Several hundred years ago the world was electrified by hearing that the most desired thing in the world had been discovered. When Ponce de Leon declared that he had found the fountain of perpetual youth in Florida, the whole world joined in paying him honor. It is a coincidence, at least, that the revelation of Christian Science through Mrs. Eddy, which discloses the real fountain of perpetual youth, should occur in the United States, and that, after all these ages, the discovery should be accomplished in our midst. The trouble with the world has been that it has sought this fountain in a material way, looking away continuously from the opportunity within its grasp, overlooking the boundless, irresistible flood of the river of eternal life which proceedeth out of God and healeth all our diseases. While God's word is no more potent to-day than it ever was, our understanding of that potency is greater than it has been at any period since the Master was on earth; and, because of this understanding, all humanity is living longer, becoming better, and having higher ideals. Even if the world has been unconscious that it is Christian Science which has accomplished this, mankind is realizing more and more that it is reasonable to contemplate God as a very present help in trouble of all kinds, and is finding that the sword of the Spirit, which both guides and guards, is rending the veil of misunderstanding and misapprehension of the mission of Jesus Christ from top to bottom, exposing the tree of Life, whose leaves are for the healing of the nations.

Correspondence.

Edinburgh, Scotland.

The annual lecture on Christian Science was given on the 28th of November. The lecturer, Mr. Bicknell Young of Chicago, was introduced by Mr. Richmond Cochrane, who said in part,—

Most of us will acknowledge, I think, that there is progress in religion,—not in God's truth, for the truth is always the same,—but there has been and there will be progress in men's idea of religion, as God and His creation are better understood and further revealed to them. Christian Science is no new religion and it has no new Bible. Many have heard very erroneous ideas concerning it. Twelve years' personal experience has proved to me the truth of its Principle and teachings, and that it can be practically applied. We do not, however, understand Christian Science except as we can prove it, and we certainly cannot prove it if we do not understand it.—*Correspondence.*

Brighton, England.

One thing Christian Science does. It offers a most definite rebuke to materialism. This can honestly be said without in any way wholly subscribing to the opinions of Mrs. Eddy or her followers. This idea of a rebuke to materialism came home forcibly to one's mind in listening, on Tuesday evening [November 14], to a lecture on Christian Science given by Mr. Bicknell Young, at the Royal Pavilion. The banqueting-room was crowded to its fullest capacity, —a fact which shows that Christian Science, although a comparatively recent development in this country, is at least a force in Brighton. Among the keenly attentive audience were a few Church of England clergy and Nonconformist ministers.—*Brighton Herald.*

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

A Greeting from England.

London, England, November 21, 1905.

Dear Mrs. Eddy:—We are taking advantage of our daughter Victoria's departure from Liverpool to-morrow, to cross over to Boston, to send you by her an illuminated copy of the Psalms of David, designed in the early days of Queen Victoria's reign.

We hope you will accept this book as a little Christmas offering of love from

Your affectionate students,
GERTRUDE DUNMORE.
DUNMORE.

MRS. EDDY'S REPLY.

Pleasant View, Concord, N. H., December 18, 1905.
Countess of Dunmore, C.S.B., and the Earl of Dunmore, C.S.B., Christian Scientists, London, Great Britain.

My Beloved Students:—Your gift of the beautiful hand-illuminated Victoria Psalter was duly received.

Among my list of gifts gracious, yours is conspicuous,—sent to me across the sea, commemorating one of the very best queens that history has recorded, and issued early in her reign.

I regret that I could not see your dear daughter Victoria when she was in America—she is accomplishing much for the race. Affectionately yours,

MARY BAKER EDDY.

"Signs of the times."

THE world is waking up to the fact that the healing of the sick is a necessary part of our Master's gospel, and that this sign of the times is not escaping the attention of the newspapers will be seen by the following quotation from an influential paper of the Middle West. The *Jackson* (Mich.) *Patriot* says,—

"There is an increasing public discussion in the press along comparatively new lines of thought. An encouraging sign of spiritual advancement, says a writer in the *Cincinnati Enquirer*, is the tendency of some of the clergy toward the healing Christianity practised by Christ. Discarding old theological theories, many are turning wholly to the simple teachings of the Master, which in the early centuries gave substantial comfort to the good Christian and the sick as well as to the sinner.

"Even the conservative Bishop of London 'urges his clergy to pay more attention to the recovery of the sick than to preparing their souls for the next world,' but he inconsistently adds, 'to hold the extreme beliefs of the Christian Scientists is to magnify a great truth into a gigantic heresy.'

"Christian Science presents the proposition that 'either God heals the sick or He does not.' Any half-way position is untenable. The Bishop has taken an affirmative stand and begun at the numeration table of Christian Science. The only difference in the position of the Bishop of London and that of the Christian Scientists is that the Christian Scientists put the theory into practice forty years ago."

The evidence that the sick are being healed through Christian Science is accumulating so rapidly that there is no gainsaying these good works, and even those who have ranged themselves in opposition to the teachings of Science and Health are compelled to admit the genuineness of the cures which result from the practice of its rules, but the most significant fact in connection with the matter is that the older denominations are now beginning to recognize this spiritual healing as an integral part of Christianity and are advocating that their ministers equip themselves to respond to calls for this work.

Mrs. Eddy quotes on page 104 of Science and Health the following wise saying of Professor Agassiz: "Every great scientific truth goes through three stages. First, people say it conflicts with the Bible. Next, they say it has been discovered before. Lastly, they say they have always believed it." It would seem that Christian Science is fast approaching the last of these three stages.

ARCHIBALD MCLELLAN.

"Thy light is come."

WHILE listening to the singing of "The Messiah" recently, a message from our beloved Leader to one of the branch churches, at the time of its dedication, was recalled, in which she quoted Isaiah's words, "Arise, shine; for thy light is come, and the glory of the Lord is risen upon thee." This message meant much then, and doubtless means more to-day, to all those who heard it, for Christian Science brings a marvelous illumination of the Scriptures and shows how their divine intent may be perceived and obeyed. Here we have the declaration that the "glory of the Lord" is present, and what must this mean to those who, according to sense-testimony, are in the darkness of sin or suffering? Does it mean that though this is an eternal fact it has no direct relation to their need? Far from it! The command, "Arise, shine;" surely implies the possibility of rising out of all wrong conditions and reflecting the divine light. It recalls the experience of blind Bartimeus, as he sat by the wayside begging and crying out for help to Jesus, who was passing; and when the Master responded to his appeal they said to him, "Be of good comfort, rise; he calleth thee."

To-day there are multitudes of the sick and heavy laden, blinded to the ever-presence of Christ, Truth, by traditional belief, and to such Christian Science says, "Rise, he calleth thee," "Arise, shine; for thy light is come," and gladly they hear and obey. In many of these cases it is a sweet surprise to learn that after they are themselves set free, other sufferers are healed by their simple declarations of the truth; and they marvel, but it all comes through obedience to the command to reflect the light. The Master warned his followers against putting their light under a bushel, and our Leader says, "Let us watch, work, and pray . . . that this light be not hid, but radiate and glow into noontide glory" (Science and Health, p. 367). The light of divine Love is never absent, and through Christian Science mortals are being liberated from their long-time bondage to the belief in evil's reality and power, and they begin to see the things that are of God, the things that St. John saw when he declared that sickness, sin, and death had passed away.

Christian Science is very emphatic in its teaching that when the things of Spirit are revealed to us, then is the time to be up and doing, to rise out of indolence and selfishness,—to "shine." It should not be forgotten that in the prophetic vision it was when darkness covered the earth and gross darkness the people that the glorious light of the divine presence dawned upon them, and then was the command given, Arise, shine! The British admiral's signal to his forces, "England expects every man to do his duty," may well remind every Christian Scientist that in our great and momentous struggle for moral and spiritual freedom, the freedom which is to emancipate all mankind from sickness and sin, Truth's signal is ever the same,—"Arise, shine; for thy light is come."

ANNIE M. KNOTT.

Looking Up, and Ahead.

At a time when many are wont to yield their thought to a retrospection which leads them into the cheerless haunts of regret, they that be wise will turn away from every temptation to self-depreciation or self-excuse, and follow the loving counsel of our Leader, "Hold thought steadfastly to the enduring, the good, and the true, and you will bring these into your experience proportionably to their occupancy of your thoughts" (Science and Health, p. 261). To recall past failures so far as to profit to the utmost by their lessons brings gain, but to cling persistently to the remembrance of bygone blunderings is to hold fast to that which surely is not good.

The only gleaning from the fields of failure which is of value, is the wisdom of experience; when, therefore, we have recognized an error for what it is, it were well to leave it to bury its own dead. Mistakes may serve us and others as cautionary guide-posts, but the knowing traveler will not add them to his permanent baggage.

Students of Christian Science find nothing in its teaching to encourage the husbanding of disagreeables. Its fundamental declaration of the allness of God, good, authorizes no gospel save that of optimism, and its strong, glad word to humanity to-day is this, "Joy to the world; the Lord is come."

St. Paul evidently had this revelation of hope and good cheer in mind when he counseled the Philippians—his "dearly beloved"—to "stand fast in the Lord," for he immediately goes on to say that they should "rejoice in the Lord alway," and then, lest some might forget the technique of this high and happy living, he hedges their thought about with a safe and sure protection against every depressing and disquieting foe,—"Whatsoever things are true, whatsoever things are honest, whatsoever things are just, whatsoever things are pure, whatsoever things are lovely, whatsoever things are of good report; if there be any virtue, and if there be any praise, think on these things."

To pass from the depths of mortal sense which breed both pain and pessimism to this level of spiritual supremacy demands full many a vigorous uphill stride, but St. Paul speaks of the attainment as though it were the most natural sequence of a Christian life; and he knew withal of what he spoke, for he added modestly, "These things which ye have both . . . heard and seen in me, do." This was his supreme vantage, as it will be ours if we live a kindred life of high thought, holy purpose, and consistent endeavor.

The beneficence of this fine, joyous living is wondrously expansive. It is, first of all, the basis of our own health and happiness. The faith-for-us of others may help to lift us from many a slough, but we cannot forget that the spiritual synonym for health is holiness, and therefore we are to expect a larger and fuller overcoming for ourselves, as our thought grows more unselfish and pure. It is ours also to remember rejoicingly that the true life is a beacon-light to unnumbered wayfarers all about us, who are finding courage and comfort in the manly cheer, the loving word, and the honest deed, those fruits of the Spirit which should ever laden our boughs.

How entirely in keeping and splendidly worth while it is for every exponent of this great Cause to live day by day, in all the years, a yet nobler and more ennobling life! Thus shall we express true thankfulness to God for the demonstrable truth of Christian Science, thus aid effectively in advancing the interests of this sacred enterprise, and thus contribute most surely to the satisfaction and joy of her through whom the gospel of healing has been brought to this age.

John B. Willis.

A Correction.

In part of the issue of December 23, page 265, first column, eighteenth line from the bottom, the phrasing is incorrect and should read, "thought is lifted to the appearing of Immanuel, the Christ-truth, spiritually understood, and we begin to realize how sadly," etc.

Letters to our Leader.

Lisbon, N. H., November 13, 1905.

My Dear Mrs. Eddy:—It may be of interest to you to learn that at the Sixth Annual Conference of the Vermont Chapter of the Daughters of the American Revolution, held with the Marquis de Lafayette Chapter of Montpelier, Vt., October 3, it was voted to place a memorial tablet to the memory of those Revolutionary heroes, Seth Warner and your ancestor Remember Baker, on the Isle La Motte in Lake Champlain. It seems that a committee had previously been appointed to investigate the matter, and to learn what they could about the necessary details of such a memorial. This committee made a favorable report and it was voted to erect the tablet during the coming year.

Most lovingly yours,

C. C. Moore.

Boston, Mass., December 19, 1905.

Beloved Leader and Teacher:—The New Year approaches. It has in store, I am sure, many blessings for you and for all God's children. I am, I trust, growing in gratitude for all that has come to me through your teaching. Before, I had only an unknown God, a far-away heaven, a distant Christ, and practically no Bible. The text-book, together with your countless private helps in times of trouble, have revealed to me in great measure, comparatively, the God of Love, the Principle of being; have opened out tangible visions of the heaven "at hand;" taught me that the healing and saving Christ is with us "alway, even unto the end," and made the Bible, to me, a book of light, and Life, and Love.

What has thus been done for me, has been done for many thousands, and the numbers are daily increasing. Why, then, should not your heart be comforted? Why should you not "rejoice with joy unspeakable and full of glory"? This is your *right divine*.

Last evening I lectured in Phillips Brooks Hall at Harvard. It was the first lecture under the By-law. The attendance was gratifying to the young men interested, and I sincerely trust the occasion will accomplish its appointed good. It seems to me most significant. I have in mind some interesting incidents of my trip which is just closing, but time forbids their recital now. Some of them I know will gratify you.

With one more lecture in Illinois my year closes, and then "homeward bound," expecting to reach there Christmas eve. With love and gratitude,

Your student,

S. J. Hanna.

Denver, Col., December 7, 1905.

Rev. Mary Baker Eddy,

Pleasant View, Concord, N. H.

Beloved Leader:—We are to-day sending to Mr. Chase, Treasurer, five thousand dollars, our Thanksgiving offering to The Mother Church Building Fund. We esteem this a blessed privilege, and are striving to obey the loving admonition in your letter to the Denver Church, as published in "Miscellaneous Writings," to "Exercise more faith in God and His spiritual means and methods, than in man and his material ways and means, of establishing the Cause of Christian Science." Our church is united in the effort to increase its contributions to The Mother Church Building Fund, until there is no longer an opportunity to give.

Gratefully and lovingly,

First Church of Christ, Scientist,
E. J. Yetter,
Ella Peck Sweet,
Clara Schrader Streeter,
Lawrence Donald,
John C. Ryan,
Joy E. R. Zint,
Martha O. McConaughy.

New York, December 16, 1905.

To Mrs. Mary Baker Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—No words can adequately express the deep sense of sincere gratitude with which my heart is overflowing for your wonderful message, entitled "Christmas as in Christian Science," given to Christendom through the columns of the *New York World* of December 10, 1905.

I am earnestly striving to so assimilate its great truths as to "bring forth fruits" "by signs following." I was enabled to indeed praise God by witnessing a case of instantaneous physical healing through an enlightened sense of the words, "An eternal Christmas would make matter an alien save as phenomenon, and matter would reverentially withdraw itself before Mind." I thank God that through your teachings and life I am enabled to perceive even a portion of a moiety of the meaning of your marvelous messages which come to bless tired humanity. I owe *all* to the learning to know God aright, as revealed in Christian Science through our text-book, "Science and Health with Key to the Scriptures."

Humbly and lovingly your student's student,
IDA GIBSON WHITNEY.

Hackensack, N. J., December 7, 1905.

To Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Our Dear Leader:—With loving hearts the members of First Church of Christ, Scientist, Hackensack, New Jersey, wish to send to you a message of gratitude and loyalty. After holding meetings as an association, for nine months of rapid growth, our church was organized December 7, 1904. Healing has been the proof of our growth throughout, and the ability of those just coming to a knowledge of the truth to demonstrate its healing power has been particularly noticeable. There is one great song of gratitude for all the blessings received, and the true understanding of God gained in Science and Health. The interest the people of this place have shown is the result of the healing, and has brought our present membership up to twenty-six. The Sunday School, which started with two, now numbers twenty.

In a rising consciousness of love and unity in our branch, we recognize our relation to The Mother Church, and with one voice would assure you of the gladness it gives us to have this opportunity of aiding somewhat in this work of building an addition to its edifice. Joyously the members and friends of our church and Sunday school send to-day to Mr. Chase a check for eighty dollars, their second contribution to The Mother Church Building Fund; and, on October 4, 1905, seeing the need of greater activity, and lovingly responding thereto, the members voted to send thereafter the total collections of the first Sunday of each month. We know we can prove our gratitude to you only by our faithfulness to the spiritual idea, as taught in our text-book, and, conscious of this, we will, in honesty and humility, press on more earnestly.

Lovingly and loyally,
First Church of Christ, Scientist, Hackensack, N. J.
HELEN T. ROBINSON.
DOROTHY B. KNUDSEN.
M. ELIZABETH HORTON.
JOHN MCLEAN.
W. D. KNUDSEN.

Jamestown, N. Y.

Dearest Leader:—Here is a Merry Christmas for your "Little Church." I have also given four hundred dollars besides this, and all gained by healing the sick and reforming the sinner. Lovingly.

MARTIN F. JACKSON.

Testimonies of Healing.

My grandfather Warren was a surgeon of the Indian wars of 1800 to 1815, and his father was a surgeon and officer in the Revolution. Two of my father's brothers were surgeons, and several cousins on either side of my family were physicians, while my father was a druggist. My mother and Alexander Campbell, founder of the Christian Church, were brothers' children, my mother being reared and educated in his home at Bethany, Va. Until three years ago I was a member of the Christian church, having joined at the age of twelve. An unbroken line of two hundred and fifty years of teachers and preachers is the record of my mother's family. The foregoing is mentioned for the purpose of showing that I was well-grounded in *materia medica* and scholastic theology.

When a child I had scarlet fever and dropsy, which left me physically impaired. The best medical attention was sought, and when told that a change of climate would benefit me, my father gave up a profitable business, at Liberty, Mo., and moved to Golden, Col., and afterward to St. Louis,—always in search of health for me. Excessive physical exertion, or the eating of certain foods, would produce convulsions. The disease was considered organic, and in the whole system of *materia medica* there was no cure. I was most susceptible to climatic conditions, the slightest atmospheric change causing a cold. All this and more is in certain hospital records, and well known to many prominent citizens of Missouri, Denver, Chicago, and Philadelphia.

I began the study of Christian Science at Scranton, Pa., August 22, 1902, and am now a perfectly healed woman. I am a pianist by profession, and since a child was troubled with a bursa or weeping sinew on the left wrist. Pain was frequent through the whole arm, and as a result of this injury my musical work was seriously interfered with. My ambition to become a public performer was shattered thereby, for I suffered much after hard practice. Now I am able to work at the piano for four hours a day without inconvenience, my left arm being as strong as the right. This ailment was treated by surgeons of Chicago and St. Louis without relief, and I was told by them that an operation might stiffen the wrist. Christian Science removed all evidence of this defect in four weeks. Insomnia all my life was another objectionable companion from which I suffered much. I worried considerably because I seldom got enough sleep—frequently being afraid to sleep. Now I lie down to rest knowing that the harmony of my being "is no more to be invaded than the rhythm of the universe" ("Retrospection and Introspection" by Mrs. Eddy, p. 84). I have also taken off glasses which I had worn for eighteen years.

The realization of immunity from disease is the natural result of my changed thought and understanding of life,—the knowing that Christian Science is the science of right-thinking and that it is applicable to each day's work. Health, happiness, and a clearer insight into all things have been received for a few paltry dollars, not worthy to be mentioned in connection with the great good derived from Christian Science. I had always accepted in full the teachings of Jesus, believing (although I could not explain why) that my prayers would be answered, and I had, before coming into Christian Science, wonderful answers to prayer. Then it was blind faith, but now I know that divine law governs all and never fails.

I always loved the church of my family and of my childhood—still love it—but language cannot begin to express the happiness which is mine since beginning the study of Christian Science. I was taught from childhood the teachings of the New Testament, and upon being introduced to Christian Science, immediately wished to know whether it coincided with my understanding of the Bible, since I desired to be healed by nothing but the truth. I sought a

Digitized by Google

practitioner, and read "Science and Health with Key to the Scriptures" by Mrs. Eddy,—the entire book in two weeks,—then the New Testament in four weeks; and the more I studied the one with the other, the more was a beautiful sense of eternal life unfolded to me. Certain teachings of Jesus and the apostles which had puzzled me before becoming acquainted with Christian Science, immediately thereafter became clear.

Can any one wonder that I love Mrs. Eddy and am exceedingly grateful to her for being the messenger to this age of this remarkable explanation of God's Word? I pray to be made sufficiently grateful, and especially do I return thanks to divine Principle, our Father in heaven, for giving us this insight into all truth.

MRS. LIZZIE LEE WARREN-LUKENBILL, Atlanta, Ga.

About eight years ago, while residing for a time in New York City, I found myself in a most distressing condition, owing to many perplexing cares and the loss of a dear relative. Having been considered delicate from childhood, when so many troubles came I seemed unable to bear them, and I began sinking rapidly. My family physician at last told me that my case was hopeless. He did not mean to distress me unduly, but as he wished me to leave New York, he felt it his duty to do this. I had had severe throat trouble for many years, and for ten years had been almost continually under the care of throat specialists and physicians of the best standing, in the North and South. Now I was told that my lungs were seriously affected. I had been expectorating blood for many months, and had become so emaciated that I did not look like myself at all. My stomach could stand no more medicine, and I could eat only the lightest food with any degree of comfort. My physician advised me to see several specialists, and then to have a final talk with him about my case. This I did, but none could give me any comfort, and all agreed that I must leave for Florida at once, as they did not think I could live two months longer in New York.

After having another talk with my regular physician, he told me that the most he could hope for me was that I might, with great care, live a year in a mild climate. He felt that the steady loss of flesh indicated a hopeless condition. After this, while presenting an outward appearance of cheerfulness to my family, inwardly I felt very much depressed, and when a slight hemorrhage came, while trying to make preparation for my journey, I gave up, thinking my physician had been right in pronouncing mine a hopeless case.

Just at this time a friend, hearing of my serious condition, asked me to try Christian Science treatment. I knew nothing whatever about this mode of treatment, but in my despair turned to it as a last resort. It took several hours, with the assistance of a maid, to get myself ready to go with my friend for treatment. I would lie down to rest as each garment was put on. I was carried to a practitioner, and sank into a chair in an almost fainting condition. As I was too weak to talk, she immediately proceeded to give me a treatment, and then said nothing more, except that I might come the next day at the same hour.

When I reached home I was ravenously hungry. I went into the dining-room for the first time in weeks, ate heartily of the heaviest kind of food, and this was the end of my trouble. After luncheon I went out alone and spent the entire afternoon walking about in the fresh air and sunshine. I returned for my second treatment the next morning without assistance. After reaching the street, I felt as if I wanted to run and dance like a happy child. I realized that I was perfectly healed and my joy knew no bounds. I continued the treatment for a few days, but at the end of a week I knew there was no necessity for further help. I had gained five pounds, and was looking so well that I was becoming a source of astonishment to my friends. I remained in New York City the entire winter, going out in all kinds of weather with a sense of freedom and joy that only those who have had a similar experience can appreciate.

Eight years have passed since I took my first treatment in Christian Science, and I have rejoiced in excellent health, never having any use for drugs for my two children or myself. My delight is to bring joy and light into darkened homes just as they were brought to mine in my hour of need.

MRS. ELLA WEILL, Wilmington, N. C.

Five years ago my mother was taken suddenly very ill and we sent for our family physician. After taking his medicines four weeks with no improvement, she decided to try Christian Science, and I wrote to a practitioner who had helped us years before, although at that time we regarded Science as nothing more than a remedy for physical ills. After three weeks' absent treatment, as she seemed no better, we had a practitioner come to our home. She remained with us three days. At this time my mother was in bed, unable to move without help, and could only lie in one position, as any other caused extreme suffering. The troubles were gravel, constipation, and tumor, the first-named caused her at times to scream with pain. The practitioner worked faithfully for her nearly two months, but with very little improvement, and then we decided that it would be best to go back to *materia medica*. A doctor was called, and we followed his instructions faithfully for four months, when he pronounced her case hopeless and refused to call again. We then tried a third physician three weeks; still she grew worse, and those who saw her thought her time here was very short. There were very large bed-sores on her back, and she could straighten neither her limbs nor her fingers. One of the doctors had said the fingers would never straighten. Such was her condition when she said, "We will go back to Christian Science, and stay by it." My sister then wrote to a practitioner, asking if she would take the case. She replied that she would if we were ready to drop all material remedies, and we were. The first improvement we noticed, was that mother rested better at night. In six weeks she began to sit up, and at the end of five months she was free from suffering and could take a few steps. We began to work out our own salvation, with the Bible and Science and Health, and for the past two and a half years my mother's health has been good. She does all the family housework except the washing, and I sometimes doubt if she stepped more sprightly at sixteen than she now does at seventy-four. I thank God, and our dear Leader, Mrs. Eddy, for Christian Science, the understanding of which enables us to do our own work.

HOMER W. CLARK, Remus, Mich.

For three years I was afflicted with what the doctors had diagnosed as floating kidney, resulting, the attending physician said, in tuberculosis of the bowels. I had seven of the best physicians of the city at different times, and two specialists pronounced my case incurable without an operation, and said that recovery would be doubtful even if the operation were successful. As the condition of my heart would not allow my taking an anesthetic, the operation was out of the question, and the physicians said that I might die at any moment. At length I was taking heart stimulants three times a day, and frequently a physician was hastily summoned during the night for sudden attacks of the heart. I was afraid to sleep, for sleep seemed to be merely a trance-like condition in which I was semi-conscious but could not move. I felt that I should go insane through fear.

I was finally induced to try Christian Science, and was completely healed in two weeks' treatment. I at once began taking care of my own rooms, whereas I had not been able before even to lift a chair. During the treatment, glasses which I had worn for nine years, on account of astigmatism, were laid off, and I have never worn them since. My healing occurred in October, 1901, and these conditions have never returned.

MARY DAVIS JOINER, Indianapolis, Ind.

Digitized by Google

About two years ago I was restored from a condition of total invalidism to perfect health through Christian Science. I had been an intense sufferer for seven months with rheumatism in its most violent forms, inflammatory and muscular, including sciatica. I had been under medical treatment all the time and had tried all material systems and cures of which I knew, including electricity, massage, and mineral baths, with the result that I was no better physically and I had added to my list of afflictions nervous prostration, which rapidly grew worse until I seemed to be losing my mind. *Materia medica* could offer me no hope, and I had nothing to look forward to but insanity or death, and probably both in their turn. Now I had known about Christian Science nearly eleven years,—in fact a copy of Science and Health had been given to me in 1896, but I had never read it,—and I was not unfriendly towards this Science; on the contrary, I had on several occasions recommended it to friends of mine who needed help, and had seen its good results. During the seven months that I was ill, Christian Science treatment was often suggested to me by relatives and friends, but I did not want to hear about it, and it was not until I had no hope left that I finally consented to try it. I was healed of the nervous prostration in two treatments and in less than ten days I was a well woman. All the mental and physical suffering which I had had for months left me and I was free. My healing occurred in the month of September, 1903, and in June, 1904, I went to a medical examiner of one of the large life insurance companies, and he, knowing the facts of my past illness, after having made three different examinations, several days intervening, recommended me to the company as a first-class risk for a ten-thousand-dollar policy and I received my policy without further question. This ought to be satisfactory evidence of a complete healing, to those who look at it from a standpoint of *materia medica*.

Christian Science has brought more to me than mere physical healing. It has healed me of sin, and brought harmony into all of my relations in life where formerly there was discord. My heart is full of love and gratitude to God, and to Mrs. Eddy for the many blessings that have come to me through the revelation of Christian Science. My desire is to know more of this truth and to live it.

Miss Frank Gray Shaver, Chicago, Ill.

As the son of a physician, a graduate in pharmacy, and an ex-druggist, I had a perfect contempt for what I thought Christian Science to be. About six and a half years ago, however, having exhausted all material means at my command,—*materia medica*, electricity, gymnastics, cycling, and so on,—and being in a hopeless state, the study of Christian Science was taken up. I had been a sufferer from catarrh and sore throat for over thirty years, and in the last five were added dyspepsia, sick-headaches, and bronchitis, as well as kidney and bladder trouble, and a loss in flesh of sixty pounds. I was completely healed, and regained health, strength, and flesh through the spiritual understanding of Christian Science; the result of about six weeks' study. This good and perfect gift came to me through the careful and prayerful study of Christian Science, as revealed to the world to-day through its revered Discoverer and Founder, the Rev. Mary Baker Eddy, and given to us in her book "Science and Health with Key to the Scriptures." The promise of Christ Jesus, "the truth shall make you free," was fulfilled, and the past six years of health and harmony have been spent in striving to "hold fast that which is good."

While most grateful for the physical healing, my gratitude for the mental and spiritual regeneration is beyond expression. When I learned that Jesus' mission of healing sickness as well as sin did not end with his short stay upon earth, but is practical in all ages, my joy was unbounded. Having spent thousands in the old way, it seemed wonderful to be healed at such small cost as the price of the "little book" and a few weeks' study. Every thought of prejudice immediately vanished before the proofs that Christian Science is indeed the elucidation and practical application of Jesus' teachings, which are demonstrable truth, "The same yesterday, and to-day, and forever."

Charles N. Churchill, Memphis, Tenn.

I have been a resident of Syracuse, N. Y., for the past nine years, and have been a trained nurse for the past six years. I suffered with constipation and stomach trouble ever since I can remember and was treated by four of the best physicians in this city, one of them a specialist, with no lasting benefits. I was operated upon for hemorrhoids caused by the constipation, but was not relieved of the latter, although the surgeon, who was the specialist above referred to, said I would be. Christian Science was brought to my attention about eighteen months ago and I decided to try it about six months later. I did so and was healed of both the stomach trouble and constipation in one treatment.

During the past year I have had perfect health, which has added to my general usefulness, and for all of this I feel grateful; but I feel more grateful for knowing the truth of God, which Jesus came to teach us, and which Mrs. Eddy, through Christian Science, is again teaching us.

Miss Jessie B. Calkins, Syracuse, N. Y.

I wish to express my gratitude for what Christian Science has done for me. When I turned to it, I had been an invalid for ten years—sick in mind and body—a neurasthenic. The first treatment I took was more particularly for tonsilitis,—so pronounced by a physician who gave me medicine for it, but the next morning I was so much worse that I decided to try Christian Science, as I had heard of wonderful healing through it. In two treatments I was not only cured of tonsilitis but also of a dreadful stomach trouble which had been so bad that for years I had denied myself everything but plain food and had even then at times suffered tortures. As I have said, my whole body was sick, and nothing had been spared in ten years of doctoring, travel, and rest-cures, in hopes of relief, but in two days Christian Science healed me. Soon after I took up the study and became a happy, normal person, and felt that life was indeed good.

That was four years ago. Since then I have grown to see that this great truth is the Saviour of mankind. Whenever a cry goes up in the night to the Father, it is heard, and all shall see this light which leads unto the perfect day.—Belle Goodyear Hodges, Chicago, Ill.

It is with great pleasure that I make known to suffering humanity what Christian Science has done for me. Three years ago I had bronchitis, was nervous, unable to sleep, and coughed almost constantly. My physician advised me to go to Colorado, and while there I grew worse. After consulting three physicians, and trying their remedies with no relief, I returned home in a much worse condition than when I left. Again my physician was sent for, and he told my family that it was a hopeless case, that I would never be well again, but if possible to keep the sad fact from me. Here Christian Science—the good Samaritan—came to my rescue. There being a practitioner in the house she was called at once. My plasters and medicine were immediately laid aside, and that night I slept without an opiate. The following Wednesday I attended the experience meeting with my practitioner, and did not cough during the service, this being my first evening from home since my illness, as the physician had pronounced night air injurious. Science and Health was ordered at once. I thank our dear Leader

Digitized by Google

for its beautiful teachings. She has made the Bible so plain, that I can get nearer to God, and feel the presence of divine Love more than ever before in my life. I only wish I could go out into the world, and tell the glad tidings to every one, so that all might come and be healed.

Since this glorious restoration to health I have been able, by the help of Truth and Love, to make many demonstrations, not only for myself but for others, by reading "Science and Health with Key to the Scriptures." I have never called in a practitioner since my first wonderful healing. For all of these blessings I am truly thankful to God, and too much gratitude cannot be given our beloved Leader, whom divine Love has endowed with such spiritual power.

MRS. G. BOWMAN WILMOT, Merigold, Miss.

At seven years of age I had an attack of scarlet fever, which left me a weak and sickly child and made me sensitive to various diseases, including diphtheria and the grip. Eight years later a severe stomach trouble developed. In diagnosing the case, eight local physicians differed slightly from a Milwaukee specialist, who pronounced the trouble ulcers of the stomach, a disease which I believed to be hereditary, and with which my father passed on. In 1892 I had what physicians called spinal meningitis in its worst form. It left me with constant pain in the back of my neck, and for nine years and eleven months I was never free from pain, much of the time suffering intensely. At times my neck, right shoulder, and arm stiffened, opiates alone giving me relief. In 1896 I had a stroke of paralysis. About this time the Koch cure was suggested, and I tried it for six weeks without being benefited. Five years later I had several light strokes of paralysis, which put me in a hopeless condition. I resorted to osteopathy, and had twenty-six months' treatment with only temporary relief. On September 8, 1902, I turned to Christian Science for relief from physical agony. At that time I was under strict diet rules, but after the first treatment I ate anything that I desired, without distress, and soon walked long distances without inconvenience. The third day my practitioner told me that further treatment was unnecessary, but I was unwilling to have the treatments discontinued, as I feared a return of the diseases. At the end of the week I was convinced that my healing was complete, and I have remained in perfect health ever since.

My gratitude to God can be measured only by my faithfulness in serving Him, and I am very, very grateful to our beloved Leader, Mrs. Eddy, for her pure and loving life that has enabled her to bring this blessed healing truth to the world.—DORA E. CRAMER, Wausau, Wis.

For fifteen years I was a constant sufferer, until I was almost a mental, physical, and financial wreck. I had employed as many as fourteen different physicians, but all in vain, and finally my health failed so that I had to sacrifice a profitable business. I underwent a surgical operation, and for five months I was not able to pursue the practice of my profession, dentistry, although I did finally get somewhat better. After traveling for some time in the mountains, I returned to my practice, when again the old trouble,—piles, with neuralgia of the stomach, constipation, dyspepsia, and nervousness,—caused me to give up work, and with my family I went to the mountains for several months.

Three physicians told me I could not live long if I did not soon get relief, and advised a sea voyage as being my only hope, since medicine could do nothing for the neuralgia of the stomach; so I spent a winter in Central America, and while on the water I was more comfortable. On my return, I was advised by my numerous physicians to reopen an office, and did so, but after less than two weeks of work I collapsed. I was nearly helpless for some time, but the determination to care for my family impelled me to struggle on, although there was no time that I was free from pain, and I could not work more than one hour a day.

About this time, June, 1902, I removed with my family to Oakland, Cal., and I here met with Christian Science. We were told that it would heal all manner of disease. I said I did not believe it could do anything for me, but if it could, I wanted it. My wife was also a sufferer, and we called a practitioner, who was very sympathetic and seemed to understand just what we were passing through. We each took treatment. I was suffering extremely at this time with piles, but all pain ceased within an hour, and in three days' time the constipation was healed and all trace of the piles had disappeared. The night after our first treatment we retired early, and for the first time in years I slept all night, and awoke the next morning at eight o'clock, as it were in a new world. Neither of us had any pain, and for a time I was afraid to move for fear the pain would return; but no, it was gone, and I was free.

I gradually grew stronger under Christian Science treatment, which was continued for three or four months, until all the old physical troubles, together with a bad temper, profanity, and the liquor habit, were entirely removed. The desire for tobacco also left me, so that I would forget to smoke, although I had indulged the habit for twenty-seven years. The desire left me against my will. I can now work as many hours each day as is necessary for the needs of my patients.

At one time my suffering was so dreadful that I purposed taking my life as a means of relief, and the doctor afterwards told me that he gave me enough opiates to kill any one. He frankly told me that I could not live much longer in such pain, so he was willing, and did, press the opiate to the limit.

The memory of those hours haunts me still; but now I am healthy, happy, and prosperous, and I owe it all to Christian Science,—all that I have and am. My wife has been healed; our home is a Christian one; love and gratitude are our watchwords, and I cannot express my thankfulness to God for His loving care and for sending His dear Son to redeem mankind from sin, sickness, and death. To our dear Leader, Mrs. Eddy, the Discoverer and Founder of Christian Science, I owe a life of endless gratitude for her faithfulness in giving to the world the Christ healing as our Master taught and demonstrated it.

DR. E. DAVIS, Oakland, Cal.

I have received substantial benefit of late through reading the testimonies in our periodicals, and the expressions of deep gratitude by those who have been marvelously healed as I have been. I was a helpless, hopeless invalid for five years, suffering from motor paralysis, and at all times during this period was desperately sick. The verdict of nineteen different physicians was that nothing could be done to cure me. Everything suggested was tried, however, regardless of expense. There were three operations awaiting the time when I should gain sufficient strength to have them performed. That time never came. When Christian Science was first recommended to me I greeted it with joy, and accepted it at once. I was ten months under treatment: in the first three, absent treatment was given. Although I had been unable to walk for five years, I was healed by the truth. It is nearly eleven years since this occurred, and during this time I have been striving to live my gratitude by following obediently in the divine way, for there are no words sufficiently expressive to convey it to others.

Our revered Leader, Mrs. Eddy, has revealed the better hope whereby "we draw nigh unto God."

FLORENCE BELDEN FITZGERALD, New York, N. Y.

From our Exchanges.

Appreciation of that which is good is an effective way of making the world better and happier. To broaden the mind, to strengthen it in high motives and honorable ambitions, it is essential that the censorious disposition be thoroughly curbed, and this can be done only by the cultivation of an honest, sincere appreciation of the good, however slight, that is discoverable in other lives. This may be done, too, without overlooking that in them which is faulty and injurious and which merits disapproval. If the mind is kept busy with the innumerable good things in the world —in nature and in humanity—it will enrich itself and it will help to create a current of influence that will lift the family, the neighborhood, the community into a sweeter, saner, healthier, happier state and thus exert a saving influence upon the world. Jesus discovered and acknowledged the good in those with whom he associated. He saw the possibilities of goodness in every one. He encouraged its development. He came not to condemn the world but to save it by evoking the good in every soul.

The Universalist Leader.

When the word of truth has been spoken it is no longer in the control of man. It cannot be recalled by the speaker himself and it cannot be discerned and removed by those who would act as inquisitors. It cannot be recanted by those who have been enlightened by it even if their lips are compelled to disown it. Many witnesses have been cut off from life and personal activity, but their word of truth has been uttered and remains as a permanent element in the community. Men have heard it and the secret is transmitted. The truth has found its place in the free and independent souls of men and will develop itself and produce after its kind.—*The Watchman.*

When the disciples first went forth to preach, the burden of their preaching was, "Be like Christ," "Put on Christ," "Have in you the grace of Christ," "the mind of Christ." Unless they had supposed their listeners capable of being like Jesus, they would not have exhorted them to imitate the virtues of the Master. Unless they had thought Jesus not different in kind from themselves they would not have said, as did John, "Now are we the sons of God."

REV. THOMAS VAN NESS.
The Boston Transcript

Our Christianity will be judged by its effect on life. Thoughtful men have always judged it so, and more and more the world is coming to apply the same test. Those who have most bitterly condemned the Church do not hesitate to call the Gospel divine. But what is the Church making of it? is the question they ask and we must answer. Is our modern Christianity making men able to use the great moral opportunities, to face the great moral temptations of the day? Is it binding them together in the common cause of righteousness?—*The Churchman.*

If one is really devotedly, persistently striving to be like the Lord Jesus, and to properly represent him, it is hardly necessary to proclaim from the house-tops the quality of character possessed or the degree of spirituality attained. It would be almost as consistent for one to take a bell and parade the streets notifying the people that it is daylight, when the sun is shining in its glory.

Pacific Christian Advocate.

It is for us to show that liberalism in religion, by which I mean open-mindedness to receive new revelations of divine truth, is no bar to the highest spirituality, the most resolute faith, the humblest and heartiest self-devotion.

REV. W. R. INGE.
The Liberal Churchman.

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 505 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to The Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of The Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to The Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number, or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By the Hon. WILLIAM G. EWING of Chicago, Ill.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

250 Huntington Ave., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,
Associate Editors.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.

Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month.

The date of expiration may be found on the address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

After attempts covering a period of ten years the consent of the Government for the building of a lighthouse and fog signal on the dreaded Diamond Shoals off Cape Hatteras was secured last week, when Secretary Metcalf signed the plans and specifications of the civil and consulting engineers, finally granting the bill to Captain Albert E. Eells and his associates. The act, passed two years ago and amended last year, specifies that the engineers shall build the light station at their own cost, maintain the structure and operate the light in accordance with the regulations of the Lighthouse Board for one year, also at their own cost, after which it shall be placed under the control of the Lighthouse Board, who shall operate it for four years more at the cost of the United States, when Eells and his associates shall be authorized to demand from the United States the sum of $750,000, provided the structure is in a substantial and satisfactory condition. The promoters of the project are absolutely confident of its success. The process by which the new lighthouse will be built is new. Its foundation will be a massive steel caisson in the form of the lower portion of a cone with a cylindrical base. This caisson will be built on shore and towed to its location off the shoal. Upon this foundation will be erected the lighthouse proper, with plate steel cylinder, with a slight batter from base to top, supporting a light of the first order at one hundred and fifty feet above tide level. The caisson will be one hundred and eight feet in diameter at the bottom, eighty feet high, and fifty feet in diameter at the top. This foundation, on reaching its location, will be scuttled by pumping water into the interior compartments. The work is of greater magnitude than any that has ever been undertaken in the construction of lighthouses.

The representatives of sixty-eight institutions of learning met in New York last week to take concerted action that should result in eliminating the objectionable features from football as now played. The conference perfected a permanent organization and appointed a rules committee of seven which will communicate with the representatives of Yale, Princeton, Harvard, Pennsylvania, Cornell, Annapolis, and Chicago University, constituting the existing committee on rules, asking for an amalgamation with that body. None of the above mentioned universities was represented at the conference. If they refuse to join with the committee appointed the latter will act independently and formulate rules for their own guidance.

In the report of the Isthmian Canal Commission, just made public, is the declaration that the Panama Canal will be greatly and needlessly increased in cost, probably by twenty-five per cent, unless the procuring of unskilled labor is left entirely unhampered by Chinese exclusion, contract labor, and other laws passed for the protection of labor within the United States.

Emerson Hall, the new home of philosophical study at Harvard, was used for the first time last week on the occasion of the annual convention of the American Philosophical Association and the American Psychological Association. The new building is named for Ralph Waldo Emerson.

The members of local Union No. 3, United Mine Workers of America, of Hazelton, Pa., have decided to present to Miss Alice Roosevelt as a wedding gift a carload of the best coal that can be found in the anthracite region in appreciation of her father's services in ending the great strike of 1902.

It is announced that the late Mr. Yerkes has bequeathed to New York City his mansion in Fifth Avenue, together with the great art galleries in connection with it, valued at four million dollars, and an endowment of one million dollars for its maintenance.

The Massachusetts Institute of Technology has issued its annual bulletin and catalogue. It shows a total student registration of 1,400 names.

Foreign.

Captain William Mogg, master of the whaler Bonanza, who arrived in Seattle last week, says: "It will probably be from twelve to fifteen months before the value of the observations taken by Captain Amundsen at the North Magnetic Pole is made known to the scientific world. For two years Captain Amundsen registered every movement of the needle, finding that it continually moved back and forward, practically in a circle. The observations were taken with self-registering instruments, and no member of the expedition is able to give the results. This data will be submitted to the lords of the admiralty, London.

Sir Edwin Cornwall, chairman of the London County Council, has issued to the press a proposal for an international congress of representatives of capitals having over five hundred thousand population, to meet annually for the discussion of municipal methods. Sir Edwin says he is encouraged to make the suggestion by the good results following the recent exchange of amenities between the London County Council and the Paris Municipal Council.

That part of the former Russian railway in Manchuria which the Japanese have taken over, has been declared open to passenger and freight traffic to points in Southern Manchuria. While the published notice of the reopening of the road does not specify as to nationalities, the privilege is practically restricted to Japanese and Chinese.

Industrial and Commercial.

It is asserted from Pittsburg that the long-talked-of merger of the Republic Iron and Steel Company, Tennessee Coal, Iron, and Railroad Company, the Sloss-Sheffield Iron Company, and La Belle Iron Works into one corporation has finally been accomplished. The name of the new combine has not been adopted, but it is considered probable that the Republic Iron and Steel Company's charter will cover the act of incorporation and the other companies will become underlying, the same as the subsidiary companies of the United States Steel Corporation. The combined capital of the companies already merged is $150,000,000. It is the intention of the new combine to enter into competition with the United States Steel Corporation on a large scale in the manufacture of rails. The company will manufacture pig iron, billets, bars, wrought iron, muck bar, skelp, wire products, rails, structural shapes, sheets, merchant bars, hoops, bands, and eventually cast-iron pipe. No tubes or tin plates or steel plates are included in the list of products the combined concerns are prepared to manufacture.

From the official programme of the annual convention of the National Board of Trade it is evident that the time will be devoted largely to discussion of ship subsidies and Government control of railroad rates. The National Board of Trade is a central body composed of representatives from commercial organizations throughout the country, so that whatever action it may take is credited with more than local significance. The convention begins in Washington on January 16.

Several Panaman and foreign capitalists are endeavoring to obtain from the Government of Panama a concession to build a railroad across the Isthmus, the probable route of which would be from Chiriqui to Bocas del Toro. If the consent of the United States Government can be obtained the Government of Panama will enter into negotiations with these capitalists, but not otherwise, owing to certain stipulations in the Canal Treaty.

K. Otsuki, a Japanese silk culturist and manufacturer, is to establish a silk farm a few miles from Beaumont, Texas, having purchased land which he is stocking with mulberry trees, on which to feed fifty thousand silk worms. It is his intention later to erect a silk cloth manufacturing plant in Beaumont. The silk farmers and weavers are to be native Japanese.

The Lake Superior Corporation of Sault Ste. Marie will construct at once an open hearth steel plant at the Canadian Soo. The plant will cost upwards of $200,000 and will permit the company to use its Helen mine and other non-bessemer ores.

The Government report just issued places the total freight tonnage of the Soo Canal for the year at 44,270,680 tons, an increase over last year of forty per cent.

General.

By a German invention sugar is used to prevent decomposition of wood. The new method of conservation consists in treating the wood with a solution of sugar. For this purpose the pieces of wood are placed in a cage that may be plunged into a boiler. The latter is then closed and filled with a solution of beet sugar. The liquid penetrates into the pores of the wood and combines intimately with the woody substance, although microscopic examination does not show the presence of a single crystal of sugar. The wood is then withdrawn from the boiler and dried in a furnace heated to a temperature depending on the structure of the wood subjected to treatment. The wood thus treated is not porous; it can be worked without shrinking or cracking and seems to be exempt from the attacks of fungi.

A writer in the *London Chronicle* says that the beautiful Swiss scenery is being seriously damaged by various engineering enterprises that scar the mountain walls, plant unsightly contrivances everywhere, and deface the peaks.

It is estimated that four counties of Vermont this year contributed to the Christmas trade 156,000 little evergreen trees, filling one hundred and four cars.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

[WE are glad to give a prominent place to the following important article, also the letter to Mrs. Eddy which accompanied it. The correct interpretation of the Scriptures is of the utmost moment in individual study as well as in our public services, and we feel sure that our readers will derive much help from Professor Hering's thoughtful analysis of the three verses to which he has had special occasion to devote careful study.—EDITOR.]

I John, 3: 1, 2, 3.

PROF. HERMANN S. HERING.

IT may interest the First Readers of our Churches and Societies, as well as other students, to examine the renditions of 1 John, 3 : 1, 2, 3, given by various writers and translators.

The capitalization given this passage by our Leader on page 460, Vol. III., of the *Sentinel* is significant:—

"Behold, what manner of love the Father hath bestowed upon us, that we should be called the sons of God: therefore the world knoweth us not, because it knew him not. Beloved, now are we the sons of God, and it doth not yet appear what we shall be: but we know that, when He shall appear, we shall be like him; for we shall see him as He is. And every man that hath this hope in him purifieth himself, even as He is pure."

The Revised Version has it:—

"Behold what manner of love the Father hath bestowed upon us, that we should be called children of God: and such we are. For this cause the world knoweth us not, because it knew him not. Beloved, now are we children of God, and it is not yet made manifest what we shall be. We know that, if he shall be manifested, we shall be like him; for we shall see him even as he is. And every one that hath this hope set on him purifieth himself, even as he is pure."

Rotherham gives it in his translation:—

"See! what manner of love the Father has given to us, that children of God we should be called, and we are! Wherefore, the world understands not us, because it understood not him. Beloved, now are we children of God; and never yet was it made manifest what we shall be: we know that, if perchance it should be made manifest, like him we shall be, because we shall see him according as he is. And every one that has this hope on him purifies himself according as *he* is pure." (This last "he" is strongly emphasized in the Greek.)

Ferrar Fenton translates it:—

"Just think what a wealth of love the Father has lavished upon us, in order that we might be called children of God: and such we are! For this reason the world does not know us, because it did not know Him. Friends, we are now children of God; and it is not yet revealed what we shall become. But we do know that when He is manifested, we shall be like Him; because we shall see Him as He actually is. And every one who has this hope in Him will purify himself, as He is pure."

The "Twentieth Century New Testament" gives it:—

"Think what love the Father has shown us in allowing us to be called 'God's Children;' as indeed we are. The reason why the world does not know what we are is because it has not learnt to know him. Dear friends, we are God's Children now; what we shall be in the future has not yet been revealed. What we do know is that, if it should be revealed, we shall be like Christ: because we shall see him as he really is. And every one who has this hope in regard to Christ tries to make himself pure—pure as Christ is."

These show that the words "he" and "him" in the three verses quoted are pronouns for Deity, and refer to God and God's appearing, or the Christ; and a very helpful interpretation is obtained when read with this in thought. Thus the third verse reads substantially, "And every man that hath this hope in God (in God's appearing, or the Christ) purifieth himself because God is pure." A wonderful wealth of wisdom awaits us in these words of the "beloved disciple."

Undue emphasis is sometimes placed on the pronoun "we" in the first verse, "that we should be called the sons of God," as though we were the only ones. The important fact in that sentence, as well as in the second verse, is that we are actually or in truth sons of God and not sons of men, in correlation with the "scientific statement of being" previously read, which says that "man is spiritual and not material."

The order in which our Leader has asked that these selections be read is also important. First, the "scientific statement of being" (and it should always be stated that this is from the Christian Science text-book), and then the announcement of the reading of the "correlative selection from 1 John, 3 : 1, 2, 3." The fact that this selection is a correlative is important, and the announcement, coming after the reading from Science and Health, makes it possible for strangers and those not familiar with the Bible to know where our Leader's words end and those of St. John begin, which is difficult when these passages are read consecutively.

We feel deeply grateful to our Leader each Sunday for this beautiful ending of our Sunday service. These passages seem to be the kernel and epitome of all the Lesson-Sermons and are like the preacher's "Let us hear the conclusion of the whole matter." They place the seal of divinity on the service, after which we shall do well to go to our homes, enter our closet, shut the door of the material senses, meditate on the wonderful truth we have heard, and make it our own.

Boston, Mass., December 25, 1905.

Dearly Beloved Leader:—During my recent lecture tours I observed that many of the First Readers in the branch churches read the correlative selection from 1 John with emphasis which shows that they do not rightly understand this passage, and some of them announce the "scientific statement of being" and the verses from 1 John together, and then read the two consecutively, which is apt to confuse strangers who are not Bible students, and who might not know where your words end and those of St. John begin.

Copyright, 1906, by Mary Baker G. Eddy.

The passage "Beloved, now are we the sons of God, and it doth not yet appear what we shall be," is generally read as though it meant that we shall become something else than sons of God in the future. My understanding of this according to Science is that we are God's children now, but that this fact is not yet apparent.

In order to aid the brethren and bring about greater uniformity in our services, I have prepared the enclosed article, thinking it might be interesting to publish in the *Sentinel* if it meets with your entire approval. I regret trespassing on your time, but as this is a matter of interpretation and bears on the Field it could not well be done without you.

We were very glad to attend The Mother Church service again yesterday, after several weeks' absence. It was very beautiful and far exceeds that in any of the branch churches in spiritual insight, understanding, and power. This is as it should be, but it was never before quite so apparent to me.

With sincere love, in which Mrs. Hering joins me, I am

Your grateful student,

HERMANN S. HERING.

"Believe me for the very works' sake."

CLARENCE W. CHADWICK.

And every spirit that confesseth not that Jesus Christ is come in the flesh is not of God: and this is that spirit of antichrist, whereof ye have heard that it should come; and even now already is it in the world.

First Epistle of John.

WEBSTER defines antichrist as "a denier or opponent of Christ," as "a great antagonist, person, or power, expected to precede Christ's second coming." Christian Scientists do not attach any special significance to the personality of this phase of evil, nor confine it to the past, when, at different periods in the world's history, it has assumed the form of a so-called incarnated mortal, posing as a second Christ. In the light of Christian Science it assumes a more comprehensive meaning, one that impels the individual to look within his own habitation of thought, lest there be some lurking qualities of this belief of antichrist which need to be cast out. Whatever is unlike God would necessarily be a denier or opponent of the Christ-truth, and would antagonize the coming of the Christ-idea to individual consciousness.

In the Biblical record of this claim of evil, the apostle John is the only one who makes specific reference to it as antichrist. It is reasonable to conclude, however, that other writers were describing the same or similar conditions of thought, when referring to "false Christs," false prophets," "seducing spirits," "the man of sin," and such like. The definition given in 1 John, 2 : 22, is perhaps as pointed as any, when John declares that to be antichrist which denies the Father and the Son; and as we pause to consider what it means to deny the Father and the Son, we shall better appreciate the apostle's concept.

The analysis of mortal consciousness makes it clear that it is diametrically opposed to God, Spirit. The "carnal mind" is enmity against God and not subject to the law of good. This carnal mind can never know or understand Spirit, since Spirit must be spiritually discerned. We know, therefore, that wherever this mortal mentality is in evidence, God is being denied place and power in human consciousness, in the same way that darkness denies the presence of light. To the extent that we believe in and accept this carnal or mortal mind as being true and real, to this extent do we deny the power and presence of Spirit, and misinterpret the manifestation or expression of Spirit, whether we are conscious of so doing or not.

Christian Science is demonstrating the eternal fact that God, good, is all-powerful and ever-present. If we simply profess that God is omnipotent, and yet do not offer proof of our profession by healing sickness and overcoming sin, are we practically accepting or denying the truth? Are we acknowledging or rejecting Christ? If we say we believe that God can heal us if He wants to, but forthwith resort to material remedies, are we honoring or dishonoring the power of God and His Christ? If we profess to love God with our whole heart, and yet do not trust Him to do for us what we admit He has power to do, are we proving or denying the power and presence of divine Love? If we have a "form of godliness," and yet deny the power thereof, believing it to be supernatural and unavailable for human needs, are we sustaining or rejecting Christ's kingdom on earth? If a trusted friend, whose moral character we had never had occasion to question, should tell us that through the ministrations of Christian Science, the spiritual apprehension of the Christ teaching, he had been healed of a supposedly incurable disease, and we were to doubt the information, persist in thinking that this friend was laboring under a delusion, and make no effort to investigate so important a claim, but cling to our prejudices and unbelief, would we be acknowledging or rejecting the power of God unto salvation?

If we deny the right of Christian Scientists to establish a church, founded upon the Rock, Christ, and sustained by Christian healing, and refuse fellowship with those who voluntarily unite with this church, are we obeying our Master's teaching? If we believe that some of Christ Jesus' commands are to be obeyed while others are to be studiously ignored, are we acknowledging the Christ as our present and perfect Saviour? If we are simply repeating Jesus' words, but denying the present application of the ever-operative healing power which he demonstrated, are we proving or disproving his Messiahship? He gave us to understand that it was his healing works, more than what he said, that established this Messiahship, and that we must show our love for him and for the Father by repeating these very works. What practical benefit will accrue to humanity if we fold our hands and simply say that we believe that such works were performed by Jesus and his immediate followers, but that they were miraculous, and not intended for this age and generation? Should such apathy on our part be termed Christian or antichristian?

Has the Christ come for our individual redemption and yet left us in bondage to disease and sin? Can the Christ come without healing sin and sickness? If so, where is our Saviour, and where can we turn for help when all earthly supports have failed? Is there anything antichristian about Christian Science because it acknowledges and demonstrates the completeness of Christ's salvation, instead of trying to perpetuate only a portion of it, the power over sin, while believing its control over disease to be a dead issue? Does Christian Science deny the Father when it acknowledges Him to be the ever-active, unchangeable, divine Principle of the universe, who is not willing that any should perish, but that all should be saved?

According to John's testimony, he is both a deceiver and an antichrist who confesses not the healing significance of the Christ coming, and in the light of Christian Science this means vastly more than a refusal to admit the personal appearing of Christ Jesus as a purely historical event. Rather does it mean the denial of the presence and utility of the Christ-healing in this and every age. Are we not deceiving ourselves and others, if we assert that the Christ-power is not made manifest through Christian Science, which heals both mind and body and inspires the individual with a desire to study and apply the Word of God as expressed in Holy Writ? Any Christian Scientist, no matter how familiar he may have been with the letter of Scripture, will tell you that the Christian Science text-book has proven itself to be a key to the Bible, in that it has revealed to him the Principle of Christian healing and enabled him to apply it "with signs following." This fact alone ought to arouse a lively interest in the strong claims of Christian

Digitized by Google

Science on the part of all professing Christians, and beget great thoughtfulness upon the part of any who may be tempted to condemn Christian healing, especially when they have every reasonable assurance from reliable sources, and notably from the Bible, that spiritual healing should be expected at this period no less than in the past. The true follower of Christ Jesus, who demonstrates the omnipotence of God, cannot give any valid excuse for limiting the power of God to any age, and it surely is not an evidence of loyalty to our Master's teachings to deny their application to our present needs.

The Word of God will be made available to humanity only as we overcome every supposition of a power opposed to God, good, and eliminate from individual consciousness every taint of the "antichrist that denieth the Father and the Son."

"Our refuge."

ANNA ROBINSON.

SINCE my study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, the truth of the Scriptures has been illumined to me. In Psalm 46 : 1, I find this beautiful promise, "God is our refuge and strength, a very present help in trouble." These words have been very helpful to me, for I begin to see that as God is good, good is our refuge, and that each of us may say "my refuge," because this refuge is for the rich and the poor, for those who are well and for the afflicted alike, for all nations, at all times, in all places, under every circumstance. This refuge is necessarily unlimited, unchangeable, ever present, and a strong refuge.

According to Webster, refuge means a place of protection or shelter from an enemy. We know we have protection in God, good, from all enemies, evil thoughts or beliefs,—sin, sickness, and death. We learn that this protection is for all; it is as impartial as sunshine on a bright day. Each one may claim the sunshine and have full access to it without depriving his neighbor of any of it.

In Truth's refuge there is no night, no sorrow, but infinite light, joy, health, wealth, intelligence, peace, the presence of Life, Truth, and Love. Through Christian Science it has dawned upon me that we can now find refuge in God, good; that now we are protected,—"under the shadow of the Almighty,"—free from sickness, sorrow, hate, poverty, malice, and death.

This truth is gloriously expressed in Revelation 21, "And I heard a great voice out of heaven saying, Behold, the tabernacle of God is with men, and he will dwell with them, and they shall be his people, and God himself shall be with them, and be their God. And God shall wipe away all tears from their eyes; and there shall be no more death, neither sorrow, nor crying, neither shall there be any more pain: for the former things are passed away."

[Written for the *Sentinel*.]

O Guiding Love.

GERTRUDE RING.

ONE there was told me that the polar star
Stands sentinel by day as well as night,
Drawing the needle of the mariner
To guide him when he may not see its light.

Taught me of seeds, long centuries entombed,
That yet respond unto the soil and sun;
That send forth tender leaf and flower perfumed,
As ages past the parent plant had done.

O guiding Love divine, O wondrous power
Which conquers time and overleaps all space,
Thou vital Principle of star and flower,
Hold all Thy children in Thy close embrace!

Selected Articles.

Large Attendance at Wednesday Evening Meeting in Concord, N. H.

There was a large attendance at the mid-week testimonial meeting of First Church of Christ, Scientist, last evening [December 13]. The session of the Massachusetts Metaphysical College having just closed, several of its attendants were present. There were also visitors from Manchester, England; Victoria, British Columbia; San Francisco; New York City; Cleveland, Ga., and Franklin, Pa.

The First Reader, Rev. Irving C. Tomlinson, opened the services with a hymn and the reading of selections from the Bible and from "Science and Health with Key to the Scriptures" by Rev. Mary Baker G. Eddy.

A beautiful testimony was given by Miss Coutts-Fowlie of Manchester, England. Mr. Charters of New York spoke feelingly of the help which he had received from Christian Science, and voiced his gratitude to its Discoverer and Founder, Mrs. Eddy. Mrs. Chamberlain of San Francisco told of the wonderful growth of Christian Science on the Pacific coast, and of permanent good which had come to her through this healing gospel. Others spoke also of many practical benefits received and of the change wrought in their lives by the power of God.

The concluding testimony was by Lady Victoria Murray of Manchester, England, who is a daughter of the Earl of Dunmore. It may be remembered that Lord Dunmore and his family visited Concord some six years ago and were received by Mrs. Eddy. Since that time Lady Victoria has consecrated her life to the healing and teaching work of Christian Science and is now giving her entire time to it. She said,—

"I bring a message of love and gratitude from First Church of Christ, Scientist, Manchester, England. We feel more than ever the blessings that are coming to us and have been poured upon us of God. It is a privilege which I have had once before, of being present at the testimony meeting in Concord, the home of our dear Leader, who is doing so much for humanity. It means so much to us to be in this church, and each time we come over to this side we get much to take home. Every one is waiting for the love and messages that we take them from over here.

"I had a cable from Manchester on Tuesday evening, saying that Mr. Bicknell Young had given his lecture and that there was present a larger gathering than ever. Last year we had something like four thousand people, which shows how hungry they are, as it is only five years ago last month that Christian Science work was started in that city. A physician residing near Manchester wrote a letter to one of my family, saying he wanted Christian Science treatment, but that he did not believe in Christian Science, and that he was practising medicine, but his father had been cured in California through Christian Science. I was asked to go to Manchester to attend his case, and he told me that he had spent three months trying to find a Christian Science practitioner; that he had written to the newspapers and had got no reply. He advertised without success, and finally he had to write to California to find a Christian Science practitioner's address. This will show you how little Christian Science was then known in the north of England. Within the last five years there have been organized fifteen churches and societies in the larger towns of the north of England, and in each case the work started through healing. This doctor, whose child was cured of tuberculosis, after he had fully tested Christian Science by seeing many of his former incurable patients healed by this treatment, said he could not go on with his practice any longer, and gave up the medical profession and is now working in Christian Science."

Lady Victoria Murray then gave some other remarkable cases of healing which she had seen through the power of Christian Science.—*Concord Evening Monitor.*

A Splendid Tribute.

Concord [N. H.] is one of the typical New England cities, educationally and otherwise. As the State capital it is indeed the city of dignity, wealth, and influence. It is the most central city of the State as well. Educationally it has never had a sensation in administration or method. Its leadership has always been intelligently progressive but never radical. It has always had ideals, toward the attainment of which earnest effort has been put forth. The public has never failed to support the educational leaders heartily with sentiment and votes. The schools of Concord are up to modern educational standards in the quality and quantity of work done. The pupils are well housed, well cared for, and the results attained are creditable. Superintendent L. J. Rundlett has long been the professional and official leader in fact as well as in name. He has never failed to have the child's life-work in mind in building, in equipment, in curriculum, in supervision, or in teaching. He is a well-balanced man; as the seafaring man would say, "He sees to it always that the school craft rides on an even keel." One of his pet phrases is "Develop the sensory and motor phases of the child evenly."

He impresses upon his teachers that their mission is to see to it that eventually the children perform fully and satisfactorily the duties of life.

The New England Journal of Education.

"Mrs. Eddy . . . in her insistence upon the constant daily reading of the Bible and her own writings, . . . has given to her disciples a means of spiritual development which . . . will certainly build such truth as they do gain into the marrow of their characters. The scorn of the gross and sensual, and the subordination of merely material to spiritual values, together with the discouragement of care and worry, are all forces that make for righteousness. And they are burned indelibly upon the mind of the neophyte every day through its reading. The intellects of these people are not drugged by scandal, drowned in frivolity, or paralyzed by sentimental fiction. . . . They feed the higher nature through the mind, and I am bound as an observer of them to say, in all fairness, that the result is already manifest in their faces, their conversation, and their bearing, both in public and private. What wonder that when these smiling people say, 'Come thou with us, and we will do thee good,' the hitherto half-persuaded one is wholly drawn over, as by an irresistible attraction.

"The religious body which can direct and control, in no arbitrary sense, but through sane counsel, the reading of its membership, stands a great chance of sweeping the world within a generation. On the other hand, a religious body that neglects to give instruction on the necessity of systematic religious reading, especially the reading of Scripture, is doomed, unless it look promptly to its ways, to certain disintegration and death."

Extracts from an article by the late

FREDERICK LAWRENCE KNOWLES.

Methodist Review.

Jesus said, "Sufficient unto the day is the evil thereof." A great many worry needlessly because of their limited foresight. There are few who do not see at least one step which can be looked upon as absolutely right, and if that step is taken it is likely to lead to where the next proper move can be discerned, each successive step interpreting the next necessity or possibility. Looking across the prairie one can see just so far when the horizon cuts off the view. As one advances the horizon moves on, and one can see still farther. No individual will ever be able to see farther than he can now perceive, except in proportion as he advances beyond his present position.

Each individual will have grace sufficient to effectually overcome the evils which confront him at any given time, though if there be added to such difficulties an accumulation of errors which have not been scientifically disposed of in the past, as well as a contemplation of prospective future evils, the burden may be more than one can bear. So it behooves us to take care of each day's work as we reach it, and make our labors so conclusive that there will be no necessity of going back to take up unfinished work. It is also important that we should train ourselves to look carefully after the present and not worry about future details which are beyond present comprehension.

While we thus write, we are not unmindful that Christian Science, revealing the absolute allness of divine Mind and its manifestations, points to a final victory over all evil and the final and full triumph of truth. Therefore, abstractly the Christian Scientist sees his way through to the end and is certain that he will be guided by divine intelligence in each successive step. He notes that his advancement is in proportion to his goodness and spirituality. If his perception is dim, he is aware that a closer walk with God is the one thing needed, and he is not devoid of a definite course to pursue. He knows that Jesus' statement, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you," is absolutely true. If we are governed absolutely by divine intelligence, the details of the right course will be clearly defined to us.

ALFRED FARLOW.

Boston Times.

Only those who have no knowledge of Christian Science would think of identifying it with those systems which claim to heal through the exercise of personal magnetism and hypnotism. The mere fact that Christian Science operates through the mentality, is no more of an argument in favor of classifying it with mesmerism and hypnotism, than is the fact that Jesus rejected the material in favor of the mental in his work of reformation and healing any reason for claiming that he healed merely through the exercise of the human will. His teaching healed the sick by pointing the way to God. He taught his followers to submit the human will to the divine, and thus partake of the "bread of life."

ALBERT E. MILLER.

Chester (Pa.) *Times.*

We are told that "Christian Science is out of harmony with orthodox teaching, with the Church, and with the Scriptures, for it admits of only one power in the world." So far as the orthodox church and its teaching on this point go, Christian Science admits the charge, but not as to the Scripture, for the latter states positively the omnipotence or unlimited power of God. If Christians actually believe this in their hearts, there cannot possibly be another real power, and if not in reality, there could be no more power than that given a ghost story or the "bear in the dark room" of our childhood days. Christian Scientists believe that the first commandment means just what it says, "Thou shalt have no other gods before me," and to acknowledge any other power, even in thought, is as much a breach of the command as to bow down to mammon. They realize that the very first sin that came to the world was the belief of a power apart from God, and for this sin and its progeny mankind is daily paying the penalty in suffering and sorrow, and will continue to do so until they come to the realization of God as the only power; then there will be no desire to sin, hence no sin.

CHARLES K. SKINNER.

The (Traverse City, Mich.) *Record.*

God has not given us vast learning to solve all the problems, or unfailing wisdom to direct all the wanderings of our brothers' lives; but He has given to every one of us the power to be spiritual, and by our spirituality to lift and enlarge and enlighten the lives we touch.

PHILLIPS BROOKS.

The Lectures.

Hull, England.

Mr. Bicknell Young lectured on Christian Science in the Lecture Hall of the Assembly Rooms, November 21. He was introduced by the Hon. John Ashburnham, who said in part,—

I am very glad to see that Hull is no exception to the general rule and that a notice of a lecture on Christian Science suffices to fill the hall with a large and representative audience. This fact is the more remarkable when we remember that a very short time ago the very name of Christian Science was hardly known in this country. Its adherents were few, and the mildest terms employed by its opponents were those of derision. Now all this is changed. Christian Science churches are being organized all over the country. While other denominations complain of small congregations, we have to enlarge our churches, and both pulpit and press when they mention Christian Science certainly no longer do so in terms of derision. The reason of this great change in public opinion is not difficult to find. Jesus said the "tree is known by his fruits." The saving and healing power of Christian Science can no longer be denied. The voice of thousands and tens of thousands of those who have been delivered from the bondage of sin and sickness is being heard, and men and women are asking to hear something of what has produced these marvelous results.—*Correspondence.*

Quincy, Mass.

An audience which filled every seat in Quincy Music Hall, assembled last evening [October 27] for the Christian Science lecture under the auspices of the Braintree church. Lewis C. Strang of Boston, in introducing the lecturer, Judge Septimus J. Hanna, said in part,—

Christian Science is the modern protest against the slavery of the ages. To some of you it may seem strange that the sick can be healed to-day, as in Jesus' time, without material means,—not by blind faith, but in strict accord with divine law; but it is not more strange, mysterious, and unaccountable than that a seed planted in the spring should bring forth a beautiful flower in the summer. Christian healing has seemed more mysterious simply because it has been regarded as more unusual.—*Quincy Ledger.*

Gloucester, Mass.

A goodly audience was in attendance at the Christian Science lecture by Bliss Knapp of Boston, last evening [November 9]. The lecturer was introduced by William Bradford Turner, who said in part:—

Ever since the time of the great Nazarene, it has been the hope, the prayer, and the endeavor of the centuries to get at the vital spirit, the regenerating attitude of mind and heart which actuated Jesus, and governed him in all he did; and to find, if possible, its counterpart actuating ourselves. That it is possible to find this counterpart, the apostle Paul seems to have entertained no doubt. All his words Jesus himself confirmed by works, by "signs following." Christian Science comes to us to-day, asking us to consider that if Christ's message was truth in the first century, it must still be truth in the twentieth; and that if its right apprehension then could set men free from sin and suffering, its right apprehension now must still be able to do the same.

It asks us to remember, also, that Jesus' ministry included a twofold office, that of healing as well as preaching; and that all his injunctions to his disciples bore upon the inseparability of these two.

Christian Science appeals to us to look humbly but most earnestly out upon the widespread suffering in the world about us, and then to ask ourselves if ever the Mind that wrought through the great Exemplar was more needed among us than it is to-day. Finally, it invites us to closer and more intimate searching of the Scriptures, in the light of its exposition, which presents us with the scientific interpretation of Christianity, so timely in its appearance in this scientific age.—*Gloucester Times.*

Stoke Newington, England.

Mr. William N. Miller, K.C., lectured on Christian Science at the Stoke Newington Library Hall, October 26. He was introduced by the Rev. Joseph Stokes, who spoke in part as follows:—

I received the greater part of my training for the Christian ministry in connection with the Established Church of England, so-called, and severed my connection with its fellowship some years ago for conscientious reasons.

After that time I worked pretty much on unsectarian lines, and I think I am wholly of the same mind at the present time, for I hold that man is bound to be a seeker after truth, and when he finds it he must accept, adopt, and practise its precepts, irrespective of the channel through which that truth may come, even though it may come to him through a woman.

We have arrived at a time in our religious thinking when we yet need to take up our tent-pegs and stretch our canvas, and with unbiased and open mind seek for truth and accept it from whatever quarter it may come. I believe I am right, too, when I say that the faith and teaching of Christian Science have had to fight for their existence; but the mustard seed which was planted in the city of Boston by that noble, courageous, and saintly woman, Mrs. Eddy, thirty years ago, has made most rapid progress, and now its shade reaches to the uttermost parts of the earth.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Christmas for the Children.

METHINKS the loving parents and guardians of youth ofttimes query: How shall we cheer the children's Christmas and profit them withal? The wisdom of their elders, who seek wisdom of God, seems to have amply provided for this, according to the custom of the age and to the full supply of juvenile joy. Let it continue thus, with one exception; namely, the children should not be taught to believe that Santa Claus has aught to do with this pastime. A deceit or falsehood is never wise. Too much cannot be done towards guarding and guiding well the germinating and inclining thought of childhood. To mould aright the first impressions of innocence aids in perpetuating purity and unfolding the immortal model, man in His image and likeness. St. Paul wrote, "When I was a child, I spake as a child, I understood as a child, . . . but when I became a man, I put away childish things."

MARY BAKER EDDY.

Pleasant View, Concord, N. H., December 28, 1905.

Card.

MARY BAKER EDDY.

THE following letter from the Clerk of First Church of Christ, Scientist, at Manchester, England, is indeed interesting. This church was organized by Lady Victoria Murray, daughter of the Earl of Dunmore.

Neither space nor time can separate genuine Christian Scientists. "Behold, how good and how pleasant it is for brethren to dwell together in unity."

Manchester, England, December 15, 1905.

Rev. Mary Baker G. Eddy.

Beloved Leader:—The approach of Christmas prompts the members of First Church of Christ, Scientist, Manchester, England, to offer you a loving greeting, and an expression of their abiding gratitude for all the blessings they are realizing through your teaching of Christian Science.

The third lecture called for by this church has just been delivered by Mr. Bicknell Young, and we are able to record a greater attendance than before, and a wider interest in Christian Science, as manifested in the press and around us in other ways. We recognize now more fully your wise provision that one lecture or more should be called for annually by each church, as we experience the growing attention given to this "preaching of the Gospel," which through your teaching is healing suffering humanity of their sickness, sin, and woe.

We also are deeply grateful for the help which comes to us through the *Journal* and *Sentinel* publications, showing us as they do how our sisters and brothers "across the water" have fought and overcome the same erring senses against which we are contending, and are also learning to overcome through our understanding of "the better way."

Your loving gift of Christian Science, made yet more priceless by your selfless labors and constant prayers for all, has welded a bond of union between us "in the old country" and you "in the new" which nothing can sever, and as your teaching becomes more widely known it will grow into the "more perfect bond of peace."

Truly "God is good to Israel," and in the fulness of our hearts we pray we may learn to press meekly on in the way of your teaching, showing our gratitude to you in blameless lives, and by striving for "that Mind to be in us, which was also in Christ Jesus."

Faithfully yours,

WILLIAM WEBB, *Clerk.*

First Church of Christ, Scientist, Manchester, England.

"The sick are healed."

IN view of the practically admitted futility of medical treatment for certain diseases, it is not amiss to call attention to the fact that testimony is constantly accumulating which proves that Christian Science is healing all manner of so-called incurable diseases, also that tuberculosis is included in the list of ills for the cure of which many are successfully turning to this practical application of the Master's gospel.

We are reminded of this by an exhibit, under the auspices of the State Board of Health, which is now in progress in Boston. This exhibit has for its object the dissemination of information regarding tuberculosis and the methods which modern medical and hygienic authorities advocate for its treatment and prevention. While the methods advised for the prevention of this dread disease find ready endorsement by sensible and refined people, because they are in harmony with their innate love for sunlight, pure air, pure water, pure food, and cleanly surroundings, there is but little encouragement given to the unfortunates who are suffering from fully developed cases of this malady. In the presence of such cases medical practice and hygiene confess their helplessness.

Among well authenticated instances of the healing of consumption by Christian Science is that of Mrs. Lila Young of Los Angeles, Cal., who testified in the case of The People *versus* Reed, a case which was tried in the courts of that city. The following is a part of the official record of Mrs. Young's testimony:—

Q.—Have you had any experience in the matter of Christian Science treatment for disease?

A.—Yes, sir.

Q.—You may state to the jury what your experience consists of.

A.—I was healed of consumption. My people, my mother and her family, consisting of six in the family, all died with consumption, which was what they used to call the old-fashioned lingering consumption, and I was doctored for many years. There were twelve years that I was in bed the greater part of the time, and an eminent physician of San Francisco was the last physician that told me—he examined my lungs and shook his head and said that he didn't know what to do for me. He said he knew of no climate—he said, "I can only compare you to the sensitive plant; heat or cold, you will wither away." It seemed to me he explained my situation better than I could. And at that time, there hadn't been a day, I presume for more than a year, that I sat up all day. I had, among other complaints,—my spine was also affected. This same physician burned my spine at the time I was under his care in San Francisco, and I was healed by Christian Science after I had no other hope.

Q.—How long ago was that?

A.—I first became interested in Christian Science fourteen years ago. I went East, and before that I had had Science and Health, which is the text-book of Christian Science, sent to me, but I had never paid any attention to it. I was very antagonistic to it, as most people are until they understand what it is, and I went home and I found my sister, who had been given up by all the physicians with consumption, well; but she had quite a time convincing me that there was anything in it. But I found daily, with all

Digitized by Google

my opposition in the atmosphere of Christian Science which was all they had in their household, that I was gaining, and when I returned to California I began the study of Christian Science, and I have been perfectly well for over seven years, and I began gaining immediately upon my knowing something of Christian Science.

Our Master promised that the sick should be healed as he healed them, and Christian Science daily gives proof of the fulfilment of his promises. ARCHIBALD MCLELLAN.

Patient Persistence.

HUMANLY speaking, the problem of overcoming the world, the flesh, and the devil is a serious undertaking, but in Christ's name it may be entered upon and continued with well-grounded confidence and unfailing cheer. If, in the presence of trying human conditions, one is ever tempted to be discouraged Christian Science comes to him as an aid of inestimable value, since it gives him firm footing, a solid foundation for thought, in the scientific apprehension of the allness of Truth, the unreality of error. If it is entirely clear to one in such an hour that the overcoming of sin and sickness, every physical and mental ill, through spiritual understanding, is just as natural and just as sure as is the overcoming of darkness by light,—then the period of depression will be brief, and he will renew the struggle with unquestioning assurance and a glad song.

When troubled about delayed results, it will be of advantage to remember that "we wrestle not against flesh and blood, but against principalities, against powers, against the rulers of the darkness of this world, against spiritual wickedness in high places;" for if we have not reckoned rightly with our foe, it is more than probable that we have neglected some part of that "whole armor of God" which alone enables us to "withstand in the evil day, and having done all to stand." Inapprehension of the importance of any given problem, is the forerunner of unpreparedness to solve it, and hence of failure. A review of the facts of the situation often helps us to dissipate a weakening self-confidence, and begets that turning to God and reliance upon Him which frees from every phase of erroneous belief and gives strength for every exigency of experience. The recognition of all the claims of mortal sense should ever stir thought to the further recognition that every root of bitterness, every increment of error can be, and shall be displaced by patient continuance in right thinking and right doing. Thus shall we know that Truth cannot fail.

In the eighth chapter of his letter to the Romans, Paul puts the situation in a very plain, straightforward way. He says, "We know that the whole creation groaneth and travaileth in pain together until now. And not only they, but ourselves also, which have the firstfruits of the Spirit, even we ourselves groan within ourselves, waiting for the adoption, to wit, the redemption of our body." In this communal phrasing he recognizes the inevitability of struggle,—a struggle from which even those who have already realized "the firstfruits of the Spirit" are by no means exempt. He also defines the remaining disability. The "body" is not yet redeemed; and the aspiring "groan within themselves" over the disclosure of errors yet to be eliminated. How true all this is! Later he reminds them, and us, of the saving power of that patient hope which knoweth that Spirit, divine Truth, is the sufficient helper, and that the struggle worthily maintained can but result in both present and future good to each. "If God be for us," he asks, "who can be against us?" and his answer is one of the noblest pæans of victory ever uttered.

Christian Science helps men to be both courageous and patiently persistent by bringing them not only a right understanding of the nature of their undertaking, but a clear and satisfying assurance of the completeness and adequacy of their equipment for it, in Christ, and of the absolute certainty of their success if they are faithful to Truth.

JOHN B. WILLIS.

The True Guest.

THE coming of New Year's Day recalled a quaint and well-nigh forgotten custom, which required that a man be the first to enter every home on the first day of the year. The origin of this custom is veiled in obscurity, but metaphysically regarded it has a lesson for us to-day, since never before has the dignity of manhood been understood and appreciated as it is in Christian Science. In all the writings of our revered Leader, man, the ideal man, is kept constantly before us as the model for all aspiration and endeavor, and not one day, but every day those who are faithful to her teachings refuse to allow any other concept to pass unchallenged over the threshold of consciousness.

Christian Science teaches that man is "the generic term for all that reflects God's image and likeness" (Science and Health, p. 475). All that expresses God must therefore be in harmony with man, as man is thus understood in Science. The false concepts of mortal mind,—sin and suffering,—which are no part of man's being, should be forever denied entrance to thought, and this applies to everything that does not bear the signet of the divine creation. Every idea that expresses goodness, purity, and intelligence, be it ever so lowly, has its rightful place in Mind, and each tends to bring out completeness. Of man the Psalmist says, "Thou madest him to have dominion over the works of thy hands,"—and Christ Jesus proved the truth of the statement by exercising this dominion and teaching others how to avail themselves of the same divinely bestowed privilege.

How few there are who know what man really is, and none can know while failing to distinguish between him and his mortal counterfeit. In all times the multitudes have believed a great warrior to be a splendid specimen of manhood, but suppose such an one to have been brought face to face with the funeral cortege coming out of Nain, of what avail would have been his seeming strength and courage? of what avail even legions of Roman soldiers in the presence of sin or suffering? True manhood was then put to the proof, and not found wanting,—there was one who spoke the word, and the young man who lay on the bier was restored to his mother. Our text-book says, "The ideal man was revealed in due time, and known as Christ Jesus" (Science and Health, p. 338). Well might the world have rejoiced that "the ideal man" was thus revealed, and we to-day, that through our Leader's wonderful discovery the world at length knows the Science of man—the Science which explains man's God-given dominion and how it may be realized by all who accept the truth.

Man as the image and likeness of God has an inherent nobility which lifts him far above all that is base and unworthy; he is ever conscious of the supremacy of Spirit, and this consciousness heals the sick and the sinful. In the words of the prophet, this "man shall be as an hiding place from the wind, and a covert from the tempest;" to him every door should be opened wide, for blessed is the abode where the true concept of man has entered; of such it can be rightly said that peace and prosperity are within its walls. Let us all listen to the voice which to-day is saying, "Behold, I stand at the door, and knock."

ANNIE M. KNOTT.

Letters to our Leader.

Tombstone, Ariz., December 11, 1905.

Our Dear Leader:—Recently one of our little band went to Chihuahua, Mexico, on mining business; and while there looked about for drawn work as gifts for friends. This piece he found in a little adobe house and purchased from the woman who made it, thinking it far too beautiful to stay there unseen.

Three or four Scientists came to the home of this Scientist after the Thanksgiving service, and the work was shown and admired. The wife said, "It is too beautiful to keep

Digitized by Google

here." The Second Reader said, "It is beautiful enough for Mrs. Eddy," and immediately we knew why it was purchased and where it belonged. Will you accept this from the little band here? It expresses so beautifully the perfect and harmonious thought of one Mind. With this is the gratitude of one healed morally, also of dyspepsia; one healed mentally and morally; one healed,—a nervous wreck, hospital in sight, eyesight restored after wearing glasses twenty years; one healed of dropsy, heart trouble, sight restored; one past three score, who reads Science and Health and his Bible by candle-light without glasses, and many others healed of rheumatism, kidney disease, and numerous other troubles. With it is also the love of twelve children,—the Sunday School,—who are demonstrating nicely, attending school continually instead of being out with the usual ailments.

Our county is one and three fourths the size of Connecticut. Our Second Reader comes forty miles to read on Sunday and teach in the Sunday School. In less than two years we have sold thirty-four copies of Science and Health, and they are scattered all over the mountains and in Mexico. Services are established in the county in Bisbee, Douglas, Naco, as well as famous old Tombstone, and we hope to be organized as churches some day. With much love and gratitude, Your student's student,

ELECTA E. SCRIBNER.

MRS. EDDY'S REPLY.

Beloved Student:—The above letter is redolent with love, and the embroidered bedspread is the most beautiful thing of the kind I ever saw. But more than all else of earth is your joy-inspiring recital of the good being done in your midst by Christian Science and your faithful labors.

MARY BAKER EDDY.

Kinston, N. C., December 3, 1905.

Mrs. Mary B. G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—Knowing that you feel such a loving interest in our beloved Cause and its progress, we felt that perhaps just a few words from us might add something of joy to your cup; this is the only excuse we offer for this trespass on your time. We had an inspiring Thanksgiving service; there were many expressions of gratitude to God for the truth revealed through you, coupled with testimonies of healing. The voluntary offerings for the Building Fund of The Mother Church amounted to sixty-five dollars, making a total of five hundred and sixty dollars from this church. Our little Sunday School, numbering only three regular attendants, has contributed up to date seventy-eight dollars and thirty-four cents. When the call came for funds to enlarge The Mother Church, they immediately decided to devote the amount on hand (a nest-egg for our own building fund), and all the future collections, to the Building Fund of The Mother Church, until there was no further need.

Our church, though small in numbers, is strong in its love and loyalty to you. Though the contribution seems small, every penny is a thank-offering to God, and to one who has not learned that we look to God for our supply, it seems incredible. With sincere love.

MRS. SUDIE W. NEWBORNE, *Clerk.*
First Church of Christ, Scientist, Kinston, N. C.

[Telegram.]

Philadelphia, Pa., November 12, 1905.

To Mrs. Mary B. Eddy, Pleasant View.

Dear Mrs. Eddy:—We, the students of the association of Mrs. D. Eloise Brownell, C.S.B., assembled in our annual meeting, unanimously send you our love and gratitude for the benefits received through your teaching. Our earnest prayer and desire is to be loyal to God and to our Leader.

JOHN B. SHOE, *Secretary.*

Testimonies of Healing.

About eight years ago a copy of Science and Health was sent me by a friend whose child had been wonderfully healed of tuberculosis of the throat, after being condemned to die by some of the best physicians in America and Europe. I read the book, and it seemed to be the most reasonable and desirable religion ever presented to me, but being in fair health, and leading a very busy life, I neglected my opportunities, although believing it to be right and declaring my convictions at all times. After some two years of ups and downs I was suddenly attacked by hemorrhage from what the doctors called fibroid tumor. My sufferings were intense, and for six weeks I lay upon the bed, unable to rise without serious results. After talking with two or three other doctors, it was decided that the hospital was the only hope, unless I was willing to wait to have the tumor absorbed by treatment, which would take probably a year, they said.

I wrote my friend of the doctors' verdict, and in reply came a letter which said in part, "Give up your doctors, read Science and Health, and when you can get on your feet, come home." As I had been trying six weeks to get on my feet, it seemed my only chance, and was worth trying, although I had no particular understanding and there were no Scientists in our town. I did as told, with all willingness to be healed, and in two weeks the work was done, in so far that I could go to Kansas City without help. I went at once to a practitioner, and in one week the healing was complete. The second Sunday there, I was on the East side, expecting to attend Second Church, but finding no services, continued the walk with friends to our home, a distance of twenty-one blocks, without resting on the way. There was not the least sense of fatigue and no bad results from it, which to my sense proved the healing complete. My husband had been extremely antagonistic to Christian Science, but did not dare refuse to let me try it under the circumstances. He wrote me while there, that for my sake he would read Science and Health. He read, and found his help, for while doing so he was healed of piles, and chronic indigestion in a severe form, with its attendant troubles.

While the physical healing has been wonderful, it seems but a small part, for the growth along the lines of disposition and my attitude toward the world has been such that my whole life has been changed. The spiritual growth brings a peace and rest which cannot be expressed in words, but those who have experienced it can, partially at least, realize the great unselfishness and goodness of Mrs. Eddy in bringing it to the world.

MRS. ANABEL BENSON, Guthrie, Okla.

To tell of the manifold benefits which have come to me through the study of Science and Health would take up too much space, but I would like to testify to one case of healing which illustrates the power of divine Love to accomplish what surgery and mechanical appliances failed to do. About two and a half years ago, when I first took up the study of Christian Science, I had what is termed by medical men a curvature of the spine. The case was considered critical and I was under the care of two noted specialists for a long time. For several months I was obliged to remain in bed, and at times the pain was so severe that morphine was administered to relieve it. Owing to the prolonged rest, conditions improved somewhat, and I was able to get up and walk around. The pain, however, continued and I was unable to stand erect. If I coughed or was jolted I would fall to my knees, the pain was so acute. At this juncture Christian Science found me, and through its help alone the inharmonious condition was destroyed and the spine resumed its normal position. Since then there has been no return of the trouble. The healing was absolutely perfect, and so natural that I did not know when it

Digitized by Google

took place. One day I realized that I was walking erect, and on examination the spine was found to be straight.

The study of Christian Science has helped me in many other ways and has changed me mentally, morally, and physically. It helps me in my daily life, in my relation to others, and in my business. For all these benefits I am very grateful to our Leader, who has given this great discovery to humanity. I hold for her the deepest reverence and love, as do all who have been helped and strengthened by her unselfish life.—F. C. IRVINE, Chicago, Ill.

For thirty-five years I was a sufferer from nasal catarrh, caused by taking calomel during a siege of diphtheria when about six years of age. This finally developed into severe throat and lung trouble, and an abscess formed in the side of my face, which caused intense suffering. Ten of the best local physicians were employed at different times, each one prescribing many different remedies and honestly doing his best, as I am sure. In the fall of 1897, after having been treated by a specialist every other day for fifteen months, I was told by him that medical skill had done all it could do, and that nothing could hinder my going to a slow death by consumption, as my throat and lungs were in such a bad condition. He also said my breathing was so imperfect that nothing could do me any permanent good.

My mental and physical condition was indescribable when a friend of my family, from Elgin, Ill., visited us. She had just been healed from rheumatism in its worst form, and said it had been done through Christian Science, and to please my wife and daughter, as I then thought, I went to Elgin to see a practitioner. I took one present treatment, and went into Chicago the next morning to attend the dedication of First Church. This was my first Christian Science service, and from that time I have never missed attendance at one of our meetings, either Sunday or Wednesday, except when I have been out of their reach, nor have I failed to study carefully the current Lesson-Sermon each week. I owe much, and I might say nearly all, of my progress to this persistent study, also attendance at our meetings, and I cannot recommend too highly such an effort to any one who is trying to work out his problem in Christian Science.

I took six weeks' absent treatment after the one above mentioned. My healing seemed slow, but I began at once to breathe more freely and my cough ceased. For several years I worked on, gaining little by little an understanding of the truth that finally made me free, and to say I am well but feebly expresses it. Nothing could tempt me to give up this great truth which has come into my life, and much as I value my physical healing, I value the spiritual regeneration most of all. I am trying to show my gratitude to God, and to our Leader, Mrs. Eddy, by helping others.

FRANK G. MORGAN, Sioux Falls, S. D.

I have long had a desire to tell of the wonderful healing I have experienced through Christian Science treatment. Between three and four years ago I was healed of severe lung trouble. The coughing and raising stopped in about three days, not by degrees but at once. Many minor ailments were met also. I had been from birth afflicted with valvular heart disease, and had been told repeatedly that I was liable to die at any time. Nearly one year ago, I was taken with what the doctor called hemorrhages of the heart, which I had for five weeks, one of these being very severe. I had to lie on my back for weeks and could not be moved from one side of the bed to the other, as every exertion brought on another hemorrhage. My physician said he could do nothing to prevent them and had done all he or any physician could do. My death was four times reported about town, and the general statement was, "It is only a matter of time." I had an ice-pack on the left side for weeks, to try to congeal the blood. When I was in despair, a dear cousin, who knew that I had a desire for Christian Science treatment, sent to a practitioner without my knowledge, as one in the family was opposed to it. The hemorrhages were stopped in a few days' treatments. I now do a good share of my housework, can walk quite a distance, and go up and down stairs many times a day.

I do not feel that this testimony does justice to the healing I have received. I would not leave out the spiritual uplifting that came with the physical healing. I feel grateful for the little understanding I have of Truth; it has enabled me to make some good demonstrations. Instead of believing in a God afar off, I have learned that He is ever-present. I wish to thank Mrs. Eddy, whose teachings have brought me from darkness into the light. I am doing what I can to spread this blessed truth. A great work is going on here. I shall be glad to answer any questions in regard to my healing.—MRS. CORA KELLOGG, Bellows Falls, Vt.

For about five years I was afflicted with sciatic rheumatism, in such a severe form that my body was drawn out of shape. When able to be around I walked with the assistance of a cane. The attacks were periodical, recurring every few months; any exposure to rain or dampness would bring one. At one time I was in bed eleven weeks, suffering intensely all the time, except when relieved by hypodermic injections. When I had these attacks my regular physician was always in attendance. My daughter consulted another physician, who said there would have to be an operation which would include the exposing and scraping of the sciatic nerve. There was also another physician who, knowing of the case, examined my heart and claimed that it was weak and that I was liable to pass on at any time from heart trouble.

After suffering three years I heard of Christian Science, but did not avail myself of it for two years, when I decided to give up all other means and rely wholly upon it. It was not convenient to call a practitioner, so I took Science and Health and applied its teachings as best I could. In three days the trouble completely left me and there has never been the slightest return. My health has been good ever since, and I am at present in perfect physical health. I have been benefited in every way by Christian Science, physically, mentally, and spiritually, and would not be without my understanding of it for anything.

MRS. ELIZA A. KEMP, Billings, Mont.

I am a willing witness to the healing power of Christian Science, having had a lifetime's battle with disease and medical experiments. Various doctors finally admitted that they had exhausted their resources, and could only offer me palliatives, saying that a cure was impossible. I had paralysis of the bowels, an almost continuous condition of low fever, frequent sick-headaches with unutterable agony, and my mortal career was nearly brought to an end by a malignant type of yellow fever. Many were the attending evils of this physical disharmony, but God confuses the wisdom of men, for while studying Science and Health two years ago, the veil of ignorance was lifted and perfect health was shown to me to be my real condition, and to such there is no relapse. The constant use of glasses, which were apparently a necessity to me for years, was proven needless, and they were laid aside. Mrs. Eddy has made Scripture reading a never-failing well of comfort to me. By her interpretation "the way of the Lord" is made straight to me and mine. It aids us in our daily overcoming of the tyranny of the flesh and its rebellion against the blessed leading of Christ, Truth. The daily study of the Bible and our text-book is bringing more and more into our consciousness the power of God unto salvation.

JULIET CURRY, Manatee, Fla.

Digitized by Google

Out of the joy of my heart comes the story of my healing. Two years ago I was a very unhappy woman, sick in body and mind. For a long time I had been troubled several months of each year with nervous exhaustion, during which period I was so weak and miserable that life seemed indeed a burden. My work was at a standstill—I only existed. Two years ago I went through the unhappiest winter of my life. A heavy sorrow was laid upon me that seemed to crush out all joy and hope. I longed to forget it all in change of scene and climate, but circumstances forbade. My mental unrest produced such a weak and exhausted physical condition that as soon as I could summon strength or interest to plan at all, I decided I must go West for a long vacation.

How strange that we should seek far and wide for the truth and find it at last at our own door. To think of going two thousand miles from Chicago to receive my first knowledge of Christian Science, yet such was the case. It was at the foot of Mt. Adams that I first received the light. A dear Scientist had come up from Portland with her family for a few days' summer outing in this lovely retreat, and from her I heard the story of the marvelous healing of her little son whom the doctors had doomed to death. His unexpected restoration had been the means of bringing her and her husband into this Science. As I listened to the story of this healing, tears of human sympathy stood in my eyes, and this was the beginning of my own healing, although I knew it not until long after.

A week later this Christian Scientist left, after having planted the good seed. She was wise not to say much, and at the time I knew not that it was with the bread of Life I had been fed. During the weeks following, she wrote me such beautiful letters, yet she said little of Science. At last the end of August came, and although I had intended staying in the West indefinitely in search of health, a voice seemed to be calling me strongly back to my work. I obeyed it, stopping in Portland, Oregon, to see my new friend on the way. There I attended my first Science meeting. All seemed new and strange to me, yet I liked Mrs. Eddy's hymn, "Shepherd, show me how to go," and the testimonies were helpful. I went directly from the meeting to the train that was to take me to Chicago. My friend had given me a *Christian Science Journal* and several *Sentinels*, and I read every word of them. I shall never forget how uplifted I felt all through that journey back to duty. Arriving in Chicago, I began my work only to break down before two weeks were over. I was in despair. What was I to do? Go back to the West? Why not try Christian Science, which had done so much for my new friends? I put the thought into immediate action, and in four treatments, on successive days, I was entirely healed. I took up my work with a new zest and have been in the best of health ever since, being able to accomplish twice as much as before. Never can I forget the heaven into which Christian Science lifted me, after the hell of hampered activity I had experienced before. Not only was I able to teach in day-school but the next year in night-school as well. In a few months, to my great satisfaction, I lost some twenty-five pounds of superfluous flesh that had been a burden to me, and I never felt so well in my life.

O the sense of freedom and the joy unspeakable of those early weeks in Christian Science. It is true I had to come down from the mountain-top and prove every step of the way, but I never had to seek again for physical healing, for as I grasped the truth of being, the body seemed to respond to the harmonious thought. To me one of the most wonderful results of my healing was not physical but mental. I had ever been restless, hungry, longing for I scarce knew what. It seemed to be human affection. Like a child, I mutely looked into this face or that, to see whether it contained what could satisfy my need; but I only turned away, grieved and disappointed. At last it seemed as though the cup of happiness might be mine, but just as I was about to put it to my lips it was dashed to the ground, leaving me stunned and dazed by the sudden shock. Then divine Love lifted up my head and showed me that what seemed like a general wreck of all things was but the destruction of a phase of my own mortal thought,—the passing to a higher plane, on which I began to realize that there is really no love but divine Love; that all my restless yearning through the years was but a hungering after divine Love. God alone can fill the consciousness with lasting joy. How sweet to rest upon the sustaining power of God!

A life of purer purpose and sweeter meaning is my grateful offering to our beloved Leader, whose teaching has led me into this light.—Helen Annette Rice, Chicago, Ill.

I have for several years enjoyed the testimonies given by others, and they have afforded me so much comfort and encouragement that I feel it would be ungrateful to be silent any longer. I was led to investigate Christian Science by being healed of neuralgia, from which I had suffered much since childhood. The healing was instantaneous,—all swelling had left my eye in a few minutes, and I was perfectly well. I have never had an attack since. Seeing the teachings of Christian Science demonstrated in this way caused me to have faith in it,—the faith born of demonstration.

By reading Science and Health through twice, also some of our other literature, I gained an understanding of this wonderful truth that makes us free. I am only an infant in Christian Science, but my blessings have been innumerable. I am very grateful to Mrs. Eddy, whose love and devotion have led us out of darkness into light, and who is continually admonishing us to follow in the steps of our blessed Master. May I be able to give as I have received.

Miss Lou Ella Walk, Lampasas, Tex.

I came to Christian Science for the spiritual healing, and with the help of the Bible, Science and Health, and of a practitioner, I have been brought out of darkness into light. I cannot tell all the good that has come to me through this blessed truth, but this I know, that my feet are planted on the rock, Christ Jesus. I have had many beautiful demonstrations, but the one thing that I prize more than all else is the spiritual uplifting and the revelation of God as Father-Mother, Life, Truth, Love. When errors present themselves at times, I hear the call to come higher, and I know that man, governed by God's law, can reflect only good. To me Christian Science is divine Love expressed. I have tasted and know that God is good. I also desire to express my gratitude to our dear Leader, Mrs. Eddy, for guiding us into this new-old way.

Mrs. Amy L. Willard, Kirkwood, Ill.

In the latter part of January, 1905, after retiring about 10 P.M., I woke up one night with a dull pain. I began realizing the truth and dozed away to sleep again. A little before daylight I became wide awake; the pain and soreness had increased and spread, and it took but a few moments for me to feel that I had well-developed symptoms of appendicitis. All the symptoms and indications were pronounced and familiar, as I had been engaged in the practice of medicine for thirty-four years. I knew this disease before I knew anything of divine Metaphysics, and I realized fully that it required good work to check and control it.

There seemed to be a little doubt as to the sufficiency of my own understanding, but I went to work in Christian Science as I had never done before, and for the next three days I did the hardest mental work I ever did in my existence. During the evening and early part of the night of the third

Digitized by Google

day the pain became very annoying, but towards daylight of the fourth day I felt that I was getting the best of it, and by evening of that day most of the pain and soreness had disappeared. Three days after, nearly every trace of the disorder had vanished, and I felt well.

I would state here that owing to a great misfortune to my eyes—sunstroke—some eighteen years ago, I have as yet been able to read only with the aid of a very powerful magnifier. I have been able to spell out small portions of Science and Health,—one or two pages a day,—and with the very moderate understanding and knowledge thus gained, I have, all by myself, gained a victory which makes me feel very happy. My sight is improving slowly but surely.

From what little I have learned of Christian Science I love it more and better than anything I have ever studied before. For all the great good and help we have received through this Science, our first gratitude goes to our Father, and next to our revered Leader, who has done so much for all mankind.—FRED F. MULLER, Los Angeles, Cal.

I gratefully acknowledge and cheerfully bear testimony to the manifold benefits through Christian Science. Eleven years ago it found me at the grave's mouth. For five years I had been a miserable, useless, and almost helpless sufferer. For three of those years I seemed to be under the very shadow of death, which meant days of weakness, weariness, and pain, and nights of sleepless agony with ceaseless tossing and moaning. Those about me looked for me to die, and I wondered myself why I did not. My case was complicated. I was first incapacitated for work by a very distressing form of bladder trouble, supposed to have been the result of over-exertion, and diagnosed as ulceration of the urethra by two physicians,—one a visiting surgeon of the Woman's Hospital, Soho Square, London, E. C., England. This trouble caused the most intense, torturing pain, and every exertion, however slight, aggravated the suffering. To walk, or even stand, was almost impossible, and for three years I could not walk up-stairs. Later these conditions appeared to induce extreme nervous debility, followed by constipation, disordered liver, and heart failure.

I had taken large quantities of medicine, allopathic and homœopathic, had been in hospitals in London, England, and in Boston, U.S.A., had been twice on the operating table; in short, every known human invention for the alleviation of suffering had been tested for my relief, but like the woman in the Scripture, I was "nothing bettered," except for a little temporary relief; and I continued to grow worse, until, utterly prostrate with weakness and suffering, and knowing nothing else to look to, I resigned myself to what seemed inevitable, and calmly awaited the end which I felt must be very near.

But my extremity proved to be "God's opportunity," and at this juncture that white-winged messenger of peace, "Science and Health with Key to the Scriptures" by Mrs. Eddy, found its way into my home. It was sent to me through the mail by one who had been wonderfully helped by Christian Science, and who, hearing of my case, yearned to help me. I had not been able to read for some weeks, and when this book was placed in my hand, I opened it almost indifferently, but my attention was arrested by a leaflet it enclosed, bearing the testimonies of persons who had been healed through the reading of Science and Health. It struck me very oddly that a person could be healed of physical infirmities by reading a book; but a new hope sprang up in me, and I thought, Perhaps, now, there is a chance for me after all—if others could be cured, why not I? I closed the book and lifted my heart to God in prayer, that I, too, might be helped.

I started in to read Science and Health, and I read very little indeed at a time, but each day I found I could accomplish a little more, and in about a week I began to feel a change of symptoms,—my bowels were regulated, and from that day to this have never occasioned me the least discomfort. Little by little the different diseases relaxed their hold, and as I continued to read I gained strength and energy.

Later I had treatment from a practitioner, and although, taken altogether, my complete healing was slowly accomplished, it was sure; and from the first symptom of improvement, I knew it would come. For the last six years I have enjoyed the most vigorous health of my life, although considered healthy as a young person. I can now go all day on my feet, and sometimes all night, without feeling any ill effects. I never have any trouble with the bladder.

What Christian Science has been to me in the years since I first felt its "beneficent influence," I can never adequately express. My heart goes out in gratitude to God for His goodness, and to Mrs. Eddy for her beautiful, unselfish work for suffering humanity. I cannot conclude without bearing testimony to the great spiritual illumination gained through this wonderful teaching. Although I had received religious instruction in three different Christian denominations, I did not begin to know God aright until I was healed in Christian Science.

MRS. MARY M. VAUGHAN, Sussex, N. B.

For about nine years of my life I was a sufferer from rheumatism. During this time I had several severe attacks which lasted many weeks, and not one day in the whole time was I free from the fear of the disease. My heart was very much affected by the disease, and I suffered also from stomach trouble and constipation. I was told I must never overwork myself. I was treated by three physicians during the time, and at separate times when I had the severe attacks.

During the last severe attack of sub-acute rheumatism, when no hope was held out by the doctors for a permanent cure, a cousin who had been healed by Christian Science came to see me, and advised me to take treatment, saying that she knew it would cure me. Her encouraging words helped me much, for this was the first time I had been told that I could be healed. I was ready for something which would cure me, and I immediately arranged for Christian Science treatment. The treatment continued ten weeks, beginning in February, 1902. I was healed mentally and physically, for the fear of the disease left me entirely, and I was made physically whole.

Since that time many of my friends have noticed the change in my appearance, and have asked the cause of it. One said to me, "You almost persuade me to be a Christian Scientist." I have never had the slightest return of the disease, and what I rejoice over greatly is that I do not expect a return.

My people very seriously objected to my taking up the study of Christian Science, but now, since they see the improvement in my condition, they do not oppose it. I can but wish I might tell the whole world what has been done for me, that others might drink of the same fountain and live.—LIZZIE CORDER, Waverly, Tenn.

In the midst of seemingly insurmountable troubles, we are brought nearer to God than ever before, and the bitter tear often brings with it gratitude for the obstacles which we all have to rise above, proving that the near and active truth is bringing us into the kingdom of heaven. I was healed of a disease pronounced incurable, and this brought me into Christian Science. My gratitude for the truth which has held me, and enabled me to work out of mental conditions before they had become physical, cannot be measured. This truth has sustained me for years, and made me appreciate our much revered Leader.

MRS. L. B. BALDWIN, Kansas City, Mo.

From our Exchanges.

Death is not in our case a natural event. We are not made to die. It is horribly unnatural that we should die. A reason is rendered why we must die; and then comes the Gospel. For men, death is the wages of sin. To deny this is to decide with the philosophers of this world and to contradict the words of Christ and his apostles, that man is physically and spiritually one. Think as you may of the old account in Genesis; make it legendary if you please, but the sense does not change. Man was not made to die. He was warned not to sin against God lest he should die. He would not hear the warning, but disobeyed, and he died as he had been told that he must, and surely would.

MORGAN DIX, D.D.
The Homiletic Review.

The moral or spiritual elements that enter into human effort are the deep sources of final victory. They are brought into human experience in a very marked way when one lays hold of God who has eternal energy and is carrying forward all the movements of the world and human life to glorious moral victory. He who is doing God's work and gains the help of God himself feels within his soul the mighty divine impulse that sustains faith, hope, patience, courage, and other moral elements of character. Prayer secures and sustains these elements until a man overcomes all difficulties and obtains the original object of his desire.—*The Watchman.*

Man's need of finding a right relation to his fellow-men and to his God is creating a new sense of the need of God in Christ, and therefore there is an insistent demand for the fruits of the kingdom, for men who will rightly fulfil all their relations in every department of human experience. Only this one kind of fruit will meet the needs of mankind and satisfy the purpose of Him who made us, and so the tendency of all Christian Churches must be toward unity in the body of Christ.—*The Churchman.*

The *Cumberland Presbyterian*, quoting a passage from the *Christian Register*, speaks as follows. "We rejoice with our contemporary over the fact that a kindlier and truer Christian spirit seems to be abroad in the land. It is one of the encouraging signs of the times. One day, perhaps, Christians will learn that it is not by sword, nor by fist, nor by denunciation, but by love that the kingdom of God is to be advanced.

The larger view of Christianity is declaring that the Almighty is everywhere and always acting directly upon the earth for a righteous cause, because he is so acting at every moment, in an orderly and definite way,—a way which can be known of all men and relied upon. That way is called "law," and we say, "God's laws are unalterable and unchangeable." REV. THOMAS VAN NESS.
The Christian Register.

The churches have discovered that religion is no longer man's method of changing the disposition of God, but God's method of improving the character of man, and consequently there is a shift in the direction of their activities. God does not need any amendment man can offer, but men have needs which religion alone can supply.—*The Universalist Leader.*

They who seek first of all to order their lives, to think, to feel, to act according to that which they know to be right and best, unconsciously glide into currents of power which set always toward the deeps where the tides are full and strong.—*The Christian Register.*

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to The Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of The Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to The Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number, or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By the Hon. WILLIAM G. EWING of Chicago, Ill.

Twelve or more to one address, each, prepaid . . . 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* **PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

250 Huntington Ave., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,
Associate Editors.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.

Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month.

The date of expiration may be found on the address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

It is stated that the Armstrong Committee, which has been investigating insurance matters in New York State, will, among its recommendations, include the following:—

That policyholders have an effective voice in the government of the companies; that there be full publicity to the policyholders in regard to the management of the companies' affairs; that a uniform system of audits and accounts be prescribed by the State Insurance Department; that policies be limited to certain standard forms; that policies be safeguarded further than at present against forfeiture; that deferred dividend policies be either prohibited or greatly restricted; that the companies be obliged to make an equitable distribution of the surplus to policyholders at stated periods; that the companies make a greater proportion of their investments in real estate bonds and mortgages; that the control of subsidiary companies be prohibited; that investments in corporate bonds be regulated so as to prevent speculation and losses in attempts to float doubtful enterprises; that deposits with or loans to moneyed corporations be suitably restricted; that the discretion of the directors be subject to judicial and administrative review.

Henry Clews, of the firm of Henry Clews & Co., bankers, says: "I would not accept a salary of one hundred thousand dollars, because I think that I am worth more than that, but I think that the modern tendency toward what might be called herculean salaries is a mistake. I think, however, that the salary of the President of the United States—fifty thousand dollars—should be the highest paid in this country, and serve as a basis for all others. That is to say, there should be nothing above that, no matter what the service rendered."

The scientists of the Government, who have made a study of the ocean, and especially the Gulf Stream, say that the frequent statements that the Gulf Stream has changed its course are unfounded. The Stream has extensive variations, but its real course never changes. The currents vary greatly at times, depending on the strength, direction, and continuity of the wind, but the Gulf Stream itself maintains its natural course and never, considering it by years, has changed its ways.

The Colon station has sent to the Chief of the Bureau of Equipment of the Navy transcripts of wireless conversation between the stations at Manhattan Beach and Pensacola, which it overheard on the evening of December 19. The extreme range of the message was 2,150 miles. This not only betters any previous record made by the bureau, but it beats the record of the first trans-Atlantic cable, which reached only 1,800 miles, from Newfoundland to the west coast of Ireland.

The Payne Philippine tariff bill, which has been favorably reported to the House, provides that all goods totally produced within the Philippines shall come into the United States free of duty, with the exception of sugar and tobacco, which are to pay twenty-five per cent of the Dingley duty instead of seventy-five per cent as now. An important amendment incorporated in the report is that all American-grown sugar and tobacco shall enter the Philippines free of duty.

The recommendation of the Third Assistant Postmaster General, that the franking privilege be abolished, and that Senators, Representatives, and departmental officials be required to use postage stamps, funds for the purchase of these to be appropriated by Congress, is not likely to be adopted.

The Government pays for its railway service seventy million dollars. The belief has long prevailed that this is excessive, but legislative attempts to reduce it have failed.

Foreign.

Considerable interest was aroused by the announcement from Rome last week that the famous painting of "Christ Bearing the Cross" by Giorgione had disappeared from the Loschi Palace at Vicenza and was in Mrs. Gardner's "Fenway Palace," Boston. The sale of art treasures to foreigners is prohibited in Italy unless the State is first given the option of buying. It is now said this painting is not Giorgione's, but a rare De Maria.

The work of the restoration of St. Mark's, Venice, proceeds satisfactorily. The scaffolding supporting the apocalypse vault, which was most in danger, has been completed without the decoration of the vault suffering the least injury. The pillars of the Tribune and the chief walls have been protected and supported. The preservation of the Basilica is now assured.

Last year Japan imported from the United States 350,000 bales of cotton. For the first six months of 1905 there were in operation 1,100,000 spindles, 6,625 looms, and she used 456,039 bales of cotton.

Agitation has begun in Japan by far-seeing men to create in that empire a seaport, probably at Osaka, that shall rival or exceed those at Hongkong or Shanghai.

Industrial and Commercial.

Consul Bardel of Bamberg reports that a new explosive has been invented by Dr. G. Schultz of Munich and Mr. Fritz Gehre, an engineer of Pullach, Bavaria, which has been named "Vigorit." The consul says: "The inventors claim that the new explosive is absolutely safe against friction or concussion; that it can only be fired by an electric current; it cannot be affected by water, and is therefore safe for transportation on land as well as by water. Fire does not explode vigorit; it simply burns it up. Vigorit is free of poisonous gases after the discharge, and therefore well adapted for mining purposes. The new explosive can be made in different grades, and it is further claimed to be particularly well adapted for the filling of charges for heavy guns. To demonstrate the merits of the new explosive different experiments have been made under the supervision of men of experience, such as mining engineers, officers of the army, and other experts, and the result was pronounced to be highly successful."

The United States and Nicaragua Company, and the Nicaragua Finance and Improvement Company have effected a consolidation of interests on the west coast of Nicaragua, which is expected to result in the construction of a railroad system of about one hundred and seventy-five miles that will open up territories said to be rich in gold, silver, copper, and other minerals, also coffee, spices, dye-woods, and other agricultural products. The capital of the new concern will be ten million dollars. The new company takes over mineral, water, and timber interests embracing an area of nearly 650,000 acres and railroad rights permitting the construction of a standard gauge line from the National Managua road through the states of Managua, Leon, Matagalpa, Jinotega, and Segovia.

Figures of the trade of the United States with the United Kingdom in the fiscal year 1905 show that the exports from the United States to the United Kingdom aggregated $523,000,000 out of a total of $1,518,000,000, and imports from the United Kingdom aggregated $176,000,000 out of a total importation of $1,117,000,000. The imports were $118,000,000 from Germany, $100,000,000 from Brazil, $70,000,000 from France, $80,000,000 from Cuba, $62,000,000 from Canada, $52,000,000 from Japan, and $46,000,000 from Mexico. The exports were $194,000,000 to Germany, $141,000,000 to Canada, $76,000,000 to France, $73,000,000 to Netherlands, $53,000,000 to China, $52,000,000 to Japan, and $46,000,000 to Mexico.

With the beginning of the new year a new scale of wages was inaugurated in nearly every woollen manufacturing centre in New England, involving an annual increase in pay rolls of approximately $1,500,000. About fifty thousand mill operatives will participate in the increase at a percentage ranging from six to ten per cent. Employes in mills in the States of Ohio, New York, Connecticut, Rhode Island, Massachusetts, New Hampshire, Vermont, and Maine were affected by the new wage scale. In a majority of cases the increase was voluntarily made by the manufacturers, although demands for increased wages had been made at a number of the mills.

Application for a charter for the Chattanooga Iron and Coal Company, capitalized at $500,000, has been filed at Chattanooga, Tenn. The new company has acquired large ore mining interests in North Georgia and large timber and coal interests in the Sequatchie Valley.

The classification of the trans-Atlantic passenger service shows that in the year 1905 of the 1,002,000 passengers who landed at the port of New York, 105,000 came in first cabin, 107,000 in second, and 780,000 steerage.

General.

According to the report of the Fish Commission the introduction of frogs into Hawaiian Islands has been a success and they are multiplying, and it may soon be profitable to catch them for market, though this was not the original purpose, but to give them a chance to eat things that were not desirable to have around. A certain worm infested the grass or slime in or about the pools, with no good results to cattle or sheep if they happened to swallow them. It was thought that the frogs might assist in thinning out some of the noxious insects. The island rats disposed of most of the early importations. The frogs are now very well scattered over all the islands and are making their influence felt.

An interesting effort to apply the Parsons turbine to locomotive propulsion, says the *Scientific American*, is being made by Mr. Hugh Reid, a well-known British locomotive engineer. This inventor has designed a self-contained electrical locomotive, which will generate its own current by means of a boiler and a condensing Parsons turbine. He has also devised an air-cooled condenser of somewhat novel design for use with the same, and the forthcoming experiments with this locomotive are being anticipated with great interest by British engineers.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

"I serve."

W. D. MC CRACKAN.

THE ancient motto, "*Ich dien*" (I serve), which is attached to the crest of the Prince of Wales, deserves to be adopted by all practical Christians, for one of the unfailing signs of moral regeneration in human nature is the desire to serve. A tradition, which recent historical investigators are inclined to discredit, affirms that at the Battle of Crécy, in 1346, the fifteen-year-old Prince of Wales, known as the Black Prince, took this device from the helmet of the fallen King John of Bohemia. Be that as it may, the motto, "I serve," has been associated for many centuries with princely rank, and has thereby emphasized a truth of rare significance. The desire to rule others may be part of the sordid sensuousness which mortals must outgrow, but the longing to serve can only proceed from noble aspirations, deep-seated love, and genuine tender-heartedness.

Jesus read his students one of his most impressive lessons upon this subject, upon the occasion when two of them asked him for place and power. He pointed out to them in kindly admonition that the "great ones" among the Gentiles "exercise authority upon them," but that their greatness was to be of another sort. He said, "And whosoever of you will be the chiefest, shall be servant of all." At another time, shortly before his betrayal and crucifixion, he illustrated his idea of service by the apparently menial and material act of washing the feet of his disciples, thus symbolizing the exalted spiritual service of purification which they and all others who should understand his teaching were to perform for mankind. He said, "For I have given you an example, that ye should do as I have done to you."

This desire to serve must have expressed itself strongly in Mary of Magdala, after the "seven devils" had been cast out of her, for Luke tells us that she and other women "ministered unto" the Master. She was also among the faithful few who stood last at the foot of the cross and first at the open sepulchre. In Wagner's opera of "Parsifal," in which the theme of healing is introduced, there occurs a deeply impressive scene, which would tend to show that the great composer had knowledge of the marked trait in human nature referred to above. After Parsifal had freed Kundry from the spell which seemed to bind her to an evil life, her one hope, ambition, and glory was summed up in the idea of service. She is represented after her deliverance from sin as serving mutely, neither speaking nor singing, except to utter the one word "*Dienen*" (to serve).

It should not be forgotten that the word "minister," in common use as an equivalent for preacher or pastor, means "servant" in Latin, and indicates that those who fill such offices should learn to serve mankind as Jesus did, following his example in its entirety,—not merely essaying to reform the sinner, but healing the sick as well. The word "service" in the vernacular of religious denominations loses its true significance when it becomes a mere rehearsal of creed and doctrine and fails to include healing as well as instruction.

Christian Science shows how it is possible here and now to follow Jesus' example, so as to produce the fruits of health as well as those of holiness. The practice of Christian Science constitutes a metaphysical washing of the feet. It also liberates man's inherent desire to serve others from the trammels of impotence and sin, and gives this desire free play to act naturally, spontaneously, and effectively. It is part of the first grand impulse of gratitude which rises in the heart of him who has been healed by Christian Science, to wish to help and heal others. Indeed this impulse is one of the marks that the true healing has taken place. The promptness and joyousness with which the newly-healed often take up the task of self-abnegation and self-sacrifice, serves as a wholesome example.

The desire to serve bursts the shell of selfishness, lifts the burden of belief which would impose upon mankind a weighty sense of "cannot," and cuts short the tendency in human nature to fatten on the words and works of others without contributing to the common weal. Service makes "doers" and not merely "preachers" of the word, and stamps Christianity as practical and immediately available. The union of noble leadership and unremitting service is beautifully illustrated in our own day by the life of the Discoverer and Founder of Christian Science, who bids Scientists follow their Leader "only so far as she follows Christ" (Message, 1902).

Laws Which Alter Not.

MARY LLOYD MC CONNELL.

THERE are some remarkable records of the method pursued more than five hundred years before the coming of our Master, in binding men with fetters of self-imposed rules and customs. The Medes and Persians were ruled by absolute monarchs, whose word was law and regarded as irrevocable, until finally it became a common proverb among the nations: "According to the law of the Medes and Persians, which altereth not." We can imagine how much misery, loss, and injustice were thus occasioned. No government, no matter how honest and sincere, is far-seeing enough to legislate absolutely for all time. Each session of Parliament or of Congress sees the necessity for the revision or rejection of old statutes, and how injurious must have been the results when laws were passed in haste,—oftentimes in passion,—by irresponsible rulers acting upon the impulse of the moment; but in that olden time change of mind, repentance, brought no redress. A decree once issued, and sealed with the royal signet, could not be rescinded even at the desire of the monarch. It had become a law which could not be altered. The best that could be done was to issue further decrees and manifestoes, seeking to mitigate or circumvent the former mandates.

It is not difficult to imagine the conditions of confusion and uncertainty resulting from such law-making. There could be no real security or stability, no absolute assurance of safety in an empire thus governed. We have only to read the Book of Esther to understand something of the workings of this law which forbade the repeal of any decree once issued. The best that King Ahasuerus himself could do to help the Jews, after commanding their massacre, was to

Copyright, 1906, by Mary Baker G. Eddy.

Digitized by Google

allow them to arm and defend themselves, thus entailing terrible additional slaughter throughout his dominions.

We of a more enlightened generation may look backward into the ages and ask, "Who made this rule that no law, however unjust, could be repealed? Why were the people so stupid as to bow beneath such a yoke? Could they not realize that, having themselves originated such a law, they could by their own act also repeal it?"

Looking deeper into history, we find a close analogy between this ancient régime and the conditions surrounding us to-day, and we may well ask ourselves some searching questions. Are not scholastic theology and *materia medica* our Medes and Persians? Do they not make laws under which men groan, because of burdens heavy to be borne? and instead of rising in God-given might and throwing off the yoke, do not men submit to these self-imposed limitations, fears, and laws,—first making them decrees to govern their lives and then believing them to be irrevocable? It is easy to say the Medes and Persians were stupid fellows and could have broken their own laws had they so wished. It is not so easy to realize that mortals in all ages have declared for laws of sin, sickness, and death, and then have tried to circumvent them with the aid of theology and medicine, hygiene and diet.

Christian Science reveals the eternal fact that the bondage imposed by these man-made laws can be overcome by the understanding of divine law. God alone is the ruler and lawgiver of the universe. Human laws, like the laws of the Medes and Persians, are only the formulated opinions of mortals and can be annulled by the law of God. Take the common belief in the so-called laws of mortal existence, and we find a complete annulment of every one in God's own Word.

Concerning the supposed law of heredity, that prolific source of mortal suffering from one generation to another, Malachi says, "Have we not all one father? hath not one God created us?" while the Master commands us to "Call no man your father upon the earth: for one is your Father, which is in heaven." We also have authority to meet the asserted law of contagion, in the promises, "He shall deliver thee . . . from the noisome pestilence." "Thou shalt not be afraid . . . for the pestilence that walketh in darkness."

With respect to the belief that there is a law of poverty, the wise king has told us, "There is that withholdeth more than is meet, but it tendeth to poverty." How many of us make that a law of action? Again, the Psalmist says, "The young lions do lack, and suffer hunger: but they that seek the Lord shall not want any good thing." "No good thing will he withhold from them that walk uprightly."

The false mortal law of fear is the occasion of many an ill to which flesh is heir, but there is surely no room left for fear when we realize with St. John that God is Love, and that "There is no fear in love, but perfect love casteth out fear." Then there is the belief in a law of overwork. How many a tired toiler in the fields, or in an office chair can conquer the mortal sense of overwork by a realization of Isaiah's inspired statement, "They that wait upon the Lord shall renew their strength; . . . they shall run, and not be weary; and they shall walk, and not faint."

Lastly there comes the belief in the law of death. The Psalmist's question, "The Lord is the strength of my life; of whom shall I be afraid?" finds triumphant response in Hosea, "I will ransom them from the power of the grave; I will redeem them from death," and in St. Paul's exultant cry, "Death is swallowed up in victory." Thus encouragement to deny the authority of any law which God has not made, rings to us down through the ages. The Bible closes its majestic utterances with the blessed assurance, "And there shall be no more death, . . . for the former things are passed away: the "former things," —those laws of the Medes and Persians, which alter not.

In Science and Health our Leader speaks of this matter with no uncertain voice: "Let us remember that the eternal law of right, . . . exempts man from all penalties but those due to wrong-doing" (p. 385). "No law supports them [sin, sickness, and death]. They have no relation to God wherewith to establish their power" (p. 196).

Thank God, there is a law,—the eternal law of Truth, Life, and Love,—which altereth not.

Holding our Own.

LOUISE C. PEELAR.

SOLOMON'S wise counsel, "Trust in the Lord with all thine heart; and lean not unto thine own understanding," turns thought away from the smallness of human effort to the greatness of God's work, to the spiritual man and the spiritual universe, which we must understand in order to be perfect,—to have that mind "which was also in Christ Jesus." Realizing God's perfection and man's relation to Him, which is kindred to that of the ray of sunshine to the sun, we lose our fear of failure and can believe in success.

Our trust, which begins in weakness, increases as we learn more of God. We trust Him more because we know Him better. How can we be thankful enough for our Leader's teaching upon this infinite theme? How small was our understanding of God, before we were given our text-book, "Science and Health with Key to the Scriptures." Before Christian Science awakened a more understanding faith in God, the belief in human intelligence drove us from one error to another. Error is vacillating, but there is no uncertainty in Truth. God's law was thundered from Mount Sinai in no uncertain tone. Jesus' words come to us with all the majesty of Truth after nineteen centuries.

Satisfaction with the imperfect is a foe to progress in Christian Science. Self-righteousness would cling fast to iniquity, calling that good which is unfit to be contemplated. Self-justification betrays the weakness of human character. The false self is often hurt when its defects are brought to light, and a friend takes on the appearance of an enemy when a straightforward exposure of error is made. If, however, we acquire the habit of looking upon error as impersonal, this sensitiveness will disappear. Mortal mind is arrogant, and would make one think that he is better equipped mentally, or is more spiritual than another, but we can always meet the conceit of mortal mind with a more determined effort to hold all that mentally belongs to us,—not in a greedy sense of getting everything for ourselves, but with the right thought of our duty to God and to ourselves. There is, in reality, no mortal mind to interfere with man's reflection of all the intelligence there is, all the good there is. There is no robbery in Christian Science, and Christian Science must govern us.

The question Who shall be first and who shall be greatest? seems to be occupying mortal thought more than ever, but we are learning to be more watchful, not allowing ourselves to be led into believing that anything that God gives can be taken from us. We need to guard against ignorance as well as maliciousness, for the misconceptions of the human mind have a thievish propensity if we do not meet them quickly with truth. We should never accept any estimate of man as less than the reflection of infinite good.

If error is more readily detected than before we made a study of Christian Science, it must be because we are analyzing human thought from the standpoint of a clearer sense of truth. It is an advantage to understand the working of mortal mind if we meet it promptly with truth. The subtlety of mortal mind makes it necessary to have more and more trust in God. When we learn how to obey the commandment our Master designated as the greatest: "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy mind," we shall have attained to the true perception of loving service and real living.

When we understand the omnipresence and the omnipo-

Digitized by Google

tence of the one Mind, we shall feel secure in our possessions, knowing that we are always safe, for in His presence there is no danger, no discord. Trusting in God with all our heart, leaves no reservation for any lesser or seeming power. It must be an unconditional surrender of all beliefs in life, substance, and intelligence in matter. This means much. The eleventh chapter of Hebrews is a brief but graphic history of the victories which attended Abraham, Isaac, Jacob, and Moses, who trusted Him and by actual demonstration proved that "things which are seen were not made of things which do appear." Abraham, that early representative of trustfulness, inspires us with a desire to go and do likewise. Jesus is our perfect example of perfect trust. He taught us how to live by reflecting God. He said, "I can of mine own self do nothing," and "the Father that dwelleth in me, he doeth the works." It was his absolute reliance upon Spirit and spiritual law that enabled him to walk on the waves and raise the dead. To him good was natural and God's law the only law.

A Simple Rule.

ELMA E. WILLIAMS.

IN our every-day life there come up many problems which are not always easy to solve, but which we must work out,—problems of our relations with our fellow-men in business and social life, questions of duty in civic and religious life, rules of conduct in the home; in fact, we are everywhere confronted by the question, What is the right thing to do?

A clear, definite rule for action was given me recently, and it has proved so helpful that I pass it on, hoping that others may gain from the use of it. It is as follows: Will I know more of God by doing or by not doing this? The right answer to this question, taken as a guide, must lead one in the path of righteousness.

By following this simple rule I have proved that problems which otherwise had been the source of much perplexity were easily solved. This rule, intelligently applied, has given me a clearer realization of God as an ever-present and available help,—as a Father to whom I can go in trustfulness, knowing that I shall receive what I need. It has also helped me to overcome a strong repugnance for a certain kind of work which it seemed necessary for me to do, by enabling me to understand that my first duty was to know God; and by destroying hatred with love, it certainly would teach me more of God.

Through following this rule, courage has been given me to face and overcome manifestations of error which before had seemed too formidable for me to handle alone, and I know more of God because of the struggle and the victory. It seemed that one of the strongest holds which error had in my consciousness was a sense of fear, but by going straight ahead and doing whatever came to me to do, or refraining from doing it, according as the answer to the question, Will I know more of God by doing or by not doing this? required, much of the sense of fear has been destroyed.

In gaining a larger knowledge of God, I necessarily gained a larger knowledge of Love, and the apostle says, "Perfect love casteth out fear." The desire to know God is a factor in all human consciousness, but how to know Him has puzzled mankind for ages. To many He seemed so far off, so unknowable, but through the teaching of Christian Science as given in Science and Health by Mrs. Eddy, we are learning to know God, "whom to know aright is Life eternal" (Science and Health, Pref. p. vii.). Hence any experience, any effort, any rule whereby we can learn more of God, good, is welcomed by every earnest seeker after truth. Jesus said, "Ye shall know the truth, and the truth shall make you free."

Selected Articles.

Christian Science, lifting thought above the seen and temporal, and directing it to the unseen and eternal, takes the first chapter of Genesis as the statement of the spiritual creation, perfect, entire, finished, and pronounced by divine wisdom good, nay, very good,—a creation consisting of the unfolding or revelation of truth to or above the chaos of a seeming mist of human thought. This infinite light, dispelling the darkness or negation of false sense, ignorance, is ever revealing more of the divine character of man and the universe. "The sufferings of this present time are not worthy to be compared with the glory which shall be revealed in us." "This then is the message which we have heard of him, and declare unto you, that God is light, and in him is no darkness at all."

Now that which makes manifest is light; as St. Paul writes, Christ Jesus "brought life and immortality to light through the gospel." The spiritual and only creation must, therefore, consist of the revelation of the eternal, changeless facts of a creator who is Spirit and Life, and of a spiritual cosmos, as perfect as its cause or creator. The Scriptures record the spiritual progress or history of mankind, ever expressing the power and presence of an overruling divine Principle, "the same yesterday, and to-day, and forever." The mist arising from the ground, the illusory sense, is gradually lifted by the units of spiritual consciousness, the prophets and apostles. Abraham, piercing this illusion, revealed the power of faith in the invisible. Moses discerned the pattern in the mount and revealed the triumphant power of God over seeming material obstacles. Isaiah had a wonderful glimpse of the spiritual origin of man, and Jesus fully reveals the divine sonship or indissoluble at-one-ment of God and man in His image and likeness. To-day Mrs. Eddy stands as the Revelator of the Science of Jesus' life and work, or scientific Christianity. The Scriptures begin with the first chapter of Genesis as the account of spiritual creation, wherein man has dominion over all the earth, being the highest expression of Mind, God; and they end with the book of Revelation, wherein John beholds the ever-present spiritual universe, the new Jerusalem, wherein is "no more death, neither sorrow, nor crying, neither shall there be any more pain: for the former things are passed away." The Adam theory, or the belief of mind in matter, has never healed or benefited one human being; whereas the revelation of the divine presence and power forever heals, saves, and blesses humanity, and, as Isaiah says, will gradually "remove the covering over the face of all nations," and reveal man and the universe at one with divine Love, the eternal Principle of being, wherein we may love our neighbor as ourselves, and all malice, ambition, and evil will vanish, like the darkness, into its native negation. SUE HARPER MIMS.

Editor *Evening Press.*

In your report of a recent sermon at Albion the speaker said, "There are so many divisions of the church, and so many new teachers that people are confused." It would seem that this statement was the key to the whole problem. Our brother claims for his church that it is the only true instrument to hand down "The faith once delivered to the saints." So do others, and it is quite probable that each can prove its right to the position quite as logically as can the one our brother represents. It is granted that the Christian church is founded on the teachings of Jesus Christ, and right here it is well to note the proofs or signs which the Master gave as indicating his true followers.

He said, "Go ye into all the world, and preach the gospel to every creature," and then he enumerated the signs by which all who believed (understood) him should be known; they should heal the sick, raise the dead, cast out devils

Digitized by Google

(evils), etc. These were the only accredited signs of a believer in the teachings of the Christ, and that these teachings were followed for three hundred years is proved by the works done by the church for that length of time.

It follows, then, that if all mankind will become obedient to all the commands laid down by the Master, the same signs will follow as of yore. His words were, "If ye love me, keep my commandments," not in words only, but in spirit and in deed. Christian Scientists do not claim a monopoly of the healing. On the other hand, they aver it as a universal heritage to all mankind on conditions. Jesus said, "If ye continue in my word, then are ye my disciples indeed."

CHARLES K. SKINNER.
Jackson (Mich.) *Press.*

Ezekiel refers to a certain tree, the leaves of which should be for medicine. Of it he says, "It shall bring forth new fruit according to his months, because their waters they issued out of the sanctuary: and the fruit thereof shall be for meat, and the leaf thereof for medicine." Who knows where to find the tree "whose leaf shall not fade," and whose fruit shall not "be consumed," and which grows by the waters that issue "out of the sanctuary"? Will any one insist that such a tree is a material one? Evidently Ezekiel's prophecy referred to a coming revelation of Truth with healing and sustaining powers for all mankind. He undoubtedly referred to the tree which John mentioned as "the tree of life."

There are many figurative expressions in the Scriptures which include the word medicine, but they point to an implicit dependence upon God as a means of health and harmony. It is not unlikely that the good Samaritan poured in oil and wine, as stated in the story related by Jesus. Perhaps these were considered proper remedies in that age, but Jesus, who referred to this act of kindness, did not himself use material remedies nor recommend them, and he is the true example. Jesus' recitation of this story was not for the purpose of recommending oil and wine for human ills, but to give an example of charity and love.

ALFRED FARLOW.
Boston Times.

Professor Gates claims to have discovered more than forty injurious products which are produced in the blood by "bad emotions," such as envy, hatred, etc. These elements, he asserts, are "life-depressing and poisonous," but, on the other hand, the opposite feelings, which are evidenced in goodness and kindness, are equally prolific in physical elements favorable to health. The professor has not hesitated to affirm that the physical consequences and penalties of sin are thus demonstrated by chemical science.

It is very interesting to find that science is thus able to demonstrate not only the physical but also the moral ravages of sin. It remains and ever will remain true that the man who "desireth life, and loveth many days, that he may see good," must "depart from evil, and do good."

The London Christian.

As a matter of fact, no one but a Christian Scientist knows how this religion heals, and we say emphatically that it is not faith cure, it is not blind belief in the practitioner, it is not auto-suggestion, self-mesmerism, or the action of the human mind in any form. St. Paul said, "Let this mind be in you, which was also in Christ Jesus." It is this Mind which healed through Jesus, and which heals to-day and will always heal, when it is sufficiently understood and possessed by mortals, for this Mind is God.

For whoever would be fairer, illumination must begin in the soul. The face catches the glow only from that side.

WILLIAM C. GANNETT.

Among the Churches.

New Orleans, La.

The Second Christian Science Church, at Dufossat and Pitt Streets, held its first service in the little new church yesterday morning [November 30].

While the service was very simple it was quite impressive. The pulpit was decorted with plants and flowers. There was quite a large attendance.

New Orleans (La.) *Daily Picayune.*

Rich Hill, Mo.

First Church of Christ, Scientist, this city, has just purchased St. Luke's Episcopal church, located on the corner of Third and Walnut, and will proceed at once to repair and repaint the building and equip it for their purpose. The Christian Scientists are steadily increasing, and now that they have a place of worship of their own will no doubt continue to grow.—*Rich Hill* (Mo.) *Review.*

Growth in Brighton, England.

It seems a fitting time just now to express something of the gratitude all are feeling in First Church of Christ, Scientist, Brighton, for the very decided progress that has been made. Looking back to this time last year, our report to the Field showed the number at our meetings to be about fifty. To-day we rejoice in an average attendance of one hundred and twenty, an organized church, and steady increase. On November 5 we removed to the Athenæum Hall, North Street, from the old quarters in Compton Avenue, where we were pressed to the uttermost for room. We are now in the very center and busiest part of the town, and have seating accommodation for three hundred and fifty.

Deep is our gratitude to God, that through our beloved Leader, Mrs. Eddy, many who are thirsting are coming to the sweet waters of Truth.—CONRAD R. ANDREAS, *Clerk.*

Growth in Asheville, N. C.

We have been so abundantly blessed of late, that we wish to share our joy and gratitude with all. A year ago we gave our local building fund as a Thanksgiving offering to The Mother Church, happy to lay aside our personal interests and desires, for the time being, that we might add our mite to the Mother vine, whose health and prosperity is also the health and prosperity of all her branches. This was done, however, with no sense of sacrifice, but rather with thanksgiving.

Our church membership is small, only twenty-six in number, so our offering was large only in love, but the motive which prompted it has, as in the case of the loaves and fishes, opened our eyes to behold more of infinite, ever-present good,—and our local needs have been wonderfully met.

The Thanksgiving offering was sent to The Mother Church in November, 1904. In March, 1905, First Church of Christ, Scientist, of Asheville, purchased one of the most desirable sites in this city. The lot is one hundred and twenty by one hundred and eighty feet. The house is well adapted to our needs. The first service was held in our new church home Sunday, November 5, and we cannot possibly express what was in our hearts on this glad occasion. We can hardly, as yet, realize the extent of our blessedness, but we are deeply grateful to God, and to our dear Leader, whose untiring labors of love have made it possible for us to take this advancing step. We have endeavored to make our new quarters a worthy expression of our appreciation of God's great gift to the world,—Christian Science,—and to the noble woman through whom it has come.—*Correspondence.*

The Lectures.

Philadelphia, Pa.

Mr. Bicknell Young delivered a lecture in Horticultural Hall, October 30, under the auspices of First Church of Christ, Scientist. Mr. Charles H. Fahnestock, First Reader, introduced the speaker, and said in part,—

In vain have the creeds and dogmas or scholarly attainment essayed to solve the problem, "What is Truth?" simple though it is; thereby confirming the words of the Master, "Whosoever shall not receive the kingdom of God as a little child shall in no wise enter therein." Imbued with this child-likeness, with a heart filled with love for God and mankind, the Discoverer and Founder of Christian Science, the Rev. Mary Baker G. Eddy, has been enabled to answer the question, illumine the Scriptures, interpret the assertion of the Christ, "I am the way, the truth, and the life," and give to the world her marvelous text-book, "Science and Health with Key to the Scriptures," the perusal and study of which has revealed to thousands their true being and relation to God, causing them joyously to exclaim with Job, "I have heard of thee by the hearing of the ear: but now mine eye seeth thee;" and in a spirit of loving solicitude reiterate to fellow-mortals Job's all-inclusive admonition, "Acquaint now thyself with him, and be at peace." This spiritual perception of, and acquaintance with God, is the impregnable bulwark of Christian Science. It quells fear, dissipates doubt, and solves the problem of atonement through the revelation and realization of man's true at-one-ment with God.

The plaintive wail for relief from the thraldom of mortal suffering, the cry for rest and peace, finds a ready response and speedy succor in this applied Science of Christianity which Jesus taught and practised, as thousands now joyfully bear witness. Above all, it unfolds the true import of the Master's utterance in his wonderful prayer preceding his betrayal, "And this is life eternal, that they might know thee the only true God, and Jesus Christ whom thou has sent."

Correspondence.

Richmond, Surrey, England.

Out of that land of marvels, America, Christian Science has come to claim the attention of all thinkers, and though a leading English bishop has denounced it as "dangerous heresy," its crusade of teaching has created a deep interest. Lately much has happened to further this interest, and not even the most wet and depressing of November evenings kept away those who wished to hear a lecture on the subject, given at the Castle Assembly Rooms on Thursday evening [November 30]. There were few vacant seats in the spacious hall when Mr. Hervey Bathurst briefly introduced the lecturer, Mr. Bicknell Young, a member of the Board of Lectureship of The First Church of Christ, Scientist, Boston, U.S.A.—*Surrey Comet.*

Manchester, England.

A very full definition of Christian Science was furnished in a lecture given by Mr. Bicknell Young of Chicago, in the Free Trade Hall, Manchester, on Tuesday evening [December 5]. That the announcement of the lecture had created considerable local interest was evidenced by the large audience, which almost filled the greater hall. Sir Thomas T. Shann (Deputy Lord Mayor) presided. The lecture was listened to with the closest attention, and at the close Sir Thomas Shann was accorded a vote of thanks on the motion of the Earl of Dunmore.—*The Reporter.*

Indianapolis, Ind.

Rev. William P. McKenzie lectured in Shortridge High School, Tuesday evening, November 7, under the auspices of First Church of Christ, Scientist. He was introduced by R. Stanhope Easterday, State Publication Committee, who said in part,—

Christian Scientists advocate but one criterion by which they would be judged. The great Teacher said that a tree should be known by its fruits, and systems of theology and medicine can rightly be judged on no other basis. Pre-eminently this age is susceptible to the argument of works and to no other. Truth is infinite, it is all-powerful, it needs no defence, so that the defence of Christian Science does not come within the province of its lecturers. Since, however, truth alone can confer harmony, its delayed triumph must entail inconvenience and suffering, and the endeavor on the part of Christian Scientists to spread the knowledge of this healing truth is wholly justified. Our purpose is, therefore, purely philanthropic.—*Correspondence.*

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Revivals Discussed.

THE Philadelphia *Public Ledger* recently interviewed Rev. Dr. S. Parkes Cadman of Brooklyn, N. Y., regarding certain evangelistic work now being carried on, and it is interesting to note that this well-known Congregationalist strongly objects to some of the features which characterize the teachings and methods of the evangelist whose work was under discussion. He says that the root of his objection is the evangelist's "assumption of authority to voice a salvatory dogma, coupled with the declaration that thus only can a man be saved. . . . denouncing those who differ from him." More specifically, he objects to the demands for "belief in a personal devil, in an eternity of burning for those who are 'lost,' " etc.,—which show "no faith that the Father can finally save all."

Dr. Cadman states his position as follows:—

"First. No man has the right to restrict the life and love of God, in the Gospel of Jesus Christ, to the holding of his personal views. I maintain that this attitude at this late day is not religious, but irreligious, and rather than being orthodox is, in fact, heterodox.

"Second. Any theory of biblical inspiration which claims to be both absolute and final, and rejects the assured results of reverent and constructive scholarship, is a derogation of the work of the Christian Church and is an injury to the kingdom of God.

"Third. One of the greatest heresies abroad to-day is the proclamation of personal opinions about the Bible and its teachings, without allowing the Book to speak for itself in its general purpose and contents."

He advises that there be preached "an unhampered gospel, based upon simple faith in our Lord Jesus Christ, who said that 'if any man willeth to do the will of my Father it shall be given to him to know the doctrine.' "

The reporter asked Dr. Cadman, "Under what circumstances, in your opinion, could an evangelistic effort command undivided support?" His answer was, "Not until the pastors of all of the churches are united on this fundamental issue of presenting the gospel of Jesus without any theological coloring, high, low, or middle, concerning any subordinate issue." To the further question, "Is there a probability that such an effort, on this non-theological basis, will come in the near future?" he replied, "As regards the outlook, a far more hopeful sign of movement toward God in this country is to be seen in the awakening of the social conscience than in any sporadic movement anywhere. I am deeply persuaded that the religion of Jesus is on the verge of a greater and more hearty acceptance than has occurred since the Wesleyan revival."

We regret that this scholarly critic, who has pointed out some of the weaknesses of modern evangelistic effort, did not go farther and call attention to the fact that the *entire* gospel of our Master must be preached, and that this gospel includes the healing of the sick as well as the reformation of the sinful; also that "faith, if it hath not works, is dead." The great religious revival is here, and has been here ever since Mrs. Eddy promulgated the scientific understanding of the Bible through her book, "Science and Health with Key to the Scriptures."

ARCHIBALD MCLELLAN.

A Sacred Union.

What therefore God hath joined together, let not man put asunder.
Jesus.

THESE words were spoken by the Master under circumstances which render them peculiarly significant to our times, but their meaning would be unwarrantably restricted if it were limited to a declaration of the sacredness of the marital relation. The expressions of truth which pertain to the redemption of humanity likewise have their appointed place and relation to human welfare and advance, and this order cannot be disturbed or ignored in our thought without trespassing upon Truth's law of identity, and experiencing consequent loss.

To illustrate: every word and work of Christ Jesus witnesses to the lawful and necessary union of truth's declaration and demonstration. Their supplementary relation and mutual dependence was unfailingly recognized in all his teaching and ministry, and in his last counsels to his disciples he repeatedly expressed the thought that this union was to be preserved inviolate,—they were ever to "preach" and to "heal." Their loyalty to this sacred bond was chronicled in the steady and irresistible progress of the early church. They overcame every obstacle which individual and organized antagonism could present, and so long as the union of truth's statement and proof was maintained, so long were the gates of hell unable to withstand them.

Thought was directed to this subject by a recent editorial on the "Cause and prevention of colds," which appeared in a leading religious journal. After making a number of statements which would tend to awaken and intensify fear, the writer, with no apparent sense of the humor of the phrase, proceeds to give the present "notion of physicians" as to the proper means of prevention. We are to guard against infection, microbes, etc., as physicians commonly advise. This is all that a twentieth-century Christian periodical has to say respecting the matter, and it furnishes abundant evidence of the complete divorce, in the writer's thought, and presumably in the thought of those who follow him, of Christianity and spiritual healing. The prophetic assurance of Isaiah and many another seer, "I will heal him, saith the Lord," has been forgotten, and no citation is given us of the spiritual sovereignty manifest in Jesus and his disciples through the "healing of all manner of diseases;" no hint that holiness is the basis of health,—that he who "dwelleth in the secret place of the most High" shall be delivered from the "noisome pestilence;" no reminder of the wondrous works on which Christianity was founded,—how that through faith its sturdy pioneers "stopped the mouths of lions, quenched the violence of fire, escaped the edge of the sword, out of weakness were made strong, waxed valiant in fight, turned to flight the armies of the aliens," and "received their dead raised to life again." In all this editorial disquisition there is neither counsel nor suggestion that we are to attain unto the "more abundant life" of spiritual and physical freedom which Jesus lived, by looking away from matter and finding escape from its every ill in the apprehension of Spirit.

In the presence of humanity's pitiful suffering and outcrying need, men of every faith should welcome the fact that in Christian Science a stupendous and effective protest against the asserted lapse of spiritual healing is being made. More than this, they should rejoice that the reawakened understanding of the naturalness and legitimacy of health which has been gained by earnest students of Mrs. Eddy's writings is reuniting in practical demonstration "that which God hath joined," and that again, as of old, the humble and the true are going forth into all the world *to preach and to heal.*

JOHN B. WILLIS.

The Divine Completeness.

AT the present time, as never before, there seems to be a willingness to permit the fair and free discussion of religious subjects, and this is surely evidence of a deep desire

Digitized by Google

to know the truth. It is true that these discussions are usually along the lines of popular belief, and yet they point to the possibility of reaching something beyond it. No professed Christian can well deny that the truth is knowable, since Christ Jesus has said, "When he, the Spirit of truth, is come, he will guide you into all truth;" and the knowing of truth is surely the one all-important consideration for humanity, inasmuch as the great Teacher never intimated that aught else could bring deliverance from bondage. He said, "The truth shall make you free."

In the text-book of Christian Science, Mrs. Eddy says, "The time is not far distant when the ordinary theological views of atonement will undergo a great change" (Science and Health, p. 24). In fulfilment of this we find the following recent statement by a prominent religious writer: "God never needed to be atoned into love, nor did He ever require from His perfectly holy Son the endurance of unspeakable suffering as a substitute for sin's penalty, for the vindication of His honor or His government." This sentiment, which would have been considered heretical a few years ago, but expresses the "great change" of belief which has come respecting this question. Linked to this, however, is the belief that not only is suffering a necessity of man's being, but that it is inseparable from the divine nature. Such a belief is unquestionably based upon the evidence of physical sense, which does not rise above the material plane. Suffering implies imperfection and has no relation to Spirit or spiritual being, according to Science and the testimony of Holy Writ.

Christian Science teaches that God was and is perfect; that the divine nature is not subject to any evolutionary process by which perfection is reached. The Psalmist says, "From everlasting to everlasting, thou art God," —absolute good. Christian Science does not deny that a sense of suffering attends the human belief in error, whether it be entertained ignorantly or wilfully, until the error is overcome, and it teaches that the overcoming of both sin and suffering is reached only by knowing the truth about God and man; namely, that in God neither the one nor the other can exist. The divine perfection is therefore the glorious hope which Christian Science holds out to those who are struggling to escape from the bondage of suffering, for while suffering may impel the wanderer to seek the Father's house, the abode of Spirit, it can have no place therein. When this truth is scientifically known the atonement is found to be as truly available for all human need as it was in the blessed ministry of Christ Jesus.

Nearly all who testify to the healing power of Truth as proved to them in Christian Science, after years of suffering in which God seemed far removed from their need, emphasize strongly the fact of the spiritual illumination that comes with the healing and reveals God as infinitely near in every hour of need. One whose testimony is given in this issue of the *Sentinel* says, "Great as has been our physical healing, the spiritual benefit has been so much greater, that were it not for the obligation I feel under to suffering humanity, I should scarcely think it worth while to enumerate the physical benefits." Thus does Christian Science give proof that as we draw near to God through the knowing of truth, both sin and suffering—the shadows of material sense—disappear in the light of the divine presence, in which is "no darkness at all."

ANNIE M. KNOTT.

The Board of Lectureship.

REV. IRVING C. TOMLINSON of Concord, N. H., who resigned from the Board of Lectureship some time ago, has been reappointed to membership on the Board.

All remittances for subscriptions, professional cards, etc., and all correspondence relating to such matters, should be addressed to The Christian Science Publishing Society. The Editorial Department has nothing to do with the business affairs of the Society.

Letters to our Leader.

Reading, Mass., December 27, 1905.

Rev. Mary Baker G. Eddy,

Pleasant View, Concord, N. H.

Beloved Leader:—Believing that it will add one more ray of sunshine in your daily demonstration, to learn of the doings of our little church, in contributing our mite to help finish the beautiful temple of Christian Science in Boston, we venture to send you a short statement of the same. Since September 1, 1902, there has been sent from the Reading church a total amount of $4578.25, which includes all of our building fund, the regular pledged quarterly payments to that fund, the rentals from the two cottages now standing on the site of our church building lot, and also several special collections, the last of which was our Thanksgiving offering of $708.06. If your important duties will permit you to glance at this letter, we shall feel very grateful for the privilege of coming into such close touch with your thought even for one moment; and, on the other hand, if it never reaches you, we shall love you just the same.

And now with honest gratitude for two fundamental blessings,—first, the Revelation of Christian Science; and second, the fact of living in the same day with Truth's great Revelator to this age,—we will not presume to encroach any longer upon your precious moments of holy and whole consecration, but humbly hope that this simple, childlike message, freighted with love to you, will touch your great but tender heart with a grain of comfort.

In truth and simplicity, we are your loving followers,

THE BOARD OF DIRECTORS.

First Church of Christ, Scientist.

MRS. EDDY'S REPLY.

Beloved Brethren:—Your unselfed labors must swell the song of angels. M. B. EDDY.

Cranford, N. J., November 26, 1905.

Rev. Mary B. G. Eddy,

Pleasant View, Concord, N. H.

Beloved Leader:—It is with hearts filled with gratitude and love to you who have taught us how to love, that we write to tell you of the action taken by our church this morning at the close of service. When the *Sentinel* came yesterday with the suggestion that we make Thanksgiving contributions to the Building Fund of The Mother Church, our trustees immediately took action and presented the matter to the church, who with one accord voted to send at once twenty-five hundred dollars to the Treasurer of The Mother Church, twenty-one hundred dollars of which was our entire building fund. We have already had our blessing in giving to this fund eighteen hundred and thirty-five dollars, having given twelve hundred and forty dollars of this amount during the past year. Our congregation of about one hundred, seventy of whom are members, wish you to know, dear Leader, how very lovingly and gladly this was done, and we all feel that our own church is all the nearer for having taken one step more in unselfish love.

Most lovingly and obediently yours,

CHARLES G. BLISS., ETTA D. SMITH,
BELLE S. COOPER, JOSEPH J. POGGI,
JESSIE C. BAILEY, *Committee.*

For First Church of Christ, Scientist, Cranford, N. J.

Atlanta, Ga., September 16, 1905.

Beloved Leader and Teacher:—I write only a few lines to assure your loving, faithful heart of our loyalty, devotion, and prosperity. I have just finished a fine class of workers —going out from class into the waiting harvest of Truth and Love. In this class was a colored man, bishop of the Methodist church in this section; he is meek, unobtrusive, and intelligent. He was healed by reading Science and Health, and goes out to preach the omnipotence of God—

Digitized by Google

the divine Presence who heals and blesses humanity. I am *awake,* wide awake, to the great need that Christian Scientists have to work on the problem of racial hatred, antagonism, and prejudice. I believe it is at the root of much disease and poverty in this section. I have instructed my students to strive to know its unreality, and to hear only the divine voice, proclaiming, "On earth peace, good will toward men." This is so vital a problem, so serious a menace to this country, that we need the help of all sections to meet it in love and harmony. Good is supreme!

We know that Love is leading, protecting, and blessing you every moment, for the inexpressible good you have done and are doing; and each day we realize the splendor of your work and mission more and more.

Devotedly yours in good,

SUE MIMS.

Kansas City, Mo., November 28, 1905.

Mrs. Mary Baker G. Eddy,

Pleasant View, Concord, N. H.

Our Dear Leader:—The pupils of our Sunday School have for many months contributed quite liberally to The Mother Church Building Fund, but decided to increase their demonstration this month for a special Thanksgiving offering, and to-day are sending to Mr. Chase seventy dollars and forty-four cents. The sum stands for no little self-denial and much love. If the help be small toward the building of the edifice, it has made broad and firm foundations for the church in a good many little children's hearts and helped them to express the gratitude and thanksgiving of which it is the symbol. The children all join in a most loving greeting to you.

From the Sunday School of First Church of Christ, Scientist, Kansas City, Mo.

J. F. GOODMAN, *Secretary.*

Plymouth, Pa., November 28, 1905.

Rev. Mary Baker G. Eddy.

Beloved Leader:—I am writing this to tell you of a little Christian Science Society lately organized in Wilkesbarre, Pa., and at the request of its members to send you grateful acknowledgment for the health and happiness which have come into their lives through the understanding, in a small degree, of their relationship to God as revealed through you in Christian Science. Last Sunday a collection was taken for the Building Fund of The Mother Church, and added to the amount in the treasury, making forty-seven dollars, which has been sent to Mr. Chase.

Hoping this demonstration will please you and lead to greater things in the future, I remain one who is striving to follow your teachings.

Lovingly yours,

MRS. MARY I. AUSTIN.

Grand Forks, N. D., October 18, 1905.

Rev. Mary Baker Eddy.

Dear Leader:—Your "loving benediction" fell into grateful and affectionate hearts. Already "Heaven's rich blessing" *is* crowning our labors, and "unity and praise" dwell within us, a sweeter concord than ever before. Yes, our church is chartered and was paid for when dedicated, but without your instructions, your watchful care, the uncovering of errors and unveiling of Love's ever-present action and co-operation with us, this edifice could not have gone up. The increased interest in Christian Science and kindliness toward it in the community, as well as the greater love and unity among our own people, indicate that the building of our church was prompted by gratitude to God and love toward man.

Thanking you for your inestimable labors in our behalf, we are, gratefully, your followers in Christ.

THE BOARD OF DIRECTORS.

First Church of Christ, Scientist.

Testimonies of Healing.

Many times the loving gratitude of a full heart has prompted the writing of this testimony, and I can truly say that "Eye hath not seen, nor ear heard, neither have entered into the heart of man, the things which God hath prepared for them that love him." I was born and reared in an orthodox church, both my grandfathers having been active pioneer preachers. From early childhood my chief interest and delight was in the work of that church, although I never accepted many of its teachings and always frankly stated my objections. When very young a great trouble came upon me, and I gradually settled into a condition of melancholia, fast developing into insanity, with which my mother had passed away. I could never describe the agonizing, hopeless despair that never lifted. The days were dreadful, the nights worse. Nothing on earth had power to arouse in me any interest, and even my husband's loving care could not break the nightmare of hopelessness.

In the hour of my greatest trial, when the physical and mental suffering seemed beyond human endurance, two dear women brought me my first true impression of Christian Science. All through that summer they manifested such sweet, unaffected love and helpfulness that we began to say, "There is surely something in Christian Science." They did not talk it, they lived it, and I finally began asking for the literature. Very soon, to my utter astonishment, that absolute hopelessness, the forced cheerfulness when anyone was with me, had disappeared, and I sang happily all the day.

Then the most loathsome "breaking out" I have ever seen appeared on my hands and arms, rendering me helpless. The conditions were almost unbearable and for several days and nights I did not close my eyes. When the disease appeared on my face, shoulders, and limbs, I still refused to consult a doctor and my husband telegraphed for help in Christian Science. That night I slept; in a week I was doing all my work, and in two weeks I was perfectly healed. At first my hands were terribly scarred, but I knew that evil had no power, and for three years they have been as fair as ever.

If I should try to tell of all the blessings that Christian Science has brought us, time would fail me. The sense of accident, want, discord of every sort, yields to its beneficent influence. With only one treatment, and that absent, the birth of my little boy was painless, occupying less than half an hour,—a season of joy instead of suffering.

My love and gratitude to Mrs. Eddy are only second to my love for our Father, who forgiveth all our iniquities and healeth all our diseases. My deepest prayer is for the Mind that "was also in Christ Jesus," which destroys every thought of criticism for others, of self-sympathy, of irritability or impatience. I long to show by every tone and action that my trust in divine Love is perfect and casteth out all fear.—EDITH E. BROWN, Palo, Ia.

It is now about three years since I accepted Christian Science, and I wish to express my gratitude for what this wondrous truth has done for me. As a child I was never strong, and for about eighteen years before Christian Science helped me, I was constantly under the doctors' care, taking medicine of one kind or another every day, but still I failed to get well. Finally they told me, a few years before I accepted Christian Science, that fibroid tumors had developed, and that I could be well only by submitting to an operation. The operation was performed and the result was that after it I found myself in a much worse condition than I had been in before. A few months later the physician said that more tumors were growing, that as soon as I was strong enough I must have another operation. I lived along in that condition for three years, until they insisted that the operation must be performed immediately; that unless this was done, I could not live very long. Then

Digitized by Google

it was that in my extremity I turned to Christian Science, and in less than four weeks I was healed. I have not been in bed a day since, nor have I taken any medicine. With the disappearance of the tumors came the discovery that the action of every organ in my body had changed and become normal, and for the first time since I can remember, I knew what it meant to feel well.

While I am very grateful for this physical healing, I am much more grateful for the spiritual understanding, the uplifting, and the happiness which has come to me. This has been gained from the study of our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. I love her more and more each day for what she has done and is daily doing to bless mankind.

L. MAY SEARS, Syracuse, N. Y.

In October, 1899, my grandmother was stricken with creeping paralysis, and by the following December she was helpless,—had to be lifted and turned in bed like a babe. The physician in attendance said he could do nothing more for her, and that the end was near. At Christmas time my uncle came to see her, thinking it to be for the last time, and together he and I visited the physician at his office to have a talk with him, hoping to hear that something might yet be done for her; but after explaining the nature of the disease, he said in a kind manner, "I wish it were in my power to help your mother, but no power on earth can restore life to those limbs."

Soon after this a friend called whose wife had been healed in Christian Science, and after we had told him the doctor's decision, that my grandmother might pass away any hour, he said, "Why don't you try Christian Science?" I had heard of it, and thought its spiritual teaching beautiful, but could not understand the physical healing. We were, however, willing to try it as a last hope. A practitioner was brought to us the next day, and after the first treatment there was a wondrous change for the better. From that time, about the first week in January, the improvement was steady; by the middle of April she was able to go down stairs, walking one step at a time, and by the end of the summer she was fully healed. She is now in her eightieth year and is as well and active as twenty years ago.

Since that time Christian Science has meant much to my family and to myself, in spiritual and physical help. As the cloudy, fiery pillar led the children of Israel in their pilgrimage, so through dark and stormy places divine Love has led me, until in Christian Science I have found my "desired haven."—MRS. J. E. SELFE, Wellesley, Mass.

My gratitude for what Christian Science has done for me, prompts me to give my testimony, hoping that it may be a help to some one in an hour of need. For eight years I had worn glasses to do my work. I was subject to severe headaches and unable to read print. Two years ago I consulted a specialist, who said that the muscles had been strained, and I was told that I must give up my position at once, that to continue in the work I was doing would render my eyes useless. With a great deal of inconvenience and suffering I retained my position for two years longer, at the end of which time I was forced to give it up. At this time another specialist was consulted, who gave the same verdict as the first one. Glasses were again fitted, which proved of very little benefit. I was finally told that an operation might give relief, but that it was uncertain. All this time, my sister, who had been healed in Christian Science, was urging me to try it. Finally, after having tried a great many other things, I decided to give it a trial. With the very first treatment I was healed of a trouble from which I had suffered for many years, and found I could walk and work without fatigue. After three weeks I took off my glasses, though with a great deal of misgiving, and at the end of three months I could use my eyes with perfect freedom. Hay fever of fifteen years' standing was also overcome. I am now filling a position in the same line of work which I had been advised it would be impossible for me to do. Surely "The blessing of the Lord, it maketh rich, and he addeth no sorrow with it."

CLARA FRANK, Oshkosh, Wis.

I was healed of lung trouble after a doctor had said it was only a matter of time till I would have consumption. My lungs pained me and I coughed most of the time. Insomnia was another trouble from which I was healed through the reading of Science and Health. Now I do not know that I have lungs, so far as their paining me is concerned, and the other ailments also have disappeared, through the study of that blessed book which revealed to me the truth that God is All in all, and that omnipresent Love shields us from all error. I feel most grateful for the understanding I have gained through Christian Science, which enables me to demonstrate better health and morals for the children. My heart is full of gratitude and love to God, and to Mrs. Eddy, and my desire is to work, watch, and pray, that I may lose sight of self and reflect Life, Truth, and Love, and in so doing win others to Christ.

MRS. SUSIE E. TITUS, Marion, Ia.

It is always a pleasure to me to tell of the healing and happiness I have received through the understanding of Christian Science. Every inch of progress I make enables me to appreciate more clearly Mrs. Eddy and her life, and to love her more tenderly. When I first saw a copy of "Science and Health with Key to the Scriptures," I knew nothing whatever of Christian Science, so that when I began to read the book I had no prejudices to combat.

I could not accept or love the concept of God that I had been taught. I wanted a God whom I could worship for His justice, and a God who was all-powerful and not in any sort of partnership with evil. When I read Science and Health I immediately saw that its teachings were all toward proving that such a God did exist, and this delighted me greatly. I began to study the Bible, which I had for years doubted or scorned, together with Science and Health, and within a week I realized that I was free from dyspepsia and nervousness, which had enslaved me for fifteen years. My husband read the book at the same time I did, and he, too, was healed of dyspepsia of twelve years' standing.

It was in 1896 that we first read Science and Health and were healed, and since then, although we have continued to live in the swamp region of Louisiana, where malaria is supposed to reign, we have excellent health, and have no cause nor desire to take medicine of any sort. In our family of three, during these nine years, there has been overcome, besides the nervousness and dyspepsia mentioned, biliousness, constipation, sick-headaches, whooping-cough, chicken-pox, measles, chills and fevers, colds, and such ailments as are accepted by the world as household necessities. Business reverses have been met and overcome, and treachery and deceit have been uncovered and escaped from.

Christian Science has brought me much happiness, for it has not only healed me of many forms of sickness, but it has healed me of restlessness, worldliness, agnosticism, and an abominable temper; and I hopefully look forward to the day when I will be healed of every vestige of selfishness, fear, malice, and every other trait of character that is unlike Jesus the Christ.

JEANNETTE D. COLTHRAP, Tallulah, La.

Two years ago my wife and myself were in very poor health,—she so poorly that I expected her soon to pass on; I in such a condition that existence was to me a burden. We had tried many doctors, and many remedies, with little

Digitized by Google

apparent and no real benefit. We were in debt, in povery, and utterly unable to better our financial condition. My wife, unknown to me, turned to Christian Science, and was healed. I could but acknowledge the healing, yet religious prejudice kept me from acknowledging this Science as of God. Many were the battles between my mortal sense and the truth, before my feet were planted upon the Rock,—Christ, Truth. My progress has been slow, but to-day we are both in good health,—new creatures as it were,—almost out of debt, lacking nothing, except more truth; and I feel like exclaiming in the words of our beloved Leader, "Glory be to God, and peace to the struggling hearts!" (Science and Health, p. 45.) But great as has been our physical healing, the spiritual benefit has been so much greater, that were it not for the obligation I feel under to suffering humanity, I should scarcely think it worth while to enumerate the physical benefits. Hoping, however, some weary traveler in the wilderness of material illusion may hereby be led to the highway of truth, I will say that my wife was healed of asthma of fifteen years' standing, of an internal ulcer of the head, of nervous prostration, and general debility. I was healed of indigestion, nervous weakness, the grip, neuralgia, constipation, and last but not least, the drink habit; as well as lust, envy, and malice. Besides these, I have made other demonstrations.

For all these benefits, the consecration of all I have or am, is but my reasonable service to God, to our beloved Leader, and to humanity.—GILES F. HUNT, Arkansas City, Kan.

Christian Science came to me in a very dark hour, when I was mentally and physically almost a wreck. I had failed to find health and peace of mind, although I had sought earnestly for them, but now I can say that they are to be found in Christian Science, and I am truly thankful. Christian Science has been a wonderful help for a number of years. It has never failed when faithfully applied, and I know that every seeming cloud will pass away.

I want to express my gratitude and thankfulness to our beloved Leader, who has worked so patiently and unceasingly to show us the way to the promised land,—the land of health, happiness, and peace. I am very thankful for our periodicals, especially the Lesson-Sermons. They are all such a help to those who are working in this great and blessed Cause.—MISS LENA DAGG, Flint, Mich.

It is difficult to express in words my grateful appreciation of all that Christian Science has done and is doing for me and mine. It is three years since I had my first treatment. In less than one week an ailment of many years' duration was overcome and has never returned. Intercostal neuralgia, muscular rheumatism, had also troubled me. Sick-headaches, which were fast becoming more violent, and for which various remedies had been tried, with only temporary relief, have at last disappeared.

To find that so much can be accomplished, with even a slight understanding of this transforming truth, encourages me to press on, to strive for that Mind which is in Christ. I am deeply grateful to our loving Father, and to Mrs. Eddy, our inspired Leader.

MRS. ALICE B. WORKS, Los Angeles, Cal.

Christian Science has brought a sweet peace and comfort to my hungry soul, where all was trouble and unrest. Now I can say with the Psalmist, "In God is my salvation." I was hungering and thirsting for a nearer sense of God, and now I have found Him in Christian Science, and am able to demonstrate the power of divine Truth in the healing of many ills, as well as of sin and discord.

"Science and Health with Key to the Scriptures" by Mrs. Eddy, has been a source of much light and strength, by applying its teaching and learning to know myself. I have deep love and gratitude for our Leader, who has made it possible for me to understand that God is a present help in time of need.—MRS. HATTIE A. STEWART, Greensburg, Ind.

My heart overflows with gratitude when I realize what Christian Science has done for me this last year, although my faith was tested almost past endurance. Many times I felt that I could not understand it and was tempted to give up, but I have at last found what I was seeking. I had read many times, "Seek, and ye shall find." At last I have found. My dear son has entirely recovered from illness and I am well and happy. God in His goodness has placed us in a lovely home, and all our needs are provided for. At last, after many years of rebellion, I can say, "Thy will be done."—HATTIE F. HOBBS, La Jolla, Cal.

I first heard of Christian Science about four years ago, and I can now see that it came to me as a direct answer to my desire to meet with people who accepted the teachings of the New Testament in their entirety and endeavored to put them into practice. As long ago as I can remember, I always held the thought that Christianity would one day be proved to be a science, but I never dreamed that it would be *now* or that I would have the privilege of becoming a Christian Science student; so my delight may easily be imagined when the truth was presented to me and shown me to be one with good. At that time I had never thought of spiritual healing,—so blindly had I read my Bible,—but this was only an additional blessing that I was most thankful to accept. I felt it was worth while to give up my whole life to prove whether it was true or not, but the proofs came to me very quickly, and I was able to help myself and others physically. I had, of course, much to overcome. I had a great objection to church organizations, and it was some time before I recognized Mrs. Eddy as Leader, and The Mother Church as the vine of which the local churches are the branches; but one by one these difficulties have melted away, and I am thankful to say I begin to see things more in their right light and to give honor where honor is due.

During these four years I have had great opportunities of proving the healing and saving power of Christianity, accepted and proved to be a Science. Amongst the evils overcome have been polypus; varicose veins healed by reading Science and Health; water on the knee healed in one week's absent treatment after seven weeks' surgical treatment had failed. One can never tell the half of all Truth has done and is doing, even in an individual experience. For all this, and for much more,—for her reiteration of the truth that the kingdom of heaven is on earth,—I give thanks to God, and am deeply grateful to Mrs. Eddy. Without Science and Health, and without her consecrated, courageous life, I should still be struggling helplessly with sin and sickness.

ETHELDRED BROWNING, Dublin, Ireland.

I am glad to let others know what Christian Science has done for me. I had in my possession for several years a copy of Science and Health, but I did not realize its worth or meaning until I read Mark, 16:17, 18, which brought to me in a new light the reality of Christian Science. I at once began reading Science and Health with a new understanding. At this time I was afflicted with serious troubles of the stomach and heart, and had been a constant sufferer for more than a year. I had consulted many physicians, and the only relief they offered was the daily use of a stomach-pump, but without any hope of a permanent cure. I was treated for several months by one of the home physicians. The treatment was distressing and painful, and did not improve my condition. I felt that perhaps Christian Science might help me, and I was soon con-

Digitized by Google

vinced that this Science could do for me what *materia medica* could not. The terrible distress which I had been undergoing was lessened, and I improved so rapidly that it was only a few weeks until I was entirely healed. I am more than grateful that through Mrs. Eddy this wonderful revelation of Truth has come. I have been brought to know God's infinite love to His children. I study the Bible Lessons each day and am striving to live a life worthy of the name, Christian Scientist.

MRS. KITTA W. KLEVER, Albion, Neb.

Fourteen years ago I sought Christian Science as a practical Christianity, and the blessing of instantaneous physical healing was bestowed upon me by divine Love. The spiritual healing and uplifting has been slow but sure. It would have been difficult to find anyone more discouraged and despairing than I was at this time. I was bitterly dissatisfied with my lack of spiritual understanding; for almost five years I had been a slave to inflammatory rheumatism; was almost one year under the care of an oculist—one eye focused incorrectly, and I had to wear glasses. At this time it was the fifth week of an attack of the grip, and these were some of the vexing problems before me.

At the time of my first lesson in Christian Science the rhematism, eye disease, and the grip disappeared. Glasses were immediately given up, although the oculist said that I would be obliged to wear them again; but I have never had any use for them since. The rheumatism has never returned: and an attack of the grip, about eight years ago, was met without the knowledge of a single member of the family.

I had been a member of an orthodox church, though for ten years prior to accepting Christian Science I was very discontented, and investigated various doctrines, but none of them appealed to my reason. I became confused, and declared to myself, I do not *know* anything about God. After the first careful reading of Science and Health, I closed the book and all I could say was, Christian Science is to know that God is all. I thank God for Christian Science, for our beloved Leader, and for our text-book, which has made the Bible a storehouse of a loving Father's promises.—MRS. MARY SPARGO FRASER, Cleveland, O.

Eighteen years ago the physicians thought it necessary to give me morphine most of the time, which resulted in my becoming a slave to the drug. My husband had patiently borne with me, till to save my life it became necessary to send me to a sanitarium to be treated. I took the cure six different times, at an expense of about eighteen hundred dollars, but the desire for the drug seemed to be more intense than before. After trying all the cures I could hear of, and being in constant fear of the most dreaded of all experiences, convulsions, which I had been having for some time, I was given up to die in a short time. At this darkest hour of my need, when all material means had failed, I was told of divine Love as being an ever-present help. My husband and myself had no confidence in Christian Science, but we decided that it could make me no worse, and it was the last chance. We turned to the things spoken of in the Scriptures,—the things of the Spirit,—and found hope.

I very tremblingly placed myself in the hands of God for relief from this awful dungeon of darkness and despair into which myself and my family had been plunged. I was relieved with the first treatment, and after some weeks of patient trying I was free from the desire for the drug. The way has been rugged many times, but my husband and I thank God for His protecting care over us, and we are thankful for the truth as given in "Science and Health with Key to the Scriptures" by Mrs. Eddy, which has shown us the way to eternal life.

MRS. W. D. ALBRIGHT, Sumner, Okla.

It is with gratitude that I write of the healing truth that has come to me through reading "Science and Health with Key to the Scriptures" by Mrs. Eddy. It has lifted me from despondency and gloom to hope, peace, and joy. Each day I find a test of my understanding. Each day God gives the strength to meet the illusions of mortal mind, and so step by step I am overcoming error in all its forms, with truth. More than thanks are due to the noble woman who has revealed this practical and demonstrable truth to this age.—FRANCIS W. BAKER, Philadelphia, Pa.

It is nine years since my husband and I began the investigation of Christian Science. At that time we were both very much in need of something that the physicians could not give us. I was a very unhappy woman, and cried two thirds of my time. I had been a church worker, but there was something I needed and could not find there. I prayed on, and my prayers were answered when the light of Truth dawned upon me through the inspired pages of Science and Health by Mrs. Eddy. For the first time I read the ninety-first Psalm understandingly. The way has seemed dark at times, but we have grown by our trials. We have four children, all of whom were born under Christian Science treatment. They do not know about medicine and have wonderful demonstrations of their own at times. Our two oldest daughters were healed of scarlet fever in the very worst form. I worked day and night in Christian Science, and when the healing came it was wonderful.

I thanked God, and how my love and gratitude went out to the one who lived near enough to God to rediscover this glorious truth which was so long hidden from us, and to reveal it to mankind. In no way has Christian Science ever failed us. May I live close enough to God to be worthy of the name, Christian Scientist.

MRS. HATTIE B. POTTS, Omaha, Neb.

It is over six years since I began the study of Science and Health. During this time I have been a constant reader of the *Sentinel* and *Journal* and have received so much benefit from the testimonials that I have long felt it my duty to send mine. Christian Science was first brought to my notice by a dear Scientist, out of the goodness of her heart, knowing what great benefits she had received and wishing others to share with her the glorious truth. Words fail in which to express my gratitude for all it has done for me, but if there is one thing more than another to be thankful for, it is the help received in two great mental trials, which to material sense would certainly have crushed out all earthly hope.

Thanks be to God, and to our dear Leader, that I now know truth is all and error nothing. I have had many beautiful demonstrations in physical healing, over burns, colds, and accidents, also many successful demonstrations in financial affairs.—MRS. CARRIE SMITH, Tacoma, Wash.

[Written for the *Sentinel*.]

Retrospect.

WINIFRED BORLEE.

THEY who have drained earth's changeful bowl,
And tasted sap of galling root
As well as juice of ripened fruit,
And learned how bitter-sweet the dole,—

They who have conquered self, and won
Love's pathway to the heart of things,
Have spread their new-found spirit wings
And soared beyond earth's twilight sun.

Those who have dreamed, and wake at last,
Like mountain climbers gazing back,
See Love's own finger o'er their track,
And joy to know their bondage past.

From our Exchanges.

The birth in Bethlehem brought into the world a new idea of the relation of man to God. In previous ages the highest religious thought had been that God might be with man, or might even be in man, or might manifest Himself in the form of man. With Jesus came to earth the new truth of a real union between God and man. He came not like the Messenger of Jehovah who appeared to Abraham and Jacob, not as a man through whom God spoke as through the prophets; but in him God was united to man —in a genuine though mystical union; and he taught that as he is one with the Father so are his disciples one with him. From the words and life of Jesus it is evident that this union is not limited to a union of love, of sympathy, of belief; but it is a union of spirit and nature by which men become in a true sense sons of God.—*The Watchman.*

The law is that one gathers what he sows. If he gives thought and effort to the things of the body mainly—if he lives in and caters to the senses—he will surely reap a harvest of failure, of defeat, of sorrow. Selfishness puts forth effort for self and reaps narrowness of mind, dwarfed affections, shriveled sympathies, a starved spirit. It finds unrest, dissatisfaction, barrenness, regardless of great or small outward possessions. . . . That richest product of all, a Christian character, comes from the implanting of Christ's teachings and his spirit within the mind and heart and carefully nurturing them year by year. Thus the life steadily approximates "the measure of the stature of the fulness of Christ."—*The Universalist Leader.*

"The story of Jesus is the history of every man writ large." One man was true to the divine possibilities that are in every one of us. Not by cruel substitution, not through atoning blood (God deliver us from such barbaric notions) does Jesus serve us or save us, but by leading us into the ways of sonship and brotherhood and mutual service. It is for us to catch anew the significance of his teaching and the inspiration of his heroic young life, to let his spirit be born again in our hearts, to take up with new courage and confidence the pursuit of his ideals.

SAMUEL A. ELIOT.
The Christian Register.

Jesus sent forth his disciples with the double commission to go teach and heal. The early Church followed him faithfully in its ministry to the whole man—physical as well as spiritual. It was not long, however, before certain churches thought it cheaper and easier to preach than to practise, and ritualism, Judaistic and heathen, was substituted for Christian socialism and philanthropy.

E. J. HELMS, D.D.
The Homiletic Review.

The clergy ought to approach the bedsides of the sick with far more faith; they ought to pray for their recovery and lay hands on them with far more expectancy that they would recover. In doing their sick visiting they ought to look with far more hope for the recovery of the patient, and not look alone to the preparation of the soul for death.

The Churchman.

Heaven and earth are not immeasurably apart, but men and women living like Christ, live close to the borderland of both worlds. They are in heaven while they walk this earth.—*Pacific Christian Advocate.*

God is constantly sowing His grains of mustard seed, and they will continue to grow without impediment or confusion.

REV. THOMAS C. STRAUS.
The Homiletic Review.

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 505 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing all the By-laws to January 1, 1906, of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to The Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of The Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to The Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number, or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By Hon. WILLIAM G. EWING.

CHRISTIAN SCIENCE. Its Worth and Work. By Rev. ARTHUR R. VOSBURGH.

Works on Christian Science

Written by Rev. MARY BAKER G. EDDY

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Enlarged and Revised, 1902. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid $3 18

Two to twelve books (cloth only) to one address, each, prepaid 3 00
Twelve or more books to one address, each, prepaid 2 75

Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid 4 00
Twelve or more to one address, each, prepaid . . . 3 75

Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid . . 5 00
Twelve or more to one address, each, prepaid . . . 4 75

Levant, divinity circuit, leather-lined, round corners, gilt edges, silk-sewed, heavy Oxford India Bible Paper, wide margins, each, prepaid 6 00
Twelve or more to one address, each, prepaid . . . 5 75

Orders for Science and Health, in lots of twelve or more to one address, may include any or all the different styles of binding.

A COMPLETE CONCORDANCE to Science and Health with Key to the Scriptures, 595 pp., 10 x 7. Bound in cloth, marbled edges. Price, single copy, prepaid . . $5 00
Twelve or more copies to one address, each . . . 4 50

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth), each, prepaid 2 25
Twelve or more books to one address, each, prepaid 2 00

Morocco, limp, round corners, gilt edges, convenient for pocket, each, prepaid 4 00
Twelve or more to one address, each, prepaid . . . 3 75

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5 00
Twelve or more to one address, each, prepaid . . . 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

National.

The traveling public will be interested in the decision of the Appellate Division of the Supreme Court in New York in a suit brought by a passenger against the Pullman Company. The plaintiff purchased a ticket for a double lower berth in the sleeping-car from San Antonio, Texas, to Jersey City. When he reached New Orleans, where he had to change cars, he was informed that there was no lower berth for him, and he was obliged to ride in an ordinary coach for two days and a half. Under the charge of the trial judge he recovered a verdict for the eight dollars which he had paid for the lower berth which had not been accorded him. The Apellate Court ordered a new trial on the ground that the plaintiff was entitled to something more than the price of his ticket, which was not an adequate compensation for the discomfort and inconvenience suffered by him.

The Criminal Code of New York makes it a penal offence for any employer of labor to "coerce or compel any person or persons, employe or employes, laborer or mechanic, to enter into an agreement, either written or verbal, from such person, persons, employe, laborer, or mechanic, not to join or become a member of any labor organization, as a condition of such person or persons securing employment or continuing in the employment of any such person or persons, employer or employers." The Appellate Division of the Supreme Court in the District of New York has unanimously held that this provision is unconstitutional. This is in accordance with a long line of decisions to the general effect that the Legislature can limit the private right of contract only so far as may be necessary to protect public health, public morals, or the public welfare.

The following inscription will be placed on the large bronze tablet for the new general store building at the Portsmouth Navy Yard in which the Peace Conference was held: "In this building, at the initiative of Theodore Roosevelt, President of the United States, was held the Peace Conference between the envoys of Russia and Japan, and September 5, 1905, at 3.47 P.M., was signed the Treaty of Portsmouth, which ended the war between the two empires."

The negotiations that have been in progress at Caracas, looking to a settlement of issues between the Bermudez Asphalt Company and the Venezuelan Government, have completely failed. The Secretary has accordingly called upon Mr. Calhoun, the President's special commissioner, for his report upon that controversy as the basis for immediate action on the part of the department.

The systematic collection of meteorological observations from vessels at sea by means of wireless telegraphy, and the simultaneous issuance of weather forecasts and storm warnings to these vessels, based upon observations thus collected, is the latest work upon which the United States Weather Bureau has entered.

The postal authorities are now considering the question whether mail should be divided into two classes, one including letters and daily papers to go at maximum speed, the other including magazines, circulars, books, and merchandise to go at a slower and less expensive speed.

The Carnegie Pension Fund has been increased from ten million dollars to fifteen million dollars. From the benefit of the first sum teachers in sectarian and State-aided institutions were to be excluded. That restriction is now removed.

All matters relating to the Panama Canal and the government of the Canal Zone and the management of the Panama Railroad are being investigated by the Senate Committee on Interoceanic Canals.

The parcels post brought packages estimated as worth four million dollars from Europe to New York's revenue officials in one week recently, most of which were Christmas gifts.

The Charlestown Navy Yard received from the Glacier, one of the vessels convoying the drydock Dewey to the Philippines, a wireless message covering a distance of 875 miles.

Some one proposes that the navy be made partially self-supporting by utilizing the vessels as freight carriers to the limit of their practicability for that purpose.

The President last week submitted to Congress the annual report of the Isthmian Canal Commission.

Foreign.

The Russian budget statement for 1906 shows that it will be necessary to raise $240,500,000 by credit operations to balance the estimated receipts and expenditures. The latter include $202,500,000 for the liquidation of the expenses of the Russo-Japanese war, the repatriation of the troops in the Far East, and the reduction of the army to a peace footing. For the first time the total cost of the war, $1,050,000,000, is revealed.

The Prussian appropriation bill allots $36,250,000 for great harbor works at Emden, which port will be brought into connection with the coal and iron district by the Dortmund-Ems Canal. The purpose is to create a seaport that shall rival Amsterdam.

The General Assembly of the members of the Royal Academy in London has elected Augustus Saint Gaudens, the American sculptor, and Joseph Israels, the Dutch painter, foreign members of the Academy.

It is understood that thirty thousand freight cars have either been ordered or will be ordered by the several State-owned railroad systems of Germany.

The failure of Venezuela in meeting expectations in recognizing the French Chargé d'Affaires is likely to lead to energetic action by the Republic.

It is announced that King Edward will attend the Olympian games at Athens in the spring.

Industrial and Commercial.

The following statement is made in England's foremost metallurgical journal, the *Iron and Coal Trades Review:* "We would seem to be within little more than half a century of an absolute iron famine. . . . This fact raises problems of serious consequence to the world's iron industry and to the outlook of civilization itself." According to that publication it has been computed that from the beginning "up to the end of 1904 the world's consumption of iron ores had aggregated 1,110,000,000 tons," whereas "the total computed consumption of iron ores in the past would only be equal to eleven years' consumption, at the rate of to-day, and that rate is not only rapidly increasing, but is likely to continue to increase at an accelerated pace." "In any case," it says, "it is clear that the next fifty years will witness more or less revolutionary changes in the conditions of the world's iron ore supply, and within the next ten years those conditions may become profoundly modified."

Twelve per cent of the average flow of the Niagara River, says the *Boston Transcript*, passes over the American Fall, yet ten power-developing companies have been given authority to utilize thirty-five per cent of the effective power of the entire volume. Five of these companies are exercising their franchises, and others are preparing to follow, yet the public gains nothing from those concessions of almost priceless value. The franchises are given away so that neither directly nor indirectly do the taxpayers of the State benefit one penny's worth, while privileges worth many millions are enjoyed with no return by a few corporations.

Swift & Co. are planning to build large packing plants in Argentina, and will devote to this purpose a large part of the $15,000,000 additional capital stock authorized at the annual meeting. It is said that the branching out of the company has been made necessary because of the new German tariffs which go into effect in March. These tariffs will be prohibitory to the packing products of the United States, while Argentina is on Germany's free list.

It is reported that the Cudahy Pipe Line and Oil Refining Company of St. Louis will compete with the Standard Oil Company and will soon come into the Tennessee Valley with its line. Not less than five million dollars will be expended in this section of the South by this company. At present the company is completing a pipe line of four hundred miles in the West, and will develop other sections of the country as rapidly as possible.

Owing to the serious car shortage in the Northwest and Canada more than seventy million bushels of grain cannot at present be brought to market. Growers find it a great inconvenience, as they are not supplied with sufficient storage facilities.

The surface railways of New York City have been purchased by the capitalists who own the elevated and subway systems.

During the closing week of 1905 99,298 cases of shoes were shipped from Boston, which gave a total for 1905 of 5,100,038 cases.

The port of Baltimore imported goods to the value of $25,172,026 during 1905. The value of exported goods was $103,154,734.

A plan has been formed to merge the glucose companies with a capital of $30,000,000 preferred and $50,000,000 common stock.

The United States Steel Corporation will spend seven million dollars for improvements on the Homestead Steel Works.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

Only One Christian Science.

SAMUEL GREENWOOD.

ONE of the difficulties encountered in making Christian Science and its work understood by the public, is in its being confounded, as it often is by those who are unfamiliar with its teachings, with the claim that healing can be done through the influence of the human mind, so-called. It is a manifest injustice to the Christian Science Cause to class it as of the same lineage and teaching as any that is not based upon the understanding of divine Principle,—the one Mind, as revealed in the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. Thanks to the work of the Christian Science Board of Lectureship, the Publication Committees, and other denominational agencies provided by our Leader, it is now becoming better understood that Christian Science has no connection whatever with any system which does not recognize divine Mind as the only healing power, and that it occupies a position apart from that of any human belief, ology, or ism, however much these may seem to imitate its language or fundamental ideas.

One not infrequently meets those who claim kinship with Christian Scientists because they think they "are studying along the same lines." There are still others who insist that their beliefs are "just the same as Christian Science." It is evident that these do not understand the distinction made by Christian Science between what it designates as "mortal mind" and the infinite divine Mind, or God. They do not realize that when they speak of "mind" they are not saying the same thing as do Christian Scientists when they say "Mind." They have not learned to distinguish between the mesmerism that changes one mental belief into another, and the scientific destruction of the erroneous belief through a knowledge of divine Mind and His supreme government of man. Not understanding these vital differences, they may conclude that they are thinking the same as the Christian Scientist, when the fact is quite the reverse.

A similarity of terms does not necessarily imply a similarity of thought. One may talk glibly of mind, or about mental treatment, affirmation, and denial, and yet have no understanding of what Christian Science teaches. The method employed by the hypnotist or the so-called mental scientist in his thought manipulations is by no means similar to that of the Christian Scientist, who recognizes only the divine Mind, and whose law he demonstrates in the measure of his understanding

The asserted material mind of mortals is a kingdom divided against itself, trafficking in bad as well as good thoughts, loving and hating by turns, claiming by the same mental means to make mankind better and worse, seeking on the same plane to define evil and good, matter and Spirit, health and disease. Paul denounced such a "mind" as "enmity against God" and that it could never evolve, invent, or formulate a system of Christian Science is self-evident to any one who correctly apprehends the nature of Christianity, or the Mind that was "in Christ Jesus." Jesus well said of this condition, "If therefore the light [intelligence] that is in thee be darkness [error], how great is that darkness."

It is patent to those who understand Christian Science that there can be nothing "just the same," either in theory or in practice. Christ's Christianity, scientifically understood, is the complete Science of being, and when Mrs. Eddy discovered this Science it was to her what it will yet be to all mankind,—a revelation, not an invention or product of her own thought. And when, through her own spiritual understanding and demonstration, she was able to give an explanation of this Christ-truth in Christian Science, she gave that which is not found apart from the teaching of Jesus. Any attempt, therefore, to found an independent system of mental healing, based upon some stray gleaning from her writings, must ever prove abortive, since it would lack the divine animus of Mrs. Eddy's work.

It needs no argument to prove the divine origin of Christianity, and that it was a revelation of God to mortals through Christ Jesus; and it is also evident that the coming into human consciousness of Christian Science, through its Discoverer, Mrs. Eddy, to interpret and demonstrate original Christianity, was also a divine revelation, and in fulfilment of Jesus' prophecy concerning the coming of the Holy Ghost, the Comforter. Although the human mind may speculate and theorize regarding what it conceives Truth to be, it cannot reproduce the divine idea upon its own plane, that of the material senses, however it may deceive itself that it does. It is the very nature of so-called carnal or mortal mind, whose *alias* is evil, to claim equality with God, divine Mind, and therefore to claim equality with the truth which interprets God's law and demonstrates His power.

The Christian Scientist, realizing that God alone is Mind, and that of himself he can do nothing, relies solely upon God for his success, and this distinguishes the only right mental practice. Nothing can be like a perfect or complete thing without being the thing itself. Nothing could be just like a telephone without itself being a telephone. For anything to be just the same as Christian Science, would be to have the same origin, explanation, government, rules, and demonstrations, the same text-book; in which case there would not be two but one, and thus all ground for comparison would be lost.

Mrs. Eddy gave the name Christian Science to her discovery, and to the movement she has founded thereon, and this name cannot be honestly appropriated by those who are not identified with her in this movement. If Christian Science were but one among many man-made systems, an offshoot of the human mind, it might easily be that there were others like it; but the human mind is of itself incapable of conceiving such a teaching as Christian Science, for this mind is finite and could not evolve that which demonstrates the infinite. The human mind includes all that is known of evil, in whatever form, and hence any treatment that is based upon it is unable to effect the destruction of those discordant conditions of disease and sin which are among its asserted realities. Hypnotism, will-power, and blind faith appear under different guises in the many mental

Copyright, 1906, by Mary Baker G. Eddy.

Digitized by Google

systems which this human mind has set up, but wherever found they are the opposites of genuine Christian Science. To produce permanent health; to destroy the love of sin; to restore faith in God, or impart spiritual enlightenment to man; to lead mankind not into but out of the delusions of a mortal, sinful mind; to unfold God's perfect ideal, not as a human, erring, material personality but as spiritual, immortal man,—this is the mission of Christian Science, the sign and seal of its divine authority.

Readiness.

J. S. B.

In the third chapter of Isaiah we read, "When a man shall take hold of his brother of the house of his father, saying, Thou hast clothing, be thou our ruler, and let this ruin be under thy hand: In that day shall he swear, saying, I will not be an healer: for in my house is neither bread nor clothing: make me not a ruler of the people." In studying this passage one can but be struck with the extraordinary force of the message it conveys and the wonderful spiritual insight of the prophet, so far in advance of his age.

In this instance Isaiah was addressing the Jews prior to the captivity. They were at that time a people assiduous in their worship of Jehovah and lavish in their sacrifices, also careful in all points of ritual; but they were at the same time, as this prophet tells us, immoral, grossly neglectful of their civic duties, while they indulged in all kinds of vice. Luxury and oppression of the poor were also rampant. In the midst of all this exaltation of materialism stood Isaiah, almost a solitary figure.

His recognition of God as Spirit, and the necessity for declaring this knowledge in such a way that the truth might be shed abroad in hearts stupefied by low ideals, was absorbing his whole consciousness; and that sin and sensuality bring their own punishment was undoubtedly clear to him.

The passage quoted above is evidently intended to illustrate the utter inability of mortal man, unenlightened by Truth, to respond to the appeal of his fellows in distress, or to do anything to lift the burden of their oppression. In studying this passage the writer was much helped by the recollection of an article in the *Sentinel* on the subject of the healing of Naaman the Syrian. There it was pointed out that the scant information afforded by the little Jewish maid as to the healing done among the Jews, led Naaman, as a matter of course, to seek out the greatest man in the land as the one who could best heal him of his dread disease. Loaded with gifts he sought out the King of Israel himself, and asked to be healed.

The king's reply to Naaman's request was very similar to that of the individual in the prophecy above, for he rent his clothes and said, "Am I God, to kill and to make alive?"

Accordingly, the one in Isaiah's prophecy, not understanding the truth, never having perceived the divine Principle of being, is attracted by illusions, as a moth to the candle. Whatever hope he may have of salvation from all his troubles is soon dashed to the ground as he listens to the petulant and fearful words, "I will not be a healer." This answer carries with it the same admission as Cain's, "Am I my brother's keeper?" Evil in the first instance had said, "Ye shall be as gods," but when the fruits of its false teaching appeared there came the repudiation of a man's duty to his brother.

"At this period mankind are learning the falsity of the counsels upon which they have placed so much reliance. These are known by their inability to help men in their hour of need. With the growth of research in medicine and surgery there is also the spread of disease and its attendant bondage. What is to free man from this bondage? Who, then, will be a healer and put this ruin under his hand? The answer is, Christian Science.

Then let those of us who know the truth consider how often we are found admitting that we have neither bread nor raiment to meet our brother's need. The bread needed is the "unleavened bread of sincerity and truth" of which Paul speaks, and the raiment is the robe of Christ, "white and glistering." Have we not sometimes been making mental reservations by which we propose to enjoy the benefits that Christian Science has brought us, but drawing the line at becoming practical exponents of its healing except under circumstances of our own selection? In our text-book we read that "all must sooner or later plant themselves in Christ, the true idea of God" (Science and Health, p. 54). To reach this goal, mental reservations as to what we will or will not do or become must be set aside, and in meekness and obedience to the Christ example we shall learn our lesson in God's way. Christ Jesus came teaching that "men ought always to pray, and not to faint."

Before Christian Science came into his life the writer had but a shadowy notion of the meaning of prayer, and constant prayer would have been an impossibility to him. Now he is learning that only in proportion to his ability to pray aright comes the understanding of man's real need and how to meet it. Obedience to the commandment to love one's neighbor as oneself is only achieved in proportion to one's readiness to answer every appeal for aid in the true way. The desire, nay, the yearning to be ready to meet that need, and that appeal for help, which comes to signify that we are entrusted with the mission to do so, will only become part of our lives as we are found watching faithfully. Mortal mind asserts its claim to power by much exhibition of pomp and circumstance, but we, by demonstrating in our lives that the meek "shall inherit the earth," give evidence of our disregard of, and our total disbelief in the efficacy of this so-called power.

With quietness and assurance we should go about our daily work, striving that it shall be always our Father's business and not our own; secure "under the shadow of the Almighty," *i.e.*, the consciousness that we are reflecting Life, Truth, and Love, and purifying ourselves of all material thoughts and aims.

Thus shall we be ready to respond to the call for help, fearless and confident that our understanding of God's omnipresence is sufficient to "let this ruin [error] be under thy hand."

O let my weakness have an end!
Give unto me, made lowly wise,
The spirit of self-sacrifice;
The confidence of reason give,
And in the light of Truth — Thy bondman let me live.

WORDSWORTH.

What the Truth Will Do.

IDA G. STEWART.

As I read our Leader's words in the *Sentinel* of January 6, relative to Christmas for the children, in which she gives her wise admonition that we do not teach our children the old Santa Claus traditions, I am reminded of the healing of a little child which it was my privilege to witness, and which may be of interest to others.

It was nearing the Christmas holidays some five or six years ago, when I was hastily summoned to see a sick child. Upon reaching the home I found a little girl, perhaps six years of age, tossing on her pillow in delirium. The family were too frightened to tell me anything of the particulars of the case further than that she had been in this distressing condition for twenty-four hours.

I seated myself at the bedside, and as I listened to the incoherent talk of the little sufferer I perceived that she was believing in Santa Claus, was fearing and dreading him: that the strife, envy, and anxiety in which the world at large indulges, in the exchange of Christmas gifts, were poisoning the child's thought, were polluting the sweetness and innocency which were hers by divine right. Although she

Digitized by Google

was delirious, I explained to her audibly that Santa Claus and the wonderful reindeer, with their mysterious ability to intrude themselves upon her by descending the chimney, were myths; that it was divine Love reflected in love that brought her the gifts at Christmas time, and that her parents and friends were the avenues through which she received them. I also told her that we celebrate the twenty-fifth of December in commemoration of the birth of Jesus of Nazareth, "that Godlike and glorified man" (Science and Health, p. 54); that Christmas signifies the birth of the true idea of God—the Christ—in human consciousness; that this dear Christ is God's gift to the world, by means of which we may understand the Father and be free from all evil and strife. By the time I had reached this point the child was lying quietly on her pillow, regarding me, her eyes opened wide with joyous wonder, and the fever and the delirium had gone.

The subject was presented to her at greater length, she asking and answering questions; the fever abated, the frightened breathing and cough ceased; and in an hour from the time that I took my seat beside her bed she arose, well!

The Christ-idea born to the dear little one upon that day, has enabled her to keep herself and members of her family well, and although her mother is a medical midwife and nurse, and the family are members of an orthodox church, this little girl has been a constant attendant at a Christian Science Sunday School ever since that glad day when, through the divine Christ, God gave her an understanding of "Him that is true."

If I am happy in spite of my deprivations, if my happiness is so deep that it is a faith, so thoughtful that it becomes a philosophy of life,—my testimony to the creed of optimism is worth hearing. My optimism rests on a glad belief in the preponderance of good and a willing effort always to co-operate with the good, that it may prevail. I try to increase the power God has given me to see the best in everything and every one, and make that best a part of my life. To what is good I open the doors of my being, and jealously shut them against what is bad.

HELEN KELLER.

[Written for the *Sentinel.*]

His Own are Fed.

KATHERINE J. SMITH.

To-day, from far Tiberian coast,
He whom the night-bound fishers greet,
Incarnate in Life's holy morn,
Calls thro' the Christ-illumined dawn,
My children, have ye meat?

Who hears the calling Paraclete,
Will leave his knotted net behind,
Nor count the leagues of sin-swept sea;
But here, in Truth's immensity,
Cast deep, and he shall find.

Come, hungered, heart-worn, restless child,
Brush from thy lips the acrid ash,
Cease toil, and plea, and olden rage,
Leave to the sea its grudging wage,
Its hurricane and crash.

Seek not the mortal recompense,
For work imprest by heav'nly sign,
Come and divide Life's quick'ning bread—
From Love's right hand His own are fed—
Beloved, come and dine.

Annual Meeting of Concord Church.

The annual meeting of First Church of Christ, Scientist, in Concord, N. H., was held last evening in the church edifice. The presence of several members living out of Concord showed the deep interest taken in this meeting. The treasurer reported all bills paid and a balance in the treasury. The report of the chairman of the Reading Room showed over sixteen hundred pieces of literature sold and more than five thousand visitors to the Reading Room and church. The absorbing interest in the subject of Christian Science was shown in the report of the committee on free distribution of literature. The record indicated that more than seven thousand pieces of reading matter had been taken by visitors and inquirers during the past twelve months.

Religious services are regularly held by the church in the county jail, and much good is being accomplished with the prisoners. During the past twelve months the members, in addition to the generous support of the home church, have contributed twenty-one hundred dollars to the Building Fund of the addition to The Mother Church in Boston.

The term of office of the former Readers, Rev. Irving C. Tomlinson, C.S.B., and Miss Mary E. Tomlinson, C.S., having expired, Prof. Hermann S. Hering, C.S.B., of Boston, was elected First Reader and Miss Mabel C. Gage, C.S., of Concord, was made Second Reader.

The other officers elected were as follows: President, Mr. Joseph A. Moore; clerk, Mrs. Fred A. Piper; treasurer, Mr. J. Wesley Plummer; auditing committee, Mrs. Urianna P. Grover, Mr. Horace G. Boutwell, and Mr. James R. Hosking; trustees, Mr. Joseph A. Moore, Mr. Fred A. Piper, Mrs. Fred A. Piper, Mr. J. Wesley Plummer, Mrs. Helen E. Moore, Mr. Josiah E. Dwight, Miss Elizabeth Thompson, Mr. George H. Moore, Mrs. George H. Moore, and Mr. Fred A. Barker.

In accordance with the rule in all Christian Science churches, that there shall be rotation in the office of their Readers, there has come a change in these offices in First Church of Christ, Scientist, Concord, N. H. As announced at the annual meeting of this church last evening, Rev. Irving C. Tomlinson, C.S.B., and Miss Mary E. Tomlinson, C.S., are to be succeeded by Prof. Hermann S. Hering, C.S.B., formerly First Reader of The Mother Church of Boston, and Miss Mabel Gage, C.S., of Concord, Second Reader. Rev. Mr. Tomlinson has been reappointed on the Board of Lectureship of The First Church of Christ, Scientist, in Boston, and will at once enter upon his duties as lecturer. Mr. and Miss Tomlinson will continue, for the present, to make Concord their residence.

Prof. Hermann S. Hering, C.S.B., the newly elected First Reader of First Church of Christ, Scientist, of Concord, is a native of Philadelphia, Pa., and son of Dr. Constantine Hering, the founder of homœopathy in America. He is a graduate of the University of Pennsylvania from the department of mechanical engineering, receiving the professional degree of M.E. in 1886. He was made professor of mechanics and electrical engineering by the Philadelphia Board of Public Education in 1887, and in 1891 was called to Johns Hopkins University in Baltimore, Md., as associate in electrical engineering, where he remained eight years, engaged in lecturing and in conducting laboratory and research work.

In 1899 he gave up his profession for the purpose of devoting himself entirely to Christian Science work, and was a practitioner, Reader, and teacher in Baltimore, and Publication Committee for Maryland and the District of Columbia. In 1902 he was elected First Reader of The Mother Church in Boston for a term of three years, and recently was made president of the church and a lecturer.

The Holiday Spirit.

The attitude of Mrs. Mary Baker Eddy, the eminent Christian Scientist, toward the habit of gift-giving at the season of the Christmas holidays, attracts our attention, and raises the question of whether we are celebrating the birthday of our Lord and Saviour in a manner acceptable to him.

This season is, as we well know, one of prayer, and we are inclined to agree with Mrs. Eddy that there has come to be a spirit of commercialism in the bestowing of gifts at this particular time.

For days before the approach of this holiday season our time is absorbed with the thoughts of giving and receiving gifts, and in writing congratulations to friends and receiving congratulations from them in return. If we receive a gift, we feel under obligations to make a return gift of equal if not greater value.

The Christian Scientists would bar the habit of giving Christmas gifts, because their church annuls that which has the appearance of personal worship.

The Christmas season has for so long been one of merry-making that there may be some reluctance on the part of our people to accept so radical a change as that proposed by Mrs. Eddy in putting the ban on the custom of Christmas giving, but it would certainly be a distinct improvement if the commercial element were eliminated.

The Atlanta (Ga.) *News*

Classification of Christian Science Literature.

At the meeting of the Catalogue Section of the American Library Association on July 5, a communication was presented from Frank W. Gale, of the Christian Science Publication Committee for the State of California, pointing out the lack of uniformity in the classification of this literature. The subject was briefly discussed, and in order to bring out more full consideration it was decided that it should be given greater publicity. With this purpose, and with the desire of eliciting further comments, Mr. Gale's letter is here published in full as follows:—

Mr. C. B. Roden, Chairman A. L. A. Catalogue Section.

Dear Sir:—Being interested in the proper presentation of the subject of Christian Science to the public, I have made inquiry as to the classification of books on this subject in the public libraries in this State, and find a great lack of uniformity regarding the classes in which these books are placed. With a view to having some action taken which will remedy this condition, I beg to call your attention to some phases of the subject.

It is claimed for Christian Science—and this claim is being very widely admitted by those who have made an honest and intelligent study of the subject—that it is the demonstrable Science of Christianity, the spiritual understanding of the teachings of Christ Jesus, which enables its adherents to comply with the injunction of our Master to his disciples, to preach the kingdom of God, and to heal the sick. The reformation of the sinful and the healing of the sick through Christian Science is accomplished through the power of God, divine Mind, which distinguishes Christian Science from all systems of healing which depend upon the action of the carnal, or mortal mind, and which are known as mental science, suggestive therapeutics, etc. This being the case, it would seem that books on Christian Science would properly come under class 280 of the Dewey Classification, for this Science is the essence of Christianity.

Another point I would call to your attention is the tendency to place books on mental healing, suggestion, etc., as well as those which wholly misrepresent the teachings of Christian Science, under the general subject-heading of "Christian Science." This is not fair to the public, who would naturally look under that heading to find books which give a correct statement of this Science, and who are liable to be misled by the many misrepresentations which in some cases are placed with authentic works on this subject.

One simple way to discriminate would be to place under the heading of "Christian Science" only such works as are written by Mary Baker G. Eddy, the Discoverer and Founder of Christian Science, which are published by Joseph Armstrong of Boston, Mass., and the publications of The Christian Science Publishing Society in Boston, Mass., as these are all that may properly be called authorized Christian Science works. It seems only just that some way be found to classify these books so that they will not be identified with other works which are contrary to the teachings of Christian Science.

Trusting that you will kindly give this matter careful consideration, I remain, Sincerely yours,

FRANK W. GALE.

Among the Churches.

Church Organization in Aberdeen, Wash.

September 26, 1905, the Secretary of State of Washington issued a charter to the twenty-four incorporating members of First Church of Christ, Scientist, of Aberdeen, a point in western Washington already of great importance to the lumber industry. It has approximately ten thousand people and the neighboring towns have a combined population of about as many more.

Six years ago three or four Scientists of Aberdeen formed a Christian Science Society, and from the first its growth has been steady. For over a year a Christian Science Reading Room has been maintained in a down-town building, and interest in the work is active, as is shown by the large attendance at both the Sunday and Wednesday meetings, at which as many as sixty-five people have been present, fifty being a fair average congregation. Another sign of vitality is the growth of the Sunday School from practically nothing to a membership of twenty-five.

For some time past a monthly collection has been taken for the benefit of the Building Fund of The Mother Church; three hundred dollars has already been forwarded, and this amount is increasing at the rate of twenty-five dollars a month.—J. R. BERTHOLF, *Clerk.*

San Francisco, Cal.

At a meeting of the members of the local Christian Science Church, held Wednesday evening, it was decided to ratify the action of the board of directors in leasing from the Bohemian Club, for a period of two years, the premises and synagogue, corner of Post and Taylor Streets, formerly occupied by the Sherith Israel congregation.

The building will be thoroughly renovated, and the main auditorium will be fitted up with opera chairs. A large assembly hall will be fitted up on the lower floor, for use in overflow meetings. The seating capacity of both auditoriums will accommodate upwards of seventeen hundred.

This is to be the temporary home for First Church of Christ, Scientist, of San Francisco, pending the erection of the large edifice on the lot now owned by the church, southwest corner of Sacramento and Scott Streets, for which plans are now under consideration.

The church structure to be erected is estimated to cost close to three hundred thousand dollars and will take nearly two years to complete.

The church has for years been occupying Sherman and Clay's Hall and Elks' Hall, on Sutter Street, for its Sunday and Wednesday evening meetings, but on account of the rapid growth of the movement in San Francisco the premises can no longer accommodate the crowds in attendance.

The Lectures.

Asheville, N. C.

The Auditorium was comfortably filled last night [November 6] by an audience which listened with interest to Mr. Edward A. Kimball's lecture on Christian Science. The lecturer was introduced by Mayor Barnard, who said in part,—

In spite of a criticism amounting in some instances almost to abuse, this wonderful school has grown with remarkable rapidity, and though less than forty years old it has attracted to itself thousands of followers, most of them earnest men and women who have been helped by the wholesome optimism of its teachings and who look to them as a source of deepest satisfaction and comfort.—*The Asheville Citizen.*

Texarkana, Ark.

Last evening [November 10] the Hon. Clarence A. Buskirk of Princeton, Ind., delivered an address at the Grand Opera House on the subject of Christian Science. Attorney T. E. Webber of this city introduced the speaker, and said in part,—

I am not a Christian Scientist. I am not familiar with their special tenets, but I know that Christian Science teaches and rears the pillars of its temple upon love, purity, and the brotherhood of man. With such a foundation its influence must be for good, and as such is entitled to respectful consideration. It does not withhold its rewards until the hereafter, or hold out the promise of a final reward after a life of travail and suffering with repentance in sackcloth and ashes, but asks you to accept now, to-day, and for all time, health, happiness, and love ever increasing and never ending! With such a promise surely it is well worth our best attention. You ask me, Will it do all this? I do not know, but we need it all so badly in this life of ours that we cannot afford to turn our backs on the hope of it. We say to Christian Science, "State your case. We want the proof!"

There is one feature about Christian Science worthy of remark. Its teachers and expounders are not men and women who have been failures in other walks of life. Its platform speakers are cultured, educated people who leave positions of prominence to preach the tidings of good will towards all men.—*Daily Courier.*

Boise, Idaho.

A large audience listened to the lecture last night [November 21] in the Columbia Theatre by Rev. William P. McKenzie of Boston. The speaker was introduced by ex-Governor J. T. Morrison, who in his introductory remarks said,—

We are living in one of the most remarkable thought periods in the history of the world. Much that we know was unknown by the ancients, and even the philosophers and scientists of a century or so since saw but the first faint outline. In the thought of the present day science dominates. Science is knowledge, knowledge that is capable of demonstration. Scientific thinking, scientific methods, and scientific knowledge conspire to make life more tolerable and to help solve the human equation. The so-called warfare between science and religion is settled, except in the minds of the uninformed, for the very good reason that exact learning and the truth are one and the same thing.

"Ye shall know the truth, and the truth shall make you free," is a statement of both a scientific and a religious fact, a fact which is equally potent whether demonstrated by science or revealed by religious experience. In this enlightened and thoughtful age, whatever the system you seek to teach and establish, whether scientific or religious or a commingling of both, it must be measured by the same standard, the truth, which is both the scientific yardstick and the religious pendulum.—*The Idaho Statesman.*

Dublin, Ireland.

Mr. Bicknell Young gave a lecture on Christian Science to a full house on the 23rd of November in the Ancient Concert Rooms. Commander J. Heugh, D.S.O., of the Royal Navy, introduced the lecturer, saying in part,—

Christian Science is attracting universal attention, owing to its regenerative and healing power. It is essentially a practical religion, and a "religion of right thinking." It teaches, not that that you are to become better than any one else, but better than you were. It has healed, and is healing its thousands, of every form of sin and disease, and I am very grateful to God that I can count myself as one of them.—*Correspondence.*

Longmont, Col.

Monday evening, November 20, Mr. Clarence C. Eaton of Tacoma, Wash., addressed a fair-sized audience in Dickens Opera House, on Christian Science. The lecturer was introduced by Rev. A. L. Chase of the M. E. Church, who said in part,—

My being on this platform does not signify that I am a Christian Scientist or likely to become one. Some years ago I could not have been induced to take part with Christian Scientists, but I have grown more liberal and inclined to allow others the privilege of the faith they think best. I am here to listen and to learn what the Scientists have and we have not. I welcome everything which will lift mankind and make the world better.—*Correspondence.*

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

A Generous Gift.

Pittsburg, Pa., January 2, 1906.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Our Dear Leader:—At the annual meeting of First Church of Christ, Scientist, of Pittsburg, Pa., held on the evening of November 27, reports from the several departments of the church work were read. These reports indicate a marked increase in interest on the part of this community in Christian Science. There has been during the past year a very gratifying growth in the membership of the church, as well as in the attendance at its public services.

Our gratitude for God's loving care of this church, so marked in all its history, and gratitude for the gift from divine Love of our beautiful church edifice, which was dedicated last April, found expression from many lips at the Thanksgiving service. From many overflowing hearts came tributes of love for you, our Leader, whose untiring devotion and labors have blessed countless lives.

On the Sunday following this service a special Thanksgiving offering for The Mother Church was taken. This was supplemented by the regular offering which is taken on the second Sunday of each month. As a result of these two Sunday collections it was our happy privilege to send to Mr. Chase, the Treasurer, a draft for fifty-five hundred and eleven dollars. This made the total of our contribution to The Mother Church Building Fund twelve thousand seven hundred and forty-one dollars.

These figures are symbols that inadequately measure our love for you; our desire to be obedient to your leadership, and our joy in being permitted to take a part in the building of the enlarged Mother Church.

Yours gratefully and lovingly,
ALBERT E. PIERPOINT, *Clerk.*

"Thou shalt not kill."

RECENTLY there has been a renewal of the proposition advanced some time ago, that it is legitimate and humane to cut short the lives of sick persons who have been pronounced incurable; and the most astonishing thing regarding this proposition is that it has found advocates in the ranks of those who have earned by their works the reputation of being humanitarians. The proposition has, of course, met with very general protest and denunciation upon moral grounds, but there is another side of the question which has not entered largely into the discussion, as it has been carried on in the newspapers, and that is, the fallibility of human judgment in the matter of disease. Who will dare say, even from the standpoint of long experience in the practice of medicine, that any disease is incurable; and what physician is there of any considerable practice who has not seen a patient get well after he had diagnosed the case as a hopeless one? Who will take the responsibility of saying that if a sick man cannot be healed by drugs or surgery he cannot be healed at all? Certainly there is no justification for such a conclusion, and this is becoming more and more apparent each day. Of the thousands who have been healed by Christian Science a very large proportion had previously been pronounced incurable by their physicians. These people are alive to-day and are healthy and useful citizens. In the light of subsequent events, would it not have been worse than a crime to "put them out of their suffering," in the manner proposed by these new-school humanitarians? A case in point is that of Mr. Ephraim D. Mann of Savannah, Ga., whose experience, as described by himself, is given in a pamphlet called "Christian Science and Legislation," recently issued by The Christian Science Publishing Society. Mr. Mann details his experience as follows:—

"Twelve years ago I was in a hopeless state of ill health. For twelve years I was afflicted with pulmonary disease, and during the above stated period, tried every remedy known to *materia medica*, with no permanent relief. I was twice carried to the operating-table, my uncle, Dr. Edman Fitzgerald, of Macon, Ga., being chief surgeon at these operations. After the second operation, Dr. Fitzgerald told my mother that the operation had disclosed the fact that my left lung was entirely gone, and the right lung was so badly affected by tuberculosis that it was impossible for me to recover.

"I had pneumonia four times after the last operation, and was never known to be free from a cough or cold. I was attended by six prominent physicians of the State of Georgia, each one concurring with the others in the diagnosis of my case as being hopeless. I was also informed that my kidneys were diseased.

"In this sad and hopeless condition, I found a copy of 'Science and Health with Key to the Scriptures' by Mrs. Eddy, in the Georgia Historical Library of Savannah, Ga. I engaged this book for two weeks, read it through, and was satisfied that its contents could not harm me, for it was based upon the inspired word of the Holy Bible. I called on the Christian Science practitioner here, bought a copy of Science and Health, which cost me three dollars, and was healed by reading this book, in one year.

"My family and I have spent over three thousand dollars for medicine and medical attention. I was healed by Christian Science at a cost of three dollars. When I began studying Christian Science, I weighed one hundred and five pounds; I now weigh one hundred and eighty pounds. I have not taken any medicine, internally or externally, for the past twelve years, and I am now a well and happy man. I owe my very existence to-day to the healing efficacy of Christian Science, and I stand ready to qualify to the above statement."

There has been no abrogation of the command, "Thou shalt not kill." It is the unalterable law of God.

ARCHIBALD MCLELLAN.

Liberation.

MANY are gratefully acknowledging the liberation of thought that has come to them through our revered Leader's recent utterance on the spiritual significance of Christmas which appeared in the *New York World* and was republished in the *Christian Science Sentinel* and *Journal*. Many were indeed glad to respond to this loving call to turn away from the material and limited sense of the Christ-appearing and contemplate its higher meaning, so wonderfully expressed by her when she says, "It represents the eternal informing Soul recognized only in harmony, in the beauty and bounty of Life everlasting,—the truth that is Life,—the Life that heals and saves mankind." As we ponder these words we can but think how much we have missed in holding and serving a lesser sense of Christmas; then we rejoice that the higher lessons are coming as we are ready for them, and that no good is lost in following Truth.

A dear Scientist wrote her teacher that she had prepared a gift for the latter, when our Leader's words on "The Significance of Christmas" appeared in the *Sentinel*. She

Digitized by Google

at once felt that a Christian Scientist ought to have a truer gift to offer her teacher than a material one, and she accordingly began to gather up some of the fruits of Spirit,—some precious records of the triumphs of Truth and Love in the overcoming of disease and sin; in the maturing of long-delayed "buds of promise,"—these were sent instead of a material offering and greatly gladdened the heart of the recipient.

Through many experiences Christian Scientists are learning to prize above all else the realities of being,—the things which "neither moth nor rust doth corrupt" nor thieves break through and steal; and, thanks to our Leader's teaching, these things no longer seem to be impalpable abstractions, but, to quote St. Paul, "enduring substance." Well might Peter and John make light of it, that of "silver and gold" they had "none," when at the Beautiful gate they were able to offer the man lame from his birth the priceless gift of healing, and say, in the name of Christ, "Rise up and walk."

To-day Christian Science offers to every weary sufferer the gift of spiritual healing, with all it implies, in the name of Christ, Truth, and in His appointed way; and thousands are gladly stretching out their hands to receive the precious boon. As the blessing comes to them, they may well recall the Psalmist's words, "Thou hast ascended on high, thou hast led captivity captive: thou hast received gifts for men; . . . blessed be the Lord, who daily loadeth us with benefits."

ANNIE M. KNOTT.

A Channel for the Waters.

THE indulgence of that human sense of self-limitation and inadequacy which explains so much personal timidity and ineffectiveness, finds a pertinent rebuke in Jesus' words to the woman of Samaria. They were sitting at the mouth of Jacob's well, whose limpid treasure attracted the village water-carriers day by day; thus becoming for them, as for all, a symbol of perennial good. Jesus' use of it, therefore, to illustrate the gladdening and helpful influence of those who were to become the channels of spiritual truth, must have found ready access to their understanding and interest. More than this, however, the water of life in them was to be like a flowing well,—an unfailing spring which surrounds itself with orchards and gardens abounding in fruit and flowers, and beyond with broad stretches of growing grain. No thought of the labored liftings for famished flocks intruded itself upon the picture. There was to be an abundance for every need, and it was to be poured out with Love's unreserving largess. Purity, constancy of flow, and unstinted abundance,—all these were to characterize that fountain which was "opened in the house of David for sin and uncleanness."

It is true that sometimes the sense of incapacity is distinctly increased by the overwhelming contrast between this ideal of Christian living and the records of our past endeavor, and in such a moment an escape from the pitfall of depression is found in the realization that our human service is simply one of transmission,—we are to be channels for that living stream which alone brings healing and comfort. A little child may give drink to the tired wayfarer, and if the human sense of weakness, of ignorance, and of unworthiness but sublimate into an artless humility, we also may bear the life-giving Word to the sick and fainting at our threshholds.

When to this suggestive description of the possibilities of ministry which attend spiritual awakening, there is added the thought of the infinite deeps of Truth whence issue the unfailing streams; when we remember the splendid demonstrations of the Master's life,—his practical works as humanity's Teacher and helper,—and when we recall his assurance that these ministries were to be continued and multiplied by his followers, then the richness and glory of our privilege and inheritance begin to appear; then, too, do we realize the world's indebtedness to our Leader, who in lonely travail demonstrated for this age the greatness of our possible efficiency in Christ.

Christian Science has given new meaning to the phrase "A Christian minister," and not infrequently the definition is embodied in the humble and childlike, who are following the steps of the Master in works of loving kindness and healing that are a telling though silent rebuke to conventional religious indifference, an unanswerable argument before the quibbling and worldly-wise, and, best of all, a joy and inspiration to those who were once in bondage to sorrow and to pain. Flowing wells of water are these in the wilderness of human experience. Some of the early disciples were of modest culture and rank, but how their achievements witnessed to their ready, self-effacing responsiveness to the divine requirements, as well as to the mightiness of the truth which wrought in them.

Our carrying capacity may be small in our own estimate, but if as Christian Scientists the channel of our thought is kept so openly sincere and so continuously pure as to permit the waters of Truth to flow on, flowers will spring up beside our way, and the world will receive an unmeasured blessing at our hands.

JOHN B. WILLIS.

Letters to our Leader.

New York City, January 8, 1906.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—I am enclosing a copy of a clipping from the *New York World* of recent date, containing an appreciative reference to your views on Christmas present-giving. Judging from many similar expressions in the public press, your thought on this subject has struck a responsive chord in many hearts. The love that has so long been forced into congested channels can now flow more freely throughout the year. To quote your own words, "Blessed is that mortal who seeth his brother's need and supplieth it," regardless of the season, but as opportunity may offer. Science and Health informs us that "Giving cannot impoverish in the service of our Maker, neither does withholding enrich us." I feel deeply grateful to you, dear Leader, for your wise and timely By-law. A blow has been struck at a traditional custom that has obscured "peace and good will" at the Christmas season.

Gratefully your student's student,
RICHARD P. VERRALL.

[The following is the clipping referred to in Mr. Verrall's letter.—EDITOR.]

"AFTER-CHRISTMAS THOUGHTS."

To the Editor of the *World*.

All hail to Mrs. Eddy and to her million followers who will heed her request to the Church of Christian Scientists against the craze of Christmas present giving! That it may be the forerunner of a universal change in regard to the abuse of the day will be the earnest wish of many people throughout the Christian world. The holy event the day commemorates is obscured. Peace and good will to men is not realized. On the contrary, by the great majority of wage-earners the day is looked forward to with dread, though a cheerful smile is kept up, and it is followed by disappointment, envy, debts, and general dissatisfaction.

Of course the tradesmen are happy and of "good cheer," also the man with a full purse, but I venture to say there are ten whose "good cheer" is alloyed with bitterness to one who is truly joyous. It is full time to stop this empty farce of "swapping" presents. "Good cheer" will again come to all if Christmas day is kept in the proper way and Santa Claus confines his visits to the little ones and to the really needy.

E. WARNER.

Spokane, Wash., November 18, 1905.

Beloved Leader:—There were so many happy people in the city of Spokane, State of Washington, on Sunday, November 12, 1905, at the opening service of First Church of Christ, Scientist, that it would do your heart good to know of them. Between six and seven hundred were present in the morning and about three hundred in the evening. The subject—"Soul and Body"—was a most fitting one for the occasion. A year and a half ago we were without a church home, and the Jewish tabernacle, where we had been for some time, was no longer available. There was no hall in the city which could be secured for both Sunday and Wednesday evening, so that there was just one thing to do, and the basement of the church was begun. On the date that we were to leave the Jewish tabernacle there was a place of our own prepared, and last Sunday we were in the church proper. The congregation had more than doubled in that time. We have found while building that there was more to give to The Mother Church than before.

We are striving to appreciate more your labor for mankind and thus, in humility, to be worthy to call you our Leader. Sincerely,

MARY LOUISE WRIGHT, *First Reader.*

Haysville, Kan., December 22, 1905.

Mary Baker G. Eddy, Concord, N. H.

Dearest Teacher and Leader:—We wish to express our untold love and gratitude to you for what you have done, and are doing, for us and mankind, by sending a little Christmas offering to the Building Fund of The Mother Church, and telling you of the work here. We are only a small society, four families being represented, but we want to grow, and we know that if we do our part God will give the increase. Last fall, with the assistance of First Church of Christ, Scientist, of Goddard, Kan., we gave a lecture, and hope to have one again next year. To-day we are sending Mr. Chase a money order for twenty-five dollars for The Mother Church Building Fund, and though it is a small amount, we rejoice to send our mite.

Hoping to do better work for God and our Cause, we are

Yours lovingly,

MRS. IVAH FAGER, *First Reader.*

For the Society.

Springfield, Mass., November 29, 1905.

Mary Baker G. Eddy, Concord, N. H.

Dear Leader:—In gratitude for the sustaining care of divine Love in the erection and completion of our chapel, and as an expression of love to you and to The Mother Church, the Board of Directors voted that the collections taken on the first Sunday in our new chapel should be sent to The Mother Church Building Fund. A check has accordingly been sent to Mr. Chase for $131.85.

Lovingly yours,

HARRIETTE S. MARSH, *Clerk.*

For the Board of Directors.

Admission to Membership.

The next admission of candidates to membership in The Mother Church will be June 5. Applications must be in the hands of the Clerk on or before May 14.

Have Endeared Themselves.

During the years that Mr. and Miss Tomlinson have served as Readers in the Christian Science Church in this city, they have endeared themselves very much to our people by their strict adherence to the duties of the stations they so competently filled, as well as by that unpresuming personality that, where found, bespeaks true merit.

The Daily Patriot, Concord, N. H.

Testimonies of Healing.

It is nearly two years since I began to grasp the spiritual teaching of Christian Science, and my life has been transformed,—changed to its very center. I walk in a different atmosphere. Life is sweet, genuine, good, and beautiful. In the old thought I was a semi-invalid much of the time,—depressed, weak, inharmonious, and physically a sufferer in almost every way. Nearly three years ago a brother came to visit me. I knew he had become a Christian Scientist, though what that meant I did not know, but I saw immediately there had been a vital change in him. He had formerly been an inveterate smoker, and I noticed instantly the absence of the odor of tobacco. As soon as I felt free to do so, I asked him what that meant. I remember he smiled and said he did not want it any more. This seemed very remarkable, and when I found opportunity I asked him to tell me about Christian Science. He gave me some *Journals* and *Sentinels* to read, and the testimonies particularly interested me. During my brother's stay he treated me for backache, and the treatment was successful. Before that I had not been able for many weeks to walk to a neighbor's house and back without suffering intensely. I had used various material remedies, but nothing seemed to stop the pain. It has been entirely cured by Christian Science. At that time my little girl was only six weeks old and mortal belief seemed to hold me in severe bondage. I knew nothing of Christian Science, but my brother told me that if he treated me I should lay aside my medicine. I was open to the advice given, and in one treatment constipation was entirely overcome, so that the trouble never returned.

My growth in Christian Science has not been rapid but it has been steady, and I am very thankful for the knowledge of Truth that I have. I have been healed of nervous prostration, melancholia, different forms of indigestion, severe headaches, and catarrh. My management of the children has been changed and improved. My little boy of six often helps me and helps himself. We have seen severe sick-headache vanish with one treatment, and chicken-pox and measles under a few treatments.

One of the greatest blessings that has come to me in Christian Science is the ability really to love my friends and associates. I had always tried to love them, but utterly failed in satisfactorily doing it. Underneath was a current of antagonism which divine Love has utterly destroyed, and I love my friends, all of them, every one and everybody, genuinely and abundantly. It often comes to me clearly that Love is Life, and Love is God, and that man can express only his Principle,—God. Nothing satisfies but Christian Science, nothing heals but Christian Science. I find the Sunday services and Wednesday evening meetings to be of immeasurable assistance in helping me to know God, and I am very thankful for the privilege of attending these services.

I do not know how to express my love and gratitude to dear Mrs. Eddy. I love her because through her God, good, has been revealed. She knows divine Love, and I am grateful to her for her courage and steadfastness in giving us the truth as God has given it to her.

MRS. HELEN L. DEAN, Morristown, N. J.

About three years ago I was healed at once of rheumatism, through Christian Science. For two years prior my suffering had been intense; at times I would be helpless for days, the slightest touch would occasion pain, and every joint seemed to be affected. Through the application of material remedies I would be relieved a short time only. After having been afflicted in this way so long, and having tried every material remedy that I felt would afford relief, I got no better but gradually grew worse; each succeeding attack became more severe and frequent. Because of the severe suffering I was persuaded to try Christian Science,

Digitized by Google

believing it could do me no harm if I received no benefit, but fearing criticism I had the practitioner call at night. At the time I was suffering from a fearful attack; my left hand and limb were so swollen I could hardly move them. The practitioner came at eight o'clock and gave me a treatment, staying nearly an hour, explaining Christian Science, and thus clearing away my prejudice. About ten o'clock I was placed in bed and for about a half hour I continued to suffer unspeakable agony. I then went to sleep and did not awake until morning, when I realized my freedom from pain. Since then I have had no return of the old trouble.

Only by living close to God do I feel I can express my deep, heartfelt gratitude for all that I have received through Christian Science.

Miss Edith C. Damewood, Ogden, Utah.

Having been greatly benefited by Christian Science, I wish to give my testimony. Two years ago I started out to find a way by which people could not only be cured of sickness but kept well after being helped. I needed help myself, and fully intended to make myself useful for others, whenever I should be prepared for the work. My idea was to take a four-years course at some medical institution, after that to take up the study of Christian Science, and then combine the two. I knew that the spiritual part was necessary, but at that time I did not know that it could do the work alone. Prior to taking up medical work I had purchased a copy of Science and Health, and had read it through once, but did not understand very much of it. I took a year's study in a medical college in the West, expecting fully to complete my course; but during the summer following my first year's work, I took up the reading of Science and Health again, thinking it would be profitable to spend the vacation in that way. The result was that I never returned to the study of medicine, but went to Boston the following winter to look into Christian Science more thoroughly. I soon became convinced that it was the truth, and last spring I decided to spend all my time in doing what I could in this great and glorious Cause. While reading our text-book I was healed of stomach trouble, and of many dietetic and medical beliefs, for which I am very thankful. I now know, as our Leader says, that "Mind governs the body, not partially, but wholly" (Science and Health, p. 111).

My desire to find a system by which people could be healed and, best of all, could be permanently kept well, was answered in Christian Science,—the best preventive medicine that there is. My gratitude to God, and to our Leader, for this truth can best be expressed in my daily life and deeds.—Harry C. Taylor, Springfield, Mass.

I was told by my doctor that I had at the longest about three months to live, but that if I would go to Florida I might stand it for one year, though this was very doubtful. I was said to have consumption in its worst form,—one lung entirely gone and the other in a very critical state. I also had an internal cancer of the head. I had lost the hearing in the right ear, from which large pieces of bone had passed. Then I began suffering with my feet, the bleeding kept them in such a state that there did not seem to be any bones in them. A trained nurse told me that it was impossible to heal them. It was certainly wonderful, but they were healed, and I now have full and perfect use of them. I also had a good deal of trouble with my left arm and hand; now I hardly know which hand it was that troubled me. My first entrance in the Christian Science rooms was to carry a few flowers. I had heard that they loved to have them. I always had tried to alleviate the sufferings of others, for I knew what I was passing through, and in this desire to cheer some one my own help came. We always receive more than we give. I know that I do. Malachi, 3 : 10, has certainly been proved true in my case.

My healing came by reading our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, except that I had one treatment for the cancer, when it came away from the head. That was five years ago, and I have not since had the least trouble from it, or from the lungs. I do indeed feel very grateful to Mrs. Eddy for giving us this blessed truth. My desire is to prove my gratitude by deeds, and I know that divine Love will ever guide me.

E. Katherine Hall, Norfolk, Va.

As I look back over eight years of health and peace, I remember that before I knew of Christian Science I was diseased and discouraged. I was healed of lung trouble, catarrh, indigestion, and the tobacco habit, of many years' standing. When *materia medica* could do no more for me I was entirely healed by reading "Science and Health with Key to the Scriptures." I am thankful to God, and to Mrs. Eddy, for this truth and for the *Sentinel* and *Journal*. I have been able through the understanding of prayer as taught in Christian Science to help many others to realize health.—William Betzel, Christobal, Canal Zone.

I feel that I would not be doing justice to Christian Science or to the world did I not acknowledge what Christian Science has done for me and mine. I cannot half express my thankfulness that this blessed truth has been given us through the love and unselfishness of our dear Leader, Mrs. Eddy. Recently I went with some relatives and others to visit a very beautiful spot, some four miles from here. Our trip over the water was delightful, but we had not been on land five minutes when a very severe storm broke over us. It lasted about half an hour, then the sun shone out again bright and clear. We remained about an hour then set sail for home. From the land the water looked calm, but we had not gone far when the waves began to run high; the wind was blowing very strong, and with that and the current against us considerable fear was manifested. We were some three hours making the four miles, for we had to cross and recross many times to make any headway whatever, and it seemed dreadful when we came out in the current. The nearer we came to the wharf the higher the waves were, and again and again the boat dipped water.

My mother and I were the only Christian Scientists, and the hymn, "In atmosphere of Love divine," was a great help to me. I sang the second verse aloud over and over again, and along with my mother's work in the realization that there was no other power but God, we landed safe in harbor. There were many on the wharf watching us through field-glasses, and much fear and anxiety was manifested by them all for our safety, but we had the strong assurance that "The Lord on high is mightier than the noise of many waters, yea, than the mighty waves of the sea."

My mother and I have been in Christian Science nine years, and many demonstrations have been made over sickness and accidents, but this last experience means much to us, and it also gave us an opportunity to tell of Science. Trusting that I may learn more and more of this blessed truth, I wish to express my love for our Leader and Cause.

Miss Nora Mason, Middlefart, Denmark.

It was in 1892 that I first heard of Christian Science. I had dedicated my life to God according to the orthodox views, and spent much time in studying the Bible. A lady who was at this time stopping in the same house with me, on discovering that I was interested in the Bible, began to talk to me about Christian Science, of which I had never even heard the name. She gave me a vivid picture of the promised land, and of what God is ready and willing to do

Digitized by Google

if we trust Him absolutely, and I drank it all in like a thirsty child. It seemed so perfectly natural and right that God should give us only good. I followed the subject up, and I gladly and gratefully testify, after almost three years' study and work, that many, many times more than what was promised has been fulfilled.

I had been bound to the orthodox church by every tie, and was a Sunday School teacher, but when the truth came to me, as revealed in Christian Science, I knew it was no longer possible for me to believe or teach that God allowed evil to exist; so step by step, in God's strength, I was able to make daily progress, and though it seemed dark beforehand, as I advanced only harmony was expressed. At the first Wednesday evening meeting I attended in Belfast I was healed of indigestion, and my fear of it was completely destroyed. I have proved for myself and others that Christian Science is the truth, and that it enables us to worship and obey God in all the ways that our Master, Christ Jesus, commanded,—to preach the gospel and heal the sick. I have had a glimpse of man as God made him, which can never be effaced. It was only after I became a member of The Mother Church that I realized what a great privilege had been granted to me, and I gladly and gratefully accept the present opportunity to prove my love and gratitude to this Church for all the blessings that flow to me from it, by helping those who are doing the grand work of erecting the new building.

I have no words in which to express my gratitude and love to God for all these blessings, and to our Leader, Mrs. Eddy, for her life and work, which are blessing not only us but the whole world. I am trying through obedience to express a little of what I feel.

LIZZIE MCKIBBIN, Belfast, Ireland.

It is with a heart full of love to God, and to our dear Leader, Mrs. Eddy, that I gratefully offer my testimony. I did not accept Christian Science for the healing alone, but for the spiritual uplifting, and the mental work thus involved has given me a sound foundation upon which to build. The conviction abides that this teaching is thoroughly in accord with reason and common sense, and has Scriptural authority. Life has for me a grander outlook, a nobler aim. Christian Science has several times snatched me from what seemed the very edge of the grave. A few years ago I was suddenly overtaken with illness, and tried to overcome it with my own understanding, but being very near unconsciousness the friend waiting upon me called an older student to aid me. In a very short time I was able to be out of doors. Later I had a severe attack with my eyes, from two o'clock in the afternoon until about eleven at night. I very nearly screamed with pain. A practitioner was asked to help me. I went to bed that night and soon went to sleep, had a good night's rest, and the next morning got up with my eyesight restored. I then went away for Christian Science treatment for another ailment, and in less than a week I returned healed.

It is only as I reflect infinite Love that I can ever pay the debt I owe to Him "who forgiveth all thine iniquities; who healeth all thy diseases." I most humbly thank God for all His blessings to me and my dear ones.

MRS. LILLIAN A. NIEMANN, Milwaukee, Wis.

When I was three years old, I had scarlet fever and diphtheria. I was under a doctor's care, but after that I could not hear for eight years. When I was eleven years old, my school teacher told me and some other girls, one noon, that the doctor was coming to examine our ears and eyes. When I got home my aunt, who is a Christian Scientist, was there, and I told her what had been said, and how I feared the doctor. She told me not to be afraid, that God was my help, and that if I trusted Him I could be healed. She told me how to realize the truth, and to hold it fast in my thought. I went back to school feeling happy to think that I at last was going to be healed from deafness.

After school the doctor came to examine us. He called me, and told me to stand in one corner of the room while he stood in the other. He also told me to hold my ears shut while he asked me questions, but I could hear every word he said and answer him correctly. My teacher, thinking it was the doctor's loud voice that made me hear, asked me some questions in a very low tone of voice, and I could hear her also. Knowing that I had not been able to hear, she came running up to me and said, "Can you really hear?" I told her, "Yes." "Why," she said, "what healed you so suddenly?" I told her that it was through the word of God I was healed. She looked at me very much surprised, but said nothing. I went home thanking God that I was healed through Christian Science. The next day the teacher changed my seat and gave me the very last seat in the room, which I kept. It is now over five years since I was healed, and I have not had any return of the trouble. I have had many demonstrations of God's ever-present help, and while to many they may not seem to be great, to me they have been stepping-stones to a higher and better understanding of the one Mind. I am certainly very grateful for this truth.—MISS ANGELINE UHLMANN, Milwaukee, Wis.

I was raised in Denmark, in the State Church, and the danger of eternal punishment was strongly impressed on my mind. While the way of redemption was not made clear to me, my fear of being eternally lost was very great. My people came to this country when I was thirteen years old, and after I was grown and married my health failed. After six years of suffering I was healed of a complication of diseases by Christian Science. I took up the study at once, and never again went back to medicine. My first copy of Science and Health was the twenty-third edition, which I prize very highly. I am entirely free from the fear of being eternally lost, and my gratitude is greater than I can express. I am satisfied, as I have indeed found a religion that heals and saves to the uttermost, and my earnest prayer is to live this truth and show others the way out of error.

I wish to express my gratitude to God, to our dear Leader, Mrs. Eddy, to our Publishing Society for the *Quarterly*, and to all who contribute to our periodicals.

MRS. HANSINE MADSON, Vermillion, S. D.

Words are not adequate to express my gratitude for what Christian Science has brought to me in the past few months. When I began reading "Science and Health with Key to the Scriptures" by Mrs. Eddy, I was burdened with a seemingly serious eye trouble, which had annoyed me for four years, and for the past two years had made any continued use of the eyes practically impossible, owing to the severe pains in head and eyes, together with great nausea, which followed any attempt to read or sew. During this time I had advice and treatment from two of the foremost oculists in the country without receiving any relief. When Christian Science came to my attention the same trouble came up when I tried to read, but I was told that if I would continue I would suffer no bad results. I had a great desire to understand the "little book" and continued reading. After a few days all pain disappeared, though to sense the appearance of the eyes was not pleasant; but I read persistently, being alone in a strange city, with the result that at the end of a month I awoke one day to the fact that, although for many nights past I had read until very late and by a very poor light, my eyes were entirely healed. This was without a single treatment,—simply by reading the book. This encouraged me to apply for treatment for other physical ailments, with the result that a case of prolapsus, supposed to have been caused by a fall from a horse in childhood and pronounced by an authority on such cases as incurable without an opera-

Digitized by Google

tion, has been met. I had long since given up hope of ever getting any permanent relief, as I had no intention of submitting to an operation. This trouble has been as entirely eradicated as though it had never existed.

Two months after I began to read Science and Health, I was enabled to treat a badly burned forearm, so that the pain was controlled almost at once. The manifestation of a burn disappeared within three days and left no scar. These are but a few of the many benefits I have received in five months; they are but the signs that shall follow them that believe. The rescue from the mental darkness regarding God and His creation, in which I had wandered so long, is of greater value to me than any physical help could possibly be.

I can but feebly express the love and gratitude to God which goes constantly out when I recall the many blessings that have come in so short a time. To the dear Leader who has brought us up out of darkness into the clear sunlight of Truth, must ever be love, honor, and obedience from me, and my prayer is for more understanding of this simple and wonderful truth which enables us to follow the Master in the way he has appointed.

ALICE MARIAN ADAMS, Omaha, Neb.

Although I am but a novice in the study of Christian Science, I desire to contribute my heartfelt thanks for benefits received. Some months ago my wife formed the acquaintance of a lady who was a Christian Scientist. Being prejudiced, I did not approve of this, especially as I soon noticed that my wife was trying to practise in the home the doctrines of her new-found friend. I had always been a believer in *materia medica*, and one can well imagine my anger when my wife, in response to my request for medical help when I was ill, asked me if I would not try Christian Science. This so incensed me that I ran out in a pouring rain to the nearest drug-store and bought some medicine. The medicine had no effect, nor did the other remedies which had always before proved beneficial in any way bring relief. Finally I gave up taking medicine in despair, but I managed after a few days to return to my work, feeling at enmity with the whole world and with myself in particular; but this was not to last long. After three weeks I was suddenly taken severely ill with catarrhal fever, and again my wife suggested Christian Science. Mentally reviewing my former experience with medicine, and as I was growing worse and suffering greatly, I gave my consent, and allowed her to send for her friend. She came, took her seat by my bedside for a few minutes, and then left, but never shall I forget the experience of those few minutes. A calm so peaceful and beautiful filled my consciousness that I felt as though I were in another world. In two hours all fever had left me, and the following morning, I arose, rejoicing and praising God as revealed in Christian Science.

For the following two weeks I felt as though I had been lifted above the earth. I had always been a very profane man, but now nothing could come up to cause me to swear. Then, too, came a desire to read the Scriptures, and together my wife and I began the study of our much neglected Bible and the Christian Science text-book. Soon we began to put into practice the truths contained in those two wonderful books, and the more we read and study the more we appreciate our copy of Science and Health and its author, Mrs. Eddy. May God's blessing ever rest upon her.

MARION S. CEMER, Muskegon, Mich.

The study of Christian Science has enabled me to overcome sorrow and many ailments, and partially overcome extreme nervousness and fear. Last spring my brother-in-law came to visit us, and one evening, as he sat talking to my mother, I left the room for a few minutes, when my mother called to me in a frightened way. I ran in quickly and saw my brother-in-law lying on the floor unconscious, his face almost black. I spoke aloud, as much to myself as to her, saying, "There is nothing to fear," and in an instant he showed signs of consciousness. I then declared the truth silently, and he sat up. The next morning he was as well as usual and rode fourteen miles to attend to some business. This seemed wonderful, as he had experienced a number of such attacks before, and once while under the doctor's care had not left his bed for nearly two weeks.

To God, the only good, I am grateful for the gift of His love, so beautifully expressed through the prophets and apostles of old, and through Christ Jesus, by whose teaching later generations were benefited; then through Mrs. Eddy, who stands before the whole world to uphold the Cause of Truth.—STELLA RALSTON, Choteau, Mont.

I wish to express my heartfelt gratitude to God, and to Mrs. Eddy, for the many blessings received through Christian Science. In November, 1904, our little boy was kicked on the head by a horse, the shoe striking him between the eye and temple, making an ugly gash and slivering the bone. He was in the barn lot, about a hundred yards from the house, but he got up and came to the house, the blood streaming all over him. We sent for a surgeon to dress the head, and it took two of them over an hour and a half to do it. A dozen pieces of bone were removed, but after the first scare, at the sight of the instruments, he never complained. This happened about half past eight in the morning and he never lost a meal or his sleep, and he was out of school only one week. He was injured on Saturday and on Monday evening his eye was open, clear and bright as ever, without a particle of redness. I cannot tell how thankful I was when I saw this. The beauty of this to me was that, so far as he was concerned, the work was done at the first treatment given during the operation.

I never felt any fear from the first, although I stood by him from the time the doctors began until they had finished. For this demonstration alone I owe a lifetime's service to the Cause of Christian Science.

CLARA A. SEYFFERT, Joplin, Mo.

[Written for the *Sentinel*.]

The Ever-coming Christ.

C. VIOLET SPILLER.

THE watchful shepherds heard the song
Whose echoes ne'er can cease
Till all the world shall be attuned
To that sweet song of peace.

The wise men saw the star of hope
Whose light can ne'er grow less
Till high o'er all the earth shall shine
The Sun of Righteousness.

O never-ending angel-song,
O always steadfast-shining star,
The ever-coming Christ we hail,
Whose witnesses ye are!

With outstretched arm to save and heal,
Christ through all time appears,
To bless the children as of old,—
To wipe away all tears.

Our falt'ring feet grow swiftly strong,
As on his way we press,
And lips long dumb, in joyful praise
The healing Truth express.

Digitized by Google

From our Exchanges.

The primary purpose of Jesus Christ was not to expound a theology, but to upbuild a life. A church has made theological progress when it has come to realize the relatively subordinate position which any theology, however true, must take. Most men have some sort of a theology, but its influence on their lives will depend largely on how they get it. If one gets it primarily by an intellectual process, if it is chiefly a system of ideas about God and man and Christ and destiny, then one may have a flawless theology which has hardly speaking acquaintance with his spiritual life, just as one may know how a church is built without having any desire or purpose to build one. But if a man's theological ideas are primarily the attempt to voice his spiritual experience, to set forth truths involved in right living, if he holds them primarily not so much because they are intellectually true as because they are spiritually necessary, then his theology will profoundly influence his life.

REV. FREDERIC W. PERKINS.
The Universalist Leader.

It is not easy for men grounded in the metaphysics of a system that reaches back for hundreds of years, and is rooted in all the modes of their thinking, to understand how other men can cast it all away, and think in new terms, to new results. But if one were to observe closely the Christian earnestness of these apparent iconoclasts, and note how much more valuable *seems to them* the forms of truth they are building in place of those they have abandoned, and who declare that their work is not only no loss to faith but great gain, while the conservative would not believe this he would at least understand and respect the men who do believe it.

The Homiletic Review.

He is the health of the world, and all who lift their eyes to Him can be made whole. New Year's day is always and for every one a beginning. No matter what lies behind it of wasted life, of corruption and folly, there is always a future stretching away into the dim distance. The whole process of life is one of redemption, and those who have blasted their careers, stained their names, distorted their souls, and come at last to moral and spiritual bankruptcy, may still find in Him, against whom they have sinned most unpardonably, the peace and help and health which the world cannot give.—*The Outlook.*

The man leans back upon his oars, satisfied. We may come to that mood in spiritual things as surely as in temporal. Some men practically retire from religion, much as they retire from business, because they think they have accumulated enough to live on. That was not Paul's way.

PROF. C. T. WINCHESTER.
Zion's Herald.

He [Jesus] said to his disciples on the eve of his departure that he had many things to say to them which they could not yet comprehend, but that he would come in the spirit to make these things clear. That is an abiding promise of a new revelation of himself.—*The Congregationalist.*

Heaven in its essential idea does not imply locality. It is a condition. And that condition is one of complete satisfaction. Wherever one may be or in whatever condition, if there is entire satisfaction, that is heaven for that one.

The Watchman.

Life is a good deal of a puzzle; but if we were more resolute in our determination to enrich it by worthy service than we are in our desire to solve its mysteries, we should be happier. If we put more into it, we should get more out of it.

Epworth Herald.

THE CHRISTIAN SCIENCE TEXT-BOOK.—"Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing all the By-laws to January 1, 1906, of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to The Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of The Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to The Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number, or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1 25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By Hon. WILLIAM G. EWING.

CHRISTIAN SCIENCE. Its Worth and Work. By Rev. ARTHUR R. VOSBURGH.

CHRISTIAN SCIENCE. Its Promises and their Fulfilment. By EDWARD A. KIMBALL.

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

The decision of the overseers of Harvard University means that football is prohibited and that no more contests can be held until radical reforms are made and evidence that the reforms are effective is presented. It is said that a well-advanced movement is on foot among several of the faculty members of the University of Chicago to abolish or suspend football for two years, following the example of Harvard. Yale's athletic radicals include in their demands: Abolishing games with outside colleges; abolishing gate receipts; taking athletics out of undergraduate hands. The moderates demand: Refusing to allow more than one or two graduate football coaches at one time; giving up professional coaches; putting athletic funds into hands of business men to check extravagance.

The Philippine Tariff Bill, as passed by the House, provides: A tariff duty of twenty-five per cent of the Dingley rates levied upon sugar, tobacco, and rice from the Philippine islands; admits all other goods, the growth or product of the Philippine Islands, into the United States free of duty; provides that after April 1, 1909, there shall be absolute free trade each way between the United States and the Philippines; exempts Philippine goods coming to the United States from the export tax of the islands; subjects merchandise from either country to the internal revenue tax of the country in which such merchandise is withdrawn for consumption.

Luke E. Wright, Governor-General of the Philippines, has been named by the President as the first American Ambassador to Japan. The indications are that Henry C. Ide of Vermont, at present the senior member of the Philippine Commission and acting Governor-General in the absence of Governor Wright, will receive the appointment to that office upon the latter's transfer. Upon Governor Ide's retirement, General James F. Smith, now a member of the Commission and a former justice of the Philippine Supreme Court, will succeed him.

A vigorous campaign is being carried on in Washington this winter to secure favorable action by Congress on the bills providing for the establishment of Federal forest reserves in the East. These bills call for the purchase of about five million acres in the Southern Appalachian Mountains, and not more than one million acres in the White Mountains of New Hampshire.

There seems to be a prospect that the action of the Department of Justice against the beef packers will fail, owing to the fact that the packers have entered a plea for immunity on the ground that certain information to be used against them in the prosecution was given to the Bureau of Corporations in confidence. The courts are expected to uphold the plea.

On June 30, 1905, there were in operation in the postal service 32,121 rural routes, from 13,599 distributing offices; more than one billion pieces of mail were handled by the carriers in the fiscal year ended June 30, 1905; value of stamps canceled, $3,421,857.01; value of stamps sold, $3,348,471.27; number of money orders sold, 3,979,620.

The report of the Keep Commission on the character of the work done in the statistical branch of the Agricultural Department, as submitted, is said to be much milder than the original draft. Much dissatisfaction has been expressed with this statistical work. There is a possibility that it may be transferred to the Census Bureau.

The House of Representatives cheered to the echo the historic frigate Constitution, went on record unanimously in favor of preserving Old Ironsides, and aroused a patriotic scene such as has not been witnessed in the House for years, when the monster petition from Massachusetts was presented to the House last week.

The Cape Elizabeth wireless station announces that it received a message from the drydock Dewey, which is being towed to the Philippine Islands, when the Dewey was more than three thousand miles away.

Mrs. Clara Hay, widow of John Hay, has received a memorial address signed by 2,363 Jews in America and Great Britain, commending the services of the late Secretary of State in behalf of the Hebrew people.

On January 17 the State of Massachusetts and the City of Boston united in celebrating the two hundredth anniversary of the birth of Benjamin Franklin.

Former Ambassador White of Germany represents the United States in the conference on the Moroccan question at Algeciras, Spain.

Foreign.

The Central Committee, composed of representatives from the Presbyterian, Methodist, and Congregational churches throughout the Dominion of Canada, have agreed upon a code of doctrines that will unify the three denominations into one great Church, which, it is proposed, should be known as the "United Church of Canada." The revised confession of faith of the American Presbyterian Church will be used. The new Church is to be governed by the "General Conference," after the Methodist form, with the president as the chief officer. Below is to be a council, after the Congregational idea, with a chairman at the head. The next body is to be a "Presbytery," governed by a moderator. The plan will be submitted to the several denominations throughout Canada for approval, which it is expected to receive.

M. Armand Fallieres, who has just been elected President of France, will assume the office on February 18, when M. Loubet's term expires. It is understood he will continue the policy of Loubet. M. Fallieres is sixty-four years old, is a lawyer, has been in the French Parliament since 1876, when he was elected a Deputy, and has been a political power for twenty-five years. He has been president of the Senate since 1899. M. Fallieres has served in three cabinets and once was premier.

The arrangements for the Russian Duma, which is to assemble in March or April, are being completed. In St. Petersburg seventy thousand persons of the tax-paying class have registered for the election. The upper house of the Duma will consist of a hundred members, of which fifty will be appointed by the present Cabinet or Council of the Empire. Of the fifty elected members twelve will be chosen by the nobility and thirty-eight by the other classes.

Great Britain has launched during the year two battleships and two armored cruisers. France has launched one battleship and one armored cruiser; Germany two battleships; Russia one battleship; Italy a battleship and an armored cruiser; Japan two battleships and one cruiser, and the United States four battleships and one armored cruiser.

M. Taigny, the French Chargé at Caracas, has been compelled to leave Venezuela. M. Maubourguet, the Chargé d'Affaires of Venezuela at Paris, has received the official announcement of his expulsion from French territory.

The Chinese still persist in their refusal to sign the Tibetan treaty. They are anxious to assert the sovereignty of China over Tibet, and are considering a project to send a Tartar general to govern the country.

The Schlusselberg State Prison, in the fortress of that name in Russia, famous as the place of incarceration for so many political prisoners, has been closed.

Industrial and Commercial.

The aggregate benefactions of wealthy men and women for the year 1905 are summed up by the *Chicago Record Herald* as $66,104,432. In this amount are included only gifts by individuals of $5,000 and over. Considerably more than half the whole amount was for educational purposes—$37,303,000 as compared with $4,242,757 for church work. It does not represent, however, the ratio of popular interest in educational as compared with church work, for two of the gifts for education, of $10,000,000 each, were by Mr. Carnegie and Mr. Rockefeller, and of the twelve institutions receiving a million dollars or more each, two were theological seminaries, Union and McCormick.

The *Commercial* says: All the details of the merger of the New York City Railway with the Interborough Rapid Transit Company, known as the Metropolitan Street Railway Company deal, have been practically completed. The total capitalization will be $425,000,000, consisting of $220,000,000 underlying stocks and bonds; $70,000,000 new 4½ per cent bonds; $52,000,000 new preferred stock, and $83,000,000 new common stock. This capitalization is on about sixty miles of subway, elevated, and street surface railway lines.

The Tight Barrel Heading Manufacturers' Association has just completed its semi-annual meeting at Memphis, Tenn. There were ten million tight barrels manufactured last year, and ninety-five per cent of the heading used was made by members of the association, representing the producing mills of Arkansas, Mississippi, Tennessee, and Kentucky. The invested capital is $3,000,000 and the annual output is about $4,000,000 worth of heads.

The Southern ports are increasing their importance as exporters of breadstuffs as shown by the *Manufacturers' Record*, which says: "During the twelve months of the past calendar year the value of breadstuff exports from this country increased over that of the preceding year from $92,311,812 to $146,110,962. The increase of leading Southern ports was from $30,015,517 in 1904 to $50,049,696 in 1905."

General.

Finland has a larger percentage of wooded area in comparison with its total surface than any other European country. It leads with 51.25 per cent, while Great Britain has the smallest, or 3.6 per cent.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

A Memorable Occasion Recalled.

A LETTER recently received from a friend vividly recalls the date June 13, 1888, when our Leader addressed an audience which completely filled Central Music Hall, Chicago, then the largest and best hall in the city. It was our privilege upon that occasion to see and hear Mrs. Eddy for the first time, and we distinctly remember the profound impression which her words made upon the great assembly which occupied every seat and every foot of standing-room. Although Central Music Hall has been swept away by that progress which has made Chicago the metropolis of the West, its place in history is assured by the words spoken from its platform that memorable June day.

Our friend's letter follows:—

Chicago, Ill., January 10, 1906.

Dear Mr. McLellan:—If you have not forgotten Chicago and its institutions, the enclosed clipping may afford you a moment's interest. As a matter of further interest this building (1902 addition) covers the site of old Central Music Hall, where Mrs. Eddy spoke when she was in Chicago, some seventeen years ago, and gave to the movement here its first great impetus.

Yours very truly,
WALDO P. WARREN.

The following item from the *Chicago Record Herald* is the clipping mentioned in Mr. Warren's letter:—

The finest and most elaborate merchandising building in the world is assured to Chicago as a result of the determination of Marshall Field & Co., announced yesterday, to begin construction of a new building to take the place of the old structure at the corner of Washington and State Streets.

As soon as the addition is completed which is being built on Wabash Avenue it is intended to move the stock now in the old State Street section into the new structure and to begin tearing down the old section. On the site will be erected a superb building, the same in structure and design as the north building on State Street, which, together with that building, will form a structure one entire block in length, of steel and granite.

The Field store, including the two State Street sections, and the Wabash Avenue sections, will thus occupy the whole block bounded by State, Washington, and Randolph Streets and Wabash Avenue, with the exception of the comparatively small space taken up by the Trude Building.

The two new sections—that now being completed on Wabash Avenue and that to be built at State and Washington Streets—added to the remainder of the structure, will give to the Field retail store a total floor area of one million five hundred thousand square feet, or about thirty-three acres.

The cost of the new building at State and Washington Streets will be about one million five hundred thousand dollars, while the cost of the new building now being completed on Wabash Avenue is to approximate one million dollars—altogether the building operations meaning a total of more than two million five hundred thousand dollars, entirely exclusive of the value of the sections which are to be untouched and which are immensely valuable.

Such a finished structure as will result when both new sections have been finished will mean that this city will have a store which cannot be approached by any merchandising building in any city of the world.

In 1888 the five-story buildings on State Street, just north of the corner building, were acquired. In 1892–3 the "Annex," a nine-story building, was erected on the corner of Wabash Avenue and Washington Street, and in a short time three buildings just north of the Annex were acquired. In 1897 two stories were added to the building on the corner of State and Washington Streets.

In 1901 the two buildings on the State Street side, just north of the corner building, together with the property known as Central Music Hall, extending to the corner of State and Randolph Streets, were torn down to make room for a twelve-story steel and granite structure. In 1905 the three buildings on Wabash Avenue, north of the Annex, were removed to make room for the new Wabash Avenue building. Now comes the passing of "the old corner" building, to be replaced by another new granite structure—a further step in the phenomenal growth of Chicago's great mercantile institution.

From our Contributors.

Understanding Gained.

ELOISE CAMERON MAC GREGOR.

IT was long my desire to understand the Old Testament, as a well-thumbed first chapter of Genesis would testify, but my interest could never survive its seeming incongruities and I repeatedly abandoned the effort in despair, though I did cling to the familiar Psalms and to the New Testament. It may be safely presumed that I have not been alone in this unsuccessful attempt, it has no doubt been the experience of many, and I shall be very glad if anything I may say proves helpful to others. In my studies, next to mathematics, the myths of classic literature interested me, because they seemed to point to the real meaning of things. At last it became my privilege to study under a great master, who would often say to his pupils,—"The ministers tell you to be good—I shall only tell you to be reasonable. You may find in the end that it is the same requirement, since there is no virtue without intelligence and no intelligence without virtue." His only text-books were what he called the four great literary bibles, written by Homer, Dante, Shakespeare, and Goethe. From them he gathered and presented what to me then seemed such sound logic, consistent ethics, and so lofty a spiritual ideal, that I became a peripatetic searcher for its equal in the famous pulpits of the city where I live. Different churches were visited, with keen appreciation of the good found therein, yet the teaching seemed contradictory and unreasonable; there was always something lacking. Not one of them seemed to bring so much out of the Bible as I had received from Homer's great story of the Odyssey, when our master showed us that it made no difference whether there ever was a man named Homer, or another called Ulysses; because

Digitized by Google

the wandering warrior was not a long-ago hero, but ourselves,—that daily are we required to sail between Scylla and Charybdis, to beware of Calypso and Circe, and to resist the Sirens; so we learned that daily we should strive for a higher ideal within if we would see it without.

At length I became dissatisfied even with this teaching. Soon after this my health gave way completely, and after three years of invalidism, with the prospect of several more years of suffering and uselessness before me, I was healed in five days by Christian Science. I took that blessed book, Science and Health, and studied it from morning until night, from beginning to end, for a year and a half, trying all the time to put the teachings, so far as I understood them, into practice, for we were distinctly told from the first that in Christian Science mere belief counts for little, that Christian Science demands practical demonstration, the actual living of its exalted teachings. I had found a religion sufficiently spiritual and practical to satisfy me, thoroughly logical, consistent and reasonable thoughout. It is impossible for me to describe the joy and happiness which I felt, or my gratitude to God, and to Mrs. Eddy, for this wonderful gift to the children of men.

I had now learned that the Scriptures must be read as records of consciousness, and I got out the old Bible which had formerly seemed such a stumbling-block, when, lo and behold! the study of Science and Health had transformed it for me into the most interesting and absorbing book in the world, and such it has continuously proved for over nine years. I have found that Mrs. Eddy's interpretation of its spiritual truth supplies all that I had been seeking in order to gain that practical inspiration which mankind so sorely needs. Truth, thus revealed, has been in all these years our only physician, and more successful than any other could possibly have been.

Fourteen of our friends turned to Christian Science at once, and there have since been many others, so that we have seen many diseases, which had previously been diagnosed by reputable physicians as very serious, healed by the application of the spiritual ideal set forth in Science and Health. For these and many other blessings I have always felt that daily and hourly obedience to our highest sense of Christian Science is the only worthy way in which we can ever express our gratitude to Mrs. Eddy for giving us this bread, or Word of God, good, and the water of Life.

I am thankful to be living in an age when we may, by love and fidelity, disprove the old belief that a prophet is without honor in his own country, as was written long ago,—

> Seven wealthy towns contend for Homer, dead,
> Through which the living Homer begged his bread.

How happy we should be to have the privilege of serving our Leader by contributing to the building of The Mother Church so dear to her heart. Truly this message of Christian Science, through Science and Health, is the risen Christ, who opens our understanding so that we too may understand the Scriptures. "If ye know these things, happy are ye if ye do them."

Shut the Door.

GEORGIA LOUISE MORRISON.

SOON after my healing, which was realized through the study of our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, I saw that by applying faithfully and persistently my understanding of divine Principle I could work out every problem that presented itself in my daily life. I found that by putting into practice all that I understood of Truth, I gained a little each day; and every time I made a demonstration, even though ever so small, I was that much stronger to cope with the next problem which presented itself. In a short time I found myself confronted with the financial question. It was very clear to me that poverty is only a phase of error. I saw that I had the same right to freedom from chronic poverty that I had from chronic liver trouble, of which I had been perfectly healed, because St. Paul says, "God shall supply all your need." But how was I to overcome this seemingly giant error? I began a diligent study of the Bible and our text-book, and "by little and little" I worked out the problem.

Early in this study and demonstration I found that I must seek "first the kingdom of God, and his righteousness." I had learned that righteousness is right thinking, so if I could think right, I knew I could solve the problem. The first thing to do was to seek supply in the "kingdom of God." —that is, I must find all in God. Then came the command, "Bring ye all the tithes into the storehouse, that there may be meat in mine house, and prove me now here with, saith the Lord of hosts, if I will not open you the windows of heaven, and pour you out a blessing, that there shall not be room enough to receive it."

It was easy to say that God is the source of my supply, that God is all, but it was another thing to know it, especially when my pocket-book was nearly empty, and I had no work, while my expenses were going on just the same; but I remembered that "now is the accepted time; behold, now is the day of salvation." I must know the truth *now*, and if I could not know it now there must be some mistake in my reasoning; there could be no mistake in Principle, for that is absolute. James says, "Every good gift and every perfect gift is from above, and cometh down from the Father of lights, with whom is no variableness, neither shadow of turning." Again I read, "Jesus Christ the same yesterday, and to-day, and forever," and better still, Jesus' last words, as recorded by Matthew, "Lo, I am with you alway." This was the point that I had failed to see—"'Lo, I am with you alway,'—that is, not only in all time, but in *all ways* and conditions" (Science and Health, p. 317).

I went back and reviewed my work. I saw that if God is the source of my supply and God is Spirit, then supply must be spiritual and not material. At this point I secured work which met all my needs for some time, and I thought the problem was solved, so I gave it no more special attention.

Not many months passed, however, until I found the old error presenting itself again. At first I had a battle with discouragement, for it seemed a little hard that when I was so sure I had solved the problem I must again work it over. It seemed to me like an example in partial payments, both long and tedious, but the error had to be met and I must begin at the beginning and go over all the ground. The Bible is full of promises which gave me strength and encouragement, and Science and Health had enabled me not only to understand these promises, but to apply them to every need. From past experience I knew this problem could be solved, and this made me feel the stronger to go forth to battle with the enemy—material sense.

Mrs. Eddy says in "Miscellaneous Writings, p. 307, "God gives you His spiritual ideas, and in turn, they give you daily supplies. Never ask for to-morrow; it is enough that divine Love is an ever-present help; and if you wait, never doubting, you will have all you need every moment." When the children of Israel were provided with manna, they gathered it every morning, according to each one's need. Right here I discovered a mistake in my work, for I had thought my problem solved and my work done, but I now saw very plainly that only present need is assured and no more. "Sufficient unto the day." The problem was no longer doubtful or tedious, for it became a privilege to demonstrate the supply each day.

> Day by day the promise reads,
> "Daily strength for daily needs;
> Cast foreboding fears away;
> Take the manna of to-day."

For two weeks I had had no work and there was still no prospect of it. The rent was almost due and this must be paid in advance, but I recalled the fact, "Hitherto hath the

Digitized by Google

Lord helped" me, and why not now? I knew that divine Love was willing to help His child, and that this seeming lack was simply error, which was trying to separate me from God. The question was, Would I submit to it, or would I overcome it? I remembered that a widow once went to Elisha when her supply seemed to be very low, and he asked her what her resources were. She answered, "A pot of oil." Then he told her to go and borrow vessels; and they were to be "empty vessels," and she was to "borrow not a few." And what next? She was to "shut the door" and "pour out [oil] into all those vessels." Could she have done it if she had kept thinking that she had only "a pot of oil"? No. She must "shut the door" on the material sense of lack. So must I. "And when thou hast shut thy door, pray to thy Father which is in secret; and thy Father which seeth in secret shall reward thee openly."

Need I add that in two days I found employment which met all my needs? Thus it was again proved to me that "God is our refuge and strength, a very present help in trouble." Is it any wonder that I love, honor, and revere the one who has given us the "Key" that unlocks the hidden treasures of our beloved Bible?

Little Cities.

J. A.

IN the 19th chapter of Genesis we read that Lot, when commanded by God to come out of Sodom, and to escape to the mountain, obeyed only in part, and begged that he might tarry in a city not so far off, saying, "Is it not a little one?" Formerly when I read this passage I looked on it merely as an old legend of doubtful authenticity; but now, read by the light of our text-book, which is indeed a Key to the Scriptures, I see that it contains a valuable and much-needed lesson.

When God, through Christian Science, calls us to come out of our dreary cities of the plain, the Sodoms and Gomorrahs of sin and sickness, and flee to the "city which is set on an hill," do we not halt on the road, content if we are freed from the grosser forms of sin and more serious physical discord? Should we not rather take warning from what befell Lot? He relapsed into shameful sin, from whence sprang the Moabites and Ammonites destined to be obstacles in the way of the people of God on their journey to the Promised Land.

Our Leader says, "We are not Christian Scientists until we leave all for Christ" (Science and Health, p. 192). Are we leaving all if we linger in the little cities of our own choosing? Let us beware lest from them also spring hosts which will molest not only ourselves but others on the road to our Promised Land. This brings to mind the words of our hymn,—

Whatever dims thy sense of truth,
Or stains thy purity,
Though light as breath of summer air,
Count it as sin to thee.

Our Handiwork.

Better to weave in the web of life
A bright and golden filling,
And to do God's will with a ready heart
And hands that are prompt and willing,
Than to snap the delicate minute threads
Of our curious lives asunder,
And then blame Heaven for tangled ends
And sit and grieve and wonder.

ANON.

Is not prayer also a study of truth,—a sally of the soul into the unfound infinite? No man ever prayed heartily without learning something.—EMERSON

Selected Articles.

No one can complacently dismiss Christian Science because it fails to coincide with established theological views. Christian Science is not theological in the common acceptance of the term. On the contrary it is practically demonstrable. Jesus said, "Believe me for the very works' sake." His followers in Christian Science re-utter these words in behalf of their faith.

Our critic objects to this teaching because it violates tradition—because it revives the charge that "faith without works is dead." Let us lay aside the dry bones of old beliefs, and look the needs of humanity fairly and squarely in the face. Is the conscientious physician of to-day wholly satisfied with the results which his system of healing affords? Is the hard-working pastor of his flock, in these days of evil's apparent supremacy, content with the results of his work for humanity? All who labor in behalf of others have common cause in this matter, and should welcome whatever reasonable effort is made towards overcoming this lack of results.

The Moravian Church, of which our critic is an honored member, annually commemorates the martyrdom of John Huss and other early Christian workers. Does he forget that Huss was burned only because other Christian critics charged him with heresy? Is not his criticism of Christian Scientists of the same species of attack?

It is comparatively late in the day that Christian Science has come to this community, but the world at large has been accepting the presentation of this uplifting Christian teaching with marks of unusual approval and satisfaction. It is true that the ranks of Christian Scientists are made up largely of those who were formerly honored members of other Christian churches. It should be remembered, however, that many whose skepticism debarred them from accepting Christianity in any form before, are now among the most devout and active members of this church. Should we not rejoice over the spiritual awakening of those who were once lost to our Master's cause, as well as over those who had already tasted of salvation?

Not since the time of the apostles has there been such a strong, wholesome, and healing religious thought abroad as in these latter days. Should some few who do not understand or who do not approve of the interpretation placed upon divine Truth by Christian Science, be permitted to hinder this glorious work? Let the fruit of the tree be the evidence of its quality.

Christian Science has clearly shown its ability to satisfy fully the highest standard of Christian ethics by retaining the devout and loving adherence of many thousands of people who learned in the church of their earlier years the first lessons in discriminating between evil and good.

ALBERT E. MILLER.
Bethlehem (Pa.) *Times.*

Christian Science plants itself unreservedly on the side of Spirit and declares that spiritual things are the only real things and that the material universe is a false concept of the corporeal senses and will pass away. St. John declared, "And the world passeth away, and the lust thereof: but he that doeth the will of God abideth for ever." That the universe expresses Mind, and Mind only, is the conclusion to which even the leading physicists of the day are tending. Huxley himself exclaims, "After all, what do we know of this terrible 'matter,' except as a name for the unknown and hypothetical causes of states of our own consciousness?"

Christian Science does not deny the existence of pain, evil, sin, sickness, and death to the mortal consciousness. It denies that they are a part of God's universe or that He created them. They are an expression of false material sense, the carnal mind of which St. Paul speaks. Would our critic, in denying this position of Christian Science, assert

Digitized by Google

that these things are a part of the kingdom of heaven? They must be, if God made them. Jesus said he came to destroy the works of the devil. The works of the devil are pain, evil, sin, sickness, disease, and death. How could Jesus destroy these things if they are a part of God's universe and have eternal life? The mortal false consciousness of evil—matter, sin, disease, death—lasts as long as we believe in its reality and no longer. When corrected by a higher understanding this consciousness passes away, as St. John declares.

EZRA W. PALMER.

Rocky Ford (Col.) *Enterprise.*

The physical healing in Christian Science is the result of some degree of spiritual regeneration in the individual, or an awakening to that natural, God-given consciousness which has been obscured by erroneous suggestion and false belief. No one can be healed in Christian Science without receiving some spiritual betterment, and this transforming process is not the result of human will power nor personal control, but is due rather to the understanding, in a degree, of the omnipotence and omnipresence of God, the one divine Mind, and the consequent powerlessness and unlawfulness of all forms of evil. In the application of Christian Science there is positively no mental attempt to personally influence the individual through suggestive argument or domination of will.

The same relationship exists between an appealing sufferer and the Christian Science practitioner as is common between the tangled and disturbed accountant, who has struggled long and unavailingly with his trial balance, and the expert adjuster of accounts. The former is confused and distressed because of his ignorance, while the latter, with calmness and precision, is enabled to remove the difficulty and distress by reason of his better understanding and practical application of the unchanging mathematical law governing the situation. It is not mental control nor suggestive argument which can deliver the entangled accountant, but rather a knowing of the truth about mathematical facts; and in like manner, in Christian Science practice, the conscious knowing of the infinite truth about God and man, whether silently or audibly affirmed, will in the measure that it is realized displace and destroy discordant physical and mental distress.

Suggestive therapeutics and hypnotic control may affect the mortal mind and body as does morphine, and the last state of the dependant thereon be sadly worse than the first; while, contrariwise, through Christian Science a sufferer who is relieved physically has also gained a freedom from material hypnotic influence in some form of disease or sin. Christian Science lifts men away from the desire to control, or to be controlled, by the so-called human will, and gives them a confident assurance and present satisfaction in that earnest prayer of the Master: "Not my will, but thine, be done."

DAVID B. OGDEN.

Oregon State Journal.

Christian Science treatment establishes in the consciousness of the individual the wholesome truth that God is his Life, inasmuch as it is in Him we "live, and move, and have our being." Then as God, this Life of man, in whose image, exact likeness in every particular, man was created, is "of purer eyes than to behold evil," and cannot "look on iniquity" manifest either in the form of sin or disease, it is quite evident that these can have no place in Deity, and it is but logical to conclude that they can have no power over man. Thus the patient is strengthened with a stimulus of warrantable courage and inspired with a conscious power which enables him effectually and entirely to throw off such untoward conditions, and he is free to act without possibility of reaction.

R. STANHOPE EASTERDAY.

Goshen (Ind.) *Democrat.*

The Lectures.

Creston, Iowa.

There was a representative audience present at Patt's Opera House Friday evening [November 24] to hear the lecture on Christian Science delivered by Judge Septimus J. Hanna of Colorado Springs. The speaker was introduced by Senator J. B. Harsh, who said in part,—

The little body of devotees of this faith in our midst has gained my admiration because of the quiet way they do their work. But the great work I have marked is the change in the individual members of this fast growing society after espousing the doctrine. This is the way all national changes must come—first change the individual, then the community, and soon the entire body is changed and made better.—*Advertiser-Gazette.*

Salt Lake City, Utah.

Rev. William P. McKenzie lectured at the Salt Lake Theatre, Sunday evening, November 12. He was introduced by Hon. Frank B. Stephens, who said in part,—

To-day more than ever before the world is asking the question, "What is God? What are His attributes? Are they Life, Truth, and Love? Did God create only what is good, or did He also create evil and sickness? Is death the doorway to the more abundant life promised by our Saviour, or is this more abundant life something we are entitled to have here now?

These are questions which more and more occupy the minds of thinking people; nor are these questions new; they are as old as history. Almost thirty centuries ago the greatest man among the children of Israel, their first king, Saul, chosen as the one above all others possessing the physical, moral, and intellectual qualities necessary to a great leader, was so grievously afflicted by some unknown ailment that he was wholly unfit to perform his duties as king. The newly-formed government was without a head, and consternation reigned. At last, all other means failing, the friends and counselors of the king sent for David, the young shepherd, famed as a skilful player upon the harp, to see if he could not by the power of music restore the king to health.

Robert Browning has taken this story for the subject of one of his greatest poems. The poet represents David as using every art in his power to heal the king; and failing so to do, he reflects profoundly upon the spectacle before him. He sees what should be a splendid specimen of manhood, capable of great service to his people; greatly needed by his people, but utterly unable to perform his duty. Then David begins to consider the attributes of God and to compare them with those of mankind. He finds that while the attributes of God are held to be infinitely higher than those of man, yet can it be possible, he asks himself, that in one particular I am greater than my Creator? Is it possible that my love for my fellow-man exceeds God's love for mankind? Were I omnipotent, I would heal this man and give him back to the children of Israel with the full possession of his powers of body and mind. Then the soul of David was filled with the light of Truth; he said to himself, "The creature cannot be greater than his creator; God's love is infinite." There came to him a vision of the Christ who should some day come to the world and bring to afflicted humanity the truth that should make them free; and the future prophet is pictured as going home by the early morning light with a glorified vision of the Saviour who was to come.

The same thought was expressed by other prophets. Isaiah spoke of one to come who should be "as rivers of water in a dry place and as the shadow of a great rock in a weary land." In the fulness of time the vision of the Christ was fulfilled. The one came who set at naught all

Digitized by Google

the powers of evil. But the concept of Truth unfolded by the man of Galilee was crushed to the earth, sometimes to rise again, grandly voiced with the magnificent courage of a St. Paul or a Savonarola; sometimes uttered by a poet, as in Lowell's "Vision of Sir Launfal;" sometimes breathed through the sweet spirit of a Whittier, who says, "Where love dwells the peace of God is there;" and at last, again unfolded, undimmed, full-orbed, in the life and teaching of Mary Baker G. Eddy under the name of Christian Science.

Correspondence.

Cambridge, England.

The beliefs and aims of Christian Science were explained to a large audience gathered on Friday evening [November 17] in the Guildhall, Cambridge. Mr. G. Warre Cornish, of London, who presided, in introducing the speaker, said Mr. Bicknell Young's name was familiar to all Christian Scientists in this country. Christian Science could not be learned—no subject could—from hearsay and rumor. When he was an undergraduate at Cambridge he knew of Christian Science, but he had not the slightest idea through hearsay on the point how good its teachings were, how calculated to benefit and uplift humanity.—*Cambridge Express.*

Belfast, Ireland.

Mr. Bicknell Young of Chicago lectured in Ulster Hall, Belfast, on November 21, before an audience of about eight hundred. He was introduced by Mr. H. A. Crooks, who said in part,—

Ladies and Gentlemen:—The Christian Scientists of Belfast and district have conferred on me the honor of acting as chairman at this great meeting, because I have had some personal experience of the Christian Science movement in this city for the past three years. I venture to promise for the lecturer a fair hearing from my fellow-citizens here to-night. We are all here as seekers after truth, and if the speaker has any new truth to give us, we want to hear it. The Master said, "Ye shall know the truth, and the truth shall make you free." I want to be free, and if the Christian Science people have any light that has not come to me, I want it.—*Correspondence.*

Council Bluffs, Ia.

Rev. Arthur R. Vosburgh lectured on Christian Science at the New Theatre, November 27. He was introduced by Mr. J. A. Barris, who said in part,—

While it is true that many of us Christian Scientists were at one time members of an orthodox church and have since separated ourselves from it, we desire to say, as did Abraham when he parted from Lot, "Let there be no strife, I pray thee, between me and thee, . . . for we be brethren."

Science and religion have ever seemed to be at war with each other, so that if they can be reconciled by showing religion to be a science we are benefiting mankind, for we thereby give him a demonstrable religion, one that can be proved by all men here and now. This is what Christian Science is doing—changing blind belief in an anthropomorphic God to the knowledge of a demonstrable Science whose Principle is God, Spirit, omnipotent, omniscient, omnipresent, the same yesterday, to-day, and forever, and whose highest exponent was our great teacher and Way-shower, Christ Jesus.—*Correspondence.*

Superior, Wis.

Hon. Clarence A. Buskirk of Princeton, Ind., delivered an interesting lecture on Christian Science at the Pilgrim Congregational Church, Thanksgiving evening [November 30]. E. C Kennedy, in his introductory remarks, said in part,—

The subject of the lecture this evening, Christian Science, I believe is arousing greater interest and commanding more serious thought and consideration in the religious world than has any other subject since the dawn of the Christian era. Enlisted in its Cause are many of the ablest, most thoughtful, and influential men and women of this age. Its teachings and practice are not new, for nearly nineteen hundred years ago, when the Saviour was asked if he were indeed the Christ, he answered, "The blind receive their sight, and the lame walk, the lepers are cleansed, and the deaf hear, the dead are raised up, and the poor have the gospel preached to them." By his works he furnished the proof of his identity. The testimony of the thousands and tens of thousands from all parts of the world, who through Christian Science have been set free from the fetters of sin, relieved of pain, and cured of sickness and disease, furnishes abundant proof of its glorious work in the uplifting of humanity and may well invite serious thought and consideration in connection with these works and words of our Saviour.—*Correspondence.*

Birmingham, Ala.

Mrs. Sue Harper Mims lectured on Christian Science at the Jefferson Theatre, December 3. The lecturer was introduced by Prof. J. H. Phillips, superintendent of schools, who said in part,—

There are already in motion many forces that seek the readjustment of the social, political, and religious standards of the past. Among the numerous agencies at work to this end, is the organization known throughout the civilized world as the Church of Christ, Scientist. Whether we believe all its tenets or not,—whether we approve its creed, its philosophy, or its Science,—all must recognize the fact that its adherents are earnest seekers after that truth which makes for the ultimate freedom of the race.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Amendment to Church By-law.

ARTICLE XVIII.

LOCAL SELF-GOVERNMENT.—SECT. 1. The Mother Church of Christ, Scientist, shall assume no general official control of other churches; and it shall be controlled by none other. This is the denominational rule of Christian Science. Each Church of Christ, Scientist, shall have its own form of government. No conference of churches shall be held, except the annual conference at The Mother Church, unless it be when our churches located in the same state convene in unity and love to confer on a statute of said state, or to confer harmoniously and agree on individual unity and action of the churches in said state.

"Christian Science and Legislation."

WE understand that those who have heretofore attempted to obtain legislation opposed to the practice of Christian Science are again active to this end in some of the States, therefore it is important that our people should see to it that all such attempts to curtail individual rights are defeated, as they have been defeated in the past. In order to do this successfully, particular attention should be given to the systematic distribution of the authorized literature of our denomination, which correctly sets forth the teachings of Christian Science and the results of its practice.

That Christian Science as taught by Mrs. Eddy in Science and Health heals the sick and reforms the sinful, is becoming more widely known and more readily conceded, but there still remain many who are not prepared to admit this fact, because they have not taken the trouble to investigate for themselves, being content to let others do their thinking for them, and it is to such persons that the stock arguments against Christian Science have sometimes appealed with great force. Obviously the only thing to do with these people is to educate them to know the truth about Christian Science; viz., that it is the religion of Christ Jesus, that it heals the sick and reforms the sinful as was done in the first three centuries of Christianity, and that it is the legal right of every person who may desire to do so, to rely upon the promises of this healing and saving religion and to practise its methods for themselves and for others who may desire such help as they can render.

The Christian Science Publishing Society has recently issued a pamphlet, "Christian Science and Legislation," which is especially designed for distribution in this educational work, and this pamphlet should have a wide circulation, not only that the opponents of Christian Science may have an opportunity to acquire correct information upon this important subject, but also that Christian Scientists themselves may know what their rights are. The principal article in this pamphlet is written by Judge Clifford P. Smith of Iowa, who says,—

"The mistake has commonly been made, even by our friends, of viewing much too narrowly the questions involved in Christian Science and legislation. It has been assumed that the right to religious liberty is the only right involved, whereas, the right to equal privileges and immunities, the right to the equal protection of the laws, and the right to civil or individual liberty in general, are also involved; and it has been assumed that only the rights of those who practise Christian Science as a vocation are involved, whereas, the rights of all persons to resort to every known method to recover health and preserve life, and their rights to make contracts of employment to that end, are also involved.

. . . . . .

"Suppose the law provides that none but medical doctors may practise healing at all. It will then be criminal for a man whom they cannot heal to attempt to obtain relief through the practitioners of any other system. The members of a legislature who vote for such a law will thereby unite in saying to every man whom the medical doctors cannot heal, 'The medical system is the State system of healing; if it can't cure you, you must be deemed, in point of law, to be incurable!' They will unite in saying to every man in physical extremity, 'If the medical doctors can't save you, your death must be deemed to be legally inevitable!' Who, knowing the uncertainty of their remedies, wants to assume such responsibility? If legislators are willing to assume such responsibility, by what right or authority can they do so, and what constituency would they represent in so doing? When a man's life is in danger he ought to be free to seek relief by all means whatsoever."

We believe that every Christian Scientist should read this pamphlet and distribute as many copies as possible.

ARCHIBALD MCLELLAN.

"Do thyself no harm."

ST. PAUL'S earnest and assuring appeal to the Philippian jailer saved him from an impulse which might have led to a tragedy, and to-day those who are believing in the false claims of a crucial human experience, who are giving it power and are thus tempted to make their escape by a criminal act, need also the same kind and staying word of wisdom and brotherliness. It is the false assertion of mortal sense that it can lead its votaries to dreadful deeds, and Christian work is still very largely one of rescue from this falsity. If the poor are to have the gospel preached to them, and the sick are to be healed, those who to their human sense are defeated and desperate are also to have a loving hand extended, the illuming light of Truth turned upon their way.

None will question that the larger and nobler the sense of life which men entertain, the less possible every phase of disobedience to the sixth commandment becomes. If one identifies his life with the body so far as to think that its conditions determine his happiness as well as his misery, then, when peace and joy seem to have hopelessly gone, error may further prompt him to end discomfort by smiting its accredited source; but no one would be likely to yield to the temptation if he knew that his material body had no causal or determinative relation to life. The one unendurable thing, in human experience, is a false, cruel, and self-destructive mentality or mortal sense, and the folly of undertaking to remedy a recognized mental ill by doctoring or destroying a material body, is apparent to all save those who are controlled by the false belief that life is in matter and subject to it. It is manifest, therefore, that the fundamental need of the distracted and desperate is a right thought of life, the understanding that it is not related to or dependent upon matter, but is the manifestation of omnipresent Spirit, and hence wholly spiritual; and this inspiring and redemptive truth Christian Science is bringing to all the world, through the study of its text-book, Science and Health. Wherever its teaching is received, it dispels the false sense which so often leads to crime, as surely and speedily as the light of day banishes the darkness of night.

Christian ministers and teachers are coming to see the seriousness of the condition of public thought, and many of them are ready to concede that the theological teaching which confirms, if it does not awaken, the belief of life in

Digitized by Google

matter must be held responsible for the ills which this belief logically entails. In accepting the story of man's creation from dust,—the teaching that he is constituted of both spirit and matter, and comes into being as the result of animal impulse,—and in looking to matter instead of Mind for the correction of human ills, the habit of identifying life with materiality is certainly begotten and nourished. More than this, even Christian thought is permeated with the idea that somehow we escape from human ills by death. This is an inference from the false teachings that matter is real, the legitimate source of the appetites and impulses which largely dominate the human mentality, and this also conduces, no doubt, to the willingness to get out of the world.

The whole trend of Christian Science is corrective of this condition. It declares man to be the manifestation of that eternal Life which is Spirit, and that our entry into the exalted consciousness which is our true life is made as we turn away from every unideal sense of man and know him only as the "image and likeness" of God. Christian Science is both teaching and demonstrating, moreover, that the human ills which have made the ending of life seem desirable in mortal thought may be healed, to-day as of yore, through the spiritual understanding of the Word of God. It is enabling men everywhere to see that escape from the woes of human experience is to be found not in the death of the material body, but in the death of error in human consciousness through the acceptance and realization of Truth, and in so far as this is apprehended humanity is saved from even the temptation to "harm" itself. JOHN B. WILLIS.

"The word of truth."

As newborn babes, desire the sincere milk of the word, that ye may grow thereby.—*I Peter*, 2 : 2.

FROM the earliest times men have had glimpses of that infinite light "which lighteth every man that cometh into the world." They have caught the pure tones of Spirit, and as seers have written what they saw and heard, that others might share the blessing. Those who themselves come nearest to the vital truth of what has thus been revealed, are most reverent in their approach to "the Word," and care more that its glory and power may be seen and felt in the uplifting of humanity than that their own opinions should be heeded and perpetuated. Such an one was John, the beloved disciple, who gave through his Gospel the message of the Christ in its divine purity, and who declared his purpose in so doing to be that we might "have life through his name." Again, in the Apocalypse, after presenting a picture of heaven and earth wherein neither sin, sickness, nor death were to be found,—the divine Life being supreme over all,—he gives a solemn warning against adding to this glorious message, or taking aught from it.

With Christian Science has come the presentation of the "full content of Christianity," and mankind is awakening to the infinite possibilities of good thus offered them. It has long been believed that the world's hope lies in the Bible, but many of the attempts at its interpretation have brought despair rather than a fulfilment of this hope. They have added to the world's doubt and consequent misery, and by their denials of spiritual law, denials that are based on sense-testimony, they "take away" the perception of the Christ-power which heals the sick and the sinful.

Like the multitudes who followed the Master, everywhere, to receive the blessing of the unadulterated Word, many are now coming to Christian Science, where this Word is again offered, as in that earlier day, with "demonstration of the Spirit and of power."

We venture to quote one who writes in a New York paper. He says that he believes in the Bible as spiritually interpreted, and adds, "To get it unadulterated I must go, not to my own slimly attended church, but to one of the several crowded Christian Science churches, where I find dozens of my orthodox neighbors, because they get what I get, the Bible pure and simple and consistent, and a God who is good and only good. . . . My friends and I want the Bible founded on Christ, or truth."

It is found at the Christian Science services that when men let the Spirit bear witness, the Word of Truth is made known as of old in the healing of sin and disease, and in the mental and moral illumination which proves the ever-presence of God. ANNIE M. KNOTT.

Letters to our Leader.

Chicago, Ill., January 3, 1906.

To Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Precious Leader:—To give to the church was one of the most difficult lessons for me to learn, and only within the last year, through the influence of my wife, have I been awakened to this blessed privilege. My salary is not large, but since we have been giving nearly ten per cent of it to The Mother Church Building Fund each month, and five per cent to the weekly collection basket at our church, we have been blessed greatly. My income, outside of my salary, has increased five times our monthly subscriptions. Money has come to me from unexpected sources. We surely have much reason for rejoicing, not only because we have learned that "It is more blessed to give than to receive," but for the health and happiness that have come into our lives through the study of your wondrous book, "Science and Health with Key to the Scriptures." From a state of nervous prostration, melancholy, and suicidal mania, I have awakened to the "glorious liberty of the children of God."

I daily thank God for this blessed truth, which has awakened me from the dream of life in matter to the glorious consciousness of life in God. This world can never repay you, precious Leader, for your Christlike and heroic work for sinful and suffering humanity. Your love for humanity is like a mother's love for her child,—pure and constant, and we all love you for your purity, goodness, wisdom, and loving care. Yours most humbly,

SIDNEY ROSENTHAL.

Beloved Leader:—A deep sense of gratitude to God is with me as one of the beneficent results of the inspiring interview with you on Monday. Your strong and loving words have indelibly impressed upon me your unbounded patience and your unquenchable love for the church of your fathers. The conviction abides that if at this time the entire body of the old Communion gladly confessed to your spiritual Leadership, and if now they sincerely gave to Christian Science the place in their hearts which it will some day occupy, you could not show them greater love than you even now bestow upon them. It will be a lasting lesson to me, and of incalculable help in the sacred work of the lectureship.

A good letter just received from Rev. Mr. Kratzer of Fitchburg, Massachusetts, gives this interesting testimony from a Universalist minister who has just been healed through Brother Kratzer's good work:—

"*My Dear Mr. Kratzer:*—What can I say to you? I am perfectly delighted! The next day after I wrote you I felt stronger. The following day every feeling of weakness and depression was gone and a sweet, calm happiness came. I have worked steadily all day ever since I wrote you, and have felt well and strong. The required work has been accomplished, and all has gone well. A lady here has been

Digitized by Google

ill for months. If I should talk with her and she should listen, I would like very much to have you treat her."

I do not give the name, as Brother Kratzer wished it kept confidential. He says that "ten days ago this patient was all broken down, and will demonstrate the way and be in Science before long."

How true, as Scripture says, "Every knee shall bow to me, and every tongue shall confess to God."

Faithfully and lovingly,
IRVING C. TOMLINSON.

Sydney, Australia, November 27, 1905.

Mrs. Mary B. G. Eddy,
Pleasant View, Concord, N. H., U. S. America.

Dear Leader and Guide:—At this season of the year we wish to thank you reverently for the great spiritual uplifting, healing, and many gifts, which will never vanish away, that we have received from the reading of your inspired book, "Science and Health with Key to the Scriptures," and the wonderful knowledge it has given us of the Bible and eternal life. This priceless boon has come to us through the reflection of your pure, beautiful life. May we offer for your acceptance the enclosed cheque for the Building Fund of The Mother Church. We have posted under separate cover an afternoon tea cloth and a booklet of Australian views. We thought these might please you, coming from far away.

Words cannot express our gratitude, but we trust our lives may. Sincerely and gratefully yours,
C. H. and A. C. E. GIBBS.

Van Winkle, Miss., January 7, 1906.

Mrs. Mary Baker G. Eddy,
Concord, N. H.

Dear Mrs. Eddy:—I have been mentally blind all my life,—forty-six years,—until to-night, when I finished the last chapter of "Science and Health with Key to the Scriptures." I see now, whereas before I was blind. May God, the Father of all, shower His richest blessings upon you.

Lovingly and reverently yours,
JOHN T. WOOD.

Bath, N. Y., December 18, 1905.

Mrs. Mary Baker Eddy, Concord, N. H.

Dearly Beloved Leader:—Hearts overflowing with gratitude to God for giving you to us, a Leader so pure as to discern and reveal to us the Science of Christianity, by which our Master healed the sick, raised the dead, and commanded all Christians to do likewise, have prompted the little band of your faithful followers here to unite as one in love and send Mr. Chase fifty dollars for The Mother Church Building Fund. This amount consists of our lecture fund of forty dollars and the balance a love-offering from one who was saved and healed through Christian Science two years ago, after all other helpers had failed.

That wonderful closing paragraph in your chapter, "Science of Being," revealing the spiritual import of the First Commandment, enabled us to see that we are all one in Truth, and "that in Christian Science the first duty is to obey one God, to have one Mind, and to love one another" (Science and Health, p. 496). Lovingly,
GEORGE B. JACOBS,
ISAAC H. QUINBY,
Committee.

Admission to Membership.

The next admission of candidates to membership in The Mother Church will be June 5. Applications must be in the hands of the Clerk on or before May 14.

Testimonies of Healing.

I was led to accept Christian Science about twelve years ago. I was a member of an orthodox church at the time, but was not fully satisfied and had a strong desire to know the truth, the narrow way. With that desire uppermost in my thought, I began to read Science and Health, with a mixed hope of being healed of my physical ailments and of being benefited spiritually. Before I had read it through I found to my great joy and surprise that I was healed of indigestion and of a disease of the bowels from which my mother and her sisters passed away, and from which I had been at times a great sufferer for fifty years. Through the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and with the help I have received from dear friends, I have had many demonstrations of the power of Truth over error. One of these for which I am especially grateful is the positive proof that divine Love can and does destroy sorrow. After reading Science and Health a few days I came to see I had no use for dyspeptic tablets, gum opium, pills, snuff, tobacco, and a whiskey flask which I had been in the habit of emptying quite often. What a grand thing it is to know that divine Love can and does destroy false appetites. Words can never express my gratitude for the blessings received through Christian Science. I thank our Father-Mother God that Mrs. Eddy was so faithful to Principle as to be fitted to receive Christian Science and give it to the world. I am happy with the thought that I was led into Christian Science; that the members of First Church of Christ, Scientist, in this place were most kind to help me, and that I was counted worthy to become a member of this little band of faithful Christian workers. My greatest desire is to so live that I may be worthy to name the name of Christ and to be a true, faithful Christian Scientist.—ASHER WILCOX, Eugene, Ore.

Our baby boy, now two years old, was born strong and healthy, to all appearances, and so he continued to be for six months, at which time a great change occurred, and without any known physical cause. The ailments developed rapidly, and to such an alarming extent that we soon came to feel that the case was what would ordinarily be called hopeless.

The child appeared to be partly paralyzed, and we discovered later that he had spinal and hip disease; also disease of the joints of the arms and legs. He suffered great pain, as was evidenced by his constant wailing night and day, and by his screaming when moved in any way whatever. Soon, however, he became too weak to scream, but little gasps and the expression of his face told of the agony he suffered, which wrung our hearts. He had the best of care, and medical attention was given by several physicians to determine whether any possible fracture or dislocation had been sustained, but nothing of this nature could be discovered. The physician who conducted an X-ray examination realized the seriousness of the case, however, and said he hoped the child would recover, but we thought we read in his countenance that he really had no such hope; and now the child seemed beyond relief, and we fully expected, as did our neighbors, to see our darling die.

We had, however, known about Christian Science for some years, through relatives living in a distant State, and although we had little or no faith in its efficacy in the treatment of organic disease, we resolved to give it a trial as a forlorn hope. We promised each other to carry out faithfully this resolution, and not to be influenced by our fears to resort to the use of drugs.

We accordingly sought a practitioner in the nearest city, Mobile, who took the case and seemed very hopeful about it. We tried to follow directions as well as we could

Digitized by Google

with our very limited understanding, but our fears were not lifted at once. During the first week baby seemed to get better, then to fall back, and we wrote the practitioner that we thought the end to be near. She came out to see us several times, and after a while we saw that there was a steady advance toward normal conditions. Christian Science treatment was begun the middle of July, 1904, when he was over nine months old. In two months and a half —at the end of September—he could kick and laugh once more, and we knew that our baby was saved, though still weak and emaciated. To shorten a long story, we will say that our baby is now in perfect health, yes, robust health, restored to a normal condition by Christian Science. At one time we feared, from appearance, the development of an outward curvature of the spine, but this passed away, and the spine and the limbs are now perfectly symmetrical.

He is not behind other children of his age in physical activity, and bids fair to soon make up for lost time. In intelligence he is quite up to the average. Those who knew the desperate nature of his ailments are still asking, "Is he really entirely cured?" and "Has he been given no medicine whatever?" To which we reply, "Yes; and without a single dose from first to last."

For this great blessing and restoration we feel deeply grateful to almighty God, the giver of all good, and to Mrs. Eddy, whose discovery enabled us to utilize this beneficent power. Our gratitude grows as we study and acquire understanding, and we feel that we have been brought to a proper sense of life and of our relation to God through Christian Science.

CLEMENT and SARAH COLEMAN, Fairhope, Ala.

Over a year ago I had a very helpful demonstration in Christian Science. One afternoon, while talking with a friend, I suddenly felt something like a sharp needle piercing my upper lip. Two hours afterwards my daughter asked me if I knew that my lip was swollen. I gave it no thought, however, until the following morning, when my face was badly swollen and very painful. By the next morning the other side was in the same condition, and the swelling continued to spread until my face, head, and neck were affected. The pain was so intense that I could not keep my thought above it, or only a few minutes at a time. I earnestly longed and prayed to know the truth that makes free, and I studied the Bible and Science and Health each day. The fourth day I took the *Quarterly* also, but decided to rest before reading. As soon as my head touched the pillow such intense pain surged through my whole body that I was obliged to rise and walk. Instantly the thought of obedience came to me, and I saw that if error were given more power I should surely pass out. I then took the books and read the Lesson-Sermon for the following Sunday, the subject being "Mind." It took about two hours to study it through, as I was obliged to stop frequently to wipe the water that dropped from my face and eyes.

When I had finished the Lesson I was in a new world apparently, the pain had gone and I was healed! I had awakened out of a terrible dream. I had seen and heard and found the truth,—a heritage long sought,—which proves a beacon-light to all my work in Christian Science.

I was soon hungry, and ate for the first time in four days. The skin came off my face and head, and new skin replaced it without a scar. Here I learned how great blessings are being sent out through the Christian Science periodicals, which hold the torch of Truth above the seeming mountains of error that the world may see and understand the absolute nothingness of evil.—MIRIAM R. FOSS, Chicago, Ill.

It is with a heart full of gratitude that I give this testimony to the world for benefits received from Christian Science. For more than nine years I was a sufferer, and having derived only temporary relief from *materia medica*, and with little hope of ever feeling well again, I finally decided to try Christian Science. Little did I realize what blessings awaited me, for after a few weeks' treatment I was healed of chronic troubles peculiar to my sex. I had also suffered at times from extreme nervousness and heart trouble. I had to wear glasses whenever I read at night or did fine sewing, but when one form of disease was cured all others seemed to flee.

I became interested in Christian Science through hearing a lecture delivered in our city by Judge Hanna, and while idle curiosity led me to go, I shall ever be thankful that I did hear it. I was a member of an orthodox church which I loved, yet when I began to study Christian Science as given in our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, I knew that I had found the truth and I wanted to know more of God, who is Life, Truth, and Love. While I am so thankful to have a healthy body, this is the least of the blessings derived from Christian Science treatment. I was taught to know that God is ever-present;—to realize that Christ is here, healing the sick and bringing comfort to the sorrowing, and for this blessed assurance I am the most grateful. This truth has brought me peace where discord seemed to exist, joy instead of worry and discontent, and love instead of resentment. While I still find many battles to fight, I have the assurance that the truth will destroy all evil, and that if I live right, each day there will be added strength.

Words are inadequate to express my gratitude to our beloved Leader, who has toiled so faithfully to give us this blessed message.—ALICE A. VOTAW, Houston, Tex.

It is with a heart full of gratitude and love to God, and to our dear Leader, Mrs. Eddy, that I add my testimony to the healing and redeeming power of Christian Science. I became a member of an orthodox church when only eight years of age, and I tried very earnestly to live a Christian life, but I was filled with doubt, anxiety, and fear; there was an aching void that could not be filled, a longing that could not be satisfied. I prayed earnestly that God would show me some sign that I was a Christian, but it seemed as if all was darkness. I was considered a very delicate child, and as I grew older I hardly knew what it was to have a day free from pain. Indigestion grew to be a chronic disease, and I was seldom free from headache, and I thought I could not live without material remedies. Shortly after my marriage I had an opportunity to read "Science and Health with Key to the Scriptures" by Mrs. Eddy. I thought it was very beautiful, but there were some things I could not understand. The one who had the book went away and I thought very little more about it. Finally my husband came across an old *Christian Science Journal*, and he read an article in it which led us to study the Bible. What little I had read in Science and Health gave me such a new light on the Bible, that I said, "If the Bible is true, Science and Health must also be true." We at once ordered a copy of Science and Health, and it is needless to say that our novels were forgotten.

The first week after we received the book, I was healed of a trouble to which I had been in bondage from infancy. My husband was instantly healed of the tobacco habit, and never since has had the least desire for it. Since then we have been through deep waters, but Christian Science has been our only help. My husband was healed of typhoid fever in two weeks. The third day after we wrote the practitioner for treatment, all the fever left him. He was up next day, and from that time on went to his work as usual. I have been brought back from the very brink of the grave by this beautiful truth. We have proved that "with God all things are possible." Our little girl is nine years of age and Christian Science has been her only help since she was one year old. The diseases that children are supposed to have were met for her immediately. She has never known what it is to be in bed a day.

Digitized by Google

In Christian Science I have found that which was lacking, and it has dispelled the darkness with light; has displaced doubt, anxiety, and fear with the understanding of omnipotent good, enabling me each day to prove that man is God's own child and that I am a Christian in the degree that I bring out the Christ-thought in my life. Words cannot express my gratitude to God for our Leader, Mrs. Eddy. Some time ago, when opposition to the truth seemed almost too much for me to meet, I was awakened in the night with a great sense of discouragement. I thought of Mrs. Eddy and her glorious work,—how nobly and bravely she had stood alone with God, against the whole world, as it were, and of how she had conquered. Then the knowledge that her God was my God, and that she had given us, in Science and Health, the key through which we could unlock the door of understanding, that solves all the seeming mysteries of mortal mind, brought with it a deep sense of peace and rest. I am especially grateful to her for her article on "Prevention and Cure for Divorce." When applied to church work, the benefit I received from its perusal enabled me to stand firm to Principle as never before. I am also very grateful for our periodicals, and my earnest desire is to let my daily life show forth my gratitude.—NORA YODER, Ballard, Wash.

I was healed through Christian Science treatment, about five years ago, of what the doctors called ulcerated and inflamed eyes. I first consulted a local specialist, and receiving no help called in the family physician, who said he did not dare prescribe for me as my eye (only one being affected at that time) was in a very bad condition. I went with him to New York City to see a specialist there, who told me he had never seen but six people in his life with eyes like mine, and that none of them ever got well. I, however, treated with him several months, through the family physician. Later I returned to New York and attended a clinic, of which he was the head, three times a week for several months. At this time the doctor advised my having the eye taken out, as he said the sight was practically destroyed; but, as he could not promise to save the other by the operation, I refused. I suffered a great deal, had to stay in a dark room weeks at a time, could not see at all without smoked glasses, and was under doctors' treatment most of the time for six years. The other eye had become ulcerated and I could see but very little when a friend called my attention to Christian Science. After the first treatment in Christian Science I walked down to the practitioner's office without the smoked glasses, and the sun shining on the snow, with no inconvenience or pain. The treatment continued five months, when I was entirely healed.

MRS. L. K. P. VAILL, Waterbury, Conn.

For eight years I was a great sufferer from weak lungs, and after being treated by ten different physicians, in the States of Illinois, Missouri, and Colorado, I was told there was no hope of my recovery from what they pronounced tuberculosis, which was hereditary, my father having been afflicted with it. I was greatly emaciated and hardly able to be about. My general condition was aggravated by what the doctors said was paralysis of the bowels. Three physicians so diagnosed it at different times, and assured my husband that I could never get more than temporary relief. This indeed I found difficult to obtain, in spite of my almost frantic efforts. At times I was nearly insane from suffering, and after eight years of doctoring I found myself steadily growing worse. For four years I did not have a normal action of the bowels, and it was only by extreme effort and by resort to powerful drugs or mechanical means, with resultant suffering, that any action whatever could be brought about.

I had heard nothing of the curative power of Christian Science, and only to oblige a friend I went one night, about three years ago, to one of their mid-week testimonial meetings, in Boulder, Colorado. I was much impressed by what I heard there, and determined at once to investigate this strange religion, in the hope that it might have something good for me. I bought the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and began its study. From the first I found myself growing stronger and better, both physically and mentally, as I acquired a better understanding and endeavored to put into practice what I learned. In one week I was able to get along better without drugs than I had for years with them, and before three months had passed I was better than I had been any time in my life, for I had always suffered more or less from bowel trouble. Since that time I have taken no medicine whatever, and rely wholly upon Christian Science. My lungs are now sound, my bowels normally active, my general health excellent, and I am able to endure without fatigue tasks that before would have prostrated me.

The reading and study of our text-book was the sole means of my healing.

LETTIE M. ST. CLAIR, Matachin, Canal Zone, Panama.

Words can never express my gratitude for all the benefits I have received through Christian Science. Two and a half years ago I was pronounced incurable with asthma, but have been healed of it, also of nervous sick-headaches, from which I had suffered for years. They lasted usually two or three days at a time, and always left me very weak. When Science and Health was given me by a dear friend I was so low with asthma that I could not raise my head to take a drink or the medicine that was given me every half hour. I stopped taking the medicine at once, and began reading Science and Health. At first it seemed hard for me to understand it, but I gained a little each day. A *Quarterly* was sent me by a Scientist and I began studying the Lesson-Sermons, which helped me to understand more clearly, and I soon saw that Science and Health is indeed the "Key to the Scriptures."

I have now no more fear of the weather, nor that anything I do will make me sick, than that I will be tempted to steal. I feel very grateful to Mrs. Eddy for "Science and Health with Key to the Scriptures."

I feel very thankful that with the understanding I have of Christian Science, I am able to help myself and others. I have had some good demonstrations. It strengthens me every day, every hour, to know that God is a present help.

MRS. T. A. HARKINS, Dallas, Tex.

I wish to express my gratitude for what Christian Science has done for me. In 1903, when my little boy was born, I had Science treatment, and the birth was absolutely painless and of short duration. The baby's eyes were very red and inflamed, and the nurse thought he could not see. I at once wrote to a practitioner, and in a few days the redness disappeared. The physician in attendance thought my case almost a miracle.

I also had a wonderful demonstration a few weeks ago. One morning, while coming down the stairs, I fell and sprained my ankle quite severely. I declared the truth the best I could, and all went well until after dinner, when I felt a severe pain in my foot and could not move. What was I to do, all alone with a little child, unable to move, work to be done, and no Scientist to call? Then came the sweet, calm thought of divine Love as my physician. I realized that He is both able and willing to help all His children, and all pain left me. I was free, able to walk down stairs and do my work. I wish to thank Mrs. Eddy for the help received in Christian Science.

MRS. ELLEN SWENSEN, Seaside, Ore.

Digitized by Google

It is a little over eight years since Christian Science came into my life. I was a partial invalid at the time, suffering from nervous prostration caused by selfishly brooding over a loss that I had had several years before. I had just undergone an operation, which had resulted in a most painful complication that the physicians did not seem able to relieve. I had given up my home, and had gone to be with a friend who was a Christian Scientist, and when I could stand the suffering no longer I turned to Christian Science for help. At that time I was on a milk diet, and weighed one hundred pounds. A practitioner was called, and the words of Truth she spoke to me during that first treatment were the words which practically set me free,—lifted me above my supposed self and suffering. I shall never forget the uplifted, hopeful state of mind in which she left me, and although I had struggles afterwards with the sense of pain, I never went back into the darkness and despondency in which I had been before that first treatment. I at once commenced the study of Science and Health and it has been my comfort and help ever since.

My husband began the study of the book at the same time, and together we have come into a new sense of Life, Love, and Truth. I had almost passed out with kidney trouble at the birth of my little girl, six years before. Three years after coming into this Science I had a child born with only the help of a Christian Science nurse and the practitioner. The demonstration was a wonderful one. The child lived and was perfectly well and strong. I have always felt so grateful that in this trial hour I had not one desire to go back to the doctors, but felt that if Christian Science could not save me nothing could. The fear of the kidney disease was not destroyed, however, and when two years later I found that I must pass through that experience again, I was almost overcome with fear; but that was met at once and during the entire time I was perfectly harmonious and free from any manifestation of the disease.

I owe all I have and am to Christian Science, and for the help it has given me I feel deeply grateful to Mrs. Eddy. It has made our home life one of unity, love, and peace by realizing the ever-presence of the one Mind—God.—MARGARET STOKES PATTON, Pittsburg, Pa.

I feel that it is not right for me to delay longer in sending my testimony, thus withholding from our Leader, who has labored so lovingly for all mankind, the expression of gratitude due her. Christian Science was first presented to me when a great sorrow was weighing me down, and it brought peace and comfort to my aching heart, lifting my thought from death to Life. It was not, however, until a year later, that I was given a copy of Science and Health by a friend. I then took up the study with the help of our *Quarterly*. From the start I loved to read and study it, but the understanding came to me slowly, and it was two years before I gained enough to work for myself and family. Prior to this, I had been an invalid for fifteen years, and some of the children were always sick. We had medicines of various descriptions, but gave them all up; and we have never regretted the step taken, for as a remedial agency we have found Christian Science more efficacious and pleasant than any other remedy. I wish to thank our Publishing Society for their efficient labors, and the brethren throughout the Field for their loving contributions to our periodicals, which come each week and month into our homes, bringing rays of light and dispelling many dark clouds. The Lesson-Sermons are my daily food, and are very precious to me. We have had many proofs of God's presence and power in our home, and my daily prayer is for a willing and contrite heart, to do God's will at all times.—VIRGINIA R. RAUM, Crawford, Neb.

I was an invalid for almost seven years before I knew anything about Christian Science. I had taken medicine and been under doctors' treatment without permanent benefit until I had almost lost confidence in them all. Five years ago I was confined to my bed, as I had been several times before with female trouble, and a physician did all he could for me, but I did not get well under his treatment, and sometimes it seemed to me that I could never be up again. In the mean time, one of our neighbors brought me a *Christian Science Journal* and asked me to read it, and another brought the book, "Science and Health with Key to the Scriptures," and read to me from it. My hope was then renewed, for I believed that in God's own way and in His own time He would make me strong and well. The "way" was pointed out to me then and there through Christian Science, and one day while feeling worse I asked my mother to go and borrow Science and Health that I might read and find out more about it. I sat propped up in bed and read several pages, and became so interested that the more I read the more I wanted to read. Soon after this I quit taking medicine of any kind, while before I was always taking it and was sick most of the time, hardly able to do anything; but after reading and putting into practice what I learned, I felt better and was able to do more. Indigestion and constipation were overcome and I quit wearing glasses for weak eyes, although the oculist who examined my eyes had said that I would have to wear them as long as I lived.

I married about a year and a half ago and moved away where there are no Christian Scientists living near me, but I have my own copy of Science and Health, and other Christian Science literature, and am trying to live according to its teaching. I can never give up what has benefited me so much, although I have had many battles to fight with error,—both sin and sickness. I find that God will help those who try to help themselves, and that His grace is sufficient for me. I am clinging to what I know about Christian Science, and trying to gain a better understanding of it.—CLEM SIMMONS, Greenfield, Tenn.

Something over a year ago I was stricken very suddenly with indigestion and nervous prostration, but thanks to Christian Science I was saved from death. No one can conceive of such suffering except those who have had similar experiences. What little food I could take caused great distress and threw me into spells of unconsciousness which would last sometimes an hour. I felt as if I would starve to death, but that feeling is now all gone. My healing has not been as rapid as in some cases, but I am learning patience and growing more each day in the understanding of Truth. While I feel very thankful for what Christian Science has done for me in healing me physically, I am more rejoiced over the spiritual understanding I have gained. My prayer is that I may go forth day by day to work in the service of Love, with armor on, overcoming error of every sort, and thus show my gratitude to Mrs. Eddy, who in her wisdom has brought this wondrous truth to help us in time of need. My heart goes out to her.

MRS. MARTHA F. ALDERSON, Kansas City, Mo.

I wish to express my gratitude for the many blessings received through Christian Science. I am being healed morally, physically, and spiritually. Soon after I began the study I became suddenly very ill with what seemed to be a severe attack of the grip. Toward evening I was feeling very badly and could not eat any supper, and I seemed to be getting worse every minute. Then the statement in Science and Health, page 405, line 15, came to me, and it seemed like the voice of Truth speaking. Almost instantly all suffering was gone; I found myself up and perfectly well. Words cannot express what this blessed truth has done and is doing for me and mine.

MRS. EMMA JOY, Denver, Col.

From our Exchanges.

The coming revival will be "a revival of religion, and not a religious revival." A genuine revival of religion will set the great fundamental principles of Christianity before men in a clearer light and with renewed emphasis, and will bring a keener sense of right and wrong. One cannot fail to connect the present uncovering of illegitimate measures in public and commercial life with the religious awakening now upon the world; for the ultimate ideal of the heavenly kingdom must find some foreshadowing in the living, militant Church of Christ; and the genuine revival must bring this about not by the mechanical manipulation of men, but through thoroughly regenerated natures into which love has come to reign supreme, whose conversions have been more largely by love's appeal.

WENTWORTH F. STEWART.
The Christian Advocate.

Life is not sufficiently regarded as mainly an opportunity for character-building and testing. We are to use life as essentially designed, not for getting and holding, but for acquiring soul-worth in which lies salvation. By faith and love and prayer—by labor, by philanthropy, by self-culture, mental and spiritual—we are to seek unguessed treasures of wisdom and strength. We shall travel this way but once, and if we fail to get out of life what it was meant to yield us, we fail miserably.—*Western Christian Advocate.*

There are signs, however, that this wandering in the wilderness of delusion is nearing the way out. Zeal for the spiritual life that unites is outgrowing fondness for the sectarian liveries that divide. The frost is coming out of the ground, and in the warm change of competitive into co-operative churches Christianity will rediscover and prove its power for the healing of the nations.

REV. JAMES MORRIS WHITON, Ph.D.
The Homiletic Review.

The things behind, forget them. Life is movement. Only death is stagnation. Forget whatever hinders. One kind of memory is a condition of advance, but be sure your memory is a spur and not a ball and chain. Let the dead past bury its dead; the living past is your guardian angel. So act in the living present that when the present becomes the past it may need no repentance.—*Pacific Baptist.*

My first night in a labor union was not only one of great religious value to me personally, but one which accentuated the well-known fact that while the Church is considered there to be of very little value, if not a hindrance, to social progress, the name of Jesus calls forth the most profund expressions of reverence and enthusiasm.

REV. ALEX. F. IRVINE.
The Independent.

In the case of morally earnest souls every day sees an improvement—an elevating yet higher of the spiritual desires, an attuning to a finer harmony of the better nature, a drawing of the soul nearer to its God. The believer himself may not see himself grow in grace, but if he is of the right stuff he is growing all the time.—*The New York Observer.*

The greatest good fortune any one can achieve is integrity of heart. The divinest welfare is that conscious rectitude, the peace of which never forsakes a man through all years and all worlds. The imperishable riches of God are his good fortune whose mouth is a well-spring of life.
New York Herald.

THE CHRISTIAN SCIENCE TEXT-BOOK.—"Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing all the By-laws to January 1, 1906, of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to The Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of The Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to The Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number, or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By Hon. WILLIAM G. EWING.

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

Secretary Shaw, though a firm advocate of civil service, in a public address favored a fixed term of six years for all Government employes in Washington doing routine work, after which period they shall be ineligible to reappointment. His idea is to give the largest possible number of young people an opportunity to live in Washington, partaking of its educational advantages, but not to provide life tenure in the public service, except to certain specified experts in the scientific and other bureaus. Discussing the proposed pension plan, he said: "Thirty years in a Government position, which thirty thousand others have desired, is no justification for demanding a pension at the hands of those who have been excluded."

Bids were opened at the Bureau of Insular Affairs of the War Department last week for contracts to be made by the Philippine Government for the construction, maintenance, and operation of railroads in the Philippine Islands as provided by act of Congress. The plans provide for the construction of railway lines on the islands of Luzon, Panay, Negros, Cebu, Leyte, and Samar, whose aggregate mileage is estimated at 1,233 miles.

Yunchung Kim, who has represented Korea diplomatically at Washington as secretary and chargé since last June, called at the State Department last week to say farewell to the officials, thereby terminating the independent existence of the Korean legation in Washington. The records and property of the legation have been turned over to Mr. Hioki, the Japanese chargé.

An Imperial Chinese Commission of sixty-two persons is now in the United States for the purpose of studying American political, military, naval, educational, and industrial methods. The leaders of the Commission explain that its purpose is in no sense political, and that it will not interest itself in the question of Chinese immigration.

A lock canal at a cost of $147,000,000 and not more than eight years to build, or a sea-level canal at a cost of about $250,000,000 and from twelve to fifteen years to build, are the two problems before the Senate Committee on Interoceanic Canals. The lock type is favored by Chief Engineer John F. Stevens.

The Government, through District Attorney Morrison, made its opening statement in the packers' case in Chicago last week. The attorney declared that the packers were not entitled to immunity because their statements were not made under oath.

The five-mile automobile record was lowered last week at Daytona, Fla., to 2 m. 54 3-5 sec. by a 110-horse-power Fiat and to 2m. 34 sec. by a 200-horse-power Darracq.

There has been introduced into Congress a bill to remove the tariff from paintings in oil or water color, statuary, sculpture, drawings, engravings, and etchings.

The late Marshall Field left to the City of Chicago by will eight million dollars for the Field Columbian Museum.

Foreign.

The Czar and his advisers have taken another long step in the direction of constitutionalism by deciding to entrust the first Imperial Douma with a large measure of constituent powers. The Ministerial Cabinet and the Council of the Empire are now engaged in discussing changes in the organic laws of the Empire, and the powers to be conferred on the Douma are considered necessary to bring these laws into harmony with the spirit of the Emperor's manifesto of October 30. Further concessions, it has been announced, have been granted to the Jews in the Governments of Russia where they enjoy the right of domicile by the addition of 133 places, in the country districts, where they will be permitted to reside without hindrance.

The Cuban Senate has passed a bill empowering President Palma to expend up to twenty-five thousand dollars for a wedding present for Miss Alice Roosevelt, which will be presented to her in the name of the Cuban people.

The *Matin*, Paris, says that the French Government has decided to send to Miss Alice Roosevelt a magnificent piece of Gobelin tapestry as a wedding present.

The International Waterways Commission of Canada has submitted an interim report to the Minister of Public Works, one of the principal points in it being the preservation of Niagara Falls, urging co-operation with the United States so as to save the falls from destruction by the power companies.

Duro, the Spanish æronaut, started recently from Pau at four o'clock in the afternoon to cross the Pyrenees by balloon, and alighted at six o'clock the next day at Guadix in the province of Granada. The distance between Pau and Guadix, as the crow flies, is about four hundred and fifty miles.

A Chinese Imperial edict has been issued abolishing the whole ancient system of education and service examination. Candidates for Government posts must be educated at schools and colleges. The Confucian classics give way to modern science and thought.

The relations between France and Venezuela still remain somewhat strained. A naval demonstration and a boycott of Venezuelan products, which find their principal market in France, are under consideration by the French Republic.

An official report shows that the actual cost of the war to Japan from the beginning of hostilities to September last, was, for the army, $495,000,000 and for the navy $90,000,000.

Emperor William has presented the chain and great cross of the Order of the Red Eagle to Count Witte.

The first passenger train, carrying notabilities and officials, passed through the Simplon tunnel January 25.

Industrial and Commercial.

The Netherlands and Belgium rank next to the United Kingdom, Germany, and France in their importance as markets for products of the United States. The total exports from the United States to Netherlands amounted in the fiscal year 1905 to $73,000,000, and imports from Netherlands to practically $22,000,000; exports to Belgium were $38,500,000 and total imports $26,000,000, a total of $100,000,000 of trade with these two small countries whose combined area is less than that of the State of Ohio and whose combined population is but twelve millions.

That there was an early racial connection between the North American and Asiatic continents, and that the tide of migration moved from America to Asia, rather than in the other direction, as some have thought, is asserted by Daniel T. Pierce in an article in a recent issue of *The Cosmopolitan Magazine*, on the strength of evidence collected by the Jesup North Pacific Expedition of the American Museum of Natural History. This expedition, which was sent out at the expense of Morris J. Jesup, president of the museum, has been investigating since 1897 the oldest remaining tribes of both continents, studying their customs, characteristics, and languages, finding out how long each has occupied its present habitat and whence it came originally, and ascertaining the probable relationship of one to another.

The open shop in the iron trades throughout the United States was decided upon at a special meeting in New York recently by the National Association of Erectors of Structural Steel and Iron Work. The National Association does ninety-five per cent of the structural iron work of the country, both in shops and on buildings, and employs about fifty thousand housesmiths on buildings and one hundred and fifty thousand men in the shops. Open shop notices will be posted at all the plants of the members of the association.

The collar manufacturers of Troy, N. Y., are said to have practically agreed upon a plan whereby every house in Troy manufacturing collars and cuffs, excepting six, will be merged into a combination. The houses included do an annual business of $18,000,000 and are capitalized at $8,000,000; their net profits are $1,300,000. The merger plan, it is stated, is to form a corporation with a capital of $32,000,000, divided equally, half common and half preferred stock, no bonds.

The Brooklyn Yacht Club will essay another ocean race in the latter part of the month of May. Sir Thomas Lipton has donated a cup for the race, which is marked as being from Gravesend Bay, New York Harbor, to Hamilton, Bermuda. The distance is 650 nautical miles. The conditions call for boats of fifty feet over all and under, and crews limited to eight men, all to be amateurs.

Few places in the world have such a record for marine catastrophes as has the deadly "west coast," as it is known, of Vancouver Island, which has occasioned the destruction of fifty-six vessels and cost more than seven hundred lives, within the last forty years. Within the past month the "west coast" has wrecked the Valencia and the ships King David and Pass of Melford.

The largest cargo of bananas ever received in any port in the world reached New Orleans recently in the United Fruit Company's steamer Esparta, from Port Limon, Costa Rica. It consisted of sixty thousand bunches and filled one hundred and fifty box cars.

The report of the State Secretary for 1905 shows that the total capitalization of Tennessee concerns chartered by the State was $30,768,600, which exceeds all records of former years.

The Cincinnati Gas and Electric Company has decided to increase its capital stock $5,000,000, to $36,000,000, in connection with preparations to enter the natural gas field

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

Present Opportunities.

C. W. CHADWICK.

As students of a demonstrable Science we should strive to make the best use of present opportunities. It is the work of the present that concerns us and not the neglected opportunities of the past. We live in a present age, in an age of unlimited possibilities and achievements, in an age when the would-be followers of Christ are called upon to prove by their works of healing that they possess a practical understanding of the God whom they profess to love.

The grandest opportunity confronting humanity to-day is that of seeking "first the kingdom of God, and his righteousness." The absolute necessity of understanding the nature of the spiritual or heavenly kingdom here and now, is made so plain in Christian Science that this work is taken up cheerfully and joyfully, and with full assurance of ultimate victory. The man nearest right is always the one who knows the most about God, good, even though human sense argues to the contrary and insists that men shall know evil in order to be useful, practical, and successful. The one constant aim of the Christian Scientist is to get closer to God, and to understand and obey His spiritual law. To be good and to do good no longer seems to him unnatural or impractical, but becomes the natural and prime essential of existence. He knows that, in order to accomplish any real good in the world, he cannot revolve in any self-centered orbit of his own, but must understand spiritually man's true relationship to God and express this divine relationship in thought, word, and deed. It is this understanding that makes him pre-eminently practical and useful to his fellowman, in that he is able to heal him of both sin and disease, not through human will-power or suggestion, but through understanding man's inheritance as a child of God, through knowing that man is a partaker of the divine nature, and "not of the earth, earthy."

The prodigal son finally awakened from the mesmeric dream wherein it was suggested that he had a mind of his own to do as he pleased, to learn that there was only one thing needful, and that was to return to his true home in Mind, to seek "first the kingdom of God." So is it with all mortals; they must sooner or later see the great mistake of believing in an existence separate from or unlike God. We have the opportunity to-day in Christian Science of learning that the real man is Godlike, that he has not fallen into sin, and that his only duty is to reflect or express good, not evil. It is human thought that has strayed away from a correct understanding of man's unity with God, good, and it alone must retrace its steps and find refuge in the divine consciousness wherein entereth nothing that "worketh abomination, or maketh a lie."

If one realized that Christian Science defines the truth about God and man, and that the healing of sin and disease is sure to follow a correct understanding of its teaching, which is within reach to-day, would he not feel it worth his while to investigate Christian Science? If he knew that all the distress, sorrow, sickness, and sin which humanity has called its own, do not in fact belong to man, that these ills are wholly the result of believing the mesmeric suggestion that man is both mortal and immortal, would he not want to understand Christian Science, which shows how to "put off the old man" (this belief in the mortality of man) and "put on the new man" (the understanding of man's immortality), and how to do this work here and now, rather than leave it among the uncertainties of a so-called future life?

If one were told that Christian Science makes it possible for him to know and to demonstrate that "the kingdom of heaven is at hand," that good is natural and all-powerful, and that evil is only its impotent counterfeit; that it teaches the Principle of all lawful and accurate thinking, enabling man to reflect God's thought instead of his own opinion, would he not feel duty-bound to investigate its claims? If he knew that it enables man to be upright, impartial, and unselfish; that it inspires him with true Christian charity, kindness, and forgiveness, would he have any excuse for condemning Christian Science, or for warning others to have nothing to do with it? Surely under these circumstances it would be his privilege, and his duty as a Christian, to find out that Christian Science is all that is claimed for it, and to do it at once.

The world is in sore need of that charity which "suffereth long, and is kind." Truly has it been said, "There will come a time when three words uttered with charity and meekness, shall receive a far more blessed reward than three thousand volumes written with disdainful sharpness of wit." That time is already here, and the Christian Scientist knows that there is no other standpoint from which to work. When he is reviled, he reviles not again; and many are there who have been attracted to Christian Science through witnessing just such manifestations of Christian charity and forbearance. The grievous word which stirreth up anger cannot be uttered by the true Christian Scientist. His is the soft answer that taketh away wrath, the "word fitly spoken," the kind look, the friendly hand-grasp, the unselfish endeavor. Lord Byron has well said,—

> The drying up a single tear has more
> Of honest fame than shedding seas of gore.

Only through fulfilling the law of kindness and compassion shall we ever understand the meaning of divine justice and be able to reflect it.

From his erroneous viewpoint many a suffering mortal has queried, "Why am I here on earth?" Sin, disease, poverty, and distress have seemed to him to be inevitable, and quite beyond his ability to overcome in this world. Even his hope of a future life has been enshrouded with fear and uncertainty. If he would only turn with his whole heart to Christian Science, his question would be satisfactorily answered. He would no longer think of himself as a poor miserable sinner, as a mere worm of the dust, but he would rejoice in the conscious recognition of man's true relation to God. He would no longer question his mission on earth, but he would know that the goal of life is to reflect the divine nature, to glorify our Father-Mother God, by following in the footsteps of Christ Jesus, "who went about doing good, and healing all that were oppressed of the devil."

Copyright, 1906, by Mary Baker G. Eddy.

Does any professing Christian glorify God while holding to his religious prejudices, while wilfully or ignorantly ignoring the thought of any present attainments in the line of Christian healing, by relegating it to the necropolis of the past? No greater need confronts humanity to-day than the Christ-healing, and the gracious opportunity of acquiring this sacred art is open in Christian Science to every honest seeker for Truth. Because this Science demands obedience to all the commands of the Master instead of a part of them, who shall deny its right to grateful recognition in this enlightened twentieth century?

Working for the Cause.

WILLARD S. MATTOX.

ONE of the characteristics of a Christian Science church member, which often attracts the attention of the outsider, is his zeal and quiet enthusiasm. There are no spectacular features in our church life, no artificial attractions, no display, no manufactured enthusiasm.

To grow toward the divine Mind, or God, to reflect Him, to be governed only by Him, to express His infinite modes, to succeed only because it is right to be like God, who is the very Principle of rightness,—this is the daily work of the Christian Scientist. This naturally works itself out in the matter of building up our Cause. We love Christian Science and desire above everything else to see it grow and prosper. We want to work for it, we want to participate in its beneficent practice, we want to display our loyalty and devotion by doing something. This earnestness in behalf of our Cause is so marked and so universal that others quickly notice it, and it has come to be recognized as one of the distinguishing features of the Christian Science Church.

The pastor of a flourishing church in one of our large New England cities was talking about Christian Science one day to his official board. He asked them if they knew anything about it. One man said he had attended a service at a Christian Science church and remarked upon three features: the cheerfulness of the people, their earnestness, and their sociability. The pastor said he wished every Christian church could incorporate these peculiarities into their work. A Christian Scientist could have told him that he might have adopted all these qualities and yet he would not have touched the hem of Christian Science, nor would he be any nearer an explanation of the wonderful success of the Christian Science movement during the few decades since its establishment by Mrs. Eddy. The reason for this success must be sought elsewhere than in superficial traits. Cheerfulness, earnestness, and good-will do characterize the Christian Scientist; but these are effects, and when we know their cause, we are in the way of discovering why Christian Science prospers.

The disciples were at one time in one place and of one mind, and the practical result of this unity was the conversion of thousands. The modern church which could duplicate such reformatory work would be accounted successful. This is the secret of the growth of Christian Science, if secret it may be called. In proportion as the members of this church are consciously one with God, good, and one with each other, in purpose, desire, ambition, they will have results which will startle the world. If there is little unity among the members of any church, if they are not of one mind, there will be no results; stagnation and retrogression will certainly mark the history of such a church.

It is the mental attitude of the church member which determines his value. We find it unprofitable to judge only by appearances, and the regular attendant at church services and the large giver of money to support the church may really be doing very little for Christianity. As a man "thinketh in his heart, so is he;" not as he gives money is he, not as he attends church is he, but as he thinks. A Christian Scientist is a right thinker, one who knows something, and it is what we know about God and man in His image and likeness that enables us to heal.

The weight of our scientific right thinking counts for much. Truth is the only attractive force in the universe, and if we think truly, we inevitably attract, not because of any personal endeavor, but because Truth attracts. "And I, if I be lifted up from the earth, will draw all men unto me." This is the Christ mission. This is the mission of Christ's Church, to draw all men to the Saviour, to the healing consciousness, or true understanding. Then a right thinker, or a Christian knower, or a Christian Scientist, is working for the Cause only when he is reflecting good, when he is thinking the truth about God and His universe. The Cause of Christian Science is a mental something, not a material something, and we are truly contributing to the Cause when we are thinking aright.

We measure our success as Christian Scientists by our healing ability. It is the test Jesus gave. "By their fruits ye shall know them." Unity with God and His perfect idea will result in healing. The mental atmosphere of a Christian Science service should express God and be against disease, therefore healing would be a natural sequence of it. This atmosphere is the result of right thinking, and we may each ask how much we share in this splendid work. The mental state is really the only factor in determining the condition of a church.

Briefly, then, working for the Cause is mental activity of the right kind; it is uplifting the Christ in our own consciousness; it is purification of self; it is unity with God: it is charity, patience, gentleness, love, expressed in thought and deed. A congregation made up of thinkers who love God and their fellow-men, will heal the sick who come to them, reform the sinner, and be accounted faithful, profitable servants of Christ, and members of his church.

The Presence of Mind.

JANE DUDLEY STONEMAN.

IT frequently happens that in time of sudden and apparently great danger, when no material aid is within reach, the person involved turns unconsciously to a power higher than his own, of which he has no definite idea, but which he hopes will assist him in his extremity. His thinking is quickly done,—a flash of intelligence shows him a way whereby he may extricate himself from his perilous situation, and men speak of this as an exhibition of "rare presence of mind." Alas! that mankind should be so ignorant or forgetful of the Mind that fills all space,—that never slumbers nor sleeps.

In Christian Science we learn that a realization of the ever-presence of God—omnipotent Mind—utterly excludes the thought of danger, accident, or mishap of any kind, and makes them impossible. One who abides in the sense of the divine presence dwells now in the "secret place of the most High," secure from all harm. Only by obedience to Truth, purity of thought, and constant watchfulness, can we realize the promise, "Lo, I am with you alway," and know that no illusion of height or depth can separate us from the protection of divine Love. Thoughts of danger are but illusions, phantoms, and we need have no fear of them, since the real man reflects omniscience. He always knows the right thing to do, for the activity of divine Mind is harmonious, orderly, constant. Mishaps are utterly unknown in the realm of Spirit, and the only safety we can know comes from being one with divine Mind, thinking God's thoughts after Him.

Truth is one;
And, in all lands beneath the sun,
Whoso hath eyes to see may see
The tokens of its unity.

WHITTIER-MIRIAM.

Christmas Giving.

It may be objected that this is an unseasonable time to comment upon Christmas-giving, but that the season is not fully passed is amply attested by the little "reminders" that continually drift in from the first to the tenth of January advising us to "please remit." Such reminders move us to indorse Mrs. Mary Baker Eddy's sweeping request to her Christian Science followers to abstain from making gifts on Christmas.

To paraphrase the words of another, we may say to Mrs. Eddy, "Almost thou persuadest me to be a Christian Scientist." Her request is evidently issued in a truly Christian spirit, for surely Christ [Jesus] would not indorse the practice of giving gifts on the anniversary of his birth to the extent to which it is now carried.

The giving of Christmas gifts has degenerated from an evidence of kindly remembrance, offered in the shape of some small and inexpensive token, to a trade and rivalry in the bestowal of costly presents that can often be ill-afforded by the donors.

We hold that no truly Christian spirit can accompany such gifts. They are given more to satisfy the vanity of the giver or to buy the good-will of the recipient than to express a sentiment of love. And when they work a hardship upon him who bestows them, the emotions aroused in his breast when he pays the bill are anything but Christian.

Globe Democrat, St. Louis, Mo.

Our Debt to Christian Science.

One of the leading elders in the church of Dr. Coyle, a recent moderator of our General Assembly, told me the most remarkable thing he has ever had to reckon with is the rapid growth in Denver of the Christian Scientists. "And that is not all," he says. "They have not only built the most beautiful church in the great Middle West, at a cost of more than $200,000, but all has been given without the least urging on the part of any one for it." "But far more than this," he went on to say, "these people seem to just *live* the most beautiful upright lives; so that you cannot help but feel that wherever you meet them, whether socially or in business, they exhibit something that the rest of us have not." Surely we owe any system of truth a debt of the greatest gratitude that will bring forth such heavenly fruitage as this.

One of the most influential attorneys of Cleveland told me that he dropped into one of the Wednesday evening meetings of the Scientists, and to his utter amazement, found more than five hundred present. But the strangest and most startling thing of all to him was that he counted more than seventy-five people there who but a few years before were the leading members in two of the strongest Presbyterian churches of the city—men and women many of whom were the pillars both spiritually and financially of the churches from which they had gone out. He said he asked a number of them afterwards the cause of their religious exodus, and almost invariably the reply was that now for the first time did religion seem a real joy to their life; the Bible a book they really understood and loved to read; and God the "Great Companion," whom they knew was ever and for ever lovingly present. Surely our hearts must be as hard as stone if there flows not forth abounding gratitude for such a heavenly awakening in the lives of any of His children as this.

A few weeks ago I was in a company with one of the leading ladies on the American stage. Among other things the theme of our conversation was Christian Science. I asked her what her experience had been with those of this cult. At once her reply, to my utter amazement, was: "Well, I tell you they are the greatest wonder of the world. Women that I used to know in New York and elsewhere, that lived lives that were worse than worthless,—not women 'way down,' but women 'way up,'—these women when they came to take up this new faith became in a year or two so transformed, that nothing less than 'heavenly' can express the change which is little less than miraculous." It would seem as though Christ's followers ought to send forth shouts of joy at such a great redemption, and thankfulness without ceasing for any help that would work such a work among the most hopeless and helpless.

Only a short time ago one of the leading professors in one of our leading Presbyterian institutions, to my utter amazement, made this little confession. He was the last man in the world from whom I should have expected it, for I had always felt he was the most theologically hidebound man I had ever met. He was good to the core; but "dead set" to the quick. Here are his words: "I am most thoroughly convinced there must be something in Christian Science the Church has overlooked or lost; and which it must get hold of again, if it is ever to get a grip as a mighty saving power, on the world that is lost." We must surely be dead in sin or asleep in Jesus if, in the presence of such an honest confession from one far outside the new cult, we do not thank God from the depth of our hearts that his eyes could see something in the new message that God meant us all to see, if our eyes are to be opened to the full glory of sons of God, that alone exalteth.

In view of such facts as have just been stated, which certainly are straws telling the way the winds of heaven are blowing and the thought-currents of earth are flowing, does it not behoove every Christian man and woman who is a truth-lover, to lay aside every weight of prejudice which does so easily beset them, and of religious self-satisfaction which does so easily possess them, and ask themselves, in the spirit of loving candidness, what truth there is in this message of Christian Science which has come into the kingdom, challenging the confidence, respect, and often the full allegiance of all classes and conditions of people within and without the pale of the Church militant?

[Rev.] Frank N. Riale.

Chicago, Ill. *The Westminster.*

The Empress Dowager [of China] has joined the reform movement with characteristic thoroughness, and has issued an imperial decree directing the million or so of officeholders who desire promotion, and all aspirants to office, to give up the ancient studies and devote themselves to the English language, mathematics, science in general, and things of actual value in the modern struggle for existence.

The rumor that the Empress Dowager has become a convert to Christian Science may or may not be true, but she is, plainly enough, a convert to the modern scheme of knowledge, which has done so much for the Japanese and made them able to hold their own with a great white Power.

China is moving, and led by that wonderful personality, her actual sovereign, will cover much ground in the next few years. More and more is the Far East becoming a factor in the world's affairs.—*The Mexican Herald.*

Christian Science teaches the immediate and absolute supremacy of good. The word "God" is simply a word used by man to express his highest conception of good, and when we speak of an omnipotent God we mean the omnipotence of good, we mean that infinite good has all power, and consequently that its opposite, evil, has no power. Therefore evil, or the devil, is simply a claim to be something which has power to oppose God, good. The word "Satan" means that which opposes. This is what happened to our first parents. This Satan claimed, and induced them to believe that it was something that had power, that there was something different from God, or good, which had power to oppose Him. It said to them that there was something to be known apart from and different from

Digitized by Google

good. God said to them what He is saying to the world to-day, In the day that ye shall know both good and evil, both God and devil, ye shall surely die; which was equivalent to saying, If ye shall know good only, ye shall surely not die.

This is what Christian Science means when it denies the existence of a personal devil; it refuses to know evil, or to attribute power or reality to anything unlike God. And through this obedience it is realizing and fulfilling the promise of the Master, who said, "He that believeth on me [not he that believeth on a devil], the works that I do shall he do also."

That Christian Science is doing these works is now generally conceded, even by those who feel it to be their duty to oppose it. Within the past month a minister preached a sermon in which he spoke of the work Christian Science is doing for suffering humanity in the following terms:—

"It is working cures,—we might almost say miracles,—both physical and spiritual, in the bodies and souls of men and women."

The important admissions here contained are:—

First. That Christian Science is doing these works,—works which neither of the churches represented by our critics are doing or pretending to do;

Second. That it is doing these works by the power of the truth which it embraces.

If, then, Christian Science reveals a truth in the Bible which the other churches have not discovered, it must be because it has an improved understanding of God's Word. An indispensable part of this improved understanding of the Bible consists in knowing the unreality of evil; that is, that evil has no existence outside of the human or carnal sense of life, which is in itself lawless; that is, has no legitimate existence. All things that have real existence exist in God according to the laws of His being or nature.

A thing can have being or existence, therefore, only as it conforms to law, the law of God's being or the law of good. This is the law of the universe, the law of nature; there is no other law. The proposition two times three are five has no reality because it has no basic law to give it reality. It may appear to be very real to one who believes it, even to the utter exclusion of that which alone is real; viz., two times three are six. But however devoutly one may believe it, yea, though all mankind should believe it, this will not impart the least bit of reality to it. It is just as unreal when believed by a Christian as when believed by a pagan, and will get a Christian in just as much trouble if he does not learn better. An error is just as unreal if some devout soul thinks he got it out of the Bible as if he got it anywhere else; and it is even more important that somebody should correct the error, if he thinks it came out of the Bible.

This carnal or mortal mind, this death mind, is the only devil known to Christian Science. It is not real because it was not created by God. It is not real because it has no law to support it. As Paul says, "The carnal mind is enmity against God: for it is not subject to the law of God, neither indeed can be." L. H. JONES.

Lexington (Ky.) *Herald.*

Biologists are in a state of mental chaos, and all other scientists except mathematicians. All laws of nature, about fifty so far discovered, that are based on mathematics, are known to be settled on a rock foundation. Such sciences as biology, physiology, mentology, and medicine must struggle for a hundred years to come to really settle anything. Chaos reigns supreme among these studies.

Admission to Membership.

The next admission of candidates to membership in The Mother Church will be June 5. Applications must be in the hands of the Clerk on or before May 14.

The Lectures.

Toronto, Ont.

Mrs. Sue Harper Mims delivered a lecture upon Christian Science last night [October 31] in First Church of Christ, Scientist. Hon. George E. Foster, M.P., ex-Minister of Finance, presided, and the church was crowded to the doors by an audience which listened with interest to the lecturer's address. Mr. Foster introduced Mrs. Mims in a short and appreciative speech.—*The Mail and Empire.*

Milwaukee, Wis.

Before an audience that commanded the capacity of the Pabst Theatre, Monday night [December 4], Prof. Hermann S. Hering delivered to a deeply interested audience a lecture on the doctrines of Christian Science. The speaker was introduced by W. J. Turner, who in doing so said,—

It was with a great deal of pleasure that I received an invitation to preside at the meeting this evening and introduce to you the lecturer, Prof. Hermann S. Hering of Boston. I perhaps felt more pleasure in receiving and granting this request from the fact that, owing to my association and acquaintance with many of the Christian Scientists of this city, I had learned to know and appreciate the basic truths for which they stand. In addition to that I had learned to know and will always remember the many good and sweet people I met, and the great kindness manifested toward me when I represented them at a time that was quite trying to all of us. I remember the faith and confidence reposed in me. I then had occasion to study the basic teaching of Christian Science, and have observed the talking and writing for and against it since that time. The writing and talking against it, in my opinion, is but a misunderstanding of the Principle which it inculcates.

As I read and understand Christian Science, I find it to be based upon the unbounded, illimitable love of God for man. The rich and the poor, the well and the sick, are all encompassed by this all-pervading love of God. It stands for Jesus the Christ and his virgin birth; for the Bible as the great text-book which is to govern the actions and conduct of all people as a rule and guide; for the Lord's Prayer; and maintains that it covers all human needs, the sanctity of the home, the dearest spot on earth. It stands against divorce; in fact, it stands for all of the good and moral teachings that all good and moral people stand for,—the broadest and best of brotherly love and brotherhood of man. It teaches that Christ Jesus, who healed the sick and taught others to do so, never intimated that this power would be withdrawn; it always has been and will remain as one of the greatest gifts to mankind.—*Milwaukee News.*

Harvard University, Cambridge, Mass.

An audience of students listened attentively to the lecture on "Christian Science, the Religion of the Bible," delivered by Judge Septimus J. Hanna on Monday, December 18, in Phillips Brooks House, under the auspices of the Christian Science Society of Harvard University. Wilfred G. G. Cole, President of the Society, in introducing Judge Hanna, spoke in part as follows:—

Fellow-students, Gentlemen:—For some reason, perhaps because Harvard has been noted for its breadth of view and its religious tolerance, an impression has gained ground that a general irreligious spirit prevails here. We who have made Harvard our educational home, know of course that this is not true, and it is highly interesting to find that our view is corroborated by a man most competent to judge. Several years ago, the late Prof. Henry Drummond made a tour of this country and visited the principal colleges and universities with a view to investigate their religious growth and activities. Harvard was one of the last place

Digitized by Google

visited, and as Professor Drummond took leave of President Eliot he is said to have remarked, "Contrary to what I had heard, I have found Harvard the most profoundly religious of all the colleges I have visited."

The presence of this religious, yet tolerant, attitude, makes it natural to infer that whether you attend this lecture from curiosity and a wish for educational information, or from a more serious interest in the subject, your desire in coming here is to prove all things and hold fast that which is good.—*Correspondence.*

Berlin, Germany.

Mr. Bicknell Young delivered a lecture on Christian Science to an audience of nearly three hundred persons, in the Festsaal des Logenhauses, under the auspices of First Church of Christ, Scientist, in Berlin, Germany, on December 14, 1905. The lecture was published in full in the *Continental Herald.—Correspondence.*

The lecturer was introduced by Mr. Frank Hessenberg, President of the American Association of Commerce and Trade, who said in part,—

In the early Christian days, as you all know, those men who had the gift of tongues were selected to go out and visit the different communities, to preach to them, to strengthen them in the faith, and to settle any quesions of doubt that might have arisen in their minds. You are only returning to the old ways that many centuries ago were found to answer. I am not a Christian Scientist myself, but I can appreciate the sincerity of their belief and the honesty of their faith.

Freedom of religious belief is one of the greatest boons a nation can have, and here in Prussia, Frederick the Great, with the intuitive perception of genius, appreciated the fact that religious freedom is one of the fundamental bases of a people's happiness. It was he who said that in his kingdom everybody should be free to seek salvation in his own way.

Mr. Bicknell Young will this evening speak to you out of the fulness of his heart, and whether you happen to be of one mind with him or not, I hold it that any man who is sincere, and whose faith and belief, whatever they may be, really warm his heart's blood, and who makes you feel that they form a very part of himself, that man, I say, will generally tell you something that is worth listening to, something it is worth your while to turn just one minute from the busy rush of life to lend an ear; and if it be but one beautiful thought that is suggested to your minds you may consider that your evening has not been wasted. Anything that will help men and women to lead better lives, anything that will prove an aid to real happiness and serenity of mind, from whatever quarter it may come, provided the source be pure and untainted, that we must all welcome with open arms.

Ladies and gentlemen, I have much pleasure in introducing to you Mr. Bicknell Young, C.S.B., member of the Board of Lectureship of The First Church of Christ, Scientist, Boston, Mass., U.S.A. the first authorized lecturer to lecture on this subject in Germany.

The Work of the Publication Committee.

THE following extracts from the annual reports of the Publication Committees for the States of New York and Pennsylvania for the year 1905, will be of interest as showing the great amount of work required of these Committees. That this work is of great importance to our Cause has been proved by the results obtained in correcting many misstatements which otherwise might have been accepted as true by the casual reader, and these bespeak for the Committees the earnest support and co-operation of the branch churches.

The following figures are taken from the report of the Committee for New York:—

Clippings received at this office, representing all comments, pro and con, on the subject of Christian Science during 1905, and from practically every town in the State, upwards of 2,600; corrections and answers prepared by the Committee and assistants, 550; corrections and answers published by Alfred Farlow, C.S.D., 7; corrections and answers published by Richard P. Verrall, 10; corrections and answers published by H. Cornell Wilson, 228; corrections and answers published by regular assistants, 21; corrections and answers published by other Christian Scientists, 10; original articles written for New York papers by Mary Baker G. Eddy, and published, 6; favorable quotations from, and reprints in State papers of articles by Mrs. Eddy, 111; reprints of statements and articles by Mr. Farlow, 17; reprints of articles from *Christian Science Sentinel,* 15; reprints of letters by this Committee in other States, 8; favorable items published by State papers without request, 93; reports of lectures (published notices not included), 48; letters written in connection with the work, 2,898; circular letters to assistants, in connection with distribution of literature, 693; number of newspapers, periodicals, and pamphlets circulated, 28,017; pamphlets paid for and on hand in addition to above, for use as occasion arises ("Critic Answered" and "Christian Science Journal"), 1,600.

Similar figures from the report of the Pennsylvania Committee are as follows:—

Total number of newspapers, etc., containing marked articles distributed by your Committee during the year 1905, 32,120; number of letters and telegrams received, 1,582; number of letters and telegrams sent out, 2,496; number of corrections and miscellaneous contributions sent to newspapers and other publications, 208; number of contributions published, 129; number of calls made upon editors and others in connection with this work, 221.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Anonymous Letters.

THE anonymous letter is universally regarded as the refuge of those who have not the courage to stand fairly for their opinions. It would seem that our Leader's untiring work for humanity earns her the right to expect that all communications addressed to her shall be signed. Emphatically is it true that there is no possible excuse for one who calls himself a Christian Scientist, violating this commonest of courtesies.

Therefore it is reasonable that this request for the name of the person responsible for a registered letter from the London field, addressed to "The Rev. Mary Baker G. Eddy," dated January 13, 1906, and signed "A Woman," should be complied with.

It may be added that the Cause of Christian Science is the cause of all mankind, and that the question of sex does not enter into its ministrations. Jesus gave an exact standard for both men and women when he said, "By their fruits ye shall know them;" and "Science and Health with Key to the Scriptures" places this same standard before all Christian Science workers. It is also evident that a "Teachers' Association" is an association of and for teachers, and it would not appear that a By-law was necessary further to illumine this fact.

LEWIS C. STRANG,
Associate Secretary.

Pleasant View, Concord, N. H., January 31, 1906.

Another Prosecution Fails.

THE following news item, which we copy from *The Toronto Daily Star*, marks the close of another prosecution of Christian Scientists in the Canadian courts. The judges before whom the case finally came, have expressed themselves in no uncertain terms regarding the injustice of such proceedings, and it is to be hoped their words will have a restraining influence upon all those whose zeal borders upon persecution.

The *Star* says,—

"The four Christian Scientists accused of conspiracy to deprive the late Wallace Goodfellow of the necessities of life are free at last. The Court of Appeal this morning [January 22] gave judgment quashing the indictment and dealing a severe blow at the Crown for its manner of conducting the prosecution.

"The four accused were Mrs. Goodfellow, mother of the deceased; Mrs. Grant, Mrs. See, and William Brundett. The probability is that no further prosecution of them will be made.

"The five judges of the Court of Appeal were unanimous in giving their decision against the prosecution. Written judgments were made by Mr. Justice Osler and Mr. Justice Meredith. The others concurred.

"Mr. Justice Osler states that the first count of the indictment, charging conspiracy to deprive Goodfellow of the necessities of life, discloses no indictable offence. Therefore it must be quashed. It seems, says his Lordship, to be a mere experiment on the part of the Crown, and as framed does not bring against the defendants any criminal charge. None of the defendants had any legal duty to supply him with those necessities, therefore it could not be shown that they had conspired to omit or neglect to supply him with the means of life. The Crown had failed to show any legal responsibility on the part of the accused to care for the deceased in regard to supplying him with food and drink and medicine.

"Mr. Justice Meredith goes even farther, and scores the Crown rather heavily for its evident desire to get any sort of a verdict against the Christian Scientists. The charge, he states, should have been manslaughter, or something of a lesser character.

"He says that the charge of conspiracy was evidently meant as a 'cover-all' by the prosecution, and he intimates that it was probably thought that it would prove palatable to a grand jury. His Lordship declares that a spirit of fairness should characterize all prosecutions which are brought in the name of the Sovereign, but in this case there seems to have been an undue inclination to obtain a verdict against the accused on any indictment that would serve the purpose of covering the alleged crime. He asserts that this judgment is intended to discourage looseness in the bringing of indictments in future.

"The Court affirms Judge Magee's decision in quashing the second count of the indictment, which alleged that the Christian Scientists conspired to cure the deceased by unlawful means. On the other questions submitted in the reserved case, the Court rules that it is unnecessary to give judgment, as the answer to the first practically disposes of the matter.

"Mr. Hamilton Cassels, K.C., stated to *The Star*, after the Court had given judgment, that he did not think there would be any further prosecution of his clients, the four accused.

"'It would be outrageous if there was to be another charge brought against them now,' said he. 'One grand jury has thrown out a charge of manslaughter, and the Court of Appeal now quashes the indictment for conspiracy.'"

There is no more call for the prosecution of Christian Science practitioners in cases of this kind than there is for the prosecution of physicians who lose patients, and if these physicians were to be prosecuted in every case the courts would find time for little else. Unless the death-rate is much lower in Toronto than in other cities of its size, there would be close to one hundred prosecutions every week. The absurdity of prosecuting Christian Scientists who lose a patient so rarely as to render such an occurrence sensational, and of not prosecuting the physicians who lose a hundred or so each week, should be apparent to every one.

Unfortunately for the cause of justice, many prosecuting attorneys seem to forget that it is as much a part of their duty to see that the innocent are not harassed as it is to see that persons guilty of crime are punished, and for these officers to allow personal or public prejudice to dominate their actions is to give ground for serious complaint.

ARCHIBALD MCLELLAN.

An Open Door.

CHRISTIAN SCIENCE leads to the logical and blessed fulfilment of the gospel assurance that all men may become "kings and priests unto God." It reveals the richer possibilities of an unhampered, individual access to Truth, and emphasizes the thought of the sovereign adequacy of that spiritual understanding to which the humblest may attain. Its text-book is a "Key to the Scriptures;" its teaching an open door to all good. For the sacerdotalism which would limit spiritual privilege in any way or degree, it offers the freedom of the sons of God,—a freedom in which divine Love "satisfieth the longing soul and filleth the hungry soul with goodness."

In his first letter to the Corinthians Paul writes of that "hidden wisdom" through which all may come into possession of this spiritual enrichment. He declares that it is "a divine philosophy" which is "taught to those who are

Digitized by Google

mature enough to receive it . . . a deep divine secret, a revelation to the heart of man by the divine spirit, of things which wholly surpass human knowledge." (Prof. Stevens, Pauline Epistles.)

The terms employed by the apostle in describing the nature and accessibility of our inheritance were of such peculiar significance to the Greek Christians that they suggest a thoughtful selection upon his part. As in ancient Egypt, so in Greece the great body of the people were ever in bondage to a grossly material sense. The traditional history and doings of the gods were accepted by them as matters of fact, and their many religious ceremonies were celebrated in an altogether superstitious way. The priestly class, however, as we are told, regarded the popular stories of the gods as mere fictions, and looked behind and beyond the crudities of general belief to the forces and phenomena of nature which the gods in all their activities and contentions but symbolized. Selfish considerations no doubt led the priesthood to consent to the ignorant credulity of the masses, and the authorized teachers were thus far removed from the common people, who thought of them as a highly favored class to whom alone the deeper mysteries of their faith were committed. The fixedness of this relation and the content of the people in a state of ignorance is indicated by the fact that when Socrates, their greatest and wisest teacher, dared to tell them of the folly of their superstitions, those whom he sought to make free pressed the cup of hemlock to his lips.

The apostle's use of the word "mystery" must have reminded the Corinthians of their sacred rites, to a part only of whose secrets the Greeks were admitted, and from which all others were rigidly excluded. Having thus suggested the old repressive conditions, Paul flashed before them in telling contrast the true concept of liberty when he said, "Now we have received, not the spirit of the world, but the spirit which is of God; that we might know the things that are freely given to us of God." The mystery of godliness would indeed remain secret, apart from revelation, but it has no flavor of magic, no intimation of that which may not be comprehended and explained. It is the deep of divine Truth, whose treasures are available to "all who are led by the Spirit," and spiritual immaturity alone excludes from conscious possession of these riches of "wisdom." As our Leader has written, "Without a fitness for holiness we cannot receive it" (Science and Health, p. 15).

In glowing assurance of faith the apostle cried out, "All things are yours," but he added, "howbeit we speak wisdom among them that are perfect." To those who received not the things of the Spirit of God the door was closed, and with Abraham and all the prophets the great apostle looked for the promise of a yet brighter day, "afar off,"—a day in which the demonstrable truth was to be known not by the few simply, but by every responsive and aspiring heart. In the fulness of time this day has dawned, a "great and effectual door" has been opened, and they who enter not in are without excuse.

JOHN B. WILLIS.

The Christian Science Publishing Society publishes and sells *The Christian Science Journal*, the *Christian Science Sentinel*, *The Christian Science Quarterly*, *Der Herold der Christian Science*, besides supplements, pamphlets, reprints, and other miscellaneous publications fully listed in our advertising pages. All correspondence in regard to these, except that relating to articles and testimonies for publication, should be addressed to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass. All remittances should be similarly addressed, and checks, drafts, etc., should be made payable to the Society. The editorial department has nothing to do with the business affairs of the Society, nor with practitioners' cards and church notices in the *Journal*, and no remittances should be made to the Editor. Testimonies and articles for publication should be addressed to the Editor, as should all correspondence relating to them.

Letters to our Leader.

Toronto, January 3, 1906.

Beloved Leader and Teacher:—I suppose you are daily waiting to hear from me of the victory for Truth in the Court of Appeal; the case was argued but the decision has not been given yet, so I have delayed writing you until I could tell you that it was completed. Everything now looks most favorable. The judges ridiculed the charge, and one of them said he thought the law was broad enough, and that there was sufficient opportunity to use it, without manipulating it to try to make criminals of people who were not criminals; each of the other four judges evidently coincided with his remark.

I never witnessed a more convincing proof of the freedom given those who are defending the Cause of Christ, to express themselves intelligently and with logical arguments that even the adversaries cannot gainsay nor resist, than was manifested in the argument of Mr. Hamilton Cassels (one of our lawyers) to the Court of Appeal. It was really one lawyer talking to five other lawyers, and during several hours of argument they were never able to reverse his argument on a single point of law.

I hope, dear Leader, that you had a happy holiday season, and that divine Love was even more consciously present than ever before. For several years my students have been giving me unitedly a Christmas gift, but about the first of December I told two of the most active workers that should such a thing be proposed this year I wanted them to tell the others that I requested it should not be done, as all their efforts were required in completing the Building Fund of The Mother Church. I was informed that it had been started; but at my request it was canceled, and all are doing their part in contributing to these heavy law bills, and giving what they can to The Mother Church Fund. We have given to it every three months since the movement to enlarge the edifice was started. I had a shower of Christmas gifts from patients, and one that made my heart glad is a letter accompanying a gift from one who formerly had tried all that *materia medica* could do for her. She had earnestly prayed to God for herself; her devoted parents and church friends had longed and prayed for her recovery; but there was no answer; she longed for death to release her, but even that did not come. They were then persuaded to try Christian Science, with the result shown by this letter to me, which says,—

"*My Dear Friend:*—This Christmastide my thought turns very lovingly to you—God's messenger of light to us in the midnight darkness and anguish of a year ago. What a transformation in one short year! Surely "The Lord taketh my part with them that help me," and I go forward bravely to a complete victory. Chiefest among my many blessings is this new understanding of God, the perfect good, and the joyful message of long ago, "On earth peace, good will toward men." My husband joins with me in love to you, and best wishes for a happy Christmas and glad New Year. Affectionately yours,

"ETTA M. MCCLAIN."

I thought it might add to your cup of gladness to hear from one more who through your discovery of this blessed "Science of Christianity" has been liberated from bondage, and is learning to tread firmly in the "Way of everlasting Life." With tender affection, I am

Yours in Christ,

ISABELLA M. STEWART.

Chicago, Ill., December 8, 1905.

Mrs. Mary Baker Eddy,

Pleasant View, Concord, N. H.

Our Dear Leader:—"That the abundant grace might through the thanksgiving of many redound to the glory of God" (2 Corinthians, 4 : 15), Third Church of Christ, Scientist, of Chicago, announced a special collection for its thank-offering to The Mother Church Building Fund. This

Digitized by Google

collection, taken December 3, realized two thousand dollars, and a check for the same has been forwarded to Mr. Chase.

Deeming it a privilege to express our love and gratitude to God, we also wish to express our thankfulness to you for following His commandments and teaching us, through "Science and Health with Key to the Scriptures," to obtain a glimpse of the living, practical truth in the Bible. On October 6, 1902, we pledged ten thousand dollars to The Mother Church Building Fund. October 17, 1904, only seventy-five hundred dollars of this amount had been paid. October 27, 1904, a special meeting was addressed by Mr. Edward A. Kimball, who gave a scientific analysis of the situation. November 2, 1904, at a short business meeting after the close of the Wednesday evening service, a resolution was unanimously adopted, pledging immediate payment of the twenty-five hundred dollars balance and ten thousand or more additional.

By the terms of this resolution these amounts were to be regarded as a part of the regular, fixed expenses of the church, and to be provided for in the same manner as the regular running expenses, the trustees being authorized to send to The Mother Church Building Fund all money remaining after running expenses were paid. Before the meeting adjourned more than six thousand dollars was subscribed and by December 28, 1904, four thousand dollars had been sent.

October 2, 1905, a check for five hundred dollars was forwarded Mr. Chase, completing a total of twenty thousand dollars, which with the collection of December 3, 1905, made a total of twenty-two thousand dollars. The children of the Sunday School have sent six hundred and twenty-five dollars. Each class has a special envelope, in which each and every Sunday the children place what they have for their Mother Church Building Fund.

We are very grateful to "continue in prayer, and watch in the same with thanksgiving."

Yours very sincerely,
MISS M. BELLE BRADY, *Clerk.*

Niles, Mich., November 22, 1905.

Dear Mrs. Eddy:—I shall feel very thankful if this letter finds its way to you, though I realize somewhat the many demands upon your time. My great desire to have you know of this little band of workers in Truth, is my apology. As a Society we have been in existence some time, and though we have not grown as we hoped to, yet we have tried to be "faithful over a few things." We number eighteen, and though our steps have seemed slow and tottering, we rejoice that they are now more firm. We have given two lectures to our townsmen, one by Mr. Kimball and one by Judge Ewing; we have placed on the shelves of the public library some of your writings, and last spring it was our great pleasure and privilege to send a modest sum to The Mother Church Building Fund. Heretofore we have been obliged to occupy very humble quarters, and only because we tried to put in practice your noble words, "Trust in Truth and have no other trusts," have we been able to overcome all opposition, and now hold our services in the auditorium of our beautiful Carnegie Library, the nicest place in town. We have purchased a new organ and are having a handsome pulpit built.

More than a year ago we sought entrance to this place, but were refused; nothing daunted, however, we clung closely to your teaching, and a week ago won our point. There are four of us who are students of your students, and we who are helping to establish Christian Science in this conservative little city want you to know that your teaching of what God is, and what He does for man, has enabled us to achieve whatever we have in the right direction. There are many here who sleep, but we know that if we are obedient, and doubt not, they will awaken to the truth some day, as we did before them. We thank you and love you. Very gratefully your follower,

MRS. JESSICA W. PIERSON.

Testimonies of Healing.

Although for several years I have been trying to incorporate Christian Science in my daily life, and have had many proofs of its helpfulness and practicality, I have recently passed through an experience which has awakened me to a greater sense of gratitude for its healing power. I had occasion to place a package in a safe located in a vault. A single jet of gas was the means of lighting the vault, and, at this time, the gas had escaped and filled the space above the door. When the gas was ignited, and just as I succeeded in unlocking the safe door, there was an explosion, knocking me down. At the moment of the explosion I was so impressed with the thought of my inability to contend with such a condition that instantly the counter-thought of the indestructible nature of spiritual man filled my consciousness. I crawled through the door before trying to rise, as the vault above me seemed to be filled with flame. When I arose, I returned to my office, which was a few steps down the corridor, and at once asked for Christian Science treatment. The pain was quite severe, but after about an hour and a half it ceased. My face, neck, and right hand had been severely burned, so badly indeed that for twenty hours the water exuded continuously like an excessive perspiration, but not a single blister formed on my face or neck. My hand appeared like a half-cooked piece of meat, and after the second day a large spot turned a decidedly green color. This discoloration continued for a couple of days, but the healing was perfect and there is not a trace of the burn to-day, either on my face or hand. Six days after the explosion occurred, I opened my office and resumed my regular occupation. During the days of my healing, although so disfigured that I could not see any one, I enjoyed my meals and rested well at night.

This incident has turned my thought with renewed gratitude toward our Leader, Mrs. Eddy, and my knowledge of the suffering I have been saved from, of the protection in right thinking, and of my indebtedness to God for a corrected life, makes the giving of this testimony a pleasure.

ROBERT O. CAMPBELL, Peoria, Ill.

For more than twenty years I was an invalid. I suffered with a bronchial cough, constipation, and ulceration of the lower part of my bowels, which gradually grew worse until I despaired of ever getting well. My husband, a physician, did everything he could for me; he consulted with the best physicians, but they had all given me up and said I could not get well. The cough was so very bad during the last few years of my sickness that I would have to keep medicine under my pillow and take a little many times during the night in order to get any sleep.

Three years ago I was induced by my daughter to quit taking medicine and try Christian Science. I did so and soon after commenced to improve. I continued to take treatment, and I read the Bible and Science and Health for three years, when I was entirely cured of the cough and bowel trouble. Not only did my physical suffering disappear, but mental care and worry also. I could write pages of my suffering and pain, and the great amount of medicine I have taken, but suffice it to say, that all there is left is a dark shadow from which I am turning away as fast as I can.

Words cannot express how thankful I am for Christian Science. During the years of my sickness I thought I was a Christian, but I depended entirely on material means for life, health, strength; and all these failed me. Now I am well,—old things have passed away and all things have become new. I depend on God for everything; He is my Life, the source of my health and strength, my All. I feel the day will come when all the world will know the truth as pointed out in Science and Health by our dear Leader.—MRS. MAGGIE A. RICHARDS, Omaha, Neb.

Digitized by Google

So much is said about the healing work of Christian Science by its grateful followers, that people who are not much acquainted with Christian Science itself, come to think that healing is its main work, and the principal if not the only point of difference between Christian Science and the regular orthodox theology. Every Christian Scientist, however, knows that the physical healing is but a manifestation of the transformation effected by the renewing of the mind. I did not commence the study of Christian Science on account of my own healing, but on account of the Christian Scientists themselves. I found among them men and women who were living earnest Christian lives. It was a new experience to me to find people talking together of the blessings God had given them, and telling each other of the spiritual uplift they had received from some Bible passage, or some paragraph in their text-book. They seemed so happy and satisfied in their religion, and to get so much more out of it than I did out of mine, that I wanted to know more about it. I borrowed the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and commenced reading it. I had a good many prejudiced opinions to overcome, and at first there was much in the book that I did not understand, but each time I took it up to read, I did so with the earnest prayer that if it were true, God would lead me to understand it, and if it were not true, that God would not let me be led into it and deceived by it. The more I read, the more interested I grew, and the clearer the meaning became not only of the text-book, but of the Bible as well; and I will add that this is still my experience, after four years of reading Science and Health in connection with the Bible.

I have been benefited physically in many ways, but if I had never had any of these proofs of the truth of Christian Science, still I should be a student of Science and Health, because Christian Science is the most satisfying and sensible, the most helpful and practical religion that I know anything about, although I was a member of an orthodox church for a number of years, and tried to be faithful to its teachings. I get practical help for my every-day living out of my study of Christian Science, because it not only tells me that I should love God and my neighbor, that I should be unselfish, meek, and pure, but it shows me why I should be so, and how I can be.—HELEN K. MILLS, Des Moines, Ia.

Out of the depths of my heart, I wish to relate my case of healing. On the 16th of March, 1903, I was told, after a thorough examination under the influence of chloroform, that I could not live without a serious operation. One of the surgeons who had examined me informed me that it would be necessary for me to be under the influence of anæsthetics so long that they hardly thought I would live through an operation; but I was suffering such severe pain that they believed it best for me to try that one chance, as it was impossible to endure such agony, and I would have only a short time to live anyhow.

At this stage my brother advised me to try Christian Science, for, although he had no faith in it himself, he had heard of some wonderful cases of healing. I decided to try it, and a practitioner was sent for. I was healed in a few treatments, and the doctors declared it was a miracle. They could not understand my recovery. People whom I had never met came to see me, having heard so much about my case. My pain left me entirely after a few treatments, but I did not regain my strength immediately, this required several months. I had been sick two years, and previous to my having Christian Science treatment I had not slept without opiates for six weeks. To-day I am in perfect health and can sleep like a child. Since my healing I have never had any physical troubles to overcome, and it seems that my body has been completely transformed. Within five or six months after my recovery I found myself guiding others to God and Christian Science.

I am very grateful to God, whom I have learned to know as Life, and to Mrs. Eddy, whose teaching has enabled me to understand the Bible and to pray in the right way for health and happiness.—MARY THORSEN, Chicago, Ill.

In reading the article entitled "Christian Science: Its Compassionate Appeal," in the April, 1905, *Journal*, I was forcibly reminded of an experience of fifteen years ago.

I had long been a hopeless sufferer. In looking back over weeks, months, and years of suffering I could not see that I was getting better, but rather getting worse. One day, when all seemed dark and the future held out no promise of relief, this thought came to me with startling force: "If this is not hell, what is?" I had always supposed hell to be a place beyond the grave, and it had been my thought to live so as to escape it, but I now began to realize I was in it. Soon after this I was examined by a prominent surgeon and was promised relief by undergoing two surgical operations. I was declared to be the victim of organic diseases and nervous prostration. I had submitted to one operation two years before this, at which time the same hope had been held out, but I never could see that it had given me any help; so we were very undecided, not knowing what to do.

While waiting, Christian Science was presented to me in such a way that I discarded all medicine and surgery, and decided to take treatment at once. In less than three weeks I purchased a copy of Science and Health. It opened up a new life to me and I never could express in words the joy and hope it brought into my home. I was soon able to make little demonstrations for myself and children. Slowly I came into an understanding of this great truth, and it was while treating a friend that I was able to rise above error sufficiently to sit up all day and take up my work where I had left off years before. I have passed through deep waters and over hard places, but Truth has ever upheld and sustained me.

The *Sentinel* and *Journal* are always a comfort and help. I am deeply grateful for Christian Science, which has shown me how to understand the Bible and how to make practical and apply in daily life the Christianity of Jesus. I am above all grateful to God, the giver of every good and perfect gift, and to dear Mrs. Eddy as the instrument through whom this wonderful truth, which is redeeming the world from sin, sickness, and death, has come.

MRS. SARAH OLNEY, Grand Rapids, Mich.

It has been over three years since I was healed in Christian Science. I had been doctoring probably twice that long with eminent physicians in various cities, the last being one of the best in Chicago; in fact we moved to that city purposely to be with him. Three years were spent in doing all that was prescribed for me—massage, electricity, and medicine,—and at the end of this time I felt worse than I had ever felt before. One day I went up to the office and said that I felt worse than usual. I was duly examined, as I had been many times previous, and told I had well-nigh every ill to which humanity is subject, and in three years more might be well, if I did just as I had been doing; but he could not promise me. Think of it! Three years more of living like an old woman—and a sick one at that—and I only eighteen! For the first time I was discouraged, sick at heart as well as in body, and I said, "I am going to a Christian Scientist. I don't know what Christian Science is, but I am going to find out." I knew so little about it that I had to get down a classified telephone book to find the name of one to whom I might go. Mother was with me, and although she did not approve, knowing as little about it as I, she thought she would let me have my way until I came to myself again. We soon came to the practitioner's office and I laid bare my heart with all its troubles to her.

Digitized by Google

I had had ulceration of the intestines, combined with a form of typhoid fever, and had never regained strength or health. I suffered from nervousness, blinding headaches, and fainting fits. I was at the age when I should have been in school, but I could not study; so all I did after eating my little meals of "predigested food" was to take a long walk with my trained nurse, whom we had had for three years, or she would give me a massage to help digest the already digested food. However, it is all a dream to me now. I soon found what Christian Science really is,—that it is indeed "God with us,"—and the disease which prominent physicians for years had been vainly trying to heal, was cured in five treatments. To satisfy my parents of the cure—for mortal mind is ever skeptical—I have since been examined by physicians and found to be normal in every way. Personally I needed not to be told I was cured; I knew it in a thousand ways; I can eat anything, have no more trouble with headaches,—in short, have had no recurrence of the old ailments in any way.

For these and all the other tenfold greater blessings received through Christian Science, I can only say, "God, I thank thee," and try to live the truth pointed out to me by our Leader.—VIRGINIA A. SHAYNE, Chicago, Ill.

When I first experienced the healing benefits of Christian Science, the impulse to express my thanks audibly was always met by the inward reply: It is not at all necessary. Science, the Truth, and your saying that it has healed *you* will make it neither more nor less than the absolute truth about God and man. Thus many months slipped away and my testimony remained unspoken. However, I now appreciate the privilege of telling, in part at least, what Science has done for me during these four happy years.

In the first place, I was healed in one treatment of a distressing physical condition for which I had been under medical and osteopathic treatment during a period of fourteen months. The eight different physicians of various schools, to whom I turned for help, were all at a loss to account for my condition, and for the reason that they were looking for the root of the disease in the body when the cause was mental. As soon as I saw that God is not the author of disease, I ceased to believe in it as a reality, and the disease disappeared. A few months after my first healing, a severe cold was healed in one treatment. In the evening when I went for the treatment my voice was inaudible. To the astonishment of my family, the next morning my voice was perfectly clear. They knew that on previous occasions, when I had relied upon material remedies, such a cold usually lingered from one to two weeks.

One of the greatest blessings I have gained from Science—a blessing out-measuring all physical benefits—is an understanding of God as ever-present Love. Before I studied Science and Health, I had been an agnostic, because the anthropomorphic God of theology did not satisfy me, and I felt obliged to withdraw from the church in which I had been brought up. However, it was necessary for me to read the Bible every day, and the strength and beauty of the 91st Psalm appealed to me. It had long been a favorite with me, and often, after reading it aloud, I would say to myself, "If it were only true!" Science and Health proved to me that it is true; and it was through the help of this Psalm and of the forty-sixth that I was able to overcome a great fear of lightning,—a fear that hung over me like a nightmare during the months when thunder-storms occur. With Science and Health to interpret the Bible for me, I soon saw that God is "a very present help in trouble." I know that nothing will ever be able to separate me from His omnipresent love. Each day's work in Christian Science brings to me a deeper sense of gratitude towards Mrs. Eddy, whose wondrous book has reclaimed me from the darkness of agnosticism by giving me an understanding of the God who is All in all.

ELIZABETH CAHILL, Philadelphia, Pa.

During our Sunday morning service, a short time ago, our little band had a beautiful proof of God's presence and tender care, which has been a great joy and blessing to us. During the reading of the Lesson-Sermon, one of our number—an elderly lady (whose testimony follows this)—suddenly became unconscious. There were no symptoms of faintness or suffering, but a sudden collapse, accompanied by the appearance of death. Some even declared she was dead. As soon as she could be laid down we bowed our heads in silent prayer and the room became very still. We realized that God, divine Love, was present with us, and that He is Life,—eternal, unchanging,—and that nothing could separate us from Him. A sense of deep peace came to all of us. I do not know how long the time really was, but it seemed short, not more than ten or fifteen minutes, before consciousness was restored, and with it, as our friend says, such a sense of peace and rest as she had never known. Her appearance became entirely natural, and we resumed our Lesson and finished the service as usual.

It seemed as if the words we read and sang had a deeper meaning than ever before, and we went to our homes with hearts full of thankfulness to God, the giver of all good, and to His faithful servant, our beloved Leader, who has taught us how to look to God with confidence at all times. This experience has lifted us all a little farther out of material belief, and it has been a wonderful help to some, especially the lady who was restored so quickly. She seems to have a much clearer understanding of spiritual things, to be stronger physically, and much happier and cheerier than before.—MRS. SARAH G. PHILLIPS, Fenton, Mich.

It is about seventeen years since I became interested in Christian Science. At that time I was suffering with a felon. I had not been free from pain for several days and nights. It had been lanced and the physicians said it would have to be again, and that it might be many days before I had much rest. That night one of my neighbors came in and I told her how I was suffering. She said I need not suffer longer if I was willing to be healed by Truth. I had never heard that she was a Christian Scientist, but I was willing to try anything. She treated me and the pain was soon gone. When I told my husband about it he laughed and said, "Time will tell whether the pain returns or not." Time did tell. I retired early and never slept better. I did not suffer any more and my hand healed rapidly. The next morning this lady explained about the treatment, and gave me some reading. I have been interested ever since and have been healed of several ailments. The demonstration above referred to has made me feel that I ought to acknowledge what Truth has done for me. I am the person alluded to [above] by Mrs. Phillips. I think the experience was needed, as for some time before this I would think, and say, after reading of remarkable cures, Why do we not have some of these wonderful demonstrations? I was almost doubting the power and love of God.

I wish I could describe my feelings on this Sunday, after awakening to consciousness, but words fail me. I had a sense of such peace and rest. I was perfectly happy, and as I looked around upon my friends they, too, looked happy. I did not know what had happened to me until told, but I now think that my faith will never waver again.

I am sincerely grateful to our Leader, and I ask each day that divine Love will lead me in the way I should go.

MRS. J. R. BUNTING, Fenton, Mich.

To Christian Science I owe my all, for had it not been for this truth I fully believe I would not be here to-day. In the spring of 1898 I was taken very suddenly with lung

Digitized by Google

trouble and my chances of recovery seemed very small. I had Christian Science treatment from the first, as I have known no other remedy for about thirteen years, and though the healing seemed slow, it was perfect, as I have not known a sick day since. Many ailments have been overcome by this truth as taught in Science and Health by Mrs. Eddy, among which are sick-headaches, colds, ulcerated teeth, etc. Christian Science is a practical religion which we can use every day and in all things. My husband and I are the only Scientists here, but we have been able to bring the truth to some who were in great need of it.

I am deeply grateful to Mrs. Eddy, who has made it possible for us to know something of heaven, here and now.

MRS. P. H. ROSEBROOK, Hocking, Ia.

I feel that I should no longer withhold my testimony of the power of Christian Science. I became interested in Christian Science about seven years ago. Weak lungs with hemorrhages, chronic constipation, and terrible sick-headaches are some of the ailments which have been destroyed through this wonderful truth.

My healing was not rapid, for which I am now thankful, since otherwise I might never have gained even a slight understanding. Many times I have been tempted to give up the struggle, but there was simply nothing to go back to, and now I thank my heavenly Father every hour of the day for leading me in paths unknown.

A few months ago a great sorrow came into my life, so great that in the old thought I feel I could never have lived through it. All through the shadow divine Love was my helper, and now I know that if I steadfastly look away from matter to Spirit the peace that passeth all understanding is mine.

Words cannot express my gratitude to God, and to our beloved Leader, Mrs. Eddy, for this glorious freedom.

KATE K. BROWN, El Reno, Okla.

I write this testimony hoping it may benefit some one whose healing seems slow. In Science and Health, page 22, we read, "Love is not hasty to deliver us from temptation, for Love means that we shall be tried and purified." All sufferers may therefore take courage, for we know that Christian Science is a sure deliverer. Christian Science was brought to my notice by a daughter who returned home on a visit and placed Science and Health in my hands with the remark that I might be interested in it. I eagerly read its pages, and soon found that it was what I had been looking for,—a religion that satisfies. In reading this wonderful book I was cured of neuralgia of the head which dated back twenty years. I also laid off glasses which I had worn for years. While I still have difficulties to overcome, I know that by patient adherence to Truth I shall be the victor. Words fail to express my gratitude to God, and to Mrs. Eddy, who through her consecrated life has brought us this Christ-truth.—MRS. C. A. WOOD, Chicago, Ill.

The latter part of May, 1904, my mouth began to get sore, and I went to a dentist, but it continued to get worse, and in about three weeks I had to take to my bed. I could not open my mouth, and the only food I could take was milk through a quill. The jaw was lanced eleven times in all. I tried three dentists and four doctors, had two operations, and in January, 1905, my physician told me that the only way he could help me was by removing all of the jaw bone. After I had lost all my teeth on one side, had suffered nearly a year, and had spent a great deal of money, my sister told me of Christian Science and got me to write to a practitioner in Georgia, with the result that I was most wonderfully healed; and I shall never cease to thank God for this manifestation of divine Love. I am also thankful to our beloved Leader, Mrs. Eddy, for her teachings.—J. C. MERIWETHER, Montgomery, Ala.

I wish to send an acknowledgment of what Christian Science has done for me. I had what was called very bad rectal trouble for a number of years, and I was healed by reading Science and Health. It would take pages to tell of the peace and contentment that this understanding gives.

I am thankful to divine Love for the beautiful unselfed life of our beloved Leader, Mrs. Eddy, and also for all our very helpful literature.

DELLA Z. SWEETING, Madras, Ore.

Words cannot possibly express the joy and comfort that has come to me through the demonstration and teaching of Christian Science. I can say with unspeakable gratitude, that whereas I was sick, sad, sorrowful, and had a most disagreeable disposition, now I am strong and well, physically, mentally, and spiritually. I am happy to be able to "rejoice all the rugged way" (Miscellaneous Writings, p. 398), and learn the beautiful lesson of meekness and patience. I thank God for our dear Leader, who has taught us that we are children of light and not of darkness, and that our God is ever present and lovingly and tenderly answers our prayers.

MINNIE B. MCNULTY, Los Angeles, Cal.

[Translation from the German.]

More than five years ago, I was so miserable in consequence of nervousness and insomnia that Christian Science was truly a redemption for me. After I had tried material means without avail, I was ready to accept the truth revealed in Science and Health. Thanks to the treatment, and my earnest study, my condition began to improve gradually, so that after a year I was entirely well, and not only physically, but also morally, mentally, and spiritually. Christian Science has been of priceless value to me.

How grateful I feel to God, and to our revered and beloved Leader, Mrs. Eddy, that she has enabled humanity to come to the recognition of man's true selfhood.

OLGA HAMMA, New York, N. Y.

It is with gratitude that I let others know what Christian Science has done for me. For years I suffered from nasal catarrh and nervous dyspepsia. I was cross, fretful, and dissatisfied, shedding tears many times over supposed troubles. I heard of Christian Science, borrowed Science and Health and read it carefully. At first it seemed hard to understand. I read slowly and prayed for understanding. My healing came slowly also, but now I can eat anything, and can sit in an east wind and enjoy it, instead of closing windows and doors as I used to do, fearing I would suffer for days after. It is impossible to tell of all the physical benefits I have received, and the spiritual uplifting is yet greater. I am happy to be able to help others, also, and I am grateful to my heavenly Father, and to Mrs. Eddy for showing us the way.

JULIA P. ALEXANDER, Charleston, S. C.

Our Father.

GERTRUDE RING.

Do we not all remember the dark night,
When dismal dreams had caused us nervous start,
That we cried, "Father, father," in our fright
And were clasped safe against the parent heart?

So, when the night of error seems to press,
And sense-dreams bring the unreal terrors nigh,
Turn we to Him in our alarmed distress,
With "Father, Father," and He hears our cry.

From our Exchanges.

The first fact with which we are confronted is an increasing discredit upon the value of all theological definition, either as a condition of entrance into the Church or as a guarantee for developing character. This opinion is supported by certain practical observations upon life. The average man is influenced by results, and cares little for the process by which good results are obtained. As he views the Christian Church and her formal adherents, he does not behold in what is called orthodox Christianity, or in the people who assent to correct theological definition, any monopoly of the fruits of Christian living. No one Church or body of Christians possesses a discernible monopoly of Christian character.

REV. THEODORE IRVING REESE.
The Churchman.

In no respect is the example of Jesus more significant than in his constant effort to naturalize religion among human interests. In nothing can the Christian worker of to-day receive more help from a study of the method of Jesus than in learning how to put the religious life before people in such a way that it shall be given a place in every-day affairs. The tendency to relegate religion to occasions is constant and strong. The effort to confine it within certain forms is a part of the continuous history of man. Jesus assumes that religion is of universal and constant importance, and is not to be crowded out of our common life into some corner where we have stored ecclesiastical furniture.

The Standard.

The farther we go, the more we actually come to understand of the might, mercy, and wisdom of the Lord. The Christian attains to a certain amount of sure knowledge, even amid the surrounding mystery. We know only in part, but so far as we have gone we do know, and if we persevere in the path that leads to God we shall find both intellection and faith steadily increasing, until we arrive at that transporting state where we know as we are known.

REV. C. A. S. DWIGHT.
The New York Observer.

It is well, surely, to feel and cultivate discontent with present conditions and attainments, when one has a clear view of better things and has the conviction that improvement can be effected by patient and, if necessary, prolonged endeavor. And this should be attempted in the spirit of generous appreciation of what one has already accomplished that is praiseworthy, and without the feeling of envy toward those who have wrought greater things in the same directions.—*The Universalist Leader.*

The love of God that shines out of the pages of the divine Word assures us that we have always another chance. We may rise from our defeat and try again, and out of the wrecks of our past we may build a Palace Beautiful, through the help of him who came into this world to save us from our sins.

REV. J. R. MILLER.
The Golden Rule.

Pondering upon the signs and providences of God and upon the experiences of soul that come to men, is of spiritual advantage to every one, fitting him for service and opening the way to higher and richer knowledge. Pondering prepares for discernment, and for ripening of the mind and heart to the work of God.—*The Watchman.*

The times certainly call for a persistent ministry of prophetic denunciation of the wicked and inspiration of the good.—*The Homiletic Review.*

THE CHRISTIAN SCIENCE TEXT-BOOK.—"Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing all the By-laws to January 1, 1906, of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to The Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of The Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to The Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number, or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By Hon. WILLIAM G. EWING.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month.

The date of expiration may be found on the address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

The report of the Isthmian Canal Commission, recording its decision in favor of an eighty-five foot level lock canal, was submitted to Secretary Taft last week. It is accompanied by the report of the Board of Advisory Engineers, the majority of whom declare for a sea-level canal. Secretary Taft will transmit the papers to the President with his recommendations. It appears that Rear Admiral Endicott, the naval member of the Commission, was the only one who differed with the others and favored a sea-level canal, as recommended by the majority of the Board of Consulting Engineers.

Members of the Rivers and Harbors Committee of the House of Representatives have agreed to report favorably on the Burton resolution, providing for a report to Congress by the United States member on the International Commission, on the necessary means of preventing a further reduction of the water supply at Niagara Falls. The resolution also directs the American members to co-operate with the Canadian members in preserving the Niagara Falls in their natural condition.

The House of Representatives, South Carolina, has passed the Morgan dispensary bill by a vote of sixty-three to forty-seven. This is considered significant legislation. It is believed that the Senate also will pass the measure. The bill abolishes the State dispensary and provides for State prohibition, with local option to counties to establish their own dispensaries under county management.

Foreign.

Frederick VIII. was proclaimed King of Denmark at noon on the 30th ult. in Amalienborg Square in front of the palace at Copenhagen. The Premier, M. Christensen, appeared on the balcony and announced to the fifty thousand persons assembled below, the death of King Christian IX. and the accession of his eldest son. The new ruler of Denmark joined the Premier on the balcony and in a short speech declared that he would rule in accordance with the example set him by his father and trusted that the same accord between the King and the nation would continue as heretofore. His majesty concluded with calling for cheers for the fatherland.

The *Daily Telegraph*, London, says: "Twenty hitherto unexhibited masterpieces in oil by Turner will be exposed to public view in the National Gallery next (this) week. They are the so-called 'unfinished' pictures among the collection which Turner left to the nation, and which have been condemned ever since to obscurity. Owing to the energy of Sir Charles Holroyd (the keeper of the National Gallery of British Art), they will now see the light. It will be found that instead of being unfinished pictures they were Turner's last works in the gospel of atmospheric beauty. They are astonishingly well preserved, and are valued at $1,250,000."

Twenty-five members of the diplomatic corps last week delivered to the Venezuelan Government a formal joint note stating that they cannot accept Venezuela's position that M. Taigny, the former French Charge d'Affaires there, had been deprived of his official character, and that he ranked only as a French citizen at the time of his forced departure from the country. The diplomats have communicated the text of this note to their respective Governments.

The Russian ministerial proposition for the solution of the agrarian question involves the appropriation of $150,000,000 for the compensation of private owners of lands expropriated for distribution to the peasants. The operation will be accomplished through the peasants' bank, which will purchase lands and sell them to the peasantry on the instalment system.

The Moroccan conference has adopted, without modification, its committee's draft of the international taxation project. The Moorish delegates raised a number of objections and will refer the proposals to the Sultan at Fez. The question of reforming the customs duties was not considered.

Italy has proposed to France the establishment of a permanent court of arbitration for the settlement of all questions between Venezuela and Europe. It is stated that the Powers are in favor of the project and are ready to act jointly with the United States in its realization.

The State attorney of Vicenza has entered an action in connection with the clandestine sale of Giorgione's painting, "Christ Bearing the Cross," said to be in the Fenway Museum, Boston. The Boston painting is declared, however, to be only a copy.

It is announced that Admiral Togo will visit America in April with two armored cruisers.

Industrial and Commercial.

For the purpose of "lumbering" the Menominee and Brule Rivers and their tributaries, the Menominee River Improvement Company, Michigan, has been incorporated by Marquette and Menominee lumbermen. Its business will be the recovery of "deadhead" or sunken logs from the beds of the streams. For a distance of nearly two hundred miles the Manistee River is paved with sunken pine, elm, cherry, oak, maple, and other kinds of timber. Some of the logs have been under water for forty years. The Manistee Company took over three hundred thousand feet of mixed timber from one deep hole at a bend in the stream last summer. The area worked over was less than four hundred feet in extent. Nearly every timber recovered was in perfect condition except for a few inches at the ends, where "checking" is observed.

The operations of the Menominee River Company will cover the Paint, Michigamme, Sturgeon, Fence, Deer, Brule, Nett, and Little Cedar Rivers, all tributary to the larger stream, which with the Brule forms a considerable portion of the boundary line between Northern Michigan and Northern Wisconsin. For logs recovered the owners of the timber will be charged at a specified rate per one thousand feet. Where logs are found bearing the marks of lumber companies not now engaged in operations on the river, the Improvement Company will come into possession of them after a certain length of time unless the owners pay the lifting charges. The profits from this source will amount to a large item, as many millions of feet of timber are in the rivers, bearing the stamp of concerns formerly operating on the streams, while the companies themselves have long ceased to do business.

There is at Muskegon a company whose operations are conducted on similar lines. At one time there were over one hundred sawmills located on Muskegon Lake at Muskegon. Slab wood then was of no commercial value and was loaded into carts and dumped into the lake, millions of cords being disposed of in this way, until the entire lake bottom was covered with slabs to a depth of twenty-five to thirty feet in places. These slabs are now being recovered from the bottom of the lake and used in the manufacture of laths.

Bradstreet's says: "Nineteen hundred and five was a record-breaker in the building trades, as in nearly all other forms of industrial endeavor. It is worth recalling that while a year or less ago a record amount of construction was predicted, the aggregate of the estimates then made proved to be under rather than over the mark. In April, 1905, Bradstreet's gave reports from 155 cities and towns in the United States, all or nearly all of them going to show that immense operations were contemplated, and that an aggregate of probably $900,000,000 would be expended in this country in that year. Now that the work has been done and something like a grand total is obtainable, it is found that the amount actually expended or provided for in that year in 105 cities from which reports have so far been received, was actually $711,123,741, as against $505,703,921 expended in the year 1904. There is here indicated a gain of 40.6 per cent in 1905 over 1904. The largest gains of all are shown in the Middle States group, largely because of the enormous aggregate and heavy gains shown in New York City, which seems to have furnished a little over one-third of the entire country's building output, and to have expended 64.3 per cent more in 1905 than in 1904. Here, as in the rest of the country, the actual figures of building seem to have far surpassed the estimates or expectations of last April. The smallest gain shown, that in the Far West, was 15.2 per cent; two groups—New England and the Northwest—show gains of 27.4 and 28.7 per cent; one—the South—shows a gain of 31 per cent, and the Western and Middle groups showed gains of 42.9 and 47.9 per cent respectively."

Trade of the United States with Russia, including the Asiatic part, during the fiscal year 1905, amounted to $28,800,000, of which $11,800,000 represents the imports into the United States and $17,000,000 the exports of the United States to Russia. These figures are somewhat lower than the figures for the preceding year, when the total trade figures were in excess of $31,300,000.

The United Fruit Company the past year, through its southern department at New Orleans, handled about ten million stems, or bunches, of bananas, besides eighty million cocoanuts. Three independent fruit lines, the Oteri, Cefalu, and Vaccaro concerns, brought in between them four million bunches, about equally divided.

In the last twenty years imports of cocoa to the United States have increased from a little over nine million pounds to ninety-three million pounds. The British West Indies furnish more cocoa to America that any other source. Brazil comes second in this respect, Dutch Guiana third, and Ecuador fourth.

In the immensely fertile district between San Pedro and Gomez Palacio, Mexico, and throughout that entire region, thousands of acres of cotton in full boll are said to be rotting and wasting in the field, because of the great scarcity of labor.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

Reading Room Work in New York City.

[The following excellent report of last year's work of the Reading Room Association in New York, which was sent to our Leader, will prove interesting reading. It shows an encouraging growth and activity as well as a unity of purpose and action which is commendable.—EDITOR.]

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—The annual meeting of this Association was held January 16, 1906, at Third Church of Christ, Scientist, New York City.

The purpose for which this Association was formed a little over two years ago having been realized, the Central Reading Rooms on 23rd Street and 125th Street being placed upon a safe and prosperous basis and their success and usefulness established, the members felt that the moment had come when they could take a further step in advance; namely, to conform with the provisions of the revised By-law of the Church Manual in making this work the occasion for a demonstration of the unity of the churches, whereas before it had been rather the expression of unity of individual Christian Scientists co-operating as members of different churches in this Field. Resolutions were therefore unanimously adopted dissolving the Association and transferring its property to Second, Third, and Fourth Churches of Christ, Scientist, Borough of Manhattan, New York City, which will henceforth carry on the work upon its present lines under their direct control through a Board of nine Directors elected annually by the churches themselves. The two Reading Rooms already established at 23 West 23rd Street and 123 West 125th Street will be continued in their present locations.

Before the close of the meeting a collection was taken for the Building Fund of The Mother Church, which amounted to over six hundred dollars and which will be forwarded to the Treasurer in a few days.

As a summary of the principal points of the reports heard at the meeting, we would mention that the sales of literature at the 23rd Street Room for 1905 were $8,636.21, and at the Harlem Room (for nine months) $1,516.65, making the total sales $10,152.86 against $6,671.32 last year. There were 1,203 copies of "Science and Health with Key to the Scriptures" sold during the year, and 198 copies of "Miscellaneous Writings," against 788 and 126 copies respectively the year before. Science and Health was loaned and renewed 704 times during the year, against 300 times in 1904; "Miscellaneous Writings was loaned and renewed 198 times. The number of visitors during 1905 at the 23rd Street Room was 16,756 and at the Harlem Room (in nine months) 5,687, making a total of 22,443 against 12,706 last year, which shows an increase of 9,737. Contributions received from the members and churches during the year amounted to $7,993.26, and the expenses to $7,488.34.

The Treasurer's report shows a balance in the banks of $1,910.84 against $649.38 last year, with a stock of literature on hand of $1,074.11. Besides this the investment in furniture and improvements amounts to over $2,000. A large amount of free literature has been distributed at the Rooms, and in addition to this a Distribution Committee has placed Science and Health in all the public libraries of this city where it was not already, and has seen that the Christian Science literature in these places has been properly classified. They have also placed Science and Health, "Miscellaneous Writings," and other Christian Science literature in many public institutions, homes, reformatories, etc. Several cases of healing from the reading of the literature were reported at the meeting.

We hope that this report will give you joy. The consciousness of your encouragement of this work at its start has ever been with us, lighting our path, and we desire to express to you our loving gratitude for the privilege of making these Reading Rooms a factor for good in this city. Loyally yours in truth,

Central Christian Science Reading Room Association.
ELLA BERRY RIDEING, *President.*
ROBERT E. CAREY, *Secretary.*

New York, January 25, 1906.

"By a prophet."

BLANCHE H. HOGUE.

And by a prophet the Lord brought Israel out of Egypt, and by a prophet was he preserved.—*Hosea*, 12: 13.

A CAREFUL reading of the books of the Pentateuch, wherein the history of the children of Israel in their bondage and in their wanderings is chronicled, brings to thought the utter helplessness which would have been the heritage of these unfortunate people had not Moses been saved and reared in their midst. Born into conditions which were waiting to destroy him, rescued through remarkable circumstances and cherished under royal protection, he became to his own suffering people a leader whose God-sustained purpose opened the way for a full deliverance from the literal slavery of their lot. Moses withstood Pharaoh, urged his people on in the way of the guiding pillar of fire and cloud, brought them through the Red Sea, helped them to find bread and water in the wilderness, formulated for them their laws and their commandments, and defined for them their practices and customs. To God alone they must look, upon God alone they must depend, and nothing less than the power of God wrought out their salvation from day to day; but the law of God must be declared in ways appreciable to their limited human capacity, ere it could become available for the sore need of the nation. Hence the necessity for Moses, and for obedience to his instruction. What the people themselves could not do, in throwing off the yoke of their oppressor, and in making their way to the promised land, one enlightened prophet could do, for and with them. God had been the same God, eternal and unchanging, during all the four hundred and thirty years of the sojourn in Egypt, but the divine law which makes possible victory over evil conditions, was not recognized as operating in behalf of this downtrodden people until a Moses stood forth to define that law and to establish its activity in human affairs.

Copyright, 1906, by Mary Baker G. Eddy.

Digitized by Google

Moses demanded of the people obedience, right living, and a remembrance of God in their daily doings. In return they were guided, cherished, sustained, and supplied with every right and good thing, according to the measure of their obedience. When Moses' first effort toward their deliverance seemed to tighten the grasp of Pharaoh, the people murmured against their leader; when they were hemmed in against the Red Sea, they declared, "It had been better for us to serve the Egyptians, than that we should die in the wilderness;" and when hunger and thirst came upon them, their impatience exclaimed again, "Ye have brought us forth into this wilderness, to kill this whole assembly with hunger." The golden calf was devised at the time when Moses was seeking higher inspiration for them, and Miriam brought upon herself a sad penalty by questioning Moses' authority and asking, "Hath the Lord indeed spoken only by Moses? hath he not spoken also by us?" Truly, the sorry plight of this rebellious people would have remained unrelieved had it not been that they were led and preserved "by a prophet."

The promised land attained, again and again a prophet stood among the people, urging upon them the law of God. Every higher good has come to its age through the exalted thought of some one spiritual hero, who stood forth as God's messenger because his mind and heart were receptive to the message. The prophets and disciples were just men and women, who hungered for better things and laid hold upon them. Paul said to the people about him, "We also are men of like passions with you, and preach unto you that ye should turn from these vanities unto the living God." Men whose advanced spiritual understanding had led them to reject the ways and means of human nature, were in a position to guide others in the same pathway. Joshua and David and Solomon led and judged and sheltered their people, and even in times near at hand the voice of one man has been enough to guide and preserve a church or a nation. At many points along the line of human development, in the dark hours and during the great crises, some one individual has grasped and uttered the divine message, and one individual is sufficient to supply the need. One Moses was enough for his people, one Elijah could stand for the living God, one Luther could broaden the borders of ecclesiasticism. Loving minds and hearts could prepare the way, and support their leader when he arose among them, but the leader stood alone. More than one leader was impossible; for any difference of direction would introduce confusion, and similarity of understanding and purpose would be an unnecessary multiplication. History shows us that one prophet alone has been the mouthpiece of God to his generation, and that one clear-eyed reformer or leader is equal to the deliverance of an individual, a community, or a nation.

Prophets of old prepared the way for Christ's coming, and disciples and saints and martyrs have since walked in that highway of salvation, testifying thereto. Cannot this century also have its prophet, a messenger whose whole testimony leads listening thought to a clearer, fuller comprehension of the eternal Christ? Paul begins his letter to the Hebrews by saying, "God, who at sundry times and in divers manners spake in time past unto the fathers by the prophets, hath in these last days spoken unto us by his Son;" and may not the mission of this Son be confirmed by truthful testimony concerning its purpose and nature and fruitage, through a prophet who shall arise amongst the later peoples? Mrs. Eddy, who has written the text-book, "Science and Health with Key to the Scriptures," does not claim to add to the life or work of the Master. That stands complete, supreme, all-conquering. But this God-sustained woman has a message about that Master for the ears which have not heard, the eyes which have not seen, and the hearts which have not comprehended the full import of his wonderful way of salvation. To the world which has stumbled on these many centuries with its undestroyed sense of sin, sickness, and death, she stand a prophet,—one who defines so clearly the way in which Truth destroys it all, that those who will may begin to conquer as did Christ Jesus. She knows full well that the Christian spirit which has shone through the pulpit, governed the affairs of state, and purified families and nations, has prepared the way for this full understanding of Christianity, and it supports her in its demonstration. Those who have written and preached and labored for the coming of the kingdom of heaven, should accord her glad and reverent comradeship, and this they do when they understand her relationship to their own Christian work. Thousands who have grasped enough of her message to find usefulness and strength, are rising up to call her blessed, and are turning their thoughts away from her personal life to the contemplation of the Christ-mind to which she so steadfastly points. Christian Scientists worship God, and know that they have but one Saviour; but to this quickened Christianity they add much gratitude that again to-day "by a prophet the Lord brought Israel out of Egypt, and by a prophet was he preserved." That prophet who can discern the way of deliverance, surely knows best what will preserve, in all their journeyings, those who are seeking deliverance; and the pure in heart, seeing the promised land, cannot be tempted to murmur in the wilderness, nor to doubt the inspired leadership of that prophet who has the discernment, the wisdom, and the patience which can safely lead all Israel.

The True Sense of Love.

EMMA HARRIS JAMISON.

THE question, Who and what is God? had always puzzled me, and when I began the study of Christian Science and found the answer given in our text-book: "God is divine Principle, supreme incorporeal Being, Mind, Spirit, Soul, Life, Truth, Love" (Science and Health, p. 465), I was at first unable to comprehend it, and I felt as if I had nothing tangible to grasp. The Scripture says, "There shall no man see me, and live," but we find through the understanding which Science gives that we can become acquainted with God to such an extent as to be always conscious of His presence and assured of His help.

I have seen little children who were beginning to reason out things for themselves, puzzled and perplexed over the false human concept of God, as responsible for human conditions,—sin and sickness,—but in studying this subject in the light of Christian Science they apprehend the truth readily and are healed by it. Many thoughts have unfolded to me most wonderfully, as I have learned that what we know of God is good, and good only.

In Christian Science we come to understand God through the divine attributes, as we see them reflected. For instance, we perceive that gentleness is a reflection of a divine quality, and the same is true of patience, of justice, mercy, and goodness. We come to understand Truth as it is reflected by a truthful man, whose word we can rely upon at any time; and as the true sense of Love unfolds to us in Science, we seek to express that which touches our own heart, thus passing it on to others, and so we at last learn to know God as unchanging divine Principle.

This understanding does away with the limited sense of a personal God, and gives us a God of infinite and holy attributes, a God who is Love; and this God we come to love with all our hearts and with all our strength, and as we learn to love the divine attributes we express or reflect them.

Love for God and love for man is our motto in Christian Science, and we cannot afford to lose sight of it. It is Love which bids us go forth on the errands of mercy, to whisper to the sad and desolate, "You are loved," or to send the flowers that bear sweet messages of true sympathy and helpfulness.

I shall never forget the first and only time I ever saw Mrs. Eddy. It was at Concord, in front of the church

Digitized by Google

there, a few years ago. Three times her carriage passed by; the first time she was wondrously quiet,—there was even a look of sadness on her face; the second time her face lighted up with a smile, as here and there she recognized one in the throng of her followers who were waiting to see her; the third time she leaned forward in the carriage and looked out of the window, and bowed with smiles, but when she got to where I was her face was turned in the opposite direction, and I thought I should not see her again, when, as she was almost by, she turned and bowed, with a sweet and loving light upon her face that seemed to say, "I love you all." This thought was with me for many days afterwards, and whenever I think of her now, it is always in connection with the thought of infinite Love as she reflected it that day. Our Leader's heart is so full of love that it expresses itself in her face, and when I hear any criticism of her it makes me smile to myself, for I think, If they could only see that loving face and feel the inspiration of her presence, they too would love her.

There are many who first learn to know divine Love through those whom they daily see, and this should be a constant reminder to us of our opportunities to reflect God, good. If we know God through the expression of the divine attributes, should we not also love the one who expresses Love? The apostle John says, "Every one that loveth him that begat loveth him also that is begotten of him." We see and love the good as we see it manifested through God's children, through the beauties of nature, and this love, when based upon the understanding of divine Principle, enables us to obey the command, "Bear ye one another's burdens, and so fulfil the law of Christ."

Jesus appreciated even the human sense of love, and he often visited the home of Lazarus, where the two sisters welcomed him and where he found true appreciation and sympathy. When Mary Magdalene washed his feet with her tears, he was touched by her love and gratitude. He did not shun her or prevent her from bestowing her precious gift of ointment, and methinks there must have been wondrous compassion in his eyes as he accepted what she so lovingly gave. Again, what great affection he must have had for John, the beloved disciple, who leaned upon his breast. As Scientists, we go in and out among those who are in the world, striving to do them good, and we must of necessity know and attain the true sense of love, because our acts may be misinterpreted, our sympathy sneered at and even ridiculed, and yet we cannot allow such things to move us; we must simply love and work on, while we hold more firmly to the hand of divine Love and remember that "[Love is] not easily provoked, nor does she reckon up her wrongs" (Twentieth Century Translation).

There is a mighty difference between the human sense of love and the divine. The former causes us more pain than pleasure, on account of its limitation in all directions; but when we learn to know what spiritual love is, then it enriches, ennobles, and uplifts our natures to such an extent that we are conscious of a fulness we never had before. Life seems to have a grander and a deeper meaning; we are conscious of having gained something that can never be taken away, and in proportion to our consciousness of this love do we brighten the lives we touch.

Divine Love can never be anything less than pure and holy, no matter what the mortal belief may be. It is for us to respond more fully to the divine influence, that we may live in the fullest sense. If one has a plant that is not catching the sun's rays, he need not expect the sun to change its course in order to shine upon the plant, but he can change the position of the plant so that it can drink in the sunshine and blossom out in beauty and strength. Divine Love is to poor suffering humanity what the sunshine is to the earth, and all must come to see this. We who name the name of Christ in Christian Science are called upon to show to others the power of Love, and Mrs. Eddy has set us the example by the life she lives and the love she radiates.

Selected Articles.

The True Man.

The perfect man to whom Mrs. Eddy refers in her teachings is not the material but the spiritual man. Evil, which appears to be associated with man, is no more a part of his real self than the besmirching clay is a part of the diamond. St. Paul seems to have understood this point when he said, "And the fire shall try every man's work of what sort it is," but "he himself shall be saved." He understood that it was not the man which was to be destroyed, but the evil —the error which seems to tarnish and hide the real man. Mortals instinctively understand this, hence we often hear it said of a bad person, "He is not himself, he is not a man."

It was the mission of Jesus to reveal in his own life the ideal man, and to demonstrate that the real man may assert himself, even to the overcoming of every material law. To prove this he lived a life of daily triumph, and finally ascended to the Father. It is the mission of Christian Science to show how he did this, and how we can overcome all evil and reach a life of perfection.

The Adam man was and is the false human concept of manhood which leads into sin and death. It is that sense of manhood which must be "put off" with its deeds, while the new man, "which is renewed in knowledge after the image of him that created him," is "put on."

Jesus came, presenting the ideal manhood, in order that mortals might follow his example and thereby put off the "old man" and assert their true individuality. The Psalmist must have had a glimpse of this ideal when he said, "I shall be satisfied, when I awake, with thy likeness." He seemed to regard the unsatisfactory mortal existence as a dormant state from which he was to be awakened into the likeness of God. It is not difficult to understand that man becomes Godlike—attains the likeness of God—only in proportion as he deports himself in perfect accord with the divine precepts.

"By destroying sin" we mean the overcoming of all that is unlike God. We agree that all sin is the work of the devil, but we must insist upon defining the devil as Jesus did when he declared, "There is no truth in him. When he speaketh a lie, he speaketh of his own: for he is a liar, and the father of it." The devil is a liar, and the vocation of a liar is to tell lies, to deceive. The devil is, therefore, properly named "deceiver," and his offspring, "his own," is properly named a lie, a falsity. Sin, then, is a false sense which is entertained and indulged in by mortals and which will disappear from their lives only as they cease to believe and indulge in its fancied pleasure and profit.

We agree with our critic that men are more or less sinful and that they must be regenerated and purified until all the dross and evil disappears and only the true man —the image and likeness of God—remains. The gentleman asks, "Where then is our hope?" then he answers, "In believing God's testimony concerning His Son. 'As many as received him, to them gave he power to become the sons of God.'" This answer is in strict accord with the teaching of Christian Science. Jesus is our great example. He was the one who lived the truth in all its perfection, whose life was one continuous line of victories with never a defeat, and he thus manifested the ideal manhood to the world. Those who accept this ideal manhood and strive to live for its realization will eventually attain the same degree of perfection, and thus be saved from sin, sickness, and death.

Satan appears to have alienated mankind from God; that is, deception appears to have alienated men from Truth, and it is the mission of Christ to lead mortals out of error into the understanding and demonstration of Truth. Healing the sick is not the chief work of Christian Science, and it is not so claimed by Mrs. Eddy. Healing the sick is always secondary to the moral regeneration,—is

Digitized by Google

consequent thereto. As one is spiritually and morally improved the body responds and physical disharmony disappears. There may be temporary relief, but there is no possibility of bodily *healing* in Christian Science without reformation.

ALFRED FARLOW.

Rockland (Me.) *Gazette.*

In *The Interior* which was published October 26, there is an editorial comment on my lecture, which includes a conclusion on your part that I would like to have revised, and which I trust you will modify after reading this letter.

All that has been taught at any time concerning the Principle, rule, and practice of Christian Science is still being taught, without elimination, change, or addition. Every Christian Scientist, without reserve, stands unequivocally in strict adherence to the teaching of Mrs. Eddy on this subject, and the work of the lecturer is in corroboration of that teaching.

All lovers of the Bible have deplored the propensity of the infidel to discredit the value of the sacred Scriptures by isolating texts from the context, and by forcibly detaching them from their natural moorings in the meaning of the Bible as a whole. Many an author has complained because of such mutilation of his ideas, and for similar reasons we Christian Scientists ask for an application of the Golden Rule and for a disposition to interpret Science and Health from the standpoint of its wholeness and the real meaning of its author.

Mrs. Eddy knows that the statement, "There is no matter," is a negation and not a "first principle." She does not assert that Christian Science is founded on such a statement or discovery. The only Principle that she acknowledges is God, and the entire structure of Christian Science rests on the allness of God as Spirit, as omniscience, omnipresence, and omnipotence.

I did not introduce any new statement concerning God, or the nature of sin. The brief definition of Deity given by me is in exact accord with Mrs. Eddy's, and there never has been an essential change even in the wording of that definition. She always has asserted that God is individual, and in her book declares the infinite personality of God.

In denying that God is a person or a personal God, as she does in some instances, she seeks to divest the human mind of all finitized estimates of Deity, which, if possible, would invest God with attributes and characteristics akin to those manifested by a human being.

Within a few years the page numbers in Science and Health have been changed, but on page 330 of recent editions may be found statements concerning God and the nature of sin with which my own statement quoted by you is in strict accord.

There has been no change of front, nor will there be. There is no new Christian Science; and to the extent that any attention is given to my utterances, I desire that it may be understood that I hold with undeviating insistency to the unchanged teaching of our Leader.

E. A. KIMBALL.

The Interior.

Christian Science teaches that nothing less than a complete spiritualization of thought, motive, and desire will ever get us into heaven, and it does not picture physical luxury or sensuous ease as the goal of Christian striving. It positively does not compound a moral offence. It does not teach that there is no sin in human experience, thereby, as the critic charges, producing "hypocrisy, untruth, and self-love." On the other hand, Christian Science makes it plain that so long as dishonesty or deceit are practised, they bring penalties, and Christian Scientists are taught to forsake sin, for only thereby can we meet Jesus' requirement, "Be ye therefore perfect, even as your Father which is in heaven is perfect."

The Lectures.

Glasgow, Scotland.

The long vista of cabs and carriages in West Regent Street last night [November 27] was suggestive of some fashionable social event in the Masonic Halls rather than a week-night religious meeting. Attracted by the glowing report of Christian Science and its efficacious power, there was within a well-dressed audience, comprising young and old of both sexes, that filled the hall to the doors, and those arriving at eight o'clock had either to retrace their steps homeward or content themselves with standing in the draughty passages, where they could hear the voice of the lecturer but could see nothing.

Christian Science is an American "discovery," and since founded by Mrs. Eddy, a little over a quarter of a century ago, it has developed phenomenally across the water. Mrs. Eddy is Leader of the movement, and her position is a unique one.

The teachings of Christian Science were fully dealt with by Mr. Bicknell Young, of Chicago. One might have thought it was an orthodox Presbyterian that was lecturing, as he dealt with the Gospel story, with prayer, and the love of God, albeit he was in frock-coat instead of clerical garb. Christian Scientists accept, he said, the teachings of Christ without reservation; they never ascribe evil to God, or make Him in any way responsible for it, but show that evil originates in a belief of material existence entirely apart from God and unsupported by science or truth.

Salvation in Christian Science includes exemption from sickness, also from sorrow, worry, want, and woe, as well as from sin. They have, he said, no quarrel with the doctors; they themselves had believed in *materia medica* until they found a more efficacious way of healing. All diseases, he said, have been healed in Christian Science, proving that there are no incurable diseases.

A smile passed over the quiet and attentive audience as he remarked, when speaking of *materia medica*, that Christian Science had at least never invented any new disease.

He concluded with a reference to Mrs. Eddy, the Founder, who, he said, revealed the Science by which men might begin to realize their God-given freedom from sickness and sin, and enter upon their heritage of dominion over evil.

Mr. Young spoke for an hour and a half. It may be mentioned that the chair was occupied by Vice-Admiral Dunlop, R.N.—*The Glasgow Herald.*

Livermore Falls, Me.

A large and attentive audience gathered at the Baptist Church, Friday evening, December 8, to listen to a lecture on Christian Science, by Judge Septimus J. Hanna of Colorado Springs. The speaker was introduced by Rev. H. M. Ives, pastor of the Baptist Church, who spoke in part as follows:—

Many years ago the question was asked of the Master, "What is truth?" but it was asked by one who seemed to have little regard for the truth, and no disposition to learn. To-day multitudes are asking that same question with an honest, eager desire to know. At present we are learners. There is still something for all of us to learn, and honesty compels us to accept truth, from whatever source it comes. Prejudice never changes the truthfulness of truth, but it always cripples and dwarfs the mind that harbors it. Intolerance and opposition can never defeat the truth. Christian Science, so far as I understand it, is not destructive but constructive, and if it has anything to contribute to human faith in the Divine, if it has anything to offer for the benefit and blessing of humanity, let us accept it gladly. At any rate Christian Science has a right to be heard.

Indianapolis, Ind.

An interesting lecture on Christian Science was delivered last night [December 12], by Prof. Hermann S. Hering of Boston, at Caleb Mills Hall, under the auspices of Second Church of Christ, Scientist. Professor Hering was introduced by Mayor-elect Charles Bookwalter, who said in part:

I cannot deny to myself, nor can I refrain from acknowledging to others, this most evident proposition, that Christian Science has found for itself in the world's work a great and beneficent sphere of influence,—an influence which makes for the happiness and upbuilding of mankind. Christian Science has to me long ceased to be a thing to be laughed at and scoffed. It may not perform all the marvelous things its enthusiastic devotees claim for it, but who is there to-day who dares deny that because of Christian Science thousands of men and women have been rescued from lives of despondency, and that a message of hope has been brought to souls in despair. It preaches and teaches a doctrine which brightens lives. The very atmosphere of its temples is one that brings hope and inspiration. Far be it from me to cast any doubt; far be it from me, should I so feel, by my skepticism to bring a discordant note into the music sung by this new faith. If I cannot accept all things, I am proud to announce before this assemblage that I do accept many things; and as I stand here to-night performing this most pleasant duty, it seems to me that the very atmosphere which has always pervaded the house of worship where I have heard this doctrine taught is to-night encompassing us about. The voice of the Christian Scientist is a voice which is always pleading for humanity; the friendship of the Christian Scientist is for truth; the enmity of the Christian Scientist is for falsehood and error. It enfolds within its membership those who are seeking for the higher life, and for health and strength in this life.

The Indianapolis Star.

Cleveland, Ohio.

The Grays' Armory was crowded yesterday afternoon [January 14], when Bliss Knapp of Boston gave a lecture on Christian Science. Mr. Knapp was introduced by State Senator James W. Stewart, who said in part,—

No subject sinks deeper into the human heart, more powerfully shapes human action, or more importantly affects human destiny than the subject of religion. To listen to something new on this important subject, the most cultivated citizens of ancient Athens met on Mars Hill with Paul, the great apostle to the Gentiles and exponent of Christianity; and to listen to an exposition of the tenets of a modern society in that same Christian faith, we are here this afternoon. Every system of religious faith is most fairly and ably presented and defended by one of its distinguished adherents. We who are of a different religious belief, or we who are wavering in our religious beliefs, can afford to give the speaker a fair hearing and a just interpretation.—*Correspondence.*

Waterloo Ia.

The lecture by Hon. Clarence A. Buskirk, delivered at the Opera House Friday evening [January 5], awakened deep interest. The speaker was presented by Rev. Frank Loveland, pastor of the First Methodist Church, of this city, who said in part,—

Whoever reveals to me a new truth or exposes for me an old error is my brother. I care not whether he bear the name of Methodist, Episcopalian, or Christian Scientist. Because of this, I have no hesitancy in standing in this splendid presence to-night to introduce the speaker of the hour. I am mindful that some of the ecclesiastical censors of the city may declare solemnly and with much emotion that I am, by this, giving support and publicity to a very deadly heresy, and aid and comfort to a very dangerous heretic. The distinguished gentleman who is to address you to-night claims to have a contribution to make to the great cause of Christian truth and life. Let us welcome this. May this hour bring us nearer to the truth as it is in Jesus—nearer to the truth of God's moral purpose in the world, nearer to a personal experience of Christ's helpfulness to every struggling soul and every suffering body.—*Times-Tribune.*

Guthrie, Okla.

On December 12, Edward A. Kimball lectured on Christian Science at the City Auditorium. The lecturer was introduced by Rev. W. G. Lemmon, pastor of the Congregational Church, who said in part,—

Every man true to himself seeks for truth, and when he finds it, he receives it, no matter from what source it comes. Truth is truth, and it is unchangingly and eternally so. Facts are not dependent upon your thinking or mine, and they so remain, whatever our beliefs or prejudices. Truth does not fear honest investigation, and if Christianity is afraid of investigation, and the discovery of facts, something is wrong with Christianity. We stand ready at all times to accept any truth and to reject every error. Intelligent men and women who have come here to-night with unbiased minds, will all reasonable truths receive.

Correspondence.

Hudson, Mass.

Town Hall was well filled Sunday afternoon [December 17], on the occasion of the lecture given on "Christian Science, the Religion of the Bible," under the auspices of First Church of Christ, Scientist. The speaker was introduced by Hon. L. D. Apsley, who said in part,—

Having read more or less Christian Science literature, and having been associated with many dear and loved ones who are Christian Scientists and whom I know have been blessed through its religion, I make bold to say that any religion that has done what I know it has done among thoughtful people, has a right to expect a fair and earnest consideration, and therefore it gives me great pleasure to present to you the lecturer of the day, Judge Septimus J. Hanna of Colorado Springs.—*The Hudson News.*

Lectures at Other Places.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

"Our Debt to Christian Science."

In last week's issue we printed this article, a grand communication from Rev. F. N. Riale, of Chicago, which recently appeared in *The Westminster*. The Concord *Monitor* reprints this communication, together with its introductory comment by the editor of *The Westminster*. This editorial comment reads:

[From *The Westminster*, Philadelphia, Pa.]

"[Our circle widens. A Chicago friend comes 'away down East' to confess himself in debt. We let him tell his story. In a little personal word to us, he says he will have an interpretation of his facts by and by. We are glad. If anything in this old world needs interpretation it is the facts of Christian Science. The greatest fact is Mrs. Eddy's book. But no one can interpret that. It is non-interpretable. It is like Sau Abrah's garments, 'Just the same on one side as on the other'—just the same interpreted as not interpreted; nonsense either way.—Editor.]"

Mrs. Eddy's reply follows:

"When Mrs. Eddy read the editor's caption to the article by the Rev. F. N. Riale, she smiled and said, 'That editor hit the nail on nonsense, and broke his fingers, poor man! He could not interpret the nonsense, no sense, of evil, not knowing the all sense of good; if he could, it would heal his fingers.'"

It is a very common practice with some persons to assume that what they do not know is not worth knowing, and what they do not understand is not understandable, but it is generally conceded that these assumptions are not to the credit of the person indulging them. The fact that Mrs. Eddy's book, "Science and Health with Key to the Scriptures," is so well understood by Christian Scientists as to enable them by its teachings to heal themselves and others of so-called incurable diseases, to reform the sinful, bind up the broken-hearted, and generally to do the works which Jesus commanded his followers to do, is not only proof that this book is understandable, but also that it contains the rule and explains the Principle of our Master's gospel.

It does not require a very great stretch of the imagination to think of Galileo's opponents ridiculing his elucidation of the Copernican system, and it may be recalled that in later days some of the members of Congress who voted in favor of the help extended to Professor Morse by the United States Government in the construction of the first telegraph line, were defeated for re-election upon the ground that they had wasted public money in a useless and foolish experiment.

A great part of the history of mortals is the history of the efforts of prejudice and personal opinion to defeat the appearing of truth. Christian Science and its Founder have had to contend with these efforts, but it is worth noting that thinking people are paying less and less heed to them, because the good works of this healing gospel are becoming more widely known and understood, and Mrs. Eddy's position as an author and religious Leader is both recognized and appreciated. ARCHIBALD MCLELLAN.

"Nearer to thee."

As the years pass, material theories of God and man prove their inadequacy; the heart of humanity cries out after "the living and true God" and can be satisfied with nothing less. When in the depths of distress, Job said, "O that I knew where I might find him!" and many another in the long years since then has uttered the same cry. When mortals once understand that to draw near to God means to approach good, though the way may seem long it cannot be devious.

A great change has come to human thought in recent years. In spite of the seeming irreverence of much public discussion, a profound conviction of the divine goodness is displacing the belief so long held, that God is in some way responsible for evil. The trenchant statements of Science and Health which declare God to be eternal Principle and unchanging good, have challenged the hoary opinion held in theology and out of it, that good and evil are about equally balanced, with the chances on the side of evil. In contradistinction to this belief Christian Science teaches that God, good, is supreme, and that those who ally themselves with divine Principle, eternal right, are on the winning side, whatever be the opposing evidence,—whether it be sickness, sin, sorrow, or wrong of any kind.

To the outsider this may seem an easy optimism, but the student of Christian Science knows that the call to draw near to God demands the surrender of everything that is unlike God, and that as he approaches the infinite light and purity revealed by Science, sin becomes intolerable to him, even as it is to God. As the human consciousness is largely a state of self-ignorance, evil ofttimes remains hidden until the awakened spiritual sense cries out against it; then comes a struggle like that experienced by Paul when he said, "O wretched man that I am!" One thing is sure,—that evil cannot abide in the divine presence, nor can it remain with the one who acknowledges God as his Father and who seeks daily to prove his likeness to the all-good. We learn in Christian Science that in good alone is harmony, and great is the delusion which claims that either health or happiness can exist without goodness.

Of old the loving invitation was given, "O taste and see that the Lord is good," and this is the call of Truth to-day. As hungry and thirsty wanderers respond to this call, their healing proves to them that God is indeed good, and they go in the strength of this truth—this bread—many days. If they are faithful to divine Principle, faithful to the teachings of Christian Science, they find that the one who would follow Christ must deny self daily and take up the cross, even as the Master commanded. Each day brings a demand for more goodness, and obedience brings a sure reward. Divine Love will not allow us to stop short of perfection, which is required of us at any cost, and what to sense seems hard, may mean

Just the one note the great final harmony needs.

It is no less true in Christian Science than in art, that in order to realize the ideal we must "lay aside every weight," and press on, rejoicing to know that each experience, whether sad or glad, brings us nearer to the consciousness of the divine goodness and allness. ANNIE M. KNOTT.

"Go in to possess the land."

THERE are few errors of human sense which are more general in their distribution, or more persistent in their hold, than is that of mental laziness,—the inertia which is averse to hard work, and which seems to be indigenous to all countries and climates, and all conditions of men. The spiritual overcoming to which men are called demands conscientious courage, the alertness and bravery of light, and to delay endeavor because of a false sense of hesitation or incapacity is to forget that God is our wisdom, our guide, and our sure support in every right undertaking.

Digitized by Google

The unhappy experience of some well-meaning people is illustrated in the story of the children of Israel. When the heads of the tribes, who had been sent by Moses to spy out the Promised Land, returned, all but two of them took counsel of fear and lethargy and opposed the plan to go up and occupy it, and forty years of wandering and of death in the desert measured the greatness of their folly, the far-reaching significance of their mistake. Later, their children were counseled to drive out the Hittites, the Jebusites, and every other enemy, that the abundance of the land might be theirs; but what a long time it took them, even as it takes us, to learn that error must first be cast out, if we would come to the peaceful enjoyment of our divine inheritance, the undisputed possession of man's every faculty, prerogative, and power. Here, as everywhere, the words of our Leader are a clarion call to a life that is always assertive for Truth and resistant to error. "Material beliefs which war against spiritual Truth; . . . must be denied and cast out" (Science and Health, p. 130). The clear realization of this teaching of Christian Science is impelling many to-day to the assumption of an attitude of superiority to all evil which is quite new and wonderfully significant in results.

As the Israelites longed for the milk and honey which they were too timid and indifferent to go up and make their own, so do we long for the health, harmony, and happiness which pertain to the Canaan of redeemed human consciousness; but to extirpate the errors of belief, of impulse, of appetite, and of habit, which have hitherto so largely monopolized its territory and resources,—this is an undertaking from which the torpid are ever tempted to shrink. Nevertheless this practical test of sincerity and of faith, as well as of pluck, every man must meet. There must be unswerving loyalty to the Christ ideal, there must be no truce with evil in any secret place of consciousness, no reserve in our consecration to God, and no cessation in our struggle for the possession of the riches of our inheritance in Christ. Thus living, we have "right to the tree of life,"—to the freedom, health, and joy which fulfil the promise of an "hundredfold in this present life." If not thus living, what legitimate ground have we for claiming or expecting these blessings?

In disclosing the falsity, the inherent weakness of evil, together with the infinite resources of man as a child of God, Christian Science brings us supreme vantage in the struggle, and yet we may be tempted to shirk individual effort, and to look to the practitioner for relief much as we once looked to the physician. If so, it is ours to learn that though it is altogether wise for us to seek another's aid under given circumstances, it still remains true, as we are taught in Christian Science, that substantial and permanent gains in spiritual overcoming are not effected by proxy. Each is to find his freedom and win his inheritance through the Christ-truth alone, for "there is none other name under heaven given among men, whereby we must be saved." The more speedily, honestly, and unreservedly, therefore, each seeks to dispossess error of its every foothold, the more surely will he secure his full and satisfying allotment in the Land of Unlimited Good. JOHN B. WILLIS.

WILL our readers kindly bear in mind that the work at headquarters is necessarily divided into departments, also that by referring to the advertising pages of the *Journal* and *Sentinel* they will be able to ascertain the person or persons to whom their correspondence should be addressed in order to avoid delay.

Mr. Joseph Armstrong, 250 Huntington Avenue, Boston, Mass., publishes and sells Science and Health and Mrs. Eddy's other writings, and all orders for these books, including the Manual, should be sent to him, and all checks, drafts, and money orders for these works should be made payable to his order.

The Christian Science Publishing Society publishes and sells *The Christian Science Journal*, the *Christian Science Sentinel*, *The Christian Science Quarterly*, *Der Herold der Christian Science*, besides supplements, pamphlets, reprints, and other miscellaneous publications fully listed in our advertising pages. All correspondence in regard to these, except that relating to articles and testimonies for publication, should be addressed to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass. All remittances should be similarly addressed, and checks, drafts, etc., should be made payable to the Society. The editorial department has nothing to do with the business affairs of the Society, nor with practitioners' cards and church notices in the *Journal*, and no remittances should be made to the Editor. Testimonies and articles for publication should be addressed to the Editor, as should all correspondence relating to them.

Mr. William B. Johnson is the Clerk of The Mother Church, and all correspondence regarding church matters, except such as pertain to the Treasurer's office, should be addressed to him at 239 Huntington Avenue, Boston, Mass. Applications for membership in The Mother Church and all correspondence relating thereto should also be addressed to Mr. Johnson.

Mr. Stephen A. Chase, whose address is P. O. Box 56, Fall River, Mass., is Treasurer of The Mother Church, and all remittances for the church—per capita tax, contributions to the Building Fund, etc.—should be sent to him. Remit to him by check, postoffice order, or express money order. Do not send currency.

Correspondence regarding lectures should be addressed to the individual members of the Board of Lectureship at their home addresses, and correspondence regarding instruction in the Massachusetts Metaphysical College should be addressed to The Board of Education, 250 Huntington Avenue, Boston, Mass.

Letters to our Leader.

Boston, Mass., January 15, 1906.

Mrs. Mary Baker Eddy,
Pleasant View, Concord, N. H.

Beloved Leader and Teacher:—I was gratified to read the article that appears in *Sentinel* of January 7, from the *Methodist Review*, which speaks in such commendatory terms of your wise counsel to the church, and its salutary influence on the minds of its members. In connection with this recognition of your work in a Methodist periodical, you may be pleased to know that your hymn, "Shepherd, show me how to go," as published in the Hymnal, was sung in a Methodist church, in a suburb of Boston, by a quartet. It was very much liked. After the service members of the congregation expressed to the choir-master their appreciation of the music and asked if it could not be repeated. This request was complied with, and it was again given at the Christmas vespers Sunday, December 24, and was advertised in the *Transcript*. Further appreciation of it was made known to the choir-master, and the minister asked for a copy of the hymn, which was given him.

It will please you to know that your words, whether read, spoken, or sung, heal the sick, as is evidenced in the following quotation from a patient who was brought out of the depths fourteen years ago: "May I tell you how the new hymns help us? Mr. William Lyman Johnson has beautifully expressed the spiritual thought of the hymns in the music and they mean more to us than ever before. The first night we met to practise them our organist had been under a severe ailment. She came to the rehearsal, however, feeling rebellious that the old hymns had to be given up. After singing 'Shepherd,' and 'O'er waiting harp-strings,' she was *completely healed*. The hymns, while

Digitized by Google

new to us, are sung with more *prayerful* feeling and more of the spiritual is brought out than ever in the old ones."

Lovingly your student,
WILLIAM B. JOHNSON.

New York, January 11, 1906.

Beloved Leader and Teacher:—On Monday evening we held our annual church meeting, at which time I was elected First Reader for three years. I acted upon your most loving advice and accepted the office, and I shall earnestly watch and pray to fulfil the requirements which you enumerate in your letter. While, as I wrote you, I have felt that the Cause would be best subserved by our adhering to the rule of "rotation in office" and electing *entirely new* Readers, nevertheless I recognize and bow, as I always shall, to your higher wisdom; and I assume the duties and responsibilities of this important office with a glad heart and humble thought, only praying that I may become a fitting channel for instantaneous healing through your words in Science and Health and for the effacement of all our poor work of the past.

In the larger opportunity to study Science and Health and the Scriptures which I shall now have, I greatly rejoice, for it has been my one desire to *live* in these books, and I know that it will lead to fuller fruitage, and thus benefit in some measure our beloved Cause.

With renewed assurance of my never-ending love and loyalty, Gratefully your student,
JOHN C. LATHROP.

Palo Alto, Cal., January 15, 1906.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Our Dear Leader:—The members of First Church of Christ, Scientist, Palo Alto, wish to express their gratitude for what Christian Science has done for their little church across the continent. Services as an association had been held four years, with eleven members and an average attendance of fifteen. Our church was organized in September, 1904, and we have now twenty members and an average attendance of fifty-five. Our hall has been enlarged and we have more than doubled our seating capacity. Our current expenses were very much increased, but we have found that giving does not impoverish, for our needs have always been met. When the call came we joyfully sent our building fund of two hundred and eight dollars for The Mother Church extension, and decided to send thereafter the total collection of the first Sunday of each month. We have sent also our furnishing fund, a special collection taken on December tenth, making, with the Sunday School's donation, a total of seven hundred and fifteen dollars.

We are lovingly grateful for the lesson this experience has taught us, and for all that has come to us through your teaching and consecrated life.

Lovingly yours,
ELIZABETH STEVENSON, *Clerk.*
First Church of Christ Scientist, Palo Alto, Cal.

St. Louis, Mo., January 13, 1906.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Dear Leader:—Permit me to take advantage of this opportunity to renew my heartfelt thanks to you for the many immeasurable blessings brought into my life and home through you. During the last few months I have traveled a good deal, and I rejoice to be able to report to you that Christian Science is making a steadfast, healthy growth nearly everywhere that I have visited in the Field. If you could only know how your dear name is loved and honored throughout this land!

With my most fervent wishes for your welfare and happiness, I am Gratefully yours,
C. A. BUSKIRK.

Testimonies of Healing.

When Christian Science came to me, I had been taking medicine every day for twenty years, on account of constipation. I had been treated by doctors and specialists; had taken magnetic treatments and osteopathy; had tried change of climate; had an operation in a hospital, and when I came out was worse than before. I was so discouraged, after I had tried everything I ever heard of, and was no better but rather grew worse, that it seemed as though I must give up trying to get well, when a friend suggested that I try Christian Science. I had heard that Christian Scientists healed by prayer, and I thought this must be the way Jesus had healed. I felt that this was all there was left for me to try. I sent for the book, Science and Health, and commenced to read it out of curiosity, not thinking or knowing that I could be helped by the reading, but thinking I must still take my medicine and that I must also have treatment by a Scientist. I, however, dropped my medicine and read for three days; then a light began to shine in the darkness. I was healed of the trouble and have never had to take medicine since. I have studied Science and Health faithfully ever since, and other ailments have disappeared. My little daughter has also been healed and has learned to use this knowledge in her school work.

I am very grateful for this Christ-knowledge that heals the sick and is our help in time of trouble.

MRS. OLIVE REICHLE, Leadville, Col.

I feel that the time has come for me to join the ever-increasing "cloud of witnesses" who have been healed and otherwise benefited by Christian Science. My attention was first called to it by the very remarkable healing of a friend who was given up to die by the doctors. When I was told that these people claimed to heal diseases in the same way that Jesus did when on earth, I made every effort to learn all I could about it, with the result that I soon saw that there was no other religion for me. I felt that if Jesus healed the sick, the same power could do so now, for he said that the works which he did, we should do also, "and greater works than these." The first ailment which vanished for me by the application of Christian Science was what the doctors called muscular rheumatism. I had suffered with it for about eight years, and never expected to get rid of it, as I was under the impression that old people are almost sure to have rheumatic affections in some form. It constantly grew worse, and I was trying to bear it the best I could when I read in the *Sentinel* of the healing of similar cases, so I fully made up my mind that I, too, could and would be healed. I immediately used what little knowledge I had gained from Science and Health, that wonderful book, and in a short time every vestige of the disease disappeared. It left almost instantly; and for more than two years it did not return.

Then very unexpectedly the old trouble appeared again. I was grieved, as I had learned to love Christian Science and now feared that I could not overcome the severe pain; but I could see no other way than to try, for there are no practitioners here to go to for help. I therefore undertook the work again myself, and it required more than a week, but I thank God that I did not give up, for again Truth was victor, and joy and peace came to me in God's good time, which is *now*,—"now is the accepted time." The "great physician" will heal us now; we need not die to be freed from the dire effects of sin, and be saved by divine Love. One of the chief attractions of the Christian Science religion is that it meets our present wants. I have only our text-book, and some other literature, but it seems as if God knows all about me and helps me all the time. I have not only been able to overcome the rheumatism, which was stubborn because of my strong belief that with old people it is incurable, but many other ailments have

Digitized by Google

disappeared in my family, among which are colds, toothache, cholera morbus, boils, etc.

I feel very thankful that one was found pure enough to receive this message from God to us, so that we, as well as they who lived in Jesus' time, may touch the hem of Christ's garment and be healed of all our diseases, as well as receive the forgiveness of all our sins.

ALMIRA J. DICKINSON, Chamberlain, S. D.

Christian Science has been the light of my life for eight years. For thirty-three years I was a blacksmith, and nine years ago a heavy blow on the corner of the anvil broke off two slivers of steel, which went directly into my left eye. The sight was destroyed at once, and I discovered that I could see but very little with the other, not enough to distinguish one thing from another. I called my family physician, who was a skilful surgeon, and asked him to take the injured eye out, as I knew the nature of such wounds, but for some unknown reason he would not do so. I was led home, and remained in the house about two months under the physician's treatment. I suffered the greatest agony, was unconscious a part of the time, and morphine was the only relief. I had no rest day or night. My minister came to see me every day and prayed with me very earnestly. At the end of two months I dismissed my physician; I was bound to have the eye out. I went to see an oculist, who said the eye should have been taken out when first hurt, in order to save the other. I could see but very little and did not care what was done, so I told him to take it out, which he did. I paid the bill,—sixty dollars for three minutes' work,—which took all the money that my friends and I had. This was in June. I was brought home and put to bed, but was out in a few days, though the sight in my remaining eye was no better. I could walk about with a cane, but I had more or less suffering most of the time.

In November I tried to do some carpenter work, and that finished me up,—it was all dark with me. The doctor said to put me in a dark room to spend the winter. This condition lasted till April. In the latter part of March my eye was examined by the best physicians, and they gave it up; they said it could not be healed by medical science. My neighbor, who is a medical doctor, told me to try Christian Science; that he knew of some who had been greatly helped by it. Now I had quit praying. I was very thin in flesh, and very weak and nervous. I did not care to have any one talk to me but my wife. How to get a healer was the next thing, as my church friends did not believe in Christian Science healing, and what was I to do? I began to think about my Bible, and tried to recite the twelfth chapter of Romans, for I had learned it by heart in days gone by. This leads me to say that my healing came through earnest prayer to the true and living God. I asked God to send me a healer, and my prayer was answered. In a half hour a young man came to see me. He said he came to tell me that Christian Science would cure me. I asked him if he knew of any one who had been healed by it, and he said he had been healed of heart trouble. He said he would treat me and God would do the healing. I told him I had no way to pay for the good work, and he replied that if I would come to the meeting and tell of my healing, when I was well, that was all he wanted. I told him I would testify to the whole world, and I am fulfilling my promise now. I want to do something for the Cause that has done so much for me. In thirty-two days I could see to go alone. I will not try to give details here.

Three years ago I was led by a kind friend to believe that a perfect demonstration could be made and my eyesight restored, and so it is. I have read Science and Health through. I do all my own reading and writing now. I have had many beautiful demonstrations for myself and friends. I am a member of Second Church of Christ, Scientist, here, also a member of The Mother Church. Many thanks to our Leader. I love the Christ-truth that makes us free. I love our Leader, for she has shown us the way from earth to heaven.—JOHN L. CROCKER, St. Joseph, Mo.

No one has greater reason to be thankful for this great truth than I have. When I first sought Christian Science help I had for eight years suffered with a complication of troubles. A consultation of physicians was held, and they diagnosed my case as heart trouble, cancer of the stomach, and ulceration of the bowels, besides female trouble. Later, another doctor examined me and declared I had catarrh in the head, throat, lungs, and stomach. I had eight different physicians, but they did not agree as to what my trouble was. I tried almost everything I could hear of, but no material remedy every reached my case.

I was given up to die, and was lying under the influence of morphine, not able to raise my head off the pillow, when Christian Science found me fifteen years ago. In a half hour after I took the first treatment I rose from the bed, dressed myself, went to the kitchen and got supper for the family. Language can never express the joy and happiness I experienced at that moment. I had found the Christ-truth and it had made me free. I am to-day well and enjoying good health. Not only have I been wondrously healed, and my health preserved, but Christian Science, as given to the world by its Discoverer and Founder, Mrs. Eddy, has awakened in me a greater desire for things spiritual, has given me a better understanding of the Bible, has increased my confidence and trust in God, also my desire to walk in the footsteps of our Master, Christ Jesus. For all this I am thankful to our heavenly Father.

MRS. SARAH C. LEE, Dayton, O.

I wish to express my love and gratitude for the many blessings I have received through Christian Science. A year and a half ago I was suffering from rheumatism, with knee-joint and ankle so inflamed that I could not stand up, and was carried home on a chair. For three months I could not get out of bed alone. Then a Christian Scientist came to see me, and the words she spoke cannot be forgotten, for I was healed of the rheumatism by the first treatment. I got up when she did, and went to the door to see her off. I have gained strength ever since, and have been able to work since a year ago last December. With many other blessings that have come to me, my desire is to show my gratitude to God, and to Mrs. Eddy who has pointed out the way to Him. The Bible and "Science and Health with Key to the Scriptures" are my constant companions, and through their guidance I know only good will come to me.

LOUIS A. TOURNIER, Brant Lake, N. Y.

The old dream of suffering and despair from which Christian Science awakened me, six years ago, has so faded to its native nothingness that the remembrance is only a jumble of doctors from Colorado to New York; baths, electricity, and morphine. From childhood I had been held in bondage to *materia medica*, so that when I grew to womanhood there was nothing to look forward to but suffering, with a complication of troubles that was constantly being added to. The last addition was a spinal trouble which my physicians could not understand.

How the world changed for me when I finally consented to be treated in Christian Science. It was after I had received two treatments that I experienced a wonderful spiritual uplifting, and found that God was the physician I had long been seeking, that God is good, and that I had not suffered from any law of His. What joy and peace came to me when I realized the true meaning of the omnipotence, omnipresence, and omniscience of God as taught in Christian Science; how this precious truth has unfolded day by

Digitized by Google

day, here a little, and there a little, as I had been ready to receive it. I had been a member of an orthodox church from childhood, but it never satisfied my longing or answered my questions. I rejoice that through Christian Science the longing has been satisfied and the questions answered.

I am humbly grateful to our beloved Leader, Mrs. Eddy, through whom this living water has been given me.

DORA F. FULLER, Westfield, Mass.

The Christian Science Hymnal tells us of the truth "that meets the heart's great needs" (p. 41). These words express my sense of the beautiful and uplifting articles and testimonies found in the *Sentinel* and *Journal*, which do indeed meet the need of every advancing thought in our individual experience. Thus do those who are strong in the faith and in the understanding of Christian Science, help the weak to discern the light of Truth, which alone can dispel the darkness and suffering that false beliefs produce. I have many times experienced the sweet peace and calm trust in God, good, that the truth unfolds, in the overcoming of errors—mental, moral, and physical—through a right realization of Life and Love, as explained by Mrs. Eddy in her numerous writings, and for this I am most thankful.

BERTHA F. WEBSTER, Sault Ste. Marie, Mich.

From my earliest recollections I was a sufferer from rheumatism. When a child my shoulder-joints were so affected that I would lie awake night after night, crying with the pain. My parents did all they could for my relief at that time, but I was helped only temporarily, and with the next inclemency of the weather or any slight exposure to night air I would be as badly troubled as ever. This continued all through my girlhood days, the affliction at intervals being very severe, and finally affecting other joints besides my shoulders. I was treated by different physicians during these years, without receiving any permanent help. After I was married my husband took me to an eminent physician for treatment. He said that there was really no permanent help for me, that I had inherited the disease, and that I would never be free from it. I suffered with this trouble at times most severely until April, 1898, when I began the study of Christian Science. Soon after this I was subjected to a very severe attack of my old ailment, and with my slight understanding of Christian Science I resolved to turn to it for help, and did so, with the result that I was fully and completely healed. I slept soundly all night, and awoke in the morning entirely free from pain, and have never had a recurrence of the trouble to this day.

MRS. ELVIE P. GERRY, St. Louis, Mo.

In the spring of 1892 I was taken ill with stomach trouble, which rapidly grew worse and brought on what my physician called valvular heart trouble, so bad that I often had to sit up at night in a large chair to sleep. My attending physician seemed entirely unable to give me any relief, and when I asked him if he thought that he could cure me, he said, "No doctor can cure valvular heart trouble, and if you are carrying any insurance, be sure and keep it paid up, as it is only a question of a short time with you." I thanked the doctor for being frank with me, but in a few days I went to another physician, who gave me a thorough examination and when he was through said that all he could do would be to give temporary relief. I called at his office daily for a month, but gradually grew worse until the fall of 1893, when I quit taking medicine entirely. I had become so ill that I could eat nothing but graham cakes and a spoonful of oatmeal three times a day, and at times this would distress me so that I could scarcely stand it. During this period I was examined by four other physicians.

In October, 1894, my attention was called to Christian Science, and as this seemed to be the last chance for me I accepted it. I was directed to one of Mrs. Eddy's students, and was healed instantly, or in about thirty minutes, of the heart trouble, and was healed of the stomach trouble in three days. During this treatment one or two other stubborn physical troubles yielded to the treatment,—chronic constipation, rheumatism, and a trouble with my eyes for which I had to wear glasses. I have never worn glasses since that time, nor been troubled with the other diseases mentioned. In November, 1894, one month after being healed, I weighed one hundred and thirty pounds. I am now in perfect health and weigh one hundred and ninety-three pounds. From October, 1894, to the present time, eleven years, Christian Science has been our only physician.—IRA E. SHROYER, St. Joseph, Mo.

"Out of the depths have I cried unto thee, O Lord." This quotation certainly applies to me. Through Christian Science I have truly been delivered from a most unhappy life. I do not believe a human being could be more bound by fear than I was. I sought help for a chronic case of stomach trouble of ten years' standing, and after all material remedies had failed to give me any lasting relief, the Christ-truth healed me. I have been in Science six years. It has been a great source of help and comfort in time of seeming trials and trouble. I have had a great many demonstrations in my family of six children, which showed me the power of Truth over error. Christian Science makes it plain that the perfect divine Principle governs all. I wish to express my gratitude to God, and to Mrs. Eddy that I now can demonstrate my understanding of God.

MRS. BETTIE BOSTIC, Asheville, N. C.

Eleven years ago I was healed through Christian Science of stomach trouble,—a disease which the doctors had pronounced incurable. I was living in California at the time of my illness, and I had treatment from some of the best physicians in that State. They disagreed as to the nature of the case. One said it was caused by drinking alkali water; another that it was cancer of the stomach. They agreed that I could never be well, and would never be able to work again. The disease was so bad that I could hardly stand the jar of the buggy while going to the doctor. I suffered for three years and could eat very little. After the physicians saw they could do no more for me, they said it would be better for me to go to the mountains; and if that did not benefit me, to go to the coast. I went to the mountains, and as that gave me no relief, I then went to the coast and stayed there one year, but was still no better. Seeing that neither doctors nor climate benefited me, I gave them up and came to Dallas, Tex., where I now reside. I had not been here long when I heard of Christian Science, and applied to a Christian Science practitioner for help. I was very much benefited from the first treatment, and continued for two weeks, when I was entirely healed. My cure was both quick and permanent.

I am sincerely grateful to God for the revelation of Christian Science. Through its teaching I have health and strength to support my family, and greater love for God and man.—A. MORRIS, Dallas, Tex.

In 1901 I had a serious stomach trouble which never yielded to medical treatment, but I steadily grew worse until within a year I suffered from three attacks of gastric fever and was given up to die by my family physician and his council. Before the last attack of fever, I had met with an accident which injured seriously my left ankle and wrist, splitting the cartilage of one and tearing the ligaments of the other to such an extent that three doctors said they could not be cured, but that I would always be a cripple. I could use my hand only by wearing a rubber mitt. My right eye had been injured when I was seven years old, since which time I had been able to see but very little with

Digitized by Google

it. As the stomach trouble increased the sight of this eye began to fail, so that I could do nothing without glasses and I suffered the most excruciating pain. All this suffering brought on such severe nervous trouble that one doctor said he saw only insanity before me unless relief came from some source. At this time I was not sleeping except under the influence of opiates. Five physicians had failed to help me, also another method which was tried.

During this time my mother had been healed of consumption by Christian Science and I was advised to try it. Finally, in 1904, after much hesitation, I decided to do so, and after the second treatment I began eating anything I wished. Within a week my sight had returned, my wrist and ankle had resumed their normal condition, and the nervousness had vanished. I was practically a well woman, after taking but seven treatments. I gained twenty-nine pounds within a few months, and have remained well. My husband also was healed of asthma. My gratitude to God is unbounded, also to our Leader, Mrs. Eddy.

MRS. ARTHUR COBB, Castleton, Vt.

In reading an article which appeared in the *Sentinel* I became conscious that I had failed to acknowledge the healing which had first turned my attention to Christian Science. About four years ago I had a very severe case of iritis, or inflammation of the right eye. My physician ordered me to bed, and said it would be two or three weeks before the crisis would be over. The pain became so intense that morphine was given freely to induce sleep. At the end of three weeks I was able to be around, and was driven to my office in a closed carriage, with head bandaged to keep out the cold. While at the office one of the clerks suggested Christian Science as a sure and permanent remedy. On my way home I called upon a practitioner. I was requested to remove the bandage, and the treatment was given. The following day another treatment was given, and the eye was entirely healed. My physician told me I would most likely have the trouble recur every year at about the same time, but it has never done so. The healing of the trouble, with the attending fear of its regular recurrence, was truly wonderful to me, and it led me to be a constant reader of Science and Health, the *Sentinel*, and the *Journal*. For the great spiritual unfoldment which followed, I am truly grateful to God, and to Mrs. Eddy, whose life and works will illumine the pathway for millions in the ages to come. God bless her!—A. A. WENHAM, Cleveland, O.

In 1878 I had a very serious trouble with my eyes, which was diagnosed as acute inflammation of the optic nerve. From that time until 1899 my eyes were never well. I was under the care of physicians most of the time. For fifteen months I also suffered from acute inflammatory rheumatism. In 1896, at the age of fifty-five years, I became an inmate of a home for incurables in San Francisco. In my application for membership my case was described by the physician as "incurable intestinal catarrh." In July of 1898 the trouble with my eyes became greatly aggravated, and after consulting several of the leading oculists in the city I placed myself under treatment at the polyclinic. After nine months' treatment three of the best oculists in town held a consultation and decided that there was no possible cure for my eyes, that I must wear the darkest glasses procurable, and urged upon me the necessity of the greatest care, telling me that any use of my eyes, such as reading, sewing, etc., would result in total blindness.

A few days after this, in the depths of my despair, I heard of Christian Science. I had treatment, and after a week the pain was gone, and the practitioner invited me to visit her, knowing that her home would be more favorable to my recovery than the environment of the hospital. Two days after entering her home, the cure was complete. My colored glasses were discarded, and I have never put them on since. Less than two weeks later my eyes were most severely tested by hours of unavoidable writing by gaslight, proving the completeness of their recovery. Soon after, I had a sharp attack of rheumatism, from which I suffered for two days. On the third day I spoke of it to the practitioner, when one treatment destroyed it, and it has never returned. Numerous other ailments also disappeared in a very short time, and my speedy and complete recovery was immediately followed by my permanent retirement from the Home.

Christian Science has given me everything, and I cannot express my gratitude for this wonderful truth.

THEODOSIA D. JUDD, Menlo Park, Cal.

I have felt for some time that I was not doing my duty in withholding my testimony of healing, as it may be of benefit to some one as hopeless and discouraged as I was when I turned to Christian Science for help. I had suffered for three or four years from fibroid tumor, until the physicians said that an operation was necessary; but this I felt I could not consent to. In my hour of deep distress I called upon a friend, a Christian Scientist, who comforted me with the assurance that I need not have an operation, that God would heal me. In less than two months my trouble was overcome. The examining physician expressed both surprise and pleasure at my recovery. That was three years ago. If any one wishes to know the particulars of my case, I would be very glad to give them. Each day my gratitude to God for my healing grows deeper, and to the one who has brought to us this wonderful truth,—Mrs. Eddy.—MRS. W. F. BISSELL, Glens Falls, N. Y.

No one has more to be thankful for than myself. Christian Science brought me out of a miserable condition, and while I had some two weeks' treatment, I was healed in the second treatment. Hereditary troubles have been mastered by Truth as revealed to us by our Leader; and I have been able to help myself and others by holding firmly to the power of Truth. The silent victories of Christian Science have done much toward opening up the storehouse of spiritual knowledge in my own consciousness, and bringing harmony to those around me. My pen fails to express the gratitude I feel toward Mrs. Eddy for showing me the way to God.—A. GILBERT, San Francisco, Cal.

Lincoln, the Man of the People.

The color of the ground was in him, the red earth;
The tang and odor of the primal things—
The rectitude and patience of the rocks;
The gladness of the wind that shakes the corn;
The courage of the bird that dares the sea;
The justice of the rain that loves all leaves;
The pity of the snow that hides all scars;
The loving-kindness of the wayside well;
The tolerance and equity of light
That gives as freely to the shrinking weed
As to the great oak flaring to the wind—
To the grave's low hill as to the Matterhorn
That shoulders out the sky.

And so he came.
From prairie cabin up to Capitol,
One fair Ideal led our chieftain on.
Forevermore he burned to do his deed
With the fine stroke and gesture of a king.
He built the rail-pile as he built the State,
Pouring his splendid strength through every blow,
The conscience of him testing every stroke,
To make his deed the measure of a man.

"Lincoln and Other Poems." by EDWARD MARKHAM.

From our Exchanges.

There is a lazy fatalism that looks for increase from idle talents and harvests from unsown fields. We sometimes hear people talk piously of trusting in God for success, who do very little to earn success, and who, when failure or misfortune comes, speak with base complaining, or even baser resignation, of God's will as opposed to them or their efforts and desires, while they are but duly chastised for neglecting to do His will, and so failing to meet the prime condition of success. There is nothing meaner or essentially more blasphemous than that cant of submission to the will of God which is only a cheating excuse for sloth or carelessness or reckless waste of divine opportunity and manly powers, veiling our neglects and sneaking shabbiness with the poor veneer of an insincere and impotent piety. When a man excuses his failures in life by pleading the unpropitious heavens, let him ask himself whether he has used the energy and manly boldness with which John the Baptist preached repentance in the wilderness. Let no one comfortably charge his pious inefficiency to the chastening providence of God, when he ought to be turning in shame and self-rebuke to the first bit of honest hard work that may give him any claim to the respect of men or the awards of heaven. Only they who bravely aspire and loyally work, who have done their best and utmost to fill with strenuous service the limits of their day and strength, have any right to be content in the narrowing bounds or passing opportunity of their work or their success. Only in such divinely ordered pause may any man rest his uncompleted task, justified in the releasing sentence, "A man can receive nothing except it be given him from heaven."

REV. H. H. BARBER.
The Christian Register.

They who are forever looking out for their own interests are commonly left by their neighbors in exclusive charge of that department. It is being so well cared for that nobody presumes to interfere. They who are serving others find themselves generously served by others. Their affection wins affection. The selfish person prefers his own company and walks by himself, and wonders why he has no friends. The unselfish person lives in an environment of happiness, surrounded by those whom he has helped to be happy and who in return are endeavoring to bring happiness to him.

DEAN HODGES.
The Churchman.

What all may have and what the spiritually minded and well circumstanced have in large measure, Jesus had wholly unmarred and undimmed by sin. All that he knew and experienced grew naturally out of what was taught in home and school and synagogue, out of his own studies in the Old Testament and his meditations upon life. In all these he was taught and guided by the Holy Spirit, who had unhindered access and wrought his perfect work.

The Congregationalist.

The Christian's attitude toward the world should be that of a man who has found a good thing, and wants his brother to share it. If the believer tries to keep his faith and religious experience to himself, he will find his faith and his joy evaporating with the heat of each day's sun. Religion is the kind of a thing of which the more that is given away the more remains to be had.—*The New York Observer.*

We cannot always be waiting for great things. Too many small ones lie between. We imagine God so great, that we cannot reconcile our idea of Him with anything small. Therefore, we separate religion from the little things of life; and this should not be done.

ADOLPH ROEDER.
New Church Messenger.

THE CHRISTIAN SCIENCE TEXT-BOOK.—"Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing all the By-laws to January 1, 1906, of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to The Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of The Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to The Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number, or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By Hon. WILLIAM G. EWING.

CHRISTIAN SCIENCE. Its Worth and Work. By Rev. ARTHUR R. VOSBURGH.

CHRISTIAN SCIENCE. Its Promises and their Fulfilment. By EDWARD A. KIMBALL.

CHRISTIAN SCIENCE. Is it Christian? By MRS. SUE HARPER MIMS.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* **PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.

Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month.

The date of expiration may be found on the address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

The wedding gift of the French Republic to Miss Roosevelt is a beautiful Gobelin tapestry, over thirteen feet in length and over eleven feet in width. It represents "The Manuscript." The tapestry was designed by Ehrman. It figured in the Paris Exposition of 1889. The Gobelin factory, the most renowned in the world, is owned by the French Government, and was founded in 1601 by King Henri IV. The tapestries are made on high "way looms." The reverse side of the tapestry is turned toward the workman, with the outline of the design drawn in black crayon on the stretched threads. A very skilful workman can complete from three to four square yards in a year, but the average annual task is about one to one and a half square yards. Many years are, therefore, required for some of the larger designs. The Cuban Government will present a pearl necklace.

The first session of the General Council of Congregationalists, United Brethren, and Methodist Protestants at Dayton, Ohio, closed last week amid hearty utterances of satisfaction. The conviction is general that its achievements mark an important step in the history of Protestantism. The Committee on Vested Interests reported to the effect that there was no insuperable legal obstacle to the organic union of the three bodies; the report of the Committee on Doctrine presented a brief statement phrased in devotional spirit and terms of not over five hundred words, which greatly delighted the audience; the Committee on Policy tendered a somewhat longer report. The committee proposed as a part of the name for the new body, "The United Church." Later each denomination presented its report, and it was found that all three with substantial unanimity had approved of all three reports.

A decrease in the force of the Government Printing Office is likely to occur because of the lopping off of many of the so-called unnecessary departmental publications and the introduction into the office of numerous labor-saving devices, and the prospective thorough reorganization of the establishment. These changes are the result of the investigations of the Keep Commission. It is the purpose of the newly-appointed public printer to make the Government printery as modern in its machinery and methods as the most advanced and up-to-date private printing concerns anywhere. It is his opinion that there is no reason why the Government Printing Office should not lead in the matter of modern typography.

The Board of Overseers of Harvard College some time ago passed a vote that football cannot be played at Harvard until the Harvard athletic committee reports favorably and that report is accepted by the Board. The formal vote passed last week by the Faculty was as follows: "In the opinion of the Faculty intercollegiate football should be prohibited to Harvard students in 1906 and until a reasonable game of football shall have been formulated and fully exemplified in the practice of individual colleges." The Faculties of the Universities of Michigan, Wisconsin, and Illinois have also had the subject of the continuance of intercollegiate football under consideration.

The Acting Secretary of the Navy Department has approved the recommendation of the Naval Board on Construction to require the bidders on the new sixteen-thousand-ton battleships to submit their propositions with regard to the furnishing of either reciprocating or turbine engines. The bidder will be allowed to select his own type of the class of engine. In the case of turbines he may select either the English or the American or both. Turbines will be first tried upon the new scout cruisers.

Paul Laurence Dunbar, the poet of the negro race, passed away at his home in Dayton, O., on the 9th inst. "The only man of pure African blood and of American civilization to feel the negro life aesthetically and express it lyrically," was the description of the poet given by William Dean Howells, who discovered him, and whose friendship and patronage were strong factors in the success and recognition that came to him.

Colonel Thomas H. Swope, who a few years ago gave to Kansas City thirteen hundred acres of land, now known as Swope Park, will early in the year give to the city a magnificent gallery of art, to be known as the Swope Gallery of Art, and which will cost $450,000. He will also give an annuity of $20,000 to the city for its support.

The passage of the Hepburn Railroad Rate bill in the House, with only seven dissenting votes, against seventeen dissenters from the cruder Esch-Townsend bill of last year, is regarded as highly significant. The House passed the bill by a vote of 346 to 7.

The annual expense of the pension roll of the United States is $139,000,000; that of France, $26,000,000; Germany, $21,000,000; Austria-Hungary, $10,000,000, and Great Britain, $9,000,000.

Foreign.

Dr. Francis Greenwood Peabody, Professor of Christian Morals at Harvard University, delivered his final lecture in Berlin last week, before an audience that more than filled the largest hall of the University. After the lecture Dr. Studt, the Minister of Education, expressed the hearty thanks and satisfaction of his ministry at the important inauguration of the system of exchanging professors, thereby instituting an intellectual bridge between the two peoples which ensures cordial relations.

At Rickmer's shipyard, Bremerhaven, last week there was launched the biggest sailing ship in the world. The length of the craft is 438 feet, her breadth is 54 feet, and she is of 8,000 tons burden.

Industrial and Commercial.

The ravaging dogfish, a species of the shark and the bane of deep-sea fishermen, is the subject of an exhaustive report by the Massachusetts Commissioners on Fisheries and Game. In their conclusions they say: "The annual damage by dogfish to marketable fish and fishing gear owned in Massachusetts is not less than $400,000, falling directly upon the fishing industry, but indirectly and ultimately upon the purchasing public. The inroads of the dogfish upon the profits of the fishermen have at present a decided tendency to drive capable men from the maritime industries. Under the direction of the Canadian Department of Marine and Fisheries three dogfish reduction works have been established, for securing oil and fertilizer from the dogfish. The industry of canning dogfish for food is being fostered by the same department. On the Atlantic coast are numerous glue manufactories and menhaden rendering plants, where dogfish could be converted into oil and fertilizer, provided the catching and transportation of dogfish could be made to yield a living profit."

The most extensive private irrigation works in the United States is carried on in Oregon, where the Deschutes Irrigation and Power Company is constructing canals for the irrigation of two hundred and fourteen thousand acres of sagebrush land in Crook County. Water is supplied by the Deschutes River, which is fed by the snow of the eastern slope of the Cascade Mountains, and is said by the United States Government engineers to be one of the finest streams for irrigation in the world. The land to be reclaimed is in a natural grass country, and under irrigation the experimental farms have produced excellent crops not only of hay but grain and vegetables.

A deal was completed last week which brings the Clyde Steamship Company under the same control as the Eastern Steamship Company, which operates lines between Boston and New Brunswick; the Metropolitan line, running between Boston and New York, and the People's line between New York and Albany. With the acquisition of the Clyde line, which runs from New York and Boston to Southern ports, access is given to ports on the Atlantic seaboard from St. John, N. B., to Jacksonville, Fla.

Contracts have been awarded to the Baldwin Locomotive Works for six Mallett compound locomotives for the use of the Guayaquil and Quito Railroad in pulling mineral cars over the steep grades of the Andes Mountains. The engines will be shipped in sections and put together at an elevation of ten thousand feet above the level of the sea. Contracts have also been given to a bridge firm to build eighty steel bridges for the same railroad.

The Consolidation Coal Company has contracted with the South Baltimore Car Works for the construction of three thousand steel hopper cars to be used at two of its largest mining plants. It will take almost a year to fill the order, and the aggregate cost will be between $3,000,000 and $3,500,000. The hoppers will be of fifty-ton capacity.

An American locomotive works has in process of construction a hundred locomotives for Japan, and is turning them out at the rate of two machines a day.

General.

A new table delicacy has come out of Mexico, and a correspondent of the *New York Evening Post* says that it can be produced with equal facility and in unlimited quantities on the hitherto practically barren plains of the Southwest. The Mexicans call it "queso de tuna," which, being interpreted, means cactus cheese. The correspondent intimates that fondness for this cheese, like that for some other brands, must be acquired. This product of the cactus "looks for all the world like a fine grade of chocolate." It is put up in packages about the size of a pound of butter, and, when wrapped in tinfoil, is safe from deterioration. Another use to which this plant is put is the manufacture of syrup, and a sort of jelly can be produced which is said to resemble Scotch marmalade.

The one hundred and fiftieth anniversary of Mozart was observed last week in many musical centers of the world.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

An Instance of Mrs. Eddy's Acumen.

THE following letter to the Rev. Mary Baker G. Eddy sets forth in a striking manner the far-sighted vision of the Leader of the Christian Science denomination in matters economic as well as spiritual:—

Chicago, Ill., February 2, 1906.

Beloved Leader:—The world may not acknowledge your work for the redemption of mankind, seeing it not. Nevertheless, humanity receives the blessing.

The recent uncoverings of the evils that menace the welfare of individuals and nations was pointed out in your Message of 1902 on page 7, as follows:—

"Competition in commerce, deceit in councils, dishonor in nations, dishonesty in trusts, begin with: 'Who shall be greatest?'" And do you not plainly provide the remedy on page 4 of the same message?

"To live and let live, without clamor for distinction or recognition; to wait on divine Love; to write truth first on the tablet of one's own heart,—this is the sanity and perfection of living, and my human ideal."

Obediently and gratefully,

HANSON W. WHEELER.

Concord (N. H.) *Patriot.*

From our Contributors.

Giving and Receiving.

REV. WILLIAM P. MC KENZIE.

WHEN Paul was at Miletus on his way to Jerusalem, he found that he could not spare the time to go to Ephesus and return again, so he sent for the elders of the church to come and counsel with him. He earnestly besought them to watch, like faithful shepherds who protect the flock from prowling wolves. He reminded them how he had been earnest in his warnings night and day, and how he had wrought with his hands as a tent-maker at Corinth to minister to his own necessities and to provide for those with him. "I have shewed you all things," he said; "how that so laboring ye ought to support the weak, and to remember the words of the Lord Jesus, how he said, It is more blessed to give than to receive."

The teaching of Jesus to which he refers is probably that found in Luke, 14 : 12, 14, where Jesus advises his audience to learn the joy of hospitality by offering it to those whom it will bless, rather than to those who will be expected to return it and so make a recompense. Hospitality should be a form of ministry; whereas in its formal expression it may lose all joy because looked upon as part of a bargain. It must be clear that a sense of love, a recognition of good, a realization of abundance must first be gained before the expression of love and liberality will be natural and not forced. It is dreary work to give without having received. Christ Jesus first set forth in his teaching the scientific method for giving by showing how men could be blessed; and later he indicated that receiving must precede giving when he sent out his disciples to preach and to heal, saying, "Freely ye have received, freely give."

Suppose that a man found it expedient to make his home beside the trail that wound across a desert, and in the springtime dug a reservoir for water. So long as the pool showed water in abundance he could give a welcome to the passing traveler, and refresh his thirsty animals. But when the long silent days of shimmering heat began; when the plains grew gray like ashes, and the sage brush like the ghosts of trees that had perished by fire; when the water began to shrink in the pool, and the bordering mud began to crack till its crevices seemed like thirsty mouths whence the waters disappeared, would it then be easy to welcome the coming of travelers? Would not every dust cloud in the distance, marking the weary progress of heat-parched animals, bring a questioning to the erewhile hospitable man as to how much longer he could give from the failing pool without endangering his own life?

Now suppose that this man, in view of the need of others, should plan to enlarge the supply of water rather than lessen his giving, and should bore to the depths whence the living waters are found, he would not only be comforted by knowing that his own need had certain supply, but he could also rejoice in his continued hospitality to others. Having received more abundantly, he could yet more freely give.

Christian Scientists recognize how their sense of giving has been changed from the reluctant and timorous doling of drops from a guarded cistern, to the joyful sense of lifting water in abundance from an unfailing spring. The new sense of giving without fear expresses itself in every form of liberality. "The liberal deviseth liberal things; and by liberal things shall he stand." In business matters, as well as in all the affairs of life, how true is the proverb: "There is that scattereth, and yet increaseth; and there is that withholdeth more than is meet, but it tendeth to poverty. The liberal soul [or, soul of blessing] shall be made fat: and he that watereth shall be watered also himself."

By the teachings of Christian Science the knowledge of salvation is brought to men on earth, so they are able to join in that song of victory given in Isaiah,—

> God Who saved me—I trust You, and no more will dread!
> For You, Lord, are my vigour and song, EVER-LIVING!
> And You are a Saviour to me!
> So draw water with joy from the Wells of Salvation.

We give Ferrar Fenton's translation, and his rendition of Jeremiah, 2 : 13, is also worthy of quotation, "For My people twice did evil to Me. They forsook the Spring of Living Water, to dig for themselves wells, broken wells which contain no water." Through the revelation of Christian Science, and under the leadership of that one through whom the revelation came, a great host have been brought from the desert into a place of water springs and of abundant good. It is not strange, therefore, that they "freely give." They look back to the days when they tried to "raise money" by appeals to every motive but the right one, as to a time of captivity. Then the dire needs of the

Copyright, 1906, by Mary Baker G. Eddy.

Digitized by Google

case were set before the world's sympathy; the chance to win the praise of men was offered to its pride; comparison with others was made, so that one might have occasion to fear their criticism if he came behind their standard; and hence the giving was seldom spontaneous, a giving that was prompted by a sense of richness in good which had to overflow. This spontaneity will always characterize true giving; and even if the right hand know not how much the left is doing, the giving which expresses a realization of abundance will send a glow through the whole being, causing every member of the body to prosper.

Scientific giving, then, presupposes a right sense of the source of supply. It is, of course, impelled by gratitude, since the grateful heart counts its mercies daily; but its basis is the understanding that the supply of good is unfailing, that Love is substance, hence substance is inexhaustible, and all fear of diminishment or loss in giving is thus removed.

"We have only as we give."

IRA C. HUBBELL.

THE child who has learned that two times two are four is as well qualified to tell this simple truth to another as is the person who has mastered all the higher branches of mathematics. If, therefore, we remain silent and refrain from telling others of the good that has already come into our lives from the study of Christian Science, simply because we are not yet perfect, because we have not yet attained to the full understanding of Christian Science,—the Science of Christianity, the Science of Life,—our growth is retarded to just the extent that we permit ourselves to be held in the bondage of this belief of a lack of fitness to speak. The child gains a clearer understanding of the multiplication table by telling others what he has learned, and he puts this acquired knowledge into daily use by improving each opportunity to do so. This is true of all that we know concerning any subject, whatever its importance to us, and it is especially applicable when we consider the grand possibilities to the world in the teachings of Christian Science.

One may say, "I am not as good as I should be," but through the help of Christian Science all who are sincere can see daily progress in reaching its high ideal; and with Paul they can say, I am persuaded nothing can separate us from the love of God, for victory is on God's side.

The dearest privilege one can enjoy is the opportunity to say to another, standing where he once stood,—in darkness, in ignorance of God, in doubt and in fear, afraid of this and afraid of that, literally a ship on a tempest-tossed sea without a rudder, drifting toward agnosticism,—"Cheer up, brother; through the teachings of Christian Science I have seen an opening through the clouds, and I am on my way out of doubt and fear. The same Love will guide and direct you as well, if you but permit Him to lead you." As we tell to others the helpful experiences through which we have passed, and give grateful acknowledgment to God and His messenger for the good already received, we shall find it literally true that as we learn to give, then and then only do we begin truly to receive. It is also true that we possess only what we actually use. This applies to our understanding of the Science of Life as well as to everything of less importance. Christian Science not only heals the sick and sinful, it also clarifies the student's thoughts and provides for greater activities in every right direction.

Giving to The Mother Church.

FRANCES MACK MANN.

No greater opportunity has ever been granted to Christian Scientists than the privilege of helping to build The Mother Church. The voluntary act of giving to any worthy object has a beneficial effect on the individual. It helps to break the sense of limitation, and enlarges the capacity to meet humanity's need. The only true gift is that which expresses love, and if this impulse be lacking a material offering is but a mockery. Under present human conditions we have to build a material structure to express our thought, and as this structure must occupy a place, this place is in Boston. The Mother Church typifies the Church Triumphant; the reign of universal, eternal love; the battle over, the victory won. The real Mother Church is to be mentally discerned and is made known by love manifested in all we say and do.

Our Leader states in Science and Health that she is "working for generations to come, never looking for a present reward," and again, that "a right motive has its reward" (pp. 464, 453). It cannot surely be a right motive which expects in return as much if not more than is given. Our Master received no present reward except the spiritual, and our Leader has expected no other.

The Christian Scientist should support our Cause, morally, financially, and spiritually, because he loves to do what is right. We are not seeking the praise of men, but the glory of our Father-Mother, God; so when we bring our gifts to the altar and upon self-examination find we have one unkind thought about our brother-man, let us not present that gift until we first overcome this false concept of our brother, lest it be said of us, as of Cain, that unto his offering God "had not respect."

The giving of one tenth of our income for the spiritual blessings which we are constantly receiving from the study of the Bible and Science and Health would be but a small return for what can never be expressed in this world's coin, but we can bring with love the largest offering which it is possible for us to make. We often hear the expression, "I can give only the widow's mite," but is there always with the speaker a clear remembrance that the widow's mite was all that she had?

When the extension to the Mother Church is completed may we come to it with our hearts filled with love to God, to our Leader, and to our fellow-man; each having given of his substance liberally, lovingly, expecting no earthly reward. "Every man according as he purposeth in his heart, so let him give; not grudgingly, as of necessity: for God loveth a cheerful giver."

[Written for the *Sentinel*.]

A Message from the Workshop.

AGNES FLORIDA CHALMERS.

THOSE silent years the Master toiled,—when he,
The well-beloved, bent with patient care
O'er plane and work-bench, oftentimes for me,—
God's hand marks their design.
When poor and small the task seems I have wrought,
And cheerless fear-clouds darken all the fair
Blue sky of hope and gladness, with the thought,
Vain is this toil of mine;
How often have the comfort for my tears,
And faith to raise mine eyes to bluer skies,
Come through the message of those silent years,—
Those years the Master builded, human-wise.

One with eternal Mind,
And true to humble tasks from day to day,
The workshop gave the Master grace to prove
That God would wisely guide him all the way,—
All through the bitter hours of Calvary
E'en to the joyous meal beside the sea,
Spread for the fishermen of Galilee.
Through days of toil, he found the time to pray
That God would guide his steps eternally,
And show the wondrous peace and power of Love
To heal and save mankind.

Selected Articles.

Salvation is not through Mere Belief.

Our critic declares that he finds nothing in the 8th chapter of Romans to justify the teaching of Christian Science that Spirit is the only real Life. What shall we do with such texts as the following? "For to be carnally minded is death; but to be spiritually minded is life and peace." "So then they that are in the flesh cannot please God." "Therefore, brethren, we are debtors, not to the flesh, to live after the flesh. For if ye live after the flesh, ye shall die: but if ye through the Spirit do mortify the deeds of the body, ye shall live." Do not these declarations confirm the teaching of Christian Science that sin, sickness, and even death are consequent upon serving the flesh, while salvation from these is to be found in spiritual living? The same chapter declares, "The carnal mind is enmity against God: for it is not subject to the law of God, neither indeed can be." The carnal mind referred to in the text is the same that Mrs. Eddy denominates mortal mind. If it has nothing to do with the divine will, it certainly is no part of God's creation, and since God is the only creator it must be without foundation.

The gentleman asks for an explanation of the text, "The Spirit itself beareth witness with our spirit, that we are the children of God." Through spiritual enlightenment only are we made aware of the fact that we are "the children of God." Spiritual truths are discerned spiritually. In the text above quoted, Paul refers to the spiritual nature as the witness of one's kinship with God. The material mortal nature would declare that there is no God. The text, "For we know that the whole creation groaneth and travaileth in pain together until now," refers to the fact that the whole creation is held by human concept in the same false sense, and that the same understanding of Truth which liberates one must liberate all. Since Jesus alone taught and practised that which is absolutely correct, absolute freedom could not begin until he had taught and demonstrated his particular understanding.

The text, "And not only they, but ourselves also, which have the firstfruits of the Spirit, even we ourselves groan within ourselves, waiting for the adoption, to wit, the redemption of our body," refers to the fact that though we may have gained a glimpse of the truth, our deliverance is not yet entirely accomplished, but we are still watching, waiting, and toiling for complete redemption. Paul probably had in mind the fact that salvation could not come through a mere belief, but that one must work out his salvation by understanding and applying the truth.

ALFRED FARLOW.
Boston Times.

Wages War on Worry.

The Christian Science church of to-day is succeeding because it wages war on worry. This, in a word, is the essence of the tribute paid to Christian Science by Rev. Bastian Smits from his pulpit Sunday morning.

He had taken a text from sixth Matthew, and had preached for about twenty minutes along the line of taking no anxious thought for the morrow, when he paused and remarked that he was going to speak, with proper caution, and, he hoped, in a manner not to be misunderstood or misinterpreted, a word about the Christian Science church. That Christian Scientists were building many magnificent churches throughout the country was a fact, not a theory. The reason the organization was so strong and solid was because they waged incessant and unceasing war on worry. "They say if you have ills, don't think of them. That's good. If you have difficulties, do the best you can and do not worry."

When a minister speaks in that manner he can be classed as liberal. Mr. Smits sets a good example. If we all would "acknowledge the corn" whenever we find good, and say it's good, even if found in a neighbor's garden or competitor's shop; in a *doxy* which is not our *doxy*, in a philosophy with which we are not in accord, in worship with which we do not sympathize; when we can proclaim from our mental housetops good is good because it is good wherever found, we are on the right track to individual and national redemption. We are getting together as a worthy people, ready to help one another, and thereby help us all.

Editorial in *The Citizen Press*, Jackson, Mich.

H. B. Hudson of this place received a letter from his daughter, Mrs. Stella Schowengerdt, written the 19th of December last, from San Bernardino, Cal., in which she speaks of her wonderful recovery, through the Christian Science healer at that place. She says, "Two weeks ago last night I was given up to die by a specialist in this city. He said nothing more could be done. I had been gasping for breath four days and nights. Ernest ran for the Christian Science healer and he and his wife came quickly. I was so weak I could not think what was going on. He went to work faithfully and stayed by my side from Monday night till Sunday, and that day I was healed. I was perfectly free from pain, and such a sweet peace came over me that I felt like an innocent babe going to sleep. We are positive that I could not have lasted till Tuesday night if Science had not come to my rescue. I had taken no nourishment and could not retain even water on my stomach. They say it is the most wonderful case ever known in this city."—*Montgomery Standard*, Montgomery City, Mo.

Thankful should be our hearts when we realize that the God of fear, the God of anger and wrathful judgment, is being exchanged in our more enlightened thought for the God of love and joy and peace, and waiting multitudes are acknowledging and accepting God in all their ways; and that the better understanding of the Christ-truth and the knowledge of God which that understanding brings is healing the sick as well as the sinner in many thousands of instances.

The man who would charge God with creating a weakling who is not capable of resisting evil and reforming himself, evidently has the wrong conception of Deity, and that wrong conception and erroneous thought are responsible for his weakened condition of body and mind. Until his thought and concept are changed his condition will not improve,—"as he thinketh in his heart, so is he." Let us be thankful that our thoughts are improving, and that in consequence our moral, physical, and spiritual condition is improving correspondingly.

Editorial in *Waterloo* (Neb.) *Gazette.*

Christian Science has produced a new type of woman. She has no burning social grievances to ventilate, no political axes to grind, no unbecoming predilection for scanty skirts and mannish collars. Freedom from the worries which beset the average housewife makes for a clear, wrinkleless complexion and a well-set figure. To her children she presents a calm, unruffled front. Black draughts and blue pills never cloud the nursery atmosphere, for is not the chief tenet of her faith the uselessness of medicines and coddling? There is more than a touch of the Spartan mother about her. She cheerfully takes upon herself the onus of healing her babies' illnesses. No frantic summoning of the doctor, no experimental fads in hygiene, nothing of the modern mother's super-anxiety about the child-soul and child-body; believing what she does, it is natural that she should be a success commercially. All the qualities so foreign to the nature of the average woman, which she so successfully cultivates, make for a rapid mounting of the business ladder. The impediments of womanish emotion, feminine sensitiveness, and twentieth-century nervousness cast aside, she steps serenely forward on her self-chosen path.—*London Daily Mail.*

From our Correspondents.

Christian Science in Denmark.

It is now almost three years since Science and Health was first studied in Denmark. A Danish lady who was a governess in England learned of Christian Science while in London. She returned to Denmark and took up the work. After a short time a few became interested, and meetings began to be held at her home, she serving as First Reader.

Since my healing, eight years ago, I have worked and prayed that I might one day be able to bring to my family in Denmark the truth which, in view of their many sicknesses, they so much need. I cannot, therefore, express the joy it was to me to see how ready their thoughts were for the new understanding; to see the little meetings increase from a few until there were sometimes almost thirty gathered to drink in every word as the Reader translated parts of our Leader's "Key to the Scriptures" to them. There was no opposition whatever. The interpretation which Christian Science gives us of the Bible seemed natural and beautiful to them. I could not tell them enough. How I wished I could translate more correctly for them, but I had somewhat lost command of my native language, and we eagerly looked forward to the Sunday and Wednesday evening services, the latter especially. On Sunday the Science and Health references are read in both English and Danish, but on Wednesday evening only the translation is given, so this service is especially enjoyable to them.

The Reader's home has become too small for the Wednesday evening meetings, so that services are now held in a private school. There is also a Sunday School for the children, which was begun while we were in Denmark.

And now I wish to tell of a demonstration which has established the faith of my family so firmly that it cannot be shaken, a demonstration which we know came as God's "sign" to them all. One of my little nieces, eleven years old, had suffered from infancy with carious bones of the head. The disease, together with an operation in which a part of the skull bone was removed, had so injured the right ear that the drum was gone and the doctors said the hearing of that ear was permanently destroyed. As soon as the child heard but a little of Christian Science, she cast her faith upon it. She trusted absolutely that God could help her. I have never seen so beautiful and perfect a trust. I spoke with her about Christian Science and began to treat her. In a few weeks the flowing of the ear, which had been so distressing before, ceased. Gradually the soreness left her head, and before I left Denmark the child discovered that she could hear with the ear that the doctors had said would never be of use again. This Christmas I received letters from both mother and child stating that the ear remains perfectly healed.

I thank God for His daily manifestation to us. I thank Him for our beloved Leader.

MRS. CLARA MEHDER, Oshkosh, Wis.

At the National Military Home, Ohio.

A few years ago a lady interested in Christian Science donated to the library of The National Military Home, Ohio, near Dayton, four copies of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. Later the *Journal* and *Sentinel* were accepted, two copies of the former and three or four copies of the latter. There are about five thousand veterans of the Civil War at this Home.

A few days ago the writer visited the library. From the appearance of our periodicals it is quite evident that they are read. On inquiring of the librarian in regard to the copies of our text-book, they were found to be properly indexed under the name of the author. I was shown the books, the librarian informing me that one book had been read so much and become so badly worn that it had been destroyed. (It is a rule in the library when books show so much usage as to present an untidy appearance they are destroyed.) A second copy of Science and Health was read so much as to necessitate its being rebound, and the other two copies showed that they had been read. How much good this literature has done we may perhaps never know, but there have been a number of calls for healing, and some beautiful demonstrations of the power of Truth to bring relief and to heal when material remedies had failed. A half dozen or more members have identified themselves with the Christian Science churches in our city, and attend quite regularly.

I quote the following from a letter received a few weeks ago from an inmate of the Home: "Since I have been an inmate of this Home I have spent much of my time in the library. It was there that I first saw the *Christian Science Sentinel* and *Journal*, and I confess I have found them the most interesting literature which I ever had the good pleasure to peruse. I am orthodox, but cannot see why there should be any variance between Christian Science and any other Christian belief, as the former seems to embrace all and the very best that can be found in any other creed. The truth as found in Christian Science seems to be the whole truth and nothing short of it." He then asks for some information, and adds, "I have just received the glorious information that a friend of mine in Chicago who was a confirmed inebriate and tobacco user, has been cured and is a member of the Christian Science church, all of which seems to be beyond belief, on account of the low state to which he had dropped, but, thanks to Almighty God and Christian Science, it is true." Since writing this letter his health has been wonderfully improved. About Christmas time he purchased a copy of the pocket edition of Science and Health. In another letter he writes, "The *Journal* and *Sentinel*, in my estimation, are the best matter that comes in here. In my home city (Pittsburg) there are a good many of the faith and they all seem prosperous and happy."

I desire to speak of another instance. There was a member of the Home who seemed to have a hatred for the very name of Christianity or anything pertaining thereto. He visited the library and noticed *The Christian Science Journal*. At first sight he became angry, but later decided he would read it, and this awakened an interest to learn more of the truth. He acknowledged that it was the means of converting him from infidelity. He sought help of one of our practitioners and was healed. A young man who served in the Spanish-American war also sought help in Christian Science. After the first treatment all desire for the liquor habit was destroyed, and his general health has been much improved. Not only have I witnessed the fruitage of Christian Science in physical healing among a number of the inmates, but another pleasing thing it has brought, to wit: contentment and satisfaction, with gratitude to the Government for providing this beautiful and comfortable home.

How truly the placing of literature in public institutions verifies these words in our hymnal,—

> Cast thy bread upon the waters,
> Thinking not 'tis thrown away;
> God Himself saith, thou shalt gather
> It again some future day.

LLOYD B. COATE.

A Morning Song.

A. A. ALDRICH.

My path in life is smooth and fair;
No fear or trouble—anywhere!
For all along my way doth gleam
The light of Love, whate'er may seem:
And in this light I walk serene—
Where flowers bloom and fields are green.

The Lectures.

London, England.

The annual lectures may be said to constitute a not unfair criterion of the progress of the Christian Science movement in London, and owing to the fact that all these lectures have been delivered in the same hall (Queen's Hall) the comparison is easy.

The attendance at the first lecture was indifferent. Some years were permitted to elapse, and then the lectures were recommenced to steadily increasing audiences. This year, for the first time, the number of lectures which were given under the auspices of First, Second and Third Churches, was increased to three, with the result that the audiences were not only collectively, but severally, larger than they had ever been before. This was the more remarkable inasmuch as the last lecture was given on one of those foggy afternoons when traffic is practically suspended.

The first lecture was delivered on the afternoon of Monday, Nov. 13. The subject was "Christian Science: the Proven Unity of Religion and Science." The lecturer was introduced by Mr. Godfrey Pearce.

The second lecture was delivered on the evening of Dec. 4. The subject was "Christian Science: Regenerative and Healing Christianity." The lecturer was introduced by Colonel Anstey.

The third lecture was delivered on the afternoon of Dec. 11. The subject was "Christian Science: its Redemptive Mission." The lecturer was introduced by Mr. W. N. Miller, K.C. Throughout all these lectures Mr. Bicknell Young, the lecturer, was followed with the closest attention.—*Correspondence.*

Long Beach, Cal.

The lecture given at the Chapel Hall last night [Jan. 9] in the interest of Christian Science was well attended. The speaker, Mrs. Sue Harper Mims, was introduced by Hon. J. W. Thomas, who said in part,—

We are assembled for the purpose of discussing those propositions of life which produce human happiness. All people desire happiness. Not every one finds it. Perhaps it is because they do not pursue along scientific lines. Happiness is produced by harmonious conditions, which are never had except in truth. Christ Jesus exemplified and demonstrated to the world the only system which has ever produced true happiness. He taught and verified the ways of perfect harmony. In that great system the Fatherhood of God and the brotherhood of man was the foundation proposition. As I understand it Christ Jesus taught that sin and sickness sprang from a common cause and are destroyed by the same remedy. With him, health and holiness go hand in hand. "Thy sins be forgiven thee," "Go and sin no more;" "Thy faith hath made thee whole," "Take up thy bed and walk," were interchangeable expressions with him, and always meant the spiritual and scientific application of divine Love to the case in hand. With this Principle he "healed all manner of disease." Before passing from mortal view he said, "He that believeth on me, the works that I do shall he do also." The great question of this age is, Does this Christ system still exist? Can we do the work that he did? The organization under whose auspices this meeting is held, takes the affirmative of these questions.

Long Beach Tribune.

Hastings, Mich.

Bicknell Young delivered the first lecture in Hastings on Christian Science in Reed's Opera House to a large audience Jan. 16. He was introduced by Mr. M. L. Cook, editor of *The Hastings Banner*, who in his introductory remarks said,—

The world is but beginning to appreciate the importance and power of spiritual truth. But while we are children of the same Father and brothers of the same Christ, we do not all see spiritual truth alike. Pilate's query, "What is truth?" is often on our lips. Some of you have found the convincing, satisfying answer in that belief which shall be proclaimed from this platform to-night. Others of us do not feel so assured; and yet I trust we have come here to listen with kindly interest and without prejudice. I do not pretend to understand Christian Science, but from what I do know of it I cannot believe that any man or woman can earnestly, sincerely try to live up to its doctrines and live an evil life; he or she will most certainly live a good life. Therefore we shall have a friendly, kindly interest in what may be said here to-night in behalf of Christian Science.—*Correspondence.*

Vincennes, Ind.

A lecture on Christian Science was given by Hon. Clarence A. Buskirk last Sunday [Jan. 14]. The introduction of the speaker of the afternoon was made by the Hon. James S. Pritchett, who said in part,—

I believe the teachings of Mrs. Eddy are bringing about a religious revolution which is making the Bible an inspiration and help never realized before. The grandest thing next to the radiance that flows from the Almighty throne is the light of a noble and beautiful life wrapping itself in benediction round the destinies of men and finding its home in the blessed bosom of the everlasting God. This is the life of Mary Baker G. Eddy. If the teaching of Science and Health will correct one single error, remove a single pang of pain, wipe from the cheek of sorrow a single tear, lighten a single burden, or make the life of a single individual purer and better, it is worthy of your consideration.

Oh, but they say Mrs. Eddy is a woman. It will be a troublous day when they, the women of our country, are excluded from participating in religion. The women keep and give strength to our altars and our homes.

Vincennes Commercial.

Washington, D. C.

The National Theatre was filled yesterday afternoon [Dec. 17] by an intelligent and appreciative audience, who listened to Prof. Hermann S. Hering of Boston, as he told, with simple illustrations, of the work and growth of the Cause of Christian Science. He was introduced by A. C. Peter, First Reader of First Church of Christ, Scientist.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

"Progressing toward Unity."

We are indebted to the *Indianapolis Star* for the following report of a sermon recently delivered by Rev. J. A. Milburn, formerly of Indianapolis, but now the pastor of one of the leading churches in Chicago. He said:—

"Things are now progressing toward unity. The highest compliment you can pay a man is to say that he is consistent, which means that his faculties are balanced and he has unity in his life. Unity of church, which is so much desired, will not come from wishing that the church were a unit. It will not come from presbyters getting together and saying 'We will have one church.' The unification of the church is to come by a process of absorption.

"Whichever church has the most good in it and is most like Christ's model will absorb the others. If it is the Presbyterian Church, that church will gradually take in all the other Protestant denominations. If it is the Baptists, they will absorb the rest. . . . The reason so many people take up Christian Science is that that church gives them more than the orthodox churches. Denominations like that are giving them light, while we give them the husks and doctrines. There is not enough in the natural to satisfy. What we need in life is God. We need belief in Christ and in the power of prayer. If preachers preach long, dry sermons, it is often because the people who hear the sermons are dry. It is very good to have the Apostles' Creed recited ever so often, as your pastor does, but Jesus Christ might as well have never lived, so far as your redemption is concerned, if he does not rule your heart.

"The church glorious must have beautiful ideas. Its creed must be beautiful. It must be beautiful in its institutions. . . . You should be glad that you have such a church and should co-operate to make it an increasing power for God in this community. Unless you do this you are guilty of infidelity, and I would rather be an atheist and believe in no Christ whatsoever than to profess that belief and then make him contemptible."

Since this sermon was delivered we have seen a tangible start made toward the unity prophesied by Mr. Milburn. Within a few days there has been in session in Dayton, O., a convention whose work has resulted in the amalgamation of three denominations under a name yet to be agreed upon. This seems to be a step in the right direction, and it is to be hoped that the coming together of the Congregationalists, the United Brethren, and the Methodist Protestants in this new body will prove to be the forerunner of that real unity which should prevail in the preaching and practice of our Master's gospel; and it must not be forgotten that his gospel is a healing gospel, which says, "*Now* is come salvation, and strength, and the kingdom of our God, and the power of his Christ."

Archibald McLellan.

Progressiveness.

Between thirty and forty years ago, advanced thinkers began to urge the necessity for progressiveness in religion as well as in all else, and some preachers courageously echoed this sentiment, even at the risk of being accounted heretics for so doing. Although this statement may provoke a smile to-day, it is none the less true that orthodox people in general were shocked when some one was daring enough to say that no better reason could be offered for clinging to the opinions and modes of our ancestors in religion than could be named for clinging to their agricultural implements and means of locomotion. It is undeniable that a great change has come over the world's thinking since the advent of Christian Science, and it is surely a hopeful sign that changes are now welcomed if they give promise of leading mankind toward nobler ideals and purer living.

That progressiveness is desirable no Christian Scientist will deny, and it is well for us to keep in mind the fact that, having entered the gateway of Christian Science, we cannot stand still, though inherited tendencies might tempt us so to do. Science is in its very nature progressive, and prepares us to keep abreast of the world's advancing thought in every direction. It is, however, a very important question, whether we, as individuals, are keeping pace with the demands of Truth found in our text-book. If we are its faithful students we shall keep step with our Leader's thought, and thus gain a clearer sense of the vital purpose of Christian Science,—the exaltation of the spiritual, the good, and the true. In studying the revisions of Science and Health we can see that our Leader is enabled to make stronger and more uncompromising statements of the absoluteness, the supremacy of Spirit and spiritual law, as the world's thought yields up its long contention for the asserted power of evil, expressed in sin, disease, and death, and as Christian Scientists themselves prove in their daily experiences that God is All and that there is none beside Him.

Christian Science has come to declare God's allness, and in doing this it had to lay bare the unreal claim of mortal mind to govern the so-called human organism, and thus to produce sin and disease. The Master predicted this uncovering of error by Truth when he said of the Comforter that he should "reprove the world of sin," and then guide into "all truth,"—a prediction which is being fulfilled in the progressive ministry of Christian Science. Such being the case, we cannot afford to stand still,—to think, speak, write, or act as we did a year ago, still less, ten years ago. We need to take our bearings often, in order to see whether good is becoming more real to us; whether body means less and Mind more, whether matter is vanishing and eteraal substance, Spirit, is unfolding to our gaze. If we are truly in earnest in our study and demonstration, we are assured that we shall "plant our feet on firmer ground," and experience "painless progress, attended by life and peace" (Science and Health, p. 224).

Annie M. Knott.

"As a little child."

In moments of doubt and despondency, men often express the wish that they might again possess the simple faith of their childhood, and the general thought of the impossibility of its fulfilment renders this longing deeply pathetic. Such a heart-hunger was disclosed recently in a communication to the editor of a prominent religious weekly which lies before us. The writer tells the old story of early religious impulse and enthusiasm, followed by a reaction that led first to the darkness of doubt, and later to a cold, critical intellectualism which now thinks of the Bible as interesting literature and of God as but an abstraction,—that knows neither peace of mind nor comfort of heart. He says, "I crave for the faith of my boyhood days; I have struggled for it on my knees . . . but it has not come back to me."

Replying to this, the editor says in effect that it is impossible for us to recover the lost faith of our childhood. He who boasts of such a faith gives evidence that while he has grown physically and intellectually he has not grown

Digitized by Google

in religious experience. "A childhood faith is a dwarfed and stunted faculty in a man or woman; it is unquestioning, and therefore unreasoning"! Thus reading, there comes the query: If all this be true, what of Jesus' declaration, "Whosoever shall not receive the kingdom of God as a little child, he shall not enter therein"? These words surely indicate that he placed a high value upon the child-thought. They declare it to be essential to a saving faith; that heaven "doth lie all about us in our infancy."

Analyzing this faith, all will agree that simplicity is one of its characteristics, and the desirability of this feature will not be questioned by those who have tried to find their way through the tangled undergrowths of religious teaching. Further, its "unquestioning" is also characteristic, and no less desirable. True, it is grounded in the assumed truthfulness of religious teachers rather than in "reasoning," but that such belief may ripen into faith, and faith into a spiritual understanding which is yet more sure and "unquestioning," is the joyful and unhesitant testimony of a great crowd of witnesses, who through Christian Science have found a solid basis for conviction, and that content of heart for which the troubled sigh. The mathematician may look out upon vast ranges of as yet unexplored territory, but he understands every step of his way hither, and the farther he advances the more "unquestioning" his faith in mathematical law becomes. This is the normal order of spiritual progress as well, and it is realized as each step of our advance is proved through practical demonstration. Thus and thus only is the childlike assurance maintained and augmented. On page 297 of Science and Health Mrs. Eddy calls attention to the naturalness and necessity of that divine order in which belief grows into faith, and faith into the understanding of Truth whose fruitage is joy and peace,—

> That blessed mood
> In which the burden of the mystery,
> In which the heavy and the weary weight
> Of all this unintelligible world
> Is lightened.

There are yet other glories and gladnesses of the childhood faith which warrant the Master's commendation. Its affection is unhampered by distrust and fear, it does not need to unlearn all the burdensome impositions of false belief; its expectancy of good has not been interdicted by subservience to the cruel fixedness of so-called mortal law, and its spiritual intuition has not been snuffed out by the dogma of a consummated revelation. These fragrant qualities of the faith of a little child which, as Jesus said, gives sure and sweet entry to the better land,—these all are to be regained, established on the foundation of spiritual understanding, where they shall bloom yet more abundantly in the mature life, until every Christian shall be known as

> One in whom persuasion and belief
> Has ripened into faith, and faith become
> A passionate intuition.

JOHN B. WILLIS.

Letters to our Leader.

Rochester, N. Y., February 2, 1906.

My Beloved Teacher, Leader:—Thank you for the letter with its illuminating comment on The Rock, received a couple of days since. I hesitate lest I intrude on valuable and invaluable time, but I think you will be interested in the letter which I enclose. I am to lecture in Bradford on Sunday, February 11, in the Universalist church, and the pastor gives me this kind invitation.

Faithfully and lovingly in Christ, in Science,

ARTHUR REEVES VOSBURGH.

[The following is a copy of the letter referred to by Mr. Vosburgh. It expresses a fine Christian brotherliness which does credit to the writer.—EDITOR.]

Bradford, Pa., February 1, 1906.

Rev. Arthur R. Vosburgh, Rochester, N. Y.

Dear Sir and Brother:—I am advised that you are to speak in this city on the 11th of this month. I am pastor of the church in which you speak. I cordially invite you to occupy my pulpit at the regular evening service, 7.30, preaching or speaking on any subject you may choose, knowing that you have entire Christian liberty. I do not invite you out of mere courtesy, but I urge you to accept.

With kindest regards, I am yours

Very cordially,

R. S. KELLERMAN.

Burns, Ore., January 4, 1906.

Mrs. Mary B. G. Eddy, Concord, N. H.

Beloved Leader:—Though I have never seen you, your works have shown me the Father, and I wish not to forget to be grateful. I did not believe in the Bible, nor in the works of our blessed Master, until you, his follower, obeying his command to do the work he left his followers to do, opened to me the Book revealing the nature of God in His perfect and indestructible man. I desire especially to thank you, most worthy Leader, for your article in the *Sentinel* of July 1, 1905, where you bring to our remembrance, that God "will bless all the inhabitants of the earth." With loving care I daily remember this and have proof that it is done. To be a willing and obedient helper in the household of faith is my prayer.

Sincerely yours,

SARAH D. HILL.

Englewood, N. J., January 29, 1906.

Beloved Leader:—At Christmas time our Sunday School children proceeded in a body to the home of the Day Nursery,—an institution maintained here by joint effort of all the churches, for "helping people to help themselves,"—and, on arrival, after singing several hymns from the Christian Science Hymnal, they presented each of the forty nursery children who were there, with a toy and a well-filled Christmas stocking. Believing that this instance of thoughtfulness for others, on the part of children trained under your teachings, would interest you, the members of this church, assembled recently in annual meeting, voted that you be informed of it, and this very pleasant task was assigned to the writer. The rector of the Episcopal church a week later invited our Sunday School to join with his and other schools in a choral service at his church. The children are rejoicing in the privilege of adding their share to the monthly contributions of our members to The Mother Church Building Fund, for which our Thanksgiving offering this year was something more than seven hundred dollars, making over two thousand dollars for the year, and above three thousand dollars thus far.

Another blessing was ours four and a half years ago, when we had the pleasure of building here a Christian Science church, the first of a great many to be erected in this State. It was soon dedicated, free of debt, and not long thereafter, some of our members, encouraged and aided by the others, withdrew and, joining friends in their own town, near by, started another church society, which has since delighted us all by its healing work and consequent large growth.

In closing may I convey to you, as best I can, some expression of the deep love and boundless gratitude of our members toward the one who has given to them and to the whole world the greatest prize that has been brought to this earth in nineteen hundred years. Nor are we unmindful that our indebtedness to you can in no measure be canceled by words, and we pray therefore that our works may be our witness.

Sincerely and reverently,

WM. A. CHILDS, *President.*

Digitized by Google

Hamburg, Germany, January 18, 1906.

Mrs. Mary Baker G. Eddy.

Beloved Leader:—Having read your article in the *Sentinel,* we, a few loyal Scientists in Hamburg, Germany, meeting in the parlor to read the Lesson-Sermon each Sunday, want to show our gratitude to you for all the blessings received from your revelation of the truth, by sending along with this one hundred and fifty marks for The Mother Church. We have of late started fortnightly Wednesday evening meetings, and have had some good healing, which fills us with happiness and gratitude; and though at present Christian Science seems to progress very slowly, we are hoping for better results, knowing that all space is already filled with divine Mind. It is the truth that made us free, and we thank you from the depth of our hearts for all you have done for us and for all mankind. Yours lovingly and gratefully,

MAGDALENA FLEMING.

Kansas City, Mo., January 28, 1906.

Mrs. Mary Baker G. Eddy,

Pleasant View, Concord, N. H.

Beloved Leader:—May the officers and teachers of Second Church of Christ, Scientist, Kansas City, Missouri, intrude upon your precious time just long enough to give you their heartfelt thanks for the wonderful foresight and great love that gave to humanity the much-needed lesson in honesty and purity of thought expressed in the article, "Christmas for the Children," in the *Sentinel* of January 6. During the past year our Sunday School has grown rapidly, the membership having more than doubled. Including remittance just made to Mr. Chase, we have sent to The Mother Church Building Fund four hundred and sixty-four dollars and forty-seven cents.

Our only desire is that we may, in humility and love, so point the way that these little ones may be worthy the great work that is before them.

With deepest gratitude and love,

VIRGINIA S. HOEFER, *Superintendent.*

Boston, Mass., January 14, 1906.

Mrs. Mary Baker G. Eddy,

Pleasant View, Concord, N. H.

Beloved Leader:—May I open my heart to you in gratitude for your recent articles, "Christmas as in Christian Science" and "Christmas for the Children," which met my thought precisely, and I am sure that of thousands of others who are weary of the material giving and receiving at Christmas time which mean nothing. We in Christian Science, who through you are learning the real meaning of an "eternal Christmas," are ready and waiting when your message comes.

Let me add, dear Leader, that through this blessed Truth, Christian Science, I was healed nine years ago, in one week's treatment, of three (so-called) incurable diseases, and have had to ask help but three times since, and each time was healed in one treatment,—enjoying perfect health all these years, whereas hundreds of dollars a year and no relief was the rule formerly. This, however, is as nothing compared to the spiritual regeneration which brought my forsaken Bible into daily use,—not just to look upon, but to use practically, as you have taught us in our priceless treasure, "Science and Health with Key to the Scriptures." Knowing that you live in His presence, I am

Gratefully your student's student.

MRS. JENNIE M. DELLANO.

Admission to Membership.

The next admission of candidates to membership in The Mother Church will be June 5. Applications must be in the hands of the Clerk on or before May 14.

Testimonies of Healing.

From early girlhood I was considered an invalid, having been injured by a hard fall while playing. The pain was intense for some time and for several hours I was unable to walk or stand alone. Later, a growing weakness of the back accompanied with sharp pains alarmed my parents, who called a physician, and he pronounced it spinal trouble. Then followed nearly twenty years of increased suffering, at times very severe. The spasms in my back had become so intense as to cause a depression the size of one's hand; this felt like a fire burning night and day. As years went by and I became a wife and mother my suffering increased. Everything that medical skill could do was done, but finding no lasting benefit from anything I lost all hope of recovery.

When Christian Science found me I was under the doctor's sentence that if I lived the week through I would become entirely helpless, not able to move hand or foot. My husband was a traveling man, and being urgently called home, he met an old friend on the train who asked why we did not try Christian Science. The reply, We know nothing of it, was followed by a brief explanation of its healing power and the benefit his family had received. This inspired my husband with new hope, and on his arrival at home he called on a practitioner, who recommended our getting Science and Health, which we did, but ignorance and the prejudice of old education produced such fear that I hid the book under the covers of the bed whenever the children came into the room, fearing that it was not of God and would injure them. God's dear love was, however, more potent than these foolish fears, and the first day I read from its sacred pages I was convinced its teachings were the same truths as Jesus Christ had taught centuries ago. When I had read a few pages I reached out and threw my medicine from the open window at the head of my bed. I then turned back to the book and began reading again, when, lo, the Christ-idea dawned upon me, and I was healed instantaneously.

I first noticed the spot in my back cooling, and soon I got out of bed. I continued to read eagerly; I felt as if I wanted to devour the healing truth, and drank it in as a thirsty plant does the gentle rain. When dinner was prepared I walked out and ate a hearty meal with the family, to the amazement of all. We shall never forget what a joyful meal this was. How we did thank God for Christian Science!

As year after year has gone by, till twenty years have passed and the healing has remained perfect, I have grown to thank God with deeper sincerity that one brave woman was found pure enough to bring forth this Christ-healing again, to remain forever among men and to save suffering humanity from all disease and sin. My constant prayer is to so grow in humility and unselfish love as to become fully possessed of that Mind which was in Christ Jesus, and to reflect, as does our beloved Leader, the divine Love that heals.—MRS. PHEBE L. HAINES, Fairmont, Minn.

From childhood I was subject to fainting spells, and from about ten years of age until I was healed through Christian Science, six years ago, I could not see, hear, or even think about disease or accidents of any kind without fainting, and I would not feel like myself again until the next morning. When about thirteen I commenced having trouble in breathing, and after any exertion, such as climbing stairs, trying to walk rapidly, or if I was startled, it was impossible for me to lie down and sleep. Many nights I had to sit up all night, struggling for breath, my heart beating as though it would burst. My left arm had a habit of falling by my side every now and then, and the pain and great discomfort in the shoulder seemed almost more than I could bear. Finally, after a slight attack of the grip, my throat became

Digitized by Google

so very sore that I went to a physician, who, after treating me for some time, said that I was in a very serious condition, and that I must have an operation performed. I went to another physician, and after several months of treatment the trouble continued just as bad as ever. Soon after this, an old friend of the family, who was an expert diagnostician, examined me carefully, especially my heart, and said that he would not take my case under any consideration. He told my family that my condition was most grave, and gave them the impression that little could be done for me. He has since told them candidly that he considers a miracle has been performed in my case, for at the time when he made his diagnosis, six years ago, he felt that no power on earth could save me, as the small arteries near the heart were hardening, and that I was liable to drop dead any moment. When shown that I could now run up and down stairs freely, he said there was no need to make any examination to see if I was really healed, for that was proof enough. One person, who wished to inquire very closely into my case, questioned the doctor as to whether he might not have been mistaken in his diagnosis, but he said he could not have been, for he had diagnosed the case a number of times in the hope of finding himself wrong, but it was all too apparent; that he had diagnosed several hundred such cases in large hospitals in America and Europe, and knew the disease too well to have made any mistake, much as he was puzzled to understand how the case had been healed.

This healing was accomplished almost entirely by faithfully studying "Science and Health with Key to the Scriptures" by Mrs. Eddy, though some assistance was received from Christian Science practitioners. Most of my ailments were relieved almost immediately; one or two, however, were more obstinate and did not vanish absolutely for several years, although much abated, but to-day I am a thoroughly well woman. A troublesome skin disease which I had had from childhood, and which would break out in different parts of the body, leaving a purple scar, disappeared within one month from my hearing of Christian Science. It has never made its appearance since and every scar has also gone.

MISS MARY E. CHAMBERLIN, San Jose, Cal.

It is over three years since I began to investigate Christian Science, and this is the first time that I have ever written anything concerning my healing through its agency. For about five years prior to the time that I became interested in Christian Science, I was greatly troubled with indigestion and bowel trouble of more or less severity. This trouble I tried to cure by all kinds of medicines, but with no lasting benefit. During five years I had two attacks of typhoid fever, and according to medical opinion my chronic ill health was due to these attacks, and I kept getting worse all the time. More ailments were added to the case, until I finally could boast of dyspepsia, chronic appendicitis, and bowel trouble, also tuberculosis of the bones. Life was becoming more gloomy to me every day, and I had very little hope of ever being well again. I had taken so much medicine and it afforded so little relief that I had practically lost all confidence in it.

As we had an old friend who was a living example of what Christian Science could do we thought much about trying it, but I was very much prejudiced against it. However, we decided to give it a trial. As the doctors had given me but very little hope of being any better I was ready to try anything. We secured a copy of "Science and Health with Key to the Scriptures," and the services of a practitioner in a neighboring city.

For many months previous to this time, which was about February, 1902, I had not eaten a meal which did not distress me. The first change we noticed after beginning treatment in Christian Science was that I could eat anything and everything without any suffering whatever. This was indeed a blessing and how thankful I was to God and to Christian Science, that through Mrs. Eddy's book I had at last found the way to recovery. During the first few weeks I studied the text-book a great part of the time and was much surprised to find therein statements that I could see were facts almost as soon as I had read them. At the end of a month's time the stomach and bowel trouble had all gone, and all that was left was a large swelling on the under side of my left leg near the thigh. It was about a year and a half before this was entirely healed.

When the healing was complete my thankfulness to God and to Christian Science was without limit. I know that I have poorly expressed it, but I feel that my daily life, now that I am free, can bear witness of the thankfulness that fills my heart. All honor is due to God who is able to deliver us from all our diseases, and to our Leader who teaches us that true way which bears out all the promises taught in the Bible.—S. J. FULLER, Minot, N. D.

[Translation from the German.]

A few years ago I was very ill with appendicitis, and the best care under the constant supervision of the physician brought no change for the better. One evening, when according to the physician's verdict I had but a few hours to live, and relief through an operation was doubtful on account of lack of strength, we called, with the knowledge of the physician, for Christian Science. A practitioner through whom many had been saved, was telegraphed for, and came by the next train.

The disciple of medicine and the disciple of Christian Science met at my bedside. The doctor asked that, as a friend of the family, he might be permitted to call the next day to convince himself of my condition. He came, and at every repeated visit he was more and more astonished to see how quickly I recovered. I am healed, and I now understand the word healed as meaning sanctified, made better, wiser; clad with the armor of salvation.

I rejoice that now I myself may be an instrument of good, I may preach the gospel, and heal the sick, in obedience to Jesus' command. I am a member of the Christian Science church in Denver, Col., and above all an ever-grateful follower of our revered Leader, who has illumined anew the path that Jesus pointed out to us.

Every day I thank God for Mrs. Eddy's splendid books, Science and Health and "Miscellaneous Writings."

BERTHA SCHMITZ, Denver, Col.

I suffered for years with dropsy caused from valvular heart trouble. I had consulted a number of physicians and they agreed as to the nature of the disease. I was under the treatment of three of the best that I was able to employ in this locality, and all said there was nothing that would cure me. I also took treatment from a specialist for eight months. This treatment was very severe,—the water would be drawn off, but would come again. I became so weakened that I was forced to discontinue this treatment, as there was not a day passed in which I had not one or more fainting spells. At one time I was unconscious for quite a length of time and cold for two hours. The physicians thought I might be somewhat relieved by living on a level with the sea, so we sold our home in Boise, Idaho, and went to Portland, Ore., and from there to the coast. I remained at the coast one summer and then returned to Portland no better and greatly discouraged. It had come to a time when I felt that nothing material could give me any lasting relief from suffering. I had heard of Christian Science, and as a last hope I turned to it. The help came quickly, for after the first treatment I felt relief that I had not had before, and at the end of two weeks I discontinued treatment and knew that I was pefectly healed.

It is about two years since my healing and there has not

Digitized by Google

been a sign of any return of the disease. I have also returned to my old home in Boise and now live here with not the slightest bad effect from the climate,—a thing that my physicians said I could not do. After my return to Boise, my husband met a physician from whom I had taken treatment for a year and a half. He asked how I was and my husband told him that I was now perfectly well and had been healed by Christian Science. His answer was, "I am glad to hear it; that was more than I could have done." I met the druggist who had put up my prescriptions and he expressed surprise at my changed appearance and said there must be something in Christian Science, as he had never expected to see me alive again. The druggist, as well as my physicians, treated me with great kindness and sympathy, and I shall always feel grateful to them for their kind efforts in my behalf.

Through Christian Science I know that I have found the great Physician, and my prayer is that all who suffer may be led, as I have been, to the Christ-truth that not only saves the sinner but heals the sick.

MRS. F. M. POWELL, Boise, Idaho.

Although I did not come to Christian Science for physical healing, I have benefited so much in health, and in other ways, since entering on this wonderful new life, that I would be ungrateful indeed if I did not express my thankfulness for it. By means which would be deemed miraculous without some understanding of Christian Science, I have been enabled to cast off many physical bonds and infirmities, which, under the old thoughts, were year by year getting me more firmly in the toils; and though now a good few years over the half century, I find myself not only enjoying a full renewal of health, but in a measure quite rejuvenated, having gained "the freer step" and "the fuller breath" which are characteristic of the true sense of Life.

At the time I first heard of Christian Science I did not count myself an invalid, except on occasions; but I know now that I was, to sense, the veriest slave to many infirmities, and that every year was adding to my thraldom. Bronchitis, lumbago, rheumatism, each claimed me as its victim, and so frequently that I was seldom without one or another of them; while other infirmities, such as failing eyesight and getting out of breath on the least exertion, were daily becoming more and more troublesome. In this miserable state I lived, and was content in a way, flattering myself with the delusion that all these ailments were dispensations of Providence, and that, as such, it became me to bear them with resignation, and even with cheerfulness.

As children we have all, no doubt, had many a merry laugh at our sailor friend Sinbad, with the old man of the sea on his back; and in graver moods, when reading Bunyan's famous allegory, we may have wept over poor Christian, trudging on his way to the heavenly Jerusalem with that big pack of sins on his shoulders; yet deluded mortal man, with a load of physical infirmities burdening him, is a far more laughable object than Sinbad, and far more to be pitied than poor Christian. That is how my former infirmities now appear to me. Aforetime they seemed to be very real indeed, but on the day that I first heard of Christian Science the scales began to fall from my eyes. In the light of the truth which had dawned on me, all my ailments and infirmities began to disappear, one by one. Even bronchitis, which had seemingly held me in its grasp for twenty-three years, has now lost its power over me, although not without a struggle on my part. In that Armageddon, as I may call it, victory for a time seemed to incline to the enemy, until a kind friend came to my rescue. As before the attack I had been *fearing* it would come, I was not holding the right thought to resist it when it did come; and in the struggle which ensued my resistance was weakened by a feeling that there was error somewhere in my handling of my own case. My kind helper at once showed me where I had been at fault—*first* in looking for an attack of bronchitis as something dependent on weather conditions, and secondly in thinking to destroy it by declaring only a part of the truth; because, if God is All in all, as every professing Christian is ready to declare, then bronchitis has no reality, and its false claims are already destroyed, the work having been done by omnipotence from the beginning. Under the unerring searchlight thus brought to bear on it, the evil called bronchitis simply faded away, showing that it had no existence except in mortal mind.

As now seen, life was not worth living in the old thought, for it was not life at all. In the revelation of Truth given to us by Mrs. Eddy in that wonderful book, "Science and Health with Key to the Scriptures," we are taught to understand Life aright. It tells of the glorious inheritance which belongs to every one of us, and gives bright glimpses of the spiritual idea which lights our path and makes all things new.—JOHN SCOTT, Edinburgh, Scotland.

About the year 1885 I began to have medical treatment for a stomach trouble which the doctor diagnosed as ulceration of the stomach. In 1893 I consulted a prominent physician, who gave me a thorough examination, after which he declined to treat the case, saying that it was incurable. In 1894 another doctor said I was incurable, and that my only relief would be in a climate of even temperature. In December, 1900, an operation was performed which the doctor said would cure me; but I was not cured by it, and continued medical treatment.

In all, up to October, 1902, I had been under medical treatment for about eighteen years, and was treated by thirteen different doctors.

In July, 1903, I began Christian Science treatment, continued it for less than three months, and was completely healed. Since then I have been in perfect health, eating everything I desired. My gratitude for Christian Science is unbounded.—MRS. RACHEL BARRETT TAYLOR, Joliet, Ill.

I wish to give my testimony in loving gratitude for what Christian Science has done for me. It is over a year since I first heard of it, and through the reading and study of Science and Health, and the help of a practitioner, I have been able to overcome a great many maladies. For eight years I was under a physician's care, taking medicine and having regular treatments from him. I could not walk more than a few blocks without suffering severe pain, and the physician said I could not get well but by an operation. About that time I heard of Christian Science. I investigated it, and learned that divine Love would heal me. I consulted a practitioner, and now I can walk any distance without suffering or pain. I have not taken a dose of medicine since last August. I feel well all the time. I wish I could tell all I have gained from the reading of Science and Health by Mrs. Eddy. It helps me both spiritually and physically. I am now perfectly well, and my heart is filled with gratitude to dear Mrs. Eddy for the little book she has given to the world to help humanity.

ROSA WEIL, Dallas, Tex.

About three years ago I was led to accept the position of industrial teacher at a hospital for the insane, at which time I knew but little of Christian Science and was also ignorant of the mental perils (I can think of no other word strong enough) which lay in my pathway. I soon found myself battling against conditions which I but vaguely comprehended, for though the medical faculty were very hostile to Christian Science, or to their concept of it, very little was openly expressed by them. Being isolated from human help, I was forced to turn continually to the Bible, to Science and Health and Mrs. Eddy's other works, also to the

Digitized by Google

Sentinel and *Journal*, and from them received great inspiration.

By committing to memory passages from the Bible and Science and Health each morning before leaving my room, my troubled sense gave place to a heavenly harmony which prepared me for the day's work. As my work led me through long halls and required the frequent locking and unlocking of doors, these moments gave opportunity for repeating, many times over, the passages learned in the morning, and I realized that God "fills all space" (Science and Health, p. 331), also David's words, "Be strong and of good courage, . . . fear not, nor be dismayed: for the Lord God, even my God, will be with thee; he will not fail thee, nor forsake thee."

I look back over this period with great gratitude and renewed courage, convinced that there can be no inharmony too great to be overcome with the truth, and I cannot speak too strongly concerning the benefit received from committing to memory passages from the Bible and Science and Health. It was at this time that I was enabled, with a little help, to overcome cracked and bleeding chapped hands. It was not for physical healing that I came to Christian Science, but to rid myself of the demon of incessant worry which had become a lifelong habit, but with the understanding gained from the study of our text-book I could no longer find any occasion for worry. Through the daily use of the Bible Lessons from the *Quarterly*, it has become to me the living Word and the Christ an ever-present "Comforter."

I wish to express my heartfelt gratitude to Mrs. Eddy, which is daily increased as I perceive the courage and high conviction which has been hers in giving Christian Science to the world. My gratitude to God cannot be expressed in words, and my one prayer is for understanding that I may reflect Truth.—ANTOINETTE CHOATE, Prospect Park, Cal.

Seven years ago a dear friend, seeing my need, loaned me a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy. After reading the book, I felt that it was every word true, as it was all in harmony with the Bible, and I wondered why some one had not discovered it before. Until I attended a Christian Science service, I thought that the book was used by Scientists in place of the Bible. I came home from that service, took my long-neglected Bible from the shelf, and commenced to read it with understanding. I saw so clearly the difference between the law of God and the mortal belief, that I was healed of heart trouble, constipation, dyspepsia, rheumatism, and tonsilitis of twenty-five years' standing, also severe headaches, and a sense of being tired all the time, from which I had suffered seven years. A very quick temper has also been greatly overcome. I am truly grateful for the physical healing, but for the spiritual uplifting which has come to my consciousness I can only say, Thank God that there was one who had the moral courage to be obedient to the teachings of Christ Jesus the Wayshower, and who, seeing the world's great need of this truth, went up into a mountain (a high and holy thought); and because of her love and compassion for poor suffering humanity, God chose her as the one best fitted to bear this precious message to mankind.

As one of the beneficiaries of Christian Science I can truly say that I have found in it my Saviour. I am grateful for all that has come to me through Christian Science. I have nearly all of our Leader's writings, and it is my earnest desire that I may ever be obedient to their teachings.

MRS. CLARA A. GOULD, Melrose, Mass.

For many years I had been a great sufferer from sciatic rheumatism, being perfectly helpless at times. About six years ago I had an unusually obstinate attack, when my physician, a good Christian man, said he could do nothing more for me except to deaden the pain with morphine. I then turned to other remedies, but they did me no good, so I gave up all hope of ever being anything but an invalid, —a drag upon my dear boys, who after working hard all day would divide the night watches, as I felt I could not be alone. About this time a dear old friend, past seventy years of age, came to see me. She had been healed in Christian Science, and advised me to try it. That same evening I was helped into the buggy and drove three miles over very rough prairie to see a practitioner, to whom I told my errand, saying I had no faith but I would try it, and I hoped she could cure me. Her reply,—"I cannot cure you, it is God who heals,"—rather vexed me, as I had thought myself a Christian for many years and had prayed earnestly to be healed, without having had my prayers answered, when like a flash came the thought, You did not trust God to heal you, for while you were humbly asking health you held the bottle ready to take another portion of medicine. How blind we are!

Suffice it to say I left that house, after the one treatment, able to walk without the cane and crutch I had used to get to the door from the buggy, and after four weeks' treatment, nearly all of which was absent, I was perfectly healed and have remained so. I began immediately to study Science and Health and have found in it the truth as taught by Christ Jesus. I have had many beautiful demonstrations in these six years; one last winter which I consider very remarkable. While fixing a window one day the sash fell on the little finger of the right hand, injuring the bone at the middle joint. I declared the truth immediately, though the pain seemed intense, and in a short time all pain ceased. The finger healed in a very short time, without enlargement of the joint, or stiffness.

I am striving each day to learn more of this blessed truth. We are many miles from other Scientists, and I have only been able to attend meetings twice, but now, as the members of my family are becoming interested in Science, I hope to go often to the nearest church, a drive of eleven miles over rough bleak prairie. What a feast it will be, how I look forward to it.

With thankfulness to God and love for our dear Leader, I am most gratefully her humble follower.

MELVINA STORY, Newark, Neb.

[Written for the *Sentinel*.]

Perpetual Christmas.

ALICE MORGAN HARRISON.

NOT just one day of jubilation!
Not just one burst of long-hushed praise!
Joy knows no time-bound limitation,
Love knows no hush, nor fixed days.

Not just this time of fitful giving!
Not just one day of bounteousness!
In measured love were measured living,
The one true Giver ne'er gives less.

Not just one day named for the Master!
Not just a memory of the Star!
The Wisemen's hearts had beat no faster,
Had they not seen it from afar.

Not ours a joy sealed till to-morrow,
Nor love that knows a yesterday,
Nor gifts that must their impulse borrow,
The Christ has said, "I am—alway!"

Alway!—The Christ-tide knows no ceasing,
The Star still shines! The angels' song
Rings out, with joy each day increasing,
Since all days to the Christ belong!

Digitized by Google

From our Exchanges.

Briefly, then, we find happiness to be normal for man, and the desire for it to be a law of his being and God-bestowed; we find mortal existence to be a failure so far as any permanent happiness is concerned, and to ultimate in defeat and death; we find that spiritual existence, though held merely as a future possibility, has given men courage and constancy, through ceaseless endeavor, to strive to make real, to some extent at least, a spiritual existence here and now, in flat defiance of material concepts and in the face of all logic based upon them. Confessedly, it is the only possible existence that can, even conceivably, give man what he rightly feels to be inalienably and eternally his own.

Why, then, should we attempt to saddle Deity with the creation of a state of existence for man which is a proven failure, when at the same time we ascribe to God the creation, for man, of a state of existence which is a perfect success? Why not frankly admit that material existence is not a real state of existence at all, but false and unreal; that there is, and can be, but one state of existence,—spiritual, since God is spirit; good, since God is good; perfect, since God is perfect; eternal, with the eternity of God?

Surely "in the bright lexicon of" God "there's no such word as fail." What He created perfect abides perfect. He created naught imperfect and He is the sole creator. Surely God created nothing unlike himself. Let us turn to the Eternal Goodness which alone is I AM to all generations, and, thus turning, humbly, joyfully, reverently, see all evil, like the dreams of the night, disappear in the clear shining of omnipotent Love. ARTHUR CHAMBERLAIN.

The Christian Register.

The preachers outside of the pulpits should be very careful to preach good sermons, for their congregation is very large, very observant, and very critical, and furthermore, in very great need of good preaching. The most effective "preachers" outside of the pulpits are not the ministers in the interval between Sundays, although they can do a great deal of good or evil during that time, but the people who have taken the name Christian and are going about among men, and men by the thousands are watching them and being influenced by them. Every layman is a preacher more effective sometimes than the minister himself.

The Universalist Leader.

The American Revision makes a decided change in the familiar verse, "Suffer little children to come unto me." Instead of saying, "For of such is the kingdom of heaven," it says, "To such belongeth the kingdom of God." That suggests the inalienable right of little ones in the kingdom of Christ. It is theirs as a part of their birthright. To Jesus, and possibly partially at least to Mary, came early this consciousness of divine life over and above and within his own, and his response was prompt and complete.

The Congregationalist.

There He stands, in the midst of all the creeds and the churches, and the confusion of old controversies, assuring us, with the serene confidence of one who knows, that God is, and is good, and intends good here and hereafter. That is the substantial basis both of faith and joy.

DEAN HODGES.

The Churchman.

One quality of the best things is their diffusive value. The more love, wisdom, and spiritual energy of any kind one accumulates, the better for every one with whom he comes into relations. One cannot lose by giving the best things, nor can any one rob another by taking them.

The Christian Register.

THE CHRISTIAN SCIENCE TEXT-BOOK.—"Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing all the By-laws to January 1, 1906, of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to The Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of The Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to The Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number, or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By Hon. WILLIAM G EWING.

Works on Christian Science

Written by the Author of the Christian Science Text-book, MARY BAKER G. EDDY

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Enlarged and Revised, 1902. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid $3 18

Two to twelve books (cloth only) to one address, each, prepaid 3 00
Twelve or more books to one address, each, prepaid 2 75

Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid 4 00
Twelve or more to one address, each, prepaid . . . 3 75

Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid . . 5 00
Twelve or more to one address, each, prepaid . . . 4 75

Levant, divinity circuit, leather-lined, round corners, gilt edges, silk-sewed, heavy Oxford India Bible Paper, wide margins, each, prepaid 6 00
Twelve or more to one address, each, prepaid . . . 5 75

Orders for Science and Health, in lots of twelve or more to one address, may include any or all the different styles of binding.

A COMPLETE CONCORDANCE to Science and Health with Key to the Scriptures, 595 pp., 10 x 7. Bound in cloth, marbled edges. Price, single copy, prepaid . . $5 00
Twelve or more copies to one address, each . . . 4 50

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth), each, prepaid 2 25
Twelve or more books to one address, each, prepaid 2 00

Morocco, limp, round corners, gilt edges, convenient for pocket, each, prepaid 4 00
Twelve or more to one address, each, prepaid . . . 3 75

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5 00
Twelve or more to one address, each, prepaid . . . 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 36 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

National.

Some recommendations by the committee which investigated insurance matters in New York State are,—

New policies may not be written by a life insurance company beyond $150,000,000 in a single year; limit of salary for presidents of life insurance companies is placed at $50,000 per annum, and must depend upon the earnings of the company; standard forms of life insurance polices are provided, and a company can issue but one style of policy, straight life or conditional; fraternal societies may not hereafter be chartered in that State; borrowing from his company by an official is prohibited, and participation in syndicates for the purchase and sale of securities is also forbidden. Infringement of this provision is made a misdemeanor; mutual corporations must deposit $100,000 with the superintendent of insurance.

In connection with the visit to Wellesley College of the Chinese Commissioners who have been in the United States studying political, industrial, naval, military, and educational methods, announcement was made by President Caroline B. Hazard that the Board of Trustees had recently voted to establish in the college three scholarships for Chinese women who should be duly qualified for study.

There will be an international yacht race in American waters next September, off Marblehead, under the auspices of the Eastern Yacht Club. The trophy will be offered by that club and will be known as the Roosevelt Cup, permission having been obtained from the President to use his name for the trophy. The contesting boats will be three German and three American yachts, the winner to take the cup.

The Senate of South Carolina, by a vote of 21 to 14, has decided to strike out the enacting words of the Morgan bill, providing, among other things, for the abolishment of the State dispensary, which recently passed the House of Representatives by a vote of 63 to 47. The action of the Senate leaves the dispensary situation practically as it was.

Foreign.

In 1899 the Geographical Congress, which met at Berlin, appointed a committee to prepare and publish a bathymetric (sea-depth) map. As the necessary funds were not available, the Prince of Monaco came forward and assumed the expense connected with the project. The map has just been published and a copy was recently presented to the Académie des Sciences. It shows the present knowledge of ocean depths, outlines or profiles of sub-marine lands, all the data being based upon the soundings so far taken by hydrographers and oceanographers of all nations. This map discloses many features of resemblance between the earth above and below the surface of the water—both possessing hills, plains, mountain peaks, valleys, ravines, etc. The sea-floor is covered mostly with mud or ooze instead of sand, red, green, and blue. This is composed partly of alluvial deposits from rivers, perished organic sea-life, and some volcanic material. In the Atlantic Ocean at one point the temperature, which was sixty-eight at the surface, had fallen to thirty-eight at a depth of 6,562 feet. Below that depth the temperature falls only slowly, being practically uniform and little affected by changes of season.

The Nile-Red Sea Railroad, from Atbara to Suakin, was formally opened by Lord Cromer on the 27th ult. in the presence of many official guests. The 325 miles of line have been laid across the desert in less than sixteen months of actual construction work. Practically every ton of new material had to be brought from England or countries no less distant.

The mill owners in the English Northern Counties have granted the cotton operatives an increase in wages amounting to two and one-half per cent, commencing with May. The increase will affect 150,000 operatives. This is the first time in thirty years that they have been placed on the full wage standard adopted fifty years ago.

M. Tanno, Third Secretary of the Japanese Embassy at Paris, arrived at St. Petersburg last week to reopen the Japanese Legation, which was leased for a long term just before the outbreak of hostilities, and was in charge of the American Embassy during the war.

It is understood that the Canadian Pacific Railway Company has decided to plant large quantities of young trees at various points along its lines, so as to be able in future to supply its own ties and fence posts.

Industrial and Commercial.

In all the New York diamond cutting and polishing factories a higher standard of wages is to be granted, and for the first time in ten years apprentices will be received, under the terms of a year's agreement signed last week by committees representing the Diamond Manufacturers' Association of America and the Diamond Workers' Protective Union. Under the new contract the two hundred and sixty polishers will receive an advance of four dollars a week, so that with two or three exceptions the weekly salaries will range from thirty-four to sixty dollars. When apprentices were barred in 1895, by an international agreement of the labor unions, there were practically no Americans who understood either the art of cutting or the art of polishing the gems. This left the industry in the hands of skilled workers, nearly all of whom have come from Antwerp and Amsterdam.

The *Northwestern Miller* gives figures showing the consumption of wheat by the flour mills of the Northwest for the year closed. Minneapolis used 64,647,000 bushels of wheat; Duluth, 3,569,000 bushels, and the fifty-three outside mills reporting to the *Northwestern Miller*, 34,030,000 bushels. The total amount of the Northwestern wheat crop consumed by those mills amounted to 102,246,000 bushels. Taking the Government figures for the total crop of the three Northwestern States, these mills ground 53.20 per cent of the wheat raised.

A valuable deposit of graphite has been discovered at French Vale, Cape Breton, at a depth of twenty-five feet in a thirteen-foot seam. Samples were found to contain seventy per cent graphite, an unusually high percentage. The location of the deposit is ideal. The greatest deposit of graphite is found on the Island of Ceylon. The Ceylon product sells in New York at $120 a ton. A number of minor deposits are found in America, but both in quality and quantity are inferior to the Ceylon article.

A solar motor erected last summer at Willcox, Ariz., has proved a success. It operates a twelve-horse-power engine, which pumped a four-inch stream of water from a depth of forty-two feet. The safety-valve was so set as to blow off at one hundred and fifty pounds pressure, and the sun's rays were so concentrated by the great circular mirror that the pressure was steadily maintained.

The *Lancet* of London says whereas one hundred years ago the rustling of a silk dress was attributed to the high quality of the silk, it now sometimes rustles because of the thirty-six per cent of salts of tin incorporated into the fabric. Epsom salts give weight to flannels, and cotton filled with China clay, starch, and size passes for table linen.

Inability to accept new contracts for steel to be delivered at a specified time has made it necessary for the United States Steel Corporation to decline new business amounting to thousands of tons. The orders now on the books are nearly eight million tons.

The recently organized American Smelters' Securities Company have decided, it is reported, to build a $3,500,000 smelter at a point a mile back from Port Costa, California, and ground will be broken for the big establishment early next summer.

The world's supply of platinum during 1904 was about 13,800 pounds, 13,200 pounds of which came from Russia. The United States produced two hundred ounces, valued at $4,160; all of this came from California and Oregon.

Union carpenters of Chicago have secured an increase of wages aggregating more than one million dollars a year, through a three-year agreement with the Carpenters and Builders' Association.

Trade of the United States with Spain and Portugal amounted in the fiscal year 1905 to over $34,000,000, against less than $20,000,000 in 1895, a decade earlier.

General.

A most remarkable find bearing upon the carboniferous age was made in Number Three slope of the Upper Lehigh Coal Company recently. The miners at work in the gangway uncovered a petrified tree trunk, with roots attached. Although in blasting it was broken, a piece of the trunk three feet long, with petrified roots clinging to it, was taken to the surface intact. The interstices in the bark and grain about the heart of the trunk are clearly traced. It was found lying flat along the bottom rock, about eighteen inches below the coal seam. The elevation was nine hundred feet above the sea level and two hundred feet from the surface.

The production of aluminum in the United States has increased nearly ten-fold within the past decade. The output of 1904 was 8,000,000 pounds, as compared with 7,500,000 pounds in 1903, and 7,300,000 pounds in 1900. The industry dates its beginning from 1888, in which year the production was eighty-three pounds.

The statement is made that the Southern Steel Company will soon begin developments in Alabama which will represent an outlay of $1,500,000.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

What Christian Science is Doing.

W. D. MC CRACKAN.

No well-informed person, watching the signs of the times, can any longer afford to disregard the wonderful and beneficent results of Christian Science. The movement has long since successfully weathered the storms which in every age beset the initiation of a new idea, and is now firmly established as a religious and therapeutic fact in human experience.

In her Message of June, 1901, to The First Church of Christ, Scientist, in Boston, Mass., Mrs. Eddy quoted the saying of Agassiz, that "Every great scientific truth goes through three stages. First, people say it conflicts with the Bible. Next, they say it has been discovered before. Lastly, they say they have always believed it." To this Mrs. Eddy adds, "Having passed through the first two stages, Christian Science must be approaching the last stage of the great naturalist's prophecy." Indeed, people are already saying of Christian Science that "they have always believed it," and this acknowledgment must be exceedingly gratifying to our Leader, who is laboring to bring the beneficent results of Christian Science within reach of mankind. It may be, however, that this acknowledgment is not always strictly accurate. Those who say "they have always believed" in Christian Science may not understand the full meaning of their words, but the public interest in the results of Christian Science and in its teachings is clearly indicated by such statements. They form a welcome accompaniment to the growth of the Christian Science movement from small beginnings to its present proportions.

Christian Science has led many men and women, who were once embittered or indifferent, to search for God, and many have found Him. They have found Him to be a Father-Mother God, whom they can know, and in whom they begin to realize that they live, and move, and have their being. Instead of a man-made god with human attributes, inspiring fear, they have found a God who is Love. They have also learned somewhat of the nature of man and the universe, and of evil as negation and nothingness. This advance in understanding has rescued many lives from morbid fear and sorrow, which too often culminate in despair, disease, and death. It has helped many to realize a new heaven and a new earth, wherein reign contentment, health, and peace.

This glorious attainment of Christian Science is sufficient in itself to give it place in public esteem, but when we consider that a proper understanding of Science and Health, the Christian Science text-book, leads to and involves the constant study of the Bible as a necessary accompaniment, that it means enthusiastic enlistment under the banner of Christ, then it becomes evident that Christian Science must be reckoned among the great Christianizing movements of the age.

A movement which can make Christians out of agnostics and infidels; which leads the business man to the contemplation of the allness of God before he begins his work in the morning; which sends the mother into the secret place of the most High for help when her children are sick or refractory; which gathers the representatives of every useful profession and employment into one vast brotherhood, at the feet of Christ; which teaches all to become like little children,—as meek and humble and pure in heart as they; which reconciles races and nationalities, and purifies their ambitions and desires; which unites Jew and Gentile through a new appreciation and love for the great patriarchs and prophets, and especially for the greatest of all, Jesus of Nazareth; which makes friends of employer and employee in the knowledge that all legitimate work is God's work, and that Love presides over factories and counting-rooms, as well as over churches; a movement which is giving hope to men disappointed by the failures too often experienced in social, economic, and political reforms,—such a movement, it must be conceded, is invaluable on ethical grounds alone.

Moreover, it is accomplishing its blessed work quietly and practically, on the basis that the best way of reforming others, is to reform one's self first; *i.e.*, to stop sinning, and not merely to theorize or talk about it. Christian Scientists have learned that they can help others only in so far as they are willing to take up the cross and deny self.

Christian Science has solved the temperance question for multitudes, because it is daily destroying the seeming power of drink. It is teaching moderation in eating and drinking, without begetting any thought of abstemiousness or self-righteousness. It is placing the problem of charity on a common-sense, Biblical basis, by teaching men to give, in order that they may receive, and that they may break the bonds of the belief which holds them in poverty. Christian Science is also doing much for the inmates of prisons, preparing those who are there to be truly free when their terms expire.

The Christian Science denomination is maintaining free Reading Rooms in the larger cities of this country and abroad, and in many of the smaller cities, where visitors have quiet and comfort as they read of the good news.

Furthermore, the fact that the Discoverer and Founder of Christian Science is a woman, and that women are placed on a footing of entire equality with men in all the activities and privileges of the movement, so that they can fully develop their spiritual gifts,—this tends to solve the so-called question of woman's rights without propaganda, pronunciamento, or platform.

The very name, "Christian Science," points to a reconciliation between reason and revelation, between Science and spirituality. Its teachings show that the only true Science is the knowledge of God, which is spirituality itself. Christian Science is thus exerting an appreciable influence in hastening the trend from materialism to idealism, from physics to metaphysics, from the deceptive testimony of the five physical senses to the evidence furnished by spiritual sense, the knowledge of God, eternal Truth.

Finally, Christian Science is calling all men to obey Christ's commands, including that to "heal the sick." This call has arrested the attention of the whole world, and we are witnessing a revival of Christian healing. In a vast number of cases it has entirely superseded the administration of drugs and the manipulation of the body. Meta-

Digitized by Google

physical hygiene is liberating mankind from the horrors engendered by a belief in hereditary disease and in the germ theory of contagion, and when these beliefs have gone the way of other human theories, people will repeat that they have always believed in Christian Science.

Christian Science is waging relentless war against fear, the prime procurer of all disease,—fear of sin, sickness, and death, fear induced by a false concept of God, fear expressed in worry and anxiety. It is teaching men that if they think right, they will be well. This method of right thinking, or realizing the truth, brings not only satisfaction and happiness, not only mental and moral harmony, but also physical health, and this is the result which has most attracted public attention to Christian Science itself.

The physical healing done by Christian Science is in each case the effect of a spiritual regeneration, more or less complete. It is a sign following. No one is really healed in Christian Science without receiving a wonderful spiritual baptism. It is an uplifting, transforming process, which is not the result of any human will-power or personal control. The healing done by Christian Science is due to prayer, carried beyond mere petitioning for favors, into a realm of realization, where eternal Truth dwells alone. Christian Science blesses him who gives and him who receives. It is a benign influence, for it appeals directly to God, good, and at once relegates evil to nothingness. Furthermore, Christian Science healing has never been confined to any special class of diseases. It would be difficult to find any known disease which it has not overcome. As rapidly as supposedly new diseases are discovered, they are being healed, and it is noteworthy that in a majority of cases the patients have resorted to Christian Science only after all other remedies have failed. As a rule, such patients have no professional knowledge of their own diseases, and their statements are based upon the information supplied them by their physicians.

Every Wednesday evening, testimonies of reformation and cure can be heard in the meetings of the Christian Science denomination. Inquiries may also be made at the Reading Rooms, while the Christian Science periodicals of every issue contain numerous signed narratives telling of specific instances of healing and regeneration. Christian Science has brought joy to many hearts and happiness to many homes, and it has the best wishes of all those who desire peace and good will among men.

Mrs. Eddy, through whose lifelong labors these blessed results have been made possible, has referred to the establishment of Christian Science in the following beautiful words: "Beyond the frail premises of human beliefs,—above the loosening grasp of creeds,—the demonstration of Christian Mind-healing stands a revealed and practical Science. It is imperious throughout all ages, as Christ's revelation of Truth, of Life, and of Love, which remains inviolate for every man to understand and practise" (Science and Health, p. 98).

Christian Science is a religion of deeds, not merely of statements, and the public is interested in knowing what Christian Science is doing. May this knowledge bring happiness to many sincere searchers after Truth!

A Reminder from the Past.

ELLA D. BUSKIRK.

In reading of the persecutions suffered by some of the first translators of the Bible, and then taking a look into present conditions, we ought to be filled with gratitude for the freedom we now enjoy,—a freedom almost unknown during many past centuries of darkness. When we read of the unselfish devotion and heroic courage of such men as Wycliffe and Tyndale in bringing to the world the enlightening influences of the Bible through their great task of translating it into English, we can better realize the duty incumbent on us in this age to be faithful helpers in the work of enlightenment which was inaugurated by Mrs. Eddy, and which the study of the Bible and Science and Health is continually accomplishing.

How much more ought we to be inspired to aid in giving to humanity the spiritual understanding of the Bible as taught in Christian Science, when we consider that its first translators were only able to give, for the most part, the letter of the Scriptures. It is a significant fact that the first translators of the Bible had to encounter the tide of sectarian bitterness; and it is also a significant fact that those who were then in power in the church and in the government found that they could not stop the printing of the Bible, notwithstanding their repeated attempts to do so through the burning of many of the precious volumes near the old cross at St. Paul's, and otherwise. The bulky and costly volumes were sent to England in those days in barrels, bales of cloth, etc., in order to escape detection, but although the introduction of the Bible was watched against with vigilance it continued to spread all over England, showing how divine Mind surely works through the Word of Truth and removes all the obstructions of hate and ignorance. A deep sense of gratitude is aroused when one contrasts the swift progress of our age with the more torpid past, and we ought to gain thereby an inspiration to press on with more earnest aspirations, and take a firmer stand for the truth revealed in the teachings of Christian Science.

The Mote and the Beam.

JOHN S. CRELLIN.

The darkness in one's self must first be cast out, in order rightly to discern darkness or to reflect Light.—*Miscellaneous Writings*, p. 131.

SHALL we search for the mote, and not for the beam?
Let the mote be as big as it will!
Shall the fault of our brother unceasingly seem
To our sense like the side of a hill?
And our own dark'ning beam, like the tiniest gleam
Of the moon in the daintiest rill!

But how can I find, who myself am beam-blind,
The mote with which I'd contend?
I cannot begin by ignoring my sin—
That's a miserable means to an end!
I must first search, and see, and cast out of me,
The mote I behold in my friend.

For an error I hold, be it young, be it old,
No matter how dainty its dress,
Is a wolf in disguise, that when I would rise,
And lift myself out of distress,
Stands grimly before, aye, e'en at the door,
Preventing my road to success.

Pleasant View in Winter.

GRACE WHITE.

ON bush and tree and bare brown earth
The glistening snow the wind is heaping,
And far beyond the sloping hills
The lengthening shadows now are creeping.
From out the garden's frosty beds
No flower faces now are peeping.
Beneath its shining icy covers
The little pond is soundly sleeping.

"Undeniable Facts."

[The following excerpt is from a letter by John Brooks Leavitt, Counselor at Law, New York, published in a recent issue of *The Church Standard*. Mr. Leavitt is not a Christian Scientist, but he seems to have observed the cures wrought through Christian Science and to have satisfied himself of their genuineness.—EDITOR.]

That cures of the same nature as those related in the New Testament are performed at the present time is now so thoroughly established that no well-informed person is ignorant of the fact. I have personal knowledge of a number, which I have sifted more carefully than I am able to do with those told in the Bible.

Now what answer do our clergymen make to undeniable facts? Let me give three specimens:—

1. At the Church Club in New York, a few years ago, the subject for discussion was Christian Science, and a well-known clergyman accepted an invitation to address us upon it. Imagine our surprise when he told us that he had not come to discuss it, that he would as soon speak of the devil; that what he had to tell us was that *we must not* discuss it, that the Church had spoken upon it and we must not think about it at all. He conveniently forgot to say when and where the Church had thus spoken, and to explain what right it had to bind us, and calmly assumed that we would accept his *ipse dixit* as the voice of the Church. Think of a man in this age of the world uttering such nonsense to a body of educated laymen! I suggested that as the reverend gentleman belonged to that wing of the Church which believes in an apostolic succession, and as he himself was one of the successors, perhaps he would be good enough to explain why he did not follow Christ's injunction to his predecessors, and heal the sick as well as preach the Gospel. His reverence made no reply, left in a huff, and I heard afterwards that he complained that I had been guilty of disrespect to the clergy!

2. A bishop of our Church remarked in my hearing that he was fighting Christian Science in his diocese tooth and nail. Thereupon I asked him what he thought of Christ's grant of power to his followers, "Preach the gospel," "heal the sick." He looked at me, *and answered never a word!*

3. To one of the most eminent divines in our Church I put the question, Why do not our clergy try to obey the one command of Christ as well as the other? He replied that they are doing so by helping to build hospitals!

I do not know which I have enjoyed most, the anger of the one, the silence of the other, or the wit of the third. But these be serious things, and do not call for anger or silence or wit.

Let us face facts, all of us, ministers, doctors, lawyers. We profess to be the "three learned professions." We at least have no right to be infidels until we have investigated these things with care and without prejudice. The theory of fraud breaks down in this century as it did in the first. The theory of delusion breaks down also. When a cultured, refined, educated woman has no pain at childbirth, and within an hour gets up and goes down stairs to lunch, and informs her friends that as a Christian Scientist she had "treated" herself for the ordeal (and I personally know of such a case), it is silly to talk of fraud or delusion. Suppose it is delusion. Call it what you will, is it not a good thing? Are you doctors able to produce such results without the use of drugs? Are you clergymen able to produce such results by the use of prayer? Why, then, do you scoff and sneer at others who can and do? Are you infidels?

Please do not call me a Christian Scientist—I am only a lawyer with a sceptical turn of mind, but my training has been to face facts, and not run away from them nor decry them, nor despise those with whom I do not happen to agree.

We of the law have a very inconvenient way of extracting the truth by means of questions. So let me close my little intrusion into the discussion by putting to my clerical and medical friends two cross-interrogatories:—

1st. Do you really believe the stories of healing as narrated in the Gospels and Acts?

2d. If you answer yea, how can you consistently reject similar accounts of healing to-day, which rest upon evidence equally reliable and far easier to sift?

And if a clergyman answers, let me beg of him not to say that the Church has spoken. I want to be polite, and it will be very hard for me to keep a straight face.

JOHN BROOKS LEAVITT.

According to the Century Dictionary, science is defined as, "Knowledge; comprehension or understanding of facts or principles. Knowledge gained by systematic observation, experiment, and reasoning; knowledge co-ordinated, arranged, and systematized; also, the prosecution of truth as thus known."

From the viewpoint of the Christian Scientist there exists no incompatibility between Christianity and Science, from the fact that to be a Christian in all that it means, necessarily includes actual knowledge and "comprehension or understanding of facts or principles" relative to the teachings of Jesus Christ. It includes knowledge and understanding of God, gained by "systematic observation, experiment, and reasoning" and the "prosecution" of ascertained truths relative to God, man, and the universe, as revealed in Scripture. It is therefore seen that between Christianity and Science there exists a unity, in that the one unfolds the completeness and practicability of the other. The teachings of Jesus Christ were clear, concise, reasonable, and demonstrable expositions of Truth; therefore scientific, and consequently superior to speculative hypotheses. If the universally accepted definition of Christianity fails to recognize this correlation, it is because of the incompleteness of the definition and not because of any lack of correlation in the teachings.

Science necessarily deals with things which are, and the question then to be determined is, What is it that constitutes reality, the spiritual or the material? The materialist answers, "The material," and the Christian Scientist says, "The spiritual," and this statement from the Christian Scientist has of recent years been accepted and emphasized by many of the prominent natural scientists.

JOHN L. RENDALL.
Fort Dodge (Ia.) *Post.*

That much persecuted and maligned body of intelligent men and women calling themselves Christian Scientists are justly proud of a sermon recently preached by Rev. J. Herman Randall, a Methodist clergyman of Grand Rapids, Mich., in which he finds many reasons for commending Mrs. Eddy and her teachings, especially in her insistence upon the constant daily reading of the Bible, and in having given her disciples a means for spiritual development. Sometimes we think the constantly iterated and reiterated abuse and ridicule of the Christian Scientist is one of the best reasons they have for living. It seems strange to us, in this broad and tolerant age, to see any sect thus misrepresented and villified, and it really does us good to see a godly and earnest Methodist Christian taking up the cudgels in their defence. Surely America is big enough to accommodate all shades of belief and entitle them to a respectful hearing.—*Middletown* (N. Y.) *Times.*

We are always pleased to have one admit, as our critic has done, that even part of the teaching of Christian Science is true, especially the fact that Jesus' "chief aim was the

Digitized by Google

complete salvation of man," "not his soul only, but his body as well." This is just what we advocate, and we do not believe he could have fallen so far short of his mission as to leave mankind at the mercy of bodily suffering.

If our critic understood God to be Truth, and Christ to be the Saviour of all, he certainly would see the practical application of these words of our Master, "Ye shall know the truth, and the truth shall make you free." Can it be true that one suffering from a troublesome tooth or headache is free? Jesus made it plain that sin, disease, and death were of the devil, evil, and John said in his first epistle, "For this purpose the Son of God was manifested, that he might destroy the works of the devil." It cannot seem strange that there are some who still doubt the coming of Christ, Truth, here and now, when even John the Baptist was in doubt as to the Messiahship until the Master's works were revealed unto him.

This same truth that Jesus taught and demonstrated centuries ago is again revealed to mankind through Christian Science, and to understand this truth will not, as our critic puts it, "reduce man in his present state to a nonentity," but it will remove the "maze" or the mist, and bring to consciousness the real man—man made in God's image and likeness.

We all admit that God is Spirit, and it must surely follow that man made after his image and likeness must be spiritual, not a material, or dust man. In 1 John we read, "Beloved, now are we the sons of God, and it doth not yet appear what we shall be: but we know that, when he shall appear, we shall be like him; for we shall see him as he is." Does this not mean that in proportion as we become conscious of God as the only Life, Truth, Love, and good, we are like Him? And does it not follow that when we shall see Him as He is, we shall be like Him? Surely it cannot be true that our brother believes God would make man entirely unlike himself, when in the thirty-first verse of the first chapter of Genesis we read, "And God saw every thing that he had made, and, behold, it was very good."

FRANK C. RUSSELL.

Minneapolis (Minn.) *Journal.*

I want to say that there is power in prayer, and that we have a God who can answer prayer. I was a prisoner of the Civil War, confined in Andersonville, Ga. We had the very filthiest kind of water to drink, out of a brook over which the Twenty-sixth Alabama Regiment had its sinks built. A number of us gathered in the northeast corner of the prison and prayed to God to send better water. That same night a spring of pure, clean water broke out halfway up the hill from the brook, and we named it Providence Spring, and it is flowing to-day.

In this Anderson Prison I was taken so sick that the doctor said I would not live a half hour. I was then not quite nineteen years old. I prayed for God to make me well and He did, and I am yet alive and well and hearty at sixty-one years. There is power in prayer. JOSEPH WAGNER.

New York Globe.

Whatever may be believed about Christian Science in the form of an objection, it is at least free from the charge of inconsistency. Therefore to take a word, or partial sentence, here and there from its text-book, and construct from that a garbled and obnoxious mis-statement of its teaching—thus alleging inconsistency—is to remind one of the story of the fratricide who pleaded Biblical authority for his deed, and when asked to furnish it, pointed out a passage in Genesis which reads, "Cain rose up against Abel, his brother, and slew him," and from Luke another which reads, "Do thou likewise." ALBERT E. MILLER.

Williamsport (Pa.) *Gazette and Bulletin.*

The Reading Room Work in Chicago.

The following extract from the annual report of the Central Christian Science Reading Rooms may prove of interest:—

The total amount received for sales during the year was $27,287.10 against $22,847.54 during 1904, an increase of $4,439.56 in 1905. During this time 4,063 copies of Science and Health, 599 copies of "Miscellaneous Writings," 169 copies of the Concordance, 5,469 *Journals*, 15,093 *Sentinels*, and 16,492 *Quarterlies* have been sold. The average monthly sale of Science and Health during the entire twelve months has been 338 copies, an increase of 75 copies a month over the sales of last year. During the last six months the average monthly sale has been 388 copies.

Significant work has been done in placing the Christian Science publications in prisons, in the rooms of the Young Women's Christian Association, and in various other places where they have been welcomed. Through the work of the Committee three thousand copies of the *Boston Herald* containing an important interview with Mrs. Eddy by a representative of that paper have been distributed by the Reading Rooms. The widespread circulation of the words of our Leader may be counted as a source of incalculable good. The manager reports a satisfactory growth in the Reading Room work, a constant demand for the Christian Science literature, and a marked increase in the sales of the same.

The committee has secured a five-years lease of ample and very desirable space on the Michigan Avenue front of the sixth floor of No. 6 Madison Street, and the new rooms will soon be ready for occupancy. The fact that of late the space devoted to the use of visitors has been scarcely adequate for their accommodation, indicates that the removed to more commodious quarters will be made none too soon.

HELEN E. PUTNAM, *Clerk of the Executive Committee.*

Much depends in this life upon one's ability to see things. Beauty is everywhere; but it is often unseen. Only the artist can see beauty in that which to other's eyes appears ordinary and uncouth. The beauty is revealed to him. He puts his vision into the picture. Then all can see it.

And there is also a beauty in humanity that only the right-seeing can find. To the unseeing eye the exterior of a man may lack all marks of goodness or refinement. At the same time he who believes in and loves the divinity that is in man will see in the same person something that is fine.

That is one of the great things about Jesus of Nazareth. He saw what others failed to see. He saw beneath the homely, rugged faces of some Galilean fishermen types of goodness and greatness which the world had not seen. Also he saw what he had in himself. That is to say, the artist sees beauty because he has a beautiful soul. Christ Jesus saw beauty and truth and love because these qualities were in himself.

Do you know it is great to be able to see the charm that is in the world because of the charm that is in you? Great to be able to see the fineness and radiance in human souls because your soul is fine and radiant?

No greater accomplishment has been made in all history than this—the ability to show humanity what it is at its highest. Your ophthalmologist will tell you that you can see but fifty per cent of the things at which you look with your natural eyes. With your mind's eye—your soul—you may see one hundred per cent, or you may see but one per cent of the things you ought to see. It all depends.

Grand Rapids (Mich.) *Herald.*

The *Indianapolis Sentinel* says editorially: "It may be observed that the rapid spread of the Christian Science faith is one of the wonders of this generation, and that it has been helpful seems to be beyond question."

Among the Churches.

Churches Unite in Milwaukee, Wis.

The three Christian Scientist churches of Milwaukee were formally merged at a meeting last night [January 11] at First Church. The congregation will be known as First Church of Christ, Scientist. It is planned in time to erect two handsome church edifices, one on the East Side and the other on the West Side. On Sunday mornings the congregation of First Church will meet in the Davidson Theatre, but Sunday night services will be held at the Van Buren Street church as usual.

The original Christian Science church in Milwaukee was organized in 1889. It has a congregation at present of five hundred.—*Milwaukee Free Press.*

Springfield, Mass.

Springfield's admirable collection of church edifices was increased Sunday [November 26] by the opening of the new Christian Science chapel at the corner of State and Orleans Streets. The opening in the morning was a quiet, impressive service after the simple order of the regular Sunday service of the denomination. The service was repeated again in the evening, and both were well attended. A notable feature of both services was the absence of any attempt to raise special subscriptions. A single offering was taken at each service, which the First Reader announced would be forwarded to the "Building Fund of The Mother Church that is in course of erection, as a thank-offering to God for His great love which has made this chapel possible for us."—*Springfield* (Mass.) *Homestead.*

Churches Unite in Salem, Ore.

Last evening [Nov. 29], at the Christian Science church building in this city, was consummated a reorganization of the people of that faith, whereby the two churches in this city have been consolidated. This is a union greatly to be desired on the part of those interested, and was brought about by both organizations dissolving their respective charters and organizations. After doing this, all the members of both institutions came together and organized a new church. This will be known as First Church of Christ, Scientist, and assumes the property of both old organizations. All interested were more than pleased at this happy uniting of what has, in the past, seemed a divided family.

Salem (Ore.) *Daily Capital Journal.*

Santa Barbara, Cal.

First Church of Christ, Scientist, of Santa Barbara, California, was organized October 2, 1900. At the close of the year 1905 it had a membership of thirty, twelve of whom are members of The Mother Church. In March, 1902, we purchased a lot with a building formerly used as a church, with a seating capacity of something more than one hundred, for thirty-four hundred dollars, and have paid twenty-nine hundred dollars towards the purchase price. At the annual meeting of the church in January, 1905, the church voted, unanimously, to donate all monies of the church, other than sufficient to pay the regular expenses, to the Building Fund of The Mother Church, and in the twelve months following sent $872.40, which with $127.60 previously sent made an even sum of one thousand dollars. The attendance at the Sunday services and the Wednesday evening meetings is from seventy-five to one hundred.

Although our church is small, and without a single wealthy member, we are trying to conform in all things to the wishes of our Leader, Mrs. Eddy.—*Correspondence.*

The Lectures.

Ashtabula, O.

A goodly-sized audience was attracted to the City Hall on Monday evening [Jan. 22] to hear Bicknell Young of Chicago on Christian Science. Dr. W. W. Tothsroh introduced the speaker, and in so doing said in part,—

It is needless to remind any one who is in any degree familiar with the history of formulated theology, that it cannot be said of it that it is "the same yesterday, and to-day, and forever." Herein, as in everything else of human construction, change and decay are to be expected. In the realm of opinion and belief there is progress by the elimination of error, and in the widening and deepening of conceptions as new revelations or better views of old revelations of truth are obtained. Historically the orthodoxy of to-day was the heresy of the past, while the persecutors of the present were the persecuted yesterday. God's revelation is continuous and is not restricted to tablets of stone or parchments. He speaks to-day to those who would hear him.

As for Christian Science, it must be confessed that it is in harmony with the spirit of the age, in that it emphasizes the immanence and active interest of God, and places before its followers exalted ideals. If it be judged according to the standard, "By their fruits ye shall know them," then it must be conceded that it has impressive credentials in its survival of bitter opposition; its remarkable spread among people in all lands, of all classes, and especially those of education, thought, and culture; and its thousands of witnesses who testify of the various benefits derived by them through their compliance with its teachings.

Ashtabula Beacon-Record.

San Diego, Cal.

Before an appreciative audience that filled the main floor, both balconies, and the boxes, Mrs. Sue Harper Mims of Atlanta, Ga., lectured last night [Jan. 29] at the Isis on Christian Science. A storm of applause at the conclusion of the lecture showed the appreciation of the hearers. Mrs. Mims was introduced to the audience by Mr. A. Schoonover, who said in part,—

Somebody has said that a man is always better than his creed, unless, perhaps, he changes his creed every day. 'Tis but a way of saying that people think, and thinking in the better knowledge of to-day, realize yesterday's errors. This search for truth is man's best work and its demonstration is his best service to mankind. Knowing this, people associate themselves together to free the minds of their fellow-men of the fear, ignorance, and superstition that prevent their seeing those great truths which have to do with their relation to the creator and all things of creation. Such an association, I believe the Christian Scientists to be.

San Diego Union.

Lectures at Other Places.

Olean, N. Y.—Rev. Arthur R. Vosburgh, Dec. 10.
Libby, Mont.—Clarence C. Eaton, Jan. 18.
Santa Barbara, Cal.—Mrs. Sue Harper Mims, Jan. 28.
Port Huron, Mich.—Rev. Arthur R. Vosburgh, Feb. 4.
Iowa City, Ia.—Judge Septimus J. Hanna, Feb. 4.
Providence, R. I. (First Church).—Hon. Clarence A. Buskirk, Feb. 4.

Admission to Membership.

The next admission of candidates to membership in The Mother Church will be June 5. Applications must be in the hands of the Clerk on or before May 14.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

"Moral Remedies."

Modern Medicine, in its review of the recommendation recently made by Sir Lauder Brunton, an eminent English physician and surgeon, that certain drugs be administered for the purpose of counteracting the effects of irritating occurrences and depressing news, advances the opinion that in certain cases of bad temper "moral remedies are necessary as well as physical," but it does not advise how nor by whom these moral remedies shall be administered. Is the physician to be trained to administer moral remedies as well as physical, or is he to call in a clergyman? Is there to be another class of medical specialists, who are to deal only with moral remedies? By what rule is the case requiring both moral and physical remedies to be distinguished from the one requiring physical remedies only? If there be cases which require a moral remedy as an adjunct to the physical remedy, may there not be cases which demand moral remedies alone? If some cases can be relieved or healed by moral remedies, is it not possible that all cases can be healed in the same way? These are pertinent questions which naturally grow out of the statement we have quoted.

The admission that moral remedies are of value in the cure of disease is a step in the right direction, and we hope it may be the forerunner of the more important admission which must be made at some time; viz., that moral remedies are the only means worthy of dependence. By moral remedies we mean, of course, the application of that right knowledge of God which is the foundation of all morality.

It has been proved through Christian Science that the moral remedy used by our Master and commended by him to his followers heals not only the bad temper which *Modern Medicine* says "in a great proportion of cases has for its foundation indigestion, nervous exhaustion, or some other physical ill," but also the disease which is supposed to be its foundation. It is almost proverbial that Christian Scientists are free from bad temper as well as from all manner of disease with which they were afflicted before they adopted the moral remedy disclosed to them in Science and Health, a remedy which is available to all who care to adopt it.

ARCHIBALD MCLELLAN.

Reward.

THE story of Abraham, as given in Genesis, is of profound interest, showing, as it does, what is possible to one of large and noble character in the most trying circumstances and with no guidance save that of the divine Mind. We are told that in the midst of idolatrous surroundings he took his stand for one God; and tradition says that for so doing he was cast into a fiery furnace, as were his three descendants many centuries after his day, and that like them he proved the omnipotence of divine aid in what seemed to be deadly peril.

For the sake of Truth, Abraham left his father's house and his country, presumably giving up all his earthly possessions in order to obey implicitly the divine call. He was a man of princely nature, which was expressed in all he did, and later in what he possessed. His generosity and entire lack of self-seeking were much in evidence in his relations with his nephew Lot, whom he permitted to preempt the rich lands in the plain of Jordan rather than to have any strife as to territory. This trait was also strikingly illustrated in his refusal to take the spoils of war that fell to his share, and in his readiness to give tithes to Melchizedek, "priest of the most high God." That he had sought and found that which alone can give security and plenty, is proved by the divine assurance to him after these experiences,—"Fear not, Abram: I am thy shield, and thy exceeding great reward." Well does our Leader say of this patriarch and others of an early day, that they "caught glorious glimpses of the Messiah, or Christ" (Science and Health, p. 333).

Christian Science teaches that we must, each and all, gain the true sense of motive and reward. Thus we find Peter, at an immature stage in his spiritual development, reminding his Master that he and the other disciples had given up all to follow him, and asking, "What shall we have therefore?" After giving a direct answer to this question, the great Teacher proceeded to illustrate his answer in the parable of the laborers. The deep metaphysical teaching of this parable may be applied almost infinitely to human conditions and relations, and Christian Science proves that "the kingdom of heaven" must be found by us, while in the midst of such conditions, or not at all.

In this parable the dignity of service receives honorable mention; it shows that all true service is the service of Truth and that its reward is sure,—"Whatsoever is right, that shall ye receive." The question to the laborers who cavil at their lord's generosity, "Is thine eye evil, because I am good?" is a scathing arraignment of those who are blinded by envy and jealousy to the all-prevailing and ever-present divine justice. We must know whom we serve. If the world is our master we shall look in vain for justice, but if we serve God, Truth, and Love we are assured that "Mind—omnipotence—has all-power," and "assigns sure rewards to righteousness" (Science and Health, p. 203).

Well may we pray to be "first" in faithfulness, and "last" in self-seeking, ever remembering that to each faithful toiler in the vineyard is the promise, "I am thy shield, and thy exceeding great reward." ANNIE M. KNOTT.

Longing for Truth.

Beneath the superficiality and sham, the pride and prejudice of mortal sense, there is an inherent love for the genuine, the beautiful and the good, which witnesses ever and again for the image of God; and the false fetters of educated belief and conventional habit are cast aside as the husks that they are,—the higher consciousness, the true man, claiming his own.

This assertiveness of truth, its habit of breaking through the clouds of prevailing belief, has inaugurated all reforms by giving to humanity its true leadership. The condition of thought in which Wesley was born and educated gave promise of his faithful conformity; but he experienced a wondrous spiritual quickening, and in its light he saw what seemed to him a higher path, which pursuing, he became the inspiration of his age. Truth-seekers in our day, who have also seen a great spiritual light and turned to it, have not found favor at the hands of many of his followers, nevertheless these same representatives of this great man have been so unconsciously affected by the illuminating truths of Christian Science that their thought is steadily broadening, and many of them are just now pleading splendidly for a larger freedom, an unhesitant loyalty to truth wherever it may lead. (See clipping from *Western Christian Advocate*, p. 414, of this issue.) This cry, welling up from a great body of Christian people, tells of that travail of soul through which the many must needs pass to attain to a personal and satisfying demonstration that "Truth is always the victor" (Science and Health, p. 380).

Another writer in a leading religious journal has recently

Digitized by Google

said, "Why should we attempt to saddle Deity with the creation of a state of existence for man which is a proven failure. . . . Why not frankly admit that material existence is not a real state of existence at all, but false and unreal; that there is, and can be, but one state of existence,—spiritual, since God is Spirit; good, since God is good; perfect, since God is perfect; eternal, with the eternity of God?"

Such a statement of the fundamental teaching of Christian Science at the hands of others who are being influenced by its broadening and uplifting thought, leads all Christian Scientists to share the gladness of Paul when he wrote to the Philippians, "Whether in pretence, or in truth, Christ is preached; and I therein do rejoice, yea, and will rejoice."

It is not difficult to explain humanity's longing for truth, and its repeated outbreak in history, when we remember that it alone can comfort and satisfy the higher aspirations. To the sordid and indifferent truth brings the discomfort which is their due; but "they which do hunger and thirst after righteousness," for them it supplies "the heart's great need," in fulfilment of Jesus' promise, "I will send you another Comforter." Lowell expressed a most significant thought when he wrote,—

> The thing we long for, that we are
> For one transcendent moment.

A sincere desire for truth is but truth's irrepressible assertion in us; it is speaking out in defiance of mortal sense and false belief, and every honest aspirant is therefore both its champion and its channel. How this thought gladdens the heart of the altruist, and how it lights up the future of humanity. We gain the truth we need, if we but truly seek, and the sage is therefore right who said, "The secret of happiness is to want the best things and to want them very much." Honest seekers for the highest good, for truth as revealed in Christian Science, are multiplying the world over, and the Psalmist's sure promise is theirs, "He satisfieth the longing soul, and filleth the hungry soul with goodness."

JOHN B. WILLIS.

An Interesting Letter.

THE following extract from a letter of John C. Higdon, Esq., to Mrs. Eddy's associate secretary, is of interest because of the grand Masonic animus of the entire letter and his reference to the fact that our Leader is the widow of a Freemason,—Major George Washington Glover. Major Glover was a member of St. Andrew's Lodge, No. 10, and Union Chapter, No. 3, and that he was highly regarded by his brethren and companions, is shown by his obituary notice in *The Freemason's Monthly Magazine* published by the late Charles W. Moore, Grand Secretary of the Grand Lodge of Massachusetts.

Mr. Higdon writes:—

St. Louis, Mo., Feb. 12, 1906.

Mr. Lewis C. Strang, Associate Secretary,
Pleasant View, Concord, N. H.

Dear Brother:—I was very greatly pleased to receive your letter of the 9th instant, informing me that our beloved Leader had personally written me.

Her highly valued letter, thanking me for the article, "Know Thyself," has arrived, and I am overjoyed to receive the same, on account of the beautiful sentiment and kind words it contains, as well as for the high compliment which it pays me.

You state that our great Leader and friend forgot to ask my permission to publish my letter in the *Christian Science Sentinel.*

In reply, would say that I gladly grant permission, but in my opinion, the same is not at all necessary, as our Leader has the undoubted right to publish any letter which any of her brethren deliver to her.

Yours in truth and love,

JOHN C. HIGDON.

The article, "Know Thyself," referred to in Mr. Higdon's letter, was taken from a Masonic publication, and we are informed that the portion of it which attracted Mrs. Eddy's attention was the following true and remarkable statement:—

"The sacred book of Hebrews tells us that man was made in the image and likeness of God. Birthrighted with the responsibilities of such a destiny, man must awake, must realize that indolence and inaction are the deadliest canker that can invade and infest the human soul. Omnipotence cannot be confined or limited, hence our conception of Deity of necessity predicates Him perfect and absolute freedom."

"Rudimental Divine Science for the Blind."

WE are pleased to announce the publication of an edition of "Rudimental Divine Science" by Mary Baker G. Eddy, in the New York point system of type for the blind. The publication of some of Mrs. Eddy's works in this form has long been desired by many who are compelled to use the embossed types, and it is believed that this edition of one of the most helpful of our Leader's smaller works will be greatly appreciated.

Mrs. Eddy's writings have proved a blessing to all who have studied them carefully, with the desire to put their teachings into practice, and the demand for the extension of their help to another class of readers is further evidence of the work she is doing for humanity.

Letters to our Leader.

Lynn, Mass., Dec. 15, 1905.

Mrs. Mary Baker G. Eddy, Concord, N. H.

Beloved Leader:—First Church of Christ, Scientist, of Lynn, in annual meeting assembled, sends you loving greetings. We feel that you would be pleased to know what the church is doing in the city that was the scene of your earlier labors, and in a spirit of loyal gratitude to you, God's messenger to this age, the following is submitted.

The church membership is sixty-five, sixteen of whom were admitted the past year. Somewhat over a year ago a beautiful building was erected in the business portion of the city, in which is a hall with a seating capacity of four hundred and seventy, in every way most admirably designed and artistically finished. The proprietors were desirous of renting it to us, and the church voted to secure it. The treasurer states that while the expenses were doubled by taking this step, it has been easier to meet them since than it was before. Our Sunday congregations are in the neighborhood of one hundred and twenty-five.

In all nine hundred and forty-two dollars has been sent to The Mother Church Building Fund. The Sunday School, numbering thirteen children and two teachers, contributed twenty-one dollars and sixty-eight cents of this amount in the past year. The Reading Room is now at your old home, 12 Broad Street. The Reading Room committee reports that for the six months ending December 1, 1905, fourteen hundred and twenty *Sentinels* and three hundred and sixty *Journals* were distributed from the waiting room of the Boston and Northern Street Railway station in Central Square, and in other places in the city. During this time there were sold: fifteen copies of Science and Health; two copies of "Miscellaneous Writings;" ninety-six *Journals;* eight hundred and fifty-one *Sentinels;* two hundred and sixteen *Quarterlies;* two hundred and three copies of Judge Hanna's lecture as printed in the *Lynn Evening News;* also one hundred and seventy copies of other Christian Science publications.

An occasional opportunity is given whereby services are held at the Lynn City Home and at the Home for Aged Women. The foregoing facts are given partly as a further answer to your letter of a little over a year ago, inquiring about the work in Lynn.

Digitized by Google

We trust that as the years go by this church may prove by its works that it is comprehending your teachings to a greater and greater degree, and practising them with renewed devotion and perseverance.

With love and gratitude,

HOWARD D. KENYON, *First Reader.*
FLORENCE M. LULL, *Clerk.*
Committee.

MRS. EDDY'S REPLY.

Beloved Brethren:—"Fear not, little flock; for it is your Father's good pleasure to give you the kingdom."

MARY BAKER EDDY.

Washington, D. C., Feb. 11, 1906.

Beloved Teacher and Leader:—Allow me to express to you my gratitude for the higher light shed upon the spiritual sense of the Lord's Prayer, as given in the last edition of Science and Health; not so much for the additional words as for the magnificent courage, faith, and conviction they express of the allness of God. To those working and longing for instantaneous healing, the tenacity and arrogance of error is sometimes discouraging. Then you always come to the rescue with some stronger, clearer, and higher tone in the ascending scale of harmony, that strengthens, cheers, and encourages the watchful student. We have the confidence that we, too, if faithful may climb to this height of spiritual vision, where "God is Mind and fills all space, is everywhere, matter is nowhere and sin is obsolete" (Miscellaneous Writings, p. 173).

With deepest gratitude and affection,

ELIZABETH C. WICKERSHAM.

Brighton, England, Jan. 23, 1906.

Mrs. Mary Baker G. Eddy.

Beloved Leader:—The members of First Church of Christ, Scientist, Brighton, England, have just remitted five hundred and twenty-five dollars to the Building Fund of The Mother Church. It may interest you to know that although we have only now completed the first year of our existence as a church, and have at present a small membership, this amount was collected during the last six months, over two hundred and sixty dollars at one collection, this being the response to a suggestion of our First Reader, that the money usually spent in Christmas presents should be contributed to this fund. Our children of the Sunday School collected ten dollars. When they were asked whether they would contribute this money to the Building Fund, or have their Christmas Tree, every little hand went up for the Building Fund, for they also are learning it is only as the root is recognized and supplied that the branches can prosper.

Our great desire is for loving unity, and to walk daily in the path you have so clearly shown us.

Lovingly yours,

MRS. MERCY VAN HOMAN, *Treasurer for the Fund.*

Cleveland, O., Feb. 12, 1906.

Mrs. Mary Baker G. Eddy, Concord, N. H.

Dearly Beloved Leader:—We, the students of Mr. E. A. Merritt, desiring to express our deep gratitude for the daily benefits derived from the study of Christian Science, and the loving and kindly assistance rendered by our teacher, have to-day forwarded two hundred dollars to The Mother Church Building Fund. This contribution also expresses in a slight measure our grateful appreciation of the priceless labor of your life, so generously devoted to the welfare of humanity, broad enough to encircle the globe and clear enough to give your students a glimpse of eternity. For this gracious knowledge of Truth, revealed in Science and Health, and carefully guided and guarded by our teacher, we give most heartfelt and grateful recognition.

Very lovingly yours,

CLARENCE H. STOCKWELL.
For the Association.

Testimonies of Healing.

Memory turns back this morning to the year 1897, when everything was very dark to me. I was afraid of death, and felt that I should soon pass on. For years I had been gradually going down, and was in what my physician and friends called the last stage of consumption and heart trouble. I was like a shadow, to mortal sense, and was not expected to live longer than a week, when a distant friend sent me a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy. She wrote me to read it with the Bible, to try to understand what they taught, and then I would see that it was not God's will that I should die. She wrote me that health and life come from God, not sickness and death. When I began to study the wondrous book, Science and Health, I could read only a few lines each day, but I kept on trying daily to understand it, and soon I began to see the truth. At first it came as little flashes of light, and in a moment of time I would get a gleam of something beyond the mortal vision, then for days I would be uplifted. I became hopeful; I would often catch myself trying to sing, and in two or three months I was able to be up. I gained a little each day, in understanding and in strength, from the earnest study of Science and Health, and from the absent treatments of the friend who brought the truth to my attention.

When Christian Science found me I could not walk across my room without holding on to something for support, but in a few months I was able to walk a mile and back without ill results. When I began the study of Science and Health fear would suggest that I had better put that book away and go back to my church, for I could not live long; but I noticed that when I read Science and Health, I would feel better and would be able to sit up. I prayed for light as I never prayed before. If Christian Science was the truth about God, I wanted to know it, and if it was not the truth I wanted to know it. In studying my Bible I found the answer, and realized that Christian Science was true! I was happy,—all doubt had fled. I seemed to be lifted above mortal sense, and caught a little gleam of the joys of Soul. I would often find myself saying over and over the thirty-fifth chapter of Isaiah, and also from the twenty-eighth to the thirty-first verses of the fortieth chapter. I learned their true meaning, and the help and strength they were to me. My healing was slow. It was nearly two years before I was free, before I could say truthfully and with a vim, "I have no consumption, I have no heart disease." For years I had never left the house without a bottle of medicine for the heart. Man-made remedies had failed, but the living God, He never fails!

I am here yet, and have had over six years of wonderful health, after suffering for forty years with lung trouble, which began when I was a small child and lasted until Christian Science healed me. At first there were no Scientists here in this town, and no one to talk to. I often kept my door locked all day, so that I could be alone, as all who knew me held the thought of death over me, while I was trying to overcome it through my own small understanding of Science. The freedom from fear alone is worth all the struggle to obtain it. As time went on, and I did not die, my neighbors began to ask me about Christian Science; some read my books and believed.

My heart goes out in deep gratitude to dear Mrs. Eddy, for bringing to the world this knowledge of Truth and Love. In the course of time some Scientists came to this town, and services were started a few years ago, with a very small number. Now our little church is waking many to the truth of Christian Science.

Thanks be to God and His Christ, for He does heal and save, here and now.

MRS. JANE KILCREASE, Birmingham, Ala.

Digitized by Google

Because I am grateful for the benefits I have received through the understanding of Christian Science, I should like to tell a little of what I have experienced. I have found it a practical help in a practical life. Since the overcoming, through Christian Science, of my trouble, indigestion, I have had splendid health; better still, I have found that this truth not only destroys disease, but the fear of it. Christian faith may give fortitude to bear sickness or disease, but Christian Science destroys the fear of it by the understanding of its unreality,—that it is not a creation of God. Even more than this, Christian Science restores the inspiration of life when all ambition to live has been lost; it restores the song of the heart when it has seemed to be crushed out.

Last year I was working in Leeds, and when trade was at its worst I was thrown idle. The following morning I went to look for work. The foreman sent me word to see him at noon. I got there in time, found another man more needy than I, so I allowed him to see the foreman first, with the result that he got the situation, the only one to be obtained there. However, I went only a week idle, when I got word of work at Darlington. I went there and found it better than at Leeds, but was there only about a month when I heard of work here in London. After due consideration I accepted, and found a still better situation. To me this was a triple demonstration and it showed God's care for His people as we are told of it in the Bible and in our text-book.

JAMES MARSHALL, London, England.

So much of good has been revealed to me through the teachings of Christian Science, that I could not enumerate all of it. So much has been made clear which before was a dark mystery, that I know God as I never knew Him before. When I first began the study of Christian Science I was in the depths of despair. I had suffered from ill health for years, and had come to realize that medicine could never restore me. Like the drowning man catching at a straw, I was ready to grasp anything that promised healing. In Christian Science I found a true and reliable remedy for every ill of mind or body. Through the understanding and practice of its truths I am enjoying a greater degree of health than I had known in years. Troubles with which I used to struggle for weeks, have been made to vanish, and speedily, through this new understanding of God and His Word as given to us by Mrs. Eddy.

I was a member of an orthodox church, a teacher in the Sabbath School, and while I was never fully satisfied with the teachings, I did not know there was anything better. When I turned to Christian Science it was not for the religion but for physical relief, but what a wonderful religion I have found it to be,—a religion that will save us, now and here, not only from sin but from sickness and sorrow and death. For me it has worked wonders, bringing harmony where there was discord, and peace where there was perturbation. It has revealed the joys of heaven and the possibilities within.

I am very grateful to God, and to Mrs. Eddy, His light-bearer. To all who are in trouble, or sickness, or need I would say, If you would be comforted, do not delay to read "Science and Health with Key to the Scriptures."

CATHARINE I. MCCOUN, Kansas City, Mo.

I think it would have been impossible to find a more skeptical person, regarding this Science, than I was before I had seen any of its wonderful work. I used to deride it most vehemently, so much so that now I am heartily ashamed of my past attitude when I think of the many blessings it has brought to me. However, the time soon came for the truth to be manifested. I was suffering from an ailment that was puzzling the best physicians of this country, some of whom enjoyed an international reputation. Their efforts were altogether unsuccessful, and I had almost become resigned to what I thought was my fate; *i.e.*, to suffer the rest of my life, when a friend asked me to try Christian Science. I said, "It can't do me any good, because I have no faith in it," whereupon she replied, "Give it a trial, and when you have been healed, then you will receive your faith."

I did give Science a trial, simply because there were no material remedies left, and I was completely healed in two treatments, after doctoring for nearly five years. This was a year and a half ago, and I have never had a vestige of the old complaint since. Moreover, I have never felt so well in all my life; in fact, I have not had one day's illness in all that time. As in every case, the physical healing was the least of the blessings that came to me. It purged my mind of worry and discontent, while it left instead peace and harmony. "Science and Health with Key to the Scriptures" gave me a religion for which most of us are reaching —a practical religion. Christian Science gives to us a God of Love, one who is with us now and always, an ever-present help in time of trouble. Is it then to be wondered at that Christian Scientists are continually happy? It is because they look to Principle, in the solving of all life's problems.

I wish to give thanks to God for all that He has done for me and mine, and to express my deepest gratitude to our beloved Leader, who through her untiring efforts and self-sacrifice has given to the world the greatest gift of the centuries, the wonderful book through which we may know God aright, and which, if we follow its teachings, will fill our lives with peace and prosperity.

C. MAYER, New York, N. Y.

Some time ago one of the references in our Lesson-Sermon was from the eighth chapter of Romans, "For the earnest expectation of the creature waiteth for the manifestation of the sons of God." This verse repeated itself in my thought again and again, but I could make nothing more of it than if it had been an unknown language. A few days later I seemed to be very ill with the grip. This had been an old enemy, and had left me each time in a weak and miserable condition, sometimes for weeks. Help was asked from a practitioner, but it was several hours before she came to see what was needed. During those hours the suffering seemed very great, when it suddenly dawned upon me that here was a creature earnestly awaiting "the manifestation of the sons of God," and I felt sure that the "manifestation" would come. None the less it was a great surprise that I should awaken the next morning as well and strong as if this illusion had not come near me.

How great and how blessed a privilege it is to know that we have the expectation of ultimate freedom from all conditions which were not created by infinite divine Love.

MARIE S. ALLEN, El Paso, Tex.

I think it my duty as well as a great privilege to tell what Christian Science has done for myself and family, hoping that my experience in demonstrating over ills may help some others. I have had many beautiful demonstrations of the power of Truth to overcome evil in every form, and three of them seemed like miracles to me. A broken collar-bone was healed in two weeks without even the use of a sling to hold up the arm, and a broken bone, between the knee and ankle, was healed perfectly in five weeks without the use of a bandage. The leg did not even swell. Another experience was the healing of a cancer of the throat.

I am truly grateful to Mrs. Eddy for her great work of love that has brought us "Science and Health with Key to the Scriptures."

MRS. ALLIE MCFADDEN, Branch, Ark.

Digitized by Google

Five years ago my outlook, to human sense, was dark indeed. I was suffering from internal cancer in the last stages. My physical agony, together with the mental anguish at the prospect of leaving my three little girls motherless, was beyond description. In this helpless and hopeless condition I applied to a Christian Science practitioner for treatment. Upon her advice my husband and myself purchased a copy of Science and Health and began the daily study of the Lesson-Sermons as given in the *Christian Science Quarterly*. Soon afterwards we purchased Mrs. Eddy's other published works, the continued and thoughtful perusal of which have revealed to us present blessings that we had never thought possible of attainment before death, and were uncertain if they would be ours after death. Through the loving efforts of a practitioner I was perfectly healed eight months after I began treatment, thus proving to me that God does answer prayer, and that Christian Science teaches the "effectual fervent prayer" which is attended by "signs following." Since my healing I have done the work for a family of six with ease, and have had no symptoms of the return of my old enemy. I had also been a victim of quinsy since childhood, and the attacks had become so frequent and severe that my life was threatened, but my throat is now entirely healed. Our children also have been wonderfully healed of ailments, among which I will mention membranous croup, broncho-pneumonia, cholera-infantum, whooping-cough, etc., all of which have been healed in Christian Science without the use of material remedies, these not having been resorted to in our family for some five years.

For all these blessings I return humble thanks to God, and to our dear Leader, Mrs. Eddy.

Mrs. Nellie B. Ainsworth, Watertown, S. D.

My mother was a Christian Scientist several years before I became interested in its teachings. Although I witnessed the transformation of her life from one of ill-health and sorrow to health and happiness, I was so blinded by materialism and its seeming pleasures that I could not grasp the verities of this grand teaching. I had served in the capacity of amanuensis and assistant to the leading oculist of our city for several years, and could not conceive of a spiritual remedy for the ills of mankind. I first began to study Christian Science for peace of mind, and received such an abundance that I finally gave up all medicine and looked to God for help from all my physical ailments as well. I was first healed of dyspnœa, which physicians claim to be a lack of nerve supply to the lungs, and they do not profess to do more than alleviate it by material means; then of a supposedly incurable disease of the scalp. In the two and a half years that I have tried to live the life of a Christian Scientist I have not been compelled to be away from my work more than two days on account of ill health. Prior to this time I would throw myself upon the couch immediately upon getting home from the office, because of fatigue, while now I hardly know what it means to be tired; I have learned what it means to cast my burdens at the feet of divine Love, "and bear a song away." The study of Christian Science has broadened me and I have developed marvelously in every way. For all this I am very grateful.

Miss Ada Bastman, Kansas City, Mo.

It is my pleasure and privilege to have known and reaped the benefits of Christian Science since 1892, at which time I was healed of Saint Vitus' dance, in its severest form, and in a comparatively short time. I was later healed of inflammatory rheumatism in about three days, and since then I have been helped out of other difficulties which had seemed to debar me from the sweet and exalting influences of Truth. Since my first knowledge of Christian Science, I have never for a moment doubted its efficacy in the treatment of disease, nor its highly beneficent power. Its influence is unbounded, bringing peace instead of discord, chastity instead of vice, love instead of hate, and life instead of death.

To speak of our Leader in terms appropriate seems impossible, for the revelation of Truth which has come to this age through her is revolutionizing the world.

Susie L. Bradshaw, Moore, S. D.

I esteem it a pleasure as well as a duty to give testimony as to my healing of the morphine habit. For a long time I had what the doctors called neuralgia of the stomach, and could get no permanent help. As these attacks came on from time to time, a doctor was called, and he gave me something to quiet the pain. As years went on the attacks became more frequent and severe; then morphine was given me, and soon it was kept in the house all the time. When I felt a spell coming, I would take some, and if that failed to relieve I would take more. I soon found that I could not get along without it. It seemed to hold me in its power. I did not care to eat and could not sleep at night. During this time I was trying to live a Christian life, was a member of an orthodox church, and a Sunday school teacher. I felt the use of this drug to be a sin and I prayed God to take it away. I tried to do without it, but would get worse and the doctor would give it to me again.

For nearly ten years this was the way I suffered, and finally I had what the doctor called the last attack, and he could do nothing for me. He called another physician, who said very much the same thing and tried to give me relief by injecting the drug into my arm, which became badly swollen. One afternoon my husband was sitting beside me and it seemed as though I could not live much longer. I was thinking about leaving my two little ones, when the thought came to me, Why not try Christian Science—it has helped others, and why not me? I asked for help in Christian Science and my husband at once discharged the doctor and went for a Christian Science practitioner. She came, and I soon experienced a sweet peace and quietness; I felt changed. I asked for a drink, which she gave to me. Until this time I had not been allowed a drop of water or anything to eat for days. In a few minutes I was able to eat freely, and without any bad effect. I was completely healed of the morphine habit in three treatments. It was blotted out, and seems like a dream. I then began to gain, although I had a long, hard struggle; but through a kind, loving God, I was restored to my family.

My healing has brought the whole family into Christian Science. As my thoughts go back over those years, my heart is filled with love and thankfulness to God for giving us, through Mrs. Eddy, this wonderful truth which heals all our diseases.—Mrs. Jessie Davison, Watertown, S. D.

I wish to express my gratitude to God for a recent evidence of His healing power. I have been deeply interested in Christian Science for the past eight years, and during all that time I have been in very good health and have met very quickly whatever physical discords presented themselves. Recently, however, I had a greater test than ever before of my reliance upon God as the great Physician. My whole system seemed to manifest a condition of poisoning, and from my shoulders to my feet the external symptoms were alarming. My feet swelled and my whole body was so affected that I was nearly wild. I tried to meet it for myself the first night, but early the next morning I called for help, and a practitioner worked faithfully for two days, remaining at night to comfort me and to declare the truth. After a two-days struggle the enemy was cast out, and normal conditions were manifested, except that I was left very weak. At times I seemed liable to pass away from spells of weakness, but these, too, were conquered through Truth and all fear of them disappeared. When this trouble came upon me, my family, not having embraced Christian

Digitized by Google

Science, urged my calling a physician, but I clung to God in my hour of trial and He delivered me.

I spend many hours in meditation and study, and in praise to God for His many blessings. I am deeply grateful to dear Mrs. Eddy for her great work in bringing the Word of God more clearly to the consciousness of mankind.

MRS. CLARA KELSH, Philadelphia, Pa.

I became interested in Christian Science several years ago through the healing of a friend. When I saw my friend she explained it as best she could, and I felt that it was the truth which Jesus taught. I had been a member of an orthodox church for a number of years, but had not been taught that the Christ could heal now as of old. I gladly accepted Christian Science as the truth. I was wearing glasses for astigmatism, had stomach trouble and other ailments, and at times my suffering was intense, as my work, which was sewing, made it hard for me to use my eyes. I had to stop work and remain in a darkened room for nine months. A specialist whom I went to see said that if I would rest my eyes for a time they would be all right; but after nine months they were no better, so I had to go to work again, but I was obliged to lie down two or three times a day. Daylight was torture, and lamplight I could not endure. This was my condition when Christian Science found me. I accepted it as the truth, without thinking of my physical need, but after some days the thought came to me that if this could heal my friend it could heal me. I soon found that I had no need of glasses, and I gave up the medicine I was taking for stomach trouble and felt that I was well. How happy I was, and I did not know what had healed me; but soon after I understood it, and it has been my comfort and guide through many years. How can we be thankful enough to her through whom the light of divine Truth has come to us.

SARAH A. GOODSELL, West Eaton, N. Y.

I thank God for Christian Science. It has redeemed me from much suffering, both mental and physical. Many times I wished to die, not only because I suffered pain, but my cross was very heavy, until it seemed that I could bear it no longer. I needed help very much but I did not know where to look for it, and I gave up praying to a God I did not know. I had suffered from indigestion and neuralgia, also female weakness, for years. At last I had nervous prostration, from which I was in bed about three months. Doctors could not do me much good, for I could not find peace in pills. One day I said to my sister that I wished to talk to some minister, and she then spoke of Christian Science, as she had received some help about eight years before, but knew very little about it. God heard us, however, and prepared the way even while we were speaking. Christian Science was brought to me by my dear sister-in-law. Oh, can I ever be thankful enough. My sorrow was turned into joy, my troubles into peace. I was healed that day, now two years ago, and I have been a healthy woman since that time. I do all the work for five children, eat anything I want, and enjoy any kind of weather. My husband also took up Science and was healed of the tobacco and liquor habits. In our home is peace now, and we have both joined First Church of Christ, Scientist, of Omaha. This is only a small part of what Christian Science has done for us, and is doing every day. God bless Mrs. Eddy, for without her words I would not be a happy, healthy woman to-day. I owe all to God and to Christian Science.

MRS. K. BURDIN, South Omaha, Neb.

One day I had an attack of pneumonia. Having had it three times in the past, I soon recognized the disease, and began to look at once to the all-good for help. It was quite a severe attack, and for several hours it seemed as if error would prevail, and my son proposed that the doctor should see me; but I held on to the truth, which in a short while did prevail. In about nine hours after, all pain had left me and I could take a deep breath without suffering. I was once an invalid, but thanks be to God, about five years ago Christian Science was made known to me through my daughter-in-law, who is a member of The Mother Church, and by her help, and the blessing of God, I was restored to health. I have not taken any medicine for more than four years, and have been very strong during the time. I am now seventy-two years old, and have had many demonstrations of the power of Truth over error in the past five years. I hope my testimony may encourage some others to put all their trust in Christ, Truth, and to follow our beloved Leader, Mrs. Eddy, as she follows Christ.

MRS. C. J. NUCKOLLS, Tomsburg, W. Va.

It is near six years since I was healed of asthma through the understanding of Christian Science. For seven years previous I had sought relief from the best physicians and specialists in the Middle States. I had been advised to go to California by a specialist who had been treating me for over a year. He stated that in that climate I might find relief, but nothing was definite. Truly man's extremity is God's opportunity. A lady who had been healed by Christian Science told me of this demonstrable truth which healeth all our diseases. Her words sounded to me like a fairy tale. I thanked her for her kindness, but declined an introduction to a practitioner. After this I grew rapidly worse. I could not lie down without a sense of smothering. For days and nights I fought for breath. At the end of four weeks I went to a practitioner and at the first treatment I was much benefited. In less than three months I was perfectly healed. The spiritual awakening was much more to me than physical ease. My study of the Bible in connection with "Science and Health with Key to the Scriptures" by Mrs. Eddy, has been a wonderful unfoldment to me. Through the understanding derived, I have been able to help others.

I am thankful to our beloved Leader for this wondrous light of truth. I shall try to show my gratitude by ever being an avenue for Truth and Love; in meekness and humility knowing that it is God who worketh in me to will and to do of His good pleasure.

MARY MORGAN JONES, New London, Conn.

[Written for the *Sentinel*.]

Along the Upward Way.

MARY J. ELMENDORF.

THOUGH along the upward way
Still the purple shadows fall
Unrelenting over all,
And dear voices of the day
Never through the silence call,
Turn not back to doubt and fear.
Over crags and peaks and scars
Climb, a hardy mountaineer,
Shod with courage, staffed with cheer.
Home its door to faith unbars;
See, its lamps are shining clear
Through the windows of the stars!

Peace is won by work below;
Every upward step is gain,
Though it leaves the print of pain.
Lisping streams have far to go
Ere they join the choral main.
And the heart must sunward quest;
Blend the eagle with the dove,
Strength and meekness manifest;
Banish idols, sin, unrest,
Ere it gain the heights above,
Ere it reach the Spirit-crest,
And the glory that is Love.

Digitized by Google

From our Exchanges.

Our Christian and denominational schools must never allow themselves to be outdone by any other institutions in their ardor for the fullest light and their courageous pressing onward toward the last fact that can be discovered. The Spirit of Christ is the spirit of freedom, and a school that is dedicated to him dishonors his very name and is false to its ostensible purpose if it hangs back cravenly when new leadings to truth are beckoning ahead.

The professors in our Christian colleges and seminaries should be men not only of the widest and deepest learning, but they should have the very mold and disposition of seekers for the truth, undeterred by any external pressure, unhindered by any obstinate prejudices from within. A temperament which is always asking with bated breath "what may happen," if certain inevitable conclusions are accepted without reserve, hardly belongs to a fit teacher in the twentieth century.

And the youths who throng to our schools have a right to know the full truth that has been ascertained and verified—not that which is simply subjectively surmised in the unfounded speculations of any rash theorizer—in every department of study. For this very thing have they come to the school.

Even so there will of necessity be in many considerable mental disturbance and sometimes anguish over parting with the old forms for the new. It will frequently seem to some that they are being blown from safe anchorages in familiar harbors out upon wild seas, they know not whither; and their souls are tempest-tossed. But even this alternative must be faced. Such an experience, unhappy as it is, is infinitely better than sitting, inert and content, with minds impervious to truth—hard and fast shut as a shellfish's case.

Western Christian Advocate.

Guard well the compass of conscience. It is a small thing, but the proudest ship cannot safely sail without it. Never let the salt spray corrode it or the rust of neglect settle on it. Keep it in sight, close by the helm and rudder of the ship. Study the chart of human experience; the past is our map to which we can go for guidance, surveying the collective wisdom of mankind, taking warning from the foolish and counsel from the wise. Let the bygone generations instruct us where the false lights may burn and where we may expect the reefs and the whirlpools. Watch the stars of the heavens. We may guide our course and measure our progress and check our wanderings by the lights above. Never be without the spiritual quadrant.—*The Christian Register.*

The *Universalist Leader* quotes the following from Dr. Washington Gladden:—

"What is religion? In its most primary sense it is a conviction that the spiritual world is the real world, and that the material world is temporal and ephemeral; that the things which are unseen, like truth, purity, honor, justice, integrity, fidelity, unselfish love, are the only enduring realities, while the things that can be seen and handled and weighed are counted our phantasms and vanities."

It would be an immense gain if we remembered that the one aim which is set before us is the production of the "perfect man," and that sin is whatever hinders this aim, whether in the individual or in the race. . . . In learning what divine Love means we are learning how to overcome evil with good. It was Jesus Christ who taught us the meaning of divine Love; and therefore it is he who saved his people from their sins.

REV. W. R. INGE, D.D.

The Interpreter.

THE CHRISTIAN SCIENCE TEXT-BOOK.—"Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

RUDIMENTAL DIVINE SCIENCE.—Printed in the New York point system of type for the blind. Price, prepaid, 50 cents per single copy; $5 per dozen.

CHURCH MANUAL.—Containing all the By-laws to January 1, 1906, of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of The Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the Churches and Societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to The Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of The Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to The Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number, or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By Hon. WILLIAM G. EWING.

Morocco, limp, round corners, gilt edges, convenient for pocket, each, prepaid 4 00
Twelve or more to one address, each, prepaid . . . 3 75

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5 00
Twelve or more to one address, each, prepaid . . . 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* **PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

A most important and far-reaching decision, as far as the interstate commerce law is concerned, was delivered last week by the Supreme Court, when by an undivided bench it laid down the new principle that railroads cannot deal in the commodities which they haul over their lines. This decision falls principally on the railroads which directly or indirectly own coal mines and sell their products. If the courts sustain the claim of the Interstate Commerce Commission, that private car lines are common carriers, the principle laid down may also include them, so that the owners of refrigerator cars would be prohibited from using their own cars for the transportation of their products.

It was estimated, when the Library of Congress was planned, that with an increase of thirty thousand books a year it would suffice, with the space to be filled in the courts, for one hundred and thirty-four years. It is now necessary to begin filling these court spaces, although the Library building proper has been open only eight years. Bound volumes of newspapers are largely responsible for the rapidity of the accumulation. It will also be necessary to transfer the copyright offices before many years to some other building.

Recent facts go to show that the interest in the classics appears to be increasing. From all sides in this country come reports that the number of students in Greek is increasing. Apropos to this fact is the announcement of two journals to be published by the University of Chicago Press. The one, *Classical Philology*, is to be a quarterly journal of research; the other, *The Classical Journal*, is published under the auspices of the Classical Association of the Middle West and South.

The chairman of the Executive Committee of the National Rivers and Harbors Congress favors an annual appropriation of fifty million dollars for harbor and river improvements. The average annual appropriation has been for some years a little less than twenty million dollars. "Fifty million dollars does not seem unjust," he says, "when it is remembered that war and its rewards—namely, the army, navy, and pension bills—receive over forty per cent of the entire revenue."

President Roosevelt has submitted to Congress the reports of the Panama Canal Commission. He accepts the majority report for a lock canal rather than a sea-level canal, because the time and cost of construction will be only half as much, it will be safer and quicker, will cost two million dollars less yearly for maintenance, can be more easily enlarged, and just as easily dredged.

The Interstate Commerce Commission has ordered an investigation of the rates and practices of the railroad carriers engaged in transporting oil from Kansas and Indian Territory to interstate destinations, the hearing to be held at Kansas City, March 12. The investigation is based upon a petition of the Kansas Oil Producers' Association.

The House last week passed the resolution directing the Interstate Commerce Commission to make examination into the subject of railroad discriminations and monopolies and report on the same from time to time.

The Hepburn rate bill without amendment was reported favorably by the Interstate Commerce Committee to the Senate last week. The vote stood six to five for the bill.

Foreign.

Wu Ting Fang, former Chinese Minister to the United States, when interviewed the past week on the existing situation in China, spoke in favor of the boycott, and said:—

"China is at a crisis and is passing through a transition stage. Her statesmen and people feel that China needs reform, but there are great differences of opinion regarding the means. There are several classes of reformers. There are those who speak foreign languages and who have been abroad and who have had experience in both sides of the question. They favor sensible and useful reforms, but not too radical. The number of these sensible reformers is few. I am one of them. The ruling classes also know that something should be done, but they are at their wits' end to know what to do. The third class is composed of young students, who are too rash.

"One thing upon which the majority of Chinese are agreed is that China has been deprived of many rights by concessions and territorial grants, and by the way her people have been treated by foreigners in China and foreign countries. Many Chinese who have gone abroad to America, Australia, and the Philippines, write home complaining of arbitrary discriminations made against the Chinese which dare not be attempted against other foreigners. Therefore every one is angry and hence the boycott of American goods, illustrating the feeling against the unjust exclusion laws. It has spread all over China, is solely in retaliation against unjust discrimination, and is not anti-foreign."

The impressive ceremony of the investiture of the Emperor of Japan with the British Order of the Garter, took place last week in the presence of about eighty high personages. Prince Arthur of Connaught brought the order. The Emperor conferred upon Prince Arthur the grand cordon of the Order of the Chrysanthemum and in the afternoon conferred upon Rear Admiral Sir Edward Seymour, General Sir Thomas Kelly-Kenny, and Lord Redesdale, of the Prince's suite, the grand cordon of the Order of the Rising Sun.

By the Land Purchase Act of 1903 the British Government declared itself ready to trust the Irish tenant class with £100,000,000 sterling credit, and placed itself in the position of landlord over four-fifths of Ireland for three generations, or until the purchase money had been refunded. Already agreements to sell and purchase exceeding £26,000,000 have been formally concluded.

The French and German delegates have reached an agreement on some matters relative to the Moroccan question, but on the matter of policing and French preponderance of influence a satisfactory solution has not yet been found.

Industrial and Commercial.

In a paper recently read before the Liverpool Engineering Society of the Royal Institution it was shown that to increase the speed of ocean liners from 16 knots to 20 required an increase of indicated horse-power by 4, of displacement 1¾, and of cost by over 2, which meant a saving of time on the passage of 1 day and 19 hours; from 16 knots to 23¼ required increase of power by 5, of displacement by 2½ and of cost by 3¾, saving on passage being 2 days and 4 hours; and from 16 knots to 25 required increase of power by 12, of displacement by 4½ and of cost by 6, saving on passage being 2 days 23 hours. These figures mean it is necessary to increase the size and horse-power of the vessels to such an extent that the first cost is $6,250,000, in addition to $150,000 per month to cover insurance, maintenance, depreciation, and other charges, and explain why the latest Atlantic greyhound has ceased to be a dividend earner, and why the huge moderate-speed passenger liner now prevails.

According to figures recently tabulated for the Mayor of Boston, the Boston Fire Department costs $2.18 per capita, which is ten cents more than San Francisco, second in point of expenditures. New York spends $1.50 per capita, St. Louis and Washington, D. C., each $1.20; Baltimore, $1.03; Chicago, where the population is second to New York, 90 cents. In the total expenditures for running the fire department Boston ranks third, being outranked by New York and Chicago.

Approximately there are now one million farmers in this country who have telephones installed. Most of these are independent of the great Bell interests. It has been stated that the farmers and ranchmen are profiting to the extent of at least fifty million dollars a year through the advantages the telephone gives in keeping them in close touch with the markets and in saving useless labor and wear and tear on their ordinary equipment. The telephone has wrought for the farmer a social as well as an economic revolution.

A new non-corrosive metal named monell, made in part from nickeliferous ores mined in Canada, is coming into favor among makers of steam engineering material. The United States Steel Corporation lately rolled a large lot of this metal to the order of German buyers, who are to test it for the German navy. The Lehigh Valley Railroad is experimenting with the same product, which is used in several parts of locomotives running on that line.

The Singer Company, in planning an annex to its eleven-story structure at Liberty Street and Broadway, New York, has accepted the plans of Ernest Flagg, an architect, to erect for it a building which will reach an elevation of 593 feet above the level of the street. The Washington Monument is 555 feet high, the Philadelphia City Hall 547, Cologne Cathedral 515. It will be forty stories high and twelve thousand tons of steel will go into its construction.

A string of six kites sent up from the German Aeronautical Observatory at Lindenburg recently attained an elevation of 21,006 feet, nearly four miles. This is the highest elevation yet reached by kite flying. Gas balloons sent up with instruments for recording conditions at high altitudes have reached an elevation of 48,700 feet. At that height the temperature was —111 degrees.

The quarterly statement of mill dividends at Fall River, just published, shows a distribution of $428,050 on a capital of $22,875,000, or 1.88 per cent.

Experiments are being made by an owner of pulp mills in the North by which it is hoped to utilize cotton-seed hulls for paper.

The total cut of logs on the Kennebec River this season is announced as 145,860,000 feet.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

Salvation through Right Thinking.

SAMUEL GREENWOOD.

WHEN mortal man comes to understand that the only road leading to heaven is that of right thinking, he will realize the need of working out his own salvation accordingly. The ability which all men possess, of thinking a good thought in place of a bad one, proves the possibility as well as the practicability of such an ideal mental state.

The problem of human salvation is usually considered a question of escape from the consequences of evil thinking rather than from the evil thinking itself. Indeed it is generally believed inevitable that men must be born in inquity and grow up in a sinful state, inheritors of an evil mind and exposed to constant chances of misfortune and suffering. To cast the odium of evil thus upon the creator is the very root of evil thinking, from which all its branches spring. For human thought to be right it must have the right starting-point, the right idea of man and his origin, such as Jesus referred to when he said, "Be ye therefore perfect, even as your Father which is in heaven is perfect." As applied to us does not this passage mean that although at this stage we may not be able to wholly demonstrate man's perfection, our mental concept of man must be as perfect as our concept of God, his origin or Father? The belief that man is created with an evil mind is a basis from which no righteous thought proceeds.

When we realize that wicked or mistaken thought is all that consigns mortals to suffering, here or hereafter, we shall be more careful of our mental guests; and if we are wise, begin to cast out all un-Christlike thoughts. It is from this wrong "mind," described by St. Paul as "enmity against God" and therefore the source of all woe, that Jesus came to save mankind, and not from an angry God, nor from a hell of burning brimstone.

We cannot reap good harvests from bad seeds. Bad seed-thoughts may have been given us through false education, or the mistakes of others, and we may believe them good, but they will bear us fruit "after their kind," and not according to the mistaken belief attached to them. This is not less true than that wheat will not grow from tares, even though we plant them in good faith for wheat. A fervent belief in the sublime life and work of our Master will not make us think as he did nor give us the same Mind, yet how otherwise may mortals reach his consciousness of spiritual Life?

The mistake of Christendom has been in conforming to the material world, as though it were necessary, instead of being "transformed" by the renewing of the mind; and because of this the hand of affliction, the hand of the law of this so-called material mind, has lain heavily upon Christian and unbeliever alike. To become new creatures in Christ, to be "born again" of the Spirit, cannot mean to remain as materially minded as before, for we read in Scripture that we cannot please God while in this carnal or fleshly mind. If Christianity does not bring about a change of thought from material to spiritual mindedness, then neither the individual nor the world is the better for it. If Jesus did not come to save mankind from the mental conditions which result in sin, disease, and death, we may well consent to the Jews' belief that the Messiah has not yet come. It is this misapprehension of Jesus' mission, the belief that salvation can be gained without becoming as spiritually minded as he became, that has made necessary the coming of Christian Science to present his gospel anew, and to republish the "good tidings" for which so many of us have had ears that did not hear.

To be redeemed from wrong thinking, then, is the supreme need of the human race, the solution for every problem that now perplexes it. Evil is neither a power nor a personality to act for itself. Unless mortals consent to think along evil lines, unless they open their thoughts to envy, hate, anger, selfishness, etc., there can be no immorality, no commission of crime, no lack of bread or of love. With man governed by the divine Mind, entertaining only good thoughts, thinking only love and truth and purity, heaven would become universal and evil impossible. In view of these facts is it any wonder that Christian Scientists devote their entire attention to the thoughts, or mental states, rather than to the bodies of mortals, knowing that in no way can they be saved except through righteous, Christlike thinking? Is it any wonder that Christian Scientists persevere in this course, despite adverse argument and criticism, when they have so abundantly demonstrated the truth of this position from the very beginning of the history of the movement?

Salvation includes "the redemption of the body" as well as soul. Disease is as directly a mental problem as sin is, and responds as readily and effectively to a betterment of thought. Christian Science has rescued many thousands from their physical misery and helplessness by effecting that change of thought which true Christianity produces. Who will say that this is not as it should be? The mental government of the body is simply set forth in the fact that no form of bodily suffering is recognizable apart from the so-called human mind. Even physical scientists are beginning to admit that wrong thoughts do have an injurious effect upon the body. They assert that anger may produce the effect of a specific poison, and other evil states of thought, such as malice, revenge, etc., are said to produce effects similarly poisonous and depressing to the system. In the face of these things, what better means can be suggested for the prevention and cure of disease than the reversal of such wrong thinking and acceptance of the Mind of our Master as the only basis of thought?

Christian Science will be more generally sought as a relief from discord when it becomes better understood that a mistaken mental belief, or a wrong state of thought, and not weather, material conditions, or chance, causes all the aches, pains, and misfortunes that make the human sense of existence so wretched and unendurable. The popular belief that the body becomes sick or useless in a sort of haphazard way, without regard to the individual's habits of thought, whether they be good or bad, is becoming untenable to its whilom believers, and humanity is fast approaching that phase of its problem which will present the question, not as

Copyright, 1906, by Mary Baker G. Eddy.

Digitized by Google

a choice between the various material systems, but of how to be rid of the so-called evil or material mind and "to be clothed upon" with the divine Mind and immortality. The trend of human investigation and discovery, although not wholly departing from a material basis, already points to the demand of Christian Science; namely, that the ills of the flesh must be overcome through mental and spiritual, not material, processes and reformations.

Christian Science, the Science of Christianity, presents the only true solution that has ever been offered for the problem of human salvation from evil. It is so simple that a child, or the wayfaring man referred to in Scripture as of simple intelligence, can understand it, and it is so vitally true that the first sentence of the preface to its text-book, Science and Health, has awakened many a starving prodigal to realize the utter emptiness of so-called material existence, and to contemplate longingly the plenitude of the divine Father's house. Weary of the want and suffering in the "far country" of materiality,—that state of human belief that is without hope of heaven or God,—these have gladly welcomed the message and the Messenger of divine Love, and have turned from their feeding of swine to seek their divine spiritual sonship. The history of this hour is recording with increasing reverence and hope these signs of Christ's coming.

Laying Hold upon Life.

IDA W. STRAUB.

In talking to those who are seeking help in Christian Science, an expression of anxiety is sometimes heard in this wise: "I have been helped in Science so much, but there is one ailment that has not yielded, although I have striven hard to overcome it." This may be compared to the condition of one on a shipwrecked vessel, when a storm is raging. Efforts are being made to save the passengers, ropes are thrown out and all seem eager to avail themselves of the opportunity to be saved. But there is a poor man who seems to stay among the wreckage, and although he has one hand on the rope his main struggle is to keep above the waves and he seems to be at their mercy,—being tossed to and fro. In their efforts to save all, the rescuers at last notice that he is holding with his other hand to the wreck. Perceiving his danger, a shout goes out to him, "Let go the wreck; grasp the rope with both hands and you will be saved." He then does so, though with fear and trembling, and finds to his great joy that he does not go under, as he feared, but is steadily and firmly brought to safety. What if the waves do break over him once in a while? he is being rescued, and he knows it; his thought and effort are not divided as before, but are centered on holding the rope.

How often do we hold to conditions that fear and doubt bring to our consciousness, or to thoughts of self-love, self-pity, self-condemnation, and kindred errors,—all parts of the old wreck,—quite forgetting that we are thus delaying our complete deliverance from sin and sickness. Jesus' reply to the lawyer, "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy strength, and with all thy mind," shows what we must all do to "enter into life." Material means to which we had trusted as our stronghold failed, when the storms of sin, disease, sickness, and sorrow swept mountain high upon our false refuge and wrecked hopes were all that remained. When the promise of Truth and Love was thrown out to us by Christian Science, how joyfully we grasped it. Here was rescue at last, and why cling any longer to that which could give no real assurance of safety?

God help us all to see clearly that we must grasp with both hands the life-line, the truth revealed to us in our great need, knowing that God, good, is the only power. By putting all our confidence in Him, all our trust in good, we shall not only reach safety, but rejoice in perfect freedom.

How Christian Science Taught me to Forgive.

CARRIE TOWNSHEND.

Christian Science teaches that as divine Love reigns in our hearts we will desire to help our fellow-man instead of condemning him, that we must be ever on the watch to guard against the sin of self-righteousness, to look to the beam in our own eye rather than to see the mote in our brother's. Christian Science is the Sermon on the Mount put into practice. It shows us how to love and to do good, even to those who despitefully use us; how, when misunderstood and reviled, to revile not again; how to be humble in the moment of victory. Through the practical teaching of Christian Science I have proved in part the truth of these words. When I first came to study Christian Science I was burdened with a deep sense of resentment. I bore a bitter feeling towards one who I thought had wronged me much, in return for what appeared to me repeated kindnesses on my part. I had striven to the utmost to forgive this seeming ingratitude, but in vain. I could not master the resentful feeling till I came to look upon evil in the light of the teaching of Christian Science. What above all helped to bring to me this different understanding was that beautiful chapter in "Miscellaneous Writings,"—"Love Your Enemies." If Mrs. Eddy had never written anything but this one chapter she would have been a benefactor to the human race. I read and re-read this chapter till I had it almost by heart, and by degrees my whole view of the circumstances was changed. When I came to see that as surely as either I myself, or my supposed enemy had done wrong, so surely were we the victims of a belief in sin, and that we should suffer in consequence, the whole thing seemed lifted from me; and my feeling of anger changed to pity and a longing to bring this understanding to my supposed enemy.

It came clearly to me that each of us will have to pay to the uttermost farthing for every wrong committed; then the bitter, resentful feeling left me and in its place came the sense of love that forgets self in trying to help another. Truly Christian Science turns us from a sense of hate to love. It shows us how we each and all have our weaknesses, that what one finds it hard to resist is no temptation whatever to another, therefore we must not be hasty to judge; that we must first strive to win our fellow-man by proving to him that our hearts overflow with love, and then we should pray for wisdom to tell him his fault, if this is our duty, that we may say the right word.

Another blessing which Christian Science brings to us is that we are less likely to take offence. We come to see that sensitiveness is a form of selfishness, and when we analyze the remark that has perhaps wounded our feelings, we find either that we have done something to call it forth, in which case we had best look to our own thought, or if the remark has been simply uttered through malice we have to strive to help the one who harbors such thoughts against a fellow-creature. We come to see how much worse it is to be the one who does wrong than the one who suffers wrong; that the wrong-doer is the victim; that nothing can hurt us if we be followers of that which is good. The Psalmist says, "Great peace have they which love thy law: and nothing shall offend them." In Christian Science we learn that the law of God is the law of Love, and that love is the fulfilling of the law.

The standard of Truth is upheld by self-sacrifice. Well may we feel grateful to our beloved Leader, Mrs. Eddy, for her responsiveness to Truth which has enabled her to bring to us this wonderful realization of the power of divine Love.

Admission to Membership.

The next admission of candidates to membership in The Mother Church will be June 5. Applications must be in the hands of the Clerk on or before May 14.

The True Rationalism

Christian Science teaches that true union with God is through virtue, truth, and love, rather than through adherence to any system of philosophical and religious belief, or through any form of mystical contemplation. It insists that the only way to understand God, Spirit, and the things of Spirit is to be spiritually minded, to live a spiritual, godly life.

The chief defect of much that is called rationalism is that, instead of admitting all the witnesses and proving all the testimony, it discredits a great host of witnesses and refuses to admit a great body of testimony. The testimony to which I refer is the whole spiritual history of humanity and the whole spiritual life of man. The men and women who have been more certain of God and of the reality of the things of the Spirit than of the objects perceived by the physical senses have been the best, the most heroic, sincere, and lovable people known among men. Indeed, they tell us that just to the degree that God, good, has been a living reality to them, they have found it possible to overcome evil with good. The fact that the best and most certain of these witnesses whenever they are reviled revile not again, whenever they are abused they bless, whenever they are judged insane they act most sanely, shows that theirs is the certainty of knowledge rather than the uncertainty of belief. And is it not true that all of us, in our best moments, are most certain of the reality and supreme significance of the spiritual and least certain of the absolute reality of the physical; and, in our worst moments, most certain of the physical and least certain of the spiritual? The case in favor of the spiritual point of view and attitude towards life is all the stronger when we take into account that a purely rational (in the sense of physical) point of view, to the degree that it is reduced to life practice, tends to produce a sense of physical, moral, and spiritual death.

The witnesses and testimony to the reality and supreme significance of the spiritual break down the authority of some forms of so-cal ed rationalistic consciousness, the consciousness based upon human reason acting on the data of the physical senses. J. R. MOSLEY.

The Truth-Seeker, New York City.

I have taken great pains to investigate and talk with persons who have been the objects of some wonderful cures, and to talk with the person who has treated them, so that I might be able to say, in some sense, that I had a personal knowledge of the cases.

It has been a longing of mine to be able to go through, as nearly as I could, the whole catalogue of human ills as they are presented to human sense, and I have almost accomplished it; so that well-nigh every phase of sorrow, suffering, and heart-break, I have seen cured. For a long while I knew I could say that the lame walk, I had seen so many instances of that kind; but I wanted to be able to say that the blind see. I knew where very defective eyes were cured, but I wanted to find an instance where blindness had been total or for a long term of years, so that no one could say that it was not a real, genuine instance of blindness. I wanted to see it perfectly healed. I had the pleasure within the last six weeks of seeing just such a case. I met a young woman twenty-two years of age at a dinner party of Christian Scientists in a little town in Nebraska, and as I looked across the table at her, I could not help saying, "Your life has been a long holiday. You know no sorrow or tears;" but within fifteen minutes I learned that if I had taken the combined sorrows of all the people at that table they would not have equaled a tithe of what she had suffered.

I learned from her mother that she had been born with defective eyes, one large and one small, and the sight drawn to one side. At the age of six months, a curtain dropped down over her eyes, so as to obscure the iris. No one knows whether she ever did see. At six years of age she was sent to an asylum for the blind and remained there twelve years, and was then sent home because she had reached the age-limit of the institution. Eighteen months before she was discharged, her mother became interested in Christian Science and took class instruction, and is now the First Reader in the church there, and of course her thought was very naturally addressed to her child, and she gave her all the help she could; but there was not the slightest evidence that the treatment had accomplished anything, except in the cheer of the patient, who felt that she would yet see. After she came home a neighboring Scientist began to treat her, and in about fifteen months this cloud just simply disappeared. It did not roll up or down, but went out into nothingness, and that girl to-day sees as well as any man or woman in this house. She said that God had been very good to her, in that He had made the large eye smaller and the small eye larger, so that they were both perfectly balanced. She is now a perfect specimen of vigorous young womanhood. This is the kind of demonstration that speaks for Christian Science, and enables us to use, with absolute knowledge of the facts, the argument of Christ, "the lame walk and the blind do see." HON. WILLIAM G. EWING.

Norristown (Pa.) *Daily Herald.*

Christian Science introduces the teaching of the All-in-all of God; that is, that God is Spirit, and man is His expression or likeness, and follows this with the instruction that its adherents must deport themselves according to such understanding of God and man, in order to work out their salvation.

The true understanding of Christian Science is developed and maintained by adhering strictly to its demands in practice as well as in theory. If the practice is wanting, the theory is likely to become adulterated, warped, in order to accommodate the pupil's misapprehension. Thus we observe that it devolves upon Christian Scientists to preserve and propagate their faith. If they are faithful and permit their lives to be consistently governed by what Christian Science teaches, they will progress daily not only in understanding, but also in the spirit of the Science, for this Science becomes a fixture in its adherents in the exact proportion that it enters into their life practice and individuality.

The Scriptural teaching that the letter without the spirit killeth, is true, and therefore it is well to provide against depending too much upon the letter and forgetting the spiritual regeneration which is so much needed by mankind.

The reformatory work of Christian Science must be emphasized. One cannot theorize his way into the kingdom of God. One cannot work out his own salvation by simply learning what he ought to do. One reaches heaven by actually taking the steps which Truth points out. Hence we should take time to consider how much of right enters into our life as well as to seek new ideas. We should grieve more when we are not using the understanding we already have than because of a lack of it. ALFRED FARLOW.

Boston Times.

Christian Science is a revelation, an unfolding to human consciousness of the way of salvation. It is the open fount at which every thirsty mortal may drink. The Science Mrs. Eddy teaches is of God, and no one knows this better than does she. Hence the futility of the effort to make the world believe that she claims any other relationship to Christian Science than that of Discoverer and Founder.

The Christian Scientist has not been long at work in this Science before he discovers that he may expect results only

Digitized by Google

when his reasoning is faultless and his method precise. There is, I venture to say, no scientist to-day who realizes more fully than does the Christian Scientist, the absolute necessity for statement and practice which shall be exact, truthful, and uncompromising with error.

WILLARD S. MATTOX.
New London (Conn.) *Day.*

It is true that Christian Science teaches that the cause and foundation of all sickness is fear, ignorance, and sin; and because of this teaching, Christian Scientists have learned that suffering and sickness are neither God-ordained nor God-sent. They do not come from Him "who forgiveth all thine iniquities; who healeth all thy diseases." The cause of sickness is, therefore, not to be found in God, nor His truth, nor His law, but in error and sin. But to say that sickness is a manifestation of sin demands a true definition of sin. The Christian-Scientist's conception of the term is far more comprehensive than the ordinarily accepted use of the word. As an instance, to the Christian Scientist worry is sin because it is a distrust of God and a violation of the teachings of Christ Jesus. More specifically, believing in any power but God, Spirit, is sin because it violates the first commandment, "Thou shalt have no other gods before me."

NORMAN E. JOHN.
Wilmington (Del.) *Morning News.*

Among the first lessons learned by the Christian Scientist is this—that he must follow implicitly and intelligently the teachings of Jesus. Among these teachings he finds great prominence given to the command to heal the sick, and in the daily life of the Master precept is enforced by marvelous example. As proof that Christian Scientists have understood and do follow this command, it is noticeable that in no other Church do we find so large a number of persons who come (often as a last resource) for deliverance from heavy burdens of sickness as well as of sin. The true Christian Scientist must lead a life of unceasing prayer, knowing that it is demanded of him that he heal the sick as well as render other deeds of kindness. A. M. PAYNE.
Manchester (England) *Guardian.*

Be it fully understood that Christian Science heals purely and solely by denying physical causes and effects, and depending absolutely upon the power of the divine Mind to work the cure. In the degree in which the Christian Scientist measures up to the spiritual apprehension demanded by Mrs. Eddy in her book, "Science and Health with Key to the Scriptures," in that degree is he successful in his ministry of healing. C. HERBERT PIERSON.
Richmond (Va.) *Times-Dispatch.*

Christian Scientists are followers of him who taught the relationship of sin and disease, as recorded in the Gospels. Their religion heals the sick and reforms the sinful, at one and the same time and by the self-same method. They rely wholly upon God, and they prove their faith by their works; and thus they come to know that God is a very present help in time of need. JAMES D. SHERWOOD.
Waco (Tex.) *Daily Times-Herald.*

His [Jesus'] was not book religion, but experience religion. As religion is not cult or institution, so it is not dogma, nor formula, nor theory. Religion is too simple for the theologians. They cannot teach religion any more than they can teach the grass to grow, birds to sing, or lovers to love. PROF. GEORGE BURMAN FOSTER.
Chicago Tribune.

Among the Churches.

Sandusky, O.

The truth of our dear Leader's words, that "giving does not impoverish us in the service of our Maker" (Science and Health, p. 79), has again been proved to us as a church, and our hearts are filled with love and gratitude for the blessings which divine Love has bestowed upon us.

Early in the year there seemed to be a lack of funds in the church, and at a special church meeting we were led to see that our need could be supplied only by having faith in God, by giving more to the parent vine, and by knowing that the little oil in the cruse and the handful of meal in the barrel would not be exhausted by giving. By unanimous vote it was decided to send our own church building fund and one tenth of our monthly collections to the Building Fund of The Mother Church, in addition to what had been sent. Since that has been done, the shadows have been lifted and divine Love is seen to be our only source of supply.

The children of the Sunday School have eagerly sent their fund also, it being their desire to make the mite big with love and the joy that comes with cheerful giving.

This year when the annual reports were read at the business meeting of the church, it was seen that all expenses had been paid and the treasury not depleted. The sale of literature has been gratifying, for in our town of about twenty-two thousand, nearly six hundred dollars worth of literature, including fifty-two copies of Science and Health, has been sold the past year. The public library, county infirmary, and Soldiers' Home have been supplied with copies of our text-book and other Christian Science publications.

Our church is growing spiritually and numerically, the sick are being healed, the sinful regenerated; and we turn to our beloved Leader with grateful hearts for this demonstration, which has been made possible only by the understanding given to us through her discovery of Christian Science.—HANNAH MATTHES, *Clerk.*

Halifax, Nova Scotia.

So rapid has been the growth of the congregation of First Church of Christ, Scientist, of this city, that a larger building than that in which the services are now held is desirable. It has been just six months since the church was opened, and the weekly testimony meetings seem to show that it will never lack for adherents. Certainly it will not do so while the stories of healing there to be heard continue to be true. Yesterday the subject for the day was "Love," and it was certainly full of food for thought. Whether one can assent fully to the teaching or not, the fact remains (shown to be a fact by personal inquiry on the part of a representative of the *Mail*) that there are in Halifax believers in Christian Science who are so through the cure of physical disease by some other agency than medicine, and who assert with a buoyant confidence which is at least winning, that they are believers in Christian Science because of what it has done for them. Undoubtedly no believer in any doctrine has a stronger or more impregnable ground for belief than that.

The Halifax (N. S.) *Evening Mail.*

New Britain, Conn.

Christian Scientists are gaining strength in this city. The sect has grown so strong that the members are now planning to build a church. The meetings are at present held in J. A. Andrews and Company's block. Services are held every Sunday, and from forty to fifty people at least attend regularly.—*New Britain* (Conn.) *Record.*

The Lectures.

Geneva, N. Y.

An audience that filled the floor of the Smith Opera House and a large part of the balcony gathered yesterday afternoon [Feb. 11] to hear the lecture on Christian Science by Rev. Irving C. Tomlinson. The introduction of the speaker was made by W. A. Gracey, editor of the *Times*, who said in part,—

We are all seekers after truth. Some of us see the light from one point of view and others see it from another, but it matters little what the view-point so long as the object sought is the same. In the realm of spiritual truth no one of us can justly say to the other, "I am right, and you are wrong," but rather should we feel charitably the one toward the other, living the best life we know how by the light we have, and permitting and encouraging others to do the same, being ever mindful that at best we now see but darkly, yet encouraged by the heavenly promise that if faithful, we shall in due time see Him whom we worship, face to face.

Geneva Times.

Aurora, Ill.

Mr. Bicknell Young delivered a lecture on Christian Science Jan. 2, in the People's Church. The introduction was given by Mr. Charles P. Burton, who said in part,—

Truth is truth, and truth is sacred, whether proclaimed from a heathen mosque or thundered from the pulpit of a Christian church. I like to think of truth as a huge circle. At different parts of the circumference men and women are at work, according to their light, endeavoring to carve off as large a portion as possible. I have yet to see the individual or the sect which has encompassed the entire circle, and has spoken the final words concerning the eternal verities of human life; but I am frank to say that our Christian Science friends seem to have possessed themselves of a large segment. At any rate, a religion, or a cult, or a science, which has healed unnumbered people and which seems to change the spiritual fibre of those accepting its doctrines, is worthy of profound respect and admiration.

Correspondence.

Butte, Mont.

A large and representative audience assembled at the Broadway last Monday night, Jan. 15, and listened attentively to Clarence C. Eaton's able discourse on this most interesting theme,—Christian Science.

Mr. A. B. Keith, Sr., orator, editor, and newspaper man of thirty years' experience, presided at this meeting, and in presenting the lecturer spoke in part as follows:—

Although I do not belong to the great organization represented here to-night, and have never before attended its meetings, I have the highest respect for its worthy purposes, its lofty ideals, and the splendid work it is doing for humanity, for civilization, and for God. I am here to-night because the barriers of prejudice that have fenced in the world for centuries are breaking down, and mankind is beginning to look out into the light and the love and the opportunity for growth for the harvests of divine power.

We may look at the truth through different colored glasses and interpret it accordingly, but it is the same truth, however much the view-points may differ; and humanity is getting big enough and broad enough and honest enough to recognize that Hamlet was right in suggesting the possibility of more in the hidden side of nature than human philosophy ever dreamed of.

Character-building lies at the foundation of the growth of the soul; and those of us who are not Christian Scientists, but who believe in the progress of the race, must honor and respect this great association of devout men and women for the splendid work it is doing for the civilization of to-day.

Tribune Review.

San Francisco, Cal.

Mrs. Sue Harper Mims, member of the Board of Lectureship of The First Church of Christ, Scientist [Boston, Mass.], spoke last night night [Feb. 2] to an audience in the church at Post and Taylor Streets that not only filled every part of the great assembly room but extended out into the halls. Hundreds were turned from the doors, unable to find seats.—*San Francisco Call.*

A congregation that completely filled the edifice of First Church of Christ, Scientist, listened yesterday [Feb. 4] with rapt attention to a lecture on Christian Science by Mrs. Sue Harper Mims. The lecturer was introduced by a fellow-member of the Christian Science Board of Lectureship, Francis J. Fluno, M.D., of Oakland, Cal., who spoke in part as follows:—

The prophets of old foretold the coming of one upon whom the fear of the Lord should rest, and about nineteen hundred years ago, in the little town of Bethlehem, in the province of Judæa, as had been foretold, was born this wondrous man of God, whose name was to be Immanuel or God-with-us, who should and did establish a kingdom of which there should be no end. He told his immediate followers that if he went away he would send the Comforter, even the Spirit of truth, who should bring all things to their remembrance, as he had said unto them, and should testify of him.

A little less than half a century ago, this promise was fulfilled. In a little town of one of our New England States, in this glorious republic of religious liberty, a woman of highly religious convictions, deeply spiritual nature, great executive ability, and high literary attainments, thus eminently fitted to receive it, was entrusted with this wondrous message of truth, to impart to a waiting world.

From that time even until now, this one brave woman, Mary Baker G. Eddy, this faithful ambassador of Christ, has stood at her post of duty, and from the watch-towers of the world has unflinchingly and unswervingly proclaimed that truth, in tones that slowly yet surely are rousing the world from its death stupor to behold the risen Christ.—*Evening Post.*

[Written for the *Sentinel.*]

The Golden Age.

JENNIE WALBRIDGE BRIGGS.

Lo, it has come! the Golden Age
Foretold by prophet, poet, sage,—
The Golden Age of harmony,
When Love the only law shall be;

Where Truth and beauty reign supreme,
And joy from every eye doth beam;
Where plenty flows on every side,
And want and woe no more betide,

And men now find their happiness
With love their brother-men to bless;
Where God is loved, and understood
To be the source of naught but good.

'Tis heaven begun on earth below;
Its joys from heart to heart will flow,
'Till "on earth peace, good will to men"
From pole to pole resounds again.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

The Sunday Schools.

[THE following letter from Mrs. Eddy's associate secretary is of importance not only to the officials and teachers in the Christian Science Sunday Schools, but also to the pupils and all others who are interested. It gives information for which many have inquired, and will help all in their work.—EDITOR.]

Pleasant View, Concord, N. H., Feb. 23, 1906.

Mr. George H. Lounsbery,
154 E. 50th Street, Chicago, Ill.

Dear Brother:—At the request of our beloved Leader, I am writing you in reply to your letter of Feb. 18. The gift of two hundred dollars to the Building Fund of The Mother Church by the children of Fifth Church of Christ, Scientist, Chicago, is a splendid indication of their loving interest in the Cause of Truth.

You say in your letter:—

"We recently organized our work into four groups of classes, one for the study of the Commandments, one for the Lord's Prayer and its Spiritual Interpretation, one for the Beatitudes, and one for the Lesson work."

Our Leader bids me ask you this question: Would you feed a babe on milk or on meat? Of course you will answer milk. Our Leader would have the Sunday School officials and teachers in all fields keep this necessity constantly before them in their work with the children. She would have them wise, for wisdom is essential in every line of Christian Science endeavor.

When our Leader gave the By-law on "Subjects for Lessons" in the Sunday School, it was not her intention to limit Sunday School instruction to the routine of memorizing the letter of the designated portions of the Scripture. She meant that the children should be taught the *meaning* of the Ten Commandments, the Lord's Prayer and its Spiritual Interpretation, and the Beatitudes. These spiritual fundamentals should be so set forth by means of practical illustrations and every-day examples of love, obedience, and good, that the child will catch their spirit, understand them, and as a result be interested in them.

This work, you will readily perceive, requires consecrated and intelligent effort on the part of all connected with the Sunday School. It means the demonstration of that love which does things. To teach a child the words, "Thou shalt have no other gods before me," is a comparatively easy task. To teach a child the meaning of that commandment so thoroughly that he can and will prove in his living that he actually has no other gods before good, is the grand privilege of the Christian Science Sunday School teacher.

Yours in Truth,

LEWIS C. STRANG, *Associate Secretary.*

"A Religion of Deeds."

THE following appreciative word from the Pendleton, Ore., *Oregonian*, touches upon the much vexed question of the true function of the church in the community, and its practical work in counteracting the temptations which seem to arise on every hand. That the Reading Rooms of the Christian Science churches are meeting the needs of a part of the large transient or floating population of the cities is well known to Christian Scientists, but we do not recall having seen this work alluded to before in exactly the same way as it is now commended in the *Oregonian*.

The article to which we refer is under the caption, "A Religion of Deeds," and is as follows:—

"Much has been said against the Christian Scientists. Their creed has been flayed by the orthodox churches from one end of the world to the other, but the Christian Scientists, as viewed from the Pendleton standpoint, are practical, sensible, God-fearing folk. Their church door is never locked against the world. Their faith is founded upon investigation and their religion is one of deeds.

"Do you know that the thing which turns hordes of people away from Christianity is the frowning doors of churches locked against the needy and hungry soul of the outcast and stranger for six days in the week? Every city has its warm, open, welcome saloon—a very dispenser of hospitality to the stranger and a proffered resting-place to the homeless and the transient, but for six days in the week God's house is locked and barred, no glowing fire tempts the stranger, no reading room invites the weary to rest, no welcome word from the closed doors brings a thrill of the human kinship into the bosom of the wanderer.

"The Christian Scientists are changing this condition in their humble way. Their doors are never closed. They maintain reading rooms, invite an investigation of their tenets, and make the stranger welcome at all times. Without criticism of other churches it certainly seems that this is a practical basis for a religion. If religion means anything it means something every day in the week. The world has too much Sunday religion, too much formal charity, too much perfunctory hospitality. What is needed is more open doors, more inviting retreats to offset the open deadfalls maintained by the vicious and immoral.

"The vicious elements in society are well organized and maintain attractions to draw men away from decency. For this very reason should not the moral organizations maintain an equal number of inviting places in which to offer men decent environments? Over half of the transient men in any community would take advantage of a moral place of rest and recreation rather than the other kind."

No one will question the statement, "If a religion means anything it means something every day in the week," and we are glad to know that it is becoming a recognized fact that Christian Science comes up to this standard. Mrs. Eddy says in Science and Health (p. 494), "Divine Love always has met, and always will meet, every human need," and Christian Scientists have found this statement to be true as they have applied their understanding of the teachings of our Master to every problem. This is the work of every day and every hour rather than the work of one day in seven.

ARCHIBALD MCLELLAN.

Man's Native Element.

AMONG the many testimonies to the healing power of Truth which are given in our periodicals, or at the Wednesday meetings, the greater number contain expressions of thankfulness for the illumination of the Scriptures which comes with the study of Science and Health. The Master's words, "Search the scriptures; for in them ye think ye have eternal life," are literally and most earnestly heeded by Christian Scientists, who know that in the spiritual sense of the Word they indeed find life eternal. No longer does the reproach apply to them, "Ye will not come to me, that ye might have life." Through Christian Science they have come to know that in Christ, Truth, they must find life, or find it not at all.

When Jesus called his first disciples to leave their boats and their nets, he said, "Follow me, and I will make you fishers of men." Now it is quite likely that they were

Digitized by Google

puzzled as to what this might mean. They knew what it meant to the fishes to be taken out of their native element, but before long they were to learn how mortals could be taken out of what they believed to be man's native element; namely, materiality, in order to gain the true sense of Life. Matthew's statement of what followed the call of the fishermen is very significant. He says that, in company with these disciples, the Master went about, teaching, preaching, "and healing all manner of sickness and all manner of disease." Later, he said to them, "Whosoever will save his life shall lose it;" showing that the true sense of Life could only be gained by coming out of the false.

When the truth is first brought home to the average thinker he is as much startled at the thought of giving up his material remedies and supports as if they were his

> . . . light, his life, his very breath
> With no alternative but death.

Afterwards, when he comes to understand that in God, Spirit, he really lives and moves and has his being, he becomes aware of the fact that spiritual consciousness is his true element, though at first he feared to trust himself in it lest he should thereby lose his life. When the "fishers of men" lifted others out of the depths of false belief,—the belief in a life separate from God,—the proof that God is the only Life came in moral and physical healing, even as it comes to-day to the thousands who find health and happiness in Christian Science. The wonders of primitive Christianity are being repeated in healing, and not only is this true, but those who are healed learn also what it means to live.

Our revered Leader tells us that in 1866 she discovered the "divine laws of Life" (Science and Health, p. 107), and throughout the intervening years she has devoted her time and energies to the sacred task of making them known to all mankind, through our text-book and her many other writings. Thus has divine Love insured the perpetuity of Truth's message and ministry, whereby all may be rescued from the sin and suffering, the doubt and uncertainty of materiality, and find themselves in man's native element,—the consciousness of Life as Spirit,—wherein good is the real, and health and happiness are proved to be their divine heritage.

Letters to our Leader.

Chicago, Ill., Feb. 19, 1906.

Mrs. Mary Baker Eddy.

Beloved Leader:—"The six dear churches in privileged, God-blessed Chicago," request me to express to you their heartfelt thanks and gratitude, for the recent amendment to The Mother Church By-laws, giving churches located in the same State, the right "to confer harmoniously and agree on individual unity and action."

The six Christian Science churches of Chicago, with one accord and one mind, were quick to avail themselves of this privilege and duty, feeling it to be a proof of your statement, that "divine Love always has met, and always will meet, every human need" (Science and Health, p. 494).

We desire you to know that we appreciate your loving care and watchfulness for the good of the Field, which gave this amendment; and we promise to use the liberty thus granted only for the advancement of the Cause of Christian Science, the Cause you have made your life-work and which is the Cause of humanity.

We all unite in love and gratitude to you.

IRA W. PACKARD.

Concord, N. H., Feb. 22, 1906.

Beloved Leader:—I have been re-reading with much joy your beautiful address to the Concord church, on the completion of its organization, Feb. 22, 1899. How often have they been quoted, and how much help has come from those words, "Remember, thou canst be brought into no condition, be it ever so severe, where Love has not been before thee." What unnumbered blessings has our dear Leader since showered upon the "little flock in her home city." This member of the flock sends his heartfelt gratitude.

Last Saturday, in Boston, I met a distinguished Universalist clergyman who is working out of the old into the new. He has recently been healed in Science and he would be glad to give himself wholly to the blessed Cause. He told me that some three years ago he wrote you and received an inspiring reply which led him into the study of Christian Science. It is only one more instance of bread which you have cast upon the waters that has returned to you.

On last Sunday it was a privilege to break the bread of life to a large audience in North Adams, the growing field where your loyal student James A. Neal sowed the seed. I was introduced by the Mayor, Hon. M. R. Ford, who concluded his cordial introduction with these words: "A religious faith which has added so much to human happiness should command the considerate approval of the Christian world." How we should rejoice that our dear Leader and her Cause are being more and more rightly understood.

Gratefully and lovingly,

IRVING C. TOMLINSON.

New York, Jan. 23, 1906.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—May I express my gratitude for the great privilege and blessing which came to me as a member of the December, 1905, class of the Massachusetts Metaphysical College, for the loving, spiritual teaching which turned our thoughts continually to the Bible and Science and Health for guidance. I seemed to be awakened to a clearer sense of "God with us" as our ever-present help, and this sense of the divine presence seemed at times to enfold us, and unfold to us the spirit of Christian Science. The desire to be true workers for our beloved Cause, to comfort and serve one another as well as all mankind, seemed to be with us all as we turned again to our respective fields.

Christian Science found me facing the great black wall of poverty, the death of my husband leaving me with four children. This coming after all had been swept away through business losses, it seemed as if the clouds were too black and dense ever to change, but right there I heard God say, "Let there be light," and there was light; and that light was Christian Science. This message came to me through one of your students, and the way has grown brighter, slowly but surely. Such peace and joy have come to me through doing the work of Truth. My prayer is to comfort and serve mankind, for I feel that is the best way to serve you, since this will prove to mankind what the understanding of God does for us and will also prove that Christian Science is Christian.

Lovingly and gratefully,

MILDRED GORDON.

Huron, S. D., Dec. 18, 1905.

Mrs. Mary Baker G. Eddy, Concord, N. H.

Dear Mrs. Eddy:—"Action expresses more gratitude than speech" (Science and Health, p. 3).

Soon after the organization, six years ago, of the Christian Science Society of Huron, a devoted Scientist of Chicago presented to the Society, through a friend here, one hundred and sixty dollars as the nucleus of a building fund. By slow degrees this has been increased to three

Digitized by Google

hundred dollars, which amount we have this day sent to Mr. Chase as a donation to The Mother Church Building Fund, such action having the approval of the original donor. After the establishment of our building fund, we purchased a site for a church home, and should the need of The Mother Church require it, we shall cheerfully convert this lot into money and rejoice to see it follow the way of our building fund. This is the *all* of this little Society of ten members, yet as an expression of love and gratitude we keenly realize its meagreness in comparison with the incomparable blessings we have received through your revelation of Christian Science. With loving, loyal adherence,

THE CHRISTIAN SCIENCE SOCIETY OF HURON, S. D.
LELIA L. SMITH, *Clerk.*

Niagara Falls, N. Y., Feb. 7, 1906.

Beloved Leader:—It was about two years after leaving my old home, in Dundee, Scotland, in 1900, that I first heard of Christian Science. Though I was hungering and thirsting for the truth, I could not at that time understand its teachings. Every day I passed the church in Scranton, Pa., I hoped that some Christian Scientist would speak to me, for I felt too timid to enter. One day in the early springtime I lingered by the church door, and seated myself on one of the benches, where I listened to the singing of your hymn, "O'er waiting harpstrings of the mind." What a sense of peace those words brought to me,—"And o'er earth's troubled, angry sea, I see Christ walk."

Through that hymn came my healing of heart trouble and sick-headaches. Need I say that I am grateful to you for bringing this truth to all mankind.

Lovingly yours,
HELEN BESSMER.

Leeds, Forbes, England, Jan. 23, 1906.

Beloved Leader:—We hope it will gladden your heart to know that the Cause of Christian Science is growing in Leeds. A year ago, two or three of us met in a private house to read the Lesson-Sermon together, and now we have taken good rooms near the center of the city and hold two services every Sunday. The average attendance for the last three months has been twenty in the morning and forty-two in the evening. We wish to express to you our gratitude for this beautiful truth which we are striving to demonstrate by healing the sick and casting out evil. We hope soon to be an organized Society. It has been our privilege to send small donations from time to time to the Building Fund of The Mother Church, and now we have unanimously decided to send the collections one Sunday of each month to the fund so long as it remains open. We realize, however, that only by following in the footsteps of Christ can we express our gratitude to you.

Lovingly yours,
CAROLINE B. GETTY, *First Reader.*

New York, N. Y., Feb. 9, 1906.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—I long to tell you how I thank you for the college class which I was privileged to attend in December last. Hungry, and thirsting for Truth, I was satisfied. How I love you and long to appreciate your life-work by following in your footsteps. To-night I gladly lay my small sheaf at your feet,—a few lives corrected, some sorrows healed, thoughts turned to God. May it grow larger as I know better the meaning of consecration.

Lovingly and meekly,
LILLIAN YOUNG CHARTERS.

Testimonies of Healing.

Christian Science first came to my notice nearly four years ago. I had then been afflicted with rheumatism for seven years, and had tried many doctors and medicines, besides everything that friends would suggest. Five years ago I went to a sanitarium. I stayed there ten weeks and came back worse than when I went away. From that time on I kept getting worse, until nearly a year after, when I was unable to stand up. My joints swelled worse than ever and I lay helpless for about four months, until Christian Science found me. I bought Science and Health and commenced reading and taking treatment. In a few weeks I was able to walk with a cane; my leg commenced to straighten and now it is as straight as the other. I have read Science and Health through a great many times, besides reading the *Sentinel, Journal*, and the Lesson-Sermons. I have not touched a drop of medicine since I commenced treatment in Science and many troubles have disappeared. I am very thankful for what Christian Science has done for me.

JOHN FAGERSTEN, Rockford, Ill.

I became actively interested in Christian Science about nine years ago, through the healing of a sister. This sister had five children, and prior to the time of her healing there were few days in the year when the family physician was not a visitor in that home. After she took up the study and practice of Christian Science she attended to the needs of the family, physical as well as spiritual, and this was such a great change that it awakened my interest. I thought if she could care for her children without the help of a physician there was no reason why I could not also. This was my only thought in connection with Christian Science, but I had not been trying to help myself and baby long before I realized that I needed it morally and spiritually—that to receive the benefit of Christian Science one must purify thought and action.

While the spiritual growth has seemed slow, yet the daily light has always been equal to the daily needs. In the nine years that we have tried to live this truth, there have been many times when the little one has said, "My throat is sore," or "I feel sick;" but with the understanding of the power and presence of good that Science and Health gives us, we have always been able to overcome the discord in a few minutes or a few hours—the sickness never developing into anything serious or protracted. I had grown away from all interest in the Bible or the church, but the light that Science and Health has given me has made the Bible a new book. It has also awakened a love for all mankind, and is enabling me to forget the things that are behind and to "press toward the mark for the prize of the high calling of God in Christ Jesus."

ALICE BROWN NATHAN, Denver, Col.

Years ago I was converted and joined an orthodox church. In this church I found much comfort and was helped to be a better woman, but was always in bondage to physical ailments which made me miserable. Four years ago, when I saw what Christian Science was doing for others, I began studying the text-book to find what it was that accomplished such wonders. When I began to realize that Truth now heals both sickness and sin, even as they were healed by the Master, the old complaints began to disappear and I experienced a wonderful sense of freedom, while the peace of mind that came to me as the truth dawned on my consciousness meant more to me than all else.

I am trying to live the truth and reflect Love every day, and in this way to show my gratitude for the great blessing that has come to this age through our consecrated Leader, Mrs. Eddy.—MRS. ELIZABETH GILLIS, Decatur, Ill.

Digitized by Google

A statement of what Christian Science has done for me in the last four years would fill a volume, but I would like to give an experience in an accident which occurred to me. I was working in my orchard and wished to cut off a very hard limb from a tree. A neighbor was helping me, and I took a very sharp, heavy axe and thought I could do the work with one blow. As the axe ascended it caught on a twig, which turned it slightly, and as it came down the blow was fierce and the full width of the blade hit me on the knee. The wound was not so deep as it would have been had not the bone stopped the force of the axe. I started for the house, but I must confess I never walked on a carpet of so many colors. As I reached it I was soon myself again, and the pain was much less. The neighbor who was helping me was very anxious to call a doctor, but I told him I did not need one. I consented to have some surgeon's plaster to hold the wound together, and while he was gone I used a common needle and thread and took four stitches to hold it together, as the cut was of such a nature that it made a very ugly looking wound. Toward evening I seemed to be in some pain and it was thought best to have help from a practitioner. Word was sent and I retired as usual, but was rather uncomfortable until about eleven o'clock, then peace came to me, and with it sleep. I awoke in the morning a new man; dressed and went to work as usual with very little inconvenience. As each day came I was able to work and no time was lost. The wound healed very rapidly and in three weeks I thought it entirely well. About the twenty-fourth day my knee seemed to be very stiff, with considerable pain and swelling, and the symptoms appeared to be much worse than before. I again sent for help, and it soon came. There had seemed to be much loss of joint water and in the old thought I would have looked for a stiff joint if not blood-poisoning. I give this testimony to show that God will heal a wounded limb as well as bind up the broken-hearted.

I wish to thank Mrs. Eddy for giving us this glorious truth that makes us every whit whole, and which is for all who are willing to give up self and follow the teachings of the Master.—JEROME H. BROWN, Chelmsford, Mass.

In love and gratitude to God, and to Mrs. Eddy, the interpreter of Jesus' beautiful teachings, I wish to tell of some of the benefits which I have received from Christian Science. It is a little over a year since Science found me in a deplorable condition, physically as well as mentally. I had ailments of many years' standing,—chronic stomach trouble, severe eye trouble, made almost unbearable from the constant fear of losing my sight (a fate which had befallen my mother), also a painful rupture of twenty-five years' standing. These ailments, combined with unhappy conditions in my home, made me very despondent. I had entirely lost my belief in an all-merciful God, and I did not know where to turn for help. At that time Christian Science was brought to my notice, and I shall never forget the sublime moment when I perceived that an all-loving Father is always with me. Forgotten was all sorrow and worry, and after four weeks' reading in Science and Health all my ailments had disappeared. I am to-day a healthy, contented woman.

All this has come to pass in one short year, and my earnest desire is to be more and more worthy to be called a child of God. This is in loving gratitude for an understanding of this glorious truth.

MRS. R. JAKUBOWSKI, Chicago, Ill.

[Translated from the German.]

I have studied Christian Science for several years, and having been greatly blessed in many ways by it, I gladly relate my experience. I have always meditated much over religious things, have loved God, and in this soil Christian Science was planted. I like to compare my thought when I began to study Christian Science with that of the two disciples on their walk to Emmaus. They loved Jesus, but they were yet blind. The late occurrences had discouraged and misled them, until their eyes were opened and the work of Truth understood. I loved and treasured the religion in which I had been raised, but my faith in God, in Christ and his church, was at times clouded, until Christian Science came and opened my eyes. The disciples recognized their Master in the breaking of bread—the declaration of the truth—thus I found my way in Christian Science. It showed me the teachings of the Old and New Testaments in their true spiritual light; it taught me a love which is so pure that it is redeeming me from hatred, envy, suspicion, trouble, disease, and thoughts of death, because it is constantly leading me to the only source of all good. "Did not our hearts burn within us," when we began to study Christian Science? I have experienced the operation of the truth within me, and in dark hours of doubt and unbelief I prayed, "Abide with me," and Truth did abide.

At first it was very hard for me to understand, and I constantly complained: "Why was not Science and Health written in the German language?" *Der Herold* had not yet appeared, and so far I had not been able to attend any Christian Science meetings, but I began with the help of a dictionary to translate word by word, and how happy I was after I had picked out a whole sentence. My endeavor was richly rewarded. I now study every day a section of the Lesson-Sermon, and on Sunday the whole Lesson. To these Lessons I owe my progress in Christian Science, and Science and Health is a precious, an indispensable book to me. I no longer complain that our text-book was not written in German, for the Truth in it speaks to me of the one God, in whom we all have our being. O may no German ever shrink from the attempt to study this wondrous book, for he will be rewarded far beyond his expectation. I feel very grateful for Christian Science, and likewise grateful to its Discoverer and Founder, Mrs. Eddy. I have learned to love and revere her in the measure that I approach the truly spiritual mode of thinking which she has revealed, and I shall try to prove my gratitude through faithfulness. My heart goes out to all who have become interested in Christian Science, and I hope we all shall prove faithful.

ANNA SIX, Munich, Germany.

My heart is filled with gratitude to God, and to Mrs. Eddy, for all the blessings I have received through Christian Science. It is now about eighteen months since I became interested and began to investigate its teachings. I had been for years a firm advocate of infidelity, giving but little thought, if any, to Christianity, but now I have quite a different concept of the Bible and religion. This change came about as a result of very close and unprejudiced study of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, from which I learned that I was laboring under a very wrong impression, and finally concluded that I was not on the right road. The change of thought was not, however, accomplished without a struggle. The time had come for me to resign myself to the truth, as truth alone would set me free, and I was thus prepared to receive the blessing revealed in the Bible and in Science and Health.

I am very grateful for an uplifting out of darkness into light, out of discord into harmony, and for learning of an all-loving and omnipotent God, who is a very present help in trouble. Christian Science teaches us that we may reach heaven here on earth, and a Christian Scientist proves his theory in his daily experience of immunity from suffering, thus establishing the verity of Jesus' statement, "The kingdom of God is within you."

I have a dear sister and her daughter who are entitled to my deepest gratitude, as they were the primary cause of

Digitized by Google

my taking the first step in Christian Science. In our correspondence they sought occasion always to mention something in regard to Christian Science, in order that I might become interested. Their earnest solicitations at first were ignored, but by their untiring persistence they succeeded at length in placing in my hands "the rope that lifts us out of the pit." Even in my short experience with Christian Science, I have had many demonstrations to prove to me the omnipotence of God and the potency of the truth, inspiring a trust in the ability of Christian Science to lift me out of evil into good, out of materiality into spirituality. I have become a member of First Church of Christ, Scientist, in this city, and shall endeavor to be faithful and worthy.

I shall always remain grateful to our loving Leader, Mrs. Eddy, the Discoverer and Founder of Christian Science.

JAMES A. MILES, Indianapolis, Ind.

I am reminded of the first Christian Science service I ever attended, in a hall in Boston, twenty years ago. The peaceful atmosphere of that hour has never left me, nor can I forget the sweet sacredness of the whole service.

When at the end of the sermon all present were asked to kneel in silent communion with God, I learned that Christian Scientists had silent prayer in place of the bread and wine of other churches. I enjoyed it more than any church service I had ever attended, although I had been a churchgoer from childhood. I wanted to go again, but did not have the privilege. It might seem that I was ready to investigate Christian Science, but there was one god to which I still clung. From childhood I had thought material remedies were God's means for healing, and I was taught to pray that He would bless the material means used for the recovery of the sick.

Some years later, being in a miserable condition physically, a sudden bitter disappointment nearly unfitted me for usefulness. All faith in *materia medica* was fast dying out. Remedies prescribed by the allopathic school made me worse with every dose I took, and homœopathy had lost its seeming effect. I was then wonderfully led to a practitioner in a small country village for help. I was given the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, together with a *Quarterly*, and invited to attend the meetings on Sunday. I soon became a regular attendant at the meetings, even though it subjected me to ridicule, sneers, and threats. I found what I needed to know,—that heaven, harmony, begins on earth, when we are ready to receive it.

Thus the seed of Truth sowed so many years before was springing up. I was forced to go and ask for help, and received the true bread,—health and the understanding of God which Christian Science gives. It has done even more than I dared to hope for.

MISS MARY E. BURROWS, New Haven, Conn.

About eight years ago I experienced a very wonderful healing in Christian Science. Before this time I knew that I could be quickly relieved of all ills through the prayers of a Christian Scientist, but I did not think anything was required of me, and until this healing of which I speak, I had no desire to give up any time or thought to the following of this truth, for I thought I was very content with the pleasures of the world and society. One day, however, I found myself unable to walk. I seemed to suffer tortures in my feet and limbs, which were much discolored and swollen. I found that bathing and rubbing had no effect, so I asked a Christian Scientist to treat me. At this time a member of the family who was not a Scientist became greatly alarmed over my condition, and not being sure I was having all the help I should have, to be healed, consulted two physicians and brought back this report, with a bottle of medicine which was never touched, that in severe cases like this, which is called erysipelas, amputation was necessary to save life.

This turned me more unreservedly to God for my help. I concluded that if this was the way of *materia medica* I certainly would have nothing to do with it. This stand taken, I was willing to devote all my time, energy, and thought to learning of the Christ-principle which to-day casts out evils and heals the sick. A few days passed, in which my whole life seemed bathed in tears of repentance, and I was perfectly healed.—KATE STONE THOMPSON, Toledo, O.

Christian Science has brought me so many blessings that it would be impossible to tell of all. I find Christian Science truly a religion of love. In Christian Science I have found health, happiness, contentment, and a religion one can live every day; an ever-present God to be relied upon at all times, and in all places. Two years and a half ago I turned to Christian Science for physical help, everything having failed me. I had reached the place where I felt that something must be done, or I should lose my mind or die. I had heard of Christian Science, but knew very little about it. While not an invalid, I had never been wholly well in all my life. There was always some ailment, and I was constantly taking medicine. When an infant I had what was then called spotted fever, followed later with nearly all of the so-called children's ailments. After I was grown, I was ill and suffered such intense pain for years that I would have to take morphine in great quantities. When we moved from Indiana to Texas it was thought the change would be of great benefit to me, but things went on about the same. Eight years ago nervous indigestion developed. My physician sent me to Hot Springs, but I received no benefit. Later I went to a sanitarium in Michigan, where I stayed three months and came away in a worse condition than when I went there, and so loaded with fear that existence seemed a nightmare. I changed physicians and methods many times, but my fear was so great that I was not only physically, but mentally sick, and the mental sickness was worse than the physical. My husband often told me to keep on trying, that I would find the right thing some day, and in turning to Christian Science I found that right thing. My healing was very slow, as a wall of false beliefs had been built up around me, which it seemed to me could never be beaten down. There were many discouraging days, but my faithful practitioner always had encouraging and uplifting thoughts to help me over the dark days. Through this slow healing, which took many months, I gained spiritual light which has enabled me to grasp and know in a slight way this wonderful truth that Christian Science unfolds. I have not used a material remedy in nearly three years, and for the first time in my life I can say that I am well. When I began the study of the Lesson-Sermons, I had to buy a Bible, as I had always thought I had no use for one. I used to think that I would love to have a religion I could live, and this I have found in Christian Science. It is a panacea for all ills,—a religion so simple and pure, and right here for all to have. I am now a member of The Mother Church, and also of a branch church.

My heart is full of love for dear Mrs. Eddy, and I am grateful to be living in this age where one woman has been enabled through her sacrifice of self to bring such great blessings into the lives of so many thousands, who are striving to show their gratitude to her by trying to live honest and upright lives.

MRS. NELLIE P. SAMUELS, Dallas, Tex.

When I first heard of Christian Science I thought that I could not change my faith in the church under whose influence I had been in my native home in Germany, for something new. I tried not to think about what I had heard; but three weeks later I had a severe attack of cold,

Digitized by Google

which medical remedies did not reach, so I asked the friend who told me of Christian Science to help me, and I was healed in one treatment. The peace which came to me I shall not forget, and with it came a longing to know, to understand the truth which makes us free. From that time—several years ago—I said, after I had read a little in Science and Health, "I will follow the thought of this book, because Mrs. Eddy could never have written it except God himself had quickened her and enabled her to know and to write this truth." Through the grace of God she has since awakened many who were asleep in their sins. After Truth, Life, and Love were revealed to her, she had to tell mankind to come to the fountain. Formerly I was engaged for several years in a medical department, in which I was instructed in Germany, and also in this country, but since I have more experience in Christian Science I have left my former work, because I could not conscientiously serve two masters. I have committed my way unto the Lord; I trust in Him, and He "will bring it to pass."

I love and esteem Mrs. Eddy, with gratitude for her labor, through which she has given us Science and Health.

VALESKA F. LEOPOLD, Kansas City, Mo.

Time and again I have tried to express my thankfulness to God for Christian Science, and also to our dear Leader, who has brought this truth to a suffering race. I have been so blessed that my heart is aglow with thanks all the day, for what Christ, Truth, has done for me. I know not where to begin, when I think of the many troubles from which I suffered,—rheumatism, asthma, catarrh, neuralgia, etc. For years I never knew a well day. I had tried all kinds of doctors and remedies, climates and springs, without any good results. At last Christian Science found me, and as the Scripture says, I was made free by knowing the truth. I have been without medicine for twenty years, during which time I have been well. I have learned the value of the Bible and "Science and Health with Key to the Scriptures" by Mrs. Eddy, and I hope that others may be led to try the Christ-remedy. I am thankful to God for this blessed truth.—MRS. SAM T. RIAL, Arbacooche, Ala.

It is with a heart filled with gratitude to God, and to Mrs. Eddy, that I send this statement of what Christian Science has done for me, hoping thereby to be the humble means of leading some suffering mortal into the light, as I have been led to it. During ten years of semi-invalidism and suffering, I had refused to have anything to do with medicine or doctor, but resigned myself to what I then supposed to be God's will. In December, 1904, my neighbors and friends had given me up. It seemed as if there was not a sound organ in my body. My case had been diagnosed by doctors as consumption and dropsy, with attendant ailments. One day, after vainly trying to get me to take medicine, a neighbor advised me to try Christian Science. The name seemed to fill me with new hope, so I consented to try it. After three days' treatment, I told the Scientist that he was doing me no good, as I felt no better. As he went out of the room, it seemed that all hope vanished; God seemed farther off than ever.

After a troubled sleep of a few hours, I awoke much improved, and relieved in mind as well as body. I also awoke to the realization that God is omnipotent Life, Truth, and Love, which the Scientist had so patiently tried to instill into my dull perception. Under this treatment I have continued to improve, until I consider myself a well woman except for a few minor ailments, and I know that what God has begun He will certainly complete.

While the physical healing has been wonderful, it is as nothing compared to the spiritual regeneration of my thought, which I know will be continually renewed, day by day, until I awake in His likeness. I have been enabled to overcome many troubles for myself and family, for which I am sincerely thankful.

MRS. AMANDA JENTRY, Taskee, Mo.

In our family four little daughters rely upon Christian Science, and in the years that we have known this blessed truth they have been healed of every illness and pain that has appeared. No material medicine has been used, there has been no resort to hygiene or other material methods, and the healing work has been done through daily study of the Bible and the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. Among the ailments healed were the following: cholera morbus with violent symptoms; this was instantly healed. Neuralgia was healed in three instances. Besides these there were stings of hornets, chills, burns, toothache, cramps, etc., and a swelling of the head and face from poison oak was healed in a few hours and never has returned.

Another healing of unusual interest to me occurred two years ago. "Christ and Christmas" by Mrs. Eddy, had been given me by my mother, and that night my little girl lay on her bed with burning fever and other distressing symptoms of croup. While treating her my eyes rested on this gift, which was near me. Opening it, I began to read, and as I did so the beauty of holiness dawned upon my thought and there gleamed as a ray of light the pure, the unselfed spirituality of the idea expressed by the author. I read on,—

> Christ's silent healing, Heaven heard,
> Crowns the pale brow.

At these words I looked toward the child, a soft dew came over the deeply flushed face, the breathing was deep and regular, as with a sigh of relief my darling child opened her eyes upon me, and smiling, turned comfortably over on the pillow and slept. Jesus said, "I can of mine own self do nothing." He also said, "I and my Father are one."

MRS. MARY H. NOOE, Boerne, Tex.

Gratitude for Christian Science urges me to tell of a demonstration of the power of truth over error. There seemed to be blood-poisoning of the worst type, and the fear was great for a time. I however tried to help myself to the best of my understanding, and after reading the twenty-third Psalm, and in Science and Health (p. 2), a deep, sweet peace came to me that I never shall forget. The sense of pain was gone. I then slept until evening, and went on duty; all was well. I could not even discern where the injury had been. I am very thankful to God, and to Mrs. Eddy for this truth that makes free.

MISS R. M. JACKSON, Eldridge, Cal.

I wish to express my gratitude for Christian Science. It is over seven months since this blessed truth came to me, and in that time I have found great comfort in knowing that each battle won has been another step on the way. Words seem poor when I try to express the love I feel towards our beloved Leader, who has shown us the way to live rightly. Our text-book, Science and Health, brings me many peaceful moments. I have had some satisfying demonstrations, one of which was the overcoming of female trouble, diseased pelvic organs, that caused much distress. This healing causes me to thank God for His loving care.

MRS. ANNA L. DONGES, Burlington, Ia.

I was healed of catarrh and sick-headaches in their severest forms by reading Science and Health. I was very high-tempered, and that, too, has disappeared through the study of our text-book. I find Christian Science to be as the "shadow of a great rock in a weary land," and for all the blessings I have received through it, I feel very grateful to our dear Leader, Mrs. Eddy.

MRS. DELLA M. MAY, Cripple Creek, Col.

From our Exchanges.

The *Universalist Leader* quotes these words from Dr. Washington Gladden:—

"There is nothing that the Church needs to-day so much as faith in God. Its weakness is not due to its uncertain hold on some of the minor theological beliefs; it goes a great deal deeper. The doubt which paralyzes it is the deadly uncertainty about God. We are hearing much of the need of a new evangelism, and the need is great; but the note of this evangelism which must be sounded first and clearest is the glorious truth that God reigns, and His kingdom is an everlasting kingdom, and that His dominion endureth for ever and ever. If one church could really get hold of this truth and believe it, and make men believe it; if Mammon could be cast down from his throne in the hearts of the Christian people and God could be exalted thereupon; if men could really feel that the justice, and truth, and purity, and integrity, and love in which God is revealed are worth more than money; that the weapons which are not carnal are mightier far in our warfare than all the powers of this world—the feebleness and infirmity of the Church would soon depart, and she would go forth to her conquests fair as the moon, clear as the sun, and terrible as an army with banners."

Are the ideals of the Spirit possible of achievement? Are they worth the sacrifice their attainment demands? Out of the past comes the answer in the cry of the soul's loyalty, "If I forget thee, O Jerusalem, let my right hand forget her cunning!" Whatever the cost, the things of the Spirit are supreme. No man can surrender to Babylon's seductions without forfeiting his manhood. Shadowy the ideal may seem, in contrast with the very real prizes of sense, but none the less it is more real than they, and no lower satisfaction can be compared with the reward with which God crowns the loyalty of the soul.

The Congregationalist.

There are things that remain when all earthly pursuits and achievements pass away. Some things on which we have relied may be "shaken"—to use the New Testament word—but other and more important things "remain" to bless us to all eternity. Every truth of God we learn is ours forever. Every holy sentiment of love we cherish remains, likewise. All the strength of moral purpose we develop, all the purity of heart and righteousness of soul we obtain, all the spiritual capital we accumulate in this world will be ours to possess and enjoy in the next and forever.

The Universalist Leader.

The Churchman quotes Bishop Hall as follows:—

"Christian Science sets forth and insists on an element of Christian truth which we, and the Christian Church at large, have allowed to be too generally ignored. We have not shown forth in our lives this temper of trustfulness and tranquillity and superiority to external troubles, and so this has been thought of as no part of the Christian religion. And we are to blame."

Jesus came to seek and to save that which was lost. He is the Saviour of men, but he saves no man who does not turn from evil to good. The evidence that we are saved is found in the expression of a new character. We become right with God because of the exercise of our own volition under the touch of the Son of God. We are not saved in sin but out of it.—*The Standard.*

"It is not, 'Let your lips speak,' but, 'Let your light shine.' The living epistle is not known and heard of all men, but known and read."—*Pacific Baptist.*

THE CHRISTIAN SCIENCE TEXT-BOOK.—"Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

RUDIMENTAL DIVINE SCIENCE.—Printed in the New York point system of type for the blind. Price, prepaid, 50 cents per single copy; $5 per dozen.

CHURCH MANUAL.—Containing all the By-laws to January 1, 1906, of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of The Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the Churches and Societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to The Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of The Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to The Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number, or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By Hon. WILLIAM G EWING.

CHRISTIAN SCIENCE. Its Worth and Work. By Rev. ARTHUR R. VOSBURGH.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* **PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

National.

Secretary Root, in a letter to Representative Denby of Michigan, relative to the desire to have certain alleged abuses in the Congo Free State corrected by some international action, says,—

"The United States has no treaty right of intervention. We could not rightfully summon or participate in any international conference looking to intervention, adjudication, or enforcement of a general accord by other foreign Powers against the Congo Free State. Moreover, we are without opportunity or power to investigate conditions in the Congo. We have no diplomatic or consular representatives in that country. We could not send any one there except with the consent of the Government of the Congo—to do otherwise would be an invasion of its sovereignty. Other Powers, being parties to the general act of Berlin, have made investigations through their authorized representatives, and the Congo Government also has sent investigating commissions. The information we have on the subject of Congo misrule comes at second hand through opposed channels.

"I most sincerely wish that some way could be found by which the whole of Central Africa could be rightly administered by the several Powers ruling or exercising a controlling influence therein, so as to realize the intention of those Powers when they framed the general act of the Congo. Much may be and doubtless is desirable in the way of good government in that vast region elsewhere than in the Congo."

Representative Perkins of New York, a member of the House Committee on Printing, says: "The cost of the Government printing has increased from a little over two millions ten or twelve years ago to about seven millions. It is unnecessary to say that this increase is out of proportion, and that there has been a wastefulness in every branch. I should say that if all the changes I propose are adopted the number of volumes turned out from the Government Printing Office would be at least four hundred thousand less annually than are now turned out by provisions of law, and possibly five hundred thousand. I don't hesitate to say that the publication of these four hundred or five hundred thousand books could be stopped without any harm to anybody. Barns and cellars would no longer have to be hired by the Government to store trash that cannot be distributed. I think the expense of the Government for printing during the present year will be one-quarter of a million dollars less than it was last year, and if all the reforms and changes are carried out which are advocated there could probably be a saving of a million."

In 1898, says an exchange, there was not a juvenile court in the world, and children were arrested, indicted, tried, convicted, sentenced, and imprisoned in company with and exactly in the same manner as adult criminals in every one of the United States except New York and Massachusetts, where there were ineffective laws permitting "child criminals" to be tried apart from adults. To-day, twenty-two States have some form of legislation for juvenile delinquents, and thirty-eight cities have juvenile courts in varying degrees of perfection. In almost all the other States bills are pending for the establishment of such courts. Following the lead of the United States, juvenile courts have been established in Toronto, Canada, and throughout Australia. In the Irish cities of Dublin, Cork, and Belfast, special days are set apart for hearing of children's cases, and in England and Scotland efforts are now being made to secure the complete system which has been adopted in the United States.

The Senate, in executive session, has just ratified and made public a treaty between the United States and Japan, relating to copyrights, negotiated by Minister Griscom and Minister of State Katsura, on November 10, 1905. It provides that the citizens of each country shall enjoy in the dominions of the other, the possession of copyright for their works of literature and art as well as photographs; and also against illegal reproduction, on the same basis on which possession is granted to the subject or citizen of the other. The subjects or citizens of each country, may, without authorization, translate books, pamphlets, or any other writings, dramatic works, and musical compositions, published in the dominions of the other by the subjects or citizens of the latter and print and publish such translations.

Acting Secretary of War Oliver has sent to Congress begging that steps be taken to allow the department to dispose of the enormous number of useless old records and papers that have been accumulating in the files for years past, occupying much valuable space. Many Secretaries of War have appealed to Congress for the same relief. In 1902 this resulted in the passage of a law by Congress which provides for the appointment of a joint committee of the Senate and the House to make an examination and report upon the accumulation of useless Government papers and files in the Departments. The commission has never acted or even been appointed.

Old North College, the nucleus of the present group of buildings of Wesleyan University, was destroyed by fire last week. The building was erected in 1825, when Captain Partridge, Superintendent of West Point, first founded the Partridge Literary, Scientific, and Military Academy. The building, in 1831, passed into the possession of Wesleyan University. Insurance covers the loss, and a new dormitory will be erected at once.

The recent retirement from active service of Rear Admiral Colby M. Chester and Rear Admiral French B. Chadwick develops the fact that both admirals, besides being retired on the same day, were born on the same day, February 29, 1844. Appointed from widely different sections of the country, they were in the Naval Academy together.

The catalogue of Mt. Holyoke College for the year 1905-1906, just issued, shows the present enrollment of students to be 714.

Foreign.

The British naval estimates for 1906-7 propose a net total expenditure of $159,347,500, $12,500,000 less than the estimates for the present financial year. In his explanatory statement the First Lord of the Admiralty says that for the present financial year, ending April 1, there will have been completed three battleships, eight armored cruisers, one second-class cruiser, eight scouts, sixteen torpedo-boat destroyers, and thirteen submarines. There will be under construction on that date six battleships, ten armored cruisers, twelve coastal destroyers, five ocean-going destroyers, including one which will be the fastest of its type, one royal yacht, and fifteen submarine boats. It is proposed, the statement continues, to begin during the coming financial year four armored vessels, five ocean-going destroyers, twelve coastal destroyers, and twelve submarines. It has been decided to adopt turbines for all the vessels provided for during the present year, and oil will be largely used in the British navy in future, experiments having proved that it is the most successful.

Official recognition by the Sublime Porte of the demand that the American scholastic institutes at Beirut, Syria, and elsewhere be given identical treatment with the schools of other nationalities, promised on the occasion of the American naval demonstration in August, 1904, has not yet been officially promulgated. In some quarters the impending visit of Rear Admiral Sigsbee's squadron to Beirut is connected with this question. The American legation is pressing the Porte to refund the customs dues paid under protest on consignments of educational material destined for the American schools, as it is recognized that these establishments are entitled to import such articles free of duty.

The Japanese Cabinet has had a long discussion of the nationalization of private railroads. Contrary to the previous supposition, it is believed that the Government will make the sale of the roads to the nation compulsory. Seventeen lines are concerned. The plan is for the Government to pay $250,000,000 for them before 1911. It is thought that the real motive for this unification is to make the roads thoroughly available for military purposes.

Industrial and Commercial.

Two of the largest boiler manufacturing firms in the country, which have been keen competitors for several years past, have practically completed arrangements to consolidate their business. These firms are the Babcock & Wilcox Company and the Sterling Consolidated Boiler Company. Both companies make water tube boilers for stationary and marine use, and conduct a big export trade. The new company will be formed with a capital of $15,000,000 to handle the combined business.

The American Bridge Company, it is reported, booked orders for fabricated steel during February aggregating sixty thousand tons, which makes the total since January 1, one hundred thousand tons. Independent shops have taken as much if not more.

Negotiations for the proposed consolidation of the leading companies in the United States manufacturing street cars, which have been on ever since last May, are said to have fallen through, the options on the various firms having expired.

Exports of leather and leather manufactures from the United States during the calendar year 1905 were the largest on record, being valued at $38,946,422, against $35,824,492 in 1904, $27,169,614 in 1900, and $12,275,470 in 1890.

An organization has just been effected by which a company capitalized at eight million dollars acquires oil lands in Indian Territory involving about three hundred thousand acres with a daily output at present of eleven thousand barrels.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

"As a man thinketh."

LEWIS C. STRANG.

Not the least of the blessings vouchsafed the earnest student of Christian Science is a steadily increasing ability to think, together with a growing appreciation of what thought really is. It makes no difference where Christian Science may find the individual, whether a leader of the intellectual aristocracy or a humble representative of the unschooled multitude, this Science begins at that point to teach him to think.

Almost without exception, the first step in this course of instruction is the revelation of the unsuspected fact that, however complicated one's mental processes may have been before he touched the hem of Christian Science, those processes rarely if ever constituted genuine thought. Through the humility resulting from the conning of this lesson, the courageous and conscientious truth-seeker is enabled to apprehend something of Paul's meaning when he wrote: "For the wisdom of this world is foolishness with God."

An ancient fallacy, long since exploded, and a modern prototype, regarded as eminently authoritative by many persons, may be noted to illustrate what is meant by the statement that what mankind has long regarded as serious mental processes are not necessarily thought processes. It was the theory among the ancient Greeks that the vault of heaven above and the broad expanse of earth beneath were supported on the mighty shoulders of the Titan, Atlas. In due course it occurred to some inquiring person that this explanation explained nothing, for who or what upheld Atlas? Thus was developed the amusing series of suppositions that Atlas, bearing the world on his shoulders, stood on an elephant's back, while the elephant stood on a tortoise, and the tortoise on something else.

To-day the world laughs at Atlas as a mythological absurdity, but would it laugh at the modern college professor, an authority on one of the natural sciences, who profoundly and solemnly declared to the writer that he had not dared to make positive general statements in his recently published text-book? Knowing from past experiences, he explained, that what was considered true by the scientists of to-day would very likely be proved false by the scientists of to-morrow, he had been obliged, he said, to modify every generalization with a qualifying adjective behind which he could retreat when the inevitable exposure of his fallacies came. Yet he seemed not in the least embarrassed by his manifestly untenable position, but on the contrary rather elated at his astuteness in thus circumventing the future.

Everybody knows that the Atlas theory of the ancients is not scientific, and it is at least an open question how much science—exact knowledge—is embodied in modern researches, which, though presented as scientific explanations of the composition and evolution of the universe, are generally granted so insufficient as to be open to probable revision on the morrow. It is evident that whatever sort of a psychological exercise the expansion of the Atlas theory by the ancients may have been, it was not a process of thought. Thought is the activity of intelligence, and the faintest glimmer of intelligence applied to the Atlas proposition at any stage of its development would have instantly revealed its inherent nonsensicality. Apply the same gleam of intelligence to the researches of the modern builder of materialistic theories, which are here to-day and gone to-morrow, and how much nearer genuine thought does he come than did his brother theorizer ages ago?

Christian Science teaches and proves by the irrefutable evidence of physical and moral regeneration that mental processes in order to rise to the dignity of thought must be based upon reality—upon God, divine Mind, good, as the only cause and creator; must progress in strict accord with the immutable law of eternal harmony—the law of good overcoming evil, of Love exterminating hate, of Life destroying death; and finally that thought must present the proof of its genuineness by reaching a conclusion, the truth of which is demonstrable. Christian Science, with its inexorable demand for demonstration, rules out speculation, however interesting, ingenious, and fascinating it may seem to the human mind. It recognizes that speculation is foolishness in the sight of God, divine Mind, who knows all and brings all into being by His knowing.

Christian Science awakens slumbering mortals with the positive declaration that there is no thinking except right thinking. Is it not extraordinary that in all intellectual history no savant, trained only in the world's philosophy and science, has ever penetrated the magnificent simplicity of this fundamental rule of Christianly scientific understanding? Christian Science makes plain how Jesus, a child of twelve, endowed with the authority of spiritual understanding, was able to confound the scribes and doctors of rabbinical law; and how, too, this same wonder is repeated to-day by the students of "Science and Health with Key to the Scriptures," who, though children in the schools of worldly learning, are nevertheless able to detect errors of reasoning and lapses in logic which have been hidden from the master minds of the race.

Because Christian Science is a divine revelation, it declares that which the human mind has never been able to attain—the absolute; and even as a child with a yardstick is better equipped to measure a roll of cloth than a man with no fixed standard to go by, so the "babes" in worldly wisdom, if fortified with some understanding of the truth about God, man, and the universe, are better qualified for authoritative utterance than those who base their conclusions upon the changing phenomena of material sense.

When the Discoverer and Founder of Christian Science declared that the source of all mankind's trouble lies in the belief of life, substance, and intelligence in matter (see Science and Health, p. 278), she hurled the stone that was destined to destroy utterly empirical medical methods and man-made theology. When she advanced still another stage on her mental journey by declaring and demonstrating that matter and mortal mind are one (see Science and Health, pp. 409 and 479), she blazed the way for the science and the philosophy of the future. But great as were these contributions to the salvation of mankind, her work would still have been on a material plane and therefore incomplete, had not her love for humanity, and the

Copyright, 1903, by Mary Baker G. Eddy.

Digitized by Google

spiritual perception born and bred of this love, enabled her to span the chasm between the unreal and the real, the material and the spiritual, the mortal and the immortal, and to know God, good, as the only Mind, the only thinker —the omnipotent, omniscient, and omnipresent Principle, which, reflected by man, demonstrates life and salvation for humanity.

By following their Leader, Christian Scientists learn how to think. They learn that there is no matter in thought, and that consequently the passing of a panorama of pictures of material things before the camera of the mind is a belief of thought rather than actual thought. The process by which these finite mental pictures are transformed into the true spiritual concept formed by the divine Mind, is clearly set forth in Science and Health, p. 264, as follows:—

"The crude creations of mortal thought must finally give place to the glorious forms which we sometimes behold in the camera of divine Mind, where the mental picture is real and eternal. Mortals must look beyond fading, finite forms, if they would gain the true sense of things. Where shall the gaze rest, but in the unsearchable realm of Mind?"

Thus we progress from blind faith to a true belief, looking forward with trust and confidence to the time when the true belief shall advance to spiritual understanding, when we shall see God "face to face"—that is, think the thoughts of good without a trace of limiting and falsifying materiality.

The Wednesday Evening Meeting.

HORACE W. HEBBARD.

ONE of the purposes of the Wednesday evening meeting is to give those who do not understand Christian Science, opportunity to learn what it has done and is doing for mankind in the way of healing the sick and reforming the sinful. It should therefore be our constant effort to speak in terms which will be perfectly intelligible to these people. Unusual and indefinite words and phrases should be avoided, since otherwise the uninitiated will be left in doubt as to just what we mean, and hence will be left in a state of mental confusion or uncertainty.

It is apparent further, that the public does not care about the minor details,—the small talk indulged in by this one and that one in regard to a case, or what the patient said or thought, or did not say or think,—they would have us state briefly, plainly, and forcefully what the trouble was to which Christian Science was applied, and give the results. To undertake to teach Christian Science in the Wednesday evening meetings, or to explain why and how it heals, is usually to get into deep waters.

Long testimonies are usually a great trial. There are about forty minutes each Wednesday evening devoted to the testimonies, and in large gatherings there should be at least ten to fifteen testimonies given. This would give each three to four minutes, and ordinarily that is all the time one is likely to use with profit to his hearers. Three minutes would, perhaps, be a good limit. Ten demonstrations told in one evening by ten persons will prove much more effective and convincing than ten equally good demonstrations told by one person. As a rule one good demonstration well told is sufficient to make our point, and this accomplished, it is always well to stop. After that anything we may add tends to weaken rather than strengthen the impression. To illustrate. Some time ago I had occasion to nail up a board that had become loose. It was a rather slender, narrow board, but it was in a place where it had to stand considerable strain. I drove two nails and thought I had it reasonably secure, but in order to make assurance doubly sure I decided to put in another one between the two. In driving this the board split, so that I distinctly weakened its hold. Then I thought I ought to drive two more nails, one on each side of the split, to repair this damage. Each of these had to be driven so close to the two originals that they also caused splits. The result was that whereas I had a reasonably safe structure with two nails, with five it tumbled down like a card house, and besides this the board was spoiled for further usefulness.

In giving demonstrations it is certainly wise to avoid stating the name of the practitioner. When a person is seeking a practitioner it is important that he should be led by divine Love to the right one, rather than that he should be led to go to one because of our commendation. Furthermore, the habit of mentioning the practitioner's name in public meetings is offensive to many, and if there were no other reason, it should be avoided on this account.

Every church member should feel a personal responsibility to make the meetings interesting and should know that it is both his duty and privilege to tell publicly what God has done for him through Christian Science. To say we have never spoken in public and can't do so is to our discredit, for we are called to freedom from all these old-time sense limitations. The public should not be led to infer that only a very limited number have been benefited by Christian Science, and yet they are very apt to form this opinion if only a few are heard in our meetings. Prominence should always be given to the spiritual uplifting that has come into our lives through the study of Christian Science. This is a feature of our experience which appeals to many at the outset, and eventually to all more strongly than the physical healing, and it is very important that such experiences be related; nevertheless it is true that the great majority of those who decide to look into Christian Science do so because they are seeking relief from physical suffering in themselves or in others, and they think this is the only interest they have in Christian Science. When considering the needs of this class we are obeying Christ's command, "Feed my lambs," and as a recent writer in the *Sentinel* has said, "Jesus commanded that the lambs be fed, before he said anything about feeding the sheep."

Let us not allow the meetings to get into a rut. It sometimes happens that a speaker will relate a demonstration over a lost article, for instance. This will remind others of similar experiences, and before we are aware the greater part of the evening may have been taken up with such testimonies, instead of those relating to the healing of sickness and sin, which the people have come expecting to hear. When such a condition is threatened the members of the church ought to take the meeting in hand and turn the tide at once by giving testimonies of healing.

The Wednesday evening meeting presents an opportunity to let people know what Christian Science has done and is doing for the world in the way of healing suffering humanity of all its ills, thus furnishing them with such reliable data that they may follow up the cases mentioned with further investigations, if they desire. Let us also remember ever that the best and most convincing evidence is that which is not hearsay, but which is the personal experience of the witness.

[Written for the *Sentinel*.]

An Offering.

WINIFRED BORLEE.

HERE at Thy feet, O God, I humbly lay
A human heart that yearns to rightly pray;
O teach me that Thy perfect will
Is Truth; to know Thee, and be still.

Here at Thy feet, O Love, in ashes falls
My mortal self that hugged its prison walls
And deemed them part of Love's design
Till Love revealed His will divine.

Here at Thy feet, O Truth, O Love, O Life,
My new-born self awakes to nobler strife;
To break this mortal dream and see
Good as the one reality.

Selected Articles.

The Real and the Unreal.

Christian Science does not deny, but affirms the reality of man and the universe. It teaches that the whole of God's creation is real, perfect, and permanent. It denies reality to the belief that this creation is physical, imperfect, and mortal; and in all its denials it looks to the appearing of higher and more perfect expressions and evidences of the real universe and man.

While Christian Science teaches that all is in reality Mind and mental, it makes the same distinction with reference to the spiritual, divine, and immortal Mind, and the carnal, sinful, and mortal mind, as that made by primitive Christianity. It teaches that the real, spiritual, and eternal universe and man are phenomena of the divine Mind, while the material, sinful, discordant, and mortal sense of the universe and man are the phenomena or false concepts of the carnal mind. It also teaches that through the coming of Christ, divine Truth, through spiritual awakening and growth, these phenomena or false concepts disappear, and the real universe and man is perfectly revealed.

Those who have been liberated from sickness and other evils through Christian Science, and especially those who have been liberated after all other available means have been resorted to and found ineffectual,—and there are thousands of such persons,—know through the highest and most reliable proof that Christian Science does heal sickness, overcome sin, and make people happier and better. To discredit the testimony of those who have the highest right to know whereof they speak, and to credit the testimony of those who have neither proved nor disproved the claims of Christian Science, even those who do not know enough about the subject to state accurately its fundamental teachings, would be the very opposite of true rationalism. The only rational way to approach Christian Science is in the spirit of truth. The only way to know the truth or falsity of the teachings of Christian Science is to first know what these teachings really are. The only way to judge Christian Science is by its fruits. PROF. J. R. MOSLEY.

The Truth-Seeker, New York City.

Everything which the Master said and did indicates that he considered himself an example for his followers, and that he did not expect to save them by any merits of his own, except in so far as he was worthy to be an example. He marked out the usual way to all mankind. He said, "I am the way." On one occasion he said, "If I then, your Lord and Master, have washed your feet; ye also ought to wash one another's feet, for I have given you an example, that ye should do as I have done to you."

To be Christian, therefore, is to know the way which Jesus taught and practised, and to do likewise. That way which is most nearly in harmony with his way must be the most Christian. Some seem to think that in many instances Christian Scientists are laboring at a disadvantage in the abandonment of material remedies for the sick, but the adherents of this Science have demonstrated convincingly to themselves that they can do better without material remedies than with them. Some have even gone so far as to declare that Christian Scientists are a menace to the health of the community in which they live because they advocate the non-use of medicine, and yet the every-day results of the faithful Christian Scientists are superior to anything which they had experienced while relying upon material means and methods. Surely an implicit reliance upon the Father is more Christian than any other practice, for the great Exemplar said, "The Father that dwelleth in me, he doeth the works." He used no material remedies and claimed no power within his own person, plainly teaching by example as well as by precept that the Father, whom he had defined as Spirit, was his only source of help. He even went so far as to say, "It is the spirit that quickeneth; the flesh profiteth nothing," which is equivalent to saying, Spirit alone animates and gives life; matter, materiality, is altogether unprofitable. Furthermore, the results of an implicit reliance upon divine Mind in all kinds of trouble have been to those who have practised such reliance superior to any which they have experienced while depending upon lesser powers. Thus by actual results Christian Science has proved to its devotees that it is more Christian than any way which they have heretofore sought to practise.

ALFRED FARLOW.

Boston Times.

The belief in the unreality of matter would little profit us if we did not know the reality and allness of God. In Christian Science we believe that God is all, and that He is Spirit; and that man, being His image and likeness, must be spiritual; hence, if God, Spirit, is real, and God is all, the unreality of matter is but the necessary deduction; but Mrs. Eddy teaches that the belief in the reality of matter will not be entirely overcome in our consciousness until each has fully demonstrated the omnipresence of God.

Christian Science does not assume to eliminate nature, for whatever is natural is true, and a truth exists forever; but it does assume that God's laws are the only natural laws, and that these laws were taught by Jesus. He did not teach that sickness or disease was natural. His mission was to show their unnaturalness, that sickness had no causation, except sin; and if we do not obey the will, or law, of God, or if we obey so-called natural laws which He did not make, we shall certainly be punished, as the sins of omission or commission bring their own reward. W. C. WILLIAMS.

Baltimore (Md.) *Evening Herald.*

The conceit that accompanied early discoveries of modern science has given place, as discovery has followed discovery, to an awed humility. Ten years ago the scientist, thinking himself securely seated on the atom, denied the further divisibility of matter and proclaimed its indestructibility. To-day, with radium pounding at the stars, through ions and electrons, he admits, not merely that matter may be infinitely divisible, but even that it may be there is no such thing as matter, but only force.

In brief, science believes that the universe is alive with eternal life; and not only the universe, but every smallest part of it. Therefore we may believe that death does not end all, for there is no death. As Maeterlinck beautifully says, it is only "a bend in the road, hiding its further course from our view." Editorial in *Chicago Journal.*

The proof that Christian Scientists do not "dishonor God" resides in the fact that in their every teaching and in all the practical workings of this great religious body, thought is turned towards God as the one and only creator, the one great cause, the one Principle governing and controlling all reality, the one and only healer, the loving Father to whom all can turn in every hour of trouble and "who healeth all thy diseases." Christian Science is a revelation of Christ to the world, uncovering those truths of Christian healing which have been smothered under the dead weight of creeds, forms, and ceremonies for ages.

JOHN L. RENDALL.

Fort Dodge (Ia.) *Messenger.*

In what do the six tenets of Christian Science differ from what you and I believe? We may word our beliefs somewhat differently, may change a word or phrase, but belief in the inspired Book, one God, one Christ and his atonement, and the constant, prayerful effort to pattern after Christ Jesus in love, meekness, mercy, purity, and justice, are to me a creed broad, high, and deep enough to meet the needs of this world. If we and our Christian Science brethren live

Digitized by Google

up to it, will we not be living and practising the religion of Jesus Christ? A DISINTERESTED PARTY.

Iowa City (Ia.) *Citizen.*

Christian Science has certainly made progress in London during the last five years. Instead of one rather dingy hall in Bryanston Street, there are now three centers, all conveniently situated in the West End. I went on Sunday morning to the new building in Sloane Terrace which is known as First Church of Christ, Scientist.

Nothing impressed me more than the constant use of the Bible by the Christian Scientists. The passages read were longer and more varied by far than those we hear in other churches. Must not this continual repetition of the words of Holy Scripture sink into many hearts?

London British Weekly.

The Christian Scientists have at present the largest congregation in San Francisco and [at their mid-week meeting] they listen to no sermon. They do hear with profit an equivalent, in the remarks by many who testify of the good their faith has done for them. The element of help is there, and that is why they go, though the personal factor is reduced to a minimum.

Will the pulpit continue to hold its own in the midst of new movements and new manifestations of spiritual life? This is a question which remains to be solved.

THE BYSTANDER.

San Francisco Pacific.

The reasoning of Christian Science appears "fallacious" only to those who refuse to "compare spiritual things with spiritual," preferring to accept the fleeting, changing, and unreliable testimony of the physical senses rather than credit the Scriptural verities, against which "the flesh" and its senses "lusteth." Says Paul, "The natural man receiveth not the things of the Spirit of God: for they are foolishness unto him: neither can he know them, because they are spiritually discerned." H. CORNELL WILSON.

Brooklyn (N. Y.) *Citizen.*

A mathematician, correcting the errors in a mathematical problem for his pupil, is conveying a true idea to him which destroys his erroneous concept of the problem, and thus frees him from these errors. One would not, however, term this instructive influence, hypnotism, or suggestion, since the truth of mathematics exists in the realm of mind as axiomatic. This illustration also coincides with Jesus' words, "And ye shall know the truth, and the truth shall make you free." JAMES A. LOGWOOD.

Linn County (Mo.) *Budget.*

Confessing ignorance of the teachings and workings of Christian Science, we cannot help feeling that a belief which can attract and hold some of the brightest minds of the century, must contain some elements of truth; and the cures effected in our own community, which are claimed as the result of its work, convince us that the movement should not be condemned without intelligent investigation.

Geneva (N. Y.) *Independent.*

While no Christian Scientist claims to be perfect, every one who has been honestly striving, can say he is a better man in thought and deed than before accepting Christian Science. The foundation stones of Christian Science are absolute honesty and purity. CHARLES K. SKINNER.

Grand Rapids (Mich.) *Herald.*

The point the *Miner* wishes emphatically to make is—that if any man believes Christian Science is a healing power that will heal, then we deny the right of any one to say he shall not believe in it, and practise it if he chooses.

Editorial in *Bisbee* (Ariz.) *Miner.*

The Lectures.

Norfolk, Va.

Bicknell Young of Chicago delivered a lecture at the Academy of Music, yesterday afternoon [Jan. 28], on the subject of Christian Science. The speaker was introduced by Hon. James G. Riddick, Mayor of Norfolk and a prominent practising allopathic physician. Dr. Riddick opened his remarks by saying that he had been criticised for accepting the invitation to introduce a Christian Science lecturer, but that he did not consider himself a possessor of universal knowledge, and, while honoring his own profession, if there is a Principle by which the suffering of mankind can have additional alleviation he is willing to give it a hearing; that he was not sufficiently informed as to the teachings of Christian Science to pass upon its merits, and he was willing on this occasion, as on all others, to serve the people of Norfolk.—*The Public Ledger.*

Stockton, Cal.

Increasing interest in the study of religion under the leadership of Mrs. Eddy was shown last night [Feb. 6] when Mrs. Sue Harper Mims of Atlanta, Georgia, addressed a very large audience of thoughtful persons at the Yosemite Theatre on the Principle and the practical workings of Christian Science. The lecturer was introduced by Attorney J. A. Plummer, who said in part,—

The idea of utility perhaps characterizes this age more than any preceding one. Will it pay? What is there in it for me? Is it practical? Can I take it into my daily life and make it my very own? Where can I find physical ease and mental peace? Is Christian Science simply an ideal or an every-day, concrete fact? Students thereof are finding answers to these questions. The millions of people who have been blessed by its kindly ministrations are competent witnesses to its life-giving and regenerating power. The shafts of malice, the arrows of ridicule and hatred, awaken pity rather than resentment in those who know by experience the relief this thought has brought to sick, fear-tormented, and distressed humanity.

Stockton Independent.

Worcester, Mass.

Hon. Clarence A. Buskirk of Princeton, Ind., delivered a lecture yesterday afternoon [Feb. 11] in Franklin Square Theatre on Christian Science. After every seat on the first and second floors of the theatre had been occupied, and every chair in the six boxes taken, people were turned away. The lecturer was introduced by Rev. Dr. Willard Scott, pastor of Piedmont Congregational church, who said in part,—

"I take great pleasure in being here with you, this afternoon, as a member with you of the universal church of Christ. It is a pleasure also because I have had some knowledge of the theme which is to be the subject of the lecture this afternoon."

Dr. Scott spoke of his acquaintance with the development of the Christian Science movement in Omaha, Neb., and in Chicago, while he was pastor of churches in those cities. Continuing, he said, "I saw the beginning and the progress of this organization in those cities, and I rejoiced in both. Those who have the spirit of Christ are his, no matter under what name you find them working. I take it that you of the Christian Science faith are as truly Christian as I am myself. Last Sabbath evening Rabbi Fleischer of Boston spoke from my pulpit. If Mr. Buskirk, who is to speak to you this afternoon, wants to speak from my pulpit, he may and welcome. In matters of intelligence and judgment there is room for wide difference of opinion. Religion is not a philosophy. It is a relation between the individual and his God."—*Worcester Telegram.*

Among the Churches.

New Church in San Diego, Cal.

The Christian Scientists held the first service in their new church yesterday, Dec. 31, it being one year from the time the corner-stone was laid. The service was simply reading the lesson for the day on "Life."

Every seat in the auditorium was occupied and many had to stand. The organization of this church dates from Aug. 18, 1890. The church was legally incorporated April 5, 1897.—*The San Diegan-Sun.*

San Jose, Cal., Dedicates New Church.

Yesterday [Dec. 17] the new church structure of First Church of Christ, Scientist, of San Jose, was formally dedicated to the cause of spiritual advancement. Not only the local members of the church, but about a hundred Christian Scientists from abroad, many San Joseans whose affiliations are with other churches, and many others who own no church affiliation whatever attended the simple but beautiful dedicatory service, two repetitions of which during the day were necessary to enable all who so desired to attend. From San Francisco came a special train bearing a large number of Christian Scientists. From far-off Fresno came a band of twenty or more, and many were present from Oakland, Santa Cruz, and the bay towns, and from Palo Alto, Los Gatos, and the valley villages.

San Jose Mercury.

Sharon, Pa.

The handsome new edifice of First Church of Christ, Scientist, corner of South Irvine Avenue and A Street, was opened Sunday [Jan. 21], and the first services were held in it, being attended by large numbers of people.

Three services were held during the day, one at eleven o'clock in the morning, one at three o'clock in the afternoon, and one at eight o'clock in the evening.

The new church is the second church building of the denomination erected in the State of Pennsylvania and cost in the neighborhood of eight thousand dollars.

The members of the church are very enthusiastic about their church work and are highly elated over their new building and very grateful to their Leader, Mrs. Eddy, the Discoverer and Founder of the Christian Science movement, who through her untiring efforts for humanity has made it possible for them to have this beautiful church home.

Sharon (Pa.) *Telegraph.*

Christian Science in Concord, Mass.

Seven years ago, a young woman here became ill with a complication of diseases from which medical treatment brought no relief. Through the advice of a friend she began Christian Science treatment, and in a few weeks she was healed. The members of her family were much impressed, and one by one they began the study of Science and Health, and in the summer of 1899, five of them gathered in the home each Sunday to read the Lesson-Sermon. The interest spread; other cases of so-called incurable troubles in the town were healed, and the little circle grew steadily. In the summer of 1904 a Society was formed, and the first public service was held in a small hall.

Concord was once a shire town, and its court was held in a lofty and spacious hall where such eminent lawyers as Webster and Choate have been heard. This fine hall has been leased for a long term, after having been put in perfect repair by its present owners, and on September 10, 1905, the first Christian Science service was held therein.

The Society has done some missionary work, having supplied several public libraries in the vicinity, and the Concord Reformatory, with Christian Science literature, and nearly two thousand dollars has been sent to the Treasurer of The Mother Church Building Fund.

In gratitude to God for the protecting care which has been with us all the way, and in unswerving loyalty to our beloved Leader, through whom this new understanding of Truth has come to us, we press on toward better and broader results in our lives and in our town.

Correspondence.

Growth in Indianapolis, Ind.

Second Church of Christ, Scientist, of Indianapolis, Ind., has made marked progress during the past year. Sixty-two new members were added, making a total membership of one hundred and forty-seven, and our congregation has increased from two hundred and twenty-five to an average of about five hundred.

Our Reading Room has been a constant reminder of the loving wisdom of our Leader. Many, hungering and thirsting "after righteousness," have come in daily, the average number of visitors having been five hundred and fifty per month.

The sales of literature amounted to three thousand and four dollars, an increase of one thousand nine hundred and ninety-five dollars over the year previous. There were four hundred and forty-nine copies of Science and Health sold, an increase of two hundred and fifty-six. Our text-book is also sold in the other Reading Room, and at one of the largest department stores in the city.

The fact that two and one half years ago we organized with only ten members, gives added reason for gratitude. We wish to express our gratitude for the *Sentinel*, the *Journal*, and other Christian Science literature, the distribution of which has been such a great factor in our growth.

JOHN V. DITTEMORE, *Chairman of Committee.*

Joplin, Mo.

A monument to faith and industry will be completed in about two weeks, when the members of First Church of Christ, Scientist, will occupy their new building at the corner of Sixteenth and Wall Streets. No other organization in Joplin has equaled the record made by this body of one hundred and twenty-five members. The number of believers in Christian Science in Joplin has grown at a very rapid rate. Eight years ago there were only nine believers in Christian Science in the Society of Joplin.

About a year ago it was decided to build a church—one that would be an honor to the belief in Joplin. They purchased a lot and paid a good round sum for it. No thought of building anything less than a structure to cost from twenty-five thousand to thirty thousand dollars was considered. No solicitation of funds was made by the church among people who were not members of the church.

It seems that none of the members have shirked their duty from the fact that, at the end of a year from the time they laid their plans for a building at such a large cost for so small a membership, they find they have only a very small debt on the property. This church, which has raised nearly thirty thousand dollars within its own membership of one hundred and twenty-five souls, without the aid of bazaars, socials, and outside soliciting, has given a practical illustration of works which is almost enough to take the breath of the average congregation clear away.

Joplin (Mo.) *News Herald.*

Admission to Membership.

The next admission of candidates to membership in The Mother Church will be June 5. Applications must be in the hands of the Clerk on or before May 14.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

A Letter from our Leader.

WITH our Leader's kind permission, the *Sentinel* is privileged to publish her letter of recent date, addressed to Mr. John C. Higdon of St. Louis, Mo. This letter is especially interesting on account of its beautiful tribute to Free Masonry.

Pleasant View, Concord, N. H., Feb. 9, 1906.

John C. Higdon, Counselor at Law,
Christian Scientist.

Beloved Student:—Your interesting letter was handed to me duly. This is my earliest moment in which to answer it.

"Know Thyself," the title of your gem quoted, is indeed a divine command, for the morale of Free Masonry is above ethics—it touches the hem of his garment who spake divinely.

It was truly Masonic, tender, grand in you to remember me as the widow of a Mason.

May you and I and all mankind meet in that hour of Soul, where are no partings, no pain.

Lovingly yours in Christ,
MARY BAKER EDDY.

The Mind which was in Christ Jesus.

THAT the views of physicians are changing, and that they are getting away from the old idea of almost unlimited drugging, is significantly set forth in a few words in an article by Dr. Richard C. Cabot of Boston, which appears in the February issue of *Charities*. He says, "Encouragement is one third of the business of the physician, but if it is to be permanent and not a mental cocktail, we must give the patient *good reason* for being encouraged, which usually means religion or its equivalent;" and we naturally wonder whether this "encouragement" is a part of the curriculum of any medical school and if it is included among the subjects upon which applicants for registration as physicians are examined, but upon reading further we find that "mental diagnosis and treatment are not yet taught in medical schools." Certainly a line of practice which constitutes "one third of the business of the physician" is worthy of much study, and an applicant who is deficient in "one third of the business of the physician" is not equipped for his work.

Dr. Cabot's statement is true so far as it goes, but it does not go far enough. Jesus, who was the most successful healer of disease that the world has ever known, did not limit his religion to one third of his work in healing. He did not heal with one third "religion or its equivalent," and two thirds something else. His cures were performed with three thirds religion. When he healed the man who "had an infirmity thirty and eight years," he said, "Behold, thou art made whole: sin no more, lest a worse thing come unto thee," plainly showing that he regarded righteousness as the means of permanently retaining health. When the Jews "sought to slay him, because he had done these things on the sabbath day," he said, "My Father worketh hitherto, and I work," and "The Son can do nothing of himself, but what he seeth the Father do: for what things soever he doeth, these also doeth the Son likewise."

Christian Scientists, under the leadership of Mrs. Eddy, are putting into practice these teachings of our Master, and through her wise guidance they are finding and proving that right thinking—doing the will of the Father—is the only panacea for the ills of the flesh.

When it is understood by physicians as it is by Christian Scientists, that divine Mind is the only power and the only healer, then will they understand why no lesser concept can meet the needs of those who suffer in "mind, body, or estate," and for whom Dr. Cabot pleads so feelingly in the article from which we have quoted. When Paul's words, "Let this Mind be in you, which was also in Christ Jesus," are fully comprehended, as they will be, the reform of "mind, body, or estate" will be complete. Christian Science is advancing this happy day.

ARCHIBALD MCLELLAN.

"It doth not yet appear."

IN the celebrated third chapter of his first epistle, St. John expresses a satisfying assurance respecting the acknowledged unknown, in view of his certainty respecting the known. The consciousness of demonstrable truth had become for him, as it should become for all, a refuge from every stress and tumult of doubt. As the finite addresses itself to the infinite, "the greater the sphere of knowledge the greater the contrast with the unknown," and therefore we can but say with St. Paul, "Now we know in part." The meanings of "I don't know" may, however, be quite antipodal. For the unbeliever the assertion often signifies that hopeless uncertainty of agnosticism, which is capable of boasting of its ignorance of life's greatest problems. For Christian faith, on the other hand, it is but the recognition of that immature experience which counsels reserve of judgment. The governing law may be clearly apprehended both in itself and in its relation to a given problem, but the facts necessary to its application are not yet at command.

It is clear that if we are to grow into the "fulness of the stature of Christ," there are some things which cannot be known until the end of the process, and that meanwhile rest and content must come through the realization that the known law covers the unknown facts; that all is under the government of God, and that with enlarged spiritual understanding we shall come to know "even as we are known."

Christian Science declares the knowableness of all truth, and that, so far as it is apprehended, truth is demonstrable. It also declares that error is unintelligible; "an enigma" (Science and Health, pp. 70, 124), and therefore it is excluded from right thought, is unknowable to Mind. The problem of evil is not solved by trying to know all about it, but by unknowing all its asserted factors, and this is achieved through the awakening to Truth. The recognition of error for what it is, conduces to its destruction (Science and Health, p. 252), but the materialist's endeavor to know it for what it is not, subjects him to the greater disadvantage. When we can scientifically say, "I know not," of error, unto its uttermost, we shall have effected that entire escape from error which is coincident with the realization of Truth's perfect sovereignty in us.

He who says of truth, "I do not yet know, but I shall," is unfettered, though he may have much to learn; but he who dogmatically says "I know," when in fact he only believes, has shut himself away from life's best schooling. This is the weakness of "faith" in the undemonstrated religious statements which have figured so largely in Christian history. It is ours to *know* through practical demonstration the truth which is essential to our spiritual advance, and it is ours furthermore, to *believe* the corollaries of this demonstrated truth. If questioned regarding the non-essential, it were far better to say frankly, "I do not know," than to try to explain that which we as yet imperfectly apprehend, for the outcome of this endeavor is confusion and assured defeat.

It is apparent that agnosticism, voicing as it does ig-

Digitized by Google

norance of the Principle of the universe and of man, is unable to supply a basis of moral discrimination, and therefore tradition, conventional thought, or convenience must furnish its exponents their only ground for an ethical life, —a condition which inevitably leads to individual and national degeneracy. In asserting the demonstrable knowledge of Principle and its idea "as the basis of thought and demonstration" (Science and Health, p. 259), the teaching of Mrs. Eddy allies itself with the teaching of Christ Jesus and goes forth to meet the present-day Goliaths of agnostic materialism and dogmatic human belief. Its representatives are winning, in so far as they are knowing more and more of Truth and are unknowing more and more of the assertions of error. JOHN B. WILLIS.

"What is man?"

THE question, What is man? has often been asked by thinkers since the Psalmist propounded it, and the comprehensive answer given to this infinitely significant query on page 475 of Science and Health leaves no point untouched as to man's origin and destiny, and shows how the apprehension of the truth of his being solves all problems. Christian Science encourages us to think rightly. It leads us to think of a perfect creator, and to reject the sense-testimony which would argue an imperfect creation, including man. Our text-book scientifically and devoutly points to the life of Jesus, from his immaculate conception to his victory over death and the grave, as the exemplification in human history of the ideal man. It shows us that as his victories were gained by unwavering obedience to Spirit and spiritual law, so also must our triumphs over the flesh and over evil be won. Christian Science is emphatic in declaring that there is salvation in no other way.

Human sense has made the mistake of presenting a counterfeit of man, and has expected to realize from this false concept results which can be predicated only of the ideal man,—the divine image and likeness. St. Paul saw clearly that the false concept—the mortal—is not the real man. He says, "They which are the children of the flesh, these are not the children of God," and he therefore insists that the "old man" must be "put off." That this is a practical as well as a vital question, is made very clear in Christian Science, and the right understanding of it heals both sickness and sin. Our text-book teaches that the true man is governed by spiritual law, not by asserted material laws, and this statement is supported by the teaching and practice of the Master. Why else did he say, "Take no thought for your life, what ye shall eat, or what ye shall drink"? Did he not direct thought away from subservience to the body, and point the way to dominion over it; viz., by obedience to "the law of the Spirit of life,"—which makes "free from the law of sin and death"? No one would deny that he who follows most closely the example of Christ Jesus best understands his teaching: indeed his teaching can be understood only as it is practised.

The service of the material body is not the service of God, and it does not bring freedom. Divine service,—mental obedience to moral and spiritual law,—this alone can give freedom, including dominion over the body. It also reveals the infinite possibilities of the ideal man.

One of the most important statements to be found in our Leader's writings is this, "Jesus beheld in Science the perfect man" (Science and Health, p. 476). The trouble with most people is that they look for the "perfect man" in human personality, and disappointment is the invariable result. Truth can never disappoint, and when we come to understand man as he is revealed in Christian Science we shall be satisfied. We shall then realize the necessity of holding and expressing only the divine concept, and as Christ Jesus said, the divine model thus uplifted will draw all men unto it. ANNIE M. KNOTT.

Letters to our Leader.

Boston, Feb. 18, 1906.

Beloved Leader and Teacher:—I have much to say in gratitude, and if by writing I may be refreshed, it is because I can no longer refrain from telling you some of the fruits of the harvest; for the "bread cast upon the waters" has returned unto me. Some time ago I received a letter from the clerk of one of our churches, telling of a case of healing at one of my lectures. She described it as a case of long standing and accompanied with much suffering, which was healed by attending the lecture.

There have been others also, but I wish to tell you of an interesting case of absent work. A telegram, coming from Pennsylvania, read, "Help father at once." Aside from the signature, that was all I knew. Subsequent letters informed me that the patient rested that night, and in the morning the throat was freed of corruption that had so far closed it as to dispute the passage even of water. The pain and suffering of a week's illness was gone, and the patient enjoyed a good breakfast. All this occurred before I received the letter which described the case. Truly God's laws are infinite.

Recently I have derived a wonderful amount of good from a more comprehensive understanding of your description of the trial for liver complaint, in Science and Health. I see more clearly what the different types stand for, in their metaphysical explanation. Indeed this is a masterpiece of the scientific exposition of a Christian Science treatment.

With a cup full of joy and gratitude for your welfare, and in the effort to serve you by being obedient to your words of Truth, I am

Your loving student,

BLISS KNAPP.

Chicago, Ill., Feb. 12, 1906.

Beloved Leader:—I wish your engagements would admit of your coming here for a visit, that you might see what a mighty demonstration has been made, and learn first-hand how faithfully the Scientists of this great and growing Western city are working to build up the Cause in their midst, and that you might thus be privileged to observe how loyally they ascribe to your devoted labors the prosperity of the movement here, which they date from the time of your teaching a class in this city, some twenty years ago. Their notable growth, locally, dates from the building of their First Church edifice, in 1897, since which time they have built, all working together, Second, Third, Fourth, and Fifth Church edifices, the latter two both finished and occupied in 1905, and all five well filled at each service, with the Sixth growing hopefully.

I have been much interested to note how they manage their finances; it is all done as smoothly as clockwork, without a particle of friction or ostentation, each church and all the Scientists sharing in the expense of the new buildings; and in addition to the expenditure of a quarter of a million dollars for the two splendid new structures just mentioned, they have also sent an aggregate of over two hundred thousand dollars to the Treasurer of the Building Fund for the addition to The Mother Church, while maintaining all the work of each individual local church on a high plane of good order and efficiency. Their Reading Room work also shows a steady gain, amounting to about thirty-three and one third per cent for the three years just closing, the income for 1905 being twenty-seven thousand two hundred and eighty-seven dollars and the sale of your book in said year being four thousand and sixty-three copies, as well as large sales of your other published works, and of all the products of The Christian Science Publishing Society.

With kindest thanks for all your blessed instructions, and rejoicing with you in the rapid development of the Cause

in the West, as everywhere, and with remembrances to the household, in all of which Mrs. Kinter joins me, I remain

Faithfully your student,
GEORGE H. KINTER.

Portland, Me., Jan. 29, 1906.

Mrs. Mary Baker G. Eddy.

Dear Leader:—Ten years ago a dear friend of mine residing in a city of Maine told me that his little boy was dying of tubercular spinal meningitis. My business is that of a traveling salesman, and I knew the boy well, having visited his home frequently as a guest. I was told by the parents that the best specialists said no such case had ever been known to be cured. The boy had been unconscious for several days, and on what they supposed was the last day, I got a message from the father to do anything I could, if I knew of anything, but that the boy would probably be gone when the letter reached me. Within three hours after the receipt of the message the boy was conscious and asked for water and food. His recovery was rapid, and in a few days he was about and is to-day a very rugged boy. The case was the subject of a paper before the medical society of Maine, the specialist declaring it to be the only case known of a healing of this particular condition; and he was fair enough to say he had done nothing towards the recovery of the boy, but that some other agency unknown to him had wrought the cure.

A recent call upon these friends brought from them the voluntary admission that Christian Science did the work for them ten years ago, and so I take pleasure in adding to the volume of acclaim for Christian Science which encircles the globe.

Thank you very much for your writings, which have brought happiness to so many of us.

Gratefully,
ALBERT QUINCY CARTER.

Boston, Jan. 22, 1906.

Beloved Leader and Teacher:—The annual meeting of the Concord church gave me much to think of. The church officers worked out the law of order, and every report was given promptly and concisely. It was the best conducted church meeting I ever attended, and was an inspiration; it gave me pleasure, and the love manifested was very sweet to me. I get strong in the atmosphere of Love. I am working to know more of this one power that for twenty years has helped me to overcome, to lift my thought above the strife and all that would come up in the battle with hidden error. Your teaching and example stand as most precious and valuable to me. I am blessed, above all, in the healing that came to me from reading Science and Health. All the burdens and sickness of years disappeared in one half hour. Your text-book will heal all the world if they will read it.

Most lovingly your student,
CAROLINE S. BATES.

Omaha, Neb., Jan. 10, 1906.

Mrs. Mary Baker Eddy,
Pleasant View, Concord, N. H.

Beloved Leader and Teacher:—Your kind and helpful words have strengthened and encouraged me to "press on" in the ennobling strife, and I thank you most sincerely for them. You have given to the world an exact Science, which has revealed to me the royal road to heaven on earth. My debt of gratitude to God, and to you, His chosen Messenger, can be paid only through earnestly striving to live the life that Christian Science demands of us all.

May Love's sweetest blessings crown your noble and courageous efforts to help suffering humanity, is my prayer and that of my faithful companion.

Most gratefully yours,
CLARENCE W. CHADWICK.

Testimonies of Healing.

[Translated from the German.]

The spiritual light which I have received through the continued and faithful study of the wonderful book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, enabled me, a few months ago, to free my only son, seventeen years old, from a severe and complicated disease. The false belief that he had inherited consumption had always been around the boy, and fear was held by near and distant relatives. A tendency to influenza and articular rheumatism made common cause with the inherited burden, which made its appearance in severe attacks. But God who is Love and Truth was with us day and night; He taught me, led me, strengthened and enlightened me. Confidingly I looked through the clouds of anxiety and error into the realm of the invisible, the real, and I heard the silent song of the angels: "God's thoughts passing to man; spiritual intuitions, pure and perfect; . . . counteracting all evil, sensuality, and mortality" (Science and Health, p. 581), bearing testimony of the ever-near divine Love. These came to my assistance and one trouble after another was conquered.

The disease appeared a short time before Christmas, and we usually visited my parents in the country at that time. My son has himself some spiritual understanding; and he ventured to undertake the journey with me. When we reached the grandparents, they were frightened at his appearance; and when we rejected all material help, the dear ones present were alarmed and thought this dangerous and even wrong. Only my two sisters and the governess, who are Scientists, supported us with helpful thoughts. After four days' treatment the stiffness in his limbs disappeared. I declared the truth day and night. Then the fever and a boil on his neck disappeared, the cough and expectoration also ceased, and soon after a good healthy appetite appeared. We returned to Dresden, and on January 8 my son went back to school. January 31 he danced at a school festival from eight in the evening until after midnight. He was well and happy. Every trace of the disease had disappeared.

My heart overflows with gratitude to divine Love, and to dear Mrs. Eddy, who has brought us the understanding of the Christ-teaching, so that we all may avail ourselves of it as an effective help. Nothing can hinder me now from joining the Church of Christ, Scientist, and becoming a true member of the great body that bears witness to truth.

FRAU CAROLINE CAMP, Dresden, Germany.

In November, 1899, when I first heard of Christian Science, I was, according to *materia medica,* without hope of ever being free from suffering. My physician had told me that he had tried everything he knew and there was no medicine that could reach my case. I did not need to be told this, as I recognized that instead of improving in health other diseases were developing. I could hardly enumerate the complications manifest at this time. For months I could not have lived if I had not felt the assurance that God would hear my prayer and deliver me from the bondage which I knew was not of Him. From my earliest remembrance I longed and sought for the truth. Through all the years of suffering and disappointment I prayed for light, ever questioning why it was that those who professed to love God were not obeying Christ's command to "heal the sick" as well as to "preach the gospel." At an early age I united with an orthodox church, hoping that I might find an answer to my prayers, that I might find the truth as taught by Jesus; but I did not find it there, yet from this time, although all material means of so-called help were physically, mentally, and spiritually failing me, these two promises were ever with me, and were indeed as the light shining in darkness: "Him that cometh to me I will in no wise cast out;" and, "I will never leave thee, nor forsake thee."

Digitized by Google

When every other hope had failed, Science and Health was most unexpectedly brought to me. From the moment I opened that wondrous book I knew my prayers were answered,—that I had at last found the truth; and my Bible was illumined with the light of Spirit. One of the first thoughts which came to me was, "Take no thought for your life, what ye shall eat." From that moment I was healed of acute indigestion and have never since taken any thought as to what I should eat, whereas for three years before this I had been under a strict diet, and even then suffered continually. Chronic constipation was also healed during the first reading of Science and Health and has never returned. I at once had treatment of a practitioner and immediately received help, so that I have never since been confined to a sick-bed for a day. For a number of years I had been in bondage to so-called consumption, and for months before coming to Christian Science I had not known rest day or night, nearly every breath being accompanied by a cough. My voice, too, was failing me, so that at times I was unable to make myself heard, and when my voice was the strongest I could read but very few words aloud without being exhausted. Now I can read for hours at a time, and with a sense of strength. There was also another trouble that according to *materia medica* required an operation, which I was told I never would have the strength to undergo; this trouble was among the first to yield to Truth. In addition to all this, my nerves were a wreck, my physician said. I would say to those whose healing may be slow, that this accumulation of discord did not all yield at once. The way has seemed rugged, and the most bitter opposition has been manifested; yet Truth has always been the victor,—Love the only power; and now all the struggles are to me only as a bad dream from which I have awakened to health and usefulness. I might say in a few words that whereas before knowing of this healing truth I was unable to do much for myself or any one else, now every moment is full of work to be done, and there is always sufficient strength to do it.

For the physical healing I am indeed grateful, and yet that is as nothing compared to the spiritual light and strength which I have received. We know it is only as we gain an understanding of Spirit and are obedient to divine Love,—so clearly revealed in Christian Science,—that we can love and help our neighbor as ourselves. It is only by our faithfulness over a few things that we can prove our deep, unspeakable gratitude to our beloved Leader, who has so faithfully and clearly shown us the way out of darkness and bondage into the marvelous light and liberty of the children of God, infinite good.

GRACE E. ALLEN, Portsmouth, N. H.

I was for more than two years a sufferer from nervous exhaustion, and had been treated by different doctors. I was a member of an orthodox church and had strong prejudices,—was very "set" in my opinions. I would not investigate the truth, but continued to take medicine. My father had been a physician and I had been taught to rely on *materia medica* and nothing else, but I could not get relief and had my medicine in my pocket when I met a Christian Scientist to whom I had not spoken for years, because of a spirited argument we had had about this teaching. I was not at the time seeking relief for myself, but my wife, who was also a sufferer, had asked me to make some inquiry for her. In questioning this gentleman, I was impressed with his childlike simplicity. He answered my questions so lovingly and gently that it touched my heart, and I became so interested that I have been studying Christian Science ever since. When I left my friend I felt like leaping for joy. I knew that I was healed. The pain had left the back of my head, and I was not only able to sit up all day (something I had not done for many months), but I actually worked at manual labor. I have been working daily ever since and now weigh two hundred pounds. After reading Science and Health I was reminded of the fact that I was spending my money for that which is not bread, for I was a perfect slave to the tobacco habit. I quit the habit and have not had anything to do with it since. I had worn glasses for astigmatism for twelve years, and my optician had told me that I would never be able to go without them, but I did not need them any more and have never used them since. It is over a year since my healing. I am studying daily and growing in the understanding of Truth. I sometimes marvel that I could have remained in darkness so long. I absolutely know that Christian Science is all sufficient,—that a knowledge of it will meet every need. I am thankful to almighty God for this new-old truth that He has revealed through our beloved Leader, Mrs. Eddy.

I am rejoicing in the truth and trust that I may be deemed worthy to break the bread to poor misguided humanity.

GEORGE W. ODELL, Spokane, Wash.

In the year 1898 my attention was attracted to this truth which sets free, by the beautiful life of a neighbor, and I was subsequently healed in Christian Science of chills that all available material remedies had failed to relieve. Words are inadequate to express my gratitude to our beloved Leader, but I will endeavor to attest it by implicit obedience to her teachings. Our literature is glorious, and I am never so happy as when conning its helpful pages. Last, but not least, and for which I am most grateful, is this, that recently, when I took our text-book, "Science and Health with Key to the Scriptures," to the public library, it was gladly accepted. For all that Christian Science is doing for me, and for the world, I thank our Father-Mother God.

M. E. JANÈS, Paducah, Ky.

Christian Science came to me in a time of sorrow, when every conscious thought was a prayer for help. When Science and Health was placed in my hands, its wonderful spiritual import brought the dawn of a new life to me. My first impulse was to share this great treasure with those who were working with me in the Master's vineyard, for I was sure they too would rejoice in following the star of hope which was just rising for me, but I was warned against taking up the further study of Christian Science and told that it was the work of Satan. Though sorely grieved, I still hoped that the Christian Science literature would speak the words of Truth better than I had done, but when that too was refused, I knew that I must press on alone for a time. I studied diligently and gained enough understanding to enable me to stand firm when a serious illness seemed not to yield after several months' treatment by a loyal Christian Scientist, but this passage from bondage into freedom was not without its reward, and I have since come to be thankful that the healing was slow, as the truth learned during those months of trial has changed my life. By the constant declaration of the truth, unsuspected opposition in the home was uncovered and rendered powerless, and the demonstration of perfect healing was made almost immediately. Later, by the instantaneous healing of neuralgia after all material means had proved unavailing, this opposition was overcome and the way opened for the introduction of Christian Science to this fireside.

When our little church was organized I had the privilege of becoming one of its members, and also of uniting with The Mother Church. I have seen our church attendance grow from less than a dozen to nearly one hundred, including those who have been lifted up from almost every form of disease and sin. Prejudice and ignorance of what Christian Science is have given place to tolerance and understanding, and bigotry and hatred yield to charity and brotherly love.

While I am more grateful than words can express, for

Digitized by Google

the many instances of physical healing, yet the joy and peace which have come into my life through our revered Leader's wonderful writings are much more to me. My daily prayer is that I may be accounted worthy to follow her as she follows Christ.

HANNAH MATTHES, Sandusky, O.

Though gratitude is best shown by earnest effort to reflect in our lives the blessings we have so richly received, yet I would express some slight part in words also. I did not recognize the truth when first it came to my notice, and it was not until I became conscious that relatives and friends were being helped, in cases where physicians had failed, that I began to think seriously about it. Then I read parts of our text-book, Science and Health, and would have put it aside, but that the evidence of its practice forbade. To be honest with myself, I must understand, if possible, what wrought such results. Continued study brought little light, until a practitioner said, in response to my plaint of not understanding, "If there is one statement that you do understand—use it—and others will become clear." I tried this method and found its truth continually proved. Light began to dawn, and it still comes in proportion as I make use of that already received.

The purifying presence of Spirit has freed me from many annoying illnesses, such as frequent headaches, sore throat, bilious attacks, and chronic catarrh. For such relief I am deeply grateful, but this physical healing does not mean as much to me as the changed condition of thought which follows even glimpses of Truth. From childhood to womanhood I had been oppressed with myriad nameless fears,—fears of being alone, fears of darkness filled with horrors, fears of impending disaster, etc. These were known to be senseless, but they caused more acute agony than any physical pain. Through the consciousness of Love as ever-present, they have all been dispelled. The removal of over-sensitiveness has also greatly benefited my life. The suffering and injustice which seemed to be in the world clouded my horizon and often made personal pleasure seem a positive sin, but the knowledge that God, good, creates all that really exists, and that perfect wisdom governs, opens vistas of hope for the time when all shall know God, when "the recognition of life harmonious—as Life eternally is—can destroy any painful sense of, or belief in, that which Life is not" (Science and Health, p. 495). I know that this recognition will destroy cruelty, greed, injustice, selfishness, race differences, ignorance, and poverty.

For all the blessings that Christian Science is bringing to a heart-hungry world I am indeed thankful, and gratitude fills my heart for the unswerving, consecrated work of our beloved Leader, whose great gift to us is the knowledge of a near and loving God, available in our daily need.

CARLOTTA SCOBEY SIGNOR, Chicago, Ill.

It is over a year since I put my trust in God and in Christian Science, and I am glad to say it has been the happiest year of my life. I am now twenty-seven years old, and the most of my life has been a disagreeable experience to me. I had many habits which were growing upon me, and I thought there would be no enjoyment in the world without them. I was a constant tobacco user from ten years of age, and from sixteen years old I used all kinds of strong drink quite frequently, and also profane language. From twenty-three I was more or less a gambler, a habit which was growing worse, for I was traveling from the light into darkness. I felt that I was a complete wreck, and that there was no remedy for me. I felt as if I were all alone in this world, but now I know that where I am, God is also. I concluded to try Christian Science as my only remedy. To-day I can say, through the help of God, and the kind words of a Christian Scientist, I have been led into the light. I have lost all desire for my old habits and many of my aches and pains have also disappeared. I was cured in forty-eight hours of a very severe attack of blood-poisoning caused by the cut of a rusty knife, also of constipation in a very short time. I am growing stronger in the love of God, and in gratitude to Mrs. Eddy for having brought us "Science and Health with Key to the Scriptures."—C. E. HALVERSTADT, Cozad, Neb.

Christian Science has brought me more blessings than I can number. It is over ten years since I first began to read "Science and Health with Key to the Scriptures" by Mrs. Eddy. So thick was the darkness about me that my growth has been very slow; but the darkness lasted only for the night and joy came with the morning. When my mother told me about the dear one who was showing us the same road our Master trod, I said, "How glad I am that I am living now!" Life to me had been nothing but a dark shadow, and Christian Science was the divine light thrown on my path. Sensitiveness, violent temper, hatred, and to some extent selfishness, are the dark clouds that have been dispelled by this wonderful light. Now I can see beauty and goodness all about me, where before appeared ugly forms all void of meaning.

Not long since, while removing a large button from a garment, the scissors slipped and a point penetrated my left forefinger to the bone. The muscle protruded from the wound and it seemed so painful and severe that I was aroused to immediate action. In a few moments I was able to silence fear and realize the truth. The pain vanished and the bleeding ceased. There was no swelling, and the pain was entirely relieved. I am very grateful for this demonstration, as it was another proof to a "doubting Thomas." Thanks to our dear Leader, Mrs. Eddy, who has given us the "Key" that unlocks the treasures of Spirit, and thus we are privileged to obtain the understanding that enables us to reverse the testimony of the material senses and find health and holiness.

I am very grateful for the privilege of being a member of The Mother Church, and also for the much esteemed privilege of contributing to the present Building Fund.

AMELIA A. MAELZER, May, Idaho.

Before reading Christian Science literature I was in an unsettled state. Although a member of an orthodox church, I did not feel satisfied with my spiritual attainments and was yearning for something better. I was prejudiced against Christian Science, as I had always heard it severely criticised by those who knew nothing about it, but when I began to read some of the *Sentinels* and *Journals* which a kind friend gave me, I realized almost immediately that Christian Science was true, and was what I had been looking for. In about two weeks after I began to read some of the testimonies, I was able to take off my glasses, which I had worn steadily two years for compound astigmatism. It is nearly ten months since I took them off, and I have no further use for them, as my eyes are perfectly well. Since reading "Science and Health with Key to the Scriptures" by Mrs. Eddy, I realize that God is Love, and that He is always ready and willing to help us whenever we go to Him. The Bible is now a dear book to me, whereas a few years ago I read it merely from a sense of duty.

My prayer is that I may so live this blessed truth as to be worthy of the name Christian Scientist.

CARRIE F. HOWE, Millis, Mass.

As the result of a fall my face was badly crushed, a tooth broken, and I was quite unconscious when picked up. On coming to consciousness I said, "I will be all right in just a minute." I declared the truth silently, and soon was able to walk. After having washed away the gravel, and taken a drink of water, I was able, with slight assistance, to climb the stairs to my room, and was left alone.

Digitized by Google

I managed to get ready for a night's rest, and when the wish for a practitioner came, I realized that Truth was with me. I rested content, thought of our beautiful hymns and Lessons, and about one o'clock went to sleep. I awakened to find a lovely Sunday morning sun shining in my window. I wanted to go to church, but thought I could not. I could not even use my right hand to reach for a glass of water, but I declared the truth, and did. Little by little I got ready for the five-mile ride to church. I did not look in the mirror until after I got my hat on, and then the sight of my swollen face nearly frightened me out of going, but I started early and while on the car kept repeating the scientific statement of being. (Science and Health, p. 468.) By the time the Lesson-Sermon was over all pain had gone. In two weeks my face was healed without visible scar, the tooth was firm and well without soreness. The swelling was gone the next day, when I took a walk of two and one half miles without unusual fatigue. I could tell many incidents of healing that have come to me and mine within the last two years, while I have attended the dear Mother Church. With a loving word of gratitude to our dear Leader, Mrs. Eddy, I am glad to give this little testimony to the power of Truth.

MRS. C. C. DREW, Dorchester, Mass.

After many years of shifting, doubt, and indifference, in matters of religion, I have, during the past thirteen years, had abundant reason to value the teachings of "Science and Health with Key to the Scriptures" by Mrs. Eddy, which has given me an understanding of truth, and its spiritual, moral, and physical healing power has been demonstrated to me. Christian Science has also given me a spiritual understanding of the Scriptures. I commenced reading Science and Health at the solicitation of my wife, who had become an earnest student of it, and the reading of the text-book in connection with the Bible soon convinced me that it was based upon Scriptures,—upon the life, teaching, and work of Christ Jesus,—and I needed no other incentive to continue the study. Prior to this I had ceased entirely to be interested in Bible narratives; mainly for lack of the light which Science and Health has since shed over its pages. This light has increased with the development of my understanding of Truth, while now the Bible and Science and Health are inseparably connected in my study.

While I did not take up Christian Science because of sickness, I may say that later on a long absence from home was necessary, and while so situated, a severe physical ailment developed, which my efforts at self-treatment failed to reach effectively. I finally asked my wife for help, and my case was placed in the hands of a practitioner. This brought relief quickly, and a cure. This experience with absent treatment was what I needed to prove to me that Christian Science methods are scientific. At an age when most men decline in business activity, I have been and am now very active, and the troubles which have appeared, some of them severe, have been overcome by Truth, hence I know that Christian Science is a living and livable religion, applicable to daily experiences and requirements. In following the teachings of our loved Leader, Mrs. Eddy, one learns that God is ever-present and is an all-powerful help in every time of need.—GEORGE W. CUSHING, Chicago, Ill.

[Translated from the German.]

I desire to express my gratitude for the blessings which I have received through Christian Science. During ten years I suffered terrible pain in the lower part of my back, for which I could find no relief. It seemed to grow worse from year to year, and sometimes I had to remain in bed. I had, of course, medical treatment, but found no help. The physicians examined me, but could not locate the trouble. About two years ago I went to a noted specialist, who made a thorough examination and said there was a tumor in my back, and that I could not be cured without an operation. I did not wish to submit to it and thought I would rather endure the pain, which I did until some months ago, when the suffering increased. I again went to the same physician and he gave the same verdict, adding that an operation was inevitable because the tumor had grown. He did not wish to take the responsibility alone and conferred with several other physicians. They all made the same statements and added that the operation must be performed as quickly as possible. I still hesitated, because the physicians said that they had never found such a difficult case. I understood what that meant for me, and feared that I would not leave the hospital alive, but all arrangements were made for me to come to the hospital, and the day was set for the operation.

It was at this time that I learned how wonderfully we are led. Two days before I was to go to the hospital I heard of Christian Science. The lady who told me of it gave me *Der Herold der Christian Science* to read, and the more I read in it the less I thought of my disease and of an operation. On Sunday I attended the Christian Science service, and then the Wednesday meeting. I felt more and more that I, too, could find my help in God. I went to my physician and asked him whether he would postpone the operation four weeks longer. He consented; I continued attending the meetings and felt confident in the thought that I would find help. I asked for treatment, and from the first I became aware that I was already well. I had in all six or seven treatments.

Meanwhile those four weeks had passed, and I went again to the physician. He received me with the words, "I hope you have considered the matter and are now ready for an operation." He examined me again, to find out whether the tumor had grown during those four weeks; but to his astonishment, and also to my own, he declared that there was no trace of any tumor,—it had entirely disappeared. He asked me what I had done and said it was a mystery to him. He could find no words to express his surprise. Finally he said that no operation was necessary. One may imagine with what joy I went home to my family.

I feel that I can never be grateful enough to God for this healing. Since then I am a faithful adherent of Christian Science.

FRAU M. KIRSCHKE, geb. v. Kronewsky, Berlin, Germany.

I first heard of Christian Science about fifteen years ago, and was narrow enough to ridicule many of the thoughts found in the literature, simply because I did not understand them. I then needed but little medicine and was a member of an orthodox church, so Christian Science did not appeal very strongly to me. Had I at that time accepted it, many of the bitter experiences which followed "boyhood's days" would have been unnecessary. I have found in Christian Science a remedy for tonsilitis, which had held me as a slave for about ten years, and which often required the surgeon's knife, to say nothing of medicine. Other troubles have been overcome by this truth as given in our text-book, Science and Health by Mrs. Eddy. While scarce six months have passed since I began the study of Christian Science, I am indeed thankful for the understanding already gained, and to all those who are traveling the rough and rugged road I would recommend Christian Science as the "Good Samaritan."—J. RAYMOND PROSSER, Haywards, Cal.

Have you ever had your day suddenly turn sunshiny because of a cheerful word? Have you ever wondered if this could be the same world, because some one had been unexpectedly kind to you? You can make to-day the same for somebody. It is only a question of a little imagination, a little time and trouble. Think *now*, "What can I do to-day to make some one happy?"

MALTBIE D. BABCOCK.

From our Exchanges.

The tendency to unite, now manifest in many religious bodies, is wholesome; but it will not reach the highest order of spiritual progress so long as anything but essential truth is the centre of attraction. Let all come together in one religious body who believe in immersion or in congregational government or in the rule of the Episcopacy or in Apostolic succession or in certain historic creeds. This tendency carried out will give us larger and more influential religious bodies which then will, if progress is to continue, feel some nobler form of attraction pulling upon their larger masses and making a lesser attraction seem insignificant. The strongest pull is not some mode of worship or form of government or tradition of words, but the truths which infuse life, hope, and courage into human beings, and give society its true ends of action. Give them free play, then religious union will mean something worth while.

The Christian Register.

The gift of the Spirit to Jesus Christ was unique, in degree if not in quality. "God giveth not the Spirit by measure unto him," for, as Paul puts it, it pleased the Father that in Him the whole fulness of divinity should have its permanent abode. Jesus Christ is singular both in person and powers. Yet in a lesser degree the humble believer may partake of the gift of "this same Spirit." There are diversities of gifts, but the one Source of grace. God was well pleased with His Son who welcomed His Spirit, and He will be well pleased with men only in the degree in which they receive the same gracious Spiritual Presence. The soul of Jesus was fully capacious to the Holy Ghost—it is the privilege and duty of men constantly to enlarge their capacity for the spiritual blessing.—*New York Observer.*

Rev. Joseph Hayes Chandler says in *The Congregationalist:* "Surely the present temper and attitude of mind and heart among large numbers of men in the ministry of our churches is cause for deep gratitude for what God has already done for us. Is it not, also, sufficient ground for a general spiritual awakening among our churches?

"The presence of Christ during all his ministry was a healing presence. That was not an incident but an essential element in his nature. It is not less so now than when he preached the gospel of the kingdom in Galilee. Christ in the church, in the home, and in the community brings healing and health wherever he is welcomed and obeyed. He gives to his disciples power like his own."

Religion is sunshine, hope, peace, love, and joy. It is a well of water within us, springing up into everlasting life. It makes the face shine with the reflected light of glory and heaven. The face of every true religionist, like that of Moses when he came down from the mount after communion with God, shines with a radiance not of earth but of heaven. Religion is music in the heart, in the home, and in all the walks of life. It is a foretaste of heaven even while we are upon the earth. REV. ROBERT S. MACARTHUR.

The Standard.

Is it the fact of the possession of small ability which inclines men to excuse themselves? It would seem if a man had only one talent it would be easy to take care of it. With a circumscribed field and small opportunity, it would be easy for him to discharge his obligations and meet his responsibility, but in the practical work of life we find that it is not easy. That talent is valuable, but because their work is small they seem to esteem it lightly, and give it but little attention.—*Pacific Christian Advocate.*

It is a good thing to have a model to imitate, but it is better to have within us a living spirit which will work out an inward ideal.—*Sunday-School Times.*

THE CHRISTIAN SCIENCE TEXT-BOOK.—"Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

RUDIMENTAL DIVINE SCIENCE.—Printed in the New York point system of type for the blind. Price, prepaid, 50 cents per single copy; $5 per dozen.

CHURCH MANUAL.—Containing all the By-laws to January 1, 1906, of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church.—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of The Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the Churches and Societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to The Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of The Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to The Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number, or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By Hon. WILLIAM G. EWING.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea: 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science: containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion: 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* **PANTHEISM** The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

With the breaking up on March 4 of the tribal organization of the Five Civilized Tribes, the Cherokees, Choctaws, Creeks, Chickasaws, and Seminoles, what is in reality the last chapter of the Indian's distinctive history on this continent began. They number only eighty-six thousand as against one hundred and eighty-four thousand of other tribes, but in point of development and location they may be considered as occupying the most important position. Henceforth the members of the Five Civilized Tribes will stand on the same footing as the other inhabitants of the territory which they occupy, and the Government will deal with them as individuals and not as tribes.

The Porte has yielded to the American demands and has informed the American Legation that orders have been sent to Beirut to admit duty free all consignments for the American schools in Syria. The same note declares that the Porte is ready to accord the same official recognition to American as to other schools, if a request to that effect is presented to the proper department for each institution separately. This is considered to indicate a further attempt at procrastination.

Captain E. H. C. Leutze, Commandant of the Washington Navy Yard, paid this high compliment to the character of work done by the skilled mechanics of the gun factory: "The men in the navy would rather stand behind a gun manufactured in the naval gun factory than one constructed by private contractors." He affirmed that the workmen there realized more fully than workmen in other factories doing work by contract the need of the utmost care in every detail of the work.

The faculty of Brown University has submitted to the student body a communication relative to athletic interests. The most important rule laid down is the barring of freshmen and graduate students from participation in 'varsity athletics. The students themselves were given permission to formulate rules of organization, eligibility, and play, subject to the approval of the faculty.

Acting upon resolutions passed by both houses of Congress, three members of the Interstate Commerce Commission have begun an investigation at Kansas City into charges made by independent producers of Kansas that the railways of Kansas discriminate in favor of the Standard Oil Company in the matter of oil rates outside that State.

The investigation of fraud and bribery in the Post Office Department, which was begun two years ago, has resulted in the conviction and imprisonment of the two chief offenders. Seven other convictions have been obtained by the Government, and one or more cases still await settlement.

During the month of February total Government receipts exceeded expenditures by $4,474,029, and for the first eight months of the present fiscal year there was a surplus of $1,101,304 as against a deficit for the corresponding period last year of $25,450,708.

The Senate, after amending the Statehood bill, has voted to admit Oklahoma and Indian Territory jointly as one State and has eliminated Arizona and New Mexico. The bill now goes back to the House for joint conference.

A communication has been received by the President and Congress and printed in the *Congressional Record* in which it is alleged that the United States is at the mercy of a powder trust.

The annual exhibition by the Copley Society of Boston consists this year of copies of old masters by modern artists.

American Rhodes scholars captured three firsts and one second in the Oxford field sports last week.

The Government finished its case against the beef packers in Chicago last week.

Foreign.

The Baker Street-Waterloo "Tube," London, was opened to public traffic last week. This is the latest addition to the underground solution of the city's traffic problem. The new line, which is about four miles long, runs north and south, traversing all the older lines, with which it is connected by subways, thus enabling passengers to reach within a short distance of any point in the metropolis. The construction of the road was begun in 1898. The time occupied in covering the distance is about twelve minutes, and the fare is twopence.

Germany has completed the laying of a new Pacific cable, extending from Shanghai, in China, to Yap, in the Caroline Islands, a distance of two thousand miles. This closes up the gap and gives Germany a cable encircling the globe. It is the first continuous non-English line around the world. The new cable is laid at the greatest ocean depth on record—26,247 feet at the lowest point, in the vicinity of the Linkin Islands. The American cable in the Pacific did not reach a greater depth than 20,469 feet.

The result of the first organized census of the British Empire shows that the Empire consists of an approximate area of 11,908,378 square miles, or more than one-fifth of the entire land area of the world. The population is about 400,000,000, of whom 54,000,000 are whites. The population is roughly distributed as follows: In Asia, 300,000,000; Africa, 43,000,000; Europe, 42,000,000; America, 7,500,000, and Australasia, 5,000,000. The most populous city after London is Calcutta.

A cable to the State Department says that commerce and trade in Manchuria are approaching the normal; that the Chinese Governor of the province is anxious to take over the civil administration as soon as possible, and that the Japanese troops will be entirely out of Manchuria in the course of a few days, when the country will be opened up to the world.

The value of mineral products of Canada for the year 1905 is $68,574,707, or $2,000,000 higher than Canada's best year, 1901, when it was over $66,000,000. The non-metallic is placed at $31,123,877 and the metallic at $37,150,830. Coal occupies the largely predominant position, making over $17,000,000.

Great Britain imports her raw cotton from America, Egypt, and India. It costs her manufacturers about two cents a pound more than the American manufacturers have to pay, yet the English manufacturer exports from eight to ten times as much cotton goods as are sent out of America.

A bill introduced in the Japanese Diet provides for the nationalization of railways and authorizes the Government to compel the companies to sell to it at a price based on the cost of building, plus twenty-fold the average profits of the last three years.

The International Waterways Commission met at Toronto last week to discuss the distribution of power from the "Soo" River and the diversion of water in the Niagara River.

The States of Australia have agreed to prohibit the growing of the poppy plant and the sale of opium except for medicinal purposes.

Industrial and Commercial.

The demands of the anthracite mine workers were rejected in toto by the committee representing the operators, who refused absolutely to make an agreement of any kind with the United Mine Workers of America. The reply of the operators was addressed to President Mitchell and his associates. In lieu of these demands the operators made a counter-proposition to the effect that the present agreement be continued.

Sensational, vicious, and suggestive billboard pictures were condemned at Detroit at the quarterly meeting of the directors of the Associated Bill Posters and Distributers of the United States and Canada. Resolutions instruct members to refuse, after the expiration of this year's contracts on August 1, to post objectionable pictures and titles. A penalty is provided.

At a meeting of the passenger officials of the Ohio railroads it was unanimously decided to put the two-cent a mile passenger traffic in effect to the exclusion of all other rates within Ohio. The reduction of all fares to a two-cent basis will do away with convention rates and all excursion rates as well as all charity rates, passes, and clergymen's permits within Ohio.

A one hundred million dollar corporation has contracted, so it is reported, to build an air line of electric road between Chicago and New York, the distance to be made in ten hours. The steam roads now operate every day sixty-eight through trains. The territory through which the proposed line runs has a population of over nine millions, or over one thousand per mile.

Trade between the United States and Switzerland during the latest period for which data are available, is in excess of $30,000,000, made up of about $20,400,000 worth of goods imported into the United States and $10,300,000 worth of imports into Switzerland from this country.

The consolidation of three of the largest independent sewing machine manufacturing companies in the country, the National of Belleville, Ill., the White of Cleveland, and the Davis of Dayton, is under consideration. The new concern may have a capital of $15,000,000.

The twentieth annual report of the Boston Chamber of Commerce shows that Boston has re-established herself as the second port of the country on combined values, leading New Orleans.

Chicago lithographers are supporting the movement for pure foods by refusing, it is said, to print labels unless they tell the truth.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

The Divine Sovereignty.

CLARENCE W. CHADWICK.

A CERTAIN writer has said that "the great secret of living is never to be in the way of others." This sentiment voices a wholesome truth, but it is doubtful whether it can be made practically operative until humanity learns that all-important lesson of never obstructing the way to Truth. This lesson cannot be learned until the individual is awakened sufficiently to look into the mental realm for all cause and effect, and to safeguard his own thinking against the intrusion of every thought which would deny the omnipotence and omnipresence of God, good. In other words, absolute obedience to the Golden Rule involves a scientific understanding of the Principle of right thinking as explained in Christian Science. All wrong thinking interferes with our recognition of the ideal, harmonious government of God, and it is the mission of Christian Science to eliminate all such thinking, and thereby establish in individual consciousness the true spiritual relationship between God and man.

The failure to admit that Mind has the right-of-way is perhaps nowhere more noticeable than in the futile attempt to help God out in the government of the body. It is usually only after repeated failures to realize normal and healthful conditions by the use of nearly every known human agency, that the mortal turns as a last resort to God, willing for the first time to trust Him. He claims to love God, and is taught to believe that He is all-powerful, but how to surrender unconditionally the selfish inclinations of the human will seems a most difficult problem, and "few there be" who are inclined to shoulder this cross until they have been driven by suffering to do so. This is not strange, however, since the inherent disposition of the mortal is to have his own way about everything. He has been brought up to think that this was right, and has been encouraged to cultivate rather than to subjugate the human will.

The moment the subject of spiritual healing in Christian Science is touched upon, many people, even those who profess to believe in God's omnipotence, are too prone to assert that it is simply the exercise of human will-power. This assertion clearly betrays the mainspring of all human interference. Until the influence of a false education is corrected, egotism and self-will arrogate to themselves the ability of omnipotence, even essaying to dictate to divine Principle, and to prescribe the time and manner in which Deity shall do His own work. Such unwarrantable presumption is wholly the result of false teaching, wherein the creature and not the creator is "worshiped and served."

Up to the point where it begins to meet with failure in seeking to accomplish its selfish purposes, the development of the human will is a growth away from God. It is not in accord with divine law, and only as the human will is made to surrender its false claims and to acknowledge the absolute supremacy of the one Mind, does the divine will appear to human sense. John the Baptist probably pointed to the surrender of the human will and the recognition of the sovereignty of the Christ when he said, "He must increase, but I must decrease." Could the simple significance of his words, so in harmony with those of the meek Nazarene, "I can of mine own self do nothing," dominate the early lessons of childhood, the glorious achievements of mature manhood and womanhood would practically reveal, through "signs following," the kingdom of heaven on earth. As it is, humanity has been led astray. Mortals have been taught that they could do something of themselves, that they were free moral agents to think as they pleased, regardless of the penalty attached to all wrong thinking. The practical import of that ancient saying, "Death is near one who follows his own will," has not been explained to them; they have not been taught that the exercise of the human will, unrestrained by spiritual thought, would be an interference with the government of God, and that this will must be not only subordinated, but ultimately replaced through the apprehension and acceptance of the will of God. Rather have they been told that the power to think and to act was within themselves, that it was their prerogative; and that the government and control of everything on earth rested with them, despite the Scriptural assertion that "the government shall be upon his shoulder." The belief in a multiplicity of mortal laws to-day is directly traceable to this teaching, and this belief will obtain until humanity comes to understand and obey the will and purpose of God alone; until it learns the mighty import of those words of the Master, "Without me ye can do nothing." Could the present generation have been taught from the cradle the truth of these words, that the human will can do nothing of itself, and were they living in accord with divine Principle, the millennium would be at hand.

Christian Science has come to teach humanity how to overcome the desire to interfere with God's government. One of its first lessons is to uncover the erroneous belief of a finite human will separate and apart from the divine, and to show humanity how to eliminate this belief through living in obedience to spiritual law, the divine corrective of sense-existence. No human being has any true conception of spiritual power, might, or dominion until he can say understandingly, "I can of mine own self do nothing," "for wisdom and might are his [God's]." The student of Christian Science is proving daily that the subjugation of the human will does not rob him of his individual rights; but, instead, enhances his God-given capacity to reflect divine power, wisdom, and understanding, enabling him to repeat the declaration of the apostle, "I can do all things through Christ which strengtheneth me." The remarkable growth and success of the Christian Science movement is due to the fact of our revered Leader's insistence upon the practical demonstration of this thought of unconditional surrender to the divine will in all our activities, whereby humanity is learning to reflect only such thoughts as originate in and proceed from the one infinite Mind, or intelligence; as Saint Paul expresses it, "Casting down imaginations, and every high thing that exalteth itself against the knowledge of God, and bringing into captivity every thought to the obedience of Christ." The world is slowly but surely awakening to the fact that all wrong thinking is antagonistic to the law

Copyright, 1906, by Mary Baker G. Eddy.

Digitized by Google

and government of God; and this is what seems to obstruct the consciousness of life eternal, the kingdom of heaven on earth. The whole weight of the Master's thought was constantly on the side of right. His declaration, "I am from above," gave him spiritual power and dominion, and in no other way can we reflect this same power, save as we recognize our oneness with God, good, by refusing to express all such thoughts as are "from beneath," which are at cross-purposes with the harmonious reign of Spirit in individual consciousness.

The slightest deviation from the first great commandment, "Thou shalt have no other gods before me," disrupts in human consciousness the sense of the activities of the divine government, and obscures our vision of the new heaven and the new earth. All such antagonism must cease before we can witness the fulfilment of that glorious prophecy, "The earth shall be filled with the knowledge of the glory of the Lord, as the waters cover the sea."

Science vs. Superstition.

EVELYN SYLVESTER KNOWLES.

ONE notable feature of advancing civilization is the demarcation between established fact and mere conjecture. The former is classified under the head of science; the latter might be loosely included under that of superstition. Education is constantly tearing away the threadbare garments of superstition, and the cry for scientific fact in place of foolish fable is heard in every field of research. Indeed, so strenuous has been this call, that the dangers of modern ultra-criticism have threatened to exceed those of ancient erroneous belief.

Nowhere has superstition held its ground more firmly than in the religious world. From time immemorial religion has been based largely upon intangible beliefs, and even now it seems reluctant to leave this realm of tradition for the realm of the real. Singularly enough, too, superstitions (which might be broadly defined as unprovable supposition) have not been confined to the unlettered. It was a highly cultured race that accepted the teachings of mythology. To this people Jove actually reigned in Olympus, and Athene truly sprang from his head. Even as late as the fourteenth century the learned Dante accepted literally what to us are the wildest phantasms. We laugh at these old-time delusions, but a moment's reflection will convince us that even in our day, beliefs remain which are closely allied to what all now agree in denominating superstitions. To illustrate, let us glance at some cherished ideas still retained, —concepts long since proved by Christian Science to be as erroneous as the most ludicrous of ancient traditions. It is thought by very many that a draft of sweet, pure air can give one neuralgic pains; that to wet the feet with the shoes on may result fatally; that a disease manifesting itself on one body, can transfer itself to another; that the delicate perfume of a rose can cause great physical distress, etc. Apropos of this last, a story is told of a woman who suffered greatly each summer from rose-cold. Her family physician, finding his remedies unavailing, put an artificial rose in a conspicuous place and awaited the arrival of his patient. Scarcely had she entered when she saw the flower, and casting a reproachful look at the doctor, she conscientiously began to sneeze and cough. Her suffering was very real to her until the physician suggested that she smell the rose, whereupon she discovered her mistake and her trouble vanished forthwith.

There are those who would be horrified at the Salem witch-craze, and who make merry over the outworn belief in ghosts, and yet they cling tenaciously to their belief in contagion, in the law of heredity, and in the power of evil, all of which have long since been proved fallacious through Christian Science. With equal certainty the belief that God cannot or will not fulfil His promises, has been destroyed, not by argument but by gradually educating mankind into the acceptance of a nobler sense of the divine nature and government. Ignorance, stripped of wisdom's vestments, has appeared in all its ugliness, and in place of conceded falsity, men have become possessed of scientific apprehension, fit weapon for the temporal warfare between truth and error.

Nothing can make us afraid of a ghost when we know beyond peradventure that no such thing exists. Every schoolboy now knows that Apollo, Venus, and the host of classic deities are creatures of fable who never existed outside the deceived human sense. The discernment of actualities necessarily dispels illusions or superstitions of every nature, and this has ever transpired when truth has been perceived. When Paul shook the serpent into the fire the natives thought him a god; yet we know that he was but a man who, through adherence to the Master's teaching, understood a simple law,—"Nothing shall by any means hurt you,"—and who thus accomplished fearlessly what to their untutored sense was a miracle. Jesus spent nearly all his time in the endeavor to annihilate the flagrant superstitions of his day, and Christian Scientists are to-day occupied in the achievement of similar results. We are indeed loth to part from our pet beliefs, for as Browning has sung,—

Old thoughts they cling, they cling.

The superstition that there is a personal devil who is able to thwart Deity; that malice and envy, hatred and revenge can result in anything but the suffering of those who cling to these falsities, etc., all these are annihilated by the great spiritual truth which cancels every claim of material law; that God is all, and therefore there is no evil; that "God is a consuming fire," dispelling everything unlike Himself as light dispels darkness, and that if we keep the word of truth by living the Christ-life, we shall never taste of death.

Are we willing to put off the old (superstitious) man in order to put on the new (real) man? Are we ready to be educated out of the things we have believed to be true into the things we can *prove* to be true? If so, we shall be ready to accept Christianity as a scientific fact and, taking the divine rules laid down in Christian Science, we shall work out our problems to their complete solution.

[Written for the *Sentinel*.]

Harmony.

ASTLEY L. COOPER-KEY.

THOUGH oft belief around thee wind,
And gloomy shades of discord strive
Thee to engulf, in mortal sense,
Know Love alone, and thou shalt live
In harmony.

Despairing mortal, seek the truth
And rise to immortality.
Know thou that God alone is Life:
In Life thou art eternally
In harmony.

O sin-enslaved humanity,
Assert man's sacred rights divine,
And walk not silent in the shade,
But joyous in the light benign,—
In harmony.

Admission to Membership.

The next admission of candidates to membership in The Mother Church will be June 5. Applications must be in the hands of the Clerk on or before May 14.

Selected Articles.

The Text-book.

To the Editor of the *Hawick Advertiser*.

Sir:—Having been a citizen of your good burgh a considerable part of my youth, I naturally feel some interest in the welfare of the town. It was for this reason that I recently availed myself of the privilege and pleasure of contributing to your public library a volume entitled, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy. With your permission I should like briefly to call attention to its nature, purpose, and work.

Science and Health is the text-book of Christian Science, a teaching quite prevalent in this country, and rapidly gaining a strong foothold in Great Britain as well as many other parts of the world. The author is a lady of refinement, with rare literary ability and attainment, who wrote the book after many years of earnest investigation and diligent research along both physical and metaphysical lines. The more immediate cause of its production was her instantaneous recovery from a serious illness, caused by an accident and pronounced by the attending physician as hopeless. The book itself is primarily of a religious nature. It does not set forth a new religion, but rather insists on a more practical application of the religion in which all true Christians believe. The Bible is used as a basis; also God, who is "Spirit infinite, eternal, and unchangeable, in his being, wisdom, power, holiness, justice, goodness, and truth" (Shorter Catechism); Jesus, who shows us the way of salvation through his pure, self-sacrificing love.

The purpose of the work is to bring salvation and peace to the world, to help the needy, relieve the distressed, comfort the sorrowing, and heal the sick. The predominating idea constantly is that the proper understanding of God, and implicit reliance on Him, is more efficacious in healing disease and suffering than any other method. Directions as to how we may best attain and apply this understanding are also set forth.

The wonderful work accomplished by this book is the best proof that it is worthy of the earnest attention of all, especially those who are in need of help, physically, mentally, morally, or spiritually. It was first published in 1875, and is now in the three hundred and eighty-second edition of one thousand copies each. During that time, through the reading of its pages alone, thousands have been healed of all kinds of diseases. When it was published there was but a very small handful of followers, now there are over six hundred churches with a membership of about fifty thousand. Why this phenomenal growth? Because the teachings of Science and Health have been found practical and practicable. It has proved a panacea for all ills and, like one of old, has come "to proclaim liberty to the captives, and the opening of the prison to them that are bound."

Trusting that this contribution to the library may prove of interest and profit to many of its readers,

I am, etc.,

JAMES J. ROME.

6 Blackwood Street, Boston, Mass., U.S.A.

February 1, 1905. *The Hawick* (Scotland) *Advertiser*.

One Day at a Time.

Jesus said, "Take therefore no thought for the morrow: for the morrow shall take thought for the things of itself. Sufficient unto the day is the evil thereof."

It seems impossible not to give some thought to the future, and without doubt one of the most important things in this line is to note that the success, prosperity, the general welfare of the future depends largely, if not exclusively, on our taking good care of the present. He who does not take to-day's steps to-day cannot take to-morrow's steps to-morrow, but on the morrow will be obliged to take to-day's steps. If a link be dropped out of the chain, we are obliged to go back and replace it, in order that the chain may be unbroken. To-morrow's work can never be done to-day, for we have not reached it. We cannot even determine accurately to-day what we shall do to-morrow, hence the wisdom of James' words, "For ye ought to say, If the Lord will, we shall live, and do this, or that."

To-morrow's circumstances and environments are not yet arrived. Therefore, the testimony which is to govern to-morrow's decision is not yet in hand, and he is a very unwise judge who decides his case before the testimony is presented. The battles which we already have on hand demand all our thought, attention, ingenuity, and effort, and when they are properly provided for there is little time and opportunity left for to-morrow's cares. For the evil or burden of to-day—that which is necessary to be combated and overcome to-day—is sufficient, said Jesus. It is a sufficient undertaking for our strength, a sufficient task for our duty.

I have known business men to spend nearly all their time planning and arranging for the future, and even encumbering themselves financially, to the great detriment of their present undertakings, in their effort to get ready for bigger things in advance. Such men as a rule never get to the large affairs for which they plan, because they do not take sufficient care of their present matters to have a foundation for that which they undertake to build. A wise builder begins with a good substantial foundation and carefully and properly places each successive stone in its place. One may look ahead to some extent, but he cannot build ahead. If our plans for the future are constantly interfering with the execution of what we know to be the best thing to do in the present, we have the evidence that our plans are not made with sufficient intelligence. Our plans for the future should always be made with a proviso, for such arrangements are always made in the absence of at least a part of the environment and condition which may justly claim the right to indicate the proper course at that time.

ALFRED FARLOW.

Boston Times.

A Reply to Objections.

Christian Scientists have proved by experience and demonstration that Mrs. Eddy has discovered the spiritual meaning of the Bible, and explained in a marvelous manner the life, words, and work of Christ Jesus, which enables them to be better Christians, to be healthier and happier than they were prior to their acceptance of Christian Science. Why object to this good work?

Our critic says, "It is a good and noble thing to relieve pain and sickness, sorrow and bereavement, and to rescue men from the effects of these things." "But," says he, "it is also un-Christian to relieve them of their money for such services."

If the Christian Scientist who gives all his time to the service of humanity should not be paid for his labor, then why pay the minister, the doctor, the lawyer, or any one else for his labor? However, it is but just to say of Christian Scientists that much of their time is spent in ministering to the sick and needy without money and without price.

The Scripture makes no distinction as to whether the "power" to heal is "conferred" or is attained through prayer. The disciples on one occasion inquired of Jesus the reason for their failure to heal a certain case. He upbraided their unbelief, and said, "Howbeit this kind goeth not out but by prayer and fasting." It is also said of Jesus that "he did not many mighty works there [in Capernaum] because of their unbelief." If "unbelief" obstructed the work of our Master, is it not true that Christian Scientists encounter and have to overcome in their healing work the same unbelief?

Digitized by Google

Our opponent asks, "Why are not the blind, the deaf, etc., healed by Christian Science?" There are instances where such cases have been healed through Christian Science. Might he not ask with as much propriety, "Why are not the drunkards, the gamblers, thieves, murderers, and all the sinners healed and reformed by the preachers in the other churches?" Certainly we have no lack of preachers to expound the gospel of Christ, and many Christians who pray for the redemption of sinners.

Paul says, "Be ye transformed by the renewing of your mind." If one is sick a spiritual transformation of the mind results in physical healing. The real work of Christian Science is the reformation of the sinner, and this removes sickness. Our critic denounces the practice of Christian Science as "un-Christian." Is it because we believe that the gospel of Christ, rightly applied, will produce the same effect to-day that it did two thousand years ago? Is it "un-Christian" to pray to God for the recovery of the sick as well as the sinner? Is it "un-Christian" to trust God with your life, to the exclusion of all material remedies?

Our opponent says, "Many of their paid healers have been brought before the courts to answer charges of criminal neglect, or worse." So it can be said, and with shame to this age, that occasionally a Christian Scientist has been prosecuted for failing to realize an answer to his prayer for the recovery of the sick. It is also true that Christ Jesus was prosecuted, convicted, and crucified for doing the work which Christian Scientists are endeavoring to emulate. Why would it not be as just to prosecute a "paid" doctor for failing to cure, or a salaried minister for failing to convert a sinner for whom he prayed, as to prosecute a Christian Scientist? Would it not be as just in one instance as the other?

JOHN H. WILLIAMS.
Florida Times-Union.

An Interesting Letter.

[We are pleased to have permission to publish the following interesting letter recently received by one of our contributors, Prof. Joel R. Mosley. The writer is a well-known newspaper man.—EDITOR.]

Portsmouth, Va., Jan. 23, 1906.

Dear Professor:—I have read your article in the December *Christian Science Journal* with a great deal of interest and pleasure, and I am wondering if you ever read in the Revised Version of the New Testament the passage you quote in the second page of the article; viz., "What things soever ye desire, when ye pray, believe that ye receive them, and ye shall have them." The Revised Version reads, "All things whatsoever ye pray and ask for, believe that ye have received them, and ye shall have them" (Mark, 11 : 24). As I understand this, it is a perfect endorsement of Mrs. Eddy's position that our attitude toward an abnormality should be that *in reality* it does not exist. You know that this position of hers—the unreality of the abnormal—is a hard and exasperating proposition to mortal mind, and when I found that the scholars who revised the Bible (years subsequent to her discovery) absolutely, though unintentionally, of course, endorsed her position, I was pleased beyond expression. I could scarcely believe my eyes. But there it was in cold type, "believe that ye have received." Of course we cannot believe that we have received the answer to our prayer if the abnormality whose removal is desired is still in existence to us; and by putting it in the perfect tense, as the revisers have done, it is exactly the same thing as though they had said, "When ye pray, believe that the thing you would be rid of does not exist [is an illusion]." I was puzzled when, afterwards, I looked the same thing up in the American edition of the Revised Version, and found that it read, in that particular, just as it does in the old version and as you have it in your article. When I finally got it solved it was reconciled by the fact that it was a point on which the American and English revisers did not agree, and they had an understanding, I have learned, that on all points upon which they disagreed, the change from the old version should appear in full in the text of the edition represented by the advocates of the change, but only in the margin of the edition represented by the revisers who held to the sufficiency of the old version. And so the change, in this instance, went into the text of the Oxford (English) edition, and only in the margin of the American edition. The fact, however, that the ripe scholars of even one set of the revisers found, in the original, justification for the "have received," seems to me to be a most gratifying fact to Christian Scientists, who are the only people on the face of the earth who pray in that way.

Other changes which confirm and illustrate Mrs. Eddy's teaching are these: In the benediction which we so often hear in the Christian Science churches, "Now unto Him that is able to keep you from falling," etc., it reads, in the Revised Version, "guard you from [even] stumbling;" and where in the old it reads, "the only wise God," the new stands for perfect monotheism, viz., "the only God." I have so often wished they would adopt the revised form of this passage in the Christian Science benediction. Another and very remarkable endorsement of Mrs. Eddy by the Revised Version is its rendering of the thirteenth chapter of 1 Corinthians, which entirely justifies her position that we should see only the perfect man. The old version says, "Charity . . . thinketh no evil." The revised reads, "Love . . . taketh not account of evil" (*i.e.*, has only a perfect concept).

Changing the subject a little, did you ever notice how completely the parable of the tares and the wheat bears Mrs. Eddy out in her teaching of universal salvation? Only that which the bad man planted (sin) was destroyed, every grain of wheat (the original creation or planting) was garnered and saved. Even the orthodox people do not hold that the bad man planted anything but sin (tares) in the field, and yet they figure out that more than he planted (more than sin, or the tares) are to be lost.

I hope it may be a pleasure to you even to re-read the above references, if none of them are new.

With high regard, yours very truly,

RICHARD D. HAMILTON.

P. S.—Since writing the foregoing I have consulted an American edition of the Revised Version (never saw but one copy of the Oxford, and that was some years ago) and I find it just as I stated—for "receive" it has the word "received" in the margin.—R. D. H.

None realizes more fully than the Christian Scientist the danger of words without works. He has no time for idle controversy, no time to attack his neighbor's beliefs. He knows that the only way to turn men away from "false Christs" is by giving them a true perception of the Christ.

FREDERICK DIXON.
Kilkenny (Ireland) *Moderator.*

A Correction.

We are glad to print the following extract from a letter received from a friend in Grand Rapids and thus correct the mistake which we unwittingly repeated in the *Sentinel*.—EDITOR.

"In the *Sentinel* of February 24, 1906, page 405, there is a paragraph taken from the *Middletown* (N. Y.) *Times*, in which the Rev. J. Herman Randall of Grand Rapids, Mich., is spoken of as a Methodist clergyman. This is a mistake, as Mr. Randall is a Baptist clergyman and at the present time occupies the pulpit of the Fountain Street Baptist Church of this city."

Among the Churches.

Arcata, Cal.

The lumber is on the ground for a new religious edifice in Arcata and in a few weeks the members of the Christian Science church of this section will worship under their own roof. The building will be so constructed that it can be made part of a large church in the future. The chapel is planned to seat about one hundred persons.

Arcata (Cal.) *Union.*

Dedication at Marshall, Mich.

The dedication of First Church of Christ, Scientist, of this city, was a happy occasion and one for congratulation. The service occurred Sunday afternoon [Feb. 17] and was attended by a large gathering of interested people. Messages of congratulation were read from Detroit and Grand Rapids churches, also from friends who were unable to be present.—*Marshall* (Mich.) *Expounder.*

Bloomington, Ill.

At the annual meeting of First Church of Christ, Scientist, of this city, the reports for the year were presented. These show a gratifying increase in both membership and attendance at church worship. At most of the services the church is crowded to its capacity.

Three years ago the local church pledged six thousand dollars towards the Building Fund of The Mother Church now in course of construction in Boston, Mass. During the past year the church has raised to apply as a partial payment on this fund two thousand and ninety-nine dollars and seventeen cents. In addition to personal contributions the collections on the first Sunday of each month are given for the same purpose. On hand in the local church building fund is one thousand eight hundred and six dollars and fifty-five cents. When payments are completed on The Mother Church Building Fund, then the attention of Bloomington Scientists will be turned to the erection of a new church here. The present membership of the church is one hundred and fifty-five.—*Bloomington* (Ill.) *Daily Bulletin.*

Growth in San Francisco, Cal.

The members of First Church of Christ, Scientist, held their opening services at eleven o'clock Sunday morning [Dec. 31] in the church edifice at the corner of Post and Taylor Streets. This building, which was formerly occupied by the Sherith Israel congregation, has been thoroughly renovated, painted, altered, and furnished to suit the present requirements, and will be used by the Christian Scientists until their new church is erected at the corner of Sacramento and Scott Streets. The main auditorium and gallery have been arranged to accommodate over eleven hundred people, and on the lower floor the partitions were removed to make a large room capable of seating over six hundred, which room will be used for the Sunday School and overflow meetings.

This church was organized Oct. 15, 1895, and for over two years occupied Beethoven Hall for its Sunday services, while several halls were used for the mid-week meetings as each was successively outgrown. In December, 1897, Sherman, Clay & Co.'s Music Hall and Elks Hall were secured for the regular services, and these have been occupied until the present time, when they have become too crowded to accommodate the people who wish to attend, thus making necessary another move to larger quarters.

San Francisco (Cal.) *Bulletin.*

The Lectures.

North Adams, Mass.

There was a very large attendance at the lecture on "Christian Science, Its Benefits and Blessings," delivered by Rev. Irving C. Tomlinson of Concord, N. H., at the Richmond Theatre yesterday afternoon [Feb. 18]. Charles E. Whitney, president of the City Council, called the meeting to order, and introduced Mayor Ford, the presiding officer, who spoke as follows:—

Friends, it may seem strange to this audience that one who is not a member of the Christian Science church should preside at this meeting. But I do believe that the influence which it exerts in a community is to elevate its members, and to make brighter and happier the lives and homes of men and women. A religious faith which has added so much to human happiness should command the considerate approval of the Christian world. I take pleasure in introducing the lecturer of the afternoon, Rev. Irving C. Tomlinson.—*North Adams Herald.*

El Paso, Tex.

An audience that filled every seat in Mount Sinai Temple listened to an address by Judge Septimus J. Hanna, last evening [Feb. 22], his subject being "Christian Science: the Religion of the Bible." He was introduced by H. W. Allen, who said in part,—

I am not a Christian Scientist. I believe, however, that these people square their faith more consistently with the Bible than do any other Christian people. If I believed in the Bible, I would have to be, so it seems to me, a Christian Scientist. While I have not been able to accept this philosophy, I will say that just as a tree is known by its fruit, so must we judge this religion by its effect, and I know of my own knowledge that it makes its adherents happier, more spiritually minded, healthier, and better in every way. And, after all, what better test can a religion have than that?—*El Paso Herald.*

New Orleans, La.

Mr. Bicknell Young of Chicago yesterday afternoon [Feb. 11] lectured to a large audience at Scottish Rite Cathedral. In introducing Mr. Young, Dr. Max Heller, Jewish Rabbi, said,—

Every man who stands for the life of the Spirit as the best of human existence must sorrow in his heart to see the noblest of aspirations drowned and choked in a deluge of covetousness; to observe how many men are jading and dulling, are defiling and debasing themselves in the greeds and the lusts of sensuous pleasure. There are the cowardices of the body as well as its appetites; much of our strength and worth is wasted in fear of pain, as much of our yearning turns to a fierce hunger for wealth. We are not as one, you and I, in many things; but an earnest striving unites us. You are doing your best to teach with a steadfast confidence that most fundamental of all Biblical principles, that the spirit is master, godlike, immortal, and not the body. It is because of such an influence that every honest teacher of spiritual living must wish you well, and I can but hope for inspiration from your lesson. I deem it an honor to extend the welcome of this audience to our distinguished speaker.—*New Orleans Picayune.*

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

The Efficacy of Christian Science.

It has often been alleged by persons opposed to Christian Science, that if this system possesses any healing efficacy at all, it extends only to nervous and imaginary diseases, and is not to be relied upon in serious cases or in those believed to require surgery; but however plausible this statement may seem on its face, it is not borne out by the facts of actual experience.

We receive many testimonies from those who have been operated upon without benefit, as well as those who have been pronounced incurable except by surgery. A case of the latter kind is that of Hon. Wainwright Cushing of Foxcroft, Maine, a well-known and much-respected public man, who writes as follows:—

"During the month of April, 1895, I had the misfortune to sustain a fracture of my left leg. The fracture was reduced in the usual way by a local surgeon, but I was confined to the house some three months. A few months after my recovery I noticed that a weakness had developed in this limb, which was aggravated by much walking, and I was obliged to use a cane or crutch at frequent intervals in order to get about. This difficulty grew from bad to worse until the summer of 1898, when I decided to consult one of the best surgeons in New England, who, after making a thorough examination of the limb, pronounced it a well-developed case of varicose veins. He advised me to submit to a surgical operation, as this, he emphatically stated, was the only known remedy. I naturally disliked to undergo this ordeal, and so put the matter off from week to week, wearing an elastic stocking and going about with crutches and cane. At this juncture a member of my family suggested that I try Christian Science for the trouble. I was skeptical—knowing but very little about this method of healing—and told them that I did not believe it could help in a case where surgery was the only known remedy. After a while, however, I decided to try this Science, and a local practitioner commenced treatment. At the end of three weeks' time I noticed that the elastic stocking which I had been wearing was becoming loose. This was very encouraging; so I continued the treatment, and was thoroughly healed before the end of the fall of 1898. This was nearly seven years ago, and I have had no return of the trouble. In addition to this, my general health, which had been undermined to some extent by the local troubles above mentioned, has been wonderfully improved. I am over sixty years of age and weigh above two hundred pounds, but I can walk long distances without cane or crutch and with no inconvenience whatever. I shall be very glad to make oath to the truth of these statements, and testify to my gratitude for what Christian Science, without the aid of drugs or any other material methods, has accomplished in my case."

A case where surgery proved unavailing is that of Mr. A. W. Watson of Salt Lake City, Utah. He writes:—

"For twelve years and over, I had suffered from throat trouble, called by some specialists paralysis of the vocal cords, by others catarrh. A throat specialist in London, England (one of the late Queen Victoria's physicians), charged me two hundred and fifty dollars for an examination, and later five hundred dollars more for an operation which gave me only temporary relief, telling me that it was all he could do for me. Another noted specialist in Melbourne, Australia, confirmed this opinion with the statement that my throat would never be well. However, as my business took me to different parts of the world, and my living depended on my voice (which at times left me entirely), I was compelled to continue my efforts to find a cure. Coming to this country, I went to a specialist in San Francisco, who operated on me with the same result as before,—relief for a short time. Here I was forced to give up the profession for which I had studied many years. I had been treated by seven specialists, all prominent in the medical world, had been operated upon four times, at a cost, for drugs and doctors, of about six thousand dollars altogether.

"While in Salt Lake City for a short time, I was persuaded by my wife to try Christian Science, and I did so, though with no expectation of getting any benefit therefrom. I had treatment one evening, and can any one picture my surprise and delight when, on rising the following morning, I found myself a well man,—my nose and throat free from all disease,—and that with only one treatment from a Christian Science practitioner, the cost being comparatively nothing. This was two years ago, and I have had no trouble with my throat since that time.

"The gratitude I feel for the help received from Christian Science, words cannot express; it has been good for me and mine, both physically and spiritually."

It will be noticed that the diagnoses in both cases cited were those of surgeons,—specialists,—and it is not to be supposed that these men would advise a patient to submit to an operation unless there seemed to be, from the standpoint of medical practice, no other means of cure. It has sometimes been alleged that the testimony of Christian Scientists, to the effect that they have been healed of certain diseases, is valueless, because they have no technical knowledge of disease; but this allegation is a severe indictment of the medical profession, for it is always upon the statements of the physicians who have treated them that Christian Scientists name the diseases from which they have been delivered by the Christ-method.

ARCHIBALD MCLELLAN.

The Missionary Idea.

LOVE for our fellow-men being the truest evidence of our love for God, it follows that the missionary spirit is vital to the Christian life. Faith is individual, but it cannot be isolated or exclusive; loving and alert interest in the betterment of others is no less an incident of the Christ-mind than is radiation of light; the two are inseparable. This has always been more or less clearly seen, and some of the most inspiring chapters of religious history are those which portray the splendid sacrifice and heroism of many who have found their pattern and their inspiration in the life of the great "Missionary to the Gentiles."

While recognizing the importance and the accomplished good of organized missionary work, it can but be seen that it has not proved wholly satisfactory or sufficient. His delegated place and prerogatives have tended to lessen the freedom and larger growth of the missionary, and to extend the ills of sectarian religion where unity of thought and effort might otherwise have been realized. Yet more serious disadvantage has appeared in the temptation which has been presented to the many to think that having contributed generously to this line of endeavor for others they have fulfilled their personal obligations in the matter. It is far easier to give gold to a neighbor and authorize him to present the Christ-ideal to men, than it is to bring that ideal into daily demonstration for one's self and for others. And yet upon this last, as is manifest, the vitality and effectiveness of Christianity depends. All missionaries declare that their preaching to the irreligious, whether at home or abroad, is largely in vain because it is not emphasized and commended by the life and

Digitized by Google

conduct of Christian people. It is the demonstration of the sovereignty of the Christ-ideal, by the individual overcoming of sin and sickness, which alone convincingly and adequately witnesses for divine Truth. Nothing less than this is demanded of every follower of Christ and in no other way can the missionary work of the church be accomplished.

To this more embracing, more exacting, more inspiring, and more effective idea of Christian responsibility and privilege respecting our brother men, Christian Science gives its pronounced adherence. It is emphasized on well-nigh every page of Mrs. Eddy's writings, and she expresses her own consecration and adherence thereto when she says, "I repeat again, follow your Leader, only so far as she follows Christ" (Message to The Mother Church, 1902).

Every one must be both thrilled and saddened as he thinks of what it would have meant for the world if during the past eighteen centuries the demands of this ideal had been pressed upon the attention of every Christian believer,—if his worthiness and acceptability had always been measured to him in these terms and he had been stimulated and impelled, as is every Christian Scientist to-day, to bring forth the "fruit of the Spirit" in practical healing and redemptive work! Who can picture what the civilization of the twentieth century would have been as a sequence of the rule of this higher sense.

The growth of population and the impulses of legitimate trade have brought and are still bringing professed Christians into touch with every nation, kindred, and community, and if each and all were bearing about with them "the marks of the Lord Jesus,"—if they were commending Christian truth by healing the sick and sinning through the ministries of a pure and loving neighborliness, the Master's command, "Go ye into all the world and preach the gospel," would be grandly and efficiently obeyed. As did the early church, Christian Science places the greater emphasis upon the individual demonstration of the Christ-truth as the only authorized and adequate basis of Christian appeal to the un-Christian, and the wonderful spread of Christian Science in all lands gives evidence of the wisdom and propriety of this emphasis.

JOHN B. WILLIS.

The Building Fund.

WE are advised that reports are in circulation that the Building Fund of The Mother Church is complete and that no more contributions are needed. These reports are untrue. When it is time to stop sending contributions, Mr. Chase will give notice in our periodicals, and in the mean time our people should not be deceived by such reports, but should continue to send in their offerings.—EDITOR.

Contributions from the Sunday School.

THE great interest exhibited by the children who attend the Sunday School of The Mother Church is shown by their contributions to the Building Fund. The following figures are taken from the report of the secretary of the Sunday School and are most gratifying. Miss Nickerson reports the yearly contributions as follows:—

March 1, 1903 to February 29, 1904, $621.10; March 1, 1904 to February 28, 1905, $845.96; March 1, 1905 to February 28, 1906, $1,112.13; total, $2,579.19.

Letters to our Leader.

Macon, Ga., March 3, 1906.

Mrs. Mary Baker G. Eddy, Concord, N. H.

Dear Mrs. Eddy:—The March number of *The Atlantic Monthly*, on page 414, contains a recognition of such unity in the healing work of Christian Science and that of primitive Christianity that I feel it will be of special interest to you. This recognition is found in a review, by George Hodges, of Professor Harnack's "Expansion of Christianity in the First Three Centuries," from which I quote as follows:—

"But the chief characteristic of the Christian religion in the time of its early expansion was its good, honest, helpful living. This was the convincing apologetic of the primitive Christian. They held the religion of the Spirit and of power, of moral earnestness and holiness; they preached and practised the gospel of love and charity; they offered to save men both from sin and from sickness; they went about, like Christian Scientists, with gifts of healing. Professor Harnack does not mention Christian Science by name, but he has it in his mind when he remarks that the Founder of Christianity did not explain that sickness is health. There was nothing artificial or sentimental, he says, about him. Nevertheless, he finds that the Christians made a great point of curing disease, and that they did it without medicine. He shows how Christianity supplanted the cult of Æsculapius. It would have been a fair thing at this point to acknowledge that the Christian Scientists, whatever their errors, have returned to the primitive practice of Christianity, and that the extraordinary expansion of their sect in our time is an illustration of Dr. Harnack's subject."

In an earlier paragraph, we note this significant sentence:

"Some [of the primitive Christians] were for humbling the human understanding under the word of ecclesiastical authority; some held that Christianity was a system of philosophy, reasonable and lucid and eminently provable; some were mystics, for whom religion was a sacramental mystery whereby they entered into the immediate perception of God."

Sincerely and gratefully yours,

J. R. MOSLEY.

The Hague, Holland, January 21, 1906.

Our Dear Leader:—It is with a heart full of gratitude and love that I write to tell you that divine Love has led us to make the demonstration of organizing the first Christian Science church in this country: First Church of Christ, Scientist, The Hague, Holland. Our membership is twenty-four, while our regular attendance at the Sunday services is between sixty and seventy. The sale of literature at our Reading Room is increasing steadily; during the last twelve months not less than one hundred and thirty copies of Science and Health were sold, about forty copies of your other books, and a great number of *Sentinels*, *Journals*, and *Heralds*. We feel very grateful for the help that comes to us through the different publications, bringing us in constant contact with all the dear Scientists on the other side of the ocean. The children in our Sunday School are taught in Dutch, till they can understand enough English to read Science and Health, but they all know and love you as our dear Leader. We all of us bless you in our hearts for having opened to us through your inspired book, Science and Health, the way to know the truth which makes free from sickness and sin, and leads us into the way of peace. The steadily growing interest in Christian Science, not only in The Hague, but all over Holland, is the result of the healing work done by the students of the Bible and the "little book," which is indeed a "Key to the Scriptures." We have among our number eleven who had the privilege of class instruction from your loyal students in London, and who now devote their time to bringing the gospel of joy and peace and health to others. We acknowledged our sense of gratitude for The Mother Church and all the blessings that come from it to us, the branch churches, by sending our mite to The Building Fund, when we found there was a surplus at the year's end.

Words are inadequate to express our love for all you have done for mankind and each one of us individually,

Digitized by Google

but we know that we can best show our gratitude by faithfully striving to assimilate more of the Christ-spirit, to heal the sick and to reform the sinner as you have taught us; thus obeying Christ's command.

Gratefully and lovingly,
MRS. HELENE TH. JANSEN.

First Reader of First Church of Christ, Scientist, The Hague.

Tacoma, Wash., Feb. 14, 1906.

Beloved Leader and Teacher:—The demonstration of the gospel of Christian Science at the hands of a capable, loyal, and loving consciousness, is significant to its advance in ways and degrees which all true Christian Scientists will appreciate. They will also appreciate the world's indebtedness to your wise discernment in selecting Mrs. Mims of Atlanta, Ga., for this work of bringing the saving truth of Christian Science to needy humanity, and the Christian Scientists of the Pacific Coast would all, I am sure, express their gratitude to you for the privilege which they are enjoying at this time by reason of her visit among them. Large audiences have greeted her at each lecture, and instances of healing have been reported as having occurred at each of these assemblies. It takes rare courage and a splendid fortitude to undertake such an extended tour as she is now engaged in, and it is right you should know that we recognize that the maxmium of all which has made possible our enjoyment of this special visitation in the far West, finds its source in your keen perception of humanity's need and the most effectual way and means of meeting that need.

We earnestly thank you for the blessings which we are receiving through your triumphant leadership.

Lovingly your student,
CLARENCE C. EATON.

Milford, Utah, Jan. 5, 1906.

To Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—We, the members of the little branch Church of Christ, Scientist, of Milford, wish to express our love and gratitude to you, for the manifold blessings and benefits received through your wise and great leadership; also for our text-book, "Science and Health with Key to the Scriptures," the study of which has enabled us to demonstrate so fully and forcibly the omnipresent power of Truth and Love. When, in 1902, the call came from headquarters for contributions to the Building Fund, we sent in our mite which we had on hand for our own building fund, amounting to three hundred and ten dollars and seventy-six cents. Afterwards we set aside the amount contributed the first Sunday of each month, to forward to The Mother Church; and again we obligated ourselves for two hundred dollars to establish a Reading Room here. Of this amount one hundred and forty-two dollars had been collected, and on receiving another call through the *Sentinel*, we at once forwarded this to Mr. Chase to apply to the Building Fund. The Sunday School has sent in twenty-three dollars and sixty cents, making a total to date of six hundred and nine dollars and ninety-one cents. We will continue to send in contributions of first Sundays until the completion of The Mother Church. The members of this church number eleven, of whom only four reside at Milford. This church has had the privilege of two lectures,—the first by Bicknell Young in November, 1904, and the second by Rev. William P. McKenzie, in November, 1905.

In conclusion, we wish to express our loyalty and love to you, our dear Leader.

Faithfully yours,
MRS. S. L. HARRINGTON, *Clerk.*

First Church of Christ, Scientist, Milford, Utah.

Testimonies of Healing.

When I was a comparatively young man a hernia was produced in my left side from overstraining. Ten years later an accident caused the same trouble on the other side. A double hernia was an affliction indeed, and from this I suffered for twenty-five years. I had never heard of a case like mine being cured, and the only relief the physicians offered was to fit me with a truss to support the injured parts. I never arose in the morning until this was in its place and never removed it until I retired for the night. All these years life seemed a burden with no hope of relief.

Until 1899 I had never heard of Christian Science. It was in the spring of this year that my attention was first directed to it by the successful treatment of my wife. I became very much interested in the beautiful teachings of Christian Science and through the word of Truth spoken to my consciousness I was healed. Seven years have passed since then and I am still rejoicing in my freedom from suffering with never a hint of a return. I was also healed of catarrh of the throat. At the time of my healing I was working as a clerk in the city health office and when I told the health officer of my relief, he and several physicians associated with him declared that it was most remarkable. These men were my friends and knew my previous condition because they had made examinations of my trouble and would gladly have offered some remedy to help me had any been known to them.

Christian Science has been to me in all these years a "gem of purest ray serene," and daily my heart is filled with deepest gratitude for the many blessings I have received from its glorious light. I am proud to acknowledge that I am a Christian Scientist, and have identified myself with Second Church of Christ, Scientist, of Houston, Tex.

R. G. ASHE, Houston, Tex.

About four years ago I was healed through Christian Science of several diseases, nearly all of which were of years' standing,—constipation from infancy, female weakness, tonsilitis, severe headaches, besides catarrh and heart trouble. I had trouble with the jaw-bone, supposed to have come from decayed teeth. On account of abscesses I had a dentist and doctor probe and lance my jaw many times, during a year and a half, causing me great suffering, so that I could not eat or sleep. I was so weak some days that I could not sit up all day. The doctor and the dentist said I would need to have the jaw-bone scraped or a piece of it removed,—an operation very painful and dangerous. Another doctor pronounced the bone trouble of a cancerous nature, as the others had done. He also said I had a bad heart trouble and that I would soon have consumption. He told me I could never be cured.

It seemed as if I could not die, and I was too miserable to live. It was at this stage that Christian Science found me. A neighbor came to see me and told me she had been healed through Christian Science, and I took treatment soon after. I had but three present treatments, the rest being absent, and I was entirely healed of all the diseases mentioned.

We bought a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy. How good it was to find that God is not a far-off God, but that we live in Him and that He never made sin, sickness, or death. The practitioner was always turning me from the false sense of life, to God, Spirit, as the only Life. My husband and I both consider the Bible and Science and Health the best books we have ever read. Science and Health gives the spiritual meaning of the entire Scriptures. I used the knowledge I had of Science and was well and happy for over two years, then I had a severe struggle. There were no Scientists near

Digitized by Google

us, and we did not write to a practitioner as we should have done. Relatives and neighbors wanted me to have a doctor, so we yielded, but divine Love never for one moment forsook me. After visiting in several places I went to the practitioner who had helped me before, and was entirely healed in a short time, the sensitiveness from which I had suffered all my life yielding last. I have always found justice in Christian Science, for which I am thankful. I went to church while in Spokane and saw a large crowd of cheerful and intelligent people. I have not found any Scientists in this neighborhood, but I read Science and Health, the *Sentinel*, and study the Lesson-Sermon, from which I am always benefited. My husband also reads Science and Health and the *Sentinel*.

The spiritual peace that passeth all human understanding has come to me through this healing, which was taught and practised by Christ Jesus, and which has been given to the world in our day, through inspiration, by our good Leader, Mrs. Eddy.

I am now making a demonstration over fear and loneliness by realizing that perfect Love casteth out all fear, and that the kingdom of God is within, not to be gained at some far-off time. How glad I am to trust the truth which makes us free.—MRS. ELLA BARRETT, Rearden, Wash.

With a heart full of gratitude to God, and to our dear Leader, I lovingly give the following testimony of an experience which has proved to us more than ever before the presence of God at all times. While one of our little girls, ten years old, was at play with other children at a neighbor's home, an altercation arose between two grown persons. In the midst of the trouble our little girl received a vicious blow in the abdomen, having been kicked by one of the participants in the fray. She was not visibly affected by the blow, except that she was deprived of her breath for a few moments. To all appearance she had received no other injuries, and returned to school for the afternoon session. Within a short time, however, symptoms appeared which were very serious and caused us a hard battle with fear. A suffocating fever developed, followed by frequent hemorrhages. While her condition seemed to be precarious, we clung tenaciously to the allness of God, realizing as best we could His ever-presence and protection. The injury was received on Tuesday about noon, and Wednesday it was considered best to give the case over to a Christian Science practitioner. This was done, and it was only a short time until improvement was very manifest. The fever grew less severe and the hemorrhage gradually diminished. Improvement was so marked that by Saturday she was able to go for a walk and spent considerable time gathering flowers. She slept well at night and her appetite grew stronger. By Sunday she was in her normal condition, although still showing evidence of having passed through an ordeal. This, however, soon passed, and within two days' time no evidence of the experience remained.

Our family is a large one and we sometimes have to prove the truth we are trying to live, but we find that as we do our part in its daily demonstration we have greater confidence that "the Lord's hand is not shortened, that it cannot save."—J. FRANCIS STROUP, Omaha, Neb.

For months before I first became interested in Christian Science I would not permit the subject to be mentioned to me, but one day while out walking I noticed, not very far from my home, a Christian Science church. I said to myself, "The Scientists have pitched their tent quite near. I must go in and hear what they have to say for themselves." I carried out my resolution soon after, with only one object in view, and that was to criticise adversely. I, however, came out as effectually arrested by the truth as was Saul on his journey to Damascus. There were very few in attendance that evening, in fact there were very few Scientists in Brooklyn at that time; but the few were all well acquainted with the subject. As I listened to the testimonies I reasoned with myself, Now these people can have no possible motive for trying to deceive each other, and they must know that they cannot deceive God. It came to me clearly that what I heard was the truth, and I immediately began to investigate it.

Little by little I began to see, and my eyes, which were at that time in very bad condition, according to mortal sense, began to improve. I was quite well read in *materia medica*, I had an electric battery, a highly approved medical work which I very frequently consulted, and a profusion of homœopathic remedies; these, with the exception of the battery, were immediately destroyed, while that was put away and I have never seen it since. I also laid aside my glasses, which I had worn for four or five years. When I had done this I could not read, except a few words in Science and Health. I can now see to write, read, and sew by daylight without difficulty. I have in every case tried to work out my "own salvation," but have not always succeeded without assistance. I was healed in a very short time of rheumatism, which I supposed I had inherited and which was every year growing worse. Acute bilious attacks, which I thought I must have every three or four weeks, were overcome with one treatment, and have never re-appeared.

My progress has been sure if slow. There is a long road between the recognition of a scientific truth and its realization,—even as we ascend a mountain and can see its peak although we may have gone but a little way, and many steps are to be taken before we reach it. I was always a Bible student, and my familiarity with Bible texts was of great benefit to me when I began to study that wonderful book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. In the midst of the struggle to understand something of the unreality of error this text came to me, "The fool hath said in his heart, There is no God," and it was a great help. I came to see, through Christian Science, that if every material thing were destroyed, God's spiritual creation, including man, would appear in all its glorious beauty and majesty,—good and "very good,"—the trail of the serpent (material sense) being nowhere visible. Mrs. Eddy tells us that error is like the thick, heavy fog which wraps everything within its bounds in a sheet of gray, but when it lifts every object shows forth as distinctly as if the mist had never hidden it. So when the mist of error, which has no foundation in Truth,—no Principle,—shall have disappeared, then will God's creation appear in the clear light of Science, perfect as it always has been.

MARY E. SNYDER, Brooklyn, N. Y.

I would like to tell of a demonstration which was made for me over nervous prostration. This trouble seemed to be brought on by a sense of grief and anxiety. I had become so weakened that I could not dress myself, could neither eat nor sleep, and was rapidly losing my memory. I was confined to my room, able to sit up only a little while at a time. My husband and daughter begged me to send for a practitioner, but I said that I thought this was for me to work out myself, though I seemed to be growing worse each day. One Saturday night a neighbor whom I had met only once before, though she was a member of our church, called on me. She saw my need and supplied it, by giving me audible treatment then and there. She stayed for over an hour and I felt very much better. The next day I was better physically, and so uplifted spiritually that on Monday morning I dressed myself and went to see the kind neighbor and asked for treatment. At the end of one week I was perfectly and permanently healed.

I am indeed grateful for this healing,—grateful to God, the giver of all good, and grateful to our beloved Leader.

MARY COIT WHEELER, Chicago, Ill.

Digitized by Google

I have long wished to express my gratitude to God, and to Mrs. Eddy for the benefit I have received through Christian Science. I found, after a few short years of experience as my own housekeeper, with some public work as an elocutionist, that my duties were weighing very heavily upon me and my health becoming seriously impaired. When an operation was suggested, I tried Christian Science as a last resort, and found therein that which I was looking for,—health, hope, and happiness. All the dark forebodings which attended me at that period were removed, as was my seeming ill-health.

I thank God every day for my deliverance, and I earnestly desire to do some good each day to help our dear Leader in her loving work for the benefit of mankind.

MRS. ELLA B. MOSS, Plainfield, Ill.

Some time ago, through the help I received from an article in the *Sentinel*, the true sense of substance was demonstrated to me. Last year I accepted a position which involved both responsibility and the expenditure of money, and one which, previous to my gaining some knowledge of Christian Science, I had always regarded with fear. Shortly after this a business circumstance opened up the way for me to meet some people against whom I was prejudiced and whom I would rather have avoided. It was quite optional whether I should accept the arrangement or not, but I had an instinctive consciousness that I should not refuse. My whole desire was to be obedient to Truth, and governed by this desire I took each step as I saw it, but there was only a sense of duty in my thought, not of love.

When the *Sentinel* dated May 7, 1904, arrived, I commenced to read it. It contained a report of the National Christian Science Association Meeting, held in Chicago in 1888. I read the article through and it worked a miracle in my thought. As I studied it,—especially the description of Mrs. Eddy's appearance at this gathering,—the scene came before me very vividly. Material sense was hushed. I saw the humility, selflessness, and love of our revered Leader as never before, and a new sense of love was present with me. No words can express the influence which touched my thought as the first verse of "The Mother's Evening Prayer" by Mrs. Eddy (Miscellaneous Writings, p. 389) came to me. All the prejudice and dislike respecting the business associates which had troubled me, vanished like mist.

The next day, Monday, I met the people to whom I have referred, and only love was expressed between us. Soon after a considerable portion of my income was unavoidably stopped through another's loss. This caused me to work very earnestly in the truth, for I needed what seemed to have been taken from me. On the Wednesday morning, by the first post, I received a letter telling me that much pleasure had been felt at my visit of Monday, and putting into my hands more than sufficient to supply the loss I had just sustained. I knew immediately that I had seen the fulfilment of the Scripture, "Before they call, I will answer; and while they are yet speaking, I will hear." My gratitude and gladness of heart were very great, and I could but feel that the love which I felt in reading the article in the *Sentinel* had indeed brought out the proof that divine Love is substance.

I feel very grateful for Christian Science, and to Mrs. Eddy for the wonderful love she has shown to us all. By the interpretation of the Bible given us through Christian Science, I am learning to know what Jesus meant when he said, "Except ye be converted, and become as little children, ye shall not enter into the kingdom of heaven;" and each time I demonstrate afresh that it is indeed the childlike simplicity of thought which enters into the kingdom, I am baptized anew into Spirit.

FLORENCE MAKIN, Brisbane, Queensland, Australia.

Were I to tell of all the blessings received since I have known what Christian Science is, my testimony would be too long. My mother had catarrh and I was fearful that I should have it. When it appeared I tried material remedies for years, but became weaker all the time. I seemed to cough with every breath, and the fear of consumption was always held over me. My friends and my family thought I could not live many months, and there was also the prospect of an operation before me. Such was my condition when Christian Science came to me, but one treatment healed the disease for which the operation was considered necessary. I had seemingly all kinds of disease,—all said to be caused by the catarrh, and that was very slow in yielding to treatment. At times the waves of error seemed to engulf me, but Christ, Truth, is always the victor. The Bible is no longer a sealed book to me since reading "Science and Health with Key to the Scriptures." Although I had been a Bible student, its study formerly confused me, so that I hardly ever read it, but that is all changed since studying Christian Science. Now I can open the Bible and always find what I need in the way of spiritual help. I feel very thankful for the Christian Science literature, and get much help from it.—MRS. MAY STEVENS, Ellis, Kan.

I first heard of Christian Science in 1899, when myself and family were healed of several ailments. I was healed of cancer, which had been developing for some time, also hemorrhage of the lungs,—consumption. All my life I have loved to read the Word of God and desired a true understanding of it. I am happy to say that since studying "Science and Health with Key to the Scriptures" by Mrs. Eddy, I have the blessing of a much better understanding of the Bible than ever before. I also rejoice to see my children growing into the realization of divine Love.

We have had many beautiful demonstrations, one of which I will mention. When my boy was seven years old we were traveling in a covered wagon from Oklahoma to Colorado, and he was taken sick with typhoid fever. At this time I had only read in Science and Health a little. I did not know what to do, as he seemed to be so ill, and I sent to a practitioner to treat him. She received the letter the next morning about nine o'clock. At this time the child was seemingly dying, when all at once a change came for the better, and within half an hour he wanted me to hold him up to see it rain, which I did, only too glad to know that he was safe. He is well to-day and we are all very grateful for his healing.

I am thankful to Mrs. Eddy for showing us the way to true happiness.—MRS. EMMA J. KENT, Fowler, Col.

The "little book," "Science and Health with Key to the Scriptures," has been such a treasure to me during the last few years that I willingly send a testimony of gratitude to the author. Christian Science has awakened me to the fact that the healing of divine Mind is the only true and permanent remedy for every mortal ill. Ignorance has been enlightened with understanding through its study, and many ailments, such as headaches, neuralgia, abscesses, influenza, and others, have all been dispelled by the truth as revealed through the writings of Mrs. Eddy.

ANNIE B. GILLETE, Sutton, England.

Two years ago I had my first Christian Science treatment and was healed in five weeks of a disease of the throat called chronic laryngitis, which I had had for four years. I had been treated by several physicians, the last being a prominent throat specialist of this city, who failed to relieve me in six months' continuous treatment, and who feared a development of tuberculosis. Later, I took two months' osteopathic treatment with the same result. I was gradually getting worse, and had to give up singing entirely,

Digitized by Google

but can now sing with greater ease than I ever could before. I am glad to acknowledge my debt of gratitude to God, and to Mrs. Eddy, and yet I am more thankful for the understanding of God that I have gained through my study of "Science and Health with Key to the Scriptures," than even for the physical healing. There was a time, when I first began treatment, that had it not been for the patience and unselfed love manifested, I should have given it up. Money can never pay for the hours spent in helping me to gain an understanding of God's allness and the Christ-truth.

MRS. ETHELINDA T. BOOTH, Kansas City, Mo.

It is over three years ago since I first heard of Christian Science. My brother, who had been healed through the reading of "Science and Health with Key to the Scriptures," wrote me that I did not need to be sick, and if I would read a book which had healed him he knew it would do as much for me. I thought it very strange that the reading of a book could heal any one. I had never known of any one being healed by reading the Bible, and surely what the Bible did not do no other book could. I must confess that I laughed at the thought, and at the same time I could not dismiss it.

Some two years later, when every known remedy and human agency had failed to heal me, I decided to try my brother's remedy. In answer to a letter of inquiry he advised me to get the book and read it, which I promised him I would do. I had many difficulties to overcome, but encouraged and helped by my brother I kept on reading, and as I did so the statements of truth began to appeal to me as a God-given utterance which was penned only by inspiration. When I arrived at this conviction I began at the preface and searched honestly, declaring fearlessly and conscientiously that Mrs. Eddy was God's messenger, and the light dawned. I saw that Christian Science is the truth which alone can right all wrong. My healing came slowly, but with it came many blessings and proofs of divine Love.

To God I owe endless praise, and to Mrs. Eddy loyalty and love. I am also grateful for the help received through the Christian Science literature, and for the testimonies I am especially grateful.

MRS. ELIZA M. SCHROCK, Uniontown, Pa.

[Translated from the German.]

About two years have passed since I began to attend the Christian Science services. My health was not good then, —I was afflicted with severe trouble in my eyes, which were inflamed, and this caused me much suffering. I applied home remedies, but they gave me no relief, on the contrary the trouble increased. After I had listened to several testimonies, I decided to take Christian Science treatment myself. After the second treatment I felt a great improvement; the inflammation began to disappear and after the third treatment my eyes were in a normal condition, which was a great cause for joy. Since my earliest youth I had been subject to a stubborn catarrh, accompanied by headache and loss of appetite; and from this trouble also I am perfectly healed. Since then I feel that I am born anew; my thought has become more pure; I have lost all desire for alcoholic drinks and smoking, and have instead a desire for spiritual elevation. Through this healing my understanding has grown, and the desire was awakened in me to be the happy possessor of a copy of Science and Health. I now study the Sunday lessons.

Words fail me to express my gratitude to God, and to our beloved Leader, Mrs. Eddy, for all the good that I have received.—HANS ROHE, Zurich, Switzerland.

About three years ago a lady told me about "Science and Health with Key to the Scriptures" by Mrs. Eddy. I at once became anxious to learn more about Christian Science, as I was not satisfied with my present religious belief, so I borrowed the book and read it through hastily, as I had to send it back in a short time. I greatly disliked to part with it, for I felt as if I were giving up a friend, and I earnestly desired to know more of this truth which makes men free. A short time afterward I had an opportunity to attend the meetings of a little band of workers in the town near which I lived. I then bought a copy of Science and Health, and have been studying it ever since. It gives me a much better understanding of the Bible, and such a spiritual uplifting that I shall not be "satisfied" until I gain the full knowledge of Christ, Truth, and "awake in his likeness."

One of my first demonstrations, for which I have never ceased to be thankful, was the overcoming of spells of nervous headache. I could not travel any distance or go in a crowd without having one of those attacks, and sometimes they would last two or three days. In this condition I seemed most miserable and often felt that I would be glad to pass away. As I had tried all kinds of material remedies in vain, I often pondered the healing work of our Saviour, wishing it could be done as in days of yore, but not then realizing that God is omnipresent and omnipotent. Now I know that He abides with us forever, if we keep His commandments, and through this knowledge of ever-present Love I have been healed. I have had many other demonstrations, among which are the overcoming of biliousness and constipation.

I thank God for giving to Mrs. Eddy this great message, and I thank her for giving it to the world "in His name." I am one who was sought and found by divine Love.

MARY E. JONES, Cottonburg, Ky.

About two years ago something which I at first supposed to be a corn, started to grow on my little toe. I treated myself as well as I understood how to do, but the case only became more aggravated. The toe swelled so that it was torture to wear a shoe. One day when I looked at my foot I found that there was a discharge and that the toe was beginning to separate from the foot. There was apparently no vitality, and gangrene suggested itself. The fear that I should lose the toe determined me in calling on another Scientist for help, and I think it was not more than three days before every vestige of the trouble was gone, and there has never been any return of it. I was perfectly healed. Christian Science has also helped me much in that it has lifted my thought to a higher concept of man and of all God's creation.

MRS. HARRIET L. FUNK, Cleveland, O.

The help I have received from the reading of testimonies in the *Sentinel* and *Journal*, prompts me to send an acknowledgment of the benefits I have received through Christian Science. It is over three years since I was healed of hay fever and asthma, after having suffered with these troubles for ten years and after having tried many remedies and changes of climate. I am grateful for the truth that made this and many other demonstrations possible, and in sincerest gratitude I acknowledge an awakened desire for the real, the eternal, the spiritual.—MARGARET S. FRICK, Tiffin, O.

I wish to express my thanks for the great blessing and benefit I have derived from reading the *Sentinel*. It has helped me over many rough places. I wish also to express my gratitude to God, and to our dear Leader, for my knowledge of Christian Science and for my own beautiful healing through this Science, also that of members of my family and friends.—MABELLE A. STROCK, Boston, Mass.

From our Exchanges.

Study whatsoever incident you will in the career of Jesus, and you will find that the lasting power of it lies not so much in what Jesus himself was doing for others, as in the glory of the ideal he was setting forth to inspire self-sacrificing, successful action on the part of innumerable others One who takes this conception of the power of the life of Jesus will inevitably make little use of the term "saviour," preferring the more accurate term of "leader." Jesus is the greatest of the world's leaders because he leads in the deepest things of life and because by his unclouded success in personally obeying his own ideals he has made it clear that all men may live on the same high plane. As a leader he is brought near to us by the perfection of his life. He sets us free from that mistaken notion that to be faulty is to be human. This is not true. To be faulty is to be something less than human. The nearer moral perfection we get the closer do we come to the human ideal, the true sonship to God. Jesus has been and is the closest spiritual friend of every man who is obeying high ideals, because he is strictly human, because the perfect things we see in him are made by him so plain and convincing as to make us understand we can be like him. Whosoever could discover a flaw in the moral nature and life of Jesus would by that act set Jesus apart from human life and make him less of a leader for the world. On the other hand, whosoever even faintly understands the moral greatness of Jesus must thereby recognize that moral greatness is possible for himself.

The Christian Register.

How did the early Church make its wonderful impression on the world? By a superior morality, a simpler life, a courageous joy, a devoted loyalty, and a self-sacrificing brotherly love. If the lives of Christians had not been superior in these respects to the common level of life about them the first spread of the Church would be inconceivable. What did our Lord say to his disciples on the Mount? "For I say unto you, That except your righteousness shall exceed the righteousness of the scribes and Pharisees, ye shall in no case enter into the kingdom of heaven." This is not a condition of entrance into a future heavenly state, it is a condition of membership in a present, witnessing body on the earth.—*The Congregationalist.*

The Faith—which in order to be the Faith must be the Truth—has a wonderful way of taking care of itself. Men and churches must, whether they will or not, adjust themselves to its standards. Church authorities, no matter how they may retard, cannot arrest the progress of knowledge of the Truth, through whatever medium it is revealed. Those who believe in absolute freedom of research cannot enter into a biased defence of it.—*The Churchman.*

We succeed properly when we stand where duty calls, when we are loyal to the voice of the Spirit, when our lives and souls are in harmony with every interest and every principle contained in the life of Christ. When men and women shall see the face of peace and the bow of promise in our attitudes and in the spirit which prompts every action, we have succeeded.—*Pacific Christian Advocate.*

We cannot come to the Father in any other way than Christ's, because in the very nature of things there is no other way. Christ is the absolute truth, Christ is the absolute way, his life is the only true life. Hence it is that we must come through him, for there is no other way possible, even in the highest and best developments of our nature.—*Universalist Leader.*

THE CHRISTIAN SCIENCE TEXT-BOOK.—"Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

RUDIMENTAL DIVINE SCIENCE.—Printed in the New York point system of type for the blind. Price, prepaid, 50 cents per single copy; $5 per dozen.

CHURCH MANUAL.—Containing all the By-laws to January 1, 1906, of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of The Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the Churches and Societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to The Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of The Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to The Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number, or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5 00
Twelve or more to one address, each, prepaid . . . 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

National.

Upon the recommendation of the Faculty of Arts and Sciences, the Corporation of Harvard University and the Board of Overseers have voted concurrently to adopt a new plan for the administration of the degree of Bachelor of Science and the higher degrees in applied science, and for the better organization of the scientific school. It will result in merging the present Lawrence Scientific School as a part of Harvard University into the collegiate department. A graduate school of applied science will be established at Harvard with the beginning of the next academic year, which will give professional degrees in a variety of special subjects in the field of applied science. The new plan will put the scientific school on the same plane as the college, and will allow the men studying for the degree of B. S. to elect whatever subjects they may wish.

The Senate Canal Committee is preparing an act which provides for the reduction of membership of the Isthmian Canal Commission from seven members to three, and that the offices of administration shall be upon the Isthmus instead of in Washington; that the President shall fix the salaries of members of the commission and of engineers, but that the salaries and wages for other officials and for laborers shall be determined by the commission; that the laws of the United States shall not apply to the Canal Zone unless expressly so provided. The purpose of this provision is to exclude the eight-hour law, the alien labor law, and the contract labor law from operation upon the Canal Zone.

An organization called the Simplified Spelling Board, including prominent men of affairs and of letters, has been formed to urge the simplification of English spelling. Andrew Carnegie has undertaken to bear the expense of the organization. The Board contains some thirty members, authors, scholars, editors of dictionaries, men distinguished in public and civil life. The establishment of the Board is the result of an effort made within the past year to secure the use, by men of position, of certain simplified spellings, adopted some years ago by the National Education Association.

Through the recent absorption of the Society of American Artists by the National Academy of Design, New York is to have a salon worthy of her position in art.

The Senate Committee on Appropriations has completed the fortifications bill, which carries appropriations aggregating $5,018,698.

Foreign.

The Czar's ukase of the 6th of March specifies the powers and composition of the Russian Parliament. The two houses of Parliament, the upper house and the house of representatives, will be convened and prorogued each year by imperial decree, and one-half of the upper house will be elected and one-half appointed by the Czar. Both the upper and lower houses will have the same powers and only bills that have passed both houses will be presented to the Czar for his approval. According to Associated Press reports: "The members of the upper house will be elected for a period of nine years, one-third being elected every three years; one member will be chosen by each zemstvo, six members by the Holy Synod, six members by the academy of sciences and the universities, twelve members by the trading classes, eighteen by the nobles, and six by the great landowners of Poland. The members of the upper house must be forty years of age and must have the bachelor's degree; the president and vice-president will be named by the Czar. The sittings of the Douma are to be public, and the laws which are passed by both houses will be presented to the Czar by the president of the upper house. The manifesto provides that in case Parliament is not in session and extraordinary circumstances should demand legislation, this may be cared for by the Crown Council.

It is reported that the Czar, greatly impressed by the revelations made to him by a Jewish deputation which he recently received, has instructed Count Witte to prepare a project providing for the equality of the Jews before the law for presentation to the National Assembly.

The delegates to the Moroccan conference, being held at Algeciras, Spain, rested last week, having apparently accomplished all that could be done until the French and German representatives, who were bound by instructions, were further advised by their Governments.

More than three million copper coins, weighing over twenty-eight tons, were taken last year by the Swinton United Gas Company from their slot machines in London.

Industrial and Commercial.

Silk culture is receiving considerable attention now in both the National and State Governments and it is believed that silk can be raised profitably in the United States. In Georgia some fifty thousand mulberry trees have already been set out and extensive preparations are under way for the development of the industry. North Carolina is also producing silkworms and selling them to citizens at cost, and has issued a bulletin describing in detail the method of silk cultivation, so that those interested may enter upon the work fully prepared for it. In Utah the Legislature has appropriated several thousands of dollars per annum for experimental work in silk culture, and the industry has now so far advanced that raw silk in small quantities is being put upon the market. Nearly seven thousand pounds of cocoons were raised last year. Sixteen classes in silk weaving and in instruction in the production of silk are under the supervision of the State commission. In California a bill was passed by the State Legislature of 1903, appropriating eight thousand dollars for experimental work in silk culture, but failed to receive the signature of the Governor because of lack of funds in the public treasury. For twelve years silk raising on a small scale has been carried on privately in the city of San Diego. Silk has been produced there every month in the year consecutively, from cocoons larger and finer in quality than any produced in foreign countries.

As far as our observation is a guide, says the *Scientific American*, the only conditions under which the steam turbine has failed to show a marked economy over the reciprocating engine are those in which the speed of revolution has to be cut down in order to accommodate certain speed conditions imposed by the nature of the work that is to be done. The one case in which this has occurred has been in the application of the steam turbine to ocean liners of the largest size, in which the design of the propeller governs the design of the turbine. The rather low (for a turbine) speed of revolution increases the size of the turbine to a point at which it does not yet appear to be able to show the remarkable efficiency which has been achieved by the marine steam turbines in vessels of moderate dimensions. With this exception, the data of turbine performance which are at hand prove that it is markedly superior, compared on a basis of steam consumption, to the reciprocating engine, when both are doing similar duty. This is true of the steam turbine when used in stationary plants, irrespective of its size, and it is also true of the marine steam turbine until it comes to be built in sizes of ten thousand horse-power and over.

By cutting a tunnel nine or eleven miles in length, according to the survey chosen, the Pennsylvania Road will reduce its elevation in crossing the summit of the Allegheny Mountains about six hundred feet. The Lehigh Valley Road also plans to reduce the summit elevation several hundred feet by constructing a seven-mile tunnel through the mountain range in which the Lehigh River has its source.

A syndicate of Pittsburg and West Virginia men have closed a transaction securing control of about one hundred thousand acres of coal land in Lawrence and Gallie Counties, Ohio, and Cabell and Mason Counties, West Virginia. The price was $3,500,000, the coal land having been bought up at prices averaging $35 an acre. In addition to the coal the purchasing syndicate secured the oil and gas rights.

An official report, published under Japanese auspices, says that the mineral output of Korea is chiefly gold. The value produced is about 121,000 ounces, or about $2,178,000. About sixty-six per cent of this amount is from placer mining, the remainder from quartz. The extent of development is as yet quite limited in proportion to the estimated field.

General.

The vanilla plant is grown in Bourbon on the east coast of Africa, in the Seychelles Islands, Tahiti, Fiji, and Mexico. The Mexican vanilla bean is the best and the Tahitian the poorest product, the former fetching from four to twenty dollars a pound, while the latter does not bring more than half a dollar a pound in the market. Vanilla of the quality grown in the Seychelles Islands fetches five dollars a pound on an average and an acre yields from two hundred and fifty to three hundred pounds. Cuttings of the vanilla plant are set about a thousand plants to the acre. The vines begin to yield about a year after being planted, but are not allowed to produce pods the first year. After being gathered, the pods are plunged into water nearly at boiling-point, in order to check vegetation and keep them from splitting. Then they are placed in blankets and the blankets in air-tight boxes, to "sweat" the bean. Next day the pods are taken out, wiped dry, and exposed to the sun. The sweating and drying processes are repeated for ten days or so, after which the pods are placed on shelves, where they stay until they are quite cured. Then they are made up in bundles of fifty, which are put into air-tight cases ready for market.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

Christian Science and China.

[We have permission to publish the following correspondence between our Leader and Mrs. Conger, wife of the former American minister to China. These letters should finally dispose of some untrue and unauthorized reports which have been current in the newspapers.—Editor.]

Pleasant View, Concord, N. H., March 2, 1906.

Mrs. Sarah Pike Conger, C.S.B.

Beloved Student:—Since ever receiving your card I have desired to write to you; and now after what Miss Campbell has written I hasten to reply. Her report of the success of Christian Science in benighted China, when regarded on one side only, is cheering, but to look at both sides of the great question of introducing Christian Science into a heathen nation gives it quite another aspect. I believe that all our great Master's sayings are practical and scientific.

If the Dowager Empress could hold her nation, there would be no danger in teaching Christian Science in her country. A war on religion in China would be more fatal than the Boxers' rebellion.

Silent prayer in and for a heathen nation is just what is needed. But to teach and to demonstrate Christian Science before the minds of the people are prepared for it, and when the laws are against it, is fraught with danger. The dear Countess Von Moltke has come to see that your text-book, Science and Health, cannot be translated at present, not even in Germany.

Give my kind regards to our much-respected Minister, your husband, and give my love to Miss Campbell.

Please to pardon (if it needs forgiveness) my frankness in this letter, and know that it proceeds from the best motives. Lovingly yours,

Mary Baker Eddy.

44 Orange Grove Avenue,
Pasadena, Cal., March 8, 1906.

Dear Mrs. Eddy,

Beloved Teacher:—Your highly prized message just received. Many, many heart thanks go back to you for your precious letter. It is a joy to me—assures me that my religious attitude in China has your approval. Results brought strong convictions to that effect before I received your golden words.

Many things not true would appear in the papers about Mr. Conger and myself that made me work, but when it was said that I had interviews with Her Imperial Majesty, the Empress Dowager of China, upon Christian Science, I said to Mr. Conger, "That is too absurd for any one to believe;" but papers, clippings, and letters almost flooded me from many parts of the world. Almost in desperation I said, "What can I do?" Mr. Conger in his calm good judgment replied, "You can do nothing; it is false and must fall; ofttimes the papers would like to have us speak." I answered all letters of inquiry. The papers I did not recognize in words.

However much I may have desired to have the Chinese accept an understanding of Christian Science, I never taught nor even talked it to them. In the first place, I was not authorized to do this; I was not sent a Christian Science missionary into China. In the second place, I was not equipped for such a work; I did not speak their intricate language, nor did the Chinese ladies speak mine. We always conversed through an interpreter. While these interpreters were educated, broad-minded, lovely ladies, and in sympathy with me in my methods of reaching the hearts of the Chinese and winning their friendship, they were not Christian Scientists, but orthodox missionaries. These missionaries knew from the first that I was a Christian Scientist. My religion of love never seemed to offend them. It was my watchful prayer to live my blessed faith in all my intercourse with them and with the Chinese. I met them on their ground and strove to learn of them; there was much for me; I learned some of my most valuable lessons in China.

I visited the native temples; religious services of many kinds; their schools, colleges, examination halls; their feasts, their entertainments, their factories and different industries, their palace homes, their imperial palaces, and in a degree found the inner heart and thought of the so-called "heathen Chinese." It was the love-thought that did this; I touched the cord of sisterhood and we joined hands. I visited the foreign missions in their many lines of work; I received much and I gave of what I had. I never felt the unrest of a "war on religions," but a peace that bespoke an understanding, a friendship, a sisterhood. Friendly relations was my mission to China, and I strove to establish and maintain these relations with the Chinese, with the diplomats, the missionaries, and all with whom I came in contact. God alone knows the rest. Gratitude nourished hope, awakened courage, revealed strength; I read over and over and over your "Love your Enemies;" blessed thoughts. It was ever my earnest prayer that Her Majesty,—the Empress Dowager of China,—the princesses, and the Chinese ladies should realize the tender touch of the true friendship of a foreign lady. I never strove to undermine in any way the religion of the Chinese nor of the missionaries, but to add, if I could, a golden thread of love. At first my position as the wife of the American Minister and Doyenne of the Diplomatic Corps opened the doors that I greatly desired to enter. Friendship kept them open, but when the last good-byes were said, the clasping of hands and the language of the eyes told the "old, old story."

My visits with Her Majesty, and especially the very last one, gave me a rich assurance that she respected, honored, and cared for me; her words, her actions, and her gifts proved these things.

Had it not been for the efficient, willing, sympathetic assistance of our lady foreign missionaries I never could have accomplished what I so much desired to do and undertook to do in China. I can say to you what I dare not say to others, for you will understand. What I succeeded in doing in China (through Christian Science,—not teaching nor talking it, but striving to live it) is wonderful.

The two Love Books—the Bible, and Science and Health—told me how to pray and how to work. I strove to obey. Can you not recall the heart interview which you so freely gave Miss Campbell and me in 1897, as I was about to leave for South America? I took notes as I remembered it. It was a song of Love from beginning to end, and a benediction such as I never heard before. This little note-book was with

Digitized by Google

me during the troubles of 1900 and I read it. It helped me to be more patient, kind, steadfast, trusting; taught me to be more watchful and fearless when I thought I was in the right.

I left much good will and affection in China, and it comes back to me in gifts and messages from "the throne;" from the princesses and ladies, in letters and other ways which are truly gratifying. These strange people with their worthy, strong characters are rapidly awakening to the demand of the hour. This is most remarkable when three years ago their doors were locked and their gates were heavily barred. They write me of their new doings; they send me copies of a woman's daily newspaper, the only one in all the world. They call their princesses together, their ladies together, their women together and discuss, read, and explain the contents of this paper. They are opening many schools for girls and women. They know from our past conversations that I am deeply interested in what they are doing and they try to keep me informed.

When I went to China seven years ago, I found no Christian Science sympathizers; now there are sympathizers and workers in Chefoo, Shanghai, Hong Kong, and Manila. They are all Americans and Europeans. I have never seen nor known of a Christian Science Chinese.

In China my diplomatic duties were arduous—and were not neglected—I strove never to forget that my husband was representing his nation among other represented nations in a foreign country. Our legation home was open to friendly courtesies and functions, both official and otherwise. With unfaltering faithfulness we endeavored to meet the ever-increasing demands. After seven years and more of an unprecedented life in China, and a political life of nearly thirty years, we longed to be free in our own dear land, under our own precious flag, in a much-loved little home. Mr. Conger resigned through his own pleasure his position as Minister to China, but before his resignation was accepted he was transferred as Ambassador to Mexico, which he gratefully accepted as a recognition of his efficient work in the "Far East."

The longing for a quiet home life was not given up, and he again resigned. Our home-coming was most gratifying. We have spent the winter in beautiful California, in the bright sunshine, among a wealth of flowers and rich foliage of "the green things growing," and here we hope to utilize the gatherings of past experiences. This is a long letter, but thoughts have kept coming, asking to be voiced to you.

Wherein I have failed to be true to you or your teachings has been the fault of my meager understanding. Through you, my beloved Teacher, I have been able to look upward, and the extended Christ hand has helped me safely through many very dark, threatening places. Truly Christian Science is the Love Science, the Christ Science. It scatters discords and reveals the harmony and unity of the ever-present, supreme good—God with us.

Mr. Conger bids me thank you for your kind message to him, and returns his most sincere and respectful regards. I shall be pleased to deliver your message to dear Miss Campbell. She is a loyal and untiring worker in Christian Science and her reward is surely great.

My gratitude for your precious letter I am not able to give in words,—I appreciate and prize it.

Letters similar to the enclosed we receive on Christian Science. I send it to you that you may rejoice with us.

Your affectionate student,

SARAH PIKE CONGER.

[The following is a copy of the letter enclosed by Mrs. Conger.]

S. S. Kurshan, Hong Kong, Jan. 4, 1906.

Mrs. Edward Conger, Des Moines, Ia., U.S.A.

Dear Madam:—In another week, a year has passed since I had the pleasure of taking you and Miss Campbell up to Canton. I have often thought of writing to you and thanking you and Miss Campbell for your loving kindness and the trouble you took in bringing to me a knowledge of Truth, through Mr. and Mrs. Dunn. I am indeed grateful to you both, for my beliefs in physical pains have been relegated to the past and I have found the road to salvation, health, and happiness. Had you left undone what you then did for me, I do not know what I should have been to-day. I am more grateful to you for being the means of my spiritual uplifting, for now I see light where before there was darkness and pain; still I would rather have had the pain continue than never to have known what it means to know that one is God's child.

I would write to Miss Campbell, but I do not know her address, and in the mean time I ask you to kindly convey my deep sense of gratitude to her, and I thank you both from the bottom of my heart.

Our small congregation is growing apace, and next Sunday, Jan. 7, we shall hold our first service in a public hall, having secured the Music Room in the City Hall. You see the seed you sowed in China is bringing forth its fruit.

I have had many beautiful demonstrations and I have had the happiness to help others as I have been helped. My wife had an old belief in lumbago which on her return from Europe was instantaneously cured through my understanding of the truth. My only regret is that I did not know Christian Science and its God long ago; but then I was not ready for it. I am now thankful that it took some time to get rid of my rheumatism, for the belief in the pain kept me reading and studying.

With best wishes, I remain

Yours gratefully,

IAC. J. LOSSINS.

From our Contributors.

After All, Why Not?

SAMUEL GREENWOOD.

IN view of the continued suffering of the race, and of the undoubted evidence which Jesus gave of the power of Christianity to destroy both sin and disease, one might well ask why Christian Science should not be admitted to be true and capable of fulfilling its promises, notwithstanding the incredulity it has encountered and the discredit which some have sought to place upon its healing and redemptive work. What is there about the teaching of Christian Science that ought not to be true, or that is inimical to the well-being of humanity, or that brings dishonor upon Christianity? What part of its exalted morality, its sublime optimism, or its practical reliance upon God, good, would sound out of place from the pulpit of any church consecrated to the redemption of mankind from evil?

Those under the control of prejudice, or influenced by beliefs that others have formulated for them, may be ready to condemn Christian Science, and to feel that they are thus doing God service; but before continuing this course, they might better, in a humanitarian spirit, inquire into the nature, tendency, and Scriptural foundation of this Science, and see whether for the good of men it ought or ought not to be true. Let them grant the case and assume Christian Science to be true, and say what result other than good could ensue from its practice. Feeling the tremendous pressure of human misery, the awful agony that darkens every day of earth, what God-fearing, humanity-loving man can lightly dismiss or decry that which holds out such hope and promise as does Christian Science, and which has done so much towards their fulfilment?

The teaching of Christian Science begins and ends with

Digitized by Google

God, good, as absolute, infinite, Supreme Being, the only creator, power, or intelligence, whose ever-presence includes His entire creation, and whose law alone governs it. What Christian denomination does not stand upon this same platform as man's only hope and refuge from evil? Yet standing upon this platform, declaring with solemn lip their belief in these truths, what possible reason can they find for judging that Christian Scientists are in error because they abide literally in this Divine refuge when the storms of earthly woe would mercilessly batter and bruise and shipwreck their frail bark? These fundamental truths of Christianity are as a mariner's compass to those on the sea of mortality, for they always point Godward and guide the pilgrim into a safe haven. Why not use this compass and rely upon it, no matter from what direction the storms come, whether from sin, passion, and appetite, or from sorrow and disease, poverty and disaster? After all, brethren, why should not these things be so? Why should not that be the safest trust which always points Godward? Why should not every Christian do as Christian Scientists are doing, according to their ability and understanding,—that is, take God literally for what He is, and take nothing else? Why not?

Human opinions may differ from the deductions of Christian Science, though claiming to agree with the premise thereof, but that is not sufficient reason why Christian Science should not be true. Did human opinion or belief formulate or establish the premise of the allness or infinitude of God? Does any human theory or philosophy precede Truth, control its action, or detract from its prerogatives? Does any human opinion, though endorsed by ages of material reasoning, though nourished from the richest stores of human knowledge, and coming forth of the profoundest learning of the schools, have any weight in the balances of God? When these opinions are offered in support of the aggressive claims of evil, and of the conditions that destroy human peace, why should Christian Science be assailed because in following the teaching and example of Jesus it comes into conflict with them? Giving all due respect to scholars and theologians who maintain the belief of the reality of evil and matter, why is not Christian Science right in teaching that because God is good, and is infinite in power and intelligence, evil has therefore none of these qualities? or that because God is infinite Spirit, therefore matter is not a divine reality? Why not render unto God all that belongs to Him?

Why should not the statements of Christian Science be true, and those beliefs which are based upon the assumption of another power and creation than that of God, be untrue, when it is remembered that the former, demonstrated in human experience, bring peace and harmony and increase of love; while the latter have reduced mortal existence to a chaos of misery wherein man's hand is turned against his brother in greed and hatred? Apart from any doctrinal or educational difference, thinking only of the good of the race, and caring not what may be overturned so long as Truth reigns, what objection can be truthfully urged against Christian Science for its insistence upon God's supremacy, in this world as well as in the next, when there is no other way by which humanity can ever hope to escape from the bitterness and curse of evil?

There are some who seem disposed to object to the right of Christian Scientists to minister to the sick. Without stopping to discuss the question, will these open their Bible, and after a careful perusal say why they should not? If the Divine power to heal exist,—and Jesus proved that it does,—why question the individual's right to seek and rely upon it? After all, what better course is there? If Christianity had never healed the sick, then there were room for human doubt and fear in relying upon it now; but it has. It was borne to mankind upon the wings of healing; and the ministry of its Founder and his early disciples was glorified by it. Does it therefore seem wrong that Christian Science should have re-established this healing Christianity? All humanity needs it. Sin, disease, sorrow, and death have turned earth into hell because of the lack of it, and why should it not become operative again, and Christian ministers preach once more that the kingdom is at hand? When the people sought to kill Jesus because of these very things, Pilate asked, "Why, what evil hath he done?" Must this question he repeated in the twentieth century concerning Christian Science, because it seeks to repeat the life and works of the Master?

Think of the promises of God as recorded in the Scripture, and its bright record of their fulfilment,—are they to be read from our pulpits and to our children with no thought that they have present value and availability? Do they contain no hope nor help for the sick man? if not, is it because they are not true, or because they are not accepted? Why is it that a prayer to God, the giver of all good, the Father who sent His Son into the world to save it, is generally believed to have less healing virtue than a spoonful of medicine? Is the fault that this is so with God or with mankind? If it is with God then mortals are indeed helpless and hopeless, but if with mankind why not seek its removal through the apprehension of Truth, Christian Science?

Instead of disparaging or rejecting Christian Science, the followers of which accept and seek to demonstrate the whole truth of Christianity, giving thereby to many thousands relief from sin and suffering, would it not be better to protest against the monstrous and iniquitous claim of evil that it has power to despoil the "image of God" of his inheritance and consign him to continuous torment? Instead of submitting to the depredations of disease and misfortune, and the merciless mandates of so-called material law, would it not be better, far better, to repudiate whatever teaches and maintains the belief in the existence and power of evil, and of a law opposed to the Divine law, and to ask why, after all, the teaching of Christian Science should not be true, and evil of every form but a seeming shadow in human consciousness, which the Christ-mind will cast out?

There are dreary deserts in the human sense of being, which have been despoiled of their sweet flowers and fruit by the awful belief that God allows His children to be born in sin and reared in sorrow and affliction, a prey to the most diabolical conditions that fiendish ingenuity could invent. Think of the pitiful picture which mortal experience daily unfolds, and then think how this picture might brighten into better things, these deserts blossom as the rose, under the influence of the sweet healing gospel of Christian Science, whose God is infinite Love and goodness, as far removed from the cause and curse of evil as light is from darkness. The failure of physicians and philanthropists of every school and phase of belief,—noble, large-hearted men and women as they are,—to meet the needs of mankind, and the inadequacy of the best they know to cope with the problems of disease, poverty, crime, and misfortune, might well excuse them in pausing to inquire, with their faces Godward, why, after all that has been believed to the contrary, may not Christian Science be the truth which is to redeem the world, in fulfilment of Christ Jesus' prophecy?

Lo! all men had the like beginning, coming from one Father and one Mother. . . . Why then do ye men pride yourselves above others, without cause, for your high birth, seeing ye can find no man but is highborn, and all men are of like birth if ye will but bethink you of their beginning and their creator? True high birth is of the mind, not of the flesh; and every man that is given over to vices, forsaketh his creator and his origin and his birth, and loseth rank till he fall to low estate.

KING ALFRED, on Nobility of Birth.

Selected Articles.

Christian Science and the Higher Criticism.

To the Editor of *The Herald*.

In the *Literary Digest* of March 3 there appeared an article entitled "The Protestant Episcopal Church and the Higher Criticism," which contained the following quotation from the *Outlook* of New York:—

"Literalism has been the nurse of every form of eccentric offshoot from Christianity. Mormonism, Dowieism, and even Christian Science are based upon the acceptance of Scriptural statements as verbally inerrant."

It is very probable that the writer of this statement had in mind the fact that Christian Scientists do accept Jesus' command to "heal the sick" as no less literally binding and authoritative to-day than is his command to "preach the gospel." The association, however, in which this teaching of Christian Science is placed in the paragraph quoted, tends to awaken misapprehensions respecting the attitude of Christian Science toward the Scriptures, and an adequate explanation of this attitude is therefore needed.

While Christian Scientists recognize and seek to honor the plain, unmistakable command of the Scriptures to heal the sick as well as to cast out evils, they understand and teach that it would be quite as impossible to live in keeping with the demands of Christianity without being bodily benefited and benefiting others thereby, as it would be for the sun to shine without dispelling the darkness; and hence that the healing of sin and sickness could not fail to be a sequence of Christian living, whether or not it were thus literally enjoined by the Master. We may well rejoice that Christianity, the Science of Spirit, is the menace of matter, and that it does give ground for humanity's higher hope. Christian Science delves beneath the verbal declarations of the Scriptures and discovers that deep, spiritual meaning which is demonstrable in all ages, and which, when apprehended, renders Christian faith no less practical than it was in "the early days of Christianity."

It is a matter of the greatest significance that the so-called school of higher criticism has grown up since Mrs. Eddy discovered Christian Science. Under the impulsion of spiritual aspiration and with a sublime moral courage, she ignored an unwarranted, though time-honored, traditional literalism, and sought and found that truth of God which is not subject to or limited by formula or statement, since it is sustained by its demonstrability. Nothing can express more bravely the higher criticism than Mrs. Eddy's spiritual version of the Lord's Prayer and her general exegesis of the Scriptures; and her interpretations have this supreme vantage and indorsement—that they heal sickness and sin, thus proving their truthfulness by something higher than verbalism. She discerned the Principle of Christianity, the vital truth of the Bible, and, clinging to this Principle and its logical sequences, she boldly insists that Scriptural interpretation shall be purged of all inconsistencies, and thus be brought into harmony with the eternal premise which through her demonstrations in Christian Science has been proved true.

No writer has been more successful in escaping the bondage of textual literalism than the author of "Science and Health with Key to the Scriptures," and the discovery of the new sayings of Jesus near Cairo has called attention to the interesting fact that she had already expressed the same ideas and that her statements had been decried by scholastic critics. Her writings are leavening the whole body of human thought to-day, while incidentally nourishing a liberality which encourages other religionists to freely interpret for themselves. The small hope of prayer which has hitherto enthralled the pulpit and press is disappearing in the dawn of the spiritual over the material. Christ Jesus' works, as well as his words, characterize Christianity, for, as aforetime, evils are being cast out and the sick are healed. While in the past scholastic Christianity has in large measure depended upon the acceptance of undemonstrated statements, mere beliefs, for salvation, Christian Science is making the divine power evident in a manner and degree which is bringing about the kingdom of heaven on earth. The mission of Christianity is to destroy all that is unlike God and to bring about ideal conditions. When, therefore, the Scriptures are not made to disclose a plain and definite way to achieve this end, they provoke skepticism and jeopardize the confidence of the practical truth-seeker. Thanks to the higher criticism of Christian Science, the Bible has been saved, although, like humanity, its state was well-nigh "incurable," having "suffered many things of many physicians" and being "nothing bettered, but rather worse."

The mention of Christian Science in connection with Dowieism, or any other isms based upon mere belief, is a mis-classification, to say the least. Christian Science rests its whole plan of salvation upon the atonement of Christ, whereby the divine scientific relationship between God and man is apprehended and brought into practical demonstration.

ALFRED FARLOW.

The Boston Herald.

The Northwest.

In the Pacific Northwest the first systematically organized work of the Church of Christ, Scientist, began a little more than twelve years ago.

In the years that have intervened these simple gatherings have grown, and their influence has spread, until to-day, in the three states of Oregon, Washington, and Idaho, there are some forty organized churches and societies as well as many smaller gatherings at which regular services are held. Eighteen of these organizations maintain free public reading rooms in the business sections of their respective cities. In fact in every city and almost every town of the Pacific Northwest, including those of British Columbia, there are to be found those established in the Cause of Christian Science, by reason of the spiritual, moral, and physical benefits received through its ministry.

The unusual growth and increasing interest in Christian Science is sometimes cause for inquiry, but this seems reasonably accounted for by the fact that a large proportion of its present adherents have first sought the ministration of Christian Science by reason of sore physical or mental distress, rather than faith in its doctrine, and this seeking having been rewarded by the attainment of better health and increased peace and good will, the recipient naturally associates himself with that which has been the means through which this betterment has come, and in turn desires to share this glad gospel with his fellow-men.

It is truly affirmed by the Founder of Christianity that a tree is known by its fruit, and at each mid-week service of every Christian Science church grateful personal testimony is given of the continuous operation to-day of the healing and saving power of the infinitely loving, divine Mind.

Editorial in *Pendleton* (Ore.) *East Oregonian.*

Is not the kingdom of heaven at hand? Is not the kingdom of God within? Does not the understanding of this fact, even in a small degree, enable us to free ourselves from the trials and tribulations of this life and enter into the "secret place of the most High," wherein is found nothing that "worketh abomination, or maketh a lie"? Experience has shown that Christian Science flourishes best in those towns where the churches are living up to their very highest concept of righteousness, notwithstanding what our critic believes to the contrary. In such soil Christian Science finds wholesome growth, and its beneficent influence extends far beyond the borders of its own adherents.

The Lectures.

Houston, Tex.

Mr. Bicknell Young lectured on Christian Science at Turner Hall, Monday evening, Feb. 12. He was introduced by Col. Thomas H. Ball, ex-Congressman from the Eighth District of Texas, who said in part,—

Christian Science has passed beyond the stage, if such ever existed, of the word "tolerance." The character, standing, and works of those who are its followers command respect, not tolerance. The belief of Christian Scientists, that it is their mission not only to point out the way whereby the sin-sick soul may be healed, but that all physical ailments and diseases can be cured without the use of medicines, is confronted by the greatest incredulity; the common saying is that "the day of miracles is past." It may be in harmony with the utterance of the defiant and rebellious infidel, "I deny," and the hardly less respectable exclamation of the agnostic, "I do not know," to thus meet the professions of the Christian Scientists, but those of us who, while not Christian Scientists, believe in the Scriptures from "cover to cover," can ill afford to mock at their belief and faith.

We know that under the old dispensation, when men walked with God, King Hezekiah was advised by the old prophet that he must die, but he turned his face to the wall in prayer, and his petitions were answered, his life spared for yet fifteen years; that when Elijah was undergoing dire persecution and was hidden from his pursuers, ravens were sent to bring him food; that when oppressed Israel was passing through the trackless wilderness, manna came from heaven to feed them; that the arm of Moses, stretched out with the strength of faith, struck the adamantine rock and there flowed therefrom, in crystal freshness, refreshing water for famished Israel; and that the waters of the sea divided, that they might walk across dry-shod and escape the flood which swept down upon their enemies.

Then, under the new dispensation, when the meek and lowly Jesus walked among men, under his gentle touch and at the sound of his blessed voice the blind saw, the crippled walked, and the dead arose. When his disciples were sent forth, they went with instructions not only to preach the gospel but were commissioned to heal the sick. Then shall we, though not of the faith of the Christian Scientist, say that the command thus given has lost its efficacy, or that the arm of God has been shortened now as compared with that time?—*Correspondence.*

Spokane, Wash.

Mrs. Sue Harper Mims delivered a lecture upon Christian Science Sunday afternoon, Feb. 18, in the Auditorium Theatre, to a large and appreciative audience, every chair being taken from the main floor to the gallery, all standing space occupied, and many being turned away.

Four men were healed during the lecture as follows: A gentleman having an obstinate case of eye trouble found that he was healed after the lecture was over. The second reported that he was healed from an inflammatory sore throat; the third from deafness of long standing. The fourth gentleman came in late, found all space filled near the lecturer, and being deaf, thought he would leave the room, believing he could not hear; but on reaching the door he remained, and was healed.

Mr. Cyrus Happy, a leading attorney of this city, introduced Mrs. Mims as follows:—

Nineteen hundred years ago our divine Master was crucified for teaching this same Science and religion of love, peace on earth, good will to men, in the practice of which he overcame sin, sickness, and death. Happy it is for us that we live in this country and era, which affords each one of us the opportunity, if he will, of accepting the teaching of the divine Master, not only in part, but the whole of it.

All a religion has now to fear is criticism, public or otherwise; that all religions must expect, but from this criticism truth need not shrink or fear. I doubt if this new-old religion would ever have met with any considerable criticism if it had stopped short of claiming the power of healing sickness as well as sinfulness. This claim, all must admit, is based upon Christ's teachings. These teachings, as explained by Mrs. Eddy, must go far toward removing doubts as to what are called miracles, which are no longer called such when explained and construed in the light of spiritual law. I am only a seeker after Truth, and as such I am here this afternoon.—*Correspondence.*

Newburyport, Mass.

A good-sized audience greeted Rev. Irving C. Tomlinson, in Griffin Hall, last evening [March 6]. George C. Morrill introduced the Rev. C. F. Andrews of Hyde Park, a prominent clergyman of the Universalist faith, and in the course of his remarks introducing the lecturer, Mr. Andrews said,—

Christian Science had its introduction to the public as a distinct religious organization during that period of doubt and despair which followed the American rebellion. Christian Science comes to the distressed in mind and body, as a blessed relief from suffering, both mental and physical. It cannot be satisfactorily explained through a merely mental or intellectual process. It is a spiritual religion more than a human philosophy, clear and rational to those who have mastered its teaching. It appeals to all who have been touched by its healing and uplifting power, of whatever station in life, healing the sick and lifting the fallen to noble manhood and good citizenship. It is entitled to the respect and honor accorded to all other branches of the Christian church, and I question the moral right of any professed Christian, and especially any minister of the gospel of Jesus, to condemn or unjustly criticise Christian Science, if it has been effectual in lifting one human soul from despair or degradation to nobility and purity of manhood or womanhood. It deserves our study and sympathy if (as has been demonstrated over and over again) it is proving a blessing to one of God's children.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

A Phase of the Publication Committee's Work.

THE following extract from a letter by Mr. Albert E. Miller of Philadelphia, recently published in the *Telegraph* of that city, is an example of the work our Publication Committee is compelled to do in order to correct a certain class of misstatements which, if allowed to go uncontradicted, are likely to lead to an entirely erroneous concept of Christian Science, and to create or foster a prejudice against its teachings. Mr. Miller writes as follows:—

"To the Editor of *The Evening Telegraph:*

"In *The Evening Telegraph* of March 8 appears a news item with the heading, 'Goes Insane over Christian Science.' . . .

"In the present instance your news item errs in its statements concerning this lady, who is supposed to have become insane through the study of Christian Science, because it has been found that it was a church of another denomination in which she had become interested, and of which she had recently become a member just prior to being overtaken by this misfortune. The lady in question is Mrs. Kate Jarvis of Palm Beach, Florida, and this correction is offered on the basis of information obtained from her friends and relatives."

It may seem to some that such corrections are unnecessary, but the experience of those who have had this work to do has shown that it is as necessary to ascertain and state the truth in these matters as it is to refute the most serious misstatement of the teachings of Christian Science. Before this work of publicly correcting such erroneous news items as the one referred to by Mr. Miller was undertaken, there was prevalent a very general impression that Christian Scientists were doing all manner of foolish things and that they were going insane, or dying, by hundreds. This false impression was largely due to just such reports as the one from Palm Beach, which is now ascertained to be untrue so far as Christian Science is concerned, and we have no doubt that many sufferers have been deterred from resorting to this Science because of fear or prejudice engendered by these reports. We know how hard it seems for newspaper men to discriminate correctly between the true and the false which comes to them over the wires, and how little time there is for investigation, but we believe they will be justified in withholding mention of Christian Science in connection with ninety-nine per cent of the sensational stories in which it is mistakenly made to figure. While there has been a very great improvement in this respect during the past five or six years, there is still room for much more, and we urge our friends of the daily press to still greater discrimination in coupling Christian Science with these stories, and thus avoid doing an unintentional injustice to a system which has for its sole object the good of humanity by the destruction of sin and sickness through the same means that were employed by our Master.

ARCHIBALD MCLELLAN.

"Whose image?"

THE way in which the great Teacher so wisely parried the subtle attempt to entrap him with the question, "Is it lawful to give tribute unto Cæsar, or not?" should commend itself to Christian Scientists when they are in doubt as to the rightness of any demand made upon them. We are told that Jesus took a penny and asked his questioners, "Whose image and superscription hath it?" When they answered him that the image was Cæsar's, he said that they should render unto Cæsar the things that are his, and "unto God the things that are God's." In this case superhuman wisdom quickly met a carefully planned attempt to show that Jesus' teachings were subversive of law and order. The question of paying tribute to Cæsar was easily disposed of by the Master, since the representatives of a materialistic sense of religion shrank from meeting the larger one of rendering unto God the things that are His.

At that time the Roman power, represented by Cæsar, stood for the highest existing form of human government, and it was uniformly successful in proportion to the justice and impartiality with which it ruled. Its weakness was the weakness of all merely human governments,—worldly policy was allowed to outweigh the question of absolute right; as when the Nazarene Prophet was condemned to death, in order to placate an envious priesthood which was discredited by the people on account of Jesus' marvelous teaching and even more marvelous works.

The question, "Whose is this image and superscription?" may well be asked by the Christian Scientist when some demand is made which involves a doubt as to its rightness or authority. Whatever the answer, there can be no evasion of duty by him, for he has learned that by rendering unto God the things that are His, he of necessity fulfils all the obligations of good citizenship, not the least of which is the maintenance of a sound moral sentiment. That which would be subversive of universal right and justice can hardly be said to have even the authority of Cæsar, for human governments at least claim to represent justice, whose demands must be enforced in spite of the blindness of prejudice and injustice, which must ever shrink into darkness when the challenge is given, Whose superscription is this?

To render unto God the things that are God's demands an intelligent apprehension of the distinctive quality of all the thoughts which present themselves for our consideration, since otherwise we may entertain, not angels, but enemies to our peace and progress; while obedience to this divine requirement will bring results which are clearly expressed in the words of our revered Leader, who says, "By purifying human thought, this state of mind . . . brings with it wonderful foresight, wisdom, and power; it unselfs the mortal purpose, gives steadiness to resolve, and success to endeavor." She adds, "This practical Christian Science is the divine Mind, . . . melting away the shadows called sin, disease, and death" (Miscellaneous Writings, p. 204). Thus will the "image and superscription" of eternal good appear, and be universally acknowledged as the only insignia of authority; "principalities and powers" owning the sovereign sway of Truth and Love. ANNIE M. KNOTT.

Unconscious Ministry.

WE learn in Christian Science that the most helpful influence we can exert is that which has the least flavor of personality. It is the fragrance of a flower that we may indeed bear to others, but its sweetness is its own product and impartation. From Stephen to the latest martyr the saints have ever been unconscious of their aureole, and the men and women whose lives have been most gladdening and stimulating to others have been those who were so responsive to the divine idea as to present no obstruction to its continuous and redemptive activity. As the grasses that cushion the summer stream mark its course by yielding to its flow, so have the world's best helpers revealed Truth's presence and power by denying everything of self that would have retarded its progress. The commands of a superior, whether parent or teacher, are remembered for a day, but the silent appeal of a mother's pure and unselfish living,—how it reverberates through the years!

Digitized by Google

The measure and explanation of true helpfulness are thus found not in our preaching, but in our spiritual attainment and potentiality, our unconscious reflection of the divine attributes. In so far as we have acquired the habit of being just and merciful, consistent and unselfish, honest and true, patient and loving, in so far we have become an open channel for the transmission of the things that are of God, and both our own progress in the demonstration of man's godlikeness, and our daily and hourly contribution to the betterment of others, are assured thereby.

The story of the garden of Eden takes on a new and richer meaning when interpreted in the light of this thought. It is said,—"A lake also sprang up in Eden to supply the garden with water and from there it divided and became four sources" (Ferrar Fenton's Translation). The description of these outflowing rivers and of their far-reaching distribution points to the unlimited range of that life-giving stream which, as John saw, proceeds "out of the throne of God and of the Lamb," and which, welling up an unfailing spring in the garden of individual consciousness, flows outward to water the thirsty lands of human sense. This possibility and promise of our transmission of good is one of the occasions for that abiding joy into which every sincere Christian may enter, and which will save him from the tendency to self-depreciation which forgets, if it does not deny, the fundamental teaching of Christian Science, that man is indissolubly linked to his Father-Mother God and, therefore, that through the simplest and humblest life His mighty works may continually be accomplished.

Jesus evidently recognized this possibility of our becoming avenues for the manifestation of Truth when he said, "The Father that dwelleth in me, he doeth the works," for later on he declared that the works he did we are to do also, and in the strengthening and inspiring consciousness of this wondrous privilege and call, his disciples, though but unlearned commoners, made their true living a leaven in the earth to which all subsequent Christian triumphs are directly traceable. Who, therefore, shall estimate the significance of our unreserved consent that God work in and through us "to will and to do of his good pleasure"?

Christian Science is awakening thought anew to the power of the unseen, to the practical effectiveness of the spiritual integer in human consciousness. It is reiterating the declaration of Jesus when he said, "This is the work of God, that ye believe on him whom he hath sent." It is leading men to see that *to be* is *to do*, and that our own salvation and joy is but an incident of that responsiveness to truth which enables us to be an unconscious blessing to all about us. As the beacon-light pierces even the distant darkness with its guiding rays, so does the benison of healing and quickening thought radiate from every consciousness that has become a highway for Truth and Love, and this constitutes the greatness and glory of humble faith, as revealed in Christian Science. JOHN B. WILLIS.

The Building Fund.

THE progress of the work upon the extension of The Mother Church is such as to require larger payments to be made at this time than at any other since building operations were commenced, and in order that these payments may continue to be made promptly when due, the Treasurer of the Building Fund requests that branch churches, societies, associations, and individuals will largely increase their subscriptions and remit immediately.

The total expenditure for the new building will be within the amount pledged for the purpose at the Annual Meeting in 1902, but a considerable sum is still needed to complete the work, and every Christian Scientist should appoint himself a "committee of one" to see that this money is sent to the Treasurer without delay. Mr. Chase will give notice when a sufficient sum is received, but in the mean time remittances should be prompt and liberal.

Letters to our Leader.

[We are glad to publish the following grateful letter from one who is blind and who has read "Rudimental Divine Science" in the embossed types. In announcing this edition of our Leader's book, we said, "Mrs. Eddy's writings have proved a blessing to all who have studied them carefully, with the desire to put their teachings into practice, and the demand for the extension of their help to another class of readers is further evidence of the work she is doing for humanity." That the author is receiving such letters of appreciation from those for whose benefit the book was issued, is proof that it is meeting a need.—EDITOR.]

Dear Mrs. Eddy:—I wish to express my gratitude for the dear little book, "Rudimental Divine Science," which has just been published in the New York point. Truly the "everlasting arms of Love are around, beneath, above."

I daily read it, and my prayer is that for this blessing I may be truly grateful by demonstrating more and more love.

Yours tenderly,

Orleans, Mass. ORISSA S. LINNELL.

Milwaukee, Wis., Jan. 11, 1906.

Mrs. Mary Baker G. Eddy, Concord, N. H.

Beloved Leader:—With our hearts full of gratitude for the great blessing which has been bestowed on mankind through your labor of love in giving to the world Christian Science, we desire to tell you of a small demonstration which proves to us the necessity of realizing the fact that the time for work is now. After resuming the usual work of the Sunday School, at the close of a vacation of two months, the pupils, sixty in number, decided by unanimous vote to contribute one hundred dollars to The Mother Church Building Fund. The amount then in the treasury was forty-one dollars and six cents. No mention was made as to the time of completing this demonstration. After the expiration of ten weeks, the treasury showed sixty-six dollars and seventy-six cents, an average contribution of two dollars and a half per Sunday. At that time an editorial in the *Sentinel*, under date of Nov. 25, 1905, headed "The Building Fund," was taken into consideration, and in accordance with the request contained therein, on Dec. 3, 1905, the superintendent of the Sunday School requested the pupils to consider the advisability of completing their demonstration of one hundred dollars toward The Mother Church Building Fund by Christmas, and after a few moments of such consideration, it was unanimously decided to complete this demonstration at the aforesaid time.

The pupils being advised to reflect Love, as set forth in your teachings, the response was immediate; the contributions more than doubled, the amount in the treasury at the end of the three weeks following being ninety-six dollars and forty-two cents, an increase of over twenty-nine dollars. The children, after learning of the deficiency, at once decided to complete their demonstration, and in consequence asked for one week's grace, and accordingly the demonstration was completed.

All the contributions are gifts and demonstrations of love. Yours gratefully and lovingly,

SUNDAY SCHOOL, THIRD CHURCH OF CHRIST, SCIENTIST,
Milwaukee, Wis., R. C. S., *Superintendent.*

Carthage, Mo., Feb. 7, 1906.

Dear Mrs. Eddy:—The members of First Church of Christ, Scientist, in Carthage, Mo., desiring to express our gratitude for the establishment of our church through the guidance of divine Love, and also our love and gratitude to you for your unceasing labor and prayer in showing us the way through Christian Science, send a short history of our work in establishing this church.

Digitized by Google

In August, 1904, a little band of four loyal Christian Scientists met at a private residence and held their first Christian Science service. The meetings continued to increase in interest and attendance, and on Jan. 1, 1905, we organized a society with an average attendance of twenty-three. We then rented a hall in which to hold our meetings. The following September we became incorporated as First Church of Christ, Scientist, Carthage, Mo., with fifteen members and an attendance as high as thirty-six. Shortly after, we established our Wednesday evening meeting and our Reading Room. Our Sunday School is small in numbers, but not in understanding, as the children seem to grasp the simple truth readily. Last Thanksgiving it was a pleasure to send a small sum to The Mother Church Building Fund. We shall give a lecture soon, as we feel that it is greatly needed. Carthage is a city of twelve thousand inhabitants and this is the first work in Christian Science which has been done in this place. We are not making rapid strides, but progressing slowly and surely, as the field is broad. "If God be for us, who can be against us?"

MRS. MARTHA B. SAYLER, *Clerk*.

Louisville, Ky., Jan. 10, 1906.

With love to God, and to our beloved Leader, Mary Baker Eddy, First Church of Christ, Scientist, of Louisville, Ky., submits the following report: It is with gratitude that we note the proofs of progress to be seen in the record of the church for the year 1905, first among which was the union of the two churches, by the decision of the Second to disband and make individual demonstration of one Church of Christ, Scientist, in Louisville. Accordingly, the second Sunday in January, 1905, found us all "with one accord in one place." A further indication of progress may be seen in the greater numbers visiting our Reading Room, both of those investigating and those seeking the healing, also in the increased sale and distribution of literature, the sales of our text-book having been forty-nine copies during the year. There has been no lack financially, divine Love having supplied every need, and besides meeting all current expenses three hundred and fifty dollars has been sent to The Mother Church Building Fund.

According to the decision of the Board of Trustees, the regular collection on the last Sunday of the quarter, commencing with April, has been set aside as a fund for the distribution of literature in the State, subject to the order of the Publication Committee. Through the prompt action on the part of our Publication Committee in refuting adverse criticisms, and a greater willingness on the part of the press to receive and publish such matter, Christian Science is becoming better understood, therefore more in favor with the public.

Grateful for the steps already taken, we move on to greater victories, and "in patient obedience to a patient God," we "labor to dissolve, with the universal solvent of Love, the adamant of error,—self-will, self-justification, and self-love" (Science and Health, p. 242).

FLORENCE G. MERROW, *Clerk*.

Moscow, Idaho, Dec. 15, 1905.

Mrs. Mary Baker G. Eddy, Concord, N. H.

Revered Leader:—We, the children of the Christian Science Sunday School, of Moscow, Idaho, as an expression of loyalty to Christian Science, send twenty-five dollars to the Treasurer for the Building Fund of The Mother Church, with the earnest desire to have a part in the Church Building. We are few in number, but, we trust, great in promise. We send our contribution with a prayer of love that it will increase an hundredfold to supply the need. With great gratitude and love to you, from

THE CHILDREN.
By MRS. AMELIA OPPENHEIM.

Testimonies of Healing.

I am very thankful to God for what He has done for me. I was suddenly left alone, with many troubles and trials, and I took up the study of the Bible. I was trying to understand it, prior to joining some church, as it seemed to me this would be expected. I had attended all sorts of churches from my childhood up, but never could find any that met my need. As time passed on my condition became very alarming. Sciatic rheumatism, that had troubled me for some years, became so severe I could scarcely do anything. Then there appeared some complications, so distressing that I was unable to walk far, and had to sit down frequently by the way. I thought I had Bright's disease,—such excruciating pains, no tongue could tell my sufferings. With all these things upon me, death seemed very near. I had never joined any church, and I thought it now too late, as I would have to wait six months on probation, and I would be dead before that.

About this time I made some inquiries of my sister in reference to Christian Science, as she had already turned to that faith, and I soon found that it was just what I had been looking for. I saw at once that it declared the truth and nothing but the truth. I commenced reading "Science and Health with Key to the Scriptures" by Mrs. Eddy, also the New Testament, along with it. I wanted to find out what Jesus said, as I did not expect then to live long. I did not go to the meetings, nor did I read Science and Health to be cured,—not thinking of that,—but to be saved from an everlasting hell hereafter. My sister urged me to have a practitioner, but I kept on reading, and praying to God in silence, and what happened? Where had my sciatic rheumatism gone? where had the Bright's disease gone? I persisted in reading Science and Health, together with the Bible, with the knowledge that God as revealed by Christ Jesus can do everything, that He made everything that was made, and that He can and does heal the afflicted. He has healed me, thanks to His most holy name! Thanks to Mrs. Eddy for the light she has given. I believe I am now as sound a man as lives. May God speed the day when all shall know the truth as found in Christian Science.

GEORGE J. HIBBARD, Charleston, Ill.

About three years ago I was taken sick with what the doctors called typhoid fever, and from that time on I became a constant sufferer from different diseases,—chronic indigestion, cystitis, liver trouble, kidney trouble, varicocele, etc. I tried different doctors, specialists, and many remedies, but could get only temporary relief, until finally, in one of my bad attacks, it was thought I would never be able to get up again. One doctor had already advised me that nothing but a change of climate would help me. I had two doctors and both said they had done all for me that could be done.

I had suffered so much that I thought death would be a great relief to me. They advised me to be moved to Arizona, and when I asked if they thought I was strong enough to stand the trip, they could not assure me, but said it was my only chance, so I decided to try it. One of the doctors came with me to take care of me, and when we got to Tucson I was able to walk about a little. The doctor left in a few days and my wife came to wait on me. We moved out in a tent and I improved for a little while, but began to grow worse again, when the doctor advised me that I must have some operations performed. I came to Los Angeles and had five operations, but that did me no good, and finally my wife and I concluded that she could take care of me better than they were doing. My doctor then turned me over to a specialist on chronic diseases. I had been told that I had consumption of the bowels and Bright's disease, with my other troubles, so I thought I was

Digitized by Google

doomed to die, but my cousin persuaded me to try Christian Science. I had not much faith in it, but I had tried nearly everything else, and had been given up by three doctors, so I thought I would try it as I was suffering so much. The Christian Science practitioner came and treated me, and from that first treatment I felt different and the fear began to leave me. The next day I got up and went with my wife and cousin to the practitioner's office; the next day I walked four blocks, and the following day I walked about two miles. In two weeks I went to work in a grocery, doing the heavy work, such as lifting heavy packages, etc. I was completely changed. I hardly knew how to act. I had put away my stomach-pump, atomizer, etc., in fact all my medicines, and I gained ten pounds a week until I weighed one hundred and sixty-eight pounds. I could get up at five o'clock in the morning and work hard until eight at night. I was like a different person and I certainly feel grateful to Christian Science.—W. O. Lusk, Los Angeles, Cal.

Soon after I commenced the study of Science and Health I was taken with rheumatism so badly that at times I could not walk across the floor without great pain, and at night I could hardly turn over, the pain seemed so intense. My friends urged me to try material remedies, but I decided that Truth should be my physician. My understanding of the Principle of Christian Science was very small, and the disease did not yield readily, but I kept on denying the reality of evil and seeking to learn the perfection of God's children, and to-day I rejoice in being free from that fear which kept me in bondage.

Another proof of divine Love was the healing of a bone felon on my thumb, which was very badly swollen. One night I awoke with a sense of severe pain in my thumb. I at once began to declare the truth but seemed to get no relief, when like an angel's whisper came that beautiful declaration of Paul, "In him we live, and move, and have our being." Then there came such a sense of peace and trust that all fear left me and in a few minutes I fell asleep. When I awoke the next morning, it was to find that all pain had left me. Having had previous experience with a felon, which did not heal for about two months, I was very thankful that in this last case I was able to use my hand in about three weeks.

Not only has Christian Science been a help to me physically, but I have been made better spiritually, in the overcoming, to a great extent, of a very quick temper and also of an indifference for my fellow-beings. I am learning to love, my thought is purer, my aim higher than ever before.

I thank God that through my efforts others are being brought into the truth. I am very grateful for the *Sentinel* and the *Quarterly*, which are so much help in overcoming error.

With a thankful heart I go on my way, rejoicing that God through Mrs. Eddy has revealed the true meaning of the Scriptures so that he who runs may read.

Emma Sowers, Cottonburg, Ky.

When Christian Science was presented to me, I was suffering with a serious complication of diseases, such as lumbago, sciatica, stomach trouble, and severe nervous trouble. I had been confined to my bed most of the time for three years, I had tried a number of physicians and had given *materia medica* a thorough trial, also electricity, osteopathy, and various other treatments, but found them of no avail. At the beginning of the third year I found myself rapidly growing worse.

After a few months of treatment from a Christian Science practitioner, and the study of the Bible and Science and Health by Mrs. Eddy, I found that I had not only been healed of my physical troubles, but of the tobacco habit, also of profanity. All these have been destroyed by the revelation of this truth that makes us free, and my thoughts and conduct have turned in an opposite direction, although I have taken treatments for sickness only. My day's work is now accomplished with more ease and satisfaction, the scales have fallen from my eyes; I have learned that "man is spiritual and not material" (Science and Health, p. 468); I have been brought to the realization that I am living in a world of peace, harmony, and love instead of one of darkness and despair.

I can never say enough for Christian Science, which has made me a better man, morally, physically, and spiritually. May we never cease to thank God for this truth which has made us free, and may His blessings be with the one who has so patiently brought it to us.

Paul W. Hill, Charleston, W. Va.

Words are inadequate to express my gratitude for the blessings I receive every day by the application of the truth as understood in Christian Science. Five years ago my life did not seem worth the struggle needed to live, but Truth was leading me into the right path, and when I was told of this new-old religion it appealed to me as the most beautiful teaching I ever heard. I sent for that wondrous book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and by its study, in connection with the Bible, I have been made whole. This physical healing is, however, not to be compared with the spiritual uplifting, the illumination which comes with each perusal of our text-book. Is it any wonder that we have such love for the one who has made it possible for us to have this freedom? I am indeed thankful that I am living in this progressive age, when we have this Science of God and of man's relation to Him to live by. Truth has been our only help and physician the past five years, and gratitude is no longer a form of words, it is the truth demonstrated.

Mrs. Clara S. Ackerson, Buena Vista, Col.

I would like to add my testimony to the harmony that comes to us through Christian Science. Recently, when it seemed that all was confusion and I could not think clearly to help myself out of suffering, I took up an old copy of the *Sentinel* and read a testimony which told how a woman had been taken out of the very jaws of death, as it were, being awakened from unconsciousness as the words of the 91st Psalm were heard by her. And I thought, How great is the power of God! Immediately my own sense of helplessness lessened and I was able to work mentally.

Christian Science has helped me in many difficulties. When I first came into Christian Science, and while being treated for another trouble, my hair, which was so thin I could not do it up at all, became at least twice as thick, and I had not even mentioned it to the practitioner. Since then I have been able to overcome entirely a tendency to faint, from which I suffered at the least excitement. Less than a year ago I was able to have a finger sewed up which had been severely injured,—the bone being entirely bared,—and this was done without my taking any drugs to keep me from fainting. I was calm, and the fact that my consciousness was of God and therefore indestructible, was quite clear to me, in spite of the medical opinion that I was going to faint. The fear was overcome, and the surgeon said it was the most remarkable thing she had ever witnessed. The finger, which she wished to amputate, was treated in Science, and did not become inflamed, and before long I was doing all my housework, although I had been told by the same surgeon that I would be in bed six weeks and my entire arm would be terribly swelled.

I am indeed thankful for this understanding which has helped me in so many physical difficulties, and a great deal more thankful for the happiness and peace it has brought me. There is much to be overcome yet, but I give thanks

Digitized by Google

to God, who has sent this truth to us through our beloved Leader.—Mrs. Mabel Laughlin, Chicago, Ill.

Through many years of incessant pain and illness, the cry ever and anon rang out to God,—"Please help me." Night would never close in without a great dread of the dark hours to be gone through in agony and sleeplessness, but "God said, Let there be light." Through what was meant as an effort of kindness, in the old way, a very serious scald was accidentally received, which made it seem too cruel to believe that there could be a God who was cognizant of such pain. But "God said, Let there be light: and there was light." After skilful physicians had administered their remedies and failed, a lady came and asked if she might not give me help in her way. Her religion had always seemed to me a part of her character, and the night seemed so black that anything so simple as her words implied could not really reach my manifold weaknesses. My case was seemingly hopeless, but I told her, "Yes, do your worst or best, whichever it is." The pain was relieved and I slept that night without morphine; still I did not fully believe in the efficacy of Christian Science, but I knew there must be something in it. After I got better I went to a teacher. My faltering footsteps were gently led into the supreme light which reveals the ever-presence of divine Love. I owe sincere gratitude to Mrs. Eddy, whom God has so richly endowed with the light that shall lighten the world, the light that never fails.

Mrs. Maude M. von Pustau, Brooklyn, N. Y.

Under widely varying conditions, physical as well as mental, Christian Science has been proved to me to be a panacea for all discords. Ever since taking up the study of this truth, over seven years ago, neither my wife nor I have resorted to any material remedies, nor have our two children taken any. When discordant conditions have appeared in our home, Truth has been the healer in every instance, dispelling the dark clouds of sense, sometimes instantaneously. Chronic catarrh, which had annoyed me for several years, and which did not yield to the physician's efforts, was overcome by reading "Science and Health with Key to the Scriptures" by our beloved Leader.

I wish to relate a case of healing which proved beyond a doubt the healing power of Truth. About four years ago our little boy was suffering from a heavy cold. My wife and I had been called away, and not fearing for the safety of the child, we left him in charge of a relative, who was not a Scientist. Upon our return that evening, we were advised by this relative to do something at once to relieve him. I had a clear sense of the power of Truth, and rebuked the error audibly. The relief was instantaneous, the child resting peacefully thereafter.

I know that thousands already "rise up" with me, and call our Leader "blessed,"—those who seek a higher, purer sense of Life, of God.

Richard C. Luders, Jersey City, N. J.

It is only two years since I came from darkness into the light of Christian Science, and to me the spiritual uplifting has been wonderful, to say nothing of the physical healing. Words cannot express my gratitude for the benefits I have received in that time. For five years I suffered with that dreaded disease, eczema, all over my body. Five doctors said there was no help for me. The suffering seemed as terrible as the hell fire that I had been taught to believe in. When Christian Science came to me two years ago through a dear friend, she gave me a copy of Science and Health and asked me to read it. I told her that I would, for I was like a drowning man grasping at a straw. I had been a Bible student for twenty-eight years, but when I commenced reading Science and Health with the Bible I was healed in less than a week. I never had a treatment. A case of measles was also destroyed in twenty-four hours after it appeared. I study the Bible and Science and Health, then take everything to God. My desire is to so live the truth that I may be worthy the name Christian Scientist. Thanks be to God, and to our beloved Leader that she was enabled to bring us this truth.

Mrs. Mary B. G. Buster, Vermilion, O.

Nearly twenty years ago I was sent away from my home in Leadville, Colorado, to Denver, in the hope that the lower altitude might prolong my days on earth at least a few weeks, or months, which was all that could possibly be hoped in my case, as the best physicians in three States were all agreed that I was in the last stage of consumption. Away from home, facing death, and only waiting till the summons came, it was then that Christian Science found me, by way of a letter from my husband, announcing to me that he had put my case into the care of a Christian Science practitioner in Littleton, N. H., and that many very intelligent people were interested in this study or religion, among them some friends who had told him about it and induced him to ask for treatment for me. My first impulse was to write at once and put a stop to what seemed to me the very height of folly; but a second thought caused me to realize that my husband was putting forth the last possible effort in a case past hope, unless this new, hitherto unheard of method might chance to meet my need. So, without the slightest desire, hope, or understanding upon my own part, and really without any further thought upon the subject, except when my husband wrote to me enclosing letters from the practitioner (which I never read), my healing began, and in four and one half months from that time I was practically a well woman. I still coughed some, but the change was remarkable to the eyes of all observers, and I knew that I was well.

Since then I have never tasted medicine, and have enjoyed twenty years of excellent health. After my return to Leadville I secured the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and after a careful, prayerful, studious perusal of the same, I began to apply my understanding of the Principle of healing as set forth in that volume. Since that time there has not passed one day without my use of the understanding gained through the study of Christian Science, not only in regulating my daily walk and conversation, but in the treatment of others by the method which was so successfully practised in my own healing.

Mrs. Jennie B. Phillips, Los Angeles, Cal.

It is four years since I sought Christian Science for the healing. All my life I had had constipation, using almost every material remedy prescribed for that trouble. I had never known what it was to eat like other people, and the year before I took up Science I had indeed "suffered many things of many physicians." My stomach almost refused to act at all, and the little food I ate caused great distress for hours, even though I took medicine which was supposed to digest it. That winter I suffered so intensely from hemorrhoids that an operation was considered necessary, the result being that I was a complete nervous wreck. When in this miserable state of health, a friend who had been healed in Science advised my trying it. She loaned me a copy of Science and Health, and after reading it for some time, I bought a copy for myself. I could not at first grasp the meaning of very much of it, although the chapter on Christian Science Practice helped me. I then went to Denver for the purpose of taking treatment, and in four weeks I returned home a well woman.

I cannot be too grateful for the blessings this Science has brought to me, and for the spiritual uplifting that has

Digitized by Google

come with it. My heart goes out in gratitude to Mrs. Eddy for bringing this wonderful saving truth to us.

GERTRUDE L. EBERHARDT, Salina, Kan.

Over nine years ago I turned to Christian Science because everything else had failed to help me. I was suffering from catarrh of the stomach and bowels, also heart trouble. I was without God and without hope in the world; but thanks be to the Father, I cannot recount the blessings which have come to me through my healing. After having been a sufferer all my life, Christian Science has wrought a very great change in many ways. It has awakened me from the mortal dream and I was healed of several diseases. It also unveiled the character of my mortal concept of existence and pointed out the Life that was exemplified by our Master.

I am indeed grateful to our Leader, Mrs. Eddy. I am a member of The Mother Church, and of a branch church here.—HESTER A. BLACKMAN, Eureka Springs, Ark.

About twelve years ago a friend spoke to me of Christian Science, and gave me some reading on the subject, but I put it aside. Six years passed by, bringing much sorrow, and I still called upon God in the same old way, often wondering why He allowed all the seeming conditions, but still clinging through faith to Jesus, as the Saviour upon whom all my hopes were centered. About this time Christian Science was again offered to me, when a dear niece who had been healed through Christian Science from every ill to which flesh is heir, offered to give me a copy of Science and Health, if I would promise to read it. I said to her that if it conflicted in any way with the Bible I would not read it. She sweetly replied, "Love gives this to you," and I began reading it. I felt the power of Truth, and found that divine Love had indeed given me the book, and that it is truly the "Key" to His Word. In September, 1903, I took my name from the church record, purchased a *Quarterly* and began to study; asking and receiving spiritual sight. There is no organized society here, but I have service now alone with God each Sabbath, and a few of us meet and study the Lesson, knowing that "in due season we shall reap, if we faint not." Since beginning to understand in small measure something of the truth which is revealed in Mrs. Eddy's works, my heart often goes out lovingly to her, and I long to be fitted to help those about me.

MRS. HARRIET E. MOREY, Union City, Mich.

I am grateful for all that Christian Science has done for me. About two years ago I was quite ill, and after a night of suffering, when the pain had been intense, I asked my brother to telephone a practitioner. He did so, and five minutes later all pain had disappeared. I have never forgotten that experience.

When I was in St. Louis, last November, an attack of the grip was overcome for me in one day. I returned to my work the next day, perfectly well. Christian Science has done everything for me in my work. It has given me the work and given me ability to do it. I can truthfully say that all I have I owe to Christian Science.

FRANCES DONAHUE, New York, N. Y.

For years I had been troubled with rheumatism and neuralgia. I had been treated by a great many different physicians, but without receiving permanent relief. Two years ago I had a very severe attack; one Sunday I had gotten very low and my left arm had become almost paralyzed; it was so cold and lifeless I could not raise it to my head, and it was thought I could not live until night. My husband had a little understanding of the truth; he gave me a treatment and I was healed instantly. I got up, and went out and helped my daughter get dinner. Through the reading of Science and Health I have been healed of constipation. I had worn glasses for seven years, and through my understanding of the truth I have left them off and can do anything without them. The spiritual uplifting is, however, more than all the rest. I realize more fully every day that God is "a very present help in trouble." I want to thank our Leader for bringing us this truth, whereby we are made free from the bondage of sin, sickness, and death.—MRS. LYDIA GOULD, Findlay, O.

I became interested in Christian Science, but had a great deal of opposition to contend with and darkness seemed to enclose me around. I was in a very bad condition physically. I went to a physician, who made an examination and pronounced my condition tumorous. She gave little encouragement, and I went directly from her office to a Christian Science practitioner. After I had been treated, and while on the way home, these words that Jesus spoke to Martha came to me, "Said I not unto thee, that, if thou wouldest believe, thou shouldest see the glory of God?" I knew that God would heal me! I was entirely healed in about four weeks. I am indeed grateful for physical healing, but to me the spiritual uplifting was far greater.

Words cannot express the gratitude I feel to God, who has guided me into the right path, and to our dear Leader, Mrs. Eddy, who has shown us the way from sense to Soul.

MRS. ANNA HOYTING, Roxbury, Mass.

Seven years ago I was a great sufferer, having sciatica, stomach and brain trouble, besides a tumor. I had had many doctors and taken many kinds of medicine, but had received no benefit. My doctor told me I would never be better. I could not walk without great pain, and as a last resort I tried Christian Science, and was healed after being sick eighteen years. I thank our dear Leader for the truth she has brought to mankind.

MARY E. REEVES, Kingston, Ont.

It is with a heart full of love to God that I express my gratitude for the gift of Christian Science. I became interested in this great truth through my healing of neuralgia, from which I had suffered for three months. One absent treatment brought relief, and in a week I was completely healed. It is over fifteen months since I became interested in this Science, and during that time I have seen many forms of disease destroyed by the application of the truth that makes us free.—MARY F. ELLIS, Twin Lake, Col.

Christian Science came to me in a time of need. It was tried as a healing remedy when everything else had failed, —*materia medica*, climate, hygiene, etc., everything that we ever heard of for asthma, but all had ceased to give even relief. The healing came slowly, but I could tell of many demonstrations of healing. For this one demonstration of the power of Truth I am more than grateful to God, and to our dear Leader, Mrs. Eddy.

MISS MAUD TRAER, Toronto, Ont.

Go up and on! thy day well done,
Its morning promise well fulfilled;
Arise to triumphs yet unwon,
To holier tasks that God has willed.

. . . . . .

Wherever wrong shall right deny,
Or suffering spirits urge their plea,
Be thine a voice to smite the lie,
A hand to set the captive free.

To Garrison:—J. G. WHITTIER.

From our Exchanges.

The new truth of the time is knocking at the door of all our minds, and nearly everywhere it is met with distrust. We fear that, if the old apparatus of religion is destroyed, religion itself will be lost. The fear is perhaps natural; but cannot the same spirit that shaped the older forms of worship give us new ones in their place? Is God dead? It is to such an attitude of distrust in His living presence that we are led by the moral hesitation which stands doubting before this glorious universe, unwilling to test its resources by making any vigorous choice of good, but asking, like Pilate, "What is truth?" Truth, once again, is never a formula, but a faith. It is the inspiration of a pursuit that engages all our active powers on the side of the highest excellence we know, so that with definite help from us the things in which we most believe may come to prevail in the world. So long as we fear to face the new conditions of thought and to modify or surrender our untenable beliefs in obedience to the larger revelations of the Time-spirit, we shall remain passive by the wayside of life, fingering the fringe of the garment that we ought to put boldly on and "walk in the triumphal procession of truth," where we belong. REV. RICHARD W. BOYNTON.

The Christian Register.

If Jesus had not understood what work he was to do until thirty years of age, he, no doubt, never could have performed it, for even he must be prepared for his work. While a life-work may be done in a comparatively short time, yet no life-work can be adequately done unless the whole life has been a preparation. An apprehension of it and preparation for it are as essential as the actual doing of it. One thing we ought to be sure of. In early life we should get sight of some high and worthy aim and get our life started in the right direction. This vision may come early in life, even before we understand all that is involved in it. Those who are aimless and have no well-defined purpose as to what they will be or do until middle life, seldom come to any definite and noble service.—*The Standard.*

Before we complain of God that He has not taken full possession of our hearts, let us ask ourselves whether we have ever for a single hour fully desired that He should enter there and rule. For while the Holy Spirit comes with warning uninvited and will not let us go untroubled on the way to death, for blessing and control He will not come unless we open the door and bid Him in. Do you desire the teaching and controlling presence of God's Spirit? Then be assured that He will come and dwell with you and fill your life with blessing and with power.

The Congregationalist.

Love reaches out for that which is lovely and of good report; seeks after that which is pure and uplifting; assimilates that which is nutritious and invigorating; finds more satisfaction in giving than in receiving, more blessedness in serving than in being served. Therefore love is not hard to please. Living in an atmosphere of good will, and ready to respond to every call which duty demands, the loving heart makes joy for self and others while "marching through Immanuel's ground to fairer worlds on high."

The Universalist Leader.

There is no reason why a believer in a divine revelation through Jesus Christ should doubt that God to-day may heal men without the use of visible means; to deny the possibility is to affirm arbitrarily that God is a slave to laws and forces which man claims as his own servants.

The Pacific Baptist.

THE CHRISTIAN SCIENCE TEXT-BOOK.—"Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

RUDIMENTAL DIVINE SCIENCE.—Printed in the New York point system of type for the blind. Price, prepaid, 50 cents per single copy; $5 per dozen.

CHURCH MANUAL.—Containing all the By-laws to January 1, 1906, of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of The Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the Churches and Societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to The Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of The Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to The Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number, or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By Hon. WILLIAM G. EWING.

CHRISTIAN SCIENCE. Its Worth and Work. By Rev. ARTHUR R. VOSBURGH.

CHRISTIAN SCIENCE. Its Promises and their Fulfilment. By EDWARD A. KIMBALL.

Twelve or more to one address, each, prepaid . . . 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* **PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston: 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

250 Huntington Ave., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,
Associate Editors.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.

Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month.

The date of expiration may be found on the address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

Next to the decision depriving corporations of the privilege of immunity for witnesses, handed down last week, the most important judicial event of recent weeks, says *The Literary Digest*, was the decision, given also last week, in the Chicago street car controversy. The companies held that the act of the Legislature in 1865, extending their franchises for ninety-nine years, gave them the right to continue operation irrespective of their contractual relations with the city. The court approved the validity of the franchises, but held that the use of the streets was a question of contract with the city which was not bound by the terms of the franchise grant.

The right of a railroad company to compel passengers to retain hat checks given in exchange for tickets and to produce them upon demand, is denied in a decision made last week by the Appellate Court at Bloomington, Ill. Two men traveling from Chicago to St. Louis and Chicago to Alton were ejected from the train because they refused, upon demand by the conductor, to produce the checks given them in exchange for their tickets. They sued and were awarded $500 damages, the action of the jury of the lower courts being sustained on appeal to the Appellate Court. The railroad company will carry the case to the State Supreme Court.

The complete surrender of the position of the three oil companies who have defied the orders of the Missouri Supreme Court, that they give information as to their connection with the Standard Oil Company, is believed to be due to the recent decision of the United States Supreme Court in the paper trust case. In that decision the Court, in effect, ruled that while a person might be immune under the Constitution in giving incriminating testimony against himself, a corporation was not entitled to the same immunity. A similar decision as to immunity has been found in the beef packers trial.

The United States floating dry dock Dewey, en route for the naval station at Olongapo, Philippine Islands, which arrived at Las Palmas, Canary Islands, Feb. 23, and stopped for repairs made necessary by the rough weather encountered, left last week in tow of the colliers Brutus, Cæsar, and Glacier, and the navy tug Potomac.

The Commission on Additional Water Supply for New York City has recommended that steps be taken at once toward the building of reservoirs, aqueducts, and filters sufficient to store, purify, and convey to New York City 500,000,000 gallons of water daily from various new sources among the Catskill Mountains.

The fortifications appropriation bill, taken up and passed in the Senate, carries an appropriation of $125,000 for the erection of a powder manufactory. It is claimed that the nation is entirely at the mercy of a "powder trust." As passed the bill carries an appropriation of $5,278,995.

The House, by a vote of 48 to 12, passed the anti-discrimination bill which is intended to oust the Standard Oil Company from Iowa or compel a revision of its business methods.

Plans involving over two million dollars for new lighthouses and lightships are before the House Committee on Interstate and Foreign Commerce for consideration.

Foreign.

During the session of the Porto Rican Legislature just closed a bill was passed authorizing a million-dollar insular loan to be covered by four per cent bonds. The money derived from this source will be used exclusively in the construction of roads and bridges and other permanent public improvements. As soon as the loan is available work will be begun at once, building roads from coast towns into the interior, and from one interior town to another, and completing roads already partly constructed.

The budget committee of the Swedish Folkething has endorsed the Government's proposal to appropriate $36,000 for Mylius Ericson's projected expedition to northeast Greenland, whence he will attempt to reach the North Pole. The attempt will be made in the spring of 1908. Ericson contemplates crossing the unknown ice dome, ten thousand feet high. He will sail from Copenhagen July 1.

The railway nationalization bill passed the Japanese House of Representatives without amendment by a vote of 243 to 100. It is expected that the bill for the purchase of the Soul-Fu-San Railway will also pass. The cost of the purchase of the home railways is estimated at $250,000,000. The purchase can be effected, it is thought, within five years without disturbing the market.

The South African Compensation Committee, which has been examining claims for losses sustained during the Boer War, has completed its labors. The committee examined 80,000 demands, the aggregate of which amounted to $310,000,000. The sum of $47,500,000 has been allowed for the settlement of these claims.

The Russian Government is reported to have prepared a naval programme involving the expenditure of $100,000,000 during the next two years. The sum of $25,000,000 has been assigned for four first-class battleships similar to those now building for Japan.

The total expenditure for the British navy for the fiscal year just closing is $184,208,305. Of this total $172,280,410 has gone toward the maintenance of the active service, and the remainder in such payments as half pay, pensions, and gratuities.

Industrial and Commercial.

Interest in the railroad across the Isthmus of Tehuantepec is increasing, both as a possible competitor with the Panama Canal and as an important interoceanic route. The line itself is practically completed. It is one hundred and ninety miles in length from port to port, is rock ballasted, equipped with steel bridges, and has ample docks, supplied with facilities for the speedy unloading of vessels. Arrangements have already been made for steamship service on both sides of the Isthmus. As compared with Panama the time of transit between New York and San Francisco or Puget Sound ports is claimed to be three or four days less than by Panama for all ordinary freighting steamers. It is believed that the cost of transfer, loading and unloading, will not greatly, if it does at all, exceed the canal tolls. It is a Mexican enterprise.

The new steel, the Bookwalter cast steel, is an evolution of the Bessemer process. In the latter the air for the purpose of purifying the metal is admitted through tuyeres in the bottom of the converter. By the Bookwalter process the air is admitted through tuyeres in the sides of the converter. The danger of over-oxidization is reduced to the minimum, and a steel is produced that is free from blow-holes and can be cast easily in minute and fantastic forms without the metal losing any of its strength.

The Railway Age says: There will be great activity in railway building in the United States during the year 1906. Not for years has the outlook been so favorable, and many of the new lines to be built are of such magnitude as to insure large additions to the railway mileage of the country, not only for the year 1906, but for several years to come. Over thirteen thousand miles of new railroad are under contract or actually under construction, while the live projects aggregate 8,433 miles.

Rabbi Joseph Silverman, at a recent meeting of the New York State Conference of Religion, expressed the wish that all the churches in the city discard their different names and be numbered like public schools. His reason was that in this way the people would forget to what denomination they belonged and the interdenominational strife would be eliminated.

On the recent voyage from New York the Deutschland maintained continuous communication by wireless telegraph with the station at Lizard Head, Cornwall, from a distance two thousand miles out until she reached Plymouth, England.

Oil burning locomotives have proved a success on Mexican roads, and the twenty-five big engines recently ordered by the Mexican Central will all be equipped with the most up-to-date oil burners, built to use the Mexican crude oil.

Europe takes two-thirds of the exports of the United States, over one billion dollars, and supplies practically one-half the imports. The value of tropical and subtropical products brought into the United States in 1905 was $508,000,000.

The production of Pennsylvania anthracite coal in 1905 was the largest on record, amounting to 60,339,152 long tons, valued at $141,870,000. The production in 1904 was 65,318,490 long tons, valued at $138,974,020.

The Mexican Government is sending circulars to all the farmers, merchants, and manufacturers of Mexico, explaining its plan for ships to carry permanent exhibits to all the principal ports of the world.

It is intended, under State authority, to hatch and liberate forty million lobsters in Connecticut waters this summer and so endeavor to revive the lobster industry of the State.

The steamer Silvertown, with the Commercial Pacific Company's cable on board, has left Manila for the purpose of laying the cable from Manila to Shanghai.

About fourteen thousand pounds—seven tons—of artificial silk are now being made daily at factories in nearly all the countries of the civilized world.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

Quest and Questionings.

HON. CLARENCE A. BUSKIRK.

My thoughts were not at rest. I visited the vast solitudes of the mountains. Majestic peaks mounted into the clouds. They stood rock-ribbed and ancient, seemingly able to defy victoriously the merciless anger of the tempests and the inappeasable hunger of time. Below were mighty ravines where wild torrents had once dashed like the waves of an impetuous sea. Far away I saw a solitary eagle sailing in a slow circle, and I cried, "Surely, here one might dwell in peaceful hermitage, undisturbed by the warring passions of his race; and thus find peace!"

But my thought was answered, as if some phantom of the mountains had spoken: "No sustenance is here for human happiness. We arose through fierce agonies of fire and flame. Even our most precious metals and jewels are the children of indescribable turmoil. We seem to be at peace; but within us are the unquenchable fires of the past. The only history we can offer to human thought is that of chaotic violence, the only prophecy we can furnish is final demolition. We have no antidote for human misery, nor can all our treasures purchase even an anodyne. Unsatisfied ambitions, despairing affections, remorseful memories may live within these solitudes as elsewhere."

Sorrowfully I pursued my quest. On fertile plains I saw thousands of human habitations, surrounded with green pastures and coming harvests. I saw how adventurous pioneers, through years of persevering toil and patient privation, had slowly accumulated comfortable homes. I saw the rewards of thrift and industry on all sides. I saw a vast empire which had been redeemed from savagery only a few decades, now blossoming into affluence. I saw busy towns and cities everywhere rising into being as if by the wave of a wizard's wand. I saw teeming traffic and overflowing granaries; I saw palpitating messengers of commerce speeding in all directions; I saw the currents of business flowing full and strong.

It was in the fairest season of the year. It was the season when the clasping sunshine warms the responding energies of the earth into their gladdest activities; when exquisite colors, sounds, shapes, and suggestions abound everywhere; in brief, when June comes like a radiant maiden from the skies for a holiday amid earth's most enchanting greenery. "Surely," I cried, "are not these the scenes and the proofs of human happiness?"

Then before the vision of my thought arose ugly and formidable shapes, like chilling fogs from marshes. I recognized them as discontent, greed, hatred, malice, worry, fear, dishonesty, and their like, and I cried, "Why are you here,—you who belong to other scenes than these?" and they answered, "We are bred in the dark places of human consciousness; we abound amid even these scenes of bounty and beauty."

Again I pursued my quest. I fled to the ocean. Our ship moved like a mighty albatross, and trackless waters were around me. "Surely," I thought, "the sounds of human turmoil cannot traverse these vast stretches of solitude, the fires of human passion must here be wholly quenched under the subduing glances of the stars!" But the voices of the waves replied, "We can give no surcease to human sorrow and suffering. The passing centuries have paid us their tributes, but we yield up only the moans of the dying, the bones of the dead. We have no secret for the attainment of happiness." Then I took my way to the mightiest city of our land. I saw at its wharves the commerce of the world. I saw its gilded theatres, resounding with the feigned pain and laughter of the years, and offering exciting draughts to youth, a brief forgetfulness to age and care. I saw its splendid galleries in whose painted canvas and sculptured marble was stored the genius of the world. I saw its hostelries and homes where millions had been lavished in the hope that accumulated luxuries might furnish peace and content. I saw its marvelous network of travel and traffic, its vast public buildings, its innumerable achievements of collective energy and wealth. I saw the city's libraries, its parks, its mirth, its brightness, its noble charities; I looked upon the fine equipages, the jewels and rich raiment, all the favorite toys of the children of fortune.

Thus I had hoped to escape from the dark enigma of human wretchedness, or to find its cure; but wholly in vain. The same dark spectres arose before my thought, pinched squalor, guilt, vice, and wretchedness were in evidence everywhere. I discerned that all the pleasures purchasable by wealth and power are succeeded by weariness and satiety; that all selfish enjoyments are gateways to sorrow; that happiness refuses to dwell within the marble-walled palace no less than within the humble cottage; that under flowers which look fairest and brightest too often lurk the serpents which are most subtle and stinging. I saw human virtues so often interwoven with selfish aims and motives that they were like blossoms which appear only to mildew and perish. I saw that all human happiness based on earthly things is a brief delusion.

In my doubt and despair I cried, "What, then, do we live for? What can be the purpose of human existence? Why are we permitted to cherish false beliefs which are as ashes and wormwood? Can God be, and yet suffer such things to be? what an enigma around, beneath, above!"

In that despairing moment thought brought me where I seemed to look down from a great height upon the earth. I saw its mightiest structures shrivel to ant-heaps. I discerned the utter insignificance of the proudest works and monuments erected by the industrious genius of men, and that they can endure but for a moment in the calendar of eternity. Then Christian Science, the apprehension of divine Truth and Love, came to me, and I perceived that I had been looking at temporal appearances, not reality. I saw that the beliefs based on physical perceptions, so-called, do not reach the true, the real, the eternal, for these are "the things not seen" and wholly outside of the transitory realm of physical perception. The momentous question, "What is Truth?" was a natural one from the earthly viewpoint of Pilate, and its despairing repetition by millions of mortals from a like viewpoint is not to be wondered at.

Copyright, 1906, by Mary Baker G. Eddy.

Digitized by Google

Yet am I now absolutely sure that there is truth, that there is reality, that there is eternity. The physical gives but hints of these. Therefore, to be aware of their existence (indeed, even to think about them or to suspect them) is the highest evidence that I am more than physical. I had made the mistake of confusing reality with the appearances of reality. I had thus mistaken the temporal and unreal for the true and eternal. All that is true and real is eternal and incapable of change; the simplest rule in mathematics always has been true and always must remain true. What is true can never become untrue, and what is untrue can never become true; the real can never become unreal, the unreal can never become real; the eternal can never become changeable and transient, the transient and changeable can never become eternal. All which is not true is false; and the false does not exist, because only what is true is of God. That which is untrue is but a false belief of mortal sense. That which is true must always have been true, and therefore must always have existed; hence what has not always existed must be a seeming and not actuality. We cannot affirm that human misery always has existed, that it can never change, that it can never cease. Therefore, it is not a truth of being. It differs from the belief that twice two is three only in degree, not in essence. It is not strange, therefore, that we have searched in vain for human happiness as an outgrowth or condition of earthly environment. What we term the miseries of human existence are but the illusions of sense; they spring from ignorance of the true,—an ignorance which will disappear more and more as we progress into better beliefs, and finally into true understanding.

"But," says one, "for all practical purposes, what is the difference whether you call human suffering a seeming or a reality?" In answer it may be said that if human suffering were a reality it would be true, and as a truth it never could cease. All will admit that they have many beliefs from which they suffer for a time, and which they afterwards find to be wholly false. A false belief is not true because it leads to a sense of suffering. A sense of suffering is not the test of reality or truth.

Later, I returned to the mountains, to the prairies, to the ocean, to the city, and they brought me new suggestions of beauty and brightness everywhere. A great calm came to my heart, and a broader and tenderer love for my fellows, and I questioned God's ways no more.

Reflection.

W. D. STRONG.

In our work in Christian Science we unveil in individual consciousness the true reflection of God, and reject whatever is unlike the perfect creator. If we simply say, "I know error is nothing," this does not destroy it; we must first see what it stands for; expose it under every guise as a lie, give it neither power nor reality in our own thought; then we have begun, however faintly, to *prove* the truth of our statement.

The more we are overcoming error, the less we shall voice it, for by watchfulness our thought will be constantly protected against its hidden subtleties, and we shall attain the perfect consciousness which instantly detects, and thus uncovers, error's secret methods, their influence on others as well as on ourselves.

In proportion as the true reflection is brought to light, we attain to the "mind of Christ" spoken of by Paul, and in the degree we realize that we have no consciousness apart from God, we attain to that attitude which listens for His voice. We are helped by knowing that we are not doing the work; but that our part is to stand and witness the overcoming of Truth, the glory of God. When error's dream-shadows are cast across the disc of consciousness, it is our own fault if we are mesmerized by them, since we know that by reversal their very seeming proves the existence of the reality,—that a genuine coin must exist before its counterfeit can appear. Science and Health (p. 267) says, "Thought is borrowed from a higher source than dust, and, by reversal, errors serve as waymarks to the one Mind where all error disappears in celestial Truth." How much better it is for our growth, to deny error, instead of serving it by saying, "I have so much to meet." It is only by persistent denial of its slightest claims, that we find the open door to the fuller realization of divine Truth.

In order to have error disappear to our consciousness, we must do our part faithfully. Let us hold ourselves mentally apart from all impurity, knowing that thus only can we reflect God, and that Truth can never be reversed by error, which has no foundation, no authority, and no action, whereas the reflection of Truth is the expression of the divine nature in man and the universe.

Gratitude to God untold should be ours for giving us our Leader, through whose labor of love the uplifting truths of Christian Science may be made practical in the lives of all who will receive its pure teaching.

Jealousy Overcome.

ZAIDEE D. ADAMS.

It has been said that jealousy is one of the primal passions of mortal man. It is therefore incumbent upon all Christians to eradicate this manifestation of error as quickly as possible, for when we are no longer under the influence of this sometimes unrecognized fault, there is room for the growth of beautiful thoughts and kindly acts of love. It is astonishing how spontaneously the flowers of good will and brotherhood spring up when this bitter weed no longer crowds the soil. For instance, how eagerly the dead are praised,—those who are no longer our rivals in any sense. The good deeds of the departed crowd thickly upon us, and we are glad to have the opportunity of speaking kindly of them. Now, instead of this post-mortem praise, how much better to rid ourselves of every suggestion of envy and jealousy by promptly meeting it with denials of its right to exist, and by declarations of Love's power, thus saving ourselves and others much unnecessary pain, and leaving a clear space in consciousness for divine Love to fill and overflow. If we but remember that the supply of good is inexhaustible, we will not try to climb upward by pulling down our brother, but will strive to show that the supply of infinite good is ours, and that this supply increases for us as we utilize its abundance.

[Written for the *Sentinel.*]

Love's Sufficiency.

MARY WHEELER.

I ask no riches but to know
Love doth give all.
I wish no pleasure but to go
Where Love doth call.

I crave no wisdom but to learn
Self to refuse.
I seek no honor but to earn
Love in Love's use.

Self-ruled, I nothing am or have;
Love-led, all things are mine.
Losing myself, Love me doth save:
Such is Love's law divine.

Selected Articles.

Does God Afflict Us?

Many people have a very strange idea of Deity—seem to think of Him as simply a magnified human being possessing all the qualities of the carnal mind. Their God is a God of both love and wrath—at once a preserver and a destroyer. They do not stop to think that two opposite qualities cannot exist in the same cause, and it appears to make no difference to them how paradoxical their belief may be. The logical process seems something entirely foreign to their method of reasoning—and that they do not think straight is a matter of indifference to them.

It is a great pity that in such an important matter as the very starting-point of existence—God—they should be so careless of accuracy, since no right conclusion can ever be reached if the premise, or starting-point, be wrong. The popular mind appears never to have discovered that that which stands for the preservation of a thing, cannot possibly stand also for its harm—for its disintegration or destruction. It is admitted that God is the preserver of all things, and then straightway many declare that He also kills and destroys. It is said that He "spares" one's life, as though His chief business were to kill people. It would be just as rational to speak of salt "sparing" the soundness of foodstuffs, as to speak of the author and sustainer of life "sparing" life. It would be just as easy for the sun to cause darkness, as it would for God—who is, in the very highest and most literal sense, the Life of the universe—to in any way contribute to the abnormality or disintegration of anything.

The popular thought has lost sight entirely of the fact that it is through the transgression of the law of God that untoward conditions come about. The Biblical explanation is that "sin" produced the long line of wretched conditions from which humanity suffers, but mankind seems to feel no hesitancy whatever in reversing the fact and charging the "wages of sin" up to Deity. And a very peculiar thing about it is that people well versed in the letter of the Scriptures, and even many ministers of the gospel, talk as though sin had stopped having its legitimate effect, and that the cause of all good had somehow changed places with sin and now causes sorrow, sickness, and death. They will tell you that God has sent this and that afflictive circumstance upon us for our good, and they seem not to know that such a thing is utterly impossible, by reason of the very office and nature of Deity, as the One "who forgiveth all thine iniquities, who healeth all thy diseases."

This awful misconception of Deity is no doubt largely due to the fact that many very good people suffer a great deal, and it is difficult for the popular mind to understand that if sin, and sin only, causes suffering, how it is these good people suffer so much. It seems to be much easier for the popular thought to see the impossible; viz., that God in such cases punishes goodness with affliction, than it is for it to see that these good people can possibly come within the category of the ungodly. The reason for this is, that the popular mind is used to thinking of certain things, such as lying, stealing, committing murder, etc. (of which the good people referred to are not guilty) as sin, and loses sight of the important fact that all transgression of the will of God is sin. Now the plain will of God is that His creation shall depend upon Him—trust Him—in all things, and it will be found, upon close examination, that many very good people have very little faith (trust) in God and a great deal of faith in evil—you can't have both. They are constantly expecting evil things to happen, little realizing that this very unfaith in God is the worst of sins, and that out of their fear in various directions—out of the depleting, debilitating, disorganizing, disease-promoting effect of fear on the physical being—grow the afflictions which they have been supposing were God-sent. One of the best men we ever knew always looked under the bed before he slept. It would have been considered sacrilege by the general public for any one to have accused that man of sin, and yet his distrust of God was woefully evident in the fear which made him look under the bed every night.

That perfect poise of being which is the fountain of happiness and of health does not grow out of fear, and fear when analyzed is found to be nothing but belief in evil, *alias* unfaith in God—the chief of sins. Fear—distrust of God—is the most universal thing in the material universe, and is the thing which through the ages has been our undoing. We are afraid of everything—to us all things seem loaded with harm, and instead of it having been God who has afflicted us, we have afflicted ourselves and missed the immunity from affliction which trust in God would have brought.

In unwittingly carrying out this conspiracy against ourselves, mankind is misled, too, by a misinterpretation of Scripture—taking as literal the beautiful figures of speech with which the Bible abounds, and taking as mere figures of speech its most literal passages. As soon as this subject of affliction is broached, you will be quickly told that "whom the Lord loveth he chasteneth," and to this passage is pinned the doctrine of "God's afflictive providences," it being forgotten the while that it isn't possible for God and sin to both perform the same office in the universe—that if one afflicts, the other, its opposite, cannot possibly do so. The passage referred to—"Whom the Lord loveth he chasteneth"—is one of the most striking and beautiful figures of speech in the Bible. The chastening that God (Love) does is exactly that which the signboard does to the weary traveler. We start to a certain place, and after traveling twenty miles a signboard lifts its friendly hand and says, "Stop, you have traveled twenty miles in the wrong direction." We feel sorely chastened—fretted and annoyed—to think that we have wasted so much time and energy. But the chastening which the signboard has done was really an expression of love, and not only pointed us in the right direction, but saved us a further waste of time and effort. Just so the only chastening that God (Love) ever does is to reveal himself, through His immaculate Son, in our pathway and show us our mistakes; and although the contrast between the right and the wrong chastens us and makes us feel much regret over the unworthiness of the past, yet we are blessed in this chastening. Let a person do a really good act to the person who has treated him ill, and the latter feels at once and sharply the only chastening which God (Love) ever brings. Editorial in *Portsmouth* (Va.) *Ledger*.

Christian Science Healing in Halifax.

Not a little inconsequent and thoroughly worthless comment has been leveled at Christian Science and Christian Scientists, yet the number of Mrs. Eddy's followers grows apace, and all hold with greater tenacity than ever the truth which they profess. The members of First Church of Christ, Scientist, this city, are being recruited daily from those who assert that they believe in Christian Science because it has to them personally proved as efficacious in the cure of physical disease as of spiritual, when all else has failed. The *Stroller* could enumerate, if good taste did not forbid it, at least five cases of alleged physical cures which are simply marvelous. The fact remains that whatever cured them, cured they are. "Whereas I was blind, now I see," said one, nor is any man likely to be shaken by sneers or ridicule who has an argument like that on which to plant himself. It is an impregnable rock, and cannot be shaken. When all is said, it remains—so far as may be judged by its adherents in this city—that it is a belief which makes people singularly happy, gentle, unselfish, both in action and—what is much more unusual—in speech. In the various discussions which have from time to time engaged public attention as between Christian Scientists and

Digitized by Google

their opponents, the former have shown a notable self-restraint under occasionally very malignant attack. The world in general has a remarkably sound belief in the logic which judges a tree by its fruits, and has very high authority for doing so. Christian Science, as it may be judged by its local adherents, is a fruit-bearing tree whose leaves are uncommonly like those of one said to be for "the healing of the nations."—*Halifax* (Can.) *Evening Mail.*

No one will dispute for a moment that the greatest need in the world to-day is for some such efficacious plan of moral and physical salvation as that which Christian Science offers. On every side we see great suffering and sorrow. Advocates of medicine have made noble efforts to alleviate this, but have they succeeded in lessening disease? Are not conditions in this respect as deplorable to-day as in the time of Jesus and the apostles? Is there not as great need of succor now as then?

It is upon this scene that Christian Science has made entrance, and with all the energy its followers can summon to their support they have called upon men and women to lift their eyes to higher things and seek in the contemplation of that which is spiritual and holy the much needed relief for the ills of mankind.

It is no new thing to find opposition to this message from among the clergy and the medical fraternity, although many of its advocates have arisen from among their ranks. From the very outset Christian Science has had to prove its worth every step of the way. Had it not been able to offer a reasonable return to all who sought its help, it would have long since fallen by its own inadequacy.

ALBERT E. MILLER.
Williamsport (Pa.) *Gazette.*

Our critic asks how we account for disease in the dumb animals if disease originates in the mind. It should be understood that the animal is subject to the same laws which govern mortal man. For this reason the wild animal is less subject to disease than the domestic animal; and the animals owned by those who understand that God cares not only for man but for the beast, and for the lilies of the field, fare much better than those which are under the influence of people who depend less upon God. Isaiah prophesied, "The wolf also shall dwell with the lamb, and the leopard shall lie down with the kid; and the calf and the young lion and the fatling together; and a little child shall lead them." He did not say this would come through the spiritual regeneration of the animal, but gave his reason therefor, "They shall not hurt nor destroy in all my holy mountain: for the earth shall be full of the knowledge of the Lord, as the waters cover the sea." Such a time was to be contemporary with our attainment of the fulness of spiritual knowledge.

That men have recovered from illness accidentally or incidentally, or apparently under the use of medicine, or in spite of medicine, does not in any degree affect the authenticity of Christian Science healings, but adds testimony to the teaching of Christian Science that the apparent healings of medicine are possible because of changes in the mental condition of the patient. The fact still remains, that multitudes are alive and well who showed no signs of improvement until they commenced the treatment of Christian Science.

ALFRED FARLOW.
Boston Times.

Admission to Membership.

The next admission of candidates to membership in The Mother Church will be June 5, 1906. Applications must be in the hands of the Clerk on or before May 14, 1906.

An application sent to the Clerk of the Church does not constitute the applicant a member; he must be elected to membership by the Christian Science Board of Directors, at which time notice of election will be sent.

Among the Churches.

Organization in Cornell University.

Accepting the privilege given in the Manual, the students of Cornell University who are members of The First Church of Christ, Scientist, Boston, have formed the Christian Science Society of Cornell University. The meeting for organization was held Feb. 16, at Barnes Hall, the home of the Cornell Christian Association. Permission was also given to hold the regular monthly meetings of the Society at the same place.

The objects of this Society as given in its constitution are: (1) To unite the Christian Scientists within the University in closer bonds of Christian fellowship; (2) To welcome Christian Scientists entering the University, and (3) To afford, to those so desiring, opportunities to learn the truth about Christian Science, as taught in the Bible and in "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy.

The secretary of the Society will be glad to hear from graduates of Cornell who are members of The First Church of Christ, Scientist, of Boston.

H. E. WEAVER, *Secretary.*

Little Workers in Plymouth, Wis.

Last July, when we asked our little Sunday School tots if they would have their usual vacation, they replied in the negative, as they had agreed to save all their collections until they reached twenty-five dollars for The Mother Church Building Fund. Circumstances made it advisable for us to ask the Sunday School to take its usual vacation, and at once some of the little ones proposed that during the vacation they should all earn and save as much as they could for the Fund. At the close of the vacation, Sept. 1, though only sixteen in number they had collected ten dollars, and by Thanksgiving they had twenty-six dollars. With love-offerings contributed in different ways their savings now amount to seventy-five dollars, which they forward with love and gratitude to The Mother Church.

Correspondence.

Stillwater, Okla.

Wishing to be obedient to our dear Leader's request, the children of First Church of Christ, Scientist, of Stillwater, Okla., have sent to-day to Stephen A. Chase a love-offering of ten dollars for the Building Fund of The Mother Church. Our church was built and dedicated in 1895 and it was the first Christian Science church in Oklahoma. We know Love guided in its building and is guiding in the building of The Mother Church. We send our love to our dear Leader, who has so reflected the divine Truth and Love that we can see how to work out of the seeming material darkness into the eternal light.

The sincere and devoted Sunday School scholars of First Church of Christ, Scientist, of Stillwater, Oklahoma.

MRS. I. ALICE TALBOT, Teacher of the first class.

Omaha, Neb.

The children of our Sunday School are happy in being able to further aid the early completion of The Mother Church Building Fund by temporarily suspending our local building fund, and contributing all their collections, except that of the first Sunday of each month, which will be devoted to the needs of the Sunday School general expenses, to The Mother Church Building Fund. Accordingly, until the need is supplied, these remittances will go forward on the first of each month. The first remittance will include the balance now on hand in our local building fund.

BLANCHE IRENE MARSHALL, *Assistant Secretary.*

Lecture for The Mother Church.

HON. CLARENCE A. BUSKIRK, member of the Christian Science Board of Lectureship of The First Church of Christ, Scientist, will lecture on Christian Science at Symphony Hall, corner of Huntington and Massachusetts Avenues, Boston, Tuesday evening April 10, 1906, at eight o'clock. The lecture will be free and all are cordially invited to attend.

The Lectures.

Prescott, Arizona.

A lecture on Christian Science was given last evening, Feb. 22, by Mr. Bicknell Young, in the Elks' Theatre, to a large and attentive audience. The speaker was introduced by Hon. E. S. Clark, Territorial Attorney-General, who said in part,—

Probably the ideas of most of us relating to the subject of the lecture are extremely vague. So far as I am personally concerned, I can say this with absolute assurance. And yet there is a wide and increasing interest in it. The presence of this great audience here to-night testifies to it. The mere mention of it excites instant attention everywhere, and attention leads to investigation; investigation leads to knowledge, and knowledge leads to a proper understanding of facts and principles, and this, I am told, is one of the corner-stones of Christian Science. At least, the doctrine is offered to us in the name of truth and justice, and in the spirit of brotherly love. In like manner, he who first healed the sick and raised the dead offered the religion of Jesus, and if the claims asserted by the adherents of Christian Science seem at first glance to be startling, it must be remembered that the first to exploit a great truth has ever been assailed by the skeptic, and the posterity of the doubting Thomas keeps pace with the onward sweep of demonstration and achievement. Christianity is the beacon-light of the world, yet the lowly Nazarene yielded up His life on the cross because men would not accept its truths.

Men live in captivity because of ignorance, yet their bonds have become somewhat loosened as they have discovered and applied the truth. Working within the narrow limitations of the finite, they have accomplished much; it is the claim of Christian Scientists that mankind has failed because of disbelief in the availability of infinite aid and co-operation. Who then shall say that as Christian Science becomes better understood it may not work out in large measure Christian purposes on earth, and that the splendid benediction which of right belongs to those whose hands dispense blessed relief from pain and disease may not follow its disciples?—*Journal-Miner.*

Jamestown, N. Y.

The First Unitarian Church was hardly adequate to accommodate the large crowd eager to listen to the address yesterday afternoon [March 18] on Christian Science delivered by Rev. Irving C. Tomlinson of Concord, N. H. The audience was a representative one, there being many who are attendants of other churches. Rev. R. S. Kellerman of Bradford, Pa., in introducing Mr. Tomlinson, spoke as follows:—

Ladies and Gentlemen:—I desire first of all to thank the members of the Christian Science church for their cordial invitation to be present and to introduce to you my old-time friend and brother. You are the youngest, and perhaps I might say the fairest, of the daughters of the great Christian church. If you are an alien, and persecuted, I greet you all the more cordially, because, after an existence of one hundred and thirty-six years, my church still waits in vain for the fellowship of the churches.

I am glad to be present on this occasion, because I find myself in accord on the great basal doctrines of the Christian Science church: (1) God—the Allness, Wholeness, Supremacy, and Sufficiency. He is Spirit, and Spirit is enduring Substance. (2) Man—the son of God. In God's own image—a child of God. (3) Christ Jesus—son of God. He is Leader, Enlightener, Teacher, and Friend. His life-work was teaching, cleansing from disease and sin the bodies and the souls of the heavy-laden and oppressed. He gave all this work into the hands of His disciples, who in turn have committed it to us. (4) The consummation of things is good, and good alone. Evil is temporary and must perish. Good alone is permanent, and all mankind will reach at last the supreme summit of felicity.

Being, therefore, so nearly in accord with their teaching, I entertain the highest appreciation of their efforts, crowned with such extraordinary success, to practise their religion. I have sometimes wished that the flood-tide spirit of your church might sweep me off my feet and bear me upon its crest into the sea of your greatest activities and enjoyment.

I am not here to vouch for the integrity and the pure life of my brother. I could do so if it were necessary, but his life is clean and singularly open, like the pages of a book. Neither am I here to vouch for his understanding of Christian Science. You yourselves will bear witness to that shortly. It remains for me only to assure you that this is Rev. Irving C. Tomlinson of Concord, N. H., whom I take pleasure now in presenting to you.

The Jamestown Post.

Montclair, N. J.

Rev. Arthur R. Vosburgh lectured on Christian Science in Montclair Club Hall, Feb. 18. He was introduced by Edward H. Holmes, cashier of the Bank of Montclair, who said in part,—

I have said that Christian Science is new, but by that I do not mean to be understood as saying that Christian Scientists claim the discovery of any new truth. There is no such thing as "new Truth." Truth always has been! must always be! But it is a newly discovered old truth which is set forth in Christian Science, which Christian Scientists not only believe but which they are endeavoring to set forth in their daily lives, and it is my firm conviction that no one investigates this Science,—as it has been my privilege to do to some slight degree,—with a mind open and free from prejudice, without becoming convinced that Christian Scientists have found something of which this old world of ours stands in need; and which the institutions and teachers of all ages, scholastic and theological, have in some unexplained manner failed to grasp.—*Correspondence.*

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Our Leader's Tribute to the Bible.

In these days of Bible criticism—higher and lower—it is well that there should be at least one to speak whose estimate of the Book of books is based upon actual demonstration of the truths found therein.

Christian Scientists do not need to be told what their Leader thinks of the Bible—they find that opinion emphatically expressed in all her works; but the following tribute to the Bible, brought out by Mr. Wessels' gift of an interesting specimen of the Martin Luther Bible, will be none the less appreciated by them for its inspiring spirituality.

To those who are lovers of the Bible but not Christian Scientists, these words of our Leader will reveal a phase of Mrs. Eddy's character and thought which cannot fail to impress strongly upon them the sincerity of her purpose and the richness of her achievement.

MRS. EDDY'S LETTER.

Pleasant View, Concord, N. H., March 24, 1906.
Mr. Edward J. Wessels, 275 Clinton Avenue,
Brooklyn, N. Y.

Dear Student:—I am in grateful receipt of your time-worn Bible in German. This Book of books is also the gift of gifts; and kindness in its largest, profoundest sense is goodness. It was kind of you to give it to me. I thank you for it.

Christian Scientists are fishers of men. The Bible is our sea-beaten Rock. It guides the fishermen. It stands the storm. It engages the attention and enriches the being of all men. Sincerely yours,

MARY BAKER EDDY.

MR. WESSELS' DESCRIPTION OF THE BIBLE.

275 Clinton Avenue, Brooklyn, N. Y., March 18, 1906.
The Rev. Mary Baker G. Eddy.

Beloved Leader:—While traveling in Saxony last summer, we halted for a day in Herrnhut, which, you know, is the headquarters of the Moravian church. The quaint village contains many things of historical interest.

During our visit to the museum, I was able to purchase an ancient Bible, which goes to you to-day. It is in fine condition. The copper engravings are very interesting and are an acute reminder of the concept which Germans of that day had of Holy Writ. Looking over its pages, one cannot help wishing that they, too, had possessed Christian Science to ease and beautify their often hard lot, for then, more perhaps than now, the material so greatly overshadowed the spiritual.

The strong belief in personality appears in the large amount of space devoted to Dr. Martin Luther and in the page plates of the titled personages under whose auspices the edition was issued. Happily we are moving away from these tattered beliefs, and the day must come when the Bible will appear minus the flattering and unearned dedication which prefaces too many editions.

What is now your Bible recites that Dr. Luther began the translation in 1522, ended it in 1534, and that it was printed in Nuremberg in 1733. Its red print is undimmed; although the inscriptions of the various owners have become somewhat faint, the print has not. The Apocrypha is included.

Will you accept this memento, with our love and grateful appreciation of your unselfish, tireless toil for us and all mankind? Lovingly,

EDWARD J. WESSELS.

This Bible has found a place in Mrs. Eddy's library at Pleasant View.

LEWIS C. STRANG, *Associate Secretary.*
Pleasant View, March 29, 1906.

Sin its own Punishment.

THE following excerpts from an editorial in the Philadelphia *North American* entitled "Reflections on Hell," are strikingly in accord with the teachings of Science and Health, and they indicate in a measure at least the extent to which Mrs. Eddy's views are influencing the opinions of thinking men upon the vital facts of religion. The *North American* says,—

"The fair, reasonable supposition is that men in the other world are just about what they were in this world. Possibly there may be some process of intensification or large development of personal qualities; but, upon the whole, there can hardly be any immediate revolutionary change at the moment of death. If, then, a man who is depraved and degraded and filled with greed and uncleanness, shall be struck by lightning and killed at the very moment another man dies who has lived a life of spiritual exaltation and self-sacrifice, how could the claim be made that both went at once to the same place and entered into similar circumstances in the world beyond?

"Nobody can help believing that both men, an hour after death, were just what they had been an hour before death; and, as they could not have been congenial companions in this life, there is a fair inference that they could not have fellowship or love for the same things in the other life. Of all the miracles that have been recorded as fact, or have been invented or guessed at, no miracle could be more amazing or more incredible than that involved in a proposition that a man's entire inner nature—the real man, indeed—can be completely transformed by the dissolution of his body. As well ask us to believe that a man may divest himself of his personality when he puts off his overcoat.

"Can it be that the man who loves evil in this world, and finds a kind of joy in cleaving to it, carries his love with him into the world beyond—the very same love—and then has a sort of happiness from his devotion to spiritual evil? The man here who has become debauched and degraded and likes to have it so is completely shut out from the heavenly things of earth—the pure heart, the pleasures of doing right, the joys of domestic peace, the blessings of religion. It is a kind of hell which forces him to miss the best things here. Is it incredible that the other hell of which we hear so much is just that—the man's exclusion of himself, by his own act, from the celestial glories of the spiritual world?"

Mrs. Eddy writes in Science and Health (p. 290): "If the change called *death* destroyed the belief in sin, sickness, and death, happiness would be won at the moment of dissolution, and be forever permanent; but this is not so;" and on the following page she says, "As man falleth asleep, so shall he awake. As death findeth mortal man, so shall he be after death, until probation and growth shall effect the needful change." The old doctrine of eternal punishment and the belief in a lake of burning brimstone are giving place to the gospel of universal salvation, and in this reformation of religious fundamentals Christian Science is at the forefront. No one knows better than the Christian Scientist that sin brings its own punishment. He also knows that escape from this punishment must come through the forsaking of sin, and that the denial of sin's reality does not give license for sin, but rather distinctly aids us in its abandonment.

ARCHIBALD MCLELLAN.

"Remember Lot's wife."

THE question often presents itself to the earnest student of the Bible,—Why did not more of the people accept and adhere to the teachings of Christ Jesus? It would seem that his ministry left nothing unprovided for, since it was at once the culmination and fulfilment of prophecy,—an epitome of all the good achieved or hoped for by the Hebrew nation. The good which he revealed and demonstrated was not negative or privative; its rule was ever, "Seek ye first the kingdom of God [good], . . . and all these things shall be added unto you." The sufficient answer to this question is found in the fact that people felt there was something to be given up, and this made them pause. It has been said that "fear is the attraction of mortals to earthiest earth." Thus when Lot and his family were fleeing from the doomed city of Sodom, although literally driven out by smoke and flame, they yet feared to trust the divine guidance which had brought them out of deadly peril. The wife longingly looked back upon the scene of their luxury and false pleasures—and perished.

That this tragic experience is of special significance to Christian Scientists is very clear from the Master's warning concerning the time "when the Son of man is revealed." He spoke to his disciples of the days before the flood, the gayety, the revelry, the absorption in materiality, then the destruction of this false sense of life. He also reminded them of the destruction of Sodom under similar conditions, and said, "Remember Lot's wife." In our efforts to escape from materiality with its false sense of pleasure and pain, of life and substance, we need to bend all our energies to the task of reaching a place of safety,—"the secret place of the most High,"—not merely resting content with greater ease in material belief, as such a condition of thought invariably tends toward retrogression, and may even lead those who indulge it to look backward, perchance to the evils which were once given up.

How often did the Master counsel those who essayed to be his followers, to count the cost before they started out; and yet in all his warnings there is no hint that would favor hesitation. He was daily demonstrating the allness of spiritual being and the nothingness of that which seemed real to mortal sense, therefore he knew what glorious possibilities lay in the free choice of the spiritual, and that even the seeming deprivations which accompany this choice are "not worthy to be compared with the glory that shall be revealed in us." So said St. Paul, who had proved the truth for himself; who actually gloried in his trials and said, "I am exceeding joyful in all our tribulation." No hint here of looking back to the fleeting joys and false pleasures of the senses! Here was one who had proved what Christian Science to-day insists upon; namely, that joy and not woe, fruition not failure are the guerdon of those who faithfully follow Christ, Truth.

The "Son of man"—man as God's perfect idea—is clearly revealed to those who experience the healing power of Truth in Christian Science. They know what a priceless possession is the understanding of the truth, and the great Teacher's warnings show the need of unceasing watchfulness that we be not robbed of this treasure. To these are added the constant admonitions of our revered Leader, who is showing us how all the promises may be surely and speedily realized if we look not back to the plains of sense, but press forward to the city in which is no sorrow, sin, pain, or death.

ANNIE M. KNOTT.

Christian Science Reading for the Blind.

A RECENT addition to the Christian Science publications is "Rudimental Divine Science" by Mary Baker G. Eddy, printed in New York point for the use of the blind. This further expression of our Leader's love for all mankind has already met with such grateful recognition from those directly benefited, that an account of the steps that led to it will be of interest.

Last October Mrs. Eddy received a letter from Mrs. Jennie M. Hayes of Naples, N. Y., asking for permission to copy portions of Science and Health in raised type for the purpose of study. Mrs. Hayes wrote: "We who are blind are almost debarred from the means of gaining an understanding of Christian Science, not being permitted to receive class instruction and being unable to read for ourselves."

While Mrs. Eddy did not deem it wise to grant the request to copy from the Christian Science text-book, this appeal touched her, and she forthwith made arrangements for printing her important work, "Rudimental Divine Science," in type for the blind. With customary thoughtfulness, one of Mrs. Eddy's first acts, when the book was ready for distribution, was to send a copy to Mrs. Hayes. Mrs. Hayes' letter of appreciation of this courtesy follows:—

Naples, N. Y., March 17, 1906.

Dear Leader:—The little book reached me safely, and I thank you with all my heart. I thank you.

Reverently and lovingly your student,

MRS. JENNIE M. HAYES.

This letter is only one of many received by our Leader from the blind, who already have found inspiration and comfort in perusing her writings for themselves.

LEWIS C. STRANG, *Associate Secretary.*

Pleasant View, March 23, 1906.

Letters to our Leader.

Indianapolis, Ind., Feb. 24, 1906.

Mrs. Mary Baker G. Eddy,

Pleasant View, Concord, N. H.

Beloved Leader:—A heart filled with gratitude to you for the great benefits that have come to me through the study of "Science and Health with Key to the Scriptures" prompts me to make acknowledgment to you of blessings received. I was located in a small place in Michigan when a friend loaned me Science and Health. At that time I knew absolutely nothing about Christian Science, but I studied the book earnestly, and it unfolded to me from the beginning. I knew nothing of practitioners nor where to find one, yet I knew I needed help. I got that help through the study of Science and Health, working out my own salvation by earnest study, and I soon threw away all my medicines, though I was then taking several kinds, and had been for five years. That was over four years ago; I have never taken a drop of medicine since, and I am now as healthy as any one. I had never attended a Christian Science service until after I had disposed of the medicines and turned to Truth for relief. When I think of the change that has come over me through reading your valuable works, it seems astonishing,—medicine thrown away; the tobacco habit overcome; my spare time devoted to the study of Christian Science and in seeking a better understanding of divine Principle, as pointed out by you. I was brought up in one of the strictest orthodox denominations, raised on old theology and medicine, as my father was a physician and an uncle a minister.

I take Science with me in my business, and what a help it is. If the world only knew what that "little book" contained, or had the slightest conception of its contents, how eagerly they would reach out for it. It was my privilege to attend class last November taught by one of your students. Begging pardon for intruding on your valuable time, I am

Yours in truth and love,

J. A. MITCHELL.

Boston, Mass., March 7, 1906.

Dear Leader:—I greatly appreciate your kindness in writing me, and the fact that I do not intrude upon your

Digitized by Google

thought more frequently is in evidence that I have learned to keep my impulses somewhat in leash.

I am more and more impressed with the significance to the Cause of your insistence upon an exact statement of the scientific apprehension of truth, and of late I have been thinking much of the discrimination you have made in the use of the words idea and ideal. In Science and Health, page 565, line 16, it reads "Christ, God's idea." On page 333, line 26, it reads "The divine ideal, or Christ." Are we right in understanding that Christ is the "divine idea" with respect to God, but the "divine ideal" with respect to man—God's idea being the ideal of human aspiration, whose attainment is the goal of our endeavor? Do not be troubled to answer this if I have rightly sensed your thought.

And now let me tell you of a most interesting case of healing. A young Norwegian recently told me his story, in such a spirit of thankfulness and with such a light upon his face as would have gladdened your heart. He had been a dreadful sufferer from bone disease, and had undergone ten operations, each of which left a running sore that would not heal. All hope of his recovery had been given up, and at the end of three bedridden years his death was anticipated from day to day. At this juncture a friend who had been in America returned to his Norway home, bearing a copy of the "little book," and though he knew but very little of Christian Science he gladly told the long-time sufferer of its healing work, and, so far as he could, of its teaching. This drop of the water of Life served to revive the sufferer, and he straightway began to improve, so that in a little time he was getting about on crutches, and later with canes. Meanwhile the friend returned to America and he was left with nothing but the quickening assurance that divine Truth does heal the sick, and when a favorable opportunity presented itself to come to America he left all that he might learn more of that which had healed him.

He arrived in New York about five years ago, without friends or money, and wholly ignorant of the language, but he succeeded in getting work at three dollars per week, and for two years or more he lived on bread and water, during which time he secured a copy of Science and Health and read it through three times when as yet he knew the meaning of only here and there a word! "I didn't know the English," he said to me, "but I knew the truth that healed me was in that book, and I knew that my ignorance of the words could not keep it from me; and though alone and so poor, I was happy all the time." His face was all aglow as he told me of it, and I could but think of what an interesting addition he had made to Paul's enumeration of the things which are not able to "separate" us from the love of God. During this period of struggle he was once taken very ill, but he turned to the book with the thought, as he said, "The truth is here and it will heal me," and his simple faith found its fruition. He is now well, walks without a cane and with only a slight limp, and his love for you, like that of the unnumbered thousands who have been healed through your ministry in Christian Science, is very tender and true. His heart is centered on Christian Science work, and his one purpose and plan is to learn more of the truth and acquire a better command of English, so that he may return and spread the good news among his people. How little the old Norsemen dreamed of the greater discovery that was to be made for them in that fair Atlantis whose shores they reached after long and heroic struggle!

Wife joins me in tender love to you. We are earnestly seeking, and with ever-increasing joy, to live the Christ-life to which you have called the world,—a life of honest, unselfish, and consistent loyalty to the redemptive truths of Christian Science, every moment and in every thing.

Your affectionate and grateful student,

JOHN B. WILLIS.

Testimonies of Healing.

In February, 1895, I became ill with the grip; and as I had previously suffered from the same ailment without any serious effects resulting therefrom, I purchased some quinine and proceeded to doctor myself. After a few days the symptoms of grip were overcome; but I then became subject to nervous paroxysms which I thought resulted from having taken too much of the drug. The paroxysms were accompanied with much dread; they depressed me greatly, and completely unfitted me for business while they lasted. I soon placed myself under the treatment of an experienced medical practitioner, by whom I was treated for nine months, during which time I gradually grew weaker and less able to resist the paroxysms, which were occurring with increasing frequency.

Late in November, I became so weakened that I lost hope of help from medical treatment; but I thought a change of climate and work might benefit me. This was not convenient at the time, and at the solicitation of friends, I reluctantly turned to Christian Science for help; but with little hope of its healing me, because I was an agnostic. I had never before been able to glean anything helpful from my conception of religion.

For several weeks I had been unable to sleep without first taking a sedative. The evening I resolved to give Christian Science a fair trial, after receiving a treatment I threw my medicine away; and that night I slept soundly and awakened in the morning feeling more refreshed than I had at any time for months.

The experience of this one night and the evidence of benefits received by friends were sufficient to encourage me to make a determined effort to regain my health; and, at the same time, learn something of this method of healing. I then commenced the study of Science and Health, devoting about three hours each day to this work; and, as fast as I learned how, I applied the instruction so gained in my daily experience. At that time my healing seemed slow. Although I received treatment for twenty-two weeks, it required two years' time before I could say I was thoroughly healed and the paroxysms were of the past. At the end of this two years, I had gained forty-five pounds in weight. I also had an entirely new apprehension of religion. The Bible, that before appeared as an impractical guide, became animated with instruction and admonition when interpreted by our text-book.

Now for eight years I have depended wholly on Christian Science, and since being healed I have enjoyed the best health of my lifetime.—ROBERT O. CAMPBELL, Peoria, Ill.

Four years ago, when first told of the healing power of Christian Science, I was suffering from a severe attack of bronchitis. As I was not getting any better under *materia medica* I decided at once to try this Science, and was very quickly healed by reading Science and Health. This encouraged me to apply the same truth for an illness from which I had suffered for about seven years, and which had been diagnosed by different physicians and specialists who treated me, as nervous prostration, stomach trouble, heart trouble, and locomotor ataxia. At one time I was only able to walk across the street and back. Not having received any permanent benefit from *materia medica*, I was only too glad to turn to Christian Science for help. While the healing was slow, the disease has been entirely overcome, also chronic sore throat, and headache from which I suffered nearly every day. All this has been done through Christian Science alone, as I have never once used any material remedy since the day I was first told of this truth. I am very thankful, not only for the physical healing but for the spiritual uplifting also. I am deeply grateful to Mrs. Eddy for this understanding of Christ, Truth, that heals us spiritually as well as physically.

H. L. BURGESS, Detroit, Mich.

Digitized by Google

My mother suffered with dropsy of the heart for many years, and was told by several prominent physicians in different cities that she could live but a short time. She was, however, healed in Christian Science, inside of a month, when sixty-eight years of age, and was able to attend to her household duties. This was in 1894. Since that time, until about two years ago, she has not been obliged to ask for help, having been able through her study of the Bible and Science and Health to keep well, and to help others many times.

About two years ago she was in a railroad wreck and when removed she was thought to be dead. She was laid on a stretcher, covered with a blanket, and remained in that condition for several hours. When consciousness returned she opened her eyes to find a woman bending over her, and when she asked what was the matter the woman was startled at a voice from one supposed to be dead. Help was summoned, and my mother answered all questions clearly, all the time wondering how she could get Christian Science help. While they were waiting for a train a gentleman sat beside her, picking splinters, gravel, glass, etc., from her head. A ride of eighteen miles by rail was followed by two and a half miles by team to the railroad hospital.

The wreck occurred on Wednesday evening and it was seven o'clock Thursday morning when they reached the hospital. In moving mother it was found that she could not use her arms. After caring for her the physicians decided that owing to her age she could not live, and they would not torture her by trying to set bones, etc. I was notified by telegram at six o'clock Friday evening, and immediately called a practitioner over the telephone and read the message to her. She said, "You know what to do. God is Life." The only thought that came to me was, that God was with my mother, and that He is Life; that in Him she lived and moved and had her being. I knew from the telegram that my mother was not expected to live, and I left my home in Minneapolis to go to her at once, reaching the hospital about eight o'clock Sunday morning. The physician took me to her, after telling me that she was a wonder and that she always said she was all right. She afterwards told me that whenever she was asked how she was, she *knew* that God was taking care of her. The doctors said she had a compound fracture of the shoulder; the muscles of the arm badly injured; one cut across her forehead, two across the nose, two on the left cheek; both ears cut, swollen, and black; and a large cut on the back of the head, with many large bruised spots on different parts of the body. Her whole head was a mass of splinters, etc., and it took days to remove them. There was nothing done for her except to keep the blood washed off, as the physicians felt so sure she could not recover and, in their great kindness, they disliked to cause her extra suffering. On Saturday they bandaged the shoulder and head, but the broken bones they did not try to set.

From the time Christian Science treatment commenced she improved wonderfully. The treatment was all absent. There were times when the suffering seemed intense, but in each case we realized that God is an ever-present help, and Truth was the victor. Two different times the physicians said she could not live until morning, but in a little less than two weeks we left the hospital with all her bandages removed except the one to keep the broken shoulder in place and a small plaster on the back of her head. The scars were almost entirely gone. After a week in Chicago, mother insisted that the bandage should be removed from the shoulder, and that was done. After visiting a while in Chicago we came to our home in Minneapolis and the improvement was very rapid. In a short time she began helping about the house and was soon doing much of the housework, using the injured shoulder with a great degree of freedom.

With hearts filled with gratitude, and hoping that this proof of God's love and care for His children, as demonstrated in Christian Science, may be a help to others, we press on, assured that the way will grow brighter "unto the perfect day."—Mrs. Mary M. Beavis, Chicago, Ill.

[Translated from the German.]

In passing through many and severe diseases I went from one physician to another, and they did all they could to help me. I found temporary relief, but the trouble was not cured. Finally, when I had spent my last money for doctors' bills, but was still suffering pain day and night, and knew not what to do, in my extremity I cried to God. Then God sent me Christian Science through two ladies, who wished me well. I asked for treatment, although I did not know what it would be, but I was advised to attend the meetings first, that I might understand something of it. When I went for the first time, I did not seem to learn much, but one thing became clear to me,—that there really is a God and that He does help us. Because of all my troubles, a doubt had crept in, whether there really was a God; for I had prayed and He did not seem to hear me. Through Christian Science I soon learned that God does help us. The more I attended the meetings the more I understood and the better my condition became, not only physically, but also mentally.

Two years have passed since I first knew of Christian Science, and I have needed neither physicians nor medicine. If an ailment appears I can always overcome it by the truth. I am working for my whole family, and I hope they may all be led to the light. I used to suffer much from fear, but this has entirely disappeared. I know that God is with me and that no evil can befall me. My life is very much changed, I can sleep well at night and have found rest and peace. I am very thankful to God for the truth, and grateful to all who spread the knowledge of the truth.

Georgine Geissler, Dresden, Germany.

I had heard of Christian Science several years ago, but although I was ailing at the time, I never thought to try it for myself. I had gone through an operation nine years before, and was never well after it. The two years following this operation seemed very bad indeed, for three weeks out of four were spent in bed. The doctors could not do anything for me. They finally declared I had heart trouble, which was considered incurable. My trouble growing worse, the family sent me abroad, hoping the change would do some good, but I came back feeling worse than when I left. The fear of appendicitis dogged my every footstep all the way through Europe, so when I came home I felt worse than ever before.

It was then that I heard of a friend's cure through Christian Science. She had tried everything the doctors could think of, but nothing had helped, and I thought if she could be cured, surely it would help me too. She introduced me to a practitioner, and I was completely cured in four treatments. I cannot describe the feeling of relief and joy that came over me when I first realized what it means to be God's child. I saw that I need have no more fear. I felt as if I must tell everybody about my great happiness. That was five months ago, and I have studied hard ever since, trying to understand more of this blessed truth that makes us all so gloriously free. I had been an atheist all my life, though I had always looked for some religion, I knew not what, and when Christian Science was explained to me I knew instantly that this was the religion for which I had been seeking so long. It is getting to be the greatest blessing to me as I grow in understanding. With a heart full of love I am grateful to God, and to Mrs. Eddy for this grand truth.—Helen Bode, Milwaukee, Wis.

For three years I have lived in the sunshine of Christian Science. Never have I forgotten the peace that came to

Digitized by Google

me with my first Christian Science treatment. After the second treatment I took off glasses which I had been told were the only help for me, as I was very far-sighted, but I have never needed them since, although my work requires very close attention. Hemorrhoids, from which I had suffered severely from childhood, and poison from vaccination, also disappeared after some months of studying Science and Health. I have had many other wonderful proofs of the power of Truth to heal, among them the overcoming of colds, burns, and car-sickness.

I am very grateful to God for this glorious truth which sets men free from sin, sickness, and death, and to Mrs. Eddy, who has lived so close to God that it has been possible for her to bear it to a needy world.

VARA SOMERS, Norwalk, O.

I desire to express gratitude for the many blessings I have received from reading the articles and testimonies of healing in the *Sentinel* and *Journal*, and for deliverance from sickness and temptations of different sorts, through the daily study of the Lesson-Sermon in our *Christian Science Quarterly*. I am thankful for the many warnings which have been given us, and those who have heeded these warnings have been saved from many dangers. Last, but not least, I am thankful for a loving Leader, who is faithful to duty's call; through her untiring obedience to divine Principle I am this day able to express gratitude for many benefits received in Christian Science. I am thankful for a home more harmonious to-day than it ever was before. Before I came into Christian Science my home was all broken up; I was in one place and my wife and children in another, but to-day we are all striving to learn the way as it is in Christ Jesus, through Christian Science.

ANDREW H. RUNDSTALLER, Galt, Ont.

I am glad that I have found the open door to Christian Science, and the way to God our loving Father,—the God who knows no sin, disease, sickness, or death. I am now sure that I was saved from death through the truth, and by this truth I have learned that God is not afar off, "for in Him we live, and move, and have our being."

May God bless our dear devoted Leader, Mrs. Eddy, for that wondrous book, "Science and Health with Key to the Scriptures," and for the noble work she has done and is doing for suffering humanity, all through her spiritual understanding of God. Through her teachings I know God to be divine Principle, and what it means to be God's true child and likeness. I have found that this truth takes away sin and destroys all sickness, and as we rely upon God for our help, health, and strength, He guides us in the way and keeps us free.—BENJAMIN F. MAY, Ambridge, Pa.

Our little boy was taken down with scarlet fever one day last winter. At two in the afternoon a physician said the case was serious and was complicated with a severe ulcerated sore throat. At seven o'clock that same evening, through the reflection of divine Love, as taught by our beloved Leader, Mrs. Eddy, every sign of disease had vanished. Later, his little sister had the same disease, and she was cured in one hour. These are only two out of many, many healings in our family. Neither of the children has ever had a drop of medicine, and all the pains and aches which are wont to befall little ones have been met and overcome in Christian Science. For this, for the spiritual peace, for improved conditions in business, and for the ability to help others, all Christian Scientists rejoice, and they continually send their love and gratitude to our revered Leader for her life which has made possible our joy.

CARL H. PIERCE, New York, N. Y.

All through my earlier life I was considered delicate and subject to many physical disorders. In August, 1896, my husband passed on, and for a long time, in my loneliness, I longed for death. One day a dear friend brought me a book on so-called mental science and insisted that it would help me if I would only read it. I seized it as a drowning man would a straw, and studied it faithfully for six years. At this time I was taken down with nervous prostration and could get no help from my study. I lay on my bed praying to be led in the right way. One day I asked my nurse to call up an old friend who was studying Christian Science, and ask her to come to see me. She came to me, full of love, and advised me to try Christian Science. I consented, and through the loving help of a practitioner I was soon on my feet again. I had once owned a copy of Science and Health, but I was not then ready for it. I now borrowed a copy of the book for a few days, until I felt that I was ready to study it in earnest. I then bought a copy of my own, and if I could not get another there is not money enough to buy the one I hold so dear; it is my daily companion. When I was able to go to church again, I went to First Church of Christ, Scientist. There I found such a sweet sense of peace that I felt I had at last found a church home. I am a member of our home church and of The Mother Church, and now, after two and a half years of faithful study, I feel that I have a God who will never forsake me. I have had many beautiful demonstrations over physical ailments, both for myself and my family. I thank God every day for our beloved Leader, who has consecrated her life to the Cause of Christian Science, also that He has placed me where it is possible to learn this wonderful truth.—EMMA PALMER HOTCHKIN, Chicago, Ill.

Not the least of our many blessings in Christian Science is the assurance which we have of divine guidance. I have found that if we commit our way unto God and trust also in Him, He does direct our paths. A position which I had been filling was closed, and I felt the need of other work. One night I fell asleep, realizing that divine Love would show the way, and next morning there was a call for me at the telephone. An acquaintance in an adjoining town wished to offer me a position at very good wages. It was, however, work with which I was not familiar, and long hours; besides this, the town was situated in the mountains at an altitude in which my friends assured me I could never live, even though I had been healed in Christian Science; but I accepted the place, feeling that the way was opened for me by divine Love. In a few days I made the journey, went to work, and remained two months longer than I was at first engaged for. Without my knowledge of Christian Science this would have been impossible for me. I was kept so busy that all my Christian Science study had to be done at night. The winter proved one of growth in grace and understanding, however, and I was able to give some help to others. "Trust in the Lord with all thine heart; . . . In all thy ways acknowledge him, and he shall direct thy paths."

MISS FRANCES P. DE LA VERGNE, Osceola, Mo.

I wish to express my gratitude for the help I have received through our faithful Leader, Mrs. Eddy, whose life-work has brought to me health, strength, and comfort. I had been under the care of different doctors for over four years, and seemed about ready to give up, for I was earnestly praying to God to relieve me of suffering. I felt that death would bring the relief, but God did not answer my prayers in the way I expected. Through Christian Science I have been healed of sick-headache, from which I had suffered since childhood. My left side had troubled me for nearly twenty years. Doctors said it was my heart, and I could not lie on that side without severe pain. This

Digitized by Google

has all been overcome, and the healing power of Truth has been manifested in my family in many ways, in cases of sickness and accidents.

When this Truth was first mentioned to me I said that I was willing to try anything if I could only get help, and in Christian Science I have found the great Physician who heals all our diseases. I am indeed grateful for the spiritual uplifting. I can now read the Bible with the understanding that God is All and governs all, and my trust is in Him for health and comfort in my home circle.

MRS. JENNIE KINNER, Cameron, N. Y.

I wish to express my gratitude for what Christian Science has done for me and mine. About six years ago I was a physical wreck, and my doctor informed me that unless I had an operation performed, I would be a helpless cripple. A dear friend who knew of my condition then advised me to try Christian Science, which I did willingly. A practitioner was called and in one treatment I was greatly helped. It was not only in myself that the change was noticed, but also in my husband. Before we came into Christian Science, our home seemed to be filled with discord, but as soon as we found the true light it started to be a home of harmony, and day by day we can see what God does for His children.

When I first came into Christian Science, I could not read a word of English, but the practitioner encouraged me to try and learn it, which I did. I now love to read our dear text-book, "Science and Health with Key to the Scriptures."

I am thankful to God, and to Mrs. Eddy for this great truth, for which she has so patiently toiled.

MRS. E. MIENOW, San Francisco, Cal.

I feel grateful for all the blessings Christian Science has brought to me. Some five years ago I was in a most miserable condition, suffering continually from headaches, which at times seemed almost unbearable. I was also of a very peevish, irritable disposition, making myself as well as those about me very unhappy. The remedies prescribed by our family physician were of no avail. I also consulted a leading oculist in our city, who fitted glasses to my eyes, and advised me to wear them constantly, as he said they would alleviate the pain in my head, but to my disappointment they did not bring the desired relief. About this time a great sorrow came to me, one I had much dreaded,—the loss of my dear mother. It was then that I first heard favorably of Christian Science. A friend came to our home to comfort us in our affliction, and in my hopeless grief, I begged her to help me, which she did, as no one but a Christian Scientist could, and for the first time in my life I experienced in part the peace that passeth understanding. In a short time, with the assistance of this practitioner, the chronic headache was destroyed, and with it went the tendency to irritability. The Master said, "Ye shall know the truth, and the truth shall make you free." Only those who have experienced this freedom can appreciate those words and fully understand their meaning. I can truthfully say that all I have of health and happiness I owe to Christian Science. I now rejoice in an understanding of the Bible and a love for God and man which I never expected to have before knowing of Christian Science. Our periodicals are a constant source of help and comfort to me.—MISS WINIFRED G. PIERCE, Milwaukee, Wis.

We have been able, through divine Love and the guidance of our text-book, "Science and Health with Key to the Scriptures" by our dear Leader, Mrs. Eddy, to make some excellent demonstrations over sickness, and I wish to make a grateful acknowledgment of the healing power of Truth. Our little grandson was taken very suddenly with a chill, followed by a high fever and severe pain in the head and bowels. I declared the truth, and was successful in checking the fever, relieving the pain, and restoring consciousness. With courage, and a firm faith in God's allness and power to save, I sent for a Christian Science practitioner. The child was first taken ill on Sabbath morning, and on Monday morning the practitioner gave him a treatment and another in the afternoon. Tuesday he was convalescent and Wednesday he went over a mile to school. On Thursday he was perfectly well; he ate anything he wished, and was very hungry, not having eaten anything for two days. There were no bad after-effects. To God I give the glory.

E. COSTEL, Ashland, Ore.

It is over eight years since the light of Truth began to penetrate the darkness of my awakening consciousness. My primary reason for seeking help through Christian Science was abscesses in the ears, which, aside from being very painful, were causing deafness, so that I could not hear ordinary conversational tones at all. I was in a miserable condition for something over eighteen months, and was growing worse, with no promise of help from *materia medica*.

I turned to Christian Science with no conscious hope of relief. My husband suggested it, as the physicians said they could do nothing. I had one present treatment and arranged to have absent treatment. In three days I found that the abscess which was forming when I went to the Christian Scientist was gone, and I could turn my head naturally, something I had been unable to do for months; in fact, I was healed of that trouble, and the freedom was wonderful. There were other less painful troubles which did not yield so readily, and some were long in going. I am now pleased that it was so, as I think I would not have sought the truth if I had not been obliged to seek with all my heart. There has, however, been steady growth, and the consciousness of more light. My husband and I have been earnest students, and have found the Bible a book of marvelous beauty and interest when opened with our "Key to the Scriptures." We know that Christian Science is Truth revealed to the understanding, and we are thankful for what we know of the way of Life.

We are thankful indeed for all the Christian Science literature, and the longer we work the more we appreciate our dear Leader,—her wisdom and the magnitude of her achievements.

MRS. N. BESSIE NUCKOLLS, El Paso, Tex.

[Written for the *Sentinel*.]

Prelude.

MARY J. ELMENDORF.

THE sky is blue, deep blue again—
The wild gray sky I knew so well,
Locked in its armor of cloud and snow;
Where Viking blasts raged high and fell,
Calmness broods and daffodils blow,
And tender buds of April swell.

The earth is awake, awake again—
The dark, silent paths I wandered through.
Under the honeyed gold of the sun
Hills and meadows are born anew,
Sea and sky in joyance are one,
And the liquid lay of the lark is due.

My heart is young, is young again—
My heart where shadows were wont to cling.
Peace is within and pinions of gold,
Light and the promise of fragrancing,
And the sweet, sweet petals of faith unfold—
Blossoms of Love's immortal Spring.

Digitized by Google

From our Exchanges.

Over-anxiety for the faith, whether investigation, doubt, or even denial of it is concerned, is a sign of weakness. It inevitably leads to extremes of fear and suspicion. The bishops of the Lambeth Conference of 1897 admirably described such a state of mind: "That faith is already in serious danger which refuses to face questions that may be raised, either on the authority or the genuineness of any part of the Scriptures that have come down to us. Such refusal creates painful suspicion in the minds of many whom we have to teach, and will weaken the strength of our own conviction of the truth that God has revealed to us. A faith which is always or often attended by a secret fear that we dare not inquire lest inquiry should lead us to results inconsistent with what we believe, is already infected with a disease which may soon destroy it."—*The Churchman.*

Much of the present unrest is due to the seeking after reality, with its abandonment of the unreal; and the eyes of hope are turned to the day when religion shall be understood to consist in a genuine life in the realities that are eternal. . . . The Christianity of the twentieth century must be a working Christianity, devoting its intelligence and religious power to the vast and complex present problem of humanity. This is the coming test of the faith in its large forms and operations—whatever lays hold of the problem of humanity, or any part of it, in the spirit of Christ is Christian, and whatever does not is not. And the spirit of Christ in men will prove itself large and strong enough to take hold of the problem of humanity, and the coming time will be a period of Christian power. PROF. WILLIAM N. CLARKE, D.D.

The Congregationalist.

And this was the Christ-way,—to reveal the realities of the higher life of purity and love and God-centered faith, that men might feel its incomparable attraction and gravitate to it by the law of their own being. Here was the secret of the influence of his own great life. What did Jesus do that men should be so enamoured of his spirit? What did he do to cause that sudden shifting of endeavor from the earthly prizes of earth to heavenly qualities of character that characterized early Christianity? He simply lived. He revealed the life, he manifested the spirit; and, as men saw it, the longing so to live themselves was kindled.

REV. J. WORSLEY AUSTIN.

The Christian Register.

This is the day of union. The churches are coming together. Where it is not corporate union it is federation. But we do not ask for the imperfect federation there, but for full union. Federation is good only where we cannot get something better. We believe the grace is coming, if it has not yet come, when these divisive nothings or prejudices, like the totems of savage tribes, will be cast aside, and churches will so feel the burden of their work for the world about them and beyond them that they will no longer stand in each other's way.—*The Independent.*

I wonder if any one could better prepare himself for a wise use of a sacred season like Lent than by endeavor to see and feel that he *is* a child of God; that he lives *now* in a spiritual world; that he is to keep mind and heart open on the side towards God, and so to find oblivion of things that are not of God and heaven; and above all, it may be, to make real the thought that destiny means a soul at one with truth and goodness?

REV. CHARLES H. LEONARD, D.D., LL.D.

Universalist Leader.

THE CHRISTIAN SCIENCE TEXT-BOOK.—"Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

RUDIMENTAL DIVINE SCIENCE.—Printed in the New York point system of type for the blind. Price, prepaid, 50 cents per single copy; $5 per dozen.

CHURCH MANUAL.—Containing all the By-laws to January 1, 1906, of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of The Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the Churches and Societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to The Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of The Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to The Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number, or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By Hon. WILLIAM G. EWING.

CHRISTIAN SCIENCE. Its Worth and Work. By Rev. ARTHUR R. VOSBURGH.

CHRISTIAN SCIENCE. Its Promises and their Fulfilment. By EDWARD A. KIMBALL.

CHRISTIAN SCIENCE. Is it Christian? By MRS. SUE HARPER MIMS.

CHRISTIAN SCIENCE. Its Work and Scope. By CAROL NORTON.

CHRISTIAN SCIENCE. The True Idealism. By ANNIE M. KNOTT.

IN GERMAN

CHRISTIAN SCIENCE. Its Promises and their Fulfilment. By EDWARD A. KIMBALL.

CHRISTIAN SCIENCE. The Christianity of Christ. By Rev. IRVING C. TOMLINSON.

Price. Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, 75 cents; five hundred copies, $3.25; one thousand copies, $6.00. Orders for supplements may be assorted as desired.

Pamphlets

MR. KIMBALL'S LECTURE. 33 pages.

HEALING THROUGH CHRISTIAN SCIENCE. Discourses and Editorials. By JUDGE SEPTIMUS J. HANNA. 36 pages.

HEARINGS ON PROPOSED MEDICAL BILLS IN MASSACHUSETTS AND NEW YORK. 23 pages.

ANSWERS TO QUESTIONS IN CHRISTIAN SCIENCE. By EDWARD A. KIMBALL. 26 pages.

PRAYER AND CONFIDENCE. Four articles reprinted from the *Journal*. 40 pages.

THE LOS ANGELES CASE. Testimonials given in Court as to the healing efficacy of Christian Science. 63 pages.

THE CHRISTIAN SCIENCE MOVEMENT. Revised by CAROL NORTON. 23 pages.

CHRISTIAN SCIENCE IS SCIENTIFIC CHRISTIANITY. A Lecture. By Rev. ARTHUR R. VOSBURGH. 28 pages.

CHRISTIAN SCIENCE: ITS COMPASSIONATE APPEAL. Four articles reprinted from the *Journal*. This pamphlet is also printed in German. 38 pages.

A CRITIC ANSWERED. By ALFRED FARLOW. Printed in German only. 31 pages.

Price. One copy, six cents; twelve copies to one address, sixty cents; twenty-five copies to one address, $1.15; fifty copies to one address, $2.25. Orders for pamphlets may be assorted as desired.

Works on Christian Science

Written by the Author of the Christian Science Text-book, MARY BAKER G. EDDY

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Enlarged and Revised, 1902. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid $3 18

Two to twelve books (cloth only) to one address, each, prepaid 3 00
Twelve or more books to one address, each, prepaid 2 75

Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid 4 00
Twelve or more to one address, each, prepaid . . . 3 75

Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid . . 5 00
Twelve or more to one address, each, prepaid . . . 4 75

Levant, divinity circuit, leather-lined, round corners, gilt edges, silk-sewed, heavy Oxford India Bible Paper, wide margins, each, prepaid 6 00
Twelve or more to one address, each, prepaid . . . 5 75

Orders for Science and Health, in lots of twelve or more to one address, may include any or all the different styles of binding.

A COMPLETE CONCORDANCE to Science and Health with Key to the Scriptures, 595 pp., 10 x 7. Bound in cloth, marbled edges. Price, single copy, prepaid . . $5 00
Twelve or more copies to one address, each . . . 4 50

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth), each, prepaid 2 25
Twelve or more books to one address, each, prepaid 2 00

Morocco, limp, round corners, gilt edges, convenient for pocket, each, prepaid 4 00
Twelve or more to one address, each, prepaid . . . 3 75

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5 00
Twelve or more to one address, each, prepaid . . . 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Associate Editors.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.

Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month.

The date of expiration may be found on the address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

The Postmaster General states: "As nearly as can be estimated the cost of carrying a pound of seeds furnished by the Department of Agriculture for free distribution, varies from five to eight cents. I have been informed that the aggregate weight of vegetable and flower seeds distributed annually by the Department of Agriculture under frank is 600,000 pounds. The estimated number of packages is 7,300,000. Computing at the lowest estimate—five cents a pound—the cost of handling this matter is $34,500. If the combined time of all the clerks and carriers handling one of these packages is estimated at one minute, from the time the package is mailed until it is delivered, it would amount to the time of fifty employes working eight hours a day throughout the year, which, at an average salary of $1,000, means $50,000 worth of time. It is more than likely, however, that at least five minutes of time in the aggregate is consumed, including the delivery of the packages, which means an outlay of $250,000 in clerk and carrier hire on this account."

The House has adopted two resolutions presented by the Chairman of the Printing Committee, which will reduce the number of copies of each publication printed by the Government from ten thousand to twenty-five hundred. The resolutions mean a saving probably of one million dollars annually to the Government in printing bills. "Gentlemen," the chairman said, "if all the waste books lying around this city, absolutely worthless, but which cost hundreds of thousands of dollars to print, were to be hauled out of the city they would fill a freight train two and one-half miles long. There are in the basement of the Capitol now 9,538 tons of books and public documents out of date and worthless."

It was discovered when the printing for the last census began that it made 2½ cents a copy difference whether the books were lettered with gold leaf or with aluminum. The aluminum titles maintain their lustre untarnished for years. By making this change the Census Office has saved $15,000 in the last five years, and had it been adopted with other publications there would have been saved $150,000. The total cost of gold-leaf purchased during the last fiscal year, according to the Public Printer's report, was $47,000. The total cost of the aluminum purchased for the census during the year was $80. Gold for the same purpose would have cost $1,600.

A movement is said to be on foot to make the Government Printing Office the tenth executive department, with a Cabinet officer at its head, and such action may be taken up in this session. It would have charge of the preparation of the great mass of Government publications issued by the other departments, and in its editorial functions would eliminate much of the useless matter now printed by the Government and insure a uniformity in the style of such publications.

The announcement is made by the Postmaster General that fifty-two illegal "medical offices," located in New York and Brooklyn, have been practically put out of business through the efforts of the postmasters in the two cities and inspectors assigned to the work.

The naval appropriation bill agreed to in committee last week, contains a provision for an appropriation of $100,000 to be used in repairing and refitting the frigate Constitution to an extent which will make her as nearly like her original self as possible.

General Luke E. Wright, former Governor-General in the Philippines, has been appointed Ambassador to Japan.

Foreign.

The programme for the Third International Conference of American Republics, to be held in Rio de Janeiro next July, will comprise, among others, the following topics: Codification of international laws by a committee representing the various nations comprising the American Union; principle of voluntary arbitration, with special reference to the coming Second Peace Conference at The Hague; uniform regulations for the taking out of patents and trade-marks, and international recognition of them; uniform customs and port regulations; uniform regulations for the taking out of copyrights, and international recognition thereof; uniform sanitary and quarantine regulations; international recognition of professional diplomas; Pan-American railway project; development of international intercourse, subsidized steamship lines; Calvo doctrine, which deals with the collection of debts by force.

The sympathy of Emperor Nicholas, Premier Witte, and other members of the Russian Ministry and Court, has been enlisted by Baron Loicq de Lobel in the project of the American Trans-Alaskan Siberian Company for the construction of a tunnel under Bering Strait from East Cape to Kansk and three thousand miles of railway to connect it with the Siberian railway.

The Conference on the Moroccan question at Algeciras, Spain, has come to an agreement in the matters involved, and a protocol has been drawn. France wins her contention for policing Morocco. Her prestige there is believed, on all material points, to be strengthened by the Conference.

The Japanese Government already controls many of the important monopolies,—a large percentage of the railroads, the telegraph and telephone lines, the salt works, the tobacco monopoly, and the camphor production.

The London County Council has decided to pave with noiseless material the portions of street car tracks in front of churches, and the Education Committee has proposed that similar material be laid in front of schools.

The Japanese, in thirteen months, have constructed in Korea three hundred and ten miles of railway.

Industrial and Commercial.

A combination has been formed by the manufacturers of lace curtains in the United States which represents from $25,000,000 to $30,000,000 invested capital. Not ten per cent of the curtains sold now in this country, it is stated, are imported. There are four factories in Philadelphia, two at Wilkesbarre, and others at Scranton, Gouverneur, Patchogue, Kingston, and Tariffville, Conn.

The value of silk consumed in the United States annually, inclusive of domestic and foreign manufacture, is now about $240,000,000. The United States now consumes more raw silk in manufacture than any other nation on the globe, France not excepted. In 1902 thirteen millions of pounds were used, the value of the raw material, all of which was imported, being about $45,000,000.

Plans have been filed for a twenty-five story building to be built on Wall Street, New York. The building is to be 318 feet high, with a frontage of 61.08 feet, and a depth of 130 feet.

By a fair estimate the coal provision of England is to be reckoned to-day at 100,000,000,000 tons. The present consumption is about 167,000,000 tons annually.

General.

The Merchants' Association of New York, acting in conjunction with the American Civic Association, has taken action which makes it probable that the preservation of Niagara Falls will be made a matter of joint international control. The concurrence of opinions leaves no doubt that action must take the form of a treaty between the United States and Great Britain. The ethics of this question of the preservation of Niagara Falls, says the *Scientific American*, are very simple; for it resolves itself into a contest between the claims of a few people who see in the stored energies of the falls a means of producing merchantable electric power more cheaply than its can be produced by an ordinary steam plant, and the interests of those innumbered thousands the world over who, if they visit the Western Hemisphere, set down a visit to Niagara Falls as one of the indispensable features of their programme of travel. The widespread sympathy with the movement to protect this majestic and most beautiful spectacle of nature is a refreshing sign that mercenary and utilitarian considerations have not obtained the absolute sway which the trend of recent events has seemed to suggest.

A ton of dried flies made up a portion of the cargo a vessel from Brazil unloaded at the London docks recently. They are used as food for chicken. Birds in captivity, and captive fishes. The river Amazon abounds with flies. Brazilians float down the stream in boats and scoop in millions of the flies which circle in dense clouds just above the water's edge. The flies are dried thoroughly in the sun and packed in bags for shipping. Two years ago the Brazilian Government stopped the exportation, being afraid that the fish in the rivers would suffer by being deprived of this fly-food, but the prohibition has been removed. Thirty cents a pound is the market price. One ton of flies fills a large room, as there are only fifteen pounds of flies to a bushel.

The average age of the blackbird is 12 years; crane, 24; crow, 100; eagle, 100; goldfinch, 15; goose, 50; heron, 50; lark, 13; linnet, 23; nightingale, 18; parrot, 60; pelican, 50; robin, 12; skylark, 30; swan, 100; thrush, 10; wren, 3.

A movement has been started in Nova Scotia for further extension of technical education in that province. Scientific leaders are urging Governmental assistance to establish a strong central institution.

A record price, six thousand dollars, was paid at a local auction room in London, recently, for a prize orchid.

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

Seed-time and Harvest.

M. G. KAINS.

ONE of the most interesting features of modern agriculture is the development of varieties of grains, fruit, vegetables, etc. Within the memory of men still in their prime, the farmer dipped from his own grain bin what seed he needed and sowed it, usually, just as it came,—good, bad, and indifferent. This lack of care resulted in a motley crop of grain and weeds, and where similar primitive disregard of agricultural means and methods has prevailed, as it usually does in line with this slipshod style of seed selection, the land has gradually but surely been overrun with weeds and the quality and quantity of the crops as steadily decreased.

The thinking farmer, however, who concluded that a good seed would produce good seed, proved the truth of his conclusion by trying the experiment. The results have been that by the selection of individual seeds the varieties of many plants are now numbered by the hundreds. Not only has each of these been developed in approximation to the ideal of certain growers, but a still greater refinement or narrowing of qualities has produced what are called strains of certain varieties. In these a particular character has been striven for and emphasized, so that a still higher ideal has been approached. The farmer has therefore only to decide upon his needs and he can secure from the seed specialist a variety or strain which meets it. As the more wide-awake farmers saw the advantages of this method, they forsook the crude ways of their forefathers and practised the new. Some advantages of this course are improved yield and reduction of weed troubles. The farmers have thus, perhaps better than any other class of people, learned the law that "like begets like," or as Paul puts it, that "whatsoever a man soweth, that shall he also reap."

This concrete example of the operation of the law of cause and effect is typical of the mental seed-time and harvest as explained by Christian Science. The novice, accustomed to primitive crudities of thought, often fails to recognize that perhaps for years prior to his commencement of the study of Science, he was sowing wrong thoughts continuously and filling his mental farm with weeds. He must therefore continue his harvests, whatever their characteristics may be, unless he learns how to eliminate the weeds and inferior plants. After he gains a slight understanding of Christian Science he may often fail to see why he seems not to be able to harvest what he thought he sowed. He believes he sows like others, but the harvest is not like what he supposed he planted. He sows a variety that looks well but which seems to yield little or no harvest. In such cases he may blame some one else, or even doubt the unvarying certainty of the law as explained by Christian Science; but the trouble is not there. It is in the previous sowing, for "they that plow iniquity, and sow wickedness, reap the same." It is the abundance of undesirables from previous sowings that the mental husbandman is startled to find. These are not the progeny of his new seed; nor has the new failed to grow. Every viable seed will grow and bring forth fruit "after his kind." The only thing to do is to continue sowing "the good seed" and destroying the weeds and inferior plants, for "he that goeth forth and weepeth, bearing precious seed, shall doubtless come again with rejoicing, bringing his sheaves with him." Therefore, "Sow to yourselves in righteousness, reap in mercy; break up your fallow ground: for it is time to seek the Lord, till he come and rain righteousness upon you."

Just now a chance is presented to sow for a spiritual harvest of unbounded extent. All who have been blessed by Christian Science—and who has not?—have this opportunity. The seed is at hand, and every one has some. Love, thankfulness, and gratitude constitute the seed, and when expressed they will have been sown. The Mother Church stands as the type of this spiritual harvest. All the tiny grains sown help to rear its visible structure, for the smallness of the grain must not be reckoned upon. One seed may produce several heads of wheat, each containing many kernels; but it must be a live seed,—must have the love that is life-giving. Better one seed with this than a bushel without. If thankfulness and gratitude prompt, the germ is there, and the harvest will be sure. "God is no respecter of persons."

Unless the motive be a true, pure one, there will be no harvest. The true harvest is not in the mere material increase nor wholly in the knowledge that "God loveth a cheerful giver." It is in the certainty that God has answered a prayer of thanksgiving to Him, a recognition of His benefits. "Oh that men would praise the Lord for his goodness, and for his wonderful works to the children of men!" "For he satisfieth the longing soul, and filleth the hungry soul with goodness;" but "he which soweth sparingly shall reap also sparingly; and he which soweth bountifully shall reap also bountifully." Since love is the thought that goes out to bless, love to God and to man constitutes the true seed; and since "he that soweth to the Spirit shall of the Spirit reap life everlasting," "let us not be weary in well doing: for in due season we shall reap, if we faint not."

An Aspect of Evil.

CLARA E. MAC MAHON.

IN the account of the overcoming of Goliath by David, found in the first book of Samuel, there is given a clear statement of fact respecting evil which is frequently overlooked; viz., that its claimed existence is only a mortal self-assertion.

Mortals are so blinded by the educated belief in the real existence of evil, so impressed that evil is just as true, just as real, just as powerful,—if indeed, not more true, more real, more powerful than good,—that it is often very difficult for them to be made to see that evil has no place in the divine economy, and that therefore evil has no place as entity in individual experience, but operates only through the acceptance of its self-asserted claim to power.

In the story of Goliath we are told that the Philistines and the Israelites were facing each other in battle array, and that every day Goliath of Gath came out from the

Copyright, 1906, by Mary Baker G. Eddy.

Digitized by Google

camp of the Philistines and in a loud voice defied the army of Israel. He is described as of enormous proportions, clad in brass, with a mighty spear, sword, and shield. Every day he thus advanced, and boastingly asserted his greatness and his strength in a way that greatly frightened the Israelites. For forty days this was repeated, while the Israelites became each day more alarmed, and cowered before his threats; and judging from his own standpoint, that of physical prowess, the Israelites were justified in fearing him. During all this time, however, Goliath did nothing, gave no proof whatever of his strength, but simply made his haughty and self-assertive boasts.

Were man self-existent; were his capacity and strength merely self-evolved; were there no ever-present Mind to sustain and preserve him, then the Israelites were surely authorized to fear this giant and fall back into ever-increasing weakness and confusion.

Into this paralyzed camp there came, however, a young shepherd, straight from his fields and flocks where in small ways he had learned of the power of God to save His own, —and now we have two declarations, the false and the true. Goliath says, "I defy the armies of Israel." David says, "Who is this . . . that he should defy the armies of the living God?"

When David saw the frightened and humiliated condition to which his people had come, he offered to help them, and in the conversations that followed we see why Saul and his officers could do nothing and why David could do much. They offered him the best they had, their armor and weapons, which David refused because he had not tried them,—they were not his own. If he was to do the work it must be with the weapon at hand. It was only a pebble which he had at command, but its effectiveness was entirely adequate in view of David's support by infinite Truth.

To Goliath he said, "Thou comest to me with a sword, and with a spear, . . . but I come to thee in the name of the Lord of hosts, . . . whom thou hast defied." Then he overthrows the towering giant of evil by smiting the forehead of its boastful complacence.

When exposed, known for what it is, through Christian Science, evil is found to be but mortal, finite, an atom of dust, to be utterly overthrown and destroyed not in a conflict of hatred and fear, but in the manifestation of the prowess of ever-present Love, whose protection is ever available and made manifest as we deny the falsity of self-asserting mortal sense and rest in the abiding presence of omnipotent Truth.

A Lesson in a Stone.

WILLIS VERNON COLE.

DURING that glorious period when the Italian renaissance was awakening the slumbering consciousness of the Dark Ages into a new birth of art and science, there lay in the picturesque streets of beautiful Florence a huge, unsightly stone. Misshapen by some unskilled craftsman's hand, it had been long since abandoned, a byword to the whole community, a blemish to its harmonious surroundings.

In passing one day, it dawned upon the city's ruler, as he gazed, that this block of marble possessed great possibilities. Something whispered that beneath the uncouth exterior, which presented so sorry an aspect to the casual observer, lay something valuable, and he summoned the great Michael Angelo from his studio. The intuition of the ruler was corroborated by the genius of the sculptor, and the enthusiastic young Michael was commissioned to utilize the block,—chisel a statue to adorn the city.

After several years of heroic labor the work was accomplished, and the citizens were one day surprised to behold a figure of the rarest beauty issue forth from the studio of the inspired artist. Perfect in form, outline, and proportion, embodied in the purest marble, the statuesque figure of the youthful David stood glistening in the sunlight, and amid the applause of the enraptured multitude the beautiful sculpture, destined to be one of the masterpieces of the world, was pedestaled in the city's fairest situation. The disfigured and tarnished marble had yielded to genius and understanding.

This historic incident but typifies the experience which comes to all who have been awakened to the truth of Christian Science? Has not mortal mind caused humanity to be misshapen with sin, disease, and the fear of death, and given it a false, mutilated sense of being in the highways of materialism, where, covered with the fungi of belief in tradition, heredity, and superstition, nothing remained but to crumble and disappear into the nothingness of dust to dust? But on a happy day for mankind, one passed this seeming wreck whose vision was clear enough to discern something behind the veil of appearances, beneath the mask of materiality, and to see the grand possibilities of humanity as revealed in Christ Jesus. Then came the task of announcing to the world her discovery which reveals the truth and bids us turn to the perfect Christ-model. In her wonderful book, "Science and Health with Key to the Scriptures" (p. 248), Mrs. Eddy tells us that "we are all sculptors, working at various forms, moulding and chiseling our thought." Impelled by the wisdom and strength of divine Mind, we work on, striving earnestly and patiently to remove the jagged edges of selfishness and the ugly outlines left by sin and fear. Inspired by this new-born idea of Spirit and spiritual man, the process of transformation goes steadily forward.

As sculptors of thought we may well take courage! Our beloved Leader has revealed the splendor that awaits unfoldment, and the word of God is our chisel "sharper than any two-edged sword," while moral courage is the mighty mallet. Even now the unerring hand of Truth is tracing upon human consciousness an outline of rare and wondrous beauty, and we should therefore apply ourselves with diligence that the Christ-ideal—the masterpiece of omnipotent Love—may be revealed in our lives, when, transformed by the renewing of our mind, we shall go forth to bless the world, manifesting beauty, purity, strength,—the abiding characteristics of God's man,—the image and likeness of divine Mind.

He is Risen.

V. B.

TRUE love will not entomb a brother in the bondage of his past mistakes. The light of charity helps us to discern the temptation, the struggle, perhaps the fall, while compassion ever beckons a welcome return. Error is ever ready to deceive us with the image of mortal man, while piercing us with the darts of envy, jealousy, hatred, malice, and revenge. It were well for us to heed the admonition against seeking "the living among the dead." We cannot bury a brother in the tomb of mortality and hope to see him as the likeness of God. The faithful follower of Truth heard the angels say, "He is not here: for he is risen." The one striving for the mastery may have conquered the error of yesterday, of an hour ago, while a self-willed watcher would still persistently bind him with cords of evil suggestion. Ascending thought will ever see the true image, and say to false sense, "He is not here: behold the place where they laid him."

Our times of greatest pleasure are when we have won some higher peak of difficulty, trodden under foot some evil, and felt, day by day, so sure a growth of moral strength within us that we cannot conceive of an end of growth.

A Healthful Religion.

Whatever may be thought of Christian Science, it must be conceded that it is a healthful religion. Its fundamentals involve the healing of the sick and the sinner. Based firmly on the Bible, this remarkable faith not only teaches that Jesus Christ did accomplish all the remarkable cures attributed to him, but it goes beyond that and declares that the things he did we can do also, and the disciple who is well grounded and strong in the faith can cause disease to disappear by the denial of its real existence.

Christian Scientists also produce evidences—not one or two, but in thousands of cases—where the relieved will testify that after trying all sorts of doctors and remedies, when they were given up as hopeless, they had come, reluctant and unbelieving, as a last resort, to Christian Science and were healed.

The one who depends upon reason as his guide will pooh pooh these witnesses as being possessed of imaginary diseases or of nervous physical conditions, which only needed the imagination instead of medicine as a curative power. That a genuine chronic disease is ever positively and permanently cured by Christian Science, these doubters positively refuse to believe.

Well, what of it? If Christian Science removes only mental suffering, and thus creates the belief that one is cured from physical ills, is it not a healthful religion? The tendency of its teaching is to relieve suffering, not create it. There are thousands of men and women made happier and healthier because they are believers in the curative powers of Science. This healthful religion never adds one straw to the weight of sorrowing humanity. In many an instance it relieves the burden. Taking the cures made by Jesus as absolute facts and his words as literally true, these people have a logical foundation for their faith that can only be shattered by destroying the literal interpretation of the New Testament.

It must be conceded by all who feel for the woes of suffering humanity, that Christian Science is not to be sneered at or denounced. Whether willing to accept it or not, whether reason forbids such a belief for oneself, it must be said that it brings consolation and joy to multitudes who could find no relief in any other panacea. It is a healthful religion. It is easing pain and overcoming sin. It stands firmly on the Golden Rule, "Love your neighbors." It has an honorable place among the reform and progressive movements of the day. It is so strong and growing so remarkably that it must be reckoned with.

Editorial in *Quincy* (Ill.) *Daily Herald.*

Editor *Public Opinion:*

In one of your recent numbers a correspondent treated the subject of churches under the head "Church-Shells," and included the Christian Science church among the other denominations he mentioned. Speaking of the Christian Science church, the gentleman states that "it has thousands of beautiful women striving to handle it." Your correspondent might also have added that besides these, there are many thousands of men, representing the business, social, scientific, and in fact every worthy walk of public and private life, who have a prominent part in carrying on this religious movement, which is supplied with evidence on every hand corroborative of its success in dealing with the moral, physical, and mental problems confronting this age.

Our critic goes on to state that "wherever this shell lands it is sure to kill or cure," and declares that it is "the latest religious pseudo-'scientific' church-shell." Whatever is meant by "church-shell" as regards Christian Science, I confess I do not know; but I am able to state that Christian Science is nothing more nor less than the demonstrable religion of Christ Jesus spiritually understood. This scientific religion applied, heals sickness and sin as it did throughout the earthly experience of the Founder of Christianity and that of his early followers; and while it is established as an effective prophylactic as well as therapeutic agent, it is well known that it embraces no teaching or practice which could harm by any means whatever. Neither is Christian Science a false or pseudo science. We maintain that there is the truth about God, in which is centered the sole concern of Christian Science; and, according to this teaching, the truth regarding "Our Father which art in heaven" is a science, which is neither false nor human, but demonstrable and benign in its influence whenever and wherever understandingly brought to bear upon thought.

In another place, toward the end of the article, your correspondent says, "Not one of these religious church-shells above mentioned follows his [Christ Jesus'] teachings." It might be inquired what the gentleman's estimate is of following Jesus' teachings? It is, I think, acknowledged by all Christians worthy of the name, that they fall far short of following, in deed and in truth, the precepts of the Master who taught and illustrated perfection. This can hardly be accounted strange if we consider the influences, past and present, tending toward abject materialism and away from the spiritual premise which founded the manifold and redemptive works of the great Nazarene. The acknowledged shortcoming of the churches is not a legitimate argument against them.

Those who are studying the Bible in the light of Christian Science think that to-day they are adhering more closely to the spiritual import of Jesus' teachings than ever before, no matter what their previous religious convictions have been. By reason of the fact that they reject no element of the salvation he offered when on earth among men, Christian Scientists realize that they are getting an enlarged estimate of the demands of Spirit, and the holy, life-sustaining recompense which is ever a concomitant part of living in harmony with the broader and more spiritual aspect presented by Christ Jesus. The views of Christian Scientists are in close accord with this gentleman's idea that the real church is not built with brick or stone, but that "it is a church that can be formed in each one's heart and conscience." The mere structure of four walls does not convey to the Christian Scientist any adequate sense whatever of the true meaning of the word church; rather does he look upon it as a mere adjunct to the present-day methods necessarily adopted in furthering the effort to understand and worship God.

H. CORNELL WILSON.

Public Opinion.

"Have faith in God" is the starting-point in all forms of Christian belief, and Christian Science assuredly encourages this faith. The Christian Scientist, however, does not stop at the A B C of religion, but, in the infinite scope and operation of the Science, he works toward the solution of the generally considered inscrutable problem of sin, disease, and death.

It is apparent to any thinking person that the common idea or conception of that Being whom mortals call God, has, in the last half century, undergone a great change, and that the belief in a far-away God is gradually fading out. This advance in our concept of God is naturally followed by a corresponding change in our concept of man. The nearer our concept of God approaches the infinite, the less finite will be our concept of man as God's image and likeness.

The God of the Christian Scientist is divine Mind, Truth, Love, Principle,—the only real power and presence in the universe, as the Gospel teaches. Constantly accentuating in thought and deed his idea of God, the Christian Scientist finds in this idea a guiding and supporting influence outside himself, and in the measure that he turns his thought

Digitized by Google

from self toward this source of all strength, in that proportion are his mind and body relieved.

Christian Scientists believe with Jesus that the kingdom of heaven is within. They believe that God's laws of life, health, and happiness are at hand to be demonstrated practically, proving the opposing laws of mortal belief to be powerless. D. C. PENDERY.

Cincinnati (O.) *Commercial Tribune.*

All sects and creeds can show by the Bible a foundation for what they believe, and I here give one passage that seems to me to favor Christian Science: "Is any sick among you? let him call for the elders of the church; and let them pray over him, anointing him with oil in the name of the Lord: And the prayer of faith shall save the sick, and the Lord shall raise him up, and if he have committed sins, they shall be forgiven him." According to the critic, Christian Science is a "monumental humbug," and if so this teaching must be the same.

I am not defending Christian Science, as I do not believe in it. In case of sickness I believe it shows better sense, instead of sending for the elders of the church, to send for the doctor, but I am in favor of allowing every person to believe as he likes without being abused for so doing.

Once upon a day a savage thought he would like to cross over to an island, so he got himself a log and by burning and scraping he made a dugout and also made himself as happy as a clam. According to the critic's way of thinking that dugout ought to have been the end of shipbuilding, —no change. It is the kind of men that did not believe in going right along plowing with a crooked stick that we are to thank for all the progress we enjoy; and if people never did change we would still be in a savage state.

ROBERT C. HUXTABLE.

Dartmouth (N. S.) *Patriot.*

Christian Science is mathematically demonstrable, but it does not necessarily follow that every student is a master Scientist and capable of solving every problem. What we claim for Christian Science is that, even with our limited knowledge of the subject, we obtain much better therapeutical results than under the old regime of *materia medica.* It would not be difficult for any one to recall a number of instances in which *materia medica* had proved to be absolutely unavailing. As Christians, we heal the sick by prayer; as Scientists, we base our prayers upon the promise that God is All in all. In praying for the sick, we are following the command and example of our Master, Christ Jesus. In working scientifically, we are but trying to follow his *modus operandi.*

Though it could easily be shown that there are many men and women of high standing, office, and education who are connected with the Christian Science movement, nevertheless neither philosophical attainments nor educational equipment constitutes in any sense the proof that one is a follower of Christ. I think our critic will agree that the two infallible proofs of one's discipleship are the spirit of brotherly love and the power to heal the sick; at least when Christ Jesus wished to assure John the Baptist that he was indeed the Messiah, it was to his healing works and preaching the gospel to the poor that he referred.

REV. G. HOWARD WILSON.

Halifax (Can.) *Mail.*

There is now, and has been for the past fifty years, too much blame laid to intemperance as the chief cause of poverty. It is an old and now a threadbare belief, and those who are closely in touch with the real situation have found that it is a fallacy. The subject of poverty has been more scientifically investigated in recent years, and especially in the last year, and it has been found that intemperance ranks only third in the causes of poverty. In some cities it ranks fifth.

Sickness and accidents both have had greater effects on the workingman and on mankind in general in reducing him to lower straits financially. Sickness has played a surprisingly large part, and outdistances intemperance, while accidents also take precedence over intemperance.

JANE ADDAMS. *Chicago Inter Ocean.*

While it may be true that Jesus did not state specifically that sickness is unreal, it may also be said that he never made the positive assertion that sickness is a reality. What he believed concerning the constituency of matter and the nature of disease, must therefore be determined from his general teaching, and it must be admitted that he never uttered a favorable expression concerning the flesh or matter; he always spoke of it as unprofitable and worthless. It is equally as certain that he regarded disease as the work of the devil and that he insisted that the devil "abode not in the truth" and that "there is no truth in him;" that "he is a liar, and the father of it" and that his offspring—"his own"—his work or product—is a lie. A lie is not a reality; it is a negation, a falsity, something which pretends to be true or real but is neither true nor real.

ALFRED FARLOW.

Boston Times.

As a rule, all Christian people believe that God is omnipotent and accept the Scriptural statements to that effect. But when an individual attempts to prove his faith by his works these same people change their position and say that God is only half omnipotent, and must share His power with the mortal who relies on matter instead of Spirit. Is this consistency? CHARLES K. SKINNER.

Muskegon (Mich.) *Chronicle.*

The Christian Science people must be given credit for a sincere desire to more truly reflect the life, precepts, and works of the blessed Master than any other church has done these nineteen hundred years. It is difficult to understand why they should be attacked by representatives of any Christian denomination. There would be no room for criticism, we think, if they were better understood.

Toronto (Ont.) *Once-A-Week.*

Christian Science is about as narrow as mathematics; it is as limited, and at the same time as unlimited, as truth always is. There is just one way to add up a column of figures, and it may be dreadfully "narrow" and bigoted to the man who would like to do it some other way, but there is no other way. WILLARD S. MATTOX.

Hartford (Conn.) *Times.*

These things I do engage to do:
Hourly to keep my doing true
To what my conscience knows;

To send my soul upon its round
Of this day's duty with no sound
Of plaining of my woes;

To live more worthy of their love
Whom I do love all else above—
And fight my rightful foes.

JOHN FINLEY.

Lecture for The Mother Church.

HON. CLARENCE A. BUSKIRK, member of the Christian Science Board of Lectureship of The First Church of Christ, Scientist, will lecture on Christian Science at Symphony Hall, corner of Huntington and Massachusetts Avenues, Boston, Tuesday evening April 10, 1906, at eight o'clock. The lecture will be free and all are cordially invited to attend.

The Lectures.

Hastings, Neb.

A lecture on Christian Science was delivered by Hon. Clarence A. Buskirk at the Kerr Opera House Tuesday evening [March 13]. He was introduced by Rev. Mr. Harrison of the Congregational church, who said in part,—

In the birth-throes ushering in the religion and the life which is to be, there has been, and still is, and perhaps will be, struggle, conflict, pain; but, more and more, strife is giving way to sympathy, and across the chasm of our imperfect vision, our incomplete knowledge of the truth, we grasp hands, look into one another's faces and feel the thrill of each other's enthusiasm, and are repelled less by our differences than drawn by our mutual purposes, ideals, and inspirations.

What we need most swiftly to learn is the lesson of a simple and spiritual theology and a Christ-like religion of love and sympathy and help; then we shall be prepared to grasp and handle the world-problem of to-day, and share together in the saving work of the twentieth century.

Adams County Democrat.

Beloit, Kan.

A very appreciative audience assembled at the City Hall, Tuesday evening, Feb. 27, to hear a lecture on Christian Science by Mr. Bicknell Young of Chicago. He was introduced by Mr. J. E. Smith, teller of the First National Bank of this city, who said in part,—

It has been more as an observer of results than as a student of the literature that I have become somewhat familiar with Christian Science. During the past few years it has been my good fortune to be thrown almost constantly with Christian Scientists, and I have learned to have the greatest respect for their religion.

Individual thought has never been so unfettered as it is to-day. "Ye shall know the truth, and the truth shall make you free," is the stimulus of the times, and whatever the progress of spiritual thought may be in the future, Christian Science as a step in the evolution of religious thought compels the attention of all thoughtful minds. It is founded upon the life and teachings of Jesus, the Christ, the bulwark of the Christian religion. "Go ye into all the world, and preach the gospel to every creature," "Heal the sick," were his commands to his disciples and to succeeding generations. It has been tested, has passed through and beyond the experimental stage, and has become a great religious and philosophical movement, uplifting humanity from spiritual and physical errors. But most of all, Christian Science is a practical religion, with life as its field, and if it were practised generally I believe that its splendid optimism would rejuvenate the world.—*Correspondence.*

Jacksonville, Fla.

Edward A. Kimball of Chicago gave a lecture at the Windsor Auditorium Sunday afternoon [March 18] on the subject of Christian Science. He was introduced by Judge William H. Baker, president of the City Council of Jacksonville, who spoke in part as follows:—

Man, in his finite way, since his history has been written, has sought the solution of the problem of life—man's relation to God. The Psalmist exclaims, "What is man, that thou art mindful of him? and the son of man, that thou visitest him?" Philosophy, eliminating the inspiration of the Scriptures, has sought its own solution of this great problem. It has based its theories of life upon the so-called laws of matter, but after exhausting all of the arts of human reasoning, has had to confess its inability to define life, or to account for that indefinable something with its longings for the higher and better things.

The charge is frequently made that Christian Science teaches things contrary to man's human experience, and that what he sees and knows is contrary to what Science teaches. In other words, that the principles of this religion are paradoxical, and consequently that the mere statement of them is their best refutation. That they are paradoxical from the standpoint of human reasoning is true, but that does not necessarily prove that these teachings are not truth. The teachings of all spiritual truths, to unbelieving materialistic minds, are paradoxical. Jesus was paradoxical when he said to an audience living under the Roman military rule, "Blessed are the meek: for they shall inherit the earth;" and again when he said, "For whosoever will save his life shall lose it: and whosoever will lose his life for my sake shall find it." So with each of us the question is not whether the thoughts we shall hear are new and strange, or that they are paradoxical, or that they conflict with our preconceived beliefs, but simply, Are they truth?

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

An Amended By-law.

ARTICLE XXXIII.

MEETINGS.—SECT. 2. The meetings of this Association in the United States shall be held biennially, and in alternate order, first in Boston, second in Chicago, third in New York City. A member shall not report what is said or done in these meetings.

The session of the General Association of Teachers may be held two days, closing daily not later than 6 P.M. The main topics for discussion are, *unity of action*, strict conformity to The Mother Church By-laws, and to the contents of the chapter on Teaching Christian Science, contained in Science and Health.

The Building Fund.

THE work upon the extension of The Mother Church is proceeding with such rapidity that a large amount of money is required at this time, and it is necessary for the Treasurer to receive largely increased contributions at once. Will the entire Field please act promptly and liberally in this matter, and thus avoid the necessity for further reminders of this kind. This notice is a call for the immediate fulfilment of our pledge given in 1902, and as such it should receive the earnest attention of every Christian Scientist.

As to Testimonies of Healing.

IN publishing testimonies of healing in the *Sentinel* and *Journal* it is of course necessary that we should be governed by certain rules, and adherence to these rules makes it impossible for us to publish every testimony received. One of the most important requirements is that in the case of adults the testimony shall be given by the person healed. Another is that the testimony shall be supported by the verification of some person other than the one healed. The reasons for these requirements are so obvious that they need not be repeated here.

It goes without saying that to be available for publication every testimony must be concise, definite, and conclusive. It is not necessary to give minute and elaborately detailed descriptions of all the symptoms and conditions of human suffering through which the person has passed; these are generally inferred when the disease and its duration are named. The following testimony from Miss Frances Drury, Omaha, Neb., is almost ideal in its brief and concise statement of the essential facts connected with her case. She writes:—

"From childhood I was afflicted with epilepsy, which had increased in severity through seventeen years. The attacks occurred at intervals of from two to four weeks, and at last they threatened my mind and even my life. My parents tried many doctors of different schools, but without permanent help, and they mostly pronounced my case incurable. Hundreds of dollars were spent in this manner. I came to Christian Science a physical and mental wreck and totally without hope. I was completely cured in two weeks' treatment from a Christian Science practitioner, costing me ten dollars. This was four years ago and I have never had a symptom of the disease since. My health is excellent, and I have never had need of treatment since, nor have I resorted to any kind of medicine."

It is sometimes alleged by critics of Christian Science that these testimonies of healing are not conclusive for the reason that a person who is not a physician is unable to properly diagnose disease; but this simply begs the question, because those who have been healed by Christian Science usually have been unsuccessfully treated, as was Miss Drury, by one or more physicians before having had their attention called to Christian Science, and the diagnosis is therefore the diagnosis of a physician.

ARCHIBALD MCLELLAN.

Our High Calling of God.

AMONG the many lessons taught us in the parable of the talents is this, that the force and pertinence of a rebuke are revealed no less clearly in the attempted self-extenuation of those who treat it with neglect than in the alert responsiveness of those who give it welcome.

Christian Science maintains that professing Christians of this age are under precisely the same obligation to fulfil our Lord's command to heal the sick as were those early followers who personally received his instructions, and this daring declaration, coupled with the undeniable success of Christian Scientists in their efforts to meet the responsibility named, has brought to all thoughtful Christian believers vigorous reminder of a privilege and duty which has long been ignored. The resulting disturbance of the inertia of mortal thought has expressed itself in two ways,—in the prominence given the subject of religious healing in both the secular and religious press as well as in the pulpit; and in the appearance of a large amount of apologetic statement which is often no less surprising than significant.

As a sample of this type of comment we quote from a late religious weekly, which says,—"Many have striven in later years to do those works of wonder which are called miracles . . . but the power to do these works will never come to those who seek it or who are eager to use it. . . . To wish to work miracles is to be unable to work them." This can but mean that, however unselfish and humble it may be, the desire to fulfil Jesus' command to heal the sick is not only profitless but out of keeping!

It hardly seems possible that the writer of this indirect reference to an important teaching of Christian Science intended to comfort or encourage that spirit of indifference to practical religious efficiency which rests like a pall upon the great body of professing Christians, but his thought certainly lends itself to such a result. Those who are not seeking to fulfil their manifest obligations as the ambassadors of Christ, and who do not like to be reminded of the exactions which Jesus laid upon every exponent of his teaching,—these are sure to be made the more content with their spiritual indifference and conceded inadequacy, by every intimation that it is no use trying to attain to the Christ-ideal of spiritual efficiency.

Jesus constantly pressed upon his disciples the necessity of a continuous striving for the spiritual sovereignty that was to enable them to do his works. Both the end to be achieved and the means to be utilized were first made clear, and then in due time they were sent out with definite instructions to essay the sublime enterprise. Would the Master do otherwise to-day? The "passionate pursuit of spiritual perfection" is highly commended by the writer from whom we have quoted, and Christian Science has again awakened the apostolic impulse toward this holy attainment by holding before men that "high calling of God" which was so earnestly commended to the early Christians. It has not only shown men what it is their prerogative, in God's great name and strength, to do, but how with patience, humility, steadfastness, faith, and love they can do it. This explains in part its advance, as it also explains the good cheer and enthusiasm of all its worthy representa-

Digitized by Google

tives, for nothing gives courage and conscious preparation for to-morrow's task like the mastery of to-day's, and nothing begets humility and aspiration like the discovery that one is indeed setting the captives free.

While Mrs. Eddy has declared that the student must begin with "the more simple demonstrations of control" (Science and Health, p. 429), she points to the highest efficiency in overcoming all sickness and sin as the exalted goal to which every true Christian may and must attain, and Christian Scientists are thus called to an unreserved consecration, an unfaltering devotion, an expectant faith, and an unfailing joy. They are called, as all men are called, to the largest, noblest, most unselfish, most humble, most spiritual living, and all this that they may show forth the power of Truth and Love to cure every sickness and destroy every sin. JOHN B. WILLIS.

"Train up a child in the way he should go."

AT no other period in human history have there been so many theories as to the best training for children,—the best means of advancing their physical, mental, and moral well-being,—as at the present time. Happily a large proportion of these spring from a very sincere love of the little ones, and a corresponding desire to give them the advantage of a fair start in life's great school. Many of these theories are, however, a source of much amusement to those who have had experience with children; they are vividly suggestive of "a pattern on the thumb nail," and in the end it is admitted that it may be better to leave much to God and to nature. It is obvious that never before were disease theories so pressed upon the attention of parents as now, with the result of ever-growing disquiet and anxiety upon the part of those who harbor them. One can but think longingly upon the Master's words,—"Suffer the little children to come unto me, and forbid them not,"—words that are so often mistakenly associated with the thought of death, rather than with that full and abundant sense of life which he offered to all who would accept it. With what tenderness did he awaken from the dream of death the little daughter of Jairus! Life as God was the end and aim of his glorious healing ministry, as it is of the ministry of Christian Science to-day.

It is cause for rejoicing that so many are coming to see the desirability and wisdom of bringing the truths of Christian Science to the child thought as early as possible, and thus training him in the way he should go,—the eternal way of health, holiness, and happiness. Under the old material régime the tendency is largely to cultivate for parent and child a belief in the inevitableness of disease, and at the same time to enforce an enslaving obedience to asserted health-laws, which are really disease laws and not divine statutes. It undoubtedly takes courage for a parent to step out of the little ship of dependence upon materiality, and to go upon the waters to meet Christ, who stills the tempest as of yore; but now as then Truth brings cheer to the trembling thought and says, "Wherefore didst thou doubt?"

A mother who has but recently come into Christian Science may be alarmed at the symptoms of an ailment which had caused her child nights and days of suffering under medical treatment with no abatement of fear at the subsidence of the attack; but after a brave and decisive struggle,—a vigil alone with God and her child,—a new vista opens up before her, wherein divine Love beckons to the green pastures and still waters which are to be found everywhere that Truth is known. Parents cannot overestimate their indebtedness to our beloved Leader for the uplifting message of Christian Science which she has brought to them for their children. Under its spiritual discipline the child grows strong to resist sin and disease through the understanding of that divine law whose operation tends to lessen the mortal tendency to both sin and sickness until it finally disappears.

A large number of testimonies are published in our periodicals, which tell of little ones whose health was restored by Christian Science when all else had failed, and, more than this, health has come to be known as an abiding possession—"the gift of God." The child trained to love and obey Truth expresses the true ideal,—reflects the infinite Father and Mother,—and fulfils the Psalmist's prayer that our children "may be as corner stones, polished after the similitude of a palace." Well might he add, "Happy is that people, that is in such a case: yea, happy is that people, whose God is the Lord." ANNIE M. KNOTT.

Letters to our Leader.

Philadelphia, Pa., March 12, 1906.

Beloved Leader and Teacher:—I enclose a few clippings which I thought might interest you if a moment could be spared for them. Our friend, Dr. Russell Conwell, has arranged with the telephone company to connect any telephone in the city with his church during the services on Sundays, thus enlarging his congregation by many thousands.

Faithfully,
ALBERT E. MILLER.

Chicago, Ill., March 7, 1906.

Beloved Leader:—As a worker for two years in a Christian Science Sunday School, I deeply appreciate the explanation of your views upon this subject, given us by one of your secretaries in our *Sentinel* of March 3. I am again reminded of our Master's teaching to the "children of the resurrection," of which he says, "It is the spirit that quickeneth; . . . the words that I speak unto you, they are spirit, and they are life."

Lovingly your follower,
MISS MARIE PRENTISS.

Washington, D. C., March 19, 1906.

My Dear Mrs. Eddy:—For years it has been the longing of my heart to express my gratitude to you for the many blessings derived from your inspired teachings. Four times I read Science and Health without a gleam of light, but the fifth time came the illumination which I had so patiently sought; and in proportion, my love grew for you through whom this message had come, and with this, a desire to see you, although never in the sense of worshiping personality.

I am only striving daily to live your teachings, that I may prove my love and gratitude. KATE N. FOOTE.

New York, March 8, 1906.

My Beloved Leader:—You can never know what a blessing you gave to me in the times you saw and talked with me when I was at Pleasant View; but I do want to tell you that I know it was a priceless privilege. Oh, that the Scientists only knew what they owe to you! If they could realize the toil and labor you give that they may not fall by the wayside, and lose the conscious ability to destroy the belief in ungodly things, they would keep God's commands. Only in this way can error ever be destroyed in human consciousness. I have been told that I have never brought out so much in reading the Lessons, and in conducting the Wednesday meetings, as since that time.

I thank God for you, and am striving to grow in humility and meekness that the sick may be more quickly healed through me. Obediently and gratefully,
FRANK H. LEONARD.

Toledo, O., March 20, 1906.

Beloved Leader:—I want so much to tell you, dear Mrs. Eddy, of my deep appreciation of all that you have given us. I have never gone to Science and Health for comfort, relief, or enlightenment, that it has not given me all and more than I was looking for. Sorrow, discouragement, and

Digitized by Google

sickness have disappeared, as the truth therein was understood. I am grateful for the light it has thrown upon the Scriptures. I love your works, not only for what they have done for me, but for the good they have accomplished for others. I was librarian of our Reading Room for some years and I deem it a privilege to have lived in the wholesome, healing atmosphere which your writings always impart. Many visitors have expressed their gratitude for the peace that quiet reading of your books has brought them.

I know of many cases of healing through reading Science and Health, and would like to tell you of them all. My only apology for taking up any of your valuable time, is that I wanted to contribute my "mite" in the way of testimony and gratitude. I should regret inconveniencing you, and be glad to add to your joy.

Lovingly and gratefully,

LOUISE C. PEELAR.

Glasgow, Scotland, March 5, 1906.

Dear Mrs. Eddy:—On March 1, four members of The Mother Church organized First Church of Christ, Scientist, Glasgow. We know that you will rejoice with us. Public meetings were begun in August, 1904. The growth has been steady, and Christ's healing power has been demonstrated. In November, 1905, Christian Science Reading Rooms were opened, and our first lecture given by Mr. Bicknell Young. The hall was crowded with an attentive and interested audience, and many were unable to gain admission. In January, we added an evening service. Two contributions have been sent to the Building Fund of The Mother Church, and all our own needs have been met by divine Love. We hope to prove a fruitful branch of the Vine, by abiding in Truth and Love, proving our gratitude to you by obedience and by increased understanding of Christian Science.

Loyally yours in the one Mind,

EMILIE HELENE HEUGH,
JOHN G. HEUGH, Captain Royal Navy.
JESSIE B. RICHMOND.
MARY L. RICHMOND.

Parsons, Kan., March 20, 1906.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Teacher and Friend:—A rebuke from headquarters made me think I would never intrude again, but you have proved to us that when the desire is right, viz., to express gratitude, and the motive pure (not to be seen and heard of men), then we stand alone with God, and Principle will uncover and destroy all appearance of evil. Since the time referred to, one prayer has been uppermost,—"Make self-righteousness be still," as you have so beautifully expressed it in your hymn, "Shepherd, show me how to go." Now, as "heart to heart," and "face to face," let me thank you for the new interpretation of the Lord's Prayer. "For God is infinite, all-power, all Life, Truth, Love, over all, and All" (Science and Health, p. 17). Oh, the tenderness of it, and the blessed privilege of learning how to serve such a God!

Thank you, dear friend of all mankind, for your quiet, persistent uncovering and destroying of evil, that such a God may appear to us; that we may rise higher and higher, till we, too, find the Father and unspeakable peace.

Most earnestly,

MRS. LILLIE V. BOARDMAN.

Admission to Membership.

The next admission of candidates to membership in The Mother Church will be June 5, 1906. Applications must be in the hands of the Clerk on or before May 14, 1906.

An application sent to the Clerk of the Church does not constitute the applicant a member; he must be elected to membership by the Christian Science Board of Directors, at which time notice of election will be sent.

Testimonies of Healing.

With feelings of deep gratitude I send this testimony of my healing in Christian Science. From early womanhood, and until Science came to my relief, I was troubled with indigestion, constipation, and sick-headaches. From these I had suffered greatly. A sister living in the West became interested in Christian Science, and was healed of a severe trouble through reading Science and Health. Two years later her daughter was healed of consumption, and this after the doctors had pronounced her case incurable. From time to time this sister would write me of her experiences, and of the wonderful truth of which she was surely gaining some knowledge. Some time after the healing of the daughter, my mother wrote this sister, asking her for treatment in Christian Science. In a very short time she was helped out of a serious physical difficulty from which she had suffered many years. Still later I, too, wrote and asked for treatment for the troubles mentioned. In a few months the ailment disappeared from which I had suffered most. The other troubles gave way gradually, until now I am free from them.

For the physical help received I am indeed thankful, but for the spiritual healing which came to me, and is still going on in my consciousness, I can find no words adequately to express my gratitude and joy. Self-righteousness, self-will, selfishness are among the evils which are being surely eradicated. In the light of these great changes, these genuine healings, can there be any wonder that I wish to express deep gratitude to God, and to our Leader, Mrs. Eddy, for what she has given us in our text-book, "Science and Health with Key to the Scriptures," in "Miscellaneous Writings," and her other works? Through the persistent study of the Bible and our text-book the spiritual law of creation is being unfolded to me, and through the understanding thus gained many errors have been destroyed, many victories won. Clouds have come, and there have been seeming failures, but constant endeavor to apply the truth, as taught in Christian Science, has brought back the sunshine, and great peace and joy have come into my life.

FANNY A. WHEELOCK, Dorchester, Mass.

After years of invalidism, and treatment from many kind physicians without any lasting benefit, I went to see a specialist, who informed me that a surgical operation was the only thing which would relieve me, but he said I need not expect to be very strong afterwards. I finally consented and the operation was performed, which consisted of the removal of some of my organs. After going through all this, I was still a "wanderer in the wilderness," weaker than ever, and at the expiration of eighteen months had never been able to sit up all day. The specialist finally told me I need not come back any more. I then tried to get encouragement from my home physician, but he too said, "You may recover, and you may not; people who are operated upon never amount to anything afterwards;" and he added, "Your case is chronic." I met with gloom and despair, and no one knows the suffering I experienced,—it seemed at times that I could not live from one day to the next. I tried everything imaginable in the way of material remedies. Finally I gave up all hope, made preparations to die, and gave directions in regard to my funeral. All this time I had wondered why my prayers were not answered, as I had prayed so earnestly for health, for I longed to be useful to humanity. I had often remarked to my husband and friends that there was something lacking in the teachings of the churches, for the Bible said plainly that God "healeth all thy diseases;" and "The prayer of faith shall save the sick."

About this time a dear friend spoke of Christian Science, and told me of many wonderful cures. I remembered that one of my neighbors, who was nearly seventy years

Digitized by Google

of age, had told me of being healed instantaneously of a sprained ankle through Christian Science, and at that time I had thought it wonderful, but I had been led to believe that Christian Science was nothing but the exercise of human will power. I had even remarked to my physician before my operation, that I was trying to be a Christian Scientist but that it would not work. I, however, made up my mind that I would take the word of no one either for or against it, and accordingly I went to see a practitioner. I purchased the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and returning home began to search for a God who answers prayer; if I were worshiping an unknown God, I wanted the living God. When I reached line 12, page 14, in the chapter on "Prayer," I read and re-read the statement and knew it was the truth. Immediately I went down stairs and gathered up everything in the way of medicine and threw it away. I sought to make an entire consecration of myself, and was instantaneously healed of inflammation of the bladder, chronic constipation, and other troubles.

This occurred over a year ago, and I have taken no medicine since, for it would be like going from understanding to ignorance of my God-given rights, to return to medicine. I have better health than I ever had in my life before.

Money could not buy from me Science and Health if it could not be replaced. It is what its title affirms, a "Key to the Scriptures;" it is also a key to the kingdom where "no evil shall befall thee."

MRS. QUEEN MULLINS HUTTON, Mooresville, Ind.

A little over two years ago I became interested in Christian Science, since which time I have taken great delight in reading the Christian Science literature, and especially in the study of the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. I much enjoy the reading of the testimonies, and this has prompted me to add my own, thinking that perhaps it might be of interest to some one. One day while at my work I slipped in such a manner as to cause a fracture of one of the ribs. I tried to the best of my ability to control it, but in two days' time it had become so painful that breathing was very difficult and it was impossible to get into any position in which I could rest so as to sleep well. I then applied to a practitioner, who commenced giving me absent treatment, and the first night thereafter I was able to rest well. The soreness disappeared in two or three days, and I have not experienced any trouble from it since.

I feel very grateful to our dear Leader for the light which she has brought to the world.

C. F. WILKINS, Great Bend, Kan.

Three years ago I was healed of what a number of physicians called valvular heart trouble. Never until then did I know what it was to feel as well, strong people do. When a child I wondered how other children could run and play so much more than I could. I was always sick, but until I was fourteen my parents never knew I had heart trouble. I was taken out of school at the age of fifteen. We then lived in Kansas City, Mo., where we tried a number of physicians. They all said that I must go South.

We came to Mexico, but I continued to grow worse. After living here four years, we went to New York on a visit; there the doctor gave very little hope of my ever outgrowing the illness. We returned to Mexico, but soon I was worse than ever before. I was, however, perfectly healed in Christian Science, in less than a month, and can now do anything without being fatigued. I have also gained fifty pounds. Those who have never been ill cannot know the happiness my health has brought me; but that is little compared with the joy of the spiritual understanding which I am gaining day by day.

No words can express my gratitude to God, and to Mrs. Eddy, for having been shown the way to eternal Truth.

KATE BARTO, Vera Cruz, Mexico.

Three years ago I had a very severe attack of neuralgia of the face and head. After much suffering, and when I was unable to do any work, or scarcely able to speak, my sister telephoned to a practitioner for help. In less than an hour after the message was sent I was sitting up, the suffering entirely gone. This demonstration has been to me a beautiful and conclusive proof that harmony does not depend upon material conditions. I can go out of doors in the most inclement weather without any bad results.

When my little boy was a few weeks old he became violently sick. We did not know the nature of the trouble when we asked for help, but it was whooping-cough, and was overcome at once without any after-effects. When the same child was seven months old he began to have attacks of vomiting. In a short time he grew thin and pale, and required incessant care night and day. Many said we would not raise that child, but when I asked for help in Christian Science, he immediately began to improve. The treatment was all absent and there was a hard fight, but with increasing wonder and gratitude we saw every discordant condition disappear; baby was soon in perfect health, and much improved in disposition.

My gratitude for Christian Science increases daily, and my prayer is that my life may express true thankfulness to God, and to our Leader.

MRS. EDITH E. BROWN, Palo, Ia.

When our little boy was three months old he was taken sick with some trouble of the stomach and there was an entire stoppage of the bowels. Everything that three doctors could suggest was tried, but he grew worse instead of better. At the end of six months he weighed only six pounds. The doctor allowed us to give him only a few spoonfuls of milk at intervals of three hours. At this time a friend told us about Christian Science, and as we felt the baby had only a short time to live we consented to try it. We sent for a practitioner at once; she treated the baby, and then gave him his bottle of milk. He emptied it and cried for more. We were afraid to give it to him, but the Scientist assured us we need not be afraid to give him anything he needed, and he took the third supply. He then went to sleep and slept five hours. From that day he improved so rapidly that at the end of four weeks he weighed eighteen pounds. This healing was done nearly three years ago, and to-day the child is a healthy boy.

We feel very grateful to God, and to our Leader, for we know that nothing but Christian Science could have saved him. Some people remarked that the baby was as good as raised from the dead.—MRS. JOHN REID, Palo, Ia.

Eleven years ago, during a treatment in Christian Science, I took off my glasses and have never used them since, although a prominent physician had told me the day before that I would never be able to use my eyes without them. Since then I have been engaged in very close work for three and four hours at a time, without any bad results. I have also been healed of nervous prostration, palpitation of the heart, and many other ailments. My children were born without pain, and they have been cared for by Christian Science since their birth, and I feel that they have escaped a great many ills.

It seems more wonderful to me every day—the great power of divine Love, which is ever ready to help us. I am very grateful for the understanding I have gained through reading Science and Health by Mrs. Eddy.

MRS. ELLA CLARK, Chicago, Ill.

Digitized by Google

For almost six years I have been enjoying the blessings of Christian Science. I was a wanderer in the wilderness of despair, discouragement, and sickness for thirty-five years; was always taking medicine or was looking for some new remedy, until I was without hope of ever getting well. Christian Science has healed me of catarrh of the stomach, chronic constipation, and astigmatism. Oh the joy I experienced, when my little boy was healed instantaneously of croup. I knew then that it was the power of God, for no other help was nigh. His presence fills all space. As a mother I can recommend Christian Science as a present help in time of trouble, for I have proved it in various ways and diseases. We have not used any kind of medicine since coming into Christian Science. I am very grateful to God, and to our revered Leader who has made it possible for us to apply the truth which Jesus taught.

MRS. ELLA SWAIM, Burbank, Cal.

It is with gratitude that I give this testimony. All my life I have been troubled with coughs, colds, sore throat and weak lungs. Through the winter months I suffered severely, and would have attacks lasting from three to five weeks. Despite all the medical help I had, each year found me in the same condition as the previous one. About a year ago I became interested in Christian Science, and before the winter passed my old trouble came upon me. My lungs were in worse condition than I had experienced before. I found I could not control the disease and went to a practitioner. In three days I was well, the swelling gone, my cough had disappeared, and my lungs were stronger than ever before. I have not had any trouble in that line since.

I love Christian Science for the spiritual help I have gained through its study.

AGNES A. MCMAHON, Chicago, Ill.

With a deep sense of gratitude and love to God, and to our beloved Leader, Mrs. Eddy, I humbly attempt to express my gratitude for what Christian Science has done for me. I became interested in it through the healing of a friend, whose case was pronounced hopeless by an eminent specialist. Through this almost miraculous healing I began to read "Science and Health with Key to the Scriptures," and as I studied this text-book a little understanding of Truth came to me which I was able to demonstrate. Physically I was strong and healthy, with the exception of a few ills,—one being a weakness of the eyes which I had from childhood and which quite often kept me from reading. The disappearance of this ailment is all due to Christian Science. Words are inadequate to express my gratitude for the manifold blessings that have followed the dawning of the truth in my consciousness. Every form of evil that has been manifested has been destroyed through this truth, but the greatest was the healing of my mentality, enabling me to discern the true sense of Life. Before coming into Science I was a member of an orthodox church, and trained up in the Sunday School, but with all my religious training I had very little understanding of the Bible. Our text-book has indeed proved to be a "Key," for it has unlocked the hidden treasures of the Bible, which is now my daily companion, with Science and Health. Where there was a sense of sadness and inharmony hovering over me almost constantly, especially in my childhood, now there is joy and harmony. This is indeed the new birth, which all must have in order to enter the kingdom of heaven. I am also most grateful and happy for being privileged to belong to the Christian Science church.

EDWARD C. PYNE, Washington, D. C.

Two years ago I came to Christian Science, a physical wreck from bladder trouble. The best doctors could not help me; they said I never could be cured. I also had heart trouble, pain in the top of my head, and female trouble. All this I had for nearly four years, when a doctor said I would either go insane or die before long. At this time I went to visit a Christian Scientist, taking my satchel full of medicine, as I had been taking medicine every half hour, and thought I could not get along without it. When I got to the friend's home I found Science and Health, and at once began to read it. I asked for help that night and had treatment for three weeks, when I went home well. My husband and I were both healed of eczema in a little over a week by Christian Science. I have had another grand demonstration which occurred lately. I went to visit a sister who had typhoid fever. I had always had great fear of it, and two weeks after I came from my sister's I had every symptom of this fever, but I was in bed only four days. I sent for a practitioner, who treated me and proved that Christian Science does heal all our diseases. I am very thankful to Mrs. Eddy for her great work for humanity.

MRS. MAGGIE BENNETT, Oxford, Mich.

In February, 1899, our little daughter was taken very sick. We called in a doctor who had the reputation of being one of the best in the city, and after making an examination of her case, he told us one of her lungs was gone and the other one was affected. He also said she had softening of the spine that would cause her to be a cripple, and that if he succeeded in getting her safely through the lung trouble, he would have to put her in a plaster-of-paris jacket. My heart ached when he told me this, as I recalled a niece who wore three of these jackets, and there was no end to her sufferings and torture until she passed away. The doctor said he could not tell much about my child's case until the third day. When he came again I asked him what he thought of her, and he gave me very little hope. The thought then came to me, Why not try Christian Science? We called in a practitioner, and after the first treatment we saw a change for the better; after the second treatment the swelling had all left her feet and she had no more pain; and after the third treatment she was up and took dinner with us and was as well and hearty as if nothing had ever ailed her. I thank God for Christian Science, for to-day she is in perfect health and as straight as an arrow, without a trace of either the spinal or lung trouble.—MRS. MINNIE SCHNEIDER, Dayton, O.

About three years ago, Christian Science was brought to my notice. My wife and myself were invited to attend the church. We went, and I liked it. I visited the church on several occasions, but could not get interested enough to warrant my taking the matter up more seriously. I finally dropped it altogether, with the exception of the remembrance I had of the beautiful services. The seed had been sown just the same, and it was to spring up at some later day.

December, 1904, I was troubled with a carbuncle that caused me severe suffering. The pain was terrible, still I performed my duties at the office, but under difficulties. My brother, who was interested in Christian Science, advised me to go to a practitioner, but I declined in a very determined way, telling him that I was going to my doctor in the afternoon. I went, and after waiting about two and a half hours in constant pain, he arrived. Having been my friend for many years, he would naturally try his utmost to relieve me, but he said I must go home for three or four days. I told him it would be impossible for me to leave the office, and asked him to do something to relieve me. He prescribed a plaster, which I applied, but the suffering from that application cannot be described. After lying in

Digitized by Google

bed fifteen minutes, the thought of Christian Science came to me, and my brother's words all came back. I called my wife, asked her opinion of Science, and she heartily approved of my taking treatment, telling me to go at once and that she would go with me.

We finally reached a practitioner, who gave me treatment, assuring me that before I reached home that evening, the pain would be gone. I doubted this, but twenty minutes after we had left his house the pain had disappeared. Next day I had another treatment, and two days after the carbuncle had entirely disappeared

We have since had many demonstrations which have convinced us that God is an ever-present help, that He is all-powerful. I cannot express my gratitude in words for all the health, the happiness, the spiritual uplifting, and the prosperity I have realized since coming into this saving truth. I cannot thank Mrs. Eddy enough for this great unfolding of divine Love through her ministry.

OSCAR LOEWENBACH, Milwaukee, Wis.

[Translated from the German.]

I wish to express my gratitude for all the good that I have received through Christian Science. I had always been a delicate child, and really never left the hands of physicians. From earliest youth I had suffered from severe headache, which increased as years went on. All that human skill can afford was done. Almost every year I spent some months in the mountains, for the fresh air. I tried baths, massage, and electricity, and finally took treatment from a nerve-specialist. Some of those means relieved me temporarily, but none brought me healing from my worst enemy, sick-headache. This trouble steadily increased, so that sometimes I suffered three to four severe attacks in one week. At this time, when in despair, I heard for the first time of Christian Science, my sister having just then been healed of a severe stomach trouble. Although I knew this, I had absolutely no confidence in it. It seemed incredible that I could be healed by spiritual means after all material remedies had failed. Finally I decided to try Christian Science, feeling that I could then say that I had tried all possible means. With this thought I went to a practitioner, and soon I was so joyous that I was ashamed of my doubts. After the first few treatments I felt considerably better and stronger, and after having treatment for some time, I was entirely free from my tormentor.

Five years have passed since I took treatment, and in all this time I have not had the slightest attack of sick-headache. I am indeed grateful to God for my restored health, and also grateful to Mrs. Eddy, through whom this healing truth has again been revealed.

FRIDA THILO, Dresden, Germany.

It is with a deep sense of gratitude that I acknowledge the healing power of Christian Science over all diseases. One Sunday evening, in December, 1904, my body commenced to swell and became quite hard and sore. The pain was so great that I was unable to help myself, and a practitioner was called about midnight, and again at two, as they thought I was dying. All action of the bowels had ceased for three or four days, and I had lost control of my right arm and side. All this was, however, overcome by divine power, and I thank God for giving us Mrs. Eddy and her book, "Science and Health with Key to the Scriptures."—JEANIE CRAWFORD, Chicago, Ill.

I wish to express my heartfelt gratitude for Christian Science, for its wonderful revelation of man's at-one-ment with God, its revelation of glorious possibilities, unlimited by any sense of error. Its teaching brings out qualities of gentleness, kindness, affection, humility, and purity, and makes each day brighter with new hopes and broader views, glorious freedom, harmony, and peace. Our joy is fulfilled and we lack no good thing, because our abiding-place is under the shadow of the Almighty.

N. P. W. SWANSON, Chicago, Ill.

About four years ago I first heard of Christian Science. I had about reached the extreme end of materiality, and doctors and medicine seemed to do me no good. I was in a darkened state of thought, suffering from several diseases; tired and weary of sin and its consequences. In this condition I learned of Christian Science, and when I understood even a little of this blessed truth, I realized that "the old man with his deeds" must be put off; and that I must learn of the spiritual man. The liquor habit and the tobacco habit both left me. They disappeared as though I had never been subject to them. I am very grateful to Mrs. Eddy for this wonderful teaching, and for what it has done for me and mine. Friends and relatives also have been healed and helped. I am thankful for the literature, as it is a great aid to me.

JOSEPH A. WAGNER, Sheridan, Pa.

[Translated from the German.]

I gladly acknowledge the many blessings I have received through Christian Science. During some years before I had any understanding of Christian Science, I had to wear glasses, but when Christian Science found me I laid them aside, as I did not need them. Many years ago my foot slipped while I was walking, and was sprained. From this I suffered for a long time. Finally the pain ceased, but I was unable to move one of my toes, and a corn appeared that gave me much pain. After a time the foot became enlarged. Two years ago, while listening to Mr. Bicknell Young's lecture on Christian Science, my foot hurt me so that I could hardly keep still, but from that evening it was healed. The corn disappeared, and my foot became normal in size.

I am very grateful to our heavenly Father for His love and mercy, and that He has given us our faithful Leader, Mrs. Eddy.—MRS. C. L. RADDATZ, Oshkosh, Wis.

I am glad to witness to the great benefits I have received from Christian Science. It cured me of constipation of twenty-six years' standing, of indigestion, sick-headache, melancholy, etc. I have been freed from many other distressing things through this blessed understanding of divine power and I find I am well and happy just so long as I hold steadfast to Truth.

I am very grateful for the *Sentinel* and *Journal*, and the Bible Lessons. I love and honor Mrs. Eddy and know that her blessings are an hundredfold for what she has done for humanity.—MRS. ABBIE CHAMBERLIN, Burlington, Wash.

[Written for the *Sentinel*.]

Majesty.

ETHEL E. WALTON.

"PEACE, be still."
The winds and waves in sobbing silence died,
And in the hearts of men calm did abide.
Yea, all the many voicèd powers of hell
Beneath that charm of awful silence fell,
So still, so infinitely sweet he came
That all the world caught stillness as a flame
Of holy fire, sweeping away desire
Of all but that eternal light and grace,
Which radiant shone from out the Master's face—
A face in which all gentleness, all power
Together dwelt, and in that fateful hour
Of utter darkness, flashed and glowed—a star—
On which men gazed and thenceforth silent were.

From our Exchanges.

As theological scholars recognize their essential oneness —notwithstanding differing denominational names and deep differences of judgment as to important matters—because of their unity in purpose, spirit, and method, so will the Church come to an increasing unity—not because of compromises in dogma and polity, but because of the increasing sense of a vital oneness in purpose and in method. With this will come a simplification of essential Christianity, making possible unity in diversity. It will be the union of men of good will, inspired by the purpose which ruled the life of Jesus Christ. Questions in metaphysics and cosmology will remain, but they will be given their proper place. The Christian will recognize as Christian every one who takes Christ as Lord, and as co-laborer every one who seeks to hasten the coming of the divine kingdom and the doing of God's will on earth, and as brother each individual in all humanity who is to be brought to a consciousness of his divine sonship and to a participation in the blessings of our Father's house. PROF. GEORGE WILLIAM KNOX.

The Congregationalist.

Frederick Denison Maurice, in speaking of the Church in America, more than half a century ago, said that it should be praised rather for its potential than for its actual accomplishments. He meant, of course that its anticipated progress would not be measurable by its development in the first half century of our national history. It is an interesting question for churchmen to ask whether a critic as penetrating would not speak of the American Church to-day in much the same words as those used by Maurice two generations ago. The responsibilities of the Church are far greater than they have ever been before, yet it is more than doubtful whether the necessities and the outlook of a great Christian nation, developing intellectually and materially, are interpreted to-day by the Church in America more profoundly or more accurately than was the case when Maurice's criticism was expressed.—*The Churchman.*

Jesus leads not by saving, but by guiding; he leads by virtue of having himself been on earth that lovely and perfect moral power which all the children of God may be; he leads by the directness and power with which he has set forth the fundamental principles of man's growth and of the soul's relation to God; he leads because he has set forth unto all men in absolute perfection the sublime ideal of the life of self-surrender. Following after him we are inspired to seek, not our own will, but God's will, and to seek our own happiness only in so far as it is embodied in the eternal happiness of all souls.

The Christian Register.

After a long time the one who is struggling against the tide of his own nature finds that he has not adopted the right method. He has trusted in himself instead of in the Lord. He has sought to overcome self by trusting in self; to have Satan cast out Satan. He sees that the only way of deliverance is the way of self-abandonment, nay, of self-abnegation, and sinking wholly into the Divine power. When man sees this lesson written upon the pages of his experience, he must be willing to learn it.

New Church Messenger.

Truth and love; these are the only powers that can save the soul, however they may be mediated to us. They may shine in stars or speak through the blood-drops of self-sacrifice, but it is these alone that can save in all worlds and everywhere. The entrance to the heavenly kingdom is through God's truth and God's love, and this also is the process or method of salvation.—*The Universalist Leader.*

For description, price, and other information, see last page of cover.

RUDIMENTAL DIVINE SCIENCE.—Printed in the New York point system of type for the blind. Price, prepaid, 50 cents per single copy; $5 per dozen.

CHURCH MANUAL.—Containing all the By-laws to January 1, 1906, of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of The Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the Churches and Societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to The Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of The Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to The Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number, or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By Hon. WILLIAM G. EWING.

CHRISTIAN SCIENCE. Its Worth and Work. By Rev. ARTHUR R. VOSBURGH.

CHRISTIAN SCIENCE. Its Promises and their Fulfilment. By EDWARD A. KIMBALL.

CHRISTIAN SCIENCE. Is it Christian? By Mrs. SUE HARPER MIMS.

CHRISTIAN SCIENCE. Its Work and Scope. By CAROL NORTON.

CHRISTIAN SCIENCE. The True Idealism. By ANNIE M. KNOTT.

IN GERMAN

CHRISTIAN SCIENCE. Its Promises and their Fulfilment. By EDWARD A. KIMBALL.

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* **PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

The Lodge amendment to the Hepburn rate bill will, if adopted, include all pipe lines in the provisions of the Interstate Commerce law, and make these lines, whether owned by the Standard Oil Company or others, common carriers. Senator Lodge is of the opinion that the owners of these pipe lines enjoy special privileges which should bring them under the control of the Interstate Commerce law, since their owners are compelled to operate under franchises to acquire the right to cross public highways, and in some States exercise the right of eminent domain.

It is thought that new indictments of the beef packers as individuals are to be asked from the Federal Grand Jury, which has been summoned to appear on Tuesday, May 15. Judge Humphrey, in the Circuit Court, recently decided that the packers cannot be held as individuals on any evidence which formed a part of the information given by them to Commissioner of Corporations Garfield. In order to make the immunity plea impossible, secret service men are said to have been gathering evidence since that investigation.

The irrigation dam being built by the Government in the Shoshone Canon will back up flood waters to the amount of 500,000 acre-feet. The structure will be one of the highest dams in the world, 310 feet. When the project is completed it will be possible to reclaim about 175,000 acres of irrigable public lands about seventy-five miles east of Yellowstone National Park, Wyoming. The soil is productive, and hay, wheat, oats, barley, and the hardier vegetables can be produced abundantly with an ample supply of water.

Acting under instructions from the State Department, the American Minister at Havana has been in conference with the officials of the Cuban Foreign Office for the purpose of framing a new reciprocity treaty to replace the existing convention. A treaty has been drafted that may be ready for submission to the Senate before the adjournment of the present session. The present treaty does not expire by its own terms for three years.

The cost of railroad transportation of the United States mails is increasing at the rate of a million and a quarter dollars a year. Last year 728 companies received a total of $45,279,940.04. There is a probability that a considerable reduction in the rates will be demanded soon, as it is conceded that the rates are in many instances higher than necessary for the maintenance of the present efficiency.

The chairman of the Committee on Rivers and Harbors has decided to introduce a bill relating to the preservation of Niagara Falls. As soon as practicable after the bill has been reported public hearings will be commenced and continued until the arguments of both the owners of power plants in the vicinity of the Falls and those who are urging the preservation of the Falls are presented.

The gross indebtedness of New York City is greater than that of the Chinese Empire. The cost of operating the city's government for one year almost equals the annual expenditures of both London and Paris combined. New York pays out in salaries alone, to the forty-five thousand men and women on its pay-roll, the vast sum of $65,000,000 yearly.

The General Staff of the Army, believing that the line of the Panama Canal should be strongly fortified, has prepared a plan for the defences, which is now before Secretary Taft. But the Isthmian Canal Commission urges that no attempt be made to erect fortifications and that the canal should be neutralized just as the Suez Canal.

The superintendent of logging for the Government on the Chippewa Indian reservations in Minnesota, where lumbermen are cutting timber they purchased under the Morris law, estimates that the cut for the season has been about 200,000,000 feet, compared with 130,000,000 for the winter a year ago.

Congress plans to revise the immigration act of 1903. The purpose is to improve the quality of the immigrants and to provide for a wider distribution of them after they reach the shores of America. Bills have already been reported in the House and the Senate.

Governor Ide took the oath of office at Manila last week in the presence of over a thousand persons at the ayuntamiento.

Foreign.

The Russian suggestion for the assembling of The Hague Convention in July does not meet the convenience of the United States State Department, or the States of Central and South America, and another date may be considered. The Russian programme makes the following provisions: Amelioration of provisions of the convention concerning the settlement of international controversies as far as the Court of Arbitration and the investigation committees are concerned; additions to the laws and usages of land warfare, among others opening of hostilities, rights of neutrals on land, declarations of 1889, renewal of one of them; compilation of a convention regarding the laws and usages of naval warfare relating to the special operation of naval warfare, such as bombardment of forts by naval forces, location of torpedoes, change of merchant vessels into warships, private property of belligerents at sea, time allowed merchant vessels to leave neutral or hostile ports after the beginning of hostilities, rights and duties of neutrals at sea, among others the question of contraband; rules to which belligerent vessels must submit in neutral ports, destruction from uncontrollable causes of merchant vessels captured as prizes.

By the agreement reached at Algeciras, Spain, in the Moroccan question Spain will police two ports, Tetuin and Larache; France and Spain jointly Casablanca and Tangier; France alone Mogador, Saffi, Mazagan, and Rabat. This gives France four ports on the Atlantic. The duration of this agreement was fixed for five years.

The settlement of the question of the State Bank of Morocco gives France three shares, including those of the French syndicate. The other nations have one share. Four bank supervisors will be appointed by the Bank of England, the Bank of France, the Imperial Bank of Germany, and the Bank of Spain.

Trade of the United States with Mexico in the fiscal year 1905 aggregated in value $92,000,000. In 1895 it was only $31,000,000, and in 1885 $18,000,000.

Industrial and Commercial.

The financial statement in the message to the Cuban Congress shows that the expense of the Government in the second six months of the last fiscal year has increased $10,695,000. The income during the same period was $10,382,000. The message adds: "During 1905 the island's importations reached $94,806,685, against $77,028,314 in 1904. The imports from the United States were $42,981,888; from Great Britain, $13,424,050; Spain, $10,350,469. Exports in 1905 amounted to $110,107,384, against $80,012,756 in 1904. Exports to the United States were $95,330,475; to Great Britain, $5,795,300, and to Germany, $3,905,471."

Intelligence from Oil City, Alberta, says oil of the highest quality is now flowing from huge gushers in the southwest fields, situated within five miles of the international boundary and some forty-five miles southwest of Pincher Creek, a station on the main line of the Canadian Pacific Railroad. The valley in which the oil lies is an enormous crevice caused by volcanic eruption, cross cutting the formation of the Rocky Mountains and forming a huge basin into which the oil has seeped for centuries from the coal deposits in the north, forming a vast lake, underlying the rock formation at a depth of a little over a thousand feet.

The Westinghouse Electric and Manufacturing Company of Pittsburg has completed the first of twenty-five new style electric locomotives to be used by the New York, New Haven, and Hartford Railroad between New York and Stamford. It differs from the old style electric locomotive in that it is operated by the alternating electric current single phase system. It weighs seventy-eight tons, and it is expected that it will draw a train of two hundred and fifty tons at an average speed of seventy miles per hour.

Mexico is pushing to completion her trans-isthmian railway across the Isthmus of Tehuantepec, a neck of land 193 miles in width, and is equipping it with a standard gauge, double track with terminals at Coatzacoalcos and Salina Cruz, which are being converted into splendid harbors, giving thirty-three feet of water alongside masonry or steel quays, where freight will be handled directly between ships and cars. Already forty millions of dollars have either been expended or contracted for.

A combination has been effected between the Westinghouse interests and one of the largest electrical concerns in Italy, for the purpose of undertaking important contracts for equipping Italian railroads with electric power.

Mount Vesuvius is in violent and destructive eruption.

General.

The steamship Urmston Grange, carrying the Pacific cable of the Commercial Cable Company, to be laid between Guam and Japan, landed the end of the cable on Guam Island, March 30, and began paying it out toward Japan.

According to officials of the De Forest wireless telegraph system, 572 words out of a total of 1,000 were successfully sent on the 28th ult., without cable, across the ocean from Coney Island to Ireland.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

"Awake thou that sleepest."

CLARENCE W. CHADWICK.

Awake thou that sleepest, and arise from the dead, and Christ shall give thee light.—*Paul.*

ACCORDING to Scripture the dream of mortal existence "is of few days, and full of trouble." Mortals realize that what they experienced during the sleeping-dream was but a phantom, an illusion, which vanished with their waking, but could we converse with them during the continuance of this dream, they would no doubt contend for its indisputable reality. Not until they awake do they positively know that its seeming pleasures and pains are alike unreal.

The more important awakening for men is from the day-dream of mortal existence, which testifies to the naturalness and reality of all that is evil and perishable. Concerning this day-dream, the poor mortal has been woefully misled, for he has been told that the sense of material existence constitutes life and reality, that it is ordained of God, and consequently normal and natural. Believing this teaching true, he continues to absorb the forbidden knowledge of good and evil, until at last he becomes so dissatisfied with his miserable existence that he is divinely impelled to look outside of mortal consciousness for health, peace, and happiness. Right here is the all-important turning-point in his career; when, for the first time, he begins to realize his need of a Saviour. The still, small voice of Science speaks at the door of consciousness and gently but positively assures him that the varied experiences which he has believed to be real and unquestionable are, in fact, only the changing phenomena of a false sense, and just as much a dream as are the experiences of the night. If meekness and humility are uppermost in thought, and the desire to be Godlike is paramount to all else, he will rejoice to learn that sense-testimony is both unnatural and unreal. On the other hand, if pride and selfishness hold sway, and there is little inclination to strive for the attainment of spiritual good, he will most reluctantly concede the unreliability of sense-testimony. The Master said, "Blessed are they that have not seen, and yet have believed" (understood); and he also said to the Pharisees, "Ye say, We see; therefore your sin remaineth."

When finally he does hear the cry, "Awake thou that sleepest, and arise from the dead," he marvels that he should have spent so many years in darkness without being told that the consciousness of sin, disease, and death is but a dream, and that the coming of Christ means the awakening from this dream. He rejoices in a present understanding of the Christ-truth, and "forgetting those things which are behind" he presses "toward the mark for the prize of the high calling of God in Christ Jesus." If he is a wise student of Christian Science he will no longer make the mistake of believing in the mortality of man, but will recognize the great spiritual truth that God is the Father of man, and he will find this fundamental spiritual fact to be the basis of all health, holiness, and happiness. He will no longer believe in a mind separate and apart from God, but will strive to let that Mind be in him which was also in Christ Jesus; and learning that this one infinite Mind is his only guide, healer, and teacher, he will no longer place any confidence in any minor healing agency. The demonstrations of spiritual harmony which follow an intelligent reliance upon omnipresent good, God, will evidence the fact of his having entered the strait and narrow way of divine Truth, which leads to a present understanding of eternal life, the kingdom of heaven on earth.

A mortal can memorize the whole Bible from cover to cover; he can possess the most acute corporeal senses, and yet be mentally sound asleep and without a true knowledge of God until these senses have been corrected by the testimony of Spirit. The apostle Paul must have had a keen appreciation of this fact when he said to the Corinthians, "Awake to righteousness, and sin not; for some have not the knowledge of God: I speak this to your shame." "A knowledge of God," to the Christian Scientist, means something more than blind belief. It means something more real and tangible than a mere profession of faith, with no "signs following." It means a metaphysical consciousness of the all-power and presence of Spirit, which is a law of exclusion to every erroneous belief or thought. It means a purified state of consciousness which reflects the nature of God, good, "in demonstration of the Spirit and of power," healing both disease and sin.

A good orthodox brother, upon being asked in all kindness to remove from his church roll the name of one of his members who had been healed by Christian Science, and who, after prayerful deliberation, desired to unite with the Church of Christ, Scientist, remarked that he considered such a step on her part equivalent to looking up into the face of God and saying, "I am done with You." Could this brother but realize the sweet peace and joy which have entered into this woman's life, the quickened moral sense that has led to a deeper consecration to God, and her practical insight into the Master's teaching, enabling her to rely intelligently upon God as a very present help in every hour of need, would he be inclined to think that she has forsaken her God? For his sake, and for the sake of suffering humanity, asleep to the present activities of the Christ healing, let us trust that he would not. With the all-satisfying consciousness of "God with us," the Christian Scientist will patiently await the appearing of the day-star of spiritual activity to broaden the mental horizon of those whose faith may be hampered by creed and ritual. The time must come when professing Christians will be ashamed to admit that they have not the "knowledge of God" which heals the sick through spiritual means only. Let us hope that those looked up to as leaders and teachers in the religious world will not be the last to awaken from the day-dream of mortal existence, which explains neither Christ's divinity nor his works of healing. Could the command to "awake to righteousness, and sin not" be universally heeded, there would soon be no mystery concerning Christian healing and living. We shall cease sinning only when we cease to give power to matter; and when we *know* that all power belongs to God, we cannot fail to heal the sick.

Christian Scientists know that "it is high time to awake

Copyright, 1906, by Mary Baker G. Eddy.

out of sleep: for now is our salvation nearer than when we believed." Through Christian Science the Christ has come, "the glory of the Lord is risen upon" us, "and hath given us an understanding" of how to work out our own salvation. It is our Leader's fondest hope that the world shall not again lose sight of the healing Christ-truth, which alone can penetrate and dissipate the day-dream of sense, showing mortals how to "lay hold on eternal life," here and now. As faithful followers of this Christ-truth, which is practically explained in our text-book, "Science and Health with Key to the Scriptures," let us keep awake to the demands of a healing gospel which does not ignore the redemption of the body.

Membership in The Mother Church.

F. M. T.

AFTER becoming a student of Christian Science, the subject of joining The Mother Church in Boston was brought to the writer's notice, and she well remembers that at first she thought lightly of that privilege, partly owing, perhaps, to the fact that in the church to which she formerly belonged, infant baptism was considered the seal of membership. A careful study of the Church Manual, however, soon brought quite a different view of the subject of church membership, and as more earnest thought was given to its teachings, many reasons why all Christian Science students should be members of The Mother Church became apparent.

When we become members of The Mother Church we are amenable to its rules, and if obedient thereto we reap our reward. If prayerfully followed, these rules will prevent all dis-unity, for they awaken Christian Scientists to alertness in their duty to God, and to their neighbor, as well as to bring about uniformity in their work. Mortal mind when left to itself is always indulging its own particular fancies, delighting to make its own laws,—and then it grumbles in its own inconsistent fashion when confusion results because of mistaken methods of working. Such conditions would be impossible were all faithfully to study and obey the rules given in our Church Manual. Surely we are all grateful that when our Leader organized The Mother Church she made provision for members of branch churches to be received as members, and this privilege should not be overlooked by an indifferent attitude towards it. An honest acknowledgment of the value of the teachings that are understood, will begin to open the blind eyes, and then will be seen the good that is accomplished by steady adherence to the rules found in the Manual. Those who are already members should be aware that their obligations do not cease as soon as their per capita tax is paid. Having taken upon ourselves the responsibility of subscribing to the tenets and rules of The Mother Church, we should at least endeavor to fulfil that trust, and earnestly strive for that Mind "which was also in Christ Jesus." Incalculable good will be accomplished by the obedient following of the comprehensive counsels of the Manual. Mrs. Eddy says, "Of this I am sure, that each Rule and By-law in this Manual will increase the spirituality of him who obeys it, invigorate his capacity to heal the sick, to comfort such as mourn, and to awaken the sinner" ("Mental Digestion," *Sentinel*, Sept. 12, 1903).

The mental apathy which would blind us, and make us indifferent to our spiritual growth, will soon be put to rout by a study of the chapter entitled "Guidance of Members" on page 56 of the Manual. So adequate are its provisions that all may find guidance and direction to meet every circumstance, whether in an official or non-official capacity, which may be encountered in their daily work as Christian Scientists. Mrs. Eddy says, "Whatever guides thought spiritually benefits mind and body" (Science and Health, p. 149). We should therefore faithfully adhere to the teachings of the Bible, Science and Health, and our Manual, for they are fitted to guide, protect, and encourage us in attaining that wisdom which is so needful for each one of us, and which alone will enable us to solve and overcome every-day problems, while fighting the good fight "not as one that beateth the air," but as one who wields the "sword of the Spirit, which is the word of God."

Unity.

ALICE MARIAN ADAMS.

How important to us is the true sense of unity. It expresses the sum total of that for which we are striving. In unity is strength, and a realization of man's unity with God annihilates every thought of separation, with its attendant claims of ignorance of God and fear of the unknown forces of materiality, manifested in sin, disease, limitation, death, and eternal punishment. It was the thought of separateness from God—lack of unity with Principle—which ultimated in the accumulation of error that Christ Jesus came to disprove and to destroy.

Jesus reiterated the thought of unity when he said, "I and my Father are one;" and again, "My Father is greater than I." Infinite Principle must be greater than its idea, but in proportion as man realizes unity with Principle does he reflect the insight and power of infinite Mind. To realize that we are one with God in motive and desire, leads us to know that in proportion as we reflect perfection do we see perfection made manifest all around us.

The realization of unity with divine Principle brings the realization of unity one with another; each a part of one grand whole; each working toward the same end and all governed by the one Mind. In this realization is strength impregnable,—the power to meet and destroy the claims of error, no matter under what guise presented.

This thought of unity between God and man, of brother with brother, like a gleam of golden thread runs through all the teaching of our beloved Leader, and we find the same illuminating thought in all Jesus' teaching. It is enough to lift one high above the false sense of divided interests, to ponder the Master's words, "I and my Father are one." We can then say, "I and my brother are one," in our realization of what divine Principle would have us do under any and all circumstances. It is this unity of thought and action which proves the kingdom of heaven on earth, the eternal brotherhood of man, and in proportion as we realize our unity with divine Principle here and now, will the establishment of the kingdom become apparent.

[Written for the *Sentinel*.]

Springtide Eternal.

KATHARINE J. SMITH.

LAY thy strong hand upon Truth's burnished plow,
And stir the fallow earth beneath thy feet;
Speak, and the clod shall thrill, and fruit endow,
Sing, and thy psalm shall reach the city's street,
Go forth in light of new-begotten day,
God shed His benediction on thy way.

And as ye go, heed Christ's sublime behest,
Be least, tho' great, for this means royal pow'r,
Then shalt thou know that earth in thee is blest,
The blighted heart shall bloom in deathless flow'r.
The child of God who wears the victor's bay,
Is he who, working, teacheth men to pray.

No tear shall water pain's demolished camp,
The ground is holy where thy sorrow fell;
The oil of joy burns in the perfumed lamp
Of Love, Life's water brims the well;
And he who rose to roll away thy stone,
Hath set its crystal whiteness in his throne.

The Weakness of Intolerance.

Rev. A. A. Morrison, of the Portland Episcopal church, has been delivering a series of lectures against Christian Science. The great inroads of the new denomination on other churches causes some of the more intolerant champions of these sects to attack the new faith. We use the word "intolerant" because we believe this is a free country in all matters relating to religious opinions. There is no real ground for attacking any man's belief. The Rev. Mr. Morrison had no real call to attack the views of Christian Scientists, unless it was that they had recently acquired a valuable church building site across the street from his church.

The *Portland Oregonian*, which is noted for its devotion to liberalism and agnosticism, has an able editorial, March 20, making light of the Morrison sermons, and says in conclusion: "Concerning any religion, new or old, a pertinent question may be asked, and only one—'What does it do for its followers?' If it makes them healthier and happier, more at peace with themselves and the world, better to live with, sweeter in character, and gentler in conduct, then it is a good religion."

As all institutions must be tested by their practical adaptation to human needs in the age in which they come across the consciousness of humanity, is it hard to explain why Christian Scientists have the largest congregation in San Francisco? The only explanation can be found in the fact that they have a new message of good cheer, good will, and good tidings to the world and for which the world is ever ready.

That intolerance of this new form of the old Christian thought is breaking down is evidenced by the fact that in many of the larger cities the national lecturers of the Scientists are introduced by the pastors of the orthodox churches. At Worcester, Mass., Rev. Mr. Scott, of one of the largest Congregationalist churches, introduced Hon. Clarence Buskirk, of Princeton, Ind., who delivered a Christian Science lecture. Mr. Scott said, "Those who have the Spirit of Christ are his, no matter under what name you find them working." He also said, "Religion is not a philosophy. It is a relation between the individual and his God."

In our country, where no connection between the State and the Church is permitted, and where absolute freedom of worship is guaranteed, there is little room for the intolerance of preaching down one church by another.

Salem (Ore.) *Daily Capital Journal.*

I am not a Christian Scientist myself, being, indeed, a member of the Church of England, but this does not bar me from admitting and rejoicing in the good work the Christian Scientists are doing by the exercise of what a critic calls their "healing propensity." I have had experience of it myself in being healed of a trying attack of sciatica which a doctor had failed to relieve, but I found in Christian Science no approach to hypnotism. I requested the healer's help in a spirit very like doubt and unbelief; I asked innumerable questions all through the week of treatment, and in every way that I could I inquired into the process. Before the end of the week I was undoubtedly quite well.

I have found Christian Scientists a most charitable and cheerful people to know; their conversation and, so far as I have seen, their lives conform to their professions. If this critic had the least personal acquaintance with the "healing propensity," she would know that the very last possible charge against Christian Science healing would be that of hypnotism. The personality of the healer is, if anything, the least factor in the whole process. I have been asked more than once, "What, then, does the healing?" and my answer is the only possible one from any one who knows their ways and has had personal experience of their healing; it is "Prayer—the kind of prayer the Christ himself commanded his followers to pray." The most prominent claim in Christian Science healing is that "Divine Mind heals the case."

How can any one assert in one and the same breath that there is danger of mesmerism in the Christian Science healing, and then follow on to say that "one of the good points in Christian Science was that it had made known the question of individuality"? What is more common than for a doctor to tell his patient that he will be liable all his life to the complaint from which he is supposed to be cured! Certainly there it is an admitted propensity not to heal, but merely to help. Is there so much fault to find with a people in whom their most severe critics discover their chief characteristic to be a "propensity to heal"? DACRE LANE.

London (England) *Tribune.*

A clergyman declares that "expectancy is a therapeutic agent" employed in Christian Science healings, and that "there is no necessity of going outside the church to find it, for it is practised more or less by all physicians." With all due respect for the clergyman who makes this assertion, we must insist that he has grossly misapprehended both the teaching and practice of Christian Science. Expectancy is a step in the right direction, but before our critic has practised Christian Science healing many years he will learn that something stronger than expectancy is needed to obtain the grand results of the Christian Scientist. Christian Science heals by a clear, positive realization of the divine presence. When in the Christian Scientist's prayer or meditation God becomes to him infinitely great, his troubles, however great they may have been, sink into insignificance and lose their power in his consciousness, and the body responds accordingly.

We will admit that many apparent results have been obtained by mere expectancy, as well as by the projection of human thought, but such are not satisfactory and substantial, and, moreover, are very uncertain and are not accompanied with the spiritual and moral regeneration which characterizes the healings of Christian Science. It soon becomes apparent in the experience of a conscientious Christian Scientist that his cures are in proportion to his spirituality, his reliance upon the divine power; and this is positive evidence that it is God who heals in Christian Science. Even the apparent benefits of medical practice are possible because in some way the mental condition of the patient is changed, and surgical cases are always more successful when the patient is hopeful. All these well-known facts point to Mrs. Eddy's discovery that all causation is mental. We have great respect for those who, though dispensing medicine, have faith in God, but it has been demonstrated beyond cavil that those who trust God implicitly, to the exclusion of medicine, fare better than those who undertake to use both, and Christian Scientists in general testify that they fare better with Christian Science and without medicine than they ever did without Christian Science and with medicine.

ALFRED FARLOW.

Boston Times.

For nearly forty years Christian Science has been taught and demonstrated, at first by Mary Baker Eddy alone, and then with a rapidly growing number of her followers, until to-day it is well known that many thousands have accepted this teaching as the logical and demonstrable explanation of Christ's message. A large percentage of those who have embraced Christian Science have been carefully reared by Christian parents, and have enjoyed the training of the Church and Sunday School.

Among these thousands of adherents are numbered representatives from nearly every known creed and faith, as well as many who were formerly agnostics. All have found in Christian Science a satisfactory explanation of the Word of Life. Many have come into this faith through

Digitized by Google

the avenue of physical healing. Others, or, it might be said, all, because they have found therein a higher and more practical interpretation of God's Word. To them the Bible has been re-opened, and the daily study of its precepts and promises has become a never-ending joy.

It has remained, however, for your correspondent in last Sunday's paper to discover that, after all, Christian Science is not in line with Scripture. After considerable research through the pages of the Bible and the Christian Science text-book he presents your readers with copious extracts in which he attempts to show that Christian Science is hopelessly at variance with the Holy Bible.

In reading his selections, separated as they are from their explanatory context, one is reminded of the fratricide who pleaded Biblical authority for his deed. When asked to show it, he pointed out a passage in Genesis which reads, "Cain rose up against Abel his brother, and slew him;" and from Luke another which reads, "Do ye also . . . likewise."

I shall not attempt to answer our critic by taking up his objections in detail. If he thinks Christian Science conflicts with the Bible, he alone must take the responsibility. Others have found in this faith a consistent religion, as well as a method by which relief may be had from all the ills to which the flesh is heir. It should be borne in mind that Christian Scientists do not adhere to their faith through any sense of fanaticism, but because they find that it offers the largest returns in harmony and health.

The spiritual enlightenment and strength which accrue to them as a result of their efforts to learn more of God by the persistent study of the Bible and the effort to live in obedience to its teaching make their Christianity of the sturdy sort which knows no turning back. Surely no rational objection can be maintained against a faith which insists upon works as well as upon words.

ALBERT E. MILLER.
Philadelphia (Pa.) *North American.*

Scholarship has at last entered on its serious mission of curbing the irrelevant emotions of mankind, and of introducing that intellectual domination which must analyze the problems of religion to their ultimate facts and construct general systems of belief which are rational and effective. What people for centuries have taken for granted and believed in as facts are not so because they have been believed, they can be recognized as facts only when investigation proves them to be true. Science has a spirit of inquiry. In our experience we encounter a vast body of established belief in reference to all important subjects. This belongs to two categories: the priceless results of generations of experience, and heirloom rubbish.

The basic moral laws contained in the Ten Commandments or in the Sermon on the Mount are not authoritative because they are commanded; they are authoritative because they are true. Science never would raise the question whether they are binding upon this nation or that, or upon this generation or some other, but simply whether they express truths essential to a well-ordered individual or society. If so, they will ever be true, and will apply everywhere, just as does the law of gravitation. Science is little interested in dogmatic theology, for its data, methods, and conclusions are to it like a foreign tongue, but it is immensely interested in morality and religion, and none appeals to it so strongly as the morality and religion of Christ.

PROF. JOHN MERLE COULTER.
University of Chicago.

Christian Science does not dispossess the patient of the control of his own mind, nor place him under the control of another human will. The Christian Scientist, by understanding that God is perfect, and man His perfect image and likeness, is able to apply God's word in the overcoming of envy, jealousy, selfishness, sensuality, and sin in all its forms and expressions. He knows that he must first overcome sin in his own consciousness before he can overcome sin and its accompanying result (sickness) in the consciousness of the patient. He is taught in the text-book of Christian Science, "Science and Health with Key to the Scriptures" by Mrs. Eddy, that he must strive to follow the example of Christ Jesus; that he must obey the Ten Commandments, love his neighbor as himself, and do nothing short of good at all times and under every condition. This text-book gives a full explanation of the scientific process, or spiritual, divine law, by which the sick are healed and the sinner reformed.

Those who use auto-suggestion and other forms of so-called mind-cure do not bring about moral reformation, while the Christian Scientist knows that sickness is permanently healed by bringing about moral and spiritual improvement and reformation, and that the healing is not the manifestation or expression of auto-suggestion or of the human mind, but of God, or infinite divine Love. GRAY MONTGOMERY.
Omaha (Neb.) *World-Herald.*

Those who know what Christian Science really is, know that in no respect is there any similarity between its alert, active, intelligently Christian teachings and the dreamy mysticism of Hindoo philosophy. Christian Science does not teach, "You are to take the whole universe as a falsehood, and to think it does not exist," as has been asserted, but rather does it teach, in accordance with Scripture, the eternal facts of one God, and man and the universe perfect, real, beautiful, and good. Christian Science teaches that because man is created in God's image and likeness, his individuality is intact. All truth is revealed, and is revealed to the one who knows enough to receive it. The revelation of Truth which came to Mrs. Eddy led to her discovery of the Principle of Christian healing, which has been proven to be of inestimable benefit to humanity. "By their fruits ye shall know them." JOHN L. RENDALL.
Fairfield (Ia.) *Republican.*

Christian Scientists do not deny that to mortal sense evil in all its phases is as real as any physical phenomena. These material conditions seem real to sense-perception, from the fact that the physical senses are material. Paul says, "We look not at the things which are seen, but at the things which are not seen; for the things which are seen are temporal; but the things which are not seen are eternal."

If we accept the fact that God is Spirit, omnipotent and omnipresent, we must accept the deductions made by Christian Science, for it in no way departs from this basis of Life. If Spirit is substance, is real and eternal, and fills all space, it must follow, as indicated in the statement just quoted, that matter, the opposite of Spirit, with all its conditions, including every phase of evil, must be "temporal," or unreal. Can we touch, taste, smell, see, or hear God, through the physical senses? No. Therefore, the Scripture says, "The fool hath said in his heart, There is no God," because the materialist is guided in his sense of God, man, and the universe by the physical senses. If we believe in God, we cannot believe in or accept the physical senses as being real or true, for they furnish no evidence of God, and it must, therefore, be admitted that matter is neither real nor eternal.

Truth is the understanding of God and man as His image and likeness; the understanding of the unreality of evil, matter, and all that is opposed to God. Error is the opposite of truth; the belief in the reality of evil, sin, disease, death, matter,—the belief that Spirit is not omnipotent and omnipresent. JOHN H. WILLIAMS.
The Florida Times-Union.

Among the Churches.

Buffalo, N. Y.

Second Church of Christ, Scientist, of this city, having outgrown the seating capacity of its present church building on Linwood Avenue, has leased the auditorium of the Twentieth Century Club on Delaware Avenue, which has recently been remodeled. The Christian Scientists are indeed fortunate in securing so handsome and commodious an auditorium for their present needs.

Buffalo (N. Y.) *Commercial.*

Words of Appreciation.

As officers and teachers of our Sunday School we wish to express thanks for the further suggestions given by our Leader in her interpretation of the By-law relating to the duty and privilege of teaching the young. We are stimulated thereby to more earnest and faithful devotion to this most important work, and we rejoice in the spirit of obedience which prompts our endeavor.

FIRST CHURCH OF CHRIST, SCIENTIST, Long Beach, Cal.

Wausau, Wis.

Members of this church are grateful for the *Sentinel* notice regarding the Building Fund of The Mother Church. Desiring to immediately obey the call, a special meeting of our members, thirty-four in number was called, and it was decided that the following Sunday's entire collection should be sent to Mr. Chase. The contribution amounted to four hundred and ninety-five dollars and sixty-five cents, which added to a sum on hand makes five hundred and twenty dollars, which we send to-day. This with our previous contributions makes a total of twenty-four hundred and twenty dollars that we have sent to The Mother Church Building Fund, and our members have pledged themselves to continue their love offerings until there is no further need. The children of our Sunday School recently forwarded thirty-five dollars, rejoicing that their offering, too, would help the early completion of our dear Mother Church.—*Correspondence.*

Grand Rapids, Mich.

It has been with joy that our Sunday School has shared in the erection of our church edifice, and also contributed to the Building Fund of The Mother Church.

On Christmas, 1903, we took a collection of one hundred and five dollars and fifty cents for The Mother Church Building Fund. The year following, we sent fifty dollars. Since May, 1905, we have taken a collection on the first Sunday of each month for the same purpose; also, during the month of December, a special collection was taken each Sunday, resulting in a total of one hundred and nine dollars, which was forwarded to the Treasurer.

The older children are taught from the *Quarterly*, the Bible, and Science and Health, bringing out from the references the thought of each division of the Lesson-Sermon. They now show a marked growth in their understanding of Truth.

When the By-law appeared regarding the teaching in the Sunday School, we recognized with pleasure that the instruction had been in accord therewith. Our hearts were gladdened and encouraged upon its appearance, and we constantly hold it before us as the standard of our Sunday School work.—*Correspondence.*

It is thy duty oftentimes to do what thou wouldst not; thy duty, too, to leave undone what thou wouldst do.

THOMAS A KEMPIS.

The Lectures.

Macon, Ga.

Mr. Edward A. Kimball of Chicago gave a lecture at the Grand yesterday afternoon [March 11] on Christian Science. He was gracefully and ably introduced to the audience by Hon. B. M. Davis. Mr. Davis, among other things, said that we have nothing to fear from knowing the truth, that all monopoly is detrimental to progress and to human well-being; that the meaning of the Reformation and all forward religious movements is that man has the right to know the truth and share in the freedom of the truth.

He spoke of the marvelous growth of the Christian Science movement and quoted one of Macon's leading citizens (not a Christian Scientist) who is said to have remarked,—"Christian Scientists live what our ministers preach and what we profess to believe."—*Macon Telegraph.*

Milwaukee, Wis.

Bicknell Young of Chicago lectured at the Pabst Theatre last evening [March 5] on "Christian Science and Its Principles." John H. Paul, ex-Assistant District Attorney, introduced the speaker in the following manner:—

Ladies and Gentlemen:—Over nineteen hundred years ago there appeared in this world a unique, singular, and yet majestic character—the Nazarene. He taught the then unheard-of doctrine of "on earth peace, good will toward men." His teaching and thought were new. Human nature was prejudiced against him and he was compelled to battle for recognition. He said to the people who heard him, that if they could not believe his doctrine or his preaching, to believe him for his works' sake, for the healing of the sick which he accomplished. The doctrines and teachings of Christian Science are no more startling or unreasonable than those of the Nazarene. Jesus established the test of truth when he said, "By their fruits ye shall know them." What we are looking for to-day is not creeds, but results; they are the infallible tests of truth.

About one year ago Christian Science was called to my attention, and its claims seemed to me startling and unreasonable. I was informed there were hundreds of men and women here in Milwaukee who had been cured by Christian Science of all manner of diseases. During the last year I have talked with many of these men and women, and they told me, to my amazement, of their wonderful healing, of the absolute and complete results achieved by Christian Science, and of the perfect health they now enjoy. Although many of them when they first sought help were strongly prejudiced against Christian Science, when they turned to it they were afflicted with some form of incurable disease, and had been told by their physician that no human help could save them. They have told me how, as a last resort, in their agony and fear of death, they turned to Christian Science as a drowning man would grasp at straws, but with no faith of receiving help; and yet, even under those conditions, they were completely cured. While they could not say as to how it was done, yet, like the blind man whose sight was restored by Jesus, they knew that whereas they were sick, now they are permanently well.—*The Milwaukee News.*

Admission to Membership.

The next admission of candidates to membership in The Mother Church will be June 5, 1906. Applications must be in the hands of the Clerk on or before May 14, 1906.

An application sent to the Clerk of the Church does not constitute the applicant a member; he must be elected to membership by the Christian Science Board of Directors, at which time notice of election will be sent.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Card.

WILL one and all of my dear correspondents accept this, my answer, to their fervid question: Owing to the time consumed in travel, etcetera, I cannot be present *in propria persona* at our annual Communion and the dedication in June next of The Mother Church of Christ, Scientist. But I shall be with my blessed Church in spirit and in truth.

I have faith in the givers and in the builders of this church edifice,—admiration for and faith in the grandeur and sublimity of this superb superstructure, wherein all vanity of victory disappears and the glory of divinity appears in all its promise. MARY BAKER EDDY.

Pleasant View, April 8, 1906.

The Mother Church Dedication.

THE CHRISTIAN SCIENCE BOARD OF DIRECTORS take pleasure in announcing that the extension of The Mother Church will be dedicated on the date of the Annual Communion, Sunday, June 10, 1906. Application has been made to the railroad companies for the usual reduced rates for this occasion.

"Matter is temporal."

[THE following letter and newspaper clipping emphasize the fact that material philosophy, after vainly trying to posit matter as substantial, now seems ready to abandon the effort and to fall into line with Mrs. Eddy's statement in Science and Health, made over thirty years ago, that "matter is nothing beyond an image in mortal mind." Mrs. Eddy, however, is not content to stop with the simple negative statement that there is no matter. She carries the discussion into the realm of Spirit and says, "Nothing we can say or believe regarding matter is immortal, for matter is temporal, and is therefore a mortal phenomenon, sometimes beautiful, always transitory. . . . Science reveals nothing in Spirit out of which to create matter. Spirit is the only substance and consciousness recognized by divine Science" (Science and Health, pp. 277, 278). The letter referred to appears below.—EDITOR.]

New York, March 30, 1906.

Mrs. Mary Baker G. Eddy, Concord, N. H.

Dear Mrs. Eddy:—The enclosed clipping, entitled "The End of Matter," from the *New York Evening Sun* of March 24, 1906, may be of interest to you, as indicating the changed theories and ideas of the world's learned professors regarding matter, and confirming its non-existence.

At a banquet given by the American Institute of Electrical Engineers to Signor Marconi, in recognition of his discoveries and research work in wireless telegraphy, one of the speakers, a professor in Columbia University, in discussing the action of the Hertzian or ethereal electric waves in traversing space, stated that the laws governing this invisible wave action are far more exact than the general laws of physics, wherein coefficients and complicated formulæ for correcting the main laws are necessary, due to the influence of surrounding material conditions.

The reason stated for the greater exactness of laws governing the invisible ethereal waves is, "Due to the absence of matter, and whenever matter had to be considered there could be no exact law of action."

It was also stated that research work along lines removed from the usual material conditions is fruitful of more exact results, and that the most advanced thinkers now admit that they do not know what matter really is, and in fact question its real existence.

Students of Christian Science cannot fail to observe the gradual falling away of old theories, and "the knowledge of so much that isn't so;" and this must bring us more and more into the understanding of the real and true as taught in our beloved text-book, "Science and Health with Key to the Scriptures."

Sincerely and gratefully yours,

CHARLES GRIFFITH YOUNG.

[Following is the clipping mentioned by Mr. Young as enclosed in his letter. It was copied by the *New York Evening Sun* from the *London Globe*.]

Bishop Berkeley, some two hundred years ago, proved that matter has no real existence apart from the perceiving mind, and scientific men of the present day seem to be converging to a similar view. Thus Professor Poincaré entitles an article in which he discusses recent views on the ultimate nature of matter, "The End of Matter." According to these views, he contends there is no true matter; there are only holes in the ether! This is an advance on Lord Kelvin's conception of the atom as a mere whirlpool or vortex in the ether. Atoms are not now even ethereal. And Prof. Osborne Reynolds has set forth a theory of matter under the title of "An Inversion of Ideas as to the Structure of the Universe," in which the leading idea seems to be that what we call matter is really the absence of matter. An atom, from this point of view, would be a little bit of nothing bounded by something—a hole in the ether, if the ether be assumed to be the something. But Professor Poincaré, who is a learned French mathematician and a member of the Academy of Sciences, declares, in his "Science and Hypothesis," that "a day will come when the ether will be rejected as useless." If, then, the atoms are merely holes in the ether, they, too, will be abolished!

The Forgiveness of Sin.

THE forgiveness of sin is a doctrine which distinguishes pure monotheism from idolatry or materialistic philosophy. While heathen religions in general made certain provisions for the protection of individual rights, and inflicted penalties for their infringement, yet they were very tolerant of sensual indulgence on the part of their devotees; and this is not surprising when we consider that their supposed deities paid little respect to the demands of moral law. It required the pure teaching and example of Christ Jesus to uncover the claims of sin, to show the way to its complete annihilation, and to unfold that absolute spiritual purity without which no man shall see God. He embodied and revealed the true ideal which all his followers profess to accept, and Christian Science teaches that to follow any other standard is to indulge in sin, and though this be done ignorantly, the penalty which must follow disobedience to divine law is incurred. The law of God is indeed the law of Love, and failure to comply with any of its provisions must necessarily exclude the offender from the realization of man's glorious possibilities as a child of God.

It is both sad and strange that the teaching of Christ Jesus on this vital question should have been so long misunderstood and misapplied by professed Christians, and it is cause for rejoicing that the message of Christian Science should have come, like an archangel with trumpet, to announce that "the destruction of sin is the divine method of pardon," and that, "being destroyed, sin needs no other form

Digitized by Google

of forgiveness" (Science and Health, p. 339). This teaching throws a wonderful light upon the ministry of our Lord, and makes it clear that the healing of sin and disease are substantially the same, inasmuch as those who experience this healing are lifted above the plane of belief where the asserted "law of sin and death" is operative. In the case of Mary Magdalene, "out of whom went seven devils," we find a sudden transformation; the Christ-purity uncovering to her the hideousness of sin so that it could only repel, never attract her again; while the attraction of Spirit led her onward to ever higher and holier service.

In this scientific age, proof is demanded in everything, and rightly so; and if religion is to stand the test of science, the "forgiveness of sin" must be proved, not in human dogma or declaration, but in daily demonstration of Christ-like living. The Master sought to raise his disciples above the belief in sin's necessity or reality; he also taught them how to liberate others from sin and disease, and in no other way can any prove their discipleship to-day. Of what avail is it to tell one that his sins are forgiven while he is still enslaved, in mortal belief, by appetite and passion? The one who is set free from sin and sickness by the truth knows that his sin is forgiven (destroyed) by the operation of divine law, and he rejoices in the blessed privilege of reflecting the light upon others who still "sit in darkness and in the shadow of death." There are many who thus prove that they are "risen with Christ," and it is this no less than the healing of disease which attracts so many to Christian Science.

John H. Paul, ex-Assistant District Attorney, said in his introduction at Mr. Bicknell Young's recent lecture in Milwaukee, "What we are looking for to-day is not creeds, but results; they are the infallible tests of truth." The healing of disease and the destruction of sin are inseparably linked together in the ministry of Christian Science, as in that of the great Teacher, and thus are many finding peace and purity, health and happiness. ANNIE M. KNOTT.

The Building Fund.

THE work upon the extension of The Mother Church is proceeding with such rapidity that a large amount of money is required at this time, and it is necessary for the Treasurer to receive largely increased contributions at once. Will the entire Field please act promptly and liberally in this matter. This notice is a call for the immediate fulfilment of our pledge given in 1902, and as such it should receive the earnest attention of every Christian Scientist.

Letters to our Leader.

Flatbush, N. Y., March 27, 1906.

My Beloved Teacher:—Some weeks ago there appeared on the editorial page of the *Sentinel* an article referring to your visit to Chicago in 1888, and to your address delivered to the public in Music Hall, at that time. Well do I remember this occasion! It was the first time that I had seen you, although I had been healed and interested in Christian Science nearly two years prior to that time. At the conclusion of your address I noticed a poor woman who had entered the auditorium on crutches, and who was evidently badly crippled, stretch out her arms toward you in a beseeching manner. You looked at her with eyes full of compassion and love, as it seemed to me, and immediately she laid down her crutches and walked out as any one in a normal condition would do! I cannot tell you of the awe that fell upon me, or the impression I received, and I then determined to learn more of this wonderful truth at the fountain head. The following fall I applied for and received your instruction in a primary class. This great blessing has followed me in succeeding years, and this, with additional instruction from time to time, has changed the whole current of my life.

Another incident may interest you. Recently, I met at the home of a friend, a lady who told me the following interesting experience. She said that over twenty years ago, her father was pronounced incurable with consumption, and sent to the mountains for a change; his wife and this lady, then a child, accompanying him. In this far-away place they stumbled upon a copy of the first edition of Science and Health, and with a mixture of curiosity and interest the wife read the book to her husband. He began to improve, and in a few months returned to his home perfectly well. He is to-day robust and well, a man nearly sixty years old. The climate was given the credit at the time, but the conditions in his case were such as to require something more than this to effect a cure; and the daughter is now confident that nothing but the benign influence of Christian Science restored him to perfect health. She was then a little child, but remembers some of the reading at that time. Truly the exalting influence of the divine Mind on the body was there demonstrated fully. Can any one truthfully say that Christian Science does not heal, or that the Prophet in this age does not declare the deep things of God?

I could tell you of demonstrations of healing that certainly give me great joy, and make me more than ever desirous of eliminating from my consciousness all that would hinder me from doing this healing work. It is my one ambition, if I may use this word, to heal quickly and surely —through a corrected thought and obedience to your teachings.

These are the "tithes" that I must bring "into the storehouse," and the only proof of my deep gratitude.

With tender love, faithfully your student,

EMILIE B. HULIN.

Concord, N. H., March 8, 1906.

Beloved Leader:—We thank you so much for the "Journal of the Transactions of The Victoria Institute," and for the handsome fruit of the orange tree. I have read the article on Confucius. Your markings gave to it an added interest. Great as he was, how far short of primitive Christianity, as revealed and manifested in Christian Science, was his system. The article shows that Confucianism lacked the healing, transforming power of God which Christian Science makes available to the pure in heart. The reading of this paper only makes me more grateful to God and to our beloved Leader for her revelation.

At the lecture in that ancient seat of learning, Exeter, New Hampshire, on March 4, there was a good attendance. One paper is to print the lecture entire. I visited the old First Church, organized in 1638. One of the church officers presented me with an old hymnal, "Songs of the Sanctuary," which contained that favorite of yours, a verse of which you placed on the walls of Christian Science Hall, reading,—

> Daughter of Zion, awake from thy sadness,
> Awake, for thy foes shall oppress thee no more.
> Bright o'er the hills dawns the daystar of gladness;
> Arise, for the night of thy sorrow is o'er.

The lecture Tuesday night in Newburyport, Mass., was attended by an audience which filled the hall. Rev. C. F. Andrews, the prominent Universalist clergyman of whom you know, introduced the lecturer with a cordial welcome. I enclose a brief report of his kindly words. In Newburyport, I met your faithful student, Miss Prime, also Mrs. Morrill, who often heard you lecture in Hawthorne Hall and has loved you dearly for twenty-five years. Everywhere are the signs of growth and increasing love and harmony. Faithfully and lovingly,

IRVING C. TOMLINSON.

Dampfer, Kaiser Wilhelm II.

My beloved Leader:—On my way home to Germany, after my first visit to America,—the country where Christian Science was revealed through you,—I send you a few

Digitized by Google

words. My heart is so filled with love and gratitude to God, and to you, beloved Mrs. Eddy; words cannot express what I think and feel. It means so much for a German to see the grand work of Christian Science abroad; to meet the old, strong, faithful workers. I received so much and I begin to get a clearer understanding of the broadness, deepness, and infinitude of Christian Science.

My daily prayer is for spiritual growth, to prove the truth through my life, and to be a better, more faithful worker. Through this I hope to show my sincerest gratitude to you. Lovingly your disciple,

FRAU LOUISE HERGENHAHN.
Berlin, Germany.

Toronto Junction, Ont., March 14, 1906.

My Dear Mrs. Eddy:—With a deep sense of gratitude to you for the revelation of Truth, as contained in "Science and Health with Key to the Scriptures," I am taking the liberty of writing to tell you of the joy and peace occasioned by the wonderful demonstration of the power of Truth over error, in the case of my little twelve-year-old daughter, who was, according to *materia medica*, fast becoming unconscious from an attack of pneumonia. We are not, as yet, Christian Scientists, and of course, fears seemed to be arrayed like a great army against us. My wife asked me what I thought best to do, and I replied, "'God is my refuge,' I can have no other," and we were both satisfied to trust Him. Acting upon this decision, I telephoned to Mrs. Clarke in Toronto, who has been extremely kind to us, and she said she would treat her then, and if we wished would come and see us in the evening. About half an hour after I had telephoned, we were watching our little girl and, to our great joy and satisfaction, she raised up in bed and said, "Papa, I don't feel as if anything was the matter with me."

The only return we can give for this manifestation of divine Love is to follow in the way which has been revealed to you, and by you taught and demonstrated to a world hungry and thirsty for Truth.

Yours most gratefully and sincerely,
I. H. WOODLAND.

Boston, Mass., April 2, 1906.

Dear Teacher:—I have just received the following communication from our Publication Committee at Ottawa, Ont., Rev. Geo. R. Lowe.

"The deputation from the Ontario Medical Council found the Cabinet ministers unwilling to espouse any legislation to further medical monopoly; and also that three fourths of the members of the legislature interviewed on behalf of the medical men were opposed to the proposed legislation. Therefore, they will let medical legislation stand."

This appears to settle the question of threatened medical legislation in Ontario. It seems that the people are waking up, and are determined to put an end to unwarranted and unjust medical laws. Your loving student,

ALFRED FARLOW.

Boston, Mass., March 16, 1906.

Dear Leader:—I want to give you my thanks for the change in the last line of the spiritual interpretation of the Lord's Prayer. It has helped me more than anything else has ever done to know God's allness.

Lovingly and gratefully,
MARTHA L. STRANG.

Important Notice to Branch Churches.

Each branch Church of Christ, Scientist, is requested to send, on or before May 1, a report of its total membership (not a list of its members), as on record April 2, 1906, to William B. Johnson, C.S.D., Clerk of The Mother Church, 239 Huntington Avenue, Boston, Mass.

Testimonies of Healing.

For more than thirty years I had been doctoring for chronic liver complaint, under the care of seven or eight first-class physicians in the eastern, middle, and western parts of the United States. None of them afforded me anything but temporary relief; the last one told me he could do nothing more for me, that I would never be well again. I then concluded to try Christian Science. I found a practitioner and had treatment. This was a year ago, and now I have no trouble from my liver. Other ailments have also been met, but the physical healing is the smallest part of the benefit received. I was a member for many years of an evangelical church, but was never satisfied with its doctrines; never had any real pleasure in my religion. In Christian Science I found what my religious instincts were longing for. I am a member of The Mother Church, and of First Church here, and the spiritual satisfaction, the joy and comfort which have come to me in my new church relations is almost beyond belief; it is certainly beyond my ability to express in words.

I am very thankful for the privilege of helping others through the understanding gained in Christian Science. Those who have been able to bring relief to their friends, will realize the feeling that comes when one is thus able to invoke the almighty power to heal the afflicted. The joy is almost too great; one feels like taking off his shoes, as if standing on holy ground.

For all the joy and help which Christian Science has been and is to me, and for the help I have been able to bring to others through it, I most humbly thank God. I am also grateful to our dear Leader, who has spent her whole life trying to benefit her fellow-beings, and as we know, has succeeded in her efforts.

PRESSLY J. BARR, Omaha, Neb.

I was merely a child when I first heard of Christian Science. From infancy I was always in delicate health, suffering from throat trouble and nervousness, and continually under the doctor's care. In my ninth year I was attacked with a slight stroke of paralysis, accompanied by a peculiar twitching in my side. A doctor treated me for several weeks, but seeing no improvement he said that he could do nothing for me. An aunt who had been healed through Christian Science then advised my taking treatment.

I was put under the care of a Christian Science practitioner and after six weeks was completely healed. My parents rejoiced at seeing how well I looked; still, like many others, we thought that was all that was necessary. All went well until my twelfth year, when I was attacked with a second stroke, which seemed more severe than the first. My mother, being overcome with fear, wanted to call in a physician, but remembering how little help I had received the first time, I begged them to send for the Christian Science practitioner. This time I experienced a hard struggle; until after five weeks there was no noticeable change, and then I had another stroke. As the practitioner was unable to come, she gave me absent treatment, while my mother read to me. I felt immediate relief. That afternoon a desire to write came to me. I was at first afraid to attempt it, but something prompted me to try. Then, feeling confident that with God's help I could write, I began to copy the 23d Psalm, at first with difficulty, but realizing the guidance of divine Love, all difficulties soon disappeared, and I wrote better than before. Within a few days I was healed. I am now seventeen years of age, and have never since experienced any trouble in this direction.

Many other ailments have been overcome; one of which the doctors had pronounced hereditary and incurable, but in two years of earnest work with God, that also was destroyed. I shall always be thankful to God for this grand

Digitized by Google

truth, and to Mrs. Eddy for the great enlightenment it has brought to me.—Ella Hellmann, New Braunfels, Texas.

I desire to testify to the benefits I have received during the last two and one half years through the study of Christian Science. For ten years or more I had suffered from indigestion and constipation, taking many kinds of medicine, and for several years had taken medicine every day, but without any permanent relief. My father, who was a doctor, could offer me no hope of real improvement unless it might be through taking more exercise, and I never succeeded in getting enough of that to do me any good. When I was induced to take up the study of Science and Health, I did so without any expectation that I would ever believe in it or experience any physical healing through it; nevertheless, within two weeks I was entirely relieved of the troubles mentioned, have been free from them ever since, and have not taken a drop of medicine in two and a half years.

When I had not been interested very long in Christian Science, I met with an experience which was very convincing to me of the healing power of Truth. I was moving a small iron safe on a hand-truck, when the truck slipped and struck my ankle. This was early in the afternoon, and while I remained at work my foot kept getting more and more lame, until by the time I left the office I could not put my heel on the ground in walking. After reaching my room I commenced to study the Lesson for the following Sunday, and when about half through had occasion to walk across the room. I then found that I could walk as usual without any inconvenience, and I had no further trouble with the injured foot. I had been troubled with chapped lips more than any one I have ever known. For years I could not smile, from early fall until late in the spring, without danger of cracking my lips so that they would bleed. I tried almost every known application, without any benefit beyond the time the remedy was in use. Since taking up the study of Christian Science I have used no material applications and the difficulty has been overcome to such an extent that I experience no further inconvenience.

It has been my privilege to interest some others in Christian Science and see them receive great benefits. I am also more than grateful for a greater desire to do right, and for kindlier feelings towards my fellow-men.

Charles J. Turner, Chicago, Ill.

A recent experience through which my mother passed has again revealed to us the beneficent ministrations of Christian Science. One Sunday morning she began to suffer intense pain in her head, and went to bed—an unusual thing for her to do in the morning. By noon a fever had set in. I realized that there was work to be done in Science to destroy these manifestations, and both my sister and myself declared the truth for her; but when, just before nightfall, no sign of improvement had shown itself, I went to the telegraph office and cabled to a practitioner in Detroit who had helped us when we lived there. The day had been very warm, and fever under such circumstances seems especially cruel. Before midnight mother broke out in a perspiration. The fever did not entirely leave her, however, till the third or fourth day, coming up in the middle of the day, though shorn of its terrors. The third day, severe aching in the bones ceased, but she suffered greatly from pain, and grew weaker. On the fourth day I cabled again. Through the night mother was suffering, and I was alternately helping her and striving to destroy my own sense of fear. Repeatedly there came to my mind the words, "Death must be overcome, not submitted to" (Science and Health, p. 76). When the fifth morning came, I heard her breathing deeply and knew that she had fallen asleep. For that I was very thankful. When, two hours later, I heard her stir and stepped to her bedside, I noticed a great difference in her face. For two days the appearance had been unnatural. I now saw her as she was in health, and I exclaimed at the change. "Yes," she said, "I'm better;" and she went on to say that all night long she suffered indescribable misery, but just as dawn was breaking, the words came plainly to her consciousness, as if a voice spoke to her, "As one whom his mother comforteth, so will I comfort you." Instantly, her suffering ceased. She marveled at it, for she said she had not thought of the passage, nor perhaps read it, for years. Then she fell asleep. We both knew that the truth had done its work in its own beautiful way. We realize now that the healing was done at that time; but for several days afterwards she had no appetite and gained no strength. Though she was sleeping well and not losing any ground, I sent another cablegram to the practitioner, and this condition was met quickly, for within a few hours my mother wanted something to eat, relished it, and was sitting up. From that time she continued to gain.

For this evidence of the power of Truth we are grateful, —grateful to God, and grateful to the saintly woman who has proclaimed the message to this age; grateful for the teaching as made plain in Science and Health.

Grace E. Harrah, Holguin, Cuba.

I was thirty-eight years old before I gained any spiritual understanding, and then it came through my healing in Christian Science. I was in a confused state of mind when I was led to Minneapolis to be healed of a complication of nervous troubles, and surely I was given the pearl of great price. I wish I knew how to express my appreciation of our beloved Leader, and of this grand truth which she has been permitted to give to the world. By applying this truth to the best of my understanding, I have overcome many errors for myself and family.

Mrs. Lottie Byram, Verndale, Minn.

It is over three years since I started in Christian Science and was led into the understanding of divine Truth. For years I had been a great sufferer with my head. For weeks at a time I would be so dizzy and in such pain that I could hardly do my work. I finally had a gathering in my head which the doctor could not relieve, and it was then I called in a practitioner. In a few treatments I was healed. Later I had the grip, and bone erysipelas in the worst form, but I was soon relieved of all by this truth. I am now well and do not know what it is to feel tired. I can truly thank God for health and strength and happiness.

Mrs. I. P. Jones, Caldwell, Idaho

Christian Science came to bless our home in October, 1902. I was suffering from an attack of peritonitis. The previous winter I had been confined to the house from December to April, and I visited the doctor two and three times a week during the summer. The following October I was again obliged to send for the doctor, and he said that unless I had an operation I undoubtedly would have this trouble every time I took cold. I had suffered all day, not being able to keep even a teaspoonful of tea on my stomach, and with the thought of an operation before me it then came to me to try Christian Science. My healing was instantaneous. I sent for a Christian Science practitioner, and just fifteen minutes from the time she came to my room all pain left me, and I have never had any return of that trouble. I have since been treated twice for diphtheria, and both times the trouble was met in twenty-four hours. I have also had rheumatism, which took six weeks to overcome, but never for one moment was I discouraged, for I knew that only fear was holding me. Thanks

Digitized by Google

to God, and to our Leader for "Science and Health with Key to the Scriptures," which enabled me to prove that God governs all and is an ever-present help.

MRS. A. L. WHITEHOUSE, Chicago, Ill.

I was troubled with asthma for over twenty-five years. Many a night I lay awake with it. I tried several doctors, without any relief, and used many different kinds of medicine, but to no avail. It is about six years since I first heard of Christian Science. At that time I heard about some cases of healing, and almost as a last resort I went to see a Christian Scientist and took treatment. My healing was slow, but what a revelation it is to know that evil, sickness, and death are not realities! I have been led out of darkness into light, from doubt and fear into freedom as well as better health.

My heart goes out in thankfulness to God for the revelation of Truth, through our Leader, Mrs. Eddy.

MRS. EMILIE VOELKEL, Radford, Tex.

When I first heard of Christian Science I was a very selfish, discontented person. My spiritual growth was seemingly very slow for about three years, as I studied and worked very little; nevertheless, every ailment which I had was overcome through my slight understanding of Christian Science. Since I have studied and prayed earnestly for more love and understanding, I have had many demonstrations, for which I am very grateful. I have daily proofs of God's allness and the nothingness of evil, in meeting all discordant conditions, both physical and mental.

Words cannot express my loving gratitude to our dear Leader, Mrs. Eddy, for her book, "Science and Health with Key to the Scriptures," which has been such an inspiration to me in studying the Bible and explains so clearly man's relation to God.

I have received great benefits from reading the *Sentinel* and *Journal* and hope to show my gratitude by my works.

MRS. MABEL T. IHLOW, New York, N. Y.

In my quiet room, alone with Science and Health, the tobacco habit of twenty years' standing vanished like a dream; the careless tongue became more guarded; from being a free thinker I became a believer in God, and life seems sweeter. So I, too, come back and give thanks; first to the Master who taught us the way, and next to the one who was brave enough in this age to show us the old trail. Science and Health works just as well in the far-away mining camp as it does in the crowded cities.

J. NORRISH, Llanada, San Beneto County, Cal.

After suffering for twelve years with chronic nervous indigestion and its accompanying ills, I finally turned to Christian Science for physical aid. Stomach troubles in some form had afflicted nearly every member of my family for three generations. Frequent attacks of heart failure, continued dizziness, constipation, general weakness, and a distressing sense from the base of the brain to the end of the spinal column, were some of the symptoms manifested. Towards the last of my illness I was obliged to single out an object with my eye and walk to it, in order to keep my bearings, and was not always sure where my feet would touch the pavement. Depression, fear, and irritability seemed to rule me mentally.

When I decided to try Christian Science it was from no faith in or understanding of it. I simply desired to see if the health and strength which the most intelligent doctors had failed to give me, might not be found elsewhere. The gain under Christian Science was slow but steady. At the end of six months I was much stronger and relieved of my most distressing conditions, but the perfect healing was accomplished only as I comprehended the Christ-principle involved in this method of healing and applied it in my daily living. For four years I have been well, and am realizing the health and strength of youth. Among the many joys with which my life is filled, the greatest one is that it is possible for me to help others to know this truth which brings freedom from sickness and sin.

MARY HUDSON KEIZER, Topeka, Kan.

Last summer my little daughter had a severe attack of pleurisy, and after three days' illness help was telegraphed for. In two hours she was up, dressed, and ready to take her usual ocean bath. One morning last winter I awoke with the feeling of complete loss of power over my limbs. My husband and I worked all day and the healing came through reading the Bible and Science and Health. We have been in Science now for three years, and during that time we have not taken any medicine, while before this understanding came to us we were never without all kinds of drugs. I am more than grateful for what I know of Christian Science, and what I can demonstrate. Every small demonstration unfolds to me more of the beauty and power of Truth, and the wonder of it grows.

EMMA K. BOWMAN, New York, N. Y.

Christian Science healing was brought to my notice about fourteen years ago. A sister had been a pitiful sufferer day and night for some months, and after being advised that further medical treatment would be useless, she finally learned of a Christian Science practitioner, on whom she called for help, and was healed. Seeing this wonderful result, when no hope could be given by the physician for her recovery, my interest was naturally aroused, and very soon after I began to attend the Christian Science services. I found the meetings interesting and the people happy. I continued to gain much help from them, and finally became a member of the church. I can truthfully say that during these years Christian Science has brought to me all the good I possess and the only happiness worth having.

Through the study of Science and Health by Mrs. Eddy, the Bible has become a book of interest, the study of which heals the sick and reforms the sinner. For all these blessings I am learning to be grateful.

HARRIET G. BAGLOLE, Charlottetown, P. E. I.

In the winter of 1892 I received my first blessing from Christian Science. My eyes had troubled me all my life and oculists had told me I was becoming blind, but in one or two treatments in Christian Science all sense of pain in the eyes was destroyed and I now have no fear in this respect. The following spring I took class instruction, and soon after left for my home in an eastern State. In a feeble way I tried for a time to put into practice what I had learned of the truth, but within less than two years I fell asleep over the task. This mesmerism was in no sense restful. There came a long series of troubles,—sickness, poverty, inharmony in the home,—which finally brought me to a state of physical and mental collapse—and that with a young baby to look after. In 1903 a dear friend who is a Christian Scientist took us into her home, where I lay helpless for weeks. She provided for our needs and treated me until I became able to help myself in a small degree. Gradually I came to realize that Christian Science is not only the truth, but that it could be demonstrated by me. I had believed in it for years, but it had always seemed to me that few people were really fitted to practise it.

A little over a year ago I asked a practitioner to help me overcome some difficulties which seemed beyond my understanding, and thanks to the truth I am making progress. Every step taken is a definite point gained. The road is not an easy one to travel, but the way gets brighter each day. Sin, want, and disease are becoming less and

Digitized by Google

less real. I do not now regret even the wasted years. My experience may be a warning to others.

I am grateful to God, and to Mrs. Eddy, through whom Christian Science has been given to this age.

MARIE PITTNER WOOLCOTT, Brooklyn, N. Y.

It would be impossible to tell all I have received through Christian Science, or to express my gratitude. A dread of the diseases that seem part of every child's life, and the powerlessness of *materia medica* to protect my children, drove me to investigate Christian Science. The healing of diseases, which were many, cannot compare with the peace, harmony, and love that is becoming more and more apparent in our home as the days pass.

I am striving to make my daily life a continuous expression of gratitude to God, and to our dear Leader, Mrs. Eddy.—MRS. RAYNOR HOBBS, Ogden, Utah.

I wish to add my testimony to that of thousands who have been healed both spiritually and physically. I have been studying "Science and Health with Key to the Scriptures," by Mrs. Eddy, for the past eight months, and have found Truth to be a very present help, under all conditions. I am glad and thankful beyond expression for the unfoldment of the Scriptures which has come to me through the teachings of Christian Science. I have had many helps, both temporal and spiritual.

ELIZABETH R. KING, Southampton, L. I.

I wish to express a little of the deep gratitude I feel for my slight knowledge of Christian Science. From being an ailing, delicate woman with constant pain, and weariness which was almost worse than the pain, I am perfectly well. I used material appliances daily for three years, and never hoped or expected to be free from this bondage. After four months' study of Science and Health I saw that I must put my whole trust and confidence in God. He had guided me to Christian Science and I must not be afraid. At first I was half inclined to go on using material remedies for "just this once," but soon understood that "what God cannot do, man need not attempt" (Science and Health, p. 231). The past three years have been quite the happiest and most peaceful in my life; for though there has been, and is, plenty to meet and overcome, yet with the consciousness of the ever-presence of divine Love, we can prevail.

The problem of evil had troubled me from childhood, but Science and Health has solved it for me. We find in Christian Science that God does not send sickness and death, but He destroys them. I have also found great comfort from "No and Yes" by Mrs. Eddy, in thinking of seeming wrongs and difficulties.

I thank God for giving us our dear Leader, and her wonderful writings, which are daily proving to the world that God is supreme; that God is Love.

S. H. COLLINSON, Hornsea, Yorkshire, England.

It is with deep gratitude that I wish to tell of a demonstration which proved to me the allness of God. I had not been well all day. My mother had gone out and I was asleep, when a loud noise was suddenly made in the room by one of the children. Being in a very nervous condition, this startled me into a sense of terrific pain, and then I became unconscious. To mortal sense my condition was alarming. This was the manifestation when my mother returned; the bed surrounded by anxious friends and relatives who were not in Christian Science. They were rubbing me and using hot-water bottles. They besought my mother to send for a physician at once, but she quietly asked them to leave me, that I would soon be all right. In a few moments a dear Scientist who had been helping me came in, and in fifteen minutes I became conscious and was all right.

As soon as the truth was realized and declared for me, this dark shadow passed away, and Life and health were revealed. I can never cease feeling grateful to God, and to dear Mrs. Eddy for this grand truth. I am now feeling fine, and know that if we are steadfast Truth will do everything for us.—LINDA ALFORD, Marshall, Tex.

The healing power of Truth was clearly demonstrated to us while studying the Lesson-Sermon entitled "Reality." A second reading of a section, in which the thought of health as reality was brought out, quickly banished a severe headache with which my son had been suffering for most of the day. Before taking up the study of Christian Science, these headaches had always been followed by spasms, but Truth has freed him entirely from that trouble.

Our gratitude to God, and to Mrs. Eddy, through whom Christian Science was brought to the world, grows daily.

LUCY A. BELFORD, Cloverdale, Cal.

Three years ago I spent two or three months in Los Angeles. The day after I arrived there, I was taken with a severe attack of bowel trouble. At the end of a week, I put myself into the hands of a practitioner. At the end of another week I seemed much better, and I thought I would take up the work again myself. In a few days I was in as bad condition as before. I am very fond of oranges, but I was afraid to eat them. I did not seem to realize at the time that it was fear which kept me from responding to the treatment. About this time my son gave me a very large orange, but I laid it away. One morning I took up Science and Health as usual and read the words on page 154, lines 20–24, and I was instantaneously healed. I then went immediately and got the orange and ate it without fear.—EMMA B. NEALE, Cleveland, O.

I had what the doctors called catarrh of the stomach, and their treatment did me no good. After eighteen months of suffering, getting worse all the time, and being unable to attend to business, I was advised by a friend to try Christian Science. I had no faith in it, but consented to let my wife go and have a talk with a practitioner here. When she came home, we concluded that Christian Science could not do me any harm, so we made arrangements for treatment the next day. After the first treatment I felt better; and after two weeks' treatment, my stomach trouble, with several other ailments, had passed away. I am now well and able to attend to business. I believe in Christian Science; I am reading Science and Health and trying to get a better understanding of Christian Science.

P. W. PAULSON, Ashland, Ore.

[Written for the *Sentinel*.]

A Hymn.

E. M. B.

IMMORTAL Love, eternal good,
In whom alone is brotherhood,
Help us to love Thee and adore,
That we may love each other more.

Thou blessed Principle of truth,
Who dwellest in eternal youth,
Upon us breathe, that we may find
The freedom of immortal Mind.

Almighty God, thou faithful friend,
Thy truth and love can never end.
Grant to the poor, the sick, the blind
The healing of immortal Mind.

From our Exchanges.

Ninety years from now, immeasurably more than now, the world's practical religion will be the great spiritual and ethical truths which men in great numbers are discovering in the New Testament—that record of the truth revealed to the first Christians. Churches will be one fellowship and have their place by the efficiency with which they carry the knowledge of a religion for this world and for the next to all men—a cleansing, a burden-bearing, a hopeful religion. The working creed will be the thirteenth chapter of first Corinthians, which has its climax in the heart of Christ with which it closes, "Now abideth faith, hope, love, . . . and the greatest of these is love."

JAMES R. DAY, D.D.
The Congregationalist.

After all is said and done, the conquest over self is the greatest victory a soul can achieve. The man who never loses his temper, whatever the provocation; who never becomes bitter, whatever his adversities; who never loses his optimism and sweetness, whatever his disappointments—such a man is greater than he who gets his name into the mouth of the world. This greatness can be achieved by any of us. It is as accessible for the humblest as for the highest, and, though we fail short of the mark again and again, the victory is the greater when once achieved.

Kingston (N. Y.) *Leader.*

It is a poor consolation to a father whose son has fallen in a yellow fever epidemic to be told that the law of contagion is God-appointed,—as it assuredly is if the laws of matter are the laws of God. . . . This appeal to the material world as evidence of a God of love has in it the fallacy of a thoughtless sentimentalism. Neither to-day, any more than in the day of Elijah, is the Lord, the Eternal One, to be found in earthquake, fire, or in whirlwind. He is found, now as then, in the still, small voice.

ARTHUR CHAMBERLAIN.
The Christian Register.

The world truly believes in Jesus Christ. It is a sacrilege to say that it does not merely because it does not believe in you and me. Men will believe in you and me when they see aught about us that reminds them of him. We can trust their fairness for that. So that forces us to the issue—the one issue for us, there is no other—how can we qualify ourselves, how can we find the paths which will take us where we want to go as faithful ministers of Jesus?

REV. DR. EDWIN F. SNELL.
The Universalist Leader.

See how Jesus helped people. He never set on foot any special activities. He did not lead a stirring, bustling life. He did not belong to societies and serve on committees. . . . Jesus simply manifested a certain spirit. People felt in him a certain quality of life, and it was enough. The silent influence did its perfect work. They touched the hem of his garment, and were made whole.

REV. JOHN D. REID.
The Christian Register.

There are not two standards of living for Christian men; there is no distinction drawn by Christ between the religious and secular life, between private duty and public or social duty; there is but one standard of morals for Christian men and women, for Sundays and for week days, for all times and places, for all classes, professions, trades, and social sets, and God will judge all by that single standard, without respect of persons. BISHOP SATTERLEE.
The Churchman.

THE CHRISTIAN SCIENCE TEXT-BOOK.—"Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, with latest revisions and additions, and numbered lines, 700 pages.

For description, price, and other information, see last page of cover.

RUDIMENTAL DIVINE SCIENCE.—Printed in the New York point system of type for the blind. Price, prepaid, 50 cents per single copy; $5 per dozen.

CHURCH MANUAL.—Containing all the By-laws to January 1, 1906, of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of The Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the Churches and Societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to The Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of The Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to The Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number, or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* **PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, 50 cents per single copy; $5 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents, $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

The trustees of the Carnegie foundation, who are charged with administering $10,000,000, the gift of Andrew Carnegie to provide pensions for professors and teachers of institutions of higher learning in the United States and Canada, met recently and adopted a scale of pensions. The income from the fund will be about $500,000 a year, and there are now on file two hundred applications from professors. It is expected the system will be in actual operation by June. The rules as adopted by the trustees make the following provisions:—

Any person sixty-five years of age and having served not less than fifteen years as a professor, who is at the time of his retirement a professor in an accepted institution, shall be entitled to an annual retirement allowance as follows:—

For active pay of $1,500 or less an allowance of $1,000 shall be granted, providing that no retiring allowance shall exceed ninety per cent of active pay; for active pay greater than $1,600 the retiring allowance shall equal $1,000, increased by $50 for each $100 in excess of $1,600. After twenty-five years' service, regardless of age, the retiring allowance was fixed as follows: For active pay of $1,600 or less, a retiring allowance of $800 shall be granted, providing that no retiring allowance shall exceed eighty per cent of active pay; for active pay greater than $1,600 the retiring allowance shall equal $800, increased by $40 for each $100 of active pay in excess of $1,600; no retiring allowance shall exceed $3,000.

The right of the public to fish in ponds in New Hampshire having an area of ten acres of more, constituting public waters, is upheld in a decision just handed down by Judge Pitman of the United States Circuit Court of Appeals in the famous Percy Summer Club case, which has been before the courts a number of years. The club owns a large tract of land in the northern part of the State, surrounding a pond of more than ten acres in area, and sought to prevent any but members of the club from fishing in this pond. This attempt was resented by residents of the vicinity, and the matter was taken into court.

The long expected meeting of the Board of Overseers of Harvard College for the consideration of football has been held, with the result that the playing of the game at Cambridge is still uncertain. The Board of Overseers by its vote neither confirmed the action of the committee on regulation of athletic sports, nor condemned this report or the revised rules; but it does not appear to be satisfied that the rules as revised give assurance that the game will meet the demanded improvements.

Tentative plans have been completed by the Navy Department for the entertainment of the officers of the French squadron which is coming to Annapolis to participate in the ceremonies commemorative of John Paul Jones. The squadron will be met off the Capes by the second division of the first squadron of the Atlantic fleet, in command of Rear Admiral Davis. The memorial services occur April 24.

The forthcoming two thousand mile yacht race from San Francisco to Honolulu is assured and has taken definite shape. Five yachts have entered, and others are expected. The start will be from Meiggs' wharf, San Francisco, and the yachts will finish off Diamond Head lighthouse, Honolulu.

Foreign.

Because the withdrawal of the troops from Manchuria had not sufficiently progressed, the Japanese Government up to the present time has not permitted citizens and vessels of foreign countries to enter the ports and regions of Manchuria, nor allowed foreign consuls to proceed to their posts there. Such progress, however, has now been made that the Japanese Government has decided, in accordance with their advocacy of the principles of the "open door," to permit citizens and vessels of foreign countries to enter from May 1, An Tung Hsien and Tatungkao, and allow foreign consuls to proceed to their posts at An Tung Hsien. From June 1 foreign consuls will be allowed to proceed to their posts at Moukden, and traveling of foreigners in the interior of Manchuria will be permitted in so far as military exigencies do not prevent it.

Russian radicals won an unexpected victory in St. Petersburg when every one of the 160 Constitutional Democratic candidates for the Douma was elected by a large majority. The so-called "Block" candidates, nominated by the "Octoberists," the Progressive Economists, and the Law and Order and Trade Industries parties, polled only about half as many votes. The victory is significant because St. Petersburg has been commonly regarded as the stronghold of the bureaucracy. It is accounted for by the fact that the workingmen, with their little knowledge of politics and parliamentary procedure, have become a thinking body.

The present eruption of Mt. Vesuvius, besides destroying valuable tillage land and property, killed many hundreds of people and rendered homeless, according to some reports, fifty thousand people. The great eruption occurred on Aug. 24, A. D. 79, when the cities of Pompeii and Herculaneum were overwhelmed and more than two hundred thousand persons perished. Since then there have been over fifty more or less disastrous eruptions.

The report that President Castro of Venezuela has temporarily resigned his position as President has been confirmed.

Industrial and Commercial.

The number of men working as miners in the anthracite and bituminous coal regions, who would be affected by a coal strike, is 384,500. Of this number Pennsylvania furnishes 160,000; Maryland, 5,000; West Virginia, 35,000; Virginia, 15,000; Ohio, 40,000; Indiana, 15,000; Illinois, 53,000; Iowa, 14,000; Michigan, 3,500; Kentucky, 4,000, and Missouri, Arkansas, Texas, and the Indian Territory, 40,000. Of these 120,000 are unorganized. Taking the low average wage as $425 a year, the loss in wages, if all these men go out, will be $2,500,000 a week. The great strike of 1902, which began May 12 and ended Oct. 23, caused a loss to mine employes of $25,000,000. The operators were compelled to take a loss of about $46,100,000, and the decrease in freight receipts of the transportation companies was in the neighborhood of $100,000,000.

The building by an American company of an electric railroad line across Holland, involving the expenditure of about five million dollars, says the *Commercial*, serves to indicate the push and energy of the electric interests of the United States. The line is to be constructed from the German frontier to the North Sea, and will be one hundred and fifteen miles long. Later it is proposed to build several branches which will exceed the mileage of the main line. The work is to be done by the Holland-American Construction Company, which was incorporated in October last year under the laws of the State of New York, and is backed by Westinghouse interests. Ultimately the system will be extended, by means of branches, to a length of about two hundred and fifty miles.

The Manhattan railroads, including the "L," Subway, and surface lines, would, if placed end to end, reach a little over five hundred miles, and altogether, in a year, they have carried 1,036,834,770 passengers. The passengers carried on all the steam roads of the United States numbered only 715,419,682 for the last year reported by the Interstate Commerce Commission. Passengers per mile were 104.108 on the steam roads, and about a million per mile on the electrics.

For the eight months ended with February 181 locomotives, valued at $1,430,391, were exported from the United States as against 100, worth $1,288,231, in the same period of 1904 5. In 1903 4—eight months—there were 217 locomotives exported, their total value being $2,558,317, and of these 123 went to British North America.

General.

The construction of an irrigation canal in 1901 near the apex of the delta of the Colorado River in Southern California promises to lead to a condition of things that was not anticipated when the work was begun and to change entirely the natural features there. The canal was begun to reclaim a portion of the Colorado Desert and made use of a portion of the channel of the Alamo River, through which at flood times the overflow of the Colorado found its way to the Salton Sink, some ninety miles distant. About ten miles of this river channel was dredged and a system built that embraced one hundred thousand acres of land. A portion of the irrigated territory is in Mexico and the balance in southern California. The extent and variety of the crops induced the settlement of this region on such a scale that at present about twelve thousand people are residing in the villages and upon the irrigated farms, while the Southern Pacific Railroad has constructed a branch line through the territory. The channel became clogged with detritus brought down by the river and, instead of dredging, it was decided to excavate a new channel a few miles below the Alamo and connect it with the Colorado River. This was little more than a ditch a mile in length and fifty feet wide. A flood soon enlarged this and carried more water into the Alamo than could be used in irrigation and the surplus found its way into the Salton Sink, which lies below sea level. The force of the flood waters soon enlarged this ditch and within six months nearly all the water of the Colorado was finding its way toward the sink. The floor of this sink was covered with deposits of salt, which has led to a considerable industry in the manufacture of salt. This sink has been covered by water forming a lake about fifty miles long and to a maximum depth of twenty-five feet. Already the railroad has had to be changed and unless the waters can be checked the farming lands will ultimately be submerged.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

The Impermanence of Evil.

REV. WILLIAM P. MC KENZIE.

THE following sentence from a well-known writer, a deeply thinking and widely cultured man, expresses as well as is usually done a comprehension of the change which must follow the understanding and application of the teachings of Christian Science: "To accept the doctrine that moral evil and physical pain and suffering are not realities, would require me not merely to change my opinions, but to recast, so to speak, my character." As to the change of character which must come when the eternal fact of the reality of good displaces in thought the fiction that evil has reality, and therefore eternity, we rejoice in expecting that beautiful change for all mankind. Being transformed by the renewing of the mind, we all shall prove what is that good and acceptable and perfect will of God. Hitherto mortals have not known enough about the good will of God, and therefore have not been able to overcome evil with good; then, unwilling to acknowledge their failure, they have incorporated into their philosophies and theologies the theory that evil is a reality, and therefore unconquerable. The suffering saint, after trying the potions of many physicians without a cure, has taken pride in thinking that the disease must be specially sent by God, since it is incurable, and is therefore a reality. If this were correct reasoning we should have to conclude that the infinite intelligence is a reservoir for unconquerable evil and incurable disease.

Christian Scientists hold intelligently to the authority of truth revealed in the Scriptures, and so are able to distinguish what is personal and temporary in the record, from what is universal. Those who support verbal inspiration, and claim that every word of the sacred writings is mandatory, are compelled, for example, to claim that the cursing of enemies is legitimate, this being the tenor of some imprecatory psalms. If, however, the thoughts and intents of the heart must be brought before the judgment-seat of Christ, and the mandate of the Christ is, "Bless them that curse you, . . . pray for them which despitefully use you," then it is plain that the un-christianized human sense which makes evil real, and which legitimatizes persecution, cruelty, and slaughter of fellow-men, must disappear before the Christlike understanding which recognizes only good as reality, and by goodness displaces ill-will, by kindness displaces hate, and by love displaces dread and fear.

If we bring our conceptions of God before the same tribunal, we find the theories to be misconceptions which have premised that God is acquainted with evil and forever knows it. Walking in the way opened for us by Christ Jesus, and doing the works which he did, we find that God shines in our hearts, and as the source of all good gives us "the light of the knowledge of the glory of God in the face of Jesus Christ." With this light of truth coincides the prophet's vision of the true God when he said, "Thou art of purer eyes than to behold evil, and canst not look on iniquity;" thus men long ago might have had comfort on the ground that the more they knew of God, the less would they behold evil. The true thought was evidently grasped by the Psalm-writer who said, "If I regard iniquity in my heart, the Lord will not hear me," and the inference is plain, that the more we know of equity, the nearer do we come to God, who does not know iniquity. Out of many mental struggles came the vision of truth expressed in the book of Job, "Acquaint now thyself with him, and be at peace." If, however, as some would have us believe, the divine intelligence can be a pain-producer, and the originator of sickness and sorrow, whereby these conditions become realities, then acquaintance with that Mind would not give us peace. But the thought thrills throughout the Bible that the divine intelligence is "the very God of peace." When a vision of ultimate conditions came to the Revelator, and he thought of man's acquaintance with God being so close that the tabernacle or dwelling-place of God was with men, he saw what the necessary correlative of such acquaintance was:—"There shall be no more death, neither sorrow, nor crying, neither shall there be any more pain: for the former things are passed away." Since it is the very inmost characteristic of all that is real that it cannot pass away, but endures the same from everlasting to everlasting, why should we be unwilling to grant that even now sorrow, evil, anguish, pain, and sin do not constitute reality? We pray that the divine will may be done on earth as in heaven, and then deny an answer to our prayer by theorizing that on earth the will of God is not a heavenly will, but a power which establishes discord. Men are certainly deceived when they make evil a reality, for the true light and revelation of God shows that good is real and eternal.

Let us examine one phase of evil, and consider that quality of the carnal mind which is most fertile in producing the ills wherefrom mortals suffer. We remember that Pilate was no mean judge of human nature when he discovered the hidden cause of the clamor for the murder of Jesus. The chief priests tried to show religious and political grounds for the judicial murder, but Pilate "knew that for envy they had delivered him." Envy is aroused always by the view of something considered good. What the priests envied was not so much the good character of our Master, as it was his popularity. They wanted to have the interest of the people, but were unwilling to so change their characters as to deserve it. The thief envies the comfort that results from industry, but would rather destroy the industrious worker through crime than place himself in right relations to honest labor. There is not one good condition expressed in human nature, or acquired by industry, by study, or any other form of self-devotion, which does not excite envy in the carnal mind. Shall we then speak of envy as a part of the realm of reality, and include with it the thefts, and persecutions, and false witness-bearing, and murders which it inspires? We answer by quoting one of Mrs. Eddy's pregnant sentences, "If it can be destroyed it is destitute of permanence or Principle, hence is unreal." (Series, I., 1.)

Can envy be destroyed? It is a condition of human sense based upon a supposed separation from good, and it disappears when satisfaction is found in good. While envy occupies the human sense its urgency is to deny good to others, or to destroy their good. Such an one is unhappy, and would

Copyright, 1906, by Mary Baker G. Eddy.

Digitized by Google

make others unhappy, deface their beauty, disturb their peace, poison their good fortune, destroy even life; and yet that whole mental state is a perversity, a misconception of fact, an inversion of truth. It is destroyed and disappears whenever an understanding of good is gained. Paul's error as a persecutor was annulled and atoned for by his life as a builder of the Church. We do not think of the inconstancy of Peter as real and eternal, because he became steadfast as a rock. No more do we imagine that an envious mortal can maintain his error as a reality forever, or think of the malevolent condition named envy as part of eternal reality, because we acknowledge God as the Principle of all reality, the originating and supporting cause of all that is good.

We have said that envy disappears when an understanding of good is gained. Consider the resources of good whereby God is ready to bless man, His child. Does he need pleasure, comfort, peace, riches, joy, health, prosperity? He may drink of the rivers of God-given pleasure; as one whom his mother comforteth so will divine Love comfort him; peace is proclaimed to him that is far off as well as to him that is nigh; with joy he may draw water from the wells of salvation; God will be the health of his countenance; and he may have prosperity in all that he does. With every need satisfied, with every mental faculty enriched, with the far-stretching prospect before him of infinite goodness, with a sense of life gained from knowing God, men can find no remaining perverseness to be expressed in envy of another's good. Wherever one sees good in expression he knows it to be the manifestation of divine Principle, the all-sustaining God, his God, the infinite goodness. Consequently he rejoices in (not envies) every factor of good he sees in others, in even the faintest flickering of the light of love, though it be, perchance, in the lowest criminal. He cannot be overcome of evil because he knows that by its very nature good has already overcome evil, and that when acknowledged as reality by men it enables them within themselves to overcome evil with good.

Does the disintegration or annulment of any one sin or error prophesy an end for sin? Yes, but let us not say too lightly. There is no reality in sin. The first effect of dawning truth is to reveal to mortal man his sin. Where there is no standard, how can you measure a lapse from integrity? Where there is no law, how may sin or lawlessness be known? So because of transgression law is given. This is a matter of history. But higher than formal law is the revelation of the divine Principle, obedience to which is blessedness. "Blessed is the people that know the joyful sound: they shall walk, O Lord, in the light of thy countenance." Christian Science enables men so to walk in this light that character is "recast;" then love becomes the fulfilling of the law, and sin is swallowed up in spontaneous righteousness.

Substance or Shadow?

WILLIAM B. TURNER.

ARE we thinking our thoughts in the realization of actual and vital at-one-ment with God, good; or are we contenting ourselves with mere intellectual or emotional musings about God? The answer to this question will determine for us whether our mental processes are making toward a live and effective Christianity, or tending to move us on, clad only in the vesture of superficiality. Simply thinking about God no doubt may claim its hour, but it will never bring us into saving and effective relation with good, whereby alone we can think to proof and profit in convincing demonstration. The Science of Christ's gospel teaches us that we must blend our thoughts with those of our Maker, if we would emerge from the illusive twilight of human theories and walk in light.

But how are we to know when we have passed from a mere thinking about to thinking with? Mrs. Eddy says, "As Christian Scientists you seek to define God to your own consciousness, by feeling and applying the nature and practical possibilities of divine Love" (Annual Message, 1901, p. 4). We are, then, to *feel* something, and feeling, apply. And this something? The nature of divine Love, God; but God, according to Christian Science, is Mind, and His active manifestation, the Christ-consciousness (the true Messiah) is continuously imparted to man in informing thoughts of Love and Truth. These we can feel and know. If, therefore, we are conscious of mental attitudes which experience indorses as divine and of which we can make immediate application in supporting proof, we may with reverence conclude that we are thinking in some measure with God, good.

These mental attitudes, God-blessed, find expression in the fruits of the Spirit, as Paul calls them,—"love, joy, peace, longsuffering, gentleness, goodness, faith, meekness, temperance." Thus the divine attributes appear through man. They are naturally of good, and this is significant to us; for with the coming of spiritual understanding we have learned that good alone is real, alone has power. Conscious, at last, of the living "well-spring" within, and rejoicing in the knowledge of its eternal witness to the immanence of divine Love and power, is it any wonder that such an one bows in the sanctuary of uplifted thought and worships the Father? At such an hour he is "born again," he knows himself a son of God.

In closing his comprehensive list of spiritual attributes, Paul avers that "against such there is no law," and he has well said, as all will testify who have experienced the healing touch of Christian Science. In proportion as we reflect these attributes in our daily living, we find that the so-called laws of mortal mind fall powerless before them.

It is of supreme interest to remember, also, that in a remarkable passage in his second general epistle, Peter likewise embracingly expresses the thought. He writes, "May more and more grace be granted to you in a full knowledge of God, and of Jesus, our Lord, seeing that His divine power has given us all things that are needful for life and godliness, through our knowledge of Him who has appealed to us by His own glorious perfections. It is by means of these that He has granted us His precious and wondrous promises, in order that through them you may, one and all, become sharers in the very nature of God" (Weymouth's Translation). Peter then enumerates, in a long list, the qualifications marking a spiritually noble character, and straightway adds, in line with Paul's asseveration, "If these things exist in you, and continually increase, they prevent your either being idle or unfruitful in advancing towards a full knowledge of our Lord, Jesus Christ . . . for it is certain that so long as you practise these things, you will never stumble."

No student of Christian Science can fail to see how eminently in accord with the two great apostles is our Leader, in her estimation of "Soul-sense," that divinely mental reflection which identifies, as we have now been prepared to see, the ideal man at-one with his Maker. Paul asserts that with such equipment we are immune from the "law" of the flesh; Peter, that through the divine "perfection" we may, "one and all, become sharers in the very nature of God;" and Mrs. Eddy declares that now it is for us to feel and apply "the nature and practical possibilities of divine Love."

As Christians and Scientists, therefore, we must open our consciousness to the deific modes of thought and character. Adding to this, persistent and systematic study of the letter of Truth, we shall of necessity progress rapidly in scientific thinking, and show forth a continually increasing demonstration of at-one-ment with God. To the achievement of so great an end, we must needs make the discovery that righteousness of desire, integrity of purpose, and purity of thought are the essentials which open up the way to every spiritual advance. These are the guide-signs to the "strait and narrow way;" and with these well kept in view, we shall

Digitized by Google

avoid the two stumbling-blocks which lie in the path of those who, with Paul, would attain to the mind of Christ; viz., the merely intellectual or worldly-wise interpretations of the letter of Scripture and Science, and the deception of ourselves and others with those made-up emotions and sentiments which have their origin in self-love and which masquerade as virtues. Evil would ever foist these counterfeits upon the unsuspecting, and so prostitute their efforts by beguiling them into the maintenance of a false sense of love and life, but they who are watchful will learn to discriminate between the substance and the shadow, and choose that "inspiration" without which "we have no evidence of being Christian Scientists" (Annual Message, 1902, p. 15), and the goal of right thinking will have been righteously and effectively attained.

The New Tongue.

EVELYN NOBLE SCHROEDER.

WHEN we begin to learn the way in Christian Science a change takes place in the manner in which we express ourselves, and with study and growth our vocabulary undergoes a radical change. Words which formerly were in daily use are discarded entirely, because our mental growth has rendered them useless to us. If we are true Christian Scientists we no longer talk about feeling sick, tired, afraid, or discouraged; do not say we have overeaten or taken cold; do not dwell upon contagion, epidemics, or disasters, and do not emphasize the selfishness or weakness in those about us. At first we do this simply because we are told that if we wish to be free from these ills we must not dwell upon them; but gradually the thoughts, or more correctly, the false beliefs for which such words stand, are eliminated from consciousness. We no longer look upon them as realities of being, and hear them spoken of only to deny their verity. One by one these words slip out of use, until a long list of words and phrases are swept out of our daily conversation; and with this dropping off of the old comes a great sense of freedom. We have lost nothing, and in the place of these outworn words come those which tell the truth about God and man and the world about us. Enlarged thought finds new symbols. We learn to think and speak of God as divine Love, Truth, Life, as substance and intelligence; and of man as God's idea, expressing health, wholeness, completeness, and harmony. These and many other like expressions form an integral part of our speech, are the very essence of it.

We know that our word becomes a law unto us. Jesus said, "By thy words thou shalt be justified, and by thy words thou shalt be condemned." One who has learned even a little of the language of Spirit has but to enter a household where the old forms of expression are the accustomed ones, to realize the great freedom he enjoys in the new sense. Our own watchfulness, faithfulness, and discretion in using the language of Truth will help toward the fulfilment of our prayers and the promise in Science and Health, "The night of materiality is far spent, and with the dawn Truth will waken men spiritually to hear and speak the new tongue" (p. 354).

[Written for the *Sentinel*.]

Divine Love.

MARGARET WARDELL.

'TIS dawn, and Spring,—
Gold-throated birds sweet carols sing,
The trees' green lace obscures the blue;
But Love looks through.
Yes, Love is here,
For Love divine is everywhere;
And we like Love may perfect be
If naught but Love in all we see.

Selected Articles.

At the Breakfast Table.

When coffee had been poured the landlady said, "I would like to know what you folks think of Christian Science. I have been looking over some statistics of this comparatively new religion and am surprised to see how many large and flourishing churches it has, not only in this country but other countries as well. Any attempts to suppress the order or to suppress that feature of it which leads to the healing of the sick seem only to have had the effect to multiply converts."

"So far as I am concerned," said the lawyer, "I am hardly well enough informed to express an opinion. Some years ago my attention was called to Christian Science by the large number of men and women of prominence who were joining it; but after a brief examination I found it so opposed to my way of thinking that I stopped short and haven't given it any attention since. Christian Science is a spiritual thing, and I am such a rank materialist that we have nothing in common. God, they say, is Spirit and pervades all space; and having sprung from Him, we also are spiritual beings. The aim of Christian Science, therefore, is to restore lost spirituality, and, to the degree that it does this, we get rid of our ailments and the body itself wanes in importance and reality."

"Christian Science," said the doctor, "is both a religion and a method of healing. As either one I am interested in it, and have for it only words of praise. As a religion it seeks to rid its followers of sin in every form. Its endeavor is to purify, elevate, ennoble, refine, and spiritualize, and it considers itself successful in proportion as it is able to do this. As it progresses in a community, its work is good, better, best, and as a method of cure I think well of it. The cures it has wrought are many and marvelous. Indeed the majority of its members are persons who have been healed of their diseases or who have been so benefited in their general health that they have been only too glad to join the order and do what they can to help it along."

"Now, I presume, you want my testimony," said the school teacher. "Last summer I spent two weeks of my vacation in New York. One Sunday I went to an orthodox church in Brooklyn, and on another to a Christian Science church in the vicinity of 42d Street. The orthodox church was full, though not so full but that there was an occasional empty seat. The Christian Science church was more than full, there being two lines of seats in each of the outside aisles and some occupied standing-room around the doors. In contrasting the two churches, what impressed me very forcibly was the difference in the looks of the two congregations. At the orthodox church there was the regular Sunday-go-to-meeting look, with a bit of the demure in it and more or less of the perfunctory. At the Christian Science church there was on every face a look of animation and of good cheer. It was as though something had just happened to the advantage of every member of the congregation, and they were all not only in a complaisant frame of mind but elated and happy. It was a gladsome look, such as you might expect to see on a festal occasion instead of at an ordinary midsummer meeting. And when the offering was taken up, they gave as though they were getting value received for their money, the baskets being piled with bills, with only silver enough among them to keep the bills from falling out."—*Amsterdam* (N. Y.) *Recorder*.

One is not obliged to be a Christian Scientist to see the narrowness and injustice of the action of the legislators who voted to prohibit Christian Science practitioners from charging for their services. If medicine were a settled science it would be different; but, with practitioners of a number and a variety of schools in the field, it is not for any one to say who

Digitized by Google

people shall or shall not consult; or to seek to gain this end by trying through legislation to starve and drive out of business those whose views or methods are tabooed by the old medical authorities. History discloses that even the schools which are now represented among those who have resorted to legislation to shut out such as are of the new way, were in turn subjected to similar opposition before they had favor and influence. The Scientists will, no doubt, ultimately win out.—*Ashtabula* (O.) *Beacon-Record.*

Our erudite critic asserts that the teaching of Christian Science concerning the unreality of evil, is not new, and offers some quotations from Marcus Aurelius, among which are the following: "Only that is evil which we choose to regard as such." "That which seems evil to the individual is good for the whole." Now, the beliefs expressed in these quotations do not indicate even a resemblance between the teaching of Marcus Aurelius and that of Mrs. Eddy, and they differ but slightly from the theories of many other ancient and modern philosophers. They lack the Principle of Christian Science and do not in reality declare the absolute non-entity of evil, but affirm that a thing is evil only because one chooses to regard it as such, and that evil is in reality a species of good. This is as far from the teaching of Christian Science as night is from day. Science affirms positively that God, good, the one infinite Mind, is the only real substance; that evil, the opposite of good, is simply a negation,—is not something, but the absence of something, —the absence of good even as darkness is the absence of light.

Many of Marcus Aurelius' statements, detached from their context and considered without reference to their premises, are almost identical with those of Christian Science, but when we come to examine their premises and to seek out their exact meaning we find that they are not in any sense akin to Christian Science. I fear that the difficulty with our critic lies not so much in her apprehension of Marcus Aurelius' teachings as in her misapprehension of Christian Science. ALFRED FARLOW.

Philadelphia (Pa.) *Evening Bulletin.*

It is a weakness inherent in all criticism of Christian Science that it is purely destructive. The world is asked to believe that the movement is little more than a new society craze, which, like "slumming," will soon be extinct. Unfortunately for these critics the facts are against them. The growth of the Christian Science church has resembled that of an oak rather than that of a mushroom. For forty years it has progressed silently, steadily, irresistibly. To those who have accepted its teachings it has brought a sense of power to resist sin, of mastery over sickness, and of that peace of God which passeth all understanding, that enables them to regard criticism, even in its most virulent or least intelligible aspect, in the spirit which drew from Paul the declaration, "None of these things move me."

It is the aim of Christian Science to make men physically and morally better by showing them how they may make practical the Christ command, "Come unto me, all ye that labor and are heavy laden, and I will give you rest."

FREDERICK DIXON.

London (England) *Tribune.*

In a radical and thorough-going classification there are just two standpoints from which Christian Science, or anything whatever, can be judged. One is the standpoint of sense-testimony, and the other is the standpoint of spiritual sense. These standpoints are radically opposed to each other; and one of them is true and the other false. This point is of such fundamental importance that it is well to establish it upon the rock of the Scriptures before proceeding farther.

"Eye [sense-testimony] hath not seen, nor ear [sense-testimony] heard, neither have entered into the heart of [mortal] man, the things which God hath prepared for them that love him. But God hath revealed them unto us by his Spirit." "I know whence I came, and whither I go; but ye cannot tell whence I come, and whither I go; [for] ye judge after the flesh [sense-testimony]." "The flesh [sense-testimony] lusteth against the Spirit, and the Spirit against the flesh: and these are contrary the one to the other." "If any man among you seemeth to be wise in this world [the world of sense-testimony], let him become a fool, that he may be wise. For the wisdom of this world is foolishness with God." The great majority of those who fail to understand Christian Science do so because they take the view-point of sense-testimony in judging.

REV. G. A. KRATZER.

Fitchburg (Mass.) *Sentinel.*

Christian Scientists claim nothing for themselves, but all for God, even as Jesus said, "I can of mine own self do nothing." This being the case, we must take our position on our understanding of the power of God: either that He is omnipotent or that He is not. The Scriptures declare His omnipotence. Jesus' words were, "All things, whatsoever ye shall ask in prayer, believing [understanding], ye shall receive."

Christian Scientists are daily proving these words to be true, and know that as man grows in spirituality and in a higher understanding of God, and man's relation to Him, greater works shall still be done in accordance with the promises. Jesus healed leprosy in defiance of material law. The command "Heal the sick" makes no distinction as to disease.

One trouble with some critics of Mrs. Eddy's works is that they confuse the capitalized word "Mind," which signifies God, with the so-called human mind.

CHARLES K. SKINNER.

Charlevoix (Mich.) *Courier.*

Christian Science cures by lifting the thought from the contemplation of the material concepts of sin, sickness, and death to the knowledge of the pure, sinless, deathless reality of God and His universe, including man. In this process the errors of mortal thought, whether they be sin, disease, or poverty, are met and destroyed, and man is freed from their bondage. Jesus said, "Ye shall know the truth, and the truth shall make you free." Christian Science teaches that Jesus meant that a right knowledge of God frees man from mortal ills, and demonstrates the correctness of this teaching by results in the lives of men.

Following the footsteps of Jesus, Christian Science heals by placing its reliance on the unerring divine Mind and by acknowledging unreservedly the might and power of omnipotent Spirit. EZRA W. PALMER.

Pueblo (Col.) *Chieftain.*

Christ Jesus said, "He that believeth on me, the works that I do shall he do also." Christian Science is a revival of the Christ-method of healing and depends upon the power of God, spiritually understood, for its healing work. It brings to the patient not only physical healing from every form of disease, but also a spiritual understanding of God and man's true relation to Him, which no material method or suggestion can possibly give. This spiritual understanding of God and His spiritual law distinguishes Christian Science from all other systems of healing, and is the basis of its remarkable success. FRANK W. GALE.

Oakland (Cal.) *Enquirer.*

The Lectures.

The Mother Church in Boston.

A splendid audience, which completely filled Symphony Hall, assembled April 10 to listen to a lecture by Hon. Clarence A. Buskirk. The lecturer was warmly greeted by this large and appreciative audience, to which he was introduced by Mr. William D. McCrackan, First Reader of The Mother Church, who said,—

Ladies and Gentlemen, Friends:—Permit me first of all to make you welcome in behalf of The First Church of Christ, Scientist, in Boston. Let me assure you that the invitation upon which you are present here to-night is one which comes from the heart.

Christian Scientists have many proofs in their personal experiences, in their own spiritual, mental, and bodily estate, of what Christian Science can do to help and heal, to save and comfort. They therefore rejoice in every proper opportunity of extending the glad tidings of Christian Science to those who may feel the need of its ministrations.

There is much natural inquiry in regard to Christian Science, due to the good works which it is accomplishing, here and elsewhere. There is probably no one in this audience to-night who has not at least heard of some specific instance of reformation and healing through Christian Science. Indeed there are many here who have been thus reformed and healed of sin or sickness. It is natural, then, that there should be a pronounced desire to listen to some presentation of the subject from the lecture platform which shall be authoritative and official.

It will doubtless be within the scope of the lecture to-night to respond to this natural spirit of inquiry, as far as the shortness of the time at our disposal will permit. The lecture is likewise designed to correct false notions concerning Christian Science which may still be latent in the public mind. And since it is not possible to do justice to Christian Science itself without due regard to its Discoverer and Founder, Mrs. Eddy, I feel certain that our attention will be called also to the life and life-motive of that great and good woman.

The lecturer of the evening comes to us well fitted by a legal training to weigh and measure evidence with care and deliberation. He has served the State of Indiana as Attorney General. He is now a member of the Christian Science Board of Lectureship of The First Church of Christ, Scientist, in Boston. It gives me great pleasure to introduce to you Hon. Clarence A. Buskirk.

The full text of Mr. Buskirk's lecture will appear in the May issue of *The Christian Science Journal.*

Rantoul, Ill.

An audience of about three hundred listened to Bicknell Young's address on Christian Science, given on Thursday evening, March 8, in Neal's Opera House. Mr. Young was introduced by Rev. Charles Bloom, pastor of the Christian church of this place, who said in part,—

I am here because I am interested in the old-time question of Pontius Pilate—"What is truth?" During the past few years, I have often found myself in such a place and on such an occasion as this, simply and only because my soul hungers and thirsts after truth. He who brings to me some new truth or flashes out the old in newer and better light is my friend, and to him I am indebted.

Personally a strong believer in the authenticity and authority of the Bible, I am here to say it is my firm belief that yet much more light is to break forth from the old Book. Thus I have spent many evenings at the feet of religious teachers, desiring to know the truth that the truth might make me free. As you are aware, I am not an adherent of or a believer in Christian Science; but I earnestly bespeak for the lecturer this evening your close attention and careful thought. Suffering many things myself, because of a decided change in religious convictions some years ago, the memory of which often saddens and will never quite pass from me, yet I declare to you that I hold truth in far higher regard than any position or friendship of earth, and am ready to follow one who can bring truth to me, out to the confines of human knowledge. This spirit, I take it, is likewise present with many of you—therefore you are here this evening.—*Correspondence.*

Somerville, Mass.

So large a number of people desired to hear the lecture on Christian Science by Prof. Hermann S. Hering, in Anthoine Hall, Tuesday evening [April 3], that the capacity of the hall utterly failed to accommodate the people. Before eight o'clock every available seat in the hall was taken, the stage was filled with chairs, and still a stream of people which seemed to be unending pushed steadily through the entrance doors. At this juncture, Wilfred G. G. Cole, of First Church of Christ, Scientist, Cambridge, under whose auspices the lecture was given, stepped to the platform and asked all who had previously heard Professor Hering to give up their seats to those who had not. The response was immediate. Many rose and left the hall, but their seats were taken at once, and the situation was not apparently improved.

Mr. Cole then requested all Christian Scientists to retire, for, he explained, "non-Scientists are outside, unable to get in." The second appeal also met with a ready response. It is estimated that fully one thousand, including those who left the hall in response to Mr. Cole's requests, were unable to hear Professor Hering last Tuesday night. Professor Gardner C. Anthony, Dean of Tufts College, Department of Engineering, in presenting the lecturer said,—

Friends:—It is very gratifying to me to have the privilege of presiding at this meeting and of presenting one who has come from the same professional and educational field as that in which I labor. Now a worker in the broader field, he comes to address you, not on those subjects which we commonly associate with the term science, but concerning the source of all science, God, and the reality of things spiritual. To tell you something of the present-day realization of the promises made by that most scientific of men, Jesus of Nazareth, and to point the way to his understanding of the truth.

Speculative theories concerning a future state no longer hold the attention of men to any considerable degree, but no thoughtful person can ignore those practical demonstrations of applied Christianity by means of which the lame do walk, the blind see, and the bonds of sin are loosed. Aye, and that which is seemingly more wonderful, men are taught to realize the possibility of obeying that great commandment of our Master, "Thou shalt love thy neighbor as thyself." These are things for which Christian Science stands, and I have the honor to present one who can speak with authority as to the practicability of this teaching. I take great pleasure in introducing Prof. Hermann S. Hering.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Unauthorized Literature.

SOME time ago we called attention to the bad practice which has grown up among some Christian Scientists of circulating certain papers and alleged copies of letters purporting to be helpful expositions of Christian Science, but which, as a rule, are misleading and harmful misinterpretations of its teachings; and as this practice has not entirely ceased, we again refer to it in the hope that those who are still circulating this spurious matter may be induced to cease from doing so. May we not have the help of all Christian Scientists in this endeavor?

The following editorial appeared in our issue of September 19, 1903, and what is said therein still applies to this pernicious practice.

"Since the publication of the article 'The Integrity of Christian Science Literature,' in our issue of August 15, 1903, we have been given an opportunity to inspect three papers of the kind referred to. One purports to be notes taken in a class, another is said to be a copy of a letter to a student, and the third is a formula. The alleged notes are utterly repudiated by the teacher, the letter was found to be equally spurious, and the formula is, of course, in direct violation of the By-laws of The Mother Church. All three of the papers are faulty and misleading, and, if considered as attempts to elucidate Christian Science, must prove harmful to young students and inquirers who give heed to them, and yet we regret to say that inquiries which have been received since the publication of the article referred to indicate that in some instances there is a desire to cling to these papers which are 'doubtful as to authorship or clearness of statement.'

"We feel under the necessity of again warning our readers against this class of unauthorized and faulty literature and against the subtle and specious manner in which it is circulated, for it is usually put forth as the production of some well-known Christian Scientist, and in some instances the papers even purport to be copies of letters written by Mrs. Eddy.

"That these papers are passed from hand to hand without sufficient inquiry as to whether their reputed authors stand sponsor for them is an evidence of carelessness, but an even greater danger would seem to be that more or less change is inevitably made every time the papers are copied, and what may have been a correct presentation of Christian Science in the original is likely to become a doubtful or absolutely incorrect statement in the copy.

"When it is clearly understood that Christian Science is an exact Science, and that any deviation from the true line of its expression must necessarily obscure its teaching, it will be seen why these efforts to adulterate our denominational literature should be frustrated. It is of the utmost importance that no literature should be circulated as Christian Science which has not passed the scrutiny of those capable of pronouncing upon its correctness and authenticity, and it is for this reason that great care is taken to preserve the purity of the authorized publications."

ARCHIBALD MCLELLAN.

The Light Dispelling Darkness.

THE scientific tendencies of the present time have led men to look for human unfoldment by orderly and sometimes slow processes; and this in contradistinction to the belief that instantaneous changes in human conditions were possible. Christian Science comes to teach that right is an eternal fact, that wrong has no claim even to temporary existence, and that the work of the Christian Scientist is to prove this for himself and others by demonstration. Christian Science never indorses the belief that evil is undeveloped good which will improve with the lapse of time; on the contrary, it teaches that evil has neither place nor power in the universe, and that the belief in its reality cannot be too quickly given up. It is, however, important to remember that no one can see the truth for another; he can only see it for himself, and apply what he understands to the conditions with which he has to deal; and as he does so, those who see the changes thus wrought will be led to inquire as to their cause, and will, sooner or later, seek the truth for themselves.

The capacity of mortals to discern the light of Truth is so small that they are apt to measure the light by their own ability to see it, and thus to limit their own possibilities or those of others. After many experiences with the Master, the disciples evidently came to understand that spiritual light must not be measured by mortal sense. John says, "The light shineth in darkness; and the darkness comprehended it not;" while Peter speaks of the "light that shineth in a dark place, until the day dawn, and the day star arise in your hearts." He also says that "one day is with the Lord as a thousand years," so that progress, after the rising of the day star within our consciousness, is increased a thousandfold.

It is our privilege to prove by our deeds what progress we are making, but never to make it a standard for others, any more than we would consent to be held back in our advance by the blindness of others to the truth. Spiritual illumination is ever the mightiest factor in the world, despite mortal blindness, and the Master said to his followers, "Ye are the light of the world." How aptly does this characterize the teaching and work of our revered Leader, whose inspired thought flashed like a light across the centuries to the time of Christ Jesus, and perceived how divine Science has forever spanned the seeming chasm between that day and the present; that Truth is no less potent in this hour of human need than when sickness, sin, and death vanished before its revealed light at the Master's word. One to whom this light has come, writes of a vain struggle with sin and disease, and then says, "Since I began the study of Christian Science, three years ago, dyspepsia has disappeared, the desire for liquor and tobacco is gone; I abhor evil thoughts, and am turning from the pleasures of sense to the joys of Soul." Perhaps the most important point in this testimony is the statement that the practitioners wrought this wonder by reflecting so much love. The writer says, "They did not condemn me because I was sinful, but told me I could be free. They turned my thought continually away from the imperfect belief about man to the perfect man of God's creation." Was not this in obedience to the command, "Let your light so shine before men, that they may see your good works, and glorify your Father which is in heaven"?

ANNIE M. KNOTT.

"Why seek ye the living among the dead?"

THE mistake of the disciples as they made their way to the sepulchre to find their Lord, is the mistake of all who are looking to materiality for the solution of life's problem. —for health, for satisfaction, for rest of mind. They are peering into the abode of death for that which is to be found only in Life. The Son of God is not where the schools and the senses have declared him to be, and the rebuking

Digitized by Google

query is again heard, "Why seek ye the living among the dead?"

To human sense error utilizes every possible means for the entombment of the Christ-idea, it would bury the undying truth of Spirit beneath the fallacies of material testimony, and to this end every phase of the belief of life in matter has distinctly contributed. This belief has been entertained by the great body of educated people in the past, and it is to be noted that whether it be the pronounced unbeliever who thinks of the latent possibilities of protoplasm as in themselves explanatory of all organic life, or the pronounced Christian who thinks of matter as a necessary and God-appointed means for the divine manifestation, —in either case matter is regarded as a real and integral part of nature, and into its pulseless precincts both are therefore led to look for even the highest manifestation of Life. Nevertheless it is interesting to remember that neither of these two phases of thought can make consistent and satisfactory use of this material stuff to which both have so tenaciously clung. The idea of dead matter is now practically ruled out of the physicist's thought. Even his idea of life no longer consents to material entombment. Materialistic theology, on the other hand, having fallen into the error of accepting the testimony of the physical senses while still holding to the divine supremacy, is led to the inevitable conclusion that matter is a providential provision, a tool, on which Mind is dependent for its effectiveness. As one thinks of this declaration, he can but wonder how God made matter itself if His creative activity and manifestation were conditioned upon its use. Must God, who is infinite Life, make a dead thing, matter, so as to have it to use in making a live thing, man? And if God's self-manifestation was not limited before He made matter, how could He become in any sense dependent upon matter after He had made it? This whole theological contention that God made something so unlike himself as to be dead and inert in order that He might use it in making that which is described as His image and likeness,—how unworthy it seems of the consideration it has so long received at the hands of Christian thought, and how manifest that such a god is man-made!

Christian Science has come as an "angel in white" to remove the veil of erroneous thought, to roll away the stone from the tomb of material sense, and in its practical proofs of the ever-present and ever-living Christ it is bringing an Easter dawn to the suffering and heavy-hearted in all the world. He who through the illuminating ministries of this Science has attained to that apprehension of Truth which frees from the fetters of past sicknesses and sins, to him it is given to proclaim the risen Christ as can none other. For him the resurrection has been transferred from the realm of faith and hope to the realm of experience, it has become the very vital of consciousness, and he now understands St. Paul when he says, "Henceforth know we no man after the flesh: yea, though we have known Christ after the flesh, yet now henceforth know we him [thus] no more. Therefore if any man be in Christ, he is a new creature: old things are passed away; behold, all things are become new."

To thus apprehend and appropriate the ever-ascendant Christ-idea is to bring our human needs into conscious articulation with the divine efficiency; it is a demonstration of the omnipresence of Life and Love, and in this realization we find our life forevermore. JOHN B. WILLIS.

Pictures of The Mother Church.

The Christian Science Publishing Society has arranged to issue pictures of the extension of The Mother Church in connection with the original building, as it will appear when completed. It is expected that these pictures will be ready for sale about May 1, and full particulars regarding them will be given in next week's issue of the *Sentinel*.

Letters to our Leader.

Cincinnati, O., April 3, 1906.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—We are deeply grateful for your helpful thoughts regarding Sunday School teaching, expressed through your associate secretary, Mr. Strang, and published in the *Sentinel* of March 3. It is another evidence of your watchful care to supply all our needs. We thank you with overflowing hearts, and wish we could tell you, dearest friend, how much we love you. Your book is not all we know of you. (Message of 1903.) Our prayer is to be constant and true that we may be always ready for your advice and guidance. The children present at Sunday School last Sunday united in the desire that their love to you go with this letter. The little ones show great interest in the progress of the extension of The Mother Church and are happy to have contributed five hundred dollars to the Building Fund up to the present time.

Faithfully yours,
BOARD OF DIRECTORS AND THE SUNDAY SCHOOL TEACHERS OF FIRST CHURCH OF CHRIST, SCIENTIST.
EMILY A. GRISWOLD,
D. C. PENDERY,
Committee.

Channel Isles.

Beloved Leader:—As a Thanksgiving offering to divine Love, and an expression of loving gratitude to you, we have to-day sent the contents of our treasury (£33-7-6) to the Building Fund of The Mother Church. This sum, as well as £5-5 already sent to The Mother Church, and £5 to the Guernsey lecture fund, was collected at our Sunday morning services here. It formed our fund for a future lecture on Christian Science, and was started about four years ago, by two of your faithful students who have since left the Island. We are unanimously agreed that the work here will be more prosperous because of this step, and we know that all our needs will be supplied. There are as yet only nine regular attendants at the Sunday service. At our Wednesday meetings some good testimonies of healing and other benefits have been given. Firmly believing that your church is healing the sick, feeding the hungry, clothing the poor, and giving rest and shelter to the weary, in the way appointed by our Master, we are joyful to be privileged to take a small part in its extension.

With loving thoughts from all your students here,
Yours most gratefully,
EDITH S. GRANT.
EVA A. FAIRLEE.
First and Second Readers.

Toledo, O., April 5, 1906.

Mrs. Mary Baker Eddy,
Pleasant View, Concord, N. H.

Dearly Beloved Leader:—Love finds more satisfaction in giving than in receiving, and the children of the Sunday School, animated by this thought, and the love they bear to you, knowing that the completion of The Mother Church will be the finished demonstration made by you and your faithful followers, as a fitting emblem of the "structure of Truth and Love" (Science and Health, p. 583), wished to forward one hundred dollars for that purpose. The demonstration has been made, and a check for one hundred and five dollars and seventy-five cents has been sent to-day to the Treasurer of The Mother Church Building Fund. The children love to sing your hymns, and they love and revere their author. The teachers in the Sunday School are trying to bring out the spirit of the Master, as interpreted by your inspired book, "Science and Health with Key to the Scriptures."

With deepest gratitude and love for the untold blessings of Christian Science for humanity,

I am your faithful and loving student's student,

MAIE VAN BUREN SHOUSE, *Superintendent.*

Cleveland, O., April 11, 1906.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—The students of your student, Mrs. Mary E. Crawford, C.S.D., sent to Stephen A. Chase, Treasurer, in July last, one hundred dollars for The Mother Church Building Fund, and to-day, April 11, they are sending an additional offering of one hundred and thirty dollars for the same purpose, with a deep sense of gratitude for what Christian Science has done for them. To you, beloved Leader, through whom this great truth has been revealed, we have no words by which to express our great thankfulness and gratitude, but our one desire shall be, to strive for loving unity, and to prove by daily, practical living that we know, in some degree, the truth and the way you have so clearly shown us.

With best wishes for your welfare and happiness, I am

Gratefully yours,

ELLA V. CANNIFF.

Treasurer of the Mary E. Crawford Association of Christian Science students.

Manchester, N. H., March 12, 1906.

Mrs. Mary Baker Eddy.

Beloved Leader:—In reviewing the annual meeting of the Manchester church held last Monday night, both Mrs. Green and I feel a renewed sense of gratitude to you for this great revelation,—Christian Science,—for what it has done for us and is doing for all mankind. We think it will please you to know that at this meeting the utmost harmony and unity of thought was manifested, and the reports show progress in every way. The attendance at the services has steadily increased during the past year and twelve have been added to our membership. We have sent over seventeen hundred dollars to The Mother Church Building Fund, including a legacy of eleven hundred dollars which the church had in its treasury.

We are trying to show our appreciation of what you have done for this field, by proving in our own lives and for others that this truth is practical.

Lovingly and gratefully,

CHARLES E. GREEN.

Austin, Tex., April 9, 1906.

Mrs. Mary Baker G. Eddy, Concord, N. H.

Beloved Leader:—I am this day sending to Mr. Chase for The Building Fund of The Mother Church three hundred dollars. This is lovingly contributed by First Church of Christ, Scientist, of Austin, Texas, and represents the building fund of the church with the exception of a small amount secured by a note, which will also be sent as soon as it is received by the treasurer. We consider it no sacrifice to give our entire building fund, feeling that it but poorly expresses the deep gratitude we individually and collectively feel for the manifold blessings which Christian Science bestows. In conclusion we would renewedly express to you our love and gratitude, and assure you of our steadfast loyalty.

Sincerely yours,

ROBERT L. ZILLER, *Clerk.*

Admission to Membership.

The next admission of candidates to membership in The Mother Church will be June 5, 1906. Applications must be in the hands of the Clerk on or before May 14, 1906.

An application sent to the Clerk of the Church does not constitute the applicant a member; he must be elected to membership by the Christian Science Board of Directors, at which time notice of election will be sent.

Testimonies of Healing.

I came into Christian Science like the majority of people,—I was forced to accept its help for physical troubles. I had what the doctors called systemic catarrh. It had caused deafness and stomach trouble, also hemorrhoids. I had been taking all kinds of remedies for several years, but grew gradually worse. I had tried everything I could hear of, and finally the doctors told me that I never would be well again unless I submitted to a surgical operation for the piles and hemorrhoids. I declined to do so, and about this time a friend suggested that I try Christian Science. I do not think there was any one more prejudiced against Christian Science than I was at that time, and I felt insulted. The friend persisted, however, and I finally told him I would go with him to see a practitioner, which I did, and I decided to take a month's treatment. I was given a copy of Science and Health to read. I then thought I could not understand it, and at the end of the month I sent it back.

A short time after this my wife was prevailed upon to try Christian Science for her health, which had been very poor for several years. She, like myself, was about discouraged with doctors and medicines, and decided to give Christian Science a trial. This of course brought Science and Health back into our home, and I began to read it again. I kept on reading it, and made up my mind that there was something in it, but I thought it was not for me. I, however, bought a copy, with the intention of solving the problem if I possibly could. I went on reading and taking medicine at the same time. I kept this up for about two years, while I gradually grew worse, and was very much discouraged and depressed.

It finally dawned on me that I had been breaking the first commandment, "Thou shalt have no other gods before me," by taking medicine; so I decided to quit the medicines and gave Christian Science a good fair trial. About three days after this I gained my first concept of the Principle of Christian Science. I was anxious to prove to my satisfaction that I had the right understanding by making a demonstration, so I applied the truth as I understood it to my tobacco habit of thirty years' standing. In less than twenty-four hours the appetite for tobacco, both chewing and smoking, was totally destroyed, together with the appetite for drink and drugs. I then applied this same truth to my ailments, and while it was not an instantaneous cure I knew inside of a week that it was not necessary to have an operation performed. Inside of sixty days I had gained thirty pounds in weight and was feeling perfectly well again.

This was in November, 1902, and I have been well ever since. My sense of deafness has not been entirely overcome as yet, but my hearing has been very much improved, and I know the trouble will disappear just as soon as I am ready to receive the blessing. I am now a member of the Christian Science church here and am satisfied it is the right one for me. There are six of us in the family, and since 1902 Christian Science has met and overcome every ailment that has come up. I will also say that for twenty years prior to my acceptance of Christian Science I had not read the Bible, neither had I attended any church half a dozen times. Now I read the Bible daily; it is a new book to me, and I attend church regularly. The spiritual uplift is the best part of Christian Science.

I feel very grateful to Mrs. Eddy for this truth. Christian Science is making a different man of me.

J. C. CLARKE, Pittsburg, Kan.

While seated at my writing table one day, there came upon me, without the least warning, what our medical friends would term a severe cerebral shock—caused, or said to be caused, by the rupture of a blood-vessel in the brain—

Digitized by Google

which affected one side of my face and neck. In the old thought it was no doubt a very serious matter. At any rate it quite incapacitated me when it came on. Sitting upright, the weight of my head seemed more than my neck could bear, and I thought I would be easier if I lay down on the couch; but there was no easy place for my head in any position with that sense of pain, and I made ineffectual efforts for a time to throw off the attack.

Then a strange thing happened; I sat up and laughed. If some of my friends who are inclined to scoff at Christian Science, not understanding that it is the only real Science, could have seen me at that moment, I can imagine them saying, "Touched in his head, poor man," or something of that kind. Whereas, the simple explanation is this: While mentally declaring that most comprehensive of all truths,—"God is All-in-all,"—I was so amused at the utter illogicality of my position, and the absurdity of lying there, seemingly stricken and in pain, yet knowing that God is the only creator; that all His works are good and not evil, and that, therefore, sickness and pain can have no power over man, that, as I have just said, I sat up and laughed. In less than half an hour I was able to resume my work as if nothing had happened; and every day since has had its full share of work for me—some of them days of prolonged mental strain—with no ill effects.

Now, without Christian Science,—that Christ-knowledge which Mrs. Eddy has made known to us,—I feel sure that the story which I have here related would have had a very different ending; and I am deeply grateful to God, and to Mrs. Eddy, that my footsteps have been so lovingly guided into the way of truth.

JOHN SCOTT, Edinburgh, Scotland.

We were spending a few weeks in the country and it seemed as if our pleasure would be marred in various ways, but each time the discord was quickly overcome by the truth. We had been there but a short time when my nine-year-old boy complained that his head ached and that he felt sick at his stomach. This suggested a return of one of the bilious attacks which used to last for several days, but which had not appeared since we first learned of Christian Science. I opened our text-book and read to him, and in a short time the ailment was entirely destroyed. A few days later a toe was very badly bruised. It was much swollen, and the child said he had passed a sleepless night on account of it. I told him that the same truth which healed the headache could be applied in this case. He went about his play as usual and nothing more was heard of the sore toe. Just before we returned home he came in contact with so-called poison ivy. At first there were only small blisters on his feet and limbs. I told him that God made all that is and pronounced it good; that the animals could walk through the ivy without receiving the least harm; that the ivy did not know whether it had come in contact with a boy or an animal; that it was only a false belief which made any one seem to suffer from it, and that God is the only power.

I had to leave him for a few days, and upon my return a rather sorry and alarming sight met my eyes. The small blisters had become large sores extending above the knees, a few had spread to his hands and face, and he was unable to wear his shoes and stockings. In a very apologetic manner he said, "Mother, I tried to do the work, but one night it seemed so real that I cried. I have overcome the pain now, but I know it looks badly." We went to work to destroy the ailment at once. I told him that we must learn to look upon error as unreal. We worked together, knowing the truth as we had done before, and although it was longer before all traces had disappeared, in three days it had abated so that he was able to wear his shoes without discomfort and to attend school. I then read to him the words of our Leader, which say, in substance, that disease once conquered through the truth can never return. (Science and Health, p. 217.) I told him that he never again need fear this so-called poison, but that it was never wise or necessary for us to wilfully handle those things which mortal sense calls harmful.

These demonstrations were very helpful to me and to the child, and I cannot express in words my deep gratitude for this blessed truth.—MRS. M. H. GUTHRIE, Hartford, Conn.

I was more or less of an invalid from childhood, suffering from very many serious troubles, and after I married I was confined to my bed for nearly two years. The doctors said I would soon be in an asylum if I did not have an operation performed, but I could not bear the thought of it. I then heard of Christian Science and was healed. My healing was slow, for I seemed to have much to overcome,—constipation, ovarian trouble, etc.,—but now I am a well woman. Last June a little girl came to our home. I was alone at the time, and the birth was perfectly painless. I had absent treatment. The second day I was up, and in a week was able to go out. I am thankful to God, and to Mrs. Eddy, for the good that I have received from this wonderful truth, and I strive daily to learn more.

MRS. EVIE T. NORTHRUP, Meridian, Miss.

All I have and all I am I owe to Christian Science, for I had almost every disease that mortal sense is heir to, and more troubles than most people. These have been subdued by the power of Truth.

Our Leader's work is appreciated here, though our numbers are few. We strive to keep close to the Bible and Science and Health, and all the Science literature, knowing that we cannot go wrong if we not only study but live its teachings. I find that Science is a sure protection at all times if we are faithful to it.

MRS. RACHEL E. SMITH, Cherokee, Ia.

It is now ten years since Christian Science was first presented to us. There were four in our family, all of whom were at that time under the care of a medical doctor, who had then given up all hope of saving the life of our baby, and we were almost distracted at the thought of parting from her. We then sought help through Christian Science, and in one week's time we were all in perfect health. Since coming into Science we have had croup, colds, scarlet fever, measles, and other ills overcome by this blessed truth. We have a deep sense of love and gratitude to our Leader for showing us the nothingness of error and the power of Truth, as taught in Science and Health.

My daily prayer is that I may learn more and more the power of true prayer and live the truth.

MRS. E. A. FRENCH, Souris, Man.

I wish to give grateful acknowledgment of the help received through Christian Science. Some years ago my boy was healed of a severe ailment; also my husband, who was taken out of death's clutches, as it seemed. For these and many other blessings I feel very grateful to God, and to Mrs. Eddy, through whom this great truth has been given to mankind. At the same time I wish to express my thankfulness for our periodicals, which are such a help to us.

MRS. A. NIEHAUS, Hood River, Ore.

In November, 1904, I was taken sick with great pain in the bowels and had a high fever. I was in bed two days, when a physician was summoned. After taking his medicine for a week, I grew worse and could not sleep at night, the pain was so great. Then the doctor said that medicine would not do me any good, that I must have an operation at once, as I had appendicitis. That day a neighbor came in and said we should try Christian Science. We telephoned for a practitioner, who came in the afternoon, and

Digitized by Google

after the first treatment I began to feel better. My mother was surprised when the practitioner told her I could eat anything, since I had been taking only beef tea for two weeks. After the second treatment I walked about the house and in a week was able to attend school. I am attending Sunday School now, and am very thankful for Christian Science, and to Mrs. Eddy for showing me the truth.—WARNER SCHMIDT, Spokane, Wash.

In grateful acknowledgment of the many benefits I have received through the teachings of Christian Science, I write this testimony. At a time when there seemed no help from any other source, it was presented to me as a healing agency. Having been for about three years, prior to accepting Christian Science, under medical treatment, and for several months of that time in a hospital, under the treatment of specialists, none of whom gave me any hope of entire recovery, I seemed ready and willing to try Christian Science, and I have never regretted doing so. My trouble was mainly with my eyes, and it had been with me from infancy. It was said by the doctors who attended me to have been caused by inherited scrofula. Only those who have had a similar experience can know what it is to be blind for weeks at a time, having to be confined in a room as dark as it could possibly be made, and at the same time suffering untold agony; and only those who have been freed from such bondage can know how great and blessed is the freedom. While I was under the treatment of specialists I submitted to several very painful operations. I was not permitted to read; in fact could read but little, whereas, through Christian Science, I have been enabled to read and study a great deal, even by artificial light. Who would not be grateful for this alone? But more than all the physical healing is the mental and spiritual freedom. Instead of a consciousness filled with anxieties of all sorts, and discouragement, I now enjoy a peace I never thought possible, and which is certainly unattainable without some knowledge of that truth which Jesus said would make us free. Every day brings added proof of the practicability of all Jesus' teachings in the affairs of every-day life; for we are learning that the things which he commanded his followers to do are not impossible, but are divinely natural.

Words can never express my love and gratitude to our dear Leader, Mrs. Eddy, for this wonderful revelation of Truth which is given to us in Science and Health, and my gratitude increases in proportion to my understanding of its great value to suffering humanity. I could not do without those sweet messengers of peace, the *Sentinel* and *Journal;* they are aiding so much in bringing this gospel of healing to a waiting world.

ROSA D. CAIN, Ogden, Utah.

I wish to acknowledge the benefit I have received through the reading of Science and Health by Mrs. Eddy. When Christian Science found me I was almost gone,—I was ill mentally and every other way. I had several ailments, one being a burning in the top of my head most of the time, and neuralgia of the stomach of long standing, for which I was compelled to take opiates regularly. I have been healed of these and many other troubles by reading Science and Health and some of Mrs. Eddy's other writings. I am isolated from any Christian Science church or society, but not from God. I am thankful for the spiritual uplift I have had. It has given me faith in God and in His constant care.

MRS. MARY E. CISP, Excie, Mont.

I first heard of Christian Science in 1904. I had been an invalid for many years, having come to California from New York State in 1876, seeking health through a change of climate. My family physician urged my coming, saying he could not vouch for my life if I took another cold. I had had a pain in my chest and a cough for several months. The change dealt kindly with me for several years, then other troubles came,—I suffered from stomach, kidney, and heart trouble. In 1903, a member of our family was insane for three days before his death. I was alone with him when this was first manifested, and was so startled that I had palpitation of the heart, which resulted in insomnia and heart failure. This continued for eight months, when my husband was taken ill and died in ten days. To mortal sense I was a sick and heartbroken woman, with a large ranch on my hands and two young sons to care for. At that time, our family physician, who was a dear friend, urged me not to take opiates, for if they did help me I would have a struggle to give them up; and, besides, the action of the heart was too weak to take them with safety. I have always felt grateful to him for this advice.

Three months after, I turned to a friend who had been healed of spinal trouble through Christian Science, and the first night she proved through demonstration the power of divine Love. I had all night a restful, dreamless sleep, and awoke refreshed and with a longing to know what Christian Science prayer is. I purchased a copy of Science and Health and commenced to study its pages. My healing was very slow because of my desire to know the how and wherefore of everything before I would accept it as true. I was frequently discouraged, as so many ailments seemed to assert themselves, and because of any injury to the spine which made it painful and difficult for me to get up. I seemed to be using this last to prove whether God healed through Christian prayer.

One day it dawned upon me that I was better, and that I did have something to be grateful to God for,—that I slept better and could eat better, did not have headache all the time,—and I then said, "I do thank God for these blessings." Weeks after I remembered that my back had not hurt me since I had thanked God and counted my blessings. Then a sense of love went out to our dear Leader, who was so loving and patient and willing to meet the hatred of the world that we might know the truth and be free.

FANNIE M. MCKOON, San Diego, Cal.

Throughout my childhood I was taught by a loving Christian mother to read the Bible, pray, and try "to do as Jesus would." When only ten years old, many points in the orthodox teaching puzzled me, and I began to wonder why prayer was not more frequently answered. Three years later, a terrible affliction came to one dear to me. One day I spent a long time in reading the Bible, then in simple faith I knelt to ask for that dear one's recovery. A dreadful shock followed when no healing came. For days I lived as in a dream. Later, this feeling wore away, but I never again prayed until after coming into Christian Science, when twenty-one. I never lost faith in the existence of a God, but I saw no possibility of our understanding Him. Sometimes I was reckless, other times much depressed, but these conditions seldom showed themselves to those about me. I was thought to be of a happy, light-hearted disposition.

When in a condition that medical skill could not reach, I turned to Christian Science for help. I received what I sought, and far more than I asked for. Soon I found myself praying, and my prayers were being answered. My experience proved beyond a doubt that Christian Science heals disease. I was healed of astigmatism, constipation, female disease, serious internal injuries from accident, tuberculosis of five years' standing, etc., and for this healing I am deeply grateful and long to see others likewise relieved. When it comes to speaking of the spiritual uplift, words fail. I can only say that if we faithfully put into practice what we gain from the study of the Bible and

Science and Health, we find not only physical healing but "the peace of God which passeth all understanding."

EDITH MOSSMAN, Wilmette, Ill.

From my earliest childhood I never knew what it was to be perfectly well or happy. Conditions seemed to grow worse as I grew older, until life became more of a burden than I cared to endure. In April, 1902, I attended my first Christian Science service. I shall never forget my astonishment. Every one looked well and happy. Their love radiated even to the stranger within their gates and at that first service I was healed of nervousness, sick-headaches, and insomnia. I too was baptized in sunshine, and for three months I seemed to be on the mount of transfiguration. As the good results continued, I bought a copy of our text-book, Science and Health, as I wanted to know what had done the work which physicians had failed to accomplish. While reading the book I was cured of sick-headaches, and laid aside glasses which I had worn for eight years.

I united with The Mother Church, and with First Church of Christ, Scientist, New York. Since then I have been trying to overcome self, and in spite of the problems, the happiness and the great spiritual uplifting have remained, —that peace which the world cannot give.

Christian Scientists have good reason to thank our heavenly Father for His priceless gift in this age of materialism, for this truth which has brought us nearer God and has also enabled us to stretch out strong, helpful hands to our fellow-men. I cannot express my love and gratitude to Mrs. Eddy for showing me the way out of the wilderness of pain, sickness, and sorrow, and for all the many blessings Christian Science has brought to me. I have indeed found the peace which the world cannot give, for in Science I have found the Christ.—MINNIE T. YOST, New York, N. Y.

I wish to express my gratitude for what Christian Science has done for me. I was healed of indigestion and extreme nervousness in a few treatments. After years of suffering and discouragement, I was led to try Christian Science and was not only physically but spiritually healed. I very gladly accepted our Leader's book, Science and Health, as my guide to health and understanding. It has enabled me to understand the Bible. It is now four years since I took my stand for this grand truth, and I feel very grateful to Mrs. Eddy for what she has done and is still doing to help suffering humanity, and for the love and peace which has been given me.

MRS. JOHN COVENTRY, Duluth, Minn.

I rejoice to tell of the help that has come to me through Christian Science, at a time when health, happiness, and peace seemed to have gone out of my life. Christian Science came to me and taught me how to seek "first the kingdom of God, and his righteousness;" and I can truly say that all good things have been added unto me. I sometimes think the joy which I feel must radiate and show others what it means to know the truth. I am indeed thankful for the blessings which have come to me and mine through an understanding of divine Love. Christian Science was first brought to my notice by a dear friend, who was healed after several eminent physicians had told her she could never be well again. After seeing the change in her, from hopeless invalidism and despair to health and joy, in one week, I was awakened to the truth, and through treatment and the earnest study of Science and Health I have been entirely healed of female trouble, rheumatism, constipation, and other ailments from which I had suffered. I have also been instrumental in helping my husband, and others who were considered hopeless invalids.

My heart is full of gratitude to God, and to our noble Leader, Mrs. Eddy, who has, by her devotion to Truth, made the way clear for us, and led us to know that God is all-powerful.—LIZZIE GRIST, Kenmare, N. D.

I wish to testify to my gratitude for Christian Science. Three years and a half ago I was subject to chronic attacks of grip and tonsilitis, also nervous headaches. These are now past experiences, and it is due to the study and application of the truth made known to us by our dear Leader, Mrs. Eddy. From my birth I was subject to many forms of throat and intestinal disease, being especially susceptible to the after-effects laid down by *materia medica*. Now the short attacks which occasionally present themselves are overcome, with no after-effects from which to recover. My early religious belief had only an emotional influence upon me. Now I know that in God, good, there is no sorrow, sickness, or death, and this fills me with joy.

I was walking down one of the steep hills in our city not long ago, and my foot turned under, throwing me upon my hands and knees. I recovered myself at once, and declared the Truth of being. I was able to walk some distance and attend to some business, but when I had taken a car to a suburban town I found that I was unable to step upon my foot without great suffering. At the end of a half hour's ride I telephoned to a practitioner of my condition, and then walked three blocks to my house, preparing the evening meal when I reached there. Although I suffered much during the evening, and found the limb swelled badly, I rested most of the night, and when I awakened the swelling and pain were gone. I was able to perform my duties, standing many hours on my feet without any inconvenience.

For this and many other evidences of the power of God through Christian Science, I am thankful.

M. ISABELLE HUTCHINSON, Los Angeles, Cal.

I take this means of expressing my gratitude to Mrs. Eddy for Science and Health and "Miscellaneous Writings." The good that I have received from the truth contained in them, words fail to express. It has been a great help to me in many ways in my short married life, especially in the care of my baby.

I am not a member of the Christian Science church, but I am doubly grateful for Christian Science and I love Mrs. Eddy for her pure, unselfish life.

MRS. L. G. CLAGETT, Wilkinsburg, Pa.

[Written for the *Sentinel*.]

The Scourge of Love.

E. B. MABURY.

Before I was afflicted I went astray.—*Psalm.*

"OH, spare the rod!" I grieving cried,
Yet closer hugged the well-loved sin
To my rebellious heart; and on
I struggled, anguish-laden, worn.
Earth-weary were my drooping eyes,
Nor dared I lift them to the hand—
The heavy hand that smote so sore!
Anon I stumbled, staggered, fell
Upon my knees low in the dust,
Shrinking beneath th' expected blow.
"O God, Thy help!" I raised my eyes—
And there above me, like a star,
The tender, pitying face of Love
Shone radiantly o'er all the path!
With joyous cry and lifted arms
I yearned to that fair vision, and lo!
The weight of sin fell all away
And vanished from my heaven-born sight.
"'Twas Love!" I cried in glad surprise;
"Father, I thank Thee for these wounds!"
Love smiled again; and they were healed.

From our Exchanges.

If the laws of God cannot stand, He is not the supreme lawgiver. If His standard varies, then nothing is immutable. We cannot know Him. He is, at best, the Great Unknowable. If any other power exists than His, then there are other veritable gods. We may as well acknowledge the Olympians or the swarming millions of Hindu deities. Assuming, however, that God is the sole lawgiver, and that, while the laws of God are forever immutable, the so-called material laws are no laws of God, therefore no laws at all, therefore unreal,—a mortal misapprehension of the immutable, spiritual law of God,—we do not have to take the impossible position that Supreme Wisdom annuls its own decrees, and that such annulment results in good: nor, on the other hand, that decrees involving consequences which all men deplore, and which ultimate in death, are the immutable decrees of infinite Love.

We can take and hold the position that God is the supreme lawgiver, that His laws are immutable, and that their immutability is clearly revealed in the works of Jesus and his disciples,—works which proved the unreality of all those so-called laws which result in sin and misery, by bringing to light the immutable law of God which destroys sin and misery,—"the law of the Spirit of life in Christ Jesus," which makes free "from the law of sin and death."

ARTHUR CHAMBERLAIN.
The Christian Register.

It is evident that we find here the explanation of an apparent mystery and injustice. Why is there greater inspiration in one age than in another? Why is larger vision vouchsafed to one man than to his neighbor? Why does the same man receive more abundantly to-day than he did yesterday? Inspiration is not dependent upon the moods of God, for He has no moods. The attainment and the attitude of man, intellectual, moral, spiritual, are the determining factors. How could the same David write the prayers of imprecation and the songs of trust? When he uttered the Twenty-third Psalm he opened his soul as never before to the influence of the most High. Plato is inspired to Plato's measure of desert and consent, Shakespeare to Shakespeare's, Paul to Paul's. PROF. GEORGE E. HUNTLEY.
The Universalist Leader.

The temptation that came to the Christ was to take the lower for the higher good, the immediate for the final victory, the material for the spiritual conquest. In that temptation all men share. The spirit of evil has no lure more tempting because none more blinding than this. Among the charms and potencies of evil there is none more deadly than that which was offered to the Christ. The chasm that lies between the lower and the higher kinds of power is so deep that in the ultimate moral vision they stand for principles in deadly conflict. To crave the higher and accept the lower is not only to take evil for good, but to awaken at the end in the bitter humiliation which not only acknowledges defeat but knows that it has been duped, blinded, and cheated, and that the gold which shone afar is but a dust-heap when the end is reached.—*The Outlook.*

We shall make but few mistakes if while we are working hard we trust perfectly, contending against evil and courageously letting in light everywhere, into our own souls and upon our own actions, and everywhere else we can, without hesitation, believing that light will only reveal deformity and at the same time justify conformity; and then, after we have done our part, not to become restless and nervous or anxious about the part of our heavenly Father.

Pacific Christian Advocate.

THE CHRISTIAN SCIENCE TEXT-BOOK.—"Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

RUDIMENTAL DIVINE SCIENCE.—Printed in the New York point system of type for the blind. Price, prepaid, 50 cents per single copy; $5 per dozen.

CHURCH MANUAL.—Containing all the By-laws to January 1, 1906, of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of The Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the Churches and Societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to The Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of The Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to The Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number, or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

The following message was sent on the 16th by President Roosevelt to their Imperial Majesties, the Empress Dowager and the Emperor of China, Pekin, in commemoration of the opening of the last link of the Postal Telegraph and Cable Company's cable connecting the United States and China:

"I gladly take the opportunity afforded by the auspicious completion of the last link in the new American cable that joins the Pacific coast of this country to the Far East, to offer to your majesties my congratulations upon the achievement of a work that must needs contribute to the high purpose of bringing our two Governments and peoples closer together in the bonds of mutual understanding and lasting concord. It is fitting that this fresh tie between the Western and Eastern continents should begin its happy service by bearing a message of good will, and I voice the earnest wish of this Government and of my countrymen for the happiness and welfare of your majesties and for the continued prosperity of the Chinese Empire and of your great people."

An effort is being made in Kansas to have the Legislature appropriate funds to mark the course of the Santa Fé Trail, one of the historic highways of the Union. In California a society has been formed to locate the route of "el camino real," or king's highway, the road used by the Franciscan missionaries from Mexico who founded missions from San Diego to San Francisco more than a century ago. It is proposed to restore this road and make of it a wide boulevard for its whole length. There are many other important historic routes. To be preserved these must soon be marked, as nothing now remains to indicate where they once ran except an occasional deep-worn rut which time has not yet filled up, and the ruins of a "station" far from any habitation. For many miles no traces of the overland routes can be found, and history and tradition will often have to be relied upon to relocate them.

The Yale faculty, during the recent investigation into football, has intervened in prohibiting certain games, limiting games and qualifying the character of games, as between large and small colleges; in prohibiting student subscriptions for the four major sports—football, rowing, baseball, and track athletics, and settling the long-disputed question that the surplus of the self-supporting organizations must be handed over to those that are non-supporting; in ordering the managers to keep a specified style of books in handling the accounts of their athletic associations; cutting down the training table expenses, and naming one place where the training tables must be held, the Yale dining hall.

Several important features marked the Benjamin Franklin commemorative anniversary which began in Philadelphia the 17th inst. King Edward received the degree of Doctor of Laws from the University of Pennsylvania, and Andrew Carnegie, acting as Lord Rector of the University of St. Andrew's, Scotland, conferred the honorary degree of Doctor of Laws upon Miss Agnes Irwin, dean of Radcliffe College, and great-granddaughter of Franklin. In accordance with the act of Congress, the Franklin medal was presented to the Republic of France by Elihu Root, Secretary of State, Ambassador Jusserand accepting the medal for the French nation.

President Roosevelt has transmitted to Congress an important message relating to insurance legislation. Accompanying the message were the report and recommendations of the insurance convention which was held in Chicago last February. Among the recommendations is the draft of a bill which Congress is urged to enact into law, with such amendments as its wisdom may suggest. The President says: "We are not to be pardoned if we fail to take every step in our power to prevent the possibility of the repetition of such scandals as those that have occurred in connection with the insurance business as disclosed by the Armstrong Committee."

That "interstate" divorces are not necessarily valid under the provision of the Federal Constitution, which says that "each State shall give full faith and credit to the decrees of another State," and that the recognition by one State of the divorce decree of another State is merely a matter of "comity," is the substance of the Supreme Court's decision just handed down. It operates to render invalid practically all the "Dakota divorces," and holds that a court must have jurisdiction over both parties by virtue of residence within its jurisdiction, in order that it may grant a divorce entitled to recognition in other States.

On the morning of the 18th an earthquake visited San Francisco, causing immense destruction. This was followed by fire, which raged uncontrollably many hours. The property loss is many millions, thousands are homeless, hundreds were killed. The entire country at once responded in offering all assistance possible in the way of food, shelter, and money.

The American dry dock Dewey, which is being towed to Manila, arrived at Port Said last week, where she will remain for a fortnight in order to undergo repairs preparatory to resuming her voyage.

Foreign.

The Russian loan was signed at Paris last week. It is for $450,000,000. The loan will carry five per cent. France, with Geneva and Brussels, will take $240,000,000; England, $65,000,000; Vienna, $32,500,000; St. Petersburg, $100,000,000; Amsterdam, $10,000,000. The countries to which the loan is issued will not be allowed to transfer their stock to other countries until the expiration of two years.

The earthquake at San Francisco may yet play an important part in determining the type of canal to be constructed at Panama. Advocates of the sea-level canal say the heavy masonry locks and the great dam at Gatun, which even under most favorable conditions many engineers do not consider feasible, would be utterly ruined by such an earthquake.

It is officially announced that the Peace Conference at The Hague has been postponed from July to September.

Industrial and Commercial.

The electrical installations for the new Cunard steamers, probably the largest ever fitted on board ship, says an exchange, will consist of four sets of Parsons turbo-generators, and each machine will be capable of producing 4,000 ampères at 110 volts. This plant will be placed in the aft end of the engine room in two separate compartments divided by a water-tight bulkhead. There will be a switchboard in each compartment, for distributing the electricity throughout the ship. The auxiliary machinery will be driven by electric motors, including sixteen forced draught fans of fifty horse-power each, for the stokeholds, and sixty horse-power for the refrigerating machinery. Two electric passenger hoists will convey passengers between the six decks, and smaller hoists are intended for the conveyance of stores, mails, and baggage. Electric motors are to raise and lower the lifeboats, heave in the sounding line, and drive various machines in the bakery, galley, and pantry. For the ventilation of the ship there will be sixty large electrically driven fans, including Stewart's patent thermo-tanks, for heating and ventilating the whole of the passenger accommodation. The electric lighting of each ship will require about 5,000 lamps of sixteen candle-power. There will be a telephone exchange in connection with the first-class rooms and the principal offices of the ship, and special telephones from the bridge to the wheel house aft, the forecastle head, and the engine room. On the bridge deck there will be four powerful searchlights, and there will be two masthead and two sidelights, fitted with Martin's patent electric duplicate apparatus, which automatically replaces a broken lamp filament, at the same time signaling to the officer on watch that such has taken place. The steam whistle will be electrically controlled, and all the water-tight doors throughout will be closed automatically by electric connection from the bridge.

The *Scientific American*, in speaking of the combination at New York of a power station with a plant for burning the city refuse, says: "The amount of refuse delivered per day to the destructor is 728 cubic yards, of which 465 cubic yards is taken out by the trimming contractor, leaving 263 cubic yards to be incinerated. The cost of dumping these 263 cubic yards at sea at the lowest rates yet secured would be $58.80. The costs of incineration are: Labor, $8.33; foreman, $2.75; watchman, $2.12; sundries and repairs, $2.50; interest, $2.24; total, $17.94. The ashes amount to 3.1 per cent, or 8.15 cubic yards, which must be dumped at sea at the cost of $1.66, bringing the total charges to $19.60, or a saving on the destructor of $34.20, or $10,260 per year of 300 days. The saving gives a return of 51 per cent on the first cost of the destructor, furnaces, and buildings, this cost being about twenty thousand dollars.

The *Examiner* of San Francisco says: David C. St. Charles, an engineer of this city, has invented a repeater which will make it possible to telephone from here to New York. What the so-called "repeater" has done for telegraphy, St. Charles' invention, it is now claimed, has done for the telephone. The combining of the echo in nature with the sounding-board of a violin furnished the clew to the discovery, according to a statement of St. Charles. Superintendent John F. Glass of the local telephone company is quoted to the effect that the invention is a success.

The steamship Governor Cobb, built for the Eastern Steamship Company of Boston, has just been launched at Chester, Pa. This is said to be the first turbine vessel built in the United States.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

Christian Science as Common Sense.

W. D. MC CRACKAN, M. A.

WHOSOEVER imagines that because Christian Science is metaphysical, it can be understood only by those who have special intellectual gifts, altogether mistakes its nature. Such an one is harboring a false sense of Christian Science, and is liable to deprive himself of the great benefits which are readily accessible to every sincere seeker for Truth.

Practical tests prove Christian Science to be just what its name implies, the Science of Christianity, and its terms and definitions become luminous with meaning in the light of its practice, in the course of its actual application to daily needs. It is not set apart for a favored few. It does not inculcate nor favor intellectual pride, but on the contrary undermines and then brushes aside this stumbling-block to the finding of the straight and narrow path of righteousness or right thinking. Christian Science is for all who will admit the existence of its Principle, God, and follow its rules. In contradistinction to the involved and incomprehensible hypotheses of materialism and of sterile philosophy, Christian Science stands for straightforward and provable spiritual truth and is the essence of common sense.

In order that any science may possess value in human experience it must not be mysterious, loaded down with questionable terms or with definitions that do not define. Especially is it imperative that it be demonstrable. Now the right of Christian Science to the name of science is founded upon the simplicity of its statement, and upon its definite results, which may be observed of all men, in the mental, moral, and physical regeneration of mankind. As a matter of fact Christian Science, though radical, is clear to all who desire to understand it. Its teachings may be learned and practised by children. It is for daily use in all manner of contingencies, and it has commended itself to hundreds of thousands of persons in every walk of life, and hence is winning adherents at a rate which has been described by observers as phenomenal. One of its chief merits is that it divests Christianity of the mystery and superstition which ages of merely theoretical or doctrinal theology have superimposed upon it; and that it supplies the key to the true healing for which those who have endeavored to help mankind in its physical dis-ease, have so long sought. Hence Christian Science is common sense both from a religious and a therapeutic standpoint. Mrs. Eddy, the Discoverer and Founder of Christian Science and the author of its text-book, has stated conclusively: "If Christianity is not scientific, and Science is not of God, then there is no invariable rule, and truth becomes an accident" (Science and Health, p. 342).

The manner in which Christian Science was discovered proves its divine origin and its strictly scientific nature. Before publishing her discovery to the world Mrs. Eddy tested it scientifically. Led by spiritual insight, she first reached conclusions inductively. Then came the deductive step of applying these conclusions to actual conditions and observing the results. As a result thereof we have the multitude of cases of complete regeneration through Christian Science in which the world rejoices daily and hourly, here and abroad. Common sense of the highest order has attended the introduction of Christian Science to the public thought.

The value of Christian Science is being determined by actual experience to-day, and this demonstration should be permitted on the basis of a fair field and no favor. Justice also requires that materialistic knowledge should not bar the way to reform, when the simple spiritual truth of Christian Science is found in accord with observable facts and common sense, and so much more efficacious and reliable. Physical and doctrinal theories prevalent ten years ago are no longer tenable to-day; material beliefs are becoming obsolete from year to year, and the investigation of mere effects is giving place to an understanding that God is the only cause, while day by day the supremacy of God, divine Mind, is being more clearly and firmly established in human consciousness. As a result of this process and progress along the lines of Christian Science, better Christians are being made out of those who come for physical aid. Christian Science is greatly increasing the sale of the Bible, which is found to be indispensable in connection with the Christian Science text-book.

Christian Science works in accordance with law, and does not pretend to be miraculous, except in so far as the operation of spiritual healing may be termed miraculous from the basis of materialistic reasoning. Discord of every kind means disorder and disarrangement, chaos and darkness. Spiritual understanding brings with it order and light. Under the spiritual lens of Christian Science it is discovered that what purport to be material laws and facts are not actual laws and actual facts at all, but suppositions accepted by the human consciousness as laws and facts, and having their sole existence as beliefs. Common sense demands that allegiance to such false admissions should cease, that mankind should be emancipated from the fear and oppression of such cruel taskmasters. Christian Science is helping those who would throw off this unnatural bondage, and is thus proving itself to be the true friend and helper of the sinning, the suffering, the needy, and the helpless. Surely Christian Science has earned the right to be designated as the acme of common sense.

The Unmarred Image.

RICHARD D. HAMILTON.

WHAT a pitiful mistake it was, on the part of mankind, to have ever conceived the notion that God's creation was marred by sin, when at most it was only obscured thereby—hidden to mortal sense by a material concept. To restore a broken image to its original perfection is not possible, and while it may not seem to be an easy task to escape from the error of accumulated years, yet the latter is within the range of possibility, and the fruition of one's hope in this direction awaits industrious endeavor. If the image of God had really been marred by the so-called "fall" of man, —by original sin,—we could not hope to reproduce it; we would only find, in the end, a mockery of this effort to work out our complete salvation. We are not, however,

Copyright, 1906, by Mary Baker G. Eddy.

Digitized by Google

doomed to disappointment and defeat, for we have the promise,—"Christ in you, the hope of glory." Man, the perfect image of God, unmarred and imperishable, awaits discovery through the elimination of false sense. "Beloved, now [at this very time, and from everlasting to everlasting] are we the sons of God," and although "it doth not yet appear [is not yet apparent] what we shall be," still we know, by reason of our joint heirship with Christ Jesus, and through his perfect example of achievement, as made clear to us in Science and Health, that we, too, "shall reap, if we faint not." What an inspiration to nerve endeavor has been this "key" given us by Mrs. Eddy, with which to unlock even this one passage of the Holy Scripture; viz., "Christ in you, the hope of glory." Certainly this age did not know, till Christian Science interpreted the Bible anew, that the understanding of the Christ, the ideal man, is ever with us as our "hope of glory." It is depressing even to think what life would still have been to us had we not learned, through our Leader's marvelous discovery and her sweet ministry to mankind, that a marred image of God is impossible; that "reflection" must ever be an exact and continuing likeness of "substance;" and that at the very worst we have only to remove the erroneous material concept which hides from present view the wonderfully beautiful image of our Father-Mother God,—our own true selfhood.

It is worthy of note that the sculptor must first see in thought the image he expects to produce from the rough marble. Thus also must we first see for ourselves, and for the whole creation, the image and likeness of God—and not something less—if we would realize ideal manhood, the sonship of God, and behold a perfect universe.

A Grateful Tribute.

EMMA WOOLLEY.

WHEN there came through the *Sentinel* the first appeal for additional funds for the building of The Mother Church, it was difficult for me to know my duty. The problem was one which Principle alone could solve, as it seemed impossible for me to do more without borrowing. As I was striving to overcome doubts, fears, and seeming obstacles, and to know that Spirit is substance; divine Love the source of supply and that supply inexhaustible; I opened the Bible at the book of Haggai, with which I was not then familiar. I was greatly impressed with the second chapter, especially the seventh and eighth verses, which read: "The silver is mine, and the gold is mine, saith the Lord of hosts. The glory of this latter house shall be greater than of the former, saith the Lord of hosts: and in this place will I give peace, saith the Lord of hosts." After reading these words there was no longer a doubt that the way would be made clear to me, and it was. The supply came from a distance, from a source which for years had been a care and expense, and it was with a grateful heart that the sum required was given for the Cause of Truth. When the last request came the supply had not ceased, showing that divine Love ever meets our need, and sometimes in most unexpected ways.

I desire to express my gratitude to our beloved Leader, Mrs. Eddy, for the great good which has come to humanity, and the manifold blessings which have come to myself through the spiritual understanding gained from her book, "Science and Health with Key to the Scriptures."

Infinite Resources.

J. G.

WE occasionally hear people say that a certain article in our periodicals has been very helpful to them and that they would like to give it to some friend, but that it is now out of print, and they cannot understand why this should be so. Not long ago, after hearing something of the kind said, I wondered why articles that are so helpful are not kept on hand. I then recalled those familiar words from Science and Health, p. 60, "Soul hath infinite resources wherewith to bless mankind." At once I thought, That is the reason we do not need to go back two or three or more years to find a certain article to help us. We have the same resources here and now, and we do not need to go back a few years or wait a few years. The help is at hand, now; so for me the question was settled. This brought to mind a time when a friend, who had just come into Christian Science, asked me if I would find among my old *Journals* an article which had been recommended to her as being very helpful. I found it and we read it many times. I think it was not more than a week later that an article appeared in the *Journal* which was just as helpful to me, if not more so, and my friend said, "Why this is about as good as the other one." In a short time another came out in the *Sentinel* which was equally as good. This showed me that I am not dependent upon any one article, for the resources are infinite. If certain articles are out of print, there are others equally good "wherewith to bless mankind," and far beyond any of these articles in helpfulness are our text-book, Science and Health, and the Church Manual, which we have with us always.

Angel Messages.

CORNELIA E. BAILEY.

To gain a deeper insight into the wonderful import to mankind of that promise in the 91st Psalm, "He shall give his angels charge over thee, to keep thee in all thy ways," means for us a constant listening to all that God tells us. It also means a loving and consecrated obedience to His bidding.

In every hour of trial the angel-message of divine Love is at hand, if we are alert and thus able to discern its presence. We know not how it will come to us,—perhaps through a Bible verse, a passage from our text-book, an article in our periodicals, a verse in our Hymnal, or a whispered word from the "still, small voice,"—but God will send it—in His way, not ours—and according to our need this message from divine Love, with its charity, its faith, its strength and power, will come and "minister unto" us, as to Jesus in the hour of his temptation and in the garden of Gethsemane. We must cling to the healing and saving truth which thus speaks to us, until the error which has seemed real melts away into nothingness, and harmony prevails. Thus we shall prove again and again, each time with increasing gratitude to God, that "we are made partakers of Christ [the spiritual idea], if we hold the beginning of our confidence steadfast unto the end."

[Written for the *Sentinel*.]

Growth.

GERTRUDE RING.

Do you suppose the tiny, struggling sprout
In some bleak spot, some barren, stony waste,
Knows inward joy that it gains, day by day,
A greener color from the sun's warm ray,
Feels gratitude that it makes better haste,
Measuring increase by some mark about?

It seems of kindred since I broke the clay—
Burst the poor, sterile soil of senseless lies,
Drawn by the warmth of Soul to add in height
And color, as I grow toward the light,
Until my view is widened to where rise
Comrades who signal to me on the way.

Selected Articles.

Concord's Relief Fund.

Concord will do its full share in the work of relieving the suffering people of San Francisco. This was made evident last night, at a meeting called by the Commercial club to systematize the work of relief, which was held in the Municipal court room on Warren Street.

At first the idea was expressed that two thousand dollars would be about all that Concord could afford to give to the fund, but after Mr. Meehan had read a letter from the Rev. Mary Baker G. Eddy, enclosing her check for one thousand dollars for the fund, a better spirit prevailed, and it was determined to get out and hustle and make the amount five thousand dollars if possible.

Secretary Metcalf called the meeting to order in the absence of President Pratt, and his Honor Mayor Corning was elected chairman pro tem.

Mayor Corning stated that he had taken the initative in the matter, as the call for relief was urgent and the need pressing. He said that with the contributions of the churches on Sunday and with donations from business firms and private individuals, the amount in sight would aggregate near to fifteen hundred dollars. In addition to this the schools are to contribute, and with the funds from Sunday night's concert and other amounts to come he was confident that two thousand dollars could be raised. He said also that Concord's contribution would be sent to the Red Cross Society for distribution.

At this point Mr. M. Meehan changed the aspect of affairs by presenting the following letter, the reading of which was followed by applause:—

Pleasant View, April 23, 1906.

Mr. M. Meehan, Concord, N. H.

Dear Sir:—Enclosed herewith is check for one thousand dollars, my contribution to the local fund for the relief of the San Francisco sufferers. You will please turn the same over to the treasurer of the committee.

Very truly,
MARY BAKER EDDY.

Concord (N. H.) *Patriot.*

Universal Respect for Mrs. Eddy.

The special correspondent of the *Portland Express,* who has been touring New Hampshire during the past month, in the course of a letter dated from Concord has this to say concerning our best-known and best-beloved resident:—

"I find in Concord a general, I think I may say a universal, respect for Mrs. Eddy, the head of the Christian Science church. Her views are not held by any larger proportion of her fellow-citizens, so far as I can judge, than one will find in almost any city of the Union, but they all have a good word to say for her, and the stranger is told, almost as soon as he begins to make inquiries about what is to be seen in the city, that Mrs. Eddy may be seen out upon her daily drive between two and three o'clock every afternoon. Wind and weather make no difference to her. Be it ever so rainy, or snowy, or blustering, she rides just the same. They say she has not missed a day for no one knows how long, if ever."—*Concord* (N. H.) *Monitor.*

Prayers and Drugs.

The declaration of Dr. J. F. Baldwin of Columbus, before the temperance committee of the senate, interests every one. Dr. Baldwin said that "nineteen twentieths of all the cases a doctor is called upon to treat would get well without a doctor."

It is very refreshing to hear so frank a declaration from a man of such eminence in his profession as is Dr. Baldwin. The discussion was upon amending the Stockwell bill to allow Christian Scientists to accept money for their prayers for the sick.

There were present some thirty physicians in opposition to the amendment. It is hard to see how these gentlemen could justify their position of opposition when Dr. Baldwin, one of the spokesmen, declared that "prayer would be as good as anything for these people. It is my experience," he added, "that many doctors are using remedies with the utmost confidence which I am satisfied are utterly useless and many times possibly harmful."

If that is true, as well as the former statement of the eminent doctor, it would seem that prayer in most cases would be a safer remedy than drugs. Surely prayer would in no case do harm even if it did no good. Dr. Skeels of Cleveland said that "nature is the great restorer, and that most cases would get well, doctor or no doctor, prayer or no prayer." Then surely the weight of the argument is in favor of prayer, paid for or not. Whatever is true as to the contention, however, it is very refreshing and a hopeful sign to hear such frank statements from these eminent doctors. It is an admission that common sense and the observance of the laws of nature are more important than all else. If this is true, then it looks very much as if a doctor's certificate is a special privilege.

Toledo (O.) *Blade.*

Faith and Fees.

The Ohio senate has voted down the bill giving fees to Christian Science healers, and Senator Lamb is quoted as saying he doesn't believe a man can preach with power on a stated salary. Did Senator Lamb ever try preaching without a salary? What kind of a senator does he think he would make without a salary? What manner of doctrine does he think he would preach on nothing a year?

A good preacher deserves to live—not on handouts and donations—but on a stated salary, by which he can provide for his own needs and those of his family, with a little left to assist his needier neighbors.

The doctor who cures with pills and lotions is entitled to his fee. If the Christian Scientist effects cures by other methods, there is no particular reason, as Lieutenant-Governor Harding says, why he shouldn't be remunerated.

The logical man may inquire why he should have to go to the Christian Scientist to get an answer to prayer. If God is the Father of all His children, why should He hear the prayers of some and turn a deaf ear to others?

Why not pray direct to God and save the fee? There's the question, but there doesn't seem to be any answer. Christian Scientists have effected cures, or seem to have done so. The results point in that direction. And these cures have been effected after the person cured had prayed himself, without getting a sign from heaven. Facts are facts and theories are theories. Nobody is obliged to go to a Christian Scientist for aid. If he doesn't want it he doesn't have to have it. He can go to his family physician or the pastor of his church. Or he can go into his closet and ask God for what he wants.

And there will still remain a large number of people who prefer to believe that the study of medicine is a science that is becoming more exact, and who prefer to trust the cure of their ailments in the hands of doctors who have made a profound study of the human body and the ills to which it is subject.

If a man is sick enough to need the aid of a physician and he has more faith in the prayers of the Christian Scientist than he has in his own or his pastor's, and if he has greater faith in the Christian Scientist's ability to cure him than he has in his physician's, then he is a mighty mean man if he doesn't want to pay for his faith, whatever the results may be. The doctor doesn't remit his bill because his patient dies. In fact he usually maintains that the "operation was a success." And if the mourners pay the

Digitized by Google

doctor after the corpse is buried, why shouldn't they pay the Christian Scientist? The laborer is worthy of his hire. He doesn't always do a fair day's work, perhaps, but that fact shouldn't be allowed to alter the principle.

Give the Christian Scientist his fee. The man who doesn't want to pay doesn't have to call the Scientist into consultation or take a chance on a cure by his prayers.

Toledo (O.) *Courier-Journal.*

The religious world of Jesus' time, in the main rejected him, though he made many converts, some among the leaders and eminent men of his time. What he taught has continued to grow in the favor of men, until at the present time a very large part, including the most intelligent portion of the human race, has accepted him as the Founder of true religion, and in our favored land Jesus is accepted almost universally as the great Exemplar of divine requirements.

Our Lord was rejected mainly because his mission was misunderstood. It is not surprising, then, that Christian Science, the spiritual understanding which he demonstrated, should be rejected for the same reason. Jesus grew in favor with the religious world as his motive became understood. So Christian Science grows in its acceptability to Christendom as its purpose becomes understood.

Primitive Christianity is no more in danger of being set aside through the discovery of Christian Science than the Ten Commandments were through the advent of Jesus. The Master declared: "Think not that I am come to destroy the law, or the prophets: I am not come to destroy, but to fulfil." So Christian Science comes not to set aside Christianity but to fulfil its demands, to reveal such a clear understanding of the Principle and *modus operandi* of Christianity as to render it more practical and hasten the kingdom of God on earth.

The mission of Christian Science is, undoubtedly, to establish Christianity by good works, and it thereby strengthens the preaching of our day with practice. Those who have come out of other churches into the Christian Science denomination have not grown skeptical in respect to the mission of Jesus and the truth of the Bible,—they love the Bible more than in former years, study it more, and profit more from its perusal. That the lives of these Christian Scientists have become better under the intelligent and spiritual guidance of their new faith, ought to indicate to those who are alarmed because of the marvelous growth of the Christian Science movement that their fears are unfounded.

If through Christian Science, God, Christ, and the Bible have become more to men, there is little ground upon which to condemn this Science because it points to Christian practice which has in a large measure remained dormant for centuries. Jesus said, "By their fruits ye shall know them." Who can deny that the fruits of Christian Science have been and are good? As to creeds and doctrines, they are of small import as compared to Christian conduct, and I think Christendom at large is quite ready to acknowledge this. If each particular Christian denomination grants to the hundreds of others the privilege of differing on doctrinal points, it ought surely to grant a kindred privilege to Christian Scientists.

ALFRED FARLOW.

Boston Times.

No one will dispute for a moment that the greatest need in the world to-day is for some such efficacious plan of moral and physical salvation as that which Christian Science offers. On every side we see great suffering and sorrow. Advocates of medicine have made noble efforts to alleviate this, but have they succeeded in lessening disease to any great extent? Are not conditions in this respect as deplorable to-day as in the time of Jesus and the apostles? Is there not as great need of succor now as then?

It is upon this scene that Christian Science has made its entry, and with all the energy it can summon to its support it has called upon men and women to lift their eyes to higher things and seek in the contemplation of that which is spiritual and holy the much needed relief for mankind's ills.

It is no new thing to find opposition to this message from among the clergy and the medical fraternity, although many of its advocates have arisen from among their ranks. From the very outset Christian Science has had to prove its worth every step of the way. Had it not been able to offer a reasonable return to those who sought its help, it would long since have fallen by reason of its own inadequacy. As a matter of fact, however, it has grown with rapid strides in every community in which it has been established, thereby showing its ability to fulfil all of its promises in "good measure, pressed down, . . . and running over."

But one sermon is recorded as having come from our Saviour's lips—the instances of his healing are without number. His charge to his disciples was "preach the gospel" and "heal the sick." To the seventy whom he sent forth, Jesus said, "And into whatsoever city ye enter, . . . heal the sick that are therein, and say unto them, The kingdom of God is come nigh unto you." Many of these afterwards returned, saying, "Even the devils are subject unto us through thy name."

Furthermore, our Saviour speaks to us to-day through the pages of the gospel as forcibly as to his disciples in olden time, in these words: "These signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover."

If Christian Science fulfils the dual command of Jesus, to "preach the gospel" and "heal the sick," or if, in other words, it preaches through healing and heals through preaching, what cause have ministers of this self-same gospel to attack it, and is it not in order to inquire why our ministerial critics fail to make some effort to fulfil this injunction?

ALBERT E. MILLER.

Williamsport (Pa.) *Gazette and Bulletin.*

The salvation taught and demonstrated by Christ Jesus was a complete salvation not only from sin but from sickness. A denial of this would limit the power of God, and also be contrary to Bible history. Had it been in Christ Jesus' plan for his followers to resort to drugs or hygiene for the alleviation of physical ills, he who ministered to their temporal as well as spiritual wants would have so instructed them. His teachings were, however, invariably and unmistakably that every human need is met by God, Spirit, and that such need can be met here and now in exact proportion to one's understanding of the truth he taught. We agree with our critic that the overcoming of sin is more important than the cure of sickness, and also admit that many come to Christian Science primarily for the physical healing alone; but this, as in Jesus' time, is a natural and legitimate means to an end, as it is the rule that Christian Science treatment incites a desire for holiness and a consequent loathing of sin.

The Lectures.

Toledo, Ohio.

An audience that filled to its utmost capacity the beautiful auditorium of First Church of Christ, Scientist, last evening [April 2], greeted the lecturer, Mr. Frank H. Leonard of Brooklyn, N. Y. The lecture was repeated the following evening at the same place. Mr. Charles J. Adams, a prominent business man of this city, introduced the lecturer as follows:—

The desire of every enlightened citizen is to be progressive. The command of "Forward—march" is ever sounding in our ears. Our eyes are constantly beholding the step forward of our brother, sister, or neighbor. We feel the inspiration of this advancing movement and realize the necessity ourselves of keeping pace with the times. Every well-informed person will give some consideration to that thought which appeals to his fellow-men, especially that thought which has been weighed in the balance and not found wanting. In considering such a subject I believe you will agree with me that it is better to go to its adherents rather than to its opponents.

We are here to-night to listen to a lecture on Christian Science. In an audience of this size we shall undoubtedly find diversity of opinion. There are those here with hearts full of gratitude for the benefits received through the study of this truth; there are those who have come to inquire and those also who have come to criticise. The various professions, religions, and social positions are represented. However separate our opinions are, we are united in the one verity that all are guided by the one Mind and seeking for the one Truth.

The great truth that "God is Love" was taught by Christ Jesus nearly nineteen hundred years ago. This is the old, old story which is ever new. It is the realization of this beautiful truth which has answered the desire, "Create in me a clean heart, O God; and renew a right spirit within me." A large part of the membership of the Christian Science church are those who have been healed of physical disease which physicians had failed to cure.

The Toledo Press.

Evanston, Ill.

Before a large and appreciative audience at First Church of Christ, Scientist, the tenets of Christian Science were ably expounded Tuesday evening [March 27] by Rev. Irving C. Tomlinson of Concord, N. H. The lecturer was introduced by H. W. Hoyt, who said in part,—

A great majority of the men and women who have come into this faith and understanding were led hither by a desire to escape from mental and physical tribulation. A large percentage of these once troubled ones, who had failed to find surcease of sorrow, or any real, certain, and practical means for its amelioration, were once the adherents of other church creeds, and have come from nearly every known church affiliation. Having realized in some measure their hearts' desire, and demonstrated the healing and saving power of God's eternal truth and the immanence of His presence, these happy people still have very precious memories of their former churches and an abiding love for everything that is uplifting in them. In common with the great body of Christian Scientists who have come from the byways and hedges as well as from the churches in their quest for the kingdom of heaven on earth, these people who were once the faithful adherents of other churches now invite a Christianly consideration of the elemental facts about Christian Science, which is their conception of the religion of Jesus the Christ.

"Christian Scientists well know that the most effectual means of teaching and spreading this gospel is through the lives that exemplify it. Without such evidence, which includes the healing of the sick as well as the destruction of sin, then were all our teaching and preaching in vain. But in order that the inquiring world may clearly understand upon what Scriptural and metaphysical basis rest our hopes and aspirations, a wise provision has been made for accredited public lectures.—*The Evanston Press.*

Ottawa, Kan.

The lecture of Mr. Bicknell Young on Christian Science, in the Russell Theatre last night [March 16], attracted a large attendance. The gathering was honored with the presence of Rev. William McIntosh, pastor of the First Congregational church, who, in introducing Mr. Young, said in part,—

In this conservative city it may be a surprise to some to see a pastor of one of the city churches acting as chairman at a lecture on Christian Science. While I offer no apology for this action, a word of explanation may not be out of place.

I hardly need to say that I am not a Christian Scientist: that so far as I understand the teaching of Mrs. Eddy, the Founder, there are statements in that teaching which it is impossible for me to accept at present; but the same is true of every section of the Christian church. We can see truth only from our own standpoint, and none but God can reveal to the individual, the lonely human soul. Each must be fully persuaded in his own heart. But while we have truth, and rejoice in it, we may not, as intelligent people, conclude that we have all the truth. We are no monopolists of wisdom. Truth is broader and higher and nobler than all human conceptions of it. Hence it becomes us to stand ready to receive light from whatever quarter it may come. The movement called Christian Science demands our respectful attention. It comes to us with the message of the love of God, who is our Father; of Jesus Christ, who is the true Saviour of man, who reveals the Father to the race. It accepts the Scriptures as containing the word of God, the only infallible rule of faith and conduct.

The world is full of sin, hence full of pain and anguish. Any teaching that brings a note of hope and uplift to our broken-hearted race by doing away with sin and wiping away the tear from the face of sorrow, is welcome. I am sure, therefore, that I can confidently bespeak for the lecturer of the evening a respectful and sympathetic hearing from an Ottawa audience.—*The Citizen.*

Lectures at Other Places.

Chicago, Ill. (Third Church).—Bicknell Young, March 9.
St. Albans, Vt.—Bicknell Young, March 18.
New York, N. Y. (Second Church).—Bicknell Young, March 22.
White Plains, N. Y.—Bicknell Young, March 26.
Pottsville, Pa.—Bicknell Young, March 27.
Marshall, Tex.—Rev. Irving C. Tomlinson, April 3.
Cherokee, Ia.—Judge Septimus J. Hanna, April 3.
Chicago, Ill. (Fifth Church).—Judge Septimus J. Hanna, April 5, 6.

Admission to Membership.

The next admission of candidates to membership in The Mother Church will be June 5, 1906. Applications must be in the hands of the Clerk on or before May 14, 1906.

An application sent to the Clerk of the Church does not constitute the applicant a member; he must be elected to membership by the Christian Science Board of Directors, at which time notice of election will be sent.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

A Letter from our Leader.

Pleasant View, Concord, N. H., April 23, 1906.
Christian Science Board of Directors.

My Beloved Students:—Your generous check of five thousand dollars, April 23, 1906, is duly received. You can imagine my gratitude and emotion at the touch of memory. Your beneficent gift is the largest sum of money that I have hitherto received from my Church, and quite unexpected at this juncture, but not the less appreciated.

My message for June 10 is ready for you. It is too short to be printed in book form, for I thought it better to be brief on this rare occasion. This Communion and dedication include enough of their own.

The enclosed notice I submit to you, and trust you will see, as I foresee, the need of it. Now is the time to *throttle the lie* that students worship me, or that I claim their homage. This historical dedication should date some special reform, and this notice is requisite to give the true animus of our Church and denomination.

Lovingly yours,
MARY BAKER G. EDDY.

Notice.

To the beloved members of my Church, The Mother Church, The First Church of Christ, Scientist, in Boston: Divine Love bids me say,—Assemble not at the residence of your Pastor Emeritus, at or about the time of our Annual Meeting and Communion service, for the divine and not the human should engage our attention at this sacred season of prayer and praise. MARY BAKER G. EDDY.

"Lest we forget."

[IT is a pleasure to give prominence in our columns to the following letter, which emphasizes so clearly and in few words Mrs. Eddy's leadership of the Christian Science movement, and the reasons therefor; the right relationship of Christian Scientists to her, to Science and Health, to the Church Manual, and to The Mother Church of Christ, Scientist, which she has founded "on the rock, Christ." It is a just tribute to the magnitude and success of her labors for this Church and for humanity.—EDITOR.]

To the Editor of the *Sentinel:*

In these stirring times of church building, when the attention of the whole world is fixed on Christian Science, when the growth and prosperity of our Cause are matters of general wonderment and frequent comment, when the right hand of fellowship is being extended to our people by other Christian denominations, when popularity threatens to supersede persecution, it is well for earnest and loyal Christian Scientists to fortify themselves against the mesmerism of personal pride and self-adulation by recalling the following historical facts:—

1. That Mary Baker G. Eddy discovered Christian Science in 1866, and established the Cause on a sound basis by healing the sick and reforming the sinner quickly and completely, and doing this work "without money and without price."

2. That in 1875, after nine years of arduous preliminary labor, she wrote the Christian Science text-book, "Science and Health with Key to the Scriptures;" that three hundred and ninety-six thousand copies of this book have been sold—an unparalleled record for a work of this description; that it has healed multitudes of disease and has revealed God to well-nigh countless numbers—facts which prove that Science and Health does not need to be interpreted to those who are earnestly seeking Truth, nor is it practical to state truth absolutely in a simpler or more pleasing form.

3. That no one on earth to-day, aside from Mrs. Eddy, knows anything about Christian Science except as he has learned it from her and from her writings; and Christian Scientists are honest only as they give her full credit for this extraordinary work.

4. That Mrs. Eddy organized The First Church of Christ, Scientist, devised its church government, originated its form of public worship, wrote its Church Manual and Tenets, and always has been and is now its guide, guardian, Leader, and wise and unerring counselor.

Strive it ever so hard, the Church of Christ, Scientist, can never do for its Leader what its Leader has done for this church, but its members can so protect their own thoughts that they are not unwittingly made to deprive their Leader of her rightful place as the Revelator to this age of the immortal truths testified to by Jesus and the prophets.

Deeds, not words, are the sound test of love; and the helpfulness of consistent and constant right thinking—intelligent thinking untainted by the emotionalism which is largely self-glorification—is a reasonable service which all Christian Scientists can render their Leader.

LEWIS C. STRANG.

Pleasant View, April 21, 1906.

"By their fruits."

IT is an encouraging sign of the times that the demand for Christian works and Christian living rather than for mere profession is becoming more insistent, and this demand is well expressed by the *Medford* (Ore.) *Daily Tribune* in the following editorial. The *Tribune* says:—

"There has been a great deal of acrimony developed over recent newspaper opinions regarding Christian Science. Religious controversy will exist, no doubt, as long as men continue to think that religion can be expressed in words. Religion must be lived, not professed, and it has been our observation that Christian Scientists give quite as much evidence of true religion as do the followers of any known creed or doctrine. No religious organization, nor any member of any organization, is in any position to throw stones at another. Professing Christians generally live in glass houses, and their every act is known of men. How foolish of any member to imagine that only his Sunday actions are observed. The admonition to avoid judging men is the one least heeded of all. It seems to be second nature for men to sit in judgment upon others. The error of this would be greatly lessened if all men were judged by their actions six days in the week and their Sunday manners ignored entirely. Most men act in an unnatural manner on Sundays, anyway, and wear their religious views on Sunday only, and with about the same degree of comfort with which they wear a new pair of shoes.

"If ninety per cent of all church creeds could be pruned away, leaving only the Golden Rule as the standard by which all men would be measured, how much better this world would be."

Jesus said, "By their fruits ye shall know them," and this is the basis upon which Christians will be judged, no matter what their professions may be; therefore, it behooves us to be about our Father's business at all times. If we are sincerely trying to be Christians, this will be apparent in our every action, and we shall not have to assume a constrained

Digitized by Google

and unnatural demeanor upon the first day of the week in order to impress our fellows with the belief that we are followers of our Master. If our conduct is proper and Christian-like on Sunday, it should be equally so on Monday; and no Christian should be willing to allow his conduct on the last day of the week to be less exemplary than on the first day.

Whether Christian Science be truth or error cannot be determined by the *words* of its followers; by their *works* alone can they give conclusive evidence that they are followers of Jesus and that their religion is a natural and consistent part of their existence. Jesus left certain promises for his followers, and one of these is, "And these signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover."

Science and Health has shown mankind how to reap the fulfilment of these promises, and if the lives of Christian Scientists "attest their sincerity" (Science and Health, p. 15), it is because they have made the Bible and this book their guide in every-day affairs.

ARCHIBALD MCLELLAN.

The Building Fund.

IT is necessary that liberal contributions to the Building Fund be sent to Mr. Chase without delay. We have learned from Science and Health (p. 79) that "giving does not impoverish us in the service of our Maker, neither does withholding enrich us," and the truth of this saying has been proved to us many times. Why not complete this demonstration at once?

Preliminary Arrangements for June.

A COMMITTEE has been appointed to find rooms for those attending the June meetings of The Mother Church. All who have not made definite arrangements for rooms are requested to communicate with this Committee as early as possible, stating their precise requirements, the price they are willing to pay, etc., in order that an approximate estimate may be made of the amount of accommodations which will be required. This Committee will not undertake to engage or assign rooms in advance, either in hotels or private houses. Those wishing to engage rooms in advance should communicate directly with the hotels at once.

It is desirable that, where practicable, one person should act for a group from one locality. This will greatly facilitate the work of the Committee.

On their arrival in Boston, those who have not arranged for rooms are requested to go to Horticultural Hall, corner Huntington and Massachusetts Avenues, which has been engaged as headquarters for this Committee, commencing Thursday, June 7.

GILBERT D. ROBERTSON.
Chairman Committee on Arrangements, 320 Boylston St.

Information regarding railroad tickets, etc., should be obtained from local agents, and those who will purchase round-trip tickets from points within one hundred and fifty miles of Boston should give notice to these agents at least one week in advance.

Letters to our Leader.

Melbourne, Australia, Jan. 29, 1906.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—We held our first Thanksgiving service on Christmas morning. It was beautiful, peaceful, and joyous. When the First Reader called for testimonies there was a response such as we have never had before. For thirty-five minutes there was no cessation of thanksgiving, several times two and three rose at once. They spoke of the benefits received through the study of Science and Health, and that this book was indeed a revelation and a "Key to the Scriptures."

Although so far away in miles, our interest in the extension of The Mother Church is keen, and the privilege of helping in the great work has been heartily embraced. Last year we devoted a set portion of our income to the Building Fund, and at the semi-annual meeting this was increased to the whole of the collection on the first Sunday of each month. We also made the season of Thanksgiving one of special effort, although we had not then received the *Sentinel* of November 25; from it we were pleased to see that in so doing we had been acting in accordance with the suggestions contained in the editorial of that issue. Our loving, dutiful thoughts have always flowed to you, but we began to feel that we would like to write you a letter with our own hand. This desire was strengthened by the inspiration of the Thanksgiving service, and a special meeting of members was held last week, at which it was unanimously decided to send you these loving greetings, which are accompanied by the fragrance and sincerity of the broken, thankful, heartfelt words spoken at our Wednesday meetings. It was felt that gratitude is better shown in deeds than words, and realizing that our most acceptable gift would be increased effort towards the Building Fund, the meeting decided to give the whole of yesterday's collection. We rejoice, like Hezekiah, that "God had prepared the people: for the thing was done suddenly." When the offertory was counted it was found to equal more than five times the usual collection. We are able to send Mr. Chase six hundred and forty dollars by this mail, although within the last twelve months our expenses have been doubled, as we have come out of chambers into a public hall and are maintaining a free Reading Room in the center of the city. We are proving the truth of your words, "Giving does not impoverish us in the service of our Maker, neither does withholding enrich us" (Science and Health, p. 79). Our dear Sunday School children have from the first loyally given their all to The Mother Church, and yesterday they passed the balance of their funds (in all some fifty dollars) to the same object.

We unite in expressing our deep sense of gratitude for your unselfish life, for your writings, for the knowledge of the Truth of being which you have opened to us, for the love and brooding care with which you have watched over the infant Church, and for your reflection of the divine wisdom which is continually being made manifest to us in our work.

For and on behalf of First Church of Christ, Scientist, Melbourne, Australia.

ADELAIDE BURKITT, *First Reader.*
ELLEN AGNES SALMON, *President.*
I. ORMSTON THOMSON, *Clerk.*

Boston, Mass., Feb. 29, 1906.

Mrs. Mary Baker Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—The kindness expressed in your letter of yesterday is enough to sweeten any condition of mind. Your writings are leavening the whole soured, discordant, diseased, dyspeptic lump. I often wish that the statement regarding "Miscellaneous Writings" contained in the March, 1897, *Christian Science Journal* could be before the thought of each one who comes into Christian Science, and that it would remain with those who are in Christian Science: "'Miscellaneous Writings' is calculated to prepare the thought of all true thinkers to understand the Christian Science text-book correctly." This statement, taken in connection with lines 17–27 on page 455 of "Science and Health with Key to the Scriptures," and the chapter en-

Digitized by Google

titled "Fruitage," occupying the last one hundred pages, ought to suffice for instruction for those who know how to appreciate a Leader in *deed* and in truth.

To one who came to me a short time ago for help, I made the statement that I would answer from the Bible and your writings any question which he would ask; and I did. Any one who will read and study all your writings will receive answers to his questions which will not need adjustment later on. After reading from your writings the answer to some question, this reply has often been made to me: "That is common sense. I can understand that."

A few days ago this thought came to me: We love our parents in the flesh, and are willing to and should do that which makes them comfortable and happy, even though they are responsible for our material condition, having brought us into this world; but how much more should we be willing to do, and should we do, for you, who have shown us the way out of this diseased, discordant, sinful, inharmonious condition. Then this Scripture came to me: "He that loveth father or mother more than me is not worthy of me: and he that loveth son or daughter more than me is not worthy of me."

With increasing gratitude for the many blessings received at your hands, believe me to be

Your loving student,

CALVIN C. HILL.

New Bern, N. C., March 3, 1906.

Beloved Leader:—Recognizing that we had not done so much as we would love to do, our little branch, on Dec. 7, 1905, decided to send regularly every month some contribution, however small, to The Mother Church Building Fund, until it should be completed. It was discussed, and this plan agreed upon,—that neither the church nor the Sunday School should give Christmas presents, but send all to this fund, feeling that what we thus gave would bless in a larger sense than mere personal giving. Then, as we have a monthly income from some property on the lot upon which we are to build, it was agreed we should also apply this, and send the collection of the first Sunday in each month. Beginning on Dec. 10 with the collection, we find that on Feb. 4 we had forwarded to Mr. Chase three hundred and three dollars and eighteen cents; twelve dollars and sixteen cents being from the children. The amount is small, but the certain sense of co-operation to prove our love for our Mother Vine and our loyalty to you, our Leader, whose loving life hath made its protection sure, has greatly strengthened us and urges us to new endeavor.

We were overjoyed on seeing that our sense of true Christmas giving was in accord with yours, as published in the *Sentinel* of Dec. 16, 1905, and we feel that it came to us through striving to learn how truly to serve our Cause and the race. Our daily effort in our simple service to God and man, is to live lives which heal, thereby hoping to prove that we are learning to apply the true understanding of the command, "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy mind."

FIRST CHURCH OF CHRIST, SCIENTIST.

Dorchester, Mass., March 20, 1906.

Dear Mrs. Eddy:—Please accept this humble gift from one of your followers who is seventy-five years of age. When first reading your dear book, Science and Health, I was using the strongest lens in eye-glasses and then was not always able to see. It has been my privilege to work much of this pillow and also to read several hours every morning without the use of my glasses. I am very grateful to God, and to you, dear Mrs. Eddy.

Yours in love and truth.

MRS. E. BARNEY.

Testimonies of Healing.

It is with sincere gratitude that I tell what Science has done for me. Five years ago I had an operation performed for cancer of the breast. The surgeon assured me that there would be no return of the disease, but in less than a year the trouble developed again and another operation had to be undergone. I then felt sure that every particle of diseased tissue was taken away and the doctor again assured me that there would be no further trouble. In a little over two years' time, however, it made a third appearance. In the mean time, I had heard of Christian Science and had seen some remarkable healings in my immediate family, but it was hard for me to decide upon making the trial for cancer—with my knowledge of this disease as regarded in *materia medica*. As a trained nurse, I knew that under medical treatment the knife would have to be resorted to, until the end of my sojourn here, so I finally decided to see a Christian Science practitioner.

The intense fear was destroyed in several treatments; the pain or dull ache, from shoulder to elbow, was completely destroyed in a week's treatment; and after five weeks of faithful work by the practitioner the growth was entirely gone; I knew not where at the time, but in my study of this blessed truth, given to us by our beloved Leader, Mrs. Eddy, I now know it returned to its native nothingness. Instead of worrying about heredity and my human ancestry, I can now look to God, in whom is man's being, and know that "the beautiful, good, and pure constitute his ancestry" (Science and Health, p. 63).

Thanks be to God, and to our Leader, who has worked so faithfully and lovingly in the cause of humanity, making it possible for every one to grasp this truth, and by it bring out harmony here and now. This healing has awakened in my consciousness a deeper sense of reverence and love for our Master.—ELIZABETH J. GRIFFIN, Ridgewood, N. J.

In the spring of 1901 I was in Dawson, Y. T. After I had stood the harsh winter splendidly, I arose one Monday morning full of aches and pains, which soon developed into a case of the grip. I went about my work, however, but each day found me worse than the preceding one, though I resented every effort on the part of the employes to lighten my rather heavy duties. By Friday I could hardly stand on my feet, and a quick movement would send me dizzily to the floor. By noon I really thought I was going to die, and I was wild because I could see the anxiety that my friends were showing, although, on account of my well-known temper, they were timid about saying much.

I knew that a lady, who lived five miles off, would help me, if she knew of my serious trouble; and about noon, as I stood in front of my office, the husband of this Scientist came down the street. As he was passing by he caught sight of my face, and asked what was the matter. I begged him to ask his wife to help me as soon as he got home, which he said would be about two o'clock. The hours passed, but no relief was found, and at just eight o'clock I went to bed. In an instant all pain left me, every muscle relaxed. I immediately sank into a deep slumber, and awoke in the morning feeling that I would be stating what was strictly correct in telling my friends that I was well. All day I wondered why it took so long to meet my case, and the following day being Sunday, I went to solve the mystery. I then learned that my friend did not reach home till after six o'clock, and that it was eight when his wife began to treat me.

All this was wonderful to me, and it started me thinking. I saw that I knew very little about treatment, either absent or present; that something more than repeating a lot of phrases and claiming to be well was required. I began to realize that a mortal expressing temper and passion is

Digitized by Google

not the real man, who lives, moves, and has his being in the one infinite Mind: that in this Mind there could be no separation, nor could there be distance; that the declaration of the truth understood is the truth for all of Mind's ideas. The practitioner had banished from her own consciousness and for the immediate object of her thought, all belief in matter or the reality of evil, sin, sickness, and death, and had seen only the perfect creation of divine Love, expressing health, happiness, harmony, dominion, and power, having access to the inexhaustible source of all supply, God, the all-wise Father and Mother, omnipotent, omnipresent, and omniscient good, and thus did the false sense of discord called the grip disappear into its native nothingness.

ORRIN W. JACKSON, Santa Cruz, Cal.

It is nearly four years since I began the study of Christian Science as found in our text-book, "Science and Health with Key to the Scriptures." Since then I have been able to overcome many difficulties. I used to be very much troubled with severe headaches, but now they are a thing of the past. This truth has also helped me to overcome worry, irritability, depression, and fear. I am enjoying better health now than I have done for a long time. I can go out and see beauty in everything. I was able to take long walks during my holidays last summer; sometimes as many as ten and sixteen miles a day over hills and moors, and I have not felt the least fatigue.

For some years before knowing of Christian Science, I had a stiff knee, through rheumatism. I had not been able to kneel for some time, but that left me last summer, and I have not had a return of it since.

I am very thankful for the spiritual knowledge which I have gained from the study of Mrs. Eddy's works. I have begun to realize that life is worth living. Through a better understanding of God my home has been made brighter and happier, and my life seems one long day of sunshine. I never feel so happy as when I am trying to help others.

MRS. S. FRYERS, Fallowfield, Manchester, England.

An editorial in the *Sentinel* of September 30, 1905, in regard to humanity's intense fear of consumption, reminded me of the great benefit I have received from Christian Science. I know the suffering which this disease brings, but it is more terrible still to see a loved one shrink from his friends because he knows their fear of contagion. My husband suffered from this disease, and I nursed him for a year and a half. For days at a time I would not leave him for longer than a few minutes, day or night, and for months I did not leave the house. I was told that I was running a great risk, but I thank God that my love never faltered.

The deep sorrow caused by my husband's death, and other troubles, led me to investigate Christian Science. I saw at once that it was the true religion, and I turned absolutely to it for comfort and healing. I received both, and a peace that passeth understanding. I had been reading only a few months when I was suddenly taken with many of the symptoms I knew so well and from which I had seen my husband suffer. I realized what it was and was very much afraid, the fear being greater because this disease had been in my own family, my father's brother having passed away with it. As my family and friends with whom I lived were not favorably disposed towards Christian Science, I said nothing to any one, but asked a Christian Science practitioner to give me treatment. I was healed in a very short time, and the awful dread and fear has gradually disappeared until I am entirely free from its bondage. Since this healing, nine years ago, I have had excellent health, and am strong and well.

When I read the article spoken of, my eyes filled with tears of gratitude for this deliverance, and I have written this testimony with the hope that others may be encouraged and their fears overcome by my experience.

GALLIE W. HUMAN, Oak Cliff, Tex.

Having received so much benefit through Christian Science, I feel it time to add my testimony to the power of Truth. Some thirty-two years ago I met with an accident which caused me great suffering. My spine was affected so that at times I would be almost distracted with my back and head. As years rolled on, the suffering became more intense and frequent. Some very fine physicians diagnosed the case, and all would trace it back to the accident as the cause. They did all they could to relieve me, but could not heal me. I was also afflicted with dropsical rheumatism. Besides that I had heart trouble, nervous prostration, indigestion, and constipation. At last I became melancholy, and did not want even my best friend to come near me.

While in this state Christian Science was brought to me by one who told me that I could be healed. She talked beautifully to me of God,—divine Love,—and that man is governed by divine law; that God's likeness is spiritual, and cannot be sick or suffer. I decided to give Christian Science a trial. The practitioner said I should read Science and Health. I informed her that I could not read, that I had lost my memory and could not remember a line after I had read it; but she insisted upon my trying, so I began, and through it I came to know God as all Life, Truth, Love. I kept on reading, and grew stronger daily. This was in September, 1900. In a few weeks I was as one born anew and as bright and cheerful as a young girl. At last I attended a Wednesday evening meeting, and found to my amazement a large church, filled with some of the finest people in the city. I inhaled the atmosphere of love and listened to the testimonies of what Truth had done for one and another; of the blind who were made to see, the lame to walk, etc. I decided to have treatment for my eyes, and in less than one month I was doing fine needlework without my glasses. My friends scoffed at me, and said I would be as ill as ever in a short time; but it has been five years, and I have had but one return of my old ailments and that was overcome in less than an hour.

I thank God, and also Mrs. Eddy, that to-day I can truthfully say I am a strong woman. My healing was slow in some things, but sure. Sometimes discouragement would spring up, but I clung to the truth as I found it in Science and Health, and I can truthfully say that though once I was blind, I now can see; that God does heal the sick as well as the sinful.—MRS. A. E. CLARK, Central City, Neb.

I wish to express my love and gratitude for Christian Science. For two years before I looked into its teachings, I was afflicted with a most tenacious form of bladder trouble, for which I tried doctors and drugs continually, but the cause of the trouble could never be located, and drugs would produce the contrary effect upon me to what the doctor expected. Not until Christian Science came to my rescue did I get permanent relief; then it dawned upon me that it was the mental which had to be corrected. I had treatment, and was helped, and for this I feel much gratitude; but I found that I had to work out my own salvation, and good hard work it was, at times. I found a great deal of error to correct. Self-love, resentment, bitterness, and many evil tendencies,—all of which were like so many poisons, to be antidoted by the Christ-mind. Each attack of pain became less real to me; then I began to know where I stood and could work from my understanding of divine Principle. The belief in various physical laws had to be broken, and I had to realize clearly that the spiritual law is expressed in harmony alone. Many a time I have had to declare this while walking the floor in agony, to human sense, but I have proved it in this very way and many others, although it was a fight. What joy and freedom is ours when we gain

Digitized by Google

the victory and prove that we are governed by the Principle of heavenly harmony. Mortals gain nothing without a struggle, and why should we expect to gain dominion over the flesh without one, or more than one. I cannot close without expressing my deep love for our Leader in Christian Science, Mrs. Eddy, who has upheld the light of this great truth that all who are ready might come and receive its blessings.—ELIZABETH BARLOW HOYT, New York, N. Y.

With loving gratitude I add my testimony to the many benefits received through Christian Science. In the spring of 1898, through the study of Science and Health I was healed of a trouble that doctors could not understand. A few months later I was able to leave off glasses that had been worn constantly for some years. Since then I have had many worse conditions to overcome, but with the help of our literature, also that of a practitioner, these have been met. I thank God, and our Leader, Mrs. Eddy, whose obedience to divine Principle has made it possible for all mankind in this age to know God aright.

MISS L. A. EATON, Brooklyn, N. Y.

Nine years ago a friend gave me a copy of Science and Health to read while he was at church. After reading in it for two hours I returned it to him with the remark that it would take eternity to understand that book. Then about five or six years ago another friend told me of what Christian Science had done for him and his family. I promised him that I would go to some of the services on a Sunday and Wednesday. I scarcely know what sickness or physical pain is, but all my life I have had the mental unrest that sent me searching for something to lay hold of strongly enough to dominate my life. When quite a youth I refused to continue my studies at the university because I did not believe in eternal punishment, etc., and I would not preach what I did not believe. That was a great sacrifice, for I was fond of study, so much so that for the next ten years I studied at night schools, among the natural sciences, besides delving into spiritualism, theosophy, and all kinds of "isms." I did not study the Bible, for that I had read at school and had early found that few men even tried to practise what Christ Jesus taught; so there could be no gain in reading it. What a sham and a farce life appeared to me. Eat, drink, be merry, and take your punishment at death like a man,—it is inevitable. Such was my philosophy, and my religion was to strive to leave my friends a little merrier, if not happier, than when I met them.

Such was my condition when I attended, for the first time, a Christian Science church. I was struck with the evident truthfulness with which each person told of his or her healing. From that day I attended every Sunday and Wednesday service that I could get to, and procured some of the literature, including Science and Health. The reading of these and attending the services kept me from drinking whiskey for nearly two years. After the last fierce struggle one or two treatments in Science completed the cure and gained the victory.

For thirty-five years I had been a great smoker of tobacco. While studying Science I gave up smoking for three or four months, and then resumed it for several months till I lost all desire for it. These things occurred four years ago. I can tell of no great physical healing, though I have treated myself successfully in what may be termed minor ailments; but soon after I had definitely allied myself with Christian Science I had business troubles of a very serious kind, which lasted for a year or more. Circumstances occurred that made me very bitter against a certain party. I knew that such feelings hurt myself only, so I determined to try Science. In my office, walking the streets, or wherever I was, I strove to forgive. As day followed day, week week, and month month, I often felt it was useless for me to try longer. Yet I persevered, and after about four months it dawned on me that I had had no bitter thoughts for I could not tell how long. The demonstration of forgiveness was complete, and remains so to this day. A few weeks later, while trying to get some direction which would improve my circumstances, I did not get what I wanted, but received what was immeasurably better. I wanted to "grow in knowing" through my own experience. It seemed a mockery for me to pray, but into my mind came the remembrance that I once heard a learned and good minister finish his sermon with this quotation from Shakespeare, "Assume a virtue, if you have it not." Of the many sermons I heard him preach that advice is all that remains in my memory after more than twenty years. Many a time I had questioned the morality of the advice; now I found its strength, for I immediately assumed that I believed in a helpful God, and garnered present and marvelous results. Soon it was borne in upon my consciousness, "You hate all lying and hypocrisy; it takes little effort for you to speak the truth; it is easy for you to say a kind word to your neighbor, however sore your own heart may be. Surely, then, God has been good to you." "Yes," was my cry, "all my life He has been good to me, and I did not know it till now."

Long before I knew anything of Christian Science I had gathered together many of its truths, though they were like loose links of a chain; but ever since Truth thus became conscious to me, these have been refined and welded into a chain that will bear any strain, if accompanied by honest endeavor.

It is easy for me to see the eternal fitness by which Mrs. Eddy became the Discover and Founder of Christian Science, which demonstrates the true relation of God and man; thereby bringing within the reach of all that peace which passeth understanding.

WALTER S. MIDDLETON, Hamilton, Ontario.

It is over five years since I first became interested in Christian Science through the healing of a friend, of consumption. All my life I had been a sufferer with indigestion in a very severe form, and from various other diseases which seemed to accompany that disorder. I think I tried all the remedies of which I had ever read, and all my friends had something different to suggest, which each thought would cure me; but I found no lasting benefit from any of them. The summer previous to my learning of Christian Science I was forced to spend a part of each day in bed, and the remainder I sat in the garden and could scarcely bear even to read.

After a course of treatment by a specialist, who said that by dieting, not exerting myself, etc., I might be better, but that it would be a long time, I soon returned to my former condition, even though I continued to take the prescribed medicine. A friend then advised me to get a copy of Science and Health. I did so, and at the same time I asked a Scientist to treat me. In a very few treatments the dyspepsia disappeared, and I was entirely healed of that trouble. I was also very quickly healed of insomnia and various other ills. Before having treatment it seemed that I could scarcely bear the weight of my clothing, but in a short time after treatment was commenced this did not trouble me, and I could walk quite a long distance without the slightest fatigue. So complete was the freedom found in the healing power of Truth that within a month's time I could use a sewing machine for hours at a time, and not the slightest harmful results followed.

During the time I have been in Science many ailments have been met for me. About three years ago I had a very severe attack of neuralgia which had lasted nearly a week. I tried to help myself, but the pain seemed so very intense that at length I went for help to a practitioner. Immediately after receiving treatment the pain ceased, and has not returned.

I am very thankful to God, and to our dear Leader, who has brought us this knowledge of Christ, Truth. I owe a debt of gratitude which it is my earnest desire to pay by obedience to the demands of this glorious Christian Science.—Miss May Johns, Toronto, Canada.

About seven years ago I had lung trouble, which grew worse and worse. I did not know what to do till I heard from a dear sister that she had been healed through Christian Science. I asked her to treat me, which she did. All at once the bad feeling left me, and I felt as free as a bird. I grew better fast; the cough left me, and I began to read Science and Health so gladly. Last spring I overworked and this seemed to bring on a severe spell of nervousness and lung trouble, so I wrote to a practitioner for absent treatment, and was healed. My husband had the grip, and had very severe pain in his chest and back. I kept declaring the truth, and the ailment was quickly overcome. I cannot thank God enough for the good I have received from this blessed truth.—Mrs. C. C. Fletcher, Oretown, Ore.

It is our duty as well as our privilege to let the world know what great things God does daily for His children through Christian Science. We cannot express the gratitude we feel to God, and to His servant, Mrs. Eddy, for the benefits we receive. We wish especially to speak of the healing of our little boy, who was then two and a half years of age. On a Thursday he complained of not being able to walk, and in the evening there was a large red spot on his leg. During the night he seemed to have a high fever, and we had to telephone for treatment. Next morning his leg was swollen and all red, and Friday, at midnight, he was, to sense much worse. He seemed to be passing through the valley of the shadow, and there was no time to send for help. My husband laid the child on a pillow and carried him, audibly declaring the allness of God, while I read aloud from Science and Health, perhaps for an hour or more, when the child went to sleep. The words of Truth calmed our fear and troubled thought, and we could feel the presence of God.

Next morning there were great blisters on his leg, and it was swollen and red. Saturday morning the practitioner came to the house, and again that evening, and stayed with us all night. Sunday was indeed a dark day, and at eight o'clock at night there was a severe struggle for some time; then he went to sleep and slept well all night. We knew then that the demonstration was made; the blisters broke, and the fever was gone. Truth alone had done the work!

Can we, for such a demonstration, find words to express what we feel. The most beautiful thoughts came to us, of quiet and peace. For all the benefits we have received since we came into the knowledge of the truth, we give heartfelt thanks.

Mr. and Mrs. Henry Marx, Woodmere, Mich.

About five years ago Christian Science was introduced to me by my nephew, who came to England on a visit from the United States. At first I could not accept it, because I was so steeped in scholastic theology and *materia medica*. I was, however, so impressed by his earnestness and willingness to help me that after a time I invited him to bring some of the literature to my home. After hearing some of the Lesson-Sermons the truth became clearer to my thought. I obtained a copy of Science and Health, and subscribed for our periodicals. One trouble after another was then destroyed,—ills that come in the old thought to one who has reached three score years and ten. To-day I am strong and vigorous. Christian Science has indeed given me, in the language of the Bible, "beauty for ashes, the oil of joy for mourning, the garment of praise for the spirit of heaviness."

As soon as the meaning of dear Mrs. Eddy's discovery dawned upon my thought I began to feel the benefit,—physically, mentally, and spiritually. For many years I had felt a desire to know the truth. Since it came to me I removed to London to reside, and have enjoyed the privilege of joining the church. These steps have all been a help to me, and I am thankful to our Leader for pointing the way.

Mrs. Laura Spoor, London, England.

I have had many beautiful demonstrations, for which I feel very grateful. Our text-book, Science and Health by our Leader, Mrs. Eddy, has been a great help to me. If perchance I am away from home this little book enables me to find release from every ill of the flesh. I have known the help of Christian Science ever since I was two and a half years old. A year ago I had a severe attack of stomach trouble, but through the study of our text-book and with the help of my mother I was completely healed in three days.

I am very thankful for the many blessings which I am receiving each and every day. I wish to know more of this truth and live more closely to its rules. I am very grateful to our Leader, Mrs. Eddy, for Science and Health.

Miss Florence B. Moore, Logansport, Ind.

In gratitude for the many blessings that have come to me since accepting the teachings of Christian Science, I write this testimony. For fifteen years I had been a sufferer from rheumatism. Physicians had pronounced my case incurable as they said it was inherited. This suffering made me afraid to go out in damp or windy weather; also afraid of the food I ate; and after a day's work I expected a night of pain, which usually followed a busy day. After taking up the daily study of Christian Science, these fears gradually disappeared and for five years I have proved, by going out in all kinds of weather, eating what was placed before me, and doing whatever work was necessary, that "it is the spirit that quickeneth; the flesh profiteth nothing." Although deeply grateful for the relief from pain, the mental transformation that has taken place is a source of daily thanksgiving. The Bible has become a new book, when read in this light, and has a practical meaning for to-day. I have learned that only as we practise this truth do we gain more of the knowledge that makes free. The *Sentinel* and *Journal* are welcome messengers, and contain many helpful lessons. My desire is to be faithful in the work of each day, as in this way alone can we show our gratitude to God, to our Leader, and to the Cause of Christian Science.—Julia B. Gates, Spokane, Wash.

[Written for the *Sentinel*.]

Overcome Evil with Good.

MARY A. NEWMAN.

Pilgrim on the upward way,
Wrestling with disease and sin,
This thy watchword in the fray,
Take the cross, the crown to win.

Do the dreams of error cast
Darkling shadows o'er thy path?
Trust, and thou shalt find at last,
Joy shall be thy aftermath.

In the quiet hidden way,
Grows humility's sweet flower;
Earthly wisdom's proudest sway
Bows before its gentle power.

Purity's inspiring touch
Brings the benisons of heaven;
And to one that "loveth much,"
Is the depth of sin forgiven.

From our Exchanges.

There is in man a power to see the invisible, to hear the inaudible, to know the unknowable, to enter into the nonsensuous and the spiritual; but this power lies in many a man dormant. Glimmerings of light come to him, glimpses of the invisible are afforded him; but for the most part he walks by sight and not by faith. He must be born from above. The power to see the invisible must be awakened. He must be lifted out of his lower self; out of a lower realm into a higher realm. Then he sees what he did not before see; he understands what he did not before understand. He finds himself in a world of which before he knew nothing, although it was all about him. Learning will not give this birth, any more than a knowledge of music will give an understanding of art, or the appreciation of art will give a comprehension of literature. . . . One may be as learned, as wealthy, as respectable, as orthodox, as Nicodemus, but unless he is born from above he cannot see the kingdom whose fruits are love, joy, peace, long-suffering, gentleness, goodness, meekness, temperance, faith.

The Outlook.

The life back of the word and back of the deed is receiving especial emphasis at this time. It means that there must be a soul in all we say and do. "The man behind the gun" is the logical as well as sentimental dictum. The man behind the sermon makes the sermon effective. There are brilliant sermons which produce no lasting effect because they have no soul, there is no life in them. There are great deeds of attempted benevolence which come to naught because they have no personal life back of them to give them persistence of momentum to achievement. There are multitudes of ministers and laymen who can preach about Christ—so far about him that they never touch him! But there are few who can preach Christ out of the Christ-life within their own souls. Yet that is the only effective preaching. The Gospel was never intended to be spasmodic, but eternal; as persistent and perpetual as God backing His universe to its eternal purpose.—*The Universalist Leader.*

Some think the only function of the Church is to be an inspirer—not to do social reform work. It is a defensible position. But if it be so, I recognize still that social action, social structural reform, not charity, is *the* need to-day. I recognize further that this is what is coming, and coming rapidly in America, as in all countries. And for this I have to recognize that the Church is doing and as now constructed can do very little. Therefore, when you ask me of the future, I know not. I believe in the Church, I believe there always will be a Church. "The gates of death shall not prevail against her." But I also fear that the Church has got to go down into the gates of death.

Just what will be the Church of the future, just what will be its connection with the churches of to-day, I do not know.

W. D. B. Bliss.

The Independent.

Every one may do something to hasten on the coming of the kingdom. He can see to it that the kingdom is set up in his own heart. He can be loyal himself to the King. He can bring others into the kingdom. We may not live to see the time when the kingdom of our God shall extend from sea to sea, but we may spend our lives bringing on the glad day.—*The Christian Advocate.*

Emotion runs to waste if it does not end in something done. Hence the failure of revivalism in our time. It has lost its old object, salvation from eternal punishment, and has not yet found its proper satisfaction in making a heaven of the earth in which we live.

The Christian Register.

The Christian Science Text-Book.—"Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

Rudimental Divine Science.—Printed in the New York point system of type for the blind. Price, prepaid, 50 cents per single copy; $5 per dozen.

Church Manual.—Containing all the By-laws to January 1, 1906, of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to Joseph Armstrong, 250 Huntington Avenue, Boston, Mass.

Church Tenets.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to William B. Johnson, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

Building Fund of The Mother Church.—Contributions to the Building Fund of The Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the Churches and Societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

Stephen A. Chase, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

Church Treasurer.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to The Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of The Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to The Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number, or number of post-office box.

Stephen A. Chase, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid $3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

RUDIMENTAL DIVINE SCIENCE. Printed in the New York point system of type for the blind. Price, prepaid, 50 cents per single copy; $5 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Christian Science Sentinel

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

250 Huntington Ave., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.

Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month.

The date of expiration may be found on the address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

Joint international action by the United States and Canada for the preservation of the scenic beauties of Niagara Falls, says the *Scientific American*, is an assured fact. A proposition is before Congress for diplomatic action with Great Britain which, in the event of favorable action, will give the Secretary of War authority to grant revocable permits for diversion of water from Niagara River "only to individuals, companies, or corporations which are now actually producing power from said water, and to them only the amount now actually in use by such individuals, companies, or corporations." On the other hand, the Canadian Minister of Public Works has announced at the Canadian capital a federal policy to preserve Niagara Falls. Under this policy the right to export electric energy into the United States will be granted under the understanding that it can be revoked at short notice, and that there shall be no claim against the Government arising out of such revocation, and, moreover, that the companies shall be subject to such regulations as the Government may impose.

For a week or more the Committee on Rivers and Harbors has conducted hearings on the bill for the preservation of Niagara Falls, both sides of the question having been thoroughly presented. The representatives of the power companies do not openly oppose the project of preserving the beauty of the Falls, but merely contend for what they claim as their rights. The opinion prevails in the Committee that only a certain amount of water should be taken. Until this limit is reached competition would be possible. The question is how to frame a bill that will prevent ultimate consolidation of the companies and the exaction through monopoly of unwarranted prices for power furnished.

Five thousand men in this country, says a writer in *Success*, actually own (without counting what they control) nearly one-sixth of our entire national wealth, money, land, mines, buildings, industries, everything, which sixth if put into gold would give them all the gold in the world and leave more than $9,000,000,000 still owing them! There are more than four million families, or nearly one-third of the nation, whose incomes are less than $400; more than one-half of the families get less than $600; two-thirds of the families get less than $900, while only one in twenty of the nation's families is able to secure an income of over $3,000 a year.

The Trustees of Columbia University have nominated, and the Prussian Ministry of Education has confirmed, President Arthur T. Hadley of Yale to be Roosevelt Professor of American History and Institutions in the University of Berlin for the academic year 1907-8. The subject of Professor Hadley's instruction will be "Economic Problems in the United States." He will succeed in this professorship Professor Burgess of Columbia University, who will give instruction at the University of Berlin during the academic year of 1906-7 on "American Constitutional History."

The losses in the anthracite mining regions for the three weeks of the suspension are estimated at $21,900,000, divided as follows: To mine workers, in wages, $5,100,000; to operators, in value of coal, $7,800,000; to railroads, in coal haulage, $3,900,000; to general business, $5,100,000.

The House Committee on Interstate and Foreign Commerce has authorized a favorable report on a bill providing for the construction of a ship to destroy derelicts at sea, to cost $250,000.

Foreign.

The Government of Venezuela is to establish a national bank and to substitute a paper currency for the gold basis. Heretofore the Bank of Venezuela in Caracas has been the national depository and fiscal agent for the Government. The bank issued paper money for use only in the commercial centres—Caracas, La Guayra, and Puerto Cabello—while the Bank of Maracaibo did the same for the convenience of the business people of that city. The issuance of bank notes was because of the little use made in Venezuela of check books and the difficulty of handling gold in large sums. The plan of Castro is to establish a paper currency for general circulation.

The Anglo-Tibetan treaty signed at Pekin, provides for the recognition by Great Britain of the protectorate of China over Tibet. Great Britain will not interfere internally in Tibet unless other Powers do so. China, on the other hand, will open some of the Tibetan markets to Indian trade, will erect telegraph lines, give Great Britain preference regarding railway concessions, and will pay $1,250,000 of the expense of the British expedition under Colonel Sir Francis Younghusband which went to Lhasa in 1903-4.

The German Government has introduced in the Reichstag at Berlin a project for a law obliging automobilists to pay life annuities to those dependent on persons killed by their motor cars or to persons permanently injured by such accidents, amounts to be assessed by the courts and the owners of the machines and not the chauffeurs to be responsible.

King Victor Emmanuel and Queen Helena on the 26th ult. opened the International Congress of Chemistry at Rome. There were eighteen hundred members present.

Industrial and Commercial.

The Société Francais du Tunnel Sous-Marin was incorporated in the early seventies for the purpose of constructing a tunnel beneath the English Channel, says the *Scientific American*. A shaft was sunk on the French side of the Channel at a point about six miles from Calais, and the English terminus was fixed near Dover. A considerable amount of tunneling was done by the French company; but after they had spent about half a million dollars, the British Government put a stop to the work on the English end. Engineers of the Northern Railway of France have recently made an investigation of the abandoned works and found them to be in good condition, and it is probable that the present session of Parliament will witness the introduction of a bill for permitting the work to proceed on the English side. The tunnel would be an ideal one to drive, as practically the whole of its 23½ miles of length will pass through a firm but easily-quarried chalk, which it is believed is free from faults. This would make it possible to drive the tunnel without the use of the pneumatic process, or the necessity for serious pumping operations. Apart from military considerations which, in themselves, cannot have much weight because of the tunnel's limited capacity and ease of destruction, there is much to be said in favor of the proposed tunnel. The Dover-Calais passage is notoriously rough and uncomfortable, and the substitution of an all-rail route between London and Paris would be a decided boon to hundreds of thousands of travelers between England and the Continent.

The Indiana Steel Company, a subsidiary corporation of the United States Steel Corporation, has acquired more than five thousand acres of land in Lake County, Indiana, on the shores of Lake Michigan. A square mile of the land will be used for the steel mills alone. These are already in course of construction. They will have direct connection with four trunk lines and with steamers on the Great Lakes. The mills will be able to handle 5,000,000 tons of ore a year, which will mean a product of 3,000,000 tons of pig iron and from 2,500,000 to 2,700,000 tons of steel. There will be sixteen blast furnaces, eighty-four open hearth furnaces and six rolling mills. In steel rails alone the production will be 75,000 tons a month, or 900,000 tons a year. The plant equipped for the manufacture of rails will cost $2,500,000. Ores will be brought to the mills by the company's steamers on the Great Lakes. The situation of the plant affords cheap transportation from the rich ore beds of the Great Northern, and from these will be brought, principally by water, most of the ores used. Large docks are to be erected near the mills and the most improved appliances for carrying the ore from ship to furnace will be installed. Coal brought from the bituminous fields of Indiana and Illinois will be brought into the plant without rehandling and coke will be brought on from the Pocahontas fields in West Virginia.

The *Manufacturer's Record* says: "Southern ports are holding their own and bettering their positions as handlers of American breadstuffs for export. The increase at the six southern ports for the first nine months of the present fiscal year, as compared with the same period last year, was from $25,424,145 to $57,076,404, or at the rate of 128 per cent, while at other leading ports, including Boston, New York, Philadelphia, Portland, Puget Sound, San Francisco, Chicago, Duluth, and Superior, the increase was from $50,264,757 to $88,293,584, or at the rate of but 75.6 per cent.

In spite of the predictions, successively made as railroads, trolleys, bicycles, and motor cars became practical, that the horse would be ultimately displaced and pass away, the aggregate of horses Jan. 1, 1906 in the United States stood at 18,718,578 against 14,364,667 at the corresponding date of 1897. Their total value increased from $452,649,390 in 1897 to $1,510,889,006. This rate of increase in value is also marked in that of mules. There were 2,215,654 mules in 1897 and 3,301,061 in 1906, and the values were respectively $92,302,090 and $334,680,520.

Professor Georgeson, who has been active the last few years in demonstrating the agricultural possibilities of Alaska, is taking north a herd of Galloway cattle, purchased by the Government, which will be established on the Kemai Peninsula. Galloway cattle are hardy, and it is believed that they will stand the climate of Alaska. Professor Georgeson claims there are no climatic reasons why Alaska should not produce the greater portion of the food required by its people.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

The Doubter.

[THE following verses were sent to our Leader, Mrs. Eddy, and she has enjoyed them so much that she desires the readers of the *Sentinel* to share in this enjoyment.—EDITOR.]

A DOUBTER there was, and he went his way
With a heart grown bitter and sore,
And he wandered along through the night and day
Till he traveled the wide world o'er;
And the joys he knew were fleeting and few,
Till he wanted them all no more.

At last he came to a garden green
Where the trees and the plants grew wild,
And its grandeur was greater than all he had seen,
And a Woman stood there and smiled.
So he looked at her face, with its goodness and grace,
And its beauty so loving and mild.

"You frown and sigh in discontent,"
Said the Woman in gentlest tones,
And he told her his face only said what he meant,
And he viciously kicked the stones;
He had studied to find what was good in mankind,
And had seen but the flesh and the bones.

"Oh, be not discouraged, but take good heed,"
The Woman in kindness said,
"For here is the Truth that you sorely need—
On which your should now be fed."
And he said not a word to the things he had heard,
But his face showed a sneer instead.

"This tree above bears fruit for you,
You only need pluck and eat."
The Doubter just glanced where he thought it grew,
And he scowled at her smile so sweet:
For naught could he see but the leaves and the tree,
And his doubt was quite complete.

He looked askance at the Woman below—
"I am not a fool!" quoth he,
"To think that a thing could exist or grow,
Except what my eyes may see:
And the fruit that you name is not nearly the same
As what has been given to me."

The Woman replied that his eyes were blind,
For the fruit was the Principle true
That could give him the peace which he never could find
Till he tasted the Truth and knew.
But he scorned every word, for the things that he heard
Were different from all he knew.

So he scoffed at her and her words of love,
And he would not hear nor stay,
And he frowned and scowled at the tree above
That grew in the light of day;
And he gave her a jeer for her pitying tear,
As he gloomily went his way.

ERNEST S. JAROS.

From our Contributors.

The Eternal Mercy.

BLANCHE H. HOGUE.

IN the Lamentations of Jeremiah God's mercies are recalled, and it is written of them, "They are new every morning." Tender and clear, like the early shining of the morning dew, the lovingkindness of the Lord springs anew with each awakening, in that heart which turns to Him for all that the day may bring forth. A new day has such wondrous possibilities; it holds such untried opportunities for knowing and being and doing all that is good; it unfolds so many unstained hours in which to correct yesterday's mistakes and to profit by yesterday's lessons, that psalmist and prophet and poet have found in it a beautiful type of the renewal of all that is beautiful and true. As the new morning follows each night, so renewed consecration and endeavor may follow every season of sorrow, oppression, or failure, and no experience is so severe but that its night passes and its morning breaks, whensoever thought turns without reservation to God for deliverance and enlightenment.

Christian Science teaches that God is not changeable, sending His mercies because besought therefor, or withholding them at will from those who fail to please Him, but rather that God is loving and good to all, sending His rain, the Master tells us, "on the just and on the unjust," and making "his sun to rise on the evil and on the good." Though His manifestation is veiled to material sense, God's mercies, God's tenderness, yea, the actual presence and power of God, is everywhere present, showering blessings in abundance upon all. Whence, then, the night of sorrow, the season of sin, the continual besetments of discord which seem to entangle the footsteps and sadden the heart of mortal man? The ages have sought in vain for an explanation of the origin of evil, and to that sense which sees and believes evil, evil clamors that it must have had a beginning, and that any philosophy which accords it not origin and presence is faulty. Conversely, to that consciousness which sees not and knows not evil, no sense of its original inception or present existence can be suggested.

God's eternal mercy, made manifest in evil's provable unreality, is the rich inheritance which Christian Science unfolds to the world through its text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. No one who walks upon the earth to-day can say that, in effect, evil does not exist to him, so far as his material experience is concerned; but he can perceive, through the invincible logic of Mrs. Eddy's statements, that evil does not exist to God, for God is revealed as a purely good consciousness, by which and in which evil cannot be conceived nor discerned. Even the human situation illustrates this impossibility of thought's comprehension (embrace) of opposite qualities. The innocent heart sees purity everywhere, knowing not the nature of impurity; the truthful man is prone to believe his fellow-men are equally truthful, and is persuaded otherwise only by sharp experience; the kind expect kindness, the loving and gentle are incapable of bru-

Digitized by Google

tality; while, on the other hand, low standards and unworthy motives see no higher than their own level, and deny the possibility of anything beyond their own measurement. To the pure "all things are indeed pure," and to sullied thinking all things seem soiled. To God, the all-wise and all-good, evil exists not at all; but to mortal man, in his present environment, evil seems present and insists that it must be accounted for.

The only way whereby man may find the "sure mercies" of God, presents itself in the possibility of exchanging the material belief which claims an originated and developed evil, for the understanding of the Mind which was in Christ Jesus. The phenomena of the Christ-mind are purely good; the phenomena of the so-called carnal mind are entirely evil; and this, because Mind, as causation, puts forth its own kind or quality as effect. Therefore, the individual who abandons carnal thinking and cultivates Christlike thinking, refusing to entertain any evil picture about mankind, must thereby enter a new mental area, wherein new phenomena become apparent to him. This loss of evil and gain of good, through the exchange of wrong thinking for right thinking, is Christian Science demonstration. A mortal may be humanly good, in his own conduct, and yet fill his thought with many un-Christlike concepts concerning what his fellow-men are doing. Such thoughts, even in their passing, are evil in nature, and unfit for one who would be Christlike. If the evil which is shut out from God's reflection can sometime, in the climax of salvation, be put entirely away from human thinking, we will then "be satisfied" in knowing it not, either in so-called origin or development.

Certain it is that every man should be wide awake, and know that right-mindedness actuates him in every thought and act, thus determining his views, judgments, convictions, and hence his conduct. Step by step, one thought at a time, in patience, repentance, and renewed trying, every man may reject the tyranny of mortal sense and yield to the glorious unfolding of the divine will. The whole situation is expressed in Jesus' statement, "If any man will do his will, he shall know of the doctrine, whether it be of God, or whether I speak of myself." Human reason may be unable to grasp at once the question of the unreality of evil in its full scope, but he who does the will of God in keeping with the rules given in Christian Science, will step by step prove evil's nothingness, by conquering it from the standpoint which declares its unreality, and thereby growing into a satisfying and abiding knowledge of the "doctrine" of its unreality.

If we were governed wholly by the Mind of Christ to-day, with no sense of any other, evil would not exist to us. Could all people in this age come at once into this Christly consciousness, evil would not even seem to exist to any one. It is undeniable that evil never did exist to this Christ-consciousness, else its Christliness would be impaired, and the "Mind of Christ" could offer no refuge from evil's storm and destruction. As Mrs. Eddy has fully explained in "Unity of Good," page 80, the one logical way of salvation provides that a growing knowledge of good shall deliver men from evil; and to make this possible, evil must be foreign to good, unsupported by it, unknown to it, and entirely outside its activities.

One difficulty in understanding this arises from believing that man can think both good and evil thoughts. This wrong view will be corrected as we come to understand that good thoughts cannot embrace evil, and evil thoughts cannot comprehend good. Good thoughts think about good things, in a good way, while evil thoughts picture evil phenomena, for "like produces like." A good quality of thought understands its own kind, and remains its own kind, for its quality is unchanging. Christian Science has revealed this, and has declared that right consciousness is the real man, the only manhood there is; while evil thinking is but impersonal evil suggestion, which attempts to engraft itself upon right thinking and call itself part of man. No one can think a good and an evil thought simultaneously. They may seem to occupy the ground almost at the same instant, but close analysis always reveals them to be separate. This makes it possible for thought to cling steadfastly to good, and to build such a perfect structure of right thinking that evil finds less opportunity each day to attempt to build at all.

It is related in the book of Ezra, that "when the adversaries of Judah and Benjamin heard that the children of the captivity builded the temple unto the Lord God of Israel; then they came to Zerubbabel, and to the chief of the fathers, and said unto them, Let us build with you: for we seek your God, as ye do; and we do sacrifice unto him since the days of Esar-haddon king of Assur, which brought us up hither. But Zerubbabel, and Jeshua, and the rest of the chief of the fathers of Israel, said unto them, Ye have nothing to do with us to build an house unto our God; but we ourselves together will build unto the Lord God of Israel." Thus may every one answer evil's offer to build with him, for right thinking is the right thinker, and by its very activity it must silence the clamor of every temptation, every weakness, every assault. Every Christian Scientist can thus protect his thought-processes from evil's subtle suggestion, "We seek your God, as ye do," and guard his analyses, his conclusions, and his habits from any attempted intermixture of erroneous belief. Eternal vigilance, however, is the price of this liberty. Not yet has the Christian Scientist so disentangled himself from material methods, nor so emerged from the realm of a seeming mortal self, that he can afford to relax for an instant his watchful efforts. Nevertheless, through earnest watching he begins to put on the "garments of salvation," and thus becomes so strengthened and encouraged, because of the disappearance of evil from his thought and life, that he will be able to think more and more from the basis of the divine Mind, and rest satisfied in the knowledge that evil never had an origin, inasmuch as it has no existence to the Mind that knows only good.

To God himself, unchanging goodness is not new. His mercies are eternal, springing spontaneously from the wonder of His infinity; but to the weary traveler, toiling along this journey wherein just one good thought at a time may be appropriated, God's mercies are indeed "new every morning." After each night of sin, or sorrow, or struggle, there breaks a new discovery of the eternal, ever-present good. Each lofty moral summit gained and held, reveals new vistas, hitherto unseen views, of infinite Love. A very heaven of mercies, showering its blessings in unmeasured abundance everywhere, is this realm of pure spiritual thinking, this Christ-mind; and in the measure that each man lays hold upon it, and abides with it, does he find himself within its borders of peace. What counts the night of pain or sorrow, if it be a night of discovery? "Joy cometh in the morning," and the mornings lengthen into an eternal noonday, as the unreality of evil is made more and more apparent in the expanding knowledge of the supremacy of God, until there shall be, as St. John has prophesied, "no night there." "And there shall be no more death, neither sorrow, nor crying, neither shall there be any more pain: for the former things are passed away." God's eternal mercy, made forever manifest in evil's unreality, shall reign supreme.

Man, the Image of God.

SCHUYLER S. CLARK.

It is generally admitted that Christ Jesus knew something about God and man of which men were ignorant, and that he came to bring them this information. We therefore take him as an authority on this subject. A careful study of this authority shows a consistent, uniform teaching and practice in regard to what man is. Whenever Jesus referred to himself, he did so as the type of the real man, and repeatedly emphasized the fact that man is the

Digitized by Google

son of God, wholly dependent on Him for his being; in other words, man possesses nothing of his own apart from God, can of himself do nothing. Man is an image of some one; not that one. This One is God—the divine Life, infinite intelligence or Mind, infinite Spirit, Soul. God's image has, by reflection, the substance of God, which is immutable. This image has by reflection eternal, uninterrupted life, which is not born into so-called human existence, or life in the body, and does not die. In fact these experiences cannot be thought of as belonging to God's image.

God's image has by reflection the intelligence, knowledge, wisdom of God. This is the "mind of the Lord" "which was also in Christ Jesus," and in this way it was expressed, according to his own words, "I can of mine own self do nothing: . . . I seek not mine own will, but the will of the Father which hath sent me." In the Book of Job we read, "There is a spirit in man: and the inspiration of the Almighty giveth them understanding." If man had a soul of his own he would be a god. If he had life of his own, he would be a creator,—another god. But man is not God, he is the son of God, and if we had the true sense of man as the expression of God, as His image, this would be continually clear in our thought.

One of the perplexing, fear-producing problems of mankind is the question of supply; but how simple becomes its solution if we insist hourly, regarding ourselves or others, that man is God's image. We have always said that in God is abundance—the fulness of life, of intelligence, of wisdom, of energy, of strength. What, then, of His image? Must he not be the reflection of the abundance, of everything that is good? Physical comforts are needed today. It is scientific to have them, and we can take Jesus' word for it, that if we are seeking the kingdom of God and His righteousness all these things will be added unto us.

Man's needs must assuredly be supplied by that of which he is the image. The sole function or business of the image is to completely represent its original, and everything that is needed to do this the original unfailingly furnishes. The sole business of man is to fully represent God, and everything that is needed to do this God unfailingly supplies. Whenever a sense of lack arises, let us reason thus: Do I require this thing to complete the expression of God? If so, I have it. If not, it is not a necessity, it is not needed by me, and I do not desire it. The matter is thereby quickly settled. God is unchangeable completeness, and our process of obtaining what we need is merely one of rightful appropriation.

Christian Scientists are hourly insisting on this unchanging relationship between God and man, they are giving constant attention to this essential business of man, and they continually separate the things indispensable to God's expression from those that are not. On this basis sickness is healed. It is thus that sorrow and disappointment and poverty and all kinds of distress are effectually removed. Our success, like that of Jesus, lies in our conformity to the Father, and also in our insistence upon the fact that man has no intrinsic ability whatever. It may take time and persistent effort to get into the habit of thinking this way and then acting and living this way. But how many patient hours have we spent in learning a language or in acquiring proficiency in music or painting or one of the mechanic arts? Mrs. Eddy's persistent and unselfish toil is well known, and is now being acknowledged, and the unparalleled success of her work is the result of her faithful Christian devotion.

If we examine the constitutions of the various States, we find in them a constant recognition of religious obligations. Every constitution of every one of the forty-four States contains language which directly or by clear implication recognizes a profound reverence for religion and an assumption that its influence in all human affairs is essential to the well-being of the community.—MR. JUSTICE BREWER.

Selected Articles.

Our critic raises the question as to the right of Christian Science to be considered scientific. If Christ Jesus was not scientific in the largest and fullest sense of the word, is there any hope that science will be discovered anywhere? Does not all science ultimate in God? Why is it presumptuous for the followers of the Master to announce themselves as Scientists? Is there no science of Christianity? Most assuredly there is, and what determines it? Demonstration, rather than theoretical teaching.

Does our critic believe that the only cures effected without the use of drugs are those which result from the use of mesmerism, and that any teaching or philosophy pertaining thereto must be classified with that of Plato, Leibnitz, or Spinoza? If so, will he kindly explain why the followers of Christ Jesus were able not only to heal the sick but even to raise the dead through the effect of fervent, effectual prayer? Giblon's History of Rome claims that this practice continued for several centuries after the ascension of Jesus.

Is it not possible that Bible students of the present day attach too little weight to the promises which assure a healing gospel, and which are to be found in so many places throughout the sacred Scriptures? Does it not seem reasonable that a better understanding of God must inevitably raise mankind to a plane of thought where sickness as well as sin will lose its power to tempt the children of men to turn their thoughts from Him in whom they have the promise of freedom?

Is not the kingdom of heaven at hand? Is not the kingdom of God within? Does not the understanding of this fact, even in a small degree, enable us to free ourselves from the trials and tribulations of this life and enter into the "secret place of the most High," wherein is found nothing that "worketh abomination, or maketh a lie"? Experience has shown that Christian Science flourishes best in those towns where the churches are living up to their very highest concept of righteousness, notwithstanding what our critic believes to the contrary. In such soil Christian Science finds deep root and wholesome growth, and its beneficent influence extends far beyond the borders of its own adherents.

The promise which Jesus gave to his followers before his departure is surely available to all who believe on him: "The works that I do shall he do also," and it behooves us to lend our support, rather than our antagonism, to all who endeavor to witness the fulfillment of these promises.

ALBERT E. MILLER.

Williamsport (Pa.) *Gazette and Bulletin.*

While Christian Science disagrees with some theories in respect to the nature of disease and sin, it recognizes that these exist in erring, mortal experience and must be dealt with and overcome according to God's laws. We think our critic will agree that when disease disappears it vanishes into nothingness; that it is not still hovering about, but has actually gone to nothingness. We believe he will also agree that something cannot be reduced to nothing; hence the disease must have been a nonentity to begin with.

Christian Science does not teach that disease does not appear to be real to the erroneous concept of man, but asserts that in the sight of God it has no weight whatever, no real entity. Christian Science does not teach that it is possible to be rid of pain simply by asserting that it is unreal, or that one can wilfully venture into trouble and escape its effects. One must be sufficiently conscious of the divine presence to be lifted above fear of disease in order to be absolutely safe.

It is stated by our critic that "when Mrs. Eddy advances the theory that God is all good it has our indorsement, but when she says there is no pain or no evil we dissent." I have been a student of the Christian Science text-book for twelve years and have carefully read all of Mrs. Eddy's writings, and I find no instance in them where it is denied that death, pain, and evil are very much of a reality to the mortal concept of things. Christian Science teaches that to the sinner there is sin, and to the one whose thought has not risen above the beliefs of the flesh, there is pain which sometimes assumes very acute forms. This is made plain in the Christian Science text-book on page 460, where the teaching on this point is clearly stated.

The sufficient call for the healing truth of Christian Science is found in the fact of humanity's need to be saved from its beliefs in sickness and sin, from its belief in a power opposed to God, by reason of which these things seem to be existent and to bind mankind. The apostle said of Jesus that he came to destroy the works of the devil. Jesus' mission was to save humanity from sin and sickness, and this is the mission of Christian Science.

The Christian Scientist has no difficulty in reconciling the teachings of the Christian Science text-book with his highest ideals of truth; in fact, he finds that they are already reconciled. Starting from the premise that God is good and God is all, it is impossible to reconcile sin and disease as any part of that all which is good. The Christian Scientist recognizes these things as "the works of the devil" which Truth destroys.

JOHN L. RENDALL.

Maquoketa (Ia.) *Record.*

As a regular member of an orthodox church for twenty-two years, I, like many, never understood the inconsistent literal or material interpretation of the Bible. It means absolutely nothing, and the ridiculous floundering of some clergymen, in their attempts to explain away those parts of the Bible they don't understand, is helping to empty their churches. If I want the Bible, pure, unadulterated, consistent, and spiritually, not materially, interpreted, I must go to the despised but growing neighbors, the Christian Science churches, where I attend very often, and get only the Bible, consistently interpreted. Often I have to stand for lack of room. Whatever you or I think of Christian Science, mankind feel instinctively that what it teaches is true; that is, that we have a right to health and happiness; that these are man's birthright, and that misery—the result of hate, fear, envy, jealousy, greed, doubt, graft, self-righteousness, conceit, and selfishness—plays no legitimate part in God's plan, but must be gotten rid of or blotted out of our consciousness to let in the opposite mental qualities or characteristics. When the churches look within for their troubles, and not without, their power may return.

J. H. C.

New York Evening Post.

The students of Christian Science are taught to have the Mind "which was also in Christ Jesus," and to heal through this Mind alone. If this admonition of the apostle is not practical why was it handed down to mankind? Either the teaching of the Scriptures is for all time or it is of no value to-day.

Christian Scientists agree with this advice of the bishop to the clergy: "They should approach the bedside of the sick with far more faith. They ought to pray for their recovery with far more expectancy that they may recover."

The words of Jesus are plain on this point. "And all things, whatsoever ye shall ask in prayer, believing [understanding], ye shall receive." It is this understanding that the Christ is present, now and always, which heals the sick, and every church in the land should be doing the work through this understanding.

CHARLES K. SKINNER.

Detroit (Mich.) *News Tribune.*

One of the most attractive features of the teachings of Christian Science is that it has no specialties or specialists; no particular persons set apart to heal the sick or to preach the gospel. It is part of the teaching of Christian Science that each student, or follower, shall gain a demonstrable understanding of the subject. In proportion to his understanding, every true Christian Scientist is qualified to preach the gospel and heal the sick, in the name and after the manner of the teaching of Jesus Christ, who said, "If ye continue in my word, then are ye my disciples indeed." The purpose of Christian Science is to help the human race physically, mentally, and morally; on the assumption that the method of healing practised by Jesus Christ is possible to this age.

JAMES A. LOGWOOD.

Medical Brief.

"Orthodox" clergymen—not many of them to be sure—are fond of writing to the New York papers, attacking Christian Science. It is a great mistake. The Christian Scientists are earnest, active, loyal to their church, and have unquestionably put into Christian activity a leaven that it needed. If they are deluded, upon them fall the consequences. They are firm in their faith and have a right to demand the utmost freedom in their devotion and their practice, where the laws are not disobeyed or ignored. Many of the clerical opponents who are persistently attacking them, might spend their time better in persuading their own congregations to go to church.

Editorial in *Buffalo* (N. Y.) *Commercial.*

Yesterday morning [March 7] Rev. Dr. Horton, the retiring president of the 11th National Conference of the Evangelical Free Churches of England, preached the opening sermon in the Central Hall, taking for his text "God is love," a passage of Scripture which, as he declared, "was the first text we learned as little children, and it is perhaps the last text we understand as men."

Dr. Horton somewhat startled his hearers by stating that one of the methods by which it could be tested was along the lines of Christian Science.

Darlington (England) *Northern Echo.*

Preliminary Arrangements for June.

A COMMITTEE has been appointed to find rooms for those attending the June meetings of The Mother Church. All who have not made definite arrangements for rooms are requested to communicate with this Committee as early as possible, stating their precise requirements, the price they are willing to pay, etc., in order that an approximate estimate may be made of the amount of accommodations which will be required. This Committee will not undertake to engage or assign rooms in advance, either in hotels or private houses. Those wishing to engage rooms in advance should communicate directly with the hotels at once.

It is desirable that, where practicable, one person should act for a group from one locality. This will greatly facilitate the work of the Committee.

On their arrival in Boston, those who have not arranged for rooms are requested to go to Horticultural Hall, corner Huntington and Massachusetts Avenues, which has been engaged as headquarters for this Committee, commencing Thursday, June 7. Address, Committee, 250 Huntington Avenue.

The Lectures.

Manchester, N. H.

A large and deeply interested audience listened to an impressive address Sunday afternoon [April 8] in Mechanics Hall by Prof. Hermann S. Hering of Concord, N. H. Mr. George H. Libby, master of the high school, presided, and introduced Professor Hering with the following preliminary words:—

Ladies and Gentlemen:—The last century was a century of progress. To the superficial judgment its most conspicuous characteristic was the display of inventive power. But there was achievement and advancement of deeper meaning. The great struggle for human freedom, which for us begins with the dawn of history, advanced in that century by leaps and bounds. The influence of the American and French revolutions banished tyranny even from the thrones of monarchs, and in the civilization of to-day the rights of the individual are paramount. Freedom of thought and speech and political equality were never so generally and fully granted to men as to-day; but the greatest change has come about in the religious thought of men, in their ideas of God and man and man's relation to God. A century ago many of the attributes of an earthly tyrant were commonly ascribed to God; He was represented as a cruel being and to be feared. Indeed, in all time men have been prone humanly to conceive of God as patterned after an earthly ruler, evincing human traits. Now we begin to realize the true nature of God, that, as the Scriptures declare, He is Love, that He is omnipotent and more willing to give good gifts to His children than an earthly parent. Infinitely better than labor-saving inventions, infinitely better than political freedom and equality, is the discovery and demonstration or proof that we may trust God at all times and in all ways. This is the great emancipation which frees from sin, suffering, superstition, and fear. This will do, and is doing, more for humanity than all else, and it is the theme of human progress.

Man is not a creator. True progress has been effected by casting aside human misconceptions and by a better understanding of basic laws that have forever existed; for God is the great unchanging, in whom is no variableness nor shadow of turning.

Christian Science is a getting back to the teaching and practice of Jesus Christ, who taught that God is a tender Father, all wise, all powerful, abundantly willing and able to keep His obedient child from harm; a God of whom the psalmist wrote, "When my father and my mother forsake me, then the Lord will take me up." This lecture is a message to the hungry, to those that suffer and are sorrowing.—*Mirror and American.*

Memphis, Tenn.

An audience that filled the lower floor, all the boxes, and the front seats of the balcony at the Lyceum Theatre heard the lecture on Christian Science which was delivered yesterday afternoon [April 1] by Rev. Irving C. Tomlinson of Concord, N. H. The large audience displayed the closest attention throughout, and when the lecturer in a few well-chosen sentences closed his remarks, a wave of applause swept through the auditorium. The lecturer was introduced by C. H. Trimble, who said in part,—

Theology is always an interesting subject, and there are many creeds and many denominations. I am not an adherent of this faith, but know something of its teachings, and I know that its progress has been hardly short of phenomenal. Christian Science is rapidly gaining adherents in the countries of the old world, and especially in England and Germany, and these people, it is said, come from the ranks of those who stand high socially and intellectually.—*The Commercial Appeal.*

Amsterdam, N. Y.

Bicknell Young addressed a large audience at the Opera House Sunday evening [April 1], on the subject of Christian Science. Recorder R. E. Lee Reynolds acted as chairman, and in introducing Mr. Young spoke in part as follows:

If it be true that "he who makes two blades of grass grow where only one grew before" is a benefactor of mankind, then it is doubly true that any religion that dries a tear, softens a sorrow, or brings peace to a grief-stricken heart, is worthy of an abiding-place in the hearts of men. In this materialistic age, when the pursuit of wealth almost surpasses the universal pursuit of happiness, we still find ourselves searching for that "peace of God, which passeth all understanding." Some find it in one form of faith and worship and some find it in another. True to their faith, the Christian Scientists invite the study and investigation of their religion by all intelligent seekers for Truth, and it is in that spirit and that pursuit that I trust all of you have come here to-night.—*Amsterdam Recorder.*

Troy, N. Y.

A large and very attentive audience assembled at Music Hall last evening [April 13], on the occasion of the address of Hon. Clarence A. Buskirk of St. Louis, Mo., whose theme was "Christian Science, Practical Christianity." The speaker was introduced by Rev. Harry Westbrook Reed, pastor of the First Universalist church, who said in part,—

Friends:—I am deeply conscious that to-day is Good Friday in the ecclesiastical year, and that it was on this day when Pilate asked that memorable question—"What is truth?" We are forced to doubt, however, the sincerity of his inquiry. But men in all ages have been seeking truth, if happily they might find it; and no less is it true to-day, for men are seeking earnestly and honestly after the truth, and well they may, for we cannot overestimate or exaggerate the importance of truth to men. Jesus said, in summing up his mission of life, "To this end was I born, and for this cause came I into the world, that I should bear witness unto the truth." All that is wrong with the world is the lack of truth. There is no devil. What has been called the devil is the lack of truth, the absence of a consciousness of God, even as darkness is the absence of light. The more we study truth, the more we see how various it is. Truth is manifold, and manifold must be the expressions it must ever take in human thought and life. We may define the Christian life—that is, if any definition be possible, for it is something like defining a rose, the perfume of which will steal through the very words of your definition—as comprehending the truth of God and expressing it in terms of human life. It is Christian because Christ revealed in his character what that truth is and how it may be expressed. Any man, then, who takes up into his life the truth of God and expresses it, has so far found the Christian life. The expression, or demonstration, is the practical part of the Christian life and the test of truth. We therefore gladly welcome any one who has a message on the practical side of religion, for of all things this world needs it is the knowledge of how the truth of God may be expressed in human life.—*The Troy Record.*

Admission to Membership.

The next admission of candidates to membership in The Mother Church will be June 5, 1906. Applications must be in the hands of the Clerk on or before May 14, 1906.

An application sent to the Clerk of the Church does not constitute the applicant a member; he must be elected to membership by the Christian Science Board of Directors, at which time notice of election will be sent.
