Street and to macadamize North State Street throughout?

I am pleased to see Professor Kent's homestead freshly thriving and to have its occupants again for neighbors.

Sweeter than the balm of Gilead, richer than the diamonds of Golconda, dear as the friendship of those we love, are justice, fraternity, and Christian charity. The song of my soul must remain so long as I remain. Let brotherly love continue.

I am sure that the counterfeit letters in circulation, purporting to have my signature, must fail to influence the minds of this dear people to conclusions the very opposite of my real sentiments. MARY BAKER EDDY.

Pleasant View, June 20, 1906.

Amendment to By-law.

ARTICLE XXVIII.

CHURCH MEMBERSHIP.—SECT. 14. Neither the Pastor Emeritus of The Mother Church nor Christian Scientists shall teach or treat Roman Catholics except with the written consent of the authorities of their church. Teaching and healing are separate departments. If you cannot heal without teaching said patients, abstain from doing either.

By Way of Appreciation.

WE think that all our visitors during the past three weeks will gladly concur in the acknowledgment made by one of them to a reporter for the *Boston Transcript*, for there can be no question about the generous welcome extended to our friends by the people of Boston. We have heard on all sides similar expressions of satisfaction, and on behalf of the Christian Scientists of Boston we extend our thanks to all who have contributed to the comfort of our brethren.

We copy the following from the *Transcript*:—

"One of the Western visitors expressed the satisfaction which the Scientists in general feel at the way they have been received by Boston folk. He is Holmes Hoge of the First National Bank in Chicago, who is the head of a family of Christian Scientists.

" 'Christian Science is growing rapidly in the West,' he said, 'but nowhere are there to be found evidences of greater growth than we see on every hand in its home city, Boston. The very deference shown us by your street-car people, by the police, by restaurateurs and hotel-keepers—all, indeed, vying with each other to make our stay comfortable—show us that there is good in it which is not found in every institution, nor perhaps paralleled in any.'

"Mr. Hoge also expressed the general pleasure at the manner in which the Boston newspapers had reported the series of meetings, both at the generous space accorded for detailed reports and at the general tone of the reports."

We are glad that Mr. Hoge included the newspapers of Boston in his appreciation. They certainly displayed great enterprise in the extended reports which they gave of the different services and meetings, and that these reports were appreciated by our people was proved by the large number of papers mailed to interested friends.

It seems to us, however, that one of the most significant facts in connection with the reports of this gathering of Christian Scientists was the eagerness with which testimonies of healing were sought by the newspapers, and the respectful attention given to these testimonies by persons to whom Christian Science is, as yet, "an unknown quantity" was quite impressive. A great deal of space was devoted by the press to full and accurate accounts of the Wednesday evening meetings, but even before these great meetings were held the published reports of the services and meetings which occurred earlier in the week were largly interspersed with accounts of healing, and almost every person interviewed by the reporters was asked to tell of experiences which would prove the curative effects of Christian Science. This recognition of Christian Science as a religion of deeds rather than of words is also a recognition of the reason for the rapid growth of the movement.

ARCHIBALD MCLELLAN.

Regarding Patriotism.

THE essential of every manifestation of true loyalty is adherence to Principle, and every lesser sense of it invariably leads to selfishness and illiberality. All who have proved worthy the name of patriot or hero have stood for truths which are universal in their scope and their beneficence. They have championed a world-righteousness, an ideal brotherhood.

Much that passes for patriotism demands a stage, opportunity for exhibition. It appeals to the galleries, is impulsive, sometimes foolishly brave, always cheap. It breeds sectarianism, pays tribute to the mistakes of past generations, fights for dogma, covets martyrdom, resists progress, makes the broad-minded weep.

Boswell credits Johnson with the famous statement that "patriotism is the last refuge of scoundrels," and it is clear that he was right when we understand that he referred to that partisanship which is the very antipode of patriotism, and whose end is serfdom to corrupt leaders. If Christian men were but loyal to the larger and nobler ideal and interest; if they were always willing to see and promptly disapprove the narrowness and shortcomings of their own clan or party, how surely and how soon the demoralizing factors of social, political, and business organizations would feel the rebuke and shrink before it. Protest against evil, and the support of good, without personal or party discrimination, is essential to the moral health of the individual, of the community, and of the State.

This loyalty to Truth is essential in our religious associations as well as in our social and political. Through line upon line and precept upon precept, Christian Scientists are coming to realize that fealty to God is determinative both of their worthiness and of their success in the ministry of healing. Here, too, selfishness and ambition may tempt us to secure ends otherwise than through spiritual demonstration; but above their mesmeric appeal the patriot—he who is truly loyal to God, to our Cause, and to its Leader

Digitized by Google

—will hear her wise and loving urgency, "Trust in Truth, and have no other trusts;" and hearing, he will obey.

Manifestly the quality of patriotism is determined by the elevation and comprehensiveness of its ideal. If we are true to Principle, we can but be loyal to its idea, and, conversely, as no one is prepared to solve the simplest problem of mathematics unless he is true to its basic and all-embracing law, so no endeavor to be true to friends or to any least undertaking has promise of achievement or satisfaction unless this fealty is embraced in our loyalty to God and is dominated thereby. This is the distinctive teaching of Christian Science, that continuous and unswerving devotion to Truth, and this alone, conditions and consummates all worthy service for self and for our fellow-men. The man who is true to his country will be true to the best interests of his State, his city, and his neighborhood, and he who is loyal to God will be loyal to his least obligation and opportunity to serve his brother-man. The greater determines the less, and this gives the first commandment its primacy and supreme significance.

True patriotism is an individual affair. It expresses an inner attitude, is a being something; namely, the reflection of divine Truth and Love. He who in every hour and every undertaking is thus linked to the highest ideal acts ever upon the highest authority and can afford to be patient and cheery. However delayed the triumph of his cause through human conditions, he knows in whom he has believed, and no experience can disturb his confidence, his enthusiasm, or his peace. JOHN B. WILLIS.

A Vital Faith.

IT is not strange that the coming together of such large numbers of Christian Scientists at their annual Communion and the dedication of the Extension of The Mother Church of Christ, Scientist, should have aroused much interest and called forth much comment. Even where such comment was not wholly friendly, the admission was made that Christian Science undoubtedly stands for a marvelous quickening of faith in God and in man's spiritual possibilities. There are, however, some who contend that people should accept this admitted good without accepting Christian Science; quite forgetting that it is just because people have failed to find elsewhere the way to a vital faith, with its accompanying strength and peace, that they have come to Christian Science. As in the first Christian century, former religious concepts are given up because of "the weakness and unprofitableness thereof;" and because that now as then so many find in Christian Science "a better hope;" "by the which we draw nigh unto God."

The tremendous practical significance of thus drawing "nigh unto God," and receiving therefrom both physical and moral healing; is, strange to say, overlooked by many professed Christians and students of the Scriptures. They wholly forget the one all-important fact, that the adherents of Christian Science are such because of benefits actually received, and in most cases after help had been sought in vain through material means. Those who have been healed in Christian Science can therefore afford to smile at the statement that in Christian Science the body is denied or ignored, when they know that on the contrary it is brought under the government of Mind and becomes responsive to spiritual law. It is true that they no longer submit to the tyranny of material sense, which would make body the master, but in the ratio of their understanding of Christian Science they demonstrate the supremacy of Mind, God, with the result of a harmonious body and the unfoldment of strength and endurance unknown before.

The writer recalls an experience, prior to her acceptance of Christian Science, in which she sought the aid of two well-known clergymen on behalf of one who was very ill. She was encouraged to do this because of their sermons, in which the power and goodness of God had been most eloquently brought to the attention of their hearers. From each, however, she received the same answer to her appeal; viz., that this desperate case was clearly one for the doctors, not for ministers of the gospel. This appeal had not been made until the case had been declared hopeless by physicians, and though pity and regret were expressed, the statement was made that the way of Christ Jesus was no longer available for suffering humanity. Later, she learned from an erstwhile agnostic, who had experienced the truth of Christian Science, that all the good of the Master's ministry is as truly available to-day for human need as in his time, and she herself was soon enabled to prove the correctness of the statement.

Because of their false views of God and man, of Mind and body, mortals are in the most awful bondage to sin and sickness, concerning which Christ Jesus said, "And ye will not come to me, that ye might have life;" but Christian Science brings both the sinful and the suffering to the Christ for healing, and with the healing comes a new sense of being and its infinite possibilities. From our text-book, Science and Health by Mrs. Eddy, we learn that Life is spiritual, not material, and that the spiritual includes all that is real, good, and permanent. A new meaning is thus given to the poet's prayer:—

O for fuller life we pine,
Let us more receive of thine;
Still for more on Thee we call,
Thou who fillest all in all.

ANNIE M. KNOTT.

Letters to our Leader.

Montery, Mexico, June 10, 1906.

Beloved Leader:—"To those leaning on the sustaining infinite, to-day is big with blessings." How rich, how fraught with infinite meaning are your wondrous words to us this memorable day! An anthem of praise and thanksgiving wells up in my heart to God, for this manifestation of His loving mercy and goodness to His children. "Thou in thy mercy hast led forth the people which thou hast redeemed: thou hast guided them in thy strength unto thy holy habitation." I desire to express to you this day, heartfelt congratulations, my loving recognition and appreciation of your beautiful, consecrated life, that you were so responsive and attuned to the Master's call, that you heard "the still, small voice," and by divine inspiration were enabled to resurrect this truth from its grave, and present it to the world in such purity and simplicity, that the little child can demonstrate its healing power.

Unable to be in Boston to-day with the eager, grateful multitude, still I am in unity with them in worship and communion with God in the magnificent new temple dedicated and consecrated to Him, as a monument to Truth, a grateful testimonial of the healing power of the Christ, also a loving tribute to you their revered Leader. This "prayer in stone" means more to the loyal Christian Scientist than stately architecture and beautiful adornment. It is "the structure [in individual consciousness] of Truth and Love" (Science and Health, p. 583), that will always send forth a message of hope and cheer to the weary, and inspire constant endeavor to fulfil the command: "Be ye therefore perfect, even as your Father which is in heaven is perfect."

Five years ago I became interested in Christian Science in St. Paul, Minn., through a dear friend from New York. I have never had class instruction, still God has taught and led me through His loving guidance, and with the study of your wonderful book, "Science and Health with Key to the Scriptures," the Bible has been opened and revealed to me as never before. I was healed of asthma, a chronic trouble of eighteen years' standing, and a malignant disease that kept me a prisoner for four months in my room. I was under a wise and loving practitioner's care for several

Digitized by Google

weeks and was benefited. Having to leave the city permanently, she advised me to work out my own salvation with God's help. I was enabled to go on more courageously, through the long, weary, suffering months, battling with what seemed a terrible reality, and with that effort harmony began to be manifested. My eyes were opened to the falsity of this suffering, the living God became almost a tangible presence, and God's "unspeakable gift" was mine.

Easter morning found me free from that false claim,—renewed in mind and transformed in body. I was enabled to attend church for the first time and unveiled, although all manifestation did not leave for several weeks, and there was a slight return a few months later. To-day my health is perfect, and I am a living witness of the healing power of Truth as taught in Christian Science. Following this demonstration, inside of a year my husband, two sisters, and a niece became Christian Scientists. God has richly blessed me in helping and interesting others.

The 12th of March of this year we came to Mexico from New York, where I was a member of Second Church of Christ, Scientist. My first church home was First Church of St. Paul, Minn. So far as we know, we are the only Scientists here.

Set down in this wilderness of false beliefs of man's imperfection, dishonesty, poverty, lack, etc., "I will fear no evil." The consciousness of Truth and "Love's protection" is my blessed possession, and will always be my "pillar of fire" by night and "pillar of cloud" by day.

My earest desire is that I may be so uplifted, so conscious of my unity with God that I may draw His children to me, and lead them out of darkness and their bondage to false beliefs. Striving to live more faithfully according to God's law and to be obedient to your wise and loving counsel, I feel confident God's will and work will be made manifest to me. My immediate environment answers to the Biblical description of the land of the pomegranate, fig and palm tree: the "mountain top" is always in view, as there is a magnificent range in the rear of our home, apparently a few blocks distant; and when the work in "the valley" seems discouraging, I have but to raise my eyes and receive an uplift and inspiration to more consecrated thought and endeavor, as it all speaks to me of God.

Thank you, dear Leader, for your loving and tireless work in the world's behalf, and may God's richest blessing and abiding peace crown this day's fruition of your labor.

Faithfully,

GRACE W. FAIRCHILD.

Fairbanks, Alaska, April 16, 1906.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader and Guide:—Just a word of love and gratitude from within the Arctic Circle.

In a little log-cabin in Fairbanks (probably the most interior town in Alaska) Christian Science services are held every Sunday. At our first service (September, 1905), including both Readers and a little girl, there were just seven present, but we have steadily grown, and yesterday there were thirty-five.

After the services yesterday we held an informal meeting and decided to forward to the Building Fund of The Mother Church our love-offering of one hundred dollars, and to trespass on your valuable time just to say that your loving care and tender influence is being felt all through this northern country.

With hearts full of love and tenderness, we are

Yours in Christ,

THE CHRISTIAN SCIENTISTS OF FAIRBANKS, ALASKA.
ELLA R. PARSONS, *First Reader.*
ROBERT W. TOMPKINS, *Second Reader.*

Testimonies of Healing.

I was healed by Christian Science seven years ago. I had suffered for eight years with what eighteen physicians pronounced a cancer in the breast. Eight of these physicians were specialists. All but one told me the only thing that could be done was to have an operation. Our old family physician begged me to put off having the operation until it was absolutely necessary, as he said it was a stone cancer and of slow growth, and he would tell me when it could not be delayed any longer; which he did, and then told me there was no time to lose. I went to New York City to see a cancer specialist, and was there examined by two physicians. They told me there was no help for me but an operation, and also told me it would be of great extent and very serious. I then returned home and decided I would live as long as I could without an operation. The growth continued and the suffering was something which no tongue can tell. About this time my husband had business in California and we went there to live. I hoped to feel better with the change of climate, but after a few weeks I grew worse very fast.

This was my condition when a friend in Hornellsville, N. Y., wrote me a letter and advised me to try Christian Science. If I decided to take treatment, to telegraph to her, and she would put my case in the care of a Christian Science friend in Philadelphia, Pa. It took so long for letters to come and go, that I telegraphed the answer—"Yes." I had treatment two or three weeks before I saw much of any change; then the pain stopped so quickly and entirely that I was frightened, for I had not been free from pain one moment for so many months. Then the kernels began to disappear, the muscles grew soft and natural and lost all their soreness, the cancer grew smaller and finally all disappeared. I have been a strong and perfectly healthy woman ever since. At the time of my healing I was living in the mountains of California and my practitioner was in Philadelphia, Pa. I speak of this that others may know what wonderful healing is done through absent treatment.

I can never express my gratitude to God, and to our dear Leader, Mrs. Eddy.

MRS. MELISSA HOFFMAN, Hornellsville, N. Y.

I have much pleasure in giving my experience of Christian Science, of which I have known for three years. I first saw it mentioned in a London paper, where a man stated that he had been healed through its agency. I wrote to the editor, asking about it, and my inquiry appeared in the next issue, with my address, which brought me a reply from a Scientist in Durham, directing me to the Christian Science Rooms in Edinburgh. I live about twenty-five miles north of Edinburgh, but I went in to a Wednesday meeting, for the first time. It impressed me so much that I asked for treatment right away. I had been a sufferer from defective eyesight (having worn glasses for three years), and also from neurasthenia of seven years' standing. I am glad to say that I was able to do without eyeglasses after a month's treatment, and although my other trouble was much longer in departing, it was at length overcome through Christian Science treatment and study. I used to have a nervous sense of fear that was always with me, which was most depressing, and life seemed scarcely worth living, but I am now relieved of this nightmare and rejoice in a sense of freedom which I never had before.

For all these blessings I am very grateful to God, and also to Mrs. Eddy, who has shown us the way to Truth.

LAURENCE KIDD, Kirkcaldy, Scotland.

For a number of years I had been troubled with sore throat, enlarged tonsils, and frequent attacks of laryngitis.

Digitized by Google

I consulted several eminent medical men and specialists, the latter recommending various remedies,—inhalers, etc. I was told not to go out of doors when it was wet, and to avoid speaking. I followed these instructions faithfully for six long years. Besides this, I was laid up two or three times in the year with an attack, more or less severe, of inflammation of the eyes, during which time I could do nothing but remain in bed, as I could not open my eyelids for two weeks. Two and one half years ago I had a very severe illness and was ordered to the country as soon as possible. I remained away for eight weeks. Getting no better, and in despair, I said to a friend who is a Christian Scientist, "I will try Christian Science."

It is now over two years since I applied to a practitioner in Manchester and had a fortnight's treatment, and I am happy to say I have had no return of either of the illnesses which I have mentioned. I am indeed grateful to the revered lady who has given us such a new view of Life and being and who has awakened in us, through the teachings of her book, Science and Health, a consciousness of divine Love, who is ever-present and all-powerful. This knowledge has cast out all gloom from my experience. My present state of health is excellent; I have never felt better or happier.

I may further mention that since my own healing and acquirement of a slight understanding of Christian Science, the general health of my family was never better; but three months ago, during my absence from home, a virulent, infectious disease—diphtheria—attacked two of my children. I am glad to say, however, that under prompt treatment in Christian Science one child was healed in three days and the other in seven days, whilst the rest of us escaped altogether. For this demonstration of the ever-readiness of our heavenly Father to heal all our diseases I shall ever praise His holy name.

MRS. M. E. STEPHEN, Liverpool, England.

I was troubled for over two years with my throat, and had a constant cough and hoarseness. I was treated by a physician who said that a very serious condition of the throat existed, and he undertook to burn it out. In the spring of 1904 I seemed to grow worse. I could not speak above a whisper and sometimes not at all. My brother became alarmed and told me of a lady who had lost her voice and finally died. He called on a doctor, and after explaining my condition, asked him what he could do for me. This doctor said that it was consumption of the throat and that he could not do anything for me, as it had gone too far.

In the mean time, my wife, who is a Christian Scientist, had written to her father for treatment for me, and in less than two weeks my throat was better and I have not been troubled with it since. I am in perfect health and have been since that time.—CHARLES RITCHEY, Altoona, Pa.

About twelve years ago, when going downstairs, I slipped down two steps at once, which threw me heavily on one heel, dislocating several bones in my foot. It was very much swollen and very painful and I was not able to step on it. I walked with crutches and had medical treatment at home for eighteen months, with very little improvement. I then went to an eminent physician in Philadelphia, who gave me a support to wear in my shoe, to keep the bones in place. I could not step on the foot without the support, and had to bathe it several times every day with alcohol. Some years after this I met a lady who was a Christian Scientist, and as I was in a wretched condition, both mentally and physically, I asked for treatment. I had other ailments besides the trouble with my foot. The practitioner told me it was not necessary to wear the support, so I discarded it at once. My foot was made well and I never needed the support afterward. The other ailments—stomach trouble, insomnia, and astigmatism—were overcome in three weeks.

VIRGINIA BABCOCK, Hollidaysburg, Pa.

When I first heard of Christian Science, I had been an invalid for several years, suffering from nervous prostration and organic difficulties which all available material means had failed to relieve. Continued treatment from specialists in Baltimore and a surgical operation being of no permanent benefit, I spent four months at the Johns Hopkins Hospital, where I had two more severe abdominal operations performed. The doctors and nurses were very kind and sympathetic, but like former experiences, the benefit was not lasting, and I became worse than ever before, other organs becoming affected. Another operation, more dreadful than the others, was planned for, but was prevented by my weakened condition when I reached the hospital, and I returned home with no hope of further human aid.

A few months later I learned of Christian Science through a copy of the *Journal* sent me by a friend who knew my need. I became interested, and had absent treatment from a practitioner who patiently and lovingly helped me to gain an understanding of Truth, and with it my freedom. The healing was slow, but the gain was more than worth the time and effort. As the old errors disappeared, one by one, and I was able to resume active duties, I was very grateful, as I was also for the ability to use my eyes as much as I wished without glasses, after a few weeks' treatment, when I had worn glasses eleven years. By far the greatest blessing, however, has been the spiritual uplifting which has come with a better understanding of God and man's relation to Him. I am very grateful for the help of the Bible Lessons, also the *Sentinel* and *Journal*, and recently, for church membership. I trust that my gratitude to God and to our Leader may express itself in a more consecrated life.

LILLIE E. SCOTT, Pocomoke City, Md.

My attention was first called to Christian Science about five years ago. At that time I was very antagonistic to it and would not listen to its teachings. I have since regretted the hard things which I said while still in ignorance of this healing religion and I wonder how I could have been so blind. I had many a severe lesson before I was prepared to accept the truth. Some three years later my daughter had appendicitis, and after being treated by a doctor for two weeks, with no apparent improvement, we were told by him that there was nothing left but an operation, which might not be successful. We then resorted to Christian Science, and in five treatments she was perfectly well. During this time I purchased a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and began to study in earnest, taking up the Lesson-Sermon daily.

In February, 1905, my entire family, consisting of my wife and five children, the latter being from thirteen years old to a baby of nine months, was stricken with small-pox. I was the only well member of the family and upon me devolved the entire work of the household as well as the care of the sick ones. Our case was duly reported to the Board of Health, and we were quarantined, but the services of the physician were declined. He was informed that we would depend upon Christian Science, but I invited him to call as a friend whenever he chose to do so. Our home is on a farm four miles from Pewaukee, Wis., and so great was the opposition to Christian Science in our neighborhood that I could not get any one to communicate for me with my sister, who is a practitioner in a city twenty miles distant, and for two weeks I handled the case as best I could with my small understanding. I realized then as never before that God is our only help. I studied the Bible and Science and

Digitized by Google

Health every day and cared for the sick ones to the best of my ability. Finally, when their condition had become very alarming, I prevailed upon a neighbor to telephone my sister and inform her of our trouble. She immediately took up the case, working all night, and at midnight the fever had left the patients, and the next morning every one was up and dressed. From that time on they continued to improve steadily, until, at the end of sixteen days, they were perfectly healed, although it was not until about ten days later that the Board of Health would remove the quarantine. One remarkable thing about this healing was that no marks or scars were left as a result of the disease. Being then fully convinced that Christian Science is the truth that Jesus taught and practised in healing the sick and sinful, I decided to withdraw from an orthodox church of which I had been a member all my life, and I am now attending Christian Science services at Pewaukee.

Both my wife and I are very grateful for all the blessings which have come to us through Christian Science. I feel that this testimony is but a feeble attempt to express my gratitude, and my only reason for giving it is to help those who may read it to a knowledge of the truth.

CHARLES DOPKE, Pewaukee, Wis.

During the early months of 1904 I had frequent attacks of violent pain, which lasted some hours, leaving me prostrate for days after. During one of these attacks, which was more severe than usual, my son sent for a physician who had attended us since 1900. He pronounced me to be suffering from stone in the kidney, to which he said I would always be subject unless I had an operation. I, however, decided to try Christian Science. I think I had on the whole about three weeks' treatment in Christian Science and I read Science and Health diligently. I am perfectly healed of this trouble. I have taken no medicine and am in better health than I have been for years.

MRS. H. R. FEARNSIDE, Boston, Mass.

Nearly eight years ago, after the reading of a *Christian Science Journal*, I was enabled to lay aside glasses which I had worn for over four years. Following this I read the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, from which I received such an uplift of thought, and such understanding, that I seemed to be made over anew. From a sense of languor and weakness I felt strong and well, and able to do my own housework with comfort, whereas before I came into Christian Science this seemed almost impossible.

Two good physicians had said I never would be very strong. For over two years prior to my coming into Christian Science I had to take some laxative medicine almost constantly, but this was no longer needed. I had been treated for my eyes by two specialists. They both pronounced it a severe case of astigmatism and said my glasses would have to be changed every year.

About five months after the specialist fitted me with glasses, I laid them aside and have never used them since. I can do fine sewing such as lace work, and read all I please without the slightest inconvenience. When the specialist found I had taken off my glasses, and why, he said that of course God does the healing, but He intends us to use means. He also said that if I persisted in going without my glasses I would ruin my eyes, and that I would be very glad to see him again; but I can truthfully say I have never needed to see him or any other oculist since.

MRS. C. H. PERRY, Sussex, N. B.

When ten or twelve years of age, I was taken with a severe attack of whooping-cough, which afterward led to lung trouble. After doctoring for five or six years, I was told that my only help would be a change of climate. Following the doctor's advice, we left the South and went West, where for a time I was better, but soon became worse again. Up to this time I was so weak that I could not sit up the whole day, and I was constantly under the doctor's care. Up to 1892 I had not heard of Christian Science, as I declined to read anything on religious subjects. The doctors told me that my lungs were so bad that I could not live much longer, and while I lay there, thinking that my end was near at hand, a neighbor came in and asked why I did not try Christian Science. I answered that the doctor said I had to go, but I consented to have her call a Scientist. When the practitioner came I soon had a very changed thought. She told me of what Christian Science had done for others and what it could do for me. I was healed in two treatments. This was in 1892. I am now a well and healthy woman and am able to do the hardest kind of work without any return of the old symptoms.

I cannot be too thankful for Christian Science, and to its Discoverer and Founder, Mrs. Eddy.

MRS. M. L. ADAMS, Seattle, Wash.

Five years ago my view of life was very distorted, yet I longed to be healthy and happy, and I prayed that I might be changed. I went to physicians and surgeons, tried medicine and climate, hoping thus to bring about a physical change. I went to church, read the Bible, and consulted ministers, trying to find spiritual sight; but alas, there seemed no diminution of aches or pains, or dissatisfied mental conditions.

One never-to-be-forgotten day I met a lady who placed in my hands that wonderful book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. Since then the truth has been working a change from day to day, the light comes to me more clearly all the time. Disease has given place to health, doubt has disappeared and been replaced by conviction and understanding, and how great is the joy of knowing God aright, of knowing that man is His reflection! That I may daily reflect more of Truth and Love is my prayer.—LIZZIE HALYARD, Joplin, Mo.

In February, 1885, I was instantly healed, through Christian Science, of what a physician, under whose treatment I had been for six months, called incurable uterine cancer. Prior to that time we had employed different doctors, who differed in their diagnosis, but all agreed that it was a trouble which could not be healed. The last physician whom we employed was from the women's hospital in Chicago, and she advised me to go to the hospital, at which place I was to remain a year, provided there was a possibility of getting help, but no hope of recovery was held out to me. To my husband they said it was only a question of time, for I could not live. At this crisis Christian Science came to our rescue through a workman who came to our home to attend to some plumbing, and seeing my sick condition he advised me to try Christian Science, saying he knew of some remarkable cases which had been healed by it. We grasped at it eagerly, although we had very little money left—all had gone for medical treatment. The day when I received my first treatment we threw out five bottles of medicine which had been filled that morning, and that was the last I ever took, now twenty years ago. When the first treatment was given the pain in my head was so severe that I could not hold it up, but by the time the treatment was finished the pain had nearly disappeared. When my husband came home in the evening he found me preparing the supper, and the next day I walked two miles without pain or any difficulty, and I have been able ever since to walk with perfect ease.

The healing impressed me so much that I began to question at once as to the method, and I have been a student of Science and Health ever since my first introduction to it. Although I was instantly healed, I took treatment for eight days. Words fail to express our gratitude to God, and to Mrs. Eddy, through whom this Science has been given to

Digitized by Google

the world, so that all who will may be healed physically, morally, and spiritually.

MRS. CLARA GROPP, Bloomington, Ill.

At the age of sixteen years I had what was at that time called phthisic. As I grew older this disease became worse, and my parents tried various remedies and employed doctors, but I received no permanent help, not even relief. I became very weak and very much emaciated. Bronchitis and nervous dyspepsia developed, which became very alarming. I was so sick that I could not even swallow water without nausea, and the little food I ate seemed to produce excruciating pains. Soon there followed another affliction, which the doctors pronounced spinal headaches. These I had about nine years, the attacks coming on at intervals, each time being more violent, until they seemed unbearable. Besides this I had female weakness that was very severe.

During all these years I tried the skill of eleven physicians. The last doctor said that I could not live through another such attack, and he advised me to write my will. I then began making preparations to die, even to getting my grave-clothes ready. I felt the symptoms of another attack coming on, but at this time a lady asked me to try Christian Science, since all else had failed. I asked if I would have to give up all material remedies, and said I could not do that, as they were my life. She replied that in God was my Life, and after a few moments I concluded to accept help in Christian Science. I took my first treatment in the evening, and next morning I discovered, to my great surprise, that my breathing was entirely normal, and not only so, but that the bronchitis, the dyspepsia, and the spinal headaches had disappeared, and I have had no return of any of those troubles since.

For thirty-nine years I was under *materia medica*, and I was cured in Christian Science in three days. Words fail to express my gratitude to God, and to our Leader, Mrs. Eddy.—EMMA BROUN, Cleveland, O.

Before I knew anything of Christian Science Mind-healing I used to be afraid of God, but now I love Him. I suffered for years from an internal trouble which caused me much inconvenience and gave me a great deal of pain. I attended two of the best hospitals in London, and had several doctors, but received no benefit from them, so I gave up, thinking I should never be healed, but through this wonderful truth, and the knowledge gained by the study of "Science and Health with Key to the Scriptures," I am to-day perfectly well, and I am truly grateful to Mrs. Eddy for teaching me to know God's truth. I cannot sufficiently express my gratitude to God for all the blessings I have received.

One Saturday evening I cut my hand very badly with a rusty tin, and my husband told me it would cause blood-poisoning, but I told him that God would care for me, for He is Love; then I took Science and Health and worked for myself, after washing my hand, and in five minutes all pain had gone. The next morning I went to church and not a drop of blood stained my glove. On another occasion some very hot water was upset over my hand and arm; I treated myself at once, and the pain left in a few moments. This may seem strange to those who do not know of Christian Science, but all Christian Scientists know that it is done by holding to the true thought of God as Truth, Life, and Love. Sometimes I have been obliged to call for help from a Scientist, but I thank God that the help has always been effectual, and the discordant conditions have been met and mastered without resort to drugs or any material remedy.

Christian Science is a wonder to me; it helps me in all my troubles, and in my every-day life; it has made me a good woman. I am very thankful for the knowledge I have gained, and will strive to live it always.

FLORENCE JENNINGS, Halifax, N. S.

I can no longer withhold my testimony, as I could not begin to tell of the help I have received from testimonies I have read in our periodicals. My heart is so filled with joy and overwhelming gratitude for the many blessings that have been mine since accepting Christian Science, that I can only strive to live a life of love and endless service for our Cause, and keep my lamp of truth trimmed and burning. Christian Science found me when I was discouraged with the struggle to overcome through *materia medica* an ailment brought about by excessive riding of my bicycle. There seemed to be no way but an operation, which caused great fear and sadness, so that I could hardly eat a meal with my parents without shedding tears. A dear friend spoke a few words of hope to me, and I gladly accepted her invitation to see a Christian Science practitioner. I was filled with hope and an intense longing to read and study Science and Health. I had very few treatments, but with constant and faithful study I was healed in one year. To some this may seem a long time, but it proved to be a blessing to me, for it gave me opportunity to study and imbibe the spirit of our dear text-book, which not only heals us of disease but shows us the way to rely wholly upon God in every problem in life. Thanks and endless gratitude to God, and to His dear messenger, Mrs. Eddy, for all my blessings. All I can give in return is a lifelong song of gratitude, praise, and service.

MRS. FREDERIC G. SHERMAN, Roxbury, Mass.

In March, 1905, I was suddenly seized with illness, and I rapidly grew very sick. After a few hours the evidences were such as to cause great fear in my family that the trouble might be erysipelas. I was under Christian Science treatment from the first, but because of the nature of the disease a physician was called to diagnose the case and report it to the health officer. He pronounced the case erysipelas of the head and face, and said that because of its severe nature and my advanced age (being seventy-six in a few days) he felt quite hopeless of my recovery. He was, however, a friend of the family and a man of liberal thought, so he kindly offered to help us in any way he could, and also asked to be allowed to call frequently and watch the case, as he said it would be most interesting to him to see it brought out by Christian Science.

Those who took care of me say that the appearance was dreadful, but the faithful Scientists who had charge of the case stood firm in their realization of the all-power of God and the perfection of His creation, although for a time most discouraging symptoms made their appearance. Notwithstanding this, just as the disease semed to reach its height, and when it was believed I must pass on,—as the doctor said he saw no possible chance of my rallying,—faith had its reward in demonstration. All at once the fever began to abate and rapidly passed off; and all the organs and functions quickly responded to the healing power of Truth. There was no sinking or weakness, nor any of the expected complications, and my recovery was from this time very rapid. It seemed most wonderful to every one. Our physician friend, calling a few hours later, expressed his surprise and also his great pleasure in seeing a case like that brought out in Science.

My gratitude to God is very great, also to our Leader, Mrs. Eddy, for the great truth taught in Science and Health.

MRS. EVELINE C. BEALS, Rutland, Vt.

We stumble on, pitying ourselves for the hard times we have to endure on earth, and singing our songs of the "sweet by and by." . . . But the eternal issues are now and here, in our thoughts and deeds, in our simple, common, every-day relations to God and to our fellow-beings. To-day or never, here or nowhere, is eternity.

LUCY LARCOM.

Digitized by Google

From our Exchanges.

God is back of all truth as well as in all truth, and back of all life from which thought originates. After men have delivered their own thought we have but a human expression of a limited view of the vast field of truth. The revelations of God present more truth to the mind than the most logical deductions of reason can offer the human intellect. We have had much higher philosophy which has attempted to reach truth on the side of reason alone and on that account has been more critical than the simple attempt at truth finding. It has assumed the premise that truth to be reliable must come by way of the reason rather than by way of divine revelation. The proposition that God can make himself known to a human heart by means which reason cannot employ should make us hold every system of religious belief in abeyance to the authoritative character of revelation. What is needed in every man who speaks in the name of religion or claims to define what the religion of the Bible is, is not an ability to bring truth to the criterion of human reason or judgment, but ability to interpret truth on the side of revelation. *The Standard.*

A great day is ahead of us. Christianity has something else on which to base its claims beside supernaturalism and tradition. It is a living love that it proclaims. What we are going to have is not a bundle of creeds, made out of scientific errors and theological dreams, but a creed of growing and expanding inspirational truth; not a creed for ecclesiastics to rule with, but a creed for a business man to square to, do business by, and share by. And this is what we have long needed,—a living vital creed for the present-day and every-day needs, a creed that carries the Golden Rule into our kitchens and workshops and counting-rooms, a creed for our commercial life and our national life. We believe that our forecast is fully warranted by the events of the present day. The Church has lost its taste for wrangling. It has become constructive of the new life.—*The Christian Register.*

If the [correspondent's] theory [as to the San Francisco disaster] is surely correct, then why were the very best people of this country inspired to counteract the will of God, and after He had smitten His own and left them torn, bleeding, and desolate, why did they hasten to the afflicted with food, and clothes, and medicine, and money, and doctors, and nurses, and every other form of relief? Are these people whom we esteem so good, wicked in trying to defeat the purpose of God? Or did they do the right when they were moved with compassion and set about to relieve the sufferings of their fellows? If they did the right in these acts, then how came they to be so much better than God who destroyed what these merciful people tried to save?
Pacific Baptist Advocate.

A brotherhood that exists only within the walls of the church is a sham and a hypocrisy. To profess that brotherhood and not to carry it into business and social relations, to leave it out of the warp and woof of our daily life, is to be false to the Christ we confess and to the gospel in which we profess to trust. He who professes to give himself and all that he has to the service of the Master—which for us is the service of our fellow-men—and then gives but a part, and holds back the rest, like Ananias and Sapphira, is already on the threshold of spiritual death. The man who does that cannot enter into life, for life is love and love is sacrifice, and if there is no sacrifice all his profession of religion is vain. That, too, is heresy.—*The Churchman.*

Christianity is on trial in the world, and Christ has only human beings to represent him. Upon the lives of those who bear his name depends the world's opinion of Christ and of his religion. If those who assume the name "Christian" are not more lovable and admirable and joyous and serviceable in this world than are others, why should any one follow Christ? For Christ offers to accomplish all this in the lives of his followers; and his followers show whether his claims are false or true.
Sunday-School Times.

THE CHRISTIAN SCIENCE TEXT-BOOK.—"Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing all the By-laws to January 1, 1906, of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CARDS IN THE GERMAN PERIODICAL.—Application blanks will be supplied by The Christian Science Publishing Society to practitioners who wish their names and addresses inserted in the advertising columns of *Der Herold der Christian Science*. These applications should be properly endorsed and forwarded to the Society. The rate for advertisement will be $2.00 for the first line, and $1.00 for each additional line. It is desirable that those who offer their names in this way should be able to communicate with patients and inquirers who speak the German language only.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with The Mother Church and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By Hon. WILLIAM G. EWING.

CHRISTIAN SCIENCE. Its Worth and Work. By Rev. ARTHUR R. VOSBURGH.

CHRISTIAN SCIENCE. Its Promises and their Fulfilment. By EDWARD A. KIMBALL.

CHRISTIAN SCIENCE. Is it Christian? By MRS. SUE HARPER MIMS.

CHRISTIAN SCIENCE. Its Work and Scope. By CAROL NORTON.

CHRISTIAN SCIENCE. The True Idealism. By ANNIE M. KNOTT.

IN GERMAN

CHRISTIAN SCIENCE. Its Promises and their Fulfilment. By EDWARD A. KIMBALL.

CHRISTIAN SCIENCE. The Christianity of Christ. By Rev. IRVING C. TOMLINSON.

Price. Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, 75 cents; five hundred copies, $3.25; one thousand copies, $6.00. Orders for supplements may be assorted as desired.

Pamphlets

MR. KIMBALL'S LECTURE. 31 pages.

HEALING THROUGH CHRISTIAN SCIENCE. Discourses and Editorials. By JUDGE SEPTIMUS J. HANNA. 36 pages.

HEARINGS ON PROPOSED MEDICAL BILLS IN MASSACHUSETTS AND NEW YORK. 23 pages.

ANSWERS TO QUESTIONS CONCERNING CHRISTIAN SCIENCE. By EDWARD A. KIMBALL. 26 pages.

PRAYER AND CONFIDENCE. Four articles reprinted from the *Journal*. 40 pages.

THE LOS ANGELES CASE. Testimonials given in Court as to the healing efficacy of Christian Science. 63 pages.

THE CHRISTIAN SCIENCE MOVEMENT. Revised by CAROL NORTON. 28 pages.

CHRISTIAN SCIENCE IS SCIENTIFIC CHRISTIANITY. A Lecture. By Rev. ARTHUR R. VOSBURGH. 28 pages.

CHRISTIAN SCIENCE: ITS COMPASSIONATE APPEAL. Four articles reprinted from the *Journal*. This pamphlet is also printed in German. 38 pages.

A CRITIC ANSWERED. By ALFRED FARLOW. Printed in German only. 31 pages.

Price. One copy, six cents; twelve copies to one address, sixty cents; twenty-five copies to one address, $1.15; fifty copies to one address, $2.25. Orders for pamphlets may be assorted as desired.

Works on Christian Science

Written by the Author of the Christian Science Text-book, MARY BAKER G. EDDY

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Enlarged and Revised, 1902. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid $3 18

Two to twelve books (cloth only) to one address, each, prepaid 3 00
Twelve or more books to one address, each, prepaid 2 75

Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid 4 00
Twelve or more to one address, each, prepaid . . . 3 75

Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid . . 5 00
Twelve or more to one address, each, prepaid . . . 4 75

Levant, divinity circuit, leather-lined, round corners, gilt edges, silk-sewed, heavy Oxford India Bible Paper, wide margins, each, prepaid 6 00
Twelve or more to one address, each, prepaid . . . 5 75

Orders for Science and Health, in lots of twelve or more to one address, may include any or all the different styles of binding.

A COMPLETE CONCORDANCE to Science and Health with Key to the Scriptures, 595 pp., 10 x 7. Bound in cloth, marbled edges. Price, single copy, prepaid . . $5 00
Twelve or more copies to one address, each . . . 4 50

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth), each, prepaid 2 25
Twelve or more books to one address, each, prepaid 2 00

Morocco, limp, round corners, gilt edges, convenient for pocket, each, prepaid 4 00
Twelve or more to one address, each, prepaid . . . 3 75

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5 00
Twelve or more to one address, each, prepaid . . . 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

Greetings have been exchanged between President Roosevelt and Mutsuhito, the Emperor of Japan, over the American cable connecting the Island of Guam and Japan, which was recently completed. Following are the messages:—

The White House,
Washington, June 25, 1906.

His Majesty, the Emperor of Japan,
Tokio:

I am glad to send to Your Majesty, over the American cable which has just been completed between Guam and Japan, and thus unites our two countries across the Pacific, a message of sincere good will, and the assurance of the earnest wishes of the Government and people of the United States for the welfare and prosperity of Your Majesty and Your Majesty's Empire.

(Signed) Theodore Roosevelt.

The Emperor's reply:

Tokio, June 26, 1906.

The President,
Washington:

I have just received, with great interest and appreciation, the kind message sent by you over the cable which has recently been laid between Guam and Japan, and which will shortly be open to the public. I am highly gratified to know that the first telegram by this new line which unites our two countries should convey to me the assurances of the friendly sentiment of the Government and people of the United States for myself and my people. I most cordially reciprocate your expressions of good will and good wishes.

(Signed) Mutsuhito.

The Chicago Board of Trade is taking the lead in commercial interests, in promoting a plan to have Congress, at its next session, make an appropriation to build a canal on the line between Indiana and Michigan to connect Lakes Michigan and Erie. The plan is also to widen the Erie Canal to permit large lake boats to go from Erie to the Hudson River, and thence to New York, making a waterway between the two cities that would be practically as short as the shortest rail route. This, in connection with the Hennepin Canal and the Mississippi River, would give Chicago two waterways to the coast. The survey for the Michigan-Erie Canal was made nearly fifty years ago, but the project was abandoned. It has been estimated that the canal could be constructed for less than $100,000,000.

The Treasury closed the fiscal year June 30 with a surplus for the year amounting to $5,093,459. A year ago there was a deficit of $24,305,903. June 30, 1904, there was a deficit of $41,352,325. The customs receipts for the fiscal year have passed the $300,000,000 mark, nearly $40,000,000 more than last fiscal year. Internal revenue receipt for the fiscal year has been heavy, the total being $249,063,867, or about $17,000,000 ahead of the last fiscal year. The total receipts for the Government this fiscal year have been $594,914,714, not including postal receipts, against $543,423,859 last fiscal year. The expenditures total $596,221,255.

The commission appointed by Congress to investigate second-class postage has perfected its plans for making a thorough inquiry covering the total amount of second-class mail matter handled each year, the amount in weight of different kinds of publications that go to make up the whole, etc. The Post Office Department, by which the statistics will be gathered, has already begun to keep a record of second-class matter received in every post office in the United States for the next six months.

Within a short time prosecution will be begun in Chicago, under the Sherman anti-trust act, against the $50,000,000 "Powder Trust." Since the recent revelations regarding the alleged powder trust before the Senate Committee, which led to agitation for the passage of a bill in Congress appropriating a sum for the establishment of a powder-making plant for the United States Army, President Roosevelt and Attorney-General Moody have been preparing for the prosecution of the trust.

About thirty thousand parcels addressed to foreign countries have been held as unmailable in the last eleven months and sent to the Division of Dead Letters because they were not properly prepared for the forwarding by parcels post. The inclosures in many instances consisted of articles of considerable value, and also included "samples," and were in excess of the weight (twelve ounces) prescribed for the transmission by ordinary post.

The lengthy litigation between R. H. Macy & Co. and the American Publishers Association, in which the department store firm claimed the right to sell copyrighted books at less than the prices agreed upon by the publishers, was advanced last week by the announcement that the United States Circuit Court of Appeals had handed down a decision sustaining the contention of Macy & Co.

The first session of the Fifty-Ninth Congress closed June 29. The conference report of the Railroad Rate Bill was adopted by the Senate, thus passing the bill, and soon after signed by the President. He also signed the Naturalization Bill and the bill for the construction of a lock canal across the Isthmus of Panama.

Five ice dealers were sentenced at Toledo on the 25th to a fine of $5,000 each and imprisonment in the workhouse for one year. They had been convicted under the Ohio anti-trust law of entering into a combination in restraint of trade, in the matter of controlling the price of ice.

The final steps in the United States District Court at Kansas City in the rebate cases were taken July 2, when appeal bonds were perfected upon behalf of the seven convicted individuals and concerns and when bills of exception were filed.

Attorney-General Moody has directed that suits be brought against a large number of railroad companies to recover penalties for violation of the safety appliance law, through failure to keep their equipment in proper condition.

Exports of manufactures from the United States in May, 1906, were over $56,000,000, an average of more than $2,000,000 for each business day of the month.

Harvard granted 993 diplomas at its last commencement and Yale 597.

Foreign.

The Chinese Government has instituted a military programme which, if carried out as planned, will take sixteen years to complete. At the end of that period the Chinese army will consist of forty-two divisions, each division comprising two infantry brigades (twelve battalions), one cavalry regiment, one artillery regiment, and one battalion of engineers. In the organization, drill, and equipment of this large force the Japanese are taking the chief part.

Walter Wellman, leader of the Wellman-Chicago *Record-Herald* Arctic expedition, arrived at Tromsoe, Norway, on June 29, accompanied by three French æronauts and some mechanics. The airship material and all the party will go to Spitzbergen next week. The reports that the members of the expedition have no intention of going north by airship this year are declared false. Mr. Wellman still believes that their chances of making an aerial voyage to the pole in August are good.

The Cuban Senate has passed the railroad subsidy bill, appropriating $6,000 per kilometer for the construction of twelve branch railroad lines which will be feeders for the Van Horne system. The subsidies will be paid at a rate not exceeding $500,000 annually until all the roads are completed. President Palma has decided to approve the bill.

It is announced that the Mutual Life Insurance Company has decided to withdraw from writing new business in France on account of the new French law compelling reserves to be kept there against all the French business both of the past and of the future.

The ordinary Government receipts of Russia for the first four months of 1906 showed an increase of $30,000,000 over 1905. Savings bank deposits showed an increase from $12,500,000 to $57,200,000.

Industrial and Commercial.

Seldom in the history of chemical industry, says the *Scientific American*, has any chemical product undergone such marked variation of price within a few years as thorium, the principal constituent of incandescent mantles. Early in 1894 thorium nitrate was sold by the German combination at 2,000 marks per kilogramme, and by January of the next year it had fallen to 900 marks; in July of the same year it stood at 500 marks, and in November at 300 marks. In 1896 it fell in May to 150 marks, and in October to 90 marks, touching the low price of 30 marks in 1899. After that the price was pushed up to 53 marks, less seven per cent discount, in May, 1904, a figure which the "Convention" succeeded in maintaining till January of this year, when it dropped to 27 marks, less three per cent discount.

Precious stones of every variety were imported into the United States last year in larger quantities than ever before. The importation of rough diamonds was seven times larger than in 1897, the diamond cutting industry having greatly increased in recent years. The total value of importations of gems for last year amounted to $34,008,513.

A raise in wages for nearly twenty-five thousand cotton mill operatives in Rhode Island and Massachusetts has been announced. The advance will go into effect on and after Monday, July 9 a week later than the date on which an increase will be given in Fall River, New Bedford, East Taunton, Fiskdale, and other places.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

An Appreciative Letter to Mrs. Eddy.

[We give the following letter a prominent place, feeling sure that its loving and grateful reference to the faithful Board of Directors will be heartily approved by all Christian Scientists. The building of the Extension of The Mother Church of Christ, Scientist, was a tremendous undertaking, and when we consider how much had to be accomplished in the given time, and the many intricate problems which presented themselves, it is easy to see that it could only have been brought to a successful termination by heeding the Master's injunction, "Have faith in God," by constant and intelligent reliance upon the divine Mind. When the date of the dedication was definitely announced, regardless of the fact that all the needed funds had not yet been contributed and that much work yet remained to be done on the edifice itself, a lesson was given the members which they will never forget, and for which they will never cease to be grateful.

Mr. Rome's loving tribute to our revered Leader, and his recognition of her vital relation to this great achievement in Christian Science, will touch a tender chord in the hearts of all Christian Scientists, and they will echo his prayer for her happiness.—The Associate Editors.]

Boston, Mass., June 30, 1906.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Dear Leader and Guide:—Now that the great event, the dedication of our new church building, is over, may I ask a little of your time to tell you of the interesting part I had to perform in this wonderful consummation. On the 25th of last March I was asked by one of the Directors if I would care to do a little watching at the church. I gladly answered in the affirmative, and have been in the building part of every night since that time. To watch the transformation has been very interesting indeed, and the lessons I have learned of the power of divine Mind to remove human obstructions have been very precious. At first I thought that, since it seemed impossible for the building to be completed before the end of summer, the Communion would likely be postponed until that time. Then came the announcement that the services would be held in the new Extension on June 10. I saw at once that somebody had to wake up. I fought hard with the evidence of mortal sense for a time; but after a while, in the night, as I was climbing over stones and planks and plaster, I raised my eyes, and the conviction that the work would be accomplished came to me so clearly, I said aloud, "Why, there is no fear; this house will be ready for the service June 10." I bowed my head before the might of divine Love and never more did I have any doubt. One feature about the work interested me. I noticed that as soon as the workmen began to admit that the work could be done, everything seemed to move as by magic; the human mind was giving its consent. This taught me that I should be willing to let God work. I have often stood under the great dome, in the dark stillness of the night, and thought, "What cannot God do?" (Science and Health, p. 135).

As I discovered the many intricate problems which must necessarily present themselves in such an immense undertaking, I appreciated as never before the faithful, earnest work of our noble Board of Directors. With unflinching faith and unfailing fidelity they have stood at the breastworks in the battle, and won the reward, "Well done, good and faithful servant; . . . enter thou into the joy of thy Lord."

But what of this magnificent structure? Whence did it come? To me it is the result of the love that trembled in one human heart when it whispered: "Dear God, may I not take this precious truth and give it to my brothers and sisters?" How can we ever thank God enough for such an one,—ever thank you enough for your unselfed love. May the glory which crowns the completion of this structure shed its brightest beams on your pathway, and fill your heart with the joy of Love's victory.

Your sincere follower,
James J. Rome.

From our Contributors.

A Divine Demand.

CLARENCE W. CHADWICK.

Thus saith the Lord of hosts; Consider your ways.—Haggai.

The idea of Christian healing as presented in Christian Science has set in motion the thought-forces of a Christian world. Why is this so? Because the coming of Christ, Truth, means spiritual activity in individual consciousness, a higher order of thinking than even professing Christians have been accustomed to with their limited sense of God "and the power of his Christ."

Thousands upon thousands have opened their doors to receive this new-old idea and are daily proving for themselves and for others that Christ "the Son of God is come, and hath given us an understanding" of God's all-power and presence. The builders of a man-made theology, however, still reject this full appearing of the Christ which heals the sick, and declare it to be "contrary to law and order;" but to thousands of thinking people it has again become the head stone of the corner: "This is the Lord's doing, and it is marvelous in our eyes." If it were of men it would come to naught. Those who have partaken of its healing balm know that it is of God, and that it is destined to multiply, and to replenish the whole earth with a demonstrable understanding of the power and activity of omnipotent good.

The advent of Christian healing in our day calls to mind the words of Harriet Beecher Stowe: "By what strange law of mind is it that an idea long overlooked, and trodden under foot as a useless stone, suddenly sparkles out in new light as a discovered diamond?" In answer to this oft-propounded query it can only be said that the idea of the Christ-healing has been discovered by one who was living near enough to God to receive and spiritually interpret to a famished world the practical significance of the ever-operative activity of good in human consciousness. Christian Science, therefore, has no apologies to offer for being before the world. It goes without saying that, had there been no need of it, it would not have come when it did. Had the Christ-healing not been lost sight of through the substitution of material theories, ways, and means, Chris-

Digitized by Google

tian Science would be no innnovation upon twentieth-century thought and customs. It is here to-day because the "new and living way" to the kingdom of heaven on earth had been lost sight of by a professedly Christian world, and would necessarily have to be discovered and be presented to humanity by some human instrumentality, else mortals would be left without hope and without God. Did not the Master say in plain language to those whose claim to faith and righteousness was not made manifest in healing, "The kingdom of God shall be taken from you, and given to a nation bringing forth the fruits thereof"? The healing of sickness and sin is humanity's first real taste of the kingdom of heaven, for the Master said, "If I with the finger of God cast out devils, no doubt the kingdom of God is come upon you."

The appeal of Christian Science to an unbelieving world may be expressed in the language of Haggai the prophet in admonishing the people for their manifest lack of spirituality: "Thus saith the Lord of hosts; Consider your ways." Our Leader says on page 329 of Science and Health, "Science is a divine demand, not a human." It is God's message of redemption and salvation, and not the selfish exactions of any person or individual. The modern prophet who has reached out far enough to take hold of God's right hand has the same authority to say, "Thus saith the Lord," as did Moses, Haggai, or any other of the ancient Christians. Those who see this one most important point; viz., that Mrs. Eddy is a divinely appointed messenger to voice to the world her discovery of the lost art of Christian healing, and who are ready to apply the rules laid down in the Christian Science text-book, very soon "know of the doctrine, whether it be of God" or whether she speaks of herself. Those who hold to the thought of finite personality in religion not only lose sight of God, but also of His sacred promises, which He is ever ready and willing to fulfil in individual consciousness when the individual will humbly acknowledge that God has spoken to this age through an inspired Teacher and Leader.

The vital significance of the divine demand of Science is to "consider your ways." Having once admitted that Christian Science is right, it takes but a short time to realize that mortal thinking is wrong, and herein lies the test of our humility and sincerity. We soon begin to see that the Christ-idea demands, yea, compels a spiritual activity of thought, which brings not peace, but a sword to all false views and opinions concerning God, man, and the universe. We find that we cannot blend the material with the spiritual, but must forsake the one to make room for the other. We find that mortals' ways are unequal and God's equal; we find that instead of acknowledging the omnipotence and supremacy of Life, they have been both consciously and unconsciously holding to the thought of death as the inevitable termination of a well-lived life. In Christian Science, however, Jesus' words, "Wide is the gate, and broad is the way, that leadeth to destruction, and many there be which go in thereat," have a new meaning, and we face about mentally, and not only seek, but "strive to enter in at the strait gate" which leads to a present understanding of eternal Life. We find that the belief in the reality and possibility of death has poisoned every avenue of human thought and endeavor with the discouraging supposition that man is a poor, helpless mortal, doomed to return to dust. We at once part company with this belief and begin to obey understandingly that divine demand of Science, "Be ye therefore perfect, even as your Father which is in heaven is perfect." We begin to apply the Principle of perfection in overcoming evil with good in daily thinking and living, just as the student in mathematics appeals to and applies its rules in correcting and eliminating a mistake in calculation. We assume the same spiritual attitude of thought as did our divine Exemplar when he said, "I am from above." It is this scientific recognition of man's unity with his Maker that gives us power and authority to correct our unequal ways and to bring out man's God-given dominion over sin, disease, and death. This dominion can never be realized so long as we entertain the belief of mortality and insist that man must die before he can reach heaven.

"Amend your ways and your doings" is a divine demand that will continue to knock at the door of each human heart until "every valley shall be exalted, and every mountain and hill shall be made low: and the crooked shall be made straight, and the rough places plain: . . . for the mouth of the Lord hath spoken it."

Right Doing and Its Reward.

E. E. S.

WHEN I began to discern the beauty of this grand truth, Christian Science, I yearned to be in the Field, at work for the Cause; and I regretfully returned to the business world, with perhaps a thought that I was not worthy of the higher service; little realizing that an earnest desire to do makes it impossible to be idle, since every thought should mean "*work*." I had been in my present position three months, when one Saturday morning my employer called me into his office, and told me that because of insufficient business I was to take a two-weeks holiday; then, if conditions warranted it, I could resume work. My first thought was of our Leader's words, "In the way Thou hast" (Miscellaneous Writings, p. 400). I next asked, "Is God's way ever unjust? Would I leave my employer at two hours' notice?" "No." "Does not the same law govern employer and employe?" "Yes." Then came the conviction that since I knew right, I must have courage to voice it if necessary. It did prove necessary and I said, "Mr. ——, if you were busy in your factory (and that you are not, is no fault of mine), would you expect me to leave you at two hours' notice? because I would not do it; however, I am willing to do whatever you think is just and right." I returned to my table and continued my work, when in about ten minutes I was recalled and reinstated for one week longer, at the expiration of which I would be expected to take a vacation of two weeks. To this I cheerfully agreed.

On Monday morning, when the first mail was opened, one of the partners said that a fresh order for goods had been received; the next day one much larger came, and the following day I was told that I might not have any vacation at all on account of the pressure of work. A little later a mistake of one hundred and fifty dollars was made, in my employer's favor. He asked me what I thought of it, and I at once declared for the Golden Rule. In a few moments he came to me again and said, "I would not like any one to keep that sum from me, and so I shall call them up and tell them about it;" which he did, with the result that they asked him to enter upon another transaction. He did so, and received an extensive order.

A few days later my employer asked what I thought of the week's business. I replied, "I think it is only the beginning, and a reward for your willingness to see right and then do it. I also think that your one reading of 'Science and Health with Key to the Scriptures' by Mrs. Eddy is beginning to have its effect." "I see," was his only reply. To me it was beautiful to "stand still and see the salvation of God."

In this experience I was shown clearly that if one were placed upon a desert island he would find work to do, if he wished to do it. I also saw the reward of courage and of loyalty to Principle. I saw the reward of honesty and justice, and above all else, I saw the value of Christian Science in the business world. We surely need more honesty in business transactions,—more justice between employer and employe, which will beget more confidence between them, to the end that the employe will not look upon the

Digitized by Google

employer as his natural enemy, but as a good friend; and that the employer will not look upon the employe as a slave for so much money per day. I know no need so great as to establish the understanding of the universal brotherhood of man in the workshop to-day, and our Leader tells us how it is to be realized when she says, "There is but one way to heaven and harmony, and Christ, divine Science, shows us this way. It is to know no other reality than good, God and His reflection" (Science and Health, p. 242).

The Christian Science Text-book.

E. M. B.

ONE who takes up the Christian Science text-book for the first time must be impressed by its simplicity. One does not need book knowledge nor dictionary to help him understand what he reads, for what he reads is drawn out in words so simple it is easily understood. One's attention is not diverted from what is written to consider the time and work it cost to write it well. The style is forceful and clear, and there is no attempt to impress us with a show of learning or to dazzle us with fine writing. It is thought, not its dress; great themes of eternal moment, not perfumed phrases, that is ever uppermost. We sometimes see a painting where the workmanship is so brilliant that we lose the idea. We sometimes hear a sermon of which many say, "How beautiful;" but in fact the sermon is a failure. Its real object, the purpose for which it should have been prepared, is buried beneath rhetorical brilliancy. The real test of an address is not its entertaining quality, but results; the changes wrought out in the hearts and deeds of men. We never ask if a lawyer made a beautiful plea. We always ask, "Did he win his case?" In this book there is a wealth of ideas and suggestiveness. And what is written is so plain and interesting we might regard it a product of the highest art were it not that we know it to be the logical outcome of a clear apprehension of spiritual truth.

Strong men, men of culture, tell us that they have bent over this book in reverent study for years, and have not exhausted its depth of meaning. New revelations come to them daily. The book contains seed-thoughts that the most conscientious student has not yet mastered. Those who come after will discover meanings and applications not yet disclosed. There are germs of development to be unfolded as time goes on; to be unfolded in future years, possibly future ages; but not unfolded till the circumstances come up to which they apply. These are the deep things of the book, for they are the deep things of God which the book is commissioned to reveal to mankind. Truly wonderful in simplicity, in depth, in far-reaching significance! The book declares God to be all. Your little girl understands this, and God bends the very heavens to recognize her understanding. This explains how your child can be instrumental in healing the sick. How simple! simple enough to engage the understanding of a child, deep enough to dilate the understanding of an angel.

It is well enough to try, but probably no one of our time will be able to sound the depths of this book. Thor, the peasant god of Scandinavian mythology, was stronger than Hercules. He was challenged to drain dry a simple cup. He put it to his lips but the water did not sink below the rim. He tried again with the same result. Then he addressed himself to the task with all his godlike strength, but the water did not recede. Why? The cup was invisibly connected with the ocean, from which it drew a constant supply. No god Thor can drain dry this cup, no Hercules in intellect of our time can sound its depths, for it is invisibly connected with the great ocean of infinite Truth.

Selected Articles.

The seeds of Christian Science, sown in the stoniest of places in the [English] metropolis, have fructified and invaded the aristocratic West End. The religious skepticism often associated with the wealthy classes has been overcome by the creed set forth by Mrs. Eddy, and it is among the leaders of society that this faith has made its most substantial progress on this side of the Atlantic. Society has taken to Christian Science, not because of the arguments launched in its favor, but because it has seen with its own eyes the cure of people actually known to it, by the efficacy of faith and prayer.

Moreover, there are those in perfect health who, hearing of cure after cure, have been so astounded that they have flocked to the Wednesday evening public services in the Portman rooms, or Aeolian Hall, and seen for themselves. As a result, they have enrolled themselves.

Christian Science came to us ten years ago, when ten or a dozen persons met together in a little flat near Baker Street, in the heart of the West End residence land. Slowly the movement progressed, necessitating removals to larger quarters, until at last the members of the aristocratic and wealthy classes were aroused. An old synagogue in Bryanston Street was remodeled into a Christian Science church, and until recently this has been the center of the faith in London. So crowded became the congregations that the aisles and staircases were blocked, and now another move has been made to Wilbraham Street, Sloane Square, the present headquarters. So rapid has been the growth, however, that another church has been added, making three in the city, and additions are being made to the Wilbraham Street church, so that it will accommodate sixteen hundred people.

(By special cable from London, England.)

Cleveland (O.) *Leader.*

Christian Science treats of infinite truth, the emanation of the divine, omnipresent, all-powerful, and all-governing intelligence which created and controls all, from the atom to immensity. Inasmuch as the term righteousness (rightness, strict accord with the unalterable and undeviating Principle of right) has come to be considered synonymous with the terms holiness (wholeness) and morality, it takes no tortuous process of reasoning to conceive that morality is but a strict conformity to some underlying spiritual law, entailing, of course, a knowledge of that law. We fail to see how the good doctor can possibly overlook the fact that a proper development of the moral nature is in the true sense of the term a process of higher education. A system that conduces to higher morality, as our critic admits Christian Science to be, is educational, is pre-eminently worthy the exercise of the best mental faculties, and entails indeed a keener insight and perspicuity than are required to grasp the most abstruse "scientific" truths. The learning of Jesus, who best understood spiritual truth, was wondered at by the wise men of his day, and it was said of him that he taught as one having authority and not as the scribes, while he himself said very significantly of his disciples on one occasion that while he had much to say unto them in addition to what he had already taught, they were not able to bear (understand and appropriate) it, until their capacity to grasp the truth had increased. Men are beginning to see that to be made free by truth (free from all forms of error, including sin and disease), that truth must be known. In other words, morality is rightness with God, unattainable without a knowledge of Him. Christian Science treats of so infinite a theme as to render it impossible of pursuit without imparting to the human mind great elasticity, rendering it more capable of taking in truth, thus enhancing and facilitating educational possibilities. The facts of the case also bear out this statement,

Digitized by Google

for commercial, professional, and educational men in large numbers to-day bear witness to the fact that a knowledge of Christian Science, as outlined by Mrs. Eddy in her text-book, "Science and Health with Key to the Scriptures," broadens the intellectual horizon, develops latent forces, and imparts a deeper insight upon the basis of the Scriptural injunction, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you."

R. STANHOPE EASTERDAY.

Morning Graphic (Greensburg, Ind.)

The noblest possession of the English people is the English Bible—the book that has exercised an incalculable influence over the conduct of the nation. Nevertheless, it would be impossible to pretend that this influence has not been limited by the dogmas in which Christendom has swathed itself since the invasion of Constantine. First, the power of healing was set aside as supernatural. Then the teaching of the Sermon on the Mount was relegated to the domain of beautiful but unattainable transcendentalism. And, finally, science was declared irreconcilable with revelation.

It was to a world of such failing ideals that Science and Health, the text-book of Christian Science, was given. That Christian Scientists have gained some knowledge of this Science of Christianity, this full, exact knowledge of God as the text of the Bible describes it, they owe to the study of Science and Health. It is their commentary on the Bible. For the knowledge they have gained from it they give the honor and glory to God, and to His servant who wrote it shall they not give their thanks?

FREDERICK DIXON.

Daily Mail (London, England).

The Rev. Dr. van Allen of Boston, who devoted his pulpit time on Sunday to an attack on the Christian Scientists, prefaced his remarks with the statement that it is as useless to argue with a Scientist as to wrestle with a fog-bank; which was quite true, the result ordinarily being that the attacking party gets lost in the fog. But the preacher took his chances and wasted his time, just the same, having little effect on the Scientists who heard him or who read his attack, and still less on the non-Scientists, who wondered what all his effort was wasted for, if there were nothing but a delusion that needed such a vigorous assault. Are there not more important problems of the day for the pulpit to tackle than that of Christian Science? The followers of Mrs. Eddy are accomplishing some great things, even if the world is not quite ready to admit that they can accomplish all that they claim; and, even if one is inclined to believe that there is some buncombe in it all, there must be the admission that there is a deal of reality and that in many a direction the "regular" churches might well take a few points from the Scientists. We fail to see what harm they are doing in the world, and there are evidences of good being done of which any organization concerned in the welfare of mankind might well be proud.

Haverhill (Mass.) *Gazette.*

Whether anybody believes in Christian Science or not, the fact remains that it has had a wonderful growth. It is less than thirty years ago that Mrs. Eddy organized the first Christian Science church in Boston. It started out with twenty-six members and now it has forty thousand. Churches of that faith have sprung up all over the country and there are hundreds of congregations that meet regularly in hired halls, who as yet have no edifice of their own. The orthodox churches do not subscribe to the doctrines and dogmas of this new faith, but they are not as active in pitching into it as they were formerly. Christian Science must stand or fall on its merits, just like Presbyterianism, or Methodism, or any other faith. People need not worry themselves about it very much, for its adherents are good citizens, law-abiding people. In this country it is everybody's blessed privilege to worship as they please and believe as they like, so long as there is no violation of or interference with the laws of the land. The wisest way for all the other denominations is to work along their own lines conscientiously and zealously, and all the faiths that are false will eventually fall of their own weight.

Utica (N. Y.) *Press.*

To those who seem to see no good in Christian Science it must stagger their faith not a little to read the account of the dedication of the vast temple located in the heart of the city of Boston, the supposed fountain of knowledge and seat of learning of America: the spectacle of thirty thousand people assembling to gain admission to the temple shows an enthusiasm for Christian Science seldom witnessed anywhere in the world on any occasion; and this occurred in staid old Boston, and the fact was heralded in flaming headlines in the leading newspapers of the world. According to the dispatches that assembly was not a gathering of "the vulgar throng;" the intelligence and wisdom of the country were there. There certainly must be something more than a fad in Christian Science, which was placed upon a far higher pedestal by that demonstration than it ever occupied before.—*Norfolk* (Neb.) *Tribune.*

Whether one believes in Christian Science or not, the period has been reached when it commands respect, attention, and admiration. Its followers are respectable not only in numbers but in make-up. Its essential acceptation has overflowed its own communion, and affected many persons in all denominations of Christians, and even Hebrews as well. It has the powerful advantage, as a cult, of mixing itself with its people's health and daily lives. It has grown with great rapidity, gaining probably a million of open adherents in thirty years, and there can be no question that it will gain many more. Among its local adherents is a gentleman who this week sought the nomination for the highest office in the gift of the people of Pennsylvania.

Scranton (Pa.) *Times.*

A careful study of Christian Science will reveal the fact, fundamental in its teachings, that sickness is the child of a material consciousness, conceived in sin and born in iniquity, and the antidote or remedy is not more of the same thing, disguised as you please, but still the same by nature. The remedy is the opposite of this sinning human mind, that is, the Mind which knows no sin. Then to heal in Christian Science is to have much of this divine Mind, to be like God, or Godlike, to be good, and concentration of the human thought has nothing to do with the process. Nor is it suggestion.

H. CORNELL WILSON.

Courier (Buffalo, N. Y.)

The last issue of the *Christian Science Sentinel* contains a rather remarkable announcement to the effect that friends are requested to send no more money for the building of the church which was recently dedicated at Boston. This structure cost about two million dollars, and all of the funds required to build it were raised in a little less than three years. It was dedicated absolutely free of debt, and no member of the church anywhere, in this country or elsewhere, was asked to contribute a dollar. Contributions were entirely voluntary. No resort was had to any of the latter-day methods of raising money. The record is one of which any church might well be proud.

Among the Churches.

Seneca, Kan.

A sense of gratitude moves all our hearts for the opportunities and blessings which have come in various ways to the Christian Scientists of Seneca, Kansas, since their reorganization as a church two years ago. Our membership is small, but we have a nice little church property and are growing both in numbers and in interest in our great Cause and its Leader.—*Correspondence.*

Church Dedication at Meadville, Pa.

The pleasant little First Church of Christ, Scientist, on Sherman Street, was formally dedicated Sunday [Jan. 14] in the presence of a large attendance.

First Church of Christ, Scientist, was formerly a residence. The interior has been made into one room, with a seating capacity of about one hundred persons; a Reading Room is attached.—*Meadville* (Pa.) *Republican.*

Oneida, N. Y.

First Church of Christ, Scientist, of Oneida, has purchased of Franklin R. Crandall his residence at 21 Spring Street. The building will be remodeled to make an auditorium large enough for present needs and Reading Rooms will be arranged and furnished. When in the growth of the work this building becomes too small a church edifice will be erected in its place.—*Oneida* (N. Y.) *Dispatch.*

The Lectures.

Muncie, Ind.

Nearly a thousand persons attended the lecture on Christian Science delivered last evening [June 21] in the Wysor Grand Theatre by Judge Septimus J. Hanna of Colorado Springs, Colorado. He was introduced by Attorney James Bingham, who said in part,—

In these days of commercialism, when greed and avarice are absorbing all conscience, when heart and soul count for nothing, and that is not valued which can be obtained without price, it is well that people should pause and consult that true monitor of every human being, the life and teachings of our Lord and Master, Jesus Christ, and we are glad to know that there are still those who are devoted to teaching and exemplifying them in the midst of all this strife for material welfare. While I am without the temple and cannot speak authoritatively of your creed, I am advised that Christian Scientists are pledged "to love one another; and to be meek, merciful, just, and pure" [Science and Health, p. 497]; that within the sacred precincts of your church its members are taught to drink from the refreshing fountain of human sympathy that ever waters the sweet flowers of friendship and brotherly love; to be mild of temper, humble, submissive, gentle, merciful, and just to all the world, and to be pure in spirit. These are God's teachings and after God's own words. These are the fundamental teachings of all true Christian Scientists, and your conscientious devotion to these obligations means the uplifting of all mankind, and all right-thinking men and women will bid you Godspeed in this noble work.

The Press.

Englewood, N. J.

Mr. Bicknell Young of Chicago addressed an appreciative audience at the Lyceum [April 10], on the subject of Christian Science. He was introduced by Mr. Charles E. Finlay, president of the Ætna National Bank, of New York, who said in part,—

I am an optimist. Why? Because I believe in God. Every semblance of doubt within me as to the omnipotence and omniscience of God has been removed after a careful and comprehensive study of Christian Science. I know beyond peradventure that God is all-powerful and an ever-present help. Amid the engrossing duties of an active business life it is sometimes difficult to keep foremost in our minds that mammon is not the real goal we are striving for. Your aim and mine should be for a better and closer acquaintance with God. Confidence in and acquaintance with infinite good can be cultivated and matured by first learning what Christian Science is; second, by demonstrating its utility.—*Englewood Times.*

Questions.

LAURA E. CARTER.

"WHAT do you think, little thoughtful one,
When the firelight flickers low,
And shadows o'er the hearth's gray stone
Are flitting to and fro?"

"I think that my mother loves me,
And the dark I do not fear,
With her watchful face above me
And her guiding hand so near."

"What do you think, little sailor lad,
When the fog, like a curtain gray,
Shuts out the beacon-light from view
As you'd enter the harboring bay?"

"I think that the harbor still is there,
And its light I soon shall see,
If I follow my Father's pilot—truth—
He has sent through the night to me."

Digitized by Google

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Personal Contagion.

MARY BAKER G. EDDY.

THE following letter is so right and requisite that I hereby endorse it for the benefit of the reader.

At a time of contagious disease, Christian Scientists endeavor to rise in consciousness to the true sense of the omnipotence of Life, Truth, and Love, and this great fact in Christian Science realized will stop a contagion.

In time of religious or scientific prosperity, certain individuals are inclined to cling to the personality of its Leader. This state of mind is sickly; it is a contagion —a mental malady, which must be met and overcome. Why? Because it would dethrone the First Commandment, "Thou shalt have one God."

If God is one and God is Person, then Person is infinite; and there is no personal worship, for God is divine Principle, Love. Hence the sin, the danger and darkness of personal contagion.

Forgetting divine Principle brings on this contagion. Its symptoms are based upon personal sight or sense. Declaring the truth regarding an individual or Leader, rendering praise to whom praise is due, is not a symptom of this contagious malady, but persistent pursuit of his or her person is.

Every loss in grace and growth spiritual, since time began, has come from injustice and personal contagion. Had the ages helped their leaders to, and let them alone in God's glory, the world would not have lost the Science of Christianity.

"What went ye out for to see?" A person, or a Principle? Whichever it be, determines the right or the wrong of this following. A personal motive gratified by sense will leave one "a reed shaken with the wind," whereas helping a Leader in God's direction, and giving this Leader time and retirement to pursue the infinite ascent—the comprehending of the Divine order and consciousness in Science—will break one's own dream of personal sense, heal disease, and make one a Christian Scientist.

Is not the old question still rampant? "When saw we thee a stranger, and took thee in? or naked, and clothed thee? Or when saw we thee sick, or in prison, and came unto thee?" But when may we see you, to get some good out of your personality?

"In the beginning was the Word, and the Word was with God, and the Word was God" (St. John). This great truth of God's impersonality and individuality and of man in His image and likeness, individual, but not personal, is the foundation of Christian Science. There was never a religion or philosophy lost to the centuries except by sinking its divine Principle in personality. May all Christian Scientists ponder this fact, and give their talents and loving hearts free scope only in the right direction!

I left Boston in the height of prosperity to *retreat* from the *world,* and to seek the one divine Person, whereby and wherein to show others the footsteps from sense to Soul. To give me this opportunity is all that I ask of mankind.

My soul thanks the loyal, royal natures of the beloved members of my Church who cheerfully obey God and steadily go on promoting the true Principle of Christian Science. Only the disobedient spread personal contagion, and any imaginary benefit they receive is the effect of self-mesmerism wherein the remedy is worse than the disease.

Pleasant View, Concord, N. H., June 30, 1906.

The letter to which Mrs. Eddy refers in the first paragraph of the foregoing article reads as follows:—

Boston, Mass., June 26, 1906.

Dear Leader:—Being about to leave the States for South America, to make my home in Ecuador for an indefinite season, I took the liberty of visiting Concord and driving out to your home, some days since.

I just wish to say that the lesson learned during that visit will not soon be forgotten, and I came away with a sense of having intruded upon your much-desired, yea needed, seclusion.

The significance of your words, "time to assimilate myself to God," came to me with renewed force, and I saw how, under the guise of loving interest, we might become tedious hindrances to the fulfilment of not only your highest hope, but our own as well. Therefore my next visit to Concord can only be upon special invitation from an authorized source.

From the "genial tropics" my love will go out to you, as it ever has here. In joyous anticipation of future good news to tell you, I am Earnestly yours,

(MRS.) NINA M. HENDERSON,
Guayaquil, Ecuador, S. A.

Our Leader's Article.

WE are much pleased to give the place of honor in this issue to our Leader's timely, brave, and significant article, "Personal Contagion," which appears above, because we look upon it as one of the most important statements of inspired truth that she has given to the world since the publication of the Christian Science text-book. We feel sure that all true Christian Scientists will so regard it and, as they ponder its vital message, they will express their gratitude for it in good works.

ARCHIBALD MCLELLAN.

Christian Science and Progressive Physicians.

THE authoritative pronouncements of many speakers at the late medical convention in Boston certainly furnish food for thought, and in many respects they give promise of better things. Especially is this manifest in the readiness with which the facts are being recognized by leading physicians, however unsavory and discouraging they may be. For example: a distinguished gentleman from abroad who is rated as one of the leading authorities of Europe on the treatment of cancer, conceded that its present medicinal and surgical treatment is altogether experimental, that old methods must be discarded and new ones found. Another physician declared that "the United States Pharmacopæia is a relic of mediæval barbarism, and is still crowded with things which belong with the stuffed alligator." Commenting upon the above statements, the editor of a leading daily has well said that these are startling admissions "for those who take the prescriptions."

The dilemma of the honest doctor is a serious one. He has been educated to think that his healing art is a science: that its asserted specifics have been divinely provided, and that his ministry is therefore of the highest significance to humanity. He is now discovering that its most intelligent exponents are led to speak of the practice of his profession as but an oft-repeated experiment which gives no suggestion of a divine ordering, and which has proved to be wholly unequal to the occasion. While recognizing the seriousness of the position in which physicians are placed, Christian Scientists can but rejoice that the awakening to truth is thus advancing, and that it has already rendered general thought accessible as never before to the healing Science of Chris

Digitized by Google

tianity. Both the physicians and their patients are seeing that drug-treatment is wholly unscientific; that the nostrum used is relatively unimportant; that the "providential provision" idea respecting *materia medica* has wholly broken down, and that physical ills are the manifestation of a false mental state which can be rectified by Truth alone.

Moreover, intelligent physicians are realizing that, having failed in many lines of experimentation and having recognized a long list of diseases as "incurable," they are bound, both by their interest in humanity and by their hope of success, to be considerate toward any proffered remedy which is commended by undeniably good results. Speaking of this obligation laid upon physicians, the author of "Pro Christo et Ecclesia" has recently said: "If religion, by a new faith in God, should bring strong reinforcements to the innate vitality of the body, strong enough to keep the body well, or to restore it without medical aid when it is diseased, . . . this would be a result that every physician worthy of the name would hail with delight, whether he agreed or not with the religious view of the how and why of the increased vitality. It is a conservative religious sentiment which has made objection to the exercise of faith in regard to health, never the scientific spirit. What every medical man desires for his patient is life, more abundant life; and he knows far better than laymen the limits of his power—the diseases which he cannot cure, the disabilities which he cannot remove" (*Hibbert Journal*, April, 1906).

From all this it would seem that though they may not yet be able to identify Christian Science with the teaching of the Master, honest, truth-seeking doctors cannot ignore the divine means of healing to which Mrs. Eddy has called the attention of a suffering world, and the value of which has been established in such a multitude of unquestionable instances. These men, in so far as they are earnest and sincere in their desire to help those whose tear-stained faces are turned to them with the sad longing of an imperiled hope, must thoughtfully weigh the evidence which this great movement is supplying, that Truth is the one panacea for human ills; that mortal thought must be purged if humanity is to be set free, and that the gracious promises of the Master which were based on this cleansing may be fulfilled to-day by the healing of sickness in the Christ-way.

It would be difficult to find a greater contrast than that between the depressing doubt and uncertainty of physicians as revealed in their own candid statements, and the buoyant and inspiring confidence of those who are continually proving the availability and adequacy of the Christ-truth, as revealed in Christian Science, for the salvation of men from both sin and disease.

JOHN B. WILLIS.

Promises of Good.

AT a time when the question of national existence, with all it implies, is a prominent theme throughout this country, Christian Scientists may well ask themselves to what extent they as individuals are contributing to the general weal. No one denies that right is the fundamental idea of all government, or that "righteousness exalteth a nation;" the all-important consideration is, how righteousness may be most speedily and surely attained and permanently established. The belief that wrong has even a temporary claim to consideration—or toleration—is fast dying out, and this proves the recognition of a higher standard than has been held in the past. The present outlook may be either cheering or discouraging, according to the viewpoint. If we are tempted to think that evil abounds, we should remember the great Teacher's statement that the Holy Ghost, the Comforter, must "reprove [convict, Rev. Ver.] the world of sin," before He can guide "into all truth;" in other words, sin must be seen to be "exceeding sinful," as St. Paul says, before men will turn from it with loathing.

To the human sense it is not easy to associate the thought of "the Comforter" with the uncovering of evil, but without this uncovering there can be no true comfort, no abiding peace, and on this point the teaching of Christian Science is most emphatic. Our Leader says, "Nothing short of this divine Principle, understood and demonstrated, can . . . uncover the myriad illusions of sin, sickness, and death" (Science and Health, p. 572). We may therefore rejoice when evils which would sap the very foundations of national existence (whether manifested as personal or political corruption) are being brought to the light to be forever wiped out by the action of divine Truth and Love. Let no one question that the divine arm is made bare when evil is exposed. Error does not destroy error; it requires the majesty and might of Truth to do that. What is more, it requires the human recognition and understanding of Truth to effect the destruction of error, and to this age has come a revelation of Truth's power, greater than has ever been known before. It has come where the foundations of free government were truly laid. It has come when the world is weary of wrong and would fain throw off its yoke. Because it has come, all thinking people are beginning to see the cruel tyranny of material sense, and to admit that the remedy for it must be found in greater spirituality. The lust for material pleasure and possession can never be sated by its indulgence, which is ever attended by disappointment and followed by misery.

Well is it that we may seek comfort for this misery in the knowledge that evil in its every manifestation—whether sin or sickness—is unreal because it is not of God. But this is not all that Christian Science has to offer for the world's need. It proves that good in its every manifestation is divinely real and satisfying, and this is the experience of the thousands who walk in the light of Truth and know what it means to be "rich toward God."

ANNIE M. KNOTT.

Letters to our Leader.

Lawrence, Mass., June 18, 1906.

Mrs. Mary B. G. Eddy,

Pleasant View, Concord, N. H.

Dear Leader:—Twenty-five years ago I was healed in Christian Science of consumption, after eight years of invalidism. Soon after commencing treatment, under the care of one of your students, I purchased a copy of the third edition of Science and Health, published by that good man, Dr. Asa G. Eddy, at No. 8 Broad Street, Lynn, Mass. Well do I remember that you advised me to wait a few weeks for the book, as you were about to issue a new edition. Greatly do I rejoice for having been a faithful student of the Bible and your book, because these books have enabled me to be loyal to Christian Science throughout all these years. I have known much about your struggles with the different phases of mortal mind, and of your triumph through ever-present, divine Truth and Love.

It was my blessed privilege to attend the dedication of The Mother Church in 1894, and its "excelsior Extension" in 1906. Who can tell the full significance of all this great work? However, as the spirit of Christ, Truth, dawns upon one's consciousness, through Christian Science, he can say, in the words of Simeon uttered as the parents brought the child Jesus into the temple at Jerusalem, "Mine eyes have seen thy salvation, which thou hast prepared before the face of all people; a light to lighten the Gentiles, and the glory of thy people Israel."

Lovingly yours,

LEWIS PRESCOTT.

Geneva, Switzerland, May 31, 1906.

Beloved Leader:—In sending our check to Mr. Chase we thought we would like to tell you how our little group here are trying to be obedient followers of the Master,

Digitized by Google

through your message of "Science and Health with Key to the Scriptures." We often wish you could hear the voices in our little meeting of from forty to fifty—French people—singing the Christian Science hymns in English and singing with so much love and gratitude and joy. Seeing how important it is that each one should be able to read the "little book" for himself, we commenced English classes the first of this year and finished the first class of sixty lessons in April. It is gratifying to see how the dear ones have learned English enough to be able to read the book for themselves and study the Lesson-Sermon each week. It was also beautiful to see how divine Love provided the payment for the lessons, which has encouraged us to continue having at least one, and we hope two classes, each year. Those who are healed love you for what Christian Science has brought to them, through renewed health, and above all for the clearer understanding of the word of God, which each patient invariably confesses.

Little by little Geneva is coming to see that Christian Science is a religion of love with "signs following," and it is not looked at askance as something foreign and intangible, but to be judged by its fruits—healing, spiritual uplifting, a messenger of "peace to good, willing men."

We pray for grace to live more and more the lives of Christian Scientists, so that in this dear old city of Calvin, it may be said of you, as the "Wayshower" to this age, "Her children arise up, and call her blessed."

Yours lovingly, in the name of the Christian Scientists of Geneva, Switzerland,

CHARLES and MARGUERITE VOUGA.

White Sulphur Springs, Mont., June 10, 1906.

Dear Leader:—This beautiful day, when so many hearts are lifted in gratitude to God for Christian Science, I want to tell a part of what it has done for me. How I love you for standing against the whole world for the truth which you knew was all.

Eight years ago this summer, after years of suffering, I was hurried from this place in the high Rockies to a lower altitude, with hope of relief from heart difficulty and stomach trouble. Two years before this I had gone to Helena for an operation which seemed the only hope held out of relief from ovarian trouble. After three months of agonizing suffering I was brought home. For two years I did not stand on my feet, though all was done for me that could be done by kind doctors and friends; but what was called phlebitis in my limbs seemed to bind me hopelessly, and the heart trouble growing worse, my kind husband started to California with me, but stopped in Missoula, Mont., to visit friends, where I learned of Christian Science. In three weeks after beginning treatment I left my wheel-chair, going about the house, but the fear of our cold northern winter sent me to California the next winter. While in San Francisco I found in the dear book that climate was not my help, and in the southern part of California I learned more of this truth from kind friends. I had ceased to pray, for the God of whom my mother had taught me seemed so far away, but thanks to you I have learned He is not far away. My healing was slow, but as I overcame many things in disposition, physical ailments would leave me one by one. I am thankful to be able to help others a little, and am living for the past eight months here again in this high altitude without fear of it. A few of the citizens of this place meet at the house of a friend and we have our Lesson-Sermon each Sunday. My dear mother, who is eighty-one years of age, reads the Bible at these meetings. She has been a life-long member of the Friends' church, but is thankful for Christian Science. My kind husband and friends were very grateful to see me able again to do my housework, and much besides. The only return I can give is to try to follow where you lead.

Lovingly yours in truth,

MRS. HATTIE E. JONES.

Testimonies of Healing.

Having been benefited so much through Christian Science, I feel that I must tell some of the things that it has done for me. For twelve years I was in the habit of using strong drink, and was unable to give it up until I received treatment from a Christian Scientist. At this time I was healed of the drink habit, and lost all desire for intoxicants. I had never attended church, neither had I known any Christian influences before learning of Christian Science. I have been led to see the very great need of being in the church since I have known Christian Science, which has been about fifteen years. Once during this time I was taken with malarial fever, which lasted a few days. I had read Science and Health and remembered that Mrs. Eddy had said death is not a reality, and I lost all fear of death. I had not rested any for three or four nights because of the suffering, but as soon as I realized that there was no reality in death I fell asleep and awoke next morning feeling better than I had ever felt before. I got up and went to work and have never had a return of the trouble. That was fifteen years ago. For all this I am very thankful to God, and to our Leader. This demonstration, however, is nothing in comparison with what I have been through since then.

A little more than nine months ago I was working in a coal mine, and had lighted one shot to blast some coal and was trying to light a second one. I was so slow in lighting the second shot that I decided to go out and let the first shot go off and then come back and light the second one. The second shot was already lighted but I did not know it, and just as I got over to it, it exploded, making me unconscious. As soon as possible a surgeon was called, and when I knew enough I called for a Christian Science practitioner. The surgeon dressed my wounds temporarily, but hardly expected me to live to reach the hospital. There it was found that I had sustained a double fracture in both legs and other serious injuries. The Christian Scientist met me at the hospital and was in the room when the surgeons made their examination. They said that the left knee-cap was in five pieces and the right one in seven. The right leg was broken below the knee and two ends of bone stuck out through the flesh. It was also broken through the knee, and the thigh-bone was broken. The left leg was broken about midway between the knee and the hip, broken into small pieces, and the left thigh bone was crushed clear up to the hip in such a way that the surgeons could not operate on it to straighten it. There were three ribs broken, and my upper lip was cut down to the teeth, while I was burned and bruised from head to foot. Some time afterwards my wife asked the doctor if I had received any internal injuries, and he said, "Yes, some very serious ones; he passed blood and water for the first ten days." I was forty-seven years of age at the time of this accident. The bones were not only broken but they were twisted in such a way that the surgeons despaired of being able to straighten them. On account of my being so weak they thought I could not stand any more surgical work. During all the time of setting the bones I was not conscious of any pain, which seemed quite remarkable to the surgeons and the nurses. At various times they had little hope of my recovery, but through the Christian Science treatment I came out of every seeming crisis all right. This healing was something wonderful to me, the most wonderful I had ever heard of. At the end of eight weeks I was trying to walk on crutches when I fell and broke the left leg again, just above the knee. During all this experience I had no pain, and I knew there was no pain at the time of the last break, because I was conscious all the time. I feel that my freedom from pain was because of the Christian Science treatment which I was receiving:

Digitized by Google

For this I thank God, who gave Mrs. Eddy the understanding of Truth to give to the world, through which mankind can overcome pain and sickness. I am also thankful that I was in a city where there were Christian Science practitioners who had enough understanding of Truth to know the nothingness of even such seemingly serious injuries as I had, and who were willing to help me through this trouble. Science and Health (p. 518) says, "Blessed is that mortal who seeth his brother's need and supplieth it," and I can certainly say that the Christian Science practitioner who helped me fulfilled that Christian requirement.

After the second break healed and I began to walk again, it was found that my left leg was about one inch shorter than the right, and the physician said it would have to remain so; but the Christian Science practitioner told me that God was able to bring about perfection, and normal conditions of the limbs. After three weeks' time I found that both limbs were nearly the same length. Another feature of the work which I feel should be mentioned is this: When I called the practitioner I already owed him some money for other help which he had given me, but he came to my assistance as soon as he received the word and stayed right by me until I was on my feet again. There was forty dollars to be raised immediately at the hospital, and the practitioner furnished that, not knowing whether he would ever receive any money from me or not.

I have not told all there is to tell about this accident, for there were many things that would have laid me up for weeks, and perhaps months, if I had not known of Christian Science. I must also say that although my limbs are not yet entirely restored I am able to walk without any assistance, either from crutches or canes, and am able to do a day's work again. I would also like to say how thankful I am that Christian Science was such a great help to my wife at the time of both cases mentioned. She and I came into Christian Science at the same time, and it was certainly wonderful to see how Truth sustained her and enabled her to help me night and day. She also wishes to express her gratitude to God for the blessings which Christian Science has brought to our home.

JASPER KINNEY, Des Moines, Ia.

It was early in 1900 when I took up the study of Christian Science, it having been brought to my notice by the healing of my sister, who was in the last stages of consumption. The deep gratitude expressed through the testimonies in the *Sentinel* first appealed to me, for I was hungry, and this led me to "Science and Health with Key to the Scriptures" by Mrs. Eddy, that I might learn of that which had given cause for such grateful hearts. I soon found myself joining in that song of joy and thankfulness, for in the above-named book I found the truth for which I had many years longed and looked, and the proof was made manifest to me in the removal of sadness and depression which had become almost unbearable. I came to know that to be a present fact, which before I had looked upon only as a future possibility,—that God's will can be done on earth as in heaven. For this spiritual uplifting I can never cease to be grateful to our dear Leader, Mrs. Eddy, who through the power of God has labored unselfishly to make plain to the world this healing and saving truth. The result of this uplifting through the study of the Bible and Science and Health was also made manifest in physical healing: weakness was overcome by strength, pain replaced by harmony, and disease destroyed.

Very shortly after buying Science and Health my faith and understanding were tested, for I became ill with quinsy, which I had had several times, and each time had been under medical treatment for at least a fortnight. This time I turned to Christian Science, with the result that next morning my throat was perfectly clear, whereas the day before I could scarcely speak, and I gratefully say I have had no return of the disease. Other diseases have vanished as darkness before the light, such as influenza, indigestion, chronic headache, defective eyesight, chapped hands, as well as other troubles and difficulties which arise in human experience.

I wish to express my loving thanks for our periodicals, the *Sentinel*, *Journal*, and *Quarterly*, for all are lights by the way, enabling us to "magnify the Lord" for his goodness."—LUCY HAMMOND, Bedford, England.

Over two years ago I turned to Christian Science because everything else had failed to help me. I was almost an invalid for twenty years; twelve or fifteen years a sufferer from asthma with all its horrors. During all this period of suffering I was attended by many eminent physicians, several specialists, and had an operation for polypus of the nose. I spent almost every summer away from home, in the care of the best doctors, seeking benefit in change of climate, spending large sums of money with no lasting benefit, and only looking for relief in death. When Christian Science came to me I saw that God is Life, and this brought many and great changes. The wonder now is, how I could live without knowing this truth that makes free. When I first turned to Christian Science I little knew of the wonderful blessings in store for me. After those years of suffering, when almost bereft of hope, when *materia medica* and hygiene had failed me, and when my son, a surgeon in the U. S. Marine Hospital Service, said that this disease could not be cured by *materia medica*, I found in Christian Science a God who is "a very present help in trouble." Now I am healed and in better health than for forty years. Not only have I found relief from physical suffering, but a better understanding of God and man and all that is good. I have had no return of asthma, although a year has passed since this truth made me free.

Words fail to express my gratitude to God for this revealed truth; to Mrs. Eddy for her pure life, sublime faith, and selfless love, which enables her to reflect this truth and bring countless blessings to mankind.

L. C. MCMULLEN, St. Petersburg, Fla.

It is now over a year since I heard of Christian Science and came to it for help in a chronic nervous trouble which doctors had failed to cure. I received treatment from a practitioner for about ten days and obtained immediate relief. During the time which has followed, I have only twice had slight attacks of the old trouble, and these have been speedily and effectually met by the power of God as taught in Christian Science. My first treatment rid me of two ailments which I had not thought of mentioning to the practitioner. I could not read without glasses, and even with them my eyes pained me very much, but the day after the first treatment I read without them and have never had the least pain since. I still have a sense of short-sightedness to overcome, but it is yielding gradually to the knowledge that the only true senses are the senses of Spirit. I was also able during my first week in Christian Science to throw away an elastic anklet, without which I could not walk very far, as my instep would give way. I have never required one since. The truth seemed so clear to me at first that I felt as if it were impossible to be ill again; but I now see that every discord overcome is a step forward, and the mental work which it necessitates is the narrow gateway into fresh pastures that divine Love has provided for us. My mother and sister have also reaped many benefits from their study of Science and Health.

I am deeply grateful to Mrs. Eddy for her discovery of this truth.—HELEN M. INMAN, London, England.

It is seven years since I first received physical benefits from Christian Science. I was then healed of a cancerous tumor on the stomach which had baffled many physicians then in this State. I was thoroughly cured of this trouble

Digitized by Google

in a very short time, through Christian Science, and was able to return to work. Some three years later I was working in a quarry, when a large piece of loose rock rolled from its lodgment above, and struck me a glancing blow on the right side, breaking two of my ribs. The workmen around rushed to pick me up, fearing that I was killed or that I would never recover. I was taken home (about two miles and a half) and immediately called a Christian Scientist to help me. The treatment was so effectual that in a week's time I was able to go to work, feeling none of the bad effects which usually accompany such an accident. Shortly after this I went to work in a mine as foreman. One day I went into the mine and took a man with me. As the rock was very hard it was necessary to use a double-handed ten-pound hammer. I was holding the drill and the man was swinging the hammer, striking the drill I held. As he had never done this striking before, he was very full of fear, and after a few blows on the drill he missed it altogether and struck me on the very place where the rock had broken my ribs. From that time until recently, I have suffered untold agony from the side. I sought help from others, but the relief was only temporary. The pain seemed to grow worse until I was unable to raise my arm as high as the shoulder. One night when the suffering was so intense that I could not rest, the thought came to me like a flash that I must do my own work, that I must not always depend on others. I took up Science and Health and read on page 385, from line 22. I read the paragraph several times, lay down to rest, and in a very short time the swelling caused by the blow burst and all the contents came out. I have thus learned the grand truth of the saying, "Heal thyself." It was a lesson I shall never forget. From my inmost heart I can say I am thankful to God, to our Leader, and to Christian Science.

A. R. STRANG, Vernon, Utah.

The most important events of my life I consider to be the healing of my wife in Christian Science, after doctors' remedies and changes of climate had failed to bring permanent relief, and my own bettered condition physically and morally through the same agency. Three years ago I was suffering with intestinal difficulties, experiencing much discomfort when indulging in certain foods, and for which the physicians stated I should never find a cure. In addition to this I was given to worrying over the most trivial matters, business in particular. I was constantly harassing those about me with my seeming troubles and was always sure to make mention of every ache and pain with the belief that I had some new added disease. To-day I am in better health than ever before, for which I am grateful to God, and to our dear Leader, who has given us "Science and Health with Key to the Scriptures," for through its study the physical betterment has been brought about; but the greatest blessing is the spiritual uplifting, the desire to live nearer to God.—OMAR T. FRICK, Tiffin, O.

I had all my life been frail and delicate, and with the cares and duties incident upon maternity, conditions grew worse. After nine years of invalidism, under the constant care of faithful and conscientious physicians (eight in number), who greatly disagreed in opinions regarding me, and whose treatment included massage, electricity, etc., one whole year in bed, and a four-months stay at a hospital, where temporary relief was obtained through the loving care and thought expended on my case the spring of 1900 found me a constant sufferer, with nothing but surgery held out to me, to which I would not submit, as experience and observation had taught me too much. With the weary hope that I might find help through the ministrations of my parents' family physician, I went to Washington, and the day after my arrival consulted him. I carried from the office the remedies he prescribed, but his diagnosis had further shaken my already disappointed faith in *materia medica*, and they were never used! The next day a dear Christian Scientist in the home invited me to go with her to the Reading Room and meet some of her friends.

I had never heard of Christian Science, except when a friend had timidly suggested the subject to me six months previous, as a possible solution of my trouble. I very indignantly repudiated the idea that it could be of any avail to one so sick as I, and forbade any further mention of the matter; whereupon she meekly subsided. Hence, in my ignorance and prejudice, I was not at all prepared for what I learned that day. Never shall I forget my first impressions of that peaceful, quiet room,—the gentle consideration shown to all inquirers, and the compassionate love manifested by the dear practitioner whom I asked to take my case. Her words in that first conversation brought to me the abiding conviction that the healing work of Christian Science was the same that Jesus taught his disciples. I caught a glimpse of the true spiritual healing which is the result of spiritual renovation, and I began at once to apply the teaching of the text-book to the task of the evangelization of self, and I saw that in exact ratio to the corrected thought the body responded.

Many times in our experience we have had occasion to thank God that our first steps were guided by the loving counsel of one whose discerning and unquestioning loyalty to Mrs. Eddy, and her full recognition of the importance of a just estimate of our Leader's position, undoubtedly may have saved us from bitter lessons which we might otherwise have been forced to learn. Day by day I improved, and the tenth day made the astonishing discovery that a difficulty I had neglected to include in my long list, when stating my case to the practitioner, was entirely removed. I was much impressed with her manner of receiving my announcement of this. I think I expected her to be as much surprised as I was, but she assured me that as "Love" was "the universal solvent" (Science and Health, p. 242), it was divinely natural. Then I immediately expressed the fear that it would come back, which she met by saying that there was nothing to return, and these intervening years have proved it so.

At this time also glasses, carefully fitted by the oculist and used for two years, were laid aside—no longer needed. Every proof strengthened my hope and courage. The text-book was faithfully studied, services attended, and much time spent in the Reading Room, where all I learned confirmed my confidence that at last I had found "the truth" which Jesus said should make us free. During this period I wrote nothing home about my absorbing new interest. When at the end of six weeks I returned home, my husband found me so wonderfully improved that he was eager to know what had wrought the change, and the first reading of the text-book found him a willing disciple of the doctrine it taught, sufficient proof of which he already saw before him. So, gladly and thankfully, we and our boy set out to prove its teachings in our daily lives, and Christian Science has not only been our only physician since, but has brought us all the real happiness we have ever known. Gradually a few wished to hear more about this beautiful scientific Christianity, which led in due time to the establishment of regular services in our own home, and much good has thus been accomplished. More than one hundred different individuals have heard the Lesson-Sermons read here, and the "fruits" have followed in the healing of sickness and sin. Gratitude has many times been expressed for the wisdom of our Leader, in thus making possible these services in many places where years might have elapsed before one would have been found sufficiently advanced in understanding to bring this truth to a worthy expression in sermons, as formerly.

Divine Love has provided for our every need at the right time, and can any one wonder that we love Christian Sci-

Digitized by Google

ence, for only lives of devotion can in any measure meet our indebtedness. Our hearts are full of gratitude to God, the giver of all good, and of good only, that our agonizing prayers for a knowledge of Him are now being answered through Christian Science; and we thank Him for our Leader's wisdom, fidelity, and unbounded love for mankind, in giving this truth to the world. God speed the time when the prophecy of Habakkuk shall be fulfilled. "The earth shall be filled with the knowledge of the glory of the Lord, as the waters cover the sea." May we aid in the answering of our prayers by working assiduously and intelligently for the establishment of the truth in individual consciousness.—Mrs. Florence B. Dean, Danielson, Conn.

Christian Science has done so much for me during the six years that I have been trying to make it my rule of conduct, that I am always glad of an opportunity to express my gratitude. I came to Christian Science originally for physical healing, but I was not long in discovering that my physical troubles were only a small part of the inharmonies that could be cast out by the truth. For many years I had doubted even the existence of a God, and had thought that every man's hand was against me, but I soon found such overwhelming evidence of the efficacy and power of divine Love, that my thought about my fellow-men was changed, and I was led to exclaim fervently, as did the heavenly host at the birth of the Messiah: "Glory to God in the highest, and on earth peace, good will toward men." It was indeed the coming of the Christ to my consciousness. During the past six years I have had occasion to test Christian Science in many ways, and have always found it an efficacious and ever-present help in time of trouble, whether the trouble was physical or mental. Another reason why I am grateful is that through the little understanding I have gained, I have been able to help others as well as myself. For a long time after I began demonstrating Christian Science for myself, I was loth to attempt the treatment of those outside my own family, fearing that I might not be able to afford the relief expected, but when I fully realized that God is the only healer; that there are no failures with God; and that "God will heal the sick through man, whenever man is governed by God" (Science and Health, p. 495), then this fear was destroyed, and the results corresponded with the realization of the truth gained from the study of our text-book.

Horace W. Hebbard, Lincoln, Neb.

It is only a few months since I began the study of Christian Science and I could never tell how much it has done for me both mentally and physically. For six years I had been a great sufferer, had tried many physicians and gone through three serious operations, but still continued to grow weaker. I could not eat the simplest food without great distress. I was said to have liver and kidney trouble, and my bowels were partially paralyzed; I also had malaria, etc. After this I was taken with chills and fever, and all my other troubles seemed to have reached a climax. I felt that I was about to die, and at this point my mother, who has been a student of Christian Science for several years, suggested my trying it. I had little faith in it, but I consented, and a practitioner who was then at the house kindly undertook to help me. He gave me a treatment every hour during the night, and by noon of the following day I was able to sit up and could eat anything I wanted. In three days I traveled fifteen miles without fatigue. My healing in other troubles has been slow, but I know that as fast as I put off the old and put on the new, errors will vanish.

Words are inadequate to express my gratitude to Mrs. Eddy, who has made it possible for me and for others to understand the truth.

Mrs. Ruby D. Graves, Butler, Pa.

I desire to express through the *Sentinel* my love and gratitude to God for what Christian Science has done for me. When I first heard of this saving truth, about twelve years ago, I was over seventy-two years of age and had been in poor health for years. I am now in almost perfect health, do all my work, and have time to visit and help my friends and neighbors. I am considered a wonder by many. I will only tell of a few of the many wonderful demonstrations I have had. A broken arm, which was never set, did not keep me from doing my work. It healed perfectly in a short time. I had the same results with a sprained ankle, my work keeping me on my feet most of the time. A severe attack of inflammation, for which I asked help, was healed in one treatment. Pneumonia, typhoid fever, and other diseases have been overcome through the study of Science and Health, but greater than the physical healing has been the spiritual uplifting. Can any wonder if I say,—God bless Mrs. Eddy for making my advanced years my brightest ones.

Mrs. J. Keil, Woodstock, Ont.

I was badly poisoned last summer from eating what was called cabbage snake poison. My mother became alarmed and telephoned to a Christian Science practitioner for help. Next morning I was able to go to Howard for treatment, as there was no practitioner here, and in a short time I was healed. This is only one of many ailments that have been banished through Christian Science. We have most of Mrs. Eddy's books and read them every day. My heart is full of gratitude to her for finding the true path that leads us to our eternal home, and for showing us how to be good.

Leah V. Record, Moline, Kan.

I wish to express my gratitude for what Christian Science has done for me. It is a year since I became interested in it. I sought it for spiritual help, more than for physical healing, and this has been the happiest year of my life. A few weeks ago I was healed of astigmatism of several years' standing, having been obliged to wear two pairs of glasses. It was a blessed day for me when I took up Christian Science, for it has helped me in every way, and I have been able to help those dear to me. The literature is a great comfort and help, and words cannot express my gratitude to our Leader for what she has done for all mankind.—Mrs. M. L. Rauskolb, Medford, Mass.

The clergy of all men ought to make it their one strenuous effort to free themselves from bias, to examine into facts and give credence to nothing calculated to provoke nor which is not irrefutably established, to make their deductions rationally and dispassionately, to exhibit a due sense of proportion, to realize that a drastic remedy can never be justified save for the most desperate disease, to discountenance appeals to passion and prejudice, and to rebuke sternly the spirit of hatred and uncharitableness.

John George Goddard.

Picture of The Mother Church.

The picture of The Mother Church and its Extension which The Christian Science Publishing Society now has for sale is a half-tone reproduction, 12 x 15 inches in size, of a view giving the St. Paul Street frontage and Falmouth Street side.

The picture is mounted on a white mat, 21 x 25 inches, and will be sent to any address in a mailing-tube for fifty cents a copy. A dozen copies will be sent to one address for $4.50. Souvenir postals of the same design as the large picture are for sale at twenty-five cents per dozen.

Address all orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

From our Exchanges.

Mr. Goldwin Smith has collected in a small volume certain letters which he had published in the New York *Sun* on religious and theological topics. The title of his book indicates not only the character of these letters but also the character of this age. Says Mr. Smith in his preface, "A secular journal in England received, in the course of three months, nine thousand communications from people seeking for light on the religious question." Such an age may be skeptical; but it is not irreligious. The skepticism is not of that immoral variety which discards religion in order to escape responsibility; it is not of that flippant variety which asks questions for the sake of asking them. It is very much in earnest. It is "in quest of light."—*The Outlook.*

If the history of the Church teaches us any lesson more than another in connection with the mission and work of the Holy Spirit, it is that the next step in the moral and religious development of the race must be toward the creation of a Christian social conscience, not as distinguished from the individual conscience, but as increasing the individual's sense of responsibility for the world's condition. No one can doubt that under the tutelage of the Spirit of God the Church and Christian society are being even now enlightened concerning many matters of conduct about which legislation is either silent or the ethical standards of society need further guidance.—*The Churchman.*

If we are ever to get rid of graft in society, it must be by the spread of the religion of honest, true lives,—we must get down to the roots of the matter. Giving his reason for not attending church, a laboring man recently replied: "When I go to church, I am not helped along my line. I am told how to feel, and I have a hymn-book put in my hands. This may be well enough, but what I need is more knowledge about doing my work faithfully. I want a religion that goes into the shop with me, and I know right well that is what my mates need."

The Christian Register.

If health is the heritage of Christendom, it is waiting to be realized by a corporate faith. If there is a divine abhorrence of disease and all forms of ill health, all such sufferings that Christians bear are due, not to necessity or to God, but to the lack of faith in the Church at large. Many of the noblest children of the kingdom are to-day reasonably convinced that the procession of the Spirit of God manwards involves health, and yet cannot appropriate the health because of the faithlessness of the many.

Author of "Pro Christo et Ecclesia."

The Hibbert Journal.

I would that it were possible for me to make clear to you the eager crying of the world for the man of insight with a message. The world is hungering and crying for the men of God who have seen His face, upon whom has come the spell of awe in the presence of His holiness, who have thrilled with joy in the sense of His love, and who know how to teach the world of to-day how its need and its sin and its ill can be ministered unto by that present eternal Helper.

RUSH RHEES, LL.D.

The Hartford Seminary Record.

God does not speak more to some men than to their brethren, but to all alike. It is the difference in their hearing. They put things between themselves and heaven. The men and women in the inn did not hear.

REV. CHARLES S. MACFARLAND, PH.D.

The Universalist Leader.

The battles before the Church for the present century are ethical. The test of religion has shifted to the sphere of actual life. Dr. Dale has said that the defect in evangelical Christianity is its failure to produce practical righteousness.

Western Christian Advocate.

THE CHRISTIAN SCIENCE TEXT-BOOK.—"Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing all the By-laws to date of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CARDS IN THE GERMAN PERIODICAL.—Application blanks will be supplied by The Christian Science Publishing Society to practitioners who wish their names and addresses inserted in the advertising columns of *Der Herold der Christian Science.* These applications should be properly endorsed and forwarded to the Society. The rate for advertisement will be $2.00 for the first line, and $1.00 for each additional line. It is desirable that those who offer their names in this way should be able to communicate with patients and inquirers who speak the German language only.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with The Mother Church and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By Hon. WILLIAM G. EWING.

CHRISTIAN SCIENCE. Its Worth and Work. By Rev. ARTHUR R. VOSBURGH.

CHRISTIAN SCIENCE. Its Promises and their Fulfilment. By EDWARD A. KIMBALL.

CHRISTIAN SCIENCE. Is it Christian? By Mrs. SUE HARPER MIMS.

CHRISTIAN SCIENCE. Its Work and Scope. By CAROL NORTON.

CHRISTIAN SCIENCE. The True Idealism. By ANNIE M. KNOTT.

IN GERMAN

CHRISTIAN SCIENCE. Its Promises and their Fulfilment. By EDWARD A. KIMBALL.

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

The feature of the Fourth of July observance at Paris was the banquet of the American Chamber of Commerce at the Hotel Quai d'Orsay, at which Ambassador McCormick discussed "Our National House-cleaning." At London three thousand persons, mostly Americans, attended the Fourth of July reception at the American Embassy, Dorchester House. At Pekin on the Fourth the American Consul, Thomas Sammons, gave a banquet to the Viceroy of Mukden, Count Matsura, the new Japanese Minister to China, M. Hayashi, and other prominent Japanese and Chinese officials. At Vienna for the first time in several years Independence Day was celebrated under the auspices of the American Embassy. The Viennese American Medical Association had arranged a baseball game, dinner, and dancing at a lovely spot near Vienna, where numerous other Americans, on invitation of the Embassy, gathered and spent the remainder of the day in enjoyment. At Copenhagen American tourists and the American colony celebrated the Fourth of July. The reception at the American legation was well attended. Several dinners were given by Danish Americans, at which King Frederick and President Roosevelt were toasted.

William J. Bryan was the guest of honor at the annual Independence Day dinner of the American Society at the Hotel Cecil, London, on the Fourth. Mr. Bryan, who read his speech, said in part:—

"To doubt the dynamic power of right-eousness is infidelity to truth itself. That nation which is unwilling to trust its cause to the universal conscience, or which shrinks from the presentation of its claims before a tribunal where reason holds sway, betrays a lack of faith in the soundness of its position.

"The Christian nations must lead the movement for the promotion of peace, not only because they are enlisted under the banner of the Prince of Peace, but also because they have attained such a degree of intelligence that they can no longer take pride in a purely physical victory. The belief that moral questions can be settled by the shedding of human blood is a relic of barbarism.

"I venture to suggest that the world's peace would be greatly promoted by an agreement among the leading nations that no declaration of war should be made until the submission of the question in controversy to an impartial court for investigation, each nation reserving the right to accept or reject the decision. The preliminary investigation would in almost every instance insure an amicable settlement, and the reserved rights would be a sufficient protection against any possible injustice."

The *Chicago Tribune*, on the 5th, published its ninth annual summary of the deaths and injuries caused throughout the United States by celebration of the Declaration of Independence. The figures were as follows: Dead, 38. By fireworks, 9; by cannon, 1; by firearms, 11; by explosives, 7; by toy pistols, 4; by runaway, 1; by drowning, 5. Injured, 2,789. By fireworks, 1,009; by cannon, 261; by firearms, 393; by explosives, 697; by toy pistols, 304; by runaways, 35. Fire loss, $66,-450. Last year forty-two persons were killed outright. The number of injured this year is in excess of last year's figures by 358.

In his Fourth of July oration at Oyster Bay President Roosevelt said: "Distrust as a demagogue the man who talks only of the wrong done by men of wealth. Distrust as a demagogue the man who measures iniquity by the purse. Measure iniquity by the heart, whether a man's purse be full or empty, partly full or partly empty. If the man is a decent man, whether well off or not well off, stand by him; if he is not a decent man stand against him, whether he be rich or poor. Stand against him in no spirit of vengeance, but only with the resolute purpose to make him act as decent citizens must act if this republic is to be."

A statement of the work of the House of Representatives during the first session of the Fifty-Ninth Congress, just closed, shows there were 4,501 bills passed and 362 left undisposed of. The total number of laws enacted by this Congress is given officially as 3,989, while the Fifty-Eighth Congress in both sessions enacted a total of 2,160 laws.

Entries for the Glidden Trophy Tour, Buffalo, N. Y., to Bretton Woods, N. H., July 12 to 28 inclusive, closed on the 3d, with 67 automobiles, carrying 260 passengers, in the list. There are 32 different makes of cars. Only four of these are foreign, an English Daimler, a Napier, Clement-Bayard, and Darracq.

Investigation into land frauds throughout the States having public lands within their borders has been resumed by a force of fifteen special agents of the Interior Department, who have been furloughed during the past three months on account of lack of funds, the appropriation having been exhausted.

One hundred and sixty-six settlements have been effected by fire insurance companies in San Francisco. On the same basis of adjustment it is estimated that more than $100,000,-000 will be paid in coin to fire losers.

Turbines will not be installed in the South Carolina and Michigan, if the recommendation of the Board of Construction of the Navy Department is approved by the Secretary of the Navy.

Foreign.

The Russian Government's approved agrarian bill has been introduced in the lower House of Parliament and published in the Official Messenger. The Government makes the following propositions:

To distribute upon "favorable terms" all the arable land in European Russia to the peasants who have not sufficient land; to purchase for the account of the State the land which private owners are willing to sell; to sell such lands to the peasants on reasonable terms, even if this involves the assumption by the State of the difference in the cost and the selling price; to establish the principle that new as well as old peasants' lands are not salable to persons not belonging to the peasant class, besides exempting the land from seizure for debt; to assist immigrants to reach Siberia and Central Asia, and to help them in installing themselves there, not only by allotments of land, but by the building of Government roads; to make arrangements for the sale of lands the immigrants leave behind them, for the benefit of these immigrants; the rigorous improvement of agriculture, correcting the inequalities in plots of land, etc., and the right of the distribution of the lands severally where desired.

Sir Frederick Nicholson, K. C. I. E., who has come to America from India on a special mission for the Indian Government, is investigating American fisheries and fish-culture, with a view of enabling his home Government to develop the deep-sea fishing industry on the west coast of India as a means of increasing the native food-supply.

The crew representing the Club Nautique de Gand (Belgium) on July 5 defeated Trinity Hall, Cambridge, by three lengths in the final for the grand challenge cup. The cup thus leaves England for the first time in its history.

Emperor William, in a Mercedes automobile, successfully raced the Hamburg-Kiel express train recently, covering seventy-five miles in ninety-nine minutes. The express, which makes one stop, was eight minutes behind.

A son, an heir in direct line to the German throne, was born to Crown Princess Frederick William at Berlin on the Fourth.

The estimated revenue of the Government of India for 1905-6 is £84,854,140 and the expenditure £82,867,916.

Industrial and Commercial.

The Bourne Mills Corporation of Fall River, Mass., paid its thirty-third regular semi-annual profit-sharing dividend to its operatives on the 3d. It was five per cent upon the wages for the past six months, and it was paid in gold. In a circular issued to the operatives with the envelopes containing the dividends, the treasurer said in part,—

"The time is going by when a manufacturer must take his profits out of the wages of his employes. On the contrary, we are looking for help that can manage machinery so as to get more wages and more profit out of it. That is true of every position from the bottom to the top, as well as from the top to the bottom. No wise employer will hesitate to pay the highest price for that sort of help. It is this idea which makes a scheme of profit-sharing practicable and profitable. The time is going by when any kind of business that is honorable depends for success upon taking advantage unfairly of employes or customers either; indeed, he succeeds best who gives the best for the money."

It is computed that in a short time San Francisco will be using more cement in one day in its rebuilding than all the States of the Union were using a decade ago. One of the large construction concerns of that city has engaged one thousand barrels of cement a day to be delivered in August. Later in the year it is expected that the demand will be such that the same firm will have to use ten thousand barrels a day, or about seventy carloads. This cement will be needed in the erection of about $5,000,000 worth of buildings.

In 1880 the United States produced 3,800,-000 tons of pig-iron; last year the total production was nearly 23,000,000 long tons, or a little over six times as much. In 1880 the total output of Portland cement in the United States was 42,000 barrels; last year it was 34,000,000 barrels, or over eight hundred times as much.

The Fall River Iron Works, controlled by M. C. D. Borden of New York, comprising seven mills, announces a general advance in wages beginning on Monday of this week. This affects about five thousand hands.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

An Interesting Letter.

[THE following letter, received by our Leader from the Earl of Dunmore, who was one of our recent visitors from England, will interest our readers who had the pleasure of meeting so many Christian Scientists from across the water.—EDITOR.]

Knutsford, England, June 24, 1906.

Dear Mrs. Eddy:—We arrived in Liverpool yesterday afternoon, having left Boston on June 13, three days after the dedication services for the Extension of The Mother Church. We were most deeply impressed with the whole ceremonial. The services were as beautiful as the edifice in which they were held, and the extraordinary patience and loving forbearance of the Christian Scientists who were welded together in one huge mass outside the church, waiting for hours under a burning summer sun for admission to the successive services, was not the least wonderful item in the history of that never-to-be-forgotten 10th day of June, 1906. It was instructive and very pathetic; I saw many who failed to get in after waiting hours, but they retired patient and joyful, knowing that nothing could ever keep them out.

Our voyage across the ocean was made interesting by the fact that amongst our fellow-passengers were twelve Scientists. One family in particular we associated with; namely, Mr. Packard and his wife and daughter from Chicago. On Sunday, June 17, the captain gave up his cabin, or stateroom, to us, and in it we held our Sunday service. The next morning at daylight we passed a sailing vessel with signals of distress flying—the signal flag was "We are sinking." We rescued the crew, who were quite exhausted with working day and night for seventy-two hours at the pumps. Soon after we saved the crew the ship went down. On the 19th and 20th we had a severe gale and high seas, but although most of the passengers were sea-sick the twelve Scientists never missed a meal nor did we.

We came here last night from Liverpool, and amongst a large budget of letters—the accumulation of a month—awaiting my return, I found one from you, dated May 16, which reached London, by the postmark, two days after we sailed, and I had no letters forwarded. I am afraid you must have thought it very remiss of me, when I wrote you from the Vendome in Boston announcing our arrival, not making any allusion to the very kind and loving message in that letter of May 16, in which you wrote how sorry you were not to be able to see us during our visit to Boston for the Communion. We shall certainly live in the hope that your promise to us will be fulfilled on the next occasion. We had not contemplated crossing the ocean again this year, but if we feel it is God's will, and for furthering the Cause, or that *you* thought the time had come for giving us further instruction, we would certainly not hesitate a moment about coming. I need hardly add what an immense pleasure it will be to us to see you again, and we quite appreciate and understand how little time you have at your disposal.

Amongst other letters I found awaiting me was one from a clergyman whom I do not know, the Rev. W. Barker (Dean) of St. Marylebone Rectory, London, in which he writes: "At our chapter meeting next week we are going to discuss the subject of Christian Science, of which I believe you possess intimate knowledge and experience. Might I venture to invite you to the meeting, to help us in our deliberations; we should value your presence very highly." A little straw will show in which direction the wind blows. With much love from my wife (Victoria is not with us here),

I remain, dear Leader, your loving student,

DUNMORE.

From our Contributors.

Effecting a Change of Thought.

SAMUEL GREENWOOD.

A FRIEND recently remarked to the writer that despite her earnest effort and desire she had been unable to bring her thought into accord with Christian Science. This failure to think differently was evidently because the basic concept of being, mentally held, had not changed, and hence thought continued its accustomed course. The desire for freedom from the ills of the flesh is a prayer that is too often debarred from fulfilment, because both secular and religious education turn thought away from its present possibility; and until this barrier is removed the heart's desire droops in despair, or flutters its wings helplessly against the bars of matter. It is indeed difficult to turn thought into a new channel without first closing up the old, for men instinctively think as they believe. The change from wrong to right thinking involves the abandonment of erroneous beliefs and ideals, and the gaining of a right apprehension of the spiritual truths of being; and as this is accomplished, the corresponding change of thought becomes spontaneous.

Mortals would gladly think that man is spiritual and harmonious, as Christian Science teaches, did their educated standard of judgment permit them to do so. In so far, however, as they believe matter to be the basis of being, their thought is necessarily controlled by the nature of its evidence in determining human conditions. When matter seems to present a healthy appearance and action, health is believed to be the fact; if opposite conditions appear, the opposite conclusion, disease, is accepted. Through Christian Science we learn that it is "mortal mind" which regards matter as the fountain of life, the mainspring of human action, the guardian of man's destiny and the source of his woe. Resting upon this material belief, and accepting its conditions as inevitable, human thought adjusts itself thereto, responds to this material rule, and eventually succumbs to the fear of its supposed power.

It should be apparent that to change this mental state and avoid its consequences, a different basis than belief in matter must be found to support one's concept of being. While human belief endows matter with divine qualities and attributes, human thought will continue in subjection to it,

Copyright, 1906, by Mary Baker G. Eddy.

Digitized by Google

and the wretched conditions of mortals prevail. But matter, having of itself no assertive mind or consciousness, and maintaining only a fictitious sense of existence in opposition to God, is compelled to yield up its dominion as human thought denies and dethrones it and recognizes divine Mind as supreme.

Thought and action involuntarily conform to a change of belief or conviction, which makes possible the attainment of the new ideal; and hence the application of Jesus' words, "He that believeth on me [the Christ-principle I am demonstrating], the works that I [the Wayshower] do shall he do also." Our Master's teaching and practice were never in harmony with mortals' material beliefs, but always in opposition to them; and Christian Science cannot rightly interpret Christianity without denying materiality likewise. The trouble with Christendom has been in its effort to accept Jesus' spiritual teaching while maintaining a material standpoint, and hence its failure to spiritualize and regenerate human thought and life. The transformation of human consciousness from the material to the spiritual is indispensable to our salvation, although the process thereof may seem inexplicable to a material sense of being.

Let us suppose the case of one who has been reared in want, and whose environment from infancy has been that of poverty, so that this state has seemed to him to be the fixed fact of existence. The mental picture on which his thoughts dwell and which is reflected in his daily experience, is one of destitution; there is nothing in his belief to impel him to think otherwise of himself. Now suppose he discovers that it is possible for him to become the rightful possessor of large estates, and let the truth thus discovered be disclosed to him so that he becomes convinced of his great possibilities, and that instead of destitution he can have wealth at his command, how hard will it be for him to turn his thoughts in that direction? Believing differently he will naturally think differently, until his mental state in that regard becomes the opposite of what it formerly was. It will not be difficult for him then to realize that his old sense of poverty had been a mistake and his want an unreality. This change in his manner of thinking was not effected because of his desire, but because the truth had been revealed to him, thereby exposing the falsity of his past beliefs.

In similar case with this pauper, in his deceived state, is mortal man, reared from his earliest moments in a state of spiritual destitution, environed by materiality, tortured by evil passions, and ignorant of God. He believes that every moment he is surrounded by possibilities of misfortune, disaster, and disease, which the next moment may precipitate upon him, and against which he has no sure defence. In his belief the material body is his master, and it permits him the only measure of health and strength he has a right to expect, and has power to consign him to years of suffering and helplessness. His ancestors as far back as he knows have so believed and suffered, until this material state of discord and sin has come to be accepted as the inexorable fact of human existence, and his thought naturally follows that direction.

Now note at this point the discovery of Christian Science, which exposes the falsity of these material beliefs regarding man; and consider what must be the effect upon a mortal who comes under the influence of this teaching so that the truth of man's real, spiritual state is perceived and recognized. When the concept of man as the product of a material germ, and as held in the grasp of matter, is given up, and the understanding of man as the divine "image and likeness" takes its place, there must ensue a radical change in the individual's manner of thinking. One cannot have an improved ideal without an improved state of being. These changes follow inevitably and spontaneously, and are a characteristic effect of Christianity when understood. The pauper's change of thought from want to plenty, following the revelation of man's possibilities, is not more effective or pronounced than that which results from the changed conviction, which Christian Science brings, that in the reality of his being man is now the son of God, and hence under no material or sinful control. As human thought is liberated from its belief in the reality and power of evil, and becomes acquainted with omnipotent good, it drops its load of fear, and rises on native buoyancy to higher states of consciousness, and everything in the individual's experience reflects this betterment.

For many centuries material physicians have been trying to establish a system whereby to produce health in place of disease by effecting certain changes in the physical body, but they have universally failed to produce any permanent good, and often leave the subject in a disabled and hopeless condition. It remained for the Discoverer of Christian Science to locate the difficulty, define the remedy, and demonstrate its efficacy. In Science and Health Mrs. Eddy has exposed the fallacy of the supposed material basis of creation, the belief that matter constitutes in any true sense the reality of man, or that it has anything to do with God, infinite Spirit. In this book is clearly set forth the action of human thought upon the body, showing how disease and other forms of discord result from wrong mental states, and how health and harmony may be restored by elevating human thought from a material to the spiritual basis. The truth of this position has been so abundantly proved in Christian Science practice as to be beyond reasonable dispute.

It should be evident without argument that man cannot have both a good and an evil origin. According to the Bible, and our text-book, Science and Health, man is the Divine idea or reflection, and hence is not poor, is not made up of changing material atoms, is not subject to disease, nor at the mercy of microbes, nor the victim of mischance, but is under God's government and protection. Being born of God, man cannot be the inheritor of evil traits, disease tendencies, or of anything that can produce or result in evil, unhappiness, or suffering. The dawning of these truths upon the awakening thought of mortals is as the coming of a great light to those who have sat in darkness and the shadow of death; and the change of thought thereby effected may be likened, in its spontaneity and beneficence, to the transformation wrought by the day-dawn upon night-enveloped earth.

Materiality Unreal.

A. D. PACKARD.

HUMAN theories spring from a basis of belief instead of a basis of truth. Christian Science, on the contrary, begins with demonstrable truth, and admits only logical deductions therefrom. Human thought takes on diviner hues in proportion as it accepts the facts of Science in place of its own beliefs. The superstructure built on a false premise is well likened to the house built on the sand. Its apparent solidity is unreal, and either time or accident, to both of which it is subject, insures its ultimate destruction.

The basis on which human reasoning has reared itself, and on which it depends, is the assumption of substance-matter, but this belief in and of itself could produce nothing, for even human reason will not accept organized or unorganized dust as causation. It recognizes the necessity of intelligence, and tries to combine the two opposite elements of mind and matter, and thus arrives at the belief in mortal man, embodying qualities antagonistic to each other,—a combination of intelligence and non-intelligence, Spirit and matter, good and evil. Reason on the human plane does not accept either unalloyed evil or unalloyed matter, but theorizes their union with Spirit; which is as illogical as the union of ignorance and knowledge. Mortal man thus conceives of himself, and how can this concept result but in its own destruction, even as a kingdom divided against itself? That man is wholly material is an im-

Digitized by Google

possibility now generally admitted. Mortal man realizes the necessity for good, but seeking it through material sources, his sense of it must of necessity be imperfect. Like children learning to walk, we distrust the omnipotence of Spirit to sustain us, until, by degrees, we place our affection and trust in more spiritual lines, when, being more nearly normal, they bring out harmony.

Through the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, we learn that the amalgamation of such opposites as intelligence and non-intelligence, good and evil, Spirit and matter, is an impossibility and exists only in belief. To the unawakened thought this union and its discordant manifestations seem to be real; but an awakening has begun in Christian Science, and it is the coming of Christ, Truth. The dawning of this saving truth seems slow to mortals, but as we begin to see that the supreme governing, all-inclusive cause of all reality is Spirit and not matter, we learn the falsity of material pleasure and pain; then they lose their power over us; for the strength of sin is the supposed pleasure of sin, and when we find that there is no real pleasure in it, we naturally forsake it.

If, therefore, we would escape from the thraldom of the senses, we must let the facts of divine Science support our concept of being, admitting only what logically belongs to Truth. Thus evil is barred out, and if excluded from thought, it can have no place in our lives either morally or physically.

Materiality can neither explain its own origin, government, or destiny, for the reason that it is based on a false assumption; thus it is "a liar, and the father of it." In Science and Health, page 267, we are told that "thought is borrowed from a higher source than dust," but that which belongs not to the divine intelligence, in whom there is no beginning of years or end of days, must of necessity have beginning and end,—birth, growth, maturity, decay.

By reflecting divine intelligence, even to a degree, humanity does not fall into ruin and decay, but aspires naturally to the unchanging reality which appears when the facts of being are attained. The decay and changing character of material things is no argument against the permanence of the spiritual cause of all that is real; but rather shows the futility of regarding anything separate from God, good, as permanent, or to be desired. "Thou shalt have no other gods before me"—Thou shalt find in me, Mind, all Life, all permanence, everything necessary to thy supreme and everlasting good. Divine Love freely offers us ample protection from all sense of want and woe. Christ Jesus said, "O Jerusalem, Jerusalem, . . . how often would I have gathered thy children together, even as a hen gathereth her chickens under her wings, and ye would not!"

Admitting, as we must, that there is but one cause, one God, how can this one cause, or its manifestation, be otherwise than good? All being the manifestation of the one divine cause, all must be in accord with its own nature. "And God saw every thing that he had made, and, behold, it was very good." Creation is, therefore, of necessity, supremely, divinely good, in the direct line of cause and effect. It is only by admitting the existence of two causes that we hear it said, "This is good, that is bad; this is mind and that is matter; this is life, and that is death;" for the spiritual law which governs all, and whose demands are not grievous, demands the recognition of good only, and our entire obedience and affection.

In Christian Science we learn that there is no material universe to be destroyed, but only a false sense of the universe as material which is entertained mentally; that it is this false concept which must be eliminated; and why should we cling to material beliefs when by changing them for spiritual concepts we shall thereby gain immortality?

Selected Articles.

Thirty years ago there was in the United States one church with seven communicants who adhered to the faith of what is now called Christian Science. To-day there are six hundred and fifty-seven chartered churches, two hundred and seventy-seven organized missions, and forty-two thousand communicants according to the church figures. Christian Science as a discovery is forty years old; as the creed of an associated body of believers it is but thirty. In 1889 New York had three recognized practitioners of the Scientist faith; to-day it has one hundred and thirty-seven. Chicago has two hundred and thirty-two and Boston one hundred and forty-nine. In London there are thirty-nine healers, and in San Francisco before the earthquake there were the same number.

Every Scientist edifice is paid for as it is built, and this policy of the church has been the only reason for the failure to complete the church building in Cripple Creek, which was designed along liberal lines immediately after the fire. The membership here is small, but said to be growing constantly.

The growth of the Church in this country and the widening influence of its doctrines is an interesting study in religious history. Christian Science, so-called, is founded on the belief and teaching of Mrs. Mary Baker G. Eddy, and is summed up in defining God as infinite Mind; that there is but one substance; namely, Mind; all else is the idea, expression, or reflection of infinite Mind or Spirit. Himself Spirit, God can create only that which is spiritual. Matter thus is only a belief; in itself it is nothing. Out of the erroneous belief in matter proceed sin, sickness, and death, which are distortions of ideas. And here comes in the therapeutical or practical sequence. Men and women are healed morally and physically, by waking from their material delusions or dreams. There is no life in matter; mortal mind, not body, is the pleasure taker and sufferer.

Such, condensed, is the statement. And the most wonderful miracle of the religion, to the minds of those outside its influence, is the number of people who yearly become converts to the new teaching, founded, its adherents claim, on world-old principles.

From the Cripple Creek district within the past two weeks delegates from local organizations, if they may properly be called such, of the Christian Science church have gone to Boston to attend the dedicatory exercises which mark the completion of a two-million-dollar structure to be known as [the Extension of] The Mother Church. Here will gather representatives from all over the world—many of them learned students, all deep readers.

It is not the province of a newspaper to discuss the principles or precepts of any religious organization so long as they are not a public menace when put into practice. Therefore *The Times* has no comment to make on the Christian Science church, whose teachings, in the abstract at least, cannot be objected to by any worshiper of the Creator and lover of mankind, and attention is now directed only because of the phenomenal growth.

Cripple Creek (Col.) *Times.*

The editor of the *Herald*, in his courteous rejoinder to the writer's comments on some of his references to Christian Science, evidences his belief in the thought-power in the world. The Christian Scientist adds to this his understanding that all good thinking comes from God. The works of Jesus and his sayings are all that we know of him, and he impressed upon his followers that God did the works; of himself, he could do nothing. The word and works that he preached and promulgated have awakened the world. Jesus told his disciples that all who believed on him should do these works, meaning, certainly,

Digitized by Google

that all who believed that God did the works could heal as he healed.

One of the dictionaries defines theology as "the science which treats of the relations of man to God." That is Christian Science. The understanding of this relationship of God and His child, and that divine power is all-power, dissolves the cancer, destroys the tuberculosis germ, frees the paralytic and the deaf, banishes pain and misery, and proves that man's inheritance is health, not disease. It is not a difficult thing to understand "not my will, but thine be done." If we are willing to hold our human will in obedience to the divine will, trusting implicitly in God, it is an easy matter to comprehend Christian Science; truth is always simple. All the difficulty lies in the overcoming of the erroneous beliefs and fears that we have learned by not walking with God. W. C. WILLIAMS.

Baltimore (Md.) *Evening Herald.*

The dedication of The Mother Church of Christian Science at Boston, with its paid-up cost of two million dollars, and its tremendous outpouring of eager communicants from all over the civilized world, is an event of impressiveness and momentous significance. The historic place of Mrs. Eddy as the Founder of a great denomination can no longer be questioned, and the sources of her power and following can be readily apprehended. Prominent among these is the denomination's peculiar department of healing, whose efficacy to some extent is established beyond cavil. The immense membership of the body is proof positive that it supplies these persons, most of whom were already nominal Christians, something they did not find in other communions. It affords refutation of the notion that spiritual and mystic mediation has been drowned out in this so-called commercial age. The Christian Scientists set a good example to other denominations in requiring their church edifices to be fully paid for before they are dedicated. It is to be said for Christian Science that no person's spiritual aspirations were ever deadened or his moral standards debased through its agency. Its communicants are cheerful, and shed sunshine about them—no insignificant element in true Christianity.—*Terre Haute* (Ind.) *Star.*

A critic has said that he considers Christian Science a dangerous heresy, and he therefore warns his people against it. Paul in his speech before Felix said, "After the way which they [the high priests and others] call heresy, so worship I the God of my fathers." By this same heresy of Paul, Christian Science is willing to stand or fall.

Some old writer has said that should one attempt to study the New Testament with a sense of hatred or bitterness towards Jesus Christ, it would be impossible for him to derive any understanding from it.

We learn in Christian Science that mortals sin continually because they are ignorant of what sin really is, and we learn first of all that the first and foremost sin of mankind is a belief in a power apart from God. From this follows the whole train of evils.

The Master made this imperative demand on his disciples: "Be ye therefore perfect, even as your Father which is in heaven is perfect." While the command was given as necessary to reach perfect harmony, Jesus knew that until mankind had subjected the material to the spiritual, perfection could not be manifested in its fulness. When perfection is close at hand the dead will be raised, and when it is universally present there will be no dead to raise; but, as the Scripture says, "of that day and that hour knoweth no man, . . . neither the Son, but the Father."

CHARLES K. SKINNER.

The (Houghton, Mich.) *Mining Gazette.*

The members of the Christian Science faith certainly set a better example of brotherly love and broad-mindedness than some of their critics in the old-line churches. They asperse the beliefs and doctrines of no other sect, they simply live their lives, exert their faith and expound their preaching, and seem to be willing to let others do the same. When the critics in the old-line churches can give so many expositions of faith, so much assistance to the cause they believe in, so many examples of tolerance and real assistance to the sick and afflicted, either mentally or physically, as the Christian Scientists seem to do, they can with better grace pose as critics. Until they do this there will be a great many people who will attribute motives other than the good of Christianity to their aspersions upon another sect.

Editorial in *Newburyport* (Mass.) *Daily News.*

More than thirty thousand Christian Scientists from all over the country were in Boston Sunday when the new two-million-dollar temple was dedicated with impressive ceremonies. The seating capacity of the new temple exceeds five thousand, but there were thousands who were unable to gain admission to the building at each of the six meetings held. The dedication of this magnificent new building marks another era in the very remarkable growth of this new religious sect, which has outlived ridicule and won its way into the respect of the world.

Sioux Falls (S. D.) *Argus Leader.*

Disciples of Æsculapius who went to hear and scoff at the miracle tales in the Christian Science temple the other evening, came away having "nothing to say." They simply could not give voice to the impression that was made upon them. And this is what conventions are for. They are tidal waves of faith and opinion, of experiences for the whole civilized world. They make humanity think.

THE CHATTERER.

Boston Herald.

Whatever may be thought of Christian Science, the Scientists are entitled to the credit of believing it with all their hearts, and of having enough faith in their faith so that they are not ashamed of it. If those who hold other beliefs were as earnest and as devoted as the Scientists are, why might they not make a similar progress?

Cambridge (Mass.) *Chronicle.*

A Fraud Exposed.

FROM time to time during the past six years we have warned our readers against a man who has been securing money under the false pretence that he is a Christian Scientist in temporary need of funds. A letter received from a friend in Oklahoma may help our people to identify him and thus bring his swindling career to a close. The names and locations mentioned in the letter are not the only ones used by this man; he varies his story to suit his location. An extract from our friend's letter follows:—

The young man came here to Guthrie, and represented himself as a San Francisco refugee, also as a patient of Frank W. Gale, and a member of First Church of Christ, Scientist, of San Francisco, Cal. He claims to be of Jewish extraction. He is a rather small man, between twenty-five and thirty years old, and wears glasses. He is very clever and persistent, tells a plausible story, seems to be familiar with the letter of Christian Science, and is well posted in regard to the prominent workers in the West. He claimed to be a newspaper reporter and to have lost his position through the San Francisco disaster; that he had a cousin in Kansas City, Mo., and that there was a position waiting for him as soon as he could get there. When he found we would not supply him with money he disappeared.

Among the Churches.

Dedication in Gardiner, Me.

First Church of Christ, Scientist, Gardiner, Maine, was dedicated, Sunday morning, June 17, with a simple but impressive service. In the afternoon, a lecture on Christian Science was delivered by Mr. Edward A. Kimball, who was introduced by Mrs. Caroline D. Noyes of Chicago. All of the exercises were well attended and favorably received.

Correspondence.

Incorporation in New York City.

On Dec. 7, 1904, at a time when all the Christian Science churches in New York were on the West Side above 42nd Street, and in response to a letter from Mrs. Eddy to her student Miss Anne Dodge, the East Side Christian Science Society was formed to fill the need of a Christian Science organization on the East Side of the city below 59th Street, the most densely peopled district of Manhattan Island.

On May 3, 1906, the said Society incorporated as Sixth Church of Christ, Scientist, in Borough of Manhattan, New York City, under the laws of the State of New York, with twenty charter members.

It has been the privilege of the Society to contribute to the support of the public Reading Rooms in New York City and to the Building Fund of The Mother Church, and it will still be its privilege and desire as Sixth Church to fulfil these duties and all others that may arise.

SIXTH CHURCH OF CHRIST, SCIENTIST.
STELLA W. HEWES, *Clerk.*

Yonkers, N. Y.

With oft renewed force has the truth of the tender encouragement of our Leader, found on page 79 of our textbook, Science and Health, been proved to this little band: "Giving does not impoverish us in the service of our Maker, neither does withholding enrich us."

The call to prompt action in the *Sentinel* of April 7 quickened this little branch to put forth another leaf, and with humility and joy we behold its unfolding as typified in the pledge to send all our basket collections hereafter, as our mite in the great work of building The Mother Church, a work which is so unspeakably dear and full of meaning to every Christian Scientist.

As we look back over the year we see that after all we have not really been giving, since so much more has been received, and we are thus led to understand more fully the promise in Malachi, "Bring ye all the tithes into the storehouse, that there may be meat in mine house, and prove me now herewith, saith the Lord of hosts, if I will not open you the windows of heaven, and pour you out a blessing, that there shall not be room enough to receive it." It is our earnest desire and endeavor to grow into a more fruitful branch.

FIRST CHURCH OF CHRIST, SCIENTIST.
EMMA M. J. KUNZE, *Clerk.*

Picture of The Mother Church.

The picture of The Mother Church and its Extension which The Christian Science Publishing Society now has for sale is a half-tone reproduction, 12 x 15 inches in size, of a view giving the St. Paul Street frontage and Falmouth Street side.

The picture is mounted on a white mat, 21 x 25 inches, and will be sent to any address in a mailing-tube for fifty cents a copy. A dozen copies will be sent to one address for $4.50. Souvenir postals of the same design as the large picture are for sale at twenty-five cents per dozen.

Address all orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

The Lectures.

The Board of Lectureship.

The appointments for the year beginning June 12, 1906, are:—

Miss Mary Brookins, C.S.B., 925 N. Y. Life Building, Minneapolis, Minn.

Hon. Clarence A. Buskirk, C.S., 1337 Mt. Clare Place, St. Louis, Mo.

Clarence C. Eaton, C.S.B., 624 N. 3rd Street, Tacoma, Wash.

Judge William G. Ewing, C.S.B., 541 St. John's Avenue, Highland Park, Ill.

F. J. Fluno, M.D., C.S.D., 1368 Franklin Street, Oakland, Cal.

Judge Septimus J. Hanna, C.S.D., 1532 North Nevada Avenue, Colorado Springs, Col.

Prof. Hermann S. Hering, C.S.B., 91 N. State Street, Concord, N. H.

Edward A. Kimball, C.S.D., Post Office Box 518, Chicago, Ill.

Bliss Knapp, C.S.B., 4 Batavia Street, Boston, Mass.

Frank H. Leonard, C.S.B., 305 Temple Bar Building, Brooklyn, N. Y.

Rev. William P. McKenzie, C.S.B., 1010 Massachusetts Avenue, Cambridge, Mass.

William N. Miller, K.C., C.S.B., 6 Sumner Terrace, S. Kensington, London, England.

Mrs. Sue Harper Mims, C.S.D., 575 Peachtree Street, Atlanta, Ga.

Rev. Irving C. Tomlinson, M.A., C.S.B., 82 Warren Street, Concord, N. H.

Rev. Arthur R. Vosburgh, C.S.B., 517 Central Building, Rochester, N. Y.

Bicknell Young, C.S.B., 243 Wabash Avenue, Chicago, Ill.

Reading, Pa.

The Academy of Music was more than half filled on Monday evening [June 4] to hear Bicknell Young of Chicago lecture on Christian Science. In introducing the speaker, Mayor Gerber said,—

This is an age in which people are seekers after truth in matters concerning life, in the sciences, and in religion. I confess that I am not very familiar with the teachings of Christian Science, but I do know that it seeks to better the condition of mankind, to lead us to a higher life, and to improve us mentally, morally, and spiritually. If it does that, it does good, and it must follow that good will come from listening to its teachers.—*Reading Eagle.*

Elmira, N. Y.

Hon. Clarence A. Buskirk of St. Louis, Mo., was heard on the subject of Christian Science by a large audience in the Lyceum Theatre yesterday afternoon [June 17]. The speaker was introduced by Mayor Z. R. Brockway, who spoke as follows:—

It seems to be a very striking fact that so many and such people as compose this audience should gather here, whether from curiosity, anxiety, or piety, to contemplate, associately, the loftiest topic that can possibly engage our attention: namely, the question of the actual conscious relation of our individual human life to the universal, absolute Life and life-giving source. There is no denying the existence of such a relation. All men affirm or tacitly acknowledge it. All recognize the presence of a power not ourselves, call it nature, or God, or what we will. This gathering here this afternoon is, as I understand it, the work of those who have been healed or have known of healings which evidence the presence and beneficent activity of the mysterious power we call "God."—*Gazette and Free Press.*

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Card.

MARY BAKER EDDY.

We lose the sense of personality when describing love, and so base the behests of praise on worth akin to unworldliness, on goodness shorn of self, and on charity governed by God influencing the acts of men—even a charity which "suffereth long and is kind."

Mrs. Mary Beecher Longyear's charity is of the sort that letteth not the left hand know what the right hand doeth, that giveth unspoken to the needy, and is felt more than heard in a wide field of benefactions. Seldom have I seen such individual, impartial giving as this. Therefore I hasten to praise it and turn upon it the lens of spiritual faith and love, which enforce the giving liberally to all men and the upbraiding of none.

Begging her pardon for the presumption of my pen, if such it be to "render unto Cæsar the things that are Cæsar's," I hope that I have neither grieved her meekness nor overrated her generosity thereby.

Amendments to By-laws.

ARTICLE XXVIII.

LOCAL SELF-GOVERNMENT.—SECT. 1. The Mother Church of Christ, Scientist, shall assume no general official control of other churches; and it shall be controlled by none other. The general Communion of this Church shall be observed triennially in Boston, Mass., on the second Sunday in June. Its local Communion service shall be held annually at the same date.

Each Church of Christ, Scientist, shall have its own form of government. No conference of churches shall be held, except the triennial conference at The Mother Church, unless it be when our churches, located in the same State, convene to confer on a statute of said State, or to confer harmoniously on individual unity and action of the churches in said State.

ARTICLE XXVIII.

COMMUNION OF BRANCH CHURCHES.—SECT. 8. The Communion shall be observed in the branch churches on the second Sunday in January and July of each year, and at this service the Tenets of The Mother Church are to be read.

A Changed Thought.

A NOTICEABLE change has come over the religious press in general in its attitude toward Christian Science, and this change may briefly be described as a transition from unqualified condemnation to timid and partial commendation, from an attitude which regarded Christian Science as beyond the limit of Christian toleration to one which sees in it an available something, an influence for good, which the churches have neglected to their own detriment. Just how much of an advance this is, may be problematical, but we are inclined to believe that it denotes a very considerable growth in grace, notwithstanding the inconsistency which finds fault with the logic of Science and Health yet commends the results achieved by putting the teachings of this book into actual practice.

The American Friend says: "There are two characteristics of Christian Science that deserve especial consideration: its attitude of joy, and its message of health. . . . There is no question that the Christian Scientists have learned the secret of being joyous, full of hope and sunshine . . . hosts of persons have been made whole and sound by its [Christian Science] methods. There they are as evidence, and it is useless to take the old mediæval attitude that the cures have been wrought by Satan." Yet this editor says that Christian Scientists have arrived at these conditions by "very bad logic," evidently forgetting that Jesus said, "Ye shall know them by their fruits. Do men gather grapes of thorns, or figs of thistles? . . . A good tree cannot bring forth evil fruit, nor can a corrupt tree bring forth good fruit."

Zion's Herald, while admitting the good effects of Christian Science upon the lives of its followers, expresses disbelief in the truth of its teachings, a position which betrays inconsistency; but notwithstanding this inconsistency, we are bound to commend the following paragraph, for it displays a spirit of fair play and Christianity which is most creditable to the editor and to the denomination he represents. It is as follows:—

"We should be more anxious to surpass the votaries of Christian Science in serenity, contentment, cheerfulness, generosity, and all good works, than to prove them mistaken in their theories; more desirous to make a perfectly fair diagnosis of the situation and take a judicial view of it with kindly temper, than to pile up points of easy, superficial criticism; more eager to practise the Golden Rule, by reading both sides, getting our opponents' point of view, and talking things over pleasantly with them, than to win a shallow victory by attacking what we have not honestly tried to understand."

If all those who talk or write of Christian Science will take this advice to heart, there will be still greater changes in the public's attitude towards its teachings and its followers.

ARCHIBALD MCLELLAN.

Prevention Better than Cure.

THE familiar axiom, "The proper study of mankind is man," expresses a sentiment with which Christian Scientists are heartily in accord. It is, however, likely that their study would be pursued along lines wholly different from those followed by others, inasmuch as they would begin with the statement of their text-book, "Man is spiritual and not material" (Science and Health, p. 468). According to this teaching, it would be impossible to reach correct conclusions respecting man by taking evidence from "the model of clay," the mortal body; and yet this is constantly done by those who are seeking to better human conditions by material means, and who accept material evidence as not only final, but who do this to the exclusion of the mental and spiritual.

It is now being very generally admitted that efforts for the prevention of disease should take precedence of those for its cure, and, accordingly, the supposed causes of disease have been classified in order that people may be prepared to guard against their effects. Thus, it is said that certain diseases invade the human system from without, whilst others are developed within as poisons; in all this research, however, no account is taken of mental or moral conditions, nor is there a hint of a spiritual remedy, of aught that would supply man's spiritual needs, neither is there any intimation that the poisons developed within the system have any relation to discordant mental conditions. The great Teacher said, "For from within, out of the heart of men, proceed evil thoughts, adulteries, fornications, murders, thefts, coveteousness, . . . All these evil things come from within, and defile the man."

Digitized by Google

Contrary to the medical opinion, that the "poisons" claimed to develop in the body are caused by food and exercise, or their lack, Christian Science maintains that we can secure and preserve good health by becoming conscious of the action of the divine Mind and its government of the body, and by obeying "the law of the Spirit of life in Christ Jesus," which alone makes "free from the law of sin and death." Here it should be remembered that there is a wide difference between lawlessness in respect to health and the obedience to spiritual law which Christian Science insists upon, law which preserves health and gives "length of days." It is admitted by many thoughtful physicians that the constant recurrence of thought to the body is unhealthful, yet the observance of material health-laws requires this very thing.

Let no one suppose that Christian Science counsels the holding of thought down to the scrutiny of the evil beliefs which Christ Jesus said were the occasion of human defilement; rather does it teach that thought must be constantly directed to the divine model,—man as God's likeness,—who is neither sick nor sinful. The laws which govern this man, and which are made known in Christian Science, are health-laws indeed, for they express the divine Principle of the universe, and their recognition hastens the fulfilment of the psalmist's prayer, "That thy way may be known upon earth, thy saving health among all nations."

ANNIE M. KNOTT.

Scientific Discernment.

THE practical aspect of the Christ-teaching is nowhere more marked than in the parable of the wheat and the tares. In it Jesus recognizes human sense conditions, and shows how they are to be corrected; namely, by spiritual growth, and not by revolutionary impulse. He makes it clear that while the association of the ideal and the unideal is neither normal nor approvable, they remain together, to human sense, until right thought is so matured and established as to become sovereign.

Material sense is the door of error's entry to human consciousness. So long, therefore, as this sense remains, so long the seed of the tares may be sown in human consciousness; and when this is understood, the supreme importance of making and maintaining a clear distinction between the mortal concept and the demonstrable scientific truth begins to dawn. If we find it difficult to discern between the tares and the wheat, our spiritual advance can but be impeded, and hence the imperative need of that scientific discrimination which is so constantly brought to the attention of every student of our text-book. Speaking of the attainment of this discerning power, Mrs. Eddy says, "The spiritual sense of Truth must be gained before Truth is understood. This sense is assimilated only as we are honest, unselfish, loving, and meek" (Science and Health, p. 272).

Time was when propositions were verified by reference to authorities; to-day the cultivated world recognizes but one test of truth; namely, that of demonstration, and to secure its individual command and application is the distinctive feature of all modern technical schools. Christian Science not only demands exact and continuous discrimination between the wheat and tares, but it supplies an adequate and unvarying means of making this discrimination; and in this it is honoring Christ Jesus, the authority of whose words and the practicability of whose works it re-affirms.

To reach some sense of what this scientific attitude and activity would signify to the world, one need but consider what its absence has meant to Christian history. Though Jesus taught his disciples that they should so know the truth as to make its practical demonstration the confirming fact of their daily ministry, the story of the Christian centuries has, in large part, been a chronicle of the sanguinary contention of the devotees of this or that religious theory, in which truth and error have been indistinguishable to so many that Pilate's famous query has ever been recurring, ever been opportune, and ever unanswered. To-day, despite their escape from the grosser superstitions, the great body of Christian people are not only exceedingly uncertain as to what is truth, but they practically deny the legitimacy of the truth-test which Jesus constantly used and commended, and under these circumstances the uncertainty and confusion of Christian thought is easily explained.

If, during truth's unfoldment, the tares and the wheat, though they "never really mingle," "grow side by side until the harvest," it is ours to know that "the realization of God as ever present, and of man as reflecting the divine likeness," will separate them (Science and Health, p. 300), and that the inherent and eternal distinction between them may be effectively maintained. It is ours to remember also that the demand of Science is for continuous right thought, and the exact expression of truth in all that we say, especially in all that we write. We should further remember that the basis of an authoritative judicial sense is the love of Truth. Regarding its apprehension as the "pearl of great price," the one thing to be desired and persistently sought for, we shall steadily gain in spiritual perception, man's Truth-recognizing capacity, and as we escape day by day from the lingering fetters of mortal sense we shall hasten on to that glad hour when the tares are no longer found with the wheat; when the winds of God shall have blown every mist of false sense away. JOHN B. WILLIS.

Letters to Our Leader.

Boston, Mass., July 10, 1906.

Reverend Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader and Teacher:—We, the Directors of your Church, send you loving greetings and congratulations upon the completion of the magnificent Extension of The Mother Church of Christ, Scientist, and we again express our thankful appreciation of your wise counsel, timely instruction, and words of encouragement when they were so much needed.

We acknowledge with many thanks the valuable services rendered to this Board by the members of the Business Committee, who were ever ready to assist us in every way possible; also the services of other members of the Church, who gave freely of their time and efforts when there was urgent need of both.

We do not forget that it was through you we were enabled to secure the services of Mr. Whitcomb as builder in the early days of the construction of the church, and of Mr. Beman in an advisory capacity in the later days; for this, and for their valuable services, we are grateful.

Lovingly and gratefully your students,

THE CHRISTIAN SCIENCE BOARD OF DIRECTORS.
By WILLIAM B. JOHNSON, *Secretary.*

Boston, Mass., June 2, 1906.

Mrs. Mary Baker Eddy,
Pleasant View, Concord, N. H.

Beloved Leader and Teacher:—Under another cover I have sent you one dozen copies of the new edition of the Communion Hymn, for low voice, which you may desire to use in some way. While writing to you I feel that I must say a few words relative to the amendment of the By-law, "Music in The Mother Church." Easter Sunday I was in New York, and was the guest that evening of Mr. Gibson, the organist of the Brick Presbyterian Church on Fifth Avenue. This church, as you probably know, is one of the wealthiest and most fashionable in that city, and the music last year cost the church over fourteen thousand dollars. The church did me the honor to produce, Easter evening, a composition of mine,

Digitized by Google

for violin, flute, violoncello, harp, and organ, entitled "Andacht," and the artists were the best that money could procure. The musical services at this church were elaborate, and under the leadership of the organist, Mr. Gibson, who by the way is one of the most talented in the country, they were undoubtedly the most finished and varied in the city, if not in the country; but before the last note was reached I was weary of the sound of music, and at the close I was devoutly thankful that we had a By-law and an order of service for The Mother Church which prohibits a great musical display at *any time*. Our simple, beautiful service seemed like a breath of fresh, pure air after being in the heavy atmosphere of a hot-house.

Mr. Gibson is very much interested in the music I have written for your poems, and, as a keen analyst of the musical schools, he said that as you had, through your teachings, brought about a new literature, a new church, a new manner of thinking and of living, you had also brought forth a different school of music,—one that is compatible, and is expressive, as far as music will go, with the thought of your writings. It may please you to know that Mr. Gibson desires to give the songs that I have written for your poems at his church when the opportunity offers, and I am further pleased to be able to state that this expression of willingness was not upon my request, but was spontaneous with him.

So long as music is needed for your poems, and that it serves for the present as a channel for the entrance into thought of your healing words, I am glad that I have been able to serve you. I am pleased that excellent training and experience have given me insight and power to do the work set before me. Christian Science is not dependent on music; I realize this more and more every day, and this realization makes me grateful, beyond expression, for the courageous step you have taken relative to the amount and the quality of the music in the church.

Very lovingly yours,
WILLIAM LYMAN JOHNSON.

Bloomington, Ind., June 21, 1906.

My Dear Mrs. Eddy:—Since attending the dedication and Communion service, I have wished to express my gratitude for your loving service to the world and for the great blessing Christian Science has been to me.

This was my first visit to The Mother Church of Christ, Scientist, and as I became a member this year, my first Communion service. I cannot express how my heart overflows with love to God, and to you, our dear Leader.

I had once desired to see you personally, but since listening to your message, and feeling your spiritual presence, I returned home satisfied, with a stronger desire to grow more spiritual and less material, that I may find the pearl of great price hidden from the material sight but revealed to those who worship in "spirit and in truth."

May the Father's tender love guard and bless you.

Yours in love and truth,
NELLIE ARCHER ALEY.

Boston, Mass., July 6, 1906.

Dear Mrs. Eddy:—Since my return to Boston I have realized what a privilege and pleasure was mine last Tuesday, when you so lovingly and graciously gave me of your precious time, and I thank you for it.

Your words, "God is *very* good," have come to me again and again, and my prayer is to demonstrate that this is true to those who come to me for help. I understand as never before how great is your love for *all* mankind and I comprehend in a degree the unselfishness that has made you truly our Leader.

With very grateful appreciation, I am

Lovingly and obediently yours,
MARTHA L. STRANG.

Testimonies of Healing.

When I think of all the years I have enjoyed since being lifted out of consumption, that disease which people who know nothing of Christian Science look upon as a "fell monster," I cannot be thankful enough for the blessed truth which heals all our diseases. For three years (years which now seem like a dream) I suffered, growing worse all the time, although I had three of the best doctors in this city. The last one gave me no hope, saying, "You have only a little while to live—two months at the farthest;" but his sentence of death was pronounced by mortal mind, and could not stand in the presence of the truth which makes free. A dear Christian Science practitioner who came here, gave me one treatment, and then left me in care of another practitioner, who worked faithfully four weeks, when treatment was discontinued. I was then a well woman, though there were indications the following spring that seemed to denote that the error had not been entirely overcome. At that time I received treatment for two or three weeks, and since then, I am thankful to say, I have known the complete supremacy of Truth over error. This was in 1895. My beliefs about God and religion, before studying our dear Leader's book, Science and Health, were vague and unsatisfactory, while now I rejoice that I have entered into "the larger thought of God,"—a thought which amounts to understanding. This helps me to know how to realize the truth for myself and family as well as for others. We cannot be thankful enough for this blessed, saving Gospel. I am thankful to God, and to Mrs. Eddy, whose teaching has helped me to be better and to do better.

MRS. MARY B. LA MARCHE, Eau Claire, Wis.

Ten years have elapsed since I became interested in Christian Science. It was the healing of aching feet that caused me to investigate its teaching. I had suffered for a year or more, and was about to give up my position, as I was obliged to stand most of the time, which added greatly to my suffering. After trying everything of which I had been told, in a material way, and finding no abatement of the pain, a kind neighbor prevailed upon me to try Christian Science, and with two weeks' treatment I was healed. I immediately began reading "Science and Health with Key to the Scriptures" by Mrs. Eddy, and attending the services. I thought I would progress more rapidly if I were out of the store where I worked, as it seemed to me that every customer who had an ache or a pain stopped at my counter, and I would have to hear of it. It was not long, however, before I learned that this was my work, and that I could help others as well as myself by being patient and by knowing the truth at all times.

As for myself, I have proven Christian Science to be preventive as well as curative in many cases. I have not lost even a half day from the store during these years on account of sickness. I have been able, with the understanding I have of this truth, to overcome colds, sore throat, headache, the grip, and many other annoyances that are apt to befall one. I once caught my finger in closing a case and crushed it severely. I had a customer at the time, and my first thought was that I would have to call some one to wait on her, but I simply took out my handkerchief and wound it around the finger, and began declaring the truth. It was but a minute or two until the pain was destroyed. I really forgot about it the rest of the day, and the next morning my heart overflowed with gratitude when I found that I could use my hand as at any other time. I experienced no inconvenience whatever, and the nail did not come off. These demonstrations may seem small, but when I see these same annoyances happen to others, and know how they are disturbed, I am thanful that I have a better way.

I need to be watchful continually. My department is near the main entrance, and in winter it is the coldest place in

Digitized by Google

the store. Fear is expressed by many, who say, "Why I would get my death of cold if I had to put up with this." Jesus said, "Ye shall know the truth, and the truth shall make you free." In these cases I always know the truth, and simply answer, "I have no fear of catching cold." Being the only Christian Scientist in a large department store, I am often criticised, and have heard unkind things said about my religion, but I am learning day by day to overcome all such with love, and I am realizing more fully the meaning of a verse of Scripture, "Great peace have they which love thy law: and nothing shall offend them."

In answer to the question our dear Leader asks in Science and Health, p. 496, I am glad to say that the way is indeed growing brighter. I have demonstrated many times the healing power of Truth and Love, and these ten years have been my happiest and best, for I am now living closer to God and with a hope of reaching the perfect day.

LILLIE D. STORM, Leavenworth, Kan.

I deem it a great pleasure to tell what Christian Science has done for me, also for my wife. We came into Science about four years ago through the reading of "Science and Health with Key to the Scriptures" by Mrs. Eddy. I have been cured of many ills, such as neuralgia, kidney trouble, and quite a desire for liquor. These ailments all left me in about three weeks. I have not only been healed physically, but morally, and I can indeed say that this saving truth has helped me to lead a different life. I thank God for the trials that have shown me the nothingness of matter and the allness of God. I realize the help nearly every day in a business way, and it rejoices me to be able to demonstrate this truth for myself and others. I feel very grateful to Mrs. Eddy, our dear Leader, for showing us the way of Life, and my earnest desire is to reflect Truth and Love always.—E. A. MCCALL, Grand Island, Neb.

Our little boy, two years old, had a cold and cough for several days. I worked as usual, studying the Bible and Science and Health, but suddenly fear took possession of me, as every symptom seemed so like an attack of pneumonia that our oldest boy had several years ago, when the doctor blistered him from his neck to his waist. I continued reading, but the fear that my husband would come in and insist upon having a doctor was very great, and the baby seemed worse. I then took up a copy of the *Sentinel*, read an article, and at once realized that I had been trying to hurry, and to help him my way. The words quoted, "Be not afraid nor dismayed by reason of this great multitude; for the battle is not yours, but God's," lifted the seeming load from my shoulders and the demonstration was made. The child went to sleep and all alarming symptoms were gone. No one can realize the peace and happiness I felt except those who have been through the same thing in *materia medica* and found it worse than useless with children.

From the very first I felt that Christian Science was the truth, but there seemed so many obstacles to overcome, and I depended more on others, feeling that I had not understanding enough to work out the problems. I now see that this is my work, and even though I read every day that is not enough, I must put the truth into practice. I am thankful to Mrs. Eddy for the work she has done for us all, showing us how to know God and that He is "a present help."—MRS. R. S. TOWSON, Camden, N. J.

Christian Science came to my notice about six years ago, when my mother was greatly benefited after the physicians had failed to relieve her suffering, which she had endured for fifteen years. We were all very grateful for this proof, but while I thought Christian Science all right for any one who needed it, I had always enjoyed fairly good health, and that was all I wanted. I, however, attended services at intervals, and the time came when I looked at things differently. I was not satisfied with myself or anything, although I had every opportunity to enjoy myself. I would give up my position, go away from home, stay only a short time, until the same conditions would appear, when I would come home again. This state of affairs continued until I started to study the truth for myself, when I soon became interested, and forgot my old condition. I now have a longing to grow each day, that I may help others. I attend the services regularly and can testify to the blessings which come by so doing. I have seen many proofs of the power of divine Love to destroy sickness and all forms of inharmony.

I cannot close without expressing my profound gratitude to God, and to our beloved Leader. I know that only by deeds can I ever prove my thankfulness.

MATTHEW T. BAYLE, Altoona, Pa.

Twenty-five years ago I was healed, through Christian Science, of a so-called incurable disease—consumption. As time has passed by, I have learned to appreciate, more and more fully, through study and growth, the spiritual significance of the discovery of Divine Science by our beloved Leader, Mrs. Eddy. A personal sense of life and being has gradually yielded to a clearer spiritual concept of God and man, and this has enabled me to realize, in a degree, that the truth expressed in "Science and Health with Key to the Scriptures" is indeed the voice of divine Love, speaking to this age.

LEWIS PRESCOTT, Lawrence, Mass.

In 1889 I first heard of Christian Science through a little girl four years old. Her mother had been healed of asthma, and the child came to see me almost every day, and I felt better from that time. Later, her mother treated me. At that time I seemed a complete wreck, mentally and physically. I had come to the place where I did not believe there was a just God, for I had suffered so much, but through Christian Science I was then healed of some of my complaints, although the healing was slow. The doctor had given me up, declaring that the worst trouble was neuralgia, which he said was liable to go to my heart at any time, and that would be the end. I was quickly and completely healed of constipation, but it was four or five years before the neuralgia was entirely overcome. I have been wonderfully helped mentally. The Bible and Science and Health are my daily companions. I have seen many wonderful healings in Christian Science from all manner of diseases and from sin. I have had many proofs that God is Love. In all these years I have never been confined to my bed more than a few hours. About a year ago I was taken down very suddenly with what appeared to be an attack of typhoid pneumonia, but by the blessed truth, spoken through a dear Scientist, I was raised up again, and have been enabled to see more clearly the allness of God, good, and the nothingness of evil, the nothingness of the belief of life in matter. Christian Science teaches us to overcome death, not to submit to it. Some day we shall understand that God is the only Life, and then we shall overcome death.—SERENA POLLOCK, Long Beach, Cal.

Christian Science came to me about two and a half years ago, and found me a physical wreck. For twelve years I had been a constant sufferer and each year added some new form of suffering, until some of the doctors said there was not a sound organ in my body except my lungs. For about ten years the doctors had told me that I would never be any better until I had an operation performed. I grew weaker and my suffering greater. Some of the doctors advised me not to consent to an operation, telling me that I would never live through it.

In July, 1902, I was taken suddenly ill and for several weeks lay in the hospital, seemingly at death's door. The

Digitized by Google

doctors would have performed the operation, which they considered so necessary, at that time, had I not been so very weak. In September I was brought home, but I expected to go back to the hospital for the operation. I suffered constantly, although I was taking medicine all the time. I remained in this condition until January, 1903, when I grew worse, and my suffering was so severe that I could not rest day or night. After two weeks of increasing pain I was led to try Christian Science. After the first treatment I was relieved so much that I slept all night, and a serious symptom left me the first week, together with all the pain. I took seven weeks' treatment before I felt I was well, and now instead of dragging out a miserable existence I praise God for the health I enjoy. In connection with my restored health has come financial freedom. The long years of invalidism had been a constant drain financially. Doctor's bills, drug bills, and traveling expenses left us very little at the end of the year. The two months' experience at the hospital cost about seven hundred dollars. My healing under Christian Science was accomplished in seven weeks and the return made was thirty-five dollars. I feel very grateful that I was led into this truth.—EMMA VANCE HANCOCK, Topeka, Kan.

I wish to add a word in support of the above testimony. My business as a traveling salesman keeps me away from home most of the time, and when on the road I lived in constant fear and dread, knowing my wife's condition to be critical. I dreaded to go into the different hotels, so sure was I of finding a message telling me my wife was worse. This continued until she took up Christian Science. All this fear left me after her first treatment, and it has never returned. I have had no further worry or anxiety on her account. Christian Science has brought many blessings into our home, for all of which I am truly thankful.

G. L. HANCOCK, Topeka, Kan.

I have long wanted to tell the world of my healing through Christian Science eight years ago. I had tried almost every known remedy, and when my physician could give me no hope of recovery, through the advice of a friend I turned to Christian Science. I will mention a few of the many troubles from which I have been freed. I had suffered since childhood with catarrh of the head and throat, also indigestion, chronic dysentery, neuralgia of the heart, and consumption of the bowels. My husband spent almost all he made after we were married nineteen years ago for drugs and doctors' bills. We had some of the best physicians in North Carolina and Georgia, besides two in Florida. The last one (I think we had thirteen different doctors) pronounced my case almost hopeless. My husband, who was always so patient and kind, asked the doctor to tell him the truth regarding my condition, so when he was told that I was going into consumption we were ready to try Christian Science. I was healed in one week's treatment, and now I am well and strong. It was about eight years ago that I came to Christian Science for help and I could not tell the hundredth part of the blessings and benefits that have come to me and mine through my understanding of this truth. When I came to Christian Science I could not eat any solid food, and for three months I had lived on tonics and cordials with two hypodermic injections of morphine daily. I could not walk two blocks without great fatigue, but I had only taken three treatments when I could "run and not be weary." I felt happier and better in every way after the first treatment, so I knew it must be the truth that could make such a change, and I wanted more of it. I have never used any medicine internally or externally since the first treatment. I was also healed of the very bad habit of using snuff. I formed the habit when a schoolgirl and was a slave to it. Some one had recommended it for toothache and I allowed the habit to grow. I was healed of this, along with my other troubles and diseases, and have no desire for it.

My husband has also quit using tobacco since coming into Science. We have had some beautiful demonstrations during the eight years we have known this truth. About four months ago I had some dental work done. I had a practitioner go with me and I can truthfully say that I suffered scarcely any pain. Although I had been full of fear, it was soon destroyed and the work was painless under the Christian Science thought.

I am indeed thankful to God, and to Mrs. Eddy, for my physical healing, but even more grateful for the spiritual enlightenment. The Bible, with Science and Health to interpret it, has become a new book to me, and I am gaining more understanding of it every day.

MRS. MATTIE JOYNER, Jacksonville, Fla.

At the birth of my second child, in March, 1902, a great deal of trouble was experienced. As I failed to recover properly an examination was made, which disclosed a tumor of the uterus. I was then taken to a hospital here to have it removed. A specialist from Chicago was called to perform the operation, but after an incision had been made it was decided that it would be dangerous to remove it while I was in such a weak condition. In about a week an abscess formed in the wound which had been made by the incision, and as I failed to improve I was taken to a hospital in Chicago. After being there three weeks I was brought back to my home to regain sufficient strength to endure the removal of the tumor.

During the time that I was waiting to regain my strength, I was constantly under the care of a physician and a trained nurse. About ten days after I came home I had an attack of erysipelas in my head, which became so swollen that I could scarcely see. My hair was cut off close to the scalp, so that remedies could be applied. The attending physician said that he could offer no hope of my recovery, and a few days later he gave up the case.

A Christian Science practitioner was then called upon, and he began treatment on Monday afternoon of the last week in June, 1902. The following Wednesday morning I was up and dressed and walked from my bed to the breakfast table, something I had not done since the baby was born in March. Thursday evening I went for a drive. The following Monday, after one week's treatment, I was entirely healed. The erysipelas had completely disappeared, the abscess was healed, all pain and discomfort gone; my eyes, which had been affected by the erysipelas, were perfectly well. The tumor had also disappeared. When I began Christian Science treatment I weighed about one hundred pounds. I am now in perfect health and weigh about two hundred pounds. Since my healing a child has been born to us and I was under Christian Science treatment at the time of its birth. I experienced no difficulty whatever.

I feel that I owe my life and health to Christian Science, and I can never express my gratitude to God, and to Mrs. Eddy, for the benefits I have received through this truth.

MRS. ROSIE THERESA ROBESON, Joliet, Ill.

I wish to express my gratitude for what Christian Science has done for me. It was about two years ago that it first came to me, and, I may say, saved me from the grave. My health had been very bad for years; for three and a half years I had been confined to my bed most of the time, and was given up as incurable by the medical doctors who treated me. They said I had a complication of diseases, one of which was consumption, also Bright's disease, tumors, and several other ills. I was in a sanitarium twice, but was none the better. Words cannot tell how much I

Digitized by Google

suffered; I was wretched indeed, but when I found Christian Science I was healed.

I am so glad to know that God's arm is not shortened. I am truly grateful for Science and Health. The Bible and our precious text-book are my daily companions, and the spiritual uplift is the best of all. I thank God for giving us our dear Leader, Mrs. Eddy, who has brought to us this blessed truth. I have five children, and am now doing all my own work. Dear suffering ones, take courage!—AMANDA FAIRCLOTH, Swainsboro, Ga.

In 1904 it was my privilege to listen to a lecture on Christian Science. Since I heard this lecture, I have proven the truth to be my rightful heritage. During the time I have been studying "Science and Health with Key to the Scriptures" by our beloved Leader, Mrs. Eddy, many obstacles have disappeared. For about fifteen years prior to my study of Christian Science, I was a roaming, discontented man, now I am settled, happy, and contented.

I spend the most peaceful hours at home studying the Bible and Science and Health, whereas in former years the Scriptures had been a sealed book to me, although I was brought up in a Christian home and was a member of a church. Many mental and physical troubles, including sensitiveness and melancholy, have been entirely overcome. Day by day as this glorious truth is being unfolded to me, and as I learn how to obey the commandments of God, my gratitude for Christian Science increases. As my understanding of Christian Science improves I am able to do better work, I am becoming less selfish, more thoughtful of others, and a truer citizen. For all this I wish to be loyal to the truth that constantly supplies all my needs and brings me nearer to the great heart of Love, to our Father-Mother God. This is but a feeble expression of my gratitude to our Leader, Mrs. Eddy, for her noble life devoted to mankind, and I am striving constantly to be worthy of the name, Christian Scientist.

AUGUST BACH, Oil City, Pa.

All my life I had been an invalid. For years I did not know what it was to be one day without pain. Twelve years ago I understood from the physicians then attending me, that if I would undergo an operation I would be a well woman. I went through the operation, and was a year getting to where I could do anything, but as I was without constant pain I called myself well. Three years ago, the culmination of those intervening years of hoping for perfect health, and suffering in various ways, brought on a form of nervous prostration which meant going to a sanitarium.

Divine Love then led me where I could see what this wonderful message of Truth could do and had done. I began attending the Christian Science services and reading the literature. I thus found the pearl of great price, and by putting into practice the teachings of that wonderful book, Science and Health by Mrs. Eddy, I found in a few weeks that I was a well woman. I know that if any one will accept this message in the same way that the blind man came to Jesus, he will be made whole.

I pray that my whole life may attest my gratitude to the Father for the Christ message which has been made plain to us through Science and Health, written by our best earthly friend to-day, Mrs. Eddy.

JENNIE E. RANKIN, St. Albans, Vt.

For more than twenty-five years I had suffered from many ills of the flesh, among them being indigestion, constipation, headaches, palpitation, and a female weakness for which for some months I was obliged to have treatment several times a week before I learned of Christian Science. I had consulted several physicians both in Canada and the United States, besides taking quantities of medicine. In 1888 my husband decided to go to Oregon, hoping that a change of climate might benefit me, but after nine years I came back worse than when I went away. The first of August, 1903, my aunt came to visit us. I knew that she was a student of Christian Science, but I had no faith in it, and was by this time ready to give up in despair. I had to be very careful in going up and down stairs, and any excitement would give me palpitation. All material remedies had failed to give relief. When my aunt came, she told me of the blessed truth that does make us free. She had told me of her wonderful healing eight years before, but although I thought it very beautiful, I then felt that I could never understand it. She now invited me to attend a service in our place, which I did, and met some of the Scientists. Two weeks after her return home, I went to visit her. I remained three weeks, when, through the reading of Science and Health, and her help, I came home a changed woman. Old things had passed away, all things had become new to me. The healing then begun went steadily on, and to-day I praise God with a grateful heart for the blessed, healing truth which He has revealed to us through our beloved Leader, Mrs. Eddy.

MRS. ADA SAFFORD, Rutland, Vt.

In May, 1894, I was obliged to give up my business, and our family physician, with a noted specialist in Boston, diagnosed my case as locomotor ataxia, and said it was incurable. I suffered great pain, and could not walk without a cane. My left leg was paralyzed nearly to my hip. I was under the doctor's care for about one year, but did not improve, and was going to a hospital when Christian Science was brought to my attention. I began treatment April 1, 1895, and continued until June 1, when I was so greatly improved that I could walk a long distance without my cane and suffered no pain. During the following summer and fall my healing was slow, but there was a gradual improvement. To-day I consider myself a well man, and have no symptoms of the trouble. If any further information is desired by any one I shall be glad to give it.—FRANK H. DUNTON, Portland, Me.

The Unseen Friend.

My child went forth into my garden fair,
Having no wish or will to stay by me;
But that I ever followed him out there,
He did not see.

He passed on from the garden to the wild,
Where cruel and fierce roaring monsters lie:
I drove them back, but nothing told the child
That it was I.

He saw his brothers toiling on the road:
"I will give life and strength for them," cried he;
But that I made him strong to lift their load,
He did not see.

Soul-thrilling words of love bade him rejoice,
And filled with music all that desert place;
And yet he never knew it was my voice,
Nor saw my face.

And when the night came, and his eyes grew dim,
And dark and chill the mists about him lay,
He did not know my hand was guiding him,
Till it was day.

F. A. OWEN.

From our Exchanges.

Clear-eyed men of vision in all the churches note the fact that the secular press of the country does not rally to the support of ecclesiastics who are defending the ancient creeds and the standards of orthodoxy against those who, in their own churches, are breaking away from them. The heartiness with which the majority of the contributors to the daily press disregard the standards and demand that truth, without regard to ancient interpretations of it, shall be made the test of soundness in belief, and that liberty of thought and speech shall be granted to all, on the same terms that civil liberty is granted, is a new and surprising phenomenon. It is useless to account for it by the plea that these men are irreligious and therefore not to be heeded. If they are irreligious, they have a passionate interest in the fortunes of the truth, and their estrangement from the Church may have causes which lie not in themselves, but in the attitude of the Church itself.—*Christian Register.*

Had the Church maintained the view that health was the heritage of the children of the Lord, Christendom, as far as we can see, would have been saved from the distress caused by the supposed antagonism between the laws of nature and the laws of grace. The source of the Church's error and lack has always been unbelief; and having, through unbelief, mislaid the gift of health, she next pointed to her own experience to prove that God had withdrawn it; but "kings give; they do not lend;" and the gift, once given, must be hers. Author of "Pro Christo et Ecclesia."

The Hibbert Journal.

The real denial of Christ is not a difference of interpretation in regard to creedal statements of his nature, but the departure from his spirit and a violation of his laws in conduct and character. It is heresy in life rather than heresy in doctrine that has brought confusion upon the Church, cost it the sympathy and respect of hosts of earnest men and women, alienated from it to a very large degree the workingmen in all countries, and created the most serious problems with which it has to deal.

The Churchman.

Why did Jesus wish the three disciples to withhold this report of the Transfiguration until after he had himself demonstrated the reality of the invisible life? Manifestly because a premature report would perplex the Twelve. But when Jesus had himself reappeared to them and talked with them, even as he had himself previously talked with Moses and Elijah, they would understand that the revelation of the Risen Jesus was in accordance with a universal law of spiritual life.

Rev. O. F. Safford, D.D.

The Universalist Leader.

The kingdom of God is greater than any sect or all of them. Its interests demand that we look over the barriers that surround us and gain a comprehensive vision of human need, and that the vision issue in the largest possible service to all that tends to the betterment of man. As we gain this vision and render this service we shall overcome whatever of aversion there may be to sectarian religion.

The Standard.

By what secret have Mrs. Eddy and her helpers been able to kindle and feed the enthusiasm of the thousands who believe in her version of the common Christian faith? The answer, we believe, may be given in these words—she has persuaded them to make their venture with God. Until that is accomplished, nothing really counts for much in the life of the would-be Christian.

The Congregationalist.

There are many things in the spiritual life of our day which to the laggard of thought seem signs of sleep or death, but which to the prophet foretell an age of closer intimacy with the grace and truth that were in Jesus Christ.

The Universalist Leader.

The Christian Science Text-Book.—"Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

The New Concordance.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of Science and Health, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in Science and Health. 595 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

Church Manual.—Containing all the By-laws to date of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to Joseph Armstrong, 250 Huntington Avenue, Boston, Mass.

Cards in the German Periodical.—Application blanks will be supplied by The Christian Science Publishing Society to practitioners who wish their names and addresses inserted in the advertising columns of *Der Herold der Christian Science*. These applications should be properly endorsed and forwarded to the Society. The rate for advertisement will be $2.00 for the first line, and $1.00 for each additional line. It is desirable that those who offer their names in this way should be able to communicate with patients and inquirers who speak the German language only.

Clerk of The Mother Church.—Correspondence relating to membership with The Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

Church Tenets.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to William B. Johnson, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

Church Treasurer.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

One hundred and ninety-three days after it sailed from Solomon's Island, Chesapeake Bay, the great dry dock Dewey arrived at Olongapo, P. I., having finished its voyage of more than twelve thousand miles with an average speed of one hundred miles a day for the time it was in tow. Twice the dock broke away from its convoys and was in serious danger, once off the Canaries in February and again in the Mediterranean in April. After leaving Solomon's Island on Dec. 28, 1905, the Dewey was first sighted off the Bermudas on Jan. 5, 1906. It reached Las Palmas, Canary Islands, on Feb. 23, where it was obliged to remain for repairs until March 18. It passed Malta on April 4, Port Said April 18, Colombo June 5, Sabang June 13, and Singapore eight days later, arriving at the naval station at Olongapo July 10.

The appropriation this year for the Agricultural Department, enabling it to do the thousand and one things that come under its supervision, is $9,882,690. In 1897 the appropriation was only two and one-half million dollars. More than six thousand persons are now on the rolls of the department, and of this number about three thousand are rated as scientists and scientists' assistants. Nine years ago only about two thousand persons were employed, of which number only about nine hundred were scientists or scientists' assistants.

The gross losses of thirty-five insurance companies doing business in San Francisco were $75,000,000, while the net losses are but $45,000,000. The re-insurance money to be received by thirty-five companies is stated to be $12,000,000 in round figures, leaving the large sum of $18,000,000 to be accounted for as salvage.

Thirty young Chinese students, appointed by the Chinese Government from various provinces, are coming to America for instruction. Ten others are coming with the party at their own expense. These forty students will be distributed among different colleges.

By creating the office of Ambassador to Turkey, Congress has abolished that of Minister. The Sultan is procrastinating in his acknowledgment of the new diplomatic position, but unless the Sublime Porte accepts the new official, diplomatic relations must necessarily be severed.

One hundred thousand dollars has been appropriated for the restoration of the frigate Constitution to her original condition. It is one hundred and nine years since the famous old ship was launched from the ways at Boston. The work of repair will be done at the Charlestown Navy Yard, not far from where she was built and launched.

The United States Grand Jury of the Cleveland District last week began the investigation of violations of interstate commerce and anti-rebate laws alleged to have been committed by various prominent railroads and the Standard Oil Company.

The Associated Bill Posters and Distributers of the United States and Canada, in annual convention at Chicago last week, passed a resolution prohibiting any member from posting bills or hangers carrying objectionable titles.

A conference of the parties interested in the use of the Niagara Falls for power purposes was held last week with Secretary Taft at the Falls.

Foreign.

The new Tibet treaty has stimulated the completion of an enterprise commenced more than half a century ago, but subsequently abandoned, the Hindustan and Tibet road. This was projected and put in hand in the fifties of the last century by the Marquis of Dalhousie, with the double object of providing work and remuneration for the hill people and coolies, who were then subject to forced labor, imposed upon them in accordance with an ancient custom, by their petty rajahs and chiefs; and supplying a means of communication for commerce with Tibet, Lhasa, and Western China. The idea of the Governor-General was to build a good substantial highway up to the Tibetan frontier at Shipki.

At the recent session in London of the sixth Congress of Chambers of Commerce of the Empire, resolutions were adopted favoring a freer interchange of newspapers and periodicals published in the Empire, by means of reduced postage; the establishment of a universal penny postage; asking the Imperial Government to devise means whereby cable telegraph news from all parts of the Empire can be furnished entirely through imperial channels.

Without a division the British House of Commons adopted a resolution recently affirming its conviction that the Indo-Chinese opium trade is morally indefensible, and requesting the Government to take such steps as may be necessary to bring it to an end. The Secretary for India pointed out the difficulty the Ministry would face in making good the £3,000,000 in revenue which the opium trade brings to India.

In connection with the campaign of German, Danish, Swedish, and Norwegian grain importers against alleged improper grading of American grain, German grain dealers assert that Argentine corn is rapidly replacing American corn in the market, because it arrives in merchantable condition, while American corn is so bad that the buyers have lost millions of marks thereby.

The vote in the French Chamber of Deputies respecting the Dreyfus affair was decisive, Dreyfus securing 473 votes for his restoration to the army and advance in ranking, against 42 and Picquart 467 votes against 26. The Senate had an exciting session, but passed the rehabilitation bill by 183 votes against 30. The Picquart bill was passed by the Senate by 185 to 26.

Italy has proposed a vital reduction in the fighting strength of herself and her sister Powers, Great Britain and France, and those nations, it is said, have entertained the project favorably. If a final agreement is reached, Italy will immediately reduce her army by two corps, thus taking from her effective force sixty thousand men.

Festivities of an imposing character, extending over two days, July 4 and 5, were carried out to mark the return of General Cipriano Castro to Caracas and his formal resumption of executive authority as President of Venezuela after an absence of three months.

Admiral Rojestvensky, whose trial on the charge of surrendering to the enemy after the battle of the Sea of Japan, began before a court-martial at St. Petersburg July 4, was acquitted after the court had deliberated for nearly ten hours, on the ground that his previous injuries had so incapacitated him as to make him irresponsible for his action.

Industrial and Commercial.

An advance of five per cent in wages in cotton mills in thirty or more cities, towns, and villages of southern Massachusetts and Rhode Island went into effect last week. About 45,000 operatives are benefited. Since the inception of the upward movement in mill wages early in the year, 165,000 textile operatives in the New England States have had their pay advanced from five to fourteen per cent. Of the total number 110,000 work in the cotton mills and about 55,000 in the woolen and worsted plants.

The aggregate rail tonnage now on the books of the mills in all sections of the United States for delivery in 1907 exceeds 1,500,000 tons. It is expected that the car manufacturers will produce about 200,000 freight and passenger cars this year in order to fill all requirements.

It is said that an agreement has been entered into by which the iron ore lands of the Great Northern Railway of England have been leased to the United States Steel Corporation for the consideration of a billion dollars.

The total exports from Paris to the United States for the fiscal year ending in June were $52,037,685, an increase of twenty-seven per cent and breaking the record.

General.

A deep sink-hole near Orlando, Fla., has recently become of considerable geological interest, says the *Scientific American*. Through its subterranean outlet it has carried away the overflow water of more than a dozen neighboring lakes, and may have done this for a thousand years; but about two years ago this passage became stopped, and the water, thereby shut off from this means of escape, filled the sink-basin to overflowing and formed a lake which eventually covered nearly 250 acres of the surrounding lowland, driving many people from their homes and covering gardens and cultivated fields. It is not known how the subterranean passage became stopped, but it may have been from a cave-in of the walls, or from water hyacinths which filled the sink basin. Various unsuccessful attempts were made to open the passage. A short time ago the idea was conceived of trying to find a new passage, or make a new opening into the old one, by drilling a well near the sink. A two-inch hole was first made and a passage was found, the hole carrying down the water easily and rapidly. Then an eight-inch hole was drilled, and now these holes are carrying away the water so freely that the big sink lake which has been so unmanageable a thing and the cause of much alarm in its ever-enlarging area for a long time, is rapidly being drained, and the big sink environment will soon be in its normal condition.

More than $1,000,000 worth of automobiles were brought into this country during the fiscal year which ended June 30, and more than $3,000,000 worth exported during the same time. The manufacture of automobiles in the United States during 1905 amounted in value to about $26,000,000.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

A Business Man's Letter.

[THE following letter is from a well-known business man who has found Christian Science to be a help to him in his business, because through its teachings he has been freed from the worries, fears, quarrels, and physical ills which most business men look upon as the unpleasant, yet inevitable, accompaniments of a busy career. We note with pleasure that Mr. Howard gives honor where honor is due in his reference to Science and Health and its author.—EDITOR.]

St. Louis, June 25, 1906.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Our Dear Leader:—The world is fast awakening to see the beautiful results of your teachings. The enclosed pamphlet, giving the itinerary of the St. Louis Christian Scientists' special train to Boston, is marked evidence of the attitude of the railroad people toward us. The pamphlet is neat and useful, but in no way advertises the railroad, which got it up as a souvenir and time card of our trip. This was the handsomest train that ever left St. Louis. Each car was either new or fresh from the shops, had every possible convenience, and the train was handled perfectly throughout the trip. The one hundred and twenty-five Scientists were most harmonious throughout and had an ideal trip to the great feast—the dedication of the Extension of The Mother Church. For all of this we owe you a deep sense of gratitude for giving us the text-book of Christian Science, "Science and Health with Key to the Scriptures," since through this text-book we learn the source of all good, and are enabled to use the key that opens the Scriptures to us. It is teaching us to do our work and reap our reward, and gradually we are obtaining our dominion.

My business for many, many years has put me in very close touch with the railroad world, and it would delight you to know how these people respect Christian Science and how many of them are embracing its teachings. In my talk with managers of roads, all are unanimous in saying that Christian Scientists are a fine people to handle, as there is no pushing, crowding, no smoking, no drinking, never any questionings or disputes, etc. They all speak of Scientists as being such a happy, contented, joyous people.

If the world could realize for one moment what Christian Science has done for us, they would never say an unkind thing of it, nor say that we worship you, but would join with us in our love and appreciation of one who was meek, humble, and loving enough to receive the inspiring message from the source of all good,—a message which is contained in that wonderful book, Science and Health,—and which is healing its thousands daily, straightening out the rough places and unraveling our snarls, lifting us from darkness into light, from sickness to health, from bondage to freedom. Why should we not be happy, joyous, and most grateful? Christian Science proves to us that as we sow we shall reap. Many wonder at the ability of Christian Scientists to give, but when they understand that true giving always enriches, and that all blessings are infinite and plenteous, then the question is how to *receive*. The opening we make in giving is the opening through which we receive, and your teachings have shown us how to broaden and enlarge and expand our opening—to receive by our giving.

Your time is so fully taken up that this letter and pamphlet may never reach you, but in writing and acknowledging my gratitude to you I am blessed. I feel especially grateful for Christian Science as it teaches business men to take "stingers" out of their letters and words, thus avoiding many heartaches and rough places for their fellow-men.

Yours in the truth,
CLARENCE H. HOWARD.

From our Contributors.

Individual Work.

BLANCHE H. HOGUE.

THERE is an old adage which runs somewhat in this fashion:—

If each his own doorstep swept,
The village would be neatly kept.

This quaint old couplet holds much that is wholesome for all mankind, but its application to the conduct of Christian Scientists is particularly apt, inasmuch as they are engaged in an open and avowed purification of thinking and living which becomes apparent, as it is accomplished, to every thoughtful observer. The message of Christian Science has been heard by thousands of people, who have been drawn together in the common desire for further enlightenment for themselves and for others. United in purpose and endeavor, they bring to this new field of effort every conceivable phase of human temperament, disposition, and education, every tendency which former training and environment have fostered. Under the one clear and simple line of obedience to Divine law, all objectionable idiosyncrasies must eventually disappear, but, in their passing, there is need for the harmonizing of this great mass of thought, that the unity of purpose may triumph over the individual differences of standpoint and method.

After the individual has perceived clearly the truth of Christian Science, he is called upon to prove, step by step, the supremacy of good, the powerlessness of evil; and many times, during this process of growth, the past traits and habits of thought are found unconsciously suggesting, influencing, and coloring the judgments, conclusions, and general point of view, even though there be the most earnest desire to see and do only that which is right. Right motives may prevail, and yet not instantaneously obliterate all possibility of individual limitation or mistake, and just at this point of experience there is need for much patience, discretion, and loving-kindness, that the faulty conditions may yield to the higher and better ways demanded by the Christ-mind.

Because past habits of thought are not instantly disposed of in the first healing touch of Christian Science, great charity must be exercised concerning another's doorstep, and great industry should mark the care of one's own. In the higher developments of organized work, traits which were peculiar to the individual may re-assert themselves in

Copyright, 1906, by Mary Baker G. Eddy.

Digitized by Google

connection with the liberated conditions, and until the human disposition is entirely transformed, each individual must be found sweeping from his own doorstep the errors peculiar to himself. The mortal who has been suspicious may find himself still tempted to be distrustful concerning the motives of others; the one who has been indifferent and easy-going must guard against mental laziness, and watch that he be alert; criticism, envy, ambition, self-love, may try to lift up their heads and find entrance into any group of workers through the human natures which do not successfully resist their influence; and all this tends to make the individual thus hampered see one and another fellow-worker in a false light. Such weakness of human nature must be held in check, and disposed of entirely, by the beneficent influence of the Christ-spirit, operating in the purification of each individual. Christian Science work should bring to light every personal idiosyncrasy, that all may be dispelled and the government of the divine Mind established.

As righteousness is more clearly revealed, evil is more readily detected. Growing acquaintance with the genuine and eternal exposes more fully the unreal nature of the counterfeit. For this reason, all students of Christian Science have a higher ideal of conduct than they formerly held, expect more from each other, and are more ready to detect an error upon another's doorstep. If this acuteness be coupled with that sweet spirit of charity which rejoices in shielding a brother till his deliverance be accomplished, it is yoked to the service of Christ, Truth, yielding meek obedience to His will. If such quickness to see another's error be merely an intellectual sharpness, to be followed by condemnation, disapproval, and the unnecessary rehearsal of the matter to some one else, it becomes a misuse of the instruction concerning the uncovering of error, and operates as a mischief-maker, disintegrating and dividing where the grace of God should establish unity and peace. The gentle helpfulness which goes quietly to a brother and aids him to dispose of whatever may be undesirable, is very different from the criticism which exposes the offence to others, and leaves it there; or which condemns in thought, and leaves the wrong picture undestroyed. Obeying Jesus' injunction to "go and tell him his fault between thee and him alone," will result in cleansing the neighbor's doorstep, or in a meek return to one's own to remove from it the errors to be found there. But the thought which fails to obey this admonition, and wanders abroad to discuss the matter, is multiplying sorrow on every side.

If we are not on guard, a fault in another may be unduly perpetuated by the temptation to dwell upon it, in thought or word, and much turmoil can take place over that which would speedily exhaust itself if not supported by the criticism or consternation of ever-interested observers. If the relative importance of an error be estimated, and compared with the sublimity of man's hope, it drops out of thought as unworthy of prolonged consideration, the disintegrating force is annulled, and peace and healing dominate the situation. Error is unreal to God. If the Christian Scientist has undertaken to prove it unreal in human experience, he must watch well that he classify it as nothing, not something, wherever it claims to exist. His watching has two distinct demands upon it. The first, that it be quick to detect error wherever it may attempt to appear, and the second, that the watching continue until the error is seen as separate from God and man, as a lifeless, powerless unreality, unworthy of even that belief in it which would continue to support it.

There is a vast difference between dealing with error and associating with it. Evil must be recognized and summarily dealt with, in its reduction to its rightful nothingness; but error cannot be held in thought as entity or power, cannot be repeated to an eager listener, without a mental association with it which undermines the integrity of the thinker. Whatever is cherished in thought leaves a blessing, or for a time its stain. Mental association with the wrong concept is unsafe as well as un-Christian, and the undue contemplation of the dust upon another's doorstep so engages thought that one's own sweeping may be sadly hindered. If the debris of another be evident, it is well not to add to the dust of the village a further accumulation of criticism and gossip at one's own entrance, nor should disorder be unwittingly perpetuated by that zeal which neglects one's own doorway to assist in the care of another. To purify successfully, individual thought must sweep everything unworthy from its own portals, challenge every thought which would enter, and add to this vigilance the knowledge that all the dust upon all the doorsteps is not something to be disturbed about, but a substanceless heap to be swept away by the advance of Truth. Surely, as each individual corrects his own thinking, setting it free from all taint of merely human judgment, healing and peace will preside at every fireside, every service, every meeting, in every detail of home and community and church relationship. If "the Lord is our watchman," if the spirit of the Christ thus abounds in every heart, a church service becomes a holy place, wherein unity of purpose has dominated individual differences of habit and method, and joy and healing abide in abundance.

To the dear Leader of Christian Science, Mrs. Eddy, the world owes more than can now be measured, for her loving admonition upon these matters. Pages 16 and 17 of her book, "No and Yes," reveal her attitude; and her own beautiful example shines, star-like, upon the children of men. May the prayer of every honest heart lift thought to the comprehension of her life, her work, her hope for all mankind!

A Practical Lesson.

CHALMERS W. TALBOT.

It was in the early days of my Christian Science experience that I gave my first offering towards the building of the then new Mother Church. I was not a Christian Scientist, indeed I was, like many others, at first opposed to it, but was beginning to see that God would not bless the prayers of Christian Scientists with such wonderful answers were they as deep in error as I suspected them to be. When attending their services it seemed no more than right to make some return, as I had received more or less help from them. Once I gave at a special collection for The Mother Church; not very much, for money was scarce and it was somewhat of a sacrifice to give at all, but I have many times since regretted that my offering was not larger, just as some may yet regret that they have not given more towards the Building Fund of the new Extension. I did not then realize its importance, however, or know how dear it would become to me. The understanding of its deep significance and the blessings that follow the gifts of love had not yet appealed to me.

Soon after my first offering there came up the question: Shall we start a building fund for a Christian Science church in this place? Then followed the usual discussion, and among other things it was said that times were hard, that we did not want to make any mistake in this matter, and would it not be better to wait until all could give. I had a feeling that there was no time like the present, and said if it was thought best to start the subscription I would give one hundred dollars, provided that I be allowed to pay it whenever I could. It is needless to say that we raised quite a large sum, even the children who were present entering into the spirit of the matter, one little miss pledging five dollars. I was not sure, however, that I had been wise. I thought of my last subscription, for small as it was I had to pay it in two payments. I said, "If the Lord does not help me out of this it will be a good long while before I do such a foolish thing again." I was helped, for before a week had passed I was not only enabled to pay my

Digitized by Google

subscription among the first but had more than enough to pay off several hundred dollars of debts that had troubled me for a considerable time. Afterwards I found to my surprise that this problem of supply had in some way been solved, for I no longer had the habit of getting into debt and not being able to see my way out of it. Some may say all this might have happened anyway, which may be true, yet I am confident that no one who has had answers to his prayers would say so. Be this as it may, good has followed me ever since that time. As I grew into an understanding of Truth, I have had answers to prayer that filled me with awe. Once I would have asked myself, Are not these miracles? Christian Scientists know from experience that prosperity and all the blessings that accompany good health are the smallest part of Christian Science.

Before closing I wish to express my gratitude to that wonderful woman, Mrs. Eddy. What inexhaustible revelations she has given us. They seem to me as if written for my especial needs. Through her teachings, and also through her life, I have been enabled to an extent to understand the spiritual or perfect man. If by God's help and her example I can attain the heights she has reached, no words of mine can express my gratitude.

Retaining or Remitting.

MARY LLOYD MC CONNELL.

Whose soever sins ye remit, they are remitted unto them; and whose soever sins ye retain, they are retained.—*Jesus.*

BEFORE coming into some understanding of Christian Science this verse presented many difficulties to me. It seemed an arbitrary bestowal of a gift by our Lord upon his immediate disciples, to be afterwards claimed by their successors, and which gave reason for the foundation of the doctrine of confession and absolution. In reading it with its context, as all Scripture should be read, and learning its spiritual interpretation through Christian Science, one sees what a wonderful lesson this seemingly difficult passage has to teach. The preceding verse reads, "He breathed on them, and saith unto them, Receive ye the Holy Ghost." He inspired them with his spirit, and they received the Holy Ghost, through whose agency they were enabled to remit the sins of others.

Lying awake in the darkness the other night, human life seemed to stretch before me—a long, wide track with many pilgrims journeying upon it. Some were making rapid progress; others, burdened and heavy-laden, were held back by numerous obstacles across their path. Most of these obstructions had been placed there by the pilgrims themselves, and before they could proceed on their journey they had to stop and undo work they themselves had done in bygone years. Some of the seeming barriers were, however, erected by others, a curious fact being that they were seldom placed across the path by enemies of the pilgrims, but almost invariably by friends and relatives who, by misplaced affection, mistaken zeal, false sympathy, or domestic tyranny, threw barriers across the road to heaven.

I noticed that there were two ways in which the pilgrims dealt with these barriers which were not of their own raising. Those who were new to the road and feverishly desirous of making swift progress along it were often angry, often discouraged. They thought it unfair, when their hands seemed already busy, that extra work should be given them by the mistakes or exactions of others. They turned aside from the straight path to argue and fight with the personalities whom they considered to blame. Much precious time was thus wasted, many tears shed, and they found the path more difficult to re-enter when once they had left it. The barriers still faced them. The work of demolition remained to be done. Other pilgrims, wiser and more spiritually-minded, having learned by experience that the conflict is not with personalities but with the impersonal evil which seems to work through them, did not turn aside to "fight it out." With loving, patient thoughts they set to work to overcome the obstacles by the recognition of their nothingness. They even invited with loving gestures those who had seemed to obstruct the path, to share its now cleared vista with them. The foolish pilgrims retained the sins of others, thereby retarding their own growth, and they suffered in consequence. The wise pilgrims remitted the sins of others, thereby not only benefiting themselves but morally regenerating those who had opposed them.

The same lesson may be conveyed by a homely illustration. A man went for the day to a city near his home, on business. During his absence some one carelessly left the garden gate open and a number of wandering cows entered to investigate. Finally they were discovered in the back yard. Then came a stampede, but much damage had been done. Immediately every one began to voice error for the absent master of the house. "How angry he will be when he comes home," etc. The wife, who was trying to be a Christian Scientist, heard this and became conscious that she had been silently holding the same wrong thought. At once she realized that instead of remitting she had been retaining a false sense of her husband,—in fact, holding him in the wrong, instead of the right thought. When train time came she met him at the gate and told him she was sorry about the damage done. He was not angry at all, but sent for the gardener, and soon the mischief was repaired. The lesson thus learned was not soon forgotten.

Dear friends, are we retaining or remitting the false testimony of the senses about ourselves and others?

A Clematis Vine.

LUCY E. DOE.

I HAVE received some very helpful lessons from a clematis vine which had been planted to climb over my piazza. One day, during the first summer of its growth, I noticed that one of the branches, instead of clinging to the netting which was placed there for its support, had found its way through an opening left between the boards upon which the floor of the piazza rested. I took hold of it to pull it out, when I saw that I was pulling a branch several inches higher up, which was clinging to one of the posts and growing nearer the light. Then I looked through the space where the straying branch had come out, and I saw that underneath the floor, in the dark, were beautiful green leaves, which were so large it seemed surprising that the branch had been able to emerge through the small space it had. During the summer I noticed several other branches do the same thing, but they always came out higher up, and clung fast to the netting or posts, as if determined to keep in the light in the future.

Last summer the vine was covered with blossoms, and as I thought of its early struggles and its present beauty, I was encouraged. I thought how sometimes in our work in Science we seem to get into the darkness of doubt and fear, when apparently our growth has stopped, but we know that the same divine intelligence which guides the little plant through all its experiences and provides for its growth, until it is covered with blossoms, is guiding us. Our struggles with error often teach us to cling closer to Principle afterwards, each demonstration of Truth's power bringing us nearer the light, with an enlarged understanding of God. Another helpful thought which came to me was that the growth of the plant did not stop when it was in the dark. It really threw out larger leaves in its effort to get to the light. Many times since, when seemingly in the dark, I have thought of the little plant and have known that I, too, should come out into the light, since divine Love is "above all, and through all, and in you all."

My heart is filled with love for our dear Leader, who has revealed to us the light of divine Science which leads us out of all error.

Selected Articles.

It is doubtful if, since the days of the primitive Christians, there has been such a wonderful demonstration of religious faith and enlightened zeal as that exhibited at Boston, Sunday, when forty thousand Christian Scientists from all parts of the world assembled to participate in the dedication of the Extension of The Mother Church of that denomination. These people were of the highest order of intelligence, many of them prominent figures in the social and business world, and none of them afflicted with the slightest trace of fanaticism. The gathering can in no sense, save one, be compared with those of Mecca and the Hindu shrines, where fanaticism dominates everything else. The one point of resemblance is that the Christian Scientists are thoroughly in earnest and take joy in attesting their faith in the creed of the church of their choice. It is a faith based upon reason, and reached only through intelligent and unbiased study and comparison with other creeds.

A remarkable feature, perhaps the most remarkable, of the gathering was the generosity of its adherents toward their church. The building they were in Boston to dedicate cost approximately two million dollars. Members were invited to contribute what they could to pay for it. The money was sent in such quantities that before the day set for the dedication arrived the fund was full to overflowing and the members were asked to quit giving.

There are many who have regarded Christian Science as heretical. Many others have regarded its adherents as inoffensive cranks, just a bit lacking in intelligence. A few have looked upon the belief and its practices as dangerous to society.

But these notions are passing away. The world is sitting up and taking notice. The average man is finding out from daily social and business contact with Christian Scientists that they are not only not intellectually inferior, but usually the reverse. People are beginning to discover that the Scientist can do what very few of other denominations can—he can give an intelligent and intelligible reason for his faith. We are beginning to discover that they are healthy-minded, healthy-bodied, active, and useful people, who are consistently good because they like to be good, rather than because they are afraid to be bad. And the most of us have seen this sort of people made, after becoming adherents of the creed, out of material that looked mighty unpromising at the beginning. So we have been forced to the conclusion, unless we are simply pig-headed, that there is "something to" this belief, so little understood as yet by the masses of the people. There is "something to" anything that produces such results. Some of us, perhaps, don't understand what it is. Some of us, perhaps, are incapable of sharing the belief of the Scientists. Some of us don't want to. But if we are fair we have no choice but to say that Christian Science has done a great work for the world and that work for the better. For what it has done, we all have reason to be thankful. Since its work is only fairly begun, we have an increased ground for hope for the welfare of the race.

The Sandusky (O.) *Star-Journal.*

Those of us who do not accept the doctrine of Christian Science are possibly too prone to approach it in a spirit of levity, too often disposed to touch upon it with the tongue of facetiousness. Too often we see only its ridiculous phases, attaching meanwhile no importance to the saneness and common sense which underlie many of the practices in its name. And many of us have missed entirely its tremendous growth and the part it has come to play in the economy of our social and religious life.

To those of us who have overlooked these essentials of its hold upon the public, certain statistics brought to light by the great meeting of the church now being held in Boston will come in the nature of a revelation. In 1890 the faith had but an insignificant following. To-day its adherents number hundreds of thousands, and if the growth continues in like proportion through another decade every other sect will be left behind in the race for numerical supremacy. The figures given out by the church itself have been ridiculed by the hostile as mere guesswork, but some of the evidence appears in the concrete and cannot be combated. One cannot sneer away the two-million-dollar edifice dedicated Sunday or the more than thirty thousand worshipers who entered its portals. Neither can we overlook the steady, consistent growth of the sect in every community in which it has found a foothold. In the adherence of its converts to the faith, and in the absence of dissent among them in the interpretation of its tenets, there is also much to convince the skeptic.

Topeka (Kan.) *Daily Capital.*

The dedication of a church in Boston, built at an expense of about two million dollars, calls public attention to the flourishing fortunes of the Christian Scientists. The growth of this denomination has been something wonderful. History may be searched in vain for a parallel to this development. It was in 1866 that the apocalyptic vision was vouchsafed to Mrs. Eddy. Nine years later she recorded the substantial Principle of the new faith in Science and Health—a book which, in spite of ridicule and angry vituperation, has held its own among revelations and shows no sign of yielding to-day in the struggle for existence.

If the mere number of Scientists astonishes us, their character and material circumstances are still more extraordinary. Considering that the faith has met with nothing but unsparing ridicule from the learned world; that Mark Twain and most other men of letters have taken a shy at it; that few preachers have failed to denounce and few doctors to malign it, is it not marvelous that the great body of Scientists are people of high intelligence and comfortable fortune? The new faith, unlike many religions, has made its first appeal, not to the poor and lowly, but to those of the middle class. We cannot help wondering whether it will ultimately convert the multitude, as it already has the elite, and become one of the worldwide cults.

The Oregonian (Portland, Ore.)

[Our brother is mistaken in supposing that Christian Science appeals only to the wealthy. Its following is made up from all classes of society.—EDITOR.]

When a man has heard repeatedly that people considered incurable have been healed by this renewed understanding of prayer, he is apt, if he is suffering himself, or if any one dear to him is suffering, to realize that though the skill of men is exhaustible the power of God is infinite. In this way the healing in Christian Science falls naturally into its place, as in the Christ scheme of mercy. The Master himself came preaching, by the roadside and on the lake shore, his marvelous gospel, "The kingdom of heaven is within you," and when the deep meaning of the words failed to pierce the material consciousness of the listeners, he healed the sick and raised the dead, bidding those around him, if they could believe for nothing else, to believe for the very works' sake.

Immunity from physical suffering, even though it can be gained only by the earnest and persistent effort to know God aright, is, however, only one of the many, and by no means the most important of the possibilities which the understanding of Christian Science offers to its students. Any one who is accustomed to analyze thought must have become aware how great a part fear plays in the everyday affairs of life. This applies not only to conscious and manifest fear, but even more to the almost unconscious

Digitized by Google

dread of indefinable evil—the fear which has found expression in the common saying that a thing is too good to be true. It has taken Christian Science to impress on Christian thought the literal fact that a thing can only be said to be too bad to be true, and gradually, as the human consciousness grasps this great truth, the 91st Psalm passes from a triumphant outburst of poetic transcendentalism into the psalm of every-day life. For him that dwelleth in the secret place of the most High, there shall no plague come nigh his dwelling, neither the plague of pain nor of poverty, of sickness, of sorrow, of sin.

The agonies born of pride and of ambition, the suspicions fostered by jealousy and competition, the myriad passions of the human mind, all engendered by fear of some personal loss, will find their true relationship to life as man realizes that the kingdom of heaven is indeed within him.

FREDERICK DIXON.

Daily Mail (London, England).

Good alone emanates from God. A fountain cannot send forth both sweet water and bitter. If God works through drugs, how can our drugging friends explain the deadly results from the use of so many drugs. Would any reasonable person assert that it was the power of God in a drug which is utilized, for instance, to commit murder? That drugs and poisons are opposed to the kingdom of heaven is shown by Jesus, who declared that if his disciples—those who understand his teachings—drink any deadly thing it shall not hurt them. On one occasion Jesus declared he came to destroy the works of the devil. In destroying the power of the deadly drugs he therefore was destroying not the works of good but of evil. If the use of drugs is the divine method of healing, how does it happen that a drug is used to-day and discarded to-morrow as no longer efficacious? If God is omniscient, why should it be necessary to improve on the drug? The Ten Commandments do not change, neither does the Golden Rule; and they never will, because they exemplify great truths, while drugs do not.

Christian Science denies that drugs are from God. They gain their strength with mortals because men believe in their power. When the belief is destroyed the power of the drug is gone. This explains the failure of drugs to hold their own as remedial agencies. Belief in their healing power fades, and they are discarded. No mere human belief remains unmoved. Not being based on unalterable, unchanging Truth, it fails as men advance to a better understanding of God and His universe. "Every plant, which my heavenly Father hath not planted, shall be rooted up."

EZRA W. PALMER.

Rocky Ford (Col.) *Enterprise.*

Birthdays convey suggestions of ill. What good suggestions do they convey? Suppose you did not know how old you were; would your usefulness in any way be impaired? Would any possible harm result? Suppose birthdays were abolished, what would be the result? The average strength of the human race would increase. Birthdays are responsible for the psychic dead-line of threescore and ten, which is more deadly than a machine gun.

Thousands and tens of thousands die because they think they have reached the age limit. They die because they think they must, because it is customary. In nature there is no age limit. There is no inherent reason why one should die at the age of fifty or seventy-five or one hundred and fifty.

A man at seventy should dress like a man of thirty-five, do the same work, think the same thoughts, and have no care for birthdays. Let us hasten the time when the shackles of the three score and ten delusion shall fall away. All can do something to hasten the glad day by refusing to indulge in birthday worship.

ELMER ELLSWORTH CAREY.

Chicago Record Herald.

Among the Churches.

Dedication in Muscatine, Ia.

First Church of Christ, Scientist, located at the corner of Sixth and Walnut Streets, was dedicated yesterday [July 1] with impressive ceremonies. The evening service was identical with the morning exercises, in order to give every one an opportunity to attend. The church was well filled with the regular attendants and a large number of their friends who were present to assist in observing the occasion.—*Muscatine* (Ia.) *Journal.*

Mexico City.

An unusually large audience was present at the regular testimony meeting of the Christian Scientists on Wednesday evening, at their rooms in the Jardin Hotel. Mr. Stilwell was present, and with him Mr. James Whitcomb Riley; the latter as yet but little interested in Christian Science. Mr. Stilwell spoke very inspiringly, and there were some good testimonies given of physical healing and salvation from bad habits.

The singing was, as customary, hearty and inspiring. Mrs. David E. Thompson, wife of the American ambassador, who is an earnest Christian Scientist, was also in the audience.—*Daily Record.*

Boulder, Col.

We may not have increased as rapidly in numbers here as in some other places, but there is a great awakening taking place and an activity manifested which is very encouraging.

We have a good attendance at both Sunday services and especially on Wednesday evening; often our seventy-five chairs are occupied and occasionally the window-seats are filled. We shall get a larger room as soon as it is completed. There have been some notable cases of healing in our little city. Our workers are earnest and faithful, and above all we have the sweet assurance of unity and harmony and love in our dear little church. Every one feels it and visitors and strangers frequently speak about it.

We have had three lectures inside of eighteen months, and it is hardly necessary to say that they have done an immense amount of good. Every one speaks well of them and we have the visible manifestation in increased attendance and interest.

Our membership is about thirty-five, the average attendance almost double. We were able to send to the Mother Church Building Fund the sum of fourteen hundred and sixty dollars, of which one hundred and eighty-nine dollars was given by the Sunday School, whose average attendance is twenty-five.—*Correspondence.*

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Our Campaign of Education.

DURING the six years that the Publication Committee has been at work, the results accruing from its labors have amply justified the wisdom of our Leader in establishing it as an agency for the correction of misstatements regarding Christian Science and its followers, but this Committee still has a great deal of work before it, and it needs the earnest and loyal support of every member of our Church in order that it may accomplish the good it should do. The "campaign of education" which has been entered upon by the Publication Committee and the Board of Lectureship is an important feature of our denominational activity, and this campaign must be continued until all prejudice against our Cause, and all misrepresentation of it and of our Leader, have been overcome. The importance of this work is, we think, not always understood by the branch churches, otherwise there would be no cause for complaint by the State Publication Committees that their effectiveness is more or less hampered by lack of funds. It should be borne in mind that this work cannot be carried on without expense, and this expense, when divided pro rata among the membership of the branch churches throughout a whole State, is but a small item for each one, and yet it is as necessary to the prosperity of the local churches as is any other outlay.

It is important in the work of this Committee, in addition to the circulation of our own periodicals, that newspapers and magazines containing articles in which Christian Science is correctly set forth should be widely circulated. This is a matter of considerable expense, yet we have known of instances in which the local Committee has been compelled to bear the burden from his own private means because the necessary funds had not been provided by the branch churches. That such conditions exist can be accounted for only upon the supposition that the good already derived from the work of the Publication Committee is not as fully recognized as it should be. We doubt if there is a Christian Scientist who does not personally know of one or more cases in which some misunderstanding of Christian Science, or some prejudice against it, has been removed by these truthful statements, and this of itself proves the value of the Publication Committee's work.

No matter how much each individual Christian Scientist may do—and he should do a great deal—in circulating our literature, his individual effort cannot take the place of the organized and orderly work of the Publication Committee. We repeat that this Committee should be liberally provided with funds to carry on its work, and that the branch churches should be as careful to provide these funds as they are to meet any other necessary expense.

We had intended to confine our remarks to the needs of the Publication Committee, but we are just now informed that for some reason, or for various reasons, a number of the branch churches have failed to give a lecture during the past twelve months, and it seems well to add these few words calling attention to this other branch of our "campaign of education," which has been considered of such importance by our Leader as to justify a Church By-law upon the subject. ARCHIBALD MCLELLAN.

A Belated Throe of Prejudice.

When the judgment is weak, then prejudice is strong.—O'HARA.

EVERY manifestation of prejudice is obtrusive and out of place, but its utter unfitness is never quite so apparent as when it displays itself in the columns of a religious journal. Abundant evidence has recently been furnished of the growing reasonableness and kindliness of secular journals, and of a large proportion of the religious periodicals, toward the Christian Science movement; but now and then a publication appears in a role which sadly disappoints a legitimate anticipation. In evidence, there lies before us a prominent Christian weekly containing an editorial diatribe against Christian Science and its Leader which presses the humiliating proof upon the world's attention that in this twentieth Christian century the official spokesman of a great evangelical body, an avowed follower and minister of him who commanded his followers that they "judge not," and who said to the unheeding, "Thou hypocrite, first cast out the beam out of thine own eye; and then shalt thou see clearly to cast out the mote out of thy brother's eye,"—that such an one can speak in terms of coarse ridicule and condemnation of those who believe in God, who take the Bible for their daily guide, who are earnestly seeking to possess and manifest "the mind that was in Christ Jesus," and who have the grace to be courteous and respectful toward all those who may differ from them in religious faith. No question is raised as to the intelligence, sincerity, honesty, and wholesome living of Christian Scientists; no objection is made to the life-fruits of their faith, and yet they are classified and pronounced upon with bitter invective!

Surely such an exhibition is no less suggestive than astonishing; it makes clear to thoughtful people, both within and without the churches, that neither religious profession nor position necessarily count for the culture of broad-mindedness, and that the call to a more spiritual, more loving, and more consistent sense of divine truth and Christian duty, which Christian Science is voicing to the world, is imperatively needed. So long as Christian ministers and editors have nothing better to offer humanity than the products of a wholly un-Christian prejudice, so long will the plaint respecting empty churches and a decaying religious interest certainly be heard.

It is peculiarly interesting that on the last page of the periodical containing this discreditable thrust at Christian Science and its revered Leader, whose statements of Truth have brought freedom to so many of the sick and suffering, there appears the photograph of the distorted form of a little boy, strapped to an iron frame, whose pains, as we are told, are being alleviated through the loving ministries of a seaside hospital for whose maintenance and enlargement a touching appeal is thus made. It is said that there are four thousand five hundred such "tortured children in New York, and sixty thousand in the United States." For the great body of these innocent cripples *materia medica* has recognized its inadequacy in naming them "incurable," a verdict which, prior to the coming of Christian Science, has been re-affirmed by practically all the Christian thought of the world. Indeed their sufferings have been made the more hopeless by the so-called Christian teaching that the law of heredity, which has imposed upon them the trials and life-long limitations of an unspeakable injustice, is of divine appointment, and that while Jesus and his disciples healed such cases, divine Truth is no longer thus available in their behalf. Laboring as many Christians are to relieve human suffering by means which are commended to their approval, it is a fair presumption that they will welcome any other means which have been found effective to this end, and they cannot consistently condemn a movement which in Christ's name has brought cure to unnumbered "incurables" throughout the world. Both the testimony of those who have been freed,

Digitized by Google

and the cry of little pain-bearers in ten thousand homes, must plead ever, and in God's name, with the cruel critics of Christian Science that they give up their condemnation and contempt of that which has been an unmeasured blessing to so many of those to whom both physicians and preachers have said, "There is no hope."

There is occasion for rejoicing in the fact that outbursts of this kind are being shamed into silence, and that the unjudicial criticism of manifest prejudice is always and wholly self-defeating, since the average man does not fail to perceive its impelling animus. Goldwin Smith is right when he says that "religious bigotry is rapidly disappearing from the world." JOHN B. WILLIS.

The Living Bread.

WE can estimate the relative value which the great Teacher placed upon the spiritual and material, when we consider his words, "Labor not for the meat which perisheth, but for that meat which endureth unto everlasting life;" to which he added, "He that eateth of this bread shall live for ever." The evangelist says, concerning this teaching, "From that time many of his disciples went back, and walked no more with him." This doctrine was too transcendental for them, as it is to-day to many who profess to be followers of Christ Jesus; and yet nothing less than the bread of which he spoke can satisfy the hunger of the human sense, which longs for what divine Truth and Love alone can supply.

Many of the testimonies published in the Christian Science periodicals tell touching stories of a hungry and weary quest for Truth before sickness impelled these seekers to come to Christian Science for help. In many cases the doubts and fears of material belief for a time shut out the light, so that the divine supply for every need was not only unseen, but denied. Not infrequently those who unquestioningly make use of every material means in their efforts to find health and happiness, hesitate when the healing power of Truth is brought to their attention by some Christian Scientist, and in this they are strangely inconsistent. Well might the Master say to such, "Ye also have seen me, and believe not." In spite of this attitude, however, the fact remains that no sincere student of the Scriptures can remain satisfied with the mere acceptance of the promises, without seeking their fulfilment in the healing of sickness as well as sin.

It was hunger for the "bread of life"—for spiritual reality—which impelled our revered Leader to seek until she found it in fullest measure, and through her research and continued toil, thousands have been brought to the table spread in the wilderness of mortal belief, and fed with the bread which "giveth life unto the world." With the acceptance of Christian Science comes a lessening sense of the value of all material things,—"the bread which perisheth,"—and the spiritual begins to take, as it should, the first place in thought. Christian Scientists soon learn that their first daily effort must be to find the living bread and partake of it, else they would be unprepared for the duties of the day. They learn, in a most practical way, that through this bread—the truth of being—they have all the strength needed for each day—both mental and physical—also clearness of vision for each task and joy in its doing.

One who has found this bread writes of long years of vain search for it; of much bodily suffering, followed by the distressing and seemingly hopeless illness of an only child. She says, "I was in the darkest despair when I first heard of Christian Science." She then tells how she borrowed a copy of Science and Health, and how through its study and the application of its truth both herself and her child were healed, and adds, "All of this is, however, nothing to compare with the spiritual uplifting which I have received. . . . I am thankful to God for leading me to grasp this truth which makes free, and words are inadequate to express my gratitude to Mrs. Eddy, who was found fit to bring it to hungering and suffering humanity." May we not well pray, as did Jesus' disciples, "Lord, evermore give us this bread." ANNIE M. KNOTT.

Letters to our Leader.

Washington, D. C., July 10, 1906.

Mrs. Mary Baker Eddy.

Beloved Leader and Teacher:—Allow me to thank you, gratefully, earnestly, for your wonderfully clear exposition of Principle, person, and contagion. There is such a wealth of metaphysics expressed in the brief article, it seems boundless. The spiritual impetus that accompanied the careful reading of it enabled me to make a demonstration instantly that was most gratifying. If we as Christian Scientists but remembered what our work is, and did it—that God is the infinite good, a personal presence to each idea, and the infinite Principle of them all; that our work is to constantly locate good in our own thought, and as we do this, we are helping the whole world; to turn away from all personal clinging, to do justly, love mercy, and walk humbly with God—what great blessings would we attain.

Dear Leader, your work is proving itself to be what the world needs and wants, and the time will come when with sackbut and psalms it will praise your meek, pure, loving, self-sacrificing life, and give honor to whom honor is due.

Tenderly and lovingly,

EDWARD EVERETT NORWOOD.

Gossville, N. H., July 9, 1906.

Dear Mrs. Eddy:—It is with much love and gratitude that I write to you to tell how Christian Science has come into my life, and what a help and comfort it is to me. It may give you a little happiness to know that some of your own relatives are beginning to love the great truths of Christian Science, and to realize that a great blessing has come to suffering humanity through your patient, untiring efforts. My grandfather was Ebenezer True Ambrose of Deerfield, and I used to hear him speak of visiting at your home when he was a boy. I was a teacher in the public schools of Boston, and when I first became interested in Science I was a member of a Baptist church there. Through some good neighbors I came gradually to believe in Christian Science, but it was not till last November that I had a personal realization of its healing power. I was sick, and called on a practitioner for help. I was immediately relieved, and a great happiness came into my life. I had been sick and depressed, and when I realized that God does not send anything but good to His children, the world seemed so much brighter and happier.

Our little household in Boston consists of an aunt, also a teacher, and my younger brother. They were also members of the First Baptist Church, but became interested in Science some time previous to my illness. My dear mother, who was almost an invalid, spent the winter with us. She had treatment from a Christian Scientist, spent much time reading Science and Health, and was benefited. As we live near the church she could attend the services, and they were a blessing to us. This last June we all became members of The Mother Church. I am spending the summer on my grandfather's old homestead at Pleasant Pond, and I am hoping to help others who need the hope and courage and joy that comes from Christian Science.

For all the many blessings that I have received through reading your books, and for the happiness that has come to me, I am very grateful.

Most sincerely yours,

MARTHA J. AMBROSE.

Northampton, Mass., July 10, 1906.

Dear Leader:—Your significant article on "Personal Contagion" impels me to write you an experience that has been very precious. I had never seen the new church in Concord, and the Wednesday following the dedication of the Extension of The Mother Church, I went there to attend the evening meeting. As I left Boston, the question arose in my heart, What are you going to Concord for? and the answer came with conviction,—For Principle, without a thought of seeing Mrs. Eddy's personality. The manifestation of God apparent in every detail of the experience brought a lesson that will not be forgotten. I was there at the time of your daily drive and for a while the desire to see you was present, but the effort made was unsuccessful. I soon saw the wisdom of this result, and knew the desire to see personality, after there had been a marked manifestation of divine Principle, was described in Science and Health, page 103, line 15, "The maximum of good, however, is met by the maximum of suppositional evil, hence the fight to crush Science." I came away satisfied with abundant blessing.

I am a student of yours through your works.

With loving gratitude,

MIRIAM B. CLARK.

Boston, Mass., July 8, 1906.

Beloved Leader:—Words are inadequate to express to you the comfort and strength your letter of yesterday gives me. Your letter, or message, in the *Sentinel* of yesterday, must and will awaken the "dead in trespasses and sin." None can fail to see God's guiding hand in every sentence. Your works, from which these words are the outgrowth, ought to silence all speculative opinions, or "other gods" before divine Principle, and hasten that day when those desiring to know Truth will search, and find it in your writings and the Bible. These words from page 309 of your "Miscellaneous Writings"—"He advances most in Divine Science who meditates most on infinite spiritual substance and intelligence,"—have been the safe harbor in which I have anchored during many storms—temptations to forsake the leadings of divine Principle for the opinions of persons. If all Christian Scientists had read, studied, and obeyed your article, "Deification of Personality," in your "Miscellaneous Writings," the present helpful rebuke would not have been needed.

God bless you, and comfort you, as you have comforted others, is my prayer. Lovingly yours,

CALVIN C. HILL.

Boston, Mass., June 9, 1906.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—Mr. Strang has informed me of my appointment as assistant in the Publication Committee work, to Mr. Farlow, and I hasten to express my gratitude to you, dear Mrs. Eddy. I want to do all I can for the Cause I hold so dear, and for the Leader I respect and love. I recognize in this appointment a new opportunity and a larger field, and I earnestly desire to be faithful and obedient. I know that "the Father . . . doeth the works," and so I have no doubt about results. My only business is to reflect Principle. You will have many expressions of devotion, of appreciation, of recognition of your mission, and I would like to add mine to the mighty chorus which testifies to your work gloriously done, under God; but above all, I want to prove my faith by my works. I want to serve God well, I want to know enough to follow you, because you follow Christ.

With a heart full of gratitude,

Faithfully yours,

WILLARD S. MATTOX.

Testimonies of Healing.

I wish to express, however inadequately, my acknowledgment of benefits received through the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy. The early spring of 1903 found me a very sick woman, not having been out of the house for seven weeks; I was slowly recovering from a more than usually severe attack of ills that had burdened my life for over twenty years. I speak of bronchitis and asthma; these, combined with heart trouble and dyspepsia, gave me always such a feeling of intense weariness, that at the best of times every little duty seemed a trouble. I was in this condition when a friend called upon me with a lady, who proved to be a Christian Scientist. At this time I knew nothing whatever of Christian Science, and having been a member of an orthodox church for many years, I was deeply imbued with creed and theological dogma. It seemed to me that the claims of Christian Science, as voiced by this exponent, were irreverent. I am ashamed to say that I did not hesitate to express myself in forceful language. The antagonistic remarks of myself and friend were, however, received by the Scientist in such a kindly spirit that I could but acknowledge to myself that my religion would not have stood the strain in like manner.

Upon the departure of my visitors it came to my thought that I had been acting like one of the "foolish women," in criticising something of which I had no knowledge whatever, not having read one line of the authorized publications, and the inward monitor said, "Beware lest ye be found fighting against God;" consequently, when this new friend called again some few weeks later, bringing a copy of Science and Health with the request that I would read it, I felt that I owed it to both her and myself to do so, though I had misgivings, fearing it might teach something dishonoring to God. I opened the book with an earnest prayer that if it were the truth, God would reveal it to me, and if not that He would keep me from the teaching. I then determined to read with an open mind, assured that my prayer would be answered.

I think I knew before reaching the bottom of the first page of the introduction, that it was truth. I read many hours that first day, and at its close was so convinced that the book contained the truth, that I set aside all the drugs I was then taking by the doctor's prescription, one of them being a powerful heart tonic, determined to have no more false gods. Since that memorable hour, nothing in the form of material remedies has been used by me. I read on and on the next two days, for the book absorbed me. As I was about to start reading on the fourth morning, it suddenly dawned upon me that I was feeling quite well. I was amazed, almost bewildered, and cried out, "Why, God has healed me!" and so it was, and I have remained healed. God had indeed answered my prayer to know the truth, and the truth had set me free. From that moment I have been enabled to go about and do things like other people, and am stronger than I remember ever to have been. I eat anything that is set before me, and can climb stairs, a thing prohibited for many years. The joy of freedom from the intense weariness can only be fully understood by those who have had a like experience.

For a year previous to this healing I had an eruption upon the body. Three physicians, one a skin specialist, had been consulted, with no permanent benefit. When I gave up the drugs, I also discontinued salves, and in a few weeks every trace of the eruption had vanished. These benefits were received "without money and without price," through three days' prayerful reading of our text-book, and even that was loaned to me.

I would like to add that in addition to all the ills I have already named, was epithelioma on the face, which had been operated upon by three specialists, the last one in a distant city twice. About the time of which I have spoken,

Digitized by Google

this doctor wrote that it would be necessary for me to go again to him. While I felt that this would yield to a further study and understanding of the truth, my husband insisted that I either go to the doctor or take Christian Science treatment. I took the latter, and while the healing has seemed slow, it is with heartfelt gratitude that I can now say this also has been overcome by the power of revealed Truth.

It is fitting that we should hold in profound reverence our beloved Leader, whose close walk with Christ, Truth, enabled her to understand the Master's teachings, and to demonstrate them to a sinning, sorrowing, suffering world, in a form so clear and plain that he who will may, by the prayerful study of Science and Health with the Bible, be released from the bondage of sin and disease.

MRS. KATE L. FORTH, New York, N. Y.

It is over four years since I came to Christian Science for help—not at first by asking for treatment, but studying the Bible and Science and Health, also "Miscellaneous Writings" by Mrs. Eddy. For three days I devoted myself entirely to reading and prayer, that the truth might be revealed to me, and this was after all other means had failed. There was a condition of hemorrhage, of long standing, that finally brought me where physicians said the blood-cells and corpuscles were all destroyed. This, combined with Bright's disease, brought on a nerve trouble in my head and one side. The pain in my head was so great for four weeks that I prayed to die. With this was a constant nausea; not even a teaspoonful of anything could be retained. I required constant attention by nurses, there being a day nurse and a night nurse all the time. Physicians said if I lived it would be by the power of God only, as they could do nothing for me, and that I would never be able to walk. On going home from the sanitarium I took cold and there was incessant coughing, etc. After ten weeks of this I turned to Christian Science. I could only read a few words at a time, then all would be a blank—both of sight and of thought. I continued my reading as best I could, praying that God would reveal to me if this was the Christ-truth, and the third day, as I sat with the books on my lap, I suddenly discovered that my throat was healed. My cough was gone; I slept and ate and could not get enough to eat. In ten days I was a changed woman. Later, I had treatment for bowel trouble of forty years' standing, and had at last to work it out for myself. All these ills and many more have disappeared into their native nothingness through the study of our text-book. I am well. I am free from pain, for the first time in many years. "How great a God is our God."

I have also had some beautiful demonstrations in the last year. All may know this truth by studying the Bible and Science and Health. I would I could give to some sin-sick, diseased mortal the joy and peace that have come into my life and home through this truth. I know that by living this truth I may be able so to do, and thereby prove my love and gratitude to God, and to our dear Leader.

MRS. H. A. BEAUBIEN, Detroit, Mich.

For about thirty years I was troubled with indigestion or stomach trouble. I was treated by several of the leading doctors of the city, but instead of being cured my trouble increased. One day a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy was brought to my home. It lay there several days before I opened it and read a little. I did not seem to understand it, so I closed it. This I did several times, but finally became interested and did not want to let go of it. Something like two months after this, after I had suffered for several days with the stomach trouble, the thought came to me, "Why cannot you be healed as well as so many others, by this understanding." Being satisfied that Christian Science is the truth, I resolved to try it and do the best I could with what little understanding I had. I closed the book and declared the truth to the best of my understanding, and in less than two minutes my trouble disappeared like snow in warm water. This was about a year ago, and from that time I have not missed a meal, and take anything that is set before me, having no fear of my former trouble. I have not taken any medicine since being healed.

A few weeks after my healing I awoke one night in what seemed a high fever. My first thought was to call a doctor, but the second thought was to declare the truth as before. I did so, and woke up in the morning as well as usual. I am indeed thankful to God, and also to Mrs. Eddy, for the knowledge of this blessed truth which heals all error.

S. F. SANBORN, Janesville, Wis.

[Translated from the German.]

Some time ago I had an experience which taught me how necessary it is that we deny every error at its first appearance, and declare the power of Truth. I journeyed from Cannstadt to Zurich, and in our compartment was a lady with three little children, one of whom had inflamed eyes. During the long journey the other travelers as well as myself looked at the little boy several times, and I forgot to deny the reality of the error. In the afternoon I reached the end of my journey and in the evening I seemed to suffer from the same trouble with my eyes. When I awoke the next morning I could not at first open my eyes, but I denied the error with its seeming reality, and tried to turn mentally away from it to Truth. As I was visiting relatives I was somewhat disturbed in my treatment, and I did not succeed either the first or second day in mastering the trouble. The third day I went early to a quiet park where I began my treatment. I endeavored to realize that there is no power apart from the all-power, and that this is good only. I also tried to assert my God-given dominion over the material senses, and after I had worked for about two hours, opposing the error and asserting the dominion of good, I suddenly felt a great improvement in my eyes, and during the day the trouble disappeared.

I am grateful to our heavenly Father that He has, through our dear Leader, Mrs. Eddy, shown us anew the way in Christian Science, whereby we experience such demonstrations and even greater ones.

GEORG HAIGIS, Cannstadt bei Stuttgart, Germany.

One evening my right foot suddenly began hurting as if sprained. For a short time I kept wondering what had happened, but soon awoke to the realization of the nothingness of error, and went earnestly to work to overcome it. All the evening I worked; read the Bible and Science and Health, but the pain and soreness in the foot increased until I could scarcely step on it. I went to bed, but not to sleep, as the pain, soreness, and inflammation seemed to increase until I could scarcely bear the weight of the bed-clothing. At 4 A.M. there was but very little change, and again I repeated passages from the Christian Science text-book. Then I fell asleep, and when I awoke was rejoiced to find the foot healed, and such a calm, happy, restful feeling. How sweetly the thought came, "I know that my redeemer liveth."

My heart goes out in love and gratitude to our dear Leader, Mrs. Eddy, for her courage and faithfulness in giving us this wonderful message of Truth.

HANNAH STAPLES, Sandusky, Wis.

It is with a heart full of thankfulness that I give my testimony of the blessings received through Christian Science. When my baby boy was nearly a year old, he swallowed a wire nail one and three quarter inches long. The struggle at that time, together with our fear, seemed almost more than we could bear. Two doctors were called

Digitized by Google

at once, who did all they could for him, but from that time until he was three years old he never was well. One thing followed another, and finally, after consulting five different doctors, they decided to hold a consultation. This they did, and said that his right lung had collapsed, and that perhaps an operation would help him. He had not walked in four months and had eaten scarcely anything. Nothing seemed to arouse him. As he was very weak, we did not want an operation, but the doctors said he could not possibly live over three days unless it was performed. Upon the suggestion of a friend we decided to try Christian Science, and a practitioner was sent for. Each day found the child brighter and the fits of coughing were farther apart. I purchased a copy of Science and Health and we became interested at once. At the end of eight months our boy was strong, well, and happy. He coughed somewhat, but it did not seem to inconvenience him. One morning after rising he coughed slightly and the blackened nail came up in his mouth, but no blood or mucus came with it. Since then he has never seen a sick moment and is as healthy as any boy four years old. Many other demonstrations have been made in our family, and not one drop of medicine has been used.

I am indeed thankful to God for the many blessings we have received, and I am most deeply grateful to Mrs. Eddy for her work of love.

MRS. EVA B. RANSOM, Pulaski, N. Y.

In loving gratitude to God, and to our dear Leader, I give my testimony for this wondrous truth, which has come into my life to bless and to purify. I did not come to Christian Science for physical healing, but because I found it brought me nearer that sweet peace which surpasses all human understanding. When I was just a girl from high school I had a demonstration which was instantaneous, and it has always stood out from the others because I went to the practitioner without understanding and without much faith. I went simply because a friend wished it, and I was healed in one treatment of an ulcerated tooth. As time went on this same friend invited me to attend the services, which I did, and then came to me a little understanding of what Christian Science really is—a knowledge of God—a true idea of Life, and of right living. I am very glad to know of Christian Science thus early and I am indeed grateful to be able to see this beautiful light.

NELLIE S. CHESLEY, Concord, N. H.

When Christian Science came to me it found me in the field of *materia medica*, where I had been working as a trained nurse for years, always questioning, Is there no way to eradicate sickness, sorrow, and death from the human family? My question was never answered until I began the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy. When I first began to study the book I believed many things in it, but being at that time under the influence of the medical thought I did not believe Christian Science could heal the sick. At this time I was called to care for a case of malignant diphtheria which was under medical treatment. I had worked over the case almost continuously for three or four days and nights when the child passed on. I went home, and in less than twenty-four hours found myself under the same conditions, having a high temperature, a well-defined diphtheritic sore throat, and suffering the most intense pain from the supposed effect of poison all through the system.

As I thought over my condition pen can never portray the despair with which I thought of turning to *materia medica* for help. With the picture of what I had just been through, and my overworked condition, I felt that I did not have the vitality and strength to recover from antitoxin treatment. As I thought over the situation, something seemed to say, "Now is your time to put Christian Science to the test." I got up and took my copy of Science and Health, but I was suffering so that it did not seem as though I could read a line. I found the scientific statement of being (p. 468), and before I had read it through I felt better. I read for an hour and then fell into a peaceful sleep. When I awoke, several hours later, all the inflammation, soreness, and contraction had gone from my throat. The fever was all gone, and the diphtheritic odor, which had been very perceptible, had entirely disappeared. I was still suffering great pain all through my body, but I felt hopeful. I knew what had helped me and sent for a practitioner. Word came back that she could not come, but would treat me absently and come the next day. Here I had something to meet, for mortal mind argued, "If I had sent for a doctor, he would have come at once and something would be done." I, however, decided to read some more, and in a very little while I found myself covered with perspiration and the pain all gone, a condition which would be considered very favorable under *materia medica*.

The next day the practitioner called, and the following morning I felt well, so thought I would get up, but seemed so weak I could not stand. The third day I got up and dressed and walked four blocks to the practitioner's, and in less than a week I was well and strong. This experience convinced me of the power of the truth to heal the sick,—it does heal the sick; it destroys all error; it brings immortality to light. Words are inadequate to express what Christian Science has done for me.

At first I did not keep in the straight and narrow path which, as our Leader shows us, leads to God. I thought I must investigate many modern beliefs, and this led me into a long dark night of sorrow. It seemed as if error kept me in its grasp, but on my knees, with Science and Health before me, I often asked God to lead me, to give me the right understanding, and my prayers were answered. The clouds of sense disappeared. I accepted Christian Science as the revealed truth to this age. It has been my lamp by night and my pillar of cloud by day; never failing to comfort, strengthen, and point the way.

I am grateful for the physical healing, but I am most grateful for the uncovering and destroying of errors of disposition and temperament. Joyfully I climb the rugged way, anticipating what divine Love has in store for us,—the restoration of all that to sense seemed lost. My thought is ever filled with gratitude to God and love to our Leader for what Christian Science has done for me and what it enables me to do for others.

MARGARET GOODWIN, Denver, Col.

About seven years ago I turned to Christian Science for help in a very distressing form of nervous exhaustion. I had been treated by at least ten different physicians, but none of them gave me any relief, nor could they account for my peculiar symptoms. At last an eminent physician on the Pacific coast said he believed he should have to call my case one of incipient locomotor ataxia. He gave me electrical treatments, etc., but gave me no encouragement that he could effect a cure. After returning to my native city, Pittsburg, Pa., I found myself constantly growing worse. I could stand on my feet but a few moments at a time, and was only comfortable when sitting or lying down. I had been in this condition and steadily growing worse for about five years, when Christian Science was suggested to me as a possible remedy. I knew absolutely nothing for or against this teaching, but I applied at once to a practitioner for help, and was treated for about six weeks. I began to improve at once; at the same time I was reading Science and Health, for I was convinced from the first that if I was to be transformed from discord to harmony, it must be done by the "renewing of the mind," as the Scripture affirms,—a radical change must take place in my

Digitized by Google

mode of thinking. My healing was slow, and many times I would become discouraged, but my patient practitioner was so absolutely sure of my ultimate recovery that I gave up doubting and devoted the best of my time to the study of Science and Health. Now I have my reward in my relief not only from nervousness, but from many discordant bodily conditions, and the spiritual gain which is mine is very dear to me. My dependence upon God as the giver of all good, and the peace and rest which I now have both of mind and body, is priceless.

I am now striving to gain more of this Christ-consciousness, that will enable me to help those around me, whom I see bound by the errors of sense, to see this glorious "light of Truth" and thereby emerge from the darkness which seems to envelop them. For the Lesson-Sermons and the *Sentinel* and *Journal* I am very thankful. My love and gratitude go out to our dear Leader, who has shown us how to work out our own salvation from all discordant physical and mental conditions.

ANNA B. MCCREARY, Pittsburg, Pa.

In May, 1903, I became violently insane. I was sent to the asylum at Jacksonville, Ill., with little or no hope of my recovery. I had been sick for a long time before this; had taken medicines from three different doctors, but had grown worse all the time. The supposed causes of my trouble were worry over financial losses and strong drink. The worse I felt, the more I drank, until I became a mental and physical wreck. About a year before this my wife became interested in Christian Science, and when I saw that there was no hope for me, I asked her to have me treated by a Christian Science practitioner. That night I became very violent. During the night I jumped out of a window and made my escape through the rain and darkness to a town twenty miles distant, where I had been working. My wife, learning of my whereabouts, came after me and brought me home the next day, but I became so violent that her people thought it best to put me under restraint, where I could not harm myself or others. The next day I was examined by a board of physicians, adjudged incurably insane, and taken to the insane asylum. While there I did not take any medicine, but was in constant communication with my wife, who wrote me that I was being treated by a Christian Science practitioner. In just eight weeks I was sent home perfectly healed, both mentally and physically. The doctors told me that if I lived I would never be able to hold a clerkship. I wish to say that I have been holding a position as salesman in the principal clothing store here and my employer says that he has never noticed the least sign of derangement.

For all this I am deeply thankful to God, and to Mrs. Eddy for showing us the way through Christian Science.

CHARLES KOHLER, Chillicothe, Ill.

About sixteen years ago I had a severe attack of the grip, which left me with lame shoulders and a cough. During seven years I could not dress or undress without assistance and there was constant pain in my shoulders. I went to different doctors, until I had received treatment from five, and all said that this chronic condition could not be cured. A friend then wrote me to try Christian Science, and I went to the church on three Sundays, became much interested, and knew it was the truth, but I was not able to go the fourth Sunday. My husband then asked help for me from a Christian Science practitioner. She gave me absent treatment, and I was so much better the next day that I assisted in a large washing; on Tuesday I found that I could raise my arms to my head. Before the week was over I was perfectly well. I was very happy, and said, "This is a miracle, I feel like shouting it from the house-tops." I, however, found that my enthusiasm met with little response from my friends. One doctor had said that I would surely die with consumption in less than a year, as I was much emaciated, but I now weigh more than I ever did and people can scarcely believe I was so ill. I have been and am doing all I can to spread this healing gospel, and am able to help others very often.—MRS. MARY VAN RYN, Pittsburg, Pa.

Eight years ago I was very ill. A physician was consulted, who pronounced the case catarrh, together with the worst form of exhaustion of the heart, stomach, and bowels he had ever known. For a year previous to this my heart had given me serious trouble, and one doctor told me that the present condition was largely due to the medicine taken at that time. I continued to grow worse, until a physician told my husband that probably the outcome would be death or insanity, and that he feared the latter. After a time I seemed to grow a little better of the mental trouble, but the stomach and bowels grew worse, until I could eat no food without extreme suffering and there was no action in the bowels.

At this time I heard of Christian Science through the healing of what was called an incurable disease. This brought me great hope, and later I consulted a Christian Science practitioner. The inaction of the bowels was almost immediately overcome, the other conditions yielding more slowly.

The mental trouble is a thing of the past, and I am thankful to be able to call myself a strong, well woman. I can now eat anything I want at any time. It was in the spring of 1900 that I first went to Christian Science for help, and I can truly say I have lived more since then than in all the former years. My gratitude to God, and to the Discoverer of Christian Science, is unbounded.

MRS. EMMA E. LIBBY, Rockland, Me.

Christian Science was brought to my notice in 1904. In April, 1905, I was healed from dropsy, supposedly an incurable disease, of ten years' standing, which I was said to have inherited. I took one week's treatment in Christian Science and I am now healed. My present health is perfect.

MISS MOLLIE GILBERTSON, Coeur d' Alene, Idaho.

[Written for the *Sentinel*.]

Truth's Coming.

MERCY NUTTER DAVIS.

Blessed is he that cometh in the name of the Lord.

IN Thy name! O Love transcendent,
Cometh one proclaiming good
As the Life of all—resplendent
Everywhere when understood.

In Thy name! O blessed coming!
Welcome Thou! With joy untold
We, Truth's message now discerning,
See its radiance unfold!

In Thy name! O Life eternal,
All-perfection, Love, and Truth;
Sacred three, whose light supernal
Blesses all with tender ruth.

In Thy name! Our symbol rises,
Fair its outlines, stately, grand!
Built of loving sacrifices
Offered by each willing hand.

In Thy name! Make wide the portal;
Those who love may enter in.
In Thy light, O Love immortal,
All are purified from sin.

From our Exchanges.

I do think I have the right to demand of my preacher who ministers to me the truth, that he has tested it by his own thinking or his own experience, that he has made it his own truth. I do not care to have him minister to me somebody else's probable opinion. I do not care to have him preach his reading to me. I would have him read; but his reading should have passed through his own mind. "Reading," says my Lord Bacon, "maketh a full man;" but when a man is constantly spilling over his reading, it looks as if his capacity was not great. What my preacher says to me from his pulpit on Sunday may not be novel or profound, or brilliant, or striking; I have no right to expect that. But I do expect that it shall be vital; not second-hand but fresh from his thought, warm with his own feeling. To such a message coming from such a man, this man whom I know and love as my pastor seven days in the week, whom I never see without wanting to shake hands with him in good fellowship—to such a message from such a man I shall listen, you may be sure.

PROF. C. T. WINCHESTER.
The Hartford Seminary Record.

If we had no higher thought of spiritual power than that of some vast and everywhere present force, ready to flow in where the will of man affords it an opening, the first condition of utilizing that force would be to open the doors of the soul to give it entrance—in other words, to venture upon it, as the chemist ventures upon chemical forces and the machinist upon mechanical forces. And here is just the point where all the churches stand in constant danger from pure intellectuality or the inertia of fixed tradition. Joy and enthusiasm are fruits of the personal experience which comes of venturing with God. Unless we heed Christ's call to this venture, we have no power to move and hold men. We have not exhausted the possibilities of joy and strength with any call to life which does not include the demand for courage in experiment. And unless our Christianity offers that joy of personal acquaintance and experiment as a present thing and not a hope postponed beyond the grave, we are outside the field of Jesus, whose favorite word is "Now."—*The Congregationalist.*

America is not bad. Our men of wealth are as a class the ablest and most generous rich men of the world. They live, many of them, the gospel of wealth. But this is not the Gospel of Christ, and the wealthy know it as truly as do the poor. Therefore, while the Church endorses this false gospel, neither the rich nor the poor take the Church very seriously. . . .

But if the Church will rise to the situation, if she will dare to follow the Christ, if she will say to the nation that it is wrong, if she will show plainly what is right, she will be surprised to find how many of the wealthy, as well as of the poor, will rally to such a Church. The multitudes are ready. Religion is not dead; but the people are as sheep without a shepherd. Let the Church declare her vision, let the Church, as a body, follow her Lord, and the Church of the Son of man will become the Church that will save the nation. His Gospel can save the world. I know no other that can.

REV. W. D. P. BLISS.
The Churchman.

Intelligent missionaries are now learning that in many different ways the Spirit has spoken to those who were once regarded as children of Satan, outcasts from the kingdom of heaven. All efficient missionary work now proceeds upon the supposition that whatever is true even in paganism is as sacred as if it were found in the Hebrew or Christian Scriptures, and that the truth may shine even through the fictions of paganism.—*Christian Register.*

In Jesus we see the revelation of the capacity of human souls to receive God. It is our true and realized humanity revealed to our untrue, unrealized selves.

REV. CHARLES S. MACFARLAND, PH.D.
The Universalist Leader.

THE CHRISTIAN SCIENCE TEXT-BOOK.—"Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing all the By-laws to date of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CARDS IN THE GERMAN PERIODICAL.—Application blanks will be supplied by The Christian Science Publishing Society to practitioners who wish their names and addresses inserted in the advertising columns of *Der Herold der Christian Science*. These applications should be properly endorsed and forwarded to the Society. The rate for advertisement will be $2.00 for the first line, and $1.00 for each additional line. It is desirable that those who offer their names in this way should be able to communicate with patients and inquirers who speak the German language only.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with The Mother Church and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By Hon. WILLIAM G. EWING.

In accordance with the act granting authority to the Secretary of War to regulate the water of Niagara River for the preservation of Niagara Falls, Secretary Taft has announced that temporary permits will be granted power companies to take the following amounts of water: Niagara Falls Power Company, 8,600 cubic feet a second; Niagara Power Company, 4,000 cubic feet a second; Lockport Hydraulic Company, 500 cubic feet from the Erie Canal and 333 cubic feet from the lower level of the same canal at Lockport. The Niagara, Lockport & Lake Ontario Power Company is granted permission to receive into the United States electrical current equivalent to 25,000 horse-power daily from the Ontario Power Company of Niagara Falls, Canada, and the Niagara Falls Power Company is authorized to receive from the Canadian Niagara Power Company not to exceed 25,000 horse-power of electrical current daily. These last two permits are the only ones granted for the taking of electricity generated in Canada into the United States.

The registration for Government lands in the Shoshone or Wind River Indian Reservation began last week. Officials of the General Land Office estimate that fully forty thousand persons will register for homes. The registration will close July 31. The drawing will begin on Aug. 4 and continue until Aug. 15, when the Reservation will be formally opened. There are about 1,000,000 acres in the tract to be opened and from 265,000 to 300,00 acres will be capable of reclamation by irrigation.

Thirty-eight young Chinese, clad in American clothes and minus their queues, arrived in Cambridge last week to enter the Harvard summer school. All learned to speak fluent English at Dr. Tenney's university at Tien Tsin. They will continue their study of English at the summer school, and in the fall will enter different American colleges, fitting themselves as sanitary and mining engineers, chemists, and electricians.

The Post Office Department has announced that proposals will be received until Aug. 21 for the performance of mail service by pneumatic tubes for a term of nine years in the cities of New York, Brooklyn, Boston, Philadelphia, Pittsburg, Baltimore, Cincinnati, Kansas City, and San Francisco. In the last postal supply bill about eighteen additional miles of pneumatic tubes were provided for Manhattan.

United States Treasurer Treat says that he is confronted by a demand for silver dimes that he cannot meet. "The New York banks," he says, "have only thirteen thousand dimes on hand and those at Baltimore eight thousand. The cry for dimes comes from every part of the country. The demand for them is extraordinary and there has been nothing like it in the history of the country."

Secretary Root, who is on his way to Rio de Janeiro, to attend the Congress of South American States, arrived at Para, Brazil, on the 19th, where he was enthusiastically received by the authorities and by the people. The Governor of Para held an official reception, which was followed by a banquet. Mr. Root continued on his journey the next day.

The American Minister on the 10th at San Sebastian signed, with Foreign Minister Gullon, the new commercial treaty between the United States and Spain. The document is considered to be very advantageous to both sides.

Whites from Spain and Cubans of Spanish extraction are found to be much more satisfactory in every way as laborers at Panama than the blacks from the West Indies.

The Lighthouse Board is preparing to spend about $200,000 this summer on lighthouse and ship-saving devices along the New England coast.

A treaty of peace between Guatemala, Salvador, and Honduras was signed on the 20th on board the American cruiser Marblehead.

The foreign commerce of the United States in the fiscal year just ended aggregated $2,070,000,000.

Foreign.

The French show in their justice the same sense of artistic symmetry, says *The Independent*, that they do in their architecture. Dreyfus becomes major in the crack regiment of Paris, and is applauded by the streets that hissed him. Picquart becomes brigadier general, with priority over all other brigadiers. Both get the Cross of the Legion of Honor, which was taken from Zola when he took up arms against the Government. Zola, dying in ignominy, is to be buried in the Pantheon. The Municipal Council of Paris names a street in honor of Zola; the Municipal Council of Mons will erect a monument to him. The Senate will put in the gallery busts of Senators Trarieux and Scheurer-Kastner, who championed Dreyfus against their own colleagues. Nothing but the story of Esther and the book of Job can equal the Dreyfus case in the symmetry of its ending.

The Russian Cabinet has discussed the proposed double-tracking of the Trans-Siberian Railway, and decided to present to Parliament a project for the gradual completion of a second line the entire distance to the frontier of Manchuria, except the circum-Baikal section, where car ferries will be provided equivalent to the additional track. The double-tracking will enable thirty-four trains to pass daily in each direction.

The Russian Emperor last week approved the bill of the Lower House of Parliament, which was adopted by the Upper House, appropriating $7,500,000 for famine relief, thus supporting the contention of both Houses of Parliament against his own ministers. This law is the first enactment of the Russian Parliament and represents the net legal result of a session of over two months.

The musical copyright bill introduced by T. P. O'Connor and accepted by the Government passed the committee stage in the English House of Commons amid enthusiastic cheering. The bill is framed with the purpose of putting an end to the extensive piracy of music and to ensure the protection of foreign composers.

A remarkable instance of the feeling of Buddhists and Shintoists towards Christians is furnished by the action of their leaders, who have decided to contribute voluntarily to the cost of rebuilding the Christian church which was destroyed during the disturbances in Tokio last September.

Sir Douglas Fox, Past President of the Institute of Civil Engineers, has been invited to prepare plans for an English Channel tunnel. Parliamentary sanction for the scheme will be sought at the next session.

The whole of Germany's export trade to America for the year ending June 30 amounted to $136,000,000, exceeding that of the previous year by $18,000,000.

Industrial and Commercial.

J. R. Spence, Wellas Cotton Plantation, Deese, British India, says: "I have had the good fortune to discover that there exists a tree, practically indigenous, at present growing in various parts of the Bombay and Madras Presidencies, which produces a cotton infinitely superior both in classification and staple to American cotton and in classification alone cannot be equaled in Egypt. It is an astonishing fact that the value of this tree's product has not up to this time been discovered by any one in the cotton trade, notwithstanding the fact that the tree has been known to exist since the time of the mutiny and probably for hundreds of years previously. The only uses to which the cotton it produces has so far been put are the manufacture of wicks for lamps in Hindu temples and the stuffing of beds and pillows. After carefully examining it, I unhesitatingly expressed the opinion that it possibly would ultimately revolutionize the cotton cultivation of India.

"There are now considerably over a lakh (100,000) of trees on this plantation in a most flourishing condition, growing to a height of from four to five and one-half feet, full of buds and bolls, and bearing cotton daily after being planted only six months. The quality of the 'new crop,' 1906 cotton, is superior both in classification and staple to that of the parent tree. The yield the first year has been estimated by experts at a minimum amount of two to four ounces per tree, and, as there will be over thirty-two hundred trees to the acre, this gives a total yield of four hundred to eight hundred pounds per acre, which is above the average of Egypt and no less than from eight to sixteen times greater than the average of all India. The quality is so excellent that it opens an entirely new field for Indian manufactures, the importance of which, bearing so greatly as it does upon the future prosperity of the country, cannot be overestimated."

Mr. Spence was for twenty years a member of the Liverpool Cotton Brokers' Association and has had five years' experience of cotton growing in Egypt.

June was a record month in the movement of freight on the railroads comprising the Mexican Government merger system, the through traffic between the United States and Mexico over the National and International lines being exceptionally heavy.

The New York Central Railroad Company has placed an order with the Illinois Steel Company and the Lackawanna Steel Company for the rolling of 160,000 tons of standard rails for delivery in the early spring of next year.

An association has been formed devoted to the promotion of a great public highway from New York to Chicago. This could be done at a nominal expense by connecting existing roads.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

Words of Appreciation.

[THE following letter to Mrs. Eddy gives evidence of such keen perception of the lesson to be learned from her recent article, "Personal Contagion," and of such true appreciation of her leadership, that we are glad to give it a conspicuous place in this issue.—EDITOR.]

Philadelphia, Pa., July 13, 1906.

Beloved Leader:—Your loving words in the last *Sentinel*—if heeded—mean deliverance and salvation for your followers.

I have long cherished a message you once sent me at a time when I felt that I must see you and talk with you. It healed me of the belief. It was this: "Years ago, I and the material world parted. I preserve this distance only in matter. In spirit I am coming nearer to you and to all with unseen presence, truth, and love."

Patiently and tenderly you are showing us the indispensability of obedience. Your words teach us how to be "with you" in the truest and best sense.

Could we receive all that you yearn to impart to us, we would indeed be blessed. Faithfully,

ALBERT E. MILLER.

From our Contributors.

Alive to God's Promises.

CLARENCE W. CHADWICK.

THE professing Christian is supposed to have faith in God, but unless this faith be living and active, unless it be accompanied by works, it may ignore the healing power of divine Mind and pay homage to an inanimate drug. That state of consciousness which substitutes drugs for Christ, has, so far as any practical results are concerned, relinquished a vital faith in God, having lost sight of His promises of salvation through spiritual knowledge and regeneration. The Bible promises health and salvation through the Mind that dwelt with Christ Jesus. Can it be said that the professing Christian is alive to this promise if he cannot trust God to bring about its fulfilment? Is he conscious of the activity of good if he turns away from the Principle of all harmony and perfection and resorts to matter for the cure of disease?

The knowledge of God's promises as being true and practically available for every-day needs, suggests activity, alertness, and aggressiveness rather than inertia, lethargy, and indifference. One of the first effects of reading the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, is a quickening of thought to grasp the practical import of Scriptural precepts and promises, which shine forth in the light of a new and higher understanding of the divine Word. The inspiration thus gained to study the Bible and to bring its teaching into one's daily life ought to be sufficient proof to any thinking person that Christian Science is "from above," not "from beneath." In the light of Christian Science it becomes a pleasure to study the Scriptures, because we have awakened to the fact that their sacred promises are for all mankind, and that they are capable of present fulfilment. We no longer apathetically relegate them to a dead past, as being void of all practicality, but we rejoice to find them the living expression of the unchangeable and ever-operative law of God; and through constant striving to live up to their requirements, we find ourselves in conscious possession of that peace that passeth human understanding. Our reverence for the Bible is necessarily enhanced an hundredfold, and instead of resting upon a mere profession of belief in its sacred truths, we are intent upon realizing their fulfilment in individual consciousness. It thus becomes a veritable book of Life, one that can be relied upon for wholesome and practical counsel in every hour of need.

What is the secret of such a marked transformation? Is it not the demonstration of the omnipotence of good as manifested in the healing of sin and disease? This is the opening wedge of Christianly scientific activity as taught and exemplified by Jesus the Christ, and it has come to this age in an hour of great need to lead human thought back to the essentials of primitive Christianity, back to the Christ-healing, which alone can point the way to heaven on earth and instill into the hearts of men a desire to partake of the bread of Life, to live nearer to God in this present world, and to have less and less faith in an uncertain future. The healing of one single case of disease through the application of Christian Science proves the divinity of its teaching, and should silence all unkind criticism of a subject which all the wisdom of the world can neither intelligently discuss nor disprove. Once having proved the omnipotence of God in the healing of sin and disease, we know that we have caught a glimpse of the divine Principle of all real existence, which to understand aright means Life eternal, here and now. The sense of peace, happiness, and security that this brings, cannot be appreciated by those who do not believe in the present-day activity of the Christ and who do not love Christian Science. Until they test Christian Science up to the point of actual demonstration, they cannot possibly apprehend the view-point of Truth's disciples; and they would do well to withhold condemnation, lest they "be found even to fight against God." The one sole aim of Christian Science is to tear "down the middle wall of partition" supposed to exist between man and his Maker, and all Christians must admit that this will bring men closer to God, good, and cause them to be more alive to His sacred promises. Christian Science does not rob men of one righteous thought. It does not inculcate ignorance, selfishness, uncharitableness, or dishonesty. None of these can find a resting-place in true Christian activity. Their only seeming foothold is in the divided consciousness that believes in two powers, and denies the present fulfilment of God's promises in the affairs of every-day life. The consciousness that heals and saves mankind is founded upon the Rock, Christ, and is constantly active in the practical application of everything that makes for peace, health, happiness, holiness, and good-will among men. The Christian Scientist agrees with Emerson's statement that "activity is contagious." It is the activity of good deeds, healing the sick and sinful, that is proving to be contagious among thinking people everywhere, and it is this Christian

Copyright, 1906, by Mary Baker G. Eddy.

Digitized by Google

activity that attracts suffering humanity, and encourages them to investigate the claims of Christian Science. If they approach the subject honestly, the day-star of a new hope will arise in their hearts, and they will soon begin to realize that the Bible is full of living promises, only awaiting "a willing mind" in which to find their natural and legitimate adaptation and fulfilment.

We naturally query: What is it that has kept humanity so long in darkness, what is it that has shut out the activity of God's promises in human experience? In the prophecy of Jeremiah we find our answer: "Your iniquities have turned away these things, and your sins have withholden good things from you;" and in Isaiah we read, "Your iniquities have separated between you and your God, and your sins have hid his face from you, that he will not hear." In other words, humanity has been occupied with the counterfeit activity of evil, which has placed a seeming barrier between mankind and the God who is infinite good, and consequently "of purer eyes than to behold evil." Christian Science has come to tear down this barrier of sin, disease, and death, and to reveal to the world the God of Jesus Christ, "who healeth all thy diseases," thereby fulfilling His promise to give health, strength, and life to His children.

The demonstration of Christian healing now so evident in our midst simply means that the Christ activities have been aroused in consciousness, and that mortals are beginning to work instead of trying to believe or profess their way into the kingdom of heaven; that they are beginning to prove to themselves and to others that God does "in very deed dwell with men on the earth." The absence of the Christ-healing clearly indicates a lack of faith in God's willingness and ability to fulfil His promises; it indicates apathy and indifference on the part of professing Christians to behold the spiritual, or impersonal, coming of the Christ, Truth, which is to lead thought into all Truth. If we would prove that "now is the day of salvation," must we not be practically alive to the fulfilment of God's promises? Christian Science answers in the affirmative.

The Prism of Truth.

GEORGE H. MOORE.

WHEN God endowed man with definite and complete individuality, He placed upon him the correlative duty of direct responsibility to his Maker. This response-ability is simply the ability to respond to God's law. Individuality or right being, and responsibility or right doing, these two qualities make up the equation of man's scientific being, which as an equation must perforce remain in balance at every stage of the student's demonstration. With increased understanding of one's spiritual birthright, there must be an equal acceptance and fulfilment of responsibility, if one would further his own advancement and realize his own integrity as God's child.

The intimate relation between God and man has been variously illustrated. Isaiah voiced it in the language of the court when he said that we are God's "witnesses;" Paul in the phraseology of the State, "We are ambassadors for Christ;" Jesus in the terms of the home, we are God's children. In explaining her great discovery, our Leader, Mrs. Eddy, has employed the symbolism of light and its reflection. Appreciation of her message is dependent, therefore, upon our understanding as to what such reflection includes and involves.

God is light and man is His reflection, but this simple and direct statement of relation does not relegate man to the position of an unthinking medium for the transmission of waves of light, like the hypothetical ether of physical science, nor to that of an unresponsive mirror which receives and reflects into space the rays of light. In his spiritual selfhood man reflects the self-conscious, self-contained integrity of the divine nature, and he thus radiates or distributes God's beneficence in proportion to his realization of spiritual selfhood. To measure up to the responsibility involved, it follows with scientific surety that our one individual sacrifice must be the renunciation of false material selfhood; that our true giving is simply the conscious re-dedication of God's own to God's uses and ends; and that we can best give God's gifts only as we truly understand God's ways. Through the attainment of such understanding, both our privilege and our responsibility is infinitely broadened and enriched.

Our Leader says that when Christian Science is understood, "it is Truth's prism and praise" (Science and Health, p. 558). She also says that the prism of Science serves to "divide the rays of Truth, and bring out the entire hues of Deity" (Miscellaneous Writings, p. 194). The pure, white light of full-orbed Truth is often dazzling to untrained sight, just emerging from long-accustomed shadows, but through the prism of Science man is enabled to perceive and reflect the light of revelation in its infinitely varied aspects, its multiform applications to human needs. Walking himself in the light, he may and should here reflect Love's warm ray of hope and comfort; there, the strong, clear light of the positive and healing word of Truth; here, the restful hues of peace and quiet; there, the blended tints of tactful compassion and good cheer, of helpfulness and kindliness.

Thus as the prism, through refraction, casts its wondrous spectrum of primary colors on the screen, so may we, through Christian Science, the understanding of Truth, minister to others and bring into manifestation the primary qualities of health and praise. The chief functions of a reflector are to be in place and to be clean, and the business of a spiritually conscious witness to God's ways and works is to "keep himself unspotted from the world," and to maintain his true adjustment both to the light he reflects and to the human area he would illumine.

As true reflectors, men do not confine their attention to getting; they do not think of themselves only, they acquire that they may give. If men recognize God as the source and giver of all good; that His beneficence includes all His children, and that He requires no one of them to give up that another may have; then their generosity can mean neither lack nor limitation.

The spirit of the child prompts it to share its gifts. Our surest way to lose is by neglecting to share. Our certain way to gain is to give. The urgent necessity rests, therefore, on every Christian student, to "study [make speed] to show" himself "approved unto God, a workman that needeth not to be ashamed, rightly dividing [understanding and ministering] the word of Truth."

Seeking the Footsteps of Jesus.

JOHN K. ALLEN.

AT this time of the year large parties of tourists leave America to visit the Holy Land, that little country which for centuries has been the focus of human interest. War after war has been unsuccessfully fought to prevent its falling into the possession of unbelievers, and whither once journeyed hosts of armed and zealously devout crusaders, intent upon preventing the land made hallowed by the footsteps of Christ Jesus from remaining in the possession of those who do not accept his teachings, now resort peaceful throngs of his professed followers who desire to see with their own eyes the scenes upon which he looked, and to stand where, mayhap, he once stood. Around the life of Jesus has centered more human interest than around that of any other man. Historians, dramatists, painters, and philosophers have been as zealous in their study of it as have been the theologians. Even now a continental Government, operating under permission from the Porte,

Digitized by Google

is carrying forward excavations in Capernaum, and the officer in charge told an American lady who visited him last summer that he had every reason to believe he had uncovered the ruins of the synagogue in which Jesus preached and healed with "power and authority." All this has been done in order that the veritable place may be found from which Jesus, in the flesh, spake as "never man spake."

It seems surprising that such a large degree of interest should be attached to the place where Jesus promulgated that doctrine which so astonished his hearers, and that so little interest, comparatively, should be displayed as to the true meaning of *what* he said, or in his marvellous works of healing. Men testified that never man spake like him, and yet for centuries the real meaning of his words was unrevealed to a seeking and expectant world.

For the last forty years the Discoverer and Founder of Christian Science has been imparting a demonstrable understanding of the true character of Jesus' teaching such as the world has not before known. Mrs. Eddy has found thousands of waiting hearts ready to accept the larger interpretation of the Christ-teaching, and this fits them to undertake his mission in its fulness,—for the Master commanded his disciples (students), "As ye go, preach, saying, The kingdom of heaven is at hand. Heal the sick, cleanse the lepers, raise the dead, cast out devils: freely ye have received, freely give." This larger interpretation teaches us that "the divine ideal, or Christ" (Science and Health, p. 333), is ever with us, and that the recognition of the divine presence and power heals the sick to-day as surely as it did in the days of Christ Jesus and his immediate followers. With this understanding of Christ, Truth, Christian Scientists ascribe to God all-power, all-knowledge, and all-presence, and to the degree that they have this understanding they are able to obey the great Teacher's commands above quoted.

With this understanding of the power of Truth, Christian Scientists are able to realize that man is inseparable from God, and to the extent that we have the Mind "which was also in Christ Jesus" we heal the sick and help the sinful through the operation of the truth. It is this interpretation of the truth about God and the Christ which makes Christian Scientists grasp the fuller meaning of Jesus' words, as recorded in John's Gospel: "Abide in me, and I in you." "If ye abide in me, and my words abide in you, ye shall ask what ye will, and it shall be done unto you." Christian Scientists know the all-power of God and the unity which exists between God and man. They accept as true and verifiable all of Jesus' words, and believe that all his promises will be fulfilled if the conditions stipulated by him are carried out. They are able, through the understanding gained in the study of "Science and Health with Key to the Scriptures," to preach the gospel and heal the sick; to realize the ever-presence of a loving God and a helpful Christ; to announce that the "kingdom of heaven is at hand," that health and happiness are here and now. In doing this work they may well remember the lines of a familiar hymn:—

And give me ever on the road
To trace thy footsteps, Son of God.

Picture of The Mother Church.

The picture of The Mother Church and its Extension which The Christian Science Publishing Society now has for sale is a half-tone reproduction, 12 x 15 inches in size, of a view giving the St. Paul Street frontage and Falmouth Street side.

The picture is mounted on a white mat, 21 x 25 inches, and will be sent to any address in a mailing-tube for fifty cents a copy. A dozen copies will be sent to one address for $4.50. Souvenir postals of the same design as the large picture are for sale at twenty-five cents per dozen.

Address all orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

Selected Articles.

Christian Science as Seen by an Englishwoman.

The first fact which startles the British insular intelligence respecting Christian Science in America, is the general tolerance that obtains towards it here. Nay, more than tolerance, for it is respected—even where not understood or believed in—and has gradually in the last few years won its way, greatly through the high moral standing of its supporters, to a place in the front rank of religions.

The services are most impressive, from the reverence and earnestness of the congregation, in which there seems to be an equal proportion of men and women. The interval of "silent prayer" and the general sense of peace is one which must be experienced to be believed. This applies to all the churches. You may go into any one of them, having "got out of bed on the wrong side," cross, worried, anything you like, and the sense of discomfort just drops off and leaves you feeling "real good," as they say here.

The healing which results from the application of the fundamental truth of existence is an accepted fact in America, where many doctors will send their own incurable cases to a Christian Science practitioner. One instance of those that came under my notice was that of a man cured of Bright's disease in its last and most painful stages, some few years ago, and now he is in the best of health and working sometimes eighteen hours a day. These cases of physical healing, remarkable though they are, are exceeded in interest by the cases of well-known and prominent citizens who have admitted themselves healed of sin in its various forms—drunkenness being especially noticeable. Their gratitude strikes one very forcibly, and they do not spare themselves in their endeavors to help some other unfortunate, if admitting their past sins will effect this. Individual effort, self-sacrifice, the constant practice of Christ's teaching—all these go to make up a Christian Scientist.

Christian Scientists, from the simplest to the most intellectual, hold on to the ever-present God that Abraham knew; and we know that if we never let go of this fact of His ever-presence we shall realize the kingdom of God is within us (within consciousness), and that this realization brings health and peace and joy in its train.

The papers and magazines here are far more open-minded than some of our English periodicals, and will almost invariably print "both sides of the question" when Christian Science is attacked; and as it has been found out that books containing sneering allusions to this religion do not sell, and are not asked for, self-interest, if nothing else, keeps the publishers busy with their scissors when they come across such statements. ALICE MARTINEAU.

New York. *The Onlooker* (London, England.)

A critic insinuates that Christian Science cures only imaginary trouble, or hypochondria, but neglects to add to his assertion that the same troubles which are healed by Christian Science had been treated for years by reputable physicians who had diagnosed them as being "real" and had been doctoring them with "real" medicine. If it is true that Christian Scientists have been fooled in this respect, what shall we say of the physicians and the many thousands of intelligent people who have applied to them for help? Moreover, if the Christian Scientists have succeeded in driving away these imaginations which have baffled the efforts of the physicians, why should they not be praised for their good work? Usually, in the medical field, an individual who discovers a remedy which is followed by such remarkable success as is effected by Christian Science, is praised as a public benefactor.

Our critic ridicules Christian Scientists for claiming to destroy disease which they assert does not really exist. To be fair he should more fully present the teaching of Christian Science on this subject. While Christian Scientists

Digitized by Google

realize that sin and disease do not belong to the divine economy and are, therefore, not eternal entities, yet they recognize that these exist in erring, mortal experience and must be grappled with and overcome intelligently. To illustrate: If a false charge is brought against an individual in court, notwithstanding it is false, the judge must give it attention, the witnesses, pro and con, must be heard, and eventually a decision must be rendered on the right side before the judge declares "there is no cause for action." Even a ghost must be explained away. It may seem to be very real to the child but it is understood by the adult to be simply an illusion.

The critic declares, "In asserting the superiority of mind over matter, the Christian Scientist asserts no new truth." This statement is misleading because it first assumes that Christian Science is a mere assertion of the human "mind over matter," which is incorrect. Such teaching, we admit, is not new, but we would assert in unmistakable terms, neither is it Christian Science. This Science teaches that God is omnipotent Mind, infinite Spirit, and that it is this omnipotent Mind, not the human will, which governs all things. Jesus' practice was mental, but it was spiritual, for he prayed, "Not as I will, but as thou wilt."

ALFRED FARLOW.
Indianapolis (Ind.) *Star.*

When Locke wrote that secondary qualities were dependent on mind, he did not in the least mean that they had no subjective reality. When Professor Oswald said that "matter was only a thing imagined," he did not mean that nothing was imagined. And when Mrs. Eddy says that disease is unreal, she does not mean that it does not seem real to the human mind, but that it is not of God. Consequently, she does not have to "bribe the thoughtless and the foolish to profess a form of religion by promising them freedom from bodily sickness," she has only to explain to them what Matthew Arnold once called the moral therapeutics of Jesus, and why he said, "He that believeth on me, the works that I do shall he do also."

Why should it be considered quaint to dub Christianity Science? If Christianity is exact truth it is scientific, and its truth can be demonstrated in healing sickness as well as sin. Jesus said, "Preach the gospel" and "heal the sick." It is the effort of Christian Science to obey this divine command by making absolutely practical to-day the truth so perfectly expressed by Whittier:—

> The healing of the seamless dress
> Is by our beds of pain;
> We touch Him in life's throng and press,
> And we are whole again.

FREDERICK DIXON.
The World (London, England).

A Christian Scientist in praying for the sick prays not in order that God may change, for God is unchanging, but that the patient's thought may be lifted to know the reality of divine Love which is the real substance of the universe. The vital force, the dynamic force, referred to by "Anon," has nothing to do with it. In fact, to conceive of one as having inherent force of himself would defeat his healing in Christian Science, because that would deny the omnipotence of God. Jesus, who knew more of the true nature of the universe than any man that ever lived, declared that he could of himself do nothing, and that all things were delivered unto him of his Father.

Christian Scientists follow the Christ-method. They know that mortals' thoughts are a rope of sand and their power of control a deception. Before the vision of a universe of Spirit the petty thoughts of men shrink away, and when one looks to God for his healing, his strength, and inspiration, he sees the weakness and folly of hypnotism and kindred systems and discards them.

Because of the omnipotence of Spirit, Christian Scientists use no other means of healing. God is all-sufficient. He needs no aid of drugs, no assistance of hypnotism or auto-suggestion. To attempt to heal by prayer and use drugs or will-power at the same time would bring defeat. "Thou shalt have no other gods before me" means more than mere prohibition of worshiping idols of wood or stone.

EZRA W. PALMER.
The Critique (Denver, Col.).

It is the custom to sneer at Christian Science, but it is evident that the cult will soon be beyond the sneering point. The dedication of what is known as The Mother Church Extension in Boston, the other day, was attended by people from all parts of the United States. And they were people of intelligence.

The fact is that Christian Science just goes a little beyond what almost every one is inclined to admit. The best physicians now admit the power of mind over matter. They believe that firm faith on the part of a sick person, for instance, will go far toward making the patient well. These same physicians, however, ridicule the idea of a patient getting well without the use of medicine. It has yet to be shown that of the sick who abjure medicine a larger proportion has died than among those who were medically treated. The *Journal* has kept no books on the subject, and is not a Christian Scientist, but we believe that if the figures could be given it might show that the Scientists have a little the advantage so far as this goes.—*Peoria* (Ill.) *Journal.*

The dedication of the magnificent Christian Science church in Boston has brought that cheerful and prosperous body of believers before the press gallery of commentators. They have built a huge church, which has cost them about two million dollars, and it has a dome which rivals that of the famous old Massachusetts State House. During the great assembly of forty thousand Christian Scientists in Boston they were described in the newspapers of the Hub as a contented and well-dressed body of people.

The faith of these people is certainly great. They go about telling of miracles performed in this twentieth century when "advanced" clergymen of other denominations are avowing their disbelief in the miraculous.

The higher critics and the men of science may think they can banish faith in the supernatural, but no religion of growth and vitality exists without faith in the things unseen.—*Mexican Herald* (City of Mexico, Mex.).

Christian Scientists declare that their philosophy will abolish bad temper. If such is indeed the case, it might be a good thing to have it become the universal religion—no matter how illogical it may be. Worse than any disease, and harder to cure than cancer, is a bad disposition which has been cultivated during the major portion of a lifetime. Verily if Christian Science can abolish bad temper the age of miracles cannot be said to have passed away.

Cedar Rapids (Ia.) *Republican.*

The dedication of the great Christian Science church at Boston was attended by people from all parts of this country and even from foreign lands. Whatever may be thought of this Church's faith, it must be admitted that it has had a wonderful growth. If it brings to its followers comfort and happiness, as they claim, it ought at least to silence the harsh criticism that comes from outsiders. After all, it is an individual matter, a question for the conscience.

Attica (Ind.) *Press.*

The magnificent temple the Christian Scientists have dedicated at Boston might properly be called a monument to the gospel of good temper. No sect excels them in the matter of putting doctrine into practice, and self-control is the essence of their doctrine. As a Don't Worry club their organization is a huge success.—*Dubuque* (Ia.) *Times.*

Among the Churches.

Liverpool, England.

[We are very glad to give space to the following letter received from a member of First Church of Christ, Scientist, Liverpool, England, who attended the recent Communion and dedication service in Boston. Lieutenant-Colonel Hobart spoke at one of the Wednesday evening meetings held June 13, and a short statement of his testimony will be found on page 681 of our issue of June 23.—EDITOR.]

Liverpool, England, July 4, 1906.

To the Editor.

Dear Sir:—On my return home, I feel very desirous to express my gratitude to all for the many kindnesses received during my all too short stay of a fortnight in Boston, where, on the 10th of last month, was held that—to those at any rate who were present—never-to-be-forgotten, solemn, though joyous Communion service upon the occasion of the dedication of the Extension of The Mother Church.

Arriving in America, to sense, a complete stranger, I very soon realized that in the city of Boston, at least, Christian Scientists are members of one family, recognizing God as their one Father—hence, very many friendships were formed, and ties made, which, through the purity of motive and understanding of the one Mind governing all, will be lasting.

I feel sure that neither the church officers, The Publishing Society, the members of the various committees, nor indeed any who are in any way connected with the stupendous work of Christian Science throughout the world, or with the completion of that magnificent and costly church edifice Extension, look for any human praise—their labor of love being too self-sacrificing and noble for that—still, as one who never before fully realized what Christian Science has done, and is doing, for the welfare of mankind, I should just like to tender my heartfelt congratulations to all in any way connected with every department, whose united, harmonious, and unflagging action resulted in such a complete success as attended their efforts, whereby it proved possible for upwards of thirty thousand Christian Scientists to assemble in Boston, without causing traffic to be unduly congested, or the public comfort to be interfered with; thus gaining the highest commendation on all sides, from the railway companies, police authorities, hotel and lodging-house proprietors, tradespeople, and others.

It is easy, and the usual custom of its adherents, to "talk" Christian Science, but I have seen it "lived," and if that alone were the fruits of my visit, I should be content; but I have learned far more, for I have experienced and witnessed that it is possible, here and now, to love God supremely and one's brother also. These two commandments I saw "kept," and my earnest hope is that I may never allow the light, which was so bright in Boston, for one moment to grow dim, but that every lesson learned on the late auspicious and uplifting occasion may be more and more spiritually discerned and assimilated.

I can truthfully wish no sister or brother a happier event than to visit Boston during the Communion season, where they will be rewarded by seeing and breathing the pure atmosphere of true Christian Science.

The picture of our revered Leader, and that of The Mother Church, now adorn the walls of our Reading Room in our branch church in this town, and serve to recall the memory of a very happy visit to your much-blessed and well-ordered city. Believe me

Yours gratefully and sincerely,

GEORGE HOBART, *Lieutenant-Colonel.*

Creston, Ia.

First Church of Christ, Scientist, of this city, has leased the ground-floor room in the Creston National Bank building formerly occupied by Attorney D. W. Higbee, and has fitted up the room in a most handsome way for the purpose of holding their meetings. The congregation of this church have one of the most convenient and inviting places of worship in the city and their affairs are evidently prospering.

Creston (Ia.) *Advertiser Gazette.*

Dedication at South Bend, Ind.

In 1888 the physical healing by means of Christian Science was demonstrated in a few instances in this city, and later a few became interested in the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy. As the understanding of the power and willingness of God to heal sickness as well as sin was proven, there grew a desire for spiritual healing, but no organized effort was attempted until January, 1898, when public services were held on Sunday morning in the Progress Club Rooms, with a congregation of eleven persons. Very soon the Wednesday evening meetings were begun, and Aug. 26, 1898, First Church of Christ, Scientist, of South Bend, Ind., was organized with eleven members. In February, 1899, we leased the Auditorium Annex, which for the past seven years has been our church home. The first step towards a church building was taken in the Sunday School in its very early days, when one of the children suggested that they take the money saved for a picnic and "build a church." They started their church building fund with this money and have paid for the steps and doors of our new edifice, which to us is a beautiful reminder that it is through the child-thought we enter the kingdom of heaven. The history of our struggles, trials, failures, and victories is written in our hearts, and experience has taught us some costly lessons. As is the case in every community, Christian Science has had to prove itself every step of the way; and that it is bringing forth fruit among us is shown in increasing numbers, improved financial as well as moral and physical conditions; more patience in tribulation, more charity for the shortcomings of others as well as a keener sense of our own, and a growing desire and ability to help our brother.

Our new church was dedicated, free from debt, on July 8, three services being held. This beautiful building is the testimony of grateful hearts, a monument to the healing and regenerating power of divine Life, Truth, and Love, a witness to faithful endeavor to follow the example and commandments of Christ Jesus, and an evidence that we are striving to follow the teachings of our beloved Leader, who has admonished us to follow her only so far as she follows Christ.

BOARD OF TRUSTEES AND DIRECTORS.
First Church of Christ, Scientist, South Bend, Ind.

[The following interesting prophecy by the poet Longfellow appeared in the first number of the *Atlantic Monthly*. —EDITOR.]

Where'er a noble deed is wrought,
Where'er is spoken a noble thought,
Our hearts in glad surprise
To higher levels rise;
Honor to those whose words and deeds
Thus help us in our daily needs,
And by their overflow
Raise us from what is low.
A lady with a lamp shall stand
In the great history of our land,
A noble type of good,—
Heroic womanhood.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Amendment to By-law.

ARTICLE XXVIII.

CHURCH MEMBERSHIP.—SECT. 14. Neither the Pastor Emeritus nor a member of this Church shall teach Roman Catholics Christian Science, except it be with the written consent of the authority of their Church. Choice of patients is left to the wisdom of the practitioner, and Mrs. Eddy is not to be consulted on this subject.

"Healed by reading Science and Health."

IN preparing the contents of this issue of the *Sentinel* we have been especially impressed by the testimony of several persons who were healed solely through the study of our text-book, and while many such testimonies have been published heretofore, we recall none that has impressed us more profoundly than that of Edith Lamar Burch, which will be found on page 766. In conclusion she writes, "I had all the symptoms [of consumption], and they are every one gone through the reading of 'Science and Health with Key to the Scriptures' by Mrs. Eddy." The history of this text-book has been that of a healing and regenerating agency, and the constant accumulation of such testimony as that referred to is proof that the works which our Master performed are still going on in his name, and in accord with his promises.

The question is sometimes asked by Christian Scientists, "What shall I give my patients to read?" or again, "What shall I recommend to a sick friend who knows nothing of Christian Science and asks for some reading matter on the subject?" In view of such evidence of healing through the study of Science and Health as has been presented by thousands of witnesses, it would seem that these questions are unnecessary, and that the most natural thing in the world would be for Christian Scientists to place this book in the hands of every inquirer. We willingly undertake considerable labor and expense in the distribution of our periodicals, and such other printed matter as will introduce the subject of Christian Science to our friends and the public in general, yet none of these have established the record made by Science and Health in healing the sick and in awakening the sinful to purity and righteousness. Would it not therefore be well for us to give greater attention to a still wider circulation of our text-book?

There existed at one time a very prevalent belief that Science and Health was hard to understand, and notwithstanding their own experience to the contrary many fell into this false belief and tried to find some easier method of presenting Christian Science to their friends, but they are fast coming to see that this is impossible. The fact that thousands of persons have been healed or reformed through their first reading of this book, is the best evidence that it is the most efficient exponent of our faith, and that it is, beyond all other, the most valuable literature for both adherent and inquirer. The simple and learned alike are being healed by it.

ARCHIBALD MCLELLAN.

Faith in Good.

ONE of the most remarkable lessons given by the great Teacher was that in which he told his disciples that they should be ready to forgive a brother even though he repeated the trespass seven times in a day, the only condition imposed being repentance on the part of the offender. According to Matthew, he added, in answer to a question from Peter, "I say not unto thee, Until seven times: but, Until seventy times seven." We need not wonder that the disciples said, "Increase our faith;" for they must have seen that without a wonderful enlargement of their faith in good it would be impossible to carry out his instructions. His answer to their prayer for more faith shows clearly that he did not expect them to bow in helpless submission before any form of evil, for Luke tells us that he responded, "If ye had faith as a grain of mustard seed, ye might say unto this sycamine tree, Be thou plucked up by the root, and be thou planted in the sea; and it should obey you."

As we study the teachings and demonstrations of Christ Jesus in the light of Christian Science, we see that we must apply our understanding of divine Principle not only to the healing of sickness, but to all the other varied problems of human experience, as in the case cited. Here was an instance in which evil was supposed to assume the reality and persistency of good, to re-appear after it had seemed to be disposed of, so that we could easily imagine the aggrieved brother saying like Jonah, "I do well to be angry." It might seem that the offence would be repeated forever, that it might outlast the power of forgiveness, if we had not learned from the Christ-teaching that evil, whether manifested as sin or sickness, is destructible, while good is indestructible because it is continuously supported by God, the divine Principle of all reality. The vital lesson for each of us is the need of increased faith in the power of good, for our problems are practically the same, whether we are striving to overcome sickness or sin. In both cases our need is to have an ever-lessening sense of evil and an ever-enlarging sense of good. If we fail in gaining this, we are not working according to the Master's commands, nor according to the rules found in our text-book, Science and Health, by the observance of which obedience is ever rewarded with success; namely, the disappearance of evil.

It is encouraging to know that every effort on our part to put into practice our understanding of Truth and Love in the overcoming of error has a wonderful influence upon our spiritual unfoldment. Even seeming failure only compels us to apply the truth more persistently, and to see that our methods are not slipshod but truly scientific. We thus gain strength in the assurance that God reigns, that His kingdom is here and now, and that we have but to know this when a sense of sickness or "trespass" would intrude upon its divine harmony. In the prophecy of Micah, God calls upon the mountains to prove His faithfulness to His people in every emergency, and in the beautiful Hebrew metaphor the mountains answer for Him: "He hath showed thee, O man, what is good; and what doth the Lord require of thee, but to do justly, and to love mercy, and to walk humbly with thy God."

ANNIE M. KNOTT.

Another New Pamphlet.

"The Ministry of Truth," a new pamphlet now on sale, is made up of the following articles, reprinted from *The Christian Science Journal;* viz., "Healing as Practised by Jesus," "The True Thought Modus," "Letter from a Lawyer to a Friend," "The Word Declared," and "Here."

Price. One copy, six cents; twelve copies to one address, 60 cents; twenty-five copies to one address, $1.15; fifty copies to one address, $2.25. Address all orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

Letters to Our Leader.

[MRS. EDDY has received a great many letters expressing appreciation of her article, "Personal Contagion," which appeared in the *Sentinel* of July 7, and we are glad to have permission to publish a few of them. The writers of these letters are awake to the importance of this article and their gratitude for it is manifest in their words.—EDITOR.]

Cedar Rapids, Ia., July 18, 1906.

Mrs. Mary Baker G. Eddy, Concord, N. H.

Beloved Leader:—Pardon me for intruding upon your valuable time, but after reading your most helpful and timely article, "Personal Contagion," I cannot refrain from expressing my thanks to you for your loving patience, and unceasing efforts to lead us into a fuller realization of Truth. I was one of the many who recently visited Concord and drove out past Pleasant View. I afterwards caught a glimpse of your face as you drove past me on the street, and now as I read and ponder the message of love which this article brings me, the thought comes more forcibly to me than ever, that what many of us most need is to be more mindful of what you have revealed to us in "Science and Health with Key to the Scriptures,"—that man is not a personality; that it is not your personality which has done for humanity what you have really done; that all there really is of you is what you know and reflect of God, good, and we can see this only in your good works and inspired writings. We can behold your real self only in the good which you have expressed in your loving, self-sacrificing, untiring efforts to reveal God to us as impersonal divine Principle, Life, Truth, and Love. The understanding of this Principle has freed hundreds and thousands from sin and disease and given them peace and happiness in the place of sorrow and suffering.

I can now see clearer than ever before that you are our Leader and we are your followers only as we turn from the mortal sense of personality and are led by Principle. I see that the best expression of love and gratitude which we as true followers can give you, is to strive more earnestly and persistently to understand and put into practice your inspired teachings, which you have proven by your works to be a revelation of Truth! This means that we must rise above, shut out of our consciousness, all sense of personality, and have but one God, one Leader, divine Principle; and be ever awake at our post of duty, ready to give a "cup of water" to the weary wanderer who is thirsting for righteousness, and keep in mind that "inasmuch as ye have done it unto one of the least of these my brethren, ye have done it unto me."

With a heart full of gratitude to God, and to you, and for all the good that has come to me through Christian Science, I am

Sincerely yours,
NORVAL M. CRAWFORD.

Kansas City, Mo., July 14, 1906.

Mrs. Mary B. G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—It is with the utmost gratitude that I thank you for your article in the *Sentinel*, "Personal Contagion," and in so doing I do not concede you any less place in my affection and esteem. It seemed to me three years ago, when we accepted your kind invitation to Concord, that we were taking time from your work that you could ill afford to give; for what is our gratification compared with the salvation of the world? I am so grateful that I have learned this lesson, for it has enabled me to be obedient this year, without question or regret. If we really see you in your true light, as Discoverer and Leader, we realize that you must not be hampered by us in your "passage from sense to Soul" (Science and Health, p. 566–7); that our mistaken sense of reverence and love is but a clog, which if possible would retard you and thwart the purpose of your life of self-immolation,—the bestowal upon us of the true understanding of God and man's relation to Him. My sincerest desire is that no word or act of mine may ever be a hindrance to you, dear Leader, or to the Cause of Christian Science.

Words can never express what the "fruit of your labors" has brought to me, in the understanding of God in some measure and consequent love for my fellow-man, resulting in health, happiness, and prosperity.

Lovingly yours,
EDITH C. F. KENNEY.

Columbus, O., July 13, 1906.

Mrs. Mary Baker G. Eddy.

Dear Leader:—Permit me to thank you for your inspired article, "Personal Contagion," in a recent number of the *Sentinel*. It is a tremendous help in solving the question, "What shall I do?" when appeals to personal sense invade the thought and interfere with the proper spiritual solution of the problems confronting the student of Christian Science. If God is indeed everywhere, then one does not need to seek Him as a distant friend would be sought, using railroad trains or steamship lines to visit, uninvited, distant places. I have regretted that in my seven years in the study of Christian Science I have seen neither Boston nor Concord; neither Pleasant View nor Mrs. Eddy; but, as you are reported to have once said to your students in a class, "Duty never points in two directions," and it has always pointed to my home environment, and never Eastward (in the flesh). I thank you for your letter, because it helps me to feel that I have not been remiss in any loving tribute toward our Leader or the Cause she loves.

I was glad I had listened to the inner voice and almost reluctantly remained at home from the dedication in June, when on that historic morning I stood on the platform in answer to a sudden call to take the First Reader's place in the service, and felt, as the service progressed, that wonderful sense of harmony which spread over the country from the dedicatory services and blessed the entire Field. Nothing in my previous experience as First Reader so impressed me as did that service in Columbus, on the morning of the dedication of the Extension to The Mother Church, and to my thought there came the dear uplifting, "They do well who simply do their duty where duty finds them;" and I knew that I had received a blessing which I would have missed had I smothered my real conviction of what was right to do in my case, and gone where personal sense beckoned.

As one of those who are the beneficiaries of your loving labors for mankind, it had been a happy hope that I might visit Concord this year and see you even from a distance; but when your announcement expressed the wish that faithful students would at this season fix their thoughts on God and refrain from visiting Pleasant View, I made you a visit in loving thought, and gave up the trip to Concord. I gave up the trip to Boston when the appeal was made for more money, and I knew my money was needed more at Boston than was my presence in the flesh. Now comes your loving message, which seems to me a benediction, and I deeply thank God to learn that the inner guidance was the true inspiration and that obedience thereto brings a spiritual reward in direct line with your teaching. An appeal received last Sunday for physical help, from a young woman and a stranger, was met by a perfect healing in four days of absent treatment. May I ascribe this also to the effort to be obedient to "the one divine Person," whose you are?

Yours very appreciatively and respectfully,
E. HOWARD GILKEY.

Boston, Mass., July 10, 1906.

Mrs. Mary Baker Eddy, Concord, N. H.

Dear Leader:—Your article in the current *Sentinel*, "Personal Contagion," is so timely and needful, and the letter which accompanies it, so vital, honest, and progressive, that I cannot withhold an expression of my appreciation.

Digitized by Google

Many of your students see clearly that you, through forty years of toil, adherence to God, and unceasing devotion, have won at every step triumph after triumph, and that prosperity has produced neither pride nor defeat. How willing we should be, therefore, to think only of adherence to Principle, not of personality. Neither should we point proudly at present prosperity, but more steadfastly look for more light.

As you so clearly point us to one Supreme God, I am glad to be enrolled in the ranks under a Teacher and Leader who teaches and leads through Divine guidance and not through personalism.

Gratefully your student,
BERT POOLE.

St. Louis, Mo., June 12, 1906.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—Your wondrously inspiring and helpful article, "Personal Contagion," came at a time when I most needed it, and I thank you. I wonder, dear Leader, if you yourself know how much that article was needed? I am sure God told you to write it. I want to be obedient and not intrude for one moment on your most valuable time, but I cannot refrain from writing my thanks to you. May I prolong this by telling you that your beautiful teachings reached me six years ago and saved me? Yes, saved me from myself. The state of consciousness wherein I sat was so dark that for years not one ray of light had reached me. When the first words of your teachings shed their beneficent light upon my despairing consciousness, I cried as did Thomas, when he recognized Jesus, "My Lord and my God." Thankfulness to you has made my feet swift to walk in that light. Again let me thank you for the light of Life, Truth, and Love, as shed abroad throughout your entire writings, especially "Science and Health with Key to the Scriptures," which, in the words of the psalmist, has "delivered my soul from death, mine eyes from tears, and my feet from falling."

I am glad to be your obedient and loving servant,
MRS. FRANCES F. WILSON.

South Bend, Ind., July 15, 1906.

Mrs. Mary B. G. Eddy,
Concord, N. H.

Dear Leader:—I feel I must express my thanks to you for your helpful article, "Personal Contagion," in the *Sentinel* of July 7, 1906. It is an answer to my prayer. I, too, went to Concord, but I felt I had never been so cruel to any one, and I was so ashamed of myself that I longed to disappear somehow out of sight. I felt the rebuke very keenly, that I had not been invited, and remembered I had even been asked not to come. I did not see you in your drive, and was glad. I now know I was glad I had not intruded that far. It seemed as if something tried to tell me the way I felt was wrong, and that I was all wrong or I would have seen you. In this dazed sense I remembered there is one divine intelligence, and I left all with divine Mind, earnestly desiring to know the truth. You can realize my joy in having this article; it has more than answered my desire. I hope for forgiveness in a greater obedience,—obedience to divine Principle, and not to personal contagion. With love and gratitude,
MISS MARTHA B. PRELL.

List of Members.

The List of Members of The Mother Church, including those admitted June 5, 1906, is now on sale. Single copy, 50 cents; six copies to one address, $2.50; twelve copies to one address, $4.50. Address all orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

Testimonies of Healing.

It may help others to know that some one was really healed of severe illness through Christian Science. It is over nine years since we first became interested in the Science, and it would be hard to find a healthier person than I am now. I can go all day, from morning till night, upheld by the thought that "they that wait upon the Lord shall renew their strength." I can truly say that I scarcely know what physical weariness is any more. Before I came into Science the physicians said that one lung was gone, and that the other was affected with tuberculosis; so, from their standpoint, there was little left for me to hope for. We had tried every remedy that they had suggested. I had gone to the mountains, but could not stay there on account of the altitude; and when they did not know what else to do, they said we would better go to England—that the ocean air would be beneficial. So we spent three months in the British Isles, and when I came back I seemed much better, but this only lasted a short time. In little more than a month I was worse than ever, and my mother was told that I had but a few weeks, or at most months, to live.

At that time, a lady, a stranger to us, suggested that we try Christian Science. There was no prejudice against it, as we did not even know what it was. We knew of no Scientists in the Western town where we were living, and when we were told that we could send to Kansas City for absent treatment, we thought it was absurd. We were then told that many people had been healed through the reading of the Christian Science text-book, Science and Health, and to us this seemed a little worse than the absent treatment, but as we had tried everything we had heard of up to that time, my mother sent for the book.

It came in the middle of October and we began to read it together. It seemed to me from the first that it was something I had always believed, but did not know how to express it—it seemed such a natural thing. My improvement was very gradual, but I felt that I was recovering. After the Christmas holidays I started in at school and went the whole term without missing a day,—something I had never done before. I finished my school course without missing a day—in fact I have not spent a day in bed since that time. I feel absolutely certain that I have two sound, healthy lungs now. The hollows in my chest have filled out, and I breathe perfectly on both sides; rarely have a cold to meet, and have not a sign of a cough.

People sometimes say, "Oh well, maybe you never had consumption." Well, I had all the symptoms, and they are every one gone through the reading of "Science and Health with Key to the Scriptures" by Mrs. Eddy.

EDITH LAMAR BURCH, Chicago, Ill.

After hearing Christian Science lightly spoken of, from a Christian pulpit, I decided to go to one of the services and hear for myself. From infancy I had been devoted to my church, and as soon as I was old enough I was ever active in the work. Feeling it to be my duty to attend every service held in my own church, I took advantage of the Wednesday evening meetings. My first visit was not my last, I am thankful to say, for I saw immediately that these people not only preached Christianity, but practised and lived it. At that time I was wearing glasses and had worn them for sixteen years. At times I suffered the most intense pain, and for this phase of the trouble, one specialist after another had been consulted. All gave me very much the same advice; each one urged extreme carefulness and gave me glasses that seemed to relieve for a time. None of them held out any hope that my sight would ever be restored, saying that the defect had existed since infancy, and that in time I should be blind.

The thought of blindness was very distressing to me, but

Digitized by Google

I tried to bear it with Christian resignation, since I thought that God had seen fit to afflict me; but since I have learned that He is a loving Father, who gives only good, I regret that I ever charged Him with my affliction. I had no treatment, but I read "Science and Health with Key to the Scriptures" by Mrs. Eddy, and my eyes were healed and glasses laid aside. I can never find words adequate to express my thanks to our dear Leader, through whose teachings my sight has been regained. I can truthfully say that "whereas I was blind, now I see"—through an understanding of Truth I have found my sight perfect as God gave it.—Miss Bertha Smith, Wilmington, N. C.

For three years I was a physical wreck—a martyr to sick-headaches and stomach troubles in their most acute forms, also nervousness, and in fact ills of every kind. I had several doctors, and was never without three or four different kinds of medicine, but all to no avail.—I still suffered. While in New York last summer, I met a friend who told me what Christian Science had done for her, and she loaned me the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. This dear book has done more for me than all material remedies ever did.

Since coming into Christian Science, in October, 1905, I am enabled through my understanding of Truth to demonstrate for myself most wonderfully, and I now know that God is not afar off but ever-present. I have been benefited in every way by Christian Science—physically, morally, and spiritually.

I am truly grateful to God, and to our dear Leader, Mrs. Eddy.—Mrs. Ada Hammerly, Hamilton, O.

In my opinion, the most wonderful healing that has been experienced by me since I became a student of Christian Science, as taught by our Leader, Mrs. Eddy, was my healing of eczema some two years or more ago. From my earliest childhood I had been doctored for this disease. In my young boyhood I was under the doctor's care for it, and and to my inquiry of my mother why they did not give me treatment which would cure me, I was informed that they had tried from my birth to have me cured and to no avail. My condition was one of continual annoyance and suffering, and I could indulge in but few of the pastimes common to boys and young men because of my physical bondage to this taskmaster. Before coming into Science, and all during my more mature years, it was necessary for me to resort to special appliances in order to secure even a small amount of rest at night. For nearly fifty years I was in bondage to a disease which medicine had tried in vain to cure or alleviate. My suffering was great, and my humiliation was even greater than my physical annoyance, when through forgetfulness I would give evidence of my trouble.

In a constant search for health I employed possibly fifty different physicians in as many years, in my effort to be cured. I tried every remedy I ever heard of, but secured no relief of any except a temporary character, until about three years ago, when I was attracted to Christian Science and began to take treatment for other troubles with which I was then afflicted. While taking treatment for rheumatism, sciatica, and lumbago, of which I was subsequently cured, I was astonished to find that the eczema was becoming less noticeable. In a short time it completely disappeared.

To me this was the most wonderful of the many benefits secured to me by turning to Christian Science. I had frequently been pronounced incurable, and believed myself to be so.—J. E. Robinson, D.D.S., Columbus, O.

Six years ago I was taken with a severe cough, went to a medical doctor for help, took his medicine and went to see him every few days for about two months, but got worse all the time. When I could go no longer, then the doctor came to see me every few days. I could scarcely eat, coughed nearly all the time, and was almost exhausted. After about six weeks I seemed better and went to work again, out of money and in debt to the doctor. I had been cautioned by him to be careful, for he said if the trouble came back it would be worse than before. I was careful, but the next fall the symptoms appeared; so I went to the doctor at once, but the medicine did me no good, though I continued taking it until the following January, when I had to give up work. I then went to another doctor, but continued to get worse, and feared that I should die and leave my family without means.

A friend had told me of his healing through Christian Science, so I inquired about a practitioner. After telling her of my troubles, I was given some Christian Science literature, and told that I could go to work in a very short time. I went back, took treatment, quit taking medicine, and went to work in six days from the first treatment. I am now well and strong and have no fear of disease.

There are seven in the family and we have had many troubles to overcome, but Christian Science has been our only healer, and we are very grateful not only for the physical healing, which has been great, but for the spiritual uplift, which is beyond estimate.

E. P. Stephens, Wichita, Kan.

Twenty-two years ago, while playing, I slipped, fell, and injured my spine. From that time on I was a sickly, miserable creature. A number of skilful physicians were called upon, and each one in turn would shake his head and remark, "Crippled for life." At last a female physician said I must go to an institute and be placed in a plaster cast. That I positively refused to do. No words can describe the days, months, and years of torture I endured. My clothes had to be suspended from my shoulders, on account of three abscesses at the end of the spine.

Finally, when nothing but despair was left, some one suggested Christian Science. I demurred for a while, but finally consented to take treatment. A practitioner was sent for immediately, treatment given, and in a few hours I was downstairs in the parlor. Next day I went to the practitioner, and walked a distance of over two miles, without any bad effect whatever. The following day I was not so well, and through the influence of friends I discharged the practitioner. I however held firmly to Science and Health, never taking one drop of medicine, and the healing was almost instantaneous. I wish to add that in the nineteen years I have been in Science, the truth as revealed in Science and Health has been my only helper.

God grant that others may be blessed through this testimony of my wonderful healing. My blessings are too numerous to mention. My family rejoice with me, and are ever grateful to God, and to dear Mrs. Eddy, for the many blessings we have received through this wonderful truth.

Mrs. Harry Lee Peebles, Cincinnati, O.

I am twenty-one years of age, and from my birth I had been sick. My parents consulted all the physicians they could, but none of them were able to heal me, scarcely able to help me. The following were my diseases: chronic cerebral catarrh, throat constantly diseased, producing a cough that nothing could quiet; five vertebræ of the spinal column weak and diseased; constant pain in stomach, at times causing strangulation, and frequent attacks of nausea; liver trouble; chronic and frightful constipation, producing at times intense pains, bladder disease, etc. There was a general condition of anemia, and I was always taking medicine.

Last September I went for treatment to a Christian Science practitioner. At his advice I bought a Bible and a copy of "Science and Health with Key to the Scriptures." I commenced to read the two books and read them every

Digitized by Google

day. From the first treatment almost all the old pain left me, and has not returned, though I no longer use any of the former remedies. On the second day, after I left the office of the practitioner I was caught in a severe rain-storm, and though I was soaked no ill resulted; I did not even catch cold. The constipation ceased on the fourth day. I now take long walks without any of the former troubles, and can truthfully say that all my sicknesses have been healed. I thank God!

MLLE. CAMILLE SEAUTEREY, Mexico, Mex.

For over fifteen years I suffered nearly all the time, and spent hundreds of dollars in trying to get cured. I had what the doctors called dyspepsia, and various other troubles of the stomach. I was treated by an eminent physician in New York and followed his advice for nearly a year, but steadily grew worse. Then I went back to one of our local physicians, who had me examined by the X-ray, and who concluded there was an unnatural growth in the stomach. The treatment for this was so severe that I had to give it up. He told me that there was nothing more he could do except to recommend an operation. I wanted to live, on account of my family, and decided to leave nothing untried, so I engaged three of the best surgeons in the city, and after they had treated me about a month they took me to a hospital and performed the operation. They found nothing wrong with my stomach, but said the liver was badly out of order, and the gall-bladder greatly enlarged. I lay between life and death for several days, after having been on the operating table about three hours.

In about a week I began to get a little better, and in about two months I went back to the shop where I was a foreman. Not having gained much strength, I did very little work, but to my dismay, in a short time my troubles all came back, and I was just as bad as before. I was completely discouraged, and was positive that my time on earth was nearly closed. I did not want to live and suffer any longer. About that time I received some clippings from a good woman in Vermont, which she had taken from the *Sentinel* and other Christian Science literature. I did not think I could be cured, but I decided to try the treatment as they did not give any medicine. My joy knew no bounds when I found at the end of three weeks' treatment that I was completely healed. I realized something of what came to the woman who touched the hem of Christ's garment and was made whole after many years of suffering. I was healed nearly five years ago and have lost only one day on account of sickness in that time. I have gained in weight from about one hundred and forty to two hundred and four pounds. The spiritual uplifting that came to me was nearly as wonderful as the healing of my physical troubles. It is impossible for me to find words to express my gratitude for Christian Science. It has brought me and my family into the light of Truth which makes us free. We think that the best way to prove our gratitude is to strive daily to have in us that mind which was also in Christ Jesus, as our beloved Leader has taught us.

A. HENRY MATSON, Norristown, Pa.

Six years ago I came into Christian Science through the healing of a daughter who had for years been troubled with constipation, from which she has been entirely freed through Christian Science. She was very happy over the physical healing, but it was not to be compared with the spiritual uplifting which the understanding of Christian Science has brought to her. She frequently talked to me about it, and it all seemed very beautiful, but having been brought up in an orthodox faith, I did not think it right for her to leave the church in which she had been confirmed; but I am now thankful to say that I was not long in coming out of that thought, for soon after, another daughter was taken down with typhoid fever. As there was no practitioner in our town, I called in our family physician, and followed his directions, but instead of growing better she became worse, and by Tuesday my husband said there must be something else done for her. The next day she had her first Christian Science treatment about one o'clock, and in the evening she walked all around and could use her arm, which had been very stiff, as well as ever. The next day she wanted to go to school; and the following day she did go, entirely healed of the disease. We thought it wonderful.

Soon after this I was invited to visit the Christian Science church, which I did, and will never forget the happy faces I saw that day. It seemed when I went into the church that I was going into a different atmosphere, and I know now it was the atmosphere of Love. I then sent for "Science and Health with Key to the Scriptures" by Mrs. Eddy, and began to study it. I could not at first understand it, but I never got discouraged, for I knew it was the truth that Jesus taught and that some day I would understand it, and it is being unfolded to me every time I read the book. Through the understanding of this blessed truth we have been able to overcome many ills,—such as sore throat, rheumatism, erysipelas,—and a very bad abscess has been destroyed. I have been greatly helped for heart trouble, and what seemed to me the greatest demonstration of all was the overcoming of the thought of poverty. I have learned to take no thought for the morrow. My husband has overcome the liquor habit without being treated for it, simply through living in the atmosphere of Christian Science.

For all these blessings I am grateful to our Leader, Mrs. Eddy, for having brought to us this truth, and above all I am grateful to God, for "every good gift and every perfect gift is from above, and cometh down from the Father of lights."—MRS. TILLIE WAKER, Glen Carbon, Ill.

I visited the World's Fair in Chicago, in July, 1893, carrying a burden of health-destroying, man-made laws. In September I was advised to try Christian Science, and being tired of a five-years down-hill road in *materia medica,* I willingly did so, and was healed in a few weeks. I returned to the Fair in October a changed woman; Christian Science had made me whole, and given me the ability to walk all day and enjoy that great White City with its beautiful treasures. When the old fears of cold or over-exertion would try to make themselves real, in those huge, cold buildings, I would use the "scientific statement of being" (Science and Health, p. 468), and with my sight understanding that God's law is the only law, and His power the only power, all the effects of old beliefs would vanish.

How thankful I am for that experience. I had first seen and felt the healing power of Christian Science, as demonstrated by my practitioner; now I was making the truth mine. Nothing is ours in Science until we prove it, and in those days of proving was the firm foundation laid on which my faith was built. "Science and Health with Key to the Scriptures" is the golden key given the world by that loving, patient woman, Mrs. Eddy,—a key which unlocks the Bible to the Christian, the Jew, and the atheist. For twelve years the daily study of that book has shown me the way to know God and that He is an ever-present help.

EVA BISHOP HANNA, Cincinnati, O.

Since I became interested in Christian Science, about eight or nine years ago, when I was healed through the understanding of my son, I have had many wonderful proofs of the power of Truth. One night, at two o'clock in the morning, I fell about fifteen feet, down a flight of steps, striking my head first. My weight is about one hundred and seventy pounds. As I fell I called to my son, who immediately declared the truth. I felt no pain or fear and was enabled with his help to get up and

Digitized by Google

walk to my room in the second story. In about five hours I was up, dressed, and breakfasted with my family. For the first few days my face was black and blue, my back seemed to be badly hurt, and my nose was cut; but very soon these effects were overcome, and the nose healed without a scar. For this wonderful demonstration of God's protecting power I am inexpressibly thankful.

I feel endless gratitude for the noble life of our dear Leader, who by her purity and consecration has made it possible for this truth to be revealed to a hungry and waiting world.—Mrs. Alice Jennings, Washington, D. C.

I wish to tell of the great blessings and benefits we have received through Christian Science treatment and the reading of Science and Health. About eleven years ago my husband was a great sufferer from nervous dyspepsia. He had suffered about nine years, and at times would be confined to bed for six weeks. At one time he was so emaciated and weak that he had to be lifted. He could take nothing but liquids without great distress, had heart palpitation, and other troubles that caused great misery. We had spent a great deal for medical treatment, yet nothing gave any permanent relief. I was indeed a miserable woman; the suspense I endured is beyond description.

One day, a blessed day for us, a kind friend told me of the wonderful healing of her sister through the reading of "Science and Health with Key to the Scriptures" by Mrs. Eddy. We then went to see a practitioner and my husband was healed.

Soon after his healing, I became almost a nervous wreck. Insomnia, despondency, and other troubles came up to be destroyed by the truth. My healing was slow, yet, in the words of the psalmist, I can say, "Before I was afflicted I went astray: but now have I kept thy word." The reading of the Bible and Science and Health has been a great help to us, spiritually, physically, and financially. We have had to fight, but Truth always gains the victory. I enjoy the Wednesday evening meetings, but as we live some distance we cannot always attend. We, however, realize God's ever-presence and loving care and protection.

Mrs. Kate Massey, Massey, Tenn.

It is a year since I began to read "Science and Health with Key to the Scriptures," by Mrs. Eddy, and I will now try to outline what a knowledge of its teachings has done for me.

My condition was then very trying; my eyes, which had caused me much trouble since childhood, were very painful. For these I had been treated by some of the best specialists in my native land, and after coming to the United States I had been doctored much and had worn glasses for four years. I also had catarrh, for which I had taken much medicine without being helped. In addition to this I was an excessive smoker, using tobacco in some form almost constantly. I had contracted a smoker's heart, and used liquors freely.

The one who brought to me that which I now prize so highly, was a book agent. I told him that I would be forced to leave my trade on account of my eyes. He then told me of having been healed of a cancer, through Christian Science treatment. He showed me a copy of Science and Health, which had the signs of much use, and after being assured that if I did my part I would be healed of all my diseases, I sent for a copy of the book.

My recovery was very rapid, for after reading the book only three weeks I was completely healed of the tobacco habit. I will say, in regard to this healing, that it did not require even as much as a resolution on my part. I was smoking a cigar, while reading Science and Health, when all the desire to continue smoking left me, and I have never had a desire to use tobacco in any form since then. My eyes were the next to manifest the influence of the new knowledge gained, and had soon so far recovered that I could go about my daily work with ease, and have had no more use for glasses. To-day my heart is normal, the catarrh has totally disappeared, and I am not addicted to the use of liquor.

Christian Science has proved to be an ever-present help, not only in overcoming physical ailments, but in business and in daily life. It has also overcome a great sense of fear. The Bible, which I regarded with suspicion, has become my guide, and Christianity has become a sweet reality, because the Christian Science text-book has indeed been a "Key to the Scriptures" and has breathed through the Gospel pages a sweet sense of harmony. This and many other things has the reading of Science and Health accomplished in me, and daily I thank God, who through our dear Leader, Mrs. Eddy, has shown us the way from "sense to Soul."—Abraham Filarski, Sioux City, Ia.

I was at a Wednesday evening meeting, and when I returned home had a message to come to my mother's, as she was very sick. When I arrived I was told that she had had another stroke (she having had a slight stroke the previous November), that the doctor did not think she would live, and had told my sister that the only thing she could do was to relieve mother of some of the pain by injections of morphine. I at once said that we would try Christian Science, and called up a practitioner, who agreed to take care of her. I went back to the house and found the convulsions broken and mother quiet. In a short time she opened her eyes and spoke to me, but we could hardly understand her. In about ten minutes she again went to sleep, and the doctor said her pulse was getting stronger and that she seemed out of danger. After mother awoke, early in the morning, she talked with us, and felt very much better, so much so that she sat up in her chair, but she did not have the use of her right leg or arm. The doctor called in the morning and said mother was very much better. She also said she supposed we did not want her to prescribe, and my sister replied that we did not. This same doctor had given mother electrical treatment to within one month of her second stroke. In one week's treatment under Christian Science mother was well, and even better than she had been before the other stroke in November.

Truly God is with us as an ever-present help in time of need, and our hearts go out in love to Mrs. Eddy, and gratitude to God for the revelation of Truth which has come to us through Christian Science.

George E. Braker, Philadelphia, Pa.

[Written for the *Sentinel*.]

Healing.

MARY MC CRARY.

Egyptian darkness,
Pharaoh's slave,
Hope's star gone down,
The doom—a grave.

But, bending low
O'er couch of pain,
With healing touch
A whisper came.

"Come unto me,"
The sweet voice said.
The slave awoke,
Lo! pain had fled.

O radiant dawn!
O "still, small voice"!
Life rends the tomb,
Love cries, "Rejoice!"

From our Exchanges.

Our churches lose their grip only as they fail to let go of the outlived and outloved. They have to recognize that the people have become utterly indifferent to those affairs which dominated the old pessimistic era. Who indeed constitutes the Church to-day, and who are best qualified to represent Jesus Christ to the present generation? Is it those who have formulated creeds out of antiquated science, which they insist that we shall fight for, whether we believe it or not, who have built costly churches which they lock up for six days in the week? Or is it the industrialists who work six days in the week and do all their work, but, if, on the seventh, are not found in the assembly with the minority, are somewhere giving themselves for the betterment of the world? The matter has got to be looked into. Who are the Christians of the twentieth century, and to what class does Jesus naturally belong?—*The Christian Register.*

If again, we are to do our work in the present day, with all its sociological and economic problems, the Church must speak the language of the people. It must, to take an instance, know the manual worker and the social reformer, it must feel what they feel of the injustice and oppression at which their souls burn, and it must apply Christian principles to the solution of their problems. The victory will be more than half won if the Church can make them understand that it knows their speech; the work will be a miserable failure, and the Church will repel men who ought to be won to its ranks, if it cannot bring them its inspired message translated into a language that they know.

The Churchman.

It is an old-time question, How shall we escape if we neglect so great salvation? The attitude of the present age is one of neglect of Gospel rather than of positive opposition to it. The Golden Rule is admitted—and forgotten. It is not a case of theoretical, but of practical irrecognition of Gospel. But neglect of the Word of God is really contempt of it. There is no neutral zone where that may be found which is neither Christ nor anti-Christ. The type of character demanded to-day is that which is out-and-out for Jesus Christ. Nothing else is satisfactory; nothing else is safe.—*New York Observer.*

"Great is thy faith: be it unto thee even as thou wilt." The man of great faith may always count on having his way. The statement sounds unwarranted, the promise dangerous. The warrant and the safety are evident to him who knows what faith is. Through faith man's will is made one with God's; the only possible prayer for a man of great faith is the prayer of Gethsemane, "Not my will, but thine, be done." Large faith prays until it has its own way, because it comes in any event to desire God's regnant way.—*The Pacific Baptist.*

Can we who believe in Christ doubt that to-day, as of old, he, the unchangeable, comes to offer the healing touch? While we wail loudly, "If thou canst do anything to help us," surely he waits, saying, "All things are possible to him that believeth," for he does nothing unlawfully.

The author of "Pro Christo et Ecclesia."

The Hibbert Journal.

God's delays are not refusals. Sometimes we have to say to ourselves, "This is trial time: now, if ever, I am to put my faith to use." For what would be the worth of a faith which could only be taken out, like a delicate garment, in fine weather? ISAAC O. RANKIN.

The Congregationalist.

Life is continuous and unbroken. There is not this world and another world; there is one world. There is not time and eternity; it is all eternity. Immortality is not a future hope; it is a present possession.—*The Outlook.*

The Lord of Life cannot be enthroned in our hearts, unless the life of the Lord is lived in our daily deeds.

REV. W. D. P. BLISS.

The Churchman.

THE CHRISTIAN SCIENCE TEXT-BOOK.—"Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing all the By-laws to date of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CARDS IN THE GERMAN PERIODICAL.—Application blanks will be supplied by The Christian Science Publishing Society to practitioners who wish their names and addresses inserted in the advertising columns of *Der Herold der Christian Science.* These applications should be properly endorsed and forwarded to the Society. The rate for advertisement will be $2.00 for the first line, and $1.00 for each additional line. It is desirable that those who offer their names in this way should be able to communicate with patients and inquirers who speak the German language only.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with The Mother Church and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.
It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Morocco, limp, round corners, gilt edges, convenient for pocket, each, prepaid 4 00
Twelve or more to one address, each, prepaid . . . 3 75

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5 00
Twelve or more to one address, each, prepaid . . . 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* **PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Associate Editors.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.

Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month.

The date of expiration may be found on the address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

National.

Congress in its recent session took the position that as a navigable river and boundary Niagara comes under the control of the Nation, and thus even the privileges already granted by New York are of no effect. While those now obtaining power from the stream are not forced to give up their business, they get notice that they are not entitled to what they already have, and that any further favors will be granted subject to recall at any time. Permission to use the water may be granted, but to a limited extent. All privileges granted by the bill passed by Congress are to hold but three years.

The plans for the new Boston Museum of Fine Arts have been approved. The institution, which is to occupy an imposing site in the Back Bay section, will be ready for occupancy in about three years. The main building of the group, planned to cover an area of about 320 by 200 feet, will be for the greater part not over two stories high, and will be the first edifice to be constructed. The other buildings will be grouped harmoniously about the main structure, following the plan of the best museums in Europe and America.

By a decision of the Supreme Court of Michigan the State is entitled to collect from the Michigan Central Railway $4,000,000 back taxes, covering the years 1856 to 1893. Suit was brought on the ground that the company had made a fraudulent report as to the amount of property it had subject to taxation. The company filed a demurrer alleging that the State was barred by the statute of limitations. The Court overruled the demurrer and the company appealed. The Supreme Court sustained the lower court.

The American Library Association, having a membership of library workers of the United States and Canada, decided at its recent meeting at Narragansett Pier to establish permanent headquarters in Boston.

Foreign.

The first official announcement respecting the British battleship Dreadnought is contained in a White Book on naval construction the past year, which has just been issued. Besides the ten 12-inch guns, the Dreadnought will have twenty-seven 12-pound quick-firing anti-torpedo-boat guns and five submerged torpedo tubes. In the arrangement of armament six of the big guns are mounted in pairs in the centre line of the ship, and the remaining four are mounted in pairs as broadsides. After thorough consideration from every point of view, the White Book states, experts had no difficulty in arriving at a decision to adopt turbines, which are considered more advantageous for sea-going speed, providing sufficient stopping and turning power and for purposes of quick and easy manœuvring. The speed is designated to be twenty-one knots. The bunker capacity is 2,700 tons, with which the Dreadnought can steam 5,800 sea miles at economical speed and 3,500 miles at 18½ knots. The estimated cost of the Dreadnought, including guns, is $8,987,485.

Sir Robert Hart is said to be preparing to return to England after having been at the head of the Chinese Customs for nearly half a century. On May 9 an imperial edict was published in China, appointing Ti Eh-liang administrator general, and Tang-Shao-yi assistant administrator of the whole customs system of China, including the imperial maritime customs, of which hitherto Sir Robert Hart has been director. He and his fifteen hundred European officials and large native staff were placed under the control of the new Chinese administrator. The imperial maritime customs have been for long the only honestly and efficiently administered department in China. It alone has stood between China and attempts at dismemberment at the hands of the irritated Powers. It was the sole reason why she has been able to borrow and why certain indemnity payments have been spread out over terms of years.

There are fifty-four mountaineering clubs in Germany with 142,603 members. The Baden Black Forest Club, with 10,710 members, does much to popularize the mountains by making paths, roads, etc., and publishing illustrative matter. The annual membership fee is $1.25, and American Consul Liefeld suggests that Americans form similar mountain associations and make the White Mountains, the Catskills, the Adirondacks, the Allegheny Mountains, etc., their field of operations. The thought of employing a guide never occurs to a person tramping around in the Black Forest, for the many guideposts and maps render it unnecessary.

A commission, composed of members of the United States internal revenue officials, has arrived in Berlin, Germany, to investigate the denaturization of alcohol and the use of alcohol for fuel and light. Alcohol for these purposes sells at wholesale there at about twenty cents per gallon, and probably more is used there than in any other country for cooking, illuminating, and motors.

The Pan-American Congress met on the 23d ult. in Rio de Janeiro in the Pavilion of St. Louis. The meeting of the Congress there was the greatest international event the city has ever known. The American delegates have a prominent position on the floor.

The Venezuelan Government is suing the French Railway Company of Venezuela to annul their contract. It demands $10,000,000 damages as a penalty for alleged non-fulfilment of contract.

Industrial and Commercial.

Statistics collected by the United States consulates throughout France and tabulated by Consul General Mason show that exports from France to the United States for the year ended June 30 reached the record total of $107,240,547, an increase of seventeen per cent over the previous year. All the great commercial centres except Lyons, Havre, and Calais, increased their shipments to the United States. The decrease at Lyons is chiefly due to the development of the silk industry in the United States and a corresponding reduction in the demand for French silks.

The Carnegie Steel Company of Homestead, Pa., has completed a new open-hearth department, which will add 35,000 tons a month, or 420,000 tons a year of open-hearth steel to the Homestead production, and will supply the plate mills with raw material in larger quantities than has been possible before. Considerably over $1,000,000 will be represented in the huge plant. With this department in full operation it will give Homestead the largest group of open-hearth furnaces in the world.

Assessed values of property in the South, according to the *Manufacturers' Record* of Baltimore, are likely to show an increase over those of last year of at least $500,000,000, judging from facts in such typical States as Texas, Georgia, Louisiana, and Tennessee, which would indicate an increase in true values of at least $1,250,000,000.

It is reported that the output of the Sicilian sulphur wells brought to the United States is to be handled exclusively hereafter by the Union Sulphur Company, a concern which already controls the brimstone trade of the United States.

General.

Consul Sharp, writing from Kobe, says that raw cotton forms the largest single item of import into Japan, its manufacture being also the most important industry. He continues: "Japan, having seen that Great Britain, though not a cotton producing country, spins and weaves that staple for about fifty per cent of the people of the world, and having seen that many of the conditions in the two countries are parallel, no doubt wishes to profit by the example of her prosperous ally. Thus cotton mills have been established throughout the country, more particularly in the Kobe district, and in those American and other cottons are transformed by cheap labor into fabrics that not only go toward supplying the home demand, but in certain lines are largely exported. The imports of raw cotton, ginned and unginned, from all countries to Japan during 1905 amounted to $55,000,345, of which Kobe received $44,370,904 and Osaka $480,364.

The Harvard University eight-oared crew that defeated Yale on June 28, on the Thames River, Connecticut, will race against the eight-oared crew of Cambridge University that defeated Oxford on April 7 on the Thames River in England. The contest will be held on Sept. 15 and will come off over the historic English course of four miles and three furlongs. The Harvard crew has already sailed. It will be the first meeting between English and American eight-oared university crews. Harvard made the first overtures for a race with the winning Cambridge crew shortly after the defeat of Yale in June. The negotiations have since been going on by mail and cable.

An Austrian inventor, Richard Szigmondy, is reported to have made a new kind of window glass whose chief peculiarity is that it prevents the passage of nine-tenths of the heat of the sun's rays. Ordinary window glass allows nearly all of the heat derived from the sun to pass through, but intercepts all heat coming from non-luminous sources, such as a stove or the heated ground. If covered with Szigmondy's glass a hot-house would, it is claimed, become a cold-house, since the heat could not get into it.

A very large increase in the manufacture of explosives in the United States is shown in a preliminary report just issued by the Census Bureau on that industry for 1904. Establishments numbered 124, an increase of 28 per cent over 1900; capital invested, $41,236,945; total value of product, $29,602,884.

With a population not much over four million, the external trade of the Commonwealth of Australia is one and one-half times that of Japan, and five times that of Portugal. During the last ten years the external trade has increased from $280,000,000 to $500,000,000 a year.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

Progress in England.

ALICE A. HOUBLON.

APART from the many in this country who have found in Christian Science, health, happiness, and peace, its progress has reached the stage when not only have most people heard something of its healing work, but many have come to recognize that they are confronted with phenomena not easily to be explained away, whatever the supposed power behind may be.

Though the roots of Truth have been strongly fixed in the soil for some years, the growth has been in part unnoticed in the great whirl of conflicting thought. But the plant has now shot up into a stately tree, and can no longer be ignored or hidden amongst the stunted growths surrounding it.

London is the heart of Great Britain; in it the intellect and progress as well as the unconscious impulse concentrate, and the thought strikes out and feeds a movement away from its center. It is partly because of this, perhaps, that the work of Christian Science in London has been so far-reaching.

In 1902 the final volumes of a great work which had taken its author many years to compile and write were published. This work is called, "Life and Labor of the People of London" (Charles Booth; published by Macmillan, London). The object has been to describe London, in this particular, as it appeared in the last decade of the nineteenth century,—"to chronicle the actual, leaving remedies to others." The concluding volume deals specially with "religious influences." The author of this book knows more about the life and thought of London than anybody else living; and the results of his close investigations and the drawing up of charts and statistics of these results, reveal facts at once sad and significant. If this is so to the ordinary observer of human conditions, it is easy to see what it lays bare to the Christian Scientist. We quote from the author's concluding sentences as follows: "I have made no attempt to teach; at the most I have ventured on an appeal to those whose part it is. . . . The dry bones that lie scattered over the long valley that we have traversed together, lie before my reader. May some great soul, master of subtler and nobler alchemy than mine, disentangle the confused issues, reconcile the apparent contradictions in aim, melt and commingle the various influences for good into one divine uniformity of effort, and make these dry bones live, so that the streets of our Jerusalem may sing with joy."

With us in England—apart from the liberty claimed by one and all—certain influences have hitherto controlled and directed the channels of religious "belief," perhaps often unconsciously, but almost invariably. These are class-tradition and politics. But that *something* is breaking down these ancient influences is patent, and the disintegration is already a central fact in the religious attitude of the moment. Down the ages the State Church, viz., the Church of England, has been the denomination of the upper classes. The great pious middle and lower middle classes are non-conformist to the State religion—arbitrarily speaking—for its wide fringes merge into either border. While in the country the "poor," a great body of people, have lived upon the land (coming and going) from father to son, the majority of whom have been content to abide under the shadow of parish church, squire, and parson, —the artisan both in town and country is usualiy of "radical" opinions, and being so, is likewise a "dissenter." This is also the case among those of the agricultural population who share his political creed.

It is not possible here to enter into the conditions under which the State Church holds a unique position in this country; nor yet how the education of a vast number of the children of the people is controlled by the Church and clergy. It seems likely that this privilege is about to be withdrawn, chiefly with a view to eliminating dogma from the syllabuses of religious instruction in the schools. That a chemicalization—the result of this far-reaching project—is in progress is recognizable to the Scientist, also that whatever the result of the ferment Truth must reign and gain. The effect of emancipation from a continuity of teaching, given as of right by the Church, must ultimately be as great as that which has already taken place among "educated" people. In respect of these, it is a fact that the standpoint of the religious attitude has changed, and is daily changing in a variety of ways; and it is not that people have become more irreligious; on the contrary, the gravitation toward good is unconsciously at the bottom of the revolt against accepted formulas.

Amongst a vast number of well-meaning people in this country, of whatever class, attendance at "divine service" has been at once the roll-call and the expression of religious sentiment. Beyond this, except in sections, English people are as a rule "unget-at-able" by the clergy. Apart from really devout worshipers thousands of people have attended church year after year from mixed motives: either because it was "expected" of them, or because it was usual for respectable persons so to do, or because it was a good example to others. If persuasion has been brought to bear upon those who stayed away or otherwise sinned, coming to church has generally healed the breach. From this act deductions have been made and statistics and reports drawn. It is in respect of this attendance that a vast change has come about; steadily and surely it has diminished, but only now are men beginning to recognize why the hidebound trammels and prejudices of class and temperament are breaking down everywhere, and "conformity" is no longer regarded as the "outward and visible sign of an inward and spiritual grace," except indeed by the saddened clergy, who rejoice or lament as the attendance at the services and communions is great or small. In the press, among thinkers other than heart-whole church men and women, and in the more serious strata of society, the absentees from public worship are no longer regarded as necessarily antagonistic to religion, nor even as indifferent to its claims. In one place it may be claimed for dogma that it is the "essence of religion," but in others it is recognized that among the mass of the people, of whatever class, it is

Copyright, 1906, by Mary Baker G. Eddy.

Digitized by Google

the chief thing which bars religion from the acceptance of men. Renan voiced this thought in France when he declared that "Truth and Love are true religion;" and he is quoted to-day, unconsciously, since the thought comes not from him, but from the living, acting, pulsating Christ Science in our midst. Meanwhile, modes of expression, ways of approaching subjects, sermons, the press, even quotations show the hidden influence. The lump is rising, and the weight—the mesmerism of old things in this old country—has begun to ferment, and move, and expand.

While the quiet work of Christian Science has already stamped thought with its seal, it has also borne much fruit in healing, while of late various circumstances have tended to bring it more prominently before the minds of the public. That adverse criticism should have unwittingly done this is no new thing to Christian Scientists, for truly "all things work together for good." There have been several references in the *Christian Science Sentinel* to the Bishop of London, whose words on Christian Science have had a more far-reaching effect than he contemplated when they were uttered; as he himself has since remarked, "They have gone round the world." As it happened, the meeting for women workers of the Church of England (on which occasion the Bishop alluded to Christian Science) was held last winter the very day before the first of the Christian Science lectures given by Mr. Bicknell Young in London was advertised to take place. While warning his hearers against the "gigantic heresy" of Christian Science, the Bishop admitted the actuality of the healing and urged greater spirituality and faith on the Church. The next day the morning papers reported the meeting and the "Bishop of London on Christian Science." The result was a large attendance at the lecture of all kinds of people hitherto indifferent or skeptical. While many possibly went empty away, others heard the good news to their abiding advantage. So far as orthodox thought is concerned there is no doubt that its attitude in respect of Christian Science has since undergone a great change. A case I personally came across shortly after this, was that of a lady who in a quiet country village read accounts of the Church meeting and Christian Science lecture, together with press comments thereon. Struck with conviction, she exclaimed, "Why, if this is true, then *this* is *nothing!*" clasping her throat. She was instantaneously healed of a chronic affection which had troubled her for years.

Doctor Ingram, Bishop of London, formerly worked amongst London's poor. He wrote many little books for lads, working artisans, etc. Before I became a Christian Scientist I read some of these books, and in one of them I found: "We are looking for the truth; and we will accept it, whenever and from wherever it comes." These words later came to my mind. I was deeply attached to my church; but the truth as presented by Christian Science was so evident, so plainly solved all the problems of existence, that I knew from the first the truth had come in plain and mighty strength.

Many of the clergy have now awakened to Christ's command to heal; some are seeking to learn how to do it. Some urge that the rite of anointing with oil should be revived; the Bishop of London urges prayer and conviction; and co-operation with the medical profession is advised. An organization called the Guild of Health has invited discussion from all interested; and here the blind have for some time been successfully leading other blind into the ditch of mortal mind, with its accompaniments of will-power, hypnotism, spiritualism, and the like.

Meanwhile healing is preached and talk heard in the pulpit about matter. Some Englishmen of science have abolished matter; others are investigating the "spirit world" in expectation of finding the solution there. The search is serious, whether from the standpoint of natural science or on the religious basis. Although it needs no telling, that where ignorance and frivolity approach the subject of Christian Science, cheap ridicule and silly jeers in respect of it sometimes disgrace so-called Christian people,—this attitude is lessening, and is altogether absent when individuals have come into contact with the actual work or with the literature. It is taken seriously, in short, and those who deride it do so rather on the score of its "dangerous tendencies,"—its supposed results of separation between individuals and families,—while apart from its supposed impiety, it is regarded as bad taste to take up with a *sect!* It is natural, then, that strong efforts should be made to hold back those who are attracted by the teaching and struck by the power of Christian Science. Where there is perseverance in spite of obstacles, the inevitable reward is reached, but through an avenue of many thorns. Scorn, gossip, amazement, reproaches, and arguments galore; then oblivion, in so far as the world is concerned. Nevertheless there is much wonder at the happiness and health of those who have left all for Truth.

Four years ago I and my family had heard nothing of Christian Science beyond its name. At that time it had not yet been proclaimed a "heresy," and we thought it was come as an onward step in the Christianity of the world. Many of us accepted it at once as a fresh revelation in the continuity of Truth, and told our good news with the certainty of its acceptance. How it was met, those who have suffered the like rebuff know well. On the other hand, peace, health, mental quiet, freedom from care, conscious security in the ultimate triumph of Truth over all difficult conditions, whether of health or circumstance,—these are mine, and the ever-abiding joy with which I wake in the morning and lie down at night. The orient of the rejected pearls is ever brighter and more precious. Likewise, I know I shall come again with joy and bring my sheaves with me. As time goes on, the halt between two opinions, which is so often the "passing by" of the traveler, will surely be shorter and more fruitful of result. Of those who come to see, out of the crowd of seekers after "The Lost Chord," an increasing number will find what they seek and will drink of Christ's cup and partake of his joy and sorrow, triumph and sacrifice. As Christian Scientists daily grow in unity, and in the love which hews a path for the march of Truth, so will that path be trodden which leads to God.

In the Mother Country we look across to the West with love and gratitude to the leading of the younger country of our race; and above all, with veneration and loyalty not to be expressed, for the dear lady who has given to the world this great and mighty revelation of Christian Science. Jesus said, nineteen centuries ago, "I have yet many things to say unto you, but ye cannot bear them now." That these things kept secret from the foundation of the world have been made known to her whose life proved her capacity to bear them, we owe our endless gratitude; also, that the increasing toil of our Leader has taught the world to bear them too. Dutifully we accept her rule, obey her mandates, love her, and follow her footsteps. For we know that she is the chosen instrument of God to bring again to His waiting children the Light that had waned, the Truth that had been obscured, and the Love that had been hidden through the ages, since Christ—the Truth—came with the message of peace and at-one-ment with the spiritual idea of God.

The New Tongue.

M. G. KAINS.

WHEN two people who know no common language try to express their ideas to each other, their means of conveying thought are limited to signs, gestures, and facial expressions, and only in modest degree can they grasp each other's meanings. Such human experiences as hunger and thirst are so readily expressed that even a savage and a civilized man can understand each other perfectly. Mirth and sadness may also be expressed and understood very

Digitized by Google

readily by civilized people without the utterance of a word. In such ways thought, not speech, is proved to be the universal language, and words of the so-called mother tongue are merely the signs or symbols agreed upon by different peoples, races, or tribes to designate thoughts. Thus words become the limiting counterfeits of thought to those who do not grasp their full meaning, and in a sense the statement that words were invented by man to conceal his thoughts is seen to be rather nearer the truth than at first appears.

Every science, art, or business uses distinctive terms, —terms which, to those who have not learned their application, are as meaningless as are the words of unlearned foreign languages. In the acquisition of a working knowledge of the language used in any department of thought, whether a science, a trade, or a religion, it is of fundamental importance to understand its terms. Not only so, but it is absolutely necessary that this understanding be exact and that the participant be able to give so cogent and convincing a definition and explanation of each term that the inquirer who knows nothing of the trade or science may grasp clearly the idea for which the term is used and, further, be able to use that term with exactness when himself essaying to convey his ideas. Unless this exact knowledge be acquired the participant cannot claim proficiency. He must recognize the fact that in order to make himself clear in audible or written speech he most broaden his understanding, and as he views a wider horizon he must step down from the little summit of his acquisition to the level of those striving to attain his point of view, because having scaled thus high he will be in a position to lend a helping hand to seekers of the light.

In nothing are these statements more strikingly true than in acquiring a working knowledge of Christian Science. When first approaching the subject the inquirer is apt to be more or less disconcerted to find words employed in a sense in which he may never before have heard them used. If, however, he will recall his study of a science or trade, he will find himself confronted with a parallel case. The terms in Christian Science are all used either in some one of the often many meanings recognized by standard dictionaries, or else the specific sense in which they are employed is distinctly set forth in the text itself. In the first case the inquirer is alone to blame for not knowing or acquiring the recognized, legitimate meaning of the word, or for restricting its meaning to his limited experience; in the second case he must exercise the same patience he would have in acquiring proficiency in learning a new profession.

More than this, however, it must be apprehended that the acquisition of terms and proficiency in their use does not necessarily imply an understanding of the new tongue of Christian Science. This is neither expressed by voice, nor cognized by ear, for "ear hath not heard, nor hath lip spoken, the pure language of Spirit." "God is Spirit; therefore the language of Spirit must be, and is, spiritual" (Science and Health, p. 117). Christian Science must be and is apprehended, comprehended, and expressed spiritually. For this reason it is of paramount importance that the aspirant to its knowledge and command patiently strive for that Mind to be in him which was also in Christ Jesus, so that he may think truly and intelligently, and speak and act in accordance therewith. Faithfully to do this is to acquire that proficiency evidenced to-day, as during the first three centuries of the Christian era, in those reciprocal signs which accompany spiritual understanding; namely, the reforming of the sinner and the healing of the sin.

A Reminiscence.

WILLIAM W. PORTER.

(STANDING beneath the great white dome in the Extension of The Mother Church building at the first dedicatory service on the never-to-be-forgotten Communion morning of 1906, and as the words of the dear Leader's hymn, "Shepherd, show me how to go," rose from the hearts and lips of the assembled thousands, filling the vast dimensions of the magnificent auditorium in the hush and calm of the early Sabbath morning—something of what it all meant filled a wondering consciousness. The words, the book, the notes, the people—all, for a moment, were lost to sense: and there and then the infinite love of God and the harmony of the Christ-truth were manifested as never before. Then there came something of what the occasion commemorated, of cross-bearing, of faith assailed, and of consistent, undisturbed tranquillity on the part of Mrs. Eddy, which filled the heart with unspeakable tenderness and gratitude. Like a great canvas, rose, too, the future, with the duty of to-day, and while the tear-dimmed eye refused to trace the lines on open page, the holy calm of heaven within, subduing every sense of self,—a consecration strong and pure,—inspired thought to higher demonstration and to holier deeds.)

What songs are these
That rise and swell in cadence grand,
Then, lingering soft and low,
Float like Shepherd voice across the hills
To strayed and lost,
To storm-beat, toss'd, and crippled sheep?

What songs are these,
And whence the music,
Like the harmony of God's ages,
Thrilling and quickening the tired-sick
Beyond the memory of pain,
Beyond the touch of sorrow, grief, and woe?

What songs are these,
That bring to earth the joys of heaven,
That still the breath of tempests,
Lull restless waves to rest;
That tell of Mind's supremacy, and God as Mind;
And telling, 'wake a sleeping world
To new-born day, the reign of Truth?

They usher in triumphant
The hope of age-long span,
The reign of God's own kingdom
The brotherhood of man.

When the South Wind blows Softly.

REUBEN POGSON.

And when the south wind blew softly, supposing that they had obtained their purpose, loosing thence, they sailed close by Crete. But not long after there arose against it a tempestuous wind, called Euroclydon.
ACTS 27.

THE story of Paul's voyage and shipwreck has many lessons for the student of Christian Science. When the scouting gusts of the north wind come riding over the ocean, flickering up a foam of rebellious white horses, and seeing a brave ship built for progress gives it a few challenging buffets, picks up a few loose articles on the deck, impudently tries to get under the peak of the cap of the officer on the bridge; then that officer, if he is awake, softly "Ho! Ho's!" to himself, casts an all-comprehending glance over the water, and calls for alertness and readiness from his crew. There is an icy sting in the wind that challenges resistance, and it is going to get it. Experience teaches that the wind gives no quarter, so the officer tells his men that the race is not going to be a handicap; there are to be no penalty put-backs for negligence on his part, he is going to run to win, in fact he has got to. Strictly speaking, to the mariner it just depends upon the direction in which one is sailing whether a south or a north wind is favorable, but the line quoted at the commencement will convey through the imagery of words the seem-

Digitized by Google

ingly delightful pleasure of easy, successful motion. Oh, the infinite wisdom needed in knowing when to stand still as well as when to move, to know when we are moved by a divine impulse, an inspiration, the breath of God, and when the restless human will strives to make us rush around.

It is a noticeable feature in the experience of mortals that they no sooner start the study of any phase of art or science than they almost immediately attempt to solve the most advanced problems. The consequent depression and chagrin is then charged to the art or science and the richest grapes are declared sour. The inherent indolence and dishonesty of mortal mind is the reason for this effect; it is always striving to enter in by some other way, always looking out for short cuts, royal roads, and prediges ted foods, and it is blind in its own conceits. Like the Pharisees of old, mortals declare that they can see, and heed not the warning of Truth that is ever speaking to the willing ear. Material sense declares its environment too limited; then it feels the south wind blowing warm and softly, and it leads one to loose thence, to sail forth and meet Euroclydon.

Most students of Christian Science take an occasional retrospective view of their journey Godward, and if sufficiently loosed from the bonds of egotism they can see the links in the chain of eternal truth which has been holding them to God and His universe. They then learn, often with dismay, that it was not when the storm of persecution seemingly hid the sun from their sight that they missed the succeeding links, but that often when their eyes were dimmed by undue contemplation of a personal victory, they were tricked into seeing angelic vestments where keen spiritual sight would have uncovered the nakedness of the fleshly lie. We need to be specially on guard when the soft south wind of human approval blows, for it may carry us away to meet a Euroclydon of passion and pain from which we are scarcely saved by the one pure thought that had been held as a prisoner, but which in the hour of storm and shipwreck must take command. Many who are thus saved, must yet pay the penalty of a lost ship. We may well ask ourselves how many ships we are thus going to lose? Are we going to rouse ourselves for defence and attack when the south wind blows softly, as we do when the cold sweeps of the northern blast of icy criticism strike us? Do we really desire to go through the severe ordeal that purifies us sufficiently to be successful practitioners, or do we consider our present possibilities too small, our work too material for Christian Scientists? If this feeling is allowed to dominate, the south wind of personal ambition blowing softly may cause us to loose our moorings to meet the gale we little expected, so that, perchance, we are tempted to place our troubles to the credit of a wayward God.

Mrs. Eddy says, "This spiritual idea, or Christ, entered into the minutiæ of the life of the personal Jesus. It made him an honest man, a good carpenter, and a good man, before it could make him the glorified" (Miscellaneous Writings, p. 166). Christian Science needs laborers, not a professional faculty. The mere exchange of a stethoscope for a copy of Science and Health does not constitute the sole difference we have to make in our possessions to become true followers of him who said, "Heal the sick." It is all that the stethoscope symbolizes which makes up the gentle, languorous breezes of the southern wind of material sense, and of all this we must let go. When in our present haven we learn to exchange impurity for purity, fleshliness for spirituality, hate for love, material concepts of man and woman for the divine ideas of Spirit, an anthropomorphic concept of God for ever-present infinite Love, then and not till then will the "winds of God awake and blow the mists of earth away." Then will the Divine Light show that our limitations were the phenomena of mortal short-sightedness. Instead of sailing here and there for Eldorados, we build a habitation for Spirit in our consciousness, and the Christ again rebukes the winds and waves of mortal sense and reveals the grand ideas of Truth for which they stand in the universe of Soul, where the true mariner hears no siren song, feels no sensuous breezes, meets no Euroclydon, and suffers no shipwreck.

The Word Demonstration.

ALFRED FARLOW.

THE frequent misuse of the term "demonstration" prompts the following brief statement. A demonstration consists of a scientific illustration, manifestation, or achievement. In Christian Science nothing can be called a demonstration except the realization of satisfactory results. A normal condition or an advance toward such a condition is the only evidence of demonstration. An uncertain, inefficient effort or attempt to apply the teachings of Christian Science could not be truthfully called a demonstration, therefore to use the term as synonymous with the term treatment is not proper. Moreover, such a use of the term is apt to appear ridiculous to the public, and is confusing not only to non-Scientists but to Scientists as well. The healing of a case in Christian Science may be properly called a demonstration of the truth, while a treatment may or may not effect a demonstration. The term treatment, as generally used, is broad enough to apply to any sort of an effort, however feeble or inefficient it may be. If every effort of a Christian Scientist resulted in an actual demonstration he would never need to give a patient more than one treatment.

In our declarations we should be very careful not to jeopardize the true sense of Christian Science by the use of misleading terms and expressions. In conversation with each other we may find such terms as "belief" and "claim" to be valuable in minimizing our sense of the reality and power of disease, but the use of such terms in the presence of non-Scientists is likely to intensify the human sense of the reality of error. It is therefore wise to guard against the use of such terms in the presence of those who do not understand them. This applies to our Wednesday evening testimonies, since we always have in attendance those who know little or nothing about Christian Science. Even among our fellow-believers why say, "I would like to demonstrate a good home or a good position"? Why not say, in plain, unmistakable English, "I would like to have a good home or a good position, if it be God's will"? But even this might be considered improper, for what we really need is to be more Godlike.

Much of the present opposition to Christian Science,—which, however, is rapidly decreasing,—and some of the criticisms which we are obliged to meet in the public press, are directly traceable to the unwise things which have been said and done by Christian Scientists. Hence may we not be permitted to hint, in reference to corrections, that "charity begins at home." The saving truth which our Leader has given us in Christian Science ought not to be subject to misapprehension at our own hands. It is much needed by mankind in general and when we offer it to others we should do it tactfully and not in a manner that will render it inacceptable. As a rule, it is not Christian Science that is rejected by the honest critic, but what he in his misapprehension believes it to be.

List of Members.

The List of Members of The Mother Church, including those admitted June 5, 1906, is now on sale. Single copy, 50 cents; six copies to one address, $2.50; twelve copies to one address, $4.50. Address all orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

Selected Articles.

The healing in Christian Science is not the greatest tenet of the belief. It is but a side issue. The strongest and highest attainment is to bring the kingdom of heaven from beyond that vague ether which we call the sky. Other teachers promise us that if we are good, we shall have heaven after we die. The Christian Scientists try to bring that heaven to us now. The ideal man is one who is ever thoughtful of others; who brings happiness and does good; who sheds sunshine and love unconsciously. . . . If a religion is so broad, so liberal, so effective that it can make a man hold up his head and say "I am a man;" if it can make a man go deep into his pocket for money (and that's a mighty searching test); if it will make him give with a joyous heart; if it will make him love his family and his neighbors—to do for them all he can; if it will turn a squalid home into a sweet and beautiful abode where love and happiness are hand in hand; then it seems to me that it's a pretty good religion, even though in addition it does away with the doctor's bills. What matters it that the religion emanates from a little New Hampshire town, and is voiced by a woman? Perhaps the main objection is due to the fact that it does not look like religion. When you come right down to it, what does the pomp of the church amount to? The burning of incense does not get beyond the church door, and perhaps God wouldn't care for it even if it did. And maybe He really doesn't so much want bright, showy vestments on His altars, as He does good Christian hearts. I don't know; I am only surmising. But after all, what does it matter where a man kneels in prayer, so long as his heart goes out to God? Does it make any difference at the great white throne whether that prayer comes from a dim church with the gentle tremolo of a big organ to accompany it on its upward flight, or whether it comes from a forest glade, nought but the blue sky above and the whispering of the birds to carry it upward; whether it comes from the solitude of one's closet or from a bright, sunlit Scientist church? The prayers all go to the same God, and He loves us all, whether we be Episcopalian or Baptist, Catholic or Presbyterian, Methodist or Christian Scientist. It is results that count, and the Christian who can make a heaven on this old prosaic earth of ours is, I have faith to believe, going to lead in the long, white-robed procession that we are told will come to the foot of the eternal throne on that last day.

So perhaps it would be just as well if the minister who assails the Christian Scientists would go deeper into the teachings of that big book that he opens every Sunday morning and night, and remember that they are all God's children, after all. ROBERT MARSHALL.

Rutherford (N. J.) *Republican.*

To the Christian Scientist it is quite clear that God, being infinite, omnipotent, and omniscient, the author, the creator of all that is, could not create or permit that which is absolutely unlike himself. In Habakkuk we read, "Thou art of purer eyes than to behold evil, and canst not look on iniquity." Omnipotence signifies all power; omniscience signifies all knowledge; for God, who is omnipotent and omniscient, to know or permit sin would by the inevitable logic of the thing make Him the creator of it. This Christian Scientists cannot reconcile with the fact of a God who is infinite good and with the statement in Genesis, 1 : 31, "And God saw every thing that he had made, and, behold, it was very good." The logic of Christian Science is irrefutable. Its teachings have brought the truth of an ever-present God who is infinite Love to the understanding of thousands of people who formerly disclaimed any belief in God. It teaches a real world and a real man with a real body on the only possible basis of reality; namely, the spiritual. JOHN L. RENDALL.

Mason City (Ia.) *Times-Herald.*

Not long since two gentlemen entered a railway coach. One of them was denouncing Christian Science in a heated manner. By and by his friend left the train, and a Christian Scientist who had overheard the conversation politely occupied the vacant seat and began to speak of some of the benefits which he had observed in connection with Christian Science treatment. The critic at once changed his tone and began to refer to benefits which he too had observed. This incident serves to suggest that which fosters and perpetuates the apparently unabating interest in the Christian Science movement. Whether or not we are ready to endorse Christian Science, it cannot be denied that its propagation is followed by good results; that Christian Scientists are an unusually healthy, happy people, and that they are richly endowed with that rare accomplishment, brotherly kindness.—*Cedar Rapids* (Ia.) *Evening Gazette.*

A casual observer cannot fail to recognize that to the skill of Mrs. Eddy as an organizer and to her genius as a religious leader is due the present impetus of the Christian Science movement. The completion of the splendid edifice recently dedicated in Boston may be counted among her most brilliant achievements, for the funds which were thus expended were given as an expression of appreciation and love for her no less than in recognition of the needs of this great movement, the credit for the initiation and successful guidance of which is due to this remarkable woman.

Cedar Rapids (Ia.) *Evening Gazette.*

Mary Baker G. Eddy may well be proud of her enormous following. Perhaps she is wise in keeping out of sight of the enthusiastic throng that gathered in Boston in her honor this week. She is a woman who does nothing without a purpose and keeps calmly and persistently to one course. Therein is the keynote to her success—the like of which the world has seldom seen.—*The Oregonian,* Portland, Ore.

Another New Pamphlet.

"The Ministry of Truth," a new pamphlet now on sale, is made up of the following articles, reprinted from *The Christian Science Journal;* viz., "Healing as Practised by Jesus," "The True Thought Modus," "Letter from a Lawyer to a Friend," "The Word Declared," and "Here."

Price. One copy, six cents; twelve copies to one address, 60 cents; twenty-five copies to one address, $1.15; fifty copies to one address, $2.25. Address all orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

Picture of The Mother Church.

The picture of The Mother Church and its Extension which The Christian Science Publishing Society now has for sale is a half-tone reproduction, 12 x 15 inches in size, of a view giving the St. Paul Street frontage and Falmouth Street side.

The picture is mounted on a white mat, 21 x 25 inches, and will be sent to any address in a mailing-tube for fifty cents a copy. A dozen copies will be sent to one address for $4.50. Souvenir postals of the same design as the large picture are for sale at twenty-five cents per dozen.

Address all orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Medical Legislation.

We are advised by our brethren in Louisiana that the recent attempt of the physicians in that State to secure legislation adverse to the practice of Christian Science has been defeated, the proposed bill having been withdrawn by its author in order to give it, as he said, "a decent burial." This bill, as we assume, was the outcome of the proceedings of the Louisiana State Medical Society at its meeting held about a year ago, when the remarks of one of the members was reported by the *New Orleans Picayune* as follows:—

"Dr. J. M. Barrier thought the thing to do would be to bring this down to an issue and make it a practical question, so the average politician can get hold of it. Say to the legislator, while at home: 'We want certain things; you want certain things; if not right now, later. Give us what we want; you can have what you want.' Tell him that if he don't do it, that we'll do him a plenty the next time he runs for the Legislature. That is the way to handle them. You will find them very amenable to treatment."

It would appear from the defeat of this latest attempt to enact monopolistic legislation for the benefit of a favored class, that the physician quoted by the *Picayune* was mistaken in his estimate of the gentlemen who compose the Louisiana Legislature, and that these gentlemen can be depended upon to do their duty without fear of such threats. In commenting upon Dr. Barrier's statement, shortly after it was made, we said, "We cannot believe that the laws of Louisiana are made by such men as this doctor has in mind," and it would seem that our estimate of the Legislature was correct.

The following, which we quote from the report of the Committee on Legislation of the American Medical Association (*Journal of the American Medical Association*, July 22, 1905), is significant when we consider the monopolistic character of the legislation which these medical associations have labored for in many of the legislatures. This Committee said:—

"Your Committee has felt itself embarrassed from time to time by the fact that it has had comparatively few representatives of its profession in the Congress. This was sufficiently exemplified in the Fifty-eighth Congress, in which there were but two medical men in the Senate. . . . In this connection the Committee urges that in the legislative field the duty of the profession to themselves and to the public is very distinct."

The *Medical Times*, April, 1905, in a leading editorial on proprietary medicine, says:—

"This is a subject vital to every physician. . . . We will merely repeat here the specific statement we have already made, to the effect that in one year $62,000,000 has been expended on patent medicines in the United States, enough to give to every practitioner in the country a yearly income of two thousand dollars."

This way of stating the case certainly gives ground for the suspicion that at least some of those who advocate legislation "to protect the dear public," and incidentally in the interest of the physicians, have carefully weighed the effect of such legislation.

Archibald McLellan.

"The everlasting gospel."

It is agreed by many religious writers that those who are striving for more spirituality find greater help in the study of the Gospels than in any other part of the Bible. The reason for this is very clear to Christian Scientists, who know the supreme value of demonstrations of the truth. In the Gospels we find not only the wonderful teachings of the Master, but the proof of their practicality in the healing which he accomplished; indeed he did not ask for faith in his words alone, but said, "If I do not the works of my Father, believe me not." In characterizing the Gospel narratives our revered Leader says, "Jesus illumines them, showing the poverty of mortal existence, but richly recompensing human want and woe with spiritual gain" (Science and Health, p. 501). The pity is that any should deny or doubt the Christ-power to do all this to-day as surely as in Jesus' time, for the need is as great now as then, and in the darkest hours the troubled heart turns instinctively to the imperishable record of his mighty deeds, when all else fails. Only those who have had the experience can know how terrible it is to be told in such an hour that the "hope in Christ," awakened by the Gospel stories, must also fail, because "the day of miracles is past." Well is it that to this enlightened age has come "the bringing in of a better hope," by which "we draw nigh unto God" and thus find all the help we need.

The naturalness of the Christ-healing is beautifully illustrated in the restoration of the nobleman's son, as recorded by John. From the Gospel narratives we learn that Jesus was ever at work, preaching, teaching, and healing. He was then in Cana, and this nobleman came from Capernaum, some sixteen miles distant, to ask help for his son, who "was at the point of death." We can easily imagine his interruption of the Master's teaching, with his almost despairing appeal. Then came the calm response, "Except ye see signs and wonders, ye will not believe." The pride of place and power must have bowed before those searching words, for the father cried, "Sir, come down ere my child die." This humble, trustful entreaty brought the cheering answer, "Go thy way; thy son liveth;" and the record adds, "The man believed the word that Jesus had spoken unto him." How great was the faith thus enkindled may be gathered from the statement that the father did not even go home to learn the child's condition, but remained, presumably to learn more of this truth which heals the sick. The next day he was met on his way home by his servants, who told him that his child had been healed at the very hour in which Jesus had declared the truth for him.

It is interesting to know that this nobleman and his household accepted the truth in consequence of the child's healing, as many do to-day because of the healing of some loved one. This case is of special interest to Christian Scientists, because the healer was not with the patient; the healing thus proving the omnipresence of the divine Life —which is the basic teaching of Christian Science.

Should not all Christians rejoice that we have to-day "the everlasting gospel" which John announces in the Apocalypse, in which we have Truth declared, and also a continuous record of the healing wrought by Truth, a record which can only be closed when sin, disease, and death shall have disappeared from human consciousness, and the reign of Life and Love be universally realized.

Annie M. Knott.

Diagnosis.

It has been claimed that Christian Science practitioners are unfitted to heal the sick in view of their asserted inability to diagnose disease, not having made a study of symptomatology, and to this charge practitioners have made the best possible answer by continuing to do the thing of

Digitized by Google

which they are said to be incapable. We are sometimes called upon, however, to meet the question in words as well as works, and hence it is worth our while to examine the grounds of the allegation.

Etymologically the term diagnosis means to *know through*, or thoroughly; hence the definition, "to inquire into, to examine," and disease has thus been studied for purposes of classification. It is manifest, however, that to concentrate our attention upon things and upon conditions which are abnormal is necessarily harmful, and that this is particularly true in the case of disease, since the more we study its forms and phenomena the stronger, more fixed becomes that false sense of its reality and inevitableness which multiplies our fear of it and yet which anticipates it, opens the door for its coming and gives it cruel and desolating power in human belief when it arrives. It is coming to be seen, moreover, that fear and expectancy are not only the handmaids and abettors of disease; they are not infrequently its source. In the realm of false mortal sense they have been known to transform a mild malady into a devastating contagion. Every thoughtful person must have observed how crowded are the columns of the daily press with evidences of the pitiful prevalence of morbid and inevitably degrading interest in the phenomena of sin and disease, despair and death. It sometimes seems well-nigh impossible for one to acquaint himself with the important news of the day and yet escape the pollution of the malodorous tide which flows on and on to satisfy the gruesome appetites of mortal sense, and to these startling conditions the material study, classification, description, and general discussion of disease directly contribute.

In the presence of these unquestionable disadvantages and dangers of that diagnosis which seeks to master while incidentally exhibiting and exploiting the abnormalities of materiality, we can better understand why it should have had no part or recognition in the healing work of Jesus and his disciples, and we can better appreciate the significance of those passages in which Mrs. Eddy has called our attention to these things (Science and Health, pp. 369, 370).

A true *dia-gnosis*, that genuine *knowing-through* to the correct explanation of abnormal conditions, that analysis and interpretation of human experience through spiritual perception which discriminates between the true and the false, the real and the seeming, the mental and the material, the eternal law of being and the false claims of mortal sense,—such a diagnosis has meaning and value, for it is scientific. It uncovers error for its destruction and finds a rational explanation of both the cause and cure of every disharmony and disease.

Material diagnosis is an inherent part of a material system. It is ever looking down and not up. It always starts with matter, and clings to it, for it knows nothing else. Ignoring mental causation, it expends itself in the microscopic analysis of the tissues and fluids of the body, hunts for bacteria instead of bad thinking, and seeks its explanation of even so-called mental troubles in materiality. Under the dictum of asserted physical laws, the matter physician uses many poisonous drugs, and if the diagnosis of disease in keeping with his basis of classification and treatment lessens the ill he may do, then it is well. The Christian metaphysician, however, knowing that in truth all human ills are but the varying manifestations of false sense, which would locate life, substance, and intelligence in matter (Science and Health), and that there is but one remedy for all; viz., the Christ-truth, is laid under no necessity of knowing after the manner of false mortal beliefs; his trust is in the presence and power of the living God.

Christian Science is awakening the world to the fallacy of the material process and point of view; the inadequacy of its best intentioned effort. It is demonstrating the significance of false mentality in the inception of disease, and that of divine Truth in its cure, and it has thus already effected a great and promising change in public thought, so that over and beyond its specific healing and redemptive work, it is conferring an unmeasured benefit upon every community in which its influence has been exerted.

JOHN B. WILLIS.

Letters to our Leader.

[The reading of the following good letter has been a great pleasure, and we heartily commend both the letter and the prompt and unquestioning obedience of the writer of it. —EDITOR.]

Muskogee, I. T., July 19, 1906.

Mrs. Mary Baker Eddy, Concord, N. H.

Dear Leader:—Since returning from Boston and thinking over the grand Communion, its example to all mankind, and the lessons of meekness learned there, I have wanted to write and express in a measure my gratitude to you for the privilege of studying a demonstrable Science, which teaches an invariable rule of right governing every circumstance, and by which any and all problems of mankind may be solved.

Before going to Boston I had always been very anxious to see you, also I had always wished for some special privilege of serving you, and when your request came for Scientists to help "throttle the lie," I thought, This is my opportunity. Although there was a sense of disappointment, yet I was determined to obey as best I understood. I had intended to go to Concord and out past Pleasant View, with the hope of seeing you, but immediately after reading your request I decided not to go. Since then I have a greater realization of my duty to mankind, and a greater desire to keep my consciousness free from every form of error, that there may be no thought from me to retard the progress of the searchers for Truth.

Our church here at each Wednesday evening service expresses from the depths of its heart loving gratitude to you for all you have done and are doing for the world.

With the desire always to have my "lamp" in readiness, I am

Lovingly,

A. CORA JONES.

Des Moines, Ia., July 23, 1906.

Beloved Leader:—We have great cause for rejoicing that the time has come for the seed, "Personal Contagion," to be sown, by our Leader, in the human consciousness. God alone knows what the harvest will be. Who would not willingly give you the time you ask for,—"to assimilate" yourself to God, when, by so doing, you can become transparent enough to reflect such a ray of light as "Personal Contagion." Such a consecrated life can but command our deepest love and appreciation. Victor Hugo said, "The sword is but a hideous flash in the darkness,—right is an eternal ray." There is only true liberty in serving Principle. "Where the Spirit of the Lord is, there is liberty."

You have taught us that freedom is obtained by seeking the honor that cometh from God only, the result of which is love and tenderness in all our ministrations. The following words of yours—another "eternal ray"—made such an impression on me: "That glory only is imperishable which is fixed in one's own moral make-up."

Yours, joyfully striving to have every thought an absolute demonstration of Christian Science.

VALERIA J. CAMPBELL.

Independence, Mo.

Mrs. M. B. G. Eddy.

Dearest Leader:—May I ask you to accept my thanks for your last article, "Personal Contagion." It seems to me a burst of sunshine after fearful storms,—a master-stroke,

Digitized by Google

—bringing down the "Rain-drops of Divinity" to refresh the earth. God is good to give us this through you. Obeying this article will wipe out our sense of everything personal.

Thus freshened and cleansed, we should press on, to show our gratitude humbly, by our work for God and man, through Love. I have never seen your dear face, have never seen our church, or been to Boston. Only in "conscious Mind" I know it all is given from God, and am striving to live near to Him. I have been away from other Scientists mostly, and with obedience to the instruction given me, I have fought my battles alone for fifteen years (as mortal sense puts it). I realize that the only time is now, eternity.

The contagion of personal sympathy is not felt when the Divine understanding reigns. There should be no other consciousness than "sinless joy without bodily pleasure or pain." I am striving to learn also the wisdom of briefness, and to know that nothing but Love should be voiced or written.

With loving obedience, I am yours in truth,

(Mrs.) Annie E. Hinds.

Chicago, Ill., July 13, 1906.

Dear Leader:—When the *Sentinel* came to-day, and I was told the heading of your article, "Personal Contagion," it seemed that I could scarcely wait until a later hour to study it. When I first turned to Christian Science a new heaven and a new earth presented itself to me. There was no struggle, old beliefs were laid aside much as a child lays her dolls aside, because she has found something better, more satisfying; but of late years I have learned why Jesus was tempted in all things as we are. There have been temptations and struggles and victories. I do not regret them. I have learned many lessons, have learned better how to supply my brother's need, and victory has followed victory. The truths contained in your article have been unfolding to my consciousness during the last year, and through Science and suffering I have seen that we must not clothe idea with the flesh, must not personalize Life, or Truth, or Love, or good,—that these are free forever from mortal touch; that the only thing that we have a right to worship is God and His idea; that all that causes suffering is a clinging to the material, the personal sense of things. Adherence to Principle brings only joy and peace. Truth is the only attraction.

Only this year, one of your first students, Mrs. Burchard, said to me in Boston, "In an early day Mrs. Eddy called corporeal sense personal love, and we would do well to-day to handle it as such." The right idea of Love is the Saviour, and I am trying to center thought upon Principle and not personality.

I thank you for this article, it will help us to push onward and upward. Fidelity to Truth will keep us from sinking Principle in personality and leave you the freedom you so richly deserve and which is your divine inheritance.

Yours sincerely,

Kate Morey.

Portland, Ore.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Dearest Leader:—I desire to thank you from the depths of my heart for this last deeply significant message on "Personal Contagion." How good that you were led of God to give it to us, and may I be humble and obedient enough to see wherein its call bids me higher rise, even out of all material, personal selfhood into the glory of the one true God.

In loving, tender gratitude, yours, striving for diviner attainments. (Mrs.) Mary W. Weldon.

Testimonies of Healing.

A strong desire to let my fellow-men know what Christian Science has done for me lately, prompts me to write my testimony. Human pen would vainly try to express part of what a sin-freed conscience and a heart filled with gratitude would love to tell; but as I recount the blessings that have come to me and mine during the last four years of life illumined by the teachings of Christian Science, thought quietly goes back to the fruitful hours when I first read that wonderful book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. My wife had just been healed of a sickness that was taking her to an untimely grave. I myself was slowly but surely being led into unbearable bondage to a mentality growing more morbid day by day. The perusal of a few pages of Science and Health, however, brought to me the clear conviction that its teachings, if faithfully followed, would bring salvation in direct contradiction to material theories which could promise no release under such conditions. I accordingly set about to study and ponder in the light of this new revelation. The task was not an easy one. Many and bitter were the struggles that I passed through during the first year, until pride, prejudice, and stubbornness yielded to divine intelligence.

Then followed a peaceful time, when I was privileged to see many a case of sickness and disease healed by the power of divine Mind, as demonstrated in Christian Science, and when I had the misfortune to fall with a defective scaffolding, wrenching my ankle and breaking both bones of the leg, the easiest and most natural thing for me to do was to trust entirely to God. After the carpenters had carried me upstairs and laid me upon my bed, I asked to be left alone. They wanted to know what doctor to send for, as this had happened some six miles out in the country. I told them quietly, that for four years God had been our great Physician, and that I had no doubt but He was both able and willing to help me now. Their consternation at this was great, as they had convinced themselves that the leg was broken. I felt, however, absolutely no need to have the bones set by the usual material means. I knew that God, divine Mind, could do it, and I knew that all I had to do was to trust Him understandingly; but as I did not seem able to realize the truth for myself, on account of the intense pain, I had my wife telephone to a faithful follower of Christian Science in a city two hundred miles away.

The third day I could write to my practitioner that the bones of the leg had healed, and by the fifth day I could lie on my side without any fear of the consequences. The ninth day I walked a few steps, and the twelfth day I dressed, came downstairs, and have been able to walk all that I needed to ever since. This happened about eight weeks ago, and the other day my duties made it necessary for me to climb a mountain so steep that I had to lead the horse, but I was equal to the task.

I wish I were able to express my gratitude to Mrs. Eddy, the Discoverer and Founder of Christian Science, for being so consecrated to the call of God as to enable us again to touch the hem of Christ's garment. During the time of taking treatments these words of Jesus came to me imperatively, lovingly: "Arise and walk!" After the healing was perfected his admonition to his disciples rang out to me also: "Notwithstanding in this rejoice not, that the spirits are subject unto you; but rather rejoice, because your names are written in heaven." The physical healing alone could never awake in us this sense of joy, gratitude, and endeavor to consecrate our lives anew to the services of a divine theology. The true import of the physical healing is revealed to us in the fact that we have found a religion thorough enough to pierce "even to the dividing asunder of soul and spirit, and of the joints and marrow," and which is "a discerner of the thoughts and intents of the heart;"

Digitized by Google

practical enough to heal both mind and body; ideal enough to satisfy the loftiest aspirations of man.

MORRIS WEBER, Roseburg, Ore.

My mother was healed by Christian Science when I was three years old and I can say with thankfulness that I have never been ill in bed a whole day in my life. A great many ailments have come up, all of which have been met with Christian Science. In school work, in the home, and in all my experience, Christian Science has been relied upon for help and has never failed. The physical healing is but the smallest blessing which I have received. It is the moral help for which I am most grateful,—the knowledge that every error of thought, such as anger or fear, need not be endured, but can be destroyed through the understanding of God which Christian Science gives. This is a constant source of gratitude. I hope that by practising this truth which Mrs. Eddy has brought to us, I can show to some extent my gratitude for the great work she is doing for the world.

MARGO KOHN, Poughkeepsie, N. Y.

It is about four years since I became interested in Christian Science, through the healing of our little boy. He had been sick from the time he was three months old. We had the best doctors and specialists that could be had in Chicago. After he had been under treatment for about eight months without receiving any benefit, they suggested that the only thing left to do was to change climate, as they had done all they could. We then started to travel from one place to another, without any benefit whatever. When we came to Portland we had to stay, as our means were about gone, and my husband had to look for work, and the baby was getting worse from day to day, so that I did not know what to do any more. A neighbor came in to see me and asked what I was doing for the baby. I told her that we had done everything we could; then she asked if I would like to try Christian Science, and told me something about it. I said she surely did not think Christian Science could heal him when the very best doctors had failed to do so. She replied that many were being healed, and that we might try it, and then she left me. In thinking over what she had said to me, I felt that it surely would not hurt to try it.

I took my baby at once to a practitioner. He was then seventeen months old and weighed nine pounds. He could not sit up or even turn over. In this condition I took him for Christian Science treatment, and in a week he was entirely well, could eat everything, and gained rapidly. Within two months he could walk and was as strong as any child of his age. He has not taken any medicine since, and is as healthy as any child can be.

Christian Science has been our only remedy since that time. It has brought health and happiness to our home. Words cannot express our gratitude to God, and to our beloved Leader, Mrs. Eddy. My daily prayer is to know more of this truth and to live it.

MRS. AMELIA SAUNDERS, Portland, Ore.

In January, 1892, when living in Rochester, Vermont, I was taken with chills and fever, resulting in grip with many complications, one of which was pneumonia. A physician was called, as my people knew very little of Christian Science and supposed it could only be used in chronic cases. He was very kind in every respect, and with the counsel of other physicians did all that he could to relieve me, but instead of gaining I seemed to grow worse. I was told that ulcers had formed in my lungs, which caused much coughing; and my eyes were so seriously affected that I could not bear even a ray of light. I continued in this condition for some time, growing weaker and more emaciated day by day, until I could not move from one side of the bed to the other.

Finally a Christian Science practitioner was called. Like many others, I had previously ridiculed Science, not having an inkling of its worth, but at that time I was glad to accept it. I never should have accepted Christian Science if I had not been obliged to do so, although, as I afterwards learned, it satisfactorily answers the question which was oftenest in my thought and to which for many months I had sought an answer; namely, What and where is God? The practitioner came to me with such a loving and health-giving thought that I felt as though I wanted to walk in the footsteps indicated, though the way looked dark. My eyes were instantly healed, but the rest of the demonstration was slow, giving me an opportunity for much study. When I was able to walk down a gentle slope to the farm shop and weigh myself, I found that I weighed seventy-nine pounds, which was thirty-six pounds less than my usual weight. By the first of September I was able to return to my work as a student at the normal school, although it was winter before I felt that I was entirely healed. I was indeed grateful for the physical healing, but more grateful for the understanding of God and His Word which came to me through Christian Science.

ANNIE L. MESSER, Randolph, Vt.

With a heart overflowing with gratitude to God, to the Master, and to our beloved Leader, Mrs. Eddy, for her untiring efforts in behalf of "poor tired humanity," I send this testimony, trusting that it may help some one else who is trying to work out of *materia medica* and the old beliefs of theology. When Christian Science came to me, I was, indeed, without hope and without God in the world. For eight years I had been a trained nurse. Three years of this time was spent in miserable health, the result of blood-poison and its effects, following vaccination. Often my own suffering seemed greater than that of my patients. Added to this I had been preparing to enter a deaconess order, thence to become a missionary nurse. What should have been progress in the spiritual life was little more than a series of disappointments to me.

After a hard experience in a medical college hospital, sick physically and mentally, I decided that it was out of the question to go into the mission field, and I expressed myself to that effect to the superiors of the order. A long conversation followed, which resulted in leaving me in "outer darkness." I thought God might be somewhere, but where was I to find Him? In this condition I went to the home of a classmate, who was a physician's wife. As I entered she exclaimed, "You look as though you did not have a friend in the world." I answered, "I have none." She responded,—"Do you know what you need? A big dose of Christian Science." I told her I would take or do anything that would help me out of my condition. I had always bitterly opposed the Science, but that was forgotten. I began treatment and in two weeks was a changed woman. I am sure that my practitioner had a storehouse full of patience, for I was full of beliefs of scholastic theology, *materia medica,* and self-will. As soon, however, as I began to realize what Christian Science was doing, I wished to drop *materia medica* at once, but my belief in theology, unsatisfactory as it had been, was not to be given up so easily, and it was last to yield.

During the following five months I took care of an infant, which gave me ample time to read. I read Science and Health many times, and with the exception of two chapters, it seemed Greek to me, but I would argue that the Science had healed me, hence it must be the truth, and that some day I would see it. At the end of this time I was obliged to go to another State and care for two relatives who were ill. After a number of weeks it seemed necessary to take one of my patients to a small hospital in a distant

Digitized by Google

town. I went as her nurse, but had not been there two days when the nurse in charge of the institution had to leave on account of sickness, and with no other available help it seemed my duty to shoulder the responsibility. I agreed to remain two months, but months lengthened into years, and at the beginning of the third year I was still superintendent of the hospital, but at heart a Christian Scientist, knowing that when the time came for me to leave, my way would be made clear,—and it was. This proved to me that we cannot bound away from the place where Science finds us, but must work out and upward.

During the second month, when I had gotten deep into surgery again, I found myself, at the close of a hard day, disheartened, discouraged, discontented. Circumstances, seemingly, had forced me into this position. I could not leave without doing that which would wrong others, but was it not taking my Science away from me? In this mood I picked up "Miscellaneous Writings" and read on page 19 these words, "He who has named the name of Christ, who has virtually accepted the divine claims of Truth and Love in Divine Science, is daily departing from evil; and all the wicked endeavors of suppositional demons can never change the current of that life from steadfastly flowing on to God, its divine Source." Through all the dark days which followed, this thought never left me.

I seldom went to bed, no matter how late the hour, without reading at least a few lines from the Bible and Science and Health. If I could not help myself and came under a sense of sickness, I called for medical aid, but drugs brought me no relief, indeed if there was any seeming effect it was to make me more miserable; then I usually telegraphed to a practitioner for help, as I knew of no Scientist in the town. Twice I seemed completely worn out and left the hospital for several weeks, had Science treatment, and then went back to work. In talking with the practitioner one day, I mentioned the good which surgery seemed to be doing, and cited the case of a tumor being removed. She said, "Yes, they have taken it out of matter but not out of mortal mind." This, and the testimony of a gentleman who wrote, "I know that the word of God is sharper than any two-edged sword and can remove a tumor from my shoulder," settled the question of surgery for me. When sin, sickness, sorrow, death, and discord lifted their voices I knew that it was only a material dream, unreal, and that some day all would see its unreality. I also saw here, as I could have seen nowhere else, what a hopeless mental condition patients are in when material remedies fail. How much the belief has to do with sickness was proven to me many times when I have seen patients put to sleep with hypodermics of water and powder of sugar of milk.

The following demonstration will show how divine Love often meets human needs. One evening I was dressed to go out, and without knowing why I walked into the ward to the bed of a patient, and found her in a critical condition from what appeared hemorrhage from a wound which I could not touch. I telephoned for the physicians, but they could not be found; then fear took possession of me, but I remained with the patient, and it occurred to me immediately that my fear was not helping her, so I began to declare that her life did not consist in the blood which was coursing through her veins and arteries, that Life is God. I then tried to realize the omnipresence of God. When the doctor came and removed the dressing he turned to me and said, "Nurse, this stopped bleeding before we got here." One evening the same week the doctor insisted upon sending for this patient's children, as he thought she would die before morning, but I could not see the material conditions as he did, and was sure she would live. The doctor acknowledged the next day that it was God's power which was at work. My prayers were known to no one but God and myself, and I could never doubt His omnipotence after that.

In the truth we gain a freedom far beyond anything that mortals can think or express, and this too was proven to me. When the thought would come, "You are wrong in leaving your church," a still, small voice would say,—"God is leading and guiding. He will make the way so plain that you will see it." When I saw that material sense was keeping me back, I listened to it no more, and became as a little child. I accepted and used as much of the truth as I saw and understood, knowing that more would be revealed. Then, indeed, Truth became the way.

While I am grateful for the physical healing, words fail to express what it means to be lifted out of spiritual darkness into the sunlight of Life, Truth, and Love and to know the peace which passeth understanding.

IDA G. BEAUFORD, Red Wing, Minn.

While playing on the ice, my little girl, thirteen years old, slipped and fell, spraining her ankle very badly. Her younger sister pulled her to the house on a sleigh, and on removing the shoe, the foot was found to be badly swollen and discolored. Treatment in Christian Science was given, which quieted the fear and eased the pain. As myself and my two little ones are the only Scientists in Lehi, there was much antagonism to meet, so help was sent for. In three days the child was walking about the house; the fifth, she walked down town and back, eight blocks. The foot was normal and she was healed. Colds, sore throat, toothache, and all other ailments have been healed through the understanding of Christian Science. It is our refuge in every trouble. Our lives and our home would indeed be empty without it. We are grateful to God, and to our dear Leader.—MARY M. ROCKWELL, Lehi, Utah.

I am very grateful for Christian Science. It has revealed to me a perfect, unchanging God, an ever-present Love, so different from the old teaching, which I could never accept though all the time longing for a God I could know and serve. This prayer was answered in Christian Science, and I do gratefully thank our dear Leader for her life of faithfulness to God, whereby she is enabled to be a channel for the glorious truth revealed in our text-book, "Science and Health with Key to the Scriptures." I know that our gratitude is best expressed in striving to attain to the same faithfulness.

Four and a half years ago I was suffering from internal catarrh. The attacks were very painful and were becoming chronic, and a great fear came that I could not survive another English winter, yet there was such a dread of death! I was healed instantaneously in Christian Science, without any treatment, from the reading of a *Sentinel*. The perfection of God, the love of God, came so clearly home to me, bringing such a sense of rest and peace—that at last I had found God—for previously I had become discouraged and weary. The orthodox teaching did not satisfy, there was so much that puzzled me, yet I was not encouraged to reason. It all seemed such a tangle, religion seemed just a bundle of human theories,—ever-changing,—but now through Christian Science we find we have a divine Principle—God, the same yesterday, to-day, and forever, even All, no matter what human belief may assert. I feel so thankful for the knowledge, through Christian Science, that good is impersonal—a truth Jesus ever pointed to. My one desire is faithfully to watch and pray, that I may serve the only true God.

LILIAN DOUDNEY, Southampton, England.

It is with the deepest sense of gratitude that I send my testimony of healing through Christian Science. As a child I was subject to long illnesses and to morbid reflec-

Digitized by Google

tion, and by the time I was eighteen my sincerest wish was that I might pass on from this world in which there seemed to be no place or sympathy for the invalid and heartsick. I did not give up and go to bed, but for every half hour's exercise I spent several hours resting. After nearly a year's excruciating material treatment, which brought on nervous prostration, I gave up all hope of recovery. The memory of that dreadful time is so removed by the sense of Truth and Love that I now but faintly recall it. It was one of my early demonstrations in Science, not to be like Lot's wife, forever looking backward, instead of progressing toward better conditions. All I know is that after two years of almost constant suffering, with a very few treatments in Christian Science I was taken to the point where I could work out my own salvation. I returned to the school which I had been obliged to leave in the middle of my senior year, and the memory of that winter, with the victories won, and the summer following, which brought back my rightful youth, will ever remain the happiest of my life. There have been struggles since, mostly mental, and I have learned that uniform progress can be made only by daily study and demonstration. Through these I have been relieved not only of physical ailments but of worry, fretfulness, nervousness, hate, and other errors, and it is for deliverance from these, and for spiritual growth and mental development, that I am most truly grateful. I have learned that in seeking the kingdom of God these things are added.

To our Leader, who has unselfishly suffered the hardships of the pioneer in opening the way for her followers to realize the great blessings of a demonstrable knowledge of Christ Jesus' teachings, all honor is due, and I am glad that this day the prophecy of Isaiah is fulfilled, "And mine elect shall long enjoy the work of their hands."

MARIAN V. LOUD, Au Sable, Mich.

It is with a grateful heart that I send this testimony, hoping it may be the means of helping others who are searching for the truth. It was through the reading of a testimony in the *Sentinel* that I was healed of consumption. Prior to this I had gone to a practitioner to talk with her about a relative who was ill. This lady was very kind to me, and when I was leaving she handed me several copies of the *Sentinel*. Through her advice I purchased a copy of Science and Health, and next day I went to visit the relative, taking this book to her. While there I had a severe attack of the grip, which seemed to settle on my lungs, and quick consumption followed. This was supposedly hereditary, as several in my mother's family had been victims of this dread disease. I was just able to get back home, and although I thought of Christian Science, yet I decided to take medicine, and that after I recovered I would investigate Christian Science. I had the *Sentinels* which had been given me brought to my bed and I read them daily, not with any thought that I would be benefited, but I wanted to see what Christian Science was doing for others. I was especially interested in the testimonies of healing, and after I had been reading these for several days I saw that I had not acknowledged God as all-power, or I would not have turned to medicine for help. This started me to thinking, and I saw that I had many wrong beliefs, and how glad I was to be able to correct each one as I saw the truth. While I was working on this line I awoke one morning with the thought that I might not be alive when night came, and yet I saw that if I could only touch the hem of Christ's garment I, too, would be healed. That day, while reading a testimony I came to these words, "I gave all up for Christ." I then saw that this was what I should do, and I asked myself the question,—Am I willing to trust all to God? I found that I was willing, and then and there every trace of the disease disappeared. I was healed.

My husband did not want me to try Christian Science, and he asked me to wait one week, to which I consented, but would not take any more medicine. I had forgotten all about my fear of that morning, and the thought that delays were dangerous did not present itself to me. I had been lying awake most of the night coughing, but that night I went to sleep. It was New Year's eve. I awoke at twelve, and the bells were ringing in the new year. I thought I had never heard anything so beautiful before, and with this thought I fell asleep, and woke in the morning to find I had not moved in the night or coughed once. In the morning I looked up my Bible and read with wonder. It was a new book to me! The following week I read it almost constantly, and when the week was up I said, Now I can have Science treatment. Then I asked myself, What am I going to ask the practitioner to do for me? I found that I was not conscious of a single ailment, mental or physical. Then it was that I knew God had healed me and that this healing had come to me through the teaching of Christian Science. With this healing other chronic diseases also disappeared. One year and a half later I gave birth to a son, and Science took care of us. This birth was painless; baby is an unusually healthy one and is a joy in our home.

I am grateful to God, and to Mrs. Eddy, who is doing so much for suffering humanity.

MARY E. KEENAN, Chicago, Ill.

I did not become interested in Christian Science through any physical healing, but about four years ago I heard of the Wednesday evening meetings, and was induced to attend one of them. I immediately became interested, for previous to this time religion had very little to commend it to me. I was brought up in the Jewish faith, but witnessing the little interest that the Jews paid to their Sabbath, I was led to believe that it was only necessary to go to the temple about twice a year and feel that I had done my duty. The earnest attention manifested, and the class of people I met at that first meeting in one of the Christian Science churches of Chicago, interested me deeply, and I am happy to say the teachings of the New Testament, as well as of the Old, and Mrs. Eddy's Science and Health, have now become essential to my life. When great sorrow came to me, it was the comfort I found in reading these books that helped me through my grief, and with the understanding thus gained I have been able to overcome a severe attack of rheumatism, and also a terrible burn on my shoulder, which was healed in a few days.

Christian Science has also changed my disposition. I now have a greater and deeper love for all my fellowbeings, and for these and many other things I am most thankful to God, also that He has given to our dear Leader the wisdom to teach us this saving truth.

LEON A. JACOBS, Chicago, Ill.

[Written for the *Sentinel*.]

The Little Scientist.

GERTRUDE RING.

THERE are no eyes more beautiful to me
Than those that look from out her dear, round face.
They are so steadfast in their gaze, so clear,
They do not see alone, they speak, they hear,
Laugh like bright water in some pebbly place
And instantly seem deeper than the sea.

She leans so trustingly on Love's wise power,
Accepts God's promises with glad delight—
I am rebuked before the childish eyes,
They shine with so much truth, they are so wise,
So patiently they seek to learn the right,
So eloquently speak of Life's rich dower.

From our Exchanges.

It is quite true that we have become, as a people, too reckless in the pursuit of wealth, that the nation "needs a new baptism of the old virtue of honesty." But it is not recklessness or dishonesty alone; it is the love of money and power that has undermined the character of a nation hypnotized by material prosperity. Mere honesty, fair dealing between man and man, the law might conceivably secure, and yet our national life be as materialistic as before. "The one solvent of all these evils is justice, absolute justice," says President Schurman. The Christian cannot be content with that answer. For him the one solvent is the gospel of brotherly love. The Church, guided by the revelation of divine Fatherhood and inspired by the conception of human brotherhood, has before it the task which it had in the first century and will have to the last, that of redeeming society and saving the world.—*The Churchman.*

The churches have sometimes been narrow. They have lacked real sympathy with men. May it not be that any and all failures of the churches are due to this lack of vital sympathy? Will not the genuine spirit of Christ in men and women infallibly win other men and women? It is worth a thought, at least. Concern for traditions and usages and old forms of words and antiquated opinions on theological subjects is idolatry the moment that it stifles that warmth of human affection which is the first element in winning souls. Love has the right of way in the Christian scheme. Conformity to the past is good, but Love's first commandment is, "Thou shalt have no other gods before me."—*Western Christian Advocate.*

Every Christian becomes a minister by virtue of his relation to Jesus Christ. If that relation is vital, the aims and purposes of Christ pass over into his life. The expression of the Christian purpose is ministry. There are no conditions that nullify the obligation, because there are none that make helpfulness impossible. In the measure that we recognize this obligation and discharge it does the kingdom of God advance. Others may have their larger ministry, but that does not render ours any less real or important.—*The Standard.*

While we see the pattern in the mount, we must go down into the valley to make the things; the clay and the potters are down below. We have to carry our pattern-book down and set to work with it there before us. To see the pattern we must climb, to copy it we must descend; but if we copy well, while in the valley, what we saw in the mount, the next time we go back we will see more.

PRESIDENT ENGLISH, Moores Hill College.
Western Christian Advocate.

The moral order of the world and the world's greatest literature alike reveal to humanity in the large the inevitability of judgment for evil done here, while in the flesh. This inexorable decree may fall while man is in this world; it may be postponed to another stage of the soul's persistence; but come it must. This judgment has its divine side, and its human; and the human is none the less certain and inevitable than the divine.—*The Congregationalist.*

It [the great awakening] is not the birth of a new religion, destined to harden into formalism and intolerance. It is not a mere revival of learning; and least of all is it a mere emotional upheaval. It is a vast grappling with great problems by the human understanding, and a profound conviction of the fundamental necessity of dealing with them in a spirit of righteousness, no less than with a clear intelligence.—*The Independent.*

It is not what we receive, but how we act from what we receive that determines our character. All prayer is worthless, but so far as it is an effort to cease doing the wrong and to do the right, or obey the Divine impulses which we never fail to receive from the eternally omnipresent influx of Love itself to do right. E. A. BEAMAN.
New Church Messenger.

THE CHRISTIAN SCIENCE TEXT-BOOK.—"Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing all the By-laws to date of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CARDS IN THE GERMAN PERIODICAL.—Application blanks will be supplied by The Christian Science Publishing Society to practitioners who wish their names and addresses inserted in the advertising columns of *Der Herold der Christian Science.* These applications should be properly endorsed and forwarded to the Society. The rate for advertisement will be $2.00 for the first line, and $1.00 for each additional line. It is desirable that those who offer their names in this way should be able to communicate with patients and inquirers who speak the German language only.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with The Mother Church and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.
It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. One hundred and three pages. Illustrated. One copy, $1.50; six copies, $7.00; twelve copies, $12.00.

THE CHRISTIAN SCIENCE CHURCH. Its Organization and Polity. By CAROL NORTON. Single copy, 20 cents; twelve copies to one address, $1.75.

CHRISTIAN SCIENCE AND LEGISLATION. A pamphlet of one hundred and twelve pages, containing articles by JUDGE CLIFFORD P. SMITH, EDWARD A. KIMBALL, and JUDGE SEPTIMUS J. HANNA, together with testimonies of healing, editorial comments, etc. Single copies, 10 cents; twelve copies to one address, $1.00; twenty-five copies, $1.85; fifty copies, $3.50.

THE REVELATION OF CHRISTIANUS, and twenty other poems, by the EARL OF DUNMORE. Dedicated by special permission to Mary Baker Eddy. Sixty-two pages. Bound in white ribbed cloth, gilt top, lettered in gold on back and sides. Pages red ruled and red initials. One copy, $1.25; six copies to one address, $6.50; twelve copies to one address, $12.00.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, prepaid, $1.15 each; per dozen, $9.00; per half dozen, $5.00. Half Morocco, per copy, prepaid, $1.40 each; per dozen, $12.00; per half dozen, $6.50. Full Morocco, $2.50 each. Levant, $3.50 each.

COMMUNION HYMN. "Saw ye my Saviour?" The poem by MARY BAKER G. EDDY, the music by WILLIAM LYMAN JOHNSON. Published in two keys, G and E, for high and low voice. Price 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER. A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, $1.00 per copy; $9.00 per dozen.

CHRIST MY REFUGE. A hymn for voice and piano, with suggestions for organ registration. The poem by MARY BAKER G. EDDY, the music by WILLIAM LYMAN JOHNSON. Arrangement for high and low voice in same copy. Price, 75 cents; $7.00 per dozen.

LIST OF MEMBERS OF THE MOTHER CHURCH. Single copy, 50 cents; six copies to one address, $2.50; twelve copies to one address, $4.50.

REMITTANCES: Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago, or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

We ask that no money remittances whatever be made to the Editor or Editorial Department. Address all orders for above literature to

Works on Christian Science

Written by MARY BAKER G. EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Enlarged and Revised, 1902. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid $3 18

Two to twelve books (cloth only) to one address, each, prepaid 3 00
Twelve or more books to one address, each, prepaid 2 75

Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid 4 00
Twelve or more to one address, each, prepaid . . . 3 75

Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid . . 5 00
Twelve or more to one address, each, prepaid . . . 4 75

Levant, divinity circuit, leather-lined, round corners, gilt edges, silk-sewed, heavy Oxford India Bible Paper, wide margins, each, prepaid 6 00
Twelve or more to one address, each, prepaid . . . 5 75

Orders for Science and Health, in lots of twelve or more to one address, may include any or all the different styles of binding.

A COMPLETE CONCORDANCE to Science and Health with Key to the Scriptures, 595 pp., 10 x 7. Bound in cloth, marbled edges. Price, single copy, prepaid . . $5 00
Twelve or more copies to one address, each . . . 4 50

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth), each, prepaid 2 25
Twelve or more books to one address, each, prepaid 2 00

Morocco, limp, round corners, gilt edges, convenient for pocket, each, prepaid 4 00
Twelve or more to one address, each, prepaid . . . 3 75

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5 00
Twelve or more to one address, each, prepaid . . . 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* **PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

National.

The original plans of the famous old Constitution, for the restoration of which Congress at the recent session appropriated $100,000, have been found at Salem in the East India Marine Museum. The section of the naval appropriation bill authorizing the work directed that the ship should be fitted up as nearly as possible in accordance with its original construction. The Bureau of Construction and Repair has been having some difficulty in carrying out this provision, owing to the fact that the original plans of the ship could not be found.

In 1835 the Six Nations tribe of Indians of New York State, by the Buffalo Creek treaty, were to migrate from New York to Kansas, where they were to receive new lands. Some of them went. Those who remained at home asked for cash instead of the land. The Government refused to make the exchange and the Indians brought suit. Finally they have been given a verdict. The amount approximates $2,000,000. This is to be divided among the 9,627 Indians.

Forty men are working day and night to get the airship of the Wellman and Chicago *Record-Herald* expedition started toward the North Pole the latter part of August. There have been many visitors to the headquarters of the expedition at Spitzbergen, including the Prince of Monaco on his yacht Princess Alice and the passengers of two tourists' steamers.

The three members composing the relief commission which has had the relief work in charge in San Francisco, have resigned. The relief work will be carried on by subcommittees of the rehabilitation committee, to which has been assigned all the powers of an executive committee.

According to the report of the New Hampshire State Board of Bank Commissioners the aggregate resources of savings banks June 30 were $87,638,939.71. The number of depositors increased 10,000 to 174,476, and their deposit increased $5,656,674.54.

Foreign.

The Education Bill, which was introduced in the English House of Commons by the President of the Board of Education on April 9, passed its third reading by a majority of 192, and was sent to the House of Lords. The bill embodies the contest in England between the Non-conformist element and the Church of England, the former being in favor of educational freedom in religious matters provided in the bill. The main features of the bill are as follows: From Jan. 1, 1907, all schools maintained by the local education authority must be "provided" schools. The local authority has power to purchase or lease the existing schools; no public money is to be used in denominational instruction; teachers will be appointed by the local authorities without any tests; all schools receiving "rates" will give the same religious education; religious instruction may be taught in these schools two mornings a week by arrangement with the local authority; attendance will not be compulsory during religious instruction, and religious instruction will not be given by the ordinary staff. In the House of Lords, on Aug 2, Lord Crewe moved the second reading of the Education Bill. The attendance was large, not less than eighteen bishops being present. In the course of the debate which followed it was clearly indicated that the House had no intention of rejecting the bill.

In recognition of the friendly interest which the United States has in all of her sister republics of Central and South America, the President of Brazil has announced, through the Brazilian delegates to the Pan-American Conference, that hereafter the Pavilion St. Louis, in which the sessions of the Congress are being held, will be known as the "Monroe Palace."

The Bann Rowing Club of Coleraine, Ireland, has invited the Harvard crew, which is to meet Cambridge on the Thames, to race them on the Bann River on any date convenient to the visitors, subsequent to the Harvard-Cambridge contest. The Bann senior eight holds an unbroken record for the present season, having defeated all the principal Irish clubs.

The last hours of Secretary Root's stay in Rio Janeiro was marked by several incidents of interest. In honor of the presence of the Secretary of State the President of Brazil designated Aug. 2 as a holiday and all business was suspended. Mr. Root at noon visited both houses of Congress, and replied to the address of welcome by the Secretary of the Senate.

The officers of the London and Southwestern Railway admit that excessive speed was the cause of the disaster to the steamer express from Plymouth at Salisbury, July 1, resulting in the loss of over a score of lives. Up to the time of the Salisbury disaster the company had not lost a passenger since Jan. 1, 1889.

The Chancellorie of the French Legion of Honor has again rejected the nomination of Sarah Bernhardt for the Cross of the Legion, despite the formal insistence of M. Briana, Minister of Public Instruction and Worship.

Industrial and Commercial.

For some time the Kaiser Wilhelm II., with a speed of 23½ knots, has held the ocean record. The Lusitania and the Mauritania, the two new Cunarders, will have a speed of 25 knots—1½ knots an hour more than the fastest of the German fleet. To gain this little increase in speed, 1½ knots an hour, requires a sixty per cent increase in engine power. The indicated horse-power of the German flyer is 38,000; that of the Lusitania will be between 68,000 and 70,000. Her boilers will use up coal at the rate of 1,000 tons every 24 hours. She will have four screws propelled by turbine engines, which will ensure an entire freedom from vibration. She is 700 feet in length over all, 88 feet broad, and 60 feet 6 inches moulded depth—84 feet longer, 16 feet greater in beam, and 8 feet deeper, with a displacement of 40,000 tons—as against the German record-breaker's 36,000 tons. The bridge will be about 110 feet above the line of the keel of the vessel. The tip of her four monster stacks is 154 feet above the bottom plates. She will be lighted by 4,500 electric lights; will carry 550 first-class, 500 second-class, and 1,300 steerage passengers, with a crew all told of some 800 hands. Each of the floating palaces will cost, when completed, $6,500,000. The British Government lends the company $12,500,000 to defray the cost of construction, at 2½ per cent interest, and guarantees a subsidy of $750,000 a year for a score of years. The ships have been constructed under admiralty supervision with a special view to their transformation into cruisers in time of war, provision being made for armor-plating them and mounting heavy guns.

The Farmers' Co-operative Union, which has a membership of more than two hundred thousand farmers in Texas, is earnestly at work in its effort to control the cotton market of this country. In addition to its Texas membership the union has many thousand members in all of the other cotton-growing States of the South. The chief purpose of the present movement is to bring to the cotton producer the direct benefit of the increased prices of the staple. More than thirty Farmers' Union warehouse companies have been chartered by the Secretary of State during the last few weeks, and more than one hundred additional companies of the same character are in process of organization in different cotton centres of the State. A school has been opened at Dallas by the Farmers' Union, at which farmers are educated in sampling, classing, and grading cotton. Several large classes of farmers have already been graduated.

The Union Pacific in March last year completed its model Motor Car No. 1, driven by power generated in a gasoline motor. The following month Motor Car No. 2 was put in service. It is built on the plan of the yacht, with port-holes for windows and tapering, steel-covered body to decrease the wind friction. Car No. 7 has been still further improved. All these cars are in actual service. One is used in Kansas between Leavenworth and Lawrence, one between Houston and Galveston, Texas; one on the Oregon Short Line; one in California out of Los Angeles. The weight of the car is about twenty-eight tons. Each car is driven by a one-hundred horse-power, six-cylinder gasoline engine. Speed of better than a mile a minute has been made on several trial runs, and forty miles an hour is a usual performance. Another style of motor car, designed for western conditions, is the electric motor car, a combination of the gasoline engine, a dynamo, and a storage battery.

Government scientists say that indisputable evidence has just been found, showing that centuries ago the Pacific Ocean extended as far east as Colorado. This discovery has been made by the engineers now engaged in the work of building the Gunnison tunnel in Colorado, which is being constructed by the United States Reclamation Service. This tunnel, now more than a mile long, has been driven through a hard black shale. The heading has now advanced to a point where it is passing through a great accumulation of sea shells. Thousands upon thousands of them, imbedded in the shale, are being dug out, some of them of gigantic size, upward of three feet or even more in diameter.

The establishment of a line of steamers between Charleston and European ports is part of the plans of State Immigration Commissioner Watson of South Carolina, in his efforts to secure for South Carolina a desirable class of immigrants. He sails for Europe on Aug. 11, and will visit several immigration agencies and personally urge several of the big steamship companies to make Charleston a port of call. He is certain that the steerage class for passengers and the freight business will justify later on a direct line of steamers.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

Did Jesus Teach a Practical Religion?

SAMUEL GREENWOOD.

THE question whether Jesus' teachings are practicable at the present time should be decided on the basis of their veracity. Are they true? If they are, and if their practice would benefit mankind, there can be no conceivable reason why they should not always be practised. If they are not true, they should not be preached from our pulpits, nor taught in our Sunday Schools, nor sent to the heathen as the revealed truth of God. That they were the utterances of the best man who was ever on earth, the man who did the most good, who so perfectly understood God to be the Life of man as to overcome death for himself and others, should have more weight on the side of their truthfulness than anything that can be urged against them by others more material and less wise and good than he.

A serious responsibility is assumed by those who pronounce impracticable—that is unprovable—a large part of our Master's teachings. Who is there wise and good enough to speak for God, and declare authoritatively what part of Christianity He has dispensed with? Who feels that he sufficiently understands the Divine purpose to declare, in the absence of Scriptural warrant, that Jesus' life and teachings no longer interpret God's will concerning man, nor point the way in which mortals must go to be saved? The statement that the healing of the sick and the final overcoming of death no longer belong to Christianity, is a tremendous one to make, on no better basis than human opinion, and should not be accepted without authority which is equal to that of the Founder of Christianity, who declared these to be among the privileges of his faithful followers. The belief that Jesus' teachings and example are not practicable beyond the point decided by mortal man has kept Christianity for sixteen hundred years out of its rightful place and power.

It is evident that whatever is true is capable of proof, and open to the practice of all who understand it; while that which has not been proved or practised is wholly problematic. Any teaching that is partly true and partly false must either throw off its error or be finally engulfed in it. Jesus gave ample evidence that his entire teaching can be proved in this present world. The burden of initial demonstration therefore does not rest with us, but the repetition thereof is logically our work if we accept the statements as already proved. Resting satisfied with Jesus' proofs of the Christ-power, abiding content in the belief of his goodness and self-sacrifice, as Christians too generally do, is to be as the barren tree condemned by the Master, in a condition which affords neither sustenance nor shelter to those in need.

One cannot conceive that truth is less practicable with the student than with the teacher, except in that he understands less. Although centuries have passed since the great Teacher personally taught, we may become students of his teaching as truly as if we had lived in his own time. The truths he enunciated concerning the Father and the Son were the basis upon which he healed the sick and raised the dead; and these truths are eternal if true at all. To become students of an impracticable teaching, or of a truth that cannot be demonstrated, would be an anomaly.

The spiritual truths which are the foundation of Christianity have no relationship with any phase of materialism, and cannot be circumscribed by its deductions. The religion of Jesus leads mortals towards spirituality, and to confidence in God's omnipotence, but takes no account of medical decrees regarding the life or health of man. If the supposed power of material law and the influence of evil have become too strong for Christianity any longer to cope with them, then is the world in a terrible plight, for it has nothing better to which it may look for its salvation. The outlook were indeed appalling if evil and matter are gaining the ascendency over men, to the defeat of Christian effort; but human experience furnishes nothing adequate for such an assumption. On the other hand, in this issue of the *Christian Science Sentinel* will be found the narration of experiences which verify the plea of Christian Science; namely, that the Christ-truth is available and practicable, so far as it is understood, in all times of human need. The success of the Christian Science movement, whose growth has been wholly the result of its healing work, is surely arousing the world's attention to the possibility and also to the duty of practising Christianity in healing the sick as well as reforming the sinful. Abundant evidence has been accumulated by Christian Scientists to disprove all that has been or can be said in support of the belief that the healing of disease is no longer requisite in Christian practice. In this great work, in which they and so many thousands have been blessed, they have been students of the scientific interpretation of Jesus' teachings as presented by Mrs. Eddy in Science and Health; and in their struggles Christward have been guided by her wise and loving leadership.

Had the Church continued faithful to the Christ-ideal it would be healing the sick to-day as it did in the early years of its history, instead of repudiating this sacred duty to the discredit of its high profession. This laxity on its part has made it easy for Christians to believe that it was no longer required of them, since they seemed unable to fulfil Jesus' command. If through its Christian ministrations this feature of its work had become unnecessary, if mankind had been lifted beyond their need of healing, then both the Church and the world might well be congratulated that the kingdom of heaven had been brought so near to earth; but in view of the fact that humanity continues in the belief of suffering, sharp and cruel beyond expression, this attitude of the professed followers of the Great Physician is indescribably pathetic and pitiful.

The religion of the Master brings out the true relationship of man to God,—not as a thing of yesterday but as the eternal truth of being, and in the fulfilment of which Jesus said every man is his brother. The difference between his understanding of Truth and popular belief proves nothing but ignorance, lack of growth in spirituality, and consequent incapacity to follow his example more fully. To thoughtlessly condemn as impracticable what we do not understand nor try to prove, is dogmatic and illogical. Such a conclusion regarding the teachings of Jesus is positively ludicrous when one remembers what Jesus and his disciples did in support of these same teachings. Truth once

Copyright, 1906, by Mary Baker G. Eddy.

Digitized by Google

proved can never again be relegated to the problematic. That so many Christians to-day do not apply themselves to the practical demonstration of Christianity is their loss, and the world's, but is no evidence that what Jesus taught is not true, nor that his works cannot be repeated.

Our Leader's interpretation of Jesus' teachings as demonstrably true accords with his own estimate of them, a fact that should preserve Christian Science from the criticism and misjudgment of Christian press and pulpit. That Christianity, as Jesus taught and practised it, is absolutely true,—true in itself, without reference to any particular time, place, or person,—is the only foundation which we have for our hope of salvation. It is this truth which reveals the Christ to be ever-present and ever-available as the Saviour from evil; which made possible the discovery of Christian Science in fulfilment of the Master's prophecy of the coming of the Comforter, and which underlies the wonderful success of Christian Science in ministering to suffering mortals, in restoring the healing element to Christian practice; this it is which should forever silence every false and wicked word against her through whom God gave to humanity the priceless gift of Christian Science.

Life the Way.

ANNIE M. PAYNE.

THE expression, "God took him to himself," is generally used in reference to so-called death, that stage of human experience when mortal mind decides that the semi-religious, semi-material sense which men call a "soul" must part company from its supposed prison-house, the body, and seek another sphere, presumably within material space, wherein it can be "forever with the Lord."

The conclusion that death is real, that is, known to omnipotent God—yea, that it is His method of bringing man into nearer contact with himself—involves thought in many contradictions. In illustration let us look at the dictum accepted by enlightened modern theology, that "Heaven is a state and not a place." Here we have a thought which would land us at once in Christian Science, but for this older belief which maintains that spirit is imprisoned in matter from which it must be freed by death. It is surely obvious that if spirit resides in matter, or "soul" in "body," as it is commonly expressed, then spirit must be fitted for, and be cognizant of, material space relations; hence its heaven is not a state only but also a place, and hence also its consciousness or the atmosphere of its heaven is not a purely spiritual one.

Thanks be to Divine Love, that in this age and through Christian Science it may be known with absolute certainty that God takes us not to Himself through the removal of a fictitious self to another sphere, neither through the loss of any real substance, nor through the disuniting of aught which the Eternal has made one.

In Christian Science we learn that the embodiment of God's child can never decay. It can never pass from one material condition to another, for it is never subject to material conditions. Mortals must rise to see this, and seeing, gradually put away the myriad beliefs of mortality. Through Science the false consciousness called matter, and its self-styled ego, mortal mind, disappears.

But, it may be asked, how then does God take us to himself if not through death? How but through an enlarged and spiritualized sense of Life? Through obedience, patience, humility, purity, spiritual activity, the recognition of God's omnipresence—these are the avenues by which we approach the Divine consciousness and learn that we are not appointed unto death, but that our heavenly Father hath already taken us to himself.

Christian Science comes to every one whom material sense has seemingly so beclouded as to make him despondent of God's grace, telling him that the Father hath already taken him to himself through that broken and contrite heart which He doth not despise. It bids him awake, because it is his right, his heritage, to be forever at rest in God, in knowing that man is "made, not after the law of a carnal commandment, but after the power of an endless life."

Essentials and Non-essentials.

WILLARD S. MATTOX.

You cannot tell what mankind believe by what they say. Macaulay writes: "Man is so inconsistent a creature that it is impossible to reason from his belief to his conduct or from one part of his belief to another." Fortunately, we are not left entirely at the mercy of unreliable surface indications, otherwise we would never be able to estimate true worth, and character would be only what hypocrisy or fraud chose to expose to view. The mortal deceives himself most of all. He imposes upon himself more often than upon others. The average mortal shrinks from self-examination and imitates the silly bird which imagines itself safely hidden when its head is in the sand.

The inclination to substitute appearances for genuine worth is no less a temptation to the Christian Scientist than it is to others, but deception is practised with much less success in this field than in any other, for the one reason that Christian Science is a religion of doing, not of pretending. Here the individual is impartially estimated by results. "Every good tree bringeth forth good fruit." "A good tree cannot bring forth evil fruit." Now the fruits of Christian Science living are the destruction of the false belief of evil, the improvement of one's self, the revelation in consciousness of the perfect man. These are the essentials of Christian Science, the results for which we strive. By our success in this work we shall be judged, and not by what mortal mind would wish to present to the world in place of results.

Our text-book, Science and Health, clearly states our objects, motives, and aims; on page 450, Mrs. Eddy says, "The Christian Scientist has enlisted to lessen evil, disease, and death." That is the important thing to remember always. These are the essentials of Christian Science living, the vital part, without which all the outward show, the protestation, the wordy self-exploitation, are pitiable shams. Anything which would divert us from our real work, anything which would prevent us from healing the sick and reforming the sinner,—this is surely the obtrusion of evil.

From the beginning the Church of Christ has had but one business, and that was and is to do the work of its Founder. He commanded the members of his Church to do the work that he did,—to heal the sick, preach the gospel, cast out evils. These are the essentials of Christian profession and living. There are many non-essentials, and they have been so many that the Christian Church almost entirely lost sight of its real mission. It neglected the healing of the sick and the raising of the dead, in order to elaborate an intricate church organization. The time spent in dogmatizing, in arguing of worthless non-essentials, was all criminally stolen from the earnest effort to do the Master's bidding. Intellectualism, ceremony, material organization, these were the means by which error led the early Christians astray, and in the study of our Manual we see with what great wisdom and care our Leader has given the first place to essentials in the Church of Christ, Scientist.

Christian Science says that its purpose is to preach, insistently, a return to apostolic healing, a return to that primitive simplicity which was satisfied with being good and doing good. Most of us, it is true, are still "cumbered about much serving;" we are so unnecessarily "careful and troubled about many things," when all we need to know is just that "one thing is needful." To be like God, to strive to obey Christ's commands, will keep us fully occupied and we shall have no time for the non-essentials.

Digitized by Google

The essentials of Christian Science are quite simple, altogether beautiful, and very satisfying. If all pursued them with half the energy devoted to the study of the non-essentials, they would be much happier, much healthier. That there is one creator; that this creator is Spirit, Mind; that creation is spiritual; that this creator is God, good, and His creation good; that man is like God, like Mind, and consequently, not like matter, not like evil; that matter, sin, disease, death, are not God-made, but are false beliefs, temporal and passing, capable of destruction; that the one logical remedy for error is Truth,—these are some of the simplest statements of Christian Science. These are fundamentals. To study them, to understand even a little of their potency and grandeur, would keep us sensibly occupied, and on this basis alone we should be blessed with results which would speedily "lessen evil, disease, and death" (Science and Health, p. 450).

As a matter of fact, we do not begin to take in the magnitude of these basic statements. In spite of all our understanding we are tempted to allow ourselves to be distracted about the non-essentials. Instead of trying to be good, we are troubled over abstract questions, which, if they have any value at all, are only remotely connected with our salvation. We fret about the non-essentials and ask for a solution of problems which, at best, are not necessary at our present stage of growth, and because of this we neglect the really important work of overcoming a false belief about God, man, and the universe. To get rid of a tendency to hate, to overcome revenge and resentment,—this is much more scientific than to weary ourselves with a query as to the origin of evil. To recognize and begin to destroy a false sense of disposition or temperament is much more like obedience to Christ than to be "careful and troubled about many things." The non-essentials absorb time, and that which is worth while is lost sight of. Are we healing the sick, do we understand better the love which is divine, are we taking up "arms against error at home and abroad" (Science and Health, p. 29), are we bringing forth fruits? These are the more important as they should be the more impelling questions. "Not every one that saith unto me, Lord, Lord, shall enter into the kingdom of heaven; but he that doeth the will of my Father which is in heaven."

"A grain of mustard seed."

ADELINE T. RICKER.

A USEFUL parallel may be drawn between our sense of the apparently insignificant mustard seed and the too common indifference to the present moment. Infinite possibilities may grow out of what seems a very little thing, so that great and small become only relative terms. Every moment's reflection of God is essentially important. When this view of living is clearly discerned, each moment becomes one of quiet enthusiasm, and we no longer neglect the present in order to look forward to next week or next year, hoping for a larger opportunity.

The essential greatness and significance of the present is for the most part lost sight of by the habit of looking idly or regretfully forward or backward. To recognize the real meaning of the present opportunity furnishes the only standpoint from which to view correctly the past and future. Jesus compared the kingdom of heaven to a grain of mustard seed. The seed presents all the possibilities of its outcome,—a fact indicated in the statement that this "least of all seeds" finally becomes the "greatest among herbs." The essence of both seed and tree is one and the same, and spiritual greatness is quality rather than quantity. The joy of knowing that the present moment is one of contact with infinite good makes us strong for work and for trials of our faith. When Peter perceived something of the glory of the spiritual idea which Jesus showed them on the mount of transfiguration, he said, "Let us make here three tabernacles." The tendency of the human is always to limit or confine the spiritual idea, whereas each moment's revelation of good has infinite possibilities. Failure to recognize this is the reason why we all have to come down from such mounts of transfiguration and go to work again casting out evils and healing the sick, but that need not discourage us. Not until the spiritual idea has ascended above all material sense can we see that God is not confined within the poor human concept. The disciple John finally saw this when he declared of the heavenly vision, "I saw no temple therein: for the Lord God Almighty and the Lamb are the temple of it."

Recently, while seeking to realize something of that grain of faith to which is promised such great results as the removing of mountains, there came to mind the early experience of a student of Christian Science, who was watching and waiting to know whether this Science were really of God or not. She was walking in the street one day, and saw some children at play whom she knew to be the children of a Christian Scientist. A violent quarrel seemed to be going on. She lingered in some curiosity, surprised that they could quarrel like that. Suddenly one little girl stood boldly up and said, "God is ever-present, and God is Love!" The tempest was stilled at once, and the lady went on, wondering greatly, and saying within herself, "This must be the truth, since it can accomplish results like that." Surely here is the quality of faith that removes mountains of unbelief, and so perhaps does the work that centuries could not do without that little seed, "Whosoever shall not receive the kingdom of God as a little child, he shall not enter therein."

The healing consciousness always involves the present moment, and is what every faithful Christian Scientist strives from day to day to cherish and unfold with all the patience and devotion of which he is capable. To bring these moments of the conscious reflection of good nearer and nearer together, until they become a continuous stream —"the river of God"—enriching and purifying human affections, is the task confronting every Christian worker. Mrs. Eddy, the Discoverer of Christian Science, has led into human consciousness a stream of truth which is rapidly cleansing it of all falsity, and it is the earnest endeavor of every faithful student of her writings to make way for that stream in his own daily living. Among the labors of the ancient Greek hero, Hercules, was the cleansing of the Augean stables, where three thousand cattle were stalled. He worked long to no purpose. One day it occurred to him to turn through these stables the course of the river Alpheus that flowed near by, and thus, by a process of continuous, uninterrupted cleansing, the task was accomplished.

Complete purification is the final, glorious result of alert attention to the present moment. "The kingdom of heaven is like to a grain of mustard seed, which a man took, and sowed in his field: which indeed is the least of all seeds: but when it is grown, it is the greatest among herbs, and becometh a tree, so that the birds of the air come and lodge in the branches thereof." In this section our Leader says that the new birth "begins with moments, and goes on with years" (Miscellaneous Writings, p. 15).

Work.

H. S. BYRNE.

A MAN once complained to a fellow-workman, whose motive was to work for the sake of his work and not for money, that he had tried to find employment but had failed. His friend listened to his story, and then pointed out the mistake he was making in thinking he was looking for work, when in reality he had been looking for money.

The remark is sometimes made by Christian Scientists, "I have tried again and again, but there are no results," and because of this there comes a sense of discouragement. Surely this is the time to find out how and for what we

Digitized by Google

have been working. If we have been looking or working for material results for their own sake, it is somewhat like the man who failed to get work because he had been looking for money. At such times it is well to remember that we have before us, in this age, an example for all workers in our Leader, Mrs. Eddy. Hers has been an incessant effort to know the truth and to seek "first the kingdom of God," and the glorious results of her work prove beyond doubt that she is working aright. In her message to The Mother Church in 1900 (p. 4), our Leader says, "The song of Christian Science is 'work—work—work—watch and pray.'" What a new, joyous meaning is given to work through Christian Science. In working to know God aright, and in working for God, those who manifest good in their lives have indeed a song—a prolonged song of joy and gladness. Sometimes the wonder comes as to where and what one's work shall be, but all speculation vanishes before the thought that our real work is to know God and to reflect His work—and He is everywhere. With this true concept of work there can be no weariness, discouragement, nor barren results.

To the faithful worker who by her example and life-work has lifted many a toiler out of the drudgery and weariness of material work into the joyousness of true work, a great debt of gratitude is owing, which will be best paid by striving to "work—watch and pray" in the way she has shown and is daily showing us.

[Written for the *Sentinel*.]

The Swallows' Lesson.

BEN. HAWORTH-BOOTH.

I DEEMED, before mine eyes beheld the light,—
When life was young, when I believed the story
Of wise incompetence and darkened sight,—
That He, the Lord of love, the God of glory,
Was even a tyrant, terrible and gory,
Eager to hurl His foolish children hence,
As rocks by Cyclops off their promontory,
Into the foul abyss of hatred, whence
Is no return, no hope, no prayer, no penitence.

Was this the Lord and King who bids us love
Our fellow-babes, and says, Forget, forgive
Your enemies? who came as holy Dove
When John baptized? Does earthly father live,
Would hurl his child to such a doom, would drive
His own to such perdition? Hush, ye vain,
Ye worldly-wise! The swallows safe arrive
From sacred sands of Nile to-night again,
A thousand miles of flight beyond the boundless main!

I hear them sing, "Praise to the guiding hand
That holds the swallows on their wondrous way
Beneath the pilot stars by sea or land;
He points them where the rainbow fountains play,
He loves and leads the birds." Then who shall say
He could consign to ruthless punishment
The weak and erring ones that weep and pray?
To Him each head shall bow, each knee be bent,
Each heart shall turn, contrite, converted, and content.

Shall not His sons abide, with all creation,
In the creator's all-enfolding arms,
And wait His will in trustful expectation,
Fearless, secure, and free from earth's alarms?
From pole to pole, from lands of pine or palms,
Each bird and beast and flower, each wave, each stone
Proclaims aloud, aloft, in songs and psalms
His all-sustaining love: shall men alone
Mutter of hate and hell before the Father's throne?

Resignation of a Pastor.

The following letter has been received by the trustees of the First Baptist church, Westerly, R. I., from the pastor, Rev. W. L. Swan:—

"New Haven, Conn., July 19, 1906.

"*Dear Brethren and Sisters of the First Baptist Church:* Since coming from Westerly and having thought the matter over carefully, I have decided it would be best for my pastorate to close the first of August instead of the first of October, if the church should see fit to release me at that time.

"While I still believe in the fundamental principle of the Baptist church, 'Loyalty to the teaching and example of Jesus Christ,' as stated by Dr. H. M. King of Providence, and believe all the doctrines that have been to me the essentials of Christianity for the past ten years, and that they are the same as held by many of the leading Baptists in this country, I have come also to believe that the fundamental Principle taught by Christian Science is true, that it is not inconsistent with the historical attitude of the Baptist denomination. Nevertheless, many in the denomination do not think the same. I have become convinced, therefore, that in the interests of harmony the only right thing for me to do is to resign at once.

"I want to thank you all for the way in which you have sought to be loyal to me as your leader for the past nine years, even when you have not agreed with all my theological views. May God continue His blessings upon you.

"Your pastor,
"W. L. SWAN."

The church has accepted the resignation, to take effect Aug. 1, as requested.—*Norwich* (Conn.) *Bulletin.*

Prayer—A Lay Sermon.

That the majority—large majority—of prayers go unanswered needs not to be asserted. This old world, in which we find sin and its awful consequences still rampant, would have been saved long ago had any large proportion of the prayers been answered. And it would seem that enough of them have been fruitless to leave no doubt that there must be some radical mistake in the popular mind as to the nature and modus of effective prayer. Certainly there is no lack of petitions—but are mere petitions really prayer? Is it possible to change the mind of Deity? Can He unknow what he once knows? Is it the Mind of God or the mind of mankind that needs to be changed in order to have things as they should be? Can it be that Deity doesn't realize what He should do and how He should do it, better than men can suggest or inform Him? Is it not rational to conclude that the universe is operating under divine law—doesn't the rain fall on the just and on the unjust alike? Can it be that a part of the universe operates under law, as we know it does, and that the whole does not? Would it be possible for a part to express more wisdom than the whole—for a part of it to express mathematical exactness and the rest run haphazard? Are we blessed because of prayer or are we blessed by our prayers?—important question this, as there is all the difference imaginable between the two. Is it conceivable that Deity would let a wrong condition go unrighted in His own universe simply because some one didn't request Him to set it right? As already suggested, must it not be that it is the mind of mortals, and not the Mind of the omnipotent, omniscient, and omnipresent ruler of the universe that needs to be changed in order to bring us the blessings we desire and so much need? Are not our limitations, our deficiencies incident rather to our vision than to His? Have we not, by our unbelief,—our unfaith in Him,—by our limiting view of all things, brought

Digitized by Google

about the imperfect conditions from which we would now escape? In other words, hasn't mortal man, by a long process of retrogression, encased himself in an environment wholly unlike the universe as it appears to the immortal vision of its creator and preserver? Is it possible that mortal man has been able to do more by his disloyalty than to mar his own vision of the universe—has he been able to change the universe itself so that God does not now see it in the unmarred perfection in which He made it? Has mortal man proved more powerful than God—has he been able to really mar the handiwork of omnipotence? Or has he simply shut himself off from its perfection, and needs only a renewing of the mind, as St. Paul puts it—a more perfect mental vision—to bring into his experience the normal conditions which have escaped him, and for which he now prays? "Prayer is the heart's sincere desire, uttered or unexpressed," but there isn't the slightest warrant in Holy Writ, or out of it, for expecting an answer to prayer unless the desire ripens into "faith." The fact that "faith" is the one condition of effective prayer indicates that we are not blessed because of our asking, but by the desire—by the quality of the desire's expression—by the "renewing of the mind" to the extent of spiritually laying hold of (mentally seeing) the conditions which we would bring into our experience. In a word, by bringing ourselves to a mental vision corresponding to the Mind that sustains and keeps the universe in its original perfection,—which perfection is obscured to mortal man by his carnal, limited view of things. He retakes heaven—normal, harmonious conditions—not because of his requests, but in the ratio that he has that Mind "which was also in Christ Jesus;" that Mind which was in him who said that "all things are possible to him that believeth," and "according to your faith be it unto you." God is "of purer eyes than to behold evil, and canst not look on iniquity" (cannot see His own universe marred and deformed—cannot see His own original purpose defeated), and if we would have that for which we pray we must, through faith, see the perfection—the normality—of all things as He sees it.

Editorial in *Portsmouth* (Va.) *Ledger.*

The teaching that evil can be performed through erroneous mental influence is not new to this age, but it should be understood that the mission of Christian Science is to counteract and destroy such evil mental influence. Christian Science lifts men away from the desire to control or to be controlled by human will, and awakens the desire and effort of every earnest Christian to be possessed of that Mind only which "was also in Christ Jesus." Christian Scientists are united with all other Christians in the confident belief in and fulfilment of the Scriptural promise, "Because thou hast made the Lord, which is my refuge, even the most High, thy habitation; there shall no evil befall thee, neither shall any plague come nigh thy dwelling."

DAVID B. OGDEN.
Pacific Baptist Advocate.

Not only her following, but the world in general, is amazed at the success of the movement Mrs. Eddy originated, single-handed, and has guided with phenomenal ability from the beginning. Her fame has just received a fresh impetus through the dedication of the great church in Boston, second in impressiveness and architectural grandeur to no church in America.—*Troy* (N. Y.) *Press.*

List of Members.

The List of Members of The Mother Church, including those admitted June 5, 1906, is now on sale. Single copy, 50 cents; six copies to one address, $2.50; twelve copies to one address, $4.50. Address all orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

Among the Churches.

Hamilton, Ohio.

As we review the past six months we have cause for much gratitude for the growth made in our church. Truly the divine Presence has been round about us, leading us onward and upward. We have not stood still, but a steady growth has marked each step we have taken, and we have only songs of thanksgiving in our hearts for the many blessings of the past year. The people here are very friendly to our beloved Cause, and particularly are we grateful to the city press for their kindly interest and help in publishing the reports of the Christian Science work from time to time. Recently they applied, unsought, for items concerning the dedication of the Extension of The Mother Church of Christ, Scientist, in Boston, and were eager to publish anything the committee might authorize.

Aside from this much interest has been shown generally in our locality. The lecture of April 10 was well attended by hundreds of Hamilton's representative citizens, welcoming eagerly the opportunity of having Christian Science explained by one of our able lecturers.

The literature racks stationed in the traction office at Hamilton are rapidly emptied, and much good has resulted therefrom, a number of persons having come to the Reading Room to purchase our text-book, Science and Health, as a result of this seed sown. The first of May we found it necessary to seek more commodious quarters for church worship, and the attendance at the Sunday and mid-week services has increased very favorably indeed.

June 1 we furnished a new Reading Room in the best locality procurable in the city. We find a marked increase in the sale of Science and Health and other Christian Science publications. There are many visitors to the Reading Room and much interest is felt generally by outsiders. Our financial obligations have all been quickly and easily met. In April we responded to the call for help for the San Francisco sufferers and also contributed to the publication work. The outlook for Christian Science here is very encouraging and we may hope for great things in the future.

Our prayer each day is for more love to God and to our noble Leader, Mrs. Eddy, through whom this Christ-truth has come. We realize, as never before, that our gratitude to her can only be shown through our obedience to her teachings.—*Correspondence.*

Richmond, Va.

In December, 1900, regular Sunday and Wednesday evening services were held in a private home, and a Reading Room was also established. As a result of these meetings a regular church organization was effected in June, 1902, to be known as First Church of Christ, Scientist, of Richmond, Va., with thirty-six members.

In August, 1902, the room, 709 East Main Street, was rented for the purposes of a Reading Room and for services.

The membership has increased until it now numbers sixty-four—eight having been transferred to churches in other cities. The removal to new quarters increased the expenses from fifteen dollars per month to one hundred dollars per month. The full amount was raised, however, by voluntary offering; and that this church is solving the financial problem it is only necessary to say that in the four years of its existence this little band has raised ten thousand dollars.

In August of last year the Reading Room was removed to the Chamber of Commerce Building, and Belvidere Hall was secured for the regular Sunday and Wednesday evening services. It is now the purpose of the members of the Richmond branch to put forth every effort to secure its own building in the near future.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Mrs. Eddy's Request Granted.

[THE following letter to Mrs. Eddy, as well as the clipping from the *Boston Herald* which accompanies it, will be read with pleasure by all her friends and followers, and we are sure that they will join us in thanking the city government for its prompt and generous response to the suggestion for the improvement of the streets, made by a distinguished citizen of Concord.—EDITOR.]

Concord, N. H., Aug. 8, 1906.

Beloved Leader:—It is a satisfaction to inform you that the Concord city government, at a special meeting called last night, voted to improve State Street in accord with your letter which appeared in the *Concord Monitor*, and *Patriot* of June 21. Your friends are to co-operate with the city in this important improvement.

At the invitation of Mayor Corning, I was present at the meeting last night, and heard with pleasure the hearty indorsement given to the plan by the leading men in the city government.

It is a joy to know that, during the entire discussion wherein the city voted to expend five thousand dollars to carry out your suggestion, not one unfriendly word was spoken against Christian Science or its beloved Leader.

Among those in the city government who manifested their friendliness to you and worked actively for the success of the plan, may be mentioned His Honor the Mayor, Judge Charles R. Corning; President of the Common Council, Benjamin W. Couch; Aldermen Fred C. Demond, Joseph S. Matthews, George D. Waldron, George H. Rolfe, and Irving T. Chesley; Councilmen Harry J. Brown and Harry R. Cressy.

I have learned of the following influential citizens who spoke favorably of the plan and used their influence in its behalf: Hon. Benjamin Kimball, President of the Concord & Montreal Railroad; Gen. Frank S. Streeter; Mr. Josiah E. Fernald, President of the National State Capital Bank; Hon. Harry Dudley, Cashier of the Mechanics National Bank; Mr. Myron J. Pratt; Mr. J. Wesley Plummer, Deputy State Treasurer of New Hampshire, and Mr. J. C. Derby.

I am sure that your many friends in your native State and throughout all lands will welcome this marked evidence of the genuine appreciation of the Discoverer and Founder of Christian Science by her fellow-citizens.

Lovingly yours,
IRVING C. TOMLINSON.

[Special Dispatch to the *Boston Herald*.]

Concord, N. H., Aug. 7, 1906.—Through the suggestion of Mrs. Mary Baker Eddy, Discoverer and Founder of Christian Science, and by vote of the Concord city government to-night, the capital city of the Granite State is to have, in the improvement of State Street, one of the finest avenues in New Hampshire. This improvement is the direct result of a request to the city government by Mrs. Eddy, and the generous action of her friends, who have offered to bear half of the expense of concreting one of the city's leading and most beautiful thoroughfares.

Early in the summer the city put down a water-main through this street, leaving the roadway in bad condition. Mrs. Eddy, in a letter which appeared in the local press, asked the city government, in behalf of the public, to improve the impaired highway. Her action was in harmony with her interest in the good roads movement. Seven years ago Mrs. Eddy inaugurated the movement for good roads in New Hampshire by providing the funds for macadamizing a large portion of Pleasant Street, thereby making it one of the best pieces of highway in Merrimac county.

Mrs. Eddy's letter in behalf of improved streets not only received the hearty indorsement of many leading citizens of Concord, but also attracted the favorable notice of her host of friends elsewhere. The outcome of this interest was a letter to the city government from Irving C. Tomlinson, in which he stated that citizens and friends whom he represented would bear half the expense if the city would concrete State Street.

Mayor Corning placed the letter before the committee on finance of the city council, who unanimously indorsed it. A special meeting of the council to-night acceded to Mrs. Eddy's request and accepted the proposition of her friends.

A Plea for Fair Play.

THE following excerpts are from an editorial in a recent issue of the Matteawan and Fishkill-on-Hudson *Evening Journal*, and we take pleasure in commending them to the consideration of any who are tempted to forsake their own legitimate field of labor and discuss their neighbor's religious views from a controversial standpoint. The editor of this paper writes:—

"The other evening one J. J. Kennedy, an evangelist, who has been giving some very interesting talks in a tent at the corner of Willow and Church Streets, Fishkill Landing, took as his subject, 'Christian Science: Is it of God?' It is not our business to discuss any form of religious belief, or unbelief, here, but from the purely secular standpoint of a rank outsider we would like to ask if 'Christian Science: Is it of God?'—then why not 'Methodism: Is it of God?' or 'Episcopalianism: Is it of God?' or 'Baptism: Is it of God?' or any other ism, for that matter.

"Christian Science has taken its place among the religions of the world, and all dogmatic assertions to the contrary, it will continue to grow and win its converts. It will grow because it is constructive rather than destructive, and because its Founder was wise enough not to say: 'Take my book and throw away the Bible,' but 'Take them both.' That is the secret of all success in the spreading of any belief among the people. Not to say, 'Stop believing as you have believed before, and believe my way,' but 'Take my beliefs and assimilate them with yours.' . . .

"We have no fault to find with Mr. Kennedy, nor do we even know what he said about Christian Science. His caption, however, 'Christian Science: Is it of God?' was suggestive of that spirit of controversialism which has made the world run red with blood in the name of one whose mission was eternal peace. . . ."

It is a maxim amongst business men that one who devotes the greater part, or in fact any part, of his time to the disparagement of his competitor's wares will find little time to present the merits of his own, and while Christian Science is not in competition with other religious faiths, the course which has been pursued by some critics makes this maxim apropos.

If these critics would present their own doctrines in a manner calculated to convince the world that they are for its good, there would be no need to adopt other and less legitimate methods to attract a large following. Christian Scientists, from Mrs. Eddy down, are glad to avail themselves of every opportunity to speak well of those who are

Digitized by Google

trying to benefit the race, and they are always liberal with their commendation of every effort for good.

ARCHIBALD MCLELLAN.

Readiness.

IN our text-book we find this statement, "Those ready for the blessing you impart will give thanks" (Science and Health, p. 570). These words were recalled by a letter from one who attended the recent dedication of the Extension of The Mother Church, and who referred to the great help received from our dear Leader's Message, "Choose Ye." Special reference was made to her playful use of the word justice—"not just ice"—and this Scientist spoke of the many who "lack human sympathy, and who therefore have no true understanding of Divine Love." Then followed a few words taken from the letter of a distant friend who had read and pondered the Message. In speaking of one who greatly needed the help which Christian Science gives, this writer said, "I think I can be a wee bit of comfort to her, 'not just ice,' but loving and warm and tender."

In Christian Science we soon learn that we must be healed of all that is unlike God's perfect idea,—His child,—not merely from our physical aches and pains. Mortals are marred by mental deformities which have greater need of healing than has any physical condition, so called, but divine Love can and does heal all our ills. Of old the Israelites were commanded to "worship the Lord in the beauty of holiness," and it should be our chief concern to have and to express this beauty in all we are and in all we do. The hardness and angularity of selfishness and fear must feel the firm, yet tender touch of Truth and Love, and "give place" to that which expresses the One "altogether lovely." We may rejoice in knowing that over and above physical healing this beauty of Spirit is earnestly sought by so many of those who come to Christian Science. In all such there is awakened in wonderful degree the consciousness of spiritual realities and their supreme value. Thus is the true healing realized. This healing meets both mental and physical needs and replaces deformity and weakness with the beauty and strength which come from the divine Mind.

In the process of healing, our consciousness should ever be of the abiding qualities of Spirit, not of the unreal conditions of mortal belief, to which we must not cling if we would get rid of them. The sense of justice which merely chills and repels is not a product of Love, and needs to be healed as much as does any bodily ailment; nay, more, its healing is sure to bring a corresponding change even in physical health, which witnesses to the world the regenerative power of Truth. We must be ready for higher and yet higher problems, and give thanks at each step of the way. Christian Scientists who are closely following their beloved and trusted Leader, receive with gladness her every counsel, whether it be a word of warning, of rebuke, or of praise, well knowing that by heeding it added blessings will follow. The important thing is to be ready, both to hear and to heed; this was the Master's warning to his students, "Be ye therefore ready." Thus shall we learn each lesson assigned us, receive the blessing, and give thanks.

ANNIE M. KNOTT.

Letters to our Leader.

Boston, Mass., July 11, 1906.

Dearest Leader:—Before leaving these shores I feel compelled to tell you with what sacred resolve I am returning to the work in London. This thought suggested itself to me so clearly on June 10, that our only duty lies in alert obedience to God, and that, if we perform this faithfully, in just the way you have pointed out, we cannot then "be false to any man." From the services in The Mother Church, and from interviews with faithful workers, I have caught a glimpse of a faith deeper and stronger than I yet possess. This has stimulated me to strive after such watchfulness and self-immolation as will surely lead to a deeper understanding of divine Love. Your students, Mr. and Mrs. Miller, longed to be present at the dedication, but could not be spared at this season. The spiritual growth of our little branch of the Vine is striking; numbers are being healed and are devoting themselves to the joyous work of liberating others. My gratitude towards you deepens as I realize the immensity of this revelation that has unmasked evil, the impostor of the ages, and is enthroning infinite good in the hearts of men, through your purity and faithfulness. I am humbly your follower,

VIOLET KER SEYMER.

Delegate Third Church of Christ, Scientist, London, England.

Tandjong Malim, Perak,
Federated Malay States, May 7, 1906.

Very Dear Leader:—Humbly I address these lines to you, thinking that they may be laid before you. Last mail brought the *Sentinel* with the beautiful letters from you and Mrs. Conger about China. A day or two before, the enclosed letter was shown to me, and thinking it might interest you, I have been granted permission to forward it. The writer is a Straits-born Chinaman,—clerk in a mine near here. He was educated in a school in Singapore. I have been in the Straits now two and one half years. For some time we lived far away in the jungle, then moved here, where I had the privilege of presenting Christian Science to a lady who has accepted it in all its loveliness. Khoo Sing Hock is amongst those to whom she has introduced it. She talked with him, and after reading one *Sentinel* he wrote the enclosed letter. Since then he has read "Retrospection and Introspection," is now reading Science and Health, and hopes soon to send for a copy of his own. Some of our neighbors are reading my Christian Science literature until they can have their own sent. I am a member of First Church of Christ, Scientist, London, England. My little boy is an attendant of the Sunday School there. I pray that I shall be enabled to do more faithful work, and deeply I would thank you for showing us that God is always with us, and how to live near to Him. I can never be grateful enough to you, our dear Leader, for the wondrous truth given us so freely through you. Your ever obedient follower,

CLARISSA MARY ALLARD.

[The following is a copy of the letter mentioned in Mrs. Allard's letter.—EDITOR.]

April 27, 1906.

To Mrs. Proust, Prangin.

Madam:—In returning this copy of the *Christian Science Sentinel*, I crave the liberty of saying a few words, besides thanking you most sincerely for your kindness. The proposition, as set forth by Christian Science, that mankind can and should do without doctors of medicine and drugs, appears to me, at first sight, a "big order," especially when one takes into consideration the years and years of hard study and labor, the heaps and heaps of money bestowed upon the medical institution—or rather, profession. Therefore, at first sight, as I said above, Christian Science *vs.* The Medical Profession, appears to be a very great problem, and would be a most suitable subject for heated discussion in the debating hall. However, the solution of the problem is not far to seek. The subject is just like the story we read in our schooldays, about two boys quarreling over the question of the color of a lobster. One insisted on its being red and the other black, and the two boys were on the point of coming to blows when the uncle of one of them appeared on the scene and settled the dispute by explaining that raw lobster was black, but when cooked it became red. One of the boys only saw a lobster on the table after

Digitized by Google

being cooked, but the other's father being a poor fisherman he used only to see a live lobster.

So long as there are vices in this world mankind can never do without medicos. Men overworry themselves in pursuit of wealth and some strive very hard even to get a living. The overworry taxes the constitution, and it often happens that nothing but medical treatment can cure the patient. On the other hand there are those who are content with the little they get, and instead of striving hard to get more, either to lay by for old age, comfort, or to spend on pleasures or luxuries, leave all their destiny in the hands of Providence, meantime serving God by leading virtuous lives and practising self-abnegation as Buddha did and preached. To such as these the name of drugs is an abomination, and really drugs are no good to them, for they can never want them.

Christian Science, as I understand it, is a great blessing to mankind, and as it is said to be applicable and beneficial alike to Christians and non-Christians, its merits must be inestimable. Words cannot adequately describe my gratitude to you for first impressing it upon me, madam, and I can assure you that whatever benefits I may obtain from Christian Science, I will distribute, to the best of my abilities, among neighbors, friends, and relations.

Yours most respectfully,
KHOO SING HOCK.

Columbus, Wis., July 18, 1906.

Mrs. Mary B. Eddy, Concord, N. H.

My Dear Mrs. Eddy:—Can you take time to read a word of earnest, loving gratitude for your timely article, "Personal Contagion." It is because of individual experience in striving to be free from said contagion, that my sense of joy on reading your words seems to demand utterance. I also wish so much that you should know how lasting and delightful is the blessing I received while listening to your address in the Christian Science Hall at Concord, Feb. 27, 1898, when all doubt and unbelief vanished and I saw you as the inspired Revelator of the truth in Christian Science. I have since told this experience to many rejoicing ones.

With thankful love,
MRS. CLARA SAWYER.

Rutland, Vt., July 17, 1906.

Beloved Leader:—Many times have I taken my pen to write you words of love and gratitude, and as many times laid it down, feeling that I should not trespass upon your valuable time; but to-day I feel strongly that I must write you somewhat of my joy, even though your eyes may never read my lines. After years of earnest study of Science and Health, with the Bible, it was my precious privilege to be a member of the college class of December, 1904. The results of that experience, if told, would occupy more pages than you would care to read; and when I think of all the other dear members of that class, then of all the other classes, and realize how the same splendid teaching must have blessed the efforts of all, I begin to faintly comprehend the truth taught by Jesus in the miracle of the loaves and fishes.

In the capacity of Publication Committee it has been my privilege during the past year to know more of the work of Christian Science in our State, and I am rejoiced to note the increasing interest and activity of our churches as well as a growing interest of the people generally in the subject of Christian Science. Your last message to the Church is my daily study; and now I thank you deeply for your words in "Personal Contagion."

In loving anticipation of the good work which I feel sure our State will do this coming year (the State which stands as sister to the one that shelters you, dear Leader), I am

Lovingly and obediently yours,
HELEN S. B. ROSS.

Testimonies of Healing.

Six months ago the words Christian Science conveyed to me nothing more than the bare fact that some people, Americans mostly, called it a religion, and that it denied the existence of pain. I knew no one who was of that religion, did not even know the name of the text-book or that of its author. When in trouble, it had been my habit to take up some study, of such a nature that I should be prevented from dwelling on the misery I could not avoid feeling; and once more, in what seemed the greatest and has proved to be also the last of such wretchedness, I looked about for something of the sort to help me through weeks of suspense. There seemed no earthly reason why I should take up Christian Science rather than the thousand things I had often wanted to study, and yet strongly and insistently I was driven to it. It was after a whole month, and a great deal of trouble, that I got the name of the book; then, before I could get a copy, I heard of the church in Sloane Square. The wrong address was given me, and the wrong time for service, and I almost gave up my search for it, when on a rainy morning in June I found the church closed. I could do no more than note that there was a service on Wednesday at eight. There ended my difficulties. On Tuesday I received a copy of Science and Health which had been lent to a friend by a Christian Scientist.

On that Wednesday I realized that healing was an essential part of the religion. It did not occur to me to doubt that I could be healed. The sequel is an old story. For years I had been very nearly an invalid, and for a year I could not move from my sofa. For the six months previous to this date, it was only dire necessity that had forced me to my feet. For years I had suffered severely from mucous colonitis, and had tried all sorts of diets. I digested next to nothing, and was greatly reduced in weight. I had frequently had abscesses in the jaw, for which doctors could do nothing except give me morphia when the pain became excessive. In fact I was never entirely free from pain, and very often I was in agony. I had also a growth in my side, but my condition was such that the surgeon refused to operate, as he did not consider it safe. My control of the body was already affected, and the prospect was that I should be helpless.

This was the mental and physical condition, with the added knowledge that the one thing I had relied upon in all my troubles was about to fail me, and that in a very miserable way. On that Wednesday in June I was given the name of a practitioner. On Saturday I wrote to her, and that night I went to bed at ten o'clock. At seven the next morning I opened my eyes, having slept dreamlessly and peacefully all those hours. As I opened my eyes and realized that the night generally so full of misery was over, the words, "the hem of his garment," leapt into my mind. I had not looked at a Bible for twenty years, but I knew it was just that, and that I was healed. I never again lost a night's sleep. I could eat and digest anything and everything. In four treatments all symptoms of the mucous colonitis had disappeared forever. In all I had eight treatments, but two of those were only because it was so hard to believe I really was well. Everything I took to the truth was cured, and cured completely. The growth disappeared and I could wear my clothes as others do. I put on flesh at the rate of a pound a week, slept and ate like a healthy child, and most glorious of all, my other troubles fell from me as if they had never been, as in truth they never had. In place of misery, I had peace, joy, and gladness. Instead of an overwhelming longing for speedy annihilation, my days were full of energy and absorbing interest; and yet my troubles and the stress of circumstances were what others would have thought even harder and sadder than before; but I was coming into my inheritance, daily learning where to look for and how to reach the divine

Digitized by Google

source of all good. Steadily and gently the way to God was shown me; every difficulty and doubt was met through the Bible and Science and Health.

My deeply appreciative gratitude goes out for the wisdom which kept me reading and searching my Bible and Science and Health, and which forced me from the very first to realize that such wisdom was not of man, but of God. Who can speak of what it means to find God? I begin to know Him, and to know that to live means to know Him more and better. It is everything,—riches, beyond the dreams of avarice; spiritual hunger, divinely satisfied.

Beyond my thankfulness to God for my moral and physical healing, deep as that is, is my great and throbbing gratitude for His gift to suffering, starving humanity of her whom we know as Mrs. Eddy.

WINIFRED M. PLAYFAIR, London, England.

There are no words that can express my gratitude to God for what Christian Science has done for me and mine. For eleven years I was afflicted with many plagues,—female trouble, constipation, catarrh, etc. I had given up all hope of recovery, had been told by physicians that I could not be cured, so I told my husband to prepare himself to give me up, and prayed to be taken out of my suffering.

Just at this time—the darkest hour—a friend called and asked my husband to try Christian Science. I had little hope of its doing me any good, but the next day a practitioner was called, and I took my last dose of medicine. When she came all was silence for a few moments; then she took my Bible,—which impressed me, as I had heard that Christian Scientists used a Bible of their own,— and during her reading of it a new light dawned upon me. I saw that all God made was good, therefore He never afflicted me. I was free from pain. When she was leaving she told me to read the 91st Psalm that evening. I had my husband place me in a comfortable position to read, and I read it over twice. I was reading it the third time when I felt every evil leave me, and I praised God, for I was healed. The next morning I attended to my household duties, have enjoyed good health ever since, and I do thank God for the light and understanding He has given me through Christian Science, as taught by Mrs. Eddy.

MRS. SARAH LYDIA NORRIS, Laurel, Miss.

For four years I had been a helpless invalid from an injury to the spine, and during that time was under the care of a number of physicians without receiving any help. They tried nearly everything in the line of *materia medica*, external and internal. I was subjected to some very painful applications.

After four years of medical treatment, not having received any help, and having been given up as an incurable, I was healed by Christian Science in less than two weeks. Since then I have been able to work constantly, at hard work. Word of my healing reached the doctor before I went to see him, and when he saw me he said, "Well, I see Christian Science has made a new man of you!"

I am truly grateful for the little understanding I have of this truth, for it is the All in all to my wife and myself. It has brought sunshine, health, and harmony into our home. We give our heartfelt thanks to God for His loving-kindness to us, that through Christian Science we have been brought out of Egyptian darkness, and for this we owe endless gratitude to Mrs. Eddy.

PAUL H. ALFORD, Detroit, Mich.

I wish to express my gratitude to God for the benefits I have received in Christian Science. A short time ago I had a very severe attack of what seemed to be apoplexy. A practitioner was called as soon as possible, and I do not think it was more than five minutes after she received the message before consciousness had fully returned. This being the second attack of the kind, I feel sure I owe my life to the truth taught by Mrs. Eddy. I am trying to understand and obey the divine law which is made plain to us in our text-book, Science and Health.

MRS. J. H. EMERSON, Denver, Col.

For a long time I have desired to express a little of the gratitude that fills my heart for the freedom which I have gained through the study of Christian Science as taught by our Leader and the world's benefactor, Mrs. Eddy. Six years ago I was bound down by all kinds of limitations, mental and physical My last physician had told me that I would live but a few months at most. I had suffered for fifteen years from asthma and kidney trouble. My suffering from a spinal disease was also very great; while a cough and debilitated condition made every effort a burden,—in fact, I had lost all desire to live.

I was satisfied with my religion, having been a church member for thirteen years. My prayer was all the time that I might know God's will and be found ready to do it, but I believed that the suffering which was constantly with me, and had been for so many years, would remain until I was freed from the body by death.

One day my church paper contained a long article entitled, "Is Christian Science Christian?" In it Christian Science was denounced as a great fraud, imposed upon the world by Mrs. Eddy, etc. Passages were quoted from Science and Health, supposed to prove the folly of the teaching. As I had never heard of such a book, or of Mrs. Eddy, I desired to know more of this doctrine which was undergoing such severe criticism, but it was several months before I learned, through a relative whose daughter had been most wonderfully healed, that there was a Reading Room in the city where I could learn something of Christian Science. I went that same day. Two *Journals* were given me and I was told that "Science and Health with Key to the Scriptures" by Mrs. Eddy, was in all the branch libraries of the city. I got the book at once and read it through. I found that the truth it contained had been very much misrepresented in the criticism. I found that it taught a very high ideal of Christian living and it gave me a hope which I did not have before. The thought of being healed by trusting in God was very beautiful to me, yet I wanted the authority for my acceptance to come from God's Word.

I now began searching the Scriptures as never before. I got Science and Health the second time and read portions of it. After loaning it to a dear friend, who read it, I continued to study the Bible, finding, after my thought had been awakened, that from beginning to end of its sacred pages those who trusted and obeyed God were healed. I was uplifted by this thought, and began to realize that if God could heal our sins now, as I had always been taught, He could certainly heal our diseases; that this power had never left the world, and that the practice of healing in the Christian Church need never have stopped, had there been any left to follow the teachings of Christ closely enough to attempt such holy work. Through this spiritualization of thought I learned that God is our only healer, and I knew I was healed. My healing had been so gradual that I could not tell when it took place, but it was none the less beautiful and complete. I had not attended any of the Christian Science services nor talked with any Scientists up to this time. I thank God that for over five years I have been a well woman and can do anything I desire to do with perfect ease, scarcely ever feeling even tired. Although my healing came simply from my own study of the Bible and Science and Health, it was so effectual that I have had very few troubles to overcome, but would like to tell what one treatment helped me to accomplish. I went to a dentist and had seventeen teeth extracted with no fear or suffering whatever. To me this was a beautiful proof that God's

Digitized by Google

Word "is quick and powerful" to protect from or destroy suffering; and that God is able to care for us, no matter how great the difficulty to be met. My husband has been healed of sick-headaches, from which he had suffered for twenty-five years; of fistula, the grip, and other minor troubles, and he rejoices with me in this saving truth.

I rejoice more and more in the study of the Bible, in trying to gain more light, and in fellowship with all who are learning to follow more closely the teaching and example of our Master. Although I have many times had to leave the mountain-top and go down into the valley, I can thank God for every experience, and can never doubt the power of divine Love to lift me higher after every rebuke; and in proportion as I seek His wisdom in meekness shall I be able to declare the Word with power to destroy every evil which I am called upon to meet.—Mrs. Osta C. Brooks, Cleveland, O.

From the time I was thirteen until shortly after my eighteenth birthday I suffered from what the family physician diagnosed as uterine trouble. For three years I was treated by a reputable physician, but received no help whatever. This continued until March, 1905, when I was at home with my mother, from whom I had been separated for fourteen years. She was a Christian Scientist, and upon the recurrence of my trouble she called in a practitioner, who gave me my first Christian Science treatment. A half hour after the practitioner left the house I was able to be up, and since then have never been confined to bed. The treatment was continued one month, when normal action was established and it has continued.

To say that I am grateful would be expressing myself very mildly. I know that I have found the pearl of great price, and I am beginning to taste the joys of life, wherein they who wait upon the Lord shall "run and not be weary."

Orlena A. Kirk, Joliet, Ill.

[Translated from the German.]

I had a severe attack of inflammation of the throat, and a tumor formed which the physician lanced to give me relief; but instead of its getting better, another one formed, worse than the first, and I could not swallow even liquid food. I would not consent to have the throat lanced again, and instead I was treated by a Christian Science practitioner. Immediately after the first treatment I felt a great improvement, and after two days the tumor had disappeared and I was well.

I am deeply grateful to God, and to Mrs. Eddy, for all the blessings which I have received through Christian Science.—Emilie Lutz, Stuttgart, Germany.

[Translated from the German.]

I feel that it is time for me to give my testimony of what Christian Science has done for me and my family. It is now almost two years since I first became acquainted with it. Some friends gave us *Der Herold* and other Christian Science literature to read, and then Science and Health. This I could at first understand but little, because I could read very little English, but I became interested and asked our little daughter, eleven years old, to read to us, and thus we gradually learned to understand it. It is a wonderful book. It has brought us many blessings,—health, happiness, work, and peace. Words fail me to express what it really has done for us. Many diseases have been conquered with my friends' help. We are a large family and receive blessings daily. It is impossible for me to relate it all, but I would like to speak of a recent experience.

Last summer I hurt my left eye with a fine gauze wire. I did not pay much attention to it, and felt only a slight pain until evening, when I suffered terribly. The eye was inflamed and I could not endure the light. As I was but a beginner in Christian Science, I sent for a friend the following day. He came and gave me treatment, and in a few days the eye was improved. Two weeks later I thought that I was well enough to go out to work, which was in a physician's house. He noticed my eye, and I permitted him to examine it. He pronounced it a bad case and said that I must go to an oculist immediately. A sense of fear made me waver, and I let him persuade me. He took me to an oculist, who treated me for several days, but the eye did not improve any, rather grew worse. He said that I must go to the hospital, but I refused and returned to Christian Science and remained there. It seemed a hard struggle, and there were times when I thought that I must submit, but gradually error yielded to Truth. My dear friends had to stay patiently with me for many days and nights. It was several weeks before I was healed, but the healing was complete. I can now see, and am a happy woman that I have been led from error to Truth. We are thankful to God, and to dear Mrs. Eddy, who has brought this wonderful light to us and to all the world. We hope to come more and more into this light, and we shall strive to lead lives which please God.—Mrs. Rosa Tritten, Rome, N. Y.

I have seen so much good done to myself and others by the reading of the Christian Science literature that I wish to tell my experience. I started to take Christian Science treatment as soon as I heard of it, because I was tired of wearing glasses, but stopped several times because I could not see that it was benefiting another who talked a great deal about it. I have since taken off my glasses and have no headaches. The effects of a blow on the head and severe sore throat were also overcome through the reading of "Science and Health with Key to the Scriptures" by Mrs. Eddy. I was all worn out with work, and Christian Science is daily teaching me that truth rests us. I have seen so much justice demonstrated through another's understanding of Christian Science that I am daily learning there is but one omnipotent Mind governing the universe and man. I am grateful to our Leader, Mrs. Eddy, whose writings are daily teaching me what Life really is, and because of this I united with the Christian Science church one year ago.—Eleanor C. Hatch, St. Paul, Minn.

I had suffered for many years and was under the doctor's care, but nothing seemed to relieve me from suffering. I went through an operation, but my case was pronounced incurable. The disease was said to be internal cancer, and I suffered from sick-headaches, nervousness, indigestion, and the morphine habit. I cannot thank God enough that I was led into Christian Science, and to-day I am perfectly healed from all disease. I am also able to meet any ailment that appears in my home, and have had some beautiful demonstrations of Truth's power. When Christian Science was presented to me, about nine years ago, I saw clearly that it was Jesus' teachings, and just what I had been looking for. I cannot thank Mrs. Eddy enough for her teachings. It has not only healed me of sin, sickness, disease, and the fear of death, but has saved me from the fear of hell. Through Mrs. Eddy's writings I have learned that God is Life, Truth, and Love, and the Bible and Science and Health are my daily helpers.

Mrs. C. Schell, Guelph, Ont.

I first heard of Christian Science about nineteen years ago, and soon after this I saw the healing of a member of my own family by its means. I had always believed that God was good, but His "awful judgments" I could not clearly reason out. The stress laid by Scientists upon trusting the heavenly Father as the source of all good—as "good" itself—appealed to me from the first.

I was, however, in the world and of the world at that time, and so relegated the study of Christian Science to "a more convenient season," and that came a few years

Digitized by Google

later—not as I had planned, but in a far different way; not after a well-spent life, a successful career, but after failure,—the darkest time of my life, it seemed. Then I saw the husks upon which I had been feeding, and returned to my Father's house. I was "afar off" and my progress seemed very slow at first, but, holding steadfastly to the thought of God, I have been led to a better understanding of Him as Life, Truth, Love—the divine Principle of being, and now I rejoice in Him always.

I have much to be thankful for in physical healing—more than I can tell—and for the cure of the "saloon habit" of thirty years' standing. If I had had no other single benefit than this, it would be enough of itself to keep me grateful, but above all I thank God continually for the general cleansing of my daily living, mentally, morally, and spiritually.

To our Leader I am very grateful. The reading of Science and Health has opened the Bible for me until it has become "a lamp unto my feet, and a light unto my path," and I am trying to let my life prove my sincerity. I am trying to *really* trust God every moment and be at peace.

G. M. D. HEARD, Painesville, O.

When Christian Science was first brought to my notice, I was indeed in bondage. Now, in the light of Truth, I am amazed at the patience and resignation with which I bore my troubles. Suffering as I was from three serious physical ailments, as well as several minor ones, I wonder that my dull and sleeping senses were not sooner awakened, but the divine remedy came at last through Christian Science, bringing the health and harmony for which I had long been searching.

This opened my eyes, and I saw that my blinded sense had accepted the verdict that it was only a matter of time when I would lose the sight of both eyes. The next most formidable trouble was with a weak heart, on account of which I was afraid to go out anywhere alone. The third difficulty was a troublesome and painful knee, also pronounced incurable. These and many other ailments have been overcome so thoroughly that when questioned recently as to the efficacy of Christian Science in the healing of blindness, I had quite forgotten at the time my own former serious condition of the eyes.

Words are insufficient to express my sense of gratitude for Christian Science, for its Founder, Mrs. Eddy, neither can I express in few words all that Christian Science is and has been to me, as for a period of several years it has never failed me when faithfully applied. I am understanding and appreciating more and more what Mrs. Eddy has done and is doing for humanity, and am most grateful for the privilege of having demonstrated this healing, life-giving truth for myself and others, over and over again.

ADA L. LAPHAM, Darien, Conn.

I knew nothing of Christian Science until this last fall, when two ladies, Scientists, came to our city. They came to our home and found my wife and myself groping in the darkness of sickness and sin, and they said they would try and help us if we would let them. My wife had been able to walk but a short distance for three years, and I had had stomach trouble for eight years or more. I had six doctors in that time and used a great deal of medicine, but did not get well. My wife read the Bible a great deal, but we could not see the truth. The ladies told us that God is Truth, Life, and Love. We now see that we had lamps, but did not have them trimmed and burning so that we could see, for we had no oil in them. These Scientists asked me to get "Science and Health with Key to the Scriptures" by Mrs. Eddy, and before I had read the book through I was healed, and my wife is getting better every day. Where there was darkness now there is light; where there was sorrow now there is joy. We are glad that those Scientists found us as they did and told us how to live and be well. We are learning better each day how to know God, and to know that He is with us always. I trust that Mrs. Eddy's book may find others and help them as it has helped us.

JACOB BREHMER, Chillicothe, O.

I have received so many benefits through Christian Science that it is hard to know where to begin to enumerate them. I will, however, mention a few of the things from which I have been freed through even a limited understanding of this truth which has been given to the world in "Science and Health with Key to the Scriptures" by Mrs. Eddy. For twenty years I used alcoholic drinks to such an extent that it was impossible for me to keep a position for any length of time, but through the help of a practitioner, and the study of Science and Health, all desire for intoxicating liquors left me entirely, and I know that I will never be in bondage to it again. I was a slave to tobacco for twenty-five years; also a very profane man. These habits also have entirely left me. Through the understanding of this Science I have also been enabled to regain a position with a firm which some twelve years ago had to dispense with my services on account of my drinking habits.

I wish to express my thanks to God, and to Mrs. Eddy, for this beautiful and practical religion.

WILLIAM W. MACFARLANE, Chicago, Ill.

When my attention was called to Christian Science I opposed it like a great many others, but after seeing a relative restored to good health and other members of our family being benefited by it, my wife became interested in its teachings. Finally, about two years ago, I became afflicted with a high fever, organic trouble, and weakness. I placed my case in charge of a Christian Science practitioner and soon regained health. At the same time I was relieved of all desire for tobacco, which I thought was impossible. During all my previous life I had indulged in the use of intoxicants. On two occasions since then I drank some wine, but now, I am glad to say, I have no desire whatever for these beverages. I see the nothingness of false appetites.

It is impossible to enumerate all the good things that Christian Science has brought to our home. I have a different view of the world since God has been proved good beyond all our expectations. For all the blessings received, and for a clear understanding of the truth, I am grateful to God, and to Mrs. Eddy.—CHARLES LAHMANN, Dayton, O.

Picture of The Mother Church.

The picture of The Mother Church and its Extension which The Christian Science Publishing Society now has for sale is a half-tone reproduction, 12 x 15 inches in size, of a view giving the St. Paul Street frontage and Falmouth Street side.

The picture is mounted on a white mat, 21 x 25 inches, and will be sent to any address in a mailing-tube for fifty cents a copy. A dozen copies will be sent to one address for $4.50. Souvenir postals of the same design as the large picture are for sale at twenty-five cents per dozen.

Address all orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

Another New Pamphlet.

"The Ministry of Truth," a new pamphlet now on sale, is made up of the following articles, reprinted from *The Christian Science Journal;* viz., "Healing as Practised by Jesus," "The True Thought Modus," "Letter from a Lawyer to a Friend," "The Word Declared," and "Here."

Price. One copy, six cents; twelve copies to one address, 60 cents; twenty-five copies to one address, $1.15; fifty copies to one address, $2.25. Address all orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

From our Exchanges.

The Rt. Rev. Charles Gore, D.D., D.C.L., Lord Bishop of Birmingham, in a sermon preached at the University of Oxford, said: "I speak now only of the Church's spiritual life. But here, again, we appear to be failing equally as much, that is, as we appear to be failing in the definition of negative law The perilous tendency among us is to appeal always to averages or majorities; to ask ourselves what sort of religion we can induce men in general, rich or poor, to accept and welcome; to make religion easy; to abstain from asking too much; to accommodate the requirements of religion to what we suppose men in general will be ready to accept. Nothing could be so directly contrary to the method of Christ. He never will suffer the best to be sacrificed to what may be supposed to be the average requirement. He moves on his way relentlessly, presenting the high and complete claim, though it become more and more evident that his people as a whole may reject it. He never turns aside to remodel his religion, and to accommodate it to what would be found generally to commend itself to each class; to Sadducee or to Pharisee; to accommodate it to what would be found compatible with the politics of the one and the prejudices of the other, or to what the mass of the people might be prepared to accept without too much effort. Our Lord chose and sanctified exactly the opposite method. He appealed with the whole truth, for the whole of the man's heart."

The Churchman.

The stirring of the great heart of the under-world waits for clear and abundant evidence that Christians are really Christian, and that evidence is found only in life. When business men and professional men, when the wives and daughters of those who live in comfort, when all who claim to be followers of Jesus Christ look out upon life through his eyes, share in his love and longing, maintain his attitude in all of life's varied relations, then will the Christian Church discover the only dynamic sufficient for her task. The spirit of brotherhood and kindliness and sympathy which made Jesus the "friend of sinners" must be in our hearts and glowing forth in every relation of every day if we would hope to reach the great, restless, wretched multitudes who are "as sheep without a shepherd."

The Standard.

There has been too much confusion of the purpose of religion with the things upon which it acts and through which it acts. If the man who is corrupting the nation politically were to become religious,—not theological or ecclesiastical, but religious,—the power by which he is able to corrupt would be made to serve righteousness instead of sin. Is this too simple? Most primary things are simple, and what higher purpose could there be, what higher service to humanity could be rendered, than to direct all life currents, little and big, towards good instead of evil? To make men do good through wanting to do good is to make the doing of good perpetual.—*The Universalist Leader.*

This deepening of faith is not a matter that belongs to sacred times and places. The problem is to make common days sacred and familiar places alight and aglow with the presence of God. Unless we realize in work and rest—yes, even in our drudgery and amusement—that the life by which we live is Christ's life, that he is concerned with our use of it and eager to give us the crown of overcoming, we can never get beyond the shallows of the Christian faith. But God is calling us to better things. He urges us to venture forth on the wide, deep seas. For He is the pilot of our lives and will bring us to the port of full vision and untroubled love at last.—*The Congregationalist.*

The Christian preacher and teacher must not only inspire moral ideals in individual hearers, he must inspire in them a determination to apply this righteousness to their citizenship, and to remember that heaven cannot be won for self except as a man seeks to make heaven for others.

The Churchman.

THE CHRISTIAN SCIENCE TEXT-BOOK.—"Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing all the By-laws to date of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CARDS IN THE GERMAN PERIODICAL.—Application blanks will be supplied by The Christian Science Publishing Society to practitioners who wish their names and addresses inserted in the advertising columns of *Der Herold der Christian Science*. These applications should be properly endorsed and forwarded to the Society. The rate for advertisement will be $2.00 for the first line, and $1.00 for each additional line. It is desirable that those who offer their names in this way should be able to communicate with patients and inquirers who speak the German language only.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with The Mother Church and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By Hon. WILLIAM G. EWING.

Morocco, limp, round corners, gilt edges, convenient for pocket, each, prepaid 4 00
Twelve or more to one address, each, prepaid . . . 3 75

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5 00
Twelve or more to one address, each, prepaid . . . 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

The total corporate expenditures of 151 cities for the fiscal year 1904, according to a recent bulletin of the Bureau of the Census, were $554,440,215, of which those of New York constituted $167,060,171, or three-tenths. New York, with twice the population of Chicago, has current expenses nearly four times as great. The next six largest cities of the country together expend less than New York. Boston, though about equal in size with Baltimore, has current expenses nearly three times as great. Of the total running expenses of the 151 cities, 61.7 per cent went for salaries and wages, and 38.3 for all other objects. During the fiscal year 1904 the total receipts of the 151 cities were $594,175,998, of which $472,423,858, were from taxes and other revenues, and $121,752,140, from loans increasing indebtedness.

All wireless telegraph stations in the world have been located and catalogued by the Bureau of Equipment of the Navy Department at Washington and the list will soon be published. The systems of wireless are also given. The number of stations in the principal countries are: Denmark, 4; Germany, 13; France, 6; Great Britain and Ireland, 43; Holland, 8; Spain, 4; Italy, 18; Russia in Europe, 8; Sweden, 3; Turkey, 6; Argentina, 5; Brazil, 5; Canada, 5; United States, 88, of which ten are in the possessions of the United States, thirty-two being directly under the control of the navy; China, 5; Hawaii, 5; Japan, 2; Dutch East India, 5. The compilation also gives the names of all the merchant ships, and the flags they fly, which are equipped with wireless.

An indictment charging the Standard Oil Company with receiving rebates in the form of non-payment of storage charges to certain railroad companies was returned by the Federal Grand Jury before Judge S. H. Bethea at Chicago last week. The Standard Oil Company is the only defendant. The bond was fixed at $25,000. This is the case investigated by the grand jury in Cleveland, where it was found that the grand jury had no jurisdiction. The indictment contains nineteen counts and alleges that by a system of granting the Standard Oil Company certain concessions the oil company benefited to the extent of $8,506.72 during a period from August, 1903, to February, 1905.

According to a census just taken by the health department of the Isthmian Canal Zone, the population of the Zone is 22,137. The entire population of the Canal Zone and of the cities of Panama, Colon, and Crystobal, which are at the ends of the canal and a part of the Canal Zone to all purposes, although they are under the Panama Government, is 57,459.

New York City has a land area of 209,218 acres. New Orleans, 125,600 acres; Chicago, 114,932; Philadelphia, 81,828; Duluth, 40,556. Duluth with 62,000 inhabitants takes in more territory than St. Louis with its 624,000. Salt Lake City, with a population 6,000 less than Hoboken, includes an area thirty-five times as great.

The Attorney-General, in an opinion addressed to the Secretary of the Navy and just made public, holds that the so-called eight-hour law does not apply to vessels under construction for the navy by contract with builders at private establishments.

Enlisted men in the navy have instituted a movement to do away with tattoo marking, which was formerly so popular with sailors.

More than $50,000,000 is now being spent upon buildings and bridges of a public character in and around Washington.

Foreign.

The Mexican delegates in the Pan-American Congress will propose the re-organization of the whole Pan-American railway scheme, dividing the project into three sections, the first to include Mexico and Central America; the second, the United States, Panama and Colombia; the third, Argentina, Peru, Ecuador, and Bolivia. Each section will hold a separate railway conference and report to the congress. While the decision reached by the congress on the arbitration question does not involve a settlement of the Drago doctrine issue, it is clear that there will be no serious disagreement over it. The Drago doctrine involves the question of the right of a creditor nation to collect a debt by the use of force. The arbitration committee has agreed to the resolution recommending to the different republics the extension for the further period of five years of the treaty of arbitration for pecuniary claims which was agreed upon at the Pan American conference held in the City of Mexico.

A commission recently appointed by royal decree in Spain is charged with the duty of encouraging, by whatever means are at its disposal, the visits of foreigners, either those coming for pleasure or improvement. Among the steps which the commission has already taken is the preparation and publication in foreign countries of itineraries for travel, which show the chief national and artistic monuments, landscapes, and other points of interest that may be visited most easily and profitably by foreigners.

Industrial and Commercial.

The total shipment of potatoes from the Aroostook County crop of 1905, just concluded, over the Bangor & Aroostook Railroad, amounts to 7,725,372 bushels. The total shipment from the 1904 crop amounted to 6,694,071 bushels. The number of carloads shipped in the season just closed to different destinations outside of New England were: to Southern States, 785; Middle and Western States, 2,826; foreign, 1; total outside of New England, 3,612.

What is said to be the largest individual wool clip ever grown on the American continent was shipped last week from Billings, Mont., over the Burlington, to a Boston wool firm. The clip weighed 1,500,000 pounds and forty-four cars were required to carry it. The owner refused an offer of twenty-four cents a pound for the wool.

The result of an investigation carried on secretly by the Corporation Counsel of Chicago may be that millions of dollars will be added to the assessed valuation of Chicago estates and that back taxes may be imposed on one hundred and fifty estates which it is alleged have evaded the payment of just taxes in past years.

The aerial tramway just completed by the Conrad Consolidated Mining Company, at Conrad City, B. C., extending from that city four miles into the mountains, contains the longest span of any aerial tramway in the world, 2,068 feet long. The next longest in the world is 2,750 feet.

A subsidiary company to the new works of the United States Steel Corporation at Gary, Ind., has been incorporated as the Universal Portland Cement Company with $1,000,000 capital, to utilize for commercial purposes the slag of the Gary furnaces.

It has been reported that the Hamburg-American line has given an order to Harland & Wolff, Belfast, Ire., to construct a steamer larger than the Cunard liner Lusitania, which is 790 feet long.

The actual gains in the foreign commerce of the United States in the past decade are, in imports, $447,000,000, and in exports, $861,000,000.

The reports received concerning the wheat crop in the Canadian Northwest this year indicate that it will be about 97,000,000 bushels.

The value of the zinc and lead mined in the Joplin, Mo., district has increased over a million dollars in the past year.

General.

The life-tree of the Philippines is so tenacious of vitality that stakes cut and trimmed will grow into trees if set in the ground. This life-tree grows about forty feet high, with insignificant blossoms, but remarkable oxidized-green leaves. The narra also grows in the Philippines. The male wood is rose colored, the female white, and both are aromatic. The tree is so impervious to decay that it denudes itself of aramay, a diseased white wood sometimes found next to the bark. The wood texture, solid yet brittle with united fibres, is rarely attacked by the anay (white ant). The wood takes excellent polish, becoming a rich dark red hue. In Albay, curious drinking cups are made of narra, the white variety being used to color water in the cups. Placing water in a small narra vessel of either kind turns the water sky blue and gives it a perceptible fragrance, but white narra colors water more quickly.

The Japanese are expert paper makers, and manufacture from the bark of shrubs and trees scores of papers which it is claimed are superior to those of American manufacture. These papers are thin, yet tough and durable, and some of them are oiled, and serve the purpose of waterproof.

The Pennsylvania Railroad Company has placed another supplementary contract for 35,000 tons standard steel rails for 1907 shipment and a small bridge order requiring 900 tons of structural steel.

During the year ended June 30, 1905, the American farmer received for orchard fruit $83,751,840. In American vineyards during the same period there were raised 1,500,000,000 pounds of grapes valued at over $15,000,000 more. Nearly one third of these grapes went into wine, but most of them went to the consumer in eight and four-pound baskets. American subtropical fruits brought the producers nearly $10,000,000, and there was imported from the West Indies and Southern Europe $25,000,000 worth of tropical fruits. There was paid the American farmer over $25,000,000 for berries during the short summer season of 1905. American orchardists marketed 2,000,000,000 bushels of apples, 16,000,000 bushels of peaches, 7,000,000 bushels of pears, and 9,000,000 bushels of plums. The manufacturing of fruit and berry baskets brings to the various factories over $7,000,000 annually.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

Christian Science and its Leader as Seen by an Australian.

[THE following articles are copied from *Light*, a temperance journal published in Sydney, Australia, and they express in some measure the interest in and appreciation of Christian Science and its Discoverer and Founder which is felt in that distant continent. We feel sure that the writers will be glad to have us correct a few inaccuracies in these most excellent articles. The Concord "associated with the name of Emerson" is Concord, Massachusetts, whereas the city of the same name in which Mrs. Eddy resides is the capital of the State of New Hampshire. Mrs. Eddy was not born in Concord, but in Bow, New Hampshire, a small town within sight of her present residence. Her work in establishing Christian Science was all done in Massachusetts, until within a comparatively few years, when she retired to Concord, New Hampshire. Here she has since resided, and from this place she actively directs the world-wide movement of which she is the Leader. The Mother Church of Christ, Scientist, was dedicated almost twelve years ago. The building dedicated in June last, although much larger than the original structure, is an extension of that edifice, and while Mrs. Eddy was not personally present on the occasion of its dedication her Message, "Choose Ye," was the most important feature of the exercises.—EDITOR.]

CHRISTIAN SCIENCE.

Last week the cables advised us that Mrs. Mary Baker G. Eddy, the Discoverer and Founder of Christian Science, had dedicated, in Boston, what is known as The Mother Church of the Christian Scientists, in the presence of thirty thousand followers.

It is only two years since the corner-stone was laid. It is only twelve years since the first building of this new denomination was erected. It will be twenty-seven years next July since the first Christian Science Church was formally organized, and it is only forty years since Mrs. Baker Eddy discovered Christian Science. Yet now that the great cathedral is completed, at a cost which will not exceed $2,000,000, money will be available for paying the last cent of indebtedness.

GREAT RELIGIOUS MOVEMENT FOUNDED BY A WOMAN.

[By our Special Contributor.]

"All great religions have been founded by men." This might have been written fifty years ago; it is not true to-day. Memory recalls the names of the great religious reformers of history. They are few, but their names are emblazoned in the hearts of humanity and on the rolls of fame. They stand out like mountain peaks on the lowly plain, and they live to-day, exerting an influence a thousand times more potent than when they passed from mortal sight. "Given a great soul," wrote Carlyle sixty years ago, "open to the Divine significance of Life, then there is given a man fit to speak of this, to sing of this, to fight and work for this; in a great, victorious, enduring manner."

But the "great souls" of whom the Sage of Chelsea wrote, and whom the world generally has followed, have been men. There have been great women, women who live in history, and without whose name and example many of the records of the past would be sombre and dull. And woman's influence has always been great,—though often silent. Perhaps the one has been the result of the other; the silent forces around us are the most powerful. But we do not think of women as among these "great souls." This may be faulty judgment; probably it is. If that is so, then the day has arrived when we must acknowledge it.

For we are being constantly reminded that this is a Woman's Age. As if every age had not been a Woman's Age. As if women had not always been wives and mothers; had not always loved and suffered; had not always been hopeful and brave; had not always manifested those gentler qualities that endear her to man. But it is a Woman's Age in another sense—that woman is enlarging the scope of her outlook and her pursuits. She has made such advances in this way in the last half century that she must have surprised herself. For good? some one asks. Yes. There are those who doubt this now. The future will leave no doubt.

Our forefathers might have thought woman capable of many things that she had not attempted in their time; but did they ever dream of her becoming a religious reformer? Indeed, how many to-day know—how fewer still realize—that the greatest movement in the religious world in the last century was begun by a woman—a woman who is still amongst us, alert and active, though she has passed the age of four score years and for forty years has concentrated all her thought and time and unique powers to her supreme work.

The complete life story of this woman, Mary Baker Eddy, has yet to be written. But what is known makes it fascinating; it will be still more so in the future, when she can be studied from a true perspective. Every reformer must to a certain extent be an iconoclast—must disturb traditional beliefs and bring the battering-rams of truth to bear upon ignorance and prejudice; else he or she were not a reformer. Hence a fierce fight—storm and stress against which only an heroic soul could stand and fulfil its Divine mission. And about no great reformer can this be said more truly than about Mary Baker Eddy. Her followers have been charged with worshiping her. In the sacred sense of that term nothing could be farther from the truth. But they know something of her life; her fidelity to the great task entrusted to her; her dauntless courage in the face of an army of foes; her profound spirituality; her deep love for God and her fellow-men. Moreover, they have reaped where she has sown. By thousands they have been restored to physical health and have entered into spiritual rest; they have grown into the consciousness of those real things taught and lived by Christ; and they are seeking to be lights and guides to others into the "secret place of the most High," where alone there is escape from the ever-restless sea of daily unhappiness and unsatisfied longings.

Mrs. Eddy is a native of Concord, U. S. A., that historic little New Hampshire town associated with the name of Emerson and other great Americans. Within a comparatively small radius,—which includes Boston,—Hawthorne, Lowell, Oliver Wendell Holmes, Longfellow, and Whittier lived and worked. The literary atmosphere that seems to pervade that part of the great American continent must have had its influence upon Mrs. Eddy, for in very early life she began

Copyright, 1906, by Mary Baker G. Eddy.

Digitized by Google

to write. Long before she had entered upon her life's mission she was one of the most frequent and welcome contributors to popular magazines, and she manifested then some of that poetic fire which is so apparent to all students of her writings. Emerson, in his essay on another religious reformer, Swedenborg, says that "it is remarkable that this man, who by his perception of symbols saw the poetic construction of things, and the primary relation of mind to matter, remained entirely devoid of the whole apparatus of poetic expression which that perception creates. . . . His books have no melody, no emotion, no humor, no relief to the dead prosaic level." Just the very reverse may be written about Mrs. Eddy. Even in her great work, Science and Health, which treats the most profound subjects from a metaphysical standpoint, there are whole passages that glow with poetic fervor, and appeal to the student because they have gone to the inmost heart of things.

But the literary atmosphere of New England would not account for Mrs. Eddy's mission; her inspiration for that must be sought elsewhere. To-day in Concord, where she still resides, to every one who knows her life, she is a deeply spiritual woman—to whom, as both she and her followers believe, a special revelation was made. It was in Massachusetts, in February, 1866, as she relates in one of her books, that she discovered the Science of Divine Metaphysical Healing, which she afterwards named Christian Science. She says, "The discovery came to pass in this way. During twenty years prior to my discovery I had been trying to trace all physical effects to a mental cause; and in the latter part of 1866 I gained the Scientific certainty that all causation was Mind, and every effect a mental phenomenon. My immediate recovery from the effects of an injury caused by an accident, an injury that neither medicine nor surgery could reach, was the falling apple that led me to the discovery how to be well myself, and how to make others so. Even to the Homœopathic physician who attended me, and rejoiced in my recovery, I could not then explain the *modus* of my relief. I could only assure him that the divine Spirit had wrought the miracle—a miracle which later I found to be in perfect Scientific accord with divine law. I then withdrew from society about three years,—to ponder my mission, to search the Scriptures, to find the Science of Mind, that should take the things of God and show them to the creature, and reveal the great curative Principle,—Deity" (Retrospection and Introspection, p. 38).

That, in a few words, is the story of how this noble woman entered upon her mission. The remainder of the story is written in the hearts of thousands of men and women. Has her path been smooth? Then it were not the path of the reformer. Has the way been strewn with roses? Rather with thorns and thistles. Has the outlook always been bright and clear? Then the mental and spiritual struggle which must be made by every soul in its search for Truth would not have been hers. But her equipment has been equal to her task. Belief in her mission has never failed; else success would have been impossible. The prophetic vision which sees beyond the present is hers; herein lies one factor that inspires the reformer.

And how stands the work to-day—forty years after the great discovery? Mrs. Eddy describes herself, and is accepted by her followers as the "Discoverer and Founder of Christian Science." We have seen that it was to the Bible she looked in her search for truth. And it was to the Bible only. In the tenets which she subsequently drew up and which are accepted to-day, she laid down that the Bible is the "guide to eternal life." Christian Science, therefore, is founded upon the great Christian classic, and it is the book that before all others every Christian Scientist makes his daily study. Necessary it is to emphasize this, because of misconception. Mrs. Eddy's greatest book, "Science and Health with Key to the Scriptures," wherein she expounds her teaching, is an interpretation of and commentary on the Bible. It opens with an exposition of prayer, than which there is nothing more helpful in the English language. It declares and proves health, harmony, and perfection to be the normal condition of man created in the image and likeness of God. It shows that the Christ-healing is the healing for all to-day—not limited to the apostolic times.

But the object of this article is not to explain the truths embodied in Christian Science, but to write of its pioneer and the results of her labors. In 1879 Mrs. Eddy established a church in Boston and became its pastor. The membership was then twenty-six. To-day the number of members is 34,063, of which 3,628 were admitted last year. There are 625 branch churches throughout the world, besides over two hundred societies. [The Clerk's report at the Annual Meeting, held June 12, 1906, showed an increase over these figures of 6,181 members of The Mother Church and fifty-nine branch churches.] In Australia there are four churches; the first one was formed four years ago. The spread of Christian Science teaching has therefore been remarkable—nothing more so in history. And the future is bright with hope. Mrs. Eddy has always urged that people should only follow her as she follows Christ. They esteem her for her worth's sake. For forty years this beloved Leader and Teacher has, to quote from the last report of The Mother Church in Boston, "labored for the regeneration of mankind, and time has put its seal of affirmation upon every purpose she has set in motion, and the justification of her labor is the fruit. In these years of work she has shown wisdom, faith, and spiritual discernment of the needs of the present and of the future that are nothing less than God-bestowed."

Let it be added that Christian Science is not merely a new remedy for physical ills. It is supremely greater than that. It is a remedy for spiritual ills also. It not only heals the sick and reforms the sinner, but, to quote one of its latest exponents, "it offers a practical solution for every problem that presents itself in each individual experience, inasmuch as right knowledge is always demonstrable, and demonstration proves its correctness. Every healing in Christian Science proves the divinity of its Principle. There is no remedial benefit claimed to be obtained from drugs that cannot be secured from Christian Science." Given this, Mrs. Eddy's position as a great Leader and Reformer is unassailable. It is not necessary to be a Christian Scientist to do justice to her in this respect. We do not need to be Methodists to acknowledge the inestimable value of John Wesley's phenomenal labors; or Presbyterians to give all credit due to John Knox's stand for truth. Here is a woman who, standing alone, has for forty years braved the scorn and contumely of the world in her heroic determination to uplift her fellow-creatures. She has been engaged in "smiting error with the falchion of Truth." Hence to-day she is accepted as a guide and preceptor by thousands in all parts of the world. She has taught them that there is redemption here and now from the evils that afflict humanity. And they are demonstrating this to be true. Woman—last at the cross; first at the sepulchre. Woman—pointing the way to Life through Christ; health, peace, and power becoming the precious possession of humanity.

From our Contributors.

Patient Continuance in Well Doing.

WILLIS F. GROSS.

EVERY earnest and experienced Christian Science practitioner has had abundant proofs of God's love and power, manifest in the rapid and in many cases the well-nigh instantaneous restoration of the sick to health and the speedy liberation of those in bondage to the enslaving senses. He has had great reason to rejoice that humanity is learning how to avail itself of divine help. He has marveled at the might of omnipotence, and oftentimes he has been led to

exclaim, in the language of the psalmist, "Who is so great a God as our God?" The evidence of God's willingness and ability to supply human need in all the varied phases of experience, has quickened and increased the desire to know Him who, as the psalmist has declared, forgiveth all our iniquities and healeth all our diseases.

Marvelous works which seem to compel conviction are not, however, the only reasons for the Christian Scientist's faith. The writer has been most deeply impressed and greatly helped by cases of physical and moral healing which have been realized only as the result of faithful work and patient waiting; when days have passed into weeks, weeks have become months, and the months have not been few. The hand of God is seen in these works, and the wise student gains help and encouragement therefrom. We would not convey the impression that in these instances God withheld the blessing so much desired, but we would call attention to the fact that these faithful toilers were encouraged, strengthened, and sustained in their work until it was possible for them to realize the blessing already bestowed upon the children of God. They were not left comfortless. The need of the hour was supplied, and in their struggle with temptation they came off more than conquerors. Day by day faith grew stronger because of error overcome, and they were inspired with greater and still greater confidence. They would have yielded to discouragement and given up in despair, or else fainted by the way, if they had not received strength from on high. Human will or wisdom could not have sustained them or made it possible to walk by faith when material sense was unable to perceive the way before them or give any assurance as to what was to be the outcome. Divine Love enabled them to press on, looking "not at the things which are seen, but at the things which are not seen," until the unseen things of Spirit became so real that the illusion of physical and moral inharmony was dispelled. Then did they rejoice with joy unspeakable, rendering "unto God the things that are God's."

It may help and encourage those who are to-day learning the much-needed lesson of patience, to consider some of the phases of error which have been overcome by those who have fought a good fight and finally gained the victory.

Christian Science strongly insists upon the Scriptural declaration that "God is no respecter of persons." One of the first temptations which has beset many of those who have not been quickly healed was the suggestion that God is a respecter of persons. Under the influence of this error the seeker for health is frequently heard to ask, and sometimes rather impatiently, "Why am I not healed as quickly as others have been? I have done all I can, why does not God heal me?" This shows that the personal sense of God, which conceives of Him as doing for one person and not bestowing the same measure of good upon another, has not yet given place to that true conception of divine Principle which heals sickness and destroys sin. This error of belief is one of the iniquities spoken of by the prophet Isaiah which have separated between man and his God. It excludes the light of Truth and Love, and so long as it remains the individual abides in darkness. Divine Love is not a respecter of persons.

Another phase of the belief that God is a respecter of persons is manifest in the thought that if one is not healed quickly he cannot be healed at all. All forms of sin and sickness can be healed if we are able and willing to do our part. To declare otherwise is to reject the truth which is able to destroy every manifestation of evil.

A lie repeated ten thousand times has no more truth in it than when it was first uttered. The fact that its falsity has not been proven is no argument in its favor, neither does it indicate that the truth will not even yet be established. Faith in the truth, even though it be not understood, and an abiding conviction that the truth will finally triumph, is a saving faith known by its fruits.

Another form of error which must be overcome is the temptation to sit in self-righteous judgment, esteeming one's self as good or perhaps even better than those who have been healed with apparently but little effort on their part. Mortal man possesses no inherent goodness. "There is none good but one, that is, God." One is not healed because he has earned it or deserves it, but because he is the recipient of God's goodness. God is merciful and just and He does not unwittingly bestow His blessings. The human sense of goodness which regards one person as worthy and another as unworthy is the prayer of unrighteousness which avails not, while the spirit of meekness and humility expressed in the publican's prayer, "God be merciful to me a sinner," testifies to one's willingness to be saved in God's own time and way.

The apostle Paul, who was able to give such remarkable proofs of his understanding of the Master's teachings, was at one time possessed of a thorn in the flesh. Just what this thorn was we do not know, but it is evident that the apostle did not in any sense regard it as sent of God, for he speaks of it as the messenger of Satan; in other words, a manifestation of error or evil. Neither did he have any doubt as to God's will in the matter, for he says that he besought the Lord thrice that it might depart from him.

At the time of writing his second epistle to the Corinthians the infirmity had not been overcome. Shall we then say that his efforts were unavailing, that his prayer remained unanswered? By no means. As the result of his struggle he gained the assurance that God's grace was sufficient for him. In the hour of trial and temptation he was divinely sustained. It must have been such experiences as this, with success finally achieved, that made it possible for him to give utterance to those words which have brought encouragement and strength to millions: "And let us not be weary in well doing: for in due season we shall reap, if we faint not."

The assurance that honest, conscientious effort will finally be rewarded, has encouraged and strengthened the earnest seeker for heavenly good to continue to labor and wait, even though he saw no immediate results. The one who works only for present reward is laying no enduring foundation for future success, but the one who clings steadfastly to the truth of being, and is faithful in the application thereof, is building for eternity and is not discouraged if the human sense of what is required is not immediately satisfied. He is convinced that divine Love supplies his daily need; what he wants or thinks he needs may not always be that which will insure the most rapid spiritual growth and development.

Because he seeks first the reign and rule of spiritual harmony he is content to work and wait for his reward, never doubting that it will come in due season. Such an one is helped because he can be helped; he is blessed because he is prepared to receive the blessing. He has no time nor occasion to complain. He is never tempted to think others are rewarded more abundantly than they should be, for such a suggestion hints at the injustice of God, whom he professes to serve and to whom he looks for help. He turns a deaf ear to the whispering of error, that after all he may labor in vain, for he is convinced that nothing can render null and void the divine law which makes it possible for every man to reap as he sows and only as he sows. He is convinced that the operation of divine law can never be interfered with, and for this reason obedience to that law can never go unrewarded nor disobedience unpunished.

Healing, physical and moral, will ever be realized when the demands of divine law and order are complied with. Let the seeker for health admit the truthfulness of this declaration and he will perceive that the only reason he has not gained his heart's desire is because he has not done all that is required of him. He may not know and no one may be able to tell him just what and how much God requires, but if he sees one thing he should do, let him do it.

Digitized by Google

and then his eyes will be opened to perceive something else that needs to be done. Thus he will be led step by step.

As the immediate answer of Paul's prayer for deliverance from the thorn in the flesh was the assurance that God's grace was sufficient for him at all times, so the immediate result of endeavoring to overcome some physical infirmity is oftentimes the gaining of some spiritual good, the need of which had not hitherto been realized, and this spiritual good may be the very thing needed to overcome the sense of physical inharmony. Christian Science healing is scientific healing, and obedience to the law of God must remove the supposed cause of all discord. Ignorance gives place to spiritual understanding, and the results of ignorance are no longer manifest. Fear is overcome by that love which casteth out fear and one ceases to be the victim of his own and other people's fears. The sense of pleasure in sin is destroyed and one ceases to pay the penalty of wrong doing. If inharmony is not overcome, a higher understanding of divine law must be gained and obedience thereto must be made the rule of life. We repeat, no right effort is lost, it does avail. There is hope and encouragement in the words of the prophet, "My word . . . shall not return unto me void, but it shall accomplish that which I please, and it shall prosper in the thing whereto I sent it."

Little Things.

MABEL S. THOMSON.

If thou hast run with the footmen, and they have wearied thee, then how canst thou contend with horses? and if in the land of peace, wherein thou trustedst, they wearied thee, then how wilt thou do in the swelling of Jordan?—JEREMIAH.

A WISE man once said, "Faithfulness in great things is a very small thing, but faithfulness in small things is a very great thing." Lord Beaconsfield's definition of genius as an infinite capacity for taking pains, was in the same line of thought, and it is obvious that the only road to success in any walk of life is through perseverance, patient attention to detail, and a refusal to accept defeat. It has been generally supposed, however, that the realm of religious thought and action lies quite apart from such methods, in a region of sentiment, with which reason has very little to do, and so insidiously has this separation of his religious from his secular life grown into the thought of the ordinary mortal, that—unless he is a thinker—he is either quite oblivious of all such matters, or blissfully unaware that his daily conduct, while theoretically actuated by the highest spiritual motives, is in reality far more influenced by the prevailing bank rate or the price of mutton.

In entering upon the serious study of a subject so revolutionary in its processes and so far-reaching in its effects as is Christian Science, it is most instructive, and indeed sometimes most necessary, to trace the origin and growth in human consciousness of some mental conditions which seem to obstruct the student's progress, and which even threaten to prevent him from taking any step at all, so closely does association of ideas bind him, all unconsciously, to his forefathers' habits of thought, his class, his education, and his surroundings.

Human nature, or mortal mind, has always been the same, varying in detail in different periods, passing through various stages of extreme simplicity to extreme complexity, but remaining the same in its fundamentals. Possibly the most persistent of its qualities is the inherent dislike to mental exertion in any direction save in that which will minister to its bodily needs or pleasures. As was once said to the writer, in a forcible phrase, "The two primitive factors of the human mind are hunger and lust." The speaker, not then having any knowledge of Christian Science, did not connect these two conditions with the desire to perpetuate life in matter, which is necessarily the moving impulse in mortal mind.

From the very earliest times of which we have any record in the history of mortal man, one idea seems to have been common to every tribe and race with hardly an exception, and that is the idea of priest. There can be hardly any idea that this office had its origin primarily in the desire of primitive man to propitiate the powers of nature, so called, over which he recognized he had no control and which, through storm, flood, and disaster, imperiled his existence. Gradually this idea took more definite shape, and the head of the tribe or of the family became its priest; then, as life became a little less simple, a little more difficult, a priestly caste was evolved, consisting of persons who would devote themselves to the sacrificial and propitiatory offices, while the other members of the community were fighting or hunting to keep their place in the struggle for existence. So the idea of priest became more and more firmly fixed in human thought, and it is not difficult to see how gradually the priest became the mediator, and his office an object of superstitious reverence, surrounded by a halo of sanctity. Nor is it more difficult to realize how easy would be the transition, to the priestly caste, from being the servants of the people to becoming their tyrants, holding a monopoly of power on account of the supernatural forces they were supposed to control or have access to.

Now there are a number of side-issues which arise from this point, as to the various beneficent uses of the priesthood at different times, but they cannot be touched upon here, the purpose of these remarks being simply to show how, from this disinclination or inability of the human mind to do its own thinking, has arisen the whole imposing structure of ecclesiasticism, creed, dogma, apostolic succession, priestcraft, and, incidentally, much of the cruelty and bloodshed which have stained human history.

It is true that at different times, when the tyranny has become intolerable, some violent upheaval has shaken it somewhat, a few courageous communities have made a bid for religious freedom, but only to find the priest idea rising up in some other form in their midst, for the simple reason that the fundamental condition in human thought which originated it has remained untouched.

Having got thus far in our examination of this question, let us see how this habit of thought is likely to affect one who is just entering on the study of Christian Science. Remember, not only is he himself steeped, consciously or unconsciously, in the priestly idea, for it has permeated all human relationships in some degree,—the man who takes his political opinions ready-made from a particular newspaper is following the same line of thought, getting some one else to do his thinking for him,—but for thousands of years behind him this state of mental indolence in spiritual matters has paralyzed mankind.

The student soon finds himself confronted by two demands. One is, that he must think for himself about matters on which he has been generally satisfied to accept another person's opinion; the other, that he must be faithful in applying the Principle and rules of Christian Science to the smallest things of daily experience,—a state of affairs quite foreign to his former religious habit. What is his first inclination? Is it not, when in any difficulty, to go to some one else to be told what to think and what to do? Does not the suggestion that he should try to solve the problem for himself, with the aid of his text-book, often beget self-pity, or the pointing out of the little faults, fears, dishonesties, etc., meet with resentment? Looking closer into these things, is it not clear that they are indicative of the same mental indolence which has steeped the world in priestcraft?

It is not uncommon to find, even in sincere and more experienced students of Christian Science, a tendency to argue for some pet habit, to excuse some small inconsistency, to indulge some small fear, not apparently realizing that, while the thing in itself may be harmless, the mental indolence which is preventing them from rising above it and destroying it, is sapping the vitality of their individual energy.

Digitized by Google

and paralyzing their further demonstration of the truth. We thus see that faithfulness in little things is indeed a very great thing, for it implies in spiritual matters a state of activity, watchfulness, and individual effort to which Christendom has long been a stranger.

Jesus gave his parable of the talents, which commends those who have been faithful over a few things, and spoke of the fruits necessary to show that one is truly his disciple, and it is well to remember that in all this he was addressing a people who were groaning under an ecclesiastical tyranny as despotic and arid as the world has ever known. St. Paul, speaking of his work in this respect, uses the phrase, "Blotting out the handwriting of ordinances that was against us, . . . and took it out of the way, nailing it to his cross." Furthermore, while the writer of the Epistle to the Hebrews emphasizes the fact that Jesus was indeed the great high-priest of humanity, nevertheless he sweeps aside all the traditional priestly caste of Aaron and Levi, and places him in a different order, "the order of Melchisedec." "For this Melchisedec, . . . first being by interpretation King of righteousness, and after that also King of Salem, which is, King of peace; without father, without mother, without descent, having neither beginning of days, nor end of life; but made like unto the Son of God; abideth a priest continually." To this comprehensive and wonderful description of the true priest there is a fitting corollary in Science and Health, page 141, where, in speaking of the reign of divine Principle illustrated in the life of Jesus, the Discoverer of Christian Science says, "Its only priest is the spiritualized man."

Can any one point the Christian Scientist to any surer means of attaining to this spiritual consciousness than the diligent assimilation of the Principle of Christian Science attained through the study of the Bible and Science and Health, and through unremitting fidelity in applying its rules to the little things? Otherwise, "How wilt thou do in the swelling of Jordan?"

Selected Articles.

An Answer to Criticisms.

Christian Scientists do not pray directly for material things. They follow the teaching of the Master, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you." They know that they are always in need of more goodness, though they may not know just what they need materially; therefore, their task is to do good and trust God for a just reward.

Christian Science treatment does not consist merely in a "denial of any need." It involves, first, a recognition of one's sins; second, repentance; third, reformation effected and sustained by the power of God.

Christian Scientists believe that bodily healing is a consequence of spiritual regeneration, so that healing the sick is secondary to the healing of sin and dependent upon it. While Scientists differ from some others in their understanding of the nature of sin and disease, they none the less recognize that these exist in erring mortals and must be grappled with and overcome in God's way.

Mrs. Eddy declares in her message to The Mother Church published in 1901: "To assume there is no reality in sin, and yet commit sin, is sin itself, that clings fast to iniquity." Again, "In Christian Science it is plain that God removes the punishment for sin only as the sin is removed."

It may be true that a few persons have failed to find the comfort for which they have sought in Christian Science and have gone back to their old ways of thinking and doing. If this is an argument against the worth of Christian Science, what shall we say of the vast multitudes who have found health and comfort in this Science after having sought it vainly in other ways?

Mrs. Eddy states that the Bible was her only guide in the search for Christian Science, and all her followers agree with her that her book is in strict accord with the Scriptures. If it is right for clergymen to expound the Scriptures from the rostrum, it is certainly right for Mrs. Eddy to explain them in a book, and it is not in good taste for a clergyman to refer to Christian Science as a "travesty on Christianity" simply because it gives an interpretation of the Scriptures which dishonors flesh, or matter, and heals the sick.

A critic declares: "Its cures, in my opinion, can be explained in part by coincidences." It is quite remarkable,

[redacted]

made most of those forlorn students bloom and blossom as God's own children. Last June a large representative body of Christian Scientists assembled in Boston, and it was conceded by all who saw them that they were distinctly above the average from every point of view.

A physician declares, "The time for miracles was when Christ was establishing his divinity." This is quite true; but now also is the time, and nothing less than marvelous demonstrations of the Christ-teaching can prove its divine origin to this age. Before I studied the Scriptures on these points, and understood the possibility of Divine healing in this age, I was inclined to the same belief; but to say that the day of Christian healing or healing without the use of medicine and through implicit dependence upon Divine power is not for this age,—when multitudes are being healed in this manner,—is like declaring that the day of artists has passed when our walls are covered with pictures fresh from the artist's brush, and such as would do credit to the old masters. Mrs. Eddy declares in Science and Health that Jesus' works were "not supernatural, but supremely natural" (pref. p. xi.).

There are a number of medical students who have gone through the "full courses in medicine," and who earnestly declare that what they have learned of Christian Science has enabled them to heal a larger per cent of patients who come to them (including consumptives, victims of cancer, and of other serious maladies) than they were able to cure while practising medicine. This is certainly better testimony than that of one who has only had experience with medicine and not with Christian Science. With all due respect to our kind physicians and to their long courses of training, I would add that thousands of individuals have been cured through Christian Science after they had failed to recover under the care of skilful physicians.

ALFRED FARLOW.
Pittsburg (Pa.) *Despatch.*

We wonder why it is that so much is made of a death when the patient has been treated by Christian Science, yet so little is thought of the hundreds of thousands of deaths that follow the ablest treatment of the ordinary medical practice. You frequently hear the assertion that such a one was "doctored to death," and nothing is thought of it, yet when one comes to his death by not being doctored a great cry is raised. It's a queer world.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

A Helpful Letter.

[We are glad to publish the following letter to Mrs. Eddy from one of her students whose work in Christian Science has done much for the advancement of our Cause. This letter expresses such appreciation of our Leader's work, such gratitude for it, and such a desire to be of service to her, that it will be read with pleasure by Christian Scientists.—Editor.]

New York, N. Y., July 20, 1906.

My Precious Leader and Teacher:—My heart is overflowing with grateful love for your dear letter and its sweet contents. Had ever any people so wise, unselfed, and vigilant a Leader as we, your students; and who is so great a God as He who has given you to us to lead us to His Christ?

I am ever searching my inmost consciousness and praying earnestly and continually for God to open my spiritual eyes that I may behold wondrous things, as you, His chosen messenger, reveal His law of unfailing love.

When I realize what loving obedience has brought to me and to all your obedient students, I could shed tears of pity for those students who tarried by the way in the past and listened to the voice of personal sense, until they ceased to hear your loving tones and lost the pathway.

I thank God for His tender care, which has enabled me and your faithful and loyal students to watch and pray, work and wait, through the cloud and tempest, till this harvest hour. Love's labor is never lost. The tireless watcher does not sleep on his sword.

As I behold this First Church of Christ, Scientist, of New York City, a tribute of love and gratitude to you, beloved, our prayer in Concord granite, which my students and members of this church have reared to you, I praise God for this evidence of His love.

Every day I see proofs of your unselfed watch-care and love for your students, including me and mine. How often during the church services I wish you could see the great congregation and hear the testimonies of wonderful deliverance from sin, sickness, sorrow, and death, and their appreciation of your great work and your book, Science and Health, and could hear your words in the hymns ring out from hundreds of voices, which fill the lofty dome until the music seems to blend with the unseen angel choir and the great organ of eternity swell its diapason in Te Deums of praise to God for your ministry to mankind.

Had I been more spiritually minded and quicker to catch your messages from God, you would have moved me to greater demonstrations of His mighty power. I love the church solo, "Hear ye, Israel! Oh, hadst thou heeded my commandments!" I always hear your gentle rebuke in these words, and my heart responds, Oh, *had* we heeded, how much holier would be our peace and greater our power. Then I watch more vigilantly and gird on my armor more securely and go forward more dauntlessly to wield the sword of Truth and Love.

You thank me for getting you wearing apparel and feel indebted to me for the favor. If you think you are *indebted* to *me*, suppose, my beloved Leader, you and I compare accounts. I am indebted to you for perfect physical health and almost unlimited strength, for a large body of loving, loyal students and church members, for a large church edifice which shelters multitudes who come to learn through Christian Science the way to eternal life.

I am indebted to you for the understanding of God's power to heal through man, which recently enabled me to destroy a cancer in the mouth and throat in one treatment—all evidence having disappeared after the second treatment. This was nine weeks ago. This gentleman, Mr. Ernest C. Speare, is a very reliable man, who has occupied a responsible position in one of our largest dry goods stores for thirty-one consecutive years.

I have found brothers and sisters, houses and lands, according to the promises in the Scriptures. No good thing has been withholden from me.

Ever your loving student,

Augusta E. Stetson.

A Manly Apology.

The work of the Publication Committee has been largely in the nature of securing the publication of correct statements of Christian Science, in answer to misstatements which have previously appeared in newspapers, and in this work the members of the Committee almost invariably have found the editors ready to publish the necessary correction, but without assuming responsibility for it or for the original incorrect or offensive article. In some instances regret has been expressed for the publication of the offending article, and in a few instances the editors have felt called upon to publicly apologize for the misuse of their columns. An instance of this latter kind is found in the Ottawa, Canada, *Evening Journal*, which contained the following manly apology in its issue of Aug. 7:—

"A few days ago, in a report of a 'Dakota Cyclone' meeting in Harmony Hall, *The Journal* allowed to slip into print an objectionable reference to Mrs. Eddy, the head of the Christian Science Church. *The Journal* regrets the publication of the item, not only because of the pain it may have given to Christian Scientists in and around Ottawa, but because the publication of such remarks is contrary to *The Journal's* principles.

"*The Journal* may not agree with Mrs. Eddy's teachings, as a whole, but it knows nothing derogatory to Mrs. Eddy's personal character. In fact it knows much to her credit, especially as a philanthropist. The Dakota Cyclone made many wild statements during his stay here. *The Journal* regrets that through a slip it was made the medium for spreading his wholly unwarranted attack on Mrs. Eddy. *The Journal* apologizes to Mrs. Eddy and to the local Christian Scientists."

This editor takes the right view of the matter, and his apology is the logical result. It does credit to his honesty and to his sense of justice. His paper "was made the medium for spreading" a "wholly unwarranted attack on Mrs. Eddy," and he does not seek to evade his responsibility, even though it was through error, or "a slip," that it was done.

The mere fact that some more or less irresponsible person has attacked Christian Science or its Founder, presents no justification for circulating the prejudiced and unwarranted opinions of such persons. Respectable newspapers should

Digitized by Google

not aid in the misrepresentation of a religion which stands, for the whole Gospel of Christ, a religion whose followers are admitted to be honestly striving for the attainment of the high goal of their faith. ARCHIBALD MCLELLAN.

Letters from ex-Governor Rollins.

[THE following letters from ex Governor Rollins of New Hampshire, one to Mrs. Eddy and the other to the *Concord Monitor*, display a hearty interest in the movement inaugurated by Mrs. Eddy for the betterment of Concord's streets. —EDITOR.]

York Harbor, Me., Aug. 10, 1906.

Dear Madam:—Noticing your very generous offer to the city of Concord, I have written the *Monitor* editor making some suggestions on the subject which I feel certain will meet your approval. I consider it useless to lay a good pavement on State Street, unless the stone teams can be made to go elsewhere.

Won't you ask Rev. Mr. Tomlinson to look at the pavement on Dartmouth Street, between Boylston and Beacon? It is the best thing I have ever seen.

Yours very respectfully,
FRANK W. ROLLINS.

Rev. Mary Baker Eddy, Pleasant View, Concord, N. H.

[From the *Concord Monitor*.]

Editor Monitor:—In connection with the recent action of the city government in voting to concrete State Street (or a certain portion of it) and Mrs. Eddy's generous offer, permit me to make a suggestion. There is probably no street in any city which has such heavy teaming over it as the north end of State Street. All the great loads of uncut granite, weighing many tons, come down that street. No pavement ever discovered can support such loads. Stone pavement will partially hold it, but even that gets badly rutted after a time. Concrete will not last two years, neither will macadam. You will notice in any large city where modern streets have been built that signs are put up forbidding heavy teaming on those streets. To build a concrete street and allow the present heavy teaming is to throw the money away.

My suggestion is that some way be found to bring these heavy loads of stone through town, either on some other street or by the electric road at night.

Furthermore, permit me to suggest that if concrete is to be laid, there is a very much better and more permanent method of laying it than the one we use in Concord. If you will go to Boston and go up Dartmouth Street, between Boylston and Beacon, you will see a sample of concrete street which is strong, durable, and a splendid road to drive over. I am not sure that there is not some asphalt mixed with it, but it is one of the best surfaces I ever saw and seems very durable. FRANK W. ROLLINS.

The New Street Improvements.

THE members of the city government have, we think, shown excellent judgment in their prompt action taking advantage of the generous offer for the improvement of North State Street. It is good business, always, to buy gold dollars for fifty cents, and that is exactly what the present proposition amounts to. It would be hard to name a single improvement which would add so much to the externals of the city just now as the proposed work upon Main and State Streets. These are the front windows of Concord, so to speak; and it is wise policy for a small city, like a small store, to get the attractive goods into the front windows.

Concord people who appreciate the development of the city will thoroughly approve of what the city government has done in this matter; and they will gratefully remember the generous sources from which have come the means to make this desirable improvement immediately possible.

Editorial in *Concord* (N. H.) *Evening Monitor*.

Letters to our Leader.

New York, N. Y., June 30, 1906.

My Dear Mrs. Eddy:—An incident occurred recently in the Harlem Reading Room, which I think may be of interest to you. A gentleman, who for many years was a minister in the Baptist church, but later, to use his own words, "preached himself out of it," seeing the Reading Room sign, came in. He asked many questions and read some of our literature. The next day he bought our text-book. After several visits he said, "Why, Mrs. Eddy loves the churches, listen to this;" and he read from your Message to The Mother Church (1902, p. 5),—"I never left the church, either in heart or in doctrine; I but began where the church left off. When the churches and I round the gospel of grace, in the circle of love, we shall meet again never to part." When shown the definition of "Church" in Science and Health (p. 583), he read and re-read it carefully, then said, "That is a universal, practical church." Day after day for several weeks he came to read, often for many hours at a time. Before leaving for his home in a distant city he voluntarily expressed gratitude for the change wrought in him by his study of Christian Science, saying that he was going away with renewed life and courage, and although he had been helped physically, he had gained in these few weeks that which was infinitely more to him than physical healing. He ended with the words, "I have the deepest love and reverence for Mrs. Eddy."

This is but one proof that the Reading Rooms are fulfilling the healing and educational mission for which they were established by you.

A life consecrated is, to me, the only adequate expression of my deep appreciation of your life and work.

Most lovingly,
MARCIA B. WILSON.

Cambridge, Mass., July 22, 1906.

Beloved Leader and Teacher:—To-day we have had the lesson on "Love" which always carries me back in thought to the starting of our Cambridge church. That was the lesson read seven years and six months ago by Mr. McKenzie and myself at the first service, and it seems to have struck the keynote for our church.

I feel so increasingly grateful to you for the privilege that was mine in helping to organize a church which is doing its part to lessen the sorrow and sin of the world. The reading was always a happiness to me, but I was happy, too, in giving it up when "orders came from heaven." Surely nothing has contributed more to the growth of our Cause than the changing to Readers.

In words I can never sufficiently thank you for having taught me Christian Science, but by trying to obey the four commands on the cover of our text-book I know that I shall pay the debt in a manner most acceptable to you.

Your loving student,
EMMA EASTON NEWMAN.

Jacksonville, Fla., July 24, 1906.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved and Revered Leader:—The gracious acknowledgment by letter, which I have kept sacred, of the receipt of a watermelon which I sent you several years ago, encourages me to hope that you will accept another from the Southland, which I shipped you Saturday last. If this simple token of loving gratitude should arrive safe and sound, I beg you to accept it as coming from one who is deeply indebted to you for having brought a Divine message which has given him peace, joy, and health, together with a slight but priceless knowledge of the Science of Being.

I thank you sincerely for the dedicatory message, "Choose Ye," to The Mother Church, also for the recent article entitled "Personal Contagion." I have gained deep lessons

Digitized by Google

from these additions to your literature, and I feel that there is more to be gained from them when consciousness is prepared to receive it.

It may interest you to know that the *Times-Union* published a full account of the dedication of the Extension to The Mother Church and the Communion services. *The Daily Florida Times-Union* is our leading State paper, and goes into every town and hamlet in the State. Our Cause and Leader are becoming more generally and favorably known throughout the State. I mention this as evidence of the fact that the people in general are beginning to accord you a proper place as a religious Leader, Teacher, and reformer.

I am endeavoring to be lovingly and obediently your follower. JOHN H. WILLIAMS.

Kincraig, Sevenoaks, England, July 5, 1906.

Beloved Leader:—We feel we should like to let you know of our society in Sevenoaks. We began to hold services in September, 1905, and have held them regularly since. In December it was suggested that we should have a collection for The Mother Church, and the response was ready. We have since then sent all the money remaining after the current expenses were paid, and have been enabled in all to send £29 2*s*. All gave gladly and rejoiced in the privilege. In some cases Love met the earnest desire to "render unto Love the things that are Love's," when to mortal sense it seemed impossible.

We feel it will gladden you to know of one demonstration. Amongst our number are a father and mother who, some years back, before they had heard of Science, lost a little daughter. The mother and the other little daughter treasured every memento, and amongst them was a collection of farthings, to which they continued to add. When they came into Science these mementos were seen to be unnecessary, for they realized that the child lived, and that there is no separation; so, one by one, as Love gave opportunity, the things were sent to those whom they might help or gladden. On Sunday, June 10, the little girl brought her last remaining memento of the little sister in a gift of one hundred and twenty-two farthings, a love-offering to The Mother Church.

We all wish to express our heartfelt gratitude to you for all that you have done and are doing for mankind, and we will earnestly strive to be worthy of the name, A Christian Scientist.

In grateful greeting,

JEANIE C. F. ANDREWS, *Clerk.*

Boston, Mass., June 20, 1906.

Mrs. Mary Baker Eddy, Concord, N. H.

Beloved Teacher and Leader:—I beg to offer my heartfelt thanks for the opportunity given me to serve for another year, as associate editor, the Cause and Leader so dear to me. I pray most earnestly that I may better apprehend the purpose of divine Love, as expressed through Christian Science, and see the truth more nearly as you see and practise it.

We are all rejoicing in the fresh inspiration gained by the completion and dedication of the Extension of The Mother Church, as well as from your Message. I am deeply impressed by the wisdom of the Rule which forbids the holding of receptions, and the giving of talks, etc., about the time of our Communion. The quietude in which we can hear the voice of Truth is surely much needed on these occasions, and it was greatly in evidence this year in spite of the large numbers and the enthusiasm felt by all. I think that among the older Scientists there was a deep sense of humility that they have done so little with such a Cause and such a Leader.

With love and gratitude, I am, dear and revered Leader,

Your student,

ANNIE M. KNOTT.

Testimonies of Healing.

From infancy I was considered delicate, and I have no recollection of a time when I was not compelled to take nauseous drugs. This continued until I obtained my freedom through the understanding of God as revealed in Christian Science. After years of sickness I collapsed physically and mentally about a decade ago. Indigestion, constipation, and extreme nervousness made existence almost unbearable. Everything recommended in the way of *materia medica* was tried. I consulted allopathic and homœopathic physicians eminent in their respective schools. I also took treatment from a noted doctor in Boston, who combined medicine and so-called mental treatment. Christian Science had been broached to me on numerous occasions, but not in a way to make a convincing impression, until one evening, while dining at the home of a friend in Kansas City, Mo., I was rebuked by my hostess, when I inquired of her which of two pudding sauces would be the least injurious to a man with a weak stomach. She looked at me a moment and then replied that neither of them would be harmful if eaten with the right thought. A few minutes' further conversation led me to understand that she was a Christian Scientist, and when I departed that night, she handed me a copy of Science and Health, with a request that I would read it carefully. I did read the book in a desultory way, not seeming to be interested in it, nor getting any benefit from it, but I now know that my mental attitude was being prepared for the next step.

About four months later I broke down, and was "of all men most miserable." One present, who was very dear to me, then suggested that I try Christian Science treatment, and after a short discussion I assented and went to the home of a Christian Science practitioner. I entered the door with a sense of shame, feeling that I was thus sacrificing my self-respect, but I departed from that modest home, probably an hour later, with a bud of hope unfolding in my thought which has by Truth's ripening breath proved a beauteous flower. My healing was not instantaneous, but that night I banished from my dinner-table the so-called health foods, and have since eaten anything I desired, of course using common sense as to the amount. From that day I have been much stronger physically, and much more joyous mentally. Before that time I had been confined to my bed a large portion of the time with great suffering, and since then I have not been absent from my business one day on account of sickness. For all this I am most grateful, but as I realize the great change in my moral and spiritual consciousness, my gratitude becomes higher and deeper. Before the light of Christian Science pierced the gloom of my environment, I was a man of the world, living only for its false fruits, and my religion was perfunctory and conventional; now I am daily seeking "the kingdom of God, and His righteousness," and striving for that Mind to be in me "which was also in Christ Jesus;" therefore my heart is full of love to God for His infinite goodness, to Christ Jesus for showing us the way, and to our Leader for her untiring efforts to make spiritual things clear to us.—A. B. COFFROTH, Pittsburg, Pa.

I was an invalid for several years before coming to Christian Science, my diseases being many. I suffered from inaction of the bowels in its very worst form, and had several operations, but each one left me in a worse condition than before. I also had serious ovarian trouble. All these conditions have been overcome through Christian Science, for which I am very thankful, but the spiritual uplifting to me is above all. God is now my only help in all my undertakings. My healing was slow, but I know that when I am ready for blessings they come; God does not leave His work unfinished.

Words cannot express my gratitude to God, for sending

Digitized by Google

to us our dear Leader, Mrs. Eddy, who has done so much to relieve the sufferings of mankind.

MRS. LOUISE M. NOEL, Madison, Wis.

It is seven years since this blessed truth brought me health and happiness. The words that were repeated every Christmas morn in the church of which I was then a member, "On earth peace, good will toward men," always seemed a mockery to me, for as I looked about me what was there but sorrow, sickness, and trouble? How, then, were peace and harmony to be brought about? This was never answered satisfactorily to me, until I had the privilege of reading that wonderful book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. It certainly is a "Key to the Scriptures," for now the Bible is an open book to me; now I know that peace and happiness are for all God's children.

Before studying Christian Science, I was sick and unhappy; whereas I am now robust, healthy, and happy. I find Christian Science a help in keeping well, and while I am thankful for the physical help, the spiritual uplifting of this truth I esteem as the greatest blessing that has ever come into my life.

I thank God that I am permitted to live in this age, in which so much of divine Love has been revealed to mankind. I am also grateful for our Christian Science literature; I find it very helpful and uplifting. All our family, consisting of my father, mother, and one sister, are interested in Christian Science, and our earnest desire is to learn each day more of this Christly knowledge which heals the sick and the sinful.—OTTELEA FALK, Council Bluffs, Ia.

It is with a heart full of gratitude that I write of what Christian Science has done for me. I had been in poor health since I was fifteen years of age, and in the spring of 1904 I underwent an operation, which was followed by a complete nervous breakdown. My physician, an eminent doctor, said I must have a complete change at once. I gave up my office work and was taken to a health resort in southern Missouri, where I remained five weeks, returning home no better than before going. It was then decided that I must undergo a second operation before I could get relief. This was done in October, 1904, but I was worse than before it. My physician then said it would be several years before I would be myself again and that I never could resume my office work.

Christian Science found me in this condition in February, 1905, when an aunt induced me to try its treatment. I readily consented, as I had given everything else a trial. I was completely restored to health in six weeks, and did not require further treatment. During this period I received not only my physical healing, but my whole life was changed. I began to get glimpses of the wonderful truth which makes us free, and I grew content and happy. By the first of June, 1905, I was back in the office, doing my old work with ease and enjoying perfect health.

I am indeed thankful for Christian Science, and my desire is to live the gratitude I owe to God, and to Mrs. Eddy for my lasting sense of this new-old religion.

MRS. VIOLA E. DEVAULT, Cedar Rapids, Ia.

My blessings in Christian Science have been more than tongue or pen can express. I was an invalid for five years, treated by several of our best physicians, had electric and magnetic treatment, but gained only temporary relief, indeed was sometimes worse than before the treatment. When Christian Science found me I was waiting patiently for my heavenly Father to take me where I believed I would at last be free from pain. A dear friend and neighbor then told me of Christian Science, and said that through its teachings people were being healed in the same way that Jesus healed. I at once took up the study of Science and Health, but I was very incredulous about its being the true Christ-teaching. I, however, prayed earnestly that if it were not the truth I would not be healed. I continued to study and to compare the teachings of Science and Health with the Bible, also to put them into practice according to my understanding. I soon found myself improving and able to walk about the house. Thus the spiritual light came into my consciousness, and I was healed of what the physicians had called a fibroid growth, a diseased spine, and sciatic rheumatism in a very bad form. After being unable to walk for two years, my gratitude was unbounded when I again found myself able to walk where I pleased. I have had many demonstrations of the power of Truth, one of which I wish to tell. In going down from the porch I slipped at the third step, which threw me to the ground, turning my foot under me in such a manner as to cause a very bad sprain. I immediately declared the truth, and the pain and soreness were entirely overcome the same day.

My heart overflows with gratitude to God for this blessed truth, also to the one whose purity made her an open channel to carry this water of Life to all mankind. Only the pure in heart can see God.—MRS. ANNA INMAN, Jackson, Mich.

I desire to express my sincere gratitude for what Christian Science has done for me. I had suffered from rheumatism for six years and been treated by a great many different medical doctors, but practically to little or no avail. I was then advised to try the hot springs, which I did, but with the same result. I was then advised to try Christian Science, which I did by receiving treatment and by the daily study of Science and Health, and through this means I was fully healed.—DAN MORRISON, Moraine, N. Dak.

It is with a heart full of love and gratitude that I tell of what Christian Science has done for me and mine. Several years ago I took the course of training for nurses at a leading hospital in California. At the time of my graduation I was completely broken down, both mentally and physically. Then began a long search after health. Everything that kind physicians could do for me was done; I was treated for months at a time by some of the most prominent men in the different schools of medicine, both in Oakland and San Francisco; I had change of climate, electricity, massage, salt baths, and finally submitted to two operations,—all without the least benefit. Words could not describe the utter hopelessness of my life in every direction. I despaired of ever being well or happy again.

It was about this time that a friend asked me to try Christian Science treatment. I went to a practitioner, not that I expected Christian Science to do anything for me, but this was about the only thing that had not been tried. I was very antagonistic and full of fear at leaving *materia medica*, but through the loving patience of the practitioner I was led on. How thankful I am that I did not give up, even though my healing was slow and I grew very much discouraged when at times I seemed worse than ever. Gradually I began to understand that "every law of matter or the body, supposed to govern man, is rendered null and void by the law of God" (Science and Health, p. 380), that only through right thinking could I expect to manifest harmony, and after many struggles my health slowly returned.

Through my healing, every member of my family has become more or less interested in Christian Science. Two of my sisters were wonderfully healed by it, one of floating kidney and repeated attacks of appendicitis. The physicians decided, after several consultations, that an operation was the only thing that would save her life. She, however, asked for Science treatment and was entirely healed of both conditions. The other sister was sinking from a complication of troubles, and as a last resort turned to Christian Science for help, which she received. "With God

Digitized by Google

nothing shall be impossible." When I think of the different blessings which Science has brought to my home, I can only "rejoice in the Lord, . . . and give thanks at the remembrance of his holiness." The spiritual uplifting has been by far the greatest blessing. Out of a sense of darkness it has brought to me light and hope.

Before I understood the teachings of Christian Science, God seemed far away and of very little real help in times of distress; but now I know that God is Love, and that through obedience to the law of Love we can overcome the discordant conditions of every name. Can we be too grateful to our dear Leader, Mrs. Eddy, who was so pure, so loving, and so courageous that she could discern and keep this path of Life, which leads us finally to eternal joy?

JESSIE ELIZABETH WOOD, Cloverdale, Cal.

In February, 1905, I had a severe attack of the grip, combined with nervous prostration, which rendered me perfectly helpless. I used all the means prescribed for such ailments without receiving any benefit, and while in a hopeless condition the thought of Christian Science, as a Divine help for sin, sickness, and death, came to me, and I immediately sent for a practitioner. When she entered the room I began to depict the awful state into which my trouble had seemingly plunged me, although I had been a consistent member of the church for fifty-five years; but when I continued to reiterate my calamities, the practitioner, with a sweet smile of assurance, remarked that it was useless to repeat my woes; that I should dry my tears of sorrow, for divine Love ever meets the needs of humanity. She gave me treatment, my health was restored, and I am now in a better condition both physically and spiritually than ever before. Christian Science has illumined the pages of my dear old Bible, which I have read through consecutively twelve times. Since embracing Christian Science, I have read Science and Health in connection with the Bible, and find it a source of comfort beyond anything I have ever known. I feel sure that in time the Principle revealed through our dear Leader, Mrs. Eddy, will govern the hearts and sentiments of all humanity.

Language is inadequate to express my gratitude to God for my restoration to health, and for revealing to my benighted sense the truth which has set me free from sin, sickness, and the fear of death.

MRS. M. J. MAULDING, Marshall, Tex.

It is with the deepest and sincerest gratitude that I testify to the healing power of Christian Science, which, as our dear Leader says, gives vitality to religion so that religion is no longer buried in materiality. For many years I had been searching for a religion that was more in keeping with the teachings of Jesus, and it is a little more than five years since I first went to a Christian Science Sunday service in Dublin and began reading "Science and Health with Key to the Scriptures." I had suffered very much for six weeks with chilblains and had used many remedies, but with no relief. In this condition I attended a Sunday service for the second time. During the service I felt a deep spiritual uplifting and I knew that I had been healed. I continued to read Science and Health, not always understanding it at once, but knowing that what others had understood and proved to be true would some day be clear to me. In a few months I became aware of the fact that chronic neuralgia, sick-headaches, and dropsy (a disease I believed to be hereditary) had completely disappeared.

For these and many other benefits received, spiritual as well as physical, I have much joy, and render my heartfelt thanks to divine Principle, and to Mrs. Eddy, who has restored to us the Christ-healing as Jesus taught and demonstrated it.—MINNIE THOROGOOD, Ealing, London, Eng.

I have been a student of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, for nine years, during which time I have gone through what seemed to me many severe struggles. I say "to me," because I see now quite plainly that the struggles were entirely mental, in which self was in opposition to Spirit, God. Probably no one else could know that I was experiencing such tumult, as I was physically gaining daily in all that goes to make up a normal state of human life. This experience to my sense meant the adjustment of my thought to the divine demands of Truth, the cleansing of my consciousness of what was most conspicuously opposed to Truth. It is indeed pleasant and encouraging to look back to those periods of sweet hope and realization of the passing of the pangs of chronic indigestion, catarrh, insomnia, and nervous impotence, yet the greatest satisfaction thereof is as nothing compared with the results of the spiritual cleansing that has followed, even if the divine remedy had been many times more bitter than it seemed to be.

I shall never cease to be grateful to an all-wise God, and to His Revelator, to this age, for Science and Health, and for the continued manifestation of that wisdom in the organization and dignified but gentle operation of the Christian Science propaganda, which is fixing for all time and for all men the healing and saving power of Christ, Truth.

JOHN FORBES, Omaha, Neb.

I was cured without medicine of what is known as exophthalmic goiter in 1897, through the teachings of Christian Science. For two years previous to this I was very ill from this disease, and as if that were not enough for one poor mortal to bear, a floating kidney was added, together with insomnia. It is needless to say that everything in the line of *materia medica* was done for me. I would get a little stronger at times, but would soon fall back again, till in the summer of 1897 I felt I could not live through another fall.

In the latter part of August, of that year, I met two students of Christian Science. At this time I knew nothing of its teachings. Seeing my condition, they spoke of the healing work of Christian Science and what it had done for them. I was then a member of an orthodox church in New York, and had taught one of its Bible classes for ten years, so naturally I asked many questions as to their interpretation of certain verses in the Bible. I had determined that if the healing did not rest on the Bible, I would have nothing to do with it. Their answers showed me they had a clearer understanding of the Scriptures than I had, so in a few days I said to one of the Scientists that I was willing to be helped. I gave up my many medicines without a struggle. I had a week's present treatment and four weeks' absent treatment. The first symptom to disappear was the sense of discouragement; I felt I was going to get well. In the mean time I had bought a copy of Science and Health, the text-book of Christian Science, and was reading earnestly for myself. At the end of five weeks, when I again saw this "Good Samaritan," I was very much better in every way, but not well. I supposed she would continue the treatments, but she said, "You are so much improved, I think you can do the rest of the work yourself;" so through the following fall and winter I slowly worked out of the remaining conditions by the earnest study of the Bible and our text-book. In the following spring I was in a normal condition and able to ride a bicycle.

I am greatly indebted to Christian Science for the many blessings that have come to me and to my home through its illuminating interpretation of the Bible; it is indeed the pearl of great price. Surely the psalmist sang truly, "The Lord on high is mightier than the noise of many waters, yea, than the mighty waves of the sea."

MRS. W. J. BREWSTER, East Orange, N. J.

After suffering for the past four years with every form of indigestion, and with bronchitis, having been treated by eminent physicians and having taken almost every known

Digitized by Google

drug, and yet having grown worse every day, I gave up all hope of ever being well again. I was a physical wreck when in November, 1905, a Christian Scientist called on us and mentioned the great benefit which Christian Science had been to him. This only amused me, not then being able to appreciate how it was possible. However, I went to a Wednesday evening meeting, and all the next day I was thinking of what I had heard. After a long time I decided to try Christian Science, and I called on a practitioner. I told her of at least a dozen troubles I had, and began taking treatment. I went every day for two weeks, after which time I could eat anything I desired.

I had been brought up in an orthodox church, had the example of a devout, good mother, but could not realize that it was the truth which I needed. This fact alone proves to me how little I knew about the Bible, and I thank God for Christian Science, which has not only healed me physically, but morally. My heart is overflowing with gratitude that I have been able to overcome an intense dislike which I had taken to some persons, formerly my friends. Strange as it may seem, they were the ones to whom my heart first went out. I also feel the same love I used to have, and they also have come into Science, which fact has made me especially happy.

I now find I cannot do without my Bible and that wondrous book, "Science and Health with Key to the Scriptures" by our beloved Leader, Mrs. Eddy. God bless her! Words fail to express the joy I feel in knowing I am well.

ELLEN BUJAC DIFFENDERFFER, Baltimore, Md.

Fifteen years ago Christian Science was first brought to my attention through some of its literature. A few months later a practitioner located here, and as I was tired of drugs I ventured to take treatment for severe neuralgic attacks, bleeding piles, and uterine trouble. All these ailments yielded to the treatment, and in a few weeks I was not only well but strong, and have remained so. The spiritual uplifting which came with this healing has been worth more than all else to me. I procured a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, also a *Quarterly*, and began the study of the Bible in this new way. The knowledge of Truth thus gained proved to be a great help in supporting and educating my children. It turned sorrow into joy, induced praise instead of melancholy, taught me to be grateful even for trials and persecutions, as they forced me to seek God as all-in-all.

The Bible, the works of our beloved Leader, and the Christian Science publications are my constant companions. My gratitude for Christian Science will be best expressed by striving to let my life be one continual prayer, a manifestation of the Life divine.

MRS. JENNIE S. STEWART, Crawford, Neb.

Christian Science has done what nothing else could do for my mother. She suffered intensely from stomach trouble, and was told by her physician, after a thorough examination, that there was some kind of growth in it. I mentioned Christian Science treatment to her, but she was opposed to it. Finally, she reluctantly consented, but not until she felt that otherwise death was certain. We called a practitioner at once, and in a short time she was healed. No one could be more changed or more grateful than she is for the teaching of Christian Science. She cannot read English, and only learned to know this truth by having it explained to her by a practitioner. She is in better health than ever before, and enjoys life more than she ever did. Words are inadequate to express the gratitude we both feel for the healing truth taught by our dear Leader, Mrs. Eddy. For this healing and the many blessings that have come to us through Science, we are sincerely thankful to God, and hope and pray for a greater understanding of the truth, that we may bring harmony into all our life and environment.—MRS. J. G. TOELLER, Cedar Rapids, Ia.

I was most wonderfully healed through Christian Science, which came to me in an hour of very great need, after every material means had failed. I had sought help in four of the best hospitals in the United States, and had employed in all twenty-seven physicians, among whom were doctors in Boston, Chicago, and Minneapolis. The physicians gave up my case and could only try to alleviate my suffering with powerful opiates. In July they told me that I could only live until September. At this point I sought help from Christian Science, though with no faith whatever, until I began to read the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. I then saw a light "that never was on land or sea." Although my case was an extreme one I was helped immediately and finally healed. I went to work at once to demonstrate the teachings of this book and I have been able with this truth to help many others. I have found that God is the Principle of all and an ever-present help in trouble.

MRS. H. E. GANS, Marion, Ia.

[Written for the *Sentinel*.]

At-One With Thee.

BEN. HAWORTH-BOOTH.

AT-ONE with Thee, upon the shore of time
We stand in silent awe, at-one with Thee!
And know Love is in all eternity
The only law sublime.

There is no hand upon the salt sea-spray
But Love's alone, and on the starry sky
To guide Arcturus in his majesty
Upon his splendid way.

To Thee, alone to Thee, the ravens cry
To feed their callow brood, and in the deep
By Thee leviathan his young doth keep;
Thou art their sure supply.

At-one with the sustaining infinite,
The Principle at-one with its idea,
The morn of time above the sapphire sea
Ariseth pure and white.

At-one with Thee, upon the morning's wing,
Our hopes achieved, and free from earth's alarms,
Leaning upon Thine everlasting arms
Our eyes shall see the King.

Picture of The Mother Church.

The picture of The Mother Church and its Extension which The Christian Science Publishing Society now has for sale is a half-tone reproduction, 12 x 15 inches in size, of a view giving the St. Paul Street frontage and Falmouth Street side.

The picture is mounted on a white mat, 21 x 25 inches, and will be sent to any address in a mailing-tube for fifty cents a copy. A dozen copies will be sent to one address for $4.50. Souvenir postals of the same design as the large picture are for sale at twenty-five cents per dozen.

Address all orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

Notice.

Those who have made application for membership in The Mother Church previous to June, 1906, and have not received notice of election, may send inquiries to the Clerk, William B. Johnson, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

WILLIAM B. JOHNSON, *Clerk*.

From our Exchanges.

"God was in Christ reconciling the world unto himself." It is the world, then, that needs reconciling. Not, as theologians have vainly imagined, that God needs reconciling to the world; contrariwise, it is the world that needs reconciling to God. God is not away from the world, but the world is away from God.

Christ came not to turn away divine, but human wrath. Mankind have strayed, not the Maker of us all. The children have wandered away from the Father, not the Father from the children. The prodigal has left the Father's house, but the Father is still there, and the prodigal must come back if he would receive the Father's blessing. . . . It was and is that God might reconcile the world unto himself. The world,—not a part, not a chosen few, not an elect number, but the world, the whole world.

The Universalist Leader.

The faith that Christ committed to the Church of his own creation is synonymous with the truth. It is unchanged and unchangeable. That truth, and therefore the faith, has not been made dependent upon any human agency, not even upon his own Church. But what he desires of his Church, and what the Church is responsible for, is that the faith shall be so propagated and so manifested to the world in the Church's life and that of every member of his family, that the world, by the inspiration of the Holy Spirit, shall know him and the Father who sent him.

The Churchman.

When Christ was on earth he healed the sick with a touch of his hand or a word of his mouth. I am not sure that he ever employed remedies. He is the same "yesterday, to-day, and forever," so why should he not exert his healing power in a miraculous way now and relieve the multitude of those whom he loveth and that are sick? There is no reason to believe that he will not. Again and again all over Christendom and all through its years he has healed his sick children.

REV. LLOYD G. KNIGHT.
Pacific Christian Advocate.

Nothing is more disastrous morally than prosperity, unless certain neutralizing influences are constantly at work. Jesus set forth plainly the perils, not only of riches, but of the process of getting rich. He warned his disciples against the dominance of the acquisitive spirit. The only thing that can prevent prosperity from smothering the best life of the soul is the restraining power of ideals, plus that restraining grace of God from which any man severs himself at his peril.

The Congregationalist.

The more one comes into truth, the more clearly he can see his own evils and also understand what are the causes which afflict humanity. This thought leads us to conclude that the exposure of evils that have long had sway among men is not necessarily an evidence of greater corruption, but it is rather a manifestation of the power of truth in bringing evils to the light that they may be seen in their true colors.—*New Church Messenger.*

It is certainly the teaching of Christianity that a man who is religious at all must be religious all the time. A Christian man may take vacations, but he never takes a vacation as a Christian. The soldier of Jesus Christ may not perpetually be on the march or charging redoubts, but he is never out of the uniform. He is always a member of the army of the Lord, since there is no discharge in the Christian warfare.—*The New York Observer.*

The Church to-day is struggling with an effort to hold on to parts of the old theology. The foundation has gone out, and the leaning walls are upheld by the strenuous efforts of our half-way people. What can be more in contrast than the old theology and the new, and how can a compromise be brought about?—*The Christian Register.*

THE CHRISTIAN SCIENCE TEXT-BOOK.—"Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing all the By-laws to date of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CARDS IN THE GERMAN PERIODICAL.—Application blanks will be supplied by The Christian Science Publishing Society to practitioners who wish their names and addresses inserted in the advertising columns of *Der Herold der Christian Science*. These applications should be properly endorsed and forwarded to the Society. The rate for advertisement will be $2.00 for the first line, and $1.00 for each additional line. It is desirable that those who offer their names in this way should be able to communicate with patients and inquirers who speak the German language only.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with The Mother Church and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.
It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

The recent piratical acts of Japanese sailors in poaching upon the Pribilof Islands has brought the question of pelagic sealing forward again prominently. Among the plans suggested for its regulation two receive chief favor. One suggests the reduction of the present herds so that pelagic sealing will be unprofitable. There could then be adopted an international agreement against the industry. The herds could then be allowed to increase to their original sizes. Another plan which has been considered is the purchase by the United States of all vessels engaged in pelagic sealing, such purchase to be made pursuant to an international agreement which would thereafter prohibit this form of sealing, it being maintained that the chief obstacles to a general international agreement on the subject are the owners of vessels engaged in sealing.

"Bad roads, no mail," is the rule the Government has adopted for the guidance of the rural free delivery service of the Post Office Department. During the past nine years, however, the Government has been too busy installing postal routes to give much emphasis to the good roads question. It is now in position to take up this question and it proposes to do it. The 35,973 rural carriers employed by the Government travel a total of 863,363 miles of country roads daily. Eventually there will undoubtedly be adopted an iron-clad rule that unless the roads over which a rural carrier travels are maintained in first-class condition the mail service will be withdrawn. The Government feels that it has an opportunity to compel local authorities to take up the question of good roads, and it proposes to exercise the authority freely.

Acting under authority of the Secretary of the Interior, the director of the Geological Survey has ordered the confiscation of the whole of the contractor's outfit for work on the Corbett Tunnel, on the irrigation project in northern Wyoming. It was ascertained by the Secretary that the contractor, not being able to secure labor and finding the cost of materials high, had not only abandoned the work, but was about to remove all his appliances from the premises. The Government officers have also taken possession of the work and outfit of the contractors on the Shoshone Dam, one of the largest structures in the West, on the ground that the firm had not been able to secure the necessary men and financial backing to carry them through the work.

The programme for the big naval review which is to occur on Labor Day off Oyster Bay has been sent by the Secretary of the Navy to the President. It is now calculated that upwards of fifty ships will participate in the pageant, which will be reviewed by the President. The total complement of the ships will be nearly fifteen thousand men. There will be probably sixteen battleships in the review, besides the armored cruisers and a large number of the smaller craft.

The Equitable Life Assurance Society has decided to apply for registration under the new insurance laws of France, make the necessary deposits with the Government, and continue doing business there. The society already owns valuable realty in Paris, so it will be no hardship for it to comply with the requirement to invest in French securities.

The American Seed Trade Association, including growers, wholesalers, and retailers of seeds, is making a vigorous effort to check the free distribution of seed by the Government. The total packet-seed trade of the country, it is stated, amounts to 120,000,000 packets, of which the Government gives away 40,000,000 and the dealers sell 80,000,000.

By the conviction of three men connected with the Little Missouri Horse Company in North Dakota, one of the most elusive and persistent cases of unlawful fencing of public lands has been ended. The fence enclosed eighty thousand acres of land, twenty-one thousand of which was unlawfully enclosed.

The proposition of Admiral Bradford, United States, for a gunnery competition between picked teams of British and American battleships, is said to find favor among the British.

Federal agents are in Chicago investigating the business methods of grain elevator corporations and their relations with certain grain companies and railroads.

Foreign.

The elections for the new Russian Douma will be held in November. It is to be specifically provided in advance, so it is reported, that all legislation dealing with the power of the throne and the liberties of the people shall originate only from the czar and his ministers. The new body will be allowed to consider many minor matters, but they will have no power to put forward constitutional measures, nor without the consent of the cabinet to consider any of the questions which have been agitating the empire. Moreover, the czar, it is understood, will retain a veto power which no majority of the Douma will be able to overcome.

The scheme of reforms adopted by the Powers for Crete does not satisfy either Greece or Crete. This is due, it is alleged, to the lack of full agreement among the Powers themselves. It provides for the reform of the gendarmerie under Greek officers not in active service and for the creation of a Cretan militia and the eventual withdrawal of the international troops when circumstances permit it. The surtax of 3 per cent is kept in force in order to render possible the conclusion of a loan of £360,000, of which one-third is to be allotted to the payment of indemnities due to the victims of past insurrections, and the remainder to the execution of public works. The financial control existing in Greece will be extended to Crete, where a system of foreign inspection will be instituted.

King Menelik of Abyssinia has signed the Franco-Italian-British convention relative to railways to be constructed there, and the convention will be communicated to the Parliaments of the interested States as soon as they meet. The main features of the treaty constitute a guarantee of the integrity of the Abyssinian empire, the open door and commercial equality for all countries, and the continuation by the French of the construction of the railway connecting Addis Adeba, the capital of Abyssinia, with the coast. Great Britain and Italy naming representatives on the railway directorate.

The sub-committee report on the Drago doctrine, in the Pan American Congress at Rio de Janeiro, recommending merely that the Hague Conference be requested to decide if the use of force for the collection of public debts is admissible, has been accepted by four of the five committemen.

Griefswald, the oldest Prussian university, celebrated its 450th anniversary last week. One of the features of the occasion was the conferring of a number of honorary degrees upon prominent men in other universities, there and abroad.

The German railway from Konia to Bagdad is nearing completion. Eventually, no doubt, an attempt will be made to extend the line to the Persian Gulf. The choice of a terminus is a problem of grave concern to Great Britain.

It is announced that Japan is planning to double-track the railroad from Dalny to Moukden, a counter-demonstration, it is said, against Russia's Siberian projects.

The Spanish Minister of Finance announces that there will shortly be established a line of steamships running direct from Vigo to New York.

King Edward and Emperor William met at Friedrichskron Castle, near Homburg, Germany, Aug. 15.

Industrial and Commercial.

The future passenger car equipment of the Pennsylvania Railroad is to be of steel and non-combustible material in every particular. The new car, No. 1651, the first one so built, weighs 103,550 pounds, against 84,000 for the standard wooden coach, but it is found that the added weight very greatly reduces the vibration and adds to the comfort of the passengers. Safety against telescoping is secured by the use of enormous steel girders, the principal feature in the body of the car being a central box girder, twenty-four inches wide by nineteen inches deep, extending throughout the length of the coach. The flooring throughout the car and platform consists of an imitation of stone spread while in a plastic state over the steel plates of the car. The framing above the windows is composed of steel plates. The doors are of steel plates pressed into a shape imitating the wooden doors used in other cars, and filled with cork to deaden the sound. The roof is constructed of composite boards covered with copper sheathing. The inside lining consists of composite boards covered with fireproof paint. The seats are of steel frame, covered with fireproof plush. The footrests are also of steel. Tests to ascertain the effect of the temperature of the atmosphere on the steel, as compared with the old wooden car, showed that in hot weather the difference is very slight, and that the steel car shows a decided inclination to cool off more rapidly than the wooden coach.

What is thought to be the largest bearing pecan orchard in the world is located in Charleston County, S. C. It has six hundred acres in bearing trees.

Trade of the United States with its non-contiguous Territories amounted in the fiscal year just ended to $119,504,511.

The Cape Cod cranberry crop for this year is estimated at 160,000 bushels.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

An Appreciative Letter.

[We are glad to give prominence to the following letter, which makes plain the attitude of Christian Scientists toward their Leader and expresses the gratitude they feel for her Christian labors for them and for all mankind.—Editor.]

Boston, Mass., Aug. 11, 1906.

Dear Mrs. Eddy:—I have just returned from a day's visit to Concord, where I go several times a year to look into the *Patriot's* affairs, and in this connection I desire to say that I appreciate more deeply than ever before the privilege of controlling this paper for such service as it is able to perform, and while I have been obliged year by year to add considerable amounts to my original investment, I can say from my heart that if the ownership of the paper by a Christian Scientist has been of any comfort to you, dear Leader, I am a thousand times repaid.

While in Concord I was much pleased to learn that the city had accepted your proposal relating to the improvement of Pleasant and State Streets, and to see that the work was under way. When completed I am sure it will add greatly to the pleasure and comfort of your daily drive. I regret exceedingly the gathering of people in the *Patriot* office one day in June, to see you as your carriage was driven by.

I have been thinking of writing you a few simple lines, in behalf of my wife and myself, to tell you again of our loving gratitude. We realize more and more clearly, as the years go by, that our happiness, our peace, our ability to help others, whatever progress we have made in "evangelizing this human self," our growth in the understanding of the Scriptures,—even what we know of God,—has come to us because of your spiritual attainment, your enduring love, your faithfulness to the great trust committed to you. As we ponder these things, it seems the miracle of the ages that this light has dawned in human consciousness, that one has discerned the Science of Spirit, formulated it, and given it to the world. We think we can understand a little more your love for God and man, your courage and faithfulness in planting, watering,—yea, with tears,—and cultivating this seed of Truth.

Yet we see also that your great work has been possible because it is "the fulness of the time," and because of the demand of this age for a scientific Christianity; that this utterance of Truth has found a hearing because of the spiritual progress of the race; that it has come because of the work of Jesus and the apostles, of Moses and the prophets, of all who have "wrought righteousness;" that it has come because of the Reformation; that this light has dawned first here in this dear America because of the Puritan and the Abolitionist; because of the measure of civil and religious liberty attained in our country.

We thank God it has found in you a faithful witness, testifying of the "Comforter," "even the Spirit of truth" which leadeth into all truth.

With much love from us both,

Yours in Christ,

Arthur P. DeCamp.

From our Contributors.

What is Truth?

PROF. JOEL RUFUS MOSLEY.

Then said Jesus to those Jews which believed on him, If ye continue in my word, then are ye my disciples indeed; and ye shall know the truth, and the truth shall make you free.—John, 8: 31, 32.

The question, What is Truth? is answered by demonstration,—by healing both disease and sin; and this shows that Christian healing confers the most health and makes the best men.

Science and Health, Pref. viii.

When Jesus explained to Pilate that his life-mission was to bear witness unto the truth," and that such as were of the truth would hear his testimony, Pilate asked him the question that all men in their more thoughtful moments have surely asked, viz., "What is truth?" Unfortunately for Pilate, he did not stay for an answer. Jesus had already answered this question both by his life and teachings, and through his resurrection and ascension was soon to demonstrate the full and final freedom of the truth. Moreover, as Mrs. Eddy has said, "the women at the cross could have answered Pilate's question. They knew what had inspired their devotion, winged their faith, opened the eyes of their understanding, healed the sick, cast out evil, and caused the disciples to say to their Master: 'Even the devils are subject unto us through thy name' " (Science and Health, p. 49).

Truth in its most absolute sense is a synonym for God, and means divine substance. It means real existence, "that which indeed is," as opposed to the changing phenomena made manifest to the senses. Truth is also employed as a synonym for Christ. When so used, it carries with it the idea of the consciousness of the divine reality, the knowledge and love of God and His creation. In this connection it is interesting to note that Tolstoi in his translation of John 14 and 15 makes the spirit of Christ, the spirit of Truth, and the consciousness of Truth mean the same thing. In his rendering of John, 8 : 58, he interprets Jesus to have referred to his eternal existence (his being before Abraham was) as "the understanding of good." One of the definitions of truth given in the Century dictionary is "conformity of thought with fact." This means the same thing as that truth is the consciousness of reality, the knowledge of that which indeed is. As the only reality of being is seen to be God and His creation, and as Christ is seen to be the true knowledge of God and this creation, we are brought back to the Christian Science conception of Truth, that it is Divine reality and the consciousness of this reality.

Christian Science teaches that there is no reality apart from God and His perfect creation. Nothing unspiritual, discordant, sickly, sinful, and mortal is real in the sense that Christian Science employs the term. Christian Science also teaches that nothing but God and His perfect creation are really knowable. The erroneous, sinful, discordant, and mortal sense of man and the universe may be believed, but never known in the sense that we may know God, Truth, and the things that are Godlike and true. The only true knowledge about error, whatever is not true and real, is that it is untrue and unreal, and this knowledge destroys

Copyright, 1906 by Mary Baker G. Eddy.

Digitized by Google

its seeming reality. Such knowledge sets free from the belief in evil, the love and fear of evil, its slavery.

That Christian Science answers the question, What is Truth?—What is Divine reality?—correctly, appears from the following considerations:

1. The Christian Science concept of God and His creation—that they are only and wholly good and real—has to be true, or to know the truth would not make one free. If God and all His works were not good and very good, harmonious and perfect, to know God and the manifestations of God could not make us free from the claims of evil. If sin, sickness, and death were real, indestructible, eternal entities, instead of temporal illusions, to know the truth about them would not only not make free, but would make slavery to these evils absolute and hopeless.

Moreover, if God and His creation were not, as the Scriptures and Christian Science teach, All in all, the perfect knowledge of the truth could not make wholly free from all of the appearances of evil. In fact, absolute freedom from evil, through the knowledge of the truth, of things as they really are, would not be possible if God and the works of God were not All in all, and all the claims of evil were not illusions which the truth and only the truth can destroy.

2. If we credit the testimony of the New Testament, Jesus actually proved the unreality of the "world [the material sense of creation], the flesh, and the devil" by overcoming them. He proved that the works of the devil (evil)—sin, sickness, and death—are unreal by destroying them. He overcame and thus proved unreal the last enemy, death, as well as all forms of sickness and sin which ultimate in death. All of his recorded teachings about God refer to Him as all-loving, all-wise, all-powerful, everywhere present, and altogether perfect and good. Indeed it appears that Jesus did all of his mighty works upon the very basis that the Father and His kingdom were at hand and embraced all that is true, real, permanent, and worth while, and that the knowledge of Truth sets free from all claims of evil.

Then, too, the very fact that Jesus came to fulfil and not to destroy the law of God, the will of God, and to destroy the works of the devil, is proof that the evils that Jesus destroyed were of the devil and not of God. Had they been of God, had they been any part of Divine reality, or real existence, Jesus would not have destroyed them. He could not have destroyed them.

3. The fact that Christian Science, through the understanding that God is wholly good, wise, perfect, and All in all; that His whole creation, all that really is, is spiritual, perfect, harmonious, and eternal, and that all evil—materiality, sin, sickness, and death—is an illusion which Truth can destroy, is bringing the good to light and destroying the claims and appearances of evil,—this is the highest kind of proof that the Christian Science concept of good and evil is true. Is it not conclusive proof that it is at least nearer the truth than the concepts which are less fruitful in good works? If we judge the Christian Science concept of good and evil by its power to overcome evil and bring the good to light, if we judge Christian Science by its fruits, the conclusion is inevitable that it is true and good. If by truth, we mean the knowledge of Divine reality as well as absolute reality or being, Christian Science gives the highest Christian proof that it is true, the Christ-truth.

Christian Science makes unmistakably clear that the truth does not appeal solely to the intellect. Our moral dispositions and lives must correspond with the truth before it can be fully known and its freedom fully realized. Truth is most clearly perceived by the pure in heart, by the meek, by the truthful, and by the loving. Truth, in fact, is synonymous with Life and Love. In order to know and demonstrate the truth as Jesus did, it is necessary to live as he lived, to love as he loved. "Every one that loveth is born of God, and knoweth God. He that loveth not knoweth not God; for God is love."

Spiritual Discernment.

EVELYN SYLVESTER KNOWLES.

SPIRITUAL discernment, one of the essentials in the equipment of a Christian Scientist, is unattainable save as we reflect the Christ-wisdom which reveals the inwardness of motives, aims, desires,—in short, of the entire human character. It was this quality which enabled Jesus, at the age of twelve, to analyze the mental conditions of his time as embodied in the rabbis, whom he easily confounded on their own basis of thought, and the lack of this quality in his disciples and others was often rebuked by our Master in vigorous and uncompromising language. He indicated it to be a requisite of spiritual growth, and that those who did not possess it were sorely limited in their ability to "work as he worked" for themselves or others.

The dawning of spiritual discernment is indicated by a threefold condition of thought; viz., the absence of prejudice, the absence of suspicion, and the presence of love. Black-spectacled prejudice renders it quite impossible correctly to discern anything. Whether it be favorable or unfavorable is immaterial; so long as it remains it is sure to give rise to erroneous conclusions. One would not go into a a dungeon to dissect the sunlight, nor stand on a mountain with an umbrella before his face to view the landscape. Prejudice is the outcome of ignorance, malice, or hate, and its indulgence is to be guarded against as an insidious foe of the spiritual life.

Suspicion is likewise a hindrance to true discernment, beclouding and stultifying all our mental activities. To peer into the acts of those about us for some hidden, perchance impious motive, is not conducive to clear perception. Indeed, doubt and distrust exclude from human consciousness that divine insight which never believes but knows. When Jesus met the woman at the well he did not suspect her; she was aware that he *knew* whereof he spake. His gentle yet unsparing rebuke awoke in her a craving for Truth which suspicion and false accusation would never have stimulated. This is one of the unfailing results of spiritual discernment,—while detecting evil in its every refinement, it condemns not the evil-doer. It would have been false charity for Jesus to have closed his eyes to the sins of the woman before him; yet when the error was uncovered, he had only love for the misguided person who had been its instrument.

Abounding love, characterized by our Leader as a charity "broad enough to cover the whole world's evil, and sweet enough to neutralize what is bitter in it" (Miscellaneous Writings, p. 224), is the distinctive attitude that favors the acquisition of spiritual discernment. To see clearly is always to see lovingly, and *vice versa*. The mother who thinks her child faultless sees neither clearly nor lovingly, for true love would enable her to detect and thus destroy the error always embraced in the carnal mind. The man who sees in his supposed enemy nothing but evil, is equally wide of the mark. Impartial, universal love is the "discerner of the thoughts and intents of the heart," and when we remember that error must be uncovered before it can be destroyed, we shall realize how needful it is to perceive it though this divine apprehension.

How shall we attain this spiritual insight? Not by assuming a critical attitude toward our fellow-men, surely, but by studying the Word until we begin to have reflected in us the Mind that was in Christ Jesus, and thus see nothing else reflected in our brother. Then, indeed, while judged of no man, we shall be able to judge all with righteous judgment; that is, *we* shall not judge them at all. Again, in forming our estimate we shall listen for the voice of Truth rather than to the tongues of men. We shall strive to place ourselves in what may be the less advantageous position of our neighbor; we shall endeavor to view a question from every point, we shall try to be charitable toward every one, and above all we shall bear in mind

Digitized by Google

that "a knowledge of error and of its operations must precede that understanding of Truth which destroys error, until the entire mortal, material body finally disappears, and the eternal man, created by and of Spirit, is understood and recognized as the true likeness of his Maker" (Science and Health, p. 252). These efforts will do much to clear the thought, and induce that mental attitude which is impartial, just, and right.

The results of spiritual discernment are beyond the power of tongue or pen to name. It was this God-bestowed insight which enabled Jesus to destroy in the carnal mind every phase of error, to keep his own thought pure, and to acquaint himself with God; and it is this Christlike condition of thought which has placed our Leader at the head of the greatest religious movement of this age, enabling her to discern the need of mortals, and the wisest and best means of meeting that need. It is this power which enables the least in the ranks of Christian Science to find and tread the royal path of Truth. Every case of moral or physical healing, as well as every upward step or out-reaching desire, is due in greater or less degree to its attainment. What loftier prayer was ever uttered than that of the Hebrew king who yearned for an understanding heart?

A keener ability to diagnose mortal thought, whereby sin, sickness, and death are more quickly and effectually destroyed, a deeper insight into human conditions, a finer perception of human character, a sane and active charity, a clear and exalted apprehension of God and His manifestations,—these are some of the fruits of spiritual discernment whose roots lay hold on eternal foundations, and whose blossoming yields the fragrance of heaven.

The Thrall of Deception.

REV. GUSTAVE HAAS.

ONE of the dominating habits of mortal mind is to judge things and persons by appearances, and the injustice and suffering which follow in the wake of this evil is indescribable. A lesson may be learned from every human experience and observation, however insignificant, if viewed in the light of truth.

In some of our eastern States deer are trapped in a manner which is both interesting and suggestive. At a certain height a wire is strung around a number of trees, forming an inclosure. A swinging gate, inside of which the bait is placed, is left open, and when the deer has entered, the gate swings to and closes tightly. The deer, seeing itself inclosed, is mystified by the wire and will neither jump over it nor dodge under it, and is thus securely imprisoned. To its frightened sense the wire seems a formidable obstruction which it believes itself unable to overcome. Did the deer realize how unreal is its prison; how deceptive the hindering barrier; how unimpaired its own strength and agility, this realization would at once destroy the enthralling appearances, break the spell, and with a bound it would leap to liberty.

Is there not a lesson in this picture for every spellbound, mystified, and struggling heart? The animal was really never deprived of its liberty; it was in the very midst of liberty, but believed it was robbed of it; a hopeless prisoner, because to its clouded vision it so seemed. What was this spell but ignorance of itself, its rights and liberty, which were the same now as before the depressing confusion?

It is pitiful to think that such an alert, fleet-footed animal as the deer is known to be, could act so stupidly and be caught off its guard so easily. How foolish, we exclaim! Could it not look beyond the wire and see the outer world? That thread of metal was no obstruction, much less a restraint to an animal which readily leaps over a high wall, but evidently the wire was as much of a barrier as the blinded instinct of the animal believed it to be. Its own stupidity was responsible for its dilemma, for really nothing had changed. The azure sky retained its friendly and peaceful aspect; the sun still beamed with genial light and warmth; nature, in her gorgeous robe of many colors, had not ceased to smilingly invite to full enjoyment of life and liberty. The animal, blinded by fear, did not detect that the whole occurrence was merely a deception, a trick. It saw only that wire, and in its anxiety kept gazing at the wire instead of the glories all around. Every moment the wire assumed, to the sense of fear, larger proportions, till it became its death-trap.

Mortals, though ever so much higher in the scale of intelligence, believe themselves, to a greater or lesser degree, overshadowed by the mystic veil of error,—a false sense of God and His universe. This false sense, what is it but ignorance? The belief that the ills of the flesh, or material conditions, whatever forms they may seem to assume, that these indicators of wrong thought can be real obstacles because mortal mind believes they are, and so can deprive us of man's God-given rights and liberty, is no more true than that the wire was an insurmountable obstacle to the deer. It was not the wire, but the belief that the wire had power to imprison, which really constituted the foe. The wires which confront the human sense are the belief in material laws of sin, disease, and death, strung in every direction. We do well to learn a lesson from the experience of the deer and to keep our eyes upon the true and normal state of God's creation. We have a glorious example in Christ Jesus, before whose unfaltering footsteps all seeming barriers vanished into their native nothingness. The whole interest must be centered on the eternal unity of God and man. In this realization there is no place for a sense of fear or of interference, for in it we know that there is no opposite to God or man. God's universe, including man, is to-day as when He spoke it into being, and man is spiritual and not material; the delusion of wicked mortal mind cannot change it. Our conscious freedom and harmony is not a question of altering eternal facts,—these are eternally the same and have never been touched or changed,—but of mastering the ignorance concerning them which is expressed in surrender to fear, sin, etc.,—the mortal opinions which constitute that human sense.

The presence of fear bespeaks a lack of trust in the ever-presence of Spirit, God, and yet "in him we live, and move, and have our being," for "He [God] is at once the center and circumference of being" (Science and Health, p. 204). It is required of us to see ourselves and our surroundings as they are, and not as mortal sense, the liar of the ages, reports them to be. To know liberty, harmony, Godlikeness, man's true, eternal identity, is our right and privilege, and ever has been, and for the revelation and demonstration of this truth we owe endless gratitude to our Leader, the Discoverer and Founder of Christian Science.

The Attitude of the Insurance Companies.

The Weekly Underwriter, an insurance newspaper, recently addressed the following questions to a number of life insurance companies:—

1. Does your company accept applicants for insurance when it knows they are Christian Scientists?
2. If it does, are they restricted to any plan of insurance?
3. Do you consider that as a class Christian Scientists are sufficiently above the average as regards the observance of ordinary rules of health, morals, etc., to offset the extra risk from lack of skilled medical attendance in case of sickness?

The *Underwriter* says editorially: "Of the thirty-eight companies which have replied to the question whether they take risks of this class without reserve, twenty-nine answer in the affirmative and but nine in the negative."

Selected Articles.

From Mrs. Eddy's Friends.

The following letter to Rev. Irving C. Tomlinson of this city, from one of Mrs. Eddy's church members in Cincinnati, O., shows how widespread is the interest in the improvement of Concord's streets. The letter contained a check for fifty dollars, which has been turned over to Mr. J. Wesley Plummer, deputy State treasurer, who has kindly consented to act as the treasurer of the fund raised by Mrs. Eddy's friends.

Cincinnati, O., Aug. 14, 1906.

Rev. Irving C. Tomlinson,
Concord, N. H.

My Dear Friend:—Noticing in this week's *Christian Science Sentinel* that State Street, Concord, is to be improved, —the paths made straight,—and knowing that this street is frequently used by our beloved Leader, Rev. Mary Baker G. Eddy, will you kindly permit my daughter Elsa and me to add twenty-five dollars each toward this improvement, as a token of never-ending love to her who has helped smooth our pathway as none other, and whose daily presence will continue to bless, cheer, purify, and heal mankind?

Trusting this will be acceptable, with kindest regards,

Yours very sincerely,
RACHEL F. MARSHALL.

Concord (N. H.) *Evening Monitor.*

Among the speakers at the Christian Science church in Avondale, O., last evening, says the *Cincinnati Tribune* of July 12, Professor V. Karapetoff, professor of electrical engineering at Cornell University, told an interesting religious experience. Professor Karapetoff was sent to this country five years ago by the Russian Government. He said that he had from boyhood been a deep student of the natural sciences, always searching for some explanation of life, its origin, and man's destiny. Religion, other than Greek Catholicism, had always been denied him, as it is all his fellow-countrymen, by the State, and he longed for something more than its forms and ceremonies.

"Shortly after arriving in this country," said Professor Karapetoff, "my health was completely shattered. The physicians failed to give relief. In utter despair I walked the streets of New York with a pistol in my pocket, on the verge of suicide. I should not be here to-night were it not for the fact that just at this time Christian Science was presented to me. I at once saw what it offered, accepted and studied it in connection with the Scriptures, and am glad to say that I have indeed found the saving Christ-truth in this practical Christianity. Not only has it brought me mental peace and spiritual comfort, but I have learned also how to keep myself physically well. It is because of my healing that I settled in this country. I love your country and I love Christian Science."

Professor Karapetoff has thrown away his revolver.

Ithaca (N. Y.) *News.*

Our critic admits the truth of the proposition that darkness is simply the absence of light, and that when the light appears the darkness disappears, but he declares that "this is not true of the relation between good and evil in our personality." If this is not true, will the gentleman kindly explain where the evil which is driven out of the man takes up its abode? Is it bottled up somewhere? Is it skulking behind the trees? Where is it? If he ceases from all wrong, and every other individual on earth ceases from all wrong, what becomes of the wrong? It has no existence except in human indulgence, and it dies instantly when it finds no indulgence. Is it possible to make nothing out of something? The fact is, evil is unreal to begin with, and it ceases its apparent existence the moment mortals awaken to the truth and thereby cease from error.

In his insistence upon the reality of evil, that it is "positive force," our critic places himself in an inextricable dilemma, for he must either admit that God made it or that there is another creator. If he seizes the first horn of the dilemma he immediately conflicts with the Scriptural teaching, "God saw every thing that he had made, and, behold, it was very good." If he seizes the second horn of the dilemma, he goes contrary to the Scriptural teaching, "All things were made by him [the Word of God]; and without him was not any thing made that was made."

Moreover, the proposition that evil is unreal is quite as demonstrable as the proposition that good is real. If a room is filled with darkness one may admit the light and dispel the darkness, but if the room is filled with light one cannot admit the darkness and dispel the light. One may overcome evil with good, but one can never overcome good with evil, for the declaration in the following lines is true:

Truth crushed to earth shall rise again,—
The eternal years of God are hers;
But Error, wounded, writhes with pain,
And dies among his worshippers.

If God, good, is everywhere present and all the time present, how can evil have any real presence? David said, "If I make my bed in hell, behold, thou art there." He seemed to understand that whatever of evil he might make for himself in his false consciousness, he could not displace God. If God knows evil, He knows it as it is; namely, as an illusion, for the divine consciousness is never deceived. Hence the propriety of the Scriptural declaration that God is "of purer eyes than to behold evil."

ALFRED FARLOW.
Boston Times.

When the conflict is between truth and error, it is just as well to be "one-sided" on the side of truth, though such siding may appear "silly" to "regulated thought," for we have it on good authority that "the wisdom of this world is foolishness with God." C. HERBERT PIERSON.

Richmond (Va.) *News Leader.*

Notice.

Those who have made application for membership in The Mother Church previous to June, 1906, and have not received notice of election, may send inquiries to the Clerk, William B. Johnson, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

WILLIAM B. JOHNSON, *Clerk.*

Another New Pamphlet.

"The Ministry of Truth," a new pamphlet now on sale, is made up of the following articles, reprinted from *The Christian Science Journal*; viz., "Healing as Practised by Jesus," "The True Thought Modus," "Letter from a Lawyer to a Friend," "The Word Declared," and "Here."

Price. One copy, six cents; twelve copies to one address, 60 cents; twenty-five copies to one address, $1.15; fifty copies to one address, $2.25. Address all orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

Picture of The Mother Church.

The picture of The Mother Church and its Extension which The Christian Science Publishing Society now has for sale is a half-tone reproduction, 12 x 15 inches in size, of a view giving the St. Paul Street frontage and Falmouth Street side.

The picture is mounted on a white mat, 21 x 25 inches, and will be sent to any address in a mailing-tube for fifty cents a copy. A dozen copies will be sent to one address for $4.50. Souvenir postals of the same design as the large picture are for sale at twenty-five cents per dozen.

Address all orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

Among the Churches.

Wilmington, N. C.

Wilmington is soon to be further adorned and advanced in the building line by a large and handsome new church, which is to be erected by First Church of Christ, Scientist, of this city. Plans for the edifice have already been drawn, the contract in this particular having been given out to Messrs. Hunt & Hunt, of New York City, and a member of that firm will shortly arrive in Wilmington to make ready for the building. The site is to be about Tenth and Market Streets, but whether the church will be erected directly on the corner or not has not yet been determined upon.

At present the church occupies handsome quarters in the Odd Fellows' Building, but these quarters were only obtained temporarily, as it has long been the desire of the members of the church to possess an edifice of their own. Now the long-expected time has arrived. The building will be a handsome one and will very likely be of stone. It will be finely appointed and substantially constructed. The work of erecting it will be done under the personal supervision of a representative of the architects, and the tearing down of the buildings now on the site will begin shortly.

The Evening Dispatch, Wilmington, N. C.

Bridgeport, Conn.

That the Christian Science cult is flourishing in this city is evidenced by the purchase yesterday by the local branch of the Church of the property on the west side of Lafayette Street, just south of State Street, for the site of a Christian Science temple. The property is now under lease to Miss Fannie Smith, who conducts the Froebel kindergarten. Her lease is good for another year. In the mean time the society will raise funds to commence work upon an attractive edifice, where services will be held as in other large cities. Those interested in the project say that it is not possible to get a suitable place large enough to accommodate all who desire to attend the services. The growth of Christian Science has been remarkable in Bridgeport within the past two years and now a large edifice is necessary. The property purchased by the local branch is desirable in every way. It has a frontage of about one hundred and fifty feet, is located in a fine residential section, and is convenient to the trolley cars.—*Bridgeport* (Conn.) *Standard*.

Troy, N. Y.

A movement has been started to raise a fund of $100,000 for the erection of a handsome new edifice for First Church of Christ, Scientist. The proposition was presented to the members of the church last Sunday, and Treasurer E. K. Betts states that already a considerable sum has been received. The Christian Scientists do not believe in building before they have the money in hand to pay for the edifice, and while it may take some time to raise a fund as large as proposed there seems to be little doubt that the project will be carried out. No plans for the edifice have been outlined as yet, but the building will be erected on the property owned by the church on Second Avenue, just south of First Street, Upper Troy. The present chapel will be used for Sunday School purposes. Besides the chapel the congregation maintains well furnished Reading Rooms at 15 Second Street. Recently the congregation raised $10,000 toward the fund for the magnificent Christian Science church in Boston, Mass.—*Troy* (N. Y.) *Times*.

Cleveland, Ohio.

Ground was broken yesterday for the new Third Church of Christ, Scientist, the ceremonies being directed by Mrs. Helen A. Smyth, Reader. The new structure, which will be located at West 25th Street and Mapledale Avenue, is to be a reproduction of First Church in Euclid Avenue. It will have a seating capacity of four hundred and is to cost $12,000. The architect is S. W. Striebinger. The doors of the new church are to be open seven days in the week. There will be a library and Reading Rooms, which will always be open to the public. It is expected that the building will be completed and ready for use in ninety days.

Cleveland (O.) *Leader*.

Grand Rapids, Mich.

The dedication of First Church of Christ, Scientist, will be held Sunday, Oct. 14. Although services have been held in the church for over a year, it has not been free from debt. Pledges for sufficient sums to clear the church debt before October have now been made. The building, with all its contents, cost $63,000, and is a beautiful example of the highest architectural art. There are now two hundred and nineteen members of the church and the list is steadily growing. Three services will probably be held in the church on the dedication day.—*Grand Rapids* (Mich.) *Herald*.

[Written for the *Sentinel*.]

At Last.

M. BETTIE BELL.

At last, I saw the light.
It came from one who knew the way;
Who said that darkness could not stay,
And taught me what she knew was right.

At last, my hope grew strong,
I strove to lay my burden down
And seek in Truth to find the crown;
I'd waited on the Lord so long.

At last, my trust rose high,
The Word of Life came clear to me,
It said, You must and shall be free,
And God shall be forever nigh.

At last, the rod was given,
To lay the error in the dust.
Obey and pray; she said we must
From all the past of sin be riven.

At last, the light did shine,
Truth healed me of a broken heart.
It said, From grief you now must part,
The saving love of Truth is thine.

At last, the love is great,
I know that my Redeemer lives.
And with His loving kindness gives
A message which is not too late.

At last, the Christ so sweet!
To her who taught me how to pray,
In humble gratitude I lay
The healing laurels at her feet.

Truth ever lures us on, with beckoning finger
She seeks to draw us from the dim and murky realm
Of ignorance and doubt, in which we long have wandered,
And points to new and undiscovered lands,
Where freedom is and knowledge dwells.

Anon.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

The True Basis of Health.

In the references of Christ Jesus to himself the deeply interesting fact is disclosed that the uniqueness of his nature inhered not in the absence of a human sense but in the continuous supremacy of the divine. In one instance he not only specifically recognized the limitations of his human sense but he as specifically declared its unreliability and added that this understanding had immediately to do with salvation.

To the caviling Judæans who, as John states, were seeking his death, he said, "From myself I can do nothing. If I should testify about myself, my evidence would not be reliable. There is another witness for me; and I know that the evidence which he gave about me is reliable. You have yourself sent to John, and he has given evidence to the truth. I do not, however, accept the evidence of man; but I mention this in order that even you may be saved" (John, v., Ferrar Fenton translation).

The importance of the discrimination thus made by the Master, and the need that we also have it in mind when answering the yet caviling world, is revealed in a recent criticism of Christian Science at the hands of a Boston clergyman, who makes the point that Christian Scientists are grossly inconsistent in declaring that they have been personally healed, or that they know of others who have been healed through Christian Science treatment, since they offer as evidence the testimony of the physical senses, which testimony, as they insist, is altogether untrustworthy and deceptive.

To this it may be replied, first of all, that even material sense-testimony as to health would be an improvement over kindred testimony as to disease, and therefore to realize this improved belief means advance. Hence Jesus' statement to the Jews that the acceptance of John's testimony would have been to their credit and advantage though he himself had a higher source of information. Christian Science teaches that while the acceptance of improved beliefs indicates progress toward spiritual consciousness, this last alone can furnish "reliable" testimony respecting health, which, in truth, is a state of right consciousness and not a state of organized matter. In keeping with this discrimination Mrs. Eddy emphasizes the point that a belief in health as physical may prove a serious impediment to one's escape from disease. The final and only reliable testimony respecting actual conditions is not feeling, but a demonstrable apprehension of Truth. To the materially exacting Thomas, Jesus said, "Blessed are they that have not seen and yet have believed [understood]."

Christian Science makes the further radical and necessary discrimination between the relief of sickness and the healing of sickness. Relief is often secured through a change of thought, which may result, under the prevailing belief of mankind, from any one of unnumbered things, such as the taking of a so-called drug specific, change of climate, massage, the application of electricity, etc. Healing, however, is effected only when the false beliefs of human sense are dissipated through spiritual awakening to the truth of being, in which disease and disharmony can have neither place nor power. The true scientific ground of determination is, therefore, wholly different from that of those who judge from the material basis of physical sense-testimony. In the early stages of his experience a Christian Scientist may accept, place a value upon, the improved belief which is expressed in more normal bodily conditions, but until he has recovered from this state of material dependence he is subject to legitimate criticism, for his position is no less inconsistent than insecure. In due time, however, he learns, through its oft-repeated piercing of his own hands, that the reed of material sense is utterly unreliable and that the true healing, immunity from disease, is realized only as consciousness is exalted to at-one-ment with Him who is Life, Truth, and Love, the All in all in whose perfectness there can be neither sin nor sickness. As Jesus said, it is the Christ-idea, God with us, who alone speaks truly as to the facts of being, and who will prove our safe guide amid the pitfalls of human experience. JOHN B. WILLIS.

The Divine Fatherhood.

Father! the dearest, holiest name
That men or angels know!
Fountain of life that had no fount
From which itself could flow!

In all times the human heart has sought in the idea of the divine fatherhood a resting-place for its holiest hope and faith. Christians find in the Master's teaching and example their warrant for giving to the Almighty the tender name of Father, and Christian Science teaches us to think of God as the infinite Father-Mother. The troubled human sense has clung to the words, "Like as a father pitieth his children, so the Lord pitieth them that fear him;" and because of this declaration it has argued that God must know evil and regard it somewhat as the human parent does. Now this parent grieves because he feels helpless to save his child from sin and suffering, but if he were conscious of power to avert every calamity, he could have no cause for sorrow. The mother does not weep when her babe cries out with fear at some unsightly object; rather does she smile at the needlessness of this fear, as she reassures the little one. The pity is that the mother does not always know that her own fear or that of her child is causeless. She does not know that the infinite Parent is never absent, but watches over her and her child so that "no evil shall befall" them. The human sense of parenthood sees only a little way; sometimes not at all. It mistakes the wise discipline of divine Love for the wrath of "an angry god," and so life's great and glorious lessons are not learned when they are most needed. Thus we have self-inflicted suffering, when divine Love waits ever to be gracious, to clasp close the trembler who has learned that naught else has power to soothe or to save.

In Christian Science we learn that we must give up the human sense of parenthood and its pity for that diviner sense which recognizes infinite Love and power. Our revered Leader says, "Gladness to leave the dark landmarks, and joy to see them disappear,—this disposition helps to precipitate the ultimate harmony" (Science and Health p. 324). To be able to trust, because we in a measure understand, our heavenly Father, gives that sublime courage which faces without fear every crisis in human experience, knowing that He knows the outcome of all—even our triumphant emergence from all the bonds of material sense,—a freedom and a joy so great that it hath not entered into the heart of man to conceive it.

How true it is that our text-book, Science and Health, is the "Key to the Scriptures." Many of us were accustomed to think rather sadly upon the statement of the Divine pity already quoted, because we allied it to human pity, which is usually so helpless. But how does the psalmist speak of it? In the 103d Psalm, where this reference appears, we are told that our heavenly Father not only "pitieth them that fear him," but heals all their diseases, redeems them from destruction, *removes* their transgressions "as far as

Digitized by Google

the east is from the west," and crowns them "with loving-kindness and tender mercies." This is the Divine pity, as seen in the light of Truth. Well might the prophet compare this pity with the highest human sense of it and say, "Can a mother forget her sucking child? . . . yea, they may forget, yet will I not forget thee." Well might he call upon the heavens and the earth to be joyful over such a revelation so full of comfort to all in need! To-day thousands are rejoicing because of the revelation of Divine Science, the Comforter which makes known to mankind the pity that saves from sin, disease, and death, the pity of our Father-Mother God. ANNIE M. KNOTT.

Letters to Our Leader.

[THE following letter well expresses the "joy and uplift-ment" which came to many as the result of the services and meetings held in Boston in connection with the Communion and the dedication of the Extension of The Mother Church of Christ, Scientist. We are sure that all who took part in these services and meetings will thank the writer for her admirable letter.—EDITOR.]

On the way back to Alabama,
Cambria, Va., July 4, 1906.

Beloved Leader:—The joy and upliftment of our dedication and Communion season have passed into history. Even though your moments may be too full of love-work to glance at this missive, it will help me just to express a little of what I saw and felt. I can only re-echo what our editors and others have said of the wonderful demonstrations at the six Sunday services and the ten Wednesday evening meetings, and fervently thank you for the teaching and living that have made these demonstrations possible in human history. You have led thousands upon thousands out of Egyptian bondage. What I want to speak of especially is the glory and light of the Annual Meeting on Tuesday—the business meeting for reports. In listening to the introductory reading from the Bible and Science and Health by our retiring President, Mr. McKenzie, and his inspiring remarks before presenting the incoming President, Mr. Gross, the passage in the last verse of the sixth chapter of Acts, on the trial of Stephen, came to me, when "all that sat in the council . . . saw his face as it had been the face of an angel." The same beautiful light was on the face of Mr. Gross during his address. Both men spoke of law and obedience,—Mr. McKenzie of becoming "gladly obedient to law." In speaking of you, the author of our text-book, "Science and Health with Key to the Scriptures," Mr. Gross said, "Obedience to the teachings of this book has brought us to this hour." In the despatch sent to you Judge Hanna used this expression: "Strict and intelligent recognition of, and obedience to the means by you provided," etc. Ah! this is what we need—to be able to recognize, to *know* the law, and then become "gladly obedient" thereto in both letter and spirit. The two are indissolubly wedded in the holy and health-giving Science of divine Mind discovered by you forty years ago, and fitly named "Christian Science." Thank you again and again for the teaching and living which will enable the faces of all humanity to shine as the faces of angels—"God's thoughts passing to men" (Science and Health, p. 581).

The unity of thought that pervaded this Annual Meeting was remarkable, yet no speaker repeated what others had said. The review of the history of The Mother Church by our Clerk, Mr. William B. Johnson, C.S.D., was wonderfully instructive and uplifting, and we owe him a debt of gratitude therefor.

I am sure that one meaning of these events is that we are seeing you, our Leader, more clearly, and therefore becoming better able to follow. Even if we had the privilege of often meeting you face to face, we should not thereby become better followers, except through accompanying spiritual apprehension. It is this apprehension of the light of Truth that you desire for us, and obedience to your wishes for non-intrusion, with quiet study and practice of your teachings, will enable us to enter more fully into that light. Your obedience to law brought to you the revelation of Christian Science—the light of Truth. You are showing us how to follow on and obey, that the same light may come into our lives until "death is swallowed up in victory"—material sense is lost in spiritual consciousness.

With deep and reverent love,
Your grateful follower,
IDA TIGNER HODNETT.

Johannesburg, South Africa, June 8, 1906.
Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H., U. S. A.

Beloved Leader and Teacher:—Knowing that it always pleases you to learn of the progress Christian Science is making in any part of the globe, it is to me a most pleasant task to communicate to you the following.

On the 21st of August, 1904, six of us, including one Christian Scientist from America, held the first service at my residence. After six months the attendance of seekers for Truth increased and we had to take larger rooms, and now again we must take still larger accommodation. Since the above date regular services have been held every Sunday, the Reading Room is open twice a week, the attendance averages fifty-five for the last two months, but the number interested in Christian Science is above eighty people. We are holding evening services, testimony meetings, and a Sunday School will soon begin.

We are now organizing a branch church named "First Church of Christ, Scientist, of Johannesburg." The sale of "Science and Health with Key to the Scriptures," and all the other literature has remarkably increased. We have with us two practitioners, both members of The Mother Church; they are very busy and active disciples of Christ and doing the Master's good work.

I became interested in Christian Science about two years ago, and by studying the text-book was healed from chronic rheumatism of over fourteen years' duration. I had used glasses for over twelve years, but now do without them for the last year, and was lately healed from deafness and many minor ailments. I am sixty-six years old, and have used no medicine for two years.

The writer's whole being thrills with inexpressible gratitude to God for the spiritual understanding, and this great blessing, and that He has sent you as His faithful disciple to help humanity out of darkness into light.

With loyal and loving greetings,
Yours in truth,
CARL BREDELL.

Boston, Mass., July 25, 1906.
Mrs. Mary Baker G. Eddy.

Beloved Leader:—It may please you to hear a little from our Sunday School. A little girl who had come with her mother from the far West to attend the Communion service, and who remained a few weeks, was in my class in the Sunday School. After the regular work was finished I dwelt for about ten minutes, very carefully, upon the "Spiritual interpretation of the Lord's Prayer" in Science and Health, especially on the last two lines, which you have recently changed, and which to me contain all of Christian Science. The mother told me the evening before they left for home that her daughter was healed in Sunday School. This shows that it is not personality, but the truth alone, which is contained in the dear "little book" which you have given to the world and which the world is accepting, that heals.

In the *Sentinel* of July 9, 1904, appeared a letter to you from my pen, in which I told of a progressive step in our dear old "Granite State." It seems that two years ago

Digitized by Google

the principal of the high school in Lisbon, N. H., broke away from the regular order of graduation, and came to Boston with his graduating class to visit the historical points. While here, they visited The Mother Church and listened to a Christian Science service for the first time. Last year this trip was repeated, and this year they came as before; and two other towns in the northern part of the State followed the example of this wide-awake principal in Lisbon and sent their graduating classes with their teachers to Boston. These also attended our service for the first time; showing that the leaven is leavening "the whole lump."

I want to thank you for all the blessings I have, for I owe them all to God, and to you through the understanding of Christian Science. My husband joins with me in deepest love and gratitude.

Faithfully and obediently yours,
MRS. HATTIE STICKNEY GALE.

London, W., England, July 12, 1906.

To Mrs. Mary Baker G. Eddy,
Concord, N. H., U. S. A.

Beloved Leader:—It is my pleasing duty to forward you a copy of the following resolution:—

"That this semi-annual meeting of the members of Third Church of Christ, Scientist, London, desires to place on record its deepest sense of gratitude to God for the dedication of The Mother Church at Boston on the 10th of June, 1906; as a monument of practical Christian Science, also a token to humanity at large of the life-work and teaching of our beloved Leader; Further, that the President and Board of Directors be requested to communicate this resolution to the Pastor Emeritus of The First Church of Christ, Scientist, Boston, Mass., U. S. A."

With love, yours gratefully,
F. ALEX. BARTON, M.R.C.S. Eng., L.R.C.P. Lond.
Clerk to the Board.

Providence, R. I., July 27, 1906.

Mrs. Mary Baker Eddy,
Concord, N. H.

My Dear Teacher:—I thank you most heartily for your letter of recent date, relating to my election for the coming term as teacher in the Board of Education. My unwillingness to serve in this capacity has always been on the ground of my recognition of the high qualifications requisite for this position. Believe me, I would have been willing to accept your wisdom had it led to the appointment of another as teacher, and would have asked no questions. The evidence of your care and hope for me is, however, very precious, always, and I will give this great work my best and clearest effort—seeking constantly God's help.

With deep appreciation for your unceasing kindness.

Most sincerely yours,
EUGENE H. GREENE.

Boston, Mass., June 14, 1906.

Dear Mrs. Eddy:—This wonderful Communion has indeed touched my thoughts profoundly with a higher sense of your unbounded love for all humanity, inducing a most earnest desire to help you to consummate your grand life-work. I have never before been so deeply impressed by the magnitude and majesty of Christian Science, and the seemingly stupendous task in advance. I find ample encouragement in Philippians, 1 : 6, and clearly see the grand necessity for earnest consecration, alert vigilance, and loving obedience to your wishes and admonitions, which I am sure will lead to better demonstration.

I shall always be happy to serve you and your Cause in any way which will lessen your burden. With most tender love,

Faithfully yours,
ERNEST C. MOSES.

Testimonies of Healing.

For several months prior to June, 1904, my eyes had been giving me trouble. I was advised to wear glasses, carefully shade the room in which I met my classes, as I am a teacher, and to read but little, so that the eyes might have as complete rest as possible. For the next ten months I tried to regain my failing sight by this means. My wife read to me the books most necessary for my work, and made abstracts for ready reference. A capable student made abstracts from numerous library sources. I examined these abstracts briefly, or had them read to me. The school authorities placed special shades on the windows of my class-room, so that the light could be carefully regulated. Under these conditions my work was carried on fairly well, but no cure was being effected.

In April, 1905, I noticed in our Normal School Library a file of Christian Science *Journals*. I selected one and found an article on Inductive and Deductive Reasoning, which I read with less strain on my eyes than when I had read other printed matter. The writer quoted from Science and Health (p. 468), "All is infinite Mind and its infinite manifestation, for God is All in all." This interested me in the text-book, and I obtained a copy of it and began reading. I found some statements which seemed true and helpful, and many others which conflicted with my previous studies. I, however, read on, and found to my surprise that I could read this book for several hours each day without much difficulty. I read it through, then read it a second time with a growing conviction that it contained the explanation of Christianity as the practical, ever-present, ever-operative salvation from sin and sickness for which the human heart has always yearned. A third reading brought home to me the certainty that here was an interpretation of the Scriptures in which humanity might well rejoice and be exceeding glad, for God is the same yesterday, to-day, and forever. I had always wondered when and why the works of healing, as performed by Christ Jesus and his disciples, had been discontinued. I now learned to my great satisfaction that the Christ is the same to-day as when Jesus walked in Galilee, and that the laws he then demonstrated are eternal, and operative now as then.

During this study I had turned to my Bible again and again, and read the works of Christ Jesus with a new and fuller sense of the meaning. I saw that what had been done for blind Bartimaeus could be done and was being done for me. The reading of Science and Health had done for me in a few days more than the resting of the eyes had done in ten months. In order that I might obtain more rapidly the benefits which I felt sure were in Christian Science, I sought the services of a practitioner. On the evening after my first treatment I read manuscript for two hours without serious inconvenience. I had been unable to read manuscript to any extent for months. On the following Saturday I spent four hours continuously reading manuscript, and writing. I received one treatment each week, read Science and Health, and rapidly added to the amount of reading in my regular work. I did not take more frequent treatments, as I wanted the benefits to be derived from a personal investigation of Christian Science through a diligent study of Science and Health. After four treatments I was reading as much as necessary with but slight inconvenience. After twelve treatments the eyes were strong, and I have since that time read as much as my work required,—often eight to twelve hours per day.

I rejoice in the physical healing brought to me through Christian Science, and much more do I rejoice in the flood of light which its study has shed upon the truth of the Bible; and in the sweet consciousness that Christ Jesus meant his followers of all time to heed his command to preach the gospel and heal the sick.

DOUGLAS C. RIDGLEY, Normal, Ill.
Professor of Geography, Illinois State Normal University.

Digitized by Google

One night about midnight my telephone rang and I went quickly to answer it. I reached the first landing all right, but when on the first step of the second stair I slipped and fell to the bottom. My first feeling was that I had broken my neck, but I got up and went into a room, declaring the truth again and again. After a short time I became calm, and began in a systematic way to meet the seeming conditions. I remained up for about an hour, then retired until half past five, during which time I suffered the most intense pain. I then decided to get up and read in Science and Health.

This was Monday, and on Tuesday was the meeting of our students' association in Chicago. All day Monday I spent in reading from the Bible and Science and Health; denying the power of evil and declaring the all-power of God, but I seemed to make no progress except that I had no pain. On Tuesday morning the trouble had seemingly increased to an alarming extent.

Up to this time I had not once thought I could not go to Chicago. During Tuesday morning I read from the eighth chapter of Luke, how Jesus had cast out the legion; how the woman was healed by simply touching the hem of Christ's garment; then how Jairus came and pleaded for his only daughter; how Jesus took Peter, James, and John, also the mother and father into the room with him, and how he put them all out again before he raised the girl.

Then I read from Science and Health, but I could not seem to get that firm grasp of the truth which would enable me to rise up and speak as one having authority. At noon I was helpless, to mortal sense, and quite convinced that I would not go to Chicago that day. A short time after that, I again read about Jairus' daughter; and remember thinking how strange it was that Jesus took Peter, James, and John, also the two nearest relatives of the girl into the room, only to put them out again. Up to this point I had thought of them only as personalities, now the light was beginning to break, and I saw that Jesus entered into that room even as the true sense entered into my consciousness. I saw that I, too, must put out every thought relative to the claim of accident, and like a flash I saw the light; I understood the unreality of the error, and at once I felt a strange sensation. I said, "I am well;" then I sat up and moved freely. I sprang from the couch, rushed upstairs, made my toilet, and in a short time was at the depot, ready to go to Chicago. I had as comfortable a journey as I had ever taken.

I had often felt grateful for Science and Health, but never had it meant to me what it did now, for without it I had not understood the Scripture. Now it was truly the "key," and I thank God every day for this wonderful truth.

MRS. BELLE A. ARMSTRONG, Racine, Wis.

Christian Science was brought to my notice almost five years ago, by a neighbor who had been greatly benefited by it. A year previous to this, our daughter had passed through a very severe experience with lung trouble, which had left her with a bad cough that no doctor could relieve, and we were obliged to take her out of school. I sent for a Christian Science practitioner, and said, "I am willing to try Christian Science if you think you can cure her." She replied, "I cannot, but God can." I then said, "Do you think she can get well?" She replied, "I don't think, I know she can be well, for all things are possible to God." I must say, that since studying Christian Science I have learned the truth of that statement, and also that "all things are possible to him that believeth." In less than three weeks the child was well, and she is now a picture of health.

Since that time we have seen the healing of many severe forms of sickness, and with no help but that of Christian Science. One dear child of four years was badly scalded, and was healed through Science alone in a very short time. During a serious experience I said to the practitioner that I did not seem able to overcome the great fear I had. She told me that God was more to me than the fear. This thought took possession of me, and with the one treatment I was healed, and about my household duties the next day. With similar experiences under medical treatment I had been compelled to remain in bed for weeks, and was unable to attend to my household duties for months afterward.

The last experience which I wish to relate was the most convincing one to me that Christian Science is indeed God's Word to this age, and that it makes men free. After suffering for months from what doctors had pronounced a tubercular disease, and getting no help from *materia medica*, I was told that I would have to go to a hospital. I then made up my mind to have Christian Science, and I was healed in a few weeks. I was unable to use an arm which had been operated on several times, but thanks be to God, through the teachings of Mrs. Eddy's book, "Science and Health with Key to the Scriptures," I was enabled to overcome every manifestation of this ailment, and the arm was fully restored in six months.

I am thankful I have learned that "all things are possible to God," and that through this wonderful text-book of Christian Science we are learning how to avail ourselves of this blessed truth that makes free from sickness as well as sin. I am also thankful that through Christian Science I have learned to love the Bible, to read it, not as a duty, but as a privilege and pleasure. My desire is to know more of the truth and live it.

LILLIE WEISZ, Denver, Col.

It is now over two years since I became interested in Christian Science and commenced the study of its teachings. During this time I have depended entirely upon it for physical healing. One demonstration I want especially to mention, because it proves that God's Word is "quick and powerful." I awoke one morning feeling miserable. I got up and dressed, as necessity compelled me to prepare breakfast for those who were going to their work. Breakfast over, I sat down and began to study the Lesson-Sermon in the *Quarterly* entitled, "God the Preserver of Man." When I had finished that lesson I was well. I worked hard until ten o'clock at night, without feeling in the least tired.

Words do not express my gratitude for the knowledge I have received from Christian Science. It has not only helped me physically and spiritually, but it is also giving me a better education. It has aroused an interest in the study of the Scriptures and made the Bible an interesting book. For all this and many other blessings I am thankful to God, and immeasurably indebted to our Leader, Mrs. Eddy, the author of "Science and Health with Key to the Scriptures."—MRS. FLORA BURKE, Kirksville, Mo.

I desire to express my gratitude to the Discoverer and Founder of Christian Science, Mrs. Eddy, for the great blessings that are now mine to enjoy through restoration to health from what seemed the brink of the grave. More than once have I been overcome by weakness and had to be conveyed to my home. I then had no knowledge of Christian Science, except having heard it mentioned by some one who ridiculed it. I had tried everything, medicine, manipulation, climate, etc., but was all the time growing worse. While in this condition I happened to attend a lecture on the subject of Christian Science. I was seated near enough to hear and see plainly when the lecturer was introduced, but shortly after he began to speak I had a very violent attack of my old enemy, and almost lost consciousness. I wanted to leave the hall, but knew that if I attempted to rise I would fall, so I resolved to remain and die right there rather than make a scene; but in a comparatively short time I began to hear and see more distinctly, and the pain and fear became less and less, until before the lecture was over I was perfectly normal. I have never had another attack of that trouble, and have since received bless-

Digitized by Google

ings in health and protection which I am now aware are the result of the understanding of Truth as revealed in Christian Science. For this I shall be ever grateful. The incident above referred to took place in Quincy, Ill., seven years ago, and since that time I have been the recipient of blessings, both spiritual and physical, which I know could have come from no other source than Christian Science.

As a young man of nineteen I became an inveterate user of tobacco. The habit had grown on me to such an extent that for eighteen or twenty years I used it almost continually, night and day. I took a number of different tobacco cures, but without the desired good results. Soon after this I lost my health,—was afflicted as I have already stated. After I turned to Christian Science and was restored to health, I wanted to quit tobacco and had two weeks' treatment, but gave up and continued to use it. Later I again requested treatment for the tobacco habit, and after a few weeks the practitioner told me that in his opinion there was some sin which stood in the way and which must first be removed. This was said in a brotherly manner, and I now feel grateful for it. I was at that time enjoying the bliss of new-found health, but had a very faint idea of spiritual things. It was about eighteen months after this when the thought dawned upon me that I needed help to overcome the belief of sin. I asked for treatment, and a complete cure of the tobacco habit followed in a few weeks. From that time to this, nearly three years, I have had no desire for tobacco. Christian Science does heal the sick and reform the sinner, and I am grateful for the blessings which have come to me.—TERE A. CLARK, Quincy, Ill.

When I first became interested in Christian Science I was an utter skeptic, but knowing of a serious case of disease that had been cured by it, I decided to investigate it. I had been under the care of different doctors for nearly six years, trying everything that promised relief; but after all, I found myself with nearly half a dozen so-called incurable diseases. For nearly two years before trying Christian Science I had been under the constant care of one of the best nerve specialists in New York, but all to no effect.

When I first went to a Science practitioner I intended to drop my old treatment very gradually, and when he told me I could stop the medicine and dieting at once and eat anything I pleased, I laughed at him. I, however, did as he suggested, and had a good night's rest, when I was more inclined to laugh at myself. Since that time two of the diseases have simply disappeared, and their instantaneous healing led to my study of the text-book, Science and Health, until one by one all my ailments have disappeared. I now enjoy better health than ever before in my life. It is now about four years and a half since I began the study of Science, and though at first I needed help from practitioners I have been for over a year relying entirely on my own understanding of the Bible and Science and Health. I find these an ever-present help.

Great as has been my physical healing, the growth in spiritual understanding, in which I rejoice, has been even greater. I am striving daily to show by my deeds my gratitude to God, and to His Messenger, Mrs. Eddy.

KENNETH B. ELLIMAN, Lyons Falls, N. Y.

Through the understanding that God is All in all I have received many blessings. I think it would be a hard task to find a more disconsolate, discordant woman than I was, both mentally and physically, when I first learned of Christian Science. For several years I had been laboring under the sense of hypnotic influence, which it seemed an utter impossibility to throw off. By the grace of God I can now say that this has all disappeared. I am indeed beginning to understand the at-one-ment with divine Mind, and my heart is filled with loving gratitude, first to God, and next to our beloved Leader, Mrs. Eddy. May God's blessing abide with her and hover over her now and ever. This is only a trifle compared to what my heart feels for our glorious Cause. My heart is filled with gratitude and love for the truth which has helped me in my hours of trial and sadness.—MRS. LILLIAN J. CARRANO, Brooklyn, N. Y.

In February, 1905, my wife, in avoiding a street car, got in the way of a team of dray horses, one of which stepped on her right foot. This caused her to fall; and the wheels of the dray passed over both limbs, injuring her very severely. She was taken home, and a doctor summoned. He bandaged the limbs, and said it would be at least three weeks before she would be able to place her feet to the floor, and that it might be months before she could walk properly. Shortly after the doctor had left, she began to suffer the most intense pain. I immediately telephoned to a Christian Science practitioner, giving the particulars of the affair, and in twenty minutes after I telephoned my wife was perfectly free from pain and did not suffer a moment thereafter.

The following morning, when the doctor called, he was very much surprised to learn that she had not suffered during the night, and judging from his actions, we could plainly see he was afraid her limbs were paralyzed. The appearances were very alarming, but all these conditions were promptly met by Christian Science, and in three or four days they had nearly all disappeared. In conclusion let me say, that in exactly twelve days she was down town shopping, and has been able to walk ever since without the slightest difficulty.

We thank God for the truth, as revealed in "Science and Health with Key to the Scriptures" by Mrs. Eddy.

H. RUTHVEN MCDONALD, Toronto, Ont.

I cannot withhold any longer my testimony of what Christian Science has done for me and mine. My ailment began when I was about twenty-four. From that time I was not able to do any hard work. I took much medicine and consulted many physicians, some of whom pronounced it lung trouble, some heart trouble, and so on. I grew worse and worse, so that I was compelled to give up my business. I began to seek help through spiritualism and was told that I might die during the coming winter. This was in September, 1902. This only added more fear and agony, as I did not know what to do to prevent it, everything having failed me. Death seemed to be staring me in the face, and every one's looks seemed to be telling me that my days were numbered. In my despair I tried dieting, massage, etc., but all failed.

At this time I met a lady who recommended me to try Christian Science. She said it had helped her daughter of an ailment similar to mine. I then went to a practitioner, and after a few treatments I felt relieved of the mental disturbances and also of much of the physical suffering. I was then advised to purchase a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and to read the Bible, which I willingly did. The practitioner told me to read Psalms 23 and 91 after I got to my hotel, which I did, and I could not keep back the tears when I saw how I had been robbed of a most precious treasure by mortal ignorance.

After two weeks' treatment I went home to work out my own salvation. Later I wrote for help and was under treatment two months, but concluded that I should work harder myself, with the knowledge I then had of Christian Science, knowing well that I need not seek for any other way in healing. I have been pressing on, denying the reality of the errors which beset all mortals, and the mist begins to clear away, and the presence of God, good, becomes more real to me.

My wife, thanks to Christian Science, was also healed of an aggravating skin disease which had troubled her for two years, and for which she had previously tried every-

Digitized by Google

thing we could hear of, without any marked benefit. I have also helped others of my family through Christian Science. Our children do not use any medicine, and are all healthy. I am now in perfect health, in spite of my staying up late and getting little sleep. This would have been a menace to my health previous to my understanding of Christian Science, but the cares of business are melting away under the application of the truth, and that is why the ailment has lost its hold, and many hard problems are being solved by applying the same truth.

I owe much to God for all the blessings I have received; and to Mrs. Eddy, as her consecrated life was the means of helping me out of much suffering, and of enabling me to follow the true path.—STEPHEN POSTALKA, Vining, Ia.

When I first heard of Christian Science I had for years been a great sufferer from stomach and liver trouble, also lung trouble. From early boyhood I had been subject to frequent bilious attacks, and was troubled a great deal during the winter months with my lungs and throat. A few years before I heard of Christian Science, a prominent physician told me that my lungs were in a very bad condition and advised a change of climate. He said it was doubtful whether I would live a year if I remained here. After spending about a year in the open air, a part of the time under a doctor's care, I seemed to be somewhat improved, and later returned to my old position in a large mercantile establishment, but did not seem to improve any further. I finally seemed to be slowly failing, until I had lost all faith in doctors and drugs.

I was at last persuaded by a dear friend to read "Science and Health with Key to the Scriptures" by Mrs. Eddy. During one of my attacks I took two or three treatments from this friend, which put me on my feet again; and finally, through the faithful study of Science and Health, I was entirely healed of all my ailments. I have not taken any medicine since my first treatment, and during the past eight years have not lost a day from business on account of sickness. Five years of this time I spent on the road as a traveling salesman with very heavy work. My territory being in northern Iowa, I often had to make long drives in all kinds of weather, but I never experienced any bad effects from exposure to storm or cold.

We have two children, nine and seven years of age, and have been able to prove beyond a doubt the efficacy of Christian Science in protecting them from the many diseases which children are usually subject to.

Christian Science has not only made me better physically, but it has made a better man of me in every way. Through the study of Science and Health I am gradually coming to understand and put into practice the teachings of the Bible, and I cannot find words to express my gratitude to Mrs. Eddy for the wonderful illumination of the Scriptures which Science and Health has produced. It is indeed the "Key to the Scriptures," for it has unlocked them to thousands who were groping in darkness and despair, and through this new light they have been able to claim the many promises of the Bible, and thus become free from the bondage of sin and disease.

N. M. CRAWFORD, Cedar Rapids, Ia.

When only a child I had rebelled against the belief that God sent all sorts of affliction and misery on His children, that they might be purified and learn to love Him. To me it seemed a poor way to bring about such a result, and I groped in the darkness of despair until October, 1901, when Christian Science was brought to me. I was then suffering, for the third time, with a serious malady, and the attending physician—one of the best in St. Louis—said I had only one chance in a hundred for recovery. Arrangements were made to remove me to the hospital for an operation. At four o'clock that afternoon a friend, who was a Christian Scientist, called to see me as she was returning from church, and as soon as she came in I asked if she could heal me. She said, "God will heal you, if you are ready for it." I expressed my willingness to have all material means —medicine, poultices, etc.—thrown away. With the first treatment I experienced relief, and slept for the first time in over thirty-six hours, and on the following evening, Monday, I was dressed and down to dinner. I was able to be out from that time, and have never had even a symptom of the trouble from that day to this, whereas before I had lived in constant dread of it. I have experienced to the fullest extent the healing power of divine Love, for no matter what the seeming conditions have been, they have been met through Christian Science. For all these blessings, and many others too numerous to mention here, I am more than grateful to God, and to our beloved Leader, Mrs. Eddy, for this blessed truth.

M. H. WILLIS, Jefferson City, Mo.

I came to Christian Science nearly two years ago, seeking relief from deafness. I then knew nothing of the Science and only sought its benefit in a physical way, but it has enabled me to see that I was extremely selfish, suspicious, self-willed, and sinful. By absent treatment and the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, I have been freed from many serious physical ills, and from jealousy, hatred, suspiciousness, fault-finding, etc. I have never met a Christian Scientist, but have Science and Health, "Miscellaneous Writings," and several others of Mrs. Eddy's works, and have been able to prove my way by helping others. Here in East Texas Christian Science is the most effective remedy for chills that I have ever seen tried.

My spiritual blessings have so far exceeded the material benefits that I feel I must acknowledge them. Though one of the troubles has not yet been removed, that does not disturb me, and I can now see that my object at first in seeking relief was wholly selfish. As I learn more of the grand truths that are revealed in Science and Health, my love and respect for Mrs. Eddy become greater, for she has helped us to find our inheritance through her unselfish life-work.—ALBERT STANFORD, Atlanta, Tex.

About seven years ago I was suffering intensely from a stomach trouble which physicians seemed powerless to relieve, although I was treated by them for a long time. As a last resort I was induced to try Christian Science, and after three days' treatment I was permanently healed and have not had the slightest recurrence of the trouble since. I am glad from personal experience to commend this treatment.—C. W. JACKSON, Sioux City, Ia.

[Written for the *Sentinel*.]

Pass it On.

MRS. H. RUTHVEN MC DONALD.

COMES a word of hope to you?
Pass it on;
Something that you know is true?
Pass it on.
Other barques are on the sea,
Needing Life and liberty;
When the light is shown to thee,
Pass it on.

Fear not lest the cruse be dry,
Pass it on;
Love and Truth will oil supply,
Pass it on;
Let your light shine calm and clear,
With the love that knows no fear,
Testifying far and near,
Pass it on.

From our Exchanges.

Prayer was the natural breathing of his soul. He was saturated with piety. But, so far from this involving him in an effort to produce specific, technical "conversion," after the manner of any and all types of this experience, in him the great reality of the spiritual life is dissociated from all these things. The aim of Jesus is infinitely profounder than all this conventional desire of revivalism. In him the spiritual life never ends in anything said or done at any stated time. It is not a set event, like repentance or conversion. It is the introduction of a new power into life. It is a germ, a seed cast into the soil. It is a new quality of experience which is a leaven, filling the soul, shining in the eyes, running over, dropping like honey from the lips, imparted like the perfume of a rose to all the neighborhood. . . . There is a cry for "results" in most churches and in most people. And by results they mean things or converts they can count and tabulate. But we repeat that this is not the method of Jesus. His work is to breathe upon and in men this new life from above. He introduces into the soul a dynamic energy, a mighty, moulding, transforming energy, but he does not harness this to some formula.

The Universalist Leader.

Christianity was spread at the first, both by the Master and by his followers, not so much by great missionary organizations, nor by the persuasion of great preachers, as it was by the conversation and influence of lowly, humble, every-day working saints. It was the sense of brotherliness that introduced and spread the new religion. Hardly any books were written. They lived up to the new commandment that they love one another. It was such a new thing in human experience that it spread with marvelous rapidity where no apostle or preacher had ever gone. And the joy of it was the joy of the Lord. It exalted the depressed. It was a flush of divine life to those almost crushed. It reasserted the original thought of God that every man was capable of receiving and preaching that gospel that made even Jesus rejoice in the Holy Spirit.

Central Christian Advocate.

There is another aspect of prayer that follows the letter of this instruction, but it is none the less formal and unreal. It is when one seeks the undisturbed place of prayer in an attitude of mind which is made up for the occasion, as though a man must be sublimated into some other kind of a being when he prays. This is something quite apart from reverence or the spirit of worship; it is a conception of prayer which reasons thus: "Now I am about to engage in prayer, and I must put out of thought everything that concerns me and every interest I have in the world. I must be just as unlike my usual self as it is possible to become." Thus it happens that the man prays like a saint and lives quite unlike a saint. His prayer lacks reality. The real man is not there in the prayer closet! REV. G. K. NEWELL.

The New York Observer.

The real question before the American Church to-day is not so much, What is error? as How is error to be overcome? It can never be done by wholesale abuse of the scholars who seek to prove and test the foundations of religious belief. It can only be done by the overwhelming and irresistible might of the larger truth. The partial truth of the unorthodox must be met and overcome by the whole truth of the whole gospel of Jesus Christ. Because heresy has been condemned, men will not cease to think.

The Churchman.

The greatest need of this age is the genuine Christian in the world—not the Christian in the cloister, nor wrapping his robes of righteousness about him in a manner of "I am holier than thou," nor separating himself from men for the purpose of practising acts of self-mortification, but the Christian mingling with others and bearing well his part in the affairs of the world.—*New Church Messenger.*

THE CHRISTIAN SCIENCE TEXT-BOOK.—"Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing all the By-laws to date of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CARDS IN THE GERMAN PERIODICAL.—Application blanks will be supplied by The Christian Science Publishing Society to practitioners who wish their names and addresses inserted in the advertising columns of *Der Herold der Christian Science*. These applications should be properly endorsed and forwarded to the Society. The rate for advertisement will be $2.00 for the first line, and $1.00 for each additional line. It is desirable that those who offer their names in this way should be able to communicate with patients and inquirers who speak the German language only.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with The Mother Church and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Twelve or more to one address, each, prepaid . . . 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.
