CLIPS, QUOTES, and COMMENTS is issued on the first of each month, by the BORDERLAND SCIENCES RESEARCH ASSOCIATES -- 3524 Adams Ave., San Diego 16, California. Sample copy on request. Most back issues available. -- Twelve issues (12 months) - $5.00; six issues (6 months) - $2.50; two issues for $1.00.

Meade Layne, M.A., Editor and BSR Director.

"THEY KNOW YOUR ATOM. --- Dr. George Schweitzer, atomic scientist of Oak Ridge, and active Christian layman, has prepared the following outline of the history of the atomic power, revealing how recent have been the astounding discoveries that are destined to change life on this planet. This is data that should be familiar to every informed person:

" (1) In the early 1890's the Curies and Becquerel began the first experiments in radioactivity, which basically consists of certain substances that kick off tiny bits of matter and energy such as the X-rays, etc. (2) In the early 1900's radioactivity found to be due to certain kinds of atoms -- infinitesimal particles that give off matter and energy. Experiments to discover what kind of atoms are radioactive re - vealed that uranium, plutonium, etc., were 'hot'. (3) In 1919 to 1932 experiments were made to learn what nature had previously done in exciting atoms of almost any element to make them radioactive, to make them kick off bits of matter or penetrating bits of energy. (4) In 1932 and after, the neutron, or atomic bullet, w a s discovered. These atomic bullets are shot into all kinds of atoms, thus making them radioactive. By 1939 neutrons were shot into uranium atoms, splitting them i n t o two big pieces, not just a chip, but 'fission' which gave off tremendous energy. In 1942 proof was found that a large number of uranium atoms could be split together, and on July 16th, 1945, the first atom bomb was exploded in Alamogordo, New Mexico. In early August, A-bombs were dropped on Hiroshima and Nagasaki.

"The back-ground of the H-bomb: It was early known that large amounts of energy are given off if light elements, hydrogen, lithium, etc., were melted together, but extremely high temperatures were needed to do this melting --- millions of degrees. No source for such temperature was known until it was found that the atom bomb could act as a fuse, for the plutonium, when in fission, creates enormously high temperatures. In 1951 the first H-bomb was successfully exploded by the use of the plutonium bomb as the 'trigger'. The H-bomb is at least 100 times as powerful as the A-bomb, equivalent to at least one million tons of TNT. While atomic bombs (plutonium) are limited as to size, there need be no limit to the size of an H-bomb. An H-bomb dropped on either New York or Washington, D.C., would destroy the whole city, kill immediately all persons within a twenty-mile radius, melt all metals, exhaust all oxygen in the air, dry up all the water in the Hudson River or in the Potomac, or bring the nearby ocean to a boiling point. Earthquakes and winds would sweep many miles in all directions. Deadly radio-dust would be sent out over 7,000 square miles. The total deaths in any such instance would run into the millions. Half the people in cities within 100 miles would be killed by the poison dust created by the enormous hole torn out of the heart of either city. The poison dust would follow a cigar-shaped pattern approximately 160 miles long and many miles wide.

"A cobalt bomb could be made, but this would be so all-destructive that only an insane leadership would ever attempt it. The facts about the cobalt bomb: T h e technique is simple --- merely make a shell out of cobalt metal instead of steel to surround the hydrogen or atomic charge. Such a cobalt bomb would create a large cloud of radioactive cobalt dust. If the explosion took place off the Pacific Coast 1,000 miles out, it would reach California in one day, cross the continent in three to six days and kill almost all ife, plant, animal and human. The cloud of vapors would continue to spread and kill for several hundred years. Slow death by radio-active poison would fill the air, earth, and water.

"Atomic scientist (including Albert Einstein whose forecasts were very accurate ob all scientific matters) have felt that there is the theoretical possibility that an H-bomb, if large enough, would set off a chain reaction that would encircle the globe in a few seconds, turn the earth into a little sun, so that the whole planet

would become a glassy, barren, semi-molten ashen mass. U.S. political-military leadership endeavors to keep the totally destructive aspects of atomic weapons secure from general public knowledge to prevent hysteria and panic which might at times hinder the defense program.

"PEACEFUL HYDROGEN: The biggest problem that remains in taming the force of the hydrogen bomb for peaceful purposes is that of finding a method to contain the enormous heat that must be generated to control fusion reaction. Reports in authoritative scientific publications indicate a firm conviction that a solution to this problem is not so far away. Temperatures of unbelievable intensity -- 20 to 40 million degrees -- are required, and no material known to man will withstand such temperatures. Scientists now believe that the masses of hot gas can be generated and contained by means of electronic and magnetic forces.

"Dr. Richard Post, writing in the "Review Of Modern Physics", details the conviction that if a magnetic field is created of sufficient strength, the electrical particles caught in the hot gas will not escape but can be made to whirl around in tight spirals about the cloud of gaseous hydrogen. The 'reactor' thus becomes a cloud of whirling vapors with a core hotter than the center of the sun, an enormous discharge tube surrounded not by glass or any conventional material, but by a magnetic field. The power and heat available in such action is beyond belief. Dr. Post believes that uranium, and even thorium, will not long meet the need for atomic power in the coming years and that success in thermo-nuclear research offers the needed power resources.

"The Atomic Energy Commission has been so coy and pontifical about letting the public know what is going on in non-military phases of atomic research that such information from an authoritative source represents an important break-through." -- (From "The Wells Newsletter" (March 1, 1957) - Published at: 152 Madison Ave., New York 16, N.Y.)

- - - - - - - - - - - -

EXCERPTS from letter, Hugh A. Brown, to C.Q.C. Editor:) --" 'The North Pole is today 18% heavier than the South Pole', appears on page 4 of ROUND ROBIN, for January-February. I marvel that anyone can figure so precisely. Yet Professor A. Nahon, of Lausanne, Switzerland quotes Professor Axel Hellenborg of Sweden with apparent seriousness.

"The facts are that there is an ice cap at the South Pole which weighs approximately 19 quadrillion tons (19 with 15 zeros - an astronomical figure). At the North Pole there is an ice sheet of nearly the same area as Antarctica; but the ice is only 8 to 16 feet thick, except where rumpled into hummocks. Greenland and the Arctic islands are 400 to 500 miles from the Pole.

"The weight of the South Pole Ice Cap is arrived at, by arithmetic, from the statement of the U.S. Coast and Geodetic Survey - 'There is enough ice at Antarctica to make a layer 120 feet deep, if it were spread uniformly around the globe.' It is also readily checked by assuming a pyramidal cone with height of two miles and base 2800 miles in diameter, with each cubic foot weighing 57.5 lbs. . ."

We again call attention to THE GREATEST PUZZLE OF ALL, by the well-known writer and investigator the late Clarkson Dye - the "puzzle" being the neglect or denial of all-important data in the field of psychism, survival of death and communication. This is a 77-page book, neatly printed and bound, large type - an excellent first book for newcomers. $1.00 each, or 3 copies for $2.00 (gifts for friends). NSRA Hdqrs.

POST HOC ERGO -- ? ". . . We have not, however, the right to indulge in any particular joy -- and for a good reason! Between March and September, fifteen atom or hydrogen bombs were exploded. Results: epidemics of polio - myelitis, typhoons, devastating tornadoes, earthquakes, catastrophic rains, a r e multiplying. In Northern India, a million homeless as a consequence of floods; the basic foods of the Indian population reveal a more than average degree of radio - activity; meadows in Germany are dangerously radioactive; cherry trees and apple trees, along with other plants in France, are burned; a mysterious illness has made its appearance in Switzerland; an invisible cloud, an agglomeration of radioactive dust, is revolving round the earth, constituting a grave menace, and it will b e fourteen years before it is completely dissipated. And the military meteorologists of all the great powers are amusing themselves by studying the modifications o f temperature and of the weather produced by atomic explosions, in the hope of evolving a new weapon intended to produce tempests! While the German government decides to take measures in order to fix the degree of radioactivity in rivers and lakes at which bathing becomes dangerous. Professor Hexel declares, 'Even if the immediate cessation of atomic experiments was obtained, the effects of those of these last years would continue to make themselves felt for another fifteen years.'

"Several states have addressed protests to the United Nations organization: Atomic crimes continue, none-the-less. Russia accelerates the production of nuclear weapons, and Great Britain expects to explode next Spring two or perhaps four hydrogen bombs.

". . . But how could one not know and not believe that earthquakes are multiplying and having terrific consequences? (Tokyo, Feb. 14th - Turkey, Feb. 20th. - Isle of Santoin, July 9th.) How could one not know and not believe that the Russians - and perhaps also the Americans - have several times secretly exploded SUB - TERRANEAN atomic charges? (Article by Pierre Devans in 'Le Figaro', July 13,) How could one not know and not believe that the new International, that of 'official' scientists, plans to explode, in the course of the year 1957, from 300 to 700 meters underground or under the ocean, four A and H bombs, in order to produce four gigantic earthquakes - this by way of experiment? (I emphasize 'it plans to', because 'twen now and then much water will have passed under the bridge.) How would one not know and not believe that according to analyses of ardioactive dust and atmospheric disturbances registered in Japan eight secret thermo-nuclear explosions have taken place since that of May 21st., to such a point that the Japanese government has demanded explanations from the United States, in view of the uneasiness prevailing among fishermen and maritime companies? How could one not know and not believe that the deterioriation off the seasons, and particularly of last 'Summer', as well as various catastrophies are attributable to an accumulation of the effects of some 150 explosions since 1945? How could one not know, and not believe, since scientists assure us of the fact, that the danger of radioactivity is greater in rain-water, dew, and snow , than in air? How could we not know, and not believe, that the American director of Army Research, General James M. Gavin has just declared before a Commission of the U.S.A. Senate that an atomic raid by America upon Russian territory could have as a consequence, the death of hundreds of millions of persons upon Allied territory, according to the direction of winds blowing over radioactive snow?

"How could one not know and not believe, that 51 laureates of the Nobel Prize for Sciences declared on the first of July, last, 'All nations should voluntarily re - nounce the use of this force as a final means of policy, otherwise they will cease to exist?' How could one not know or not believe that a fresh epidemic of sudden

deaths has occurred in Japan, in which the patient dies after twenty minutes of horrible nightmare? How could one not know and not believe that at least forty thousand atomic bombs are in existence throughout the world.... and that it only needs a madman.....? How could not know and not believe that an actual radioactive neurosis extends throughout the human race? (See CATACLYSM HAS BEGUN! for prediction of this on statistical data.) ---("Le Courrier Interplanetaire", British Edition - Nos. 21 - 22 -- pgs. 27 - 29.)

- - - - - - - - - - - - - - -

- AFTER TEN YEARS!! . . . . "Fate" magazine (quoted by UFORUM, Vol. I - No. 9) -- prints the following:

". . . The nine-man board of governors of the National Investigations Committee on Aerial Phenomena (NICAP, with headquarters in Washington, D.C.), is going to launch a detailed scientific investigation of flying saucers because they feel that 'there exists more than enough evidence of certain and obvious aerial phenomena to justify independent evaluation.'

"The board of governors is comprised of the following men: Dr. Charles A. Maney, professor of physics at Defiance, Ohio, college; Rear Admiral Delmer C. Fahrney, USN-retired; A.M. Sonnabend, president, Hotel Corporation of America; the Rev. Albert H. Baller, Robbins Memorial Congregational Church, Greenfield, Mass.; Brig. General Thos B. Catron (retired); Frank Edwards (famous radio-TV commentator), Indianapolis; Talbot T. Speer, Speer Foundation, Baltimore and Maryland Publisher; the Rev. Leon C. Levan, New Jerusalem Christian Church, Pittsburgh; and Col. Robert Emerson, USA-retired, nuclear physicist of the Kaiser Aluminum Co., Baton Rouge, La.

"General Albert C. Wedemeyer, USA-retired, will sit with the Committee as an evaluations advisor. The Committee's first investigation will be known as 'Project Skylight'!

"The Committee states that: 'Under no circumstances shall there be any form of so-called secret classification of the Committee's findings, or restrictions as to their dissemination.'

"Add to the above list such men as William P. Lear of Grand Rapids, Clyde W. Tombaugh, famous astronomer, and Air Chief Marshall Lord Dowding of England, and we have a very impressive list without going any further. There are other well-known people interested in the mystery of the Saucers, but let us see what some of the aforementioned men have to say regarding unidentified flying objects.

"Rear Adm. Fahrney, who was once head of the Navy's guided missiles program, recently stated that reliable sources indicate that there are 'objects coming into our atmosphere at speeds and accelerations....which' neither Russia nor the United States are able to achieve 'at this time'.

"Fahrney said that he had never seen a flying saucer, but has talked with a number of scientists and engineers who reported seeing strange flying objects which seem to be directed by 'an intelligence'. Wm. P. Lear, Grand Rapids industrialist, stated in February of 1955 that he believed 'flying saucers are real' because of numerous manifestations over long periods of time, because of many observations made simultaneously by reliable observers, because there are great possibilities of scientific reality if the latest theory of electrogravitational field is proved and because actual serious efforts are now in progress to prove the existence of antigravitation.. .. He was also quoted at that time as saying that he believed in saucers because he and his pilot had seen one. And Clyde W. Tombaugh, discoverer of the planet Pluto, who has just completed a survey of the skies for the Government, said a couple weeks ago that unidentified flying objects seen in recent years may be coming from outside our own solar system. . . " (UFORUM address: Box 142- Rt. 1, Ada, Michigan.)

CONCERNING ASSEMBLY BILL NO. 2359 -- and (2) enclosed cards:

At Sacramento, Calif., on January 21, 1957, legislation aimed at cancer quacks was introduced by Assemblyman Casper W. Weinberger (R.) of San Francisco. Sponsored by the American Cancer Society, the bill on its surface would establish a board of ten, composed of physicians, surgeons, and osteopaths, to investigate and control any drug or device used in California, in and for the treatment of cancer. This board would eventually have all of the power over treatments for the sick, which the old, so-called basic, science board would have had and which was rejected by the vote of the people in 1942 by a better than three to one majority.

Freedom of choice in matters of health goes out the window if and when this vicious, selfish bill becomes a law. News items & editorials appearing in the papers would lead the people to believe that this bill is fair & square & would be a boon to the sick. Those who have read the bill & have had experience in these matters are convinced that if this bill is enacted into law this board will prevent any doctor of any classification from using any type of treatment for cancer except that which is approved by the A.M.A. and the Drug Monopoly. This bill would consist only of members of the A.M.A. & those osteopaths who are physicians & surgeons. T h e straight osteopath, the chiropractor, other drugless practitioners and the PUBLIC are left entirely out.

The board created by this bill would supersede in authority the present Medical Board, the Osteopathic Board & the Chiropractic Board, which today, under California law, have supervision over those whom they have the power to license to practice the healing art in California. If this bill becomes a law, countless thousands will be condemmed to death, because it is a well-known & accepted fact by those who are in a position to know that so-called orthodox medicine has no more, if as much, to offer cancer victims, as has the non-medical healer.

History demonstrates in all things, as well as in the healing of the sick, t h at what is unorthodox today becomes orthodox procedure tomorrow. UNORTHODOXY IS THE DOING OF THAT WHICH IS NEW. This bill would forever put a stop to the use or development of new & useful innovations in the treatment of cancer within the state of Calif., unless such innovations benefited the members of the A.M.A., the Drug Trust or those who profit by or make their living through the direction of cancer research.

It is vital that every Calif. resident write to his assemblyman, State Capitol Bldg., Sacramento, Calif., & urge him to use his influence to kill this vicious bill in the Assembly Committee to which it has been referred. If the bill should emerge from Committee then he should be urged to fight it on the floor. Ask him for the hour & day in March when it will be up for hearing so that if at all possible, you can be there. We need to pack the Capitol Bldg. with FREEDOM FIGHTERS, for this is the most dangerous bill ever to have been introduced into the State Legislature.

This bill is known as Assembly Bill No. 2359. -- Ask your Assemblyman to send you a copy. Also ask him to introduce or support a bill which would regulate the maximum price a doctor may charge a cancer patient for an operation and/or treatments. If he cannot introduce a bill he can amend this bill or some other health bill to accomplish that purpose. If these mercenaries secure a monopoly on cancer treatments, they become a legal monopoly, & should be subject to regulation & rate fixing in the same manner, & to the same extent, as any other public utility.

We are sending you two copies of this card. One is to be sent to your Assemblyman, & the other to Assemblyman Casper Weinberger, State Capitol Bldg., Sacramento, Calif. - IT IS IMPORTANT THAT BOTH BE SENT -

(cont'd) -- Write your message on the front of each card in the space provided. -- Place a three-cent stamp in the proper place and mail at once. Your letter should be friendly & in plain language. Your legislator wants to know your desires on this bill. We know he wants to truly represent your interests & desires, and in turn has the right to your thanks and support when he so does.

The National Health Federation is of the people and by the people, and is therefore taking the initiative in this matter. It was organized to be a voice for all the people in matters of health. It has no interest but to serve your welfare, and would be the first to fight any practice that is not to your best interest.

Additional cards may be obtained at one cent each in lots of 10 or more from the NATIONAL HEALTH FEDERATION -- 2454 Van Ness Ave., San Francisco, Calif. -- Purchase as many as you can use. Mail them with a message from you to your friends & others whom you feel would use them. We should place these cards in the hands of at least 50,000 California residents. We can, if you will do your part.- DO IT TODAY!-DO NOT DELAY! -- NATIONAL HEALTH FEDERATION.

AKUALELE RESEARCH GROUP BULLETIN: Riley Crabb, Editor, P.O. Box 1513, Honolulu, Hawaii. (Bul. Vol II - No. 2). --

"The 4-D point of view is proving a stumbling block to too many Saucer Researchers because they still worship the material science of the early 20th century. No sincere person need be ashamed of the logical method of thinking about solid, every day objects, but such thinking becomes defective when applied to the new or the unusual. And the new & the unusual has a way of becoming commonplace in about twenty years. Meanwhile the determined logician has become a crusty old fuddy-duddy, a relic of the past! To stay in the forefront of Saucer Research, the UFOnian will have to shift his thinking at least to what Ouspensky calls the psychological method of thinking and eventually to the esoteric method, one which embraces all. He outlines these ideas in the preface to the second edition of his New Model of the Universe. It is amazing to me how the people who worship science, both the layman & the technician, seem totally unaware that the science of physics has moved unobtrusively into metaphysics. This change is discussed briefly in the editorial in the January 28 edition of "Life". But long, long before January 28, 1957, the leading philosopher-scientists had deserted the logical materialists and detailed this movement into esoteric thinking in their writings. In Physics and Philosophy, Sir James Jeans says: 'A review of modern physics has shown that all attempts at mechanical models or pictures have failed and must fail. For a mechanical model or picture must represent things as happening in space and time, while it has recently been shown that the ultimate processes of nature neither occur in, nor admit of representation in, space and time. . . the physical theory of relativity has now shown that electric & magnetic forces are not real at all; they are mere mental constructs of our own resulting from our rather misguided effort to understand the motions of the particles.. ..' Sir Arthur Eddington agrees with this: '. . .Modern physics has eliminated the notion of substance. . . Mind is the first & most direct thing in our experience. . . the old atheism is gone. . .'; and then there is J.B.S. Haldane: '. . .The material world, which has been taken for a world of blind mechanism, is in reality a Spiritual world seen very partially & imperfectly. The only real world is the Spiritual world. . .' And to sum them up, a quote from Einstein: 'I believe in God. . .Who reveals Himself in the orderly harmony of nature, the universe. . .the basis of scientific work is the conviction that the world is an ordered & comprehensible entity, and not a thing of chance.'"

"OTHER TONGUES -- OTHER FLESH ", by George Hunt Williamson. (448 pgs. -- Amherst Press, Wisc., Price - $4.00) The author of this book (G.H.W.) is well known to most of our Associates of the B.S.R.A. for his work as guiding hand of the Telonic Research Center, and one who has, over the past few years, been very favorably disposed toward the "4-D" (etheric) interpretation of the Aeroforms, advanced by the Mark Probert Controls in the Fall of 1946. T h i s thesis has been repeatedly publicized by the Borderland Sciences Research Associates since that time.

This book is described as being 'a startling sequal to "The Saucers Speak", also a history, a collection of proof & a tremendous theory!' According to the author in his Prologue: 'It is necessary to reaffirm and establish three truths. Namely: (1) Science and religion are one and the same thing; (2) The entire universe is magnetic in nature, and even culture is influenced by the laws of magnetism; (3) Space visitors, mentioned in the Bible and ancient mythology, have been coming to Earth throughout the ages, and are now making themselves known to aid mankind i n entering a New Age.' (pg. 8)

From the standpoint of the B.S.R.A., the book might gain if the subject matter had not been approached or presented from a religionistic viewpoint; but it certainly should not be discounted for that reason. So much Saucer "twaddle" is now being written in this same vein, and even in the so-called Spiritualist movement almost every Medium seems to have the much-heralded 'Ashtar' on the "Astral hookup". It is no wonder then, that we are supposed to labor under the illusion that the whole Saucer problem can only be understood and even verified by this or that Holy Book. How absurd! If that be the case, then it is certainly true that the tragedy of the West will always be its illiteracy, and as to things that smack of what is called Metaphysics or Occult ramblings, even the British Astronomer Royal has a word for these, 'Bilge'. But the true nature of the Aeroforms will never be understood unless we do gain some working knowledge of these matters. Such is the case when there is widespread indifference and a tendency to glorify stupidity.

Dr. Williamson defends his case when he states: 'Some may wonder why I refer to the Holy Bible so often in this book. It is true that the Bible is inaccurate, but not totally so. For the most part, it is the true history of a particular time and people. In order to get an accurate picture of the Saucer phenomena, every possible avenue of investigation into the past and present must be utilized.' (9)

This book is so quotable that it is very difficult to review, but I continue with a few brief excerpts: 'It is now reliably reported that over 100 personal contacts have been made between Earthmen and Saucer occupants. (6) .... Many of our people are in your world now. They are nearly ten million in number, with six of those million in the United States itself. (208)'

'When an atomic bomb is detonated, literal microcosmic worlds containing created life are destroyed. Of course, these worlds are in other dimensions of time & space. (29)'.

(The Probert Controls and the occultist Gerald Light have long maintained that every time one of these awful hell-bomb explosions takes place there is a terrific reaction in the Etheric planes that tears gigantic holes in their atmosphere, destroys Etheric buildings, and even endangers the Etheric bodies of the people living in these invisible yet material zones. -- But such is the folly of t h e enlightened 20th century.)

'Very recently, it was taught in our universities that most of the atom as well as most of the starry Universe was empty space. Now, finally, physicists are uncovering the facts that show matter and energy to be the same thing. (30).... Empty space is a dead concept. (31).

(Dead except to a few die-hard physicists, astronomers, et al, who still maintain that space is empty, but maybe, just maybe, the real space that is empty is in their heads. And just what is SPACE? We are not enlightened by Dr. Williamson as to its true nature, but we feel sure it is not NOTHING. Space, we believe, equates with the Ether (or Ethers) - and we feel certain that this interpretation will hold valid in times to come.)

'The Four Forces are: Static-Magnetic Field (SM), as in a bar magnet; Electro-Static Field (ES), as in a charged capacitor; Electro-Magnetic Wave (EM), as radio waves, light, heat, etc.; Resonating Electro-Magnetic Field (RMF), like that of all celestial bodies (operating in a vortex), space craft propulsion field, the basis of life, the elemental life.' (48)

'Science has explored the upper atmosphere of the Earth and found that sixty miles above the Earth artificial light is needed, and ninety miles above the Earth, it is as dark as "pitch". The higher we go, the colder it gets; so we see even by logic that heat and light do not come from the Sun. Only lines of force come from t h e great sun body.' (56)

'No interplanetary craft could travel as it does in a static field. Only utilization of the fourth force, or RMF, will enable any kind of craft to go from one world to another.... Saucers and all space craft contain their own atmosphere around them like a celestial body. They can go under water and the RMF will keep the liquid from touching the craft.... The more highly advanced the world, the flatter the craft. Eventually, no craft is needed to travel the interstellar distances, and beings are "projected" to other worlds by thought alone.' (63)

(This, of course, reminds one of the old occult saying: "You are where your consciousness is" - (for if not, where else?). Translated, this means, " a change of frequencies is a change of location" -- but then, this smacks o f metaphysics, SO!!)

A Saucer is not built as we on Earth construct anything. First of all, an Electro-magnetic field is set up, and within this field a technician constructs sections of a Saucer by his own power of thought!' (65)

'Let it be stated here that there are beings on the planetary bodies under t h e photosphere of the Sun. There is life on your Moon as well as on some other moons belonging to other planets.' (221)

'Do not think for a moment that the so-called 'Saucers' and related phenomena are just from this or that planet; they come from many, many worlds, systems, a n d galaxies.' (223)

'You have lately achieved the means of destroying yourselves.... We are interfering more than we should, but we will not stand by and see another waste of creation in our System.' (226)

(But of course, on this so-called enlightened planet where we have reached near-perfection in madness, we are desperately trying for the final achievement of "atom-splitting" -- which may conceivably convert our planet into a flaming, fiery ball or an asteroid belt. But then, would it be a waste!)

'Our Crystal Bells operate in their own resonating electro-magnetic field the same as all celestial bodies do. Your own Saros (earth) is nothing but a huge spacecraft. We can travel at the so-called 'speed of light' and faster, but actually, light does not travel; LIGHT IS! .... If we choose to remain unseen, we could do so easily, and in fact, we have done so almost without exception for hundreds of years.... You must now become accustomed to our shapes in your skies, for one day soon they will be familiar, friendly, and reassuring sights.' (229)

'There is absolutely nothing to fear from the "fireballs", whether they be white, green, or blue-green -- silent or otherwise.... If it were not for "fireballs" our own playing with atomic energy would bounce back on us. Through the use of the photographic type of "fireball", they have surveyed every square mile of our planet." (292-3)

A rocket or nuclear-driven space ship will go from the Earth to the Moon, but it will never go through the cleavage layer of the Earth's Resonating Electro-magnetic Field.... It divides the Earth's rotating field (which contains the Earth and the Moon) from the Ether, or outer spaces. We will not be able to leave the RMF of the Earth until we have discovered the secret of magnetic propulsion, and we are not going to discover that until we accept higher metaphysical principles.... Man on Earth simply can't go to other worlds until he advances spiritually.' (405)

'Man was not built to leave Earth in space ships that will "blast off" for this or that celestial body.... He hammers, he tears, he rivets, he pounds; now he is going to "blast off" to other worlds.... When he learns to use natural forces and not fight them, he will have found the key to space travel....' (413)

"This book is certain to arouse controversy because of its approach, and in my opinion, deserves critical study and evaluation. -- Recommended as worthy of most attentive reading."

" LONG JOHN" & " PARTY LINE". (From LLP Bulletin of February 8, 1957).

Who is Long John? He is the UFO's best friend in the United States today. He conducts a unique radio forum from 1:00 to 5:30 A.M. seven days a week, on Mutual's station W O R in New York. . . It has become the world's most broad-minded public forum on what Long John calls <u>off-beat</u> subjects: Flying saucers, reincarnation, occultism, extra-sensory perception, psychokinesis - in short, the "Borderland sciences.

What is the Party-line? That is what Long John calls his program. The guests sit around in informal groups, around a big table loaded with microphones, in a building full of glowing transmitter tubes, flickering lights, fluctuating meters and big copper coils . . . Subjects not usually given time on the air ... party-liners as far away as Canada, Illinois, and Florida join in the discussion. There are now an estimated million and a half party-liners and mail runs to several hundred letters a day ... 'Ufology' has come into its own, with frank, public and informative discussion - for the millions.

Write to the Mutual Broadcasting Co., 1440 Broadway, New York 18, N.Y., and insist that Party Line be put on the Mutual network so that all of us can hear it - remember that Frank Edwards had about 10 million listeners (to 'Saucer' news). . .

Write to Long John, care of Radio WOR, New York 18, N.Y. Thank him, ask questions, make suggestions. If you wish, sign yourself as a BSR Associate. (This last hint is added here by ML, the BSRA Director - is not quoted from LLP Bulletin).

This drive (says the LLP Bul.) is sponsored by the PSI, a national organiza - tion developed around the scientist-author M.K. JESSUP (PSI means 'physical sciences integration).

"Drives" and "movements" of this sort are not a primary concern of the BSR Associates; but if it is true that "occultism is only enlightened common sense" - there is certainly a point of view from which such efforts are not only useful but imperative. (ml)

A MATHEMATICIAN TAKES TO DRINK: (from letter to CQC Editor) --

". . .I too, am a B-Cell drinker. Not too often, though. I am now using only one of the two B-Cell catalyzers which Mr. Brown sent me.

"With a triple turret B & L microscope of 1925 vintage I am using a 7.5 eyepiece and two objectives at once: the 3 mm 0. 85 NA objective being nearest to the cover-glass and slide, and the 16 mm 0.25 NA objective transferred to the interior. Under the slide are two iris assemblies and two condensing lenses, and a mirror (plane and concave both available on one mounting.)

"I can see the B-Cells (what few of them dare to venture out of the crystal - cement misture into the chlorinated municipal tap water from Lake Superior -- said to be the freshest large source of drinking water). I'm not very well up on the technology of optics, so my high-powered definition is not as sharp and unblemished as I would like.

"Maybe I'll have to sneak out of bed at 2:00 a.m. to take a squint, when my eyes have become accustomed to the dark (if ever), in order to verify to myself t h e alleged self-luminosity of these B-Cells. 'Them hyar critters shor look Heaven-sent!' Just wait until the industrial biochemists and bacteriologists analyze them under their electron and proton microscopes, and begin to report on them pictorially in Scientific American (. . . . . .)* But Mr. Brown is wise; he is giving it directly to the people, who will make it universal property, like t h e crystal radio gadget of the early 20's. We had hoped Project Hermes would be universal property; but it is far more dangerous, of course, than the B-Cell is officially feared to be.

"B-Cell water unshells lemon seeds, opens apart the inside 'meat' to expose the sprout. The sprout does not grow more rapidly than in soil, at least not during the first week of immersion. The taste of the lemon seed pulp was slightly improved - rendered more tolerable to chew. It has no vitamin K, I believe.

"I tried to determine the size of a B-Cell globule (daughter nuclei?) - and here's how I did it. After noticing that a bit of typewriting paper under the microscope covers the entire field of view when looked at edge-on, with the magnification that I used, I then used a micrometer caliper on the paper and found its thickness to be 0.0034 of an inch in gauge. Now if 40 B-Cells equal the diameter of the circular field of view, then a simple calculation (by logarithms) shows that a B-Cell is of the order of magnitude of 4 millionths of an inch in diameter. . . ."

Assoc. L.M.

* NOTE: Our Associate's mind seems to wander at this point; he actually seems to think that if the bacteriological warfare division of the Pentagon's sub-contractor laboratories got their hands on this B-Cell without being told what to look for, the dear dear public would hear no more of it, forever 'n ever. Or so your editor understands him. If that sounds less than patriotic, maybe L.M. only means that Associate Brown, like more than one other too-fruitful genius, would disappear from the picture, sans B-Cell and all credit for it alike. ML

B-CELL BUSINESS

THE GOLDEN LIGHT is a small, 12-pg magazine (8½ x 12"); Eugene H. Drake, Editor. Published at 1014 So. Lake St., Los Angeles 6, Calif. - $2.50 for 12 issues; single, .25. The current issue contains a paragraph headed: The Brown "B"-Cell Catalyzer, which reads as follows:

"This catalyzer is meeting with great experimental approval all over the country, especially in Southern California, where it is being used on soil and plants widely, arousing great interest. Many sites for location of his laboratory here are under consideration. He has supplied us (with activated matrices) in sizes adapted for one quart to 100 gallons of water. The radionic number for this cell is 999.9 - The intensity of that force is 90. * Many laboratory and microscopic tests have been made of the water in which the cell has been placed; showing positive PH-7 factor, solar energy activity from red to ultra-violet. The phageus phase develops from the chromosome and gene phase through a lightning process of thermostatics. The controlling factor here is the mitogenetic ray, which are natural ultra-violet rays or radiations. This evolution can be seen on the microscope slide as the cell moves about under its own power; creates thousands. He is working on many uses for this catalyzer...."

* It is not clear to us, what type of instrument and what force is represented by the figures 999.9 and 90, and we are making inquiry. Associates using compound microscopes of mag. 300 report that the tiny flashes of light reported by biologist John C. Brown are plainly visible, as are also individual cells in lively motion.

It should be understood that Mr. Brown makes no claims for any healing or thera - peutic effects of the B-Cell or water in which it is placed, has nothing to sell, but offers an immense amount of evidence as to remarkable effects on plant growth. See our article in"Clips, Quotes, and Comments", issue G-2 of March 1, 1957; also the article in Aberree (PO Box 528, Enid, Okla. Copy, .25) The BSR Director has been using the activated water for drinking purposes and believes that it is very beneficial. Address Mr. John C. Brown at the B-Cell Laboratory, 92 Miller St., Middleboro, Mass., ask for information and at least two sample matrices.

Since writing the above paragraph we are in receipt of the following from Editor Drake:"1. The identifying radionic number for the B-C energy is 999.9. The potential or intensity of that force is 90. For purposes of comparison, the human life force or vitality is measured on my instrument (Hemppath) against arbitrary averages, taken by dividing the age by 2, then subtracting from 100. Thus a six-year old should measure a life force or vitality of 97 units (ohms) intensity. A person of 60 should measure or normally have 70 units. So the B-C has building power of considerable force for those who are low in the scale, while normal youngsters probably would feel nothing. A very toxic person with poor elimination can really get a heavy reaction from the B-C. In the short time I have been working with the B-C I have demonstrated that vitamins and foods can be charged as high as 70 units without removing from the package (except metal packages, tin, and aluminum foil).

"It (the B-C matrix) comes in on the radium rate'." (received from Dr. R.D.)

"We have been testing the (blue color) B-C matrix--car catalyzer, in the gasoline tank, resulting in 3 to 4 miles more per gallon. One of our group is using one in his tank -- Ford pick-up truck - with similar good results. One placed in the radiator of his truck, keeping the radiator water soft and free of scum, rust, etc. Can

(contd) -- be used also both for fuel oil and radiators of diesel engines.

"There is no danger from overcharging the water if not used for several days. The PH factor should remain between 7.3 and 7.5, the same as with the blood."

We are also in receipt of a brief letter from biologist Brown, which might be headed (NOT flippantly) - "For to see and For to Admire" and which contains in substance the following: ".... It is ok to reprint the article by Editor Eugene Drake- it has my endorsement as to correct data. Dr. Walker of Arizona also has written me that he changed the inorganic water in a lake (nine miles long, two miles wide, 900 feet deep) into organic life water in the time of 48 hours. He wrote me that I could broadcast the test to all who believe in the "living water".

"Another test sent me from California was that it increased the revolutions of an airplane motor over 100 - and they are not through with the tests yet.

"Another from Dr. C.C.H. of Santa Maria on a cattle breeding farm was that t h e 'heel' fly dropped off the animals after they had been drinking the 'life water'. This is good news to all cattlemen throughout the world and to many other persons.

"Referring to the Arizona report, Dr. W. states that it took only two quarts of the 'life water' to change the water of the entire lake - which if correct, indicates that large bodies of water throughout the world can easily be activated in the same way."

(NOTE by C.Q.C. Editor: A minor but interesting point is that several persons have written to us alleging a change in the voice as a result of drinking the activated water - the male voice is said to become heavier and stronger and on a lower register.)

A D V.

We now have an additional supply of the BSR nos. 42 - 43 - 44: these are Spiritism and the Beginning of Christianity, a pocket size brochure, by J.R.Morell ($1.00): Speculative Suggestions, in 3 parts, small size QUOTES FROM FARADAY et al, compiled by F. Bartholomew (whole price $1.00): Greatest Puzzle of All, by Clarkson Dye; an excellent first book in spiritism; 70 pgs. ($1.00).

Also Spacemen, Friends or Foes, by Trevor James, in 2 parts; $2.00. The Ether of Space, by Meade Layne (with quotes from Ramond Natalli. Compilation. $1.00) Apollonius of Tyana, by Alice Winston (an Akashic reading): $2.00. The Morley Martin & Littlefield Experiments; 15 pg 7 x 10" brochure. Important compilation. $1.00

ASK FOR LIST OF OUR ON-SALE BOOKS AND BSRA PUBLICATIONS.

WE TAKE THIS RATHER UNSATISFACTORY MEANS, IN LIEU OF A PROMPT PERSONAL REPLY, OF SAYING THANK YOU to Associates and friends who have replied to our special mailing ("the pink sheet") about BSR financial needs, and have helped us with words of encouragement and with donations. Neither Round Robin nor the Magpie bird (?) called CQC wishes to hop the twig, especially at this most portentous moment in world affairs, and this can probably be avoided if each Associate can contribute even a small amount. But thank you again for your letters and all donations, small, large or medium, monthly, quarterly, annually or all in one bite if you prefer . . .

(As an after-thought: When Henry George wrote Progress and Poverty, maybe he had the BSRA in mind!!).

Meade L.
