WHAT? NOT!	

Clips, Quotes, Comments is issued on the first and 15th of each month, by the Borderland Sciences Research Associates, at 3524 Adams Ave., San Diego 16, Calif.

Twelve issues (6 months) for $5.00; six issues (3 months) for $2.50. Two issues for $1.00. Contains only short articles and miscellaneous material supplementary to the BSR bi-monthly ROUND ROBIN.

Meade Layne, M.A., Director; Margaret V. Locke, Associate Editor, Kathleen Banks, Book-keeper.

PROJECT HERMES:

This name has long been applied to plans and efforts to construct a communication device, primarily for use between here-living and excarnate people - something which would work without resorting to mediumship or psychism. BSR abandoned any active cooperation on this, since we have no laboratory facilities at Hdqrs., or funds or technical help; but investigators elsewhere have patiently carried on.

We have heard several times of apparatus which picked up various sounds, fragments of speech (ancient languages) etc., but which lacked selectivity and could not be tuned in on any recognizable level. The basic idea, that sounds somehow persist as a record in the ethers, seems to me to be strengthened by the achievements of the De la Waar camera, which is apparently able to photograph past events - since words are 'events' also.

We do not, however, have any files, books, or useful data on the Project Hermes and so cannot be of service in this respect. We mention this on account of continued inquiries.

A well-known English investigator is Mr. Arthur H. Bird, whose address is:

35 Bellwood Road - Waverly Park, Peckham Rye
London S.E. 15, England

Mr. Bird is a retired engineer, the General Secretary of the Society of Metaphysicians, a radio amateur and founder of a radio club, and widely experienced in the field of psychic research. BSR Hdqrs. is now in receipt of a memo. from Assoc. R.M.H. (Ohio), concerning a message from Mr. Bird:

> "This message was, in brief" (writes Assoc. RMH) "that Mr. Bird has not only succeeded in getting the thing to work, but has also built a companion transmitter. Some slight alterations had still to be made, a tube burned out and could not be duplicated in England but I have mailed him the replacement. . ."

Assoc. RMH continues by saying: "If he (Bird) has indeed been successful with this device, it might be worth while to revive work on it on this side (if any members wish to do so); but I personally do not feel qualified to evaluate his circuits (if he is willing to give them out. If some one else woulc do this, I would be willing to publish a leaflet or have it mimeographed commercially. Mr. Birds radio station is G 6 A Q. Possibly some BSR Assoc. could arrange a two-way contact -- or again, it might not be such a good idea to spread this all over the air-ways".

Associates actively interested in this very important Project Hermes may address Assoc. R.M.H. at 2520 - 4th St., Cuyahoga Falls, Ohio -- and/or Assoc. S.N. Green, Box 127, Bayfield, Colo. - or both Associates in care of BSR Hdqrs., for forwarding. Serious and intelligent cooperation is welcomed.

ml

DISASTERS may now be had in almost any shape, size and style desired. Associate Samuel Webb (Ironton, Ohio) calls our attention to a recent article in QUICK magazine:

"Relentlessly ... man's supply of fresh water is being contaminated by the Atlantic ocean ... It is possible that ALL fresh water on the earth will be poisonous by the year 1962... Chemists are trying desperately to find some way of repurifying water. They know that the main source of the poison now creeping into fresh-water reservoirs is the mysterious Sargasso Sea.

"The Sargasso is a gigantic area of the Atlantic stretching between Newfoundland and the British isles, as far south as Bermuda. Sargasso is a seaweed-like plant that floats endlessly about the ocean on the currents and side-currents of the Gulf Stream. Yellow, and with large paddle-shaped leaves, the weed sends its long stems deep into the water, sometimes to a depth of hundreds of feet. . . . Attached to the leaves are small pods that contain a sticky fluid which has always been considered harmless, but climatic changes over the years have altered the chemical components . . .

"A violent chemical reaction has turned the fluid in the pods to a lethal poison. As the huge bodies of floating sargasso travel north the freezing water hardens the pods, makes them brittle, and air inside forces them to burst, releasing the deadly fluid inside. First notice was taken of this toxic quality when seamen reported they had seen an unusual number of sea-gulls floating dead on the surface of the sea near the Sargasson. The birds were contorted, their necks stiff and twisted ... the internal organs completely eaten away.

"Lab tests indicate that human beings would react even more violently, but there seemed little cause for alarm ... Last month however a group of oceanographers discovered that a small portion of the poison was potent enough to contaminate an area extending from Britain to the U.S. New experiments with the purification of sea-water have been instituted, regardless of expense, but it is now evident that the safety of mankind is at stake, for already the seepage of poison has been detected in some arctic lakes. "

(Note: It is highly probable that most surface water - rivers, lakes, springs - is supplied by the seas rather than by rainfall. Consider the enormous quantity of flow of the great river systems of the world. The salt water, according to this theory, penetrates through cracks in the strata into the extremely hot interior, where it is vaporized and forced upward as live steam, then recondensed and forced out through the surface strata - the ocean salt being left behind in the process. Not all substances, however, can be removed by this natural distillation).

ml

GHOSTS IN THE KREMLIN: This same issue of QUICK (Vol. 1 No. 10, March '56). According to this story the unpredictable character of Russian policy arises from that fact that "an obscure Russian peasant" has convinced "the foremost Kremlin power" that he can talk with Stalin, Lenin and others, receives orders from these "dead" notables and passes them along while in a state of trance. "The trouble is that these communicators have been in violent disagreement, not as to general aims but as to method, and the constant squabbling is driving the mystic mad..." And this, of course, "could be". The heavy role which the invisibles have always played in national and international affairs, especially in times of danger and of war, is common knowledge among occultists and other students of such matters. But it is possible that the less the public knows and believes about such 'improbable nonsense', the better - until or unless we can have some elementary education in such matters.

rl

LETTER FROM BRAZIL:
Dear Friend:

I received your last letter in which you say: 'Any information you might be able to give us concerning these phenomena (Flying Saucers) in your country would be greatly appreciated by us...' Well, I want to report here one of the countless odd cases which occurred in my country. The first that I report now happened in Campinas, a city belonging to this State of Sao Paulo. The event did take place between the 15th and 20th of December, 1954. Three UFOs crossed the skies of that mentioned city dropping waste material. These queer filaments (remember the similar cases of Oloron and Gaillac in France, October, 1952, reported by the books of Aime' Michel "Lueurs sur les soucoupes volantes", and Jimmy Guieu "Les soucoupes volantes viennent d'un autre monde") fell down over a lady's garden and were examined by the chemist Visvaldo Maffei. A neighbor of that lady, Mr. Benedito Goncalves do Nascimento, said that those things looked like 'silver rain'. The F.S. were round , of gray color, and exhibited two parts, one of them turning around incessantly. At the moment in which they crossed the city at moderate speed they droppd the material as liquid form. The chemical examination by Dr. Maffei resulted, as he said to newspapers, in an alloy of tin together with it, other unknown metals; its composition was as following: high amount of tin, in great pureness---88, 91 per cent, unusual on this planet, because the tin had not the impurity of the presence of lead, antimony, iron and other ores. The chemist said that the single impurity was a high oxidation. Yet it was said that the filaments fell down in liquid form and when touching the ground transformed themselves rapidly in solid silver-colored rectangles intensely heated. The material re-collected was sent to the Brazilian Air Force and afterwards to the U.S.A.F., probably to A.T.I.C. However, the mystery yet surrounds this case. Brazil and U.S.A. governments divulged nothing about the event.

"I'm intending to realize a new examination of my cuttings, and as soon as I can I will report to you other odd cases happening in my country." --
(Letter from: Jose' Escobar Faria - Rua 13 de Maio, 1240 - Sao Paulo, Brazil, to Editor.)

"The Negatron" (Negative Proton), by C.F. Krafft.

"This recently discovered subatomic particle has about the same mass as the proton, but carries a negative electric charge instead of a positive charge, and is about twice the size of the proton. Under the prevailing doctrines of theoretical physics, such a particle cannot be accounted for. If its size is determined by its mass, as most physicists seem to think, then it should be of about the same size as the proton and not twice the size thereof. On the other hand, if it were a composite structure formed of one proton and two electrons, then its size would be over three times the size of the proton. Neither can it be a combination of a neutron and an electron because neutrons have no affinity for electrons.

"On page 36 of my book on "The Ether and Its Vortices", published long before the negatron was discovered experimentally, I have shown two of these negatrons as constituent parts of the carbon atom, and it will be observed that my negatron does have a size just about twice the size of the proton. No doubt the physics profession will eventually find some 'explanation' for the negatron, but the successful prediction of an unexpected fact is more convincing than any amount of wisdom after the fact."

- end -

(The foregoing will be reprinted in our forthcoming Round Robin of April 1,'56. It is or should be of much interest to physicists everywhere, since newspapers the world over are now featuring articles dealing with the concepts and experimental work involved).

REPLIES FROM THE YADA:

(After reading passages in Major Keyhoe's book - The Flying Saucer Conspiracy - the BSR Director made note of a few points and asked Assoc. John C. Stroebel to submit them to the Probert Controls. In the absence of Raymond Natalli the Yada di Shi'ite replied as follows (in substance - not verbatim quotation):

Q. What will happen at the close conjunction of Mars and the earth this summer? Will "saucer" sightings increase?

A. There will not necessarily be any increase. Whether the distance is 25 million or 225 million at opposition makes little difference to the Etherian people and their craft. The Yada again affirmed that the UFO do not originate on Mars or Venus, but in space (i.e., in the Ethers which equate with space. There is no such thing as 'unoccupied space' -- and cf. the 'neutral zones' described by M.K. Jessup. ml).

(Further note to "A" sup. Light has velocity in 'occupied space', as a phenomenon of our time sense; in 'unoccupied space' or 'free space' it has no velocity at all but is a permanent condition of the ethers. Light does not 'cross space' - nor do the Ether Ships do so. They convert their frequency rates and thereby emerge at any desired 'place'. A change of frequency is equivalent to a change of location. An analogy in physics is the timeless (instantaneous) 'jump) of an electron from one orbit to another. The Controls have maintained this opinion for ten years past - if I understand them correctly. ml)

Q. What is the nature of the dark areas on Mars? The Yada replied that these were storms - not oases, as suggested by some observers.

Q. What is the true nature of the canali? Reply: that these are huge canyons, similar to our Grand Canyon. (The Controls have stated heretofore that the 'canals' were huge fissures, and it would seem a reasonable conjecture that they might serve as water channels and create local areas of vegetation. ml) "The intelligences of Mars resemble us, but are not human". (Notes are not clear at this point, but more info. later. Much depends on the definition of the work human. ml).

The Martian satellites are NOT artificial ... The flares on Mars in 1937 were caused by volcanic eruptions. Some of the smog effects on earth were increased by this source. . . Yes, there is intelligent life on Mars ... The vegetation is thick and rubbery. . . There is also life in the interior of Mars ... There is no connection between the windshield pitting and the UFO, Venus, or Mars. .. The pitting is due to chemical changes along certain lines (compare 'magnetic fault lines').

Assoc. Stroebel calls attention also to a Kiplinger Washington Letter of last November: "The danger of fall-out from nuclear explosions has now been acknowledged by the highest authorities ... without any public statement". 'Facts lead to the conclusions (1) that neither the US or Russia will ever use the H bombs - and if the A-bomb is used it will be to a limited extent ...'A stalemate has been reached on the use of nuclear weapons - or is close at hand. . . Yet we will not discontinue the manufacture of such weapons -- because of mutual distrust - the core of the war-plan will continue to be the bomb, for some time to come ... The bombs will continue to stand as insurance -- as threat against threat - but they won't be used".

(WE HOPE! But there is small safety and less comfort for those who live on the crumbling edge of a precipice. A single overt act, a bad blunder, military of diplomatic... A more secure hope, to my mind, is the active intervention of the Space People ... ml)

CLIPS - CURRENT - CALAMITOUS MAYBE --

"Cosmic Ray Surge". Lon. AP 2. Feb. 22-56
A startling outburst of cosmic rays from the sun early today was reported by Royal Greenwich Observatory. A terse announcement said only that the cosmic ray intensity was more than doubled for a period of two hours - an increase far larger than ever before.

"A remarkable event has occurred on the sun resulting in a large increase in the cosmic ray intensity for a period of about two hours. The intensity was more than doubled" the announcement said. . . This appears to be the largest such increase known" the observatory said. The largest previous increase was about 40 per cent in 1949. Out bursts are fairly common but usually much smaller. . . " A major radio fade-out was reported at the same time.

"Rash of Sun Spots". Sacramento Peak Observatory. New Mexico. AP. 2-16-56.
A new burst of magnetic storms believed to be among the largest ever observed has broken out on the sun. . . The Harvard University observer at this Air Force installation said there was a huge flare seen on the sun's rim yesterday, and then a vast rash of 135 sun spots was observed.

It was almost triple the 51 storms he reported seeing when the current series began last Friday. "I would have to do some research to say it is the largest group of solar storms ever observed, " he said. "but it's certainly one of the largest." The 135 storms covered half the visible disc of the sun, he said, and the area was half a million miles across.

Explosion on the Sun. Lon. 2-23-56 AP. An explosion equal to the force of a million hydrogen bombs erupted on the sun Thursday, causing a startling cosmic ray bombardment of the earth. . . The jump in cosmic ray intensity lasted about two hours. At its height the earth was getting more than double its usual amount of cosmic rays. The increase was the largest ever reported. (Dr.Thomas Gold) described the explosion as a flare. It occurred over an area greater than the entire earth ... its power was beyond human comprehension... The body of every man, woman and child was receiving twice its usual amount of radiation. This, while differing in some respects from that of a nuclear weapon, reacts on the human body in much the same way, Dr. Gold said "but of course was not enough to do anyone any harm.

The increase in the rays hit everywhere on earth at the same time. For a 26-hour period from the time of the explosion, magnetic storms on earth will cause radio and television blackouts and hamper telegraphic communications, Gold said. . . He checked the ray intensity with two boxes each containing 45 Geiger counters adjusted to record only cosmic radiation. Before the explosion they recorded normal amounts - between 81 and 85. Then the figures jumped to 120 and on to 177, after which there was a gradual tapering off.

From these figures Gold calculated the actual number of cosmic ray particles that came through one of his boxes. At the peak this amounted to 14,160 particles.

Dr. D.W. Dewhirst, Cambridge University astronomer. said: "There are a number of large groups of spots on the sun at the moment. The largest of these, which I presume is responsible for the trouble, is about ten times as big as the earth. * This is a large spot but not a record one. The largest ever known, in 1947, was four times larger, Dewhirst said.

- end of clip -

(Sunspots usually occur in groups and are believed to have a cycle of about 11 and/or 22 years. The last period of special activity was about 1934-1945.
Dewhirst probably means that the increase in total aggregation is ml 'responsible for the trouble'.

CANCER CURES

The following is a list of cancer cures, 'orthodox' and otherwise, prepared by M. Georges Jacquel for Radiesthesie Magazine, Paris, and reprinted by PENDULUM in its issue for February 1956. The list will at least be instructive to many readers, as illustrating the range and complexity of the 'cancer crusade'.

Following this list, PENDULUM reprints an article from CLIPS AND QUOTES, Dec. 15, 1955, which summarized six of the principal treatments now in use in the United States. (Additional material in BSR Round Robin XI-5, Jan-Feb. 1956)

1. The spring of water at Volvie, near Riom-France, where there is a steady falling-off in cases of cancer.
2. The actinomycin of Waksman and Schulter, on which experiments have been made since its discovery in 1942.
3. "H-11" of Standard Laboratories, Henley on Thames.
4. The method of Prof. Sperti of Cincinnati, USA, which consists in the metabolic reconstruction of the cells.
5. The method of Prof. Robert, German specialist, follower of the principles of Carrell and Niehans.
6. The extract of muscular fibre prepared by M. Reading, in Brussels.
7. Stilbestrol with radio-active carbon, used in USA for tumours of the prostate and breast.
8. Penitaline, a new drug which has so far been used only on vegetables.
9. Toumouralyse, an American hormone treatment, made from a fungus which grows mainly in the Barvarian Alps.
10. Nostoc, an anti-cancerous alga which is found on damp walls. Krebser of Vevy has achieved surprising results with a marine alga.
11. Recent studies of Prof. Voronoff on cancer.
12. Hyaluronic acid, discovered by Meyer in the eyes of cats. Injections have brought about some good results.
13. Mustard gas - Cariolysine - for blood cancers. No details available.
14. Stilmabidine - no recent news.
15. The natural method of Kuhne, which is said to have had thousands of cures.
16. Mme. Kozlova said recently at Geneva that in Russia astonishing results are being obtained with isotopes, especially of cobalt and phosphorous, for skin cancers.
17. Another Soviet system is the anti-cancer therapy of Prof. Klouyev and Prof. Roskine, which is said to give $\frac{2}{3}$ 98 of cures even when the condition is dangerous.
18. The studies of Prof. Delbet, who in 1914 observed the anti-cancerous action of chloride of magnesium in the diet. He also commented on the danger of refined salt and sugar, which lack nutritive value.
19. ACTH has been used with success.
20. The similar methods of Prof. Zirconi and Dr. Covese, using grafts, presumably for skin cancers.
21. Discoveries of Dr. Clara Fonti of Rome, which have been giving good results for the last three years.
22. "H.365" tablets, on which Prof. Huguenin reported recently to the French Academy of Surgery.
23. Toxinal, invented by Prof. Von Brehmer.

24. The Haemoregen of the Swiss doctor Staffieri, which was tested in October
25. The cellular therapy of the Swiss Dr. Diehans (see 5 above) which 1954.
is said to give over %60 of cures. This doctor attended the Pope during the latter's recent illness.
26. Endobioh, invented by Prof. Enderlein, is said to have given convincing proofs of its value.
27. Further experiments are needed with the Max Tiegel system of warm ether.
28. The same can be said of the Rottach therapy.

29. The use of WGH, invented by the German Hammerschmid, given by injection, is extensive in Switzerland, Italy, and Germany but unknown elsewhere.
30. Radioactive phosphate of chromium has been used with success in cancer of the breast, rectum, and lungs.
31. G.E. Gruning, the chiropractor of Geneva, uses mineral extracts in the blood stream plus regeneration of the endocrine glands.
32. The ionized ozone injections are used by d'autrec the biologist.

33. The German healer Przyoeodda uses a diet rich in manganese and iron. He considers that the excess of phosphorus in cereals is a danger.
34. Isotope of strontium is used in Fribourg against cancer.

35. Radioactive Ruthenium is also used for skin cancer.
36. The Samuels Clinic of Amsterdam, which has a long record of cures. It is described in various books in English.

It should be observed that the list of cures which are prohibited varies from country to country. It is not known which of these are available in various parts of the British Empire or the United States.

The "C.Q.C. article, referred to as quoted by PENDULUM, gave brief accounts of the KOCH TREATMENT - TEH GERSON TREATMENT - THE HOXSEY TREATMENT - THE LINCOLN TREATMENT - THE KREBIOZEN TREATMENT - See Clips & Quotes E-10, of Dec. 15, 1955, pgs. 6-7. A single-page correction article with additional information appeared in Round Robin XI-5 (Jan.-Feb. 1956, pg. 11).

BARGAIN CORNER: We have 60 copies of FATE magazine, back nos. since 1948. NOT a complete file. Let us know the issues you want and we will check. PRICES: All 60 copies for $9.00 - 30 copies for $5.00 - single copy, .20. We have almost complete file (short one or two nos.) for the years 1948, '49, '50, '51, '52, 1953, & 1955.

ALSO: 13 copies MYSTIC, back issues. A complete file from issue No. 1, '53, to the current No., January '56, No. 13. Prices: all 13 copies for $2.50. Single copy, .20.

ALSO: 7 copies of TOMORROW, back issues; not a complete file. All 7 for $2.25. Single, .35 each.

SPIRITISM and the Beginnings of Christianity, by James Russell Morrell. Pocket size (4½ x 5 ¾ "), 87 pgs. We now have a small additional supply of this excellent brochure. $1.00.

TRANSCRIPT NO. 29; stenographic record of Mark Probert seances, Nine pages, size of this one, neatly mimeographed: Each, .50

If you have used books not wanted or needed, donate them to BSR with privilege of sale. WANTED: There is a River (Sugrue). Experiment with Time (Dunne. Lives of Greeks & Romans (Plutarch). Harmonial Philosophy (A.J. Davis). Travels in Spirit World (Larson). . . Others in field of BSR interests.

ml

WAUKEGAN CONTACT GROUP

According to a folder recently received, this is a "non-profit research organization affiliated with several world-wide organizations" 'engaged in the study of 'flying saucers' and related subjects . It is interested in promoting contact groups throughout the world, including radio 'hams',and amateur astronomers, and the members accept the antiquity of the UFO, but also their significance in con - nection with a coming 'new age'. The group will issue a Research Bulletin covering some 12 fields of research - $ 5.00 per year, single copy .50

Write to the WAUKEGAN CONTACT GROUP, 2135 Hyde Park, Waukegan, Ill., and ask for the folder describing their projects, and/or send .50 for an issue of the Research Bulletin. We hope to review this publication later on, either in Clips & Quotes or Round Robin.

WHAT? NOT!

In CQC-F-2 of March 1 last we drew attention to what we described as a "remarkable photograph of a huge five-sided UFO", printed in the Telonic Research Bulletin, Vol. II, issue 1. Maybe we spoke too soon; at any rate Associate Dennis Kier thinks so. He writes:

"I just received CQC F-2. In the Vol. II, No. 1 issue of the TRB the "five - sided UFO"is not a UFO. I had this hunch the moment I saw the picture, so I went to the local camera shop and asked to see the Kodak Tourist Camera. This camera has a five-sided iris opening. If you will look at the photograph you will notice that the sun is apparently just off the picture area at the upper right hand cor - ner. The camera was pointed in approximately the direction of the sun to take a picture of the bomber, and the shadow of the iris was cast on the film, much as the sun will shine through a hole in the side of a barn and cast a small beam of light on the floor. The lines directly 'behind the saucer' were internal reflections in the lens, which is the reason why manufacturers of cheap cameras will direct you not to take a picture pointing your camera into the sun.

"I agree with the TRB Editors that the picture could not be deliberately faked with that camera, as changing the angle a few degrees would give entirely different reflections, etc. "

Assoc. Dennis Kier can be reached at 370 East 33rd St. Eugene, Ore., or via BSR Hdqrs.

Dentist to young woman patient: Did you know that you have acute pyorrhea?
YWP to Dentist: Never mind how cute it is, just get along with your dentistry.
