Special Quote from the F.S. Review.

****

"CLIPS, QUOTES, and COMMENTS" is issued on the first and fifteenth of each month, by the Borderland Sciences Research Associates at: 3524 Adams Avenue, San Diego 1, California.

Twelve issues (6 months) for $5.00; six issues (3 months) for $2.50; two issues for $1.00. Contains only short articles and miscellaneous material, supplementary to the BSR bi-monthly ROUND ROBIN.

N. Meade Layne, M.A., Director; Margaret V. Locke, Associate Editor; Kathleen Banks, Book-keeper.

"PHOTOGRAPHING THE ETHERIC"; From "Psychic News", September 3, 1955 (Quoted in "Beacon Light Herald" of Feb., 1956).

"I think we are now photographing the Etheric,' declared Brigadier R.C. Firebrace, lecturing on the latest developments of the De LaWarr Radionic Camera at Marylebone Spiritualist Ass'n. new headquarters in Belgrave Square on August 22.

"He went on to forecast that orthodox atomic science had now reached the point where it was bound to stumble upon the region of the etheric and would be obliged to admit the non-physical laws which govern it.

"Fifty years ago," said Firebrace, 'an American named Dr. Abrams discovered that every disease emits a radiation. And every organ of the body also has its own radiation.' He told his audience that Abrams devised a means of detecting these radiations by what is known as 'Abrams Box'. His method was to detect direct from the box.

"The modern method was to use a drop of blood--dried blood on blotting paper. Hair and sputum would do just as well. He described how the blood sample was placed on the DeLa Warr camera and rotated to the critical position when it was 'linked' or 'tuned' to the patient. Next 'you set your camera to the wave-form of the suspected disease,' explained Firebrace. 'If you are correct you get a photograph of the diseased lung: if wro ng, you get a blank plate.' No light whatever is used during the 10-second exposure.

"I have taken 500** photographs on my own camera, and although we admit that we do not understand everything about this business, in my view we are actually photographing on the etheric level of matter.

"It has its own laws, and they are not the same as physical laws; otherwise, we could not photograph a woman's stomach from a drop of blood while she herself is thousands of miles away, in New Zealand!'

"The camera was invented seven years ago by an engineer named De La Warr, who had set up his own research laboratories at Oxford. At first it was too revolutionary for most people, but now there were several in operation, including one which was being studied at Cambridge University. Describing the camera as about the size of a large refrigerator, with many dials and tuning devices, he said that it required two operators, and that the magnetic field set up by the operators themselves also played a part in its functioning; consequently each camera had to be specially built for each operator.

"The whole idea was to 'tune' the camera plate to the patient. When you found you had a blank plate, then clearly there was no rapport, no resonance between plate and patient. He said it was very much like psychometry to Spiritualists.

"Firebrace showed some 30 of these photographs by means of a lantern. They included pregnancy radiations, cerebral tumors, tuberculosis, cysts in the breast, and stomach ulcers. In every case the diseased portion showed up white. They were photographs of radiations rather than outlines, but in some cases the shape was unmistakable.

"Most remarkable was what was purported to be a photograph of a bottle of homeopathic aconite medicine, with the camera tuned to the wave-length of this plant in flower. Result: The flower itself! Poorer but quite clear results were produced with honeysuckle and other plants photographed from the seed.

"He also showed some plain Thames river water before and after it had been blessed in a church by means of the centuries-old Sarum Rite. It produced the usual water

(** -- mss. illegible---this number may be incorrect-)

(contd) --
photographs of radiating shafts of light---but in the center was a thick white cross.

"Firebrace maintained that many of these photographic diagnoses had occurred where X-rays had revealed nothing: and that now they had instruments which were giving successful radiation treatment. How ever, they had met opposition from doctors and veterinary surgeons, although a number of doctors were supporting them, and they were patronized by famous studs and racing stables. 'Trade unionism is very strong in this country', said Brigadier Firebrace, dryly."

-- e n d --

MYSTERIOUS RAYS FROM THE HUMAN BODY -- (from Electronic Medical Digest article, "Living Tissue Rays", by Thomas Colson,B.S., LI.B., D.O): --

"Many think one can attract the attention of another by looking intently at the latter. Amulets are sold in many places in Europe to ward off the"evil eye" of certain persons and demons. The occultist believes the body is surrounded by an 'aura' of a vaporous material of some sort. There is a saying prevalent in America that flowers will wilt more quickly when worn by some women than by others. Then, there is telepathy relating to the transmission of thought.

"Scientists have classed all these as superstitions until recently. They now conclude that there is a sound basis of fact back of all these ideas. Herbert Spencer, an English philosopher, once said that 'Nothing, no matter how fantastic, that the mind of man could conceive, but has its feet upon reality. That belief going back many centuries could not be dismissed as superstition. They were the results o f personal observations of natural phenomena by many thousands of minds in many generations.'

"At a meeting of the American Association for the Advancement of Science, at Syracuse, New York, Professor Otto Rahn of Cornell University reported finding that yeast cells, such as are used in making bread, can be killed by a person looking intently at them for a few minutes. The yeast cells were placed on a glass plate and held close to the person's eyes while the person looked through the glass at the yeast cells.

"Professor Rahn explains the phenomenon by telling how special rays are emitted from the eyes to produce this result. For several years scientists have been re - porting discoveries that living things produce ultraviolet rays. In the human body they were first found coming from working muscles. Then they were found in the blood and in carcinoma, a form of cancer.

"The finger-tip rays of several persons at Cornell killed yeast readily. The tip of the nose was discovered to be a fine ultraviolet 'tube'. Then came the eye. Human rays are not always harmful. From some persons they are beneficial to tiny plants. There seems to be no difference in the kind, but the volume differs. When large,it is lethal to yeast. The same person emits it at different rates. He may be 'killing' at one time and 'benign' at another. The right hand appears to radiate more than the left, even in left-handers. Doctor Rahn said human rays are short, about 2,000 Angstroms. This is shorterthan sunshine ultraviolet reaching the earth and shorter than most therapeutic ultraviolet lamps.

"About ten years ago Alexander Guerwitsch discovered that onions gave off rays capable of influencing the growth of other onions and the virility of yeast cells.

(contd) "This radiated energy has been found to come from many kinds of living tissues.

"Dr. and Madame J. Magrou, of the Pasteur Institute, Paris, France, found that these rays could affect the growth of plant rootlets and certain bacteria. Dr. A. Naville showed this energy could injure the surface of the eye of a frog. Dr. D.N. Borodin, of Boyce Thompson Institute of Yonkers, New York, detected this energy from fifty six different kinds of living matter.

"These body rays seem to be given off most strongly by the parts of the body which are replaced most rapidly, such as the palms of the hands and the soles of the feet. It is to be noted, also, that these same surfaces give the greatest skin changes in the psychogalvanic responses. The tops of the fingers are very strong emitters of this energy. It has been suggested that this is the reason for the popularity of 'kissing'. The back gives off the least energy and the abdomen and chest slightly more. The sex organs in both sexes and breasts in women emit these rays quite strongly.

"The first scientific proof that there is a personal electric field, a sort of electrical aura, within and in the air around a living body, was announced to the Third International Cancer Congress.

"The report was made by Dr. Harold S. Burr of Yale University, and he explained how it opens a new field for the study of the cause of cancer. He said it may be possible that these electrical fields determine 'in a very real sense the structural character of the organism. This implies that in normal growth and development the field controls and regulates the chemical processes involved in the formation o f structural units.'

"Human eyes are powerful electric batteries. This discovery, showing that each eyeball is an independent battery, was announced to the National Academy of Sciences in 1938 by Dr. Walter R. Miles, Yale University pathologist. Each eye produces a current averaging a thousandth of a volt, an electrical energy equal to that of the heartbeats which make the recordings of electrocardiographs. Numerous eyes, Doctor Miles found, average one one-hundredth of a volt; one gave two-hundreths of a volt.

"The Yale experiments show that the electrical potential of an eye varies with at least some diseases, both eye troubles and general. But Dr. Miles said it was not yet possible to say whether the electrical variations would be useful for eye troubles. The fact that eyes produce electricity has been known to science since 1860, when it was discovered in frogs, but the source of this electric power, its variations and especially its high power in human beings, is little known. Scientists for a time thought the movement of the eye produced this current, but Dr. Miles showed the Academy that a person with a glass eye, although able to move the eye, with regular ocular muscles, gave off no current from his artificial optic.

"The eyeball, like any ordinary battery, has two poles. The front of the eye, at the pupil, is positive; the back of the eyeball is negative. This Dr. Miles demonstrated by pasting fine electrodes on the flesh beside the eyes and having his experimenters roll their eyes from side to side, or up and down. The polarity changed, that is, the pickup wires swung toward positive or negative according to which area of the eyes rolled past the pasted electrodes.

The Electronic Medical Digest is published at 2452 Van Ness Ave., San Francisco 9, Calif. Quarterly; copy .50. The EMD is in the general field of electronic treatment, is NOT AMA, and publishes much material of great interest to BSR Associates.

MIND READING MACHINE:

The following appeared in Jack Anderson's column, Philadelphia Evening Bulletin, Sept. 22, 1955 sent to us by a Philadelphia Associate with the comment: 'the significance of this could be greater than Dumont Laboratories even suspect'.

"Washington, Sept. 2 - It is still in the secret developmental stage, but electronic scientists are working on a device that will read people's minds. Dr. Thomas P. Goldsmith, research vice-president for Allen R. DuMont Laboratories, acknowledged to this column that his staff is experimenting with a thought-reading machine. Successful tests, in fact, have already been held. "We ask someone questions", Dr. Goldsmith said. "We can tell what he is getting ready to say even tho he may not have said it. It has me a little scared."

Stressing that the research is in its early stages, Goldsmith explained that the electronic thought-reading machine is based on somewhat the same principle as the electro-encephalograph, which measures brain waves. "We are learning about mechanisms of communication between people," he said. "I guess you would say we are investigating the sixth sense. . . I feel a little like scientists must have felt on the threshold of discovering atomic energy."

Another DuMont spokesman later stressed that a thought-reading machine is a long way off. He estimated that the laboratories would issue no formal news on the discovery for the next five years.

"SPACE TRAVEL": Assoc. F.B. Woodruff of Long Beach, Calif. (438 ½ Linden Ave.) sends us our first copy of a booklet called Space Travel, by Bradford Chambers, Stravon Publishers, N.Y. 1956. Paper cover, illustrated, 66 pages, NOT intended to be fictional. "According to us" some of this material is accurate, some of it merely imaginative - and the real obstacles to space travel are not realized at all. Our last issue of CQC, E-11, devoted most of two pages to this and related topics. We will also supply these two pages, along with other material on the aeroforms under the title of Brochure 116, without charge on request.

As to the new booklet mentioned above - if one can really get a Key to Interplanetary Space Travel for .25 - whichhis the right name and price of the publication - the cost-and-loss would be small in any case. Recommended, cum grano salis.

ORBIT (not of a satellite): Readers of Major Keyhoe's excellent book (Flying Saucer Conspiracy) - we hope they are as many as the leaves that strew the brooks - will recall many references to Mr. L.H. Stringfield, Editor of ORBIT and a highly competent investigator. And in the current issue of ORBIT (II-10, Jan.) Editor Stringfield is losing his patience, especially over such unbelievable twaddle as the following, quoted by him. Believe it or not, it is the Secretary of the Air Force, Donald A. Quarles, speaking - according to an editorial in the Cincinnati Inquirer of Nov, 9, 1955.

"Once again, and in the most unqualified terms, we have the word of the Air Force that the flying saucers seen by so many people in so many places were not there at all. Whatever all these people saw, they were not aircraft, missiles or space-ships from this or any other planet, according to the Secretary of the Air Force. . . Even if the story stopped there, we could expect a good many flying saucer enthusiasts to ignore the dictum of the A.F. and to go right on accumulating their sightings, their theories and their campaigns to persuade the public that these saucer-shaped ships are real ..."

'Our first thought on reading the above (says editor Stringfield) was that its writer was drunk, but we soon realized that it was written according to the dictum of the A.F. ... designed to kill saucers in the minds of the public .. for

two reasons (1) to beat Major Keyhoe's new book to the punch (2) to set the stage before 1956, when saucer sightings are expected to reach an all-time high. '

Just what is the matter with such people, as the A.F. Secretary and other top-level authorities of the silence group? Are they trusting to luck plus lying to get them past the no detour signs? Do they believe that the public can be hypno - tized indefinitely? Do they think that shock of strange experience will be less if unexpected? Are they trying to preserve or completely destroy all public confidence in themselves? Do any of them honestly and personally believe in the ridiculous "explanations" and evasions of the last ten years? It is irrational, impossible to assume this. Butthen, just what great authority is exerting such compulsion, on the armed services, the press, the radio and screen?

Suppose that ten years ago the authorities had said in effect: 'yes, we know there are strange objects overhead - but do not be disturbed - we will take care of everything, find out all about it and tell you the facts - just keep calm and give us a little time ...' -- and had then begun a campaign of education, little by little, and an honest and truthful one. . . Something like that, and the AF would not now be on the extreme tip of a cracking limb. . . There has always been an en-lightened group who favored such a policy, but stupidity and the majority vote has been too much for them.

There is likely to be trouble over this. There has been a fine sowing of dragon's teeth and it is near harvesting time.

In the matter of the censorship, real and would-be - here is a typical and just-reported incident. It comes from a friend in Sun Valley, Calif., via an Associate in Arcadia, Calif., and is dated January 8, 1956.

> "Immediately following the Bill Cunningham program on KHJ, which is over at 12:30, Frank Edwards came on the air and gave a magnificent talk on UFO's. He spoke of the many recent sightings and the heavy government censorship. He stressed how the truth was being kept from the public and mentioned that a book has been written that gives complete info on this. Just as he was about to announce the name of the book he was cut off the air and the announcer came in with the station identification." (Presumably Major Keyhoe's book).

Our informant then states that she called the station right away but found the circuits flooded. After trying for almost an hour she asked the Burbank operator why she couldn't get through, and was told that the lines were loaded with calls and asked what it was all about. When she was told that it was about the Frank Edwards saucer program, the operator said she thought it was a good thing, that the saucers were here to attack us and it was best to keep it quiet. Our informant talked with the operator and mentioned what she herself had seen, and the operator agreed that she should get the book and read it herself.

Our Arcadia Associate continues by summarizing from the DAILY REPORT of Ontario, Calif., January 3, '56. "Ontario Flyers Try to Track Mystery Planes. There is a lengthy article about these two fliers, one an aerial camera man, and the three circular craft they spotted over the Rose Parade. They estimated these ships to be about 50 ft. in diameter. They were orange colored and one had a white circle in the middle. The three circled the plane at a speed of about 1200 mph and an approx. distance of four to five miles. They were in sight for about 45 seconds before disappearing to the west. I will give you the tail end of the article:

"These craft left no rocket trail, and were clearly outlined most of the time against the mountains"

Kramer and White are co-owners of an aerial photo company and have been flying together for three years. Cramer said he has been flying 19 years for the Army

and commercial air lines and has logged more than 10,000 flying hours. He said White has spent years in the air as a camera man and during the war for the Royal Air Force.

"I know many people won't believe us", Cramer said; "but we are experienced air men and not accustomed to imagining we see things." Speaking of yesterday's incident he said, "We know what we saw". Cramer also stated that they gave a full report to CAA officials at Ontario International Airport and to the Air Defense Command.".

FLYING SAUCER REVIEW for January 1956 contains an excellent 7-page article entitled A Newsman's Saucer Experiences. We won't spoil the story for you, but here's a partial quote from pages 7 & 8:

"Okay, there's the story. Now you tell me what I've seen. Tell me I'm a lunatic, or that my two sightings were Venus, or weather balloons, or temperature inversions. But I won't believe you. And I still won't swallow the dogmatic denials of our military authorities ... But I'm not writing this to vent my anger at any source of authority. I figure they have their motives for denying the obvious, whatever these may be. I'm hoping only that some case-hardened sceptic reads this and may be honest enough to agree to the possibility of super-intelligent life on some other mass suspended in space ...

"One of this country's most noted geophysicists, told me that day aboard the LST in San Pedro harbor that Washington, D.C. knows who our visitors are, why they're here, and have some little information about their culture as well. . .

"Perhaps this explains the reluctance of the government to admit that saucers exist, because the world would then demand to know the rest of the details. And what if some one told you your neighbor might be a tourist from outer space?"

- - - -

(An element of danger in this situation is, that when the government finally decides to "tell all" , the "all" will be only what the authorities think the public should. know, hear, and believe. Nor is there any certainty that the 'authorities' themselves, with very few exceptions, will understand the true nature of the aeroforms -- since the latter is quite out of the tradition of Western science and metaphysics. This is going to be a matter of imposing new modes of thinking on hundreds of millions of minds trained mainly in the adding up of check stubs. ml)

This issue of FLYING SAUCER REVIEW also contains reports of sightings from some 20 States and several foreign countries.

The FSR is published at: Box 441, Seattle 11, Washington. $3.00 per yr. Copy .30.

Correspondence of author Harold T. Wilkins, (England)

(Author-scientist Wilkins approves of BRS activities along the lines of what he calls the new fusion - a worthwhile phrase - "provided it be not really a restatement of a much older attitude most of us have forgotten, and which the conventional scientist and academician has never understood or known - a fusion of science with the older cosmogony and metaphysics. How little we really know! But I on my side do emphasize, whether that nuisance of nuisances the semi-literate (give me the so-called illiterate every day in preference) likes it or not, that the facer for these disingenuous politicians who pretend that the UFO phenomena, naturally misinterpreted by the ideas and religious concepts in passing vogue, are really very old. The nonsense that this earth has always been hermetically sealed off from the rest of the cosmos is blown away like thistle-down when one sees how, time after time, between, say, the 9th and 19th centuries of our own era, even

the weirdest and most bizarre of the UFO entered the skies of early and later mediaeval Britain and France and Germany . . .

"By the way, I incline to think that landings of saucer entities did take place in France, but with no convincing personal contacts. Much of what I said has been left out (of my book), though not by me; and that in one South American State a malignant dwarfish entity - origin, who knows? - in one case tried to abduct a youth - far too illiterate to have made it up - into a saucer; and in another case nearly stove in the rib s of a fool of a midnight truck driver who actually attempted - and got out of his truck to do it - to drag a tremendously physically powerful entity, manikin size but not called "green", toward his truck. Here it does not strike me, as some theorize, that these entities were merely robots controlled from long range. Far from it. They were as physical and material as you or myself. Not 4th but apparently our own 3-dimensional category. But here again I find nothing to indicate whence this particular entity comes. All very well, this fantasy that they were in ages past forced off our planet - I mean these hairy and very powerful dwarfs. But where is any real basis for that theory?

"Of only one thing do I feel reasonably sure, that neither the USAF, nor certainly its British counterpart will ever make any revelations of the sort we are so often promised as being just around the corner. They will leave it to you and me and the rest of us, and deride us publicly, while in private they 'wish to hell they knew' what these mysteries are - and will continue to threaten courts-martial to any air officer who tells even his best girl what has been registered - and left unexplained - on the radarscopes."

Correspondence of Regional Director H.M.W. (Florida)

"Your remarks in C.Q.& C. just at hand, about Elementals, agree with my own knowledge of them. I have seen them in various shapes, and have been told from the other side that they <u>are</u> mischievous, have no moral sense whatever, and can be dangerous to one who sees them and radiates fear. Can be made use of by one holding them under control, but that it is a dangerous affair. . .

I seem to be mentally insulated against anything coming from Rome, the Federal Council of Churches of Christ, the AMA, and a greatdeal of the 'orthodox' occultism. My loss maybe."

- - - -

(Congratulations on the high-grade insulating. As to the Elementals, some of them seem to pal around with the space people (so to speak), and we are told that they relate to us in about the same way that we relate to earth elementals of our plane - which is suggestive but hardly more than that. Perhaps an incursion of green goblins with three arms and one eye apiece would give our soi-disant intellectuals some of the ideas they have so proudly missed. Achtung!

(Director H.M.W., like other contributors, can be reached in care of BSR Hdqrs.)

COLLECTOR'S ITEM: We have one copy of <u>Pioneers of Space</u> - A Trip to the Moon, Mars and Venus - by Professor George Adamski: First Edition, August 1949; publisher not given. 260 pages: new condition. Copies are almost unobtainable. $10.00.

REPRINT (MIMEO): The Morley-Martin Experiments - & - Experiments of Dr. Charles W. Littlefield. 27 pages. $1.00. (Living forms from "inorganic" matter. Effect of mind-energy on formation of microscopic crystals, etc.). BSR Pub.

<u>VITIC</u> Reprint. mimeo. Use of carbon and magnet. 13 pages, size of this. $1.00. A BSR compilation.

EXCERPTS FROM NEW AGE NEWS LETTER - 1542 Glendale Blvd. - Los Angeles 26, Calif.

Those concerned in the mystery of the UFO "will be interested to know that a number of Interplanetary Clubs are forming throughout the nation, in which "messages" of ASHTAR are being studied and received." This Ashtar purports to be a space being from Venus who 'broadcasts' through various human channels, and some of the material received in this way has considerable interest, whatever the identity of this entity may be. Ashtar has become so important in the minds of so many people that his influence must be reckoned with.

"There recently appeared an article written by a physician who stated that in future 'interplanetary travel' the physical body will be changed during the transit."

(It is somewhat remarkable that this statement coincides in time with that made by Ramond Natalli, published by the BSR in CQC-E-11 (Jan.1, '56), and titled " 19 PARAGRAPHS - ULTRASONICS AND THE AEROFORMS". According to this, no true space flight can be made by any human while in his normal physical body - which must be exposed to a "time-measured dosage of ultrasonic frequencies" - and even with such protection (given by the space people) the physical effects are likely to be serious. We have repeatedly suggested that the true and important obstacles to space flight have not been dreamed-up as yet, even by the scientifiction boys.

The New Age Publishing Co. (sup.) also issues a special listing of recent works based on the teachings of Rudolf Steiner - in whom there is a marked increase of interest.

CORRESPONDENCE INVITED: "Have been engaged in experiments lately following up and amplifying those of Baron Von Reichenbach - and am anxious to exchange data with anyone experimenting along these same lines. Experiments so far have been quite fruitful". - - - Address Assoc. C.H.B.; 7501 Central Ave., Philadelphia 11, Penna., or care of BSR Hdqrs.

VIBRASONICS: Too late for extended comment, the Nov.-Dec. '55 issue of FLYING SAUCER REVIEW (Lon.) has just come to hand. This is a remarkable issue, packed full of important material - but at the moment I can call attention only to the article "VIBRASONICS" AND THE U.F.O., by R.R. RUSSELL. He begins by saying that rhythm, vibration, sound, ultra-sonics all mean precisely the same thing except that they qualify different stages of the harmonic scale. . . It is at the upper end that I believe lies the harmonic power that enables flying saucers to perform as they do... For this I have coined the name Vibrasonics ... not to be confused with ultrasonics, which is lower down the scale. . . "

I do not wish to be too hasty in appraisal of an article I have not yet read with sufficient care -- but my feeling is that in Russell's article we have at long last the ANSWERS - i.e., a basic interpretation which covers all the major phenomena of the aeroforms - flight, speed, maneuvers, distortion, thunder power, explosions, "mat and demat", "teleportation", the role of instruments, psycho-physical effects and those on matter of our plane of perception. Now, though Russell does not stress the term etheric, it is quite evident that etheric matter, conversion of frequency rates, concept of emergence and other basic ideas advocated by the BSR since the fall of 1946, and reinforced within the last month by our "19 PARAGRAPHS" or "Ultrasonics and the Aeroforms" -- it is clear that except for minor differences of terminology all these concepts and those of Russell will fit together like hand to glove. On our part no stupid questions of priority will be raised; but we invite all helpers and Associates of the BSR to note the evolution and acceptance of the basic interpretation obtained and offered by the BSR nearly ten years ago.

FLYING SAUCER REVIEW is published every other month, at 1 Doughty St., London W.C. 1, Eng. Price in USA, $3.50. Ask for No. 5 of Vol.I, Nov.-Dec. '55.
