CLIPS, QUOTES, AND COMMENTS is issued on or about the first of each month, by the Borderland sciences research Associates -- 3524 Adams Avenue, San Diego 16, California. Sample copy on request, and most back issues are available. Twelve issues for $5.00; six for $2.50; 2 for $1.00. Editor, Meade Layne, M.A. & BSRA Director.

Nota bene: As requested heretofore and due to uncertain publishing conditions, all remittances to the BSRA or any of its periodicals or brochures must carry the word Released indicatingthat no refund is expected if such publications are suspended. The BSRA is a non-profit and non-sectarian organization and serves no special interests.

(Due to illness and other unavoidable circumstances, this issue of Clips & Quotes is nearly two weeks late, This is the second occurrence of the kind, in BSR publications, during ten years. Apologies!)

(The following article by BSR Associate W. Gordon Allen appears in "FLYING SAUCER REVIEW" (London). Mr. Allen is well known as owner of a chain of broadcasting stations, K G A Y Headquarters, in Salem, Oregon.)

"SPACE CRAFT OVER OREGON -

"Salem, Oregon, August 1, 1957. The Portland 'Oregonian' (circulation about 300,000 and Oregon's leading paper) had its lead sentence read like this: 'A spectacular green fireball in a hurry gave Portland residents quite a show late Thursday before it streaked south to perform for the people of northern and central California!

"The spacecraft was seen by employees of the W. Gordon Allen radio stations in Oregon and Washington as well as by thousands of other residents of the Pacific North - west. Control tower operators at Seattle-Tacoma airport in the state of Washington first noted the glowing spacecraft. The manager of the Allen radio station in Longview, Washington, Arne Peterson, returning by auto from a midwest vacation trip, saw the start of the fire-ball's travel just a few degrees above the horizon in front of him,& sighted it from horizon to horizon in the Seattle vicinity travelling at an estimated speed of 1,200 miles per hour.

"John Truhan, part owner of K B A M with Allen in Longview, and a graduate electrical engineer and registered professional engineer, reported that it was low and slow over Longview and that porthole-like spots were seen on the side of the cigar-shaped craft. Two hundred and fifty miles south of Seattle over Salem, Oregon, the crowd at a night baseball game saw the blue or green object about half the size of a full moon trailing a trail of light or puffs of smoke. Between Salem and the Oregon - California border the spacecraft was seen to launch forward at an even greater speed than its own, some smaller glowing saucer-like craft which were visible for a short time before they disappeared.

"The sighting was down the Pacific Coast of the U.S., from the Canadian border in the north to the mid-California city and capital, Sacramento. Thousands saw the performance and all of the wire services and newspapers carried the report. Many of them did not use the word 'meteor' at all.

"Salem, Oregon, seems to be an area where the public has been alerted by radio station K G A Y which has carried a series of programs and has sponsored public lectures by UFO authorities. The public is looking skyward more and more and has been rewarded by amazing spaceship performances. The large craft's appearance was 'presaged' by an appearance for a week or ten days in the early evening of a small bright light over the airport. This was watched by many.

"Prison guards at the Oregon State Prison have told W. Gordon Allen that quite often a small light will follow commercial planes in and that they have seen these glowing objects often. Commander Neil Bryant of the Naval Air Facility encountered two of the small saucers on one of his plane flights last Fall. His daughter saw a thirty-five foot craft within a few feet of the ground near Corvallis, Oregon, in May, and she had four women in the car with her as witnesses to the phenomenon. She stated that it was a bell-shaped craft similar to those Adamski saw.

- = = =

UFO sightings in the area of the different craters of the Moon as well as locations of the domes, bridges, and other evidences of spaceman construction efforts. This enthralling chart can be obtained by sending $2.00 to: K G A Y, P.O. Box 768 -- Salem, Oregon. -- Sterling area cost is one pound.

- -

RADIATION SAFETY AND MAJOR ACTIVITIES IN THE ATOMIC ENERGY PROGRAMS. July-Dec. '56.

This is a publication of the United States Atomic Energy Commission, Jan. 1957. 396 pages. Many illustrations, graphs, tabulations etc. For sale by the Supt. of Documents, U.S. Givt. Printing Office, Washington 25, D.C. Price $1.25.

ORGANIZATION AND VISTAS OF THE ENTIRETY -- A PERIODIC TABLE, BY I. BROWNING. REPORT NO. 98 - 001 -- DECEMBER 1956. -- THE BELL AIRCRAFT CORPORATION, BUFFALO 5, NEW YORK -- RESEARCH DIVISION.

BSRA HDQRS. is in receipt of a copy of this unusual publication, along with a note from one of our 'Contact Associates' which reads in part as follows: The Director of Research has given me permission to send the enclosed booklet to you, with permission to print notice of it. It is not easy reading for the general public. . . The booklet in no way indicates or wishes to imply that Bell Aircraft Corporation is conducting research in unorthodox fields, (but) in attempts to plot such fields of research as radiesthesia, psychical research, dowsing phenomena, radionics etc., it became obvious that they had no place in the established and recognized disciplines - consequently the PSYCHO- category arose.

"That a commercial organization has seen fit to expend effort in charting the disciplines of man -- and in such charting has seen fit to include the unorthodox, is ceetainly a good sign and indicates that the thinking is quite aware of the situation. But as yet there is perhaps only a status of quandary as to what to do about it."

This booklet is a beautifully prepard publication of 25 pages (8½ x 11"). Those who wish copies may secure them from BELL AIRCRAFT CORPORATION - RESEARCH DIVISION - on request, Buffalo 5., N.Y. The supply is limited & BSR Hdqrs, cannot handle.

- -

THE NATIONAL HEALTH FEDERATION BULLETIN is highly recommended (as often in the past) to all BSR Associates and their enlightened friends. The present issue is Vol. III - Nos. 6-7 (July-Aug. 1957). Turn to "A Cancer Victim Speaks", (pg.12) et al. Single copy .15 ; subscr. $2.00 year. Pub. at 2454 Van Ness Ave., S.F. 2.

BIOLOGICAL EFFECTS OF ATOMIC RADIATION: A REPORT TO THE PUBLIC: 40 pgs.
Same title, but headed SUMMARY REPORTS . . . . . 108 pgs.
Both issued by National Academy of Sciences, National Research Council, Washington 25, D.C. 2101 Constitution Ave. - 1956

For: Principles of Isotope Utilization (6 pgs): Uses of Isotopes, in medical research, therapy, and diagnosis (30 pgs): Uses in agricultural studies (43 pgs) Address Supt. of Documents, Govt. Printing Office, Washington 25, D.C.

- - - - -

N.B. THAT THE OCTOBER ISSUE OF INSIDE STORY MAGAZINE contains two excellent articles dealing with an 'unorthodox' cancer treatment, - pgs 49 & 54.

MIND AND MATTER: A quarterly journal, Introductory Number, Vol. 1, No. 1 -- June 1957; about 50 pa ges; 'slick paper'; published by George de la Warr, De la Warr Laboratories, Raleigh Park Road, Oxford, England. Annual subscription, 30 s, post free; $4.50 post free. The June issue contains a number of important photographs. See paragraphs below for comment on De la Warr's discoveries.

NEW WORLDS BEYOND THE ATOM: By Langston Day with collaboration of George de la Warr; Published by Vincent Stuart, London, Sept., 1956. 136 pgs., 25 s. (A record of Mr. de la Warr's work in radionics, 1942 - 1955. This book, of course, integrates with the new quarterly journal Mind and Matter mentioned above; both demand serious attention and open new worlds of knowledge and speculation).

TOWARD THE HEREAFTER: by Reginald M. Lester. Citadel Press, New York. 1957. 191 pages. $3.75. A sequel to the author's "In Search Of The Hereafter". Devoted to a study of the various mental and 'spiritual' therapies and accepts the basic concepts pf spiritism (survival and communication). An admirable presentation. In the book just referred to, Mr. Lester devotes some eight pages, under the chapter heading of Cosmic Therapy, to Mr. de la Warr and his collaborators and the significance of their fifteen years of research. A few quotations follow:

(pgs 84 - 85) ". . . George de la Warr is a nuclear physicist and a man of very deep sincerity. Some years ago certain scientists who had passed over materialized in full form to him and his wife and gave him directions about the research work.... For thirteen years he devoted his full time and labor to this remarkable research (of) investigating the radiations from organic matter in magnetic fields. The results showed that under certain conditions there is a state of resonance between the blood specimen and the patient. . . Tissues emit energy wave forms consonant with their own cell structure, and a disease radiation is additional to that of the normal cell. A technique was worked out enabling very precise diagnosis to be made. A remarkable camera ... was able to photograph the condition of any cell group in the body, re - cording not only the pathology but the regional tissue as well ....

(86 - 88) "... . The patient need never come within miles of the camera; all that needs to be photographed is the blood specimen ... This discovery can be used for preventive treatment ... It can show a disease such as cancer that would develop four or five years hence if no preventive treatment is employed. . . A photograph of aconite pills showed a complete aconite flower (resonance between the juice of a plant and the plant itself. . . What de la Warr is doing, of course, is working out- side time and space - in the fourth dimension. It does not matter how many years ago a blood specimen was taken ... Backward and forward in time has no bearing at all.

"Not every operator with the camera can get equally good results ... the quality required in the operator is a certain amount of psychic sensitivity, which I a m sure is always a requisite where one is dealing with fourth-dimensional research.

(pg 88) ". . .Considerable care has to be taken in orientating the radiations. The person whose blood specimen is being taken is telephoned at his home -- or, if too far away, a given time is prearranged with him - and he has to rotate his chair until he is facing in the position suitable to him. The blood specimen is similarly rotat- ed until the critical position for resonance is obtained with the patient in that position. Here are some of the actual experiments I saw. One was a photograph taken of the patient's blood specimen by the camera at Oxford, while the patient himself was in a London hospital. The developed plate clearly showed the lungs and that they were tubercular. The diseased tissue showed white on the print (black on the negative).

The U.F.O. INVESTIGATOR": ("Facts About Flying Saucers") -- published by the National Investigations Committee on Aerial Phenomena -- (Address: 1536 Connecticut Ave., N.W., Wash., D.C.) -- A few topics are:

I-1-'57

"Four Saucers Over California At Speeds Up To 3,600 M.P.H. Revealed In Radar Report Certified By N.I.C.A.P. Board Members"; "8-Point Plan Offered Air Force"; "British UFO Reports Kept From Public for 3 Years, Air Ministry Admits";"Sighting Comvinces Former Navy Pilot That UFO's Are Interplanetary Machines"; "Army Rescinds Censorship Order After NICAP Protest"; "Immunity Asked For Armed Forces Pilots Who Report UFO's To NICAP"; "Faked Press Wire Stories Planted In Attempt To Discredit NICAP";"Missile Expert Pilot Reveals Details of Earlier UFO Sighting"; "First Officer W.R. Peters of Pan-American Airways",(who says: 'I feel that NICAP is definitely needed to evaluate and collect information about UFO's and to make its findings available to the general public', in accepting appointment as a Special Adviser.);--"Statement by General P.A. Del Valle"; "UFO Sighted From National Airlines Plane Near Norfolk"; "Was Ruppelt Book Cleared?"; "National Magazine Offer To Print 'Truth About F.S. Turned Down By A.F."; "THE FLYING SAUCER STORY"--A History of UFO"-; "Pan-American Airliner Case Still Unsolved, says CAB".

We also quote the following short article: "New Space Particle Theory May Upset Scientists: A new discovery about electrified space particles, which may add to the difficulties upsetting the artificial satellite program has been reported by the scientists of Stanford University. (Until this report was made, it was generally assumed by scientists that the electrified particles surrounding the earth extend up approximately 200 miles. Now, according to Prof. Robert A. Helliwell and his associate Ernst Gehrels, these particles not only extend at least 6,000 miles into space, but are far more numerous than previously believed.

"The discovery was made with the assistance of the powerful Navy radio station at Annapolis, Maryland . Using a radio receiver at the southern-most tip of South America, Mr. Gehrels recorded normal and 'ghost' signals from the distant station. By measuring of the time intervals, Mr. Gehrels and Dr. Helliwell determined that the signals had travelled thousands of miles into space and then had been turned back by something in what had been presumed to be empty space.

"Under these conditions the artificial satellites will encounter more matter in space than anticipated by the scientists of Project Vanguard. In addition, the new discovery changes present beliefs in regard to magnetic storms and the auroras, and the puzzle of how sunspots and other solar disturbances affect the weather on earth.

"The discovery also emphasizes the fact that despite years of effort by astronomers and other scientists we still know very little about our own atmosphere at higher levels -- and even less about outer space. The hopes and aims of the U.S. government in regard to future space flights, as well as missile operations, have been officially expressed by our United Nations Ambassador, Henry Cabot Lodge, in the U.N. General Assembly.

"Though the statement was made in January, it did not receive wide publicity, and the"UFO INVESTIGATOR" believes it will be of interest to NICAP members. . . ."

Monthly -- membership and subscription - $7.50 per year. -- 32 or more pages, plus special Bulletins from time to time, and other privileges of the NICAP organization.

TO the Society of Metaphysicians

To the Hon. President John J Williamson - The Hon. General Secretary Arthur H. Bird - and the Council of the Society

I wish to express my deep personal appreciation of the honor accorded me as National Director of the Borderland Sciences Research Associates, by the conferring of the Grade of HONORARY MEMBER (4th brother so chosen), and for the words of approval and cooperation accompanying the Certificate and also appearing in DIGEST Volume IV No. 1.

I am deeply conscious that this distinction is a gesture of friendship by the Society which is personal only in a minor sense, but directed toward ALL BSR Associates - whose interest and help have made the BSR possible. Since the BSR has never instituted any system of grades, Degrees or Orders, the best return we can make will be a friendly and active interest in the activities of the English society - and this we bespeak for our friends 'over there' and for their numerous groups and centers throughout the world. The HDQRS for Great Britain - once again - is at Archers' Court, Hastings, England.

This note, then, is somewhat in the nature of an open letter, to keep our Associates informed, and to express our appreciation to our friends over-seas. There is an increasing and indeed a critical need for mutual understanding, and the basic agreement of ideas already existing between the Society of Metaphysicians and the BSRA should offer a good foundation for many worth-while activities.

(M.L.
National Director
B.S.R.A.

"BUCK NELSON'S STORY: -("The Saucerian Bulletin", Box 2228, Clarksburg, W. Va. -- -Vol. 2 - No. 3 -- Released August 15, 1957.) -- "Buck Nelson's Old Age Pension Has Been Taken Away From Him because of his publicizing alleged visits by space people. We quote from Nelson' s letter: 'I was receiving what is called a permanent, total disability pension. I understand the state pays half and the county half, though the check is made out by the State of Missouri. Edna Haggard, my case worker, came to my home and said to me, 'Anyone who saw a flying saucer, or said they did -- and especially anyone who said they rode in one os CRAZY.' She was very mean and ornery to me. What I had to take from her was a shame. She said I would have to take an examination for my sanity to get my pension back, but said she thought I would NEVER get it back. She said they would even put me in an insane asylum to stop my story, and that they would starve me out and force me to shut up that way.

'"My pension check was for $55.00 per month, and I thought that was nearly starvation living. Now I do a lot worse and live on much less.' Nelson adds that, 'someone phoned me to say that Senator Capehart may call some public hearings on CONTACTEES and that he had heard one of my tape recordings. I may be called a Communist and considered one, because I am against war and the bomb tests. I sure am NOT.'

"Incidentally, the address of Nelson's case worker is: County Welfare Office, Houston, Missouri."

"Close behind this letter from Nelson came another of equal interest, and we must take space to quote from it: 'I am having more trouble, Mr. Barker. It seems like they won't leave me alone. I have been working on a plan to get lights and power from the air -- FREE POWER. A sort of private SAUCER CONVENTION was held at my place here June 29-30, which about 50 people attended. At this Convention I made the statement that I was working on this free power, and that I had succeeded in obtaining enough power to burn out light bulbs, but had NOT found how to control it, as it came in spurges, and NOT in a steady flow. The people at the Convention were very interested in my discovery and wished me well.

"Then on July 4th three men called on me, demanded my blueprints and equipment. I refused to give them these, and then the men said they did not have time to argue with me, and started to find gasoline and coal oil to burn me out, said a bad accident would leave no ecidence, and also get rid of me, thus stopping my story a n d free power invention all at once. So I gave them the drawings and equipment.

"After they looked the material all over, the men said I was on the right track, and coming too close to this FREE POWER. They told me NEVER to work on the project again, and let it entirely alone. They said if I did, and they found out about it, I would have a bad accident. The men seemed to know what to look for when examining my equipment. They took not only what I used in the experiment, but also lots of extra wiring, sockets, etc., which they said could be used. So I lost lots of electrical equipment in this steal. I don't see why I always have to be the goat.'

"So there you have Buck Nelson's amazing narrative. Although not every saucerer has believed Buck Nelson's experiences, most everyone admits his narratives have been interesting. Nelson's book, 'My Trip To Mars' The Moom and Venus' (paper bound) is now out, and THE BULLETIN has arranged to supply them to readers at $1.00 each. This is a complete account of Buck's alleged space exploits ar' encounters with saucer men. You can send in your order immediately..."

"OLD RELIGIONS MADE NEW" * -- ". . .If we worked from data rather than from interpretation, the time is now ripe for developing a purely mechanical communication between this state of being and the state of being known as the spirit.

"I do not say just the form this mechanical connection might take. Invention is to determine that. It might be many sided, touching sight, sound, and perhaps other senses as well. But it is time that we went after definite information concerning this world that they have told us about for forty centuries. Here is a field of work that will transform religion from a matter of controversy to scientific experimentization for practical returns. Even should there be no definite statement in words, the fact that many might take up the work would within itself constitute a new statement of religion. And it would look toward demonstration and power. (pg.46)

". . .And of what significance will doctrines about Heaven and hell be when we may learn exactly what the result of human good and evil is on future existence? What will dreams about bliss beyond be, in the face of a history and geography of Heaven, with full knowledge of its inhabitants and their social and industrial activities, taught us in the public schools? If the ministers have taught their fancies rather than facts, it will then be their work to correct their teachings, rather than the care of the informed to deny or listen to their theories. We shall, in the new order of religion, prove all things, and hold fast that which is good. He will be a teacher who can impart accurate and definite information or show us how to do things so as to be able to exercise full spirit functioning. If he is indefinite or fumbles, he will not be chosen to teach. (pg. 56)

"Naturally, this involves the passing of the minister, as he is known today, and of the church. The church has been an organization for service during a period when private business was dominant. It had its capital stock of doctrines. It had its customers or communicants. At the same time, it was the beginning of cooperation. The completion of its work meant a finished cooperation in which the partial cooperation would necessarily pass away. But the change will be no more startling than was the change that came when spirit-rule was superceded by man-rule, and the sacrificial priest passed to give place to the teacher. And in saying that the church must pass, it must not be gathered that it is desirable to oppose the church. It is as foolish to assassinate an institution as a man, seeing that in time both are doomed. So long as the church remains, it is proof that its work is not entirely at an end; and while it serves, even though incompletely, it has a right to live." (pg 57)

". . . Hell, Heaven, future rewards and punishment. If we can really open the world of spirits we shall actually know of these things, and there will be no need of arguing the matter. If we have misunderstood the scriptural teachings relative to them, let us first get the facts, and when we have them, the teachers will quickly correct their interpretations to fit the facts. Everywhere the bars are being let down to bring all humanity into one fold. Experience and the social life are the keys to the situation. Everywhere the things that made religion hard are being smoothed out, and the unnecessary thing is being abrogated, as sacrifices were abrogated a few centuries back, in order to make religion practicable for all. . ." (pg 61)

---

* The title is that of a small book (90 pgs., 4½ x 7"), by Lincoln Phifer, pub. by The New World in 1918, publishers' price .50. Probably long OP but to be highly recommended for both insight and common sense. Our thanks to Assoc. H.A. Cronk, 2465 Territorial Road, St. Paul 4, Minn., for the copy sent to us. (Further information pending).

WE ARE in receipt of a reprint by the SATURDAY REVIEW of the "Schweitzer Declaration", formerly issued on April 24 by the Nobel Prize Committee in Oslo, Norway. - We do not have space in the "Clips, Quotes, and Comments" to reprint the document, but we do print a comment from our Associate, Rolf Telano, by whom the print was sent to us:

"The enclosed reprint is being sent you instead of the regular summer issue of the 'VOICE', which has been delayed by a heavy load of correspondence, etc. The readers will gain by the substitution because the 'VOICE' could not publish anything as importnat as the 'DECLARATION'.

"There are two popular, but very dangerous, misconceptions which might well be mentioned at this time. These are, unfortunately, being promoted in high places in our government, either through ignorance, political expedience, or by wishful thinking which blinds them to scientific fact. These are:

" (1) "ATOMS FOR PEACE". --- The waste products from any atomic power plant are just as deadly in the water and air as those released by bomb explosions. Plans for widespread atomic power generation are, therefore, dangerously fantastic and any 'atoms for peace' program would be just as suicidal as further bomb tests.

" (2) "CLEAN BOMBS". --- The end products of nuclear fission and fusion are, by the very nature of the processes, deadly radioactive. In the miscalled 'clean' bomb the initial low-level fallout is apparently less in the immediate vicinity of the explosion, but this is relatively unimportant. The stratmospheric contamination, which is the real threat to future generations, is as serious as any of the previous bombs. The 'clean bomb' propaganda is merely a clever play on words and a cruel hoax on mankind."

"Additional copies of this reprint can be secured from "SATORDAY REVIEW", Reprint Department, 25 West 45th St., New York 36, N.Y. Price: $ 5¢ each, $3.50 per 100, or $30 per 1,000. Add postage for less than 5 copies. Remittance must accompany your order. "

"THE SAUCERIAN BULLETIN" (now combined with "Cosmic News"), now appears as a six-page publication, 8½" x 11". Current issue is Vol. II - No. 5. Release of August 15, 1957. Editor, Gray Barker --- P.O. Box 2228, Clarksburg, West Va. -- Sample copy, .35 -- 6 issues for $2.00. Also, "Can supply all Saucerbooks". Usually contains novel and exclusive UFO data, "verified by investigation".

"THE DEAD SEA SCROLLS", by Theodore Heline. (The Essenian Forerunners of Christ). Printed 75-pg. booklet. Price $1.00. - Published by The New Age Press, Inc., 1544 Cerro Gordo St., Los Angeles 26, Calif. (An admirable treatment by a competent scholar and writer.) - - - - - - - - - - - - - - - - - - -

"CHEMIST WARNS OF H-TEST MENACE. Chicago (UP) At least 1,000 persons will be killed if Britain goes through with its proposed Christmas Island H-bomb tests, Nobel prize-winning chemist Dr. Linus Pauling predicted last night. Pauling, in a plea for an immediate halt to hydrogen weapons tests, said radioactive fallout from the British explosion would cause some 1,000 fatal cases of leukemia around the world.

"And if a ban is not placed on all hydrogen weapons tests, Pauling continued, the coming generation can expect to give birth to an additional 200,000 feeble-minded children. "That may not sound like a large percentage of all the children in the world," Pauling said, "but from a humanitarian standpoint it is a very great number."

"The biochemist won the Nobel Prize for chemistry in 1954 and holds honorary doctorate degrees from 13 universities, and the presidential medal of merit for out - standing service. He said he is certain the human race "could not survive" an all-out hydrogen war "and still remain the human race." Pauling made his remarks at the end of a technical address before the Chicago section of the American Chemical Society. He later said that in addition to his leukemia estimate, he had been told British scientists themselves predict the Christmas Island tests will cause about 20,000 cases of bone cancer around the world.

"I realize the hydrogen bomb test question is a political issue and I am a scientist, but even from a political viewpoint I think the tests should be stopped -- or at least world regulated." The California Institute of Technology scientist said he disagrees with those who claim continuation of the tests is a deterrent to a world war. "On the contrary," he said, "Unless we have world control on hydrogen weapons I fear more countries than just the United States, Russia, and Great Britain will get them." He said nuclear tests cause the greatest damage through mutation of genes, the microscopic organisms which determine heredity.

"Pauling said it also is his conclusion that, in a general sense, nearly all diseases are molecular in origin and chemists can do much toward aiding doctors i n research and in bringing "more pure science" to medicine."-(San Diego (Calif)"Tribune" April 30 , 1957).

"NEW HEREDITY HAZARD FROM RADIATION TOLD. (From the Santa-Barbara News-Press, 22 April, 1957.) (Washington, (AP) The possibility of a hitherto-unsuspected hereditary hazard from atomic radiation was reported today by an Atomic Energy Commision scientist. New evidence from mouse test, reported Dr. W.L. Russell, suggests the possibility that radiation may tend to shorten the lifespan not only of the person receiving it but also of children sired by exposed individuals. Up to now, shortening of the lifespan has been considered a potential hazard only for persons directly exposed. Dr. Russell, chief geneticist in the Biology Division of the AEC's Oak Ridge National Laboratory, prepared his report for the Spring meeting of the National Academy of Sciences. He said the life-shortening effect showed up in the first generation off-spring of exposed mice.

"Describing test made of male mice exposed to 'moderate doses' of acute neutron radiation from a nuclear explosion - presumably at one of the Nevada tests, Dr. Russell reported these results:

"Length of life in off-springs of such mice was shortened by six-tenths of a day for each roentgen received by the father in his reproduction system. If the same ratio were to hold true for humans, he siad, it would give a 20-day shortening of a child's life for each roentgen of radiation received by the father. Conditions

(contd) -- under which human beings would most likely be exposed might make the effect 'somewhat smaller', he said. 'However,' he continued, 'it seems likely that even when allowance is made for the conditions of human radiation exposure, shortening of life in the immediate descendants will turn out to be of a magnitude that will warrant serious consideration as a genetic hazard in man.'

"Between 400 and 600 roentgens received at a single dose and by the body as a whole would be lethal for most people. Some of the Marshall Islanders accidentally exposed to fall-out from an H-bomb test received 175 roentgens."

--Say, isn't there something about 'Thy days will be shorter in the end times', in the Bible!! --
(We are indebted to Associate Geo. C. Wilson, 718 Rametto Road, Santa Barbara, Calif. for the foregoing clip and comment).

U.S. CUSTOMS LATEST STUPIDITY. (From "TWO WORLDS", newspaper of England). "U.S.A. Customs Ban Healing Box . -- George de la Warr, who has achieved fame through his radionic apparatus which heals at a distance, came into the news last week when the American Customs confiscated a consignment of his machines which he recently shipped from Britain. He was, said the "Daily Express", particularly angry because U.S. government scientists who took one machine t o pieces claimed that behind an imposing facade of dials, knobs, levers, and buttons it was full of sawdust.

"I could sue these people for saying these machines were full of sawdust," de la Warr told a reporter. "It is not true. They do not understand the force by which the apparatus works. Therefore, it might just as well be sawdust to them." He showed the reporter one of his machines -- he calls it a radionic stimulator -- by which he has detected and cured human, animal and begetable diseases by remote control. De la Warr told how the apparatus could stimulate barren soil into fertility adding, "I have cured diseased carrots in Scotland and improved Rhodesian tobacco crops by using it right from here." His laboratories are in Oxford, England. The machine, he said, can detect minerals in the soil. Other apparatus he uses c a n photograph disease in a person even before the individual knows he is ill -- and it can photograph thought.

"He explained that his apparatus works on the principle that every living thing has an etheric self. The machine exerts its healing influence on the etheric self. All that is needed in human treatment is a hair from a patient's head or a drop of his blood. De la Warr showed the reporters the inside of one of his machines. He described it as a 'complicated mass of wheels, plates, and coloured discs. There was no sawdust.'

"In De la Warr's view, the Americans were jealous of being scooped by his machine! (from Associate Wing Anderson, Los Angeles, Calif.)

- -

"SNOWMAN Exists", Says Tex. Hunter. (From San Diego, Calif., "Evening Tribune", - April 19, 1957).-- "Katmandu, Nepal (UP) -Texas oilman Tom Slick reported today his Yeti-hunting expedition in the Himalayas left him '95 per cent convinced' that an 'Abominable Snowman' exists. He said he photographed 3 sets of footprints measuring 10, 10½ and 13 inches. He said 'We also collected some hair believed to be from the Yeti and recorded some very convincing eyewitness accounts of encounters with the Yeti.' He said his party examined some yaks which were reported to have been 'mangled and killed' by the Yeti."
