FROM GRANVILLE RICE * VERMILLION, OHIO

Recently D. Norman Jolliffe and Dr. Paul White told members of Congress that the United States was the most unhealthy nation of earth. There were 96,788,534 persons in 1956 registered with chronic illness in this nation. In recent years we have seen many strange things enter the picture of health and disease to both complicate and confuse it for the doctors. I list some of them here:

1. POISON SPRAYS on foods that attack the brain, liver and nerves of our people such as DDT, chlordane, benzene hexachloride, lindane etc.

2 CANCER CAUSING CHEMICALS now being used in foods consumed by our people and which have been exposed in many magazine articles. They include dyes, humecants, cancer producing properties in wax products, 8-Hyroxyquinoline used in rectal suppositories and contraceptives and which caused cancer when used on test animals. Many of these reports have been suppressed by our government.

3. RADIATION DAMAGE from X-rays, radioactive fallout from bomb tests in England, United States and Russia that filled the air with Strontium 90, Cessium 137, etc.

4. TAP WATER CHEMICALS that effect the health, nerves, brains etc. of people who drink it. Fluorine, Chlorine, lead, alum, pipe metals etc.

5. FOOD CHEMICALS that denature, devitalize and contaminate our foods. The Secretary of Health admits there are more than 500 of these now being used. Everthing from arsenic to horse urine.

These strange new things entering the human body make diagnosis difficult and complicated today when compared to the much less complex picture facing the doctors before this Age of Poison.

In late February Bud Wendell, Radio Station KYW, Cleveland, talked with a doctor on his PM Program about fluorine. The doctor said he cleared up 18 cases of partial paralysis of the legs by taking the patients off fluoridated water.

In Rosicrucian Digest, February 1952, Dr. Carlton Deederer said we have a self-imposed biological warfare going on in the United States effecting our health.

Arnold J. Lehman M.D. says DDT causes brain and liver degeneration and necrosis or dead spots in these organs and its in almost every meal we eat. He also said vegetables sprayed with lindane absorbed the poison through the roots and were not fit for human consumption even though they flood our markets.

The famous Dr. Albert Schweitzer of Africa warns that radioactive fallout is slowly destroying bones, sex organs, livers, blood and glands. He said the blasts that have already taken place represent a grave danger to the human race.

OHIO CONSERVATION BULLETIN, January 1958 says: "The nation is suffering a heavy loss of wildlife and fish because of indiscriminate use of insecticide sprays." (Three billion pounds used in 1957) If this is killing wild animals that live on natural and vital foods what is it doing to human beings???????

Calcium and Bio-flavonoids help protect the body from fallout and aid in the excretion of radiation fallout through the kidneys according to the University of Southern Florida. If the patient can be persuaded to live on organic foods and distilled water most of the above dangers will be eliminated. The usual office treatment plus the correct vitamins and minerals will result in the gradual return of health and energy for most patients.

CLOUDED WORLD

(Excerpt from Psychic News
No. 1339, February 1, 1958)
(London)

Can 9,000 scientists be wrong?

On the question of H-Bomb control the man in the street would think that so many scientists - the only people really in a position to assess the physical dangers - should certainly be heeded.

And no less 9,235 scientists of 44 different nations have now sent a petition to UNO calling for an immediate end to nuclear tests.

The petition is signed by 36 Nobel Prize winners. There are 304 British signatories among them.- 35 of these Fellows of the Royal Society - and the other signatories include 216 members of the Soviet Academy of Science and 101 of the U. S. National Academy.

WARNING

"These are men who know," says the London Star. "This is a body of evidence that world statesmen simply cannot shrug off. Dare they go on poisoning our world after this powerful warning?"

Whether they can and whether they dare remains to be seen. One qualification for world statesmanship appears to be the ability to pay heed to those experts whose advice fits in with government policies and to disregard those whose opinions do not.

Some weeks ago Aneurin Bevan, Labour's Shadow Foreigh Secretary, said that Britain would end all nuclear tests in the hope that other nations would do the same, after his party was returned to power. But this policy has not yet appealed to the parties in power in any of the three H- bomb nations.

The worsening of the situation in one way has been made clear by the announcement that if the British discoveries for converting atoms to peaceful uses were revealed, even the smallest nations would be able to produce H-bombs very cheaply.

Even on the domestic front the dangers of radiation are becoming more widely realised. Harwell scientists have urged that shoe-shop X-ray machines and dangerous luminous dial watches should be banned. A Swiss professor has declared that laws will be introduced in Switzerland by 1959 to prevent the manufacture of luminous clocks and watches with dangerous degrees of radioactivity, and in France X-ray machines in shoe shops have already been banned.

Last week an entire Dutch family were taken away for observation and kept in isolation after the discovery that a 5-year-old girl in the house had been sent home from hospital with the tiny head of a radio-active needle left in her nose. This minute instrument had made the house so radioactive that it was necessary to put a barbed wire fence around it and keep armed police on guard. Scientists say that the house may have to be demolished.

DECISION

Some of these minor effects of radiation can be controlled by personal decision. For example, one can avoid using X-ray machines in shoe shops and one can refuse to wear a watch with a luminous dial. But H-bomb dust, as we have said before, "bloweth where it listeth" and its avoidance is not a matter for individua l choice.

The choice must be made on national scale and the need is increasingly urgent for nations to think and to act, that this cloud may no longer spread its ghastly terror over the future of mankind.

PUZZLING FIRE BEING PROBED AT WOODBRIDGE (from the Lodi News*Sentinel, Lodi, Cal.

The results of a puzzling fire greeted Robert G. Spiekerman at about noon yesterday when he entered his home at 44 Main St., Woodbridge. A hole about 18 inches in diameter had been burned through the hardwood floor and subfloor of his front foom.

How it happened was the puzzle.

The same mystery greeted the Woodbridge Fire Department, which was called at 12:15 p.m.. In the debris under the floor, the firemen found the remains of a metal ashtray, apparently misshapedn and partly consumed by the fire.

One solution suggested by the firemen was that the ashtray was made of a mixture of metals, one of which could have been flammabe. It could possibly have been ignited by a smoldering cigaret, and the resulting intense heat might have burned quickly through the two layers of the floor.

It was reported that the ashtray customarily rested on a footstool, but at the time of the fire it was presumably on the floor, since the footstool was later found to be undamaged.

Firemen ruled out the possibility that the blaze started in a divan, located near the hole and partly destroyed by the fire.

SCIENCE FICTION AND 'UNCONSCIOUS MEMORY'

Much science fiction is coming from unconscious memory of other civilizations on this planet. Other planets civilizations are aldo coming into consciousness of earth people by this means. The breaking down of the ionosphere by atomic radiation is permitting a leak-through of the influences of the ZERO VOID resting between one planet and another. This Zero Void holds the planets apart equally as much as the orbital spin of a planet holds it in its course, This break-down is causing much concern to the inhabitants of the other planets, and in an attempt to make the earth people aware of this they have used means available to them, to impress this on the unconscious of those who write science fiction. Worlds in Collision is one such story.

(letter from Assoc. W. W. Webb)

THE CREATION OF SAND

EXCERPTED FROM Page 267 MANUSCRIPT OF
THE CREATION OF THE EARTH'S MATERIALS.

There is a preponderant rock - known as sandstone - that grows from sand. Sand appears to be created in the shallow seas directly from radiant energy.

Looking about us, we discover that sea sands occur throughout the world, in shallow ocean waters, around the coasts of all continents and islands - even coral islands. We discover that there are tremendous existing areasaof seacoast sands, which have not as yet turned into rocks, and which can be accounted for only by the theory of the creation of sand by the slow process of conversion of energy into matter.

We know that crystals of snowflakes are formed in the air, by water, which is a mineral - so may assume that by some similar, but not identical, metamorphis the crystals of sand are formed in the shallow seas. They appear to not form elsewhere. Sandstones, which were once sands that were created in the shallow seas, make up over 50% of the upper rock strata of the earth.

We can convert the sand back to light rays and can identify the rays by the spectroscope. The atoms of silica and oxygen have the same wave lengths as certain light rays; sp, it is not unreasonable to assume that what is now sand in our shallow seas and in the sandstone strata of the earth was once radiant energy in the form of light rays; and that the same general conditions of oceans, continents, islands and sandy seacoast bottoms and beaches existed in former epochs - when the now existing sandstone strata of our globe were being created.

Silica sands are observed as predominating in the shallow seas of the temperate zones; although considerable sections of ocean beaches consist mainly of broken and eroded sea shells.

Geological reports of the shallow seas and beaches of tropical islands and atolls show that the sands are composed principally of granulated and pulverized materials derived from the mechanical and chemical disintegration of corals and shells, with very small amounts of silica sands.

There has never been any question about the coral and shell formations having developed in the shallow seas from the growths of corals and shell fish. This material, which grows as part of animal life, consists of calcium carbonate and calcium-magnesium carbonate, respectively, and eventually becomes limestone and dolomite, which are common strata of our earth.

The con - vert - ib - il - ity
Of energy and matter,
Gives the clue, most lucidly,
Why the earth is formed in strata.

Let's cease to say that the earth has a crust,
Knowing energy changes to matter:
But, photons, quanta and meteor dust
Created the earth's matter in strata.

"THE CAMERON CONES AND THE PYRAMID OF GIZEH" by the Rev. Verne L. Cameron

PART II

Eventually I hung three of the 22 inch cones, (aluminum, closed base), in a big tree back of my house and with a single wire bleeding the energy off the apex of each and to the base of the next one. This kept the energy in a circuitous route, while each cone also gathered more energy and fed it into the circuit. The surplus was then led down another wire to a common kitchen scouring pad, (copper mesh), wh which I used for an applicator for healing.

An elderly lady, living next door, requested permission to use the device on herself to see if it might be of value in treating nervous diseases she had been afflicted with all her life. I was glad of the chance to try it, as well. Each day for about a month she came over and sat in a big easy chair and held the applicator against some part of her body. usually either in one hand or against her leg or breast. Each day she typed a running account of her improvement or the effects, After a month, almost all effects of the disease were eradicated.

Dr. Wilson, now head of the great Spears Chiropratic Sanitarium, at Denver, Colo., was sent to investigate the Cones and the AURAMETER. After a full day of careful tests and comparisons on a number of volunteers, he admitted I was able to arrive at the same conclusions in a few minutes with the AURAMETER only, that he obtained with a large array of instruments he had brought with him. Also Dr. Wilson expressed amazement at the strange effects the Cone Energy had on their bodily Metabolism and other functions. A case chart taken after a 15 minute application of the applicator showed a great change in the "CURRENT ENERGY, the RESERVE ENERGY, the PULSE RATE and several other measurements over one taken just before.

It is my opinion that here is a vast field for the betterment of health plus Scientific discoveries as yet undreamed of. At first I used the cones with the bottoms open, but later I discovered that ONE cone with a thin aluminum sheet covering the bottom, was as powerful as the three with open bases, and it need not be out of doors but may be hung on the wall in the house, (preferably fairly high). The length of the conducting wire is not important, (the current is not anxious to leave it) neither is the size. ---In one test I hung a cone on the garden fence and ran the wire to and along under a row of radish seeds, half the length of the row. The seeds NOT over the buried wire came up normally and grew well, but those over the wire almost entirely failed and the few which finally showe, soon witlted and never amounted to anything. I never repeated this test but someone should carry on to find if this force has an effect on plant life, either good or bad. A little later on I have plans for much new research which time does not now permit. Among them are plans to make more extensive tests of the cone-ray as a means of a great improvement in land surveying, at which I am quite experienced. When the cone-ray is projected direct from the apex of the cone, it gives every evidence that it is meeting with resistance from, not the AIR but from the ETHER, as instead of making a straight beam or rod of force, it flares so that at a distance of one-half mile, it is THREE HUNDRED FEET in diameter. This indicates a great loss of penetration. Realizing this I spent many months of research in developing a "RAY-GUN" to confine the beam for greater drive. I finally suceeded and throughout most of 1956 The PENDULUM Magazine, 31 Kings Road, London W.C.3, England, a monthly British Publication on Dowsing and kindred subjects, was nearly half filled with articles and illustrations from my notes made during the development of the Ray-gun. These covered a vast variety of tests to determine the nature of the energy and its peculiarities, and ranged into radio waves, heat and associated waves, many forms of light, magnetism, etc.,

and finally wound up with the present model of gun composed of a glass tube 18 inches long 3/4 inch diameter, with an iron pipe, (3/8 in. std gas pipe) inside it, wrapped in spots with tape as a cushion, and extending the entire length, and on t the outside is wound a copper wire with about a $\frac{1}{8}$ inch spacing. This can be either bare or insulated and may be any size, but it must be a right hand spiral if used with a cone or a left hand spiral for use with a pyramid if the wire from the cone or pyramid is to be connected to the rear end of the winding as the cone ray is of positive polarity and the pyramid is negative and will project fhom the rear end of the gun if wound to the right (like the thread on a wood screw). With one 22 inch cone and this GUN, and aiming th gun on a building four miles away, by sighting thru the gun, I found by testing with an AURAMETER, that the ray struck the building with apparently undiminished force after traveling the 4 miles. Also there is a curtain of force which hangs from the ray to the ground, along its entire course. By mounting the gun on a surveying transit, I was able to "project a true line far beyond where I could see the stakes thru the telescope. More follows on PYRAMIDS. (The author and inventor of the Aurameter, the Rev. Verne L. Cameron, can be addressed at Route 2, Box 526, Elsinore, California, or in care of BSRA).

Excerpts from a letter from a doctor in Southern Rhodesia, to the BSR Director:

I propose not to discuss the B-Cell here, but wish to thank you very much for the additional two matrices and for introducing to us such an interesting phenomena. The B-Cell should be a valuable aid in cultivating the "Crowning Glory"* . . . . . and should be a very powerful agent in keeping it pest free. . . We shall be pleased if you will furnish us with a report of Brown's further research if and when it is available. It definitely does promote growth to a phenomenal degree.

* a plant with which this doctor is experimenting.

"THE NATURE OF PRAYER" THE INNER CIRCLE Deep trance mediumship of Mark Probert

Let us for instance examine the work of the Good Reverend Franklin Loehr in his seardh to find out if prayer can make a plant grow. Let us discover that prayer CAN make plants grow and curses can kill them, as we shall surely discover, let us not stand around with our silly mouths dangling on our chests in awe, but let u s ask ourselves the next logical question, to wit, "How? - What is the mechanics of CONSCIOUSLY directed prayer and CONSCIOUSLY directed curses that gives them the power to substain or drive out the life force that animates material substance," Then let us ask ourselves if we who homestly want the truth of these things have the time to stand around making such sombie-like statements that the use of prayer to make plants grow is "asking Fod to do tricks" and saying "Let's keep science for 'physical reality'," I am sure we will discover it is a great deal later than we think.

Now comes the question: HOW does prayer make a plant grow?..... In brder to understand the answer to this question I believe it will be first necessary to change our thinking in regard to what we have been taught in our school books, concerning the nature of matter, and next we will have to completely revise the opinions given us in our religious teaching, that that which is called "Spirit" is some form of unknowable and effervescent nothingness and that we will come to know it all in some distant tomorrow in some never-never land. NOW is the only time to learn about anything!

The nature of physical substance: I think that right here is where the lay person must be made to realize that the NAME of a thing is NOT the thing itself but simply a tag or label placed upon certain given lines of motion so that they will not be confused with certain other lines of motion, and is but a method of cataloging what is called "sense data". As an example of this let us take the seed of any plant and these are the qualities we will give to it: roundnessm softness, hardness, smoothness, roughness, thinness, fatness, largeness, coldness, warmness, etc., then redness, browness...However, none of these are properties of the seed in question but are entirely properties of the individual's senses. Now let us reduce this seed to its minute building blocks called cells. In the past these little bodies were beyond the reaches of the physical senses but there is now an electronic "eye" that is capable of seeing them and bringing them within range of the human eye. Not only can the surface action of the cell be observed but its interior as well, and it is shown that a cell containg within its walls other cellular bodies dartingg about and pulsating in a liquid substance. Now ten, could we extend out vision still farther or deeper into this minute world called cellular and sub-cellular, we would eventually come to what is called the world of "atomic" structure. In the not too distant past it was believed that atoms contained within themselves the properties called roundness and hardness and that they were the indivisible. Today we know better - that is to say we know that an atom is neither round nor hard and by no means indivisible. Indeed we know it tobbe no more than an energy field. However, the question arises as to what is the nature of the surrounding spaces that an energ field is presumably operating in. We will find that the answer to that is - "It is not working in a media different than itself, for that which is thought of as "spac is not a vacuous condition but is itself energy. If this is true then I am sure we can understand when it is said that the human body as well as all the untold billions of bodies in the vast starry realms was created out of tthis space-substance. The human mechanism may well be thought of as a sensitive point of energy that is capable of registering a given number of vibrations in what is called light and sound and heat and cold. That these latter three are not different things but are one and the same thing and simply being recorded by a variety of organisms in a variety of ways.

All forms, or what are called "things" have a field. The observable is but a an extension of that which is called the "unobservable", and the former is classified as "sense" sata, while the latter is the matrix out of which the "form" has come and in which it has its existence. This matrix or continuum of form is sometimes referred to as the "auric" light and can be seen with the use of a specially treated piece of glass called the "Kilner Screen" and many people are capable of seeing it with the naked eye under certain conditions. Now let us take the seed of a plant, any plant, Setting this seed before us we begin to see it as something more than mere "sense" data which in the past led us to the erroneous belief that that which we observe is the thing-in-itself. We know now that this seed we are gazing upon is made up of minute bodies called cells and that each of these so-called cells is made up of more minute bodies called molecular bodies and that molecules in turn are but the grouping of still smaller forms called atoms and that atoms consist of much smaller units called electrons, protons, neutrons, etc. and while modern science refers to the latter as simply "units of energy" it is known that that which is called energy consists of sub-atomic particles. Now, as much as the lay individual, as well as some scientific minds, may like to talk about either matter or energy as being particulate, the fact is there is no such condition as a particle of matter. I have used the wordmmyself, but only as a means to express some very abstract ideas in concrete form. That which is mathematically considered as a particle is for the sakeof convenience called a stress or strain of that which is called space, and space is an extended field of awareness of all forms. It is this field that Hindu psychology calls the Center of Creation and the awakened Christian mystic refers to as God. The word God means "good" and the word good means balance. It is in this field that with the force of consciously directed thought the energies of the brain can come in rapport with the extended field of a plant seed and stimulate the seed into greater activity called growth.

Now let us consciously direct a prayer for someone suffering a disease of the body and we will find that practically the same conditions take place with the human body as takes place with the plant body. By that I mean the human body like the plant body is cellular and is therefore open to cellular breakdown, and when the cells of an organism break down or die faster than the body can replace them one has a disease of some kind. This is as true of a plant as it is of a human. However while the difference of a plant and of the human are quite vast, these differences lie more in the abstract or extended world than in the concrete or world of appearances. The human being is a self-governing unit and can not only reason from cause to effect but can act upon such thoughts. This ability not only sets him apart from all of the rest of creation, it makes him at least potentially Master and Creator of what is commonly called existence. (This latter statement will be rejected by the masses in general and so-called Christians in particular, for it burdens them with responsibilities that are far beyond their ability to handle). But because individuals singly as well as collectively have been mentally condition ed to believe just the opposite to this they have become open to all manner of ailments and general misfortunes and their sufferings are greatly enlarged upon by the simple but tragic fact that they know not the source of them. He is to be like endd unto the man who, while standing in a room containing several other people is placed under a deep hypnotic spell and given post-suggestion that when he awakens there will be no one in the room but himself, and taking this suggestion is quite unaware that the room still contains the same number of people as it did before he was hypnotixed, and that now some of these people have needles and other sharp instruments in their hands and others have feathers.

Every so often one of those with the sharp instruments sticks him or cuts him and just as he howls in pain some one tickles him with a feather which brings him a great deal of pleasure causing him to howl with laughter.

This hypnotized person knows that he is alternately experiencing pain and pleasure but he is unaware of the origin of either. This rather deplorable situation has led him to all manner of mental and physical gymnastics in his efforts to escape pain. By and large however, the majority of such gymnastics that he puts himself through become a vicious circle that leads him right back into the face of that which he was madly and blindly seeking to escape, for they are predicated upon the theory that "by drowning himself in sensual pleasure pain cannot touch him." What he fails to see is that pain and pleasure are simply two sides of the same coin and are the basic properties of life, so they cannot be run away from. As true as this may be, there comes a times for most of us when we find ourselves confronted by problems which we find we can neither run from nor face. What are we to do now? As a rule such a situation leads many into what are called "inner conflicts" which in turn may in time lead to some form of organic disorder. As organic disorder means there is a cellular disturbance going on in that organ. A cellular disturbance implies the fact that a chemical change is taking place in the cell structure that is not to the advantage of the organ as a whole. Such chemical changes as a rule take place by what may be called molecular disintegration and molecular disintegration can take place only one way and that is by some force of an extraneous nature working upon that molecule and causing a rupture in the electro-magnetic field that holds the molecule together. This means the cell is suffering an energy leak. This extraneous force that I speak of as working on the molecular structure of the cellular body is called "mental" or psychic force. I do believe that we should now see quite clearly how the mind of one literally attacks its physical self via the nervous system, and very often destroys its physical maching in the face of all who try to stop it. Many doctors have found themselves quite puzzled as to why their medicines and drugs have failed so completely in healing certain patients while other patients having the same ailment seem to repond to them almost right away.

These well meaning medical people do not seem to be aware that that which shows itself as a physical ailment has its roots in the psyche and are sown there by both conscious and unconsciou emotional attitudes to the experience called living, so they seek to destroy the ailment by the application of drugs to the ailment of appearande. This is like lopping off the tops of weeds and expecting them not to grow anymore.

Psychiatry and Psychology seem to deal with the so-called "Unconscious" of a person as though it was something he was born with, like a finger or a toe, and is therefore a product of the body. The truth is, a body is NOT born WITH an unconscious self but OUT of the Unconscious, which means that the body is an externalized expression of the unconscious. The word, "Unconscious" however, is largely meaningless for we live in an ALL conscious universe. Were this not so no"Thing" could have any contact with any other thing and if there was such a word as prayer it would be without value. As it is, prayer is a "Tuning" in of the physical self to its mental self or source of "Things". Unfortunately, most of us are taught to believe we are separated from the Source of our own being at all times other than when we are in the act of making some kind of conscious supplement to it.

The fact is every created thing is in constant contact with It because all shapes and forms are but extensions of It. When I make a conscious appeal to my "Higher" self or cource of my physical form to heal the physical form of another, I put sincere emotional feeling into the plea as I direct my thoughts toward that one.

This consciously and intelligently directed emotional energy on being discharged from me causes a motion in what is called the Universal Mind. The Universal Mind is the matrix of all forms and shapes of what is called "Things". Said "Motion" acts as a positive image or idea in thas Universal Mind. This positive thought not only

brings about a change for the better in the individual you have aimed your prayer at but its effects are felt in varying degrees in all the created world --- that is why it is said, "That which we do shall come back to us a thousand fold" and "That which we think shall be thought of us."

This cannot be construed as a "Be Good" philosophy whereby you will get "pie in the shy when you die." It is a scientific fact built on the law of cause and effect. The Universal Mind cares not one whit what one does or does not do -- The Universal Mind knows nothing about moral laws; as such these, too, are creations of the ego-physical man to protect himself from his own prime evil nature, which is highly emotional and negative, not negative in itself, for nothing is negative or positive in itself, but is so by the nature of its point of origin.

This means that good and evil or positive and negative are never any stronger than their source of birth. Proof of the latter statement is amply demonstrated by the failures, as well as the successes of Rev. Franklin Loehr's group in their experimental work with prayer.

Many individuals say they believe this or that, yet they can neither get nor demonstrate required results from their asserted belief -- Why? Simply because it is only their body consciousness that is speaking through their lips. Their sense of belief is not incorporated in what is called the "Unconscious" self, meaning t the unconscious does not believe it, therefore it cannot help the body consciousness to demonstrate what it says it believes.

However, the reverse is also true -- meaning there are many people whose unconscious knows the truth concerning certain things which their body-consciousness knows nothing of. However, whether one knows a thing consciously or unconsciously, there is a law called the law of Boredom which operates in everything we attempt to do. Its action brings about a state of fatigue in us which is recognized by an ever increasing loss of interest is such things, and because I can see the shadows of said boredom begining to show in the eyes of the reader I will say --Thirty.

BALLYCASTLE COLLIERIES BELIEVED TO REVEAL A PREHISTORIC CIVILIZATION.

The histories of Egypt, Assyria and China begin after a World Flood had destroyed most of the inhabitants and rearranged entire continents.

Homer wrote twenty six hundred years ago:-

" The race of man like leaves on trees is found,
Now green in youth, now withered on the ground.
The following Spring another race supplies;
They fall successive and successive rise. "

Evidences of a race of men populating the earth before our own epoch of time, comes from the workings of probably the oldest coal mine in Ireland - the Ballycastle Collieries at Antrim in Ulster County. Our own epoch of time has run about 7800 years, since the latest World Cataclysm known as The Flood.

"In 1770 the miners accidentalyy discovered a complete gallery, which had been driven many hundred yards into the bed of coal, branching into thirty six chambers, dressed quite square and in a workman-like manner. No tradition of the mine having been worked remained in the neighborhood." (Encyclopaedia Britannica, 11th Edition. Vol II, page 153.)

Inquiries to Ballycastle Collieries and others at Antrim fail to elicit any interest in seeking to find tools or artifacts used by the vanished race of prehistoric miners.

What was a mystery for many years now fits, like a piece of a jig-saw puzzle, into the theory of the recurrent cataclysms of the earth, caused by ice-caps at the Poles growing too heavy from constant snow-fall into cold storage reservoirs.

The ice reservoirs grow in size because the weight of the central ice, such as that now piled up two miles high at the South Pole, causes up-thrusts of coastal mountains, which block the flow-off to the sea of the glacial ice. The wobble of the globe puts this ice mass off-center from the earth's Axis of Spin, creating an eccentric throw of centrifugal force which eventually topples the earth sideways to its direction of rotation. The ice cap rolls around to the tropics and tropical areas roll to the polar axis.

Instead of concentrating our thoughts on sputniks, flying saucers and space men, we will do ourselves more good by devoting time to trying to learn more about the insecurity of our own individual lives as the present temporary inhabitants of our planet.
