Oneida Circular.

A WEEKLY JOURNAL OF HOME, SCIENCE AND GENERAL INTELLIGENCE.

Published by the Oneida & Wallingford Communities.

ONEIDA COMMUNITY, JANUARY 1, 1873.

New Series, Vol. X, No. 1
Whole No. 1439.

POST-OFFICE ADDRESS:

ONEIDA CIRCULAR, ONEIDA, N. Y.

TERMS:

The CIRCULAR is sent to all applicants, whether they pay or not. It costs and is worth at least two dollars per volume. Those who want it and ought to have it are divisible into three classes, viz., 1, those who cannot afford to pay two dollars; 2, those who can afford to pay *only* two dollars; and 3, those who can afford to pay *more* than two dollars. The first ought to have it free; the second ought to pay the cost of it; and the third ought to pay enough more than the cost to make up the deficiencies of the first. This is the law of Communism. We have no means of enforcing it, and no wish to do so, except by stating it and leaving it to the good sense of those concerned. We take the risk of offering the CIRCULAR to all without price; but free subscriptions will be received only from persons making application for themselves, either directly or by giving express authority to those who apply for them.

Foreign subscribers, excepting those residing in Canada, must remit with their subscriptions money to prepay the postage.

THE UNITED COMMUNITIES.

ONEIDA COMMUNITY

Is an association living in Lenox, Madison Co., N. Y., four miles south of Oneida and a few rods from the Depot of the Midland Railroad. *Number* of members, 205. *Land*, 654 acres. *Business*, Manufacture of Hardware and Silk goods, Printing the CIRCULAR, Horticulture, &c. *Theology*, Perfectionism. *Sociology*, Bible Communism.

WILLOW-PLACE COMMUNITY.

Branch of O. C., on a detached portion of the domain, about one and one-fourth miles north of O. C. *Number* of members, 19. *Business*, Manufactures.

WALLINGFORD COMMUNITY.

Branch of O. C., at Wallingford, Conn., one mile west of the Hartford and New Haven Railroad. *Number* of members, 45. *Land*, 228 acres. *Business*, Publishing, Job Printing, Manufactures and Horticulture.

SPECIAL NOTICE.

The O. C. and Branches are not "Free Lovers," in the popular sense of the term. They call their social system BIBLE COMMUNISM or COMPLEX MARRIAGE, and hold to freedom of love only within their own families, subject to Free Criticism and the principles of Male Continence. In respect to permanency, responsibility, and every essential point of difference between marriage and licentiousness, the Oneida Communists stand with marriage. Free Love with them does *not* mean freedom to love to-day and leave to-morrow; nor freedom to take a woman's person and keep their property to themselves; nor freedom to freight a woman with offspring and send her down stream without care or help; nor freedom to beget children and leave them to the street and the poor-house. Their Communities are *families*, as distinctly bounded and separated from promiscuous society as ordinary households. The tie that binds them together is as permanent and sacred, to say the least, as that of marriage, for it is their religion. They receive no new members (except by deception or mistake), who do not give heart and hand to the family interest for life and forever. Community of property extends just as far as freedom of love. Every man's care and every dollar of the common property are pledged for the maintenance and protection of the women and children of the Community.

ADMISSIONS.

These Communities are constantly receiving applications for admission which they have to reject. It is difficult to state in any brief way all their reasons for thus limiting their numbers; but some of them are these: 1. The parent Community at Oneida is full. Its buildings are adapted to a certain number, and it wants no more. 2. The Branch-Communities, though they have not attained the normal size, have as many members as they can well accommodate, and must grow in numbers only as they grow in capital and buildings. 3. The kind of men and women who are likely to make the Communities grow, spiritually and financially, are scarce, and have to be sifted out slowly and cautiously. It should be distinctly understood that these Communities are not asylums for pleasure seekers or persons who merely want a home and a living. They will receive only those who are very much in earnest in religion. They have already done their full share of labor in criticising and working over raw recruits, and intend hereafter to devote themselves to other jobs (a plenty of which they have on hand), receiving only such members as seem likely to help and not hinder their work. As candidates for Communism multiply, it is obvious that they cannot all settle at Oneida and Wallingford. Other Communities must be formed; and the best way for earnest disciples generally is to work and wait, till the Spirit of Pentecost shall come on their neighbors, and give them Communities right where they are.

BUILT UPON A ROCK.

BY MARTIN LUTHER.

My anchor is within the vail!
Whatever may my soul betide,
Against me nothing can prevail,
For God the Lord is on my side:
Though heaven and earth shall pass away,
My trust shall still unshaken stay.

The Rock of Truth I now have found,
Here shall I ever stand secure:
I safely anchor in the ground
That shall for evermore endure:
When all the things of earth are fled,
With joy shall I lift up my head.

Nor waves nor storms can bring me harm,
While on this Rock I place my trust;
My strength is the Almighty arm—
The shield and refuge of the just:
Here shall I dwell, and dwell serene,
Amid life's ever chequered scene.

Though fiends of hell against me rise,
Their looks of wrath I will not fear;
While on the Lord my soul relies,
He shall for my defense appear;
He is my fortress and high tower,
My helper in the evil hour.

My house I build upon this rock,
Which shall forever be my stay;
To fire, nor flood, nor tempest shock,
Shall its foundation e'er give way;
But here shall stand forever fast,
Long as eternity shall last.

WOMAN'S POWER.

Home-Talk by J. H. N.

WHO first preached the gospel? I am inclined to answer, Mary Magdalene. She was the first to find that Christ had risen from the dead; the first to whom he spoke after that event. He directed her to go and tell the disciples that she had seen him, and to say to them from him, "I ascend unto my Father and your Father, and to my God and your God." That message was the Gospel—glad tidings of the event by which salvation came—and it was first announced by a woman.

In the organization of the Church Christ appointed twelve apostles, who were strong men and important officers. This was the conspicuous part of the organization. What was the dynamic? Was it a feminine apostleship? We may safely assume that the most important facts in this matter are not on the surface but must be ascertained by esoteric examination. The fact that Mary preached the gospel before the apostles—in fact preached it *to* them—and stood between Christ and them in the most important message that ever went forth from heaven, warns us to inquire carefully as to the place that woman occupied in that organization.

We have some hints showing an essential connection between the women who were attached to Christ and his works. For instance in the case of his first miracle—the turning of water into wine—the agency of a woman was notably present. The affair is recorded with minuteness, as the beginning of the glory that was manifested through Christ in his miraculous career; and we are told particularly that the *mother of Jesus was with him* when that work was done, and that she summoned him to it. She found that the wedding party at which they were guests was lacking wine, and she spoke of the want to Jesus. Why did she interfere in this way? What reason had she to expect that he would help them? Did a mysterious understanding exist between him and her about the matter? Evidently some element of the work in hand, whatever it was to be, had a commencement in her as well as in him. Her inspiration it would seem ran before his. He answered her suggestion by saying, "Woman, what have I to do with thee? Mine hour is not yet come." But it appears that it had nearly come, and that she was not much ahead of the clock. She did not answer him, but assuming again the existence of a secret compact between them, said to the servants, "Whatsoever he saith unto you, do it;" and, as if in obedience to her, he went right on and performed the miracle.

Christ once said, "If two of you shall agree on earth as touching anything they shall ask, it shall be done for them of my Father which is in heaven;" and in this he announced a wonderful principle. It was illustrated in the case of the wedding miracle. There were two persons who were agreed, and one of them was a woman. Every natural birth is, in fact, a miracle resulting from and illustrating this principle. Perhaps all miracles require the coöperation of male and female.

Study the story of Mary of Bethany and you will see how great an agency a woman had in the performance of Christ's last and greatest miracle, the raising of Lazarus from the dead. Jesus knew that he should raise Lazarus, and went from a distance expressly to do it; but it seems that on the spot Mary's presence was a necessary preliminary to his work. Martha first met him, but she did not bring the needed element. The Master called for Mary; and it was only when *she* had come that he "groaned in the spirit and was troubled, and said, Where have ye laid him?" A mysterious sympathy with Mary seems to have perfected Christ's power. Certain *quasi*-chemical elements combined, and the tremendous force was evolved that raised Lazarus from the grave.

Thus in Christ's first miracle, which "manifested forth his glory," in his last miracle which led to his coronation and crucifixion, and in the burst of his own spirit from death on its ascending flight to the Father, the presence of the other sex seems to have been an important part of the dynamic agency. These hints, together with such as may be found in the fact that women were assembled with the disciples in prayer before the miracu-

lous manifestation of the Spirit on the day of Pentecost, and that Paul had "yoke-fellows" of the same class in his colossal labors, should make us wish to go deeper than we have yet gone in our understanding of the constitution of the Primitive Church, and to ascertain, beneath its outward show, the currents of life and affection which vitalized its organization. The national corporations of the world are composed by men and for men. The Kingdom of Heaven, it may be, is a nation whose power consists in its duality, and rests half of its base on woman.

THE POINT IN THE GAME.

[Selected from G. W. N.'s Writings.]

THE struggle between the children of God and the wicked one, is on the point of *utterance.* The devil is a liar from the beginning; and *he* knows it and *we* know it; but the world is mainly unaware of it and that gives him the chance of utterance. Through all the vehicles of human society—by the press—the daily business and conversation of the world—he is breathing out the dismal falsehoods of his spirit, preaching unbelief, holding up the certainty of death, and in general the omnipotence of evil. Now God and the angels know that this is all false, and Christ himself sweat great drops of blood to prove and proclaim the contrary; but as long as he contrives to keep control of the world's utterance, he can diffuse an infernal fog which makes it almost impossible for men to see his lies, or to believe the truth. There is a continual din and drill going on night and day, calculated to fill the atmosphere and poison the consciousness with his experience and his prospects. There is no ground for this in fact; since the devil is really conquered and men are free; but the perpetual persuasion of "Massa" Satan's lying claim, produces an illusion which keeps them slaves. The point to be noticed is, that the whole strength of evil lies in *persuasion*, in *utterance*, and shows itself to be a lie the moment it is exposed to contradiction.

Now what we want, and by the favor of God will have, is freedom of utterance—power to diffuse persuasions of good and of Christ more boldly and persistently than Satan diffuses unbelief. We shall meet blast with blast, and brass with brass. We shall gradually create an atmosphere by testifying to the truth of salvation, that will expel his lies. He will find that the glorified throngs of heaven can inspire utterance and pump spiritual influence into the world as well as he. Christ will not allow his sufferings on the earth to go for nothing, or let the race be *lied* out of that which he obtained for them. And it all hinges on the question which party shall have the freest utterance. Nothing is needed to set the world free from all evil, and pitch the author of it into tophet, but a simple and persistent confession on the part of men, of what is already true—what Christ has already done for them. "They overcame the dragon by the blood of the Lamb and *the word of their testimony.*" "With the heart man believeth unto righteousness, and *with the mouth confession is made unto salvation.*"

This "confession"—this "testimony"—has begun again in the world. We have come up to a point-blank push with the spirit of falsehood and unbelief on the point whether Christ has saved the world. We say he has—the devil through all the channels of unbelief says he has not. Assertion is the weapon we have to meet, and by the same weapon we must conquer. We must maintain our position by bolder, longer and stronger assertion than he. This in the name of Christ we can do, and more. Give us a daily PRESS, such as we see is coming, and with the grace that God can furnish we will roll out a denser volume of faith and hope and charity than all the sin-and-gloom factories put together. The words of salvation will be "fiercer" than the presentiments of despair; the devil will be crowded out, and death swallowed up in the justification of life.

This at any rate, in one form or another, must be the process of deliverance. The Spirit of Truth must find a voice—Christ's almighty name must be confessed, and man's emancipation be proclaimed in the face of death and hell. We pray for utterance; and ask of all who have a spark of heaven-sent faith in their hearts, to unite in the determination that it shall have vent—that its victorious sound shall never cease till all the delusions of Satan are drowned in a universal shout of freedom.

HOME INFLUENCE.

A YOUNG and wealthy mother loses her first-born and only child—a son. She mourns the loss deeply. But young and full of hope she is encouraged to think that other children may be given her to fill the place of the departed one.

Twelve years elapse and she is blessed with two lovely daughters. But in her heart is still the desire for a son, if she could only feel an assurance that he would fulfill her ideal of true manhood. She sees many young men around her—sons of wealthy parents brought up in luxury and ease—who are hopelessly ruined. One is so dissolute, that his parents, for the sake of their own reputation, have sent him to Europe, where they support him. Another has been sent to the Inebriate Asylum, and others have been turned out of schools and places of business responsibility, on account of moral inefficiency and are now living lives of indolence and dissipation, a sorrow to all who love and are interested in them.

Now her language is: "I dare not say that I want any more children, especially boys, for there is so much risk in bringing them up. There was a time when parents could govern their children, but now there are so many influences outside of and stronger than the home influence, that it avails but little to try to do so. Those good old times were the best; but we live in a different age now, and what *can* we do?"

Are there not many honest-hearted people in the world, who see the need of a reform and ask the same question? If the truth were known, it is not altogether vainly that they ask. A reformatory movement has indeed begun, and may God speed the day when it shall cover the earth as the waters cover the sea. In one bright spot on this continent there is a family where home influence and church influence rule, where the love of God is the first and all-powerful element, and love for one another the second element, thus ensuring protection to the young, freedom from anxiety to parents and guardians, and binding all together in the magic circle of a happy home.

CARRIE.

BACKWARD GLANCINGS.

XI.

IN a previous number allusion was made to a serious defection from the Perfectionist ranks at New Haven. Several persons of influence, once foremost in professions of entire devotion to the cause, were involved in this apostasy. Their departure from the faith chilled and disheartened the weaker brethren. The reaction toward legality and the old church standard of sinful religion was now fairly begun. The paper continued to rouse inquiry and make friends to the cause abroad, but in New Haven Perfectionism was nearly, though not quite, crushed out. The following letter from J. in reply to the anxious inquiries of friends at home describes the situation at New Haven, and his own ground of faith and rejoicing:

New Haven, Nov. 2, 1834.

DEAR MOTHER:—I am glad if my letters excite any interest among you, for I have become such a burden and by-word to this city, and have been separated from so many of my best friends, that I have almost expected at last to become an alien in my father's house; and any token of kind remembrance and friendly feeling on the part of those who have hitherto shown me affection is exceedingly refreshing, amidst the contempt and neglect, not to say persecution, which I am called to bear. I desire not to trouble you with my troubles; but as you insist upon hearing often from me, and wish to know all my affairs, I must of necessity, for the present, say something of those things which would make me sad, if I would let them. But let me notify you that if anything I write makes you sad in such a manner that you cannot heartily say "Amen" and give thanks when you have done, your sadness is not sympathy with me. Besides the living God, I have a few friends in this city, and more in the land, whose love the floods cannot quench, nor many waters drown. With these I am content and rejoice; yea and will rejoice, till the kingdom of God shall come.

We are daily discovering with amazement the passing deceitfulness and wickedness of many who walked with us at the beginning, and seemed to run well for a season, but have at length thrown off their sheep's clothing. B. and his family a few months ago were ready to pluck out their eyes and give them to Boyle or myself; now they are doing what they can by treachery to trouble us. L. was liberal beyond measure, ready to rob himself for our sake. At last he forsook us, and I have not seen or heard from him since I came back to this city till last night, when he sent me an abusive letter, wishing me to restore the $20 he "*loaned*" me, which he says I promised to do when I returned. I borrowed $20 of H——, and sent him immediately, with the word that "I never received the money on the conditions he mentioned." Mr. S., too, in the summer when other friends failed, gave Boyle and others a helping hand, and seemed to throw himself heartily into the cause of the Lord. Now he stands afar off and passes by on the other side, charging us with many sins. D. sold himself and his Mas-

ter for a license and a wife, and now denies all fellowship with the Perfectionists. All of these and many more whom I might mention are now fighting the cause of holiness by the same arguments which they themselves have a thousand times, in their former contests, treated as nonsense.

But the sorest wounds of all I have long been receiving from those who call themselves Perfectionists. Letters of censure and officious exhortation are frequently sent to us by Perfectionists in other places, who understand neither what they say nor whereof they affirm; and we have several times been troubled by those whom I wish not to call false brethren, who have yet come in privily to spy out the liberty which we have in Christ and bring us into bondage. Continual complaint from all quarters is made against me for my mysticism and innovations and false doctrines. So it goes.

After all, in everything I give thanks, and well I may, for the Lord suffers none of these things to move me. I can pray with hearty good-will for those who despitefully use me, and looking beyond the smoke and fury of the war around me, rejoice in the anticipation of the time when the whole earth shall sing a new song, saying, "Now is come salvation and strength and the kingdom of God and the power of his Christ." I hear a voice behind me saying, "This is the way, walk ye in it," and I know that God Almighty is my shield and buckler, therefore I cannot fear nor be sad. The Lord has given me a place in this city and a work to do; and till he thrusts me out—though the question be in every mouth, as it is in many, "What business has he here troubling our city?"—here I shall stay. I say to those who ask this question, "I shall soon be hated anywhere else, as I am here; and as the earth owes me a lodging place, you must be content to bear your calamity."

As to going home, though I would rejoice to see you, yet many reasons forbid it for the present. Besides, if father fears to involve himself in my doings, the same objection will lie against my living upon him at home as abroad; for you may be sure I shall never rest till "the righteousness of God shall go forth as brightness, and his salvation as a lamp that burneth." You must hedge up Jesus Christ if you check me. May the Lord give you all grace to say Amen. Yours affectionately,

J. H. NOYES.

CORRESPONDENCE.

Geneva, Allen Co., Kansas, Dec. 17, 1872.

DEAR CIRCULAR:—Kansas has been greatly overrated by the newspapers, particularly those published in the State. As a whole, I consider it a very poor grain State. In some places grain is quite a sure crop, and on the bottoms corn is usually quite successful; but in a large part of Kansas wheat will fail, at least three years out of four; and on the upland prairies, a very little dry weather cuts off the corn crop. From my three years' experience here, and from what I can learn by attending fairs and inquiring of persons who live in different parts of the State, I am satisfied that Kansas never can compete with the North Western States in grain-raising, and it may have to look to those States, at no distant day, for at least a portion of the supply of flour which it requires for its own consumption.

But Kansas is a favorable fruit region. In the older portion of the State where orchards, vineyards, etc., are old enough to bear, crops very seldom fail; and if one-quarter of the fruit trees and vines which are planted, ever come into bearing, Kansas will in a very few years have immense quantities of fruit to sell. The apple, peach and grape seem to be the particular favorites of the Kansas soil and climate. Apple trees and peach trees of two years' growth will average as large as those of three years' growth in the Northern States. They seem to grow almost spontaneously. Every seed or root put out is almost sure to produce a tree. Peach trees bear the third or fourth year from the seed; apple trees sometimes as early as the seventh or eighth from the root graft. It may be asked, how and where we expect to market our fruit. We are now within easy reach of the immense cattle-growing regions of Texas, which must always look to the North for their supply of apples, and perhaps grapes; and the Rocky Mountains (for they will soon be quite densely populated) will also demand a large supply of apples, peaches and grapes from Kansas and Nebraska. A. D. W.

Grant City, Iowa, Dec. 15, 1872.

DEAR FRIENDS:—I have been a "free subscriber" to the CIRCULAR for the last three or four years, and I have been an interested and profited reader. When I last renewed my application for your paper, you may (or you may not) remember that I proposed to raise an acre of corn for the CIRCULAR this year. I did so. The corn would very probably measure forty bushels; but there is no cash market for corn near us, and at our nearest railroad station (fifteen miles away), it would not bring more than twelve or fifteen cents per bushel. One man a few miles from here sold some standing corn to a stock-feeder for $6 per acre. I have concluded to call this acre worth $6, and send you the money as fast as I can well spare it. I enclose five dollars.

I should be glad to tell you some of the benefits I have derived from reading the CIRCULAR and the "Berean," which you were so kind as to send me two years ago. Suffice it to say, that I have learned a new lesson as to what it is to be "very much in earnest in religion." The article in the "Berean" "Salvation from Sin," read some three or four weeks ago, gave me new views of Christ as an indwelling Savior. I awoke in the night after reading that article with such a sense of Christ in me as I never had before. How my heart expanded in love to God! and I felt as though the dwellers at Oneida were brothers and sisters indeed. Since then I have found great comfort in reading "Two-Fold Nature of the Second Birth," and especially the article, "Christian Faith." I trust I have made "a whole-hearted and everlasting surrender to the faithfulness of God." But I want to press forward to know still more of what Paul means by being "dead indeed unto sin," to be "crucified with Christ," and to know the "power of his resurrection." I cannot thank you enough for the CIRCULAR. God will bless you and make you a blessing. Yours in the faith, E. M.

THE BALL OF YARN.

[Mrs. Cragin's first grandchild—a little daughter—was born about a month ago. While tracing a resemblance in her tiny face to those loved features which time can never efface from our memories, we hoped that this fair descendant might inherit the rare qualities of that large-hearted mother of Communism. Though twenty-one years have passed since the waters of the Hudson snatched her from our circle, she had instilled precepts into the minds of those who were then children, which have been of great use to us in the trials of maturity. She seemed to understand the ductile mind of childhood, and knew how to inculcate spiritual lessons by means of practical illustrations which took a lasting hold upon the imagination. The following letter from her pen has never been forgotten by the boys and girls who used to cluster about her skirts, or romp with her in the meadows when she came up from Brooklyn for a few weeks' visit at Oneida:]

Brooklyn, Dec. 21, 1849.

DEAR BOYS AND GIRLS:—I have been thinking for more than a week of writing you a letter, but have waited because I heard that you were going to write *me* a long letter. As that does not come, I will not wait to answer it, but will write first, and tell you what I should say to you if I were there.

I suppose you think because I am living in a city, where there are a great many curious sights to be seen, that I shall have some wonderful stories to tell you; but the truth is I do not go to see any of them. I love best to stay at home. So I cannot entertain you in that way. But I will tell you what I am doing, which makes me love best to stay at home. *I am unwinding a great ball!* Does this surprise you? I will explain a little. It is not a ball of yarn that I am unwinding, but the ball of *my life*. This is a ball made of actions, some of them good and some of them bad. This ball started when I first began to know right from wrong, before I was as old as Johnny; so you can see that it must be very large by this time. God says in the Bible that "every secret thing shall be brought to light;" which means that all the actions of our lives, and thoughts of our hearts will be told of, and praised if they are good, and condemned if they are bad.

Now what I want you to lay to heart is this: That whether you know it or not, you are winding a ball from day to day, and the time will come when you will have it all to unwind. Then every selfish action, every careless action, every foolish action, every act of disobedience, every lie, will make you ashamed. You will wish you had thought of it when you were winding your ball, that all of these things would have to be brought to light. Ah, you will say, when that time comes, "*I didn't think.*" But that excuse is the worst of all—the coarsest, blackest thread in the ball. Do you ask why? I will tell you. That spirit that says "I didn't think," is a spirit of carelessness; and *carelessness* is often as mischievous as evil intention. God has made us to *think*, just as much as he has made us to see or hear. You would not think it was treating me well if I should send you on an errand up stairs, to shut your eyes, and if you fell down, to say in excuse, "I didn't see;" or if I should call you, to stop your ears and then say, "I didn't hear." Well, it is treating God just as meanly, to say when you have done careless things, "I didn't think."

There is a great deal said in the New Testament about *watching*. Christ said, "I say unto all, Watch." He knew that the spirit of carelessness, which is a devil, is gliding about like a serpent, and he wants us to be very careful not to get bitten by it. You have all of you been bitten enough to know how it feels; and you say, "I will take care next time." It often makes you sore in your heart for some time, and you wish you had looked out sharper. Will you ask Mrs. W. to look out the passages in the Testament about watchfulness and vigilance, and then think over how many troubles you have got into from not being watchful; and then pray God to give you a watchful spirit to protect you against the bite of the serpent carelessness. Never again say, "I didn't think," any more than you would say, "I didn't see," or "I didn't hear," when you had shut your own eyes and ears.

If you want your ball to be white and fine when you come to unroll it, you must also be *sincere*. Nothing makes blacker threads than hypocrisy; by which I mean all deceit, from telling lies right out, down to *cant*, which is pretending something you do not feel. For instance, you hear a great deal said around you about love; you are taught that love is the best thing in the world, and so it is. But if you want real true love, which will warm your heart and make you beautiful, you must shun insincerity. You must not pretend to love where you do not, or profess more love than you feel either in word or action. If you do, false love, which is as venomous a snake as carelessness, will bite you, and true love will be grieved and leave you. The world is full of this false love; everybody wants others to love them, but instead of earning it by being watchful to do right, and perfectly sincere, they do not want to take that trouble, and so they go to work to get love in a way that is no better than stealing. They cover up their faults, and pretend to be very kind and polite, and to

love those whom they want should love them. This does for a little while; but this spirit, like all other thieves, is found out at last, and finds that it has lost all.

Ask God to give you love for the truth about everything, and to give you courage to speak the truth on all occasions. If you learn to be *sincere* and *watchful*, now while you are young, you will be saved from a great deal of trouble that we grown folks have to go through. And what is better than all, God will love you more and more, and his light in your hearts will make you happy.

When you pray for yourselves and each other, that God will give you a sincere, watchful spirit, I want you should pray for Theodore and me. I hope you will answer my letter.

Your friend, MARY E. CRAGIN.

ONEIDA CIRCULAR.

TIRZAH C. MILLER, EDITOR.

WEDNESDAY, JAN. 1, 1873.

The CIRCULAR, in passing from masculine to feminine hands, will inevitably change somewhat in character; but its aim will be the same. Its purpose will ever be to strengthen interior life; to glorify softness of heart, to encourage faith, hope, harmony, love, and to frown on selfishness, individualism and all manifestations of the "old life" which have not been subjected to the purifying furnace of the Spirit of Truth. Natural talent for literary labor is in itself insufficient to secure the objects which the CIRCULAR holds before itself; but we know that the angels who are "looking kindly down" have taken the paper in charge and will see that it is promptly issued each week in the interests of the eternal kingdom. Looking about for a motto which will please these unseen managers, and which will symbolize the heart strivings of the Community, we inscribe upon our banner in golden letters the word "Humilior!"

We cannot pass without a word of favorable comment a sentiment which accords so musically with our own views as the following, which we find in "Literature" in the last number of *The Galaxy*:

Our view of civilization may be different from that of most folks. We do not admit, for instance, that it is founded on "love of wealth or ownership." On the contrary, accepting a Christian standard of civilization, and following "love of wealth and ownership" to its logical conclusion, we should say that it was just the reverse, civilization being giving rather than acquiring, sharing rather than owning. Our conception of civilization is a true adjustment of rights and duties based upon something better than property.

NOT SO FAST!

WE observe in the last issue of the *Nation* a somewhat long and racy paragraph about a few of the late moves of the O. C. It is pleasant to know that somebody in that office reads the CIRCULAR, and we are quite obliged to the writer for passing on to his larger public a mention of our two-meals-a-day system. We take his doing so as one among many signs which we see that our example in that respect is likely to meet with favor. We hope so, at any rate. Yet modesty compels us to say that our new system hardly deserves the credit of being called a "self-denying ordinance," because we follow it so easily and enjoy it so much. However, it is sweet to be praised. The *Nation* goes on to speak of our "clothing committee," and in that connection, alludes to our custom of free criticism. Good! We don't care how much people circulate a knowledge of that fine art.

But there is one phrase in the paragraph which we hardly know how to take. The writer calls W. Hepworth Dixon "the Oneida family's dear friend." How is that? It may be that this is ironical. If so, all right. But if the itemist really means that Hepworth Dixon is our "dear friend," he is very much mistaken The account of his trial shows that he disowns us and calls our leading principles nonsense. And on the other hand, nobody in this country has found so much fault with him as we have, for no one else has had so much occasion. We have criticised him a great deal more severely than the *Nation* ever has, and have among our standard publications a pamphlet called "Dixon and his Copyists," which will show any one who cares to read it that we think this "dear friend's" way of showing his friendship very disagreeable. Happening, by chance, to be so situated that we could catch a view behind the scenes when he put "New America" and "Spiritual Wives" upon the stage, we learned a thing or two; and "Dixon and his Copyists" gives a faithful account of the way these books were made up. No one, indeed, has done so much as we, to show up Dixon as a sensational book-maker. If the *Nation* writer wants another stick to whip Dixon with, this pamphlet would, we think, be of service to him. It would at least show him that we don't think that Dixon thinks that we think he is our "dear friend." But it is of no consequence, sir; you were only mistaken; so there 's an end of the matter.

"ANTI DOCTIONAL RELIGION."

THE above somewhat striking title appeared in the last issue of the *Baptist Weekly* above an article by the Rev. E. Mills. One must of course be prepared for whatever is new and startling in this progressive age, whether in science, art, ethics, or religion; but there must be a limit to one's credulity even where transcendental philosophy is concerned. When a man calmly discourses to us about "Anti Doctional Religion" in such phrases as "orthodoc men and orthodoe ministers," "the one great lawgiver of the *Churce*," "if it be true, as *Tertulian* affirmed," "false doctrine is not rendered *inocous* by its being winked at," and the like, one is inclined to think that the age of reason is succumbing to an age of verbosity.

But the Rev. E. Mills is without doubt an innocent man, and has never for a moment thought of instigating in any way an overturn of the established ideas of the world concerning either sense, sentiment, or sectarian creeds. We presume his ears are burning still with the chagrin he felt on opening the *Weekly*. Willis Gaylord Clark's humorous description of the miseries which John Smith endured as the "Victim of a Proof Reader," though exceedingly amusing, seemed always to derive a part of its effect from its absurd exaggeration; but the fate of the Rev. E. Mills, is scarcely less deplorable. He has either been sadly victimized by his proof-reader, or the foreman of the office inserted his article into the form without any proof whatever. In this essay of only two-thirds of a column in length we counted thirty-four typographical errors. Somebody's case must be shockingly pied!

COMMUNITY JOURNAL.

ONEIDA.

Dec. 25th.—The mercury fell to 17° below zero last night.

—The Yale students are spending the holidays with mother O. C.

—We notice that our shop boys in traveling to and from Willow Place have a novel way of protecting themselves from the cold. They thrust their heads into paper flour-sacks, having openings for the eyes. They look like a party of masqueraders, but declare themselves quite comfortable, and ready for the roughest work old Jack Frost can do.

Dec. 22.—The "CIRCULAR Club" held its Sunday session in the dining-room this afternoon instead of in the printing-office; but we fear that our readers will be but little wiser for their deliberations, for nobody wrote anything. The various members wielded knives and forks and spoons instead of pens and pencils, and quietly discussed an oyster-supper with an air which boded no immediate accession to the contents of the copy-box. The supper was given by the ex-editor in token of his appreciation of the assistance the club has afforded him during the year now ended. The affair was quite an unstudied one, those who took the lead aiming to make it as informal and unpretentious as possible; but when we had reached the dessert of nuts and raisins, there came unexpectedly a "feast of reason and a flow of soul" which were quite enlivening. A member offered the following:

"The faithful editor, the affectionate brother, the ready helper and esteemed leader of the 'CIRCULAR Club.' May his future post be as useful to the Community and as pleasant to himself as his three years' work has been profitable to us and edifying to the readers of the CIRCULAR. I give as a toast, William A. Hinds."

This sentiment was sincerely indorsed by all.

T. L. P.—"I propose Mr. Noyes—the founder of the free press, and the medium of the best editorial spirit yet manifested in the world."

N.—"I do not think the Community realize how much the CIRCULAR is appreciated abroad. We get occasional glimpses from letters we receive. These letters are filled with praises of the paper. I do not think it is all talk. I believe people are sincere and mean what they say. The great charm of the CIRCULAR is that it is *free*. We have never printed it for money, and its contributors have never written for money. This fact distinguishes it from other publications; and the unselfish spirit which has tinged its whole career cannot fail to touch the hearts of good people."

Among some expressions of good-will toward the new editor was the following remark by Mr. N.:

"There are great changes going on in the editorial world about us. Greeley has gone, Bennett has gone, Croly is about retiring from the management of *The World*, and a hundred other displacements are reported. Mr. Hinds has also retired from his position as editor. In this instance, the charge of the paper goes into the hands of a woman. This may be an indication of the drift of the times."

Other edifying toasts were given, among which was the following by N.:

"The machinist's lathe, the father of the printing-press and therefore the grandfather of modern civilization."

H. J. S., whose face was becoming a petrified pun, responded:

"The probable reason why the lathe is so useful to the printing-press is because it has so much 'CIRCULAR' motion in it."

—Notwithstanding the cold weather and frequent snows of the past week, *croquet* continues to have its patrons and indeed bids fair to be an all-winter, out-door pastime with a goodly number of boys and girls and men and women of the Community. From one to four couples at a time (foremost among whom may be noticed Mr. Kinsley, in his 72d year), may daily be seen manipulating the mallets with healthful zest. Of course mittens and sacks and overcoats and warm clothing for the feet are not neglected, but with these accompaniments the game seems to be thoroughly enjoyed by many for an hour or more at a time. The women and girls particularly congratulate themselves that they are doing a little of the rugged, and

are oxygenizing their blood in an attractive way by this out-door exercise in zero weather; and the frozen ground, say all the players, makes an improved floor for rolling the balls. Then if snow falls by night or day and covers the ground to the depth of a few inches, some one is sure to be on hand very soon thereafter, with shovel and broom to clear it away. So that a stereoscopic picture of the croquet-ground at this writing, would exhibit it as an elliptical inclosure surrounded with a snow-white wall from two and a half to three feet in hight.

—Our readers have probably noted J. H. N.'s comments on Longfellow's much admired poem, "Excelsior." These comments occasioned us a racy entertainment a few evenings since. It occurred to somebody one morning that the plot of the poem might be dramatized. In a moment he had sketched the outline of several original scenes, and the "shades of night" had hardly fallen before the family were called into the Hall to the exhibition of the impromptu drama. As our readers will see, the final scene is a modification of Longfellow's plot suited to the moral of J. H. N.'s annotations.

Before the curtain rose, Mr. Underwood read the poem entire, as well as J. H. N.'s remarks, as published in the last two CIRCULARS. Next G. W. H. read, in his inimitable brogue,

PADDY'S VERSION OF EXCELSIOR.

'Twas growing dark so terrible fasht,
When through a town up the mountain there pasht
A broth of a boy, to his neck in the shnow;
As he walked, his shalalah he swung to and fro,
Saying, "It's up to the top I'm bound to go,
Be jabers!"

He looked mortial sad, and his eyes were as bright
As a fire of turf on a cowld winther night,
And divil a word that he said could ye tell
As he opened his mouth and let out a yell,
"It's up to the top of the mountain I'll go,
Onless covered up with this bothersome shnow.
Be jabers!"

Through the windows he saw as he traveled along,
The light of the candles and fires so warm;
But a big chunk of ice hung over his head;
Wid a shnivil and groan, "By St. Patrick!" he said,
"It's up to the very tip-top I will rush,
And then if it falls it's not meself it'll crush,
Be jabers!"

"Whist a bit!" said an owld man, whose head was as white
As the shnow that fell down on that miserable night;
"Shure ye'll fall in the wather, me bit of a lad,
For the night is so dark and the walkin' so bad."
Bedad! he'd not lisht to a word that was said,
But he'd go till the top if he went on his head,
Be jabers!

A bright buxom young girl, such as like to be kissed,
Axed him wadn't he shtop, and how could he resist?
So snapping his finger and winking his eye,
While shmiling upon her, he made this reply—
"Faith I meant to kape on till I got to the top,
But as your shwate self has axed me I may as well shtop.
Be jabers!"

He shtopped all night and he shtopped all day,
And ye mustn't be axing when he did go away;
Fur wouldn't he be a bastely gossoon
To be lavin' his darlint in the shwate honeymoon?
Whin the owld man has paraties enough and to spare,
Shure he moight as well stay, if he's comfortable there,
Be jabers!

Then came scene first. In rushes a youth, who, clambering up snowy hights, waves his banner "with the strange device," and shouts "*Excelsior!*" A hunter meets him, and warns him of cold and coming dangers. Unheeding, the youth sweeps past, waving his banner, and still crying, "Excelsior!"

In scene second, we again see the youth, hurrying on, with ever the same cry. A peasant and his family come out from a neighboring cottage, and try to stop him. A blooming Swiss maiden, kneeling, with outstretched arms and eager voice, implores him to stay and "rest his weary head upon this breast.' This is almost too much for the youth's persistency. In pantomine he expresses sorrow and regret; then, tearing himself away, clambers up more perilous hights, with frantic "Excelsior!" He must, oh! he must, plant his banner on the very highest mountain's top.

Now he meets, in scene third, a trembling, white-haired peasant:

"Try not the pass!" the old man said,
"Dark lowers the tempest overhead:
The roaring torrent 's deep and wide!"

No swerving on the part of the now desperate, half-frozen youth.

"Beware the pine-tree's withered branch!
Beware the awful avalanche!"
This was the peasant's last good-night;—
A voice replied, far up the hight,
"Excelsior!"

As the curtain rises on scene fourth, the stage presents a silent picture. Nothing stirs but the "faithful hound," who caresses the apparently frozen, lifeless body of the youth,

"Still grasping in his hand of ice,
That banner with the strange device,
"Excelsior!"

Now comes the closing scene (not Longfellow's). A party of monks come down the Alps, bearing the body of the youth and chanting a solemn dirge. They enter the cottage where live the peasant's family, and the blooming maiden. Expressing consternation and horror, the family gather about, and with the help of the monks, try to revive the youth. The maiden, distracted and sorrowing, caresses his motionless body. But lo! the chafing and stimulants do their work. The youth revives. He rises, gazing about him with a bewildered air. Suddenly his eye falls on his "banner with the strange device." He unfurls it, and views it with aversion and disgust. He flings it from him, and, sinking on his knees before the maiden while clasping her in his arms, iterates, "*Humilior! humilior!*" The curtain falls, and we all applaud. A.

—We have been living in Communism twenty-five years, and during that time have had a chance to try the advantages of families of various sizes. There are a few who like the snugness and coziness of a small Community; but the majority of our people prefer our largest family. Yet we don't believe we should like great Phalansteries of unlimited numbers, for the present size of the O. C. gives us hints of the disadvantages which would be likely to ensue were its members to increase to any great extent. We have, in fact, about concluded that the O. C. is just the right size for making the happiest home in the world. H. J. S. is lending a helping hand in the kitchen at the Villa this week, and he thus philosophizes on the advantages to be gained by living in small Communities:

"I find it an agreeable experience to live for a while in the atmosphere of a small Community. I don't mean the literal atmosphere during this cold snap; for, truth to say, the business of keeping warm requires much more attention here than in your great brick mansion. Unless I am particular to keep the kitchen stove and the cellar furnace *coaled* the whole house will be *cold*, and that will make the *folk-s-cold*. But it was more especially to the social atmosphere that I referred in my remark. We have demonstrated, at least to our own satisfaction, the falsity of Fourier's assumption that a small Community cannot succeed. A Community of any size can succeed if the materials of which it is composed have yielded themselves to the right kind of discipline. There are, however, some excellent advantages to be gained by limiting associations to thirty or forty members, which are not to be despised. We find, for instance, in our evening meetings, that some who would be frightened beyond measure at the sound of their own voices in the great Hall at O. C. are actually edifying members of the gathering here. This may be on the same principle that the little brook can make much more noise in proportion to its weight of water than the great *O. Ocean*."

—The following is from the school-room:

"I have been a teacher of the children for the past few months; but many are the lessons which I have learned of them. The simple expressions, 'I confess Christ a good spirit, that will be a good boy all day'—'I confess the revival spirit,' spoken with seriousness from their childish lips, have a controlling influence upon them, and teach me what a great helm is the confession of Christ. I see that these are not meaningless utterances to them; that the little girl who confesses Christ 'a spirit that will get her lessons well,' *expects to do it* and *does* do it. What interests me, is their innocent belief in their confessions, and in the realization of their faith. We all look to the same means for salvation; but with them the idea of a Savior seems so tangible. Yesterday with its failures is forgotten; unbelief finds no home, and they start anew in the path of improvement with the hope and confidence of childhood. Many times their simple faith has encouraged me and made me appreciate anew the truth that Christ is in me stronger than evil, and the simple words, 'I confess a spirit that will please my teacher,' has reacted upon my own heart, and I too have confessed Christ a spirit that will please God and *my* teachers. Truly, of such is the kingdom of heaven. P.

ABOUT INSPIRATION.

FRAGMENTS OF AN EVENING CONVERSATION.

W. A. H.—It is good for us to occasionally call to mind the New Testament doctrine that inspiration is a free gift—accessible to all. "For this is the covenant that I will make with the house of Israel after those days, saith the Lord; I will put my laws into their minds, and write them in their hearts: and I will be to them a God, and they shall be to me a people: and they shall not teach every man his neighbor, saying, Know the Lord: for all shall know me from the least to the greatest." "And it shall come to pass in the last days, saith God, I will pour out of my Spirit upon all flesh." "The Comforter, which is the Holy Ghost, whom the Father will send in my name, he shall teach you all things, and bring all things to your remembrance." Nothing can be plainer than that the gospel idea is that no one is so lowly or ignorant that he cannot receive God's spirit and be moved by it.

W. H. W.—The testimony of the Primitive Church was that they had "the mind of Christ." Those who could use that language must have been in a state of chronic inspiration, which is certainly the most desirable condition. To have the mind of Christ and be actuated by it, is far better than to seek for inspiration with reference to particular things.

W. A. H.—The early Perfectionists had a great deal to say about being inspired in this retail way. It affected their daily conversation. They would talk about being inspired to do quite trivial things. Perhaps they were; but it is plain that such inspiration is characteristic of immature experience—far inferior to the chronic state of inspiration expressed by the words of Paul, "We have the mind of Christ."

G. E. C.—The best inspiration is always organic and tends to unity. There will be no working at cross purposes when persons have the mind of Christ, for that first and always seeks unity.

W. H. W.—We are most of us more or less familiar with what is termed specific inspiration—inspiration leading us to do or say particular things; but I judge that the members are more and more seeking the chronic inspiration that comes from possessing the mind and spirit of Christ. These give us true wisdom.

J. B. H.—I have noticed that when persons

act from this higher inspiration they are sometimes led to do things which may not appear very wise at the time, but which subsequent events prove to have been in accordance with perfect wisdom. Men who live by inspiration—who walk after the mind of Christ—will never have occasion to look back and call their lives failures. On the contrary, as they grow in years they will see more good, more harmony, more beautiful providences, in their past careers.

WHAT SAY YOU?

O. C., Dec. 26, 1872.

DEAR EDITOR:—Many readers of the CIRCULAR have expressed themselves as specially interested in what relates to the inner experience of the Community; and this has suggested the thought that you might be willing to publish an occasional article embodying some of the best thoughts expressed at the meetings of our Criticism Club. What say you? At these meetings, as you very well know, individual character is freely discussed, but always in the spirit of love—with a sincere desire to benefit the subject. No personal prejudice is allowed to manifest itself. As our best critic recently said, "In criticism we should never irritate a person or aggravate his faults. The idea we should have distinctly in view is to do the subject good—to say something that will be useful for the improvement of his character. In general we should see to it that there is nothing in our spirits or words that will excite combativeness. Avoid as much as possible saying anything that tends to humiliate the subject. This of course cannot always be done; but even when the truth requires us to say very sharp things we are bound to say them in the soft, broken spirit that wounds but to heal." The same spirit should evidently guide the pen in transcribing any part of our Community criticisms for the benefit of the readers of the CIRCULAR. Even personalities that might be excused by the circumstances which elicited them in the discussions of the Club would be quite out of place in the CIRCULAR. The criticisms would lose some in interest by such elimination; but still they might help some earnest souls in the good path. What say you? Yours, W.

[Your proposal is a good one. Go ahead, if you please.—ED. CIR.]

FROM OUR YALE STUDENTS.

I.

THE first term of my last year is ended, and for a brief fortnight, we three—the Chemist, the Lawyer and the Engineer—are enjoying the blessings of our Oneida home. And just here let me say that one of the worst things about college life is its effect on the home relations of the student. I remember a series of sketches of college life by Mead in which the typical freshman is represented in the act of writing home to his mother. That picture told the whole story. But the images of father and mother and home in time grow dim. Along with the growth of independence and self-reliance natural to coming manhood, his intellectual acquirements give the student a conceit that almost overbalances their value. Home looks dull and tame, and father and mother, though good enough folks are old fogyish, and the simple faith of childhood a forgotten dream. Many students, especially the brighter ones, in every part of the University, after vainly struggling to reconcile their earlier religion with their later knowledge, to harmonize science and the Bible, land at last in scepticism. I once heard an old graduate of Yale say that young men after graduating there should spend four years more in educating their spiritual natures, not mere theological "gerund grinding," but discipline of the heart and soul. For such a college as this, Yale has few competent professors. But perhaps I have moralized enough for once.

In looking back over the past month I recall a few items of interest. The standard of scholarship is rising sharply at Yale. The Academic freshman class, though fully up to the average in smartness, lost ten men in the first two months by reason of their sheer inability to stand the strain; and as many more will probably fail to appear at the commencement of the second term. Whether it is President Porter who is thus crowding upward, or the Governing Board, or the individual professors, is more than I can tell; the fact is painfully apparent.

In the Sheffield School the Chemical department, hitherto the resort of some not over inclined to work, has undergone pungent treatment at the hands of Prof. Johnson, who declares that no more dunces shall ever graduate from that Laboratory; and judging by the examination the men have to go through he is in earnest. Entrance examinations of the school are to be more thorough hereafter, and freshmen classes will be "sifted" more energetically than ever. On the whole I'm glad I am near the end. During the recent term-examinations Rev. Doctor Bacon, Ex-Pres. Woolsey, and others were present at many of the exercises, why, I can't quite say. It seemed to be rather a bore to them, and we certainly would gladly have excused them. K.

O. C., Dec. 25, 1872.

FROM BOSTON.

DEAR EDITOR:—The great fire as a newspaper item, is burned out, of course; and yet as a theme for thought, it is quite the reverse. I was more familiar with the particular locality of the fire than with any other part of the city, and to me the scene of desolation is consequently quite impressive. Federal street was probably one of the finest and most imposing business streets, so far as granite buildings were concerned, that could be found on this continent. Now it is among the things that were. Sixty acres and more of the very heart of Boston, swept to destruction almost in a night! But why recapitulate? The reflection which comes amid these ruins is that we are only saved from such calamities by the care of God. "Except the Lord keep the city, the watchman waketh but in vain."

My business here has been chiefly with the wholesale dealers in hardware, not one of whom, I think, escaped the fire. This class of men have been in the past noted for their courtesy and integrity, and the late calamity seems to make these traits shine with greater brightness. They are uniformly cheerful and hopeful. Not, however, because they have not met with serious losses, but because they seem to have pluck to meet the emergency. As to insurance money I cannot learn that a dollar has as yet been collected, and if any is ever collected it is probable that not more than fifty cents on the dollar will be realized. Some of the heaviest Boston insurance companies were themselves among the greatest losers. Not a few of them will pay to the utmost of their ability and then cease to exist.

Little has been done as yet toward rebuilding the burnt district. State aid to the amount of $10,000,000 has been granted by the Massachusetts Legislature and several permits to rebuild have been issued; but thus far none but flat roofs are allowed. The pleasing Mansard has fallen into disrepute. The streets will probably be widened and straightened. This will certainly be a mercy to people who do not always keep their wits about them, for of all the towns with crooked, unfindable streets which I ever visited Boston is the most notable.

I arrived here on the evening of the 18th, just in time to hear Stanley's second and last lecture. His subject was Livingstone's story as told to himself. Lecturing is evidently not Stanley's forte, and it could hardly be expected that it should be. As he stands before the public today, if he is anything he is a man of deeds, not of words; and that is why the public are interested in the man. The person who braved hardships and death itself to find Livingstone, and at last succeeded, is of more value a hundredfold, than the style in which he recounts his adventures, though he were able to speak with the eloquence of Pericles. I wished to see and hear a man who has shown such indefatigable energy, and I was not disappointed in him. At the rear of the stage stood a large map of Central Africa, perhaps twelve feet square, on which were painted the various localities of Dr. Livingstone's travels; the lakes, rivers, kingdoms, etc., together with the latitudes and longitudes. This map shows Central Africa to be far different from the desolate, uninhabitable region represented on our old school atlases. It now abounds in beautiful lakes and rivers, and is quite densely populated. There was an exhibition of various trophies from that heathen country, such as bows, arrows, spears, boomerangs, boars' tusks and other warlike weapons of iron, stone, ivory and wood. Besides these the lecturer showed us a piece of cloth made by the natives from a peculiar grass which grows in that land. But the most interesting specimen was an African youth, as black as a moonless midnight, bearing the name of Kalulu. This son of Africa was born on the shores of a small lake near the equator, and I believe, accompanied Mr. Stanley to this country.

Stanley is a handsome man of about thirty years, medium hight, straight as an arrow, black hair, with mustache and imperial, round features, compactly built, a picture of health, and to all appearance precisely the man for the undertaking he has accomplished. He was expected to appear in the costume peculiar to the travelers of Central Africa, but instead he was clothed in an elegant dress-suit of black.

In order to outline Mr. Stanley's account of Doctor Livingstone's travels I cannot perhaps do better than to present the following extract from a report which appeared in the *Boston Herald* of the 19th instant:

"Beginning his story with the departure of the doctor from Zanzibar, Mr. Stanley mapped out his route of travel along the Makeuda river, through the wilds and jungles of Mozambique into the country of Moonda, where he first found the waters of that lacustrine stream that flows through a chain of lakes northward through Central Africa and many degrees westward of any route of travel ever made by white man before. While indicating to his audience by means of a large map the route of the doctor's travels over this hitherto unexplored region that is teeming with millions of people—where the school books told only of barren wastes—Mr. Stanley frequently stopped to give chapters of the doctor's trials, tribulations and sufferings, as also to tell of his desertion by his own men; but, not intimidated, he marched on till at last he had crossed the equator, and entered the country of the Manguema, where he found a people well skilled in manufactures, with fair complexions, and women of great beauty. But here, with only one link to make in his long route of explorations, he was at last compelled to abandon his researches and travel some seven hundred miles eastward to Ujiji, where he arrived in October, 1871, and where, in less than a month he was found by Stanley with nothing left, robbed, deserted and a beggar. It was an interesting story to all people who delight to learn those things that only the labor and research of men with indomitable pluck, like Doctor Livingstone, contribute to the books from which we learn such things."

H. W. B.

Boston, Dec. 20, 1872.

GEORGE CATLIN.

GEORGE CATLIN, long and well known for his researches among the Indians, and his preservation by the means of his art, painting, of their fast disappearing types and customs, died at Jersey City on Monday last. He was born in 1796, at Wilkesbarre, Pa., and was educated at the celebrated Reeves Law School, Litchfield, Conn. He afterward practiced his profession two years at Philadelphia. But his mind turned to art, and that became his passion for which he soon abandoned the law. From a sketch of his life in the New York *Tribune* we copy as follows:

"In 1829, being then thirty-three years old, Mr. Catlin had his attention called to the fact that the pure American race was disappearing before the march of civilization. He therefore resolved, if possible, to rescue from oblivion the types and customs of the unfortunate Indians.

"From that moment dated the commencement of his life-study, to which he clung through the remaining years of his existence, in good or evil fortune. From that day George Catlin was a public benefactor, and his subsequent career was devoted to the cause of art and history, to which he has added a chapter that cannot be undervalued.

"In 1831, Mr. Catlin, though discouraged by his friends and by the Government, accompanied Gov. Clark of St. Louis, then Superintendent of Indian Affairs, in a Western tour among the Winnebagos and Menomonies, the Shawanos, Sacs, and Foxes, and with these interviews began the series of his Indian paintings. After the close of the "Black Hawk War" he visited Black Hawk and five of his warriors, prisoners at Jefferson Barracks, where he painted their portraits.

"In the following year he descended the Missouri River, from the mouth of the Yellowstone to St. Louis, in a canoe, with two men, a distance of 2,000 miles, steering it the whole way with his own paddle; and in that campaign visited and painted the Mandans, Crows, Blackfeet, K'nisteneux, Assinneboins, Minatarres, Reccarrees, Sioux, Puncas, and Iowas. During these voyages he was the correspondent of the *New York Spectator*.

"These letters and others written during subsequent trips to the West, were collected and published in 1841, the volume being entitled "Catlin's Life among the North American Indians." The artist's anxiety to procure faithful and complete portraits of all the Indian celebrities, and of representatives of every well known or obscure tribe, led him into many dangers, and he traveled thousands of miles in a bark canoe and on horseback. He visited nearly every State in the Union, and was doubtless the best informed man in the world on Indian life and customs.

"He married and went to Europe in 1840, taking with him his collection of paintings, which he exhibited in London for three years. He afterward went to Paris where his wife suddenly died, leaving three daughters who are yet living, while the French Revolution turned him out "neck and heels," as he expressed it in his book. In 1852, he sailed to Venezuela and for several years was employed in exploring the innermost parts of South America, interviewing scores of tribes of wild Indians.

"Last Rambles in North and South America," from his pen is a graphic description of his life in the wildernesses of those countries. He also wrote a little book entitled, "Lifted and Subsided Rocks of America," based on his observations made during his travels. A very valuable work, "North American Folio," containing twenty-five plates of hunting scenes, was published by him in London.

"As an author, Mr. Catlin was peculiarlarly talented, and all his books exhibit unusual merit. As an artist, he excelled, and the fidelity of his drawings was highly commended by Lewis Cass, Humboldt, Schoolcraft and others. His paintings are spirited and accurate, the portraits being remarkable likenesses, while the landscape views are perfect representations. Until within two years, Mr. Catlin has resided in Brussels, preparing his second gallery of Indian characters, and also several books, which were published in London.

"Last Autumn this collection, comprising five hundred portraits, was exhibited at the Somerville Art Gallery in this city, and was visited by thousands, while the press deservedly praised its excellence. This collection is now at the Smithsonian Institute and a petition is awaiting Congress for its purchase."

THE NEWS.

Mr. Hepworth Dixon Jr., is the editor of a new weekly humorous paper, called *The Gossip*.

George P. Putnam, long eminent as a New York publisher, and founder of *Putnam's Magazine*, is dead.

Major-General Hancock has assumed command of the Military Division of the Atlantic, with headquarters at New York.

Mrs. Woodhull and Miss Claflin have resumed the publication of *Woodhull & Claflin's Weekly*. The new issue begins with the date Dec. 28, 1872. The publishers have not yet been brought to trial on any of the charges preferred against them.

Prince Bismarck, at his own request, has been, by official rescript, relieved from the Presidency of the German Council of Ministers.. He retains his position as Chancellor of the German Empire, and empowered to vote in the State Ministry through a deputy.

It is reported from the Russian Capital that the British Embassador at St. Petersburg has notified Prince Gortschakoff that if the Russian troops penetrate the countries between Khiva and Afghanistan, England will be compelled to interfere in support of Afghanistan independence.

A cold wave has just passed over the continent. Our thermometer registered as low as 17° below zero. At the west and north much colder weather is reported.—At Chicago the mercury reached—20°, and at Milwaukee —30°. At Memphis the 24th was the coldest day known for twenty-five years.

Attorney-General Williams "has decided—in answer to a communication from the Post-master General—that Post-office officials have no right to open or detain letters or other matter transmitted through the Post-office, though they may know they contain obscene matter. Post-Masters have no more authority to open letters other than those addressed to themselves than have other citizens of the United States."

The Central Presbyterian Tabernacle, Brooklyn, T. DeWitt Talmage, pastor, was burned on Sunday morning, Dec. 22. The loss on building, organ and furniture was about $100,000, insured for $45,000. The organ was one of the largest in the country and was the one constructed for, and used at, the first Boston Musical Jubilee. The building was composed of a wooden frame, sheathed inside and outside with corrugated iron, and in parts filled in with brick.

A terrible accident took place on the Buffalo, Corry and Pittsburgh Railroad, at Goose Creek, on the 24th, by which over twenty persons were killed and as many more wounded. Cause, a broken car-wheel, which threw the train from the track while crossing a long trestle. The trestle broke down at the same time and cars and broken timbers were precipitated to the ground, a distance of 20 feet, when the broken cars took fire from the stoves and the horror was complete.

The *Scientific American* says that the great railway tunnel through the Hoosac Mountain is progressing very effectively, and it is probable that the bore will be completed in October, 1873. The total length of the tunnel will be nearly five miles. It is the second longest tunnel in the world, the Mont Cenis bore through the Alps, being nearly eight miles in length. But the St. Gothard tunnel, through the Swiss Alps, which was commenced during the present year, will beat both of these, as it will be thirteen and a half miles in length.

Barnum's Menagerie and Museum, New York, was burned on Tuesday morning last. All the animals except two elephants and a camel were burned. Some adjoining buildings, including Grace Chapel, were destroyed. The total loss was about $700,000. This is the third time Mr. Barnum's museum has been burned. But he seems still undaunted, and has already cabled to his agents in Europe to expend half a million dollars in making a new collection. On the afternoon of the same day that the above fire took place, there was a great fire in Center Street, New York, between Worth and Leonard, destroying property to the amount of several hundred thousand dollars.

The Sacramento *Record* says: "Mention is made elsewhere of the passing of a heavy tea train east. The train is a special one, consisting of sixteen cars, each car containing ten tons, the whole aggregate 160 tons, or 320,000 pounds of tea. It left San Francisco on the evening of the 3d, at dusk, and reached Truckee at dark last night, being nine hours in advance of the time on which it would ordinarily have run. It is expected equal diligence will be exhibited east of Truckee and the cargo reach New York in about ten days. If close connection is made with the Atlantic steamers the tea should be landed upon the Liverpool docks in twenty-one days from its date of shipment, and be stored in London the succeeding day. The cost to the railroad companies by pushing freight in this manner, is fully 18 per cent., and often 20 per cent. more than by the usual speed, owing to the displacement of trains and extra working forces, etc., etc. It is well known that a strong effort has been made to turn this oriental trade to our overland railroads, hence the exertions made for speedy transit. This attempt at quick transportation will, if successful, demonstrate the feasibility of sending through freight by rail, and tend to greatly enhance the prosperity of our trans-continental railroads. It may be regarded as one of the most important experiments ever attempted by the railroad."

The New York *Tribune* has been bought back from Mr. Orton by the old associates and friends of Mr. Greeley, and reëntered upon its career as an independent Republican journal on Monday last. In the leading editorial of that day's issue, the managers say:

"As the result of certain intrigues and outside efforts to gain control of the paper and wrest it from the purpose to which our late chief devoted it, some changes have taken place in the proprietorship, and a large majority of the stock is to-day permanently concentrated in the hands of Mr. Greeley's chosen editorial associates —men whom he trained for this particular duty, to whom he intrusted the management of his journal in the gravest emergencies, whom he honored with the confidence of his thoughts and wishes, and whose purpose it now is to continue the work from which he was so suddenly called away. Their ambition is to make the *Tribune* of the future what Horace Greeley would have made it if God had spared him—a frank and fearless newspaper, devoted to the best interests of the whole country; spending its energies and resources freely in the collection of news; keeping its readers informed of the course of events, the currents of opinion at home and abroad, the progress of science and the useful arts; speaking its mind freely on all questions of public concern; detesting neutrality in politics as the refuge of the weak-minded and the timid, but keeping its independence as the best title to honor and usefulness.

"In taking up the unfinished task which fell from his hands a few weeks ago, we happily have the men whom he brought around him, the facilities which he accumulated, and means so ample that when, a few days since, over half a million of dollars was paid for the bare control of the paper, we, knowing the worth of what Mr. Greeley had built up, bid higher and bought it back. Making allowance for the fact that the *Tribune* is practically without improved real estate; this indicates by far the highest price ever paid for a newspaper on this continent—a price greater, we may say without offense, than any other journal on the continent, with the exception of the *Herald*, could be expected to command. But henceforth there is no price whatever with which any stranger can buy it—it is beyond reach. So fortified, we purpose continuing our old battle against injustice and ignorance under the same Republican banner which Horace Greeley upheld so stoutly and so long, and on the same policy of candid independence which it was one of his latest acts to reaffirm over his own signature in these columns. Naturally we shall prefer to support, as far as possible, an Administration which professes the party name. Such an Administration will receive from us a frank and cordial approval of every action performed in accordance with its and our principles. But the *Tribune* is nobody's official advocate. When Republican leaders are guilty of oppression, fraud, bribery, or any other species of wrong or folly, we shall not spare them because they are Republicans. No party sympathies are strong enough to overcome our independence or muzzle our honest utterance."

It is understood that Mr. Whitelaw Reid will be the

editor-in-chief of the Tribune, and that Mr. W. W. Phelps, a wealthy young gentleman of Eaglewood, N. J., and a Member of Congress from that State, furnished the money with which to purchase the fifty shares held by Mr. Orton.

MY GRANDMOTHER.

"DON'T make false motions, Mary!" This sage advice was given by my grandmother, as with keen observant eyes she watched my fingers fumbling with the needles, and making wretchedly slow progress in knitting a stocking—all the more slow, I suppose, from the consciousness that those sharp eyes were upon me, and belonged to one who many and many a time had knit a pair of stockings in a day. My grandmother! what a notable woman she was! How well I remember her in cap and spectacles, surrounded by her rag carpets, her many-colored rugs, and the great baskets of work she was always so busy about. She took boarders, too, from the academy and almost always had a grandchild or two with her. This was after all her own children were married, and she and grandpapa were old.

They lived in a great old-fashioned square house which many years before they had kept as a tavern. There was always a certain sense of mystery and awe about the large, silent rooms, and we children hardly dared to play in them, and we were apt to be a little homesick if our visits to grandmother lasted over night. But grandmother herself was interesting to the last. She was a fine specimen of the New England matron of fifty years ago. Her family removed from Massachusetts to the southern part of Vermont about a hundred years since. At the age of sixteen she married a young man of twenty-three from New Haven. The youthful pair began the world together with little beside a good moral and religious education, good health, and plenty of energy and endurance. Her husband worked at his trade as a blacksmith, and she became one of the most industrious and successful of housewives. Eleven children, of whom my mother was the eldest, were born to them, and with the exception of three who died in infancy all but the youngest son were married and had families of their own before my remembrance.

Grandmother had great talent for business. *She* "never made false motions." What splendid mince-pies she made, and how good her bread-and-butter tasted! But perhaps her great forte lay in making and weaving carpets, counterpanes and rugs. Her invention of patterns and love of colors were always in exercise. When a great-grandson had become eminent as a sculptor some one inquired. "Where did M——— get his talent?" "Why," said his father, "from grandmother H., of course. She had it all in her, though she took another way to show it." With all her home cares and labors she found time to be the counsellor, nurse and friend to all her circle of acquaintance. Her native wit, strong good sense, and freedom from flattery and deceit made her conversation racy and attractive. Among her boarders was a gentleman of forty, a college-bred man, master of arts and sciences, and deeply learned in Latin, Greek and Hebrew. He became enamored of her eldest daughter and married her. But during the long courtship, such was his bashfulness, always shrinking from any revelation of the heart, and such the charms of grandmother's conversation, as she plied her knitting-needles through the long winter evenings, that the curious neighbors laughing said they could not tell for their lives which he was courting, mother or daughter. She wrote as easily as she talked, and not only corresponded with her children and grandchildren, but kept a diary for many years. An extract from that diary, written soon after the death of her husband and when she was over eighty years of age, is now before me. As it contains a moral that all busy housewives should heed in more ways than one, I will conclude my sketch with it. Speaking of grandfather she says:

"He was a good husband—too good for me. I never meant to make him unhappy, or to require of him more than he could do; but I did not make him as happy as I might in a great many ways. He would sometimes say to me, 'The horse is standing in the barn doing nothing; we will go and ride. It is no matter whether we stop any where.' But I would say, 'I can't leave my work.' So he would not go, or go alone. Oh, now I would say to every woman who has a good husband, 'Enjoy him while he is spared to you, or it will grieve you to the heart when it is too late—when all is over.'"

C.

CHANGED.

Lowborn, unknown, unreconciled
To tame constraints of gentle birth,
I ranged the earth as fierce and wild
As are the steeds still undefiled
By touch of rider, bit, or girth;
Nor heeded aught beyond my sight,
And cared for naught beyond my might.

But now my heart turned lowliwise,
Recks only of love's loss and gain;
And all my being bends and cries
That God may hear and recognize
The man become a child again—
A child who but for love's requite
Would barter all the strong man's might.

G.

Says the Boston *Traveler:* One of the most ludicrous incidents possible occurred in an auction room in this city on Saturday, where a mammoth painting is on exhibition of Adam and Eve and Cain and Abel. An Irishman asked a bystander—"Who is it, there?" "Adam and Eve and their children," was the reply. A lady standing by said, *sotto voce*, to her companion, "Why, I didn't know they had any children!"

RECEIPTS FOR THE CIRCULAR.

J. D. W., Chicopee, Mass., $1,00; J. H. C., Centerton, N. J., 20 cts.; H. W., Dayton, Ohio, $1.00; W. P., Fond du Lac, Wis., $1,00; M. L. B., New York, $5,00; S. D. R., Phippsburgh, Me., $1,00; N. A. B., San Francisco, Cal., $2,00; H. A. W., Chicago, Ill., $5,00; M. V., Morrisville, N. Y., $1,00; Mrs. C., New York, $2.00; O. A, A., Mt. Pulaski, Ill., $5.00; J. C. S., East Cleveland, Ohio, 50 cts.; H. S. D., Pottsville, Pa., 50 cts.; W. W. M., Lamoille, Iowa, 48 cts.; Z. S., Salt Lake City, Utah, $2,00; W. B. B., West Meriden, Conn., $1,00; J. P., Tilsonburg, Ont., $1.00; A. F. B., Chico, Cal., $1,00; A. E. N., Arlington, Mass., $1,00; S. C., Southampton, Mass., $4.00; J. C. W., Cannelton, Ind., $2,00; M. M., Franklin Square, Ohio, 50 cts.; J. M. H., Greenville, Ill., $1,00; G. W., Drummondville, Ont., $2,00; J. A. W., Southampton, Mass., 25 cts.; E. C., Stamford, Ont., $1,00; O. W., Baldwinsville, N. Y., $2.00; W. D., Providence, R. I., 50 cts.; J. W. D., Leon, N. Y., $1,00; E. M., Grant City, Iowa, $5,00; T. W., Holden, Mo., 50 cts.; B. L., Patterson, Pa., $1,00; D. P. S., Iowa City, Iowa, $2,00; J. L., Rutland, Vt., $2,00; R. P., Minnesota City, Minn., $2,00; S. C., Simcoe, Ont., $10.

ANSWERS TO CORRESPONDENTS.

To F. S., Chattanooga, Tenn.—For the book, "Kingdom of Heaven," address Jesse H. Jones, East Abington, Mass. *The Co-operative News* is published in Manchester, England.

ANNOUNCEMENTS.

SILK GOODS.

Machine-Twist and Sewing-Silk of their own manufacture for sale by the Oneida Community.

Address, [S] ONEIDA COMMUNITY, *Oneida, N. Y.*

PRESERVED FRUITS AND VEGETABLES

Put up for sale by the Oneida Community in tin and glass. Price-list sent on application.

Address, [F] ONEIDA COMMUNITY, *Oneida, N. Y.*

STEEL TRAPS.

Eight sizes and kinds, suitable for the House-rat, Musk-rat, Mink, Marten, Fisher, Fox, Otter, Beaver, the Black and Grizzly Bears, are made by the Oneida Community Descriptive price-list sent on application.

Address, [T] ONEIDA COMMUNITY, *Oneida, N. Y.*

MACHINE-SHOP AND FOUNDRY.

Improved Lathe-Chucks, Blinn's Patent Gate-Hinges, Machines for Measuring the Length and Testing the Strength of Manufactured Silks, Bobbin-Winders for Sewing-Machines, etc. Agricultural, Machine and Light Castings, on hand or made to order. Descriptive price-list sent on application.

Address, [M] ONEIDA COMMUNITY, *Oneida, N. Y.*

THE WALLINGFORD PRINTING COMPANY.

All kinds of Book and Job Printing executed: Manufacturers' Illustrated Catalogues made a speciality: also Bronze and Color Work, and the finer kinds of Card, Circular and Bill-head Printing. Having enlarged its works and added new motive power, this Company is in renewed condition to meet the wants its patrons with promptness and accuracy.

P. O. Address, *Wallingford, Conn.*

PUBLICATIONS.

(Sent from the Office of the Oneida Circular by mail, post-paid, on receipt of price.)

History of American Socialisms. By John Humphrey Noyes. 678 pp. 8vo. J. B. Lippincott & Co., Philadelphia. London, Trubner & Co. Price $3.00.

The Trapper's Guide; a Manual of Instructions for Capturing Fur-bearing Animals. By S. Newhouse. Third edition with New Narratives and Illustrations. 215 pp. 8vo. Price bound in cloth, $1.50

Salvation from Sin, the End of Christian Faith; an octavo pamphlet of 48 pages. By J. H. Noyes. Price 25 cents per single copy, or $2.00 per dozen.

Dixon and His Copyists; a Criticism of the Accounts of the Oneida Community in "New America," "Spiritual Wives," and kindred publications. By John Humphrey Noyes. Price 25 cts.

Scientific Propagation. By John Humphrey Noyes. Large octavo pamphlet of 32 pages. Price 25 cts.

Male Continence. By John Humphrey Noyes. An octavo pamphlet of 24 pages. Price 25 cts.

Hand-Book of the Oneida Community; Containing a Brief Sketch of its Present Condition, Internal Economy and Leading Principles. Price 25 cts.

The five pamphlets—"Salvation from Sin," "Dixon and his Copyists," "Hand-Book of the Oneida Community," "Scientific Propagation," and "Male Continence," will be sent to a single address on the receipt of $1.00.

Back Volumes of the Circular, Unbound. Price $2.00 per volume.

MESSRS. TRUBNER & COMPANY, Book-sellers, Paternoster Row, London, have the "History of American Socialisms," the "Trapper's Guide," and the "Hand-Book of the O. C.," for sale. They will receive subscriptions for our other publications.

PHOTOGRAPHIC PICTURES

Of the Oneida Community Buildings and Grounds, made by a first-class artist and finely mounted, can be had on application at the Office of the Oneida Circular.

LARGE VIEWS.

Bird's-eye View, looking West, of Community Buildings and Grounds, 12 by 14 inches, on fine enameled board 16 by 20: price $1.75. Quadrangle and Group, 12 by 14, mounted like the above price $1.75. South and East Fronts of the Community Dwellings giving a good view of the New Wing occupied by the Children—8 by 10, on tinted board 10 by 12, with an ornamental border: price $1.00.

STEREOGRAPHS.

No. 2, East and North Lawns. No. 3, East Lawn and Portico. No. 4, East Front. No. 5, North Front and Lawn. No. 6, Bird's Eye View of Buildings looking West. No. 7, Lawn and Summer House. No. 8, West View, toward Railroad. No. 11, Quadrangle. No. 12, Lawn View. No. 15, South and East Fronts. Price of Stereographs $3.00 per doz. Sent by mail, post-paid, on receipt of price.

Oneida Circular.

A WEEKLY JOURNAL OF HOME, SCIENCE AND GENERAL INTELLIGENCE.

Published by the Oneida & Wallingford Communities.

ONEIDA COMMUNITY, JANUARY 6, 1873.

New Series, Vol. X, No. 2
Whole No. 1440.

POST-OFFICE ADDRESS:

ONEIDA CIRCULAR, ONEIDA, N. Y.

TERMS:

The CIRCULAR is sent to all applicants, whether they pay or not. It costs and is worth at least two dollars per volume. Those who want it and ought to have it are divisible into three classes, viz., 1, those who cannot afford to pay two dollars; 2, those who can afford to pay *only* two dollars; and 3, those who can afford to pay *more* than two dollars. The first ought to have it free; the second ought to pay the cost of it; and the third ought to pay enough more than the cost to make up the deficiencies of the first. This is the law of Communism. We have no means of enforcing it, and no wish to do so, except by stating it and leaving it to the good sense of those concerned. We take the risk of offering the CIRCULAR to all without price: but free subscriptions will be received only from persons making application for themselves, either directly or by giving express authority to those who apply for them.

Foreign subscribers, excepting those residing in Canada, must remit with their subscriptions money to prepay the postage.

THE UNITED COMMUNITIES.

ONEIDA COMMUNITY

Is an association living in Lenox, Madison Co., N. Y., four miles south of Oneida and a few rods from the Depot of the Midland Railroad. *Number* of members, 205. *Land*, 654 acres. *Business*, Manufacture of Hardware and Silk goods, Printing the CIRCULAR, Horticulture, &c. *Theology*, Perfectionism. *Sociology*, Bible Communism.

WILLOW-PLACE COMMUNITY.

Branch of O. C., on a detached portion of the domain, about one and one-fourth miles north of O. C. *Number* of members, 19. *Business*, Manufactures.

WALLINGFORD COMMUNITY.

Branch of O. C., at Wallingford, Conn., one mile west of the Hartford and New Haven Railroad. *Number* of members, 45. *Land*, 228 acres. *Business*, Publishing, Job Printing, Manufactures, and Horticulture.

SPECIAL NOTICE.

The O. C. and Branches are not "Free Lovers," in the popular sense of the term. They call their social system BIBLE COMMUNISM or COMPLEX MARRIAGE, and hold to freedom of love only within their own families, subject to Free Criticism and the principles of Male Continence. In respect to permanency, responsibility, and every essential point of difference between marriage and licentiousness, the Oneida Communists stand with marriage. Free Love with them does *not* mean freedom to love to-day and leave to-morrow; nor freedom to take a woman's person and keep their property to themselves; nor freedom to freight a woman with offspring and send her down stream without care or help; nor freedom to beget children and leave them to the street and the poor-house. Their Communities are *families*, as distinctly bounded and separated from promiscuous society as ordinary households. The tie that binds them together is as permanent and sacred, to say the least, as that of marriage, for it is their religion. They receive no new members (except by deception or mistake), who do not give heart and hand to the family interest for life and forever. Community of property extends just as far as freedom of love. Every man's care and every dollar of the common property are pledged for the maintenance and protection of the women and children of the Community.

ADMISSIONS.

These Communities are constantly receiving applications for admission which they have to reject. It is difficult to state in any brief way all their reasons for thus limiting their numbers; but some of them are these: 1. The parent Community at Oneida is full. Its buildings are adapted to a certain number, and it wants no more. 2. The Branch-Communities, though they have not attained the normal size, have as many members as they can well accommodate, and must grow in numbers only as they grow in capital and buildings. 3. The kind of men and women who are likely to make the Communities grow, spiritually and financially, are scarce, and have to be sifted out slowly and cautiously. It should be distinctly understood that these Communities are not asylums for pleasure seekers or persons who merely want a home and a living. They will receive only those who are very much in earnest in religion. They have already done their full share of labor in criticising and working over raw recruits, and intend hereafter to devote themselves to other jobs (a plenty of which they have on hand), receiving only such members as seem likely to help and not hinder their work. As candidates for Communism multiply, it is obvious that they cannot all settle at Oneida and Wallingford. Other Communities must be formed; and the best way for earnest disciples generally is to work and wait, till the Spirit of Pentecost shall come on their neighbors, and give them Communities right where they are.

TRUTH.

Theories which thousands cherish,
  Pass like clouds that sweep the sky;
Creeds and dogmas still may perish;
  Truth herself can never die.

From the glorious heavens above her,
  She has shed her beams abroad,
That the souls who truly love her,
  May become the sons of God.

Worldlings blindly may refuse her,
  Close their eyes and call it night;
Learned scoffers may abuse her,
  But they cannot quench her light.

Thrones may totter, empires crumble,
  All their glories cease to be;
While she, Christ-like crowns the humble,
  And from bondage sets them free.

God himself will e'er defend her
  From the fury of her foe,
Till she in her native splendor
  Sits enthroned o'er all below.

[*Selected.*

OUR WAY.

Home-Talk by J. H. N.

THE question of Community extension is continually pressed upon us. On the one hand, there are many who wish to join us where we are; and on the other hand, we receive from correspondents an abundance of advice, criticism and speculation as to the policy of forming new Communities abroad. A man writes us quite regularly from the West, urging his opinion that, instead of devoting our surplus means, as we are doing, to educating young men and preparing for a university, we ought to devote them to starting new Communities all over the country. This is but a specimen of the tutoring that comes upon us constantly.*

Now while others are free to think for themselves about our duty, we have also our thought upon it. And it may not be immodest to say that, standing, as we do, somewhat central to the subject under consideration, there is reason to suppose that we have studied it more carefully than most of our outside advisers have done, and with a deeper sense than they of the responsibility we are under, and of the interests at stake. So, though we have no wish to restrain their liberty of thought and counsel, there is yet a propriety in their observing moderation in urging their opinions. And this hint is the more pertinent from the fact that much of the advice that is given us is manifestly very crude—mere spattering of words that we can only pass off with a smile.

To promote correct thinking on this subject of Community extension, I will state in a brief but plain and intelligible way, the situation, as we understand it.—In the first place, to attempt to meet the demand for membership in the present Communities would be entirely useless. If we had received all who have made application to us during the last year or even the last six months, we should have simply become an overgrown encampment—an unwieldy, unmanageable mass, as incapable of prosperous motion as a water-logged ship at sea. Aside from moral and spiritual considerations it would be physically impossible to meet the demand for membership at our present homes by any system of enlargement that we could devise. Evidently the best course with reference to the existing Communities is, to keep them strong, avoid overloading them, take in new members only as fast as we see that they can be well digested and assimilated, and go on quietly to do the work that God (not man) has set us about.

Having thus disposed of the question of enlargement in our present localities, the next question is concerning propagation abroad. And here it might be surmised at the outset that a people who have put themselves on the principles of male continence and scientific propagation, who esteem quality above quantity in all things and especially in children, who believe in Malthus and hold to self-control in the matter of family increase, would find analogous principles for application to spiritual and social propagandism. And for myself I will say, I would rather the Communities should stand permanently as they are without increase—I would rather even that they should perish without leaving a mark to show where they stood, than that they should spread out into a great shiftless, irresponsible system of proselytism, rearing dependents and disciples that they could neither educate, govern nor protect. I am satisfied that Malthus's philosophy about the evils of over-population holds good, not only in regard to the sphere of the family, but in social and

---

*Since this Home-Talk was put in type, the following letter has come from one of the high places of theology. It is so fine a specimen of the monitorial correspondence referred to above, that it deserves to be appended:

Meadville, Penn., Theological School, Dec. 28, 1872.

DEAR CIRCULAR:—I have hailed your coming for six years with delight and satisfaction, and would still love to have your sparkling presence with me; but there is one thing I do not understand. It is this: If you have a good thing, why not let the world have it? If Communism is the best, why is there not something done to let the world have its benefits? If I should apply to the Oneida Community for admittance, I should be rejected. Then it seems to me that only a certain few can have its best blessings. But it may be the world is not yet prepared for them. Is there anything doing to bring the world up to this point? I have long looked for the O. C. to send forth their propagandist as others have done. But no one has come to organize new churches or to present its doctrines. I would like to know your *modus operandi* of bringing the world to Communism. Christ was a liberal and universal teacher. His words are, "Come unto me, *all*," etc. You believe in human progress; but what progress have you made in the last twenty years as to new members? It may be you have a plan in view for accomplishing all this that I am suggesting; but I ask for information.

Yours respectfully, S. G. A. F.

[We respectfully inform S. G. A. F. that if he has kept a file of the CIRCULAR for the last six years he will find the substance of this Talk in the paper of Nov. 26, 1866, and other articles equivalent as often as once in three months ever since.—ED. CIR.]

moral movements. The terrible vices and miseries which beset the progress of the popular religious sects, proceed mainly from their ungovernable propensity to propagate themselves beyond their means of education and support. Their spirituality is swamped in their numbers. On the other hand, as we have always favored natural propagation under good circumstances and within such limits as society can afford, so we extend the same rule to spiritual and corporate increase.

If our Communities are, as is generally admitted, examples of success, it is for them to consider *how* they succeeded, and keep on in the same course. Whatever has led to their prosperity should be continued. Now, setting aside their religious foundations (on the importance of which many of our advisers would not agree with us), and looking simply at the external means of their progress, it is manifest that our paper (printed under various titles) has done much in the gathering and building of our Communities. The press was the nucleus around which we gathered at the start. It has called around us those who have joined us since. It has educated us in various ways. The study of truth which it has called for has reacted on our life, and our life has reacted on our study of the truth. The paper has been constantly clearing ground for us and invigorating us in all our work. Those who take so much interest in advising our course never would have heard of the Community but for the paper. It is best then to keep this agency going and make the most of it. Indeed, before we multiply Communities we ought to be strong enough in all the requirements of the press-power, to wield a first-class daily paper. We have no reason to expect even the financial means to do this from our subscribers. Our only way is to provide the means ourselves. And then if we are to get the mastery of this great engine of civilization, the Press, we must also have a training-school for those who are to conduct it. We ought to develop a thousand horse-power capacity for thinking and writing; and that means a university.

All this looks merely to the diffusing of information and preparation of the public mind. But if after due labor in this way Communities come forth as the fruit of this preparation, then this same press and university will be ready to provide for their culture and means of progress. Propagation in its turn, but the press and means of education first: this is our way.

As to the right method of founding new Communities we can only take our past experience as a guide. Others may jump into association by theory. We cannot. We have thus far felt our way into it by intuition and study of practical exigencies, and know no other way. If then persons ask our help and look to our example for direction in starting Communities, we can tell them how we built and how we should build again. And referring to our experience we should say that there are three main essentials which Community-founders may set before them if they propose to pattern after the model of the O. C.

The first is *good leaders*—men who can be trusted and followed with the certainty that they are true-hearted and competent. Mere well-meaning is not enough. The leaders of a Community should have cultivation and intelligence as well as spirituality; should have ability to speak successfully to an audience, and practical qualifications at least equal to those which are required to manage the affairs of a bank or a railroad. A promiscuous crowd called together without leaders and without subordination, may make a decent town-meeting, but not a successful Community.

The second essential for the forming of a Community like the O. C. is, that the mass of the members should have a thorough practical acquaintance with the institution of *criticism*. This was the antecedent of our organization. I have no reason to think that we could have taken the first successful step in Communism without the previous acquaintance that we obtained by studying each other's characters, and without the discipline that came by criticising and submitting to criticism. This is the art that amalgamates.

The third pre-requisite of a successful Community is a thorough acquaintance of its members with the theory and practice of *male continence*. Without this, Communism goes straight either to confusion or to Shakerism.

Such are the necessary preliminaries of a Community organization according to our experience. We have no confidence that people will succeed in associative attempts without them. They constitute our standing answer to such as ask us for advice. As to our own action in the premises, we shall move on as fast as we can to provide these essential conditions of Communism; and we shall form new families when we get orders from inspiration and providence. We shall not quarrel, if we can help it, with those who think that Paradise can be reached in a cheaper way; but we are not willing to be responsible for their attempts, and we do not mean to allow their failures to discourage and turn back the world's grand march toward Communism and the Millennium.

BACKWARD GLANCINGS.

XII.

I RETURNED to Putney in the latter part of Feb., 1835. The *Perfectionist*, which had reached its sixth number, had prepared the way before him and there was a great desire to hear him preach. Curiosity and the craving to hear and tell new things were mingled with much genuine hunger for gospel food. The regular pastors did not show any cordiality, or open their churches to him, but the people came eagerly to hear him in school-rooms, in tavern-halls and in private houses. Mr Morgan, the Methodist, who had been converted on J.'s first visit to Putney, was forward in promoting and attending the meetings. The leading physician of the place, Dr. A. Campbell, and his wife (at whose hospitable house Rev. O. A. Bronson, before his conversion to Catholicism, was often a guest), became deeply interested in the new doctrines and opened their house for evening meetings. This example was followed by Mr. J. Crawford, a lawyer. He and his refined and intelligent wife had never professed religion before, but having "tasted of the good word of God" as preached by J., now manifested all the simplicity and enthusiasm of young converts. The company which assembled at these meetings embraced a variety of classes and denominations. Some were members of the most orthodox and influential families in town. Others were Universalists, Methodists and Nothingarians.

The meetings were generally very informal, not given to vocal praying or much singing. J. usually took the Bible and discoursed upon some text or topic, treating it in an original, soul-searching way, and interspersing familiar conversation and questions. The interest growing out of those evening discourses was intense and lasting. Many persons who had never before cared much for the Bible began to love and study it, and felt that with the new weapons furnished by J. they were able to meet and confound ministers and church-members. Some who had been seeking religion for years, but who were chilled and disappointed by the low, unsatisfactory hopes held out by the churches, heard the glad tidings of a full salvation with joyful surprise, and became steadfast followers of J. through evil report and good report.

From the village the interest spread to the borders of the town. The "East Part," as it was called, was a sort of neutral ground, where all religions and no religion by turns held sway. It was now the head-quarters of Methodism; but that church was not in a very flourishing or harmonious state, and could hardly be said to hold the place. Mr. L. Pierce, who belonged to no church, but thought J.'s doctrine the best he ever heard, invited him to preach at the "East Part," in the Methodist church. A revival followed this preaching. Several of the most religious and substantial families became interested and opened their houses for meetings. The converts, in most cases, were remarkably whole-hearted and steadfast. The rumor of these events reached the neighboring towns, and invitations to preach came in from Westminster, Dummerston, Fayetteville and other places almost daily. My sister and myself generally accompanied J. to the meetings in town, and occasionally to those out of town; greatly to the consternation and grief of our fashionable friends. To forsake our regular church meetings and assemble with a miscellaneous company in some out-of-the-way schoolhouse, or at some remote and obscure private house, was a grievous derogation from the family rank. Loss of caste was held up to us as a threat and a warning; but we pursued our course, caring little for the remarks of those who would keep our attention upon considerations of that kind.

Toward the close of April S. Lovett, of the State of New York, and the Rev. C. H. Weld, of Hartford, came to visit J. Lovett was at that time a beloved and enthusiastic co-worker with J., and Weld claimed a leading position in the new dispensation. They remained at our house three weeks, attending the meetings and occasionally making a few remarks. Lovett

had some of the strange characteristics of the New York Perfectionists. He was odd and abrupt in his manners. In testimony he was very positive and apparently whole-hearted, but he had little power to attract or convince his hearers. Weld had been a minister many years, and had been the leader and associate of such men as Finney, Boyle, Lansing and other eminent revivalists. He had the polish and prudence of a city clergyman, and did not attempt anything demonstrative or positive by way of defining his own position. In all he said there was a lack of the living earnestness which made J.'s words so effective. He paraded the high-sounding, mystical revelations of other New Lights, but did not make any clear confession of salvation from sin himself.

The success of J.'s preaching very naturally inflamed the jealousy of his opponents, and their bitterness added venom to the rumors already rife about the strange doctrines and disorderly conduct of Perfectionists. My father's sensitiveness on the subject of reputation was extreme. He could not endure to see his eldest son, once his pride and hope, suffer such undeserved and overwhelming reproach. One day he remonstrated very earnestly with J. for not taking measures to put down the slanders and the slanderers. J. contended that he ought not to spend his time and strength in caring for his mere worldly reputation. He accepted revilings and false accusations as a part of the inheritance of a son of God in this world. My father became very angry, and the result of the talk was that J. withdrew from our house, and went to that of a Mr. Cutler, who was apparently a convert and gladly offered a home to J. and his two friends. They remained there a week or more and then left; J. and Weld going together toward New Haven where they arrived in June. This separation from J. was painful to us all. It produced no alienation, however, and in a few months my father resumed his kind relations to J. and continued them until his death.

"JESUS WEPT."

IN the whole record of Jesus's career on earth, only one instance is given of his weeping. That his entire course was attended with suffering, in his conflict with Satan and the fulfillment of his heavenly Father's will, every page of his history bears witness. But the end in view so filled his heart and lifted him above all personal considerations, that he calmly pursued his way and manifested a repose of spirit that evidenced a God-like self-control. Free from the bondage of natural ties, superior to idolatrous love, invulnerable to the assaults of exclusive, selfish affection, his love for Mary and Martha and Lazarus was not of that nature that would lead him in sympathy to weep with Mary and Martha merely at the death of Lazarus. Mary and Martha's natural love for their brother was the cause of *their* distress. Jesus's distress arose from a far greater cause.

They had not yet apprehended Jesus in his true character. His spiritual presence and power were not understood by them. Like others, they saw him only as an outward and not as an indwelling Savior. They were yet ignorant of the nature and mode of operation of the resurrection spirit of Christ. Their remark to him, "Lord, if thou hadst been here my brother had not died," seemed to imply a delicate chiding at his absence, and showed their misapprehension of his spiritual power. Martha's language preceding and following his declaration —"I am the resurrection, and the life; he that believeth in me, though he were dead, yet shall he live: and whosoever liveth, and believeth in me, shall never die," joined with Mary's words, indicated that *unbelief* lurked in their hearts, as to his true office.

Notwithstanding all that he had said, all that he had done for them, all the love he had shown them, and all his works of which they knew, the spirit of unbelief came in through their natural love, and thrust itself in his face. Love suffers poignantly when its sincerity and willingness and power to act are doubted by those whom it loves and whose love it craves. What then must have been the *agony* of Christ on this occasion when Satan, through Martha and Mary and the bystanders and as the voice of the world, met him with the spirit of unbelief! At this terrible and crushing power of unbelief resting on and ruling the world, Jesus's soul was bowed down, and he wept. Jesus wept at the supreme reign of unbelief; but his faith in the Father wavered not. His agony became the medium of closer approach by the Father, who strengthened him, when Jesus rising with the awfulness of the situation, pierced and discomfited the spirit of unbelief, as he cried out to the dead, "Lazarus, come forth." And the dead came forth to life at the word of *belief*. This was not only indicative of Christ's power over the natural body, but significant of his energy and power and completeness as a present indwelling Savior to restore and transform into immortality all who BELIEVE.

M. L. B.

New York City.

MY PRESENT AMBITION

IS not for fame, nor any other of the glittering goals usually set up as incentives to untiring effort; but it is that I may become thoroughly receptive to the Spirit of Truth. This ambition is the result of what I have learned in the Community. Previous to coming here I had no such desire; but was aspiring after a very different prize. In fact I did not know receptivity to be of any special importance in enabling me to attain to the highest aspirations of a Christian's life. During my childhood and youth I was a constant church-goer; but I do not recollect having ever heard a minister urge upon his hearers the benefits growing out of a receptive heart. As a child I was taught obedience but not receptivity. No one with whom I was associated, in Sunday-school, day-school, or elsewhere, ever taught me that it was possible for me to put myself in such an attitude as would secure me the guidance of superior wisdom in all things, and at all times.

The doctrine, "We were not all made to think alike," so often quoted to me in early life, is a very pernicious one, and thoroughly antagonistic to the Spirit of Truth. Christ and his father were one because Christ was perfectly receptive to his Father's spirit; and all who are truly receptive to Christ's spirit, or to the spirits of those he inspires, must be one as Christ and his Father are. On the day of Pentecost when the multitude received into their hearts the Holy Ghost, "they were of one heart and of one soul," and as a natural sequence "had all things common."

Many persons who visit the Oneida Community wonder what can be the power which holds us so harmoniously together. One important element is the spirit of receptivity which pervades all hearts. Never before did I see a people with so little personal will or ambition; nor with such strong wills or great ambitions to further the general interests of the race, under the guidance of inspiration. The past career of this Association, when closely examined, furnishes one of the most marked proofs of modern times that all the affairs of life are controlled by a superhuman intelligence which we call God, and that it is possible for persons to put themselves into such a position as shall insure to them guidance in all their thoughts and actions by this superior wisdom.

I am persuaded that all the truly great men who ever lived were men of receptive hearts, and were thus fitted to become instruments which God could use in shaping national destinies. It is related as a "wonderful circumtance" of Hannibal, the great Carthagenian General (perhaps the greatest General that ever lived), "that his disposition and cast of mind were so flexible, that nature had formed him equally for commanding or obeying; so that it was doubtful whether he was dearer to the soldiers or the Generals." Instead of being independent in a willful way he was receptive to his superiors. Moses was a marked example of a man with a receptive heart. Christ was a perfect example. He had no will of his own, but sought in all things to do the will of his Father. One of the central beliefs of the Community is that Christ taught that all men can have a receptivity which will insure their being magnetized by God's spirit so that their every act and thought shall be productive of the highest good to themselves and their fellow-men. What need of a higher ambition than this?

To gain this desirable state of receptivity is no easy task. A stern and vigorous warfare must be waged with the old Adam; frequently causing all the agonies of a slow and painful death—the giving up of one's own will, and rejoicing in following another's lead. It requires not a mere passive state, but a watching and waiting with cheerful alacrity to carry out the wishes of a wiser mind than our own. But when the victory is won, and a soft heart becomes chronic, a fruitful harvest succeeds, such as can be obtained from no other source —even the gratification of all desires.

D. E. S.

"MAKE AN EFFORT."

IN the story of "Dombey and Son," Mrs. Chick is continually talking about "making an effort." Her use of the phrase is very ludicrous; but there is considerable sound philosophy in the idea. Making efforts is really

our life work. Successful effort is salvation; it is the great work of Christ in us. He can only save us by giving us his faith and courage to make incessant efforts for union with God's life. Having attained that, we go on victoriously and overcome all the evils in our pathway. When we rouse ourselves from minding the things of this world and make an effort in faith to keep our attention on the eternal kingdom, Christ is sure to meet us half way. We must never cease to "make an effort," for the moment we do the devil is on hand with his wiles. C. M. T.

ONEIDA CIRCULAR.

TIRZAH C. MILLER, EDITOR.

MONDAY, JAN. 6, 1873.

EARNINGS OF THE COMMUNITY.

OUR custom of reporting in the CIRCULAR the financial results of our labors at the end of each year was pleasant. Part of the comfort of success was in telling of it; and we presume our readers were entertained and pleased as well as we when we had a good story to tell. How we came to drop that custom, it would be difficult to say. Probably a feeling crept over us that it was impertinent to call so much attention to our private affairs. But we can hardly be said to have any private affairs; and on sober second thought we will take the liberty to go back to our old way. The following are the figures on our balance-sheets for the last two years:

1871.	
Earnings of the Oneida and Wallingford Communities above losses and expenses in 1871,	$55,386.98
Add balance of property brought in by members, above that withdrawn,	8,446.61
Net increase in 1871,	$63,833.59
1872.	
Earnings of O. C. and W. C. above losses and expenses in 1872,	$71,010.93
Deduct balance of property withdrawn by seceding members above that brought in,	3,557.23
Net increase in 1872,	$67,453.70
Recapitulation.	
Earnings of O. C. and W. C. in 1871,	$55,386.98
" " " " " 1872,	71,010.93
Net earnings in two years	$126,397.91
Add balance of property brought in over that withdrawn in two years,	4,889.38
Increase in two years,	$131,287.29

☞ We hear occasionally that such and such persons would have called at the Community, if they had not been afraid that their names would be reported in the CIRCULAR. Whereupon we wish to say very distinctly that we never report in the CIRCULAR the visits of persons who express a wish not to be mentioned, or of those who we have any reason to believe would be annoyed by being mentioned.

THE POWER OF THE AFFIRMATIVE.

The power of positive ideas and the power of the positive affirmation and promulgation of them move the world. Breath is wasted in nothing more lavishly than in negations and denials. It is not necessary for truth to worry itself, even if a lie can run a league while it is putting on its boots. Let it run and get out of breath, and get out of the way. A man who spends his days in arresting and knocking down lies and liars will have no time left for speaking the truth. There is nothing more damaging to a man's reputation than his admission that it needs defending when attacked. Great sensitiveness to assault, on the part of any cause, is an unmistakable sign of weakness. A strong man and a strong cause need only to live an affirmative life, devoting no attention whatever to enemies, to win their way, and to trample beneath their feet all the obstacles that malice or jealousy or selfishness throws before them.

In nothing is this principle better exemplified and illustrated than in the strifes of political parties. The party that adopts a group of positive ideas, and shapes a positive policy upon them, and boldly and consistently affirms and promulgates both ideas and policy, has an immense advantage over one which undertakes to operate upon a capital of negations. The history of American politics is full of confirmations of this truth. No party has ever had more than a temporary success that based its action simply on a denial of a set of positive ideas held by its opponent. The popular mind demands something positive—something that really possesses breath and being—to which it may yield its allegiance. There is no vitalizing an organic power in simple opposition and negation. Earnest, straightforward affirmation has a power in itself, independent of what it affirms, greater than negation when associated with all the influences it can engage.

The author of Christianity understood this matter. His system of religion was to be preached, proclaimed, promulgated. Its friends were not to win their triumphs by denying the denials of infidelity, but by persistently affirming, explaining and applying the truth. With this system of truth in his hands—so pure, so beneficent, so far-reaching in its results upon human character, happiness, and destiny—the Christian teacher commands the position. Infidelity and denial can make no permanent headway against faith, unless faith stop to bandy words with them. That is precisely what they would like, and what would give them an importance and an influence which they can win in no other way. Why should an impregnable fortress exchange shots with a passing schooner? Silence would be a better defense than a salvo, and deprive the schooner of the privilege of being reported in the newspapers. The world whirls toward the sun, and never stops to parley with the east wind. The great river, checked by a dam, quietly piles up its waters, buries the dam, and, rolling over it, grasps the occasion for a new exhibition of its positive power and beauty. The rip-rap shuts an ocean door, but the ocean has a million doors through which it may pour its tides. Stopping to deny denials is as profitless as stopping to deny truths. It is consenting to leave an affirmative for a negative position, which is a removal to the weak side.

So a man who has really anything positive in him has nothing to do but persistently to work and live it out. Even error itself in an affirmative form is a thousand times more powerful than when it appears as a denial of a truth.—*Dr. J. G. Holland, in Scribner's for November.*

Exactly, Doctor; we agree with you, every word. And it is just because of the power of the affirmative, that the Confession of Christ has such immense and unconquerable value. Salvation from sin is the result of the persistent affirmation of a fact—said fact being that Jesus Christ, King of Kings and head of all principality and power, is in us a perfect Savior. If I see, take hold of and affirm this fact the negations of unbelief are powerless before me. The whole world and all the generations of time against me in denial are less strong than I, and my Yes, single, alone will conquer their million-fold No. Henry Ward Beecher denies that men can live without sin; so do the majority of those who call themselves Christians. But what does their negation amount to by the side of the affirmative of the New Testament and the apostle Paul? It is weaker than the weakest of broken reeds. Search the utterances of the round world through and you can find no negations that can stand upright in the presence of such affirmations as the following:

"He that is born of God doth not commit sin; for his [Christ's] seed remaineth in him, and he cannot sin, because he is born of God."—*John.*

"There is now therefore no condemnation to them that are in Christ Jesus. For the law of the spirit of life in Christ Jesus hath made us free from the law of sin and death."—*Paul.*

"I am crucified with Christ; nevertheless I live; yet not I, but Christ liveth in me; and the life that I now live in the flesh I live by the faith of the Son of God, who loved me and gave himself for me."—*Paul.*

These are affirmations that have borne the test of experiment—the last and decisive scientific test. Not only were they invincible in the far-off days of Primitive Christianity, in the mouths of John and Paul; they are just as invincible to-day in my mouth or yours. The doubt or denial of Henry Ward Beecher, or of men a thousand times more able and eloquent than he, avail no more against my affirmation than against those of the apostles. The proof exists in history that men can live without sin. The same proof exists that men are now living who do not sin. In both cases they were saved from sin by the same power—belief in, and affirmation of, an indwelling Christ. He who does not know that this can be done, has been done and is now done, does not know A in the alphabet of the Gospel of Christ.

The power of the affirmative. I thank you, Jew, for teaching me that word. Strong is the Yes of truth; strong is the man who bears witness to the truth. But strongest of all is the truth in living deeds—in a practical life that affirms in work accomplished the banner-cry of faith. God is love, Christ is the incarnation of God's love—these are the strongest of words. Translate them into deeds: "By this shall all men know that ye are my disciples if ye love one another;" and the universe shall turn to ashes before they can be conquered. Affirmative words, and affirmative, constructive deeds are the things which are bound to make this world a paradise, and human life a chorus of heavenly victory over sin and death.

COMMUNITY JOURNAL.

ONEIDA.

—The fruit-preserving department is getting ready to make its own cans.

—The farm is wintering 72 cows, 26 horses and colts, 28 young cattle, oxen and bulls, and 216 sheep.

—The gathering home of our agents and students brings our orchestra together again. We are pleased.

Monday, Dec. 30—Our ice-harvest begins to-day—two houses to fill besides the "Keep" at the fruit-preservatory.

—The machinists have been putting up machinery in the second story of the preservatory preparatory to can-making. They are now at work on a lot of bobbin-winders, a machine invented by L. F. Dunn for sewing-machine men.

—The making of paper-boxes proves to be a cleanly, attractive business; parts of the work are taken into the house where the children work in bees. Our hardware business requires one kind of box, and the silk business takes twelve other kinds.

—On going into the home machine-shop which has lately been fitted up in the old Willow Place house, I found Mrs. S. running one lathe while Mr. N. was instructing another woman on a second. Congratulating him on the success of his pupils, he said, "O yes, he expected sometime the young ladies instead of asking for a piano would ask for an engine-lathe."

—The following books have been added to the library: Lippincott's "Universal Pronouncing Biographical Dictionary"—two very thick large volumes; "Black's General Atlas"—an American edition of a Scotch work, remarkable for its fine maps of European countries; Jowett's Plato in 4 vols. —a freer and more elegant translation than Bonn's edition which we also have; and Appleton's "Annual American Cyclopædia" for 1871.

—There appeared on the Hall table a few days

ago a pomegranate which was a curiosity to many of us. The fruit is as large as a medium sized orange. It has a hard brown rind, and when cut open displays rows of cells arranged almost as regularly as those of a honeycomb. These cells are filled with seeds about the size of a kernel of corn, and are enveloped in a sweet, ruby-colored jelly or pulp.

—Some of our people traveling on the New York Central R. R. not long since, observed a Chinese gentleman and his wife and child who were the objects of considerable attention. They were dressed in the best of silks and satins in the peculiar Chinese costume; and the richness of their attire and their general appearance led people to suppose them persons of some celebrity in their native country. The gentleman conversed in English with much ease and fluency. It was soon found that he belonged to the Chinese Educational Mission. His name was Chan Taisum and he had been appointed by the Chinese Government to look after the education of young Chinamen in America. He brought more than thirty young Chinese with him, and expects before long to have one thousand under his charge. He places them in various schools about the country—one or two in a place—and expects them in time to graduate in some of our colleges. He remarked that the oldest country in the world was sending her young men to the youngest country to be educated. Mr. Chan Taisum graduated at Hamilton College, Clinton, N. Y., about nine years ago, and was among the first of his countrymen to obtain an education in an American college. His wife, a fine-looking woman, was also educated, it is said, in this country.

—The revival spirit burst on us last winter quite unexpectedly during a half serious and half funny representation of an old Perfectionist meeting. Once begun it was kept up for a considerable time, softening many a heart, and blessing many a one for all the year gone. This time it came as the fruit of our mutual criticisms, which have been carried on quite differently from ever before. At the beginning of the holidays when the foremen were busy taking their inventories and making estimates for the year to come, and when it would have been easy to have given way to a great deal of gaiety, it was proposed to have our outside men gather in, have our studies rest awhile, and our books lie unopened, while we got ready for the new year, by a grand time of mutual criticism. We went about it on this wise: Three persons were appointed to receive the names of all applicants for criticism, name a suitable committee for each one, appoint a foreman, and time and place of meeting. The one criticised could always suggest additions to his or her committee. These committees—consisting each of about a dozen friends and intimates of the candidate—would be reported to the meeting one evening, and do their work next day. Sometimes as many as fourteen of them would meet during the day, each one of them occupying an hour if necessary, but no more. It sometimes happened that a critic at one session, would be a subject at a second, and critic again at a third one. In this way we have washed one another's feet. It has been no "you-tickle-me-and-I-tickle-you" work, but simple truth-telling, pointing out faults of temper, of taste, of manner, of character, of attractions and of repulsions, faults of every kind, in short, and all done in kindness with a view to unity and softness of heart, and not for giving vent to pent-up grudges. The fruits are peace and humility, purity and new life.

—To watch the enthusiasm and delight which children manifest in learning new things, is a constant source of entertainment. This beautiful characteristic which makes them ever-springing fountains of spontaneity and freshness, ought in some way to be made perennial in human nature. Christ, no doubt, had this in mind as one of the good and indispensable things that are to be recovered by conversion and a return to the child-spirit, when he uttered that notable saying—"Except ye be converted and become as this little child, ye shall in nowise enter the Kingdom of heaven." At all events, this text came to mind lately as I watched the exploits of some of our little boys in spinning a top. The three-year-old boys who have lately appeared in the dignity of pantaloons, have made top-spinning a pastime for a good while, and have become such experts that they can entertain papa and mamma when they go a visiting. What the three-year-olds do triumphantly, the two-year-olds try to imitate, and the contagion of top-spinning is having a "run" in this little class, who are not yet out of frock and pantalets. The other day Felix delighted himself by setting a small top in motion with his thumb and fore-finger; but his courage increasing, he threw aside the small top and tried to manipulate a larger one that was at hand in the same way. The little thumb and fore-finger were unequal to the attempt, and he appealed to larger hands to give the motion and the method. The larger top was set going by a dextrous sliding of one palm on the other. The little fellow caught the idea at once, and sat down on the floor for a half hour's delightful practice. His attempts were more than half failures at first, but his perseverance was undaunted, and when success crowned his efforts, the gleeful shout he gave as he called to the lookers on to "see it 'pin," was irresistible.

JOTTINGS AT THE CRITICISM CLUB.

I.

S—— has a great deal of what is usually termed manliness. He has encouraged the stern side of his nature, and discouraged the gentle side. He seems to be ashamed to show the softness and tenderness that he feels. He needs to know that these two phases of character are not irreconcilable. They are in fact necessary complements to each other. S—— seems to be afraid that he will sacrifice strength by becoming subordinate to his spiritual superiors. Receptivity to God does not diminish true manliness; on the contrary, by being receptive one gains rather than loses strength. No one can be like Christ without having both the lion and the dove in his character.

....

Q—— is subject to strong personal likes and dislikes, and he is so frank and fearless that he takes no pains to hide the one or the other. He should make his likes and dislikes conform to the truth. Neither our estimation of an individual's character nor our affection for him should be determined by our personal relations to him, but by his relations to general society and to Christ. If Q—— would drop his prejudices and seek Christ's mind about persons he might find good where he has never seen it before, and his heart flow out in new directions obedient to impulses from heaven.

....

The true spirit loves service—loves to be fruitful. The false spirit seeks ease and hates faithful industry—counts many kinds of labor as degrading. One kind of labor may be superior to another in furnishing better conditions for the development and exercise of talent, and one kind of labor may expose a person to greater temptations than another; but in itself considered no labor that is necessary to be done can be degrading; and it is possible to make every kind of labor an ordinance of personal improvement and worship.

....

The reason why many persons do not have good religious experience all the time is because *they do not believe in fences.* There is no use in trying to raise good crops and have fine gardens without good fences. Fences are characteristic of civilization. People can raise things now that they could not in barbarous times, because they believe in fences. The ability to raise things depends upon the ability to protect them, and that depends upon fences. But some persons who would protect their gardens from the hogs have no idea of similarly protecting their minds and souls. Some people complain that their good religious experience does not last. The reason is obvious. Swinish spirits get in and devour it; and their good experience will never be permanent till they come to believe in fences. The Universalists as a body don't believe in fences—don't believe there is any clear line of demarkation between heaven and hell. But there is reason for supposing that heaven is surrounded by a sure fence, while hell is a place where people don't believe in fences, and that for the simple reason that they are not producers but devourers.

ICY.

OUR ice-harvest has begun. Some days ago the ice was ten inches thick on the Willow Place pond. Our men who have the handling of it think that thickness greatly preferable to twenty-seven inches as we had it last year. We have a-n-ice house made of brick to put it in. The hollow walls were filled with sawdust for the purpose of keeping it i-solated. I never saw dust used so extensively as our sawdust is. The saw-mill cannot make enough of it. It has all the qualities of a good rule that works both ways. It will keep the heat out and the cold in, or the cold out and the heat in when put into a wall. We use it also as a bed for our animals. I suppose the object of that is to make them in-dust-rious. If that is the design we have been over successful since the epizoötic left our horses; for they are wonderfully attracted to the business of making tracks, and have had two runaway scrapes in consequence. Perhaps since the disease has had its run the horses think it is no more than fair that they should have theirs.

There is an interesting antithetical parallelism between ice and coal. Coal is black and opaque; ice is white or colorless and transparent. Coal is obtained from the depths of the earth; ice from the surface of the waters. Coal contains condensed heat; ice condensed cold. The heat of the coal produces chemical changes in the food and other things to which we apply it; ice prevents chemical changes. We use coal to keep us warm in winter; ice to keep us cool in summer. Coal is expensive; ice is cheap. Coal is not particular about shelter; ice must be covered up warm to keep it cool. Coal has a wonderful knack of melting other things when it gets warmed up to the work; ice a knack of melting itself when it gets warmed up in the same way. It is coal that makes the whistle scream, and ice that makes the ice-cream.

H. J. S.

FROM OUR YALE STUDENTS.

II.

Parasites of the Dog.

IN the course of our lectures on zoölogy, Professor Verrill discussed the subject of the parasites of man and domestic animals, and disclosed many things which were new and interesting to me and may perhaps be so to some of the readers of the CIRCULAR. His remarks upon the parasites that are peculiar to the dog entirely removed any fondness I had formed for that animal in my boyhood, and showed the folly of adopting such creatures for pets. Setting aside the moral and spiritual effect of familiarity with such

Original from

animals, which alone is enough to condemn the practice, I think arguments may be presented which will convince any reasonable person of the dangers connected with such associations. I will not at this time undertake a detailed account of the modes of life of these parasites, but will simply state a few of the most prominent facts as the lecturer gave them to us.

According to Professor Verrill there are twenty-five different kinds of parasites which find a home in the various organs of the dog. There are only three that are very destructive and common among domestic animals. These are found in their mature state only in the dog, but occur in the larval state in sheep, cattle and man. The first produces what is known as the "water brain" in sheep. This is simply the young or larvæ of a small tape-worm (*Tænia cœnurus*). The second produces the hydatid tumors of sheep, of cattle and of man. This is found in various organs of the body, but most commonly in the liver, brain and kidneys. This is also the young of a very small dog tape-worm and is known as the echinoccus (*Tænia echinoccus*). The third produces the diving-bladder worm or "water-bladder," often found in the abdomen of sheep, cattle and pigs; frequently forming tumors as large as a hen's egg or even larger, and is the young of a larger tape-worm of the dog (*Tænia Marginata*). The Professor remarked that it is perfectly safe to say that at least twenty-five sheep are killed by parasites derived from dogs, for every one killed by the teeth of dogs; and that more than fifty persons die from the same parasites, for every one that dies of hydrophobia! And yet the heedless practice of fondling such animals goes on from day to day, and from year to year. The loss of human life alone, to say nothing of the amount of suffering caused every year by these diseases, more than counterbalances all the good that all the dogs in the civilized world can possibly do. This may seem to be an exaggerated statement, but we are compelled to believe it by the statistics which follow:

Dr. Krabbe states that in Iceland, where the conditions for the rapid increase and perpetuation of this parasite are most favorable, there are at all times about eighteen hundred patients suffering with severe forms of this parasitic disease—a number equal to about one-fortieth of all the inhabitants. In some districts the proportion of diseased persons is said to be one in every seven, while scarcely a family can be found without two or more cases! It is estimated that one-sixth of all the deaths in Iceland are due to the diseases caused by this parasite!

Dr. Krabbe found the echinoccus tape-worm in twenty-eight out of one hundred Icelandic dogs which he examined. In England this parasite is well known, and measures are constantly employed to prevent its increase. The hunting hounds undergo a course of medical treatment once in three months, for the purpose of removing it. Yet in spite of these precautions, it is estimated that five hundred persons die annually in Great Britain from this parasite alone.

These particulars will perhaps be sufficient to show the great danger to which people in the highest circles even are exposed, and that it is not by any means the dogs that bite which are the most to be feared.

In another letter I may perhaps give you some account of the manner of growth of this parasite, together with its effects, and the remedies to be employed. C. A. B.

OUR JANUARY THAW.

HAS any one ever attempted to account for this peculiar feature of our climate, if indeed, it be confined to our own? I had puzzled over it many a day until it occurred to me that it must have something to do with the winter solstice, as it generally takes place soon after that. I had noticed that at this time there was usually a spell of calm weather. Now we know that the rays of the sun affect us more powerfully when there is no wind to counteract their influence. The consequence would naturally be a rising of the temperature. Added to this, there are always warm currents of air high above us, coming from the regions of the equator, the tendency of which is to descend into the lower regions. Of these we get our share, provided they are not driven away by violent winds. But in calm weather, even in the depth of winter, the temperature is sometimes very much affected by them, and the mercury is seen as high as 50° or more. Hence, our January thaw, and other great changes during the year.

But why do these thaws occur so regularly? The chief reason is the usual, though not absolutely certain, recurrence of these calm spells during the solstice. If these fail, the thaw may not take place; which I have known to be the case, though very rarely. Although the sun helps the matter a little in a direct way, it is much more owing to what he does at the equator. There he warms up immense volumes of air, which rise to great hights, and roll over toward both poles, diffusing their genial influence as they go. Were it not for these, ours would hardly be a temperate zone. These currents do not reach us directly from the south, but appear to be deflected by the diurnal motion of the earth, and come to us from some point between the south and west. The difference in point of duration, as well as temperature, as applied to these thaws, must depend upon influences far beyond those of a mere local character. Currents from the equator destined for us, may be affected on their way by counter-currents, and robbed of a portion of their heat, leaving us minus. It is, in short, out of the question to trace the possible complications of the currents of air in our atmosphere. Changes must be going on incessantly both in temperature and direction.

Connected with this subject are the equinoctial winds. How are they occasioned? Why should the air be so much disturbed just at such times? This could be better shown by a diagram. However, we have already alluded to the masses of warm air generated at the equator. While these expand and roll over toward the poles, the cold air of those regions rushes in an under-current toward the equator to take their place. Now the force of this current must depend upon just where you happen to be. Naturally, it would be strongest about midway, between the starting-point and the goal. Those parts of the world that are subject to these periodical winds, are just at that point when the equinox occurs, consequently there is then a special blow. For the same reason, when we stand furthest from this point, that is, at the summer and winter solstices, there is comparatively little disturbance of the air. Hence, perhaps, not only our equinoctial gales, but our midsummer heats, as well as our January thaws. R. S. D.

BUSINESS COMMUNISM.

WE were talking at the Villa the other evening about Communism as an element of success in different directions, and among others in business. The success of so many coöperative societies in England is an illustration of what may be done if men strive together for a common object. Coöperation, to be sure, is not Communism in its fullest sense; still it is a great step toward Communism, and its success foreshadows the ultimate, perfect success of true Communism in business.

But besides coöperation, there are many examples in the business world of great success attending a lower form of Communism—that of united action among members of the same family. The Vanderbilt family is a power in the financial and railroad world and holds a position that it would be impossible for any member of it to hold alone. Probably much of the great success of the Harper Brothers is due to the harmony of action among the brothers in their pursuit of a common object. Cheney Brothers, silk manufacturers at South Manchester, Conn., are an example of what might be called Communism in business. They started in a small way in the early part of this century and have held together till the present time, and the business in its vast proportions is now carried on by the sons of the original members of the firm. The faculty of agreement, without which success were impossible, seems to be as strong in the sons as it was in the fathers; perhaps it is more so, for were they not born and bred in an atmosphere of agreement?

There may be and doubtless are many more examples of business Communism in this country. Those mentioned are conspicuous on account of the great success attending them, and certainly, so far as they go, they preach the gospel of agreement to all. If God gives such success to men working mostly from selfish motives, what will he not give to a people whose object in life is the establishment his Kingdom on Earth? E. S. B.

CORRESPONDENCE.

Stratford, N. Y., Dec. 27, 1862.

DEAR FRIENDS:—I desire to have you send me your little paper. I can't bear to be without it as I love to read it for what it says about the Bible. There are many good things to be learned from your paper. I can't think of doing without it. It is a welcome visitor in my house and it is read with deep interest by us all. W. A. B.

Concord, N. H., Dec. 26, 1872.

DEAR FRIENDS:—I desire to renew my confession of Christ and my confidence in Mr. Noyes and the Community. I have never had a thought of turning from this testimony and have always been willing, so far as I could consider myself worthy, to be considered as one in heart and sympathy with you. Within the past year I have experienced something of a revival. Those articles in the paper, "Mansion-House Memories," "Backward Glancings" and "Those Early Days," have helped me very much. They seemed to bring to me a renewal of my first experience and to stir within me a semblance of my first love.

Yours, F. L.

South Woodstock, Conn., Dec. 26, 1872.

DEAR BROTHERS AND SISTERS:—I say brothers and sisters because you seem more like such than my own blood relations. Your Community religion and life, if carried out, harmonize better with my own views than any other I know of. I have not a very religious organization, but I have a great desire to do right. I think I should be happy in a Community where all sought to do as they would like to be done by. I like your two-meal system very much. I have tried it in the winter season and should continue it through summer were it not for hired help and so much company who want their three meals daily. I should like to live where all is harmony, for that would be heaven. Please send the CIRCULAR another year, as it feeds the soul if not the body. W. A. W.

South Manchester, Conn., Dec. 25, 1872.

DEAR FRIENDS:—I thank you for the privilege of reading the CIRCULAR the past year. I thank God for a free gospel as taught by Mr. Noyes and others of your number who write for my comfort and edification. I often find something as peculiarly adapted to my case as if it were written

purpose for me, and while I value and prize the CIRCULAR as one of God's best gifts to me through your benevolence and love for the spread of truth, I do also deeply regret my utter inability to send pay for it. I feel ashamed to ask you to send it still another year without pay, notwithstanding that I believe you offer it freely and in good faith. It will be hard to part with the CIRCULAR as we love it well and prize it for its many good qualities; but chiefly for its spiritual teachings. If you are pleased to continue sending the paper it will be very gratefully received. Hoping to pay for it at no distant day,

Yours gratefully, G. C. D.

Cincinnati, O., Dec. 27, 1872.

DEAR CIRCULAR:—I am always pleased to receive your hebdomadal visits, and, as a printer, would like to compliment you on your punctuality, correctness and very attractive appearance. Your items under head "Community Journal" interest me very much as evidences of the candor and unselfishness begotten of a familiarity with, and observance of, the "Golden Rule."

Your experiments in stirpiculture are perhaps of more importance in the interests of humanity in the future than anything now going, as outside of such an organization as yours such experiments could hardly be made; but the success that must result cannot fail to surround the O. C. with a halo of glory.

But I feel most of all interested in your recognition of the equality of the sexes in all your outer and inner life relationships. In ordinary social life and forms of education one might almost suppose the ends to be gained by the sexes were antagonistic. In the hope that men and women may qualify themselves to live and appreciate Community life—a life of harmony,

I am yours truly, H. W.

Lake City, Minn., Dec. 13, 1872.

DEAR CIRCULAR:—Each year brings your shining face to greet me with joy. It is the best paper I see, because it comes freely to those who are not able to pay. I would gladly pay if I were able to work my way; but being an invalid I am cared for by my children. As it does not appear to impoverish you I receive it with thankfulness of heart, knowing that you are doing good to humanity and lifting the vail of Christ's Second Coming to many. May God's blessing rest upon you in good works till others see the good of coöperation and work for it with a will. Then will the time be hastened when poverty, pain and sickness will be done away. How I wish I could look in upon you and see the harmonious group of loved ones who are of one mind and filled with love and harmony. Such love and unity must wield an influence which will eventually be a blessing to the world. I love little children. In thinking of the beautiful future which is before your little ones in being educated in good works and in having their minds filled with precious seed which will bear fruit in the paradise of God, I cannot but exclaim, "Would that all children could be provided with such a home and with such good examples!" S. A. G.

Austin, Minn., Dec. 2, 1872.

DEAR FRIENDS:—Well, what a generous set of people you Community folks are, to be sure! The CIRCULAR, neatly incased in fine wrapping-paper with printed address, I have now received as a gift for nearly six years. Punctually once a week during all that time has it brought me, without money and without price, the best and most advanced thoughts of the Community and of the world on all questions and subjects of universal interest and universal importance. And again the announcement is made, again is it proclaimed throughout the length and breadth of the land, "We will as gladly send it to the poor as to the rich; as gladly to those who cannot pay for it as to those who can." Very well, ladies and gentlemen, you dear, good people that you are, I cannot see that I, as one belonging to the former class can really do better than once more avail myself of your unbounded and unexampled liberality. So with many, many thanks for your untiring kindness, and with ceaseless prayers for the speedy, complete and all-glorious success of your great and Godly efforts for the good of mankind, I respectfully request a continuance of those spiritual blessings which the beautiful little CIRCULAR never fails to confer on,

Your sincere friend, J. M.

THE NEWS.

AMERICAN.

Tin ore, it is reported, has been discovered at Otter Head Bay, on the north shore of Lake Superior.

Mrs. Stowe has given up her public readings on account of the sickness of her husband, Prof. Stowe.

Mr. Boutwell has signified his intention to become a candidate for the U. S. Senate from Massachusetts.

The United States steamer California has sailed for Honolulu from San Francisco, having on board Gens. Schofield and Alexander.

The heaviest and most wide-spread December snow-storm which has occurred in many years took place during the last week of 1872.

The center of gravity of the population of the United States is said to be near Wilmington, Ohio, about forty-five miles northeast of Cincinnati.

Edwin A. Stevens Jr., son of the late Edwin A. Stevens of Hoboken, N. J., is heir to an estate estimated to be worth $40,000,000. He is now 17 years of age.

The Modoc Indian War in south-eastern Oregon still continues, and as the Indians occupy a wild and difficult country full of caves, the subduing of them is likely to be a tedious matter.

Sixty feet of Mr. Brisbane's pneumatic tube from the Capitol to the Government Printing-Office has been laid, and the inventor considers the progress made in the work as satisfactory.

Mr. D. G. Croly, who has retired from the post of managing editor of the *World*, it is said will accept the editorship of an illustrated daily paper, to be started with ample capital, furnished by gentlemen of Montreal.

The horse disease appears to have nearly disappeared from the United States. The horses that have had it and recovered, still show its effects in their diminished strength and robustness, and probably several months will elapse before they will become as sound as they were before the disease appeared.

In the case of Susan B. Anthony and fourteen other women, under examination for voting illegally at the last general election in Rochester, the United States Commissioners rendered a decision holding each to bail in the sum of $500 to appear before the United States District Court at its next Session in Albany on the third Tuesday of this month.

Commander J. O. Selfridge, who surveyed the route for an inter-oceanic canal by the way of the Atratro and Napipi rivers, is about to make another survey by the way of the Atrato and Bojaya rivers. When he returns all the surveys will be placed in the hands of a board of officers who will decide on the relative advantages offered by the Isthmus of Darien, Nicaragua and Tehuantepec routes.

A Washington dispatch to the *Tribune* says that the majority of the present Congress seems disposed to let the Mormons alone, and to allow the more moderate of them an opportunity of urging their policy of the gradual abandonment of polygamy. What the temper of the next Congress will be no one can tell, though some of the leaders of the House who have been reëlected are in favor of no stringent legislation. They say that the history of Mormonism illustrates the truth of the old adage, that the "blood of the martyrs is the seed of the church." When Mormonism has been let alone, they say, it has grown very slowly, if at all, but persecutions, whether in Ohio, or Illinois, or Utah, have invariably given it new life.

The same dispatch also says that the proposed resignation of Judge Strickland of the U. S. Court of Utah will leave the Court, as far as is known, entirely in the hands of those who are in favor of the Newman policy of severe dealing with the Mormons. The feeling of the new District-Attorney, appointed since the meeting of Congress, is not fully known, but from some expressions dropped during his late visit to Washington, it is believed he will go as far as the law will allow in carrying on the Administration crusade against Mormonism. Judge Strickland is not understood to contemplate resignation because of any difference with the Administration, though he favored the view taken of the notable case last year by District-Attorney Bates and sustained by the Supreme Court.

FOREIGN.

Street railroads are rapidly constructing in Calcutta.

Gen. Von Roon has been appointed President of the Prussian "Council of Ministers."

The Czarowitz of Russia is sick with typhoid fever, but is now considered out of danger.

A diamond weighing 288 carats has been found at the Cape of Good Hope diamond fields.

The Marchioness of Lorne has been elected President of the British National Union for Improving the Education of Women.

The Japan *Gazette* announces that the Mikado has determined to establish an elective parliament of six hundred members, with two houses.

The deepest known well is at Sperenberg, near Berlin, Prussia. It is 4,194 feet deep, and passes through a stratum of salt over 3,900 feet in thickness.

A French chemist has ascertained that an acre of hops carries off from the soil ninety pounds of nitrogen, twenty-two pounds of phosphoric acid, twelve pounds of magnesia and forty pounds of potash.

In some revelations about the late war between Prussia and France, the Duke de Gramont brings documentary evidence to prove that before the war was begun France had a direct promise of aid from Austria.

It is reported from Spain that the Government contemplates the immediate abolition of slavery in Porto Rico. Why not include Cuba also? This Spanish support of slavery in the West Indies is a vile insult to the civilization of the age, and should be done with.

The United States Steamer Yantic, arrived at Zanzibar on the 10th of Dec. Capt. Wilson visited the Sultan and represented to him the sentiments of the people of the United States in regard to slavery. The Sultan replied, "Thirty-three years ago I was forbidden by my father to export slaves to Muscat. The slaves now carried there are stolen by Arabs and tribes from the Persian Gulf. I will make strong efforts in the future to prevent the kidnapping of these slaves. I will make every effort." The Yantic will remain at Zanzibar till the arrival of Sir Bartle Frere, who at last accounts had reached Aden.

RECEIPTS FOR THE CIRCULAR.

E. A. J., West Brookfield, N. Y., $1.00; J. M., Bureau Junction, Ill., $1.00; W. F., Rockford, Ill., $2.00; P. P., Putney, Vt., $2.00; L. O. D., Kenton, O., $2.00; J. P., Germania, Wis., $2.00; L. M., West Lebanon, Ind., $1.00; G. B., Woodstock, Vt., $2.00; C. H., Warren, Pa., $1.00; E. R. A., Hetricks, Pa., 25 cts; S. W., Prescott, Mass., $1.00; G. W. F., Portsmouth, Va., $2.00; J. P., Owasco, N. Y., $1.00; W. A. W., South Woodstock, Conn., $1.50; W. F., Germantown, Pa., $1.00; M. T. S., Brunswick, Me., $1.00; H. W., Cincinnati, O., $2.00; A. W., East Gaines, N. Y., 50 cts; A. R., Hamilton, Ill., 25 cts; W. W. K., Richford, Vt., $1.00; G. H. S., Hagerstown, Md., $1.00; W. F., Tamarack, Ill., $3.50; J. J. F., Jersey City, N. J., $5.00; J. K., Stephen's Mills, N. Y., $2.00; G. W. B., Wallingford, Conn., $2.00; E. L. E., Vineland, N. J., 50 cts; J. J. B., Wilmington, N. J., $4.00; D. D., Carpentersville, Ill., $2.00; J. R., Frederica, Del., $1.00; L. A. B., Verona, N. Y., 25 cts; M. J. M., Scotch Plains, N. J., $10.00; A. G. S., Jersey City, N. J., $2.00.

BITTER-SWEET.

O. C., Jan. 1, 1873.

DEAR CIRCULAR:—I have observed that people who set about writing with the praiseworthy intention of conveying moral instruction are allowed more than a common measure of justification; therefore I am greatly tempted to clamber on this high ground and put forth a moral. My moral, I may say, though relating to a subject essentially sweet, is based like many morals, upon bitter experience. I shall not, of course, disclose it in set terms till the end of this writing, though I trust it will become more or less obvious as I unfold my tale.

I have lately been one of those "men who go down to Joppa," as our newly built lodge on Oneida Lake has been christened, and while sojourning there in company with Dr. N., have performed the duties of commissary, or purveyor of provisions from the home base at O. C. This post has for the most part been far from laborious, owing to the extreme simplicity, bordering on austerity, of our diet. Our staples were coarse, unbolted wheat flour and sweet apples; and every Monday morning, when we set out for Joppa to spend the week, it was my custom to fill a large duck traveling-bag with these articles to take with us. As the Midland cars were usually crowded on Monday morning, I fell into the habit of checking this bag; and I might have continued doing so without harm for an indefinite period, had I not in an evil hour hankered after, not the flesh-pots, but the sugar-bowls of civilization. I always had a "sweet tooth;" and it occurred to me one day that the mush which we made from our coarse flour at Joppa, would be much more palatable, if a modicum of some kind of sweetening could be spread upon it. I introduced this subject cautiously to the Doctor, and somewhat unexpectedly received his sanction to supply our table with sale molasses, as the least unhygienic of sweets. This permit being granted, I asked the "kitchen mothers" on the following Monday, to put up for our use, a quart of sale molasses. This they did, putting the molasses into a tight glass jar, which they packed in my bag with the apples, giving me many warnings about carrying it carefully. But alas! for the treachery of the memory, and the force of habit! Without a thought of the molasses, I committed my bag as usual, to the baggage-man at the O. C. Station. Without a thought of the molasses, I remember admiring the easy sling with which he landed my bag in the middle of the baggage-car, before the train had stopped. Without a thought of the molasses, I saw the baggage-man at Fish Creek jerk my bag upon the frozen ground; and finally, without a thought of the molasses, I lugged my bag down to our own house at Joppa, on the lake shore. I was somewhat tired on my arrival, and dropping my bag upon the floor, and sinking into a chair, I lapsed into a meditative mood. The Doctor sat at a little distance in another chair. In my abstraction, my eye naturally rested on my bag as being the most conspicuous thing in front of me, and finally fell on a dark, viscous pool on the floor at one corner of it. I surveyed this phenomenon curiously for some little time, without in any way connecting it with my bag, or having it arouse my memory. But suddenly I noted that this dark, viscous liquid was *oozing directly from my bag!* Then, indeed, I bounded from my chair in wide-awake perception and recollection.

"Good gracious!" I ejaculated, "that molasses!"

The Doctor fell to laughing, quietly. I was in the frame of mind, I suppose, in which people who were wont to do such things, tore their hair and rent their clothes; but as such is not our modern custom, I hunted up my key and opened the bag.

"Sweets to the sweet!" In one of the two compartments to my bag lay fifteen or twenty sweet apples, soaking in about a pint of black molasses interspersed with fragments of bottle glass.

[*Note.*—It is singular how much humor some people may see in a given situation of things, when to others they have a downright serious aspect. I had this thought, when I saw the effect which the mixture in my bag had on the Doctor.]

If you were to ask me how I cleaned that bag, which I left at Joppa, I should have to ask you how to staunch a flowing spring. It would not surprise me if it should be found to be a fountain of sweetness to this day. To be sure, I scooped out the molasses, and washed, and wrung and dried the lining, and rubbed and polished the duck cloth; but for all that, for days it seemed to exude molasses from every pore. After setting it in one spot for awhile, I would be sure to find a little pool of molasses staining the floor. This I would mop up, and after giving the bag another overhauling, would set it in a new place; but molasses still dripped from it like honey from the cleft in the rock. It was a constant reminder of the widow's cruise of oil which "failed not." At one time I thought of burying the bag in the snow, and exhuming it early in the Spring, when I hoped that its spring would have dried up; but considerations of economy dissuaded me from this expedient. As the bag at length took on the character of an intermittent spring, I concluded to leave it for a season in our upper chamber at Joppa; and there it lies, "wasting its sweetness on the desert air" of the frozen lake.

Moral.—Always carry molasses in a stone jug, and carry the handle in your hand. FRIDAY.

REVIVAL SONG.

First Voice.

Who can save my soul from sadness?
Who can fill my heart with gladness?

Second Voice.

Jesus can;
For he heals the broken-hearted
And he bindeth up their wounds.

First Voice.

Will he wipe my eyes from weeping?
Will he take me in his keeping?

Second Voice.

Jesus will;
For he loves the broken-hearted,
And he bindeth up their wounds.

Both Voices.

Yes, our God has stopped our crying.
He has made our peace undying.
Jesus has.
O, he heals the broken-hearted,
O, he bindeth up their wounds.

G.

The late N. P. Willis when once asked to make a speech, replied that it was not his forte. Said he, to quote his own words, "I am by profession a writer, and you cannot expect a pump to give water from the handle as well as from the mouth."

To H. W., Cincinnati, Ohio.—We had a copy of "Esperanza" several years ago, but did not think very highly of the work.

To G. C. D., South Manchester, Conn.—Our No. 1 trap, suitable for catching woodchucks, we sell at $4.65 per doz. with chains; without chains, $3.50. No. 2 fox trap may be had without chains at $9.00 per doz.; with chains, $10.50.

ANNOUNCEMENTS.

SILK GOODS.

Machine-Twist and Sewing-Silk of their own manufacture for sale by the Oneida Community.

Address, [S] ONEIDA COMMUNITY, *Oneida, N. Y.*

PRESERVED FRUITS AND VEGETABLES

Put up for sale by the Oneida Community in tin and glass. Price-list sent on application.

Address, [F] ONEIDA COMMUNITY, *Oneida, N. Y.*

STEEL TRAPS.

Eight sizes and kinds, suitable for the House-rat, Musk-rat, Mink, Marten, Fisher, Fox, Otter, Beaver, the Black and Grizzly Bears, are made by the Oneida Community. Descriptive price-list sent on application.

Address, [T] ONEIDA COMMUNITY, *Oneida, N. Y.*

MACHINE-SHOP AND FOUNDRY.

Improved Lathe-Chucks, Blinn's Patent Gate-Hinges, Machines for Measuring the Length and Testing the Strength of Manufactured Silks, Bobbin-Winders for Sewing-Machines, etc. Agricultural, Machine and Light Castings, on hand or made to order. Descriptive price-list sent on application.

Address, [M] ONEIDA COMMUNITY, *Oneida, N. Y.*

THE WALLINGFORD PRINTING COMPANY.

All kinds of Book and Job Printing executed: Manufacturers' Illustrated Catalogues made a specialty: also Bronze and Color Work, and the finer kinds of Card, Circular and Bill-head Printing. Having enlarged its works and added new motive power, this Company is in renewed condition to meet the wants its patrons with promptness and accuracy.

P. O. Address, *Wallingford, Conn.*

PUBLICATIONS.

(Sent from the Office of the Oneida Circular by mail, post-paid, on receipt of price.)

History of American Socialisms. By John Humphrey Noyes. 678 pp. 8vo. J. B. Lippincott & Co., Philadelphia. London, Trubner & Co. Price $3.00.

The Trapper's Guide; a Manual of Instructions for Capturing Fur-bearing Animals. By S. Newhouse. Third edition with New Narratives and Illustrations. 215 pp. 8vo. Price bound in cloth, $1.50

Salvation from Sin, the End of Christian Faith; an octavo pamphlet of 48 pages. By J. H. Noyes. Price 25 cents per single copy, or $2.00 per dozen.

Dixon and His Copyists; a Criticism of the Accounts of the Oneida Community in "New America," "Spiritual Wives," and kindred publications. By John Humphrey Noyes. Price 25 cts.

Scientific Propagation. By John Humphrey Noyes. Large octavo pamphlet of 32 pages. Price 25 cts.

Male Continence. By John Humphrey Noyes. An octavo pamphlet of 24 pages. Price 25 cts.

Hand-Book of the Oneida Community; Containing a Brief Sketch of its Present Condition, Internal Economy and Leading Principles. Price 25 cts.

The five pamphlets—"Salvation from Sin," "Dixon and his Copyists," "Hand-Book of the Oneida Community," "Scientific Propagation," and "Male Continence," will be sent to a single address on the receipt of $1.00.

Back Volumes of the Circular, Unbound. Price $2.00 per volume.

MESSRS. TRUBNER & COMPANY, Book-sellers, Paternoster Row, London, have the "History of American Socialisms," the "Trapper's Guide," and the "Hand-Book of the O. C.," for sale. They will receive subscriptions for our other publications.

PHOTOGRAPHIC PICTURES

Of the Oneida Community Buildings and Grounds, made by a first-class artist and finely mounted, can be had on application at the Office of the Oneida Circular.

LARGE VIEWS.

Bird's-eye View, looking West, of Community Buildings and Grounds, 12 by 14 inches, on fine enameled board 16 by 20; price $1.75. Quadrangle and Group, 12 by 14, mounted like the above price $1.75. South and East Fronts of the Community Dwellings, giving a good view of the New Wing occupied by the Children—8 by 10, on tinted board 10 by 12, with an ornamental border price $1.00.

STEREOGRAPHS.

No. 2, East and North Lawns. No. 3, East Lawn and Portico. No. 4, East Front. No. 5, North Front and Lawn. No. 6, Bird's Eye View of Buildings looking West. No. 7, Lawn and Summer House. No. 8, West View, toward Railroad. No. 11, Quadrangle. No. 12, Lawn View. No. 15, South and East Fronts. Price of Stereographs $3.00 per doz. Sent by mail, post-paid, on receipt of price.

Oneida Circular.

A WEEKLY JOURNAL OF HOME, SCIENCE AND GENERAL INTELLIGENCE.

Published by the Oneida & Wallingford Communities.

ONEIDA COMMUNITY, JANUARY 13, 1873.

New Series, Vol. X, No. 3
Whole No. 1441.

POST-OFFICE ADDRESS:

ONEIDA CIRCULAR, ONEIDA, N. Y.

TERMS:

The CIRCULAR is sent to all applicants, whether they pay or not. It costs and is worth at least two dollars per volume. Those who want it and ought to have it are divisible into three classes, viz., 1, those who cannot afford to pay two dollars; 2, those who can afford to pay *only* two dollars; and 3, those who can afford to pay *more* than two dollars. The first ought to have it free; the second ought to pay the cost of it; and the third ought to pay enough more than the cost to make up the deficiencies of the first. This is the law of Communism. We have no means of enforcing it, and no wish to do so, except by stating it and leaving it to the good sense of those concerned. We take the risk of offering the CIRCULAR to all without price; but free subscriptions will be received only from persons making application for themselves, either directly or by giving express authority to those who apply for them.

Foreign subscribers, excepting those residing in Canada, must remit with their subscriptions money to prepay the postage.

THE UNITED COMMUNITIES.

ONEIDA COMMUNITY

Is an association living in Lenox, Madison Co., N. Y., four miles south of Oneida and a few rods from the Depot of the Midland Railroad. *Number* of members, 205. *Land*, 654 acres. *Business*, Manufacture of Hardware and Silk goods, Printing the CIRCULAR, Horticulture, &c. *Theology*, Perfectionism. *Sociology*, Bible Communism.

WILLOW-PLACE COMMUNITY.

Branch of O. C., on a detached portion of the domain, about one and one-fourth miles north of O. C. *Number* of members, 19. *Business*, Manufactures.

WALLINGFORD COMMUNITY.

Branch of O. C., at Wallingford, Conn., one mile west of the Hartford and New Haven Railroad. *Number* of members, 45. *Land*, 228 acres. *Business*, Publishing, Job Printing, Manufactures, and Horticulture.

SPECIAL NOTICE.

The O. C. and Branches are not "Free Lovers," in the popular sense of the term. They call their social system BIBLE COMMUNISM or COMPLEX MARRIAGE, and hold to freedom of love only within their own families, subject to Free Criticism and the principles of Male Continence. In respect to permanency, responsibility, and every essential point of difference between marriage and licentiousness, the Oneida Communists stand with marriage. Free Love with them does *not* mean freedom to love to-day and leave to-morrow; nor freedom to take a woman's person and keep their property to themselves; nor freedom to freight a woman with offspring and send her down stream without care or help; nor freedom to beget children and leave them to the street and the poor-house. Their Communities are *families*, as distinctly bounded and separated from promiscuous society as ordinary households. The tie that binds them together is as permanent and sacred, to say the least, as that of marriage, for it is their religion. They receive no new members (except by deception or mistake), who do not give heart and hand to the family interest for life and forever. Community of property extends just as far as freedom of love. Every man's care and every dollar of the common property are pledged for the maintenance and protection of the women and children of the Community.

ADMISSIONS.

These Communities are constantly receiving applications for admission which they have to reject. It is difficult to state in any brief way all their reasons for thus limiting their numbers; but some of them are these: 1. The parent Community at Oneida is full. Its buildings are adapted to a certain number, and it wants no more. 2. The Branch-Communities, though they have not attained the normal size, have as many members as they can well accommodate, and must grow in numbers only as they grow in capital and buildings. 3. The kind of men and women who are likely to make the Communities grow, spiritually and financially, are scarce, and have to be sifted out slowly and cautiously. It should be distinctly understood that these Communities are not asylums for pleasure seekers or persons who merely want a home and a living. They will receive only those who are very much in earnest in religion. They have already done their full share of labor in criticising and working over raw recruits, and intend hereafter to devote themselves to other jobs (a plenty of which they have on hand), receiving only such members as seem likely to help and not hinder their work. As candidates for Communism multiply, it is obvious that they cannot all settle at Oneida and Wallingford. Other Communities must be formed; and the best way for earnest disciples generally is to work and wait, till the Spirit of Pentecost shall come on their neighbors, and give them Communities right where they are.

COUNT THE MERCIES.

Count the mercies, count the mercies,
Number all the gifts of love;
Keep a daily, faithful record
Of the comforts from above;
Look at all the lovely green spots
In life's weary desert way;
Think how many cooling fountains
Cheer the fainting heart each day.
Count the mercies, count the mercies,
See them strewn along our way.

See, oh, see how rich the beauties
In the charming scenes of earth!
Think of all the untold blessings
Clustering round our home and hearth;
Think of friends and precious kindred—
To our hearts so dear, so sweet;
Think of heaven's unnumbered comforts
Can you all the list repeat?
Count the mercies, count the mercies,
Making bright paths for our feet.

Count the mercies, though the trials
Seem to number more each day;
Count the trials, too, as mercies,
Add them to the grand array.
Trials are God's richest blessings,
Sent to prompt our upward flight,
As the eaglet's nest all broken
Makes them fly to loftier hight.
Count them mercies, greatest mercies,
That bring heaven within our sight.

Count them mercies that shall sever
Cords which bind our spirits down,
Causing us below to grovel,
And forget our heavenly crown,
Let all earthly ties be riven,
Nests be broken, hopes decay,
If to God our hearts be driven,
If from earth we soar away.
Count them mercies, wondrous mercies,
Urging us the heavenward way.

Oh, what richer, purer comforts!
Better far than those of earth—
Joys unfailing, hopes enduring,
Treasures of surpassing worth;
Beams of bright celestial radiance
From the central source of light,
Spreading o'er each scene of sadness
Halos gladdening to the sight.
Precious mercies, priceless treasures,
Bringing us such rich delight.

Let us number o'er our jewels;
Let us estimate their worth;
Let us thank the precious Giver,
Strewing blessings o'er the earth.
Let our hearts o'erflow with gladness,
Let us tell the wonders o'er,
Till our multiplying mercies
Seem a countless, boundless store;
Then let praises, grateful praises,
Be our language evermore.

[*Selected.*

THE DUALITY OF GOD.

Home-Talk by J. H. N.

AS mere observers of nature we find ourselves in a universe clearly marked by the distinction of sex. The living half of the universe is certainly the most important part, and that in which we should search first for the image of its Maker; and that part, in all its visible grades from the lowest animalcule to man, is a duality—male and female.

So much was always manifest to the most superficial curiosity. But science, within the last few centuries, has shown us more. It is now known that vegetable life, in all its grades from the microscopic fungus to the rose and the palm tree, is a duality—male and female.

Standing then on the boundless plain of nature, we see sex as far as we see life.

But our thoughts will not stop at the limits of what we *see*. We must argue from the visible to the invisible. From so vast a fact as that of sexual distinction in all the realms of visible life, we are invited, if not constrained, to infer that the same distinction will be found extending into the world of invisible life, reaching through all the ranks of angels, principalities and powers, to God, the source of all.

So much light we get from creation, on the great question of the nature of God. If the life of creation is his vesture, we see in it his form, and that form is a duality.

Seeking all available stand-points from which to get a sight of the Eternal Center, turn we now to the Bible. If that book should seem to ignore or deny what we have already seen, we should not the less reverence the teachings of creation. But what if the Bible should distinctly affirm that which we have inferred from the indications of creation? Would not the matching of the two views, and the reaction of our minds between them, on the one hand strengthen our confidence in the theory we had previously found in creation, and on the other set the Bible on high as an oracle which thousands of years ago clearly announced a profound truth which is just now becoming dimly visible to the scientific world?

The Bible, in its first chapter, has this singular statement:

"God said, Let us make man in our image, after our likeness. . . . . So God created man in his own image; in the image of God created he him; male and female created he them." Gen. 1: 26, 27.

This is substantially repeated afterward in the following form:

"In the day that God created man, in the likeness of God made he him; male and female created he them; and blessed them and called their name Adam." Gen. 5: 1, 2.

The critical reader will discover that the language of these passages implies on the one hand a plurality of persons in God, and on the other a corresponding plurality of persons in man, and defines the plurality in both as a duality, by the terms "male and female." Thus the Bible distinctly announces on its first pages that in man, as male and female, is seen the "image of God."

This theory of the Old Testament concerning the nature of God assumes a more positive form in the New. Christ is there introduced to the world as the eternal Partner of the Father—"the brightness of his glory and the express image of his person." The following is a specimen of the language of the New Testament on the relation of Christ to God:

"In the beginning was the Word, and the

Word was with God, and the Word was God. The same was in the beginning with God. All things were made by him; and without him was not anything made that was made. . . . . That was the true Light, which lighteth every man that cometh into the world. He was in the world, and the world was made by him, and the world knew him not. . . . . And the Word was made flesh, and dwelt among us (and we beheld his glory, the glory as of the only begotten of the Father), full of grace and truth." John 1: 1—14.

"Who is the image of the invisible God, the first-born of every creature: for by him were all things created, that are in heaven, and that are in earth, visible and invisible, whether they be thrones, or dominions, or principalities, or powers; all things were created by him and for him; and he is before all things, and by him all things consist." Col. 1: 15—17.

"The head of the woman is the man; and the head of Christ is God." 1 Cor. 11: 3.

In this last passage Paul in express terms places the Divine duality, of which Christ is the secondary member, in immediate analogy with the human duality which in Genesis is declared to be its image.

We have, then, the testimony of Nature on the one hand, and the Bible on the other, that Creation has a Mother as well as a Father—that God is a duality.

NEW PROBLEMS IN POLITICS.

[Selected from G. W. N.'s Writings.]

THE kingdom of God is an absolute monarchy. It is a government not of compact between people and sovereign; not limited by constitutional forms and provisos. God takes the entire responsibility of the State; and the only compact in the case, is the very one-sided one called by the prophet the "new covenant." It is summed up in these words: "I will be to them a God, and they shall be to me a people." The patronage and appointing power of course remain with the responsible party; and all forms of popular representation are dispensed with.

So far as there is a true church on earth, it is a frontier department of this kingdom; and will possess the great characteristics of heaven's government, viz., central executive power, and subordination. It will manifest in all its operations perfect unity of design, and true harmonious effort. To secure this, it includes a gradation of authority; officers, not self-elected, not popularly elected, but appointed by God; whose credentials, if truly received of him, need no secondary influence to secure their respect. In fact, the credential of authority through all God's kingdom, from the Supreme himself, down, is not a matter of parchment, or a voice from heaven merely, but the possession of actual ability. Carlyle's doctrine is true, that "mights in this just universe, do, in the long run, mean rights." God's appointment to office confers on the individual *ability* corresponding to his commission; and it is as certain that his ability will make his office recognized by those with whom he has to do, as it is that in a mixture of fluids the heaviest will sink to the bottom. Equivocal pretensions to superiority, based on diplomas of divinity schools, or musty apostolic commissions, and which make submission to the clerical authority a merely nominal, gratuitous thing—a matter of custom—have no place in Christ's church. On the contrary, in that organic body, as we said before, superiority of every degree is a gift of power from God, which vindicates itself by an irresistible ascendency over that which is inferior. It is this *reality* of power developed in a medium of love, that finally constitutes the church an organized corporation, well compared to the human body; which causes each member to gravitate toward his true place and office, bringing the "different gifts" of the church into the order and symmetry which is visibly expressed in the human form.

In this construction of the church, the autocratic principle of the kingdom of God is seen throughout. The distribution of gifts—the appointment of "apostles, prophets, evangelists," etc., is far removed from human dictation: and as these offices are not merely nominal, but the channels of God's will, every Christian finds himself under a despotism extending far beyond any earthly rule. In short, wherever we come in contact with his spiritual government, we find it working with a strength which makes it wholly independent of human volitions. Whether in the direct application of the new covenant to our souls, or in the organization of intermediate agencies of his will, the same despotic purpose is manifest, the same disregard of democratic forms and privileges. The question now arises, What is the effect of this tremendous, irresponsible government upon individual liberty? Can freedom exist under it?

There are two classes of subjects, who will experience differently the operation of God's spiritual dominion. It is inevitable, in the first stages of intercourse with God, while evil influences still exist in the character, that his will should come into constant collision with those influences, and the wills growing out of them. The inner and better part of our nature is even then free and happy; and it is only the selfish, egotistical part which loves darkness, and loves to do as it pleases at all cost, that experiences the effect of collision with a superior will. The effect is suffering; a bitter sense of bondage; coercion of the soul. No prison can realize the idea of helpless constraint that the soul experiences, when conscious of a hostile contact with the will of God. Yet even then it is not God's purpose to bring the offending part into bondage, but to destroy it. Every spirit opposed to him, is destined not to slavery, but to destruction. The carnal mind is not to be subdued, but crucified. He will have no drudges about him, no unwilling subjects. He will reign in natures like his own, not as a lawgiver and tyrant, but as a helper. For all others is decreed tribulation, wrath, perdition. The whole process which causes the imperfect believer to feel unpleasantly the force of God's will, is not to take away his liberty, but to make him free, to free the better part of him from an unnatural, selfish disposition; thereby putting an end to the war which exists in every enlightened person between the spirit and the flesh, which is itself (as described in the 7th of Romans) the very essence of bondage. Then, with one undisturbed principle within, coïnciding with the will of God, we have perfect liberty. Not so with the willing adherents of Satan; they find themselves in a completely inverted order; at war with all nature and the constitution of things. God made the universe after the pattern of his own heart, and adapted it to a state of love. The whole machinery of it runs directly across selfishness; and for that reason evil men can never be free.

We would say to those who consider democratic institutions the palladium of individual liberty, that this very blessing is enjoyed to an infinitely greater degree, under the monarchy of God. We believe that only those who have passed the quarantine of judgment and become naturalized citizens of the kingdom of heaven, know what is the glorious sensation of unshackled freedom of will. The highest experience and most glowing conceptions of liberty in the world, are but meager shadows of the liberty which we achieve when we become perfect men. Our wills act under the attraction of a superior spirit, it is true. But what creature in the universe does not? There is no such thing for men, and there never can be, as willing independently of the great authors of good and evil. Our advantage consists in having escaped the exclusive dominion of the evil spirit, which would have entailed on us an eternal war of impossibilities; in having ended the "joint occupation" of two hostile influences in ourselves which is incompatible with any sense of freedom; and in having come under the exclusive attraction of God, the author of all peace, harmony and beauty. All men are in one of these three predicaments; and to all purposes of enjoyment the latter offers us perfect freedom.

It offers us more. Suppose we have a desire to travel in distant countries. Liberty to do so would simply require that we should have leisure, money, conveyance, etc. But suppose a gentleman, a man exactly after our own heart, should come and say to us, "You want to go to Europe for purposes of pleasure and improvement. Let me go with you, and take the care and trouble of your journey on myself. I will pay your bills and see to all your affairs. I am familiar with all the countries which you will visit, will be your companion, and so direct your journey that you need do nothing but enjoy yourself." Would not the acceptance of this offer, confer upon us something better than mere individual liberty? True, we give up the direction of our affairs to another; but it is to one perfectly worthy of the trust, and we gain in exchange an exemption from the vexations and dangers of the undertaking. The more care we could thus transfer judiciously, the more liberty we should have, and the more completely would the object of our travels be gained. Precisely like this is the relation between God and his people, in making the tour of the universe. We may suppose that we might go alone; but it would be better to have an intelligent power to direct and forward us, and to find all our purposes backed up by Jehovah himself.

It is necessary and right that this supreme

unity of will should run through every department of the creation. It is the gravitation that will finally bring human nature, and every member of it, into the harmony of the starry system; so that each in his orbit shall be necessary to all, and the combined effect shall be worthy of God.

HABITATIONS.

I.

THE interest which one feels in the study of the various habitations of the immense variety of living creatures, from the lowest form of life up to man, grows chiefly out of the fact that these dwellings are such admirable indices of the characters of those who build them, and of their capacity for making the most of their surroundings.

Some of these homes are very durable and furnish almost the only clues by which we can get a hint of the characters of earth's earliest inhabitants. Perhaps there is not to be found a more outspoken evidence of the warlike, predaceous character of certain races, both brute and human, than are the habitations which they have left behind them. The conch-shell which you pick up on the sea-shore is sufficient evidence of this. What would the animal that lived in its pink and pearly home, have done without its shell? It would have been incontinently gobbled up by any one of a thousand enemies which were prowling the sea seeking what they might devour.

If we search through the rocks that we may discover the character of life in geologic ages, we find evidence of the existence of huge sloth-like monsters which gained a livelihood by uprooting trees and feeding upon the leaves and branches. These mountains of muscle, possessed of almost incalculable strength, were yet so slow of movement that they were utterly incapable of wielding their strength in self-defense. There is evidence that they required defense against predaceous enemies, in the fact that they were covered with a hide of such impregnable thickness and toughness, that no living creature could penetrate it. There were also prodigious armadillos which could curl up, and draw all their vulnerable parts inside of a coat-of-mail, where they became almost as hopeless objects of attack, as are the smooth bowlders which in some regions cumber the earth.

That the same predaceous propensity exists among insects is evinced by the curious habitation which the little caddice-worm that lives in our brooks constructs for himself. His head is tough and needs no protection. But how shall he make secure his long, naked body? He settles the question very practically and readily by laying hold of the first material which comes to hand, and making himself a tube inside of which he is safe from harm. If it is nothing but sand, he cements the particles together, and carries about with him a stone-and-mortar built integument. If it is a leaf, he cuts it into strips and winds it about his body, cementing the edges as a surgeon would bind up a broken limb. A piece of rotten-wood or straw is equally serviceable.

"My house is my castle," appears to have been the motto which was acted upon by the earlier and more rudimentary forms of animal life. In the later and higher forms of brute life, the methods of securing safety which I have mentioned, are not so manifest. The best protection of the horse, the ox, the deer, etc., is their fleetness, which fact, by the way, might be used by the non-resistants as an argument to show that the legs are a better kind of "carnal weapon," than are other means of defense.

If we study the natural history of man as illustrated in the various dwellings which he has constructed in the earlier ages, what better evidence of the predaceous character of the first human inhabitants of the earth could we have, than the remains of houses which belonged to the lake-dwellers of Switzerland? They evidently built their houses on piles in the lake, for the purpose of safety.

We are told that in old Bashan, of Bible fame, there are yet to be found many cities in close proximity to each other which are completely deserted, and yet the houses that were built before the country was conquered by the Jews, are still standing in a perfect state of preservation. With walls of rock five feet thick, and window-shutters made of great slabs of stone of enormous weight, what a story do they tell of the habits and character of the old Canaanites, which the Israelites expelled from the land! Notwithstanding those people were sufficiently civilized to dwell in cities, it would appear that they had not learned how to organize a system of police regulations, but chose rather to depend on thick walls for safety.

But we need not go back to those ancient days to find a society in which security was dearly bought. Look at the condition of Europe only a few hundred years ago in feudal times, and it will be found that the whole continent was simply an armed encampment on the great scale. What tales of violence do the old castles, with their thick walls, narrow windows, battlements and dungeons tell us! Safety to common people could be secured only at the price of subserviency to some feudal lord. The armor of the days of knight-errantry is another evidence of the insecurity of human life in that early age of the world. How ridiculous would men look in these days with their bodies and limbs encased in iron, with iron kettles on their heads, and peering out between the bars of their visors like wild beasts in a cage! Of all creatures in the animal world, the lobster best represents the armed knight. One cannot help wondering if the man who invented jointed armor did not get the hint from a lobster. He ought at all events to have had that creature for his coat-of-arms.

But it is not alone in thick walls, inaccessible fastnesses and heavy armor that we find evidence of the predaceous character of man. These evidences are in some instances shown in the absence of permanent dwellings—easily removed tents being their substitute; and also in the common use of a fleet race of horses and camels, as in the case of the Arabs. The power of rapid motion is as favorable to defensive as it is to offensive combat; and to be at war in one way or another, is the Arab's chronic condition. Among some of the African tribes superstition is a bar to the maintenance of a permanent home. When a man's wife dies, custom requires that he shall destroy his house.

H. J. S.

REMINISCENCES.

V.

I SAID I found developed in myself personal traits that were before unknown to me. I will endeavor to describe some of the particular trials which I passed through, and my conversion under them.

One of my first difficulties was on the labor question. My circumstances previous to this time had not demanded physical labor. I had employed my time in ornamental needle-work and things of that kind, as my fancy dictated, and I was free to work or not as I chose. We had seen so much trial and perplexity among our friends in their experience with hired servants that Mr. Noyes and I agreed that when we began housekeeping we would be independent of them and perform all household duties ourselves. As soon as the novelty of my new vocation had passed away I found myself under a spirit that made my work a bondage rather than a pleasure. I had time to do all that was necessary, and I was at liberty to do it when I chose, and yet I was driven by a legal spirit that made me feel that it was necessary to do things immediately, and at the same time that it drove me it induced me to drive others. This spirit may seem to be subordinate to necessity, but it is really insubordinate to God. It makes the body work like a machine, without any exercise of the mind and spiritual thought. It is an animal will, and may be cultivated to such an extent that rest is perfectly offensive to it. Under this influence we are servants to our work, whereas in the free spirit of God our reasoning faculties are free and we are masters of our business; we take the time we prefer for doing it and enjoy our work. Under the influence of the first motive we do things from duty and are hurried, while under the influence of the other we are governed by love. "He that believeth shall not make haste." Whenever we are pushed on by a spiritual influence to act in haste, and are thereby prevented from obtaining good counsel and the judgment of minds around us, we may know positively that there is a bad spirit influencing us and should stop at once.

Mr. Noyes seeing the oppression I was laboring under advised me to give up my housework. In obedience to this suggestion I took to sewing, and as I did not find relief in this he advised that I drop all feminine employments and read or amuse myself. I passed my time in visiting a friend, and after a week or so of reflection in which my faith in God was renewed, I began to work again under the influence of this motto, "By love serve one another." This motive of love oiled my business and made it pleasant to myself and those around me. I have since enjoyed work with my hands by returning again and again to the spirit of love and ser-

vice. It has helped me to work in harmony with those of different tastes and business methods, and I have rejoiced much in an escape from worldly bondage. H. A.

ONEIDA CIRCULAR.

TIRZAH C. MILLER, EDITOR.

MONDAY, JAN. 13, 1873.

A SHAKER START.

THE paper published by the united society of Shakers at Mt. Lebanon comes to us no longer with the bare and austere title of *The Shaker* merely. *The Shaker* has at last taken unto himself the *Shakeress*. We are glad to see that the sexes in Shakerdom are approaching each other even so remotely as in the title of their paper; and what the Shakers have thus joined together we are certain that no man could have the disposition to put asunder. In calling their paper *Shaker and Shakeress*, and making Eldress Antoinette Doolittle joint-editor with Elder Frederic W. Evans, the Shakers have made a good beginning. They have laid hold of one of the sure threads of success, and we hope they will be wise enough to see it. We have found it, in our associative career, to be of the highest economic and social profit to take woman into close partnership in all the affairs of life. Our wealth and health and happiness may be said to be largely the results of finding out little secrets like this and Male Continence.

We have not been in the habit of reading *The Shaker* for light reading, but we cannot doubt that it will improve right along under the magnetic management of the united sexes. Could they not add to the spice of magnetism which this new move must give to their paper a little humor of the godly sort? If the Shaker life is really warm and sunny, and not chilly, as all the misguided are wont to believe, and if we may advise a little, we should say the Shakers would gain something by making their paper a little more cheery and magnetic and not such a "dead lift" at doctrine. If you have a "morning-glory" in your house let your neighbor see its "red ruddy" glow. As it is now, the Shakers, though they furnish ample material for fun-making to a great many irreverent people, do not seem to let healthy laughter loose among themselves much. We don't believe it would hurt the purity of such earnest people to laugh a little more than they do. What if they should let one of the most jovial of their good-looking men occasionally stand up on the clean, white floor, which we admired so much in their Church, and sing the "Laughing Song," which H. W. B. sings to us:

"I love, O, I love a good laugh, ha! ha!
For a wonderful thing is a laugh, ha! ha!
Why it's better than all the tears
That a body could shed for years,
And there's nothing so good as a laugh."

G.

COMMUNITY JOURNAL.

ONEIDA.

—Studies were resumed after the Christmas and New Year vacation.

—The fruit-growers are thinning out the orchards where the trees have become too thick. Some orchardists think it profitable to plant their trees four times more thickly than they wish to have them remain.

—A gentleman in Brooklyn has sent as a new year's gift a small but valuable collection of autographs for our cabinet. It is pleasant to be thus reminded of our friends. The collection contains specimens of the signatures of several American celebrities, from that of Daniel Webster to Horace Greeley.

—The Methodist has his peculiar look or cast of countenance; so has the Calvinist—whether Baptist or Presbyterian; so has the Universalist, and the Freemason; so has nearly every sort or class of folk, though it would not be easy to say just what it is; these peculiarities are more easily seen than described. We presume our Communists have their look—people say they have. Maybe they look as different from other folks as boys brought up to mind at home do from boys that are left to have their own way.

—The folk who don't believe that a man in a Community can have any motives left to make him work ought to look at the Zoarites and Rappites and see how rich they are. The fact that these Communities have become very wealthy shows that they have found motives enough to make them work and scheme, each for its own public good. Your average man is always sure, yea, dogmatically sure, that a Communist can't have any reason for taking hold and doing a good day's work. We say, let these unbelievers look at the Rappites and take in an idea or two on this point. The success of the O. C. might even have some weight on the question.

—"Now that I am married I can eat onions, and if I know my own heart I always shall." We cannot say whether this remark is quoted correctly, but we will say that it is a sharp thrust at the deliberate selfishness—not to say brutality—which often hides itself under cover of marriage. It was brought to mind by hearing the criticism of a person who had fallen into some of the unmannerly ways which come from long intimacies.

—These bright days have had fair nights for their silent partners to tempt one a sleigh-riding. The Journalist is invited to go. He borrows Daniel's great coat and fur-collar and fur-gloves, wondering at the instinct for comfort which makes some folks so provident. There are two three-seated sleighs and four brisk horses. We go over to Willow Place in the face of the east wind; then along the Seneca turnpike through the Castle, which has a finer avenue of trees than any country place we know; then over the hill to the Indian Road and Five Chimneys, noting the fact that two of the Indians have built themselves new houses and that the Beechtrees—the royal family of the Six Nations—are all in bed; then home by the way of Pine Bush. Eight miles of glib riding—the horses steaming—the crusty snow sparkling and squeaking where the light teams fly, and groaning where the heavy ones crawl—great Jupiter low down in the east, bright Sirius high up in the south, Orion over head, the little stars, with their Arabic names, grown pale in the light of the moon, and the Great Bear standing on his tail as if dancing in an ecstasy of fear among the red spears of nothern light.

—Speaking of sleigh-riding makes us remember that "Frank Leslie" has printed a very interesting sketch of a Shaker sleigh-ride. Six Shakers—two of them are men and four of them are women—drawn by a slow team, are plodding through a deep snow. The lack of social warmth, as well as outward heat, is quite apparent. Another humorist has noted the same lack and set it forth in his own way. He says:

"Young people like each others' society, and among the Shakers there is no attempt to deprive them of it. On Sunday afternoon I was taken into several rooms where there were parties. The girls sat on a bench running across the room and through the middle of it. About five feet distant the boys sat on a similar bench. In the midst of the girls sat a sister who was alive when Jackson and Adams run for President. A brother, no younger, sat among the boys. In this way they spend an hour or so every Sunday, enjoying each others' society."

—Our danger from marriage and other close intimacies is that it makes love and all its offices a habit rather than an inspiration. The idolatry in which marriage often begins is not so bad for it is short-lived. The word of God to us now, is to retire from our old long-standing intimacies—not that we would be unfaithful, but that we may draw near to God. If we do this there is no danger but we shall find one another soon enough. These lines have the idea:

LOVE AMONG THE ANGELS.

BY THEO. L. PITT.

I heard a song
An angel sung:
The angel hosts
Upon it hung,
As out it rung.

This was the strain
That still anon
His silver tones
Would dwell upon:
"Meet and pass on."

"Meet and pass on:
Though love is sweet,
You still must part
If you would meet
And loving greet

The other hearts
That coming haste,
Love's banquet free
With you to taste.
No time to waste,

One moment touch
Heart's fullest tone—
Its deepest thrill—
Then swift go on:
Meet and pass on."

The angel ceased;
His brightness shone
In all their souls,
Quick he had gone—
Met and passed on.

—Our punster and conundrumist asks: "Why are rivers like confirmed monomaniacs?" "Rivers—monomaniacs," we repeat to ourselves, rummaging our brains in vain for an analogy. "Give it up—never could guess conundrums." Smilingly our punster answers, "Because they are always in pursuit of an ocean."

—Our little three-year-old, Humphrey, who has put on a jacket and trousers this winter, has been much annoyed by the buttons breaking off from his jacket. One day his mother was dressing him, when he said thoughtfully, "Mamma, I have had my *belly-button* a good while; why don't that break off?"

—"Great is water and much money is its profit," would be a good watchword for Yankees. The sudden giving way of some part of our mill-dam last week has been a powerful reminder of the value of water-power, and a striking illustration of the inconvenience of strikes at particularly critical times. That a gang of jealous and short-sighted workmen should sometime take advantage of the exigencies of their employers to demand unreasonable wages is perhaps not to be wondered at. But to hear that the faithful old mill-pond had struck, that the waters had sworn that they would be dammed before they'd work for us any more, and that too right in the middle of winter, was a severe blow to our equanimity. We looked into each other's faces and said, "How shall we get our clothes washed next Monday?" But some of the hopeful ones had great faith in straw for such extraordinary occasions; consequently teams, workmen and straw were soon collected on the spot. It turned out that midwinter is the very best time

to do a little temporary mending; for the cold weather had furnished a nice bridge, over which we could draw any amount of earth to stop the leak. Doubtless those who laid the foundation of the dam thought it was in firm. Time has demonstrated that is indeed very infirm.

—The following note was read at a criticism which turned chiefly on the manners of the one criticised:

"Our lives and characters are the results of forces, and in the present state of things, of struggling forces. We are in a struggle between interior forces and exterior forces. All reforms and improvements of character come by what may be called civil war within us, that is, by the revolt of the interior forces against the exterior. Evil intrenches itself in the exterior, and often holds its ground there long after the interior has surrendered to good. The point to be aimed at in all criticism is not to make war on the person criticised, but to enter into the civil war going on within him, and help the interior party in its struggle with the exterior party. This we can do just so far as the interior forces are predominant within ourselves and free to enter into our criticisms."

REMARKS BY J. H. N.

"Salvation from sin means freedom from condemnation; and that means peace with God, and with one another, and with ourselves—and that is happiness. We must stick to it through thick and thin that Christ has provided for salvation from sin; that is, justification and freedom from all worry and condemnation about ourselves. They do not belong to us as Christians—they are foreign to true experience and we may just as well be free from them as not. We must insist that we will live up to our privileges in these respects, and that it is the devil who would keep us in darkness and condemnation. Christ has come and brought newness of life. Every one who has tasted of love knows what newness of life is. Christ gives us new life and pure life—life free from condemnation and full of joy and merriment. We must insist upon it that it is the gospel and we will have it. We cannot have a happy home without it. We know from our experience as a Community that the gospel spirit is one that keeps the peace—makes us harmonious and happy in our relations to one another. Every individual is a little community; and the same power that gives the Community peace and happiness can make us live at peace with ourselves and make our experience as individuals as good as our experience as a Community. We can see that the grace of God can eliminate all discord from the general Community experience; it can do the same for us as individuals. Every one of us can become a fountain of the same good spirit that prevails in the Community."

A NEW YEAR'S THOUGHT.

THE idea most naturally associated with my first conversion is, that my heart became softened; and indeed, I don't know that there is anything more involved in the term conversion than the softening of the heart. Unbelief toward God is the fruit of a hard heart, and all the arguments and sophistries with which men try to make themselves and others believe in other than the true God, are results reached by strenuous efforts of the intellect to disprove what the heart knows to be true, but has no taste to approve. Therefore, Christ condemned the world in his day because light came into the world, and men loved darkness rather than light, because their deeds were evil. But once let the heart be softened, and it will turn toward God in praise, as surely as the magnet turns to the pole. If it is true, then, that a hard heart turns away from God and a soft heart seeks his face, we have herein the secret of all religion. The promise of God was, that he would take away the heart of stone, and give instead a heart of flesh; as though the possession of a soft heart would insure the necessary sequence of all other blessings. If this is true, we may turn our backs forever on all the thousand and one ways of salvation, that have been preached and advertised and fought over, from the year one to 1873, and hiding ourselves from sectarianism with all its rostrums and nostrums, apply ourselves to seeking a soft heart, with the full assurance that having once attained it, God will lead us into all good; and that we shall bring forth the fruits of his Spirit more surely than the plants of the field produce their seed. This is my belief; but how long it took me to learn the lesson!

When my heart was first softened it leaped toward God, as a child that has been lost, to the arms of its mother, and there would have remained; but theology, cruel and cold, stepped in with its precepts, its doctrines, and its isms. "I will pour out my Spirit upon all flesh," says the great Creator. It had begun to pour upon me; but the frost of theology congealed my heart, and all that remained of my good experience was the remembrance of my conversion, which, like an icicle, told only of a stream that once had flowed.

For fifteen years I attended churches, prayer-meetings, religious societies, Sabbath-schools, etc., of various sects and in different countries. I heard all sorts of religious topics discussed, and every blessing prayed for that could enter into the mind of man to conceive of; but until I came to the Oneida Community, I don't know that I ever heard a soft heart mentioned, or ever thought of asking God for it. It was a new revelation to me that softness of heart—and not the keeping of certain stern precepts—is the key to happiness and to the favor of God. I no longer wonder that brothers and sisters in this Community can dwell together in unity, when I see that all are seeking a soft heart; and I as little wonder that families and Communities and churches fail to find peace, who know no better religion than the mere precepts of Christ.

I have had many conversions since my first, and each is, surely as was the first, a softening process, and a step nearer to God. I have had many trials and have been in much tribulation; the inevitable result, a materialist might say, of my own foolish acts. Very true; but these troubles were permitted by God to soften my heart, and when I drew nearer to him, they were gone. No matter what the cause might have been, their passing away was the inevitable result of faith in God. A. E.

JOTTINGS AT THE CRITICISM CLUB.

II.

WE are to overcome "by the blood of the Lamb and the word of our testimony." R—— is trying to overcome without the word of his testimony. He is silent on principle. He is a genuine hater of shams of all kinds; and he says to himself, "I will not give any sham testimony; no man shall say that my life does not correspond to my testimony." And so he gives scarcely any expression to the good experience God gives him. That course will not answer. He carries his hatred of shams too far. It is our duty to honor God's work in us by proclaiming it; and then our words may become powerful weapons against evil. Satan may be made to recoil by a sincere confession of the truth.

....

No criticism by others can take the place of self-criticism—the criticism we give ourselves when we feel that God is dealing with us and we must be thoroughly sincere. Then we hate whatever is evil in ourselves and separate ourselves from it—judging our past life with a sincerity impossible to others. And that kind of self-judgment is indispensable if we would come into unity with the pure life of Christ.

....

When persons realize that God draws nigh to the broken and contrite, they will feel that pride and self-will are enemies to be subdued rather than friends to be cherished.

....

The greatest fault to be found with L—— is that he has not learned to distinguish between the works of God in him and his own works. Consequently he thinks that he is presumptuous and egotistical when he acts freely though under a higher than human impulse. He has not learned the difference between *modesty with God* and *modesty without God*. When one identifies himself with Christ his conditions become all changed. What might before have been modesty may now be immodesty. God's works in him now demand recognition, and it is immodesty not to give them expression. If L—— would learn to recognize God in his heart and watch for his inspiration, seeking approbation from above and caring less for the approbation of men, he would be of vastly greater service to the truth.

....

No one has a right to determine what he will do simply with reference to his own interests; we are all under responsibilities to God and the universe, and are in duty bound to exercise all our gifts, and consent to the mortification of blunders, and take whatever criticism may come, and not allow egotistical modesty to keep us from being as useful as we can.

....

Whatever we do even in the most private manner is still done before God and the angels. They watch our blunders just as we watch the blunders of our children when they begin to walk, and doubtless exercise the same charity toward our experiments that we do toward those of our little ones. All they ask is that we persevere in our efforts to improve.

....

W—— has lacked the practical and earnest development of character that is so common to the descendants of the Puritans, and this is probably due, in part at least, to the circumstances of his birth and education. He is of French and English extraction, born in India; and the predominance of French blood is indicated by his mercurial habits—vivacity, free gesticulation, etc. He never knew the necessity of working for a living; but artistic culture was stimulated in him and the love of the beautiful. He has great pleasure in the enjoyment of the senses, and with an artistic eye and taste, nature attracts him strongly and captivates his attention. The effect has been to make his life too superficial and give him undue contentment with the show of things. This proclivity was manifest in still greater excess in his children, and proved disastrous to their prosperity and well-being. His vivacity, culture and refined taste make him an interesting companion and a desirable element in society; and this is steadily increased by the deeper tone his life acquires in the earnest school of Communism.

THE WALLINGFORD DAM.

W. C., Jan. 1, 1873.

DEAR CIRCULAR:—Sometime this forenoon the younger members of the family were thrown into quite a fever of excitement by the news, "The bridge has come! the bridge has come!" One juvenile in his haste to communicate this important piece of intelligence ran through the dining-room shouting, "The dam has come."

Upon inquiry we found that the long-looked-for

bridge had actually arrived at the station and was even then rapidly transporting to the east embankment under the supervision of the two builders from Cleveland, O., who had been patiently waiting here for more than a week. To facilitate the work of the bridge-builders the great waste-gate has been left open day and night during the past month and the level of the pond kept about a foot below the top of the dam.

Standing on the central pier, nineteen feet above the apron below, the view northward gives something of an idea of the size of the pond even though the shore lines are partly obliterated by the snow-drifts. From the foot of the pier on which we stand to a distant headland which seems to cut across the northern end is a full mile and a quarter as the crow flies. In width the pond is very irregular. In some places it is full half-a-mile wide, while in others it is less than half that distance. Our map shows us 160 acres covered by water when the pond is full.

Yesterday I assisted E. H. H. in taking some measurements of the stone-work, and thinking that perhaps a few statistics of the size of the dam, amount of material used, cost, etc., may interest some of your readers, I venture to insert them.

The Quinnipiac River, you will remember, at a point almost directly opposite the center of the village of Wallingford, flows through quite a narrow pass or gorge in the valley. On the east the bank of the river rises abruptly about 35 feet. On the west, near the bed of the stream, the land rises more gradually. Directly at this point the two sides of the valley approach to within 600 feet. Standing below the dam you will see that the two sides of the valley are now connected together by a great hyphen of stone and earth 600 feet long, and nearly 20 feet high above the level of the river.

The dam proper presents a very solid and substantial appearance. It is 184 feet in length between abutments, 12 feet thick at the foundation, 5 feet thick at the top, and between 11 and 12 feet high. The central pier has an average thickness of four feet, is 19 feet long and rises 8 feet above the crest of the dam. The two abutments are of the same height and thickness, 20 feet long with wing walls extending 20 feet each way. The front of the dam has a *batter* or slope of 1 in 12 and the top of the stone-work is covered with thick chestnut plank spiked on to heavy timbers embedded in the stone-work. The entire superstructure of stone rests upon 6 rows of stout piles driven into the hard pan, heavy timbers placed lengthwise on the rows of piling and the whole covered with 4 inch chestnut planking extending 13 feet below the stone-work and forming the "apron." Before covering the piles with the plank the spaces between them were thoroughly filled with gravel carefully tamped down. The faithfulness with which this part of the work was done is shown in the fact that the dam gives no signs of leaking in the slightest degree, even when the pond is full.

The waste-gate near the west end of the dam is five feet square and is operated by a hand-wheel near the west abutment. The head-gates are placed about 100 feet west of the dam and are built in the most substantial manner. The water is taken to the wheel-house through a wooden tube 6 feet in diameter and 122 feet long. The present wheel is one of the two wheels from the old factory. It has been thoroughly repaired and is estimated to give 58 horse-power under ten feet head of water. It is one of the old "United States" or "Howd" wheels, 6 feet in diameter with a central discharge.

The embankments are strengthened and protected from the depredations of muskrats by core-walls 10 feet high and 2 feet thick extending from the abutments to the solid ground east and west. These walls also rest on piles covered with plank. The embankments are about 80 feet wide at the base and 32 feet wide on top, forming the roadway to the bridge.

To recapitulate:

Size of the pond		160 acres.
Length of the dam between abutments		184 feet.
Present hight of dam above water		9 ft. 6 in.
Hight of abutments and pier above dam		8 feet.
Length of east embankment		160 "
" " west "		250 "
Amt. of earth used in filling	324,000	cubic "
" " stone in the dam	15,555	" "
" " " " abutments and pier	5,518	" "
" " " " core-walls	4,933	" "
" " " " wheel-house	4,616	" "
Total amount of stone used in the dam, wheel-house and factory construction, including walls to tail-race and dry walls above and below embankments, by actual measurements nearly	40,000	" "

This does not include over 600 loads of stone used as "filling" below the apron.

No of piles used	1,069
" " bbls. cement	870
Amt. of lumber used	60,200 feet

COST OF THE WORK.

Value of land flowed including 57 acres belonging to Wallingford Community, valued at $100 per acre, and estimating the old Hall and Elton privilege at $7,000.00	$32,028.75
Cost of dam, including embankments, head-gates, tube, flume, and tail-race	27,050.36
Weeel-house and shafting	6,855.11
Cost of stone used in the whole work	7,548.87
Factory construction	4,354.06
Total cost up to date	$77,838.05

In regard to the amount of power obtained by the dam we are at present dependent on facts furnished by the New Haven Water Co. In 1853, which was a very dry summer, this Company measured the flow of the Quinnipiac River at this point in view of using it to supply the city of New Haven with pure water. According to their calculations a pond of 150 acres with 10 feet fall will give about 200 horse-power during the dryest part of the year.

The iron bridge now rapidly approaching completion is built by the King Bridge Co., of Cleveland, O. It is an arched truss made entirely of wrought iron with the exception of the joists and planking of the road way. The town of Wallingford contracted with this Company to build the bridge complete for $5,000.

The pond is now rising a little under the influence of our January thaw and threatens to disturb the staging of the bridge-men. G. E. C.

FROM OUR YALE STUDENTS.

III.

AS Rankine's "Steam Engine and other Prime-Movers," is lying beside me, I will copy his titles that you may get an idea of his importance: "William John Macquorn Rankine, Civil Engineer; L. L. D.; F. R. S. S. Lond. and Edin.; F. R. S. S. A.; Regius Professor of Civil Engineering and Mechanics in the University in Glasgow; Associate Member of Council of the Institution of Naval Architects; Past President of the Institution of Engineers in Scotland; Consulting Engineer of the Highland and Agricultural Society of Scotland; Honorary Member of the American Academy of Arts and Sciences, of the Royal Academy of Sciences of Sweden, of the Literary and Philosophical Society of Manchester, of the Royal Society of Tasmania," etc., etc.

I think the poor man is over-burdened. His writings, ponderous and exhaustive, call for that "much study" which King Solomon truly tells us is such "a weariness of the flesh." Nevertheless, there is here and there a fact that is worth exhuming. For instance, let me quote three or four from our next recitation.

In a table of the "Work of Man against Known Resistances," we find that a man exerts this strength to the best advantage while going up stairs, or climbing a ladder; that is, when raising his own weight. If he should go up stairs twenty-four hours, he would, if he weighed one hundred and forty-three pounds, and went at the rate of six inches a second, do work equal to lifting 2,088.000 pounds, one foot high. The lowest result is in shoveling up earth to a hight of five feet, three inches. In this instance he would only exert *effectively* 280,800 foot pounds in twenty-four hours.

A horse-power is found by a series of careful experiments on draught horses, to be .785 of the conventional value assigned by Watt; instead of 33.000 lbs. raised one foot in one minute, it is 25.905. An ox will do two-thirds as much as a horse; a mule one-half; an ass one quarter; man-power according to these estimates is 4.350 lbs. raised one foot high in one minute; about one-sixth that of a horse.

These results are from the experiments of such men as Dr. Joule, Poucelet, Coulomb, and others.

After groaning and sweating over the braw Scot for a year and a half, I was much pleased to meet a gentleman who was acquainted with him. My acquaintance, Mr. McKenzie, is a Mechanical Engineer, and has general charge of one of the largest manufacturing establishments in the country—Singer's Sewing-machine, in fact. Rankine made several visits in his official capacity as Consulting Engineer to a manufacturing establishment with which Mr. McKenzie was connected in Glasgow. He pictures him as a little short fat man with a bald head, and a slowness in getting out his ideas that is something fearful. Mr. McK. is a Scotchman, and his opinion is from the Scotch point of view. It isn't to be wondered at that Yankees find his books just a wee bit wearisome. K.

THE FAMEUSE APPLE.

FRIEND H. T.—When propounding your questions about this famous fruit, or snow-apple as it is usually called, you little thought, perhaps, that any one so near home would be interested in your speculations. I am not sorry that you have thought of noticing this apple, for I have long wondered why it is that it should cut so sorry a figure with us, while at the falls of Niagara I had been regaled for so many years with fine specimens of this luscious fruit. It is true that the yield was generally so uneven in point of size that we had to reject a large share of it, yet there were always enough fine apples left. Considering that the larger they are the finer in flavor and the freer from scab, it must surely be profitable to thin them out, though I never thought of doing so. There would always be some of the fruit entirely free from scab. It is then a beautiful apple—both within and without; very juicy and tender and of a delicate flavor. The color of the coat is rich, with a high polish, and the form is comely. I well recollect the show these apples made in the market at Liverpool some years ago, piled up in pyramidal style after having been well polished with the help of a little of the saliva! But that didn't hurt the inside, you know.

The scab seems natural to the fruit when poverty stricken, for others in our neighborhood were troubled in the same way. The soil on our place was a light sandy loam and but moderately manured. It seemed to suit the trees well, since I had always a fair yield of fine apples. I never heard or thought of a cure for the scab, having set it down to profuse bearing; nor can I find any hint of it in Downing's book on fruit trees, although he speaks of this apple. But we ought to have finer samples by far on our own land, scab or no scab, for the soil, you know, varies greatly. I presume we have never tried them on our sandy

loam, have we? I should say that the scab would not trouble us much if the roots of the tree could find just what they wanted and had not too great a progeny to maintain. The climate may have something to do with it, for the mean temperature during the winter at the Falls is about ten degrees higher than here, with the advantage of lake influences. At any rate, I should say the fruit is well worth caring for. R. S. D.

O. C., Jan. 1, 1873.

CORRESPONDENCE.

St. Paul, Minn., Dec. 28, 1872.

DEAR FRIENDS:—We have taken your much valued paper for the last three years, and now feel as though we could not do without it. I have read the Home-Talks, by J. H. N., with much interest, and think they are the best part of the paper.

Your sincere friend, M. G.

Hannibal, Mo., Dec. 28, 1872.

DEAR CIRCULAR:—I wish to tell you how welcome are your weekly visits; how beautiful your handsome countenance; how refined and intellectual and therefore edifying your conversation. If your visits are not continued it will leave a void which cannot be filled. I shall ever welcome you to my home and heart with joy and bid you adieu with extreme regret.

Yours appreciatingly, D. J.

Tamarack, Will Co., Ill., Dec. 24, 1872.

DEAR FRIENDS:—You will find inclosed three dollars for the CIRCULAR. It comes to me a weekly friend, and is a companion to me in my lonely path. It adds to my spiritual strength and supports me in times of trial. Reading it is like "going home." Though my path is lonely, I am not lonely with the Bible and the CIRCULAR. "All things work together for good to them that love God." W. F.

Gananoque, Ont, Dec. 29, 1872.

DEAR COMMUNITY FRIENDS:—I have been receiving the esteemed CIRCULAR for five or six years, and a part of the time as a gift, for which I feel greatly obliged. I believe I have derived more good from it in a spiritual way than from all the sermons I ever heard. It is my intention as soon as I get out of debt, to show more liberality in supporting the only paper in the world that preaches true Christianity, or I may add, the only one that preaches Christianity according to my views.

Yours truly, H. S.

Hagerstown, Md., Dec. 26, 1872.

DEAR EDITOR:—To-day to my great surprise I received the last number of the paper for the present year, and I hasten to ask you to please resume my subscription for another year. The CIRCULAR is highly prized by me because of the good and wholesome truths it contains. I think that every lover of the gospel of Jesus Christ should make a public confession of Christ, and the CIRCULAR seems to me to be the proper medium through which that confession should be made. I do confess Jesus Christ in me a Savior from all sin; not a Savior in part, as the churches of the present day teach—but a complete Savior. My business allows me but two hours a day for study. Those hours are from 4 to 6 o clock in the morning, and the CIRCULAR and Bible have my first attention. G. H. S.

Vistula, Indiana, Dec. 26, 1872.

DEAR FRIENDS:—Accept my sincerest thanks for your excellent paper, which I have read with increasing interest the past year. I shall be glad to have it continue its ever welcome visits another year. I have much bodily suffering to endure—having been an invalid for years. But I have found Christ a present help in every time of need; and with his aid I can endure all that the "waves of affliction" may have in store for me. I read with much interest the pamphlet "Salvation from Sin," which you sent me a few months ago. The glorious gospel truths which it unfolds and defends were indeed precious to my soul. I confess Christ in me a complete Savior. What more can I desire! "Glory to God in the highest" for sending his son Jesus to "save his people from their sins!"

Yours for the cause of a true brotherhood.

S. P. Y.

New Haven, Conn., Dec. 29, 1872.

DEAR FRIENDS:—For three years I have received the CIRCULAR, and I can say with a sincere heart, "God bless the CIRCULAR!" It has led me into truth and light, and I am now able to rejoice in tribulation. My heart is with you. I pray for your prosperity and I know that God will bless you in your work. I am aware that I am tardy with my subscription; but please do not put me on the free list, for God will help me to pay for the paper. I wish to do all I can for its support. I have studied the "History of American Socialisms," and from what I learn there I must say that I consider it very important that every one should not only read it, but study it well, especially all those who have a desire to become members of a Community. I approve of the course you are pursuing in withholding the names of your subscribers from those who have applied for them. God bless dear Mr. Noyes! I have learned to love him; yet I have not, and may never see him in this life. T. S. E.

THE NEWS.

AMERICAN.

Sidney Rigdon, who at one time ranked next to Joseph Smith in the Mormon Church, was stricken with paralysis lately, at his home in Allegahany Co. in this State.

Prof. Tyndall, it is said, intends to devote the entire proceeds of his lectures in this country to the advancement of science in America. The mode of investment has not yet been made public.

The first American Oratorio, the work of Mr. J. K. Paine, Professor of Music at Harvard University, has been published by Oliver Ditson & Co., of Boston. It is called "St. Peter," and is said to have many and great merits.

On Jan. 6, just one year from the date of the crime, Edward S. Stokes was convicted of the murder of James Fisk, Jr. He has been sentenced to be hung on the 28th of February, and at present there is but little doubt that the sentence will be carried into effect. Public opinion regards the verdict as just and a wholesome vindication of the law.

The Preachers' Meeting of the New York Methodist Conference, at its last two sessions has been discussing the question of the ultimate annihilation of the wicked, and the doctrine appears to find considerable favor among some members of that body. The discussion has been quite exciting and the old-line preachers have been a good deal exercised that such a question should be tolerated. But the advocates of free discussion have thus far carried the day, and the question is to be taken up again at the next meeting. The Rev. Dr. True, formerly a professor in the Wesleyan University is the leading advocate of annihilation.

Although the project of annexing Santo Domingo by treaty was defeated in Congress a year ago, it is not probable that the acquisition of that island country will ever be given up by the enlightened, far-seeing statesmen and business men of this country. Whatever may have been the merit or demerit of the special treaty that was defeated, the idea of making Santo Domingo a part of the American Republic, was one of the most interesting which has characterized the administration of President Grant. But while further action of the Government in the matter of annexation is delayed, the people themselves are instituting a business project, which, if successful, will lead right on to bringing the island under the control of the United States. This project is thus described in the New York *Tribune* of Jan. 4th:

"The project of acquiring possession of the Bay of Samana by the American Government, which for a long time was agitated by the President and by Congress, and finally defeated by the latter body, attracted the attention of commercial men, who were anxious for its success, independent of any political questions which were involved in the purchase or the annexation of Santo Domingo. The success of the scheme was especially desired by shipping merchants engaged in the South American and Mexican trade, there being no good station for the coaling or repairing of vessels this side of Rio or Vera Cruz. The plan for annexation met with so signal a defeat last April, that there seemed little likelihood of even that of the Samana lease being even officialy revived; accordingly certain capitalists took the matter under consideration, and determined to do for the advantage of commerce and their own private gain that which the Federal Government had declined to undertake. A company was formed and agents were dispatched to Santo Domingo, and empowered to offer President Baez substantially the same terms as those embodied in the first treaty between him and President Grant, known as the Samana Treaty and negotiated in September, 1869. These are the cession by Santo Domingo of the Peninsula and Bay of Samana at an annual rental of $150,000, gold, the right of free navigation being reserved by Santo Domingo.

"The agents left New York in the Tybee, which recently sailed, fully empowered to complete the negotiations, and with the necessary money for doing so. Most prominent among the gentlemen interested in the enterprise, are C. K. Garrison, President of the United States and Brazil Steamship Line; Mr. Stockwell, President of the Pacific Mail Steamship Company, and S. M. L. Barlow. Beside these, there are said to be others, both in this city, Philadelphia and Boston, who have a pecuniary interest in its success.

"A *Tribune* reporter was informed by some of these gentlemen that the movement was entirely a commercial one, without any political significance whatever; private persons were simply doing what the Government had refused to do, and what some of them thought it ought to have done. A shipping station at some point in the West Indies was a necessity, and Samana offered the greatest advantages. There had been no assurances from President Baez that their offer would be accepted, but there was little doubt on the subject. The whole matter was as yet only an unaccomplished plan. The agents who had sailed for the island had full powers to complete negotiations precisely similar to those begun by Baez and President Grant; in fact, the negotiations would amount to a treaty. Of course the United States Government would be bound to protect the property of its citizens, and thus the same end would be gained as if the first treaty had been ratified by Congress."

FOREIGN.

Diplomatic relations between the Swiss Government and the Vatican have been broken off.

The Japanese ambassadors have completed their visit of inspection in England, and gone to Paris, on their way homeward.

It is reported that the Russian Government has made satisfactory explanations to Great Britain in regard to the Khivan Campaign.

The ex-Emperor Napoleon is quite ill from stone and has recently had two surgical operations performed, apparently successful, but causing much suffering.

Later.—The telegraph reports that Napoleon died on Thursday, the 9th inst.

The King of the Sandwich Islands is dead and has left no heir to the throne. It is uncertain what form the future government of the Islands will take. Many are said to be in favor of republican institutions. It is also asserted by persons who are familiar with the sentiment of the intelligent classes, that annexation to the United States is favored, except by the government officials.

REVIVAL RECOLLECTIONS.

THE first revival which I ever witnessed was at Lexington Hights on the Catskill Mountains, under the preaching of Rev. Asahel Nettleton, of old revival fame. Mr. Nettleton had been laboring in a revival in Durham when his health failed, and he came further up the mountain to retire and "rest himself awhile," as he expressed it. The appearance of the great revivalist in our village was the topic of conversation, and a spirit of inquiry concerning him possessed the people. Mr. Nettleton, however, remained in seclusion for a week. He was then seen going to the upper room of the village academy, which was unoccupied at the time, and while there his voice was distinctly heard in fervent prayer for nearly an hour. I well remember how still the teacher required us children to be in the room below, and how solemn we all felt when Mr. Nettleton was praying above us. On the Sabbath of the third week after Mr. Nettleton's arrival, he requested that the upper room of the academy might be filled with seats, and it was announced that he would preach there in the evening. At the appointed time the academy was filled to overflowing and everybody was electrified with the expectation of a revival. After a short prayer Mr. Nettleton arose and read the hymn beginning thus:

"Behold a stranger at the door,
He gently knocks—has knocked before—
Has waited long—is waiting still;
You treat no other friend so ill."

A breathless silence pervaded the assembly while Mr. Nettleton read. His manner was so impressive that every eye was fixed upon him, and the words which he read sent conviction to every soul. When he closed the book my childish impression was that Jesus Christ and Mr. Nettleton must be alike. When he grew warm with his subject his face fairly shone and every feature seemed to speak. He was a man of medium hight, with a clear sharp eye whose look had a powerful effect upon the unconverted. His gestures were natural, but quite forcible.

Mr. Nettleton was what might be called an Edwardian in his belief. He preached the sovereignty of God in all its extent and bearings, and had a wonderful talent for working upon the conscience, and bringing it into the utmost activity. He was opposed to what were termed in those days New Measures. He never advocated anxious seats, or requested persons to rise in the assembly for prayers. Neither did he encourage women to pray and make exhortations in church, nor any person to pray with a loud voice. Young converts were advised to be listeners rather than talkers. His sermons were extemporaneous. He began them in a slow, simple, unpretending manner, but always became energetic and eloquent before he closed. His voice was clear and melodious, and there was an indescribable, almost unearthly solemnity and earnestness in his manner which carried conviction to the mind that he believed the truths he uttered. He preached with a directness that made each person feel that he was the one addressed. He would portray the judgment day as at the door and make people feel as though they were standing on the verge of the eternal world, and then urge them not to pass the threshold that night with hearts opposed to God as their divine sovereign.

One night a young woman who was a member of the church was so excited that she cried out in an agony of despair. Mr. N. requested the people to remove her from the place, and then said it was not religion that caused her distress, but that she had just become aware of the fact that she was *destitute of it*.

Mr. N. was in the habit of holding Inquiry Meetings with those who wished to converse on spiritual subjects. There was an excellent choir of youthful singers in that church. Most of this choir were among the converts; but two of the leading singers (young women) were determined to resist the revival influence. Mr. N. was on his way to the afternoon Inquiry Meeting one day and these girls commenced singing "Bonny Doon" as they saw him passing. He stopped in the road until they had finished the song, and then went in and requested them to sing that beautiful hymn commencing, "When gathering clouds around I view." That evening those girls were not seen in the choir, but were in the further corner of the room. The next day the Inquiry Meeting was at my father's. I recollect how Mr. N. came tripping lightly in at the back door and inquired of mother how it was with those girls? When she told him that they had submitted to God, he opened his mouth and made all the gestures of a person who was shouting at the top of his voice; yet no sound escaped his lips. He then danced about without making any noise, and finally went into the front room with his usual solemnity. C. B. B.

"GO HOME!"

Would you, my friend, from sorrow flee
And ever peaceful, happy be?
Would you each day a shining store
Add to the riches gained before?
Go home; go home!

Would you hold firm the potent shield
To quench the darts that demons wield?
Would you be loving, fervent, strong,
Of lowly heart, enduring long?
Go home; go home!

Wish you a friend in time of need
To give your earnest pleadings heed?
Then quickly turn to Christ within:
He'll ne'er forsake nor leave his kin.
Go home; go home!

Nor fame, nor wealth, nor love untold,
Can for a day true pleasure hold.
Would you then find the wondrous mine
Whence come the pearls that endless shine?
Go home; go home!

CHOICE FLOWER-SEEDS FOR SALE.

TWENTY packages (our selection) sent to one address, postage paid, for $1.00. Special selections sent at the annexed prices:

Acroclinium, rose and white,	5 cts.
Ammobium alatum,	5 "
Amaranthus salicifolius (Fountain Plant),	25 "
" bicolor, tricolor,	5 "
Asters, Truffaut's, 15 cts. German,	10 "
Antirrhinum (Snapdragon),	5 "
Balsam,	5 "
Cacana (Flora's Paint-Brush),	5 "
Calliopsis (Coreopsis),	5 "
Celosia (Cockscomb), pyramidalis, cristata, dwarf,	5 "
Dianthus (pink) Clove, China, German,	5 "
" barbatus (Sweet William),	5 "
Gomphrena (Globe Amaranth), purple, white, striped,	5 "
Helianthus (Sunflower), Mammoth Russian,	5 "
Hollyhock (double), white, black, mixed,	5 "
Linaria,	5 "
Nigella (Love in the Mist),	5 "
Marvel of Peru (Four-o'clock)	5 "
Pansies,	15 "
Portulaca (double),	15 "
Phlox Drummondii,	10 "
Petunias,	10 "
Ricinus Sanguineous (Castor-Oil Bean),	5 "
Salpiglossis,	5 "
Satin Flower,	5 "
Sweet Pea,	5 "
Solanum Texanum (Ornamental Egg-plant), wax-like, vermillion colored fruit, small and handsome,	5 "
Tagetes (Marigold) signatus, Pumila, African,	5 "
Campanula grandiflora, Large Bell-Flower, blue,	5 "
Zinnias,	10 "

These seeds were grown with care on our own grounds. All colors mixed except when noted.

Address, [L. H. B.] ONEIDA COMMUNITY, *Oneida, N. Y.*

ANNOUNCEMENTS.

SILK GOODS.

Machine-Twist and Sewing-Silk of their own manufacture for sale by the Oneida Community.

Address, [S] ONEIDA COMMUNITY, *Oneida, N. Y.*

PRESERVED FRUITS AND VEGETABLES

Put up for sale by the Oneida Community in tin and glass. Price list sent on application.

Address, [F] ONEIDA COMMUNITY, *Oneida, N. Y.*

STEEL TRAPS.

Eight sizes and kinds, suitable for the House-rat, Musk-rat, Mink, Marten, Fisher, Fox, Otter, Beaver, the Black and Grizzly Bears, are made by the Oneida Community. Descriptive price-list sent on application.

Address, [T] ONEIDA COMMUNITY, *Oneida, N. Y.*

MACHINE-SHOP AND FOUNDRY.

Improved Lathe-Chucks, Blinn's Patent Gate-Hinges, Machines for Measuring the Length and Testing the Strength of Manufactured Silks, Bobbin-Winders for Sewing-Machines, etc. Agricultural Machine and Light Castings, on hand or made to order. Descriptive price-list sent on application.

Address, [M] ONEIDA COMMUNITY, *Oneida, N. Y.*

THE WALLINGFORD PRINTING COMPANY.

All kinds of Book and Job Printing executed: Manufacturers' Illustrated Catalogues made a specialty: also Bronze and Color Work, and the finer kinds of Card, Circular and Bill-head Printing. Having enlarged its works and added new motive power, this Company is in renewed condition to meet the wants its patrons with promptness and accuracy.

P. O. Address, *Wallingford, Conn.*

PUBLICATIONS.

(Sent from the Office of the Oneida Circular by mail, post-paid, on receipt of price.)

History of American Socialisms. By John Humphrey Noyes. 678 pp. 8vo. J. B. Lippincott & Co., Philadelphia. London, Trubner & Co. Price $3.00.

The Trapper's Guide: a Manual of Instructions for Capturing Fur-bearing Animals. By S. Newhouse. Third edition with New Narratives and Illustrations. 215 pp. 8vo. Price bound in cloth, $1.50.

Salvation from Sin, the End of Christian Faith; an octavo pamphlet of 48 pages. By J. H. Noyes. Price 25 cents per single copy, or $2.00 per dozen.

Dixon and His Copyists; a Criticism of the Accounts of the Oneida Community in "New America," "Spiritual Wives," and kindred publications. By John Humphrey Noyes. Price 25 cts.

Scientific Propagation. By John Humphrey Noyes. Large octavo pamphlet of 32 pages. Price 25 cts.

Male Continence. By John Humphrey Noyes. An octavo pamphlet of 24 pages. Price 25 cts.

Hand-Book of the Oneida Community: Containing a Brief Sketch of its Present Condition, Internal Economy and Leading Principles. Price 25 cts.

The five pamphlets—"Salvation from Sin," "Dixon and his Copyists," "Hand-Book of the Oneida Community," "Scientific Propagation," and "Male Continence," will be sent to a single address on the receipt of $1.00.

Back Volumes of the Circular. Unbound. Price $2.00 per volume.

MESSRS. TRUBNER & COMPANY, Book-sellers, Paternoster Row, London, have the "History of American Socialisms," the "Trapper's Guide," and the "Hand-Book of the O. C.," for sale. They will receive subscriptions for our other publications.

PHOTOGRAPHIC PICTURES

Of the Oneida Community Buildings and Grounds, made by a first-class artist and finely mounted, can be had on application at the Office of the Oneida Circular.

LARGE VIEWS.

Bird's-eye View, looking West, of Community Buildings and Grounds, 12 by 14 inches, on fine enameled board 16 by 20: price $1.75. Quadrangle and Group, 12 by 14, mounted like the above price $1.75. South and East Fronts of the Community Dwellings, giving a good view of the New Wing occupied by the Children—8 by 10, on tinted board 10 by 12, with an ornamental border price $1.00.

STEREOGRAPHS.

No. 2, East and North Lawns. No. 3, East Lawn and Portico. No. 4, East Front. No. 5, North Front and Lawn. No. 6, Bird's-Eye View of Buildings looking West. No. 7, Lawn and Summer House. No. 8, West View, toward Railroad. No. 11, Quadrangle. No. 12, Lawn View. No. 15, South and East Fronts. Price of Stereographs $3.00 per doz. Sent by mail, post-paid, on receipt of price.

Oneida Circular.

A WEEKLY JOURNAL OF HOME, SCIENCE AND GENERAL INTELLIGENCE.

Published by the Oneida & Wallingford Communities.

ONEIDA COMMUNITY, JANUARY 20, 1873.

New Series, Vol. X, No. 4
Whole No. 1442.

POST-OFFICE ADDRESS:

ONEIDA CIRCULAR, ONEIDA, N. Y.

TERMS:

The CIRCULAR is sent to all applicants, whether they pay or not. It costs and is worth at least two dollars per volume. Those who want it and ought to have it are divisible into three classes, viz., 1, those who cannot afford to pay two dollars; 2, those who can afford to pay *only* two dollars; and 3, those who can afford to pay *more* than two dollars. The first ought to have it free; the second ought to pay the cost of it; and the third ought to pay enough more than the cost to make up the deficiencies of the first. This is the law of Communism. We have no means of enforcing it, and no wish to do so, except by stating it and leaving it to the good sense of those concerned. We take the risk of offering the CIRCULAR to all without price; but free subscriptions will be received only from persons making application for themselves, either directly or by giving express authority to those who apply for them.

Foreign subscribers, excepting those residing in Canada, must remit with their subscriptions money to prepay the postage.

THE UNITED COMMUNITIES.

ONEIDA COMMUNITY

Is an association living in Lenox, Madison Co., N. Y., four miles south of Oneida and a few rods from the Depot of the Midland Railroad. *Number* of members, 205. *Land*, 654 acres. *Business*, Manufacture of Hardware and Silk goods, Printing the CIRCULAR, Horticulture, &c. *Theology*, Perfectionism. *Sociology*, Bible Communism.

WILLOW-PLACE COMMUNITY.

Branch of O. C., on a detached portion of the domain, about one and one-fourth miles north of O. C. *Number* of members, 19. *Business*, Manufactures.

WALLINGFORD COMMUNITY.

Branch of O. C., at Wallingford, Conn., one mile west of the Hartford and New Haven Railroad. *Number* of members, 45. *Land*, 228 acres. *Business*, Publishing, Job Printing, Manufactures, and Horticulture.

SPECIAL NOTICE.

The O. C. and Branches are not "Free Lovers," in the popular sense of the term. They call their social system BIBLE COMMUNISM or COMPLEX MARRIAGE, and hold to freedom of love only within their own families, subject to Free Criticism and the principles of Male Continence. In respect to permanency, responsibility, and every essential point of difference between marriage and licentiousness, the Oneida Communists stand with marriage. Free Love with them does *not* mean freedom to love to-day and leave to-morrow; nor freedom to take a woman's person and keep their property to themselves; nor freedom to freight a woman with offspring and send her down stream without care or help; nor freedom to beget children and leave them to the street and the poor-house. Their Communities are *families*, as distinctly bounded and separated from promiscuous society as ordinary households. The tie that binds them together is as permanent and sacred, to say the least, as that of marriage, for it is their religion. They receive no new members (except by deception or mistake), who do not give heart and hand to the family interest for life and forever. Community of property extends just as far as freedom of love. Every man's care and every dollar of the common property are pledged for the maintenance and protection of the women and children of the Community.

ADMISSIONS.

These Communities are constantly receiving applications for admission which they have to reject. It is difficult to state in any brief way all their reasons for thus limiting their numbers; but some of them are these: 1. The parent Community at Oneida is full. Its buildings are adapted to a certain number, and it wants no more. 2. The Branch-Communities, though they have not attained the normal size, have as many members as they can well accommodate, and must grow in numbers only as they grow in capital and buildings. 3. The kind of men and women who are likely to make the Communities grow, spiritually and financially, are scarce, and have to be sifted out slowly and cautiously. It should be distinctly understood that these Communities are not asylums for pleasure seekers or persons who merely want a home and a living. They will receive only those who are very much in earnest in religion. They have already done their full share of labor in criticising and working over raw recruits, and intend hereafter to devote themselves to other jobs (a plenty of which they have on hand), receiving only such members as seem likely to help and not hinder their work. As candidates for Communism multiply, it is obvious that they cannot all settle at Oneida and Wallingford. Other Communities must be formed; and the best way for earnest disciples generally is to work and wait, till the Spirit of Pentecost shall come on their neighbors, and give them Communities right where they are.

"IT IS MORE BLESSED TO GIVE."

Give! as the morning that flows out of heaven;
Give! as the waves when their channel is riven;
Give! as the free air and sunshine are given;
Lavishly, utterly, joyfully give.

Not the waste drops of thy cup overflowing,
Not the faint sparks of the hearth ever glowing,
Not a pale bud from the June roses blowing;
Give, as He gave thee, who gave thee to live.

Pour out thy love like the rush of a river,
Wasting its waters for ever and ever.
Through the burnt sands that reward not the giver;
Silent or songful, thou nearest the sea.

Scatter thy life as the summer's shower pouring!
What if no bird through the pearl-rain is soaring?
What if no blossom looks up adoring!
Look to the life that was lavished for thee!

[*Selected.*

THE BRIDGE.

Home-Talk by J. H. N.

AT first we were *Perfectionists;* now we are *Communists;* and we are finally to be *Resurrectionists.* In this progression we do not leave Perfectionism behind in becoming Communists; nor shall we leave Communism behind in becoming Resurrectionists. Each stage in advance holds within it all that went before. Communism is the practical expansion of Perfectionism. Resurrectionism will be the ripe development of both Perfectionism and Communism. In fact the Primitive Church, which has long since entered the Resurrection stage, is still a Communist church, and still a Perfectionist church.

We ought always to recognize these three stages of development as comprised in the CHRISTIAN CHURCH. It would be foolish for Communists to think that they only are Christians, or that the church of Christ is confined to their little societies. Let them never forget that the Primitive Church, with Christ and the Apostles for its leaders, did not assume, permanently, during its earthly career, the Communistic form. On the day of Pentecost, it is true, and for a short time afterward, that church gave the world very distinct indications of its Communistic tendencies; and undoubtedly it held and carried out in its whole career, the principle of guaranteeing subsistence to all its members. But there is no evidence that it went into systematic Communism as we understand it. It took hold on men in all the conditions of ordinary society, and taught them to overcome evil and live the life of Christ in those conditions. This was perhaps the most trying, and therefore the most heroic service of the universal church: and it should be far from us to think that external Communism is the essential form of Christianity, or entitles us to claim superiority over the veterans of the apostolic age.

We should even remember that in our own career, Perfectionism existed many years without formal Communism, and that we were Christians then, and a church then, as truly as we are now.

The practical importance of these considerations lies in this: that we find ourselves surrounded by multitudes of believers, who are not, and for the present cannot be, externally Communists. They stand as the primitive believers stood, and as we formerly stood in the organizations of ordinary society. Our organization as Communists must not come between us and them to exclude them in our thoughts from the church of Christ. And on the other hand they must not make our advance beyond Perfectionism a stumbling-block to hinder their fellowship with us as Christians. Perfectionism, Communism and Resurrectionism, are, as we said, three stages in one church; and together they make the long-needed bridge from things as they are, to things as they ought to be.

THE KINGDOM OF UNITY.

[Selected from G. W. N.'s Writings.]

THERE are two recorded prayers of Jesus Christ, of considerable length, which evidently express the inmost moving of his heart. What are the objects petitioned for? In one, "*Thy kingdom come*, thy will be done *on earth as it is in heaven;*" in the other, concerning his disciples, he prays "*That they all may be one;* as thou, Father, art in me, and I in thee, that they also may be one in us;" &c. These are the leading, emphatic portions of the two prayers, and they are evidently, as to the thing intended in each, nearly related, if not identical, in meaning. In both he refers to the state of things in heaven, as the example of that which he prays for on the earth—one describing that state with reference to the perfect, harmonious execution of the will of God, and the other with reference to the unity of parties there. The idea in both cases is substantially the same—that of entire oneness—the indwelling of life in life, securing a perfect political and social organization—of which the heavenly Father is center, soul, and King.

Such was the prayer of Christ for the earth, for men living in the body. It was specifically for his then present disciples, and for "those who should believe on him through their word;" and as it was to be a matter of visible fulfillment, the effect also was predicated, namely, "that the world might know that God had sent him."

We must assume *a priori*, that those prayers of Christ were fulfilled substantially in the Primitive Church; and the *signs* of their fulfillment may be seen scattered along through the history of the church—in the mighty revolution of the day of Pentecost, breaking up

selfishness, and introducing Community of hearts and of goods, whereby the world were compelled by thousands to acknowledge the divinity of Christ—in the spiritual doctrines and discipline which Paul inculcated on the subject of death, resurrection, marriage, etc., whereby the church placed themselves under the exclusive jurisdiction of the heavenly government, and finally in the *perfection* which the church attained—the being "made perfect in one"—which is manifest in John's description of its last days. Here are all the elements of an answer to Christ's prayer—the kingdom of God on earth, and the visible unity of his followers; and even the anticipated result was signally fulfilled. From the time of the day of Pentecost onward, Christianity has been the prevailing power in the world—men have known that Christ was sent from God, and have acknowledged him, at least in name.

This view of the primary fulfillment of Christ's prayer, 1800 years ago, throws light on the broad universal accomplishment of it which we are allowed now to expect. We are guided both as to the matter and the manner of the future millennium. Now, as then, Christ's heart is set on UNITY—his prayer is, "that they all may be one." If there is to be any destiny whatever for mankind, it is certainly expressed in this sublime idea. And as that prayer was once fulfilled, and Heaven's unity was wrought out in the Primitive Church, we are to expect, not a new and independent work, but an extension of what already exists in them; not another separate day of Pentecost, but a union with the spirit of the former one, which now exists embodied in forms of love and light in the heavenly sphere.

FELLOWSHIPS.

HOW important that we give careful heed to our fellowships; and yet how seldom does the religious world urge this vital necessity upon young converts! God's spirit broods over a people until his love fills every susceptible heart and awakens earnest desires for spiritual improvement; but how few there are who remain in this fervent, revival spirit for any great length of time! Yet it is assuredly the Christian's privilege to have his spiritual light grow brighter and brighter. Is not the gradual dimming of the light of truth in our hearts partly owing to loose or indiscriminate fellowships? I am persuaded that has been true of my own past experience. If we are changed into the image of that which we gaze upon, it is even more obvious that we take on the characters of those we intimately associate with. It is an established fact that a husband and wife, whose union is a harmonious one, and whose business brings them into constant fellowship, undergo marked physiognomical changes during their long and intimate association until they actually bear a striking resemblance to each other. Yet the change in their spiritual features would be even greater; because spirit is more powerful than matter.

"Like begets like" spiritually as well as physically; and there is a strong spiritual influence emanating from every one that leavens for good or evil all whom it reaches. If our associates then are on a lower spiritual plane than we are we shall surely be drawn down from our good experience into a state of barrenness; but if we constantly seek the fellowship of those who are superior to us we shall be drawn upward into a sphere of greater light and justification. John says, "If we walk in the light as he is in the light we have fellowship one with another and the blood of Jesus Christ his Son cleanseth us from all sin." All light comes from above, therefore our gaze should be constantly upward and not downward. Upward in the spiritual world is inward. Hence our fellowships should be with those who dwell deep in the spiritual world.

One of my mottos for 1873 shall be, "Walk in the light." D. E. S.

EXPERIENCE.

IN connection with the committees for criticism this winter has come some of my best experience. In every instance, when called to help criticise others, I have felt the Spirit of Truth searching my own heart, showing me weaknesses and defects in my character which make me cry to the Lord for mercy and ask him for more strength and faith. I see that I am still somewhat in bondage to my affections; that inordinate affection which Paul classes with fornication, uncleanness, covetousness and idolatry, must be put off with the old man and his deeds. "For which things sake," says Paul, "the wrath of God cometh on the children of disobedience." Although I realize so keenly that "our God is a consuming fire," yet I have much comfort and hope; for the light of truth which shows us our faults, also shows us how to forsake them. And how is this? We "overcome by the blood of the Lamb and by the word of our testimony." We have an indwelling Christ whose life is constantly swallowing up and pervading ours; we need only to be in earnest to let him work freely in us and then we can go on our way rejoicing, "reckoning ourselves to be dead indeed unto sin and alive unto God through Jesus Christ our Lord." T. M. S.

BACKWARD GLANCINGS.

XIII.

AFTER J. left, the general excitement produced by curiosity and novelty, subsided. This was not true, however, in many individual cases. Some seed had fallen into good and honest hearts, and in them it sprung up and bore fruit. These young converts were simple and teachable. They had no great gifts for talking or proselyting, and had but little, if any of the lofty, swelling testimony which had characterized Perfectionism in other places. They met often together in their own houses, and gave much attention to reading and studying the Bible and the doctrines published in the *Perfectionist*. Letters were circulated, and visits exchanged with believers in other towns. The Palmers, Lords, Whites, Shaws, Pierces and Lovells of the "East Part," received with joy all who came confessing salvation from sin. Their hospitality was unbounded; and the simplicity and brotherly kindness of their manners gave believers a foretaste of the spirit of Communism. Mrs. Palmer, who was one of the first to accept the new faith, is still living at the age of eighty-four, in the old homestead at Putney. Her letters show that in spite of the changes and infirmities belonging to her advanced age, she is still what she was forty years ago—steadfast and immovable, always rejoicing in the work of the Lord.

While the revival was thus quietly progressing in Putney, there was a similar work commencing in the neighboring town of Westminster. One morning my mother received a long letter from a lady unknown to her except by reputation. The writer was Mrs. Field, wife of Rev. Mr. Field, Congregational minister of West Westminster. Mrs. Field was a woman of a powerful but somewhat erratic mind. Her letter boldly denounced the hypocrisy and luke-warmness of the clergy and churches, and confessed a whole-hearted belief in salvation from sin. Mrs. Field's position as a minister's wife, as well as her eloquent descriptions of her experience, bordering always upon the marvelous, gave greater currency to her testimony. A family of the name of Clark, influential in the church and society, resided near her. A daughter of this family was a person of superior mind, and the brightest ornament of the church. She was prepared by her previous experience to become an interested hearer of the truth, and soon embraced it. Her conversion was followed by that of a cousin of the same name. Not only was Miss Clark a great acquisition in herself, but her circle of influence was large and important. Her dearest friend and correspondent, residing in the neighboring parish of East Westminster, was HARRIET A. HOLTON. Like her friend, Miss Holton was the flower of the church. Less conspicuous than Miss Clark and less gifted in the forms of expression, she had greater depth and truer instincts. An orphan, wealthy and highly connected, she was much sought after in marriage, and had every inducement to a life of fashionable ease and respectability. The glowing letters of Miss Clark found her waiting and eager for the faith that made free from sin and condemnation. Through her friend's testimony and the Bible truths presented in the *Perfectionist*, she saw that the great desire of her heart was attainable. Her full acceptance and confession of the faith soon followed, and henceforth her whole life became identified with the cause.

At the time of Miss. Clark's conversion JOHN R. MILLER, then about twenty-one and engaged as clerk in a small store, boarded in her father's family. Miss Clark's conversation first awakened his attention to the subject of faith. The excitement produced by J.'s preaching in Putney was communicated to Westminster. Mr. Miller joined with Miss Clark's brother in inviting J. to preach in the school-house at Westminster. Mr. Miller was not a church member, but his abilities and character made him popular and respected. He became exceedingly interested theoretically, and espoused and advocated the doctrines with great enthusiasm. The converts in Westminster were not as numerous as in

Putney, but all were persons of influence and position; and certainly few names are to this day more beloved and honored—few are brighter on the list of those who have labored and suffered for the cause of Christian Communism—than those of HARRIET A. HOLTON and JOHN R. MILLER.

THE FACT.

LET us by all means bear in mind, throughout this new year upon which we are entering, the great central fact of existence, namely; that Jesus Christ is in us and that the Holy Spirit is in us. It were good if every human being could be shaken up to a mighty sense of this all-important fact with every day that dawns to him. He who would forget this great truth would forget the very pillar upon which all salvation rests. We know that the fact of which we speak is one which must abide forever, for it rests upon the words of Paul, and upon the words of Jesus Christ.

Let us also remember that the greatest foes to the remembrance of this precious truth and to its practical realization are *the feelings*. The feelings, more than all other things combined, would tend to dim the truth of Christ's presence and hide it, and cover it up. But the feelings are so often the result of some trivial, depressing circumstance, or some contact with passing evil, that we know that they cannot be trusted. Hence, if we would do our duty as soldiers in the army of the Lord, we must, day by day, *deny our feelings*, and insist upon the stability of the word of God more wilfully and doggedly than ever a soldier stood his ground upon the field of battle. We should push back denial as we would push back a deadly adversary with whom we were wrestling, and who was in danger of overcoming us. We should confess this truth, day by day, hour by hour, in every contingency and in every emergency of life. To those of the faith, who are in danger of forgetting it, we should shout it as we would shout reviving, rejoicing intelligence in the ears of one who was dying into unconsciousness. To keep this belief bright regardless of the feelings is to *keep the faith*. To confess this truth, to assert it, to proclaim it, to print it, to ring it, to sing it, with all our might, as David danced before the Lord, is to fight the fight of faith. G.

THE KINGDOM OF GOD.

[The following paragraphs from the pen of Dr. A. S. Patton, editor of the *Baptist Weekly*, are interesting and indicate a new drift of thought in the religious world:]

"We greatly err if we imagine that in order to be the subjects of the kingdom of heaven, we must have our residence within the limits of any assigned place whether celestial or terrestrial. 'The kingdom of God is within us,' and the only difference existing between a Christian here, and a saint in heaven, is that which often exists between the subjects of the same kingdom on earth—they live in different provinces, but they are all animated by one spirit of loyalty and love. We cannot suppose that the felicity of the world of spirits consists in any essential sense, in the attractive beauties of the place, nor does it result alone, or mainly, from companionship with those who are spotlessly pure. It consists essentially in personal holiness.

"If, therefore, we cherish the principles of heaven, and carry in our hearts the peace and joy and elevation that are felt by its glorified inhabitants, we are now as truly subjects of the kingdom of God as though we were disembodied, and surrounded by the beauty, brightness and gladness of heaven itself.

"We do not mean to disparage, or in the least to detract from the sensible glories of the upper world. They must be great—exceedingly great. For aught we know there may be crowns of material splendor—there may be trees of unfading loveliness, there may be pavements of emerald, and canopies of brightest radiance, and gardens of deep and tranquil security, and palaces of proud and stately decoration, and a city of lofty pinnacles, through which flows unceasingly, a crystal river; and where loud jubilees are ever sung, with a concord of seraphic voices. All this *may* be; but this is not heaven. Such beauties and charms are only the accessories of its bliss. Its highest and most rapturous delights consist in the perfect sympathy and the full communion of the soul with God. If, then, this be in any sense our state or condition on earth, we have reason to rejoice in a good evidence that 'the kingdom of God is now within us.'" —*Baptist Weekly.*

THE "SEEK-NO-FURTHER."

HEBREW mothers named their children from the circumstances of their birth; and in like manner many varieties of the apple have received their names from the circumstances of their production, or from some casual remark about their flavor. The Seek-no-further is said to have received its name on this wise: A lady was walking in her garden one day, and thinking that she would like a nice apple, she called to the gardener to bring her of the best the orchard could boast. He brought several varieties which did not quite suit her fastidious taste; at last he found an apple which so well pleased her with its beauty and flavor, that she said, "Seek no further." The gardener in honor of the event, gave to the fortunate apple the name "Seek-no-further." C. E.

CHASTENED.

O, THE sorrow and wretchedness of a hard heart! What misery, what distress it causes me! My heart was once soft and yielding, easily melted with the love of God; but now it is like a stone in my breast. Will nothing melt it? Will nothing break it? Criticism sometimes seems to touch me for a moment with a softening effect; but straightway my heart hardens itself, asking, "Who are you that you should judge me? Is your life blameless? Look to yourself!" and harder and harder it grows until I fear that nothing can soften it. My intellect assents to the sincerity of my friends, and I answer, "That is so; you are right." But my heart does not *feel* it. O, God! Hear my cry! Break my heart; break it into a thousand pieces! Melt it through to the center where it is like a rock! Smite it with the lightning of truth! Nothing can be more fearful than the agony I endure with this heart of stone.

* * * * * *

O, blessed deliverance, the process of softening has begun! God came to me in the form of judgment: "Thou shalt love the Lord thy God with all thy soul and mind and strength." "I do not do that," I answered. "Thou shalt have no other God before me.....for I am a jealous God." Though conviction entered my soul, my heart still was obdurate. The old life cast about for measures to save itself; but every newly found anchor was cut loose by my conscience, and soon my bark was tossing upon the sea of doubt and darkness with none to guide. In the midst of this struggle, these words came to my mind: "He that findeth his life shall lose it; and he that loseth his life, for my sake, shall find it," and faith was given me to say, "I will give up my dearest treasures to God. He shall have everything; I will keep nothing back. All the hopes and desires which I have centered in those that I love better than myself, I give into God's keeping. I will not stipulate that he shall again give me my treasures at some future time if I become thus and so. I will not hold them even with a thread of gossamer. I will make a complete and unconditional surrender of myself and all that I cherish to God. Nor will I mope or be sorrowful. Perhaps in due time my heart may be softened with the sorrow that worketh repentance. I want no other."

I fell asleep with the sweet sense of peace which this resolve gave me and when I awoke this morning I felt strong and happy while I repeated my covenant of the night before. All day long my heart has grown softer and softer and yet stronger and stronger to keep my purpose. A hundred times I have reiterated, "All, all; yes, I give all," and every time my hope grows brighter that God will make me faithful. Z.

PRESERVING THE BALANCE.

"You are going into college life, boys, and you must take care of your bodies. Many a boy breaks down because he keeps his country appetite and loses his country exercise. You must balance study and brain-work by exercise and muscle-work, or you 'll be down with dyspepsia, and won't know what ails you. People have wondered where the seat of original sin is; I think it 's in the stomach. A man eats too much and neglects exercise, and the Devil has him all his own way, and the little imps, with their long black fingers, play on his nerves like a piano. Never overwork either body or mind, boys. All the work that a man can do that can be *rested by one night's sleep is good for him*, but fatigue that goes into the next day is always bad."—*Old Town Folks.*

Mrs. Stowe has never penned a more sound piece of advice than is given in these few words to her young college friends—advice which need not be confined to college boys and girls of any age or condition, but applies with equal force to men and women in all classes of society. Old Dr. Abernethy who in spite of his bearish manner would hit the true cause of disease in a wonderful kind of inspiration, often declared that three-quarters of the cases of disease brought to him were caused by "stuffing and fretting;" and he would gruffly order his rich patient to "eat less, sir; eat less and play more." The college practice of "cramming" the brain just before examination, is only too often accompanied with cramming the stomach with rich, stimulating, highly seasoned food. This, together with lack of exercise, and insufficient sleep, will soon break down the strongest constitution; and many a young graduate finds to his great disappointment that he must drop his books, abandon his projected brilliant literary career, and turn farmer or hunter, if he would escape the horrors of constipation and the blue devils of dyspepsia.

Look at the daily habits of many of our great merchants, and bankers and railroad managers. The intense activity of brain through twelve, fourteen, and sixteen hours of mental effort is only kept up by immense quantities of rich stimulating food and tobacco, with no exercise, but little relaxation, and still less sleep, until everything gives away in the final crash of body and mind, and the miserable victim of this high-pressure system is hurried into the insane asylum or the grave.

It was stated by one of the New York papers a short time since, that nearly all of the managing officers of one of our largest railroad companies had, within a few months, been compelled to resign their positions on account of ill health from "overwork." This is only a polite way of telling half the truth. That such men are overworked, there is no reasonable doubt, and there is still less doubt that one cause of their loss of health could be given in the words of Abernethy, "Too much stuffing and fretting."

The brilliant, intellectual beauty of our American women and girls, which at first sight so impresses

foreign visitors, is of the most ephemeral character. Red cheeks, bright eyes and clear heads, will not crown a dyspeptic stomach, or constipated bowels.

We have colleges for expanding the brains of our young men and women; we have gymnasiums for drilling the muscles; will not some one found a school of hygiene for teaching the young as well as the old how to *keep* their health before they lose it? for teaching them that prevention is better than cure, that dyspepsia is not necessary to salvation, and that to obtain and retain a healthy mind in a healthy body, is one important step toward carrying out Paul's injunction: "I beseech you therefore, brethren, by the mercies of God, that ye present your bodies a living sacrifice, holy, acceptable unto God, which is your reasonable service." Will the sacrifice be any less acceptible if sound and healthy? G. E. C.

ONEIDA CIRCULAR.

TIRZAH C. MILLER, EDITOR.

MONDAY, JAN. 20, 1873.

Some of our correspondents who are unable to pay the full subscription price of the CIRCULAR write as though they felt timid about sending 25, 50 or 75 cts., fearing that their small offerings may be despised. Let no one be troubled by thoughts of this kind. We appreciate all the aid we receive, and none more than the "widow's mite." He who cheerfully gives 25 cts. from his necessity for the free distribution of the gospel may receive more honor in heaven than the rich man who gives his thousands to charitable institutions.

STRIKING AT RANDOM.

AN entertaining writer for *Harpers' Monthly* in an account of Marco Polo's books of Travels, goes out of his way to give the O. C. a little hit in this fashion:

"If, according to the teachings of the disciples of John Noyes the millennium is simply the extension and complete realization of their practices and principles throughout the earth, then Kublai-Khan and his contemporaries were much nearer the millennium than we. Besides those 'four ladies called empresses, he had also a great number of concubines. * * * * In Tartary,' says Polo, 'any man may take a hundred wives an he so please, if he be able to keep them,' while in Malabar 'the man who has most wives is most thought of.'"

Here are some "idle words" about John Noyes and his disciples, which it is our duty to bring to judgment. It is only in great ignorance and mental confusion that it is possible to see any resemblance between the practices and principles of the O. C. and those of polygamists, ancient or modern. A harem, which is the proper name of a polygamic family, and to which our Communities are often compared in this flippant way, is a gathering of many women owned by one man. All other males (except eunuchs) are jealously excluded. Thus, for the pleasure of one man, forty or fifty women are deprived of the right to their own persons, and forty or fifty men are deprived of their natural social interest in these women. What is there in the principles or practices of the O. C. to match this description? A Community family is composed of men and women in as equal numbers as those of a common family or of general society. The women have equal social rights with the men, and the men have equal social rights with each other. The jealousy cultivated in the Community is that which forbids any man to seclude to his private pleasure any woman. This is the farthest extreme possible from the law of the harem. It is even more republican than the constitution of the monogamic family; for that gives each man a right to seclude to his private use one woman, in very nearly the despotic fashion of polygamy.

A Mormon once came to the O. C. and claimed sympathy for a sentiment which he expressed thus: "I love woman; not merely one woman but a good many; it is natural; and I have a right to a good many women." We replied: "Women have as much natural taste for variety as men have, and have as good a right to it." The only answer he had to this was, "You are more unselfish than we."

We take this occasion to notify all whom it may concern, that it will be useless in the long run to attempt to hustle our principles and practices into any of the usual categories, such as polygamy, polyandry, licentiousness, or even "free love." Our system is new and peculiar; invented by a full-blooded and thoroughly educated Yankee, and carefully adapted to the spirit of the nineteenth century. It will have to be tried on its own merits.

THE FINANCIER.—This able financial paper has just completed its first volume, and appears to have won for itself a successful place in American journalism. We have hertofore spoken in its praise, and continue to think well of it. It is one of the best mediums of financial information in the country, and while earnestly devoted to the principle of free trade, is honest, and dignified in its discussions. It is published by J. H. and C. M. Goodsell, 156 and 158 Broadway, New York, at $5 a year.

COMMUNITY JOURNAL.

ONEIDA.

—Dr. Cragin delivered a lecture to the women one day last week on the subject of Hygiene. There are reasons why women need more lecturing upon the laws of health than men. On the one hand their physical economy is such that they get out of order more easily than men, and on the other they take less care of themselves. You rarely see a man, though he be young, who rashly endangers his physical well-being for the sake of indulging some inexplicable whim; but in the early stages of womanhood the feminine sex seem possessed to hazard the closest chances of losing health and life. Looks, not comfort, is woman's prime idea of existence; so she tortures herself and posterity, and does not, when all is done, look as well as she would had she treated her body more simply, more naturally. So rife, indeed, have become female disorders that the word woman has been defined as *disease* among medical men. Yet Hygeia, who, according to the ancients, presided over the health of mankind, was a goddess. "Consistency, thou art a jewel!"

Though the women of the O. C. cannot be classed among those to whom the above remarks might be pertinently aimed, yet there is need that we raise our standard of carefulness and faithfulness. Let us discard more thoroughly than ever before all kinds of drugs. We will take no less care of the sick; but let us take greater care that those who are well keep well and grow stronger and healthier. That this may be done the young and thoughtless must become acquainted with certain hygienic principles which will enable them to treat their bodies intelligently. Let these be encouraged to romp and run, and let all take means to inhale each day a large quantity of out-door air. Speaking of the dietetic reform which we are slowly making, the Doctor quoted from 2d Samuel: "Now there was a long war between the house of David and the house of Saul; but David waxed stronger and stronger, and the house of Saul waxed weaker and weaker." It is not our policy, the speaker said, to make sudden or arbitrary moves in the direction of reform; we wish no one to change any faster than the improvements advocated recommend themselves to his or her reason. Those in the Community who are moving toward dietetic reform may be compared to the house of David, and there is no doubt that it will wax stronger and stronger by the gradual conversion of all classes. The women, who take charge of the cooking, inevitably control, in a great measure, the general taste in regard to diet. Let them seek a true standard and there is no danger but the family will readily adopt it. Our plans in the direction of scientific propagation demand that our women be strong and vigorous, that our children be healthy and handsome.

—Divided as is the O. C. into three families, the demands of business and various other interests require frequent changes of members. There is a tendency in human nature to become so attached to place and circumstances that it is often a painful thing to pull up stakes and move on to new surroundings. Noticing the other day how much more easily these changes are made now than formerly, we were reminded of a time several years ago when we had a great deal to say about being delocalized—delocalized in every way: with regard to country, occupation, affections, and so on.—G. W. N. penned the following lines, under the inspiration of this theme, which are well worth reading again:

HOW I FOUND HER.

"Gray-beard Parting, go away!
You're ugly, old and dreary.
Merry Meeting is my love;
I clasp her as my dearie."

Gray-beard met me on a day,
I tried to scuttle around him.
"No, no," said he, "you go with me;"
A dry old hunks I found him.

We passed a wood, we crossed a stream,
The vale seemed rather dreary,
When Gray-beard vanished like a dream,
And there stood she my dearie!

Since then, I've met old Parting oft,
And given him cheerful greeting,
For straight, I find, he leads me where
I clasp my love, fair Meeting.

—Conversation turned the other evening upon the non-use of drugs, the effect of the two-meal system and kindred topics. T. remarked: "A state of perfect health in externals will be one in which we give no attention to the subject of health so far as dieting and medicine are concerned. At the same time that we adopt the best hygienic mode of living we shall be in a state of unconsciousness of the effect of what we eat."

—A few of the papers try to see a joke or a penance in our taking the advice of our doctors and eating two meals a day instead of three. As for ourselves we don't know of a single one of us who wants to go back to the three-meal system. But by saving us the labor of cooking and eating three hundred and sixty-five meals per annum the doctors do not mean to reduce the amount of exercise we shall take. We must make up the difference or more in active life out of doors. So if you are a worker in the Hardware or Silk department and go from O. C. to take breakfast at the Villa, you will be likely to meet on the way half a dozen of the women and girls who have been out for a morning walk. Occasionally a few of the more heroic will walk to the Villa and back, three and one-eighth miles in all, before breakfast with the thermometer near zero. Or

you may overtake S. B. C. with a company of the little folk, with ears and fingers well covered, brushing along on the frosty road, and enjoying the winter as only children can. Stop, we didn't mean to say that children alone can enjoy the winter, for many of the young women, and not a few of the older ones, have retained enough of their childhood to take delight in oft-repeated ventures in the dear old pastime of sliding down hill. You will see them in the afternoons flying down the crust on the hill beyond the creek; or with stronger limbs to pull the sleds up, and more safely steer them down again, they are tempted to climb the longer rise in the road to our neighbor Snell's, where pausing for a moment to take breath and catch a view of the west hill billowed by snow-drifts, and of the valley spreading out to the Oneida lake, they seat themselves before their pilots, and make the descent of nearly a quarter of a mile at railroad speed, and return to the house with glowing cheeks and sparkling eyes, to say to their friends, "O, but you should try it." Three of the more venturesome young men went over to the Five Chimneys, and, creeping up the slippery road which leads down from the west hills, they took some long, fierce rides—a mile in a minute and a half. This did not meet the approval of the family at large who remembered that one of our young men was once nearly killed while sliding down the same hill.

—A persevering botanist in New York contributes two rare ferns to our herbarium; the Woodsia (*Woodsia glabella*) from Willoughby Mountain, and a Wood-Fern (*Aspidium aculeatum*) from the forests of Northern Vermont—both "high northern" plants which only touch our borders a little here and there as if not quite sure of their ground.

—One means, highly prized by the Community, for the education and training of its children, is the daily meeting. Mrs. Cragin, in her letter written to the O. C. children more than twenty years ago (the letter was recently reprinted in the CIRCULAR), compared life to the winding of a ball. That happy comparison has been made familiar to all the children who have succeeded those to whom the letter was written, and has done more perhaps to impress her spirit on the young, and to keep her memory green in the Community, than any one thing she ever inculcated. Well, the daily meeting serves an admirable purpose in calling attention to the "winding" that is done every day, and if necessary, to unwind and pull out any black threads they may have been tempted in the day's experience to wind on their life-ball. Frequent settlements—the getting out of balance-sheets in spiritual and moral account-keeping—are popular in the Community, and nowhere more needed, perhaps, than with the children. There are almost daily differences and grievances that oppress the heart of the child, and the meeting gives an opportunity for each to tell his trials, and have them by wise healing words banished from the memory. The faults of omission and commission come under review and criticism in these meetings, and who can doubt that such a daily elimination of the black threads will save the child from much bitter sorrow and repentance in after years? But scolding and dealing with evil are not the staples of the children's meetings; we see much in the children that is lovely and good to think of and to praise. The unwinding of the different "balls" reveals the white threads as well as the black, and the meed of praise, mingled with thanks to the Author of all good, is given in no stinted measure. We keep in mind that the ultimate object is to change the character—to renew the mind and disposition, rather than the repression or weeding out of specific faults; and therefore we have sought for the expansion of the revival influences, that the Community has so richly experienced, to the children's department, and our efforts have not been in vain, as witness the oft-repeated testimony from one and another of the children with a radiant face: "I am so happy I don't know what to do." This happiness can not be explained by any outward change or circumstances, but is the fruit of the confession of Christ—the indwelling of the good spirit.

WALLINGFORD.

—The printing business has been moved from the old offices at the house to the works of the Wallingford Printing Company just completed at the river. A large book-press which we are looking for from England, costing $5,000, and a new cutting-machine, will soon be added to the fixtures of the office.

Notes of an Evening Meeting.

E. H. H.—I had some thoughts to-day about our relations to one another. Mr. N. once said that love is the circulating medium of the Kingdom of Heaven. It would be good for the young to lay to heart the principle that God is the distributer of love. We need to study love as a heavenly art. Neither one should let himself down toward the other; there should always be a consciousness in our hearts that we do not belong to each other but belong to God and are his children. Just in proportion as we lose sight of that idea we fail to get the deepest kind of love. True love never leads us into familiarity with each other which causes loss of respect. Love must not be sought too directly. It seems to me that the distribution of love in the Kingdom of Heaven is governed by similar principles to those which govern the distribution of money in this world. If a person is going to run a worldly course he must learn the fact that money is the great distributer of valuables, and he must understand the true principles of securing money if he wishes to make an honorable career. There is a large class of men who seek to obtain money directly, by means of cheating or theft or some such dishonorable action. But the law presents an obstacle to their getting riches in all such ways. It is just so in regard to love in the Kingdom of Heaven. If we seek it in a direct way for ourselves we soon find that the laws of that Kingdom are opposed to us. Those who exercise their wits to get money by foul means are called blacklegs, scoundrels, etc.; and those who desire love must remember that it belongs to God and must seek it as his gift or they will be called by no better names at last. The true way to get love is to set about improvement in the deepest sense of the word—intellectual and spiritual improvement. Persons need have no anxiety about looking out for themselves. If they will only be faithful to God and the spirit of improvement they will have their hearts satisfied with love just as surely as there is a living God. If persons think they must seek love directly, just as men would put their hands into the strong box, they will find that God in his providence is standing in the way. We must remember that it is for God to inspire and direct us in loving one another. If we get that principle established in our hearts, we shall find it will help us to draw near to God and keep near him continually. Mr. N. said in a late talk that the first great end of life is to make a *good home;* and that in order to make a good home we must have a good religious experience. Good religious experience breeds a certain respect for, and reserve toward, each other which only comes through spiritual earnestness. I want to cultivate a feeling in regard to all good things that God will wait on me if it is best for me to have them. I remember a remark which Mr N. made about love when we first started our movement at O. C. He said we might compare individuals in the Community to a round pie cut in pieces from the center. If the pieces of pie draw near the center they will inevitably draw near each other: but if they draw near each other directly, without reference to the center, they will draw far away from the center and will not succeed in getting any nearer to each other.

JOTTINGS AT THE CRITICISM CLUB.

III.

IT is a rule among business men that a letter that is worth writing is worth copying. I would go further, and say—A letter that is worth writing is worth writing well, so that you would not be ashamed to have it go before the universe; and anything that is worth saying is worth saying well, so that it will bear criticism; and anything that is worth doing is worth doing well. Away with shiftlessness and excuses for wrong and foolish doings of all kinds!

....

X—— has many valuable traits of character, and is greatly beloved; but she is tempted to let outward things absorb her attention to the neglect of interior culture. She was advised to pray for grace to lay secure hold on eternal life, and become as efficient in spiritual labor as she has been in physical and intellectual. These are chiefly valuable as a foundation for the former, and are worthless when they prevent spiritual improvement. Those who pride themselves on industry, economy, faithfulness in external things, while they are not earnest in seeking interior culture, will sooner or later find that they have trusted in broken reeds.

....

S—— was highly commended for the improvement she has made. She was naturally attractive, and was on that account petted and flattered when young. Criticism and suffering have made her an earnest, God-fearing woman. She has found Christ in her heart, and no longer depends on outward circumstances for happiness. She is very receptive to good influences, and delights in the society of her superiors. This is one secret of her great improvement. She is vivacious, and diffuses sunshine and joy wherever she goes. Her vivacity, however, sometimes tempts her into frivolity. We would not have her less vivacious, but would have her vivacity express seriousness as well as mirth. Mr. Noyes once wrote in an album: "If you listen to the strains which are ever sounding through creation, you will find that God's everlasting melody is at once full of seriousness and full of mirth. If you would make the tones of your heart a harmonious accompaniment to that melody, you must first take lessons in seriousness (which is the soul of all God's music), and then you must learn to combine seriousness with mirth, as these are combined in all the harmonies of nature and the Bible."

....

H——'s love of approbation makes him a poor critic. He has good judgment of character, but he is fearful that he may displease by speaking the truth. This is a serious fault, and prevents his rapid improvement. One cannot become a good medium of Christ's spirit while fearful that he will say or do something displeasing to those around him. He must promptly obey his best instincts irrespective of his fellows. He must be ready to sacrifice all human approbation—be thoroughly sincere—utter the word of truth given him whether it pleases or displeases. God will not choose for his mediums men who do not care more for his approbation than for all else beside; and such men, we may be sure, will sooner or later command the highest approbation of society.

The oracular way some people have of expressing themselves concerning things about which they possess but meager knowledge is often amazing. C. was re-

turning from New Haven to Wallingford the other day when an Englishman entered the car, and seating himself near by began talking in a loud tone to his neighbor upon the subject of religion. C. had some difficulty in making out the exact point he was endeavoring to clinch, for this was the style of his argument: "Look at Methuselah; who was he? And Adam, look at him: he was nothing but a man. Then there's *Jesus Christ in the bulrushes. He* was nothing but a man!"

A REVERIE.

WHO that steps out in the stillness of a moonlit night, but yields at once to the spell of the moment? You cannot help it. It is the hour of Luna's triumph, and she sways all eyes and imaginations. Ever has it been so. From the days of Adam has that same moon been scanned and pondered and discussed by the sons and daughters of men. Imagine the situation when first her beams fell upon Eden. What think you were the feelings of Adam and Eve? Were they awakened to poetic-thought, and to a higher appreciation of the first honey-moon? And he of old who "walked with God, and was not," did he not also talk with Him in the moonlight? And father Isaac, had he any reference to the moon when he stepped out "to meditate in the field at the eventide?" How oft did Methuselah, in his millennium, lift up his eyes to dally with the moonbeams? And Noah too, did he catch a cheering glimpse of the moon when he looked out upon the wilderness of waters that covered the face of the earth and there was naught else to be seen?

Abraham and Moses and Joshua, and Solomon and David and the prophets, Christ and the apostles and the great and good of every age, have all in turn felt and owned the magic sway of that never-failing disk which circles and circles from one generation to another—outliving all things here below, and ever carrying the same placid face in her ministrations to the children of men.

There she sails along apparently unconscious of all that has transpired—and yet is she as it were a link between past and present. Our forefathers looked in her face and were made happy. Who does not welcome each return of the new moon? So did they. Who loves not to revel in the moonbeams? Whose feelings are not the better for it? Where is the poet whose inspiration is not the brighter for it? Where the lover who sees not new beauty in the face that he loves, when beaming in the moonlight? That moon has witnessed many a scene of weal and woe, but she keeps her own council and tells no tale. You gaze at her wishfully as though she were a monument of bygone ages; but all you get in return, is

"*Sic transit gloria mundi.*"

R. S. D.

CORRESPONDENCE.

Cedar Grove, Va., Jan. 3, 1873.

DEAR FRIENDS:—I have been a careful reader of the CIRCULAR for about two years, and I am truly thankful for the light I have received from it. The Home-Talks by Mr. Noyes have been of inestimable value to me. I used to ask myself this gloomy question. "Can Christianity or anything else save this sin-stricken world?" and I answered unbelievingly in the negative. I am thankful to say that you have taught me to believe that Christ can and will save the world, and you have shown me how he intends to do it. This has given my soul great comfort. Yours truly, A. S.

Gratiot, Wis., Jan. 4, 1873.

DEAR CIRCULAR:—I again shall have to come a-begging to you, for I do not feel that I can do without your kind and welcome paper which has come freely to me for so long a time. I thought I would not ask you to send it to me again; but when the week rolls round and there is no CIRCULAR to read I feel so lonely that I thought I would venture to ask you to send it another year. I do hope and pray that God will bless and prosper you in all your good works. S. S.

Gustavus, O., Jan. 3, 1873.

KIND BENEFACTORS:—It seems my duty to acknowledge that the acquaintance I have formed with you through your estimable paper has awakened in my mind the highest esteem for you, as it revealed to me the existence of an organized body of Christians who (together with other important doctrines taught in the Gospel of our Savior) hold sacred the social relations of men and women. I have sought in vain this characteristic among other professed Christians. It seems to me that for Christians the time of ignorance is past, and that those who are worthy of the name should know how to possess their whole being in honor, understanding that we are to "add to our faith knowledge, and to knowledge virtue." M. H. M.

Duluth, Ill., Jan. 6, 1873.

DEAR FRIENDS:—I regard your attempt at realizing the problem of a true state of society with much favor and confidence, believing that the children conceived, born and educated in harmony with the scientific principles which I understand govern your social department will be vastly superior to those produced by parents living according to the ways of organized society. Your Association offers a splendid opportunity for testing social principles dictated by science, and sooner than see your organization broken up before you have been able to fully develop the truth of those principles I could cheerfully, if necessary, offer my life for its preservation. D. R. B.

Pawtucket, R. I., Dec. 30, 1872.

DEAR FRIENDS:—To me the CIRCULAR appears one of the most important papers I receive, advocating as it does a new and superior state of human existence based on truth and justice, where man shall no longer be the slave of man, governed by fear and imagination, but by reason and affection. The improvement of the human race is of the highest importance. It is now forty years since my attention was drawn to this great and all-important question, and notwithstanding the many failures of experiments to establish Communities I feel more convinced every day of ultimate success. The O. C. has solved a most important question. Association is no longer an impracticable, chimerical uncertainty. You have shown the living fact for nearly a quarter of a century.

Respectfully, J. W. A.

Freeport, Ill., Dec. 29, 1872.

DEAR FRIENDS:—I appreciate more than ever that God's ways are true and righteous altogether, and what we need more than all things else is to know how to submit ourselves in all our ways to the leadings of his spirit. It is written in the book of Revelation of those who had palms of victory in their hands, "that they follow the Lamb whithersoever he goeth." I confess Christ in me a spirit to follow the Lamb whithersoever he goeth, with a soft receptive heart. True it is that no chastening from the Lord seemeth joyous but grievous; nevertheless it shall work the peaceable fruits of righteousness "and the trial of our faith shall work out for us a far more exceeding and eternal weight of glory."

We have had intensely cold weather here during the last week, the thermometer ranging from 10 to 32 below zero.

Wishing you a happy new year, L. W. G.

De Kalb Center, Ill., Dec. 29, 1872.

DEAR CIRCULAR:—By your kindness I have been favored with fifty-two of your valuable numbers, which are always welcome and gratefully received. The contents are so good, that for the life of me I cannot tell which articles are the best; but some of the articles are indeed very interesting and instructive. According to what you say about yourselves you must be a very happy and contented set of people, teaching and instructing one another in a great variety of ways. It does one good to read about you. If I were not so old and had the means I should certainly pay you a visit. I hope you will still prosper and be made a blessing to thousands—and that the old man of nearly 77 will still be favored with the reading of the well-gotten-up CIRCULAR.

Yours most fraternally, W. G. W.

Southport, Prince Ed. Island, Dec. 28, 1872.

DEAR FRIENDS:—There is only one objection among my friends to the Oneida Community and that is the mixed marriage system. I neither defend nor oppose your system, as I do not know enough about it; but I always tell them that I never saw so happy a looking set of children and people, or so orderly and well managed an establishment as yours is. I am in hopes yet to see Communities flourish, and I intend as far as I can to keep my six children around me in a state of order as nearly as possible like that I saw among you. G. T. H.

FACTS AND TOPICS.

From the Monthly Report of the Department of Agriculture, for November and December, we glean the following items:

EXPERIMENT IN PLOWING BY STEAM-POWER.

On the 8th of November, on the seed-farm of D. Landreth, at Bloomsdale, near Bristol, Bucks County, Pennsylvania, a trial was made of the "Williamson road and field steamer," under the supervision of the inventor, D. D. Williamson, of New York. The experiment is reported as entirely successful. Mr. Williamson's invention is an improvement on the "Thompson road-steamer" of Great Britain, consisting mainly in the attachment of vulcanized-rubber tires in such a way as to prevent the wheels from sinking in soft soil, or compressing it to an injurious degree. The report represents that the steamer consumes about one ton of coal per day; requires for working it an engineer, fireman and "a boy to drive a water-cart;" can be used for driving threshing and other machines; will draw from twenty to thirty tons of freight in wagons on any fair country road; will turn on a space not exceeding in diameter its own length; will plow, on land suitable for cultivation by steam, from one to three acres per hour, according to length of land and depth of furrow; and costs, with plow and tackle complete, $5,000. The following extracts are from a description of its action by an eye-witness:

No team of horses could have turned, backed, and stopped with more facility and certainty. It was run up the steep bridgeway of a barn, having an elevation of 1 foot in 5, backed down, and run up again with the greatest ease and facility. For a further confirmation of its capacity a couple of large farm-wagons were coupled behind it, in which about twenty of the guests were seated for a ride. It trotted off with us on the public road toward Bristol, at the rate of six to seven miles per hour: went through gates, turned in at bars, crossed soft gullies, went up sharp hillocks, crossed at a sharp elevation the railroad-track, and down again on the other side, and, making a short turn, brought us back through a field of fifty acres, which had been plowed with it, to the place of departure. This plowing was beautifully done, and we were informed at an average depth of 9 inches, much of it being 12 inches. No more accurate or level furrows, as it appeared to us, could be made by any plowman with a well-trained team of horses.

After being uncoupled from the wagon it was attached for a trial of plowing to the Williamson gang-plow, consisting of five secured to one frame. * * * On the way to the field the plows followed the steamer as erected as a two-wheeled cart. Not a moment was lost in getting to work. The field selected was an old tough sod with a steep grade in the center. The tripping of a lever by the fireman, which he performed from his station at the boiler, let the plows into the ground, and away rolled the steamer as straight as an arrow, with the tough sod-furrows rolling over behind like so

many waves. The work seemed perfect, each furrow being mechanically correct and alike in width and depth. At the ascent of the grade in the middle of the field, no diminished speed was observable, the power seeming so arbitrary and irresistible that no ordinary field obstructions could have resisted its continuous progress. Arrived at the end of the field, the fireman pulled another rope, and out shot each one of the plows, the steamer spun around on one wheel, ran across the headland, and turning into a new land, was instantly at work on the "turn-bout." There was no hitch, no slipping or backing, but a simple, silent triumph of good, sensible engineering. We are thus particular in describing exactly what we saw and was witnessed with surprise and pleasure by the whole company, because it *demonstrated* that the experiment of steam on the farm and on the road was successful in every point.

SUCCESS IN GROWING SILK-WORMS.

The experiment of Mr. Romulus Bonhomme in growing silk-worms, at Los Angeles, California, the past season, is reported as very successful. The mulberry trees used are of the alba and moretta varieties, of which he has 16,000 trees, four and five years old. He has tried the Philippine, which he regards as nearly equal to the alba, and the multicaulis, which he has abandoned as comparatively worthless. He sets his trees in rows 16 feet apart both ways; has tried 8 feet, but finds that too near, the leaves of trees so crowded not being healthy for worms. From four ounces of eggs he obtained 445 pounds of cocoons. His loss of worms was less then 1 per cent. of the number hatched. During the first and second stages of growth he feeds from young trees; the third and fourth, from older trees and leaves. During the first three stages he feeds three times a day; during the fourth, five times a day and twice at night. He finds that the worms from one ounce of eggs require, to perfect their growth, 1,200 pounds of leaves, while in Italy and France the same quantity requires 1,800 to 2,000 pounds. He began feeding the French yellow variety on the 15th of April, and the cocoons were completed in thirty-six to forty days. As his object was the production of eggs, his cocoons are all perforated. The eggs, of which he has 400 ounces in excellent condition, are estimated at $6 per ounce. He is confident that for the successful culture of the silk-worm, the climate of Los Angeles is nowhere surpassed.

BEET-SUGAR IN CALIFORNIA.

The Alvarado beet crop of 1870 yielded less than 8 per cent. of sugar, the whole amount being 500,000 pounds; that of 1871 yielded about 8 per cent., and amounted to 750,000 pounds; that of 1872 yields 8¼ per cent., and it is estimated that the whole product of sugar will be from 1,000,000 to 1,250,000 pounds. It is reported that the home product, as yet in its infancy, has already had the effect to reduce the price of No. 1 granulated sugar in California 1½ to 2 cents per pound, and to make it 1 cent per pound lower, on the average, than in the New York market.

THE NEWS.

AMERICAN.

Four new narrow-gauge railroads are projecting in Utah.

Grace Greenwood is to have a residence at Manitou, Colorado.

A corps of engineers has begun the survey for the extension of the Midland railroad from Auburn to Buffalo.

A family of eleven brothers are to settle in New Preston, Conn. They will build one large house for refreshments, etc., and eleven cottages for sleeping apartments.

Elisha H. Allen, a native of Massachusetts, formerly a leading lawyer of Bangor, Maine, and for some time chief-justice of the Sandwich Islands, is the present regent of the Hawaüan kingdom.

The United States Government is at present the owner of real estate to the value of some forty millions of dollars, consisting of sites of post-offices, custom-houses, etc. A new department, to be called the board of public works, has been suggested, to take charge of this property.

The United States Government, through the New York Custom House, has brought suit against Phelps, Dodge & Co, of New York city, for the recovery of $1,000,000 Custom House dues, alleged to be owing to the Government in consequence of irregularities in the invoices of the firm.

The company of American capitalists who have been negotiating with the Government of Santo Domingo, for the lease of the Bay and Peninsula of Samana, have secured their object, and the treaty has been ratified. The company is to be known as the "Samana Bay Company of Santo Domingo," and has a capital of $20,000,000.

The recent storm has been very severe at the west and northwest. The cold has been intense, and many of the railroads are badly blocked up with snow. Numerous cases of death by freezing are also reported. A dispatch from Minneapolis, says that the storm was the most terrible that has visited that section of the country since its settlement.

San Diego, California, is a place of growing importance. Its harbor is the finest on the Pacific coast after San Francisco. The Pacific terminus of the Southern Pacific or Transcontinental Railroad will be here. This road is now constructing. The climate of San Diego is very charming and healthy, and the semi-tropical fruits are grown there in the greatest perfection.

By the decision of the United States Supreme Court the title of the State of California to the Yosemité Valley, under the grant of Congress reserving it for a public park, is fully comfirmed. This cuts off all preëmptive rights of the settlers who have occupied some parts of the valley, and insures the preservation of the valley as a public national pleasure-ground.

Great efforts are making by the managers of the Grand Trunk Railway to improve that road. Three hundred miles of steel rails have been laid, and it was decided at a late London meeting of the shareholders to relay the whole road with these rails at the rate of two hundred miles a year. This is as fast as the work can be accomplished without interfering with the traffic. The sum of $7,500,000 has been voted for the improvement of the road.

The New York evening illustrated paper, to be called the *Graphic*, is expected to appear about the 1st of February. Mr. Lumley, whose sketches of society are well known, is to be the chief of the corps of artists. It is proposed to illustrate in a handsome manner all current events. Large collections of portraits of eminent people are making which will appear as occasion demands. Eight large Hoe cylinder presses are erecting for the printing of this paper, of which Mr. D. G. Croly, so long of the *World*, is to be the managing editor.

A collection of antiquities discovered by Gen. Di Cesnola in Cyprus, and lately bought for the New York Metropolitan Museum of Art will soon arrive in that city. "The collection," says the *Evening Post*, "has been formed during the past seven years by Gen. Di Cesnola, our Consul at Cyprus, that focus of ancient civilization and meeting place of races, where Greece received through Phœnicia the arts and civilization of Egypt, Assyria and Chaldea. It consists of over ten thousand examples of ancient art and workmanship in sculpture, pottery, glass, bronzes, coins, jewelry of gold and silver, gems and engraved stones. It is also rich in Greek, Phœnician and Cypriote inscriptions."

Although General Grant's majority at the late Presidential election was about 702,000 over all, of the votes cast, yet he was elected by a minority of the legal voters of the United States. According to the census of 1870, there are 8,303,305 persons entitled to vote. Of these 3,579,798 voted for Gen. Grant, or 571,855 less than a majority. If the persons who abstained from voting had all voted against him, and for Mr. Greeley, the latter's majority would have been over 1,100,000. Thus it is apparent that a candidate who could have concentrated the opposition and won the non-voters to the polls, would have been elected by a majority half a million larger than that given to Grant.

Mrs. Woodhull and Col. Blood have again been arrested on a charge of sending obscene matter through the United States mails, and brought up for examination before United States Commissioner Davenport. On the first day of the examination the Commissioner refused to allow the accused to testify in their own behalf. Judge Blatchford however has decided that in preliminary examinations in criminal cases before United States commissioners, the accused shall be allowed to testify in their own behalf. The defendants claim that they did not send the alleged obscene matter through the mails and that they are the victims of an organized persecution. The alleged obscene matter consists of copies of the number of their weekly paper which contained the articles on the Beecher-Tilton scandal.

An account of the Noachian flood has been discovered on some Assyrian tablets in the British Museum. It belongs to a series of twelve mythological tablets, in the library of Assurbanapal, who reigned 660 years before Christ, and is a translation into the Assyrian from the ancient Accad language of the original Babylonians. It is thought that the original account could not have a date later than the seventeenth century before Christ.

In the Provincial Parliament of Ontario recently the Commissioner for the Crown Lands stated that the Ontario Government still owned 5,700 square miles of timber lands in the Ottawa region, on which not a pine tree had been cut, and containing some of the best pine timber this side of the Rocky Mountains, worth to the Government for the timber alone $25,000,000.

The Parliament of Newfoundland is nearly unanimous for the independence of that island so far as its relations to the Dominion of Canada are concerned. Of the 30 members 28 are anti-union and are strongly opposed to the confederation. There is no military force on the island, the police rendering all necessary protection. Nothing remains of British authority save a nominal Governor and the solitary flag which floats over his residence. A large majority of the people sympathize with the idea of annexation to the United States, and the action of the Parliament at its coming session is expected to be favorable to that project.

FOREIGN.

The Shah of Persia will leave Teheran next April, on a European tour.

Mr. Darwin has recently published a new work on "Expression in Man and Animals."

The population of Australia is estimated at 2,500,000 English-speaking people, with a yearly commerce of $400,000,000.

The specific for the cure of cancer called cundurango, has been pronounced worthless after a protracted trial in the cancer wards of the Middlesex Hospital, London.

The elevation of Gen. Von Roon to the Presidency of the German Council of Ministers, is regarded as a triumph of the party opposed to the liberal and progressive policy of Bismarck.

The Toronto *Mail* says that arrangements have been made for the organization of a company to build the Canadian Pacific railroad, authorized under the act of the last session of the Dominion Parliament.

The Chinese Government has finally abandoned its custom requiring the representatives of other powers to kneel on being presented to the Emperor. The European and American Ministers have long refused to yield to this custom, and consequently have never been presented at the Chinese Court. This right will now be accorded to them.

It now appears that the British protest in regard to the Russian operations in Khiva was not so warlike as at first reported. The British Minister at St. Petersburg simply delivered a note to Prince Gortschakoff, informing him that England will abstain from interfering with Russian progress in Central Asia if it does not threaten Afghanistan.

ANSWERS TO CORRESPONDENTS.

To J. O. O'C., Dublin, Ireland.—Thank you for British and Irish papers.

To J. W. A., Pawtucket, R. I.—Mr. N. never saw Robert Owen.

RECEIPTS FOR THE CIRCULAR.

W. H. T., Marysville, Mo., 50 cts; J. H., Albany, Wis., $1.00; S. F., Wilmar, Wis., 50 cts; J. P., Webster, N. Y., $1.00; C. C., Suspension Bridge, N. Y., $2.00; S. T., Chicago, Ill., $1.00; W. S., Hamilton, Pa., 75 cts; D. J. W., St Louis, Mo., $2.00; A. H., Oneida, N. Y., $2.70; C. M. C., Milwaukee, Wis., $2.00; J. H. S., West Union, Iowa, $1.00; A. J. L., Brooklyn, N. Y., $2.00; H. S., Gananoque, Ca., $2.00; J. H. J., East Abington, Mass., $1.00; P. M. B., Grand Rapids, Mich., 40 cts; E. L., Mt. Kisco, N. Y., $1.00; W. T., Baltimore, Md., $2.00; M. H. M., Gustavus, O., 50 cts; H. M. S., Kalamazoo, Mich., 50 cts.

OUR VILLA CATS.

WE have two cats at the Villa—a mother and a daughter: the mother white in face and beneath, and dark, inclining to maltese, on her back; the daughter white all over except two black spots in the face and a dark handle behind. The thing that I first noticed in those cats was an excess of philoprogenitiveness on the part of the mother, and of familiarity and disrespect on the part of the daughter. The first mentioned quality is indicated by the fact that the younger cat though half grown is not yet weaned. The disrespectful character of the smaller cat is indicated by her sitting in front of her mother, putting back her ears and staring most brazenly into her face for an instant and then leaping at her and scratching and biting until she fairly shrjeks with pain. But curiously enough, instead of giving the impudent hussy a regular flaxing out for her exceedingly unfilial conduct, she merely pretends to scratch and bite in return, and whenever from fatigue or any other cause there comes a pause in the struggling and kicking of their eight paws and the pretended use of their jaws the mother cat immediately begins to caress her darling with her tongue, as though she would say, "You hateful little dear! I suppose I ought to punish you; but I love you so I cannot find it in my heart to do it."

It is evident that this mother cat is very superficial and utterly destitute of any fixed principle of family government. She has no regard for the moral and intellectual character of her offspring at the same time that she is exceedingly solicitous in regard to her external appearance, spending hours in combing her hair.

Although I am disposed to attribute the faulty education of this mother cat to some outside influence that operated in the days of her kittenhood when her moral character was weak and flexible, yet I do not think that the skirts of the Community are wholly clear.

The circumstances of this cat have been somewhat peculiar. She has lived since her youth at the Villa where there are several tender-hearted women, and it would not be at all surprising if a certain amount of their extra philoprogenitive feeling had flowed over upon her. Perhaps evidences of this may be found in the fact that her breakfast of milk is so carefully warmed for her, and also in the fact that they step so carefully over and around her when she feels disposed to take a doze by the kitchen stove. She certainly has not shown any marked respect for boots and shoes, and it may be that a little judicious and carefully graduated stepping on her tail might be advisable. But it would be difficult to find the woman who would be capable of adopting such a heroic method of treatment. This shows how important it is that both sexes have some responsibility in carrying on the most necessary work of education.

But bless me! How I am running on. I ought to have remembered ere this that the wise sentiments that I have been inculcating will be utterly lost upon the old cat; for a terrible catastrophe has lately occurred in the family, which is nothing less than the sudden disappearance of its head. Whether she is dead, or if so, what was the form of her death, whether by chloroform, concussion of the brain or an unfortunate fishing excursion under the ice in the mill-pond, I cannot say. The only clue that I can get hold of is in certain dark undertone hints that I overheard from one of the sterner sex, that "she was a thief, all the while in the way under foot, and ought to be put out of the way."

But O! the distress, the sorrow and crying of the young cat since she has discovered her loss! How her grief must be aggravated by remorse as she reflects on the frivolous life she has led, and the many squalls of pain she has drawn from her mother during her irreverent frolics. At the time of the first burst of grief for her irreparable loss, and during those days which are sacred to mourning, the sympathetic hearts of the women resorted to every conceivable means of relief. Indeed, it was thought at one time, judging from certain wild manifestations, that reason was tottering on its throne. Among the measures proposed for the alleviation of the bereaved one, were catnip leaves, catnip tea, fried beef-steak, peppermint tea, and one of the male sex proposed some quinine pills. Catnip being decided upon as the most feasible remedy, a handful of the dried leaves were thrown down before her. The effect was magical. She smelled of them, she nibbled them, and she rolled over and over in them for half an hour, in an ecstacy of delight. Some catnip tea was then prepared for her, and afterward a little fried beef-steak—both of which she graciously partook with such manifest satisfaction, that it was not found necessary to resort either to the peppermint, or the quinine.

It is to be hoped that this effective and disciplinary dispensation will have a salutary influence on her youthful and giddy nature, and lead her to emulate all the virtues that pertain to a sober, wise, and industrious family cat. KITCHEN MAN.

THE CHIRPING SPARROW.

'T was on a bleak and wintry day a chirping-sparrow flew
Beneath a friendly spreading pine and hid itself from view.
A feeble chirp I, passing, heard, which gently seemed to plead:
"Sir, hear my cry and be so kind, in this my hour of need,
To leave your store-house door ajar and strew a little food,
To shelter from the bitter cold and sate my hungry mood.
O, do not ask, 'Why did you stray and linger thus alone?'
For surely, sir, I'm on my way unto a southern zone.
I only seek this passing boon; let me not ask in vain;
When storm is passed, with rested wings, I'll soar aloft again
To seek some happy, genial clime from cold and hunger free,
And sing the songs of better days, and kindly think of thee."
I passed that way another day, the winds did keener blow:
My little guest I sought with care, but could no trace discern;
The bird had flown, or dying lay beneath the drifting snow.
We, too, from this poor sparrow's fate may well a lesson learn.
And hasten now while yet we may to seek that sunny shore
Where wintry storms, cold, hunger, pain, He said shall come no more.

H. THACKER.

CHOICE FLOWER-SEEDS FOR SALE.

TWENTY packages (our selection) sent to one address, postage paid, for $1.00. Special selections sent at the annexed prices:

Acroclinium, rose and white,	5 cts.
Ammobium altum,	5 "
Amaranthus salicifolius (Fountain Plant),	25 "
" bicolor, tricolor,	5 "
Asters, Truffaut's, 15 cts. German,	10 "
Antirrhinum (Snapdragon),	5 "
Balsam,	5 "
Cacalia (Flora's Paint-Brush),	5 "
Calliopsis (Coreopsis),	5 "
Celosia (Cockscomb), pyramidalis, cristata, dwarf,	5 "
Dianthus (pink) Clove, China, German,	5 "
" barbatus (Sweet William),	5 "
Gomphrena (Globe Amaranth), purple, white, striped,	5 "
Helianthus (Sunflower), Mammoth Russian,	5 "
Hollyhock (double), white, black, mixed,	5 "
Lunaria,	5 "
Nigella (Love in the Mist),	5 "
Marvel of Peru (Four-o'clock)	5 "
Pansies,	15 "
Portulaca (double),	15 "
Phlox Drummondii,	10 "
Petunias,	10 "
Ricinus Sanguineous (Castor-Oil Bean),	5 "
Salpiglossis,	5 "
Satin Flower,	5 "
Sweet Pea,	5 "
Solanum Texanum (Ornamental Egg-plant), wax-like, vermillion colored fruit, small and handsome,	5 "
Tagetes (Marigold) signatus, Pumila, African,	5 "
Campanula grandiflora, Large Bell-Flower, blue,	5 "
Zinnias,	10 "

These seeds were grown with care on our own grounds. All colors mixed except when noted.

ANNOUNCEMENTS.

SILK GOODS.

Machine-Twist and Sewing-Silk of their own manufacture for sale by the Oneida Community.

Address, [S] ONEIDA COMMUNITY, *Oneida, N. Y.*

PRESERVED FRUITS AND VEGETABLES

Put up for sale by the Oneida Community in tin and glass. Price list sent on application.

Address, [F] ONEIDA COMMUNITY, *Oneida, N. Y.*

STEEL TRAPS.

Eight sizes and kinds, suitable for the House-rat, Musk-rat, Mink, Marten, Fisher, Fox, Otter, Beaver, the Black and Grizzly Bears, are made by the Oneida Community Descriptive price-list sent on application.

Address, [T] ONEIDA COMMUNITY, *Oneida, N. Y.*

MACHINE-SHOP AND FOUNDRY.

Improved Lathe-Chucks, Blinn's Patent Gate-Hinges, Machines for Measuring the Length and Testing the Strength of Manufactured Silks, Bobbin-Winders for Sewing-Machines, etc. Agricultural, Machine and Light Castings, on hand or made to order. Descriptive price-list sent on application.

Address, [M] ONEIDA COMMUNITY, *Oneida, N. Y.*

THE WALLINGFORD PRINTING COMPANY.

All kinds of Book and Job Printing executed: Manufacturers' Illustrated Catalogues made a specialty: also Bronze and Color Work, and the finer kinds of Card, Circular and Bill-head Printing. Having enlarged its works and added new motive power, this Company is in renewed condition to meet the wants its patrons with promptness and accuracy.

P. O. Address, *Wallingford, Conn.*

PUBLICATIONS.

(Sent from the Office of the Oneida Circular by mail, post-paid, on receipt of price.)

History of American Socialisms. By John Humphrey Noyes. 678 pp. 8vo. J. B. Lippincott & Co., Philadelphia. London, Trubner & Co. Price $3.00.

The Trapper's Guide; a Manual of Instructions for Capturing Fur-bearing Animals. By S. Newhouse. Third edition with New Narratives and Illustrations. 215 pp. 8vo. Price bound in cloth, $1.50

Salvation from Sin, the End of Christian Faith; an octavo pamphlet of 48 pages. By J. H. Noyes. Price 25 cents per single copy, or $2.00 per dozen.

Dixon and His Copyists; a Criticism of the Accounts of the Oneida Community in "New America," "Spiritual Wives," and kindred publications. By John Humphrey Noyes. Price 25 cts.

Scientific Propagation. By John Humphrey Noyes. Large octavo pamphlet of 32 pages. Price 25 cts.

Male Continence. By John Humphrey Noyes. An octavo pamphlet of 24 pages. Price 25 cts.

Hand-Book of the Oneida Community; Containing a Brief Sketch of its Present Condition, Internal Economy and Leading Principles. Price 25 cts.

The five pamphlets—"Salvation from Sin," "Dixon and his Copyists," "Hand-Book of the Oneida Community," "Scientific Propagation," and "Male Continence," will be sent to a single address on the receipt of $1.00.

Back Volumes of the Circular, Unbound. Price $2.00 per volume.

MESSRS. TRUBNER & COMPANY, Book-sellers, Paternoster Row, London, have the "History of American Socialisms," the "Trapper's Guide," and the "Hand-Book of the O. C.," for sale. They will receive subscriptions for our other publications.

PHOTOGRAPHIC PICTURES

Of the Oneida Community Buildings and Grounds, made by a first-class artist and finely mounted, can be had on application at the Office of the Oneida Circular.

LARGE VIEWS.

Bird's-eye View, looking West, of Community Buildings and Grounds, 12 by 14 inches, on fine enameled board 16 by 20: price $1.75. Quadrangle and Group, 12 by 14, mounted like the above price $1.75. South and East Fronts of the Community Dwellings, giving a good view of the New Wing occupied by the Children—8 by 10, on tinted board 10 by 12, with an ornamental border price $1.00.

STEREOGRAPHS.

No. 2, East and North Lawns. No. 3, East Lawn and Portico. No. 4, East Front. No. 5, North Front and Lawn. No. 6, Bird's-Eye View of Buildings looking West. No. 7, Lawn and Summer House. No. 8, West View, toward Railroad. No. 11, Quadrangle. No. 12, Lawn View. No. 15, South and East Fronts. Price of Stereographs $3.00 per doz. Sent by mail, post-paid, on receipt of price.

Oneida Circular.

A WEEKLY JOURNAL OF HOME, SCIENCE AND GENERAL INTELLIGENCE.

Published by the Oneida & Wallingford Communities.

ONEIDA COMMUNITY, JANUARY 27, 1873.

New Series, Vol. X, No. 5
Whole No. 1443.

POST-OFFICE ADDRESS:

ONEIDA CIRCULAR, ONEIDA, N. Y.

TERMS:

The CIRCULAR is sent to all applicants, whether they pay or not. It costs and is worth at least two dollars per volume. Those who want it and ought to have it are divisible into three classes, viz., 1, those who cannot afford to pay two dollars; 2, those who can afford to pay *only* two dollars; and 3, those who can afford to pay *more* than two dollars. The first ought to have it free: the second ought to pay the cost of it; and the third ought to pay enough more than the cost to make up the deficiencies of the first. This is the law of Communism. We have no means of enforcing it, and no wish to do so, except by stating it and leaving it to the good sense of those concerned. We take the risk of offering the CIRCULAR to all without price; but free subscriptions will be received only from persons making application for themselves, either directly or by giving express authority to those who apply for them.

Foreign subscribers, excepting those residing in Canada, must remit with their subscriptions money to prepay the postage.

THE UNITED COMMUNITIES.

ONEIDA COMMUNITY

Is an association living in Lenox, Madison Co., N. Y.,- four miles south of Oneida and a few rods from the Depot of the Midland Railroad. *Number* of members, 205. *Land*, 654 acres. *Business*, Manufacture of Hardware and Silk goods, Printing the CIRCULAR, Horticulture, &c. *Theology*, Perfectionism. *Sociology*, Bible Communism.

WILLOW-PLACE COMMUNITY.

Branch of O. C., on a detached portion of the domain, about one and one-fourth miles north of O. C. *Number* of members, 19. *Business*, Manufactures.

WALLINGFORD COMMUNITY.

Branch of O. C., at Wallingford, Conn., one mile west of the Hartford and New Haven Railroad. *Number* of members, 45. *Land*, 228 acres. *Business*, Publishing, Job Printing, Manufactures, and Horticulture.

SPECIAL NOTICE.

The O. C. and Branches are not "Free Lovers," in the popular sense of the term. They call their social system BIBLE COMMUNISM or COMPLEX MARRIAGE, and hold to freedom of love only within their own families, subject to Free Criticism and the principles of Male Continence. In respect to permanency, responsibility, and every essential point of difference between marriage and licentiousness, the Oneida Communists stand with marriage. Free Love with them does *not* mean freedom to love to-day and leave to-morrow; nor freedom to take a woman's person and keep their property to themselves; nor freedom to freight a woman with offspring and send her down stream without care or help; nor freedom to beget children and leave them to the street and the poor-house. Their Communities are *families*, as distinctly bounded and separated from promiscuous society as ordinary households. The tie that binds them together is as permanent and sacred, to say the least, as that of marriage, for it is their religion. They receive no new members (except by deception or mistake), who do not give heart and hand to the family interest for life and forever. Community of property extends just as far as freedom of love. Every man's care and every dollar of the common property are pledged for the maintenance and protection of the women and children of the Community.

ADMISSIONS.

These Communities are constantly receiving applications for admission which they have to reject. It is difficult to state in any brief way all their reasons for thus limiting their numbers; but some of them are these: 1. The parent Community at Oneida is full. Its buildings are adapted to a certain number, and it wants no more. 2. The Branch-Communities, though they have not attained the normal size, have as many members as they can well accommodate, and must grow in numbers only as they grow in capital and buildings. 3. The kind of men and women who are likely to make the Communities grow, spiritually and financially, are scarce, and have to be sifted out slowly and cautiously. It should be distinctly understood that these Communities are not asylums for pleasure seekers or persons who merely want a home and a living. They will receive only those who are very much in earnest in religion. They have already done their full share of labor in criticising and working over raw recruits, and intend hereafter to devote themselves to other jobs (a plenty of which they have on hand), receiving only such members as seem likely to help and not hinder their work. As candidates for Communism multiply, it is obvious that they cannot all settle at Oneida and Wallingford. Other Communities must be formed; and the best way for earnest disciples generally is to work and wait, till the Spirit of Pentecost shall come on their neighbors, and give them Communities right where they are.

A SPIRITUAL SONG.

BY GEORGE MACDONALD, AFTER NOVALIS.

If I him but have,
If he be but mine,
If my heart, hence to the grave,
Ne'er forgets his love divine—
Know I nought of sadness,
Feel I nought but worship, love, and gladness.

If I him but have,
Willing I depart;
Follow, with my pilgrim staff—
Follow him with honest heart;
Leave them, nothing saying,
On broad, bright, and crowded highways straying.

If I him but have,
Glad asleep I sink;
Of his heart the gift he gave
Shall to mine be meat and drink;
Till, with sweet compelling,
All is leavened by its soft indwelling.

If I him but have,
Mine the world I hail;
Like a cherub, happy, grave,
Holding back the virgin's veil;
While the vision thralls me,
Earth no more with earthliness appals me.

Where I have but him,
Is my fatherland;
Every gift to me doth come
As a heritage in hand;
Brothers long deplored
I in his disciples find restored.

[*Scribner's for January.*

HOW TO KEEP RESOLUTIONS.

Home-Talk by J. H. N.

SUPPOSE you have made good resolutions in the old-fashioned way, and broken them; you have tried desperately to stand by your purpose, but without success; and this has been repeated again and again until you have lost all confidence in yourself. And suppose the devil, taking advantage of your failures, stands ready to whisper at every new attempt, "You will not keep your resolution if you make it." That is a bad state to be in; one in which your case is apparently hopeless. But there is a way out of even this trouble, as can be shown.

When the truth is clear, and you see your path plainly before you, and make in accordance with it a true resolution, then, instead of stopping to distrust yourself, and listening to the devil's whispers of discouragement, there is another thing you can do. Turn inward and reflect that *God* is interested in that resolution as well as you, and that if it becomes successful it will be a profit to him as well as yourself. He has produced it, and your keeping it is a common interest between you and him. When you have settled this point, the next thing is to put the resolution you have made into the keeping of God's spirit. This is an act of the heart which words cannot describe, but you can find out how to do it. Put your resolution into God's hands; trust him to keep it for you; trust him to make you keep it. In the first place you can *pray* him to make you keep it at any cost; you can ask him to discipline and drill you until you do keep it, if it takes years of suffering. When you have asked him to do that, you can believe that he will do it. Instead of listening to the devil, who whispers that there is no use in your making good resolutions because you will break them, turn your ear the other way. God is whispering too; listen to him. He says, "I can make you keep your resolutions; trust me and I *will* make you keep them." Listen to this whisper, and talk with God about it, until you feel and know that he will do what he promises.

We differ on this point from the teachers of the old revival school. They exhorted people to form good purposes, and assumed that by so doing they were teaching the way to be saved. But people broke their resolutions and so lost their hopes. Thousands of supposed converts at length took up the lamentation, "The harvest is past, the summer is ended, and we are not saved." They did not know how to *insure* their resolutions, by putting them into God's care. In the revivals which are now coming there will be good purposes formed, as before; but they will be insured and taken care of by faith, as they were not before. In other words, *moral* strength will be backed up by *spiritual* power.

The power to make a resolution is a part of the machinery of human nature; how to keep that purpose in eternal motion is the thing to be sought. A man can make a water-wheel, but where is the water to carry it? Your resolution is good for nothing except as you can get the power of God upon it. Backed up by the spirit of God, moral power becomes omnipotent, and you can do what you please. Paul, referring to this reinforcement, spoke the literal truth when he said, "I can do all things through Christ who strengtheneth me." By receiving the strength of eternal life into your moral power, you can overcome any passion; you can face any danger; you can ride the whirlwinds of hell without fear. This was Paul's philosophy. He thoroughly understood that spiritual power can enter into moral power and make it almighty. This points out to all the way of deliverance from seventh-of-Romans experience and every snare of the devil. When you form good purposes, talk with God about them until you know that he has adopted them; then they become his and not yours. Transfer them to him, and your righteousness becomes his. Give up, to begin with, the idea that you can keep your resolutions yourself; put them into God's hands; then you have nothing to boast

of yourself, and yet you are omnipotent in righteousness.

HOW TO START A REVIVAL.

WE have no fellowship with the idea that God is a capricious being, who once in a great while, after long and pertinacious teasing, vouchsafes to bless us with the presence of his spirit. The Bible tells us that he has poured out his spirit upon all flesh; we believe that operation is still going on; that his spirit constantly radiates from him as heat and light radiate from the solar center; and that it is pressing for entrance at every human heart. We believe it would continually dwell with us and in us, giving us peace, joy and salvation, were it not in some way barred out. It cannot freely flow into hearts that are hard or that are filled with insincerity and worldliness, but will flow and does always flow into hearts that are soft and sincere and love not the world. "Thank God for misfortunes!" many have exclaimed, when sickness has brought them or their friends nigh unto death, or fire or flood has destroyed their property, or by other means they have been made to suffer deeply; for then their hearts have been softened—they have felt genuine earnestness—they have realized how vain it is to trust in the world for happiness; and then the spirit of God has flowed into their hearts and filled them with happiness so pure and sweet that their sorrow is obliterated in joy; and when a number of hearts are thus affected there is what is called a revival: the spirit of God has free course, and produces its glorious fruits. But first obstructions must be removed and hearts prepared to receive that spirit. This may be accomplished in a great variety of ways. Sometimes a plague or famine or war breaks the hearts of a nation, and there is a revival of corresponding proportions; in other cases the preparation and the result are limited to districts; in still others to towns and neighborhoods. But in all cases similar causes produce similar results.

Now if the spirit of God is ready to flow into every broken and sincere heart, why wait for misfortunes? Why compel God to employ his terrible judgments? Why not seek brokenness and sincerity by other and better means? We have found as a Community that this is practicable. Criticism can make hearts soft and earnest as well as fire and flood, sickness and death. It can crucify egotism and selfishness, and reveal every hidden fault; and so prepare hearts for the heavenly afflatus. We have tried it. We know that a time of earnest mutual truth-telling is a sure precursor of a deeper and better spiritual experience—in other words, of a genuine revival, in which God's spirit touches all hearts and makes them flow together in love and worship. Try it, ye churches, who vainly strive for the down-pouring of the Holy Spirit. Do not wait for the preliminary judgments. Soften your hearts, so that that Spirit can flow in, by mutual criticism. No matter whether you have a pastor or not. Come together in the spirit of love and earnestness, and speak the pure truth about one another's character. Take turns as subjects and critics and be thoroughly sincere, and you cannot fail of the expected blessing.

It was by criticism that the great Pentecost revival was produced. Peter's words, which pricked the hearts of the multitude so that they cried out, "Men and brethren, what shall we do?" were burning words of criticism. He told them the truth about Jesus and about their treatment of him, and it brought them under judgment. Their hearts broke, the spirit of God flowed in; "and the same day there were added unto them about three thousand souls." So, too, criticism has had much to do in later times with the origin of revivals. Finney and others forty years ago used to criticise the churches most scathingly; that was relied upon as more important than any other means in starting a revival. Doubtless one reason why regular pastors are less successful than others as revivalists is that their relation to their churches weakens their sincerity and power of criticism; they are afraid to speak the naked truth; their very support is dependent upon their retaining the good will of their parishioners. For this reason alone it would be better that criticism should be undertaken by the church as a body; besides, the pastor himself may often need criticism as much as any one. But if this were not the case, it is evident that the criticism of many would be likely to produce greater effects than that of a single one however wise and sincere. Let then mutual criticism be started in churches, in neighborhoods, in families, and wherever people desire to improve their characters and become mediums of the revival spirit, which is the Holy Spirit. W.

THANKFULNESS.

MUCH has been said on the subject of thankfulness; but like a rich and invaluable mine its treasures are inexhaustible. It often costs a struggle to be heartily thankful for what seems adverse in almost every particular. You were once perhaps full of activity and usefulness, and are now disabled or set one side; your immediate friends may seem cold and distant, so that you at times are tempted to say with David, "Lovers and friends have forsaken me." Some that were near and dear may have stepped the other side of the vail; and you yourself may be to all appearances a mere wreck of your former self. But just at this point of desolation let your heart be touched by the finger of the living God; let all disparaging thoughts of yourself and others be displaced by a sense of God's goodness, and let thankfulness fill your heart, no matter what your circumstances may be, and you will surely find your burdens removed and under every stone you may chance to turn you will find a treasure.

One may ask how he is to be thankful under continuous adversities. There is no doubt that our adversities are caused in a great measure by unthankfulness. Christ is thankful and Christ is in us. Let us confess his spirit of gratitude and meekness, persisting in so doing regardless of feelings, and in due time all clouds will be removed and the sun of righteousness will shine in our hearts continuously. "He that offereth praise glorifieth me." C. B. S.

ABRAHAM'S SOCIAL TRIALS.

ABRAHAM'S love of woman no less than his love of children was severely disciplined. Twice the beautiful Sarah was snatched from him and he saw her the wife of Pharaoh in Egypt and then of Abimelech in Gerar. His idolatry having been destroyed, God generously restored to him Sarah undefiled. His long deferred hope for a child must have been a sore trial to his faith, and when Ishmael gladdened his fatherly heart he brought with him new temptations to test his loyalty; he was compelled to turn the boy and his mother into the wilderness, "and the thing was very grievous in Abram's sight because of his son." That he did not make these sacrifices from a cold, indifferent nature, is shown in the humane and tender spirit he displayed in his plea with God for the sparing of Sodom. Love for God was his ruling passion, and neither woman nor child could stop his obedience. The foundation of the character that enabled Christ to say, "Who is my mother? and who are my brethren?" was laid in Abraham and through him transmitted to the chosen race. J. B. H.

HABITATIONS.

II.

ACQUISITION of power and wealth by war and robbery is the leading characteristic of barbaric life, and the acquisition of power and wealth by production and trade is the leading characteristic of civilized life. Neither of these forms of society have as yet so completely prevailed in this world as to entirely exclude the other. Nevertheless it is sufficiently manifest to every student of history that the past has been more especially characterized by the barbaric or savage element than the present, and that it was chiefly this element in ancient times which determined the location, form and character of the habitations of men. Trade, or exchange, is the watchword that is blazoned on the banner of civilization. It is by means of exchange that an individual has liberty to devote his undivided energies to the production of any one thing that society needs with the full assurance that society will in return supply each and every one of his many wants. It is by means of exchange that countries, communities and individuals are bound together by innumerable cords of mutual interest. How different must be the habitations of those men who are devoted to production and exchange and all the arts of peace, from those of the uncivilized who are devoted to the arts of robbery and war!

Let us first notice this difference in respect to location. We have seen that the barbaric home must be made as inaccessible as possible for the sake of protection against enemies. Exactly the reverse of this is the case of the civilized home. Where exchange is in view, the most easy and rapid communication is the great desideratum. It is for this reason that civilization loves the sea-shore and builds

there its immense emporiums and temples dedicated to commerce. By far the easiest and cheapest method of conveying burdens from place to place, is that of putting them afloat in vessels upon the water. The cradle of civilization must then be characterized by these two contiguous elements: land to furnish a home for man and to produce materials to supply his necessities, comforts, and luxuries; and water to provide for their easy conveyance and exchange. Placing before us a map of the world, what particular spot should we point out as the one in which civilization should come to its birth? Unquestionably we should select the region bordering the Mediterranean sea. Its very name indicates this. Mediterranean: In the midst of the land. With varying soils, races and productions on its borders, what wonder is it that man there first learned to build and launch his ships, and to secure the wealth and power that is born of exchange? The Phœnecians, a Canaanitish race, and dwellers upon the sea-shore, were the first to profit by learning this most valuable lesson. Assuming the office of carriers between nations and communities widely separated by manners and customs and animosities as well as by distance, these first rovers of the sea were enabled to levy a tax both on the producers and consumers of the merchandise they carried from land to land. In this way they rapidly drew into their own coffers the wealth of the world. Evidence of this we find first in the extent and splendor of their native seaport cities, Tyre and Sidon, and those of their colonies—Carthage, in Africa, and Carthagenia, in Spain. Secondly, we have evidence of the astonishing facility with which they accumulated wealth in the wonderful promptness with which they rebuilt their splendid habitations on the seashore after they had been completely plundered and demolished at different times by their terrible enemies the Romans. Those were the palmy days of free trade, and the world's carriers and merchants did not fail to profit by their advantages.

As fruitfulness is the outgrowth of the genial interchange between those great elementary divisions in the natural world, earth and air, causing the earth's surface to teem with the luxuriant verdure, the rich fruits, the golden harvests, as well as the countless forms of animal life, so do the combined influences of land and water, gem the commodious harbors with opulent cities, and whiten the waves with the myriad sails of commerce. What an example of this truth is Great Britain, surrounded on all sides by the sea, with her numerous seaports! The enormous wealth that is contained within her borders is a demonstration of the peculiar advantages of her location for production and exchange.

The fact that the great centers of commercial life are transferred from the borders of the Mediterranean to the north of Europe, to England and America, is evidence that civilization has outgrown its cradle, and has attained a maturity which requires a whole ocean as an arena for its activity. Steamships, railways and telegraphs have greatly counteracted the untoward effects of long distances so that civilization can build its habitations in places which would never have been thought of in the early ages.

In studying the location of cities, one cannot but be impressed with the thought that Providence in laying the foundations of the continents and islands, and in shaping their borders had an eye to the supplying of the varied wants of civilized man. Note for instance the many advantages as an emporium of exchange possessed by the city of New York. It has a harbor that affords shelter from the wind and waves. It has a large amount of water-front affording facilities for loading and unloading vessels. But a most notable feature is the fact that it is so largely surrounded by land, at the same time that it is so closely connected with the water. Being at the apex of an indentation of land, it is in comparatively close and easy communication with a long range of seacoast both northeast and south. Then again the Hudson River affords cheap and easy transit far into the country north of it, while its head waters are at the eastern extremity of a long level that stretches westward to Buffalo, attracting exchange across the great lakes with the west. What an interesting circumstance it is that the Alleghanies did not stretch their rugged barriers northward to the lakes. With a country inhabited by a civilized people, how could New York fail to become a great and prosperous city?

We have briefly glanced at the location of human habitations with reference to the business of exchange. It yet remains for us to look at human homes with reference to the facilities they afford for production, which is, perhaps, the most important member of the great duality: the father and mother of Civilization, Production and Exchange. H. J. S.

REVIVAL RECOLLECTIONS.

II.

OUR church did not relapse into the same degree of spiritual apathy it was in before Mr. Nettleton's revival. Prayer-meetings were better sustained; and the singing of the revival hymns from the "Village Hymn Book," was sometimes very inspiring. The popular belief however, was, that it was only on special occasions that Christ poured out his Spirit upon the world; so there were no conversions for the next four years, and the people did not expect any.

At the end of that time a new minister by the name of Johnson, was installed. He sympathized fully with Mr. Nettleton and President Edwards, and was an earnest, godly man. This was in 1831, the year signalized by powerful revivals throughout the country. The Presbyterian churches held a church conference once a month. Several churches met, and reported the spiritual state of their societies, and when there was any interest manifested the meeting was protracted for three or four days. After one of those meetings, my mother told me that C. W., one of my schoolmates, had given her heart to God, and had sent a request for me to attend the prayer-meeting that afternoon. C. was present at the meeting, and handed me the hymn, "Welcome, welcome, dear Redeemer," saying at the same time, "This is the sentiment of my heart." My feelings found vent in tears, and I resolved that I, too, would seek the salvation of my soul. But this was the way I took to do it. I collected a bundle of the most alarming tracts I could find and carried them to school the next day. These I distributed among the older scholars who were ready to join me in this method of salvation-seeking. Our lessons were of no consequence for several days because we were attending to more important concerns. How pious we did try to make ourselves over those tracts!

The church appointed a committee to visit and pray with every family, and to talk with every person they met upon the subject of religion. At an inquiry-meeting, Mr. Johnson invited all who were willing to give themselves to God at that hour, to come forward to a particular seat. (This was the first anxious-seat in that church, and the last one during that revival.) I was one of the number who went forward, and when the prayers were over, I was ready to take the attitude of a young convert. I was very joyful—full of zeal and exhortation—and I right away established a prayer-meeting for the young people at my father's. I imagined that I was getting along finely, and could make a very good prayer; but Christ and Mr. Johnson thought otherwise. C. B. B.

FISH-CULTURE IN THE UNITED STATES.

THE TROUT.

I.

THE method of propagating fish by artificial means was discovered by a German nearly a century ago; but it was rediscovered and rendered practicable in France in the year 1837.

The first experiment of the kind in this country was made in 1854 by Dr. Garlic of Ohio; but it is said that the Hon. Stephen H. Ainsworth of Caledonia, N. Y., started the first fish-breeding establishment. The next one of importance was the cold spring trout-pond in Charlestown, N. H. It commenced operations in 1860. The first year fifteen hundred trout were hatched; the next, ten thousand, besides forty thousand salmon-trout. The business seems to have steadily increased so that in 1871 over three hundred thousand of these two varieties of the trout were raised there, besides a large number of black bass.

The Caledonia fish-ponds are now under the control of Seth Green, superintendent of the fish commissioners of this State. This is said to be the largest establishment of the kind in the world. Last year were hatched there over nine hundred thousand white fish, eight hundred thousand salmon-trout, besides speckled trout and other kinds of fish, which are raised there in large quantities. Forty-two lakes were stocked with fish from this establishment last year; but much remains to be done in this line, as there are over six hundred lakes in the State. There is another establishment for pisciculture in Mystic, Conn., under the superintendence of Wm. Clift. This is a private enterprise, but large numbers of fish are raised here for the State. There are nearly a score of other small enterprises, but none are so important as those mentioned.

The breeding of fish has now become an established business. The spawn and the young fry have each a commercial value, regulated as are other productions by the fluctuations of supply and demand. The prices at the Poheganut trout-ponds last season were as follows: Trout spawn, ten dollars per thousand; trout fry, thirty dollars per thousand; salmon spawn, thirty dollars per thousand; salmon fry, fifty dollars per thousand; black-bass fry, fifty dollars per thousand; one-year-old, fifty dollars per hundred.

What becomes of all these fish? may be asked. A large part of the white fish, salmon-trout and black-bass go to stock lakes, rivers and public waters; but most of the speckled trout are sold to fish farmers. It may be unknown to some that farmers engage in fish raising, and a word of explanation may not be amiss. Let us take a look at Mr. C's. establishment on Long Island as a

sample. A small stream takes its rise on his farm. In 1862 he made a dam across the ravine where the brook leaves his grounds, and stocked the pond with five thousand young trout. After securing the outlet with a good screen to prevent their escape he left them to take care of themselves. Two or three years later the pond gave him rare sport at fly fishing. One day a city sportsman strayed to his place and was so well pleased with it that he rented the exclusive right of fishing from the pond for a term of years, Mr. C. agreeing to put in one thousand trout every spring and keep off poachers. Some farmers own two or three ponds, and thus keep the large and small fish separated. Nearly all now feed their fish as they do other farm stock.

I once made an experiment to ascertain how fast trout grow. I confined one hundred trout in a box of running water. They were from four to six weeks old and half an inch in length. To make the experiment as accurate as possible I placed a screen over the box to keep out insects, and I never gave them a particle of food. At the end of eight months I noticed that the larger ones were eating up the smaller ones, and there were only about fifty left. These were about the size of a rye straw in thickness and one inch in length. The whole number would not have weighed half a pound.

I next experimented with five hundred trout of the same age and size. They were confined in a shallow pond, four feet by six, and were fed on hashed liver once a day for eight months. At the end of that time they were from four to seven inches in length, with an average weight of a fraction over four ounces. B. B.

ONEIDA CIRCULAR.

TIRZAH C. MILLER, EDITOR.

MONDAY, JAN. 27, 1873.

☞ Rev. Joshua Leavitt, D.D., who died last week in New York city, commenced his career as a lawyer in Putney, Vt. Having been converted in a revival that occurred there about 1826, and having but poor success in his profession, he asked "'Squire Noyes" (the father of J. H. N.) what he would advise him to do. He was advised to enter the ministry, which he did, after a short course of study at New Haven. He soon became famous as a Revivalist and ultimately as an editor, first of *The Evangelist*, a paper devoted to Finneyism, and afterward of the *Emancipator*, an organ of religious Anti-slavery. He also published several popular books, among which the best perhaps was the *Christian Lyre*. He has been a lifelong and busy worker among the editors of New York city, devoting himself latterly to the *Independent*. He belonged to the editorial generation of Bennett and Greeley, and in his line might almost claim rank with them as one of the fathers of the modern newspaper. The trio have passed away within the same year.

A WORD ABOUT DICKENS.

FORSTER'S "Life of Dickens" has brought on a fresh shower of comments upon the works of the great English novelist. The reviewers run over his books again, analyzing his genius, praising his talent, criticising certain peculiarities of his style, his humor, his lack of depth, and so on; but there is one characteristic of his works which we have nowhere seen referred to, and it seems to us that it deserves some attention. Dickens showed again and again that he believed in the possibility of improvement—in a radical change of character for the better—as may be seen by reading almost any of his stories. We do not now recall any novelist who has in anything like the same degree idealized and extolled that possibility as Dickens has. Whether he ever had any experience in suffering himself which made him draw near to God in a spirit of reconciliation, he certainly caught from some source the happy idea that chastening and adversity, by softening the heart and starting a growth of the nobler traits, may be so received as to prove greater blessings than apparent prosperity.

Who has not experienced a feeling of disappointment at the opening phases of young Martin Chuzzlewit's character because of its absorbing selfishness, even where Mary was concerned? But Dickens put his hero through a course of discipline which so refined and humiliated him as to apparently quite eradicate that repulsive trait and make him a noble, generous man. Remember how old Scrooge was transformed from a miserly misanthrope to a free-handed benefactor; and Mr. Dombey from a proud, hard, unnatural parent, to a tender-hearted, loving father. A recent reviewer said that Mr. Dickens "spoiled a fine character" in making Mr. Dombey turn out thus. Men who live continually on the dead level of worldliness have no idea that a subtle, potent influence can enter a man and utterly change his nature; they won't believe it if the fact is before their eyes, and consequently they scout such metamorphoses as Dickens described as sentimental affectation.

Belief in change of character is one of our broadest foundation stones, and within the last ten years the O. C. has seen as wonderful and complete transformations as any Dickens ever penned. Could you have known A, B, and C ten years ago and not having seen them since become acquainted with them now, you would not recognize them as the same beings. However Dickens's own life may have been at variance with the models which he held up to his readers, we cannot doubt that there was something good in the inspiration of a novelist who lent his genius to the idealizing of that grand possibility of human nature. Dickens has not overshot the truth in his conceptions of this inner power, whatever may have been his exaggerations in other respects. Human nature, so long as it can feel the magnetism of heaven, does and will believe in the possibility of growing better. Dickens ought to receive credit for nourishing that hope—for polishing and brightening this truth-diamond until it was iridescent at every angle.

COMMUNITY JOURNAL.

ONEIDA.

—A hard winter so far.

—The Librarian has lately added to his scientific shelves, "How Plants Behave," a book for children by Dr. Gray; "The Flora of the Southern States," by Dr. A. W. Chapman, of Florida; and the "Flora of North America;" by Torrey and Gray—an old work and scarce.

—Beside the work at box-making the children now work at chain-making. Messrs. Woolworth and Hutchins have lately fitted up a room in a warm and well-lighted basement where they carry on this business. Our trap chains are made of malleable iron, and in a manner just adapted to a household shop and to the children. Our steam heating and various other conveniences do away with numerous stoves, the tending of fires, the bringing in of fuel, and numberless chores, which in common homes serve to keep the children busy and happy, so we have had to seek pleasant and profitable employments for them.

—W. G. K. writes from the Villa:

Jan. 22.—A singular phenomenon was observed in our front yard this morning. The recent fall of snow yet unbroken by the tread of feet was found to be covered by balls or rolls of snow of various sizes from that of a snow-ball which one grasps in his hand to fling at a friend, to a roll a foot or more in diameter. The shape of the rolls was very much like a lady's muff, with holes through the center. The tracks from which they were rolled were clearly discernible, all starting from one point near the corner of the house and spreading out like a fan. This singular freak of the snow must have been caused by the wind breaking into jets as it came around the house scooping up the light snow and rolling it over and over as the shop-man rolls his ribbon.

—Sunday; but no painful, anxious Sabbath-keeping, the soul torturing itself over the question whether it has not in some way "done the things which it ought not to have done," and thereby added sin unto sin and load unto load, while it was vainly striving after rest and a pure conscience. That is the kind of Sabbath we have escaped from. Believing in the futility of the Sabbath and of many of the old ordinances, we have looked to the confession of Christ to give us a sense of purity and obedience. The introduction of our two-meal system has made some change in our Sunday-keeping. Breakfast at eight A. M.; and then the people go their several ways, but not to our regular businesses. The folks at the counting-room get their mail; the proof-readers finish up their work and the printers strike off the CIRCULAR; the Criticism Club attend to any cases that have offered; at one o'clock P. M. the silk-men have their meeting; at two o'clock the Business Board meets; at three P. M. we have dinner; then a "bee" for folding and mailing the CIRCULAR; about six o'clock there is some kind of entertainment in the Hall (some instrumental music, some singing, and sometimes a little play or tableau); at seven o'clock comes the regular evening meeting, lasting only an hour.

—"Our Feet and their Covering"—a lecture by Dr. G. E. Cragin one evening last week. The foot, said the Doctor, is an exceedingly complicated member—no part of the human system is more so, and its proper dissection requires a great deal of patience on the part of the student. By means of numerous drawings the lecturer exhibited the anatomy of the foot—showing that it is an arch of small bones bound together by elastic ligaments and resting on two points, the large heel bone and the ball of the foot. To farther increase its elasticity in walking there is the strong great toe, which should always be left entirely free and never tampered with or cramped. The healthy, beautiful foot is wider across the ball or base of the toes than it is farther back, and the toes spread still wider, leaving space between them, and every one quite free and individual in its action. In the well-developed foot a straight line drawn through the center of the great toe and center of the heel will be parallel to a line drawn parallel to the inner side of the foot. This the lecturer illustrated by exhibiting the foot of a child eight years old. Swellings of the great toe-joint and bunions are caused by crowding the toes into narrow pointed shoes, thereby bending the great toe away from the right, natural line, and, by opening the joint at its base, causing sores or ulcers. The narrow pointed boot not only deforms and diseases the foot, but it greatly impairs the efficiency of that member. The lecturer exhibited a variety of faulty and fashionable lasts; and finally the correct and anatomical last. One who has always had his shoes made on such a last can scarcely fail of having healthy, enduring feet. To show us how much our feet have been deformed by our faulty shoes and lasts, he exhibited the profiles or outlines of a large number of feet in the Community. The ex-

hibition was enough to make one in earnest to have our children well and scientifically shod.

—Such paragraphs as the one subjoined occasionally come into our hands, and believing that many of our readers like glimpses of heart experience as well as we do, we venture to insert them in the Journal column:

"Last evening a strong conviction came upon me that I did not praise God enough—did not appreciate his great goodness to me. I have been all the time receiving his blessings, and am not quick to acknowledge them and show my gratitude. This thought gave me a new sense of what God had done for me, and I resolved that I would "praise God with my whole soul." I felt like praising him for bringing me to the Community where I can learn to love him as one whose right it is to have my first and deepest love even above father, mother, brother or lover. Besides the manifold blessings of a good home, loving friends and the like, I felt like praising God for all the discipline he had given me; for the deep suffering—suffering of body and spirit which at times seemed almost unendurable in its deep searchings into my heart and life, but has now resulted in peace with him and in perfect reconciliation to all his ways. I praise him for withholding gifts from me which I have sought in a willful, passionate way, and for thereby softening my heart and turning it to interior, spiritual things, which have given me far greater happiness than the things which I desired, had they been given me. 'I will extol thee, my God, O King; and I will bless thy name for ever and ever. My mouth shall speak the praise of the Lord; and let all flesh praise his holy name for ever and ever.' A. M. H."

WALLINGFORD.

—The new iron bridge is at last finished and ready for travel when it shall have been officially tested. It is a light-looking structure—two wrought-iron arches; one spanning the distance from the east abutment to the pier in the middle of the dam, the other from the pier to the west abutment. Our communication with the town and railway is now almost direct.

—One of the students tells us of an incident that interested him a good deal. There is an old colored man at New Haven who is in the habit of coming round the colleges to sell candy. He sometimes comes into the laboratory of the Scientific School. The other day he was in there, and coming up to Charles Burt watched him awhile at his work. Charles looking up said, "Well, David, how much do you make selling candy?" "Oh, sometimes five or six dollars a day," said David. "I do pretty well, but that is not what makes me feel good; I've got something better than that. I've got the love of God in my heart, and that makes me happy all the time. Oh, I feel it right in here"—striking his breast—"and it fills me full! I have had a *conversion*, and I don't care what people do to me; if they insult me or treat me unkindly, the love of God in my heart makes me happy."

FIRESIDE CHAT.

Asterion.—Come, Antares, there is half an hour before the evening meeting, sit down, please, by Regulus and tell Chara and me your impression of the traveler X. who visited us to-day.

Antares.—He pleased me. Although he has been a great traveler he was what we are wont to call a *home* man, interested in society and interesting in himself. His knowledge of geology in which you know I am specially interested, was really deep, and then the flow of his conversation on many topics was entertaining and unobtrusive—there were no awkward pauses in it. But perhaps you are asking my impression of X. as you would ask it if he were before our Criticism Club, and I could talk of him as freely and kindly as I would of one of you?

Chara.—Yes, speak like that by all means. It is the deepest thoughts that we want.

Antares.—Then I should say further that I thought X. was not a wholly soft-hearted man. There was a stony spot in his heart which he showed whenever he spoke about marriage. Though he was very courteous toward us in all respects, and when he was in the nursery took our Community children in his arms with unfeigned affection, and spoke of them with heartfelt admiration, he could hardly conceal his impatience at our social difference. He seemed to cling to marriage with some of the bitter implacability that the South clung to slavery. In the spirit he showed about marriage I could not but wonder if he would be willing that God himself should make any changes from old social institutions to new.

Regulus.—I had that thought too. X. acknowledged to me that he felt about marriage a good deal as the slaveholders did about slavery before the war, and he justified himself in feeling so. He seemed to think that marriage was a subject which ought not to be discussed any more than the existence of God. I thought that he was not childlike toward God in this matter. If his heart is so bound up in marriage when all the drift of the times seems to be against it, he ought to pray very earnestly and be certain that he has God's mind about it. Unless he does so I think he will find that he is "kicking against the pricks."

Antares.—That is so. It seemed to me that X. did not realize sufficiently that Jesus Christ is to-day an active, working power in the world a thousand times stronger than the devil. Christ said: "All power is given unto me in heaven and in earth," and it is quite as likely to be in his policy to change old social institutions for new and better as it is in the devil's. The devil is not the principal actor on the world's stage, however conspicuous he may be.

Asterion.—The devil certainly does not believe in improvement. Old ruts suit him. He would like to keep the world back in everything, and so long as he can make people believe that God has no other mind than to retain and maintain institutions which were fashioned in barbarous ages he holds an immense advantage. I think that the question which bitter partisans of marriage have to decide is not whether existing institutions are to be permanent or not, but whether they are willing that God should have his own way with them or not.

Regulus.—I should dislike to stand in the attitude toward marriage that X. did. I should be afraid of hampering God and blocking up the path of his progress, to cleave so tenaciously to systems to which he has not irrevocably committed himself. His position reminded me of the Jews who tried to bring Christ into condemnation for healing the impotent man on the Sabbath.

Chara.—The Lord is Lord of marriage as well as of the Sabbath.

Antares.—If X. is going to be a thorough religio-social student, it seems as though he ought to assume that it may possibly be in God's plan to change the oldest institutions as people progress in civilization. He should then believe that the spirit of Christ now at work in the world will make it manifest what those changes are to be, and wait for them patiently and forbearingly.

Chara.—The mourning and desolation and tyranny that hide in the precincts of marriage ought to make X. soft-hearted. Though we have to testify for ourselves we must still say that nothing like them are to be found among us. We are happy.

Regulus.—I liked Antares's discrimination that X. was not wholly soft-hearted. I thought he showed a soft heart in his love for children and fair dealing. You know he said that he did not wish to judge us and our principles as many have done, without seeing us face to face. I thought that was very honorable in him. I wish that X. might realize that he needs to have his heart broken from all attachments if he is going to follow the Spirit of Truth.

Asterion.—We cannot have any quarrel with such a man as X., for we do not cling to our own systems, however great the happiness they beget, with anything like the tenacity with which he clings to marriage. All that we ask is that the "King of all the earth" may have his own way in respect to marriage and everything else. That is what every body must consent to at last. Did the whistle sound for meeting?

Chara.—Yes, just a moment ago. G.

RELATIONS OF PETER AND PAUL.

BY THEODORE L. PITT.

THERE is an assumption on the part of some historians of Christianity, that Peter and Paul represented two distinct parties, with different tendencies of doctrine, in the Primitive Church. In other words, that there was in that Church a Petrine form and a Pauline form of Christianity.

We do not believe there is any truth in this assumption, and hold that it can be shown from the New Testament record to be unfounded. Instead of divergence and antagonism between these two apostles, there is evidence of brotherhood, sympathy and unbroken unity.

One great distinction between them is indeed recognized and recorded by Paul, Gal. 2: 7, 8. One of them was the leading apostle to "the circumcision"—the Hebrews; the other was the apostle to the Gentiles. Both were mighty in their respective callings.

The assumption is that Peter was the representative of that Judaistic, legal form of Christianity, which is so often condemned in the writings of Paul, and which eventually became the deadly antagonist of the true spiritual, anastatic Christianity of which Paul was the foremost representative. If this assumption were true then we should have to admit that the original apostolic nucleus of the Primitive Church, instead of remaining a unit, became hopelessly split into discordant factions, and the grand end for which Christ labored—the permanent oneness of his apostles—was lost.

This is a question of the greatest possible interest to every student of Christianity. And its decision must depend on the actual historic remains of the Primitive Church before the destruction of Jerusalem. The so-called Christianity that has existed this side of that event has no relation whatever to the question, so far as the historic facts are concerned; for the simple and sweeping reason that the Second Coming, with its attendant resurrection, came in as an effectual cut-off between this Christianity and that of the New Testament Church. And as no trustworthy records of apostolic career exist other than the New Testament, we are remanded to that book alone for the decision of this question of the relations of Peter and Paul.

Now what are the facts?

Before the conversion of Paul, and for a good while after, Peter was the leader of the Apostolic Church. As such, for what was he distinguished? For a Judaistic tendency? On the contrary, he was the most liberal of all the apostles. He was the man chosen by Christ to open the door of the gospel to the Gentiles, in the persons of Cornelius and his household. He was the first to apprehend that the Glad Tidings of Christ, the results of his resurrection, and the outpouring of the Holy Ghost, were not gifts limited to the narrow world of the House of Israel, but that "of a truth God is no respecter of persons, *but in every nation*, he

that feareth him and worketh righteousness, is accepted with him." Taking this truth—that had been revealed to him in a thrice-repeated vision, and corroborated by the angelic message to Cornelius—into his heart, he boldly preached Christ, his resurrection, and the judgment to come, to the Roman centurion. "While he yet spake the Holy Ghost fell on all them which heard the word. And they of the circumcision which believed were astonished, as many as came with Peter, because that on the Gentiles also was poured out the gift of the Holy Ghost. For they heard them speak with tongues and magnify God."

Here was a new and daring thing to be done, an act contrary to the historic and prevalent Jewish prejudice. Peter was the man of all others to do it. Bolder than the boldest when his eye was on his Master, he would walk on the waters of the wildest sea. The barriers of fifteen centuries were to be broken down, and the door of salvation opened to countless generations of Gentiles; and Peter as he prayed on the housetop at Joppa, was commissioned and led forth by the hand of God to do this great deed. He was faithful to the heavenly vision and did the work thoroughly and well. In all his after life as told in the New Testament, except one brief wavering, he was faithful to that vision, and stood like a rock for the salvation and freedom of the Gentiles. See how nobly he did this, and consider that in doing it he faced the same lion of Jewish prejudice which afterward when its wrath was roused to highest fury sought to crush and slay Paul.

Here is the account of his first encounter with hereditary Judaism in the Church: "And the apostles and brethren that were in Judea heard that the Gentiles had also received the word of God. And when Peter was come up to Jerusalem, they that were of the circumcision contended with him, saying, Thou wentest in to men uncircumcised, and didst eat with them." Peter had done a new, startling, inspired, independent act, and they were bound to overhaul him for it. In justification of his conduct, Peter "rehearsed the matter from the beginning and expounded it by order unto them," concluding by the following lofty and unanswerable appeal: "And as I began to speak, the Holy Ghost fell on them, as on us at the beginning. Then remembered I the word of the Lord, how that he said, John indeed baptized with water, but ye shall be baptized by the Holy Ghost. Forasmuch then as God gave them the like gift as he did unto us, who believed on the Lord Jesus Christ, *what was I, that I could withstand God?*" No wonder is it that when they heard these things, thus told, "they held their peace, and glorified God, saying, Then hath God also to the Gentiles granted repentance unto life."

Again, in the memorable council at Jerusalem, on the question brought before them by Paul and Barnabas, of the extension of circumcision and the Mosaic law over the Gentile believers, we find Peter again on the side of liberty and against the Judaistic party. On this occasion as on others, he is the harmonizer and the liberal, progressive leader. Read his speech on this occasion. How simple, effective and lofty, full of the old ring of Pentecost:

"And the apostles and elders came together for to consider of this matter. And when there had been much disputing, Peter rose up and said unto them, Men and brethren, ye know how that a good while ago, God made choice among us, that the Gentiles, by my mouth, should hear the word of the gospel, and believe. And God which knoweth the hearts, bare them witness, giving them the Holy Ghost, even as he did unto us: and put no difference between us and them, purifying their hearts by faith. Now therefore why tempt ye God, to put a yoke upon the neck of the disciples, which neither our fathers nor we were able to bear? But we believe, that through the grace of our Lord Jesus Christ, we shall be saved even as they."—Acts. 15: 6—11.

Just four sentences in all. The original may have been longer, but this is the report. It is exhaustive, going clear down to the central root of the matter and leaving nothing more to be said. It was one of those brief utterances of central men that from time to time change the world's history for all time to come—concrete announcements of a new age. These few pregnant words turned the scale. The disputants and clamorers were silenced. In the words of the historian, "Then all the multitude kept silence. and gave audience to Barnabas and Paul, declaring what wonders God had wrought among the Gentiles by them. And after that they held their peace." When James, as chairman, or moderator, of the council, after the discussion, gave his decision he did but little more than second what Peter had said. The glory of the decision, and of the famous letter (Acts 15: 23—29), which secured the permanent unity of the two branches of the Church, belongs, in conjunction with Barnabas and Paul, to Peter. He first opened the door of the gospel to the Gentiles. He now held it open, and declared it should never be shut, nor blocked up by Jewish prejudice, tradition or law.

We can in connection with the result of this council catch a glimpse of the meaning of the curious fact in the history of the Primitive Church, that while Paul was foreknown, chosen, and commissioned by Christ to bear his name and preach his gospel to the Gentiles, to Peter was given the work and the honor, of first carrying that same gospel in its Pentecostal form to the Gentiles, and unlocking its treasures to them for all time. It was done that a foreground of experience and influence might be secured in the Jewish branch of the Church, and in the person of its chief apostle and leader which would be of decisive value and authority when the great crisis came in which the unity of the Jewish and Gentile believers was to be attained and made parmanent, independent of the Mosaic law. It is doubtful whether this central, all-important result could have been attained then, or ever, without just such a foreground as that furnished by Peter's experience and work. It just matched the later experience and work of Barnabas and Paul. The two were welded together and became one, the unity of the Church was secured, and its emancipation from Judaism begun. In this work Peter and Paul, instead of being arrayed against each other, were in harmony and laboring for the same great end.

After this, when Paul made his famous fourth visit to Jerusalem, going "up by revelation" to communicate to the Church and apostles there that gospel which he preached among the Gentiles and which he had received by independent revelation from Jesus Christ (compare Gal. 2: 2, with Gal. 1: 12), we find Peter among the first to receive him. Paul communicated his gospel "privately to them which were of reputation"—to "James, Cephas and John"—and they all gave him the right hand of fellowship, "when they perceived the grace that was in him." Gal. 2: 9. And they recognized him as having the same office toward the Gentiles that Peter had toward the Circumcision or Hebrews. If, however, we look closer into the history of this mission of Paul as given in the book of Acts and in Paul's epistle to the Galatians, reading, as it were, between the lines, we shall find indications that Peter was the first of all the original apostles to become interested in Paul's new gospel, and the first to apprehend it. We see by the account in Acts, chapter 18: 22, that after Paul had "saluted the Church" at Jerusalem, "he went down to Antioch." To Antioch Peter followed him, Gal. 2: 11; evidently seeking to know more of the new revelation, for he at once entered into fellowship with Paul in the freedom of that gospel, fraternizing with him and with the Gentile believers. During this connection of the two apostles occurred the first and only jar between them, resulting in a severe criticism of Peter by Paul and one which his new and advanced apprehension of the gospel authorized him to administer. The story is thus told by Paul:

"But when Peter was come to Antioch, I withstood him to the face, because he was to be blamed. For before that certain came from James, he did eat with the Gentiles: but when they were come, he withdrew and separated himself, fearing them which were of the circumcision. And the other Jews dissembled likewise with him; insomuch that Barnabas also was carried away with their dissimulation. But when I saw that they walked not uprightly according to the truth of the gospel, I said unto Peter, before them all, If thou being a Jew, livest after the manner of Gentiles, and not as do the Jews, why compellest thou the Gentiles to live as do the Jews? We who are Jews by nature, and not sinners of the Gentiles, knowing that a man is not justified by the works of the law, but by the faith of Jesus Christ, even we have believed in Jesus Christ, that we might be justified by the faith of Christ, and not by the works of the law: for by the works of the law shall no flesh be justified. But if, while we seek to be justified by Christ, we ourselves also are found sinners, is therefore Christ the minister of sin? God forbid. For if I build again the things which I destroyed, I make myself a transgressor. For I through the law am dead to the law, that I might live unto God. I am crucified with Christ: nevertheless I live; yet not I, but Christ liveth in me: and the life which I now live in the flesh I live by the faith of the Son of God, who loved me, and gave himself for me. I do not frustrate the grace of God: for if righteousness come by the law, then Christ is dead in vain." Gal. 2: 11—21.

It is to be observed in this account that Paul not only criticised Peter, but wound up by re-stating to him the substance of the new gospel; and this statement of it is the most complete and clear to be found anywhere in Paul's writings. "I through the law am dead to the law, that I might live unto God. I am crucified with Christ. Nevertheless, I live, yet not I, but Christ liveth in me, and the life I now live in the flesh, I live by the faith of the Son of God, who loved me, and gave himself for me." This was the gospel that Paul took that long journey from Corinth to Jerusalem to communicate to the other apostles. This was the gospel Peter followed Paul to Antioch to learn more fully. It was forever burned into his heart in connection with the brotherly criticism of Paul.

It may be asked, Did Peter receive his criticism? The silence of Paul would be a conclusive answer in the affirmative were there no other evidence at hand. If he had not, he would have deserved and undoubtedly received at Paul's hands the severest condemnation. Nothing of the kind is recorded, for the simple reason that it never took place. Moreover, Peter himself answers this question. Long after this occasion he refers to Paul by name, calling him "*our beloved brother*," and commending his epistles; thus manifesting the truest and sweetest of all the effects of sincere, brotherly criticism—love and unity.

If it shall hereafter appear, as there are some grounds for thinking, that Peter was concerned in the production of the grand but anonymous epistle to the Hebrews, it will be found that he not only fully apprehended the nature and scope of Paul's gospel of an indwelling, resurrection Christ, but rose to the hight of the most magnificent argument in its favor. But aside from this the two accredited epistles of Peter are in full harmony with the same gospel and with all that Paul wrote.

If we turn now from Peter's career to that of Paul, we shall find on his part abundant evidence of love and confidence toward Peter. Three years after Paul's conversion he went up to Jerusalem expressly to see Peter, and "abode with him fifteen days." Gal. 1: 18. He speaks of him as the

apostle to whom Christ first showed himself after his resurrection. 1 Cor. 15: 5. He called Peter the apostle of the circumcision, through whom Christ wrought effectually, and recognized his position in the Church as equal to his own as apostle to the Gentiles. Gal. 2: 7—10. In 1 Corinthians, chapters 1 and 3, he recognizes Peter as a co-worker with himself and Apollos, and rebukes the Corinthians for having parties among themselves. some being for Cephas, some for Apollos, and some for Paul. He condemns all parties alike, and all glorying in men, and tells them that Cephas, Apollos and himself are all theirs in the one body of Christ.

In all these ways and instances we see Paul steadily regarding and speaking of Peter, not as an opponent but as a brother and co-worker in the gospel. And from his frequent mention of Peter and his comparative silence about the other apostles, we gather the idea that Peter stood nearest to him of them all. Peter was a wonderful man—in many respects a man after Paul's own heart. Behold him, in the power of the Holy Ghost, facing the multitudes on the day of Pentecost, piercing them to the heart, and converting three thousand in one day, and again on another day five thousand. Behold him with John facing Sadducean and priestly councils. Behold him healing the sick and raising the dead, casting out devils and smiting down the lying enemies of the truth with the word of power. Behold him in the great councils of the Church standing like a rock for Gentile liberty and salvation. Behold him, with the sure prophecy of a violent death always before his eye, marching grandly forward in the great work of his Master, full of mighty deeds, the medium of strength and victory to his brethren, bound and in prison oft but delivered by angels, second only to Paul in the labors of those greatest of all days in the world's history. Such a man with all his faults—faults rapidly passing away under the life- and character-changing power of the Holy Spirit—must have won the heart of the earnest, mighty Paul, and "bound him to his soul with hooks of steel."

Henceforth let no man separate these two apostles by thought or word.

Joppa, O. C., Jan. 20, 1873.

THE TWO-MEAL SYSTEM.

[We are receiving some favorable expressions from our readers about our lately adopted regimen. Our diet is at present in a transitional state, and we are not yet prepared to advocate unconditionally any established dietetic system; but we expect one of these days to have something to say on the subject. Meanwhile, we can recommend the eating of two meals a day as one of the best external means for producing a comfortable condition of mind and body that we know of. Here is a specimen of what our correspondents say:]

Cincinnati, O., Jan. 8, 1873.

DEAR CIRCULAR:—It has been said of man, in contradistinction to other animals, that he is a *cooking animal.* This is unquestionably true of woman. Doubtless nine-tenths of all the women in the world are more or less employed every day in cooking. If they can be relieved of one-third of this labor, and the world benefited, all honor to those who bring about such a desideratum.

Long since, the writer was treated by a physician who had practiced his profession seventeen years without giving a dose of medicine; substituting therefor regimen, warm, cold and vapor baths, manipulations, etc. Two meals per diem was the utmost limit, frequently only one, without a particle of food between meals. The limit to two meals is still strictly adhered to with the most favorable result. The least reflection will convince any one familiar with the process of digestion, that the digestive organs will be seriously impaired by overwork, if one meal is taken into the stomach within five hours of the preceding one. The stomach requires rest; so that they who eat breakfast, lunch, dinner and supper the same day, impose upon the digestive organs a task they cannot perform—and no wonder we are a nation of dyspeptics. Experience, the best of teachers, shows that health is promoted by limiting our daily meals to two. The Roman soldiers who conquered the world, partook of but two meals a day, and if we would overcome our national malady, we must follow their abstemious example. F.

THE NEWS.

AMERICAN.

There are 31,000 slaves in Porto Rico, who, in case the emancipation measure before the Spanish Cortes becomes a law, will receive their freedom.

According to a recent calculation the English language is spoken by ninety millions of people, German by fifty-five millions, and French by forty-five millions.

Mrs. Harrison Gray Otis, widow of the eminent Boston scholar, orator and senator of that name, died at Boston on Tuesday last. She has long been prominent in society in that city, and was a woman of remarkable ability.

A writer in Dwight's *Journal of Music* says: "Bach, Handel, Haydn, Mozart, Beethoven, are the five men to whom I would especially point as having an undoubted right to the title of 'Kings of Music,' and to their works and consequent influence the art of music is indebted for the position it now occupies. If to these names are added those of Weber, Schubert, Spohr and Mendelssohn, there will be a total of nine; and I do not think I shall be accused of exaggeration if I assert that it is to these nine great men that the world is indebted for the greater part of the enjoyment and instruction that has been derived from the practice of music since Bach first became known at the commencement of the eighteenth century."

Further accounts of the icy cyclone, which began to sweep over Minnesota and the northwest on the 7th of this month, increase the evidence of its terrible results. The storm came on suddenly after a warm and pleasant day, and raged with great fury for sixty hours. The falling snow was so dense that objects ten feet distant could not be seen. It is thought that more persons have been frozen to death than perished in the famous Indian massacre some years ago. In Stevens, Grant, Douglass and Otter Tail counties seventy persons are known to have frozen to death, and others are still missing. Seventeen perished in the vicinity of New Ulm, thirteen at Lake Heuskey, eight in Blue Earth, and many others in other places. Nothing like this storm has ever been known before in the northwest.

The lease of the bay and peninsula of Samana by the "Samana Bay Company of Santo Domingo" attracts much attention in commercial and political circles. The lease runs for ninety-nine years from Jan. 1, 1873, at a yearly rental of $150,000 gold. The Company is formed of leading business men of this country. Prominent among the corporators are S. L. M. Barlow, Alden D. Stockwell, President of the Pacific Mail Company, Dr. Samuel G. Howe of Boston, one of the United States Santo Domingo Commissioners, sent out last year, Paul N. Spofford, Gardiner Spofford, Henry Clews, C. K. Garrison, Oliver Ames, W. G. Fargo, Geo. M. Pullman and others. The Company, in the words of Dr. Howe, "obtains eminent dominion over the whole peninsula of Samana, and over the bay with all its islands and reefs. It exercises the sovereign power of framing laws for the government of its territory; appointing its officers of police, judiciary and commerce; laying and collecting taxes; establishing custom-houses; fixing duties on imports and exports; building railroads, wagon roads, canals and telegraph lines within its own territory, and, by special contract, thoughout the whole of the Dominican Republic, taking in return alternate leagues of public land. The Company may build, officer and man ships, establish a bank, and exercise most of the general powers of sovereignty. It has bought up all grants and concessions previously made by the Dominican Government for lands, mining privileges, wharves, railroad lines, and the like of whatever nature. The owners of almost all these grants and concessions are members of the Company, and they have formally renounced in writing all ownership and interest, direct and indirect, in favor of the Company. It has the virtual monopoly of all the future opportunities of establishing companies for railroads, steamboats, mining or other purposes, by an article in the convention which requires that the Dominican Government shall never charter, authorize or tolerate any such company, without first having offered to the Samana Bay Company a charter for the same purpose on the same terms." In fact the Company obtains all the rights and privileges that were offered to the United States in the proposed treaty for the lease of the same territory. The capital of the Company is $20,000,000, in shares of $100 each. As the harbor of Samana is the best in Santo Domingo, as well as the best in all the West Indies, it will eventually become the chief commercial port of the island, and the Company will monopolize the commerce of the country, and from its port duties will be able to pay the annual dues to the Dominican Government. The men who have this great project in hand look forward to reaping rich rewards. Dr. Howe thinks that their prospects are better than any that were before the old East India Companies of England, Portugal and Holland. The development of the vast resources and productions of the island, the introduction of modern improvements in means of travel, agriculture and the mechanical arts, the elevation of the people and the building up of American commercial interests in the West Indies, are to be the leading objects of the Company.

FOREIGN.

Arrangements have been made for permanent carrier-pigeon stations in Berlin, Cologne, Metz and Strasburg. The system is said to be highly approved by the German officials, and other stations are to be established.

Sir John Bowring, who lately died, was the author of some well-known hymns. "Watchman, tell us of the night," "God is love, His mercy brightens," "In the Cross of Christ I Glory," and "How sweetly flowed the gospel sound," were from his pen.

Great preparations are making at Thorn in Posen for the celebration of the fourth centenary of the birth of Copernicus, on the 18th of next month. Delegates from the Italian Universities of Padua and Bologna, of which Copernicus was a student, are to be present.

Edward Bulwer Lytton, otherwise Lord Lytton, the English novelist, poet and statesman, died recently in his 67th year. He is succeeded in his title by his son, Edward Robert Bulwer Lytton, who has gained reputation as a poet under the pen name of "Owen Meredith."

Minister Mori says Japan has been divided for school purposes into 100 collegiate districts; each of these into 250 academical districts. Moreover, the compulsory system of education has been adopted, and every youth in the empire must be educated; which strikes us as a wise interference on the part of the Government with individual liberty.

The colliers and iron-workers of South Wales have entered upon a vast organized strike against a proposed ten per cent. reduction of their wages. Over 60,000 men are in it, who are promised the good will of various working men's organizations in Great Britain. It is said that the workingmen of England propose to make this strike of the Welsh colliers and iron-workers a test case in the struggle for their demands, and intend to try their full strength upon it.

The Yeddo correspondent of the *Tribune* tells the following: "An interesting circumstance of recent occurrence, which helps to indicate the leveling tendency of the new Japanese spirit, is the entrance of a young relative of the Mikado into the chief foreign school of Yeddo. This gentleman, Fusimi no Miya, is about twenty years old, and is, I believe, the heir presumptive to the throne. He has joined the French classes, and goes through his daily duties and sports on precisely the same footing as the other scholars. All his relations with them show an utter unconsciousness of rank on his part, and an equal indifference to it on the part of his associates. It is really extraordinary, and one must know the Japanese well to understand that there is no affectation about it on either side."

FOR THE CHILDREN.

DO any of the little boys and girls who read the CIRCULAR have among their mates those who are quarrelsome? If they do they may perhaps like to hear about a conversation which took place not long ago between a little boy and his mother. Howard is a bright conscientious boy and generally kind to his mates; but he occasionally loves to tease them, and this propensity frequently causes unpleasant jarring between himself and his five-year-old brother Eddie, who is rather inclined to be quarrelsome.

One day, after witnessing a wrangle between the brothers, the mother called Howard to her and asked him "why he plagued his brother Eddie?" Howard found many excuses for his conduct; to these she listened patiently, and then showed him what would be the effect of his course upon his little brother.

"I wonder," said she, "if my boy remembers the flower-bed he took care of last summer. Can you tell me how you made your roses and other choice plants grow so thriftily?"

"O, yes," he replied, "we put muck and manure on them just as we saw the gardener do."

"Did you not one day find a large thistle in your bed, and did you cultivate and train that as you did your roses?"

"O, no, mamma, I pulled it out just as quick as I saw it. It don't bear pretty flowers and would have covered up a good many other things."

"You did right," responded his mother; "but let me tell you, my child, that you are cultivating a much worse weed than the thistle in your little brother's heart when you hector him and tempt him to quarrel. Do you not see that you provoke him to a naughty spirit? Would it not be more manly for you to provoke him to a good spirit, and when he is quarrelsome help him to overcome his temptations? If you will do this you will enjoy him much better than you did your flowers, and you will feel a great deal happier yourself."

Howard hung his head, but his mother's earnestness had touched his heart, and looking up in her face he said, "Eddie is a good boy sometimes, and I want to help him not to be quarrelsome."

P.

HOW TO SLEEP.—The only practical suggestion I ever received in this matter which did me much good was made to me by my friend Mr. Collins, the gentleman whose exploration and surveys of the Amoor River and of Siberia have been of such value. He gave me the advice just on the eve of his sailing on one of his expeditions: "Open the eyes," he said, "as you lie in bed, and look steadily, without once winking, on whatever is before them." If my sleepless patient will try this, he will find that the eye but just now so disposed to wakefulness is at once penitent, and begs to be permitted to close just for one instant. But you must be resolute: "It is my turn now. When I wanted to sleep, you wanted to be awake. Now keep open, and look at that crossing of the window-sash against the sky." "Please let me wink just once; I am very sorry,"—"No! look at the crossing of the window-sash." The eye is held to as insignificant an object as the window-sash. The brain is held to window-sash, and nothing more important than window-sash. Toujours window-sash! Meanwhile, the warmth of the bed, the hot water at the feet, is calling blood away; and I seldom find that I think window-sash long, or anything else. Perhaps it is pitch-dark, and there is no window-sash. None the less does this theory bid you hold the eye open till sleep closes it.

—*Old and New for November.*

PIANO-PLAYING AT THE OTTOMAN COURT.—Not long since a distinguished European pianist, in an evil hour, conceived the idea of going to Constantinople to exhibit his skill; and he was, of course, summoned to play before the Sultan. He was pleased and flattered by this summons, but his pleasure must gradually have ebbed away until there was not an atom left, during the long ordeal, which he thus describes:

"You are sent for," he says, "at eight in the morning in order to play at three in the afternoon; you must be in full uniform; you must wait seven hours in a very fine gallery, where it is forbidden to sit. From time to time you are informed of what his highness is doing. His highness has just got up—you must prostrate yourself. A little later you are told that his highness is taking a bath—you prostrate yourself again. His highness is dressing—you prostrate yourself. His highness is taking coffee, and you prostrate yourself at each of these particulars more profoundly than before. At length your piano is brought in. The legs have been taken off, so as not to injure the floor, a precious mosaic of rare woods. The immense grand piano is placed on five Turks! The wretched men support the crushing mass on their knees. 'Why,' you say, 'I can't play on a five-Turk piano.' It is thought you hesitate because the instrument is not horizontal. A cushion is therefore placed under the knees of the smallest Turk. No one supposes that a sentiment of humanity makes you hesitate. After a long explanation of this refinement of civilization, the piano is placed on its own legs again. The Sultan appears. After all sorts of salaams you are told to play. You ask for a chair; there is no chair. 'No one ever sits in the presence of his highness.'"

And so the pianist went down on his knees, and played in that position!—*Hearth and Home.*

THE LAUGHING PHILOSPHER.

BY GEORGE COOPER.

I know a funny little boy,
The happiest ever born;
His face is like a beam of joy,
Although his clothes are torn.

I saw him tumble on his nose,
And waited for a groan;
But how he laughed! Do you suppose
He struck his funny-bone?

There's sunshine in each word he speaks
His laugh is something grand;
Its ripples overrun his cheeks,
Like waves on snowy sand.

He laughs the moment he awakes,
And till the day is done;
The school-room for a joke he takes,
His lessons are but fun.

No matter how the day may go,
You cannot make him cry;
He's worth a dozen boys I know,
Who pout and mope and sigh.

He's plump and round—he once was slim;
I have not told you half;
I soon expect to hear of him
Exploding in a laugh!

CHOICE FLOWER-SEEDS FOR SALE.

TWENTY packages (our selection) sent to one address, postage paid, for $1.00. Special selections sent at the annexed prices:

Acroclinium, rose and white,	5 cts.
Ammobium altum,	5 "
Amaranthus salicifolius (Fountain Plant),	25 "
" bicolor, tricolor,	5 "
Asters, Truffaut's, 15 cts. German,	10 "
Antirrhinum (Snapdragon),	5 "
Balsam,	5 "
Cacalia (Flora's Paint-Brush),	5 "
Calliopsis (Coreopsis),	5 "
Celosia (Cockscomb), pyramidalis, cristata, dwarf,	5 "
Dianthus (pink) Clove, China, German,	5 "
" barbatus (Sweet William),	5 "
Gomphrena (Globe Amaranth), purple, white, striped,	5 "
Helianthus (Sunflower), Mammoth Russian,	5 "
Hollyhock (double), white, black, mixed,	5 "
Linaria,	5 "
Nigella (Love in the Mist),	5 "
Marvel of Peru (Four-o'clock)	5 "
Pansies,	15 "
Portulaca (double),	15 "
Phlox Drummondii,	10 "
Petunias,	10 "
Ricinus Sanguineous (Castor-Oil Bean),	5 "
Salpiglossis,	5 "
Satin Flower,	5 "
Sweet Pea,	5
Solanum Texanum (Ornamental Egg-plant), wax-like, vermillion colored fruit, small and handsome,	5 "
Tagetes (Marigold) signatus, Pumila, African,	5 "
Campanula grandiflora, Large Bell-Flower, blue,	5 "
Zinnias,	10 "

These seeds were grown with care on our own grounds. All colors mixed except when noted.

ANNOUNCEMENTS.

SILK GOODS.

Machine-Twist and Sewing-Silk of their own manufacture for sale by the Oneida Community.

Address, [S] ONEIDA COMMUNITY, *Oneida, N. Y.*

PRESERVED FRUITS AND VEGETABLES

Put up for sale by the Oneida Community in tin and glass. Price list sent on application.

Address, [F] ONEIDA COMMUNITY, *Oneida, N. Y.*

STEEL TRAPS.

Eight sizes and kinds, suitable for the House-rat, Musk-rat, Mink, Marten, Fisher, Fox, Otter, Beaver, the Black and Grizzly Bears, are made by the Oneida Community Descriptive price-list sent on application.

Address, [T] ONEIDA COMMUNITY, *Oneida, N. Y.*

MACHINE-SHOP AND FOUNDRY.

Improved Lathe-Chucks, Blinn's Patent Gate-Hinges, Machines for Measuring the Length and Testing the Strength of Manufactured Silks, Bobbin-Winders for Sewing-Machines, etc. Agricultural, Machine and Light Castings, on hand or made to order. Descriptive price-list sent on application.

Address, [M] ONEIDA COMMUNITY, *Oneida, N. Y.*

THE WALLINGFORD PRINTING COMPANY.

All kinds of Book and Job Printing executed: Manufacturers' Illustrated Catalogues made a specialty: also Bronze and Color Work, and the finer kinds of Card, Circular and Bill-head Printing. Having enlarged its works and added new motive power, this Company is in renewed condition to meet the wants its patrons with promptness and accuracy.

P. O. Address, *Wallingford, Conn.*

PUBLICATIONS.

(Sent from the Office of the Oneida Circular by mail, post-paid, on receipt of price.)

History of American Socialisms. By John Humphrey Noyes. 678 pp. 8vo. J. B. Lippincott & Co., Philadelphia. London, Trubner & Co. Price $3.00.

The Trapper's Guide: a Manual of Instructions for Capturing Fur-bearing Animals. By S. Newhouse. Third edition with New Narratives and Illustrations. 215 pp. 8vo. Price bound in cloth, $1.50

Salvation from Sin, the End of Christian Faith; an octavo pamphlet of 48 pages. By J. H. Noyes. Price 25 cents per single copy, or $2.00 per dozen.

Dixon and His Copyists; a Criticism of the Accounts of the Oneida Community in "New America," "Spiritual Wives," and kindred publications. By John Humphrey Noyes. Price 25 cts.

Scientific Propagation. By John Humphrey Noyes. Large octavo pamphlet of 32 pages. Price 25 cts.

Male Continence. By John Humphrey Noyes. An octavo pamphlet of 24 pages. Price 25 cts.

Hand-Book of the Oneida Community: Containing a Brief Sketch of its Present Condition, Internal Economy and Leading Principles. Price 25 cts.

The five pamphlets—"Salvation from Sin," "Dixon and his Copyists," "Hand-Book of the Oneida Community," "Scientific Propagation," and "Male Continence," will be sent to a single address on the receipt of $1.00.

Back Volumes of the Circular. Unbound. Price $2.00 per volume.

MESSRS. TRUBNER & COMPANY, Book-sellers, Paternoster Row, London, have the "History of American Socialisms," the "Trapper's Guide," and the "Hand-Book of the O. C.," for sale. They will receive subscriptions for our other publications.

PHOTOGRAPHIC PICTURES

Of the Oneida Community Buildings and Grounds, made by a first-class artist and finely mounted, can be had on application at the Office of the Oneida Circular.

LARGE VIEWS.

Bird's-eye View, looking West, of Community Buildings and Grounds, 12 by 14 inches, on fine enameled board 16 by 20; price $1.75. Quadrangle and Group, 12 by 14, mounted like the above price $1.75. South and East Fronts of the Community Dwellings, giving a good view of the New Wing occupied by the Children—8 by 10, on tinted board 10 by 12, with an ornamental border price $1.00.

No. 2, East and North Lawns. No. 3, East Lawn and Portico. No. 4, East Front. No. 5, North Front and Lawn. No. 6, Bird's-Eye View of Buildings looking West. No. 7, Lawn and Summer House. No. 8, West View, toward Railroad. No. 11, Quadrangle. No. 12, Lawn View. No. 15, South and East Fronts. Price of Stereographs $3.00 per doz. Sent by mail, post-paid, on receipt of price.

Oneida Circular.

A WEEKLY JOURNAL OF HOME, SCIENCE AND GENERAL INTELLIGENCE.

Published by the Oneida & Wallingford Communities.

ONEIDA COMMUNITY, FEBRUARY 3, 1873.

New Series, Vol. X, No. 6
Whole No. 1444.

POST-OFFICE ADDRESS:

ONEIDA CIRCULAR, ONEIDA, N. Y.

TERMS:

The CIRCULAR is sent to all applicants, whether they pay or not. It costs and is worth at least two dollars per volume. Those who want it and ought to have it are divisible into three classes, viz., 1, those who cannot afford to pay two dollars: 2, those who can afford to pay *only* two dollars: and 3, those who can afford to pay *more* than two dollars. The first ought to have it free: the second ought to pay the cost of it; and the third ought to pay enough more than the cost to make up the deficiencies of the first. This is the law of Communism. We have no means of enforcing it, and no wish to do so, except by stating it and leaving it to the good sense of those concerned. We take the risk of offering the CIRCULAR to all without price: but free subscriptions will be received only from persons making application for themselves, either directly or by giving express authority to those who apply for them.

Foreign subscribers, excepting those residing in Canada, must remit with their subscriptions money to prepay the postage.

THE UNITED COMMUNITIES.

ONEIDA COMMUNITY

Is an association living in Lenox, Madison Co., N. Y., four miles south of Oneida and a few rods from the Depot of the Midland Railroad. *Number* of members, 205. *Land*, 654 acres. *Business*, Manufacture of Hardware and Silk goods, Printing the CIRCULAR, Horticulture, &c. *Theology*, Perfectionism. *Sociology*, Bible Communism.

WILLOW-PLACE COMMUNITY.

Branch of O. C., on a detached portion of the domain, about one and one-fourth miles north of O. C. *Number* of members, 19. *Business*, Manufactures.

WALLINGFORD COMMUNITY.

Branch of O. C., at Wallingford, Conn., one mile west of the Hartford and New Haven Railroad. *Number* of members, 45. *Land*, 228 acres. *Business*, Publishing, Job Printing, Manufactures, and Horticulture.

SPECIAL NOTICE.

The O. C. and Branches are not "Free Lovers," in the popular sense of the term. They call their social system BIBLE COMMUNISM or COMPLEX MARRIAGE, and hold to freedom of love only within their own families, subject to Free Criticism and the principles of Male Continence. In respect to permanency, responsibility, and every essential point of difference between marriage and licentiousness, the Oneida Communists stand with marriage. Free Love with them does *not* mean freedom to love to-day and leave to-morrow; nor freedom to take a woman's person and keep their property to themselves; nor freedom to freight a woman with offspring and send her down stream without care or help; nor freedom to beget children and leave them to the street and the poor-house. Their Communities are *families*, as distinctly bounded and separated from promiscuous society as ordinary households. The tie that binds them together is as permanent and sacred, to say the least, as that of marriage, for it is their religion. They receive no new members (except by deception or mistake), who do not give heart and hand to the family interest for life and forever. Community of property extends just as far as freedom of love. Every man's care and every dollar of the common property are pledged for the maintenance and protection of the women and children of the Community.

ADMISSIONS.

These Communities are constantly receiving applications for admission which they have to reject. It is difficult to state in any brief way all their reasons for thus limiting their numbers; but some of them are these: 1. The parent Community at Oneida is full. Its buildings are adapted to a certain number, and it wants no more. 2. The Branch-Communities, though they have not attained the normal size, have as many members as they can well accommodate, and must grow in numbers only as they grow in capital and buildings. 3. The kind of men and women who are likely to make the Communities grow, spiritually and financially, are scarce, and have to be sifted out slowly and cautiously. It should be distinctly understood that these Communities are not asylums for pleasure seekers or persons who merely want a home and a living. They will receive only those who are very much in earnest in religion. They have already done their full share of labor in criticising and working over raw recruits, and intend hereafter to devote themselves to other jobs (a plenty of which they have on hand), receiving only such members as seem likely to help and not hinder their work. As candidates for Communism multiply, it is obvious that they cannot all settle at Oneida and Wallingford. Other Communities must be formed; and the best way for earnest disciples generally is to work and wait, till the Spirit of Pentecost shall come on their neighbors, and give them Communities right where they are.

REST.

BY FRANCES RIDLEY HAVERGAL.

Made for Thyself, O God!
Made for Thy love, Thy service, Thy delight;
Made to show forth Thy wisdom, grace, and might;
Made for Thy praise, whom vailed archangels laud;
Oh strange and glorious thought, that we may be
A joy to thee!

Yet the heart turns away
From this great destiny of bliss, and deems
'Twas made for its poor self, for passing dreams,
Chasing illusions melting day by day;
Till *for ourselves* we read on this world's best,
"This is not rest!"

Nor can the vain toil cease,
Till in the shadowy maze of life we meet
One who can guide our aching wayward feet
To find Himself, our Way, our Life, our Peace;
In him the long unrest is soothed and stilled;
Our hearts are filled.

O rest, so true, so sweet!
(Would it were shared by all the weary world!)
'Neath shadowing banner of His love unfurled,
We bend to kiss the Master's pierced feet;
Then lean our love upon his loving breast,
And know God's rest.

[*Baptist Weekly.*

THE DAY-STAR.

Home-Talk by J. H. N.

TO believe on God is undoubtedly the great duty of all duties. But a mere sense of duty, in this case, as in many others, may urge us into legality that will defeat our object. Persons who are under concern of mind about salvation, and of course very anxious to do their duty in regard to seeking and finding God, may get in a sort of hurry to believe, and so try to push their faith, not only beyond their sight, but beyond their insight, which is as bad as swallowing things utterly indigestible. God, we may be sure, does not want us to believe what is not true; he is not demanding of us anything irrational; he only wants us to be faithful to what we do see and know to be true.

God is a Spirit, and we are semi-material; that is, have bodies as well as souls. The instinct of natural reason should tell us that our spirits ought to have the principal attention; and that things pertaining to our spirits are the most valuable. Therefore we ought to form spiritual acquaintances; and if God is a spirit, it is our first duty to become acquainted with him and his ways. It is just as possible for us to cultivate acquaintance with God as with one another. We know that two persons living in the same house may go along for years in a state of mutual indifference, just because they have never paid any attention to each other; whereas if they choose to look into each other's hearts, it becomes a very simple thing to get acquainted and have a mutual interest. The case between our souls and God is parallel to this. We may go along in a state of indifference to him and his works, and easily keep our attention on outward things, forgetting him and living as though there were no God. And we may, on the other hand, consider that it is of the utmost importance that we should get into fellowship with the living God; and with that view, we may watch for his providences, and when we discover any movement that we know comes from God, we can fix our attention on it and make the most of it, and get into the habit of doing so. Thus we can become skillful in discovering God's movements toward us. This is something we can train ourselves to and improve in by practice.

We can in this way approach God. If we are vigilant, every discovery we make, every good feeling it awakes in us, every voluntary excitement of the attention toward that discovery, improves our acquaintance with God and carries on the process of blending with him. He does not require us to believe things that are not true, or that we do not see. He simply wishes to have us wide awake to discern the leadings of his Spirit and to discover his providences in the events that are going on about us. This is a simple and practical thing—one that a child can understand; yet it is a work, and in some respects it is a hard work, which requires a determined purpose, and a very firm control of the attention. In some cases it requires a mighty effort to see what we ought to see, and give it the attention it deserves; when the devil and all his agents are endeavoring to divert our attention.

If we are faithful to our convictions, and go on in this work day after day and year after year, fighting the good fight of faith as we know God wishes to have us, the time will come when the day will dawn, and the day-star arise in our hearts. We shall see God and cease to grope in the dark. We shall have the sensation of God himself in our hearts all the time.

Peter says, in reference to the sure word of prophecy, "Ye do well that ye take heed thereto, as unto a light that shineth in a dark place, until the day dawn and the day-star arise in your hearts." That is a text that every one ought to think of a great deal. Avail yourselves of the Bible and every external help that you can use to get an acquaintance with God; and the end of all this work will be that the day-star will rise in your heart. Peter's meaning in this text is a reality almost literal, and he points to a feeling that is a great deal better than any you ever had in looking at the brightest star.

Our hearts were fashioned with reference to seeing God. We perceive matter in many ways, by smell, by sound, by taste, by feeling and by sight—sight being probably the bright-

est and most satisfactory perception of all. Our spirits have the same variety of perceptions, and we may be said in a certain sense to feel after God, before we see him. Our hearts are blind to begin with. A blind man goes feeling round with his hands—using all the senses he has. So we may feel after God; and the beauty of the case is, that if we use what senses we have, and do the best we can to find God by groping, the time will come when our hearts will be purified and we shall see him. To know God in this way is eternal life. The heart opens itself to God and becomes purified, and the day-star of his love rises in it. It is immortal, and cannot die because God cannot die.

We may be certain that God will meet us if we seek him. "Draw nigh to God and he will draw nigh to you." We are not at work alone; he is feeling after us; and we may be sure of this, that the feelers will meet. He cares but little about being worshiped with words and show, but he is feeling after hearts that will take him in and worship him in spirit and in truth. "Behold I stand at the door and knock: if any man hear my voice, and open the door, I will come in to him and will sup with him, and he with me." We must not aspire to anything less than getting the permanent presence of the living God in our hearts. We must not be content to have it for a moment and then let it go, as they used to in the old revival times. The sun is not going to rise a little above the horizon and then go down again. We must have a day-dawn that will last forever. The dawning of God in our hearts, is really the coming of the Kingdom of Heaven. It is the day-light of eternity.

A PLAN FOR THE ORGANIZATION OF A TRUE CHRISTIAN COMMUNITY.

BY JESSE H. JONES.

To the Readers of the Circular, and all the Friends of Communism in the land, Greeting:

I would be very glad to meet you all in a Convention, that we might discuss together the ways and means for at once adopting the true system of labor and spreading it throughout the world. But that is impracticable. The kindness and liberality of Oneida enable me to do the next best thing—to hold a Convention through the CIRCULAR. Permit me then to state frankly what I desire.

A religious experience of years has led me to devote myself to Communism. But in doing this I abandon nothing of the Evangelical Faith of Christendom; but seek only to help perfect it.

I am convinced by inward monitions, that *the time has come* for energetic, aggressive action, in diffusing the doctrine and establishing Communities. My eyes have been opened to see the principles of Communism, as they are embodied in the Mosaic and Christian systems; and I have been led, in the light of their teachings and of the political principles of our nation, to attempt to form a plan for the organization of Christian Communities, fitted to the needs of our times. It is not perfect. One mind cannot make it so. I now submit it for criticism, in the true spirit of criticism. I especially crave from all who read, that they will point out every defect which they see; and that they will supply me with any information which will help me to remedy defects. I wish to get also the Constitution of every Community now established in the country.

I hope to publish this Plan, after revision, early in March. Will not every reader of the CIRCULAR, therefore, who sees anything to suggest, sit down at once and write to me? and will not every one who is willing to join with me in practical work under such a plan also inform me?

The courtesy of the CIRCULAR permits me to speak of one subject in which I differ with it. I am a monogamist of the strictest Puritanical type, and so is my wife. That one man and one woman wedded in love, equal, and each having entire control of his or her own person at all times, is the divine ideal of marriage, is with us a settled fact. In this we think that we are not willful, but believe that we are taught.

We speak thus distinctly at the outset, so as to avoid all doubt. The following is

THE PLAN.

Political Economy is the Science of Society viewed as an organization for the production of wealth—that is, as a fruit-bearing tree. But a tree cannot live, unless it be rooted in the soil. So is it with the human race. The fundamental question, therefore, concerning the existence of the human race on this globe is—

I. THE RELATION OF MANKIND TO THE LAND.

The law of that relation is twofold, as follows:

THE LAND SHALL NEVER BE SOLD.

EVERY HUMAN BEING INHERITS AN INBORN AND INALIENABLE RIGHT TO USE OF THE LAND.

1. *The Land shall never be sold.*

This is the perfect expression of the Mosaic idea, as is partly shown by the fact that the highest class, the Levites, could not sell their fields at all. Jesus came to perfect Mosaism. This is, therefore, the Christian law concerning the relation of man to the land. This is also the perfect law, as seen by pure reason. The land is a natural gift of God, just as air and sunshine are; and a man has just as much right to sell air by the cubic foot as land by the square foot or square acre; that is, he has, and can have no right whatever. Whoever sells and whatever human society legalizes or allows the sale of land thereby violates one of the great fundamental principles in the Common Law of Humanity. No absolute title can rest in man; for God *owns* the land and he alone; but the relative title of *use* shall rest in the Community; which shall hold the land in trust, under law, for the good of every citizen.

2. *Every Human Being has a Birthright Inheritance in all the Land of the Globe.*

This right is inalienable. It is special also and local. It primarily vests in the place where one is born. But it is personal as well, like the right of political action. Hence one carries it in going, and locates it in dwelling; and every Community is bound to furnish land to every one who comes into its midst, so far as it is able, without endangering the lives of those already composing it.

This right to land is to be satisfied *without* cost. God created the land and furnishes it to man without cost. The Community holds it in trust to be administered in God's name, and upon the same principles as are those of his action. Therefore as he *gives* his labors to the Community, each one of the members is bound to *give* his or her labor: for thus only can they live as the children of God.

The individual shall have an inalienable right of possession of as much land as one living in harmonious coordination with the rest of the Community needs for the support of life.

This right shall be carried out as follows:

Every family shall have, and every unmarried citizen of full age may have, a homestead lot of such size as the Community shall agree upon. This cannot be taken from them except for public purposes; and then only when the public has given them another as good and made up to them all losses and trouble. Nor can they ever transfer it to another person. They can transfer their title to another spot of land in this or another Community, under legal conditions; or they can abandon the Community entirely. In the former case the lot at once reverts to the Community; in the latter it waits one year in the charge of the Community, during which the former possessors or their heirs may reclaim it; but if they do not, at the end of the year it passes into the full possession of the Community.

Every one who has the right of a homestead lot shall have free choice from all unoccupied lands; and if many come to their right on the same day, the order in which they shall choose shall be determined by lot.

No family or individual can have any claim or hold on more than one homestead lot.

Every Community must provide houses and housen stuff for all its born citizens and for all who are received under age.

Persons who join and put all their property in should be helped by the Community to a home, as in its judgment they need help.

All lands possessed by the Community over and above the household lots shall be held by the Community in common, and shall be administered upon the same principles as are political affairs in our New England towns.

The only right of inheritance in lands is of children from their parents; and this right wills can in no wise affect. No persons not members of the Community can have any right of inheritance in it.

One man and one woman married constitute a family.

I have thus presented the true relation of the societal tree to the land. I have now to unfold the tree itself. The second great subject in a practical system of a political economy is—

II. SOCIETY IS AN ORGANISM FOR WORKING THE LAND.

A tree has a life-force, substance, structure, and function. So also a Community has a life-force, citizens, structure and function. Let us consider each of these in its order.

1. *The Life-Force of the true Community.*

The New Political Economy requires a new life-energy. This new life-energy is *Christian Love*.

The old life-energy, which yet abides and prevails in the world, is SELFISHNESS; and all the Political Economies which have hitherto been taught, at least in this modern world, have been merely unfoldings of the science of that selfish structure of society, of which selfishness is the life, and poverty, luxury, and national death are the fruits.

Christian Love is the new, the only true, yea the Divine life-energy of a human Community. Christian Love is the water of Eternal Life, which, bursting up from its infinite source in the heart of God and pouring out through Jesus Christ, the human fountain-head, has been flowing forth a crystal river into the human race during all the Christian age, and will continue flowing to the end of time. Christian Love is the vital-force of the innermost spirit, and the rule of action for the outer life; and it gives a law and a practice. In his New Commandment Jesus taught the law of the action of this vital-force; and he exemplified the rule for its practice in washing the disciples' feet.

Love in its wholeness looks two ways, Godward and manward. Looking manward Love is God's life struggling to communicate itself to human individuals, and transform them into God's *living* children; and struggling as the result thereof *to reorganize society into a new structure* corresponding to itself. The new political economy is the science of the new structure of society; and the law of all living under it is: *Live to help live.*

Just as Love, looking from God manward, gives a new life-energy and a new life-method or system for societal living, so Love, looking from man Godward, gives a new life-end and a new life-effect upon whoever has the life and lives for the end.

The old end, which still prevails in the human race, is the gratifying of the *flesh* with *things*. This end is a lie.

The new and true end of man is GOD. "A man's life consisteth *not* in the abundance of the *things* which he possessseth," but in the abundance of GOD which he possesseth. But a man can possess God only as God works in him to fill him with himself and he works with God to be so filled. Moreover, man can work in full efficiency with God only as he becomes like God and works with him in the forms of that societal organism which he has planned. To become Godlike and live as God lives, this is the effect on one's self of seeking the new end. Thus will be fulfilled the apostle's words, "Till we all come in the unity

of the faith and of the knowledge of the son of God, unto a *perfect man, unto the measure of the stature of the fullness of Christ.*" All human labor of every kind ought to be a conscious co-working of the individual with God, as a means of knowing God, becoming like God and living as God lives. Thus is it in heaven; and the Kingdom of Heaven is that divine plan of society which provides for such living upon this earth by this human race. The new Political Economy is, therefore, the Economy of the Kingdom, and the science of that perfect structure of society through which the individual can be perfected and afforded the opportunity to live the perfect life.

Therefore all work should be made to tend according to our best judgment, even in the very doing of it, toward the highest unfolding of Science, Art and Religion: for these three are the means through which God reaches down to man and man reaches up to God, and the greatest of these is Religion. To this end full time shall be set apart for each. The children and youth shall be schooled in the best manner. Each one shall go forward in the higher studies so far as his or her talents, cravings and the means of the Community warrant. Voters who wish to study in Science or Art more than the Community approve can do so by taking so much less of what would be their share, as they work less hours.

The Community shall seek to grow into a University of Science and Art as rapidly as possible.

Religion is the life and crown of every created person.

The first day of the week shall be kept holy unto God as the Sabbath. In it no servile work shall be done, except what is necessary for the life and comfort of the people and cattle and to preserve from needless waste. It is in a special sense God's day, and shall be sacred to his worship and to special administrations in his name to the needs of our fellow men.

Other times also may be set apart to religious worship as the Community or any individual shall choose.

Thus, through a true Community can people work up toward their true end—God.

2. *Of Citizenship in the true Community.*

Jesus Christ said, "Follow me." All persons who from the heart seek to obey this command, in its true import as Jesus spoke it, and who with equal sincerity adopt all the principles, and will strive to obey all the laws of the Community, may join the Community when they will.

Persons joining the Community can become citizens if they choose after having lived at least one year constantly with the Community.

All persons having property, who seek with a right heart to join the Community, will give a part of it without reserve to the Community upon taking the first step, and the whole of it upon accepting full citizenship.

All children born of citizens are citizens, and all children whom the Community may adopt. Children over eighteen of those joining become members and obtain rights in the Community only as they join it for themselves. Younger children, coming with their parents, become citizens at the end of three years.

(*a.*) *Rights of Citizens.*

Every citizen is equal to every other citizen in all his rights and duties; but the exercise of these shall be subject to such limitations and directions as this constitution and the laws of the Community may determine.

Every citizen without distinction race or sex, who is eighteen years of age, of sound mind, can read and write and has ciphered through the four primary rules of arithmetic, shall be a voter; and none others.

All faithful citizens shall be entitled to the same share in the wealth of the Community when sick or aged as when hale and vigorous.

(*b.*) *Duties of Citizens.*

Every citizen is bound to do his or her best for the Community and for every individual in it, everywhere and at all times; and to this end is bound to obey all the laws while they are laws, even though they may seem unjust. Only when the laws compel him to do an act which he in conscience believes to be a crime has he a right to refuse; and then he should seek to do so with the least possible detriment to the Community.

(*c.*) *Responsibility of Citizens.*

Citizens violating laws must bear the penalty; only no citizen can ever be expelled or put to death by the Community.

3. *The Structure of the true Community.*

The true structural law of all society is as follows:

All power belonging to persons as members of society belongs to the Community in its unity, and not to the persons separately. The exercise of such power cannot be transferred from one to another; but each person must, for himself, use his own share of it in the common public place where the people gather according to law.

Every New England town is a *political* exemplification of this law. It shall also be fully carried out in the administration of the property of the Community. Hence all laws shall be made by the voters acting in a body in a public, legal assembly, gathered for law-making purposes. Such assembly shall have full power to make all laws needful for the conduct of the work-life of the Community under this Constitution, subject to the State, the nation, and to God.

Every vote concerning persons shall be by ballot. Every vote concerning laws shall be by ballot when one-tenth of the voters present demand it. Otherwise it shall be by show of hands. The majority shall rule except when it is otherwise provided.

The Community shall hold its regular business meetings on Wednesday of each week at such time as shall be appointed, where any business may be done. It may provide other meetings by law as is needful.

The officers shall be such as the Community may from time to time provide. They shall be elected for one year, unless otherwise specified; and shall hold until their successors are elected and installed. They shall have and exercise such powers as the Community gives them by law. Except when directly engaged in that for which they were elected they shall work like other citizens. When in charge of working parties they shall work with them as one of them. They shall have no pay, nor any larger share from the products of the Community than any other voter.

The number of voters in the Community shall not exceed five hundred; for that is as large a number as can well act together in a legislative body. Before it reaches that number the Community shall swarm as the bees do; those going out who wish; and an equitable division of the common wealth being made, yet so that the parent society be not injured.

4. *The Function of the true Community in Work-Life.*

The function of the true Community, as an organization for labor, is *the production and distribution of wealth.* The generic law of each person's action has been well stated as follows:

"From each according to his ability; to each according to his needs."

Or in other words—

Things for work shall be used by persons according to their powers; things for life shall be furnished to persons according to their needs.

The first clause in each of the above is the law of production, the second is the law of distribution. Let us consider them separately.

(*a.*) *The Law of Production.*

Jesus said, "*Freely ye have received, freely give.*" To give freely is the eternal law of the living of all spirit beings. God has given to us all that we have and are. We are bound to live as his children. We must, therefore, *give* all that we have and are to the service of our fellow men.

Therefore all citizens shall always do their best work; and shall give all their powers to the service of the Community. But the Community shall use these powers only in the service of Jesus Christ. To this end both individual and Community shall be wholly devoted to obeying that command of Jesus. "Seek ye first the Kingdom of God and its righteousness." To set up that Kingdom, in its literal, outward form, over all the earth, is the work given to Christ's disciples; and toward that result every act of ours should be consciously and intelligently directed.

In order that all citizens may thus put forth their best efforts, they shall act together as spontaneously as possible. Each one may choose that kind of work which he thinks he is best qualified to do, in so far as this consists with the successful working of the Community; but every one shall, so far as able, do what the executive committees ask, when engaged in carrying on the works directed by the Community. Individual freedom, societal coöperation and executive unity must all be equally preserved. To secure executive unity, committees of works shall be chosen, who shall have the oversight and direction of affairs *under law.*

One aim of the Community shall be to produce a given amount of result with the least human labor. Another aim shall be to put the greatest amount of thought into each piece of work, so that all work may call out the intellectual and moral powers of the individual in the highest degree compatible with the circumstances.

(*b.*) *The Law of Distribution.*

Every one shall receive from the Community those conditions which are essential to his best work, so far as the Community is able to provide them.

One principle essential to a right distribution of labor is:

THERE IS NO CAPITAL BUT LABOR.

Its counterpart is—

PERSONS ONLY CAN HAVE A RIGHT TO PRODUCTS.

Capital is dead. Things (property) can have no rights. Hence no things can ever be rightfully made the ground of a claim against labor. Hence, also, capital will become extinct as a factor in the problem of the distribution of the products of labor. All rents, interest, profit, wages, salaries, fees, perquisites, stocks and dividends thereon, notes, mortgages, yea, every form of bond and taxation, by which some persons make other persons toil for them for nothing, will be utterly and forever abolished.

Persons are the only elements in the right distribution of the products of labor. The law of such division is twofold, as follows:

Things for life are to be furnished to persons as much as they need:

Surpluses are to be divided to voters equally in cash.

However, the Community may by a majority vote dispose of one-fourth or less of its surplus in other ways; and by a two-thirds vote of one-half, and by a unanimous vote of any greater proportion.

Surpluses shall be divided as fast as they accrue.

All exchanges shall be effected at *cost;* and cost shall be determined merely by the time spent in labor.

In exchanges between Communities the same laws are to hold, the cost of transportation being paid by the purchaser.

The true Communital life will bring out this great fact; viz., that—

ALL COMMERCE IS A TAX UPON PRODUCTION.

Hence each individual Community will try to produce within itself, so far as possible, all the things it needs, especially all the bulky or perishable things; so that that trade which is inevitable, because of the varieties of climate, will be as small as possible.

5. *Miscellaneous.*

All purchases shall be for cash. No debts shall be incurred by either the Community or any member; and should any member break this law, the Community will not be liable for his or her debts.

All sales shall be for cash, or as near that as those purchasing will give. Goods sold to those not members shall be sold, if practicable, directly to the consumer. They shall be sold at as near cost as can be known, and the Community shall seek to avoid letting others make a profit on its work.

We accept God's command forbidding all *profit* and *interest;* and will never knowingly break it; nor will we ever take rent.

The weekly meeting on Wednesday, when not occupied with business, which after society is fully organized and its code of laws formed will generally be the case, shall be devoted to mutual criticisms by the members, of each other in love for their mutual benefit, or to such other social exercises as may be agreed upon. In every criticism the critic shall seek to show forth pure truth and love in the most beautiful manner that one's natural powers admit of.

Such are the great principles of the true life on this earth, as embodied in a plan for a wealth-producing society. God lives on these principles. Whoever, therefore, lives them out with all his heart lives as God lives. He not only has a heart like God's heart, but he also acts on the very same *method* that God does. God needs no thing, and we cannot give him anything. We need many things. He possesses every thing, and gives abundantly to supply all our needs. He asks no thing of us, but He asks our love, not as *pay*, but as a token that we are grateful for what He has done for us.

Whoever lives in this way lives as Jesus Christ lived. He needed from mankind only clothing, food, and sometimes a shelter; that is, the simplest things of life; and He received from them only these. But He received them not as *pay*, but merely as the essential *conditions* for living and

doing his work for men. We needed Eternal Life, with all the unspeakable blessings involved therein. All these He possessed in full abundance; and at the greatest cost to Himself He gave them all to us without stint, as a free gift "without money and without price" [pay]. Jesus was the Eternal Life, and lived the Eternal Life, and *gave* the Eternal Life to us. Thus do we learn that the nature of the Eternal Life is,

LIVING TO GIVE, instead of living to get.

And we, who join this Community, solemnly devote ourselves, with all that we have or may ever possess, to living the Eternal Life in this manner, as becometh the children of God.

ONEIDA CIRCULAR.

TIRZAH C. MILLER, EDITOR.

MONDAY, FEBRUARY, 3, 1873.

A NEW PLAN.

WE this week allow the Rev. Jesse H. Jones large space for the presentation of his "Plan for the Organization of a True Christian Community." We do this more from a desire to encourage thought and talk about Christian Communism among Bible-loving men than from any special approval of the plan itself. The Infidels have had their day of social discussion and social experiment—all know with what unfortunate results. We have better hope for the Religionists.

Mr. Jones, it will be noticed, invites criticism upon his plan from all; in a private letter he especially asks our criticism; and we are perhaps under some obligation to our readers to tell them what we think of the new scheme of Communism.

We have reason to believe that Mr. Jones aims, as he avers, "to help perfect the evangelical faith of Christianity." He sees clearly that selfishness must in the true order of society be displaced by love; he comprehends that man can achieve his highest destiny only as he becomes filled with the divine afflatus and is controlled by it; he evidently is striving zealously for the realization of his ideal of society.

We do not care to criticise his plan in detail. The grand fault of Fourier and of all social architects that have failed is, that they made their plans without aid from actual experiment. Mr. Jones is repeating their error. "He that doeth his will shall know of the doctrine." The principle of induction is as important here as elsewhere. Forming mere theories of Community life is no better than the work of the old school-men, who relied on closet-thinking and ignored experiment. We should have more hope for social reconstruction in the perfect agreement of "two or three" than in the best plan ever devised. If Mr. Jones has a genuine commission for introducing the true order of society, let him form a nucleus, no matter how small, and commence a life of Communism; then a Constitution will grow as the Community grows, and so be adapted to its needs. Mr. Jones's plan is the result of cogitation; but "cogitation without experiment," as the author of "American Socialisms" has so fully shown, "is not the right way to a true social theory. With us induction is first; deduction second; and verification by facts or the logic of events always and everywhere the supreme check on both."

Were we to speak of the "Plan" itself, we should have to call attention to

1. Its monogamic phase;

2. Its attempts to combine individual ownership and Communism;

3. Its lack of adequate provision for good leadership;

4. Its rule of membership.

We do not say that partial Communism may not exist with marriage, but certainly Communism such as is worthy to be called the Kingdom of Heaven (which is the kind contemplated by Mr. Jones), cannot exist with marriage; for we are expressly told in the book which he so much reveres, that in that Kingdom "there is neither marrying nor giving in marriage."

The attempt to combine Individualism and Communism in respect to property would, we are assured, fail utterly when subjected to the test of actual experiment. If we take no higher view, it would prevent the realization of many of the great economic advantages of Communism, and would wholly defeat what Mr. Jones considers a chief aim of Communism, namely, "to produce a given amount of result with the least human labor." That cannot be done and retain family houses and family arrangements.

The lack of adequate provision for good leadership is a cardinal defect in the scheme under consideration. All who have read the "History of American Socialisms" know that a principal cause of most of the failures therein recorded was bad leadership; and few will now be found so unwise as to venture their all in any experiment simply because they have read a plan that suits them pretty well; and that few will prove worthless material, we judge, for social architecture. There are thousands ready for Communism, but they will inquire, almost to a man, Who are to be our leaders? and what are their characters? The system of voting which prevails in a New England town-meeting, good as it is, would prove inadequate in the government and guidance of a Community.

In the rule of membership we see nothing to prepent persons destitute of genuine sincerity from joining the new Community, on making a fair profession in general terms; and having become members there is no power to expel them. Mr. Jones evidently does not believe in fences! If the Oneida Community had had any such loose ideas about the admission of members it would not have lived a single year, and would not continue another year; and we don't believe it is possible to form a Community that could maintain its existence with such lax arrangements.

We might say much on these points, but prefer to simply call attention to them in a brief way, and leave our readers to study the Plan for themselves and act as their judgment may dictate. W.

THE CENSUS OF THE CHURCHES.

The church statistics of the last census are curious and interesting. There are 62,552 church buildings in the United States, with sittings for 11,395,542. While the total population of the country is a little over 38,000,000, only 27,900,000 persons are over ten years old. Deducting the very young, the very old, and the sick and the infirm the existing accommodations seem adequate. The total value of church property is $349,619,780. The Methodists are the strongest denomination, having 21,337 churches. The Baptists are next, having 13,962. The Presbyterians hold the third place, having 7,071 churches. Fourth are the Catholics, 3,806 churches. The Christians—both Disciples and the Christian connection are included under this name—have 2,822; the Lutherans, 2,776; the Congregationalists, 2,715; the Episcopalians 2,601; the German Reformed 1,445; the Friends 622; the Universalists 602; the Unitarians 310; the Mormons 171; and the Jews 152. In the decade between 1850 and 1860, most of the denominations increased more rapidly than during the succeeding ten years. The Methodists gained fifty per cent. in the former period, and only seven per cent. in the latter; the Baptist increase fell off from twenty-seven to fifteen per cent.; the Presbyterians from thirty-two to ten; the Catholics from one hundred and nine to forty-nine; the Christians from one hundred and thirty-six to thirty-six; the Lutherans from seventy-three to thirty; the Congregationalists from twenty-nine to twenty-two; the Episcopalians from forty to twenty-two, and the German Reformed from ninety-eight to sixty-nine per cent. The Friends and Universalists each lost nine per cent. during the last decade. The Unitarians gained eight per cent. from 1850 to 1860, and seventeen per cent. from 1860 to 1870. During the former period the Mormons increased fifty per cent., and during the latter more than quintupled their numbers. The Jews, who gained one hundred and fourteen per cent. from 1850 to 1860, increased by only ninety-seven per cent. from 1860 to 1870. In respect to the aggregate value of church edifices, the Methodists stand first, the Catholics second, the Presbyterians third, the Baptists fourth, the Episcopalians fifth, and the Congregationalists sixth. Though the number of churches standing in 1870 was double that of 1860, their value was four times as great. Making all possible allowance for the general advance in nominal values, it is quite apparent that the newer churches are generally much more elegant than the older ones. The increase of some of the denominations is largely dependent upon immigration. Others are recruited from different home sects. When the figures above are studied in the light of these facts, some important conclusions are apparent. The decrease in the gain of the Catholics indicates either that emigration from Catholic countries decreases, or that the Church does not succeed in keeping the new comers within its pale. The diminution in the increase of the Methodists is very large, and almost inexplicable. The gain of the Unitarians is attributable to the zeal with which the denomination has conducted its operations in the cities of the Northwest, where emigration from the New England States has given them nucleuses for the formation of congregations. The same cause has given Congregationalism a strong hold in the Northwest, and has enabled it to make a better showing for the last ten years than the Presbyterian family. It is to be regretted that the total membership of the various churches is not included in the return before us.—*Cincinnati Gazette.*

Years ago the sects more nearly balanced each other; if one threatened to sweep all before it, there was a desire and an effort made to check it. Dr. Beecher went out west to organize a great movement against the Catholics at a time when they seemed about to take possession of the country. But there never has been any notable alarm about the increase of the Methodists, though their numbers are threatening the liberties of the country more than the Catholics ever did. They now own one-third of the church buildings in the United States.

The falling off in the present age of increase in the Methodist and other evangelical churches is very striking, and the simultaneous increase of Mormonism is really startling. The Methodist Church, which is the soul of the anti-Mormon movement, has found in it a pretty hard nut to crack. If the Mormons go on increasing as rapidly as they have done, it is within the limit of possibility that another decade may see them swaying the Government as the Methodists seem to do now.

It is interesting to notice how little power the larger sects have in the literary world. The Unitarians with hardly one-seventieth as many churches as the Methodists are far ahead in that field. The law would seem to be that the literary ability of the churches generally is inversely as their numbers. The Swedenborgian church, which is too insignificant for mention in respect to numbers, has probably more popular writers at work on the great newspapers and monthlies than any other sect.

To get a full view of the competing parties in the religious world, the status of the Spiritualists, Infidels and Nothingarians ought to be added to the above account. These are large denominations, and wealthy, though perhaps not very strong in Church buildings. Probably their numbers seesaw with those of the religious churches. K.

WHAT THE WOMEN DO.

FROM the Census of 1870 we learn that 373,332 women are farm laborers; 22,681 are farmers; 692 are actors; 1,179 are barbers and hair-dressers; 7,060 are boarding-house keepers;

943 are Government clerks; 867,354 are domestic servants; 6,299 are employed in hotels, etc; 865 keep hotels; 55,609 are laundresses; 1,186 are midwives; 10,170 are nurses while there are only 806 men in the same buisness; 100 are show-women; 84,047 are teachers; 5,580 are teachers of music; 115 are authors and lecturers; 4 are sculptors; 525 are physicians and surgeons; 15 are bankers and bakers; 6,194 are clerks in stores; 32 are commercial travelers; 1,215 hucksters; 278 peddlers; 1 is a pilot; 2,775 are saleswomen; 3 shippers and freighters; 2,833 tailors; 55 are traders in books; 117 are traders in cigars; 1,197 are traders in groceries; 106 are traders in liquors and wines; 4 are bell founders; 2,729 are book finishers; 9,642 are shoemakers; 2,223 box-factory operators; 3 are builders and contractors; 5,377 are carpet makers; 1,844 make cigars; 64,398 work in cotton mills; 228 are photographers and daguerreotypists; 29 are engravers; 1,219 are glove makers; 1,229 are gold and silver workers; 3,350 are hat and cap makers; 1,989 work in knitting mills; 4,44 are linen-mill operators; 0 are machinists; 2,559 are mechanics not specified; 8,110 are mill operators not specified; 90,480 are milliners and dress-makers; 46 are miners; 1 is an oil-well operator; 3,884 work in paper mills; 1,495 are printers; 1,851 are rubber-factory operators; 35 work in saw-mills; 1,866 make sewing machines; 2,860 operate sewing machines; 16 are ship-riggers; 2,812 are shirt-makers; 2,303 work in silk mills; 5 steam-boiler makers; 1,430 are straw-workers; 97,207 seamstresses; 2,290 work in tobacco factories; 22,776 in woolen mills; 5 are charcoal and lime burners; 951 are artificial flower-makers; 39 are book-keepers in bank, railway and insurance offices; 67 are preachers; 13 are designers; 2 are hostlers; 35 are journalists against 5,251 men in the same profession; 0 are inventors; 2 are hunters and trappers; 1 is an architect.

A. B.

COMMUNITY JOURNAL.

ONEIDA.

Tuesday, Jan. 28.—Martin Kinsley arrived this afternoon with a span of horses and sleigh with which he had come from Wallingford. where they were no longer needed on our public works. When twenty miles from O. C. the heavy snows blocked his way and he was obliged to leave his team a few days, returning to-day to get it.

Wednesday, 29th.—A thermometer hanging on a tree near our office this morning indicated a temperature of eight degrees below zero, Fahrenheit; at nine o'clock in the evening it was 20 degrees below zero.

—The farmers are at work thrashing their barley. This morning we saw the thrashers burning straw over the machine to warm it up and get it to running easily.

—Mr. Wm. E. Lansing, our Congressman, sends us the first volume of the ninth census report. He has our hearty thanks. The colored maps in this volume, showing the relative distribution of wealth, illiteracy, colored and foreign populations—German, Irish, Welsh and English, Swede and Norwegian, British American and Chinese—are particularly interesting and instructive.

—A somewhat remarkable characteristic of this winter in this locality is, that the falls of snow are unaccompanied by the usual strong gales of wind; and consequently there are hardly any drifts. The snow descends quietly almost every day, and covers the earth to the depth of nearly or quite two feet, and it lies as it falls in unsullied purity, with no admixture of earthy particles so often made by the indiscriminate winter blasts. Travel is unobstructed. Our road to W. P., so often almost impassable in winter, has none of the engulfing drifts that commonly rise to the top of the fences; and the express team makes its trips with ease and regularity. "Quick transit" is a great boon to us, situated as we are with house and shops more than a mile apart, and especially to our ambitious sisters who go to the "Home Machine-shop" to run engine-lathes and work in iron.

—The following pleasant remembrance of things at Wallingford was written to one here, so we insert it among the O. C. items:

DEAR MR. HERRICK:—Let me tell you about the field of our summer work year before last. On my way to my job in the machine-shop this morning I was tempted away to the ice that glittered far and wide above the dam. I started for the place where the factory used to stand. There is nothing there now but the old laundry, which being of brick could not be moved. I took a bee line for its tall chimney, walking and sliding alternately, and stopping and turning round to admire the novelties and beauties of the scene. The morning sunshine glorified everything. The new bridge, with its two graceful arches, seen from the middle of the lake is a thing of beauty; and I thought we had no occasion to be ashamed of the factory; small as it is, compared with the power that is working it, it is a handsome building and well fits the scene. When I had gone a long way and was stopping to look round, I saw Marion on the bank near our old swimming-place; so I went back and took a new start with her. We danced and slid to the tall chimney in a straight line on glare level ice! It seemed curiously strange to find no crooked stream in all that way. Looking west we had before us the greatest width of the lake, and concluded to explore in that direction. We found the remnants of the old plank-walk standing in some places just level with the surface of the ice. The point of land where that walk commenced on the west side is now the end of a peninsula that projects twenty or thirty rods into the lake. South of that there is a bit of an island which we remember as a knoll opposite the old grape island which we cleared. In the late freshet it was entirely under water. Passing these landmarks we went on toward the west hill. I noticed that the whole region where we first chopped had disappeared. All that remained to identify the spot where we ate our dinner under the trees was here and there a post of the neighboring fence, just showing its top above the ice. It is a clear expanse of lake from the laundry to the edge of the forest near the old woodchuck-hole. The pasture that we used to cross on the way to our work is an island. I got upon a stump there and saw that the water entirely surrounded it, running up into all that region where we got poisoned and where you cut your foot. The button-ball tree east of where we killed the snake has a little island around it. These were pleasant observations to me and I thought you would be interested in them. When Marion and I turned to go toward the factory James Vaill appeared to us on skates and drawing a nice sled. He proposed that we should get on the sled and let him propel us back. So said, so done. Marion took the forward seat with her feet upon the round; I sat behind. James skated behind me with his hands on my shoulders; and I certainly think he drove us down to our landing-place at the old swimming-hole inside of three minutes. Considering all things it was the neatest slide I ever had. Yours, J. H. N.

An Evening Meeting.—The people come in with a sort of velvet footedness; the women and girls taking their seats around the tables as usual, for nine-tenths of them have some work to do—sewing or knitting; and the men drop into their arm-chairs to ruminate or listen as the case may be, for their work is done. Then there was a moment of meeting-house stillness—you know how it is. Mr. Herrick, the reader, says "There is no correspondence to-night." Then some more stillness, for W. A. Hinds, the leader of the meeting, is behindhand for once and has not come in. Mr. Woolworth thinks of an article in the *Independent.* It is Mr. Finney's story how he started a revival in Gouverneur, N. Y., and made some remarkable converversions among which was that of a Mr. Smith, a noted deist. Mr. Underwood read it. Then Mrs. Miller remembers how some of the Smiths from Gouverneur afterward came to Putney and labored in a revival—talking some with J. H. N., who was then a law-student. Then Mr. Underwood read a few sentences from Mr. Bowen's eulogium on the late Joshua Leavitt, showing what moral grit there was in the man—something you would call quite grand when fitly exercised and on questions that are no longer open, but very apt to degenerate into bigotry whenever new questions are raised or old ones brought up for a new hearing. Thereupon some of our Putney folks remembered that the Leavitt family had a singular streak of dishonesty in money matters, notwithstanding they had a great turn for piety. Old 'Squire N. was at a deal of pains once to recover a debt from the Doctor's uncle, during which trouble the 'Squire was observed to smoke two cigars a day instead of one. When all this reading and talk were over, Mr. Hinds asked if we would like to hear something from *Woodhull and Claflin's Weekly.* He then read extracts from Mrs. Woodhull's discourse that was to have been delivered at Cooper Institute. Then Miss Claflin's bit of satire concerning the naked truth, which was thought to be as "smart as lightning." Then came eight o'clock and put out the meeting.

—One of our men tells the following:

When last in New York collecting some money in a large business office, the clerk gave me a pen to write a receipt; after writing a few words the ink gave out. As I handed him the pen to replenish with ink he said, "Do you want some more beans on that stick?" I did not understand him, but seeing he meant it for a joke, I said, "Please put a little more chicken on that bone." He in his turn looked puzzled; but we both laughed, each at his own joke, and so parted. On telling the story to a friend he said the man alluded to the tale of the Irishman who after eating corn from the ear for the first time, handed the cob back to the waiter saying, "Here, Mister, please to put some more banes on this stick." I thought of our little Walter who after polishing a chicken-bone returned it to his mother saying, "Here, mamma, please put some more chicken on this bone."

WALLINGFORD.

—Splendid ice on the pond these days. The skating part of the family have been improving it. Some of the town's people appeared on the pond with ice-boats. The way their boats glide over the ice is quite exciting. It is an old fashion of locomotives practiced in Holland as long ago as when John Evelyn was in that country.

—E. H. H. offering himself for criticism an evening or two since, Charles J. being called on, said he thought Mr. H. a remarkable example of a man who had overcome himself; "he is a great encouragement to me and should be to any one who is conscious of having traits he does not like." He thought, too, that Mr. H. had a remarkable ability for carrying on a great amount of business, and yet maintaining his spirituality. Mr. N. remarked: "What Charles says of Mr. H. is great praise. It is a comparatively easy thing to be either a great business man or a very spiritually minded man. But it is a difficult thing to combine the two; and not many people do it. Mr. H. has had that power

in a very marked degree, and that is what makes him a great man. It is the same greatness that some of the old Bible heroes had. Paul especially. Paul was full of business all the time, yet he never lost his spirituality. That is where Mr. H.'s strength lies. I think he is liable to feel cramped in view of his not being an educated man. He should rise above that, rise into the dignity of his position as an inspired man. His greatness is the greatness of inspiration, and all the learning of the colleges will have to bow before that. Inspiration will lead, and all this mere intellect and education will have to follow."

—There is a good thing afloat about your old contributor "K." which is capital to tell when you want to hint delicately to somebody that it is well to mind one's own business. "K." was walking along the road not long since when he met one of our neighbor's boys driving some cows, and noticing that the boy was stoning the cows and urging them along on the run, he hailed the little chap in that mild, fatherly way of his, and said, "My son, don't you know that it is wrong to drive cows so fast as that?" Young Connecticut stopped, looked sharp at "K" for a moment, and replied, "Be *you* driving them cows or be *I*?" "K" passed on.

—We needed a photographer in the Hall the other evening. At one end of the center table, behind Mr. Noyes and Mr. Hamilton's chairs, were grouped a full dozen of the most substantial men in the family, deeply interested—as they are always ready to be—in the subject of dams, and looking eagerly at some pictures of the great Derby dam, at Birmingham, Conn. They were laughed at by some of the women; but in a moment the laugh was turned on the scoffers, for lo, there were a dozen or more of women gathered around Mrs. Noyes at the other end of the table, perfectly oblivious of dams and the like, and earnestly discussing with one voice——bedquilts!

BOYISH MEMORIES OF TROPICAL FRUITS.

I.

AH! it is one thing to "hear tell" of them, and quite another to test them by practical experience. Certainly the "proof of the pudding is in the eating." Happy the man who has a boy's recollection of the proof in this case. It is so long, however, since I have tasted of these delicacies, except as they have been imported in a half matured condition, that I can hardly tell whether or not my estimate of them has been affected by the lapse of time, as is often the case in other matters of diet. At any rate I will speak of them as a boy would whose appetite for all good things is yet in its prime. To begin then with the

COCOANUT.

This is a lordly looking tree of the palm family—a branch of our flora that is of great use to us. It is fine to see these trees towering along the seacoast (as in Ceylon, for instance) waving their fruit clusters in the breeze; there is such an air of jubilance about them. Although the fruit is everywhere known, because a hard shell enables it to bear a long journey, yet it is not known when most luscious, except where it grows. Open it when it is but half ripe—when the meat is yet soft and jelly-like, and you then have something that you will never forget. The sweet water and the pulp combined make a sop that goes to the very spot. It seems that they are aware of this in the West Indies, also, and reckon it a great delicacy.

The cocoanut tree is almost as great a boon to the torrid zone as is the banana. From the sap you get a never-failing supply of an agreeable and cooling beverage, which by a little fermentation may be made into palm wine (vulgarly called "toddy") of which the memory is yet fresh. It is amusing to see the monkey-like agility of the native when climbing the long trunk of the tree in pursuit of the sap, which is taken from the top—his ankles loosely strapped together to enable him to grasp with his feet the slender stem without effort, while he proceeds by jerks in caterpillar fashion. This he does daily.

With the leaves of the tree the native covers his hut, and relies on this roof for years. Some of the fibres furnish him with matting, and from the outside husk of the nut, which is said to be more durable than any other vegetable fibre, is made a large quantity of cordage which is sent to England. Of the midribs of the great leaves oars are made, and the thinner portions are used as material for writing. The oil of the cocoanut is nearly as good as that of sweet almonds, and many a swig have I taken from a cocoanut-shell which is in general use there for that purpose. One hundred nuts annually is the average yield—while the trees stand comparatively close together. Now for the

BANANA

or Plantain (as we call it in the East) which is the generic name. Like all other fruit this differs in quality. Happily we can only recall the finest. There is something in this production that amply satisfies the demands of the system. You feel it as you consume it and it has the merit of being easily disposed of by the digestive powers. But to use it to the best advantage, the youngster advises you to make a fry of it, either in fritters or by itself. It is then truly ambrosial, he says. You can also make a delicious drink of it when raw, by stirring it in water, as it easily dissolves. They sometimes bake it into a kind of bread. The tree itself is more properly a huge herb; for the trunk, though from fifteen to twenty feet high is soft and succulent, being composed of a number of sheaths enfolding one another in the closest embrace. It is surmounted by a tuft of undivided leaves from six to ten feet long and one foot broad—forming a canopy fit to cover a throne. From the midst of this majestic tuft springs the long spike of from eighty to a hundred flowers which bear the germs of the precious burden that is to come. I tell you it is no small thing to get a glance at the tree just at that moment; it is grace and majesty combined. The fruit is somewhat like a cucumber in shape, containing a pulp that is extremely luscious, and yet qualified by a fine sub-acid; and then the peel, which is of a decided consistency (to guard the soft contents, I suppose) comes off so glibly that it needs no help from the knife, which of course adds to the luxury. There are only two species of this fruit, the finer flavored being the shorter, straighter and rounder.

It is said that the banana tree alone would have sufficed for all the wants of the primitive man. It is propagated by spontaneous shoots, as it has no seeds. Crops are produced at every season, so that the same amount of land required to support one man on potatoes, would maintain over twenty on bananas.

R. S. D.

REVIVAL RECOLLECTIONS.

III.

THIS method of procedure did not continue many weeks before our faithful minister called upon mother to unburden his feelings respecting my course. I was within hearing of their conversation. He said that he had watched me closely and prayerfully, and was satisfied that I had a false hope; and that all my religious works were the instigations of Satan. The church, he said, was laboring to save souls; but I was the devil's tool, working against it. Mother joined in his judgment of me and they both came down upon me like an avalanche, rebuking me most severely. What a sense of mortified pride and guilt filled me! I would have gladly hidden myself from every human being. Mr. Johnson concluded his remarks by saying that he expected to preach in the school-house of the west district that evening, and had come to invite me to ride with him to the meeting. Our ride was a silent one.

The text from which he preached was, "For Satan himself is transformed into an angel of light." He represented the many ways in which Satan transforms himself, in order to make people believe their sins are pardoned before they have submitted to God; or before their consciences are really awake to the nature of their unbelief. The substance of his criticism of me was all in that sermon, and it seemed to me that he illustrated every point in the discourse by some of my words or deeds. I was distressed at my hardness of heart, but could not weep. The choir were seated in a circle around the minister. My seat was directly in front, and I thought every eye was searching me through. All excepting myself sang this hymn at the conclusion:

"Awake, and sing the song
Of Moses and the Lamb:
Wake every heart, and every tongue,
To sing the Savior's name.

"Sing, till we feel our hearts
Ascending with our tongue:
Sing, till the love of sin departs,
And grace inspires our song."

When they sang that second verse Satan possessed me in despair. I longed to put my hands around the throats of those converts, and stop their singing those burning words. Then came a feeling of remorse for my bitter spirit, which was so intense that what immediately followed is lost in oblivion. When I returned to consciousness I was lying on the bed at home. It was evening. Miss DeVotee was praying, and mother was with her. She poured out her heart in an inspiration of thanksgiving to God. My mind followed her and caught the spirit of her words. My hard heart softened. They left the room without speaking, but such a sweet inward sense of God's goodness to me came into my heart that I seemed filled with his presence and his love. From that time I cared no longer for religious display, but was satisfied to study the Scriptures (which filled me with new delight) in retirement. I do not now consider that such extreme feelings of remorse were necessary in order to receive Christ as a Savior from all sin; but the lesson I learned was profitable to me in after life.

C. B. B.

THE VERB "TO BREAK."

"I begin to understand your language better," said my French friend, Mr. Arcourt, to me; "but your verbs trouble me still, you mix them so with your prepositions."

"I am sorry you find them troublesome," was all I could say.

"I saw our friend, Mrs. James, just now," continued he. "She says she intends to break *down* house-keeping. Am I right there?"

"Break *up* house-keeping, she must have said."

"Oh, yes, I remember. Break *up* house-keeping."

"Why does she do that?" I asked.

"Because her health is broken *into*."

"Broken *down*, you should say."

"Broken *down*. Oh, yes. And indeed since the small pox has broken *up* in our city"——

"Broken *out*."

"She thinks she will leave it for a few weeks."

"Indeed! And will she close her house?"

"No; she is afraid it will be broken, broken —, how do I say that?"

"Broken *into*."

"Certainly, it is what I meant to say."

"Is her son to be married soon?"

"No, that engagement is broken —, broken—

"Broken *off*. Ah! I had not heard that."

"She is very sorry about it. Her son only broke

the news *down* to her last week. Am I right? I am so anxious to speak the English well."

"He merely *broke* the news. No preposition this time."

"It is hard to understand. That young man, her son, is a fine fellow; a *breaker* I think."

"A *broker*, and a fine fellow. Good day.

"So much," thought I, for the verb "to break."

—*Young Folk's News.*

JAPAN ASKING FOR THE ENGLISH LANGUAGE.

THE most remarkable proposition in the history of language has just been made to Prof. Whitney, of Yale University, by Mr. Arinori Mori, Japanese Minister at Washington. It is nothing less than the adoption of the English Language, with some modifications, as a national language by the Japanese people. Minister Mori says that the "spoken language of Japan being inadequate to the growing necessities of the people of that Empire, and too poor to be made by a phonetic alphabet sufficiently useful as a written language, the idea prevails among many of our best educated men and most profound thinkers, that if we keep pace with the age we must adopt some copious, expansible and expanding European language, print our laws and transact our public business in it, as soon as possible, and have it taught in our schools as the future language of the country to the general exclusion of our present language, spoken and written." He then goes on to say that the English language is their first choice for many reasons, but there are "certain obstacles of an intensely practical character, which, if they cannot be removed will make the introduction of that language into Japan exceedingly difficult—all but impossible." These obstacles are, principally, the absence of law, rule or order in its orthography, based in etymology or on the sounds actually heard in the words, and the large number of irregular verbs, the latter being among the most frequently occurring words in the language. Mr. Mori's plan to get rid of these obstacles is as follows:

"Now, my proposition, which receives the concurrence of those of my countrymen best qualified by their knowledge of English, and by their general education, to judge accurately and wisely on this question, is to prepare and place in our schools, and in the hands of the people at large, spelling-books, dictionaries, grammars, and other text-books, teaching what may be termed a 'simplified English.' In other words, I propose to banish from the English language, for the use of the Japanese nation, all or most of the exceptions which render English so difficult of acquisition even by English-speaking people, and which discourage most foreigners who have the hardihood to attempt to master it from persevering to success."

Mr. Mori proposes to substitute the form, seed, speaked, bited, teached, beared, thinked, buyed, comed, &c., for the commonly received preterites and participles, to make all plurals regular, and to reduce the English spelling to a phonetic basis. He goes on to say:

"I think I have said enough to indicate the character of the changes I propose to make, and will not therefore trouble you with further details. It may be well for me to state, however, that being much interested in this subject, I have naturally conversed with many persons on it, and that, while seeking light in all available directions, I have found that most of my views are also entertained by many eminent men who have made language a life-study—some of them, after having duly weighed and considered the claims of etymology, even going so far as to say that not only English-speaking people, but the world at large, would be vastly benefited by a thorough recast of English orthography, making the written language what it claims to be, phonetic, instead of hieroglyphic on a phonetic basis, which is what it now really is."

"To conclude: let me suggest to you to consider, while you are making up the opinion which I hope to receive from you at an early day, that many of the reasons which make Americans and Englishmen hesitate to attempt radical changes in their language, for their own people, do not apply to the case under consideration; which is the adaptation of the English language to the necessities of a foreign nation of nearly 40,000,000 souls, thousands of miles distant from the two great English-speaking nations. Let me ask you to consider, also, that the people of the Japanese Empire are anxious to take a high position among the most advanced nations of the world but are unprovided with that great essential to individual and national progress—a good language; and that the English language, simplified as I have indicated, would be received by them as a boon, while it would be all but impossible to force upon them the language in its present form. Indeed, I think I could not conscientiously recommend my countrymen to cause their children to devote to learning a language so replete with unneccessary irregularities, and in which the interchange of thought and the acquisition of knowledge are rendered so difficult by a fantastic orthography, six or seven of the most important years of their lives—years which should be devoted to the study of positive science and the practice of the useful arts."

This is certainly a very interesting proposition and indicates that a very strong influence is at work pushing the Japanese onward toward the front ranks of civilizaton, and opening the doors of the vast mysterious East to a new spirit and life. We shall await Prof. Whitney's response with interest.

THE NEWS.

AMERICAN.

Reports from the camp of Captain Jack, the Madoc chief, are that he is anxious for a talk, and a peace commission has accordingly been sent to him with full powers.

A new medical periodical has been established in Philadelphia, with the title of *Archives of Scientific and Practical Medicine*. Editors, Dr. Brown-Sequard and Dr. E. C. Seguin.

Luther Tucker, late senior editor of the *Cultivator and Country Gentleman*, died at Albany on Sunday the 26th ultimo, in his 72d year. Mr. Tucker was editor and publisher of the first daily paper in Rochester, the *Advertiser*, commenced in 1826, which at that date was the only daily paper published west of the city of Albany.—Wm. Cassidy, editor of the *Albany Argus*, also died on the 24th ultimo.

Every day a fresh rumor is started in connection with the case of Phelps, Dodge & Co. of New York city, who have been charged with defrauding the Government of its custom-house dues. The latest and most trustworthy news concerning this firm is that they have abandoned all efforts to effect a money compromise with the Government, because the latter declined to admit that they were innocent of any attempts to defraud, and have concluded to fight the matter out in the courts, as the best way of proving their innocence to the public.

A "*Dictionary of Munson's Practical Phonography*," is a work soon to be published by Mr. J. E. Munson of New York city. "Besides giving the most approved phonographic outline of each word in the language, and its position, it will present all the principles of phraseography," illustrated with numerous examples, so that the learner as well as the experienced writer, will have a perfect book of reference to guide him at every point. Along with this, Mr. Munson will also publish a "Textbook of Munson's Phonography," prepared with particular reference to school instruction.

The bill repealing the franking privilege has passed both houses of Congress, and was signed by the President immediately on its reception. It makes a total end of franking in all its forms after the 1st day of July next. "Not only Congressmen," says the *Tribune*, "but the President, Cabinet Ministers, and Department officials of every grade, will after that date be obliged to put stamps on their letters like other people; and no provision is made for the transmission of public documents or official communications. The entire franking abuse is, in short, to be plucked up by the roots."

The last week has been one of great excitement in the public mind, growing out of the Congressional investigations of the "Credit Mobilier" affair. As matters stand, several prominent congressmen, including Vice-President Colfax, are convicted by the strongest circumstantial evidence of corruption and perjury; and in the case of Mr. Colfax an impeachment of him by the House of Representatives seems to be imminent. In the face of all this evidence the Vice President maintains his innocence, and yet hopes to prove it, though it must be confessed his chances of success are small indeed. Still it is possible the lapse of another week may shed a different light on the subject.

A very sensible article discussing "the remedy for hard times," in a late No. of the *Utica Herald*, concludes as follows:

"The great overshadowing evil is too much credit. No amount of legislation in regard to finance, usury laws, bankrupt laws, etc., can relieve us. The remedy is in the hands of the people themselves, and must be applied by them individually. *Pay as you go*, is a rule which, if faithfully adhered to, will in a few years work wonders. It will do for us as a nation what no legislation can do, and may save us from a terrible financial crash, which we have thus far evaded through the careful and discreet management of the United States Treasury. The cash system will make us independent as individuals, and render a financial crisis an impossibility. It will also add to the health and virtue of the people, and to the greatness of the nation."

Last year Congress made an appropriation of $15,000 for the promotion of fish culture; and since then (as we learn from the Utica *Herald*) the commissioner, Prof. Baird, has been industriously engaged in expending the money to the best advantage. Hundred of thousands of young shad from the Hudson and Connecticut have been deposited in the head-waters of the Mississippi and Alleghany rivers. The Platte river, too, has been similarly treated from the Connecticut, as, two years ago the Sacramento received a deputation from the Hudson river. An application was also made by Mr. Baird to the German Government for the purchase of a great quantity of impregnated ova of the Rhine salmon from the governmental hatching houses of Huningen. With its customary liberality the German government made our commissioner a present of a quarter of a million of germs; and these, with purchases made in Germany of private fish breeders, of some of the best varieties of European fish, are now upon the sea on their way here. The tanks and their contents weigh three and a quarter tons; and it is said to be no slight undertaking to move such a body of prospective life so great a distance, and secure for them an equable temperature. Though we cannot count upon so marvelous an accretion of brain-force in the country as we might perhaps have done before certain ideas about the intellect-stimulating effect of phosphorated food had been in a measure exploded we can congratulate ourselves upon the prospect of a wholesome and every way desirable article of diet which will soon be within the reach of all classes.

FOREIGN.

The new emperor of China assumes the personal government of his empire on the 24th inst.

The Japanese embassy to Corea has returned to Yeddo, and the relations of the two countries are said to be in a friendly state.

England is rejoicing over a year of extraordinary commercial prosperity, as indicated by the revenue returns. During the last nine months the receipts have been $258,423,430—a surplus over the corresponding period of last year, of about $16,000,000.

The Shah of Persia will start from Teheran next April on a European tour. He proposes to visit St. Petersburg, Berlin, Vienna, London, Paris and Constantinople. Buckingham Palace has been placed at his disposal for a residence during his visit to England.

The queen of Spain gave birth to a boy on Wednesday the 22d ult.; the mother and infant prince are doing well. The event was celebrated by the singing of Te Deums in all the churches, firing salutes, and a general illumination. It is said the prince is to be christened Louis Amedeo Fernando.

A royal decree has been promulgated by the Italian Government, whereby the State formally takes possession of sixteen convents in Rome. During the late Christmas and New-Year's holidays, an effort was made to induce the Pope to allow the members of the diplomatic corps accredited to Victor Emmanuel, to present their respects to him on the occasion. But he could not be moved from his determination to ignore their very existence. Even as private individuals, they, being excommunicated persons, may not enter his presence.

A terrible marine disaster occurred in the English Channel on the night of Jan. 22d. The emigrant ship Northfleet, bound from London for Australia, with 412

passengers exclusive of her crew, was run into at midnight while lying at anchor near Dungeness lighthouse, by a foreign vessel, supposed to be the Spanish steamship Murillo, bound for Lisbon, and was cut to the water's edge. Only 97 persons of the whole company are reported as saved. The steamer that ran into the Northfleet, paid no attention to the emigrant vessel after the collision, and proceeded on her course, leaving the sufferers to their fate. £100 have been offered by the London Board of Trade for her discovery, and preliminary means have been taken by the English government for a thorough investigation of the affair.

A STORY FOR 'GENE.

VIRGIE, just look at 'Gene; he's a very little bit of a bantam-legged fellow, but wonderfully boisterous. Why, he can roar like a bull of Bashan. You go and ask him to come here, and I will tell you and him a story that will suit his humor.

Well, there was once a little man who started on a long journey, and had not traveled far before he met a big man. Now this little man of whom I am speaking was a *very* little man; and and the big man was a *very* big man. So the big man asked the little man where he was going.

"I am going," said the little man, pointing his finger, "through that big forest to the town of Digby."

"Why, my dear sir," said the big man (for he had compassion on the little man), "you must not go through that forest alone, for there are robbers in it. They will rob you and perhaps take your life!"

"I *must* go through that forest this very day;" blustered the little man; "and now my ample friend I will tell you what I am thinking. It occurs to me that you are just the man to go along with me. So come along, eh?"

"Dear me," exclaimed the big man, "what can you and I do against a gang of robbers? We shall only lose our lives like dogs, and never be heard of more. So let me persuade you, my atom of a friend, not to go. Do, now."

"You cannot," said the little man; "I must go, and what is more, if you will not go with me I will go alone, and if I am killed you will know what has become of me."

"O, dear me, now," sighed the big man, whose soul was as great as his body, "if you will not, *positively* will not be persuaded, why, I certainly must go along and try to protect you; though we both perish. So have with you."

"Well said, my liberal friend;" shouted the little man, "we will come out all right yet."

"But," asked the big man, "can you fight?"

"No," answered the little man, "I can't fight, but I can talk big."

"So I perceive," said the big man, "but I think I should rather rely upon a big cane than big talk in a country infested with robbers."

"Very well," said the little man, "every man to his trade."

The big man said no more; but as he betook himself to his journey an expression of determination gradually overspread his face which betokened him a brave man. While on the other hand the little man whistled and bustled along, talking a great deal about not much of anything. Do you see the point, 'Gene?

'Gene.—What point, sir?

Why, don't you talk a great deal about not much of anything?

'Gene (bashfully).—I guess so.

Thus the travelers went on until they came to the borders of the forest, when the big man told the little man to walk close behind him. "I will," said the little man. And still they traveled on and on. But before they reached the middle of the forest the day was far spent, and the forest began to be overshadowed with that peculiar gloom which the waning day always imparts to it. Do you understand that, 'Gene?

'Gene.—No sir.

Virgie.—I do; it means that they were afraid because it almost began to grow dark a little.

That's it, Virgie. So they pushed on faster, hoping to get out of the forest before darkness came upon them; but just when they came to the thickest part of the woods five robbers sprang out of the thicket in front of them and demanded "their money or their lives." The situation was now desperate; no time to be lost. So the big man as quick as thought, wielded his heavy cane with such mighty force that he knocked down the two foremost robbers at one blow. Now 'Gene, what do you think the little man did? Why he just jumped right up in the air as high as he possibly could, and roared at the very top of his voice,

"*What! not but two at one blow? Give me the cane!*"

You can easily imagine that the other three robbers did not wait for him to get hold of the cane, but took to their heels and to the forest, and ran so fast and so far that they were never heard of more, and the travelers finished their journey in peace.

So you see 'Gene, after all, the big man with the cane only vanquished two, while the little man with big talk vanquished three. J. P. H.

LIFE'S QUESTION.

Out from life's shore we launch upon the sea,
Bright are the skies and soft the breezes blow,
Peaceful are the waves that roll beneath our lee,
While far o'er the waters hope beckons us to go.

Sweet are the days, the sun shines ever clear,
Golden are the visions of all that is to come,
Rich is the life that fills our hearts with cheer,
Many are the scenes in which we yet may roam.

But where lies the land for which the helm is set?
Where is the port in which to anchor cast?
Shall we drift with the tide and the storm's wild fret?
Or seek a harbor safe in which to ride at last?

CHOICE FLOWER-SEEDS FOR SALE.

TWENTY packages (our selection) sent to one address, postage paid, for $1.00. Special selections sent at the annexed prices:

Acroclinium, rose and white,	5 cts.
Ammobium altum,	5 "
Amaranthus salicifolius (Fountain Plant),	25 "
" bicolor, tricolor,	5 "
Asters, Truffaut's, 15 cts. German,	10 "
Antirrhinum (Snapdragon),	5 "
Balsam,	5 "
Cacalia (Flora's Paint-Brush),	5 "
Calliopsis (Coreopsis),	5 "
Celosia (Cockscomb), pyramidalis, cristata, dwarf,	5 "
Dianthus (pink) Clove, China, German,	5 "
" barbatus (Sweet William),	5 "
Gomphrena (Globe Amaranth), purple, white, striped,	5 "
Helianthus (Sunflower), Mammoth Russian,	5 "
Hollyhock (double), white, black, mixed,	5 "
Linaria,	5 "
Nigella (Love in the Mist),	5 "
Marvel of Peru (Four-o'clock)	5 "
Pansies,	15 "
Portulaca (double), i	15 "
Phlox Drummondii,	10 "
Petunias,	10 "
Ricinus Sanguineous (Castor-Oil Bean),	5 "
Salpiglossis,	5 "
Satin Flower,	5 "
Sweet Pea,	5
Solanum Texanum (Ornamental Egg-plant), wax-like, vermillion colored fruit, small and handsome,	5 "
Tagetes (Marigold) signatus, Pumila, African,	5 "
Campanula grandiflora, Large Bell-Flower, blue,	5 "
Zinnias,	10 "

These seeds were grown with care on our own grounds. All colors mixed except when noted.

ANNOUNCEMENTS.

SILK GOODS.

Machine-Twist and Sewing-Silk of their own manufacture for sale by the Oneida Community.

Address, [S] ONEIDA COMMUNITY, *Oneida, N. Y.*

PRESERVED FRUITS AND VEGETABLES

Put up for sale by the Oneida Community in tin and glass. Price list sent on application.

Address, [F] ONEIDA COMMUNITY, *Oneida, N. Y.*

STEEL TRAPS.

Eight sizes and kinds, suitable for the House-rat, Musk-rat, Mink, Marten, Fisher, Fox, Otter, Beaver, the Black and Grizzly Bears, are made by the Oneida Community Descriptive price-list sent on application.

Address, [T] ONEIDA COMMUNITY, *Oneida, N. Y.*

MACHINE-SHOP AND FOUNDRY.

Improved Lathe-Chucks, Blinn's Patent Gate-Hinges, Machines for Measuring the Length and Testing the Strength of Manufactured Silks, Bobbin-Winders for Sewing-Machines, etc. Agricultural, Machine and Light Castings, on hand or made to order. Descriptive price-list sent on application.

Address, [M] ONEIDA COMMUNITY, *Oneida, N. Y.*

THE WALLINGFORD PRINTING COMPANY.

All kinds of Book and Job Printing executed: Manufacturers' Illustrated Catalogues made a speciality: also Bronze and Color Work, and the finer kinds of Card, Circular and Bill-head Printing. Having enlarged its works and added new motive power, this Company is in renewed condition to meet the wants its patrons with promptness and accuracy.

P. O. Address, *Wallingford, Conn.*

PUBLICATIONS.

(Sent from the Office of the Oneida Circular by mail, post-paid, on receipt of price.)

History of American Socialisms. By John Humphrey Noyes. 678 pp. 8vo. J. B. Lippincott & Co., Philadelphia. London, Trubner & Co. Price $3.00.

The Trapper's Guide; a Manual of Instructions for Capturing Fur-bearing Animals. By S. Newhouse. Third edition with New Narratives and Illustrations. 215 pp. 8vo. Price, bound in cloth, $1.50

Salvation from Sin, the End of Christian Faith; an octavo pamphlet of 48 pages. By J. H. Noyes. Price 25 cents per single copy, or $2.00 per dozen.

Dixon and His Copyists; a Criticism of the Accounts of the Oneida Community in "New America," "Spiritual Wives," and kindred publications. By John Humphrey Noyes. Price 25 cts.

Scientific Propagation. By John Humphrey Noyes. Large octavo pamphlet of 32 pages. Price 25 cts.

Male Continence. By John Humphrey Noyes. An octavo pamphlet of 24 pages. Price 25 cts.

Hand-Book of the Oneida Community; Containing a Brief Sketch of its Present Condition, Internal Economy and Leading Principles. Price 25 cts.

The five pamphlets—"Salvation from Sin," "Dixon and his Copyists," "Hand-Book of the Oneida Community," "Scientific Propagation," and "Male Continence," will be sent to a single address on the receipt of $1.00.

Back Volumes of the Circular, Unbound. Price $2.00 per volume.

MESSRS. TRUBNER & COMPANY, Book-sellers, Paternoster Row, London, have the "History of American Socialisms," the "Trapper's Guide," and the "Hand-Book of the O. C.," for sale. They will receive subscriptions for our other publications.

PHOTOGRAPHIC PICTURES

Of the Oneida Community Buildings and Grounds, made by a first-class artist and finely mounted, can be had on application at the Office of the Oneida Circular.

LARGE VIEWS.

Bird's-eye View, looking West, of Community Buildings and Grounds, 12 by 14 inches, on fine enameled board 16 by 20 inches, price $1.75. Quadrangle and Group, 12 by 14, mounted like the above price $1.75. South and East Fronts of the Community Dwellings, giving a good view of the New Wing occupied by the Children, 8 by 10, on tinted board 10 by 12, with an ornamental border price $1.00.

STEREOGRAPHS.

No. 2, East and North Lawns. No. 3, East Lawn and Portico. No. 4, East Front. No. 5, North Front and Lawn. No. 6, Bird's Eye View of Buildings looking West. No. 7, Lawn and Summer House. No. 8, West View, toward Railroad. No. 11, Quadrangle. No. 12, Lawn View. No. 15, South and East Fronts. Price: Stereographs $3.00 per doz. Sent by mail, post-paid, on receipt of price.

Oneida Circular.

A WEEKLY JOURNAL OF HOME, SCIENCE AND GENERAL INTELLIGENCE.

Published by the Oneida & Wallingford Communities.

ONEIDA COMMUNITY, FEBRUARY 10, 1873.

New Series, Vol. X, No. 7
Whole No. 1445.

POST-OFFICE ADDRESS:

ONEIDA CIRCULAR, ONEIDA, N. Y.

TERMS:

The CIRCULAR is sent to all applicants, whether they pay or not. It costs and is worth at least two dollars per volume. Those who want it and ought to have it are divisible into three classes, viz., 1, those who cannot afford to pay two dollars; 2, those who can afford to pay *only* two dollars; and 3, those who can afford to pay *more* than two dollars. The first ought to have it free; the second ought to pay the cost of it; and the third ought to pay enough more than the cost to make up the deficiencies of the first. This is the law of Communism. We have no means of enforcing it, and no wish to do so, except by stating it and leaving it to the good sense of those concerned. We take the risk of offering the CIRCULAR to all without price; but free subscriptions will be received only from persons making application for themselves, either directly or by giving express authority to those who apply for them.

Foreign subscribers, excepting those residing in Canada, must remit with their subscriptions money to prepay the postage.

THE UNITED COMMUNITIES.

ONEIDA COMMUNITY

Is an association living in Lenox, Madison Co., N. Y., four miles south of Oneida and a few rods from the Depot of the Midland Railroad. *Number* of members, 205. *Land*, 654 acres. *Business*, Manufacture of Hardware and Silk goods, Printing the CIRCULAR, Horticulture, &c. *Theology*, Perfectionism. *Sociology*, Bible Communism.

WILLOW-PLACE COMMUNITY.

Branch of O. C., on a detached portion of the domain, about one and one-fourth miles north of O. C. *Number* of members, 19. *Business*, Manufactures.

WALLINGFORD COMMUNITY.

Branch of O. C., at Wallingford, Conn., one mile west of the Hartford and New Haven Railroad. *Number* of members, 45. *Land*, 228 acres. *Business*, Publishing, Job Printing, Manufactures and Horticulture.

SPECIAL NOTICE.

The O. C. and Branches are not "Free Lovers," in the popular sense of the term. They call their social system BIBLE COMMUNISM or COMPLEX MARRIAGE, and hold to freedom of love only within their own families, subject to Free Criticism and the principles of Male Continence. In respect to permanency, responsibility, and every essential point of difference between marriage and licentiousness, the Oneida Communists stand with marriage. Free Love with them does *not* mean freedom to love to-day and leave to-morrow; nor freedom to take a woman's person and keep their property to themselves; nor freedom to freight a woman with offspring and send her down stream without care or help; nor freedom to beget children and leave them to the street and the poor-house. Their Communities are *families*, as distinctly bounded and separated from promiscuous society as ordinary households. The tie that binds them together is as permanent and sacred, to say the least, as that of marriage, for it is their religion. They receive no new members (except by deception or mistake), who do not give heart and hand to the family interest for life and forever. Community of property extends just as far as freedom of love. Every man's care and every dollar of the common property are pledged for the maintenance and protection of the women and children of the Community.

ADMISSIONS.

These Communities are constantly receiving applications for admission which they have to reject. It is difficult to state in any brief way all their reasons for thus limiting their numbers; but some of them are these: 1. The parent Community at Oneida is full. Its buildings are adapted to a certain number, and it wants no more. 2. The Branch-Communities, though they have not attained the normal size, have as many members as they can well accommodate, and must grow in numbers only as they grow in capital and buildings. 3. The kind of men and women who are likely to make the Communities grow, spiritually and financially, are scarce, and have to be sifted out slowly and cautiously. It should be distinctly understood that these Communities are not asylums for pleasure seekers or persons who merely want a home and a living. They will receive only those who are very much in earnest in religion. They have already done their full share of labor in criticising and working over raw recruits, and intend hereafter to devote themselves to other jobs (a plenty of which they have on hand), receiving only such members as seem likely to help and not hinder their work. As candidates for Communism multiply, it is obvious that they cannot all settle at Oneida and Wallingford. Other Communities must be formed; and the best way for earnest disciples generally is to work and wait, till the Spirit of Pentecost shall come on their neighbors, and give them Communities right where they are.

THE LOWEST PLACE.

BY HARRIET MC EWEN KIMBALL.

Not that I may be chiefest, Lord,
But that I may obey
More closely Thy most sweet commands,
Teach me to serve, I pray.

Not that I may be honored more
Who am indeed the least,
I would the lowest place like one
Grace-bidden to the feast.

But that Thy smile, my blessed Lord,
Might reach that lowest place,
And show me, though the last and least,
The fulness of that grace.

[*Christian Union.*

GOD IN ALL THINGS.

Home-Talk by J. H. N.

WHEN we speak of special providences, let us see that we get the right meaning of that word *special*. It should not mean that God's management of things around us is peculiar, or that he affects and arranges affairs here and there in a special way, while other things are regarded as under the control of material laws. We *discover* God's providences in a way that is special to us, because we are able to read them only in that special way. We see the hand of God in certain events, and our recognition of those events requires faith. We may properly call them special providences, because they are recognized by us in a special way, different from other events that we do not understand. But I suppose the truth is, not a sparrow falls to the ground without his care and all the hairs of our head are numbered; and so, whether we understand things or not, God's providence is over and around us always and everywhere. In that sense it is not special, but general and universal.

If we believe in this general principle that nothing happens without God's intention, this faith, whether we understand things or not, will make us feel respectful toward whatever occurs. If you watch your experience, probably you will find that you are thankful for some things that happen to you, and perhaps a little cross about other things. I think you will find that to be a wrong way of receiving events. Paul says, "In every thing give thanks." The next time any thing happens that tempts you to feel cross, why not bethink yourself of this principle, and ask whether it is not God that is approaching you behind the disagreeable event; and if it is, be respectful, whether you understand or not. If it is God that is approaching you, be sure it is for some good, and that you had better yield him your attention and not quarrel with him.

I think if we had faith enough we should meet all events that come to us as we would meet God, respectfully, cheerfully and thankfully, instead of feeling cross, and thinking we are hardly dealt with. If it is true, that God arranges all things, then it is perfectly certain that there is a sense in which all things are good; and there is a sense in which we ought to be thankful for all things and meet them with cheerfulness and respect.

The particular fault that I am criticising exists, I should say, in all cases where persons allow themselves to get cross and are worried and fretted by things that happen to them. There may be a place for resistance and severe criticism in dealing with persons. There may be, under certain circumstances, cause for strenuous contention with events around us. God's inspiration may set us to work in a certain direction, and then his providence may present persons and things in opposition to us, that require to be resisted with contention and severity. Even here his inspiration and providence are not inconsistent. If he brings to us a person that is in a bad state and needs criticism, and on the other side gives us an inspiration to criticise sharply, then the inspiration and providence match each other. But this is a very different thing from being cross. The trouble is, when a person approaches us in a bad, provoking spirit, instead of our having wisdom to deal with the case as God does, we are tempted to feel cross and think ourselves hardly used, and so grumble.

For my part I am going to take all things as coming from God, and feel respectful toward them, let them come in what shape they may. "*Though he slay me, yet will I trust in him.*"

THE LOGIC OF CRITICISM.

WHEN inquirers are informed that we rely upon "mutual criticism" as one of the principal means of internal government, it is probable that they get but a very imperfect idea of what this mutual criticism really is. They no doubt think it a very singular instrument for effecting so important a result. We can imagine them saying to themselves: "*Criticism!* If that will make people harmonious, what a beautiful, orderly state of society we outsiders ought to have! Why our atmosphere is as full of criticism as a summer evening of insects, and unhappily much of it is of the stinging, biting, kind, which one instinctively endeavors to flee from. I would as soon think of making my bed in a room full of wasps and mosquitoes as to live in a free-criticism society." In substance such remarks as the above are sometimes made by people who visit us.

It does not surprise us that criticism is not received with enthusiasm on its first presentation, for we ourselves did not altogether un-

derstand it or enjoy it at first. Like children learning to be washed, we submitted with as good a grace as we could; but when the ordinance was followed by a new sense of interior cleanliness, justification, and peace with God and man, then we began to be enthusiastic about criticism. Criticism is in fact a washing applied to the inner man.

Ah, me! At this phrase "interior cleanliness" what a prospect arises before us of hopes realized, a world redeemed, the Millennium a reality! How beautiful is purity! How we love it! How we long to stand before the "throne clothed in white!" A pure heart—how priceless! Is it possible to

"Cleanse the stuffed bosom of that perilous stuff
Which weighs upon the heart?"

How many hearts respond to this secret inquiry! Here is a passion in poor human nature which, like the rock at the foot of the mountain, shows its divine origin, and the hight from which it has fallen.

It is related that God said of David, "I have found a man after *mine own heart.*" In the light of this remark David's character has a peculiar interest. His history reveals him a man of strong passions. He was mighty in war, strong in friendship and a great lover of women; but his deep, central passion was love of righteousness and internal purity. "Cleanse thou me from secret faults. Behold thou desirest truth in the inward parts. Purge me with hyssop and I shall be clean, wash me and I shall be whiter than snow. Create in me a clean heart, O, God, renew a right spirit within me."

Love of interior purity is a passion as distinct as the love of food, but it has so long been trodden under foot, and buried under the condemnation of the devil that its existence is made of no account. Love of interior cleanliness, purity, righteousness, is really the deep, central, king-passion, and we have learned to rely upon it as the citadel that governs the whole man. Men are governed by the passions and affections of the heart, not by the thoughts of the head, and if, as we believe, criticism is an ordinance which tends to develope and strengthen the central passion—love of the truth—those who honestly consider the matter will see that mutual criticism is one of the most potent means of government.

E. H. H.

PROVIDENCES.

I DELIGHT to look back at the providences of my past life and note how time after time God has arranged circumstances in a way to make them work for my good. Of the many pleasant providences that I thus remember, there is one that my mind often dwells on till my heart is filled with rejoicing, praise and thanksgiving; that is, the state of mind I was in when I first became acquainted with the truth about Salvation from Sin.

I had associated a good deal with religious people; I liked their society and liked to hear them tell their experiences. How often I wished I had something to tell! I had a class in a Sabbath-school, and while endeavoring to explain the words of Christ to the little ones in order to make it clear to them that Christ died for them and that they must pray to him as their Savior I often cried out in my own heart in bitterness of soul: "I know nothing of what I am trying to teach these children."

I recollect having some talk with the Sabbath-school superintendent. I told him that I was not a member of any church—not even a professor of religion—and I felt condemned for trying to teach the way of salvation to others when I was not saved myself. "O," said he, "such scruples as these are to me a sign that you are a Christian. You like to go to church; you like people that are religious; you like to read the Bible;" etc.

But this did not satisfy me. I felt that in the sight of God I was a sinner, and I feared I should die and go to hell. Often when I was out of health I would lie awake at night in an agony of spirit, fearing to go to sleep lest I should awake in the other world, a companion of lost spirits—my destiny fixed for all eternity. The words, "Lost, lost, lost," often rung in my ears. Once my mother came into my room after I had retired for the night and inquired into my symptoms and if I suffered any acute pain. After she left the room I sobbed out, "The pains of hell are worse than my disease."

While in this frame of mind, a good providence so arranged my circumstances that I should be thrown into the company of some earnest souls who had not only found salvation themselves, but knew how to point out the way to others. They told me that Christ came into the world to save sinners and that he had accomplished his mission; that I must *believe* this and believe he had saved *me*. "Christ has come into all hearts," said they. "Confess him in you a perfect Savior, and his life and light will well up in your heart and fill you with peace and happiness. Make a full surrender of your whole being to God and believe that Christ died for you and has saved you from sin and condemnation." They gave me Mr. Noyes's article on Salvation from Sin to read.

I need not describe here the conflict, and what seemed to me the life-and-death struggle which took place in my heart; how the tempter labored to direct my mind from the truth and to keep me from believing the plain words of divine revelation, "Thou shalt call his name Jesus for he shall save his people from their sins;" how I opened my Bible and read: "He that confesseth me before men, him will I confess before my Father and his holy angels;" and how at last, strength and faith were given me to confess Christ in me a Savior from all sin—and the ineffable gladness and rest that immediately filled my soul. It is sufficient to say that whenever I turn my mind's eye toward that time I am impressed with the fact that God planned it so that I should have the truth presented to me at just the time when I was under condemnation for sin and striving to do right in my own strength. I was hungry and thirsting after righteousness and the blessing promised to such was not withheld.

T. M. S.

From the Independent.

REVIVAL MEMORIES.

BY PRES. CHARLES G. FINNEY.

Some time since I briefly noticed in the *Independent* a revival that occurred in Antwerp, Jefferson County, N. Y. During that revival it was reported that some "roughs" in Governeur, a town twelve miles north of Antwerp, threatened to come down and break up our meetings. I thought no more of the report; and when I concluded my labors in Antwerp I went to Brownville, to the west of Antwerp some thirty or forty miles. I had never been in Governeur, and knew nothing of the state of society there, except what I inferred from the report just mentioned, and the report had passed completely out of my mind. I had not, to my recollection, so much as thought of Governeur since I left Antwerp, until about mid-winter, while at Brownville. One day, while engaged in secret prayer, the Spirit of God made it plain to me that I must go to Governeur and preach the Gospel. It took me by surprise, as I had not mentioned or so much as thought of Governeur while engaged in prayer. But the Divine showing was clear and irresistible. I must go to Governeur. Nothing was said or revealed in regard to the time when I was to go. Soon after this I was introduced to a member of the Congregational church of Governeur, who was at Brownville on business. I told him that the Lord had bidden me to go to Governeur to preach the Gospel, and inquired as to the state of religion there. He appeared incredulous and confused; but from him I learned that there were two churches (a Baptist and a Congregational, or it may have been a Presbyterian church) there, and that the latter church had no pastor, that the state of society was highly irreligious, and that the churches were asleep. I thought no more upon this subject for some months. I had left Brownville, and was commencing labors in the neighborhood of Le Roy-ville, when, of a sudden, the Lord bade me, in a very urgent manner, to go to Governeur, as I understood, immediately. I had two or three appointments to fulfill in the place where I then was; and, as Rev. Daniel Nash had just joined me, I requested him to go to Governeur, survey the ground, leave an appointment for me to preach there, and come back and report. He went; and returned, saying that he found some conviction on the minds of some professors of religion, but, on the whole, the state of religion was very discouraging. At my request, he returned immediately to Governeur, to attend a meeting of the church to prepare for my coming. Two or three days later I followed him, and arrived in the village an entire stranger, just as the meeting was about to be dismissed. I rode directly to the church, and entered just as Brother Nash had risen to dismiss the meeting. He saw me come in, and paused. I went directly to him; and he took me right in his arms, and then turned and introduced me to the church. I preached that evening. The house was full, and the Spirit and power of God were present. The next morning I found the village excited. I sallied forth to converse with whomsoever I should meet. In passing a tailor-shop, I observed a number of persons within, and heard them conversing about the sermon of the night before. I stepped in, and found myself in the midst of a company of Universalists, headed by a Dr. Spencer, a hotel-keeper of the village. I proposed to discuss the question of Universalism with the Doctor; and after settling the preliminaries, the discussion commenced. The Doctor's friends rallied around him, and evidently anticipated a triumph. They soon saw their mistake, and went out, one by one, leaving their leader to get out of the difficulty as best he could. I followed him up till he subsided. His wife was a member of the church. Before night I learned that he went home so much agitated that his wife inquired what was the matter. He at first made no reply; but she said, "Doctor, have you not seen Mr. Finney?" He burst into tears and replied: "Yes, and he has turned my weapons upon my own head." He soon after obtained a hope in Christ. God was perfectly faithful in fulfilling the promise to pour out his Spirit, as he had assured me that he would. A revival commenced immediately, and went forward with great power. We held meetings, either for preaching or prayer or inquiry, nearly every day. Prominent in the

village was a gentleman merchant, by the name of Hervey D. Smith. He was a gentleman of much more than ordinary culture. He was living with a second wife, who was the daughter of an Old School Presbyterian minister. His first wife also was a daughter of a minister of the same school. His father-in-law, together with his other Christian friends, had taken the utmost pains to win him to Christianity; but it had resulted in confirmed Deism. He was a reader, and familiar with such Christian literature as was found in the libraries of his fathers-in-law. He was an amiable gentleman, a good husband, and a good influential citizen. His wife was a lady of uncommon culture and refinement and exceedingly anxious to have her husband converted to Christ. I had been there but a few days when she called on me, requesting me to see her husband, informing me who and what he was. I appointed an hour to see him. When I called, he at first declined to see me, saying it would do no good; that he had spent time enough in conversing with ministers upon the subject—he was familiar with all the arguments in favor of Christianity, and was unwilling to give any more time to the consideration of the question. But, as his wife entreated with tears, he consented. * * * * * [After a long controversial talk] he began to be subdued, and said mildly: "Please to tell me, then, what you do believe." I shall not soon forget the look and tone with which he said this, as he drew his chair close up in front of me. * * * * When I explained the nature and necessity of the atonement, and that it was made for all mankind, that salvation was free to all, it completely overcame him. The blood rose to his face, which became scarlet red; and, covering his face with his hands, he burst into a flood of tears and broke completely down. While he wept profusely and held his face down almost between his knees, I rose and abruptly left the room. Shortly after the bell tolled for a church prayer-meeting. I had hardly commenced the meeting when Mr. Smith and his wife came in. The people looked with surprise to see Mr. Smith in a prayer-meeting. I took up most of the time in remarks intended to enlighten him, and held up Jesus. He looked at me with an intensity which seemed to say: "It is all new to me." Before the meeting closed his face was all in a glow. As his wife informed me, he had been particularly bitter against the doctrine of endless punishment, as being supremely unjust. In walking home from the meeting, he said to his wife: "What has become of all my infidelity? It is all gone! All my arguments in support of it now seem to me to be of no weight. I wonder that I ever could have rested in them. I have entirely misunderstood the government of God. I appear to myself like a man who has been called to pass judgment upon some magnificent temple or piece of architecture, who as soon as he came in view of one corner of it turned away and condemned the whole of it with disgust. I have done God the greatest injustice, and if ever a man deserved eternal damnation I am that man." He immediately came squarely out for Christ. entered into the work of revival with all his heart, and soon after united with the church.

[Mr. Finney afterward gives the following account of the progress of the same revival:]

Father Nash (as he was called) was still with me, and we saw that nothing but strong faith could ride out the storm of opposition. Emboldened by the state of things, a band of young men in the place bound themselves together in a pledge not to be converted. Understanding, as we did, that there was no help for this state of things but by a direct appeal to God, and seeing that the faith of the church was unequal to the emergency, Father Nash and I retired to a grove at some distance from the village, and there gave ourselves up to mighty wrestling in prayer with God for the continuance of the work. Father Nash had become one of the mightiest men in prayer that I then had known. The Holy Spirit gave us hold of the promise "Where any two of you shall agree," etc. We wrestled for some hours, until we prevailed, and came from our place of prayer with the assurance that the work would go on, and that no opposition should prevail against it. The meetings had not fallen off in numbers during the suspension of conversions, but were still crowded and intensely solemn. I did the preaching, and Father Nash gave himself wholly to prayer and personal conversation. The next Sabath after this triumph in prayer I had, as usual, preached morning and afternoon; and at five o'clock we had a general prayer-meeting in the church. The young men who had banded together to resist the revival were among the most influential in the place; and, joining their influence to that of opposing professors of religion, had arrested the work of conversion. The house was full, and we observed that numbers of those young men were present. The meeting was awfully solemn, and toward the close Father Nash rose and made a short address. From the first he spoke like a man inspired, and made a profound impression. After addressing the congregation in general for a short time, he turned and addressed those young men in a very pointed manner. He told them what they were doing, and with the utmost solemnity besought them to abandon their position. He denounced the wickedness of their conduct in unsparing language, and assured them that, "though the wicked join hand in hand, they shall not go unpunished." He went on in a strain of alternate indignation and compassion, till he wound up by saying: "Now, young men, mark what I say. In less than one week the Lord will break your ranks. He'll either convert some of you or send you to Hell in less than one week, as sure as the Lord is my God." With the last word he brought his hand down with full strength upon the top of the pew by which he stood. The words and blow together had well nigh caused an explosion in the congregation. It was as much as their nerves could bear. He seemed to speak with the authority of an inspiration from God; and never in my life, I think, have I seen a more profound impression produced by any sentence uttered by human lips. The shock was electrical. The Holy Ghost was in it. Father Nash sat instantly down, bowed his head, and groaned aloud with pain. But he had committed himself, and in some sense the cause of God, by asserting that in less than one week some of those young men would either be converted or sent to Hell. I shuddered, and feared that he had gone too far. I had not risen to the hight of his inspiration, and I thought he was imprudent. I thought of rising to modify what he had said; but I feared to do so. I let it pass, and immediately dismissed the meeting, as I had to preach again in the evening. I then expressed my fears to Father Nash; to which he smilingly replied, "We shall see." Early on the next Tuesday morning the leader of those young men called on me. He was overwhelmed with conviction; and, after a few words of conversation and prayer, he broke thoroughly down, and made full confession of his awful guilt. He seemed completely subdued, and inquired with the deepest humility, what I advised him to do. I advised him to visit this whole circle of young men, confess to them, and beseech them to be reconciled to God. The Holy Ghost seemed to lay the burden of their souls upon him, and he went out from my presence borne down with the weight of his commission. Before the week closed, as nearly as I can remember, almost every one of those young men had hopefully submitted to God.

HOME-TALK BY J. H. N. ON THE ABOVE.

President Finney, in the preceding sketch of "Revival Memories," does not hesitate at all to say that "the Lord told him to go to Governeur" and repeated the command "in a very urgent manner." He does not mention it as a mere impression or instinct; he says it was plain to him—"clear and irresistible"—so that he felt free to declare at the time that "the Lord had bidden him to go to Governeur to preach the Gospel." It is probable that President Finney is now entirely out of that line of experience, and that the *Independent*, which approvingly publishes Mr. Finney's "Memories" under the heading "Our Pastoral Sketches," might ignore the principles involved, and regard as foolish and fanatical such experience when related by a less distinguished man than Mr. Finney; but it is none the less important that such experience should be carefully studied, and that its value and bearing should be determined.

In the first place, it is to be remarked that what the so-called Orthodox people term "fanatics" all over the world—the Spiritualists, the Shakers, Mormons, etc.—use language identical with that which Mr. Finney uses in describing old revival experiences. They are continually affirming that the Lord tells them to do thus and so. And this language, whether used by the Oberlin President or by a veritable fanatic, involves the idea of direct communication with the living God—that inspiration and manifestations of miraculous power are as appropriate now as they were in old Bible times. No essential difference can be discovered between God's telling Mr. Finney forty years ago to "go to Governeur to preach the Gospel" and his saying to Jonah, nearly three thousand years ago, "Arise, go to Nineveh, that great city, and cry against it." I do not say that God did tell Mr. Finney to go to Governeur, nor that God really talks to the so-called fanatics as they pretend; but I do say, that it will not answer for Mr. Finney to use such language, and for the *Independent* to publish it as sound, edifying pastoral truth, and at the same time oppose the doctrine of present inspiration and present miracles. The only position they can consistently take is, that it is possible that everybody, even the fanatics, may be inspired; but as all are manifestly not inspired by the same spirit, that the best we can do is to endeavor to discriminate between true and false inspiration.

In the second place, it is obvious that the language of Mr. Finney involves the fundamental principle of Theocracy. If the Lord really told him to go to Governeur he would have been justified in going there, though the Government of the State and of the United States forbade him; for he would have received orders from a power that is supreme and must be obeyed. In the particular case under consideration, the order was inoffensive; Mr. Finney was simply bid to go to Governeur and preach the Gospel—acts not in opposition to any State or National laws; but if God had a right to give him a specific order he had a right to give him any number of orders and to keep him under orders—to make him a sort of consul or embassador to this nation, with more authority than any representative of England, for instance, has in any foreign country. Once admit the possibility of a man's receiving orders from God in the manner described by Pres. Finney, and you cannot say where it will end, for God may choose to interest himself and give orders concerning the arrangements of society, including even State and National Governments; and this is what is meant by Theocracy—the right of God to control the affairs of this world.

Thus far we have simply discussed the matter abstractly: a personal view now occurs to me that may be worth mentioning. A powerful revival followed the labors of Mr. Finney and Father Nash; but it is to be noted that one special object for which Mr. Finney was sent to Governeur was to convert a man by the name of Hervey Smith. Now this man was connected with a family of Smiths who had removed thither not long previously from our village in Putney, Vt. Capt. Benjamin Smith, probably brother of the Hervey Smith that Mr. Finney speaks of, had been a merchant and leading man in Putney till about 1824. In fact, he built and lived in the house which, at his removal to Governeur, was purchased by my father and became the home of the Noyes family. He took with him to Governeur two nephews, Hervey and Henry Smith, who were known in Putney as rude fellows, and probably belonged to the band in Governeur who pledged themselves not to be converted, but afterward succumbed to Father Nash's desperate attack. These two young men after their conversion returned to Putney on a visit, while the revival was still going on at Governeur. I have an impression that they said that God told them to come there. They brought with them all the zeal of Mr. Finney and Father Nash and the audacious revival habits of those days. They would stop men anywhere in the streets to talk with them on religious subjects. They did not hesitate to ask strangers if they knew they "were on the road to hell!" The sensation produced by them was very profound and lasting; a great revival followed; and although I was not converted by their direct efforts, I have always known that their

course and spirit had great influence upon me both directly and indirectly; they were doubtless primary causes of my subsequent conversion. Those interested in tracing the connection of events might thus find a chain of special providences leading from the Governeur revival to the establishment of the Oneida Community. They might say the Lord sent Mr. Finney to Governeur for the special object of converting the Smith family; and then sent Hervey and Henry Smith to Putney to assure my conversion; and then told me to come here and found the Oneida Community; in which work, furthermore, I have had as co-laborers Daniel and Seymour Nash, sons of Father Nash of the "Revival Memories," for whom doubtless he constantly wrestled in prayer with the covenant-keeping God, and who have been as zealous for the progress of God's cause in the world as the "man of prayer" himself. In fact Daniel P. Nash, Father Nash's first-born son and the true heir of his "mighty faith," was a leading man in the first colony that joined Mr. Burt at Oneida in November, 1847, and commenced the Oneida Community some months before I joined it. He and I together laid the cellar-wall of our old Mansion House. He lived and died here, and his brother and descendants are with us to this day. Truly Mr. Finney and Father Nash were fighting for a far-off end in those old battles at Governeur and all through Central New York. The O. C. found its home almost on the very spot where they commenced their career. Vernon Center is only six miles east of us, and that is the place where the histories say the great Finney Revival commenced. Father Nash died at Verona, another village almost within sight of us. Pilgrims to the shrine of this devoted man, by stopping at the Community, may see his descendants of three generations, and may find among them guides that will take them to his grave.

ONEIDA CIRCULAR.

TIRZAH C. MILLER, EDITOR.

MONDAY, FEBRUARY, 10, 1873.

The only person who ever undertook to morally annihilate the O. C. by refusing "on principle" to sell goods to its agents, was Mr. Wm. E Dodge, Jr., of the firm of Phelps, Dodge & Co., New York city. That firm is now accused of fraud on the revenue to the extent of a million dollars.

It is noticeable that the "awful disclosures" of corruption that are going on in the political world, were preceded at no great distance of time by similar disclosures in the religious denomination which has most control over the Government. The affairs of the Methodist Book Concern were troubling the public a year or two ago, much in the same way as the affairs of the Credit Mobilier are now.

A few years ago, Bennett and Greeley were competing, neck and neck, in the newspaper world; and most persons of the moral and religious classes considered Greeley an angel and Bennett a devil. But somehow the ends of these two men, and what comes after them, do not indicate that Providence saw things exactly in that light. Greeley died in a mad-house, confessedly ruined by false ambition, leaving no son to take his place, and bequeathing a miserable lawsuit to his daughters. Bennett died with comfortable dignity, leav- his paper in the full tide of prosperity, and a son at the head of it, who has just achieved a feat of world-wide fame and almost regal magnificence, in his successful expedition for the discovery and relief of Livingstone in central Africa. The lessons to be learned from the histories of these remarkable rivals are abstruse and not half in sight yet.

SEX IN THE UNITED STATES.

ACCORDING to the census of 1870 there are 428,759 more males than females in the United States. In our native population there is an excess of 17,898 females. In the foreign population there is an excess of 446,657 males. In our white population there is an excess of 498,799 males. Of native whites there are 77,355 more males than females. Of foreign whites there are 391,446 more males than females. In the colored population there is an excess of 93,483 females. Of the 58,680 Chinese, only 4,574 are females. In Alabama there are 19,516 more females than males. Arizona has 4,116 more males than females—a great disproportion considering its limited population; every two men in three must either go without women, or enter into polyandry with the lucky third, or come East for a wife. This remark is still more applicable to some other Territories; in Montana only about one man in five can have a wife. Arkansas has 12,051 more males than females. California has an excess of 136,711 males. Colorado has an excess of 9,776 males. Connecticut has 6,914 more females than males. Dakota has males in excess 3,575. Delaware has only 241 more males than females. The District of Columbia has 7,316 more females than males. Florida has 1,348 more males than females. Georgia has an excess of 26,199 males. Idaho has an excess of 9,369 males in a population of 14,999. In Illinois the males exceed the females by 93,183; in Indiana by 35,351; in Iowa by 57,814; in Kansas by 40,049; in Kentucky by 10,339; while in the comparatively old State of Louisiana there is an excess of 2,585 females. In Maine there are 709 more females than males; in Maryland 10,926; in Massachusetts 49,793. In Michigan there is an excess of 51,431 males; in Minnesota an excess of 30,892 males. The females in Mississippi exceed the males by 1,080. Missouri has 71,399 more males than females. Montana has 3,824 females in a population of 20,595. There are 17,857 more males than females in Nebraska. There are 22,267 males in Nevada who cannot find wives if they stay there; let a few of them go to New Hampshire where there is an excess of 7,020 females; and some to New Jersey where there is an excess of 6,752 females. New Mexico has 2,396 more males than females; New York has an excess of 56,301 females; North Carolina an excess of 33,953 females; while Ohio has an excess of 9,840 males. Oregon has 15,339 males in excess of females. The State of Pennsylvania has 4,953 more females than males, while the little old State of Rhode Island has 7,841. South Carolina has a surplus of 17,802 females; Tennessee, 11,826. Texas has a surplus of 28,535 males. In spite of its polygamy Utah still has 1,456 more males than females. How is that Dr. Newman and Judge McKeon? To make all fair out there, there ought to be a little polyandry or something. Vermont has a small excess of males, 891. Virginia has a large excess of females, 31,047. Washington, 6,025 more males than females; West Virginia, 3,672; Wisconsin, 35,102; while Wyoming has only 1,899 females in a population of 9,118. It will be seen that the excess of males is in the new States and Territories, while the excess of females is in the old centers of population, New York, Massachusetts, Maryland, Virginia and North Carolina. Of the 428,759 males who cannot in the natural course of things be expected to get wives, let us hope that they will all be the least worthy and capable, and that by this process of natural selection by which the fittest survive and marry, the nation at large will slowly improve.

A. B.

COMMUNITY JOURNAL.

ONEIDA.

Thursday, Feb. 6.—This is the sixty-fourth day of good sleighing between O. C. and Willow Place. Although the snows have been frequent and heavy, the thaws have been timely; the last one saved us from the necessity of resorting to steam at the Willow Place works.

—Mr. Hinds, the keeper of our herbarium, says it has now 1,068 species and varieties of plants—flowering and Cryptogamous. These are mostly northern plants found east of the Mississippi and described in Gray's "Manual." Two or three peculiarly southern orders are represented, and all of the northern ones save ten or a dozen, of the smaller orders. Altogether we scarcely have a third of the flowering plants which grow in the United States east of the Mississippi. The orders best represented are Violaceæ, Liliaceæ, Orchidaceæ, and Filices. Of the fifty-six golden-rods growing east of the Mississippi, we have only twenty species and varieties. We should be glad to have them all. Mr. Charles Burt, who has been collecting trees and shrubs in Connecticut, during his studies at Yale, will soon add his specimens to our collection, making it much more complete in his department. A very considerable number of our specimens were sent us by a friendly botanist in Chicago. We hope soon to be in a condition to enlarge our herbarium by pleasant exchanges as well as by our own collections. Mr. H. says we already have duplicate specimens of about 300 species.

—Some of our folks are afraid that our readers will think the description of an evening meeting, given in last week's journal, is a specimen of the general character of our evening gatherings. Dear, dear! we wouldn't scandalize our religious audience for anything; but can't we secularize a little once in awhile as well as other folks? We thought we had said enough about our serious meetings to make it possible to give one of another character without shocking anybody very much. We believe in downright religion which changes character and enables the heart to fasten on God; but we don't think it is necessary to sit with folded hands and give all our time to "goody" talk.

—Here is a little poem which has found its way to the copy-box. It treats of home sentiments. Let it go into the Journal:

LITTLE THINGS.

Little deeds of kindness,
Little words of love,
Dropping here and there
Like snow-flakes from above.
Many a flake must fall
Before the earth is white;
They are so very small,
And lie so very light.
So with deeds of kindness,
One by one they fall,
Bringing many blessings,
Lifting many a soul.
Each kind word is mighty,
However small it be,
Making hearts grow lighter,
Helping unity.

L. B. S.

—The following comes from the Villa:

Scene, dining-room; family at breakfast. Waiter comes in bearing a new dish called German puffs. They are made of Indian meal, flour, eggs and milk stirred into a batter without shortening and baked in the gem-irons in a quick oven.

L. (looking at the bright, golden cakes)—"I suppose if you break one open you will find it full of holes."

S.—"Yes; but I am not aware that holes are an unhealthy diet."

D.—"But then they are not particularly nutricious."

E.—"I suppose they are healthy because they are *whole*some."

I.—"Nobody ought to object to holy food."

S.—"True; but the *whole sum* of the holes would not amount to much."

—What employment have women in the Community aside from the common domestic routine? An impromptu census, taken this morning, gives the following answer:

A woman superintends the spooling department in our silk works. Five women spend several hours each day in the family machine-shop, running lathes and learning the use of machinery. This is a new industry, and according to the testimony of H. H. S., a most fascinating one. She thinks she might have quite missed her vocation in life if she had not had this opportunity to become a machinist. One woman is teacher in the elementary school and three others instruct classes in music, writing and drawing. The CIRCULAR is edited by a woman. Another woman has charge of mailing the paper, keeps the subscription-book, and attends to the foreign correspondence connected with our publications. From three to four women are employed as compositors in the printing-office. Phonographic reporting is done by women. Making paper boxes for our silk manufacturers is a new home industry lately started. This gives employment to two women and several children. Still another home business is making trap-chains. It is carried on in a well warmed and lighted room in the basement. This is a business well adapted to women and children and promises to "draw" well. Two women are employed in ticketing and labeling silk-boxes. Two others have the entire business of putting up skein silk. They work in a pleasant west room in the same building (the Tontine), where are the printing-office and box-room. A number of women find pleasant and profitable employment in skeining silk. This is chiefly done in the upper and lower sitting-rooms. The financier and two book-keepers in the general business office are women, who take a large share of the duties and responsibilities connected with the accounts and money transactions of the Community.

—The following sentences were written in reply to a correspondent who proposes to make the O. C. a visit in company with his wife, but does not quite agree with us in respect to marriage:

"In your musings on marriage, have you ever thought that, with all the 'happiness, cheer and inspiration that cluster around it,' the homes which it creates are, at the best as ephemeral and uncertain as the life of man? Every one of them after a gay voyage of a few years, breaks in pieces and goes down! Perhaps the sorrows of the shipwreck are proportioned to the pleasures of the voyage. We are trying to build homes that will be *permanent* centers of 'happiness, cheer and inspiration.'

"Another thing: the homes that you are thinking of in your musings on marriage are New England homes. They are or have been (I know by experience) in many cases, blessed schools of love and happiness. But what makes them so? Is it marriage? I doubt: or rather, I am sure that what made my father's home a little semblance of heaven was religion. Are there any such homes as those of New England without New England religion? According to my observations, wherever there was a really sweet home there was a devout mother. How do you know after all but that the homes of New England are beautiful because they are little branches of the old New England church? I think we shall find that good religious experience is the center of good family experience. Let us praise religion then, instead of marriage: for the 'happiness, cheer and inspiration' that cluster about sweet homes, and let us trust that the revival spirit will carry forward religious experience till it will make such homes as there are in heaven, where there is no marriage."

WALLINGFORD.

—C. S. Joslyn lately gave us a very interesting lecture on Geography as known by the ancients, beginning near the time of Alexander and extending to the discovery of America. To illustrate the subject Mr. Joslyn referred to maps of which eleven of various sizes were hung near him. These maps were made by Mrs. H. A. Noyes, who spent several days on them, enlarging them from originals in Murray's Geography. Crude and curious ideas those old nations had, one of which was, that the river Nile ran under the Mediterranean Sea by some subterranean passage.

—Two tramps made their appearance at our kitchen door the other night, and asked for something to eat. Harriet Howard made ready two great dishes of milk toast and two big bowls of hot coffee. Taking that hospitable entertainment out to them, one, ungratefully kicking at the chair brought him, said they "needn't bring any chairs out for him," and marched off. The other tramp after eating what was given him said, "That other fellow said he didn't like *that stuff*, but I like it; it is good enough for the king. See, I have eaten it all. That other fellow don't *deserve* wittles; some folks don't deserve wittles, when they behave like that." He seemed so grateful for his fare that two great apples were given him on his departure.

Thursday, Jan. 30.—As Mr. Hamilton was looking out of the printing-office this forenoon he espied what seemed a duck hovering over the water below the dam. He thought of the rifle which Charles Joslyn keeps and at once ran into the composing-room to find the man and gun. Not finding him there he went into the press-room, and fearful of losing the bird, called "Come quick! come quick!" C. did come quickly, but the rifle was not loaded; still the bird remained, and in a few moments C. opened the window and fired, the duck falling immediately into the water. How to get it was the next question. Mr. H. and some of the young folks went out with poles, and they had quite an exciting time; about equal, Mr. H. said to some, of Stanley's adventures. The prize was finally gained, and a beautiful bird it was, the down on its breast looking like silver. It is the first game shot on the pond. Charles Burt took it to New Haven. It proves to be no duck at all, but a rare and valuable bird, a species of loon, called the Pied Billed Grebe. It is said to be very difficult to shoot, having often been known to dodge after seeing the flash of a gun.

Remarks at an Evening Meeting.

J. H. N.—Our experience at O. C. goes to show that when the system of mutual criticism shall be perfected, so that God can use it as a lively medium of his Spirit, Communities will be able to take care of themselves without special leaders, and revivals in the churches will propagate themselves and go right along, without any other special measures. Indeed it is not too much to say that the system of mutual criticism perfected will be the most effectual means of preaching the gospel and carrying salvation to the soul that the world has ever seen. I would say to any church that has no minister—If you want a revival, don't send for a preacher and start a protracted meeting; but organize yourselves into classes for mutual criticism; humble yourselves before God and before one another, by first confessing your own sins and then inviting, each from all, faithful sincerity in detecting your secret faults; in other words, wash yourselves in the spirit of truth, and *get your neighbors to help you;* and I will warrant you the best revival you ever saw or heard of. I believe that the perfecting of the system of mutual criticism is God's plan for the day of judgment. Those who love criticism need not fear that day. It will be as pleasant to them as the dawn of the morning. The revivals that shall come by sincere mutual criticism will be the day of judgment and the beginning of the millennium.

In the experience of the O. C. this winter the Community church is seen taking care of itself, and carrying on a revival, without preaching and almost without leaders of any kind. All that I did was to suggest the plan of devoting the week between Christmas and New Year's to a series of mutual criticisms. William Hinds took hold of the plan with enthusiasm, and by my advice, devoted himself to organizing the movement. His business was simply to receive applications for criticism, select the persons to serve on the criticising committees, and put up on the bulletin board each day a programme for the day following, showing who were to be criticised and who the criticisers, and the times and places of meeting. This was all the leading there was, and there was no preaching at all. The committees and the Community did the work. A wonderful interest was manifested from the beginning. There were as many as fifteen committees serving on some days, besides public criticisms in the evening meetings. The eagerness for heart-searching and truth-telling in those who received as well as those who administered, steadily increased, and at the close of the week many applications remained unsatisfied, and all were enthusiastic for continuing the work. The results were, the beginning of religious experience in some, the brightening of religious experience in others, and a substantial conversion of the whole Community.

One feature of the work at O. C. which was particularly interesting to me was the power of justification that went with the criticisms. Quite a number of persons who have been long regarded as hard cases of fixed character, offered themselves for *public* criticism, which is considered the severest ordeal of all; and I was surprised to see how many good things were said about them. With manifest love and sincerity one after another would acknowledge their improvement, till at last they would come out of the trial with an actual rise of reputation, and with new self-respect.

In such cases of long-standing unpopularity, improvement may have been going on for years unrecognized by those around them and perhaps unknown to themselves, till at last an occasion of open criticism summons their acquaintances to reflect, and specify observations on their character; then, behold! they are found to be better folks than anybody—even themselves—supposed! Thus, in cases of chronic self-condemnation, public criticism given in perfect sincerity may be—nay has been—the right hand of God to lift persons out of the slough of despond and put a new song in their mouths. This is what I mean when I say that the system of mutual criticism perfected will be the best preaching of the gospel, carrying salvation to the soul.

REMOVING BOILER INCRUSTATION.

THE VALUE OF SCIENTIFIC JOURNALS.

WE annually subscribe for half a dozen or more scientific journals, including the *American Journal of Science, American Chemist, Scientific American, Nature* and others of a similar character, costing us altogether perhaps $30 yearly for such reading. The *American Journal of Science* and the *American Chemist* are the two most thoroughly scientific in their treatment of subjects and are, in consequence, the most trustworthy, and—the least read. In fact, such ques-

tions as these are sometimes asked by members of the library committee when making out our list of periodicals for the coming year, "Who reads these journals? Do we take them merely for show, or are they of real practical value to us? Do we get any return from this investment which is filling our library shelves with books which are rarely opened by common folks?" Well, let us look into the matter and see if we *do* get any return which can be stated in dollars and cents; or, in other words, let us see if we can really estimate the cash value of our scientific journals.

To begin with, we will take the *American Chemist*. This journal costs us $5 per annum, and is read by a very few, not over half a dozen in all. Something more than a year ago our attention was called to an article in that paper, on the subject of boiler incrustations and the best method of removing and preventing the formation of scale in steam boilers. The writer was a practical chemist, and treated the whole subject on scientific principles, giving the result of actual tests and experiments.

Our ten years' experience with hard water had given us a taste of what we were to expect in future in the line of labor and expenditure, unless some remedy could be found which would effectually check the rapid destruction of our boilers from the deposits of lime. We were having no end of trouble from the leaking and burning of boiler-tubes, to say nothing of the increased amount of fuel used and dangers of explosion which are very much increased by incrustation. We at once ordered a quantity of the necessary material, tannate of soda, and began using it. It required some little time before we could discover any effect produced, owing to the very heavy deposit of hard scale with which our boilers were coated. But in the course of a month we observed that our boilers required less coal to keep up steam, and otherwise seemed to do their work without so much driving. Upon examination we found the tubes perfectly free from scale, and in as good working condition as when first put together.

Last June we started a new thirty horse-power, Densmore boiler. This boiler has been in constant use ever since, using nothing but the hardest kind of water. Having occasion lately to open it we found the tubes perfectly clean and free from scale of any kind. The inventor of the boiler, who was present at the time was much surprised at the result, and declared he had never seen anything like it before in all his experience in making and using boilers.

In regard to the amount of tannate necessary much depends upon the character of the water used. At the rate we are now using it the cost per annum is about $66 for three 30 H. P. boilers. But as we use considerably less during the summer when we can get more soft water and require less steam for heating, the annual outlay will not be much over $50.

Now how much do we save by the use of this agent?

In the two boilers at the house we use about $2,500 worth of coal per annum, reckoned at last year's prices, which were below the prices paid any previous year. As near as we can now estimate, the cost of coal used in the Densmore boiler is about $375 per annum. Now according to our best authorities on the subject of steam and economy of fuel, a deposit of scale one-sixteenth of an inch thick, will increase the amount of fuel required 15 per cent.; a deposit one-fourth of an inch thick, will increase the fuel 50 per cent.; a deposit one-half an inch thick, 150 per cent., and so on. From careful observation we feel warranted in assuming that by the use of tannate of soda in our Root and Phleger boilers, we save at least 20 per cent. in fuel; and in the Densmore boiler, which has to use very hard water, 25 per cent. This being allowed, it is plain that $2,500 is 80 per cent. of the amount of coal which we should have to use to produce the same results without the tannate. $2,500 as 80 per cent would be $3,125 as the cost of the coal required in these boilers with a scale less than an eighth of an inch thick. A saving of 20 per cent. would be equal to $625 in these two boilers.

In the Densmore boiler we have a present cost of $375 as 75 per cent. of the cost without the tannate; $375 as 75 per cent. would be $500 per annum as the cost of coal without removing the scale in the boiler. A saving of 25 per cent. would be $125 dollars.

Here then are our figures:

Saving in coal per annum in three boilers	$750
Cost of tannate of soda per annum at highest rates	66
Balance in favor of tannate of soda	$684

To make sure that we are within limits we will call the saving in the two boilers at the house 15 instead of 20 per cent.; and in the Densmore boiler 20 instead of 25 per cent. This would reduce our total amount saved to $492.

The subscription price of the *American Chemist* is $5 a year. The sum, then, which it has aided us in saving in one year, would renew our subscription for ninety-eight years, which is certainly as long as there is any probability of its remaining in the hands of its present editors.

In this calculation we leave out of account the increased wear and tear of the boilers, from the presence of lime-scale. We have at present no means of estimating the saving in this respect, but any one at all familiar with the effect of hard water on boilers, will readily admit the great practical value of this discovery. G. E. C.

FROM OUR YALE STUDENTS.

IV.

The Dog-Tape-worm---Its Development---Effects and Remedies.

THE *tænia echinoccus*, or, as it is commonly called, the echinoccus is the only parasite of the dog which is dangerous to man. To get a clear idea of its life and development we will begin our observation of it where it most frequently presents itself. This is in the form of tumors both in sheep, pigs, horses, cattle and man. These tumors occur in various forms and sizes; some are simple, others are made up of an aggregation of small tumors. In their simplest form or when young these tumors contain a roundish cyst or membranous sac enclosing a watery fluid. More frequently the cysts become compound by a process of budding, either upon the outside or inside, or both without and within the membrane of the original cyst, so that its size goes on increasing indefinitely until it sometimes becomes as large as a child's head. If the membrane of one of the cysts be examined when fresh with a microscope there will be seen attached to it by means of slender stalks numbers of small oval or rounded heads looking something like fruit on a miniature plant. These heads line the membrane both internally and externally, and by a process of budding develop new cysts which in their turn produce buds. Each of the oval heads is a hollow sac, which contains the real head of the young tape-worm. As long as these cysts remain in a living animal new heads are constantly forming, so that if the animal or man live long enough to develop a large tumor, it will finally contain many thousands of these minute tape-worm heads.

If at any time a dog eat any part of an animal containing such tumors, and swallow either the cyst or the detached heads, the enclosing membrane will be digested and the heads liberated. These soon fasten themselves by means of small hooks to the living membrane of the intestine, and there attain their full size which is only about one eighth of an inch. Unlike the beef and pork tape-worm which become long with hundreds of joints, this has but three joints when mature. The last joint which is much the largest contains both male and female organs, and is capable of self impregnation. After this has matured and discharged its eggs the next two develop and discharge their eggs in like manner. A dog in this condition is constantly discharging and scattering thousands and millions of the extremely minute eggs of this worm wherever he goes. They are scattered among the grass in the fields and pastures; they get into the water of brooks and springs; they are liable to adhere to fruit which has fallen, or to lettuce and other garden vegetables.

These eggs when taken into the stomach of an animal or a man are acted upon by the gastric juice, and immediately hatch. The embryo is a very minute worm, different from the parent, and provided with hooks by means of which it bores its way through the lining of the intestines into the blood vessels, and entering the circulation is carried to all parts of the body where it develops into the peculiar cysts and tumors which I have described. Dr. Cobbold has calculated the number of progeny that might proceed from one egg during a generative cycle, and it amounts to the enormous sum of one hundred and fifty billions!

These tumors, as before remarked, occur in various organs of the body. When lodged in the brain they are most dangerous, soon causing insanity and death by their rapid growth. When they occur in the lungs and liver they often prove fatal. When the lodgment is in the vesicles or near the exterior of the body they may be removed by a surgical operation. When in the internal organs there is generally no remedy. The true nature of the diseases caused by this parasite is seldom known until after the death of the patient, when a microscopic examination reveals the truth.

The means of preventing the spread of these parasites are simple although not easy of application in all cases. Prof. Verrill recommends the following plan:

The first and most important thing is to diminish the number of dogs to the lowest figure possible, and then to keep them at the minimum number; second, avoid as much as can be done the proximity of dogs and sheep; third, avoid feeding dogs with uncooked livers and other offal of sheep containing these parasites, or if given, let them be carefully examined; fourth, avoid too much familiarity with dogs, and especially do not allow children to play with them; fifth, be careful not to eat lettuce, fallen fruit or other raw food that has not been thoroughly washed, both on account of this and other parasites; sixth, avoid by all possible means the use of impure water or water liable to be contaminated by eggs of parasites and excretions of animals, both for household purposes and for the use of animals, for such water is not only liable to contain echinoccus eggs, but those of several other tape-worms, round-worms and many other parasites, and is of itself unhealthy and often the prolific cause of disease. If water from a good well or a well protected spring cannot be had, the water used should be carefully filtered and by preference through charcoal.

Although this subject is by no means exhausted I presume enough has been said to acquaint the readers of the CIRCULAR with the dangers which attend familiarity with animals. C. A. B.

The contract for the first five miles of the Gilbert elevated railway, which will reach from Chambers street to Central Park in New York city, was awarded on January 29th, to a Boston and New York iron firm. It is expected that work will begin in a few days, and be pushed with the utmost expedition, so that the line will be finished to Central Park and travel begun by the end

of summer. By December it is expected the road will be in complete working order to High Ridge, where cars will connect with it from all parts of the country. Local trains will run on this road at the rate of 30 miles an hour, at intervals of five minutes, and stopping at stations half a mile apart.

FISH-CULTURE IN THE UNITED STATES.

II.

THE SHAD.

IN the fish markets of Connecticut the shad in its season, has always stood at the head of the list in point of excellence and popularity. In the early colonial days its first appearance in the spring gladdened the hearts of the famished pioneers, and more than once averted a threatened famine. Scarcely one hundred years ago salmon and shad were sold for the same price per pound on the banks of the Connecticut with the proviso that every buyer should take ten salmon to one hundred shad. As population increased the supply did not keep pace with the demand, and of late years the shad has been a luxury unattainable by common people. But the experiments of Seth Green at Hadley Falls, will soon make this fish almost as cheap as the water it swims in. Mr. Green began his experiments on the first of July, 1867. After repeated failures he finally achieved a complete success, and in a few days hatched and turned into the river several millions of the young fry. In 1868 it was estimated that no less than 60,000,000 were hatched there.

Previous to these experiments but little was known in regard to the habits of this fish. Some old fishermen were firm in the belief that shad lived but one year, and nearly all, it is said, were obstinate in the notion that no effect of the hatching at Hadley Falls would ever be visible. Even the commissioners were so much in doubt about it that they did not continue their operations in 1869 In 1870 the question of the feasibility of propagating shad was decided in the affirmative. The Rev. Wm. Clift in the last issue of the *Phrenological Journal* says:

"On Sunday, the 22d of May, they appeared in the Sound in vast numbers. Captains of vessels reported immense shoals of them near the surface of the water, all making for the mouth of the Connecticut river. On Monday, the 23d, over 25,000 shad were taken from the ponds at and near Saybrook. The same day at Lewis-point 3,560 were taken at one time, seven times the usual catch. At Hadam 700 were taken at one haul; at Wethersfield 900 were taken during the day; at Holyoke dam 450 were taken between 4 and 5 o'clock; and at all other places on the river so far as heard from the catch was unusually large, and the fishing continued uncommonly good throughout the season.

"In 1871 the catch of shad was so great that the price fell from $18 to $10 per hundred and in the hight of the season they were even sold for $3 per hundred. In 1872 the increase of shad in the Connecticut was more marked and at the mouth of the river the dealers resorted to the long discontinued practice of salting them down."

The success of the enterprise was now demonstrated, and the fish commissioners again resumed their labors at Hadley Falls. 50,000,000 shad were hatched there in 1870; in 1871, 63,000,000; in 1872, 92,000,000.

The difference between the natural and artificial methods of hatching fish is almost too great to be appreciated except by those who give attention to the subject. A full-grown shad produces about 60,000 eggs. By the natural method not more than one in a thousand of these ever hatch; but by the artificial method ninety-nine per cent. are hatched and at an expense of only five dollars per million. In 1870 the fish commissioners began hatching shad on the Hudson. Large numbers have been taken from there to stock the western and southern rivers; ten thousand were even sent as far as California and there deposited in the waters of the Sacramento.

THE SALMON.

This fish has been introduced into some of our rivers, but in too small numbers as yet to justify any conclusions in regard to the result. Some interesting facts, however, have been learned in regard to its habits. It appears that about half of the young fry make their way to the sea in the fall. They are then about six months old and four or five inches in length. These return the next spring weighing from two to four pounds. The next fall they return to the sea again and come back the following spring weighing from six to ten pounds each. It is proposed to stock all the rivers north of the Hudson with this fish as soon as the spawn can be obtained in sufficient quantities. Heretofore it has been difficult to get salmon as we have but one river on our Atlantic coast where they are found. But arrangements have been made to obtain some from Canada and from Oregon. A few thousand were received from the latter place last fall, and a small lot also from Europe. After our rivers are once well stocked it will of course be easy to get any amount of spawn, and two or three hatching establishments would keep them well supplied at a trifling expense. The prospect before us then as a people is an abundant supply of cheap food; which means, better schools, more commodious, and substantial dwellings, and a higher civilization. B. B.

THE HOUSATONIC DAM AT BIRMINGHAM, CONN.

DEAR CIRCULAR:—Having occasion to visit Derby a few days since, we learned some particulars respecting the Housatonic Dam near that place, which may be of interest.

The Dam is situated a short distance above the confluence of the Housatonic and Naugatuck rivers, and exactly at the head of tide water in the former stream. It was built by a joint stock company organized for the purpose, with a capital of $600,000, called the Ousatonic Water Power Company. The company own the land for nearly a mile in length, on each side of the river, and furnish water-power, together with factory and dwelling sites to parties wishing the same. The fact that the Housatonic river is navigable up to this point renders the location a very desirable one to individuals or companies who wish to carry on a business involving the transportation of heavy and bulky material, as docks can be built so as to load and unload such material at the doors of the manufactory, being transported thence by water to New York, or any other part of the world.

The Dam is built of stone, is 870 feet long and 22 feet high. It curves up stream, forming the arc of a circle having a radius of 2,000 feet. The base is 20 feet thick, and the front slopes 2 1–2 inches per foot. The Dam, with its appurtenances, as headgates, locks, etc., contains 451,000 cubic feet of stone, and is founded on the solid rock. The pond formed by this dam is five miles in length, and covers one thousand acres.

The working force thus obtained is estimated at 2,500 horse-power, of which about one-fifth is already in use. The water is taken from the pond on the west side of the river by a canal extending along the bank and which can be prolonged for one and one-half miles. On this canal are now located a paper-mill, bolt works, two wood sawing and planing establishments, bleaching works, etc., and a thriving village has already sprung up around them.

The Water Power Company sell the factory sites, but rent the water, the amount being estimated at a given number of cubic feet per second. Thus, what is called in technical language "a foot of water," brings a given price. This foot of water is the amount of water which will flow through a hole one foot square, with one foot head. Under any head, it amounts to about five cubic feet per second, and is estimated to yield an actual working force of ten horse-power after making all proper deductions for friction and waste caused by the machinery in its application.

Much difficulty was experienced in the construction of the dam, and it was twice partly swept away by freshets. It was completed however, on the 14th of October, 1870, and now forms one of the most valuable water-privileges in the country.

We are indebted to the courtesy of Mr. D. S. Brinsmade, Jr., the engineer in charge, for much of the foregoing information, as also for kind personal attention. Y. Z.

Wallingford, Conn., Jan. 27, 1873.

REVIVAL RECOLLECTIONS.

IV.

IT was announced on Saturday evening that Doctor Porter from Catskill, had come to our village to spend the Sabbath. The news was hailed with delight. The revival which had been in progress for several weeks had begun to decline, and the cause was apparent enough. A large number of the converts were young people under twenty years of age. The most influential young man in the place, who had formerly been considered a model of morality, was determined to resist the revival himself and to prevent others from coming under its influence. He had been made a special subject of prayer by the church; but he would cavil, and start skeptical queries, and at times appear almost beside himself. On Sabbath morning there was an inquiry meeting in the ball-room of the public house, and Oh! what a feeling of thankfulness came into our hearts when we saw this young man and his companions, in that meeting. Dr. Porter was present. He was a fine-looking, white-haired old gentleman, as vivacious and sprightly as a youth, and greatly beloved by all who became acquainted with him. He was dressed in the antique style, with short breeches, long stockings and knee-buckles. It was interesting to observe the wisdom, the efficiency, and wonderful adaptation of the Doctor's words to the condition of each individual. He saw the heavy burden this young man was carrying and that he was looking to him for help; but he passed him by without a word. That only increased his trouble for he thought he was forsaken by God and man; but before the day was over he found that Christ was ready to receive the repentant prodigal.

After the morning exercises in the pulpit, the Doctor took off his coat and commenced his sermon, as though he were determined to make a desperate onset to liberate captive souls, destined to a hopeless bondage. There was such a mingling of shrewdness, humor, poetic enthusiasm and spiritual power in those two sermons, that the excitement became intense. The work moved forward with great rapidity until I doubt whether there was an indifferent family in town. I love to think of the harmony and unity of feeling among the people during that summer. It was like the spirit which reigns in our Community home. But a controversy between the Old and New Schools crept in and was conducted in a manner which was far from Christ-like. The excitement ran so high that a paper was drawn up for all the Church members to sign showing on which side they stood. I knew there was much talk about "being eternally reprobated for the sin of Adam;" about "not doing what in all respects we were unable to do;" about

"being condemned for not believing in a Savior who died for only a part of us, and who had no more to do with us than he had to do with a fallen angel:" but these were meaningless words to my understanding, so when the paper was presented to me, I placed my name among the small minority of those who advocated the New School doctrines, because I thought they were the most spiritual.

A marked providence followed both the revivals I have described. Mr. Nettleton went from our place to Albany to contend with Mr. Finney against New Measures. He was afterward instrumental in producing some revivals at the South; but he was never blessed with another at the North where the New Measure revivals prevailed. Mr. Johnson went from our town to Ohio, and took the same position against Mr. Finney which Mr. Nettleton had done. His health failed immediately and he was obliged to leave the ministry, which is the last I have heard of him. C. B. B.

Mrs. Partington's last: Overhearing a young gentleman say that he had bought a very good piano for only $350, the good old lady exclaimed, "Three hundred and fifty dollars for a pianner! Why I sold a good bureau once myself for ten dollars!"

THE NEWS.

A Canadian Pacific Railroad Company has been organized.

Official census returns show that there are 269,000 slaves in Cuba.

Prof. Tyndall gives five hundred dollars to found a Tyndall prize in the Yale Scientific School.

Prof. G. F. Barker is delivering a course of lectures on the Spectroscope in Cooper Union Hall, New York.

Mark Twain lectured to a fifteen hundred dollar house in Hartford recently, and gave the entire receipts to the poor.

A boiler explosion on the 3d inst. at Syracuse, at Geddes rolling-mill, injured eight persons, and damaged property to the amount of $5,000.

M. F. Maury, formerly commander in the United Sates Navy and an author of some note, died at his home in Lexington, Va., Saturday, the 1st inst.

A dispatch from Calcutta says: "An earthquake has occurred at the city of Lehree in the Territory of Scinde, attended by heavy destruction of human life. The disaster overtook the city so suddenly and unexpectedly that no escape from the terrible doom was possible. It is estimated that upward of five hundred persons perished."

The testimony of Cabinet officers is favorable to the new system of appointment by competitive examinations. They concede that the Government is served with greater efficiency, and that the new appointees are as a rule more intelligent than their predecessors. An incidental advantage is the relief it affords officials from the ceaseless persecution of office-seekers.

A party of professional men to the number of two hundred assembled at Delmonico's on the 4th inst. to take part in a banquet given in honor of Professor Tyndall, who is about sailing for England. The most noticeable speeches of the occasion, and the happiest in point of manner and matter, were those of the president, Mr. Evarts, and the learned Professor himself, who made an eloquent plea in behalf of scientific research conducted out of love for abstract truth.

The Hartford *Courant* says: "Recently at the Polytechnic School in Paris, one of the professors, on inquiry, found that in each grade in the school the students who did not smoke outranked those who did smoke, and that the scholarship of the smokers steadily deteriorated as the smoking continued. On account of several trustworthy reports of such a nature, the minister of public instruction in France issued a circular to the directors of colleges and schools forbidding tobacco to students as injurious to physical and intellectual development."

A bill passed the House of Representatives on the 1st inst. providing that all contracts, vouchers, receipts and papers of every description, relating to the payment of money on Government account, shall be made public record and open to the inspection of any person during business hours. The importance of a law like this will be seen, when it is known that many of the Indian agents have not been in the habit of keeping any account of their transactions, and that a greater per centage of money appropriated for the Indians is stolen than is applied to its lawful use.

There seems to be a movement toward reform this winter on the part of our national legislators at Washington. The franking privilege will be extinct after the 1st of June next, and now a bill is before the House to abolish the mileage of members and pay only their actual traveling expenses. The highest amount of mileage drawn by a member is that of Delegate Garfield of Washington Territory, who receives seventeen hundred and eighty-five dollars: the lowest that of Mr. Merrich of Maryland, sixteen dollars. As the members from the Pacific coast have free passes over the Pacific Railroad, the payment seems doubly extravagant.

A terrible boiler explosion occurred at the American Iron Works, Pittsburg, on the 3d inst. A battery of four boilers went off with one deafening roar, killing seven men outright and wounding about a dozen more. The buildings were very badly damaged. The cause is as yet unknown. The engineer examined the boiler gages only a few moments before the explosion and found plenty of water. The boilers had been used five years. This establishment is the most extensive nail and spike factory in the country, covering an area of seven acres, and employing three thousand men. The nail makers were, fortunately, on a strike at the time or the loss of life would have been far greater.

An event which is likely to have great influence on the business interests of our country is the arrangement made by the Secretary of the Treasury with several of the most eminent banking houses of Europe and America for the sale of $300,000,000 U. S., five per cent. bonds, redeemable after the 1st of May, 1881, principal and interest payable in gold coin of the present standard. Foreign investors will be eager purchasers, for the reasons that the rate of interest is nearly double that received for a large part of all the securely invested capital in Europe, and also that the Messrs. Rothschild, who are large takers of the loan, have never failed to negotiate any security, to the introduction of which they were willing to lend the name of their great house.

"KNOWING."

I.

You say you know them, since they every day
Go glancing by with gentle, jesting speech;
But are you sure you any more than reach
Their outer crust; life's upper, coarser clay?

II.

You do not know where 'tis they find a balm
For all life's hurts, nor why they sweetly sleep;
You cannot read them rightly when they weep
Or tell their peace with God; their inmost calm.

III.

Is it then knowing all or any part
By one another just to brush and graze?
With touch of hand, and formal, courtly phrase?
Do these betray the deep things of the heart?

IV.

Nay, they are deeper far and precious more—
The heart's hid sorrows and the heart's hid mirth.
Then wisely hold all else as little worth,
And seek if you may find to these a door.

G.

ANNOUNCEMENTS.

SILK GOODS.

Machine-Twist and Sewing-Silk of their own manufacture for sale by the Oneida Community.

Address, [S] ONEIDA COMMUNITY, *Oneida, N. Y.*

PRESERVED FRUITS AND VEGETABLES

Put up for sale by the Oneida Community in tin and glass. Price list sent on application.

Address, [F] ONEIDA COMMUNITY, *Oneida, N. Y.*

STEEL TRAPS.

Eight sizes and kinds, suitable for the House-rat, Musk-rat, Mink, Marten, Fisher, Fox, Otter, Beaver, the Black and Grizzly Bears, are made by the Oneida Community Descriptive price-list sent on application.

Address, [T] ONEIDA COMMUNITY, *Oneida, N. Y.*

MACHINE-SHOP AND FOUNDRY.

Improved Lathe-Chucks, Blinn's Patent Gate-Hinges, Machines for Measuring the Length and Testing the Strength of Manufactured Silks, Bobbin-Winders for Sewing-Machines, etc. Agricultural, Machine and Light Castings, on hand or made to order. Descriptive price-list sent on application.

Address, [M] ONEIDA COMMUNITY, *Oneida, N. Y.*

THE WALLINGFORD PRINTING COMPANY.

All kinds of Book and Job Printing executed: Manufacturers' Illustrated Catalogues made a specialty: also Bronze and Color Work, and the finer kinds of Card, Circular and Bill-head Printing. Having enlarged its works and added new motive power, this Company is in renewed condition to meet the wants its patrons with promptness and accuracy.

P. O. Address, *Wallingford, Conn.*

PUBLICATIONS.

(Sent from the Office of the Oneida Circular by mail, post-paid, on receipt of price.)

History of American Socialisms. By John Humphrey Noyes. 678 pp. 8vo. J. B. Lippincott & Co., Philadelphia. London, Trubner & Co. Price $3.00.

The Trapper's Guide; a Manual of Instructions for Capturing Fur-bearing Animals. By S. Newhouse. Third edition with New Narratives and Illustrations. 215 pp. 8vo. Price bound in cloth, $1.50

Salvation from Sin, the End of Christian Faith; an octavo pamphlet of 48 pages. By J. H. Noyes. Price 25 cents per single copy, or $2.00 per dozen.

Dixon and His Copyists; a Criticism of the Accounts of the Oneida Community in "New America," "Spiritual Wives," and kindred publications. By John Humphrey Noyes. Price 25 cts.

Scientific Propagation. By John Humphrey Noyes. Large octavo pamphlet of 32 pages. Price 25 cts.

Male Continence. By John Humphrey Noyes. An octavo pamphlet of 24 pages. Price 25 cts.

Hand-Book of the Oneida Community; Containing a Brief Sketch of its Present Condition, Internal Economy and Leading Principles. Price 25 cts.

The five pamphlets—"Salvation from Sin," "Dixon and his Copyists," "Hand-Book of the Oneida Community," "Scientific Propagation," and "Male Continence," will be sent to a single address on the receipt of $1.00.

Back Volumes of the Circular, Unbound. Price $2.00 per volume.

MESSRS. TRUBNER & COMPANY, Book-sellers, Paternoster Row, London, have the "History of American Socialisms," the "Trapper's Guide," and the "Hand-Book of the O. C.," for sale. They will receive subscriptions for our other publications.

PHOTOGRAPHIC PICTURES

Of the Oneida Community Buildings and Grounds, made by a first-class artist and finely mounted, can be had on application at the Office of the Oneida Circular.

LARGE VIEWS.

Bird's-eye View, looking West, of Community Buildings and Grounds, 12 by 14 inches, on fine enameled board 16 by 20, price $1.75. Quadrangle and Group, 12 by 14, mounted like the above price $1.75. South and East Fronts of the Community Dwelling, giving a good view of the New Wing occupied by the Children, 8 by 10, on tinted board 10 by 12, with an ornamental border price $1.00.

STEREOGRAPHS.

No. 2, East and North Lawns. No. 3, East Lawn and Portal. No. 4, East Front. No. 5, North Front and Lawn. No. 6, Bird's-Eye View of Buildings looking West. No. 7, Lawn and Summer-House. No. 8, West View, toward Railroad. No. 11, Quadrangle. No. 12, Lawn View. No. 15, South and East Fronts. Price of Stereographs $3.00 per doz. Sent by mail, post-paid, on receipt of price.

Oneida Circular.

A WEEKLY JOURNAL OF HOME, SCIENCE AND GENERAL INTELLIGENCE.

Published by the Oneida & Wallingford Communities.

ONEIDA COMMUNITY, FEBRUARY 17, 1873.

New Series, Vol. X, No. 8
Whole No. 1446.

POST-OFFICE ADDRESS:
ONEIDA CIRCULAR, ONEIDA, N. Y.

TERMS:

The CIRCULAR is sent to all applicants, whether they pay or not. It costs and is worth at least two dollars per volume. Those who want it and ought to have it are divisible into three classes, viz., 1, those who cannot afford to pay two dollars: 2, those who can afford to pay *only* two dollars; and 3, those who can afford to pay *more* than two dollars. The first ought to have it free; the second ought to pay the cost of it; and the third ought to pay enough more than the cost to make up the deficiencies of the first. This is the law of Communism. We have no means of enforcing it, and no wish to do so, except by stating it and leaving it to the good sense of those concerned. We take the risk of offering the CIRCULAR to all without price; but free subscriptions will be received only from persons making application for themselves, either directly or by giving express authority to those who apply for them.

Foreign subscribers, excepting those residing in Canada, must remit with their subscriptions money to prepay the postage.

THE UNITED COMMUNITIES.

ONEIDA COMMUNITY

Is an association living in Lenox, Madison Co., N. Y., four miles south of Oneida and a few rods from the Depot of the Midland Railroad. *Number* of members, 205. *Land*, 654 acres. *Business*, Manufacture of Hardware and Silk goods, Printing the CIRCULAR, Horticulture, &c. *Theology*, Perfectionism. *Sociology*, Bible Communism.

WILLOW-PLACE COMMUNITY.

Branch of O. C., on a detached portion of the domain, about one and one-fourth miles north of O. C. *Number* of members, 19. *Business*, Manufactures.

WALLINGFORD COMMUNITY.

Branch of O. C., at Wallingford, Conn., one mile west of the Hartford and New Haven Railroad. *Number* of members, 45. *Land*, 228 acres. *Business*, Publishing, Job Printing, Manufactures, and Horticulture.

SPECIAL NOTICE.

The O. C. and Branches are not "Free Lovers," in the popular sense of the term. They call their social system BIBLE COMMUNISM or COMPLEX MARRIAGE, and hold to freedom of love only within their own families, subject to Free Criticism and the principles of Male Continence. In respect to permanency, responsibility, and every essential point of difference between marriage and licentiousness, the Oneida Communists stand with marriage. Free Love with them does *not* mean freedom to love to-day and leave to-morrow; nor freedom to take a woman's person and keep their property to themselves; nor freedom to freight a woman with offspring and send her down stream without care or help; nor freedom to beget children and leave them to the street and the poor-house. Their Communities are *families*, as distinctly bounded and separated from promiscuous society as ordinary households. The tie that binds them together is as permanent and sacred, to say the least, as that of marriage, for it is their religion. They receive no new members (except by deception or mistake), who do not give heart and hand to the family interest for life and forever. Community of property extends just as far as freedom of love. Every man's care and every dollar of the common property are pledged for the maintenance and protection of the women and children of the Community.

ADMISSIONS.

These Communities are constantly receiving applications for admission which they have to reject. It is difficult to state in any brief way all their reasons for thus limiting their numbers; but some of them are these: 1. The parent Community at Oneida is full. Its buildings are adapted to a certain number, and it wants no more. 2. The Branch-Communities, though they have not attained the normal size, have as many members as they can well accommodate, and must grow in numbers only as they grow in capital and buildings. 3. The kind of men and women who are likely to make the Communities grow, spiritually and financially, are scarce, and have to be sifted out slowly and cautiously. It should be distinctly understood that these Communities are not asylums for pleasure seekers or persons who merely want a home and a living. They will receive only those who are very much in earnest in religion. They have already done their full share of labor in criticising and working over raw recruits, and intend hereafter to devote themselves to other jobs (a plenty of which they have on hand), receiving only such members as seem likely to help and not hinder their work. As candidates for Communism multiply, it is obvious that they cannot all settle at Oneida and Wallingford. Other Communities must be formed; and the best way for earnest disciples generally is to work and wait, till the Spirit of Pentecost shall come on their neighbors, and give them Communities right where they are.

TRUST.

Since thy Father's arm sustains thee,
Peaceful be;
When a chastening hand restrains thee,
It is he.
Know his love in full completeness,
Fills the measure of thy weakness;
If he wound thy spirit sore,
Trust him more.

Without murmur uncomplaining,
In his hand
Lay whatever things thou canst not
Understand.
Though the world thy folly spurneth,
From thy faith in pity turneth,
Peace thy inmost soul shall fill,
Lying still.
Like an infant, if thou thinkest,
Thou canst stand;
Childlike, proudly pushing back
The proffered hand;
Courage soon is changed to fear,
Strength doth feebleness appear.
In his love if thou abide,
He will guide.

Fearest sometimes that the Father
Hath forgot?
When the clouds around thee gather,
Doubt him not.
Always hath the daylight broken,
Always hath he comfort spoken;
Better hath he been for years
Than thy fears.
Therefore, whatso'er betideth,
Night or day,
Know his love for thee provideth
Good alway.
Crown of sorrow gladly take,
Grateful wear it for his sake,
Sweetly bending to his will.
Lying still.

To his own thy Savior giveth,
Daily strength.
To each troubled soul that liveth,
Peace at length.
Weakest lambs have largest share,
Of the tender Shepherd's care,
Ask him not the "When" or "How,"
Only bow.

[*Frankfort Herald.*

GOD'S BUILDING.

Home-Talk by J. H. N.

IT is good for us to inquire how large the Church is that we are connected with. I think of our Community and those that we have particular fellowship with in this visible world, as only the merest point of the great unit. Go back over the history of the world to Abraham's time, and you will find reason to believe that there were multitudes, perhaps millions, of men and women who believed and had more or less union with God. We know that when Christ came at last, and was perfected so that he was fitted to be the center of faith for the whole Church, then all those men and women in the other world were gathered to him.

Mr. Hamilton has compared the work of God to the building of our house. Well, it is certain the house was not built till the corner-stone was laid. You cannot begin to build a house at the top of the chimney and so work down; you must begin with the corner-stone and work upward. Therefore there was no house built till Christ came, for He was the corner-stone. Whatever was done before that, was in the way of preparing material; all of those who believed previous to that event were like loose timber and stone that were being gathered together and deposited where they would be handy. When Christ the corner-stone was ready, the building was put up and all this material was organized into a great unit. That is what was foretold as about to take place at the Second Coming. It was written, "Then shall he send his angels, and shall gather together his elect from the four winds, from the uttermost part of the earth to the uttermost part of heaven." We can see when that took place. The work commenced at Christ's resurrection. The corner-stone was then laid, and many of those who slept arose at that time, and the prophets and apostles in the visible world were from that time being gathered together and organized into a union that never was to be broken. It could be said from that time that there was a church, a building, and that the material did not lie round loose as before. This gathering was finished at the Second Coming and within the life-time of those who were living when Christ said that he would "send his angels, and gather his elect from the four winds, from one end of heaven to the other." The angels put together the timber that had been prepared and the stone that had been quarried in previous ages.

So much we know of that unit. We say we have connected ourselves with that Church, for we have found the same precious faith that they had. We recognize Christ as the soul and center of that unit, and as the beginning of unity for us.

Now we may go a little further. From the time of the Second Coming, when the connection with heaven was partly broken, there has been, nevertheless, what is called a Christian church in the world. And there can be no doubt that there have been millions of men and women in these eighteen hundred years who have believed in God and had something of the same faith that Abraham and the prophets had; but we find no evidence in Scripture or elsewhere that they were built into this first church, the great heavenly unit. On the contrary, it seems to me that God has been again preparing material during these eighteen hundred years and depositing it in preparation for another time of building.

Some years ago we put up the main part of our Mansion-house and made calculations that at a future time we would add a south wing. After we had once had our time of building we did not continue to add a little constantly year by year. On the contrary we waited several years, collecting funds and making preparation for the construction of the wing. When we found that the time had come and we had

the means and material ready, we joined another wing to this house. The time between these periods of building was one of preparation.

Now, I understand that the last eighteen hundred years have been a time of preparation, just as was the period before Christ came. And we are now coming down to the time when God is going to put on the other wing of the Church. At the first ingathering the last became first; we may therefore expect the same thing will happen now. Christ who was at the very end of the Jewish dispensation was made the head-center of all that had gone before. He said to his disciples, "Other men labored, and ye have entered into their labors. And herein is that saying true, One soweth and another reapeth." The patriarchs and prophets had sown, and the apostles reaped; the saints in all ages had labored, and the Primitive Church entered into their labors. Christ and the apostles and prophets of the Primitive Church, who were the last in the order of time, became the foundations of the final building. The twelve apostles were to sit on twelve thrones, judging the twelve tribes of Israel, that is, judging the whole church that had existed before them. I don't know why we should not expect that similar principles will govern in putting up the second wing; and if they do, the church that has the broadest faith *now* will be the foundation on which all the material that has accumulated during these last eighteen hundred years will be built up.

Now if you ask why the modern churches have not discovered these truths, you may as well go back and ask why the Jewish nation did not discover the true gospel before Christ came. The great building-time of the Jewish dispensation, you must remember, was in the last generation of that church. The last living generation was the highest and best, and the one that took precedence of all that went before; the one on which all preceding ages were built in the final organization. I don't know why that principle should not hold in the Gentile dispensation. If there was at the Second Coming an interruption of the connection between the heavens and the Gentile church, then I should expect that things would go on again in a course of imperfect development; that there would be a long time of preparing material; and that the final building would take place when God should have raised up a generation that would have faith enough to connect well with what he had built before. I should expect the last generation of the Gentile dispensation would be the foundation of the church built of Gentile material.

AN ORPHAN'S STORY.

SEVENTEEN years have not obliterated in the least the memory of an event which occurred to me when a child between three and four years old. My earliest recollection is that of hunger and bitter tears for food. My parents both died, I am told, before my first birthday, and a place was found for me and a twin brother among strangers in Eastern Virginia, how far from the place of our birth I do not know. Relatives, if I ever had any, never made themselves known to me. Indeed, so far as my memory serves me, my brother and I were treated as unfortunates who had no business in this world to add more misery to those already miserable. Those infant days of hunger and discomfort seem, in looking back to them, like so many ages. The people with whom we lived were so very poor that they were often unable to give us more than a cracker to live upon all day long, and many a time did I steal down cellar, when nearly famished, to nibble some tallow candles which I found there. Our sleeping accommodations were very rude, for we were obliged to make anything our couch which happened to be most available when we were overcome with sleep and weariness. The floor of the wretched apartments occupied by the family who had the burden of our orphanage was our usual bed, and I remember hearing folks say that the Poor-House was to be our future home.

One day—a day never to be forgotten—a deliverer came to our miserable abode in the form of a beautiful woman. To me she was more than beautiful; she was angelic. How I gazed at her comely features, her dark eyes and rosy cheeks, from a distant corner of the room! After talking a while with those who had charge of us, she bade my brother and me come to her. For the first time in my life did I experience the pleasure given by gentle words; and, while standing beside her, my little fingers found their way unchecked through an open corner of a package of crackers which lay in her lap. My hunger for once was appeased. To my childish feelings this was heaven on earth begun; my cup of happiness was full. But the good angel, in the mean time, was negotiating for my brother. His dark eyes and handsome features absorbed the larger share of her motherly sympathies. She had two daughters of her own and wanted a boy for a brother to them. But our mistress told the lady that if she took the boy the girl must go too. How anxiously did I watch that motherly face that I might read in it my fate! To all eternity shall I praise the God of heaven for the decision then made. Though Mrs. M—— did not really want me, she concluded to take us both and try us for six weeks.

To our new home we were soon conducted, and for the first time was I permitted to call any one "mother." It was not long before my brother, notwithstanding his good looks, proved so mischievous and ungovernable that he, instead of myself, was finally sent to the Poor-House, that dreary refuge for the outcasts of society. I therefore date my advent into this world from the day that the kind-hearted stranger came to the house where I was, with her package of crackers. Previous to that time my life was only that of a poorly-fed animal whose life was considered of no value whatever. But the acute memory of those days of infant destitution was soon dulled.

My new mother, and the only mother I ever knew, was a mother indeed, and no natural parent was ever loved more tenderly. By her teachings I became aware that I was something more than an animal. Another self, of which I had been ignorant, was awakened within me as I began to comprehend what she told me respecting my heart and mind. Among the first lessons she then taught me was the fact that Jesus Christ was in me a good spirit, and would protect me from the influences of bad spirits. When my passions were aroused, making me a naughty girl, my mother would say, "Now my dear, you are unhappy because a bad spirit has got hold of you. When children are willful and selfish, they are always unhappy. You must put away your playthings and sit down by me and think." She taught me to say, "I confess Christ in me a good spirit." Those simple words had a wonderful power to break the spell of willfulness, and I thus learned day by day to resist a bad spirit and to love a good one. As my young mind developed, I became much interested in the stories my mother read to me from the Bible; but even more was I delighted with accounts she related to me of a people with whom she had lived for a number of years, and would not have left had not her husband become discontented and compelled her and their two daughters to break the connection and accompany him to Virginia. One day I was thinking of the many stories my mother had told me about that interesting family, and the happy children who lived with them, and I said:

"Mother, if father had not brought you here what would have become of me?" She replied that God would have taken care of me in some other way. Then she added, "I think we shall sometime go back to the Community." This is the first time I remember hearing the name of that beautiful home. "And if we do," she continued, "I shall think that God sent us down here to take you there too."

Mother used to receive letters occasionally from her friends in the Community, and never shall I forget how she looked when reading them. Tears and smiles alternately covered her face as she read and re-read those letters; and I would hear her say to herself, as she was about her work, "Oh, how happy I am! How good God is to give me such kind, loving friends!"

At last father began to relent and confess to mother that he had done wrong in leaving the Community. He accordingly wrote to O. C. asking permission to return, for his family's sake, if not for his own. After a long time a letter came granting his request. Oh, the happiness and joy which now filled all hearts it is impossible for me to describe. My mother's face beamed with happiness from morning till night. Father had been troubled with some doubts whether he should be allowed to carry with him a child which was not his own. But the large-hearted Community bade me welcome also. Mother, indeed, said she had no doubt about the matter, for the providence of God had placed the orphan child under her protection and she knew that the same good providence guided the instincts of that upright people.

Having grown up in this Society where I am taught to love God and save my soul I often look back upon the providence which brought me here as a miraculous one and thank God again and again for my Community home.

EVA.

BACKWARD GLANCINGS.

XIV.

J. SPENT the summer of 1835 in New Haven. It was a season of great suffering and spiritual conflict. Weld had proved himself a "wolf in sheep's clothing," and Boyle had become cold and critical. The latter still edited the *Perfectionist*, but J.'s articles were tardily printed, and finally notice was given that no more were wanted. A final breach came on in the latter part of the summer, when Boyle declared "everlasting separation" from J. and his spiritual novelties, and J. said "Amen." One interesting and remarkable conversion to the doctrine of holiness occurred during this period of confusion —that of E. A. Stillman, a Baptist theological student. But Boyle's rejection of J. and his hostile influence on the other believers, now left him but little foothold in New Haven.

In September J. went to Milford, about ten miles from New Haven, and remained some time with Edward Lambert, a man he had met occasionally before; who, though not a professed Perfectionist, was a warm friend. Mr. Lambert had been editor of a paper in New Haven, and had a file of old subscription accounts. These J. took and traveled on foot through a large circle of towns in southern Connecticut, collecting what he could, preaching holiness as he had opportunity, and especially busying himself in reflection. Mr. Lambert was at that time engaged in writing a history of Milford, and J. spent several weeks in traversing the town, measuring the roads and other distances by pacing, taking their bearings by compass, and noting down the situation of houses, streams, etc., etc. He then constructed a tolerably accurate map of nearly the whole town which was afterward published in "Lambert's History of New Haven." In these employments his mind recovered from its late desolating experience and took a favorable turn. To quote his own words: "I saw that an independent, and for the present a solitary, course was laid out for me. I had an anticipative view of much of the way in which I have since been led. From this period I date the birth of many of the purposes which I am still pursuing."

The following letter, dated at Milford, indicates the changes going on in his mind, and gives glimpses of the direction of his after course. The reader will please bear in mind that it was written when he was twenty-four years old:

Milford, Conn., Sept. 9, 1835.

DEAR FRIENDS:—So far as I am concerned the work of strife is finished. The God of battles has given me the liberty for which I have long been contending. My independence is achieved. Earthly relations and friends can never again hold me in bondage. I am as free for God's service as if I had never known father or mother or brother or sister; and now I am ready to turn and bind up the wounds I have given in the conflict that is past. "The wisdom that cometh from above is FIRST PURE, *then peaceable;* not first peaceable and then pure. During my spiritual infancy I have been compelled to fight for purity: now I am strong enough to proclaim peace, and to *keep* the peace, whether my proclamation is heeded or not. "Charity *thinketh no evil*"—that charity is mine. I see nothing but *good* in the universe. All that is called evil, is good to one whose head is above the clouds. "Evil to him who evil thinks." "Charity vaunteth not *itself*." That charity is mine; and when I speak well of my own estate, you will understand that I magnify only the grace of God, by which alone I am what I am. God claims me as his own property, and I admit the equity of his claim. My body, soul and spirit, with all belonging to them, are his. I can never have good, nor greatness, nor glory, separately from him. As one with him, I glory; I cannot conceal his righteousness; I cannot assume a voluntary humility.

In giving an account of myself, if I do not gratify fully the curiosity expressed in your letter, I shall at least remove from your minds all just reasons for anxiety concerning me. My character has undergone a great change since I was with you, and indeed, within a few weeks. Larger views of truth as it *is in God*, have set me free from the necessity of contention. I can love all men in spite of themselves; and peace-making is my business. You will perhaps accuse me of fickleness. Let me say, before answering the charge, that to me accusation is but commendation. If a man accuse me of idleness, by implication he commends industry; and as I am conscious of possessing that good quality, I take to myself the implied commendation, and leave the expressed censure for those who deserve it. In like manner, if you charge me with fickleness, you thereby praise stability; and as I know myself to be immutable in obedience to the will of God, I thank you for your commendation. True it is that I have passed through many changes of external character within the last two years. Like a man climbing a mountain, as I have reached one hight after another, the prospect around me has widened—the coloring and local appearance of the scenery have changed; but my eye has still rested on the summit; my nerves have still been strung for the *ascent;* I have never taken a step backward, and never shall till I sit down with Christ on his Father's throne. I thank God for the varied scenery of my course; and I thank him for the immutability of its direction.

During the summer I have been studying theology in New Haven and the country round about—not with book or pen, but with all the energy of the intellect which God has given me. Severe suffering of body and mind was a necessary and salutary accompaniment of my studies, for which I give thanks. A complete separation from the sect of Perfectionists, has been one of the happiest results of my meditations; and I am now free from my *spiritual* as well as my natural relations.

I have learned that perfect self-possession stands first in the list of blessings which God gives his sons; and that self-knowledge is the first lesson in their education. To this lesson I have been devoting my attention; and my discoveries have been such that I have given up all thoughts of undertaking the business of teaching others, until I have attained perfect self-knowledge, and perfect self-control. A preacher, by implication, professes to know important truth and also to know how it should be communicated. I shall therefore never again assume the place of a public teacher, till I am certain that I possess such an amount of important truth, and such a knowledge of the human mind, that I can accomplish all I undertake; that is, honestly fulfill the promises of such a profession. When I compare myself with those who walk in the shadows of this world, I perceive that I know much: but when I cast a glance at the unexplored fields of knowledge comprised within the first lesson of the book which God has put into my hands, I *know* I am but a sophomore, and I lose all relish for the business of instructing others.

Having thus studied myself out of friends and business, and being without money, I began not long since to inquire for the will of God concerning my course in reference to temporal support. I found that the love of independence was one of the strongest cravings of my nature, and that this could never be gratified till I can earn my bread as other people do; not as ministers do. I found that the love of money, which I *know* "is the root of all evil," the reigning idolatry (especially of New England), was forever extinguished in myself, and that I need not fear to seek money lest I should adore it. In view of these considerations, I came to the deliberate and fixed determination to engage in some business which shall render me independent of friends for worldly sustenance. An acquaintance in this place (Milford, ten miles west of New Haven), employed me for a time in collecting his debts; and I am about to begin with him to-morrow a survey of the town, for the purpose of making a map, which will occupy us several weeks. I have engaged in these matters, as Providence threw them in my way, with the expectation of getting better business soon. I am seeking my fortune, and for the present have a good season to look about me, and devise ways and means. The people of the place are very friendly, and insist upon my preaching to them on Sunday. I shall give them a talk. I can at least tell them I know nothing, and am not a preacher. It would not be strange if I should teach a school this fall. I have courage enough to believe that I can gain the confidence of this community sufficiently for such a purpose. The man with whom I am now connected is much attached to me and wishes to keep me here, and forward my designs in every way possible. I have given you a general sketch of my situation and prospects. Let me say for the comfort of such as prize the "wisdom of this world," that in my own opinion I never was so sober and considerate as at this present time. The "children of this world" have been wiser than the "children of light;" but I promise you they shall be so no longer, if my example and influence avail anything. I have learned that logic is worth more than poetry, and matter-of-fact industry more than building air-castles.

My head is just now full of Yankee notions about money-making, economy, etc., and I have become a great admirer of Dr. Franklin. Is not this a wonderful metamorphosis? I hope you will all have a hearty laugh over it, and that no suspicion of deception, or fear of disappointment, will shade your anticipation of my success and welfare. If my mutability forbid you to expect permanency of purpose, I can only send you to the throne of God, where my own hopes of stability are anchored. I know more fully than you *can* know the chaotic ocean of change over which I have been tossed; yet I have lost no confidence in myself, because I know that God has been, and is, my pilot; and as I now perceive myself riding quietly at anchor in the haven of God's peace, I have no disposition to lose the comforts of my present situation by anticipating future shipwrecks. I fear neither ocean nor storm, nor quicksands, nor whirlpools. Innocence cannot fear.

I verily believe, mother, if I had your bodily constitution, with all its infirmities, I should soon find my way to the blessing of sleep, and sound health. Your mind diseases your body, and you think you cannot control your mind. I *know* you can, with God's help. My own mind has sometimes preyed upon my health, and I have thought I could not control its movements; but now I know better. I have learned that God has not kindled a fire in my brain to burn me up, but to warm me; and when the fire goes beyond its proper office, I throw water on it. The pilot of a steamboat can stop his vessel in a moment, even when it is under full pressure. The human mind, under proper government, is as obsequious to the will of its pilot as a steamboat. In

the midst of the mightiest movements of which my mind is capable, I stop thinking in a moment if my life begins to suffer under the pressure; and I can be perfectly thoughtless when I please, and sleep when I please. I should prefer to be the slave of a Southern negro-driver, rather than be the slave of my own brain. Will you set yourself to inquire whether you are not voluntarily the slave of your own mind? and whether you may not be disenthralled? You are not too old to learn something of yourself; and I tell you that you and all the rest—men, women and children—will find the necessity of studying metaphysics, that is, mental philosophy, self-knowledge, before you will secure the end of your being. Horatio, Harriet, Charlotte and George have studied almost everything, save the *A B C* of useful knowledge. They probably know much about the solar system and the fixed stars; but how much do they know about their own natures—the spiritual machinery in the midst of which they live?

You perceive I have grown self-centered and egotistical. Herein I think my example is the best possible. I pray you may all follow it. "Charity begins at home," is one of those maxims in which the superior wisdom of the "children of this world," is manifest. Act upon the principle of that maxim under the light of God, and I engage you shall do more good than all the missionaries of the American Board. That love of souls which hurries and worries to save others, while self remains in ruins, is baby-benevolence—foolish and fatal sentimentalism. Surely, the instrument should be perfected before the work is begun. I deliberately aver it as my purpose, *to make the most of myself:* and my example and influence henceforth shall bid all men do likewise. Call this selfishness, if you will; it is selfishness which requires perfect benevolence. As "honesty is the best policy," so a perfect fulfillment of the law of love is the dictate of intelligent "selfishness." While I would exhort all "not to think more highly of themselves than they ought to think," I would also exhort them not to think more *meanly* of themselves than they ought to think. Independently of God "all flesh is grass;" but as the creatures of God, immortal minds are not to be despised. Voluntary humility is as bad as pride; bashfulness is as bad as impudence. Harriet. Charlotte—awake! Esteem yourselves not as your own, but as God's workmanship and property. You must not undervalue his handiwork; you must not dishonor his temple. Voluntary humility calls you worms; intelligent self-respect ranks you among the noblest of God's works. Think for yourselves; stand up in the majesty of your nature; inquire how you may secure fully the end of your being? Let us all begin from this hour to *make the most of ourselves* as the property of God.

If I can in any way help any of you to burst from your bondage, tell me how. I will gladly write as often as you wish if my communications can effect anything for this object. I care not to pamper curiosity or mere family affection; but if we may hold such correspondence as becomes immortal beings, I shall most joyfully fulfill my share of the task. I expect ultimately to get my living and furnish my "quota" of usefulness to this world by writing. I may well begin with writing schoolboy's letters to my kindred. Notwithstanding your imaginations about my stoicism, I assure you my relish for a letter from home has not abated one jot or one tittle in consequence of my emancipation from your apron-strings; neither has my affection for you all suffered the least diminution. Rather it has vastly increased; and withal, it has become pure. I should be glad to visit Putney and Westminster according to the desires expressed by many; but at present I have no business there. Tell the people to wait on the Lord and not on me or on any other man. Tell them to look for greater things than my work among them last spring. We are all yet in the wilderness. The pillar of fire is before us, but we have not yet reached the "land flowing with milk and honey." I see glorious light ahead; but gross darkness yet covers the people. A few are beginning to watch for the morning.

The peace of God be with you. J. H. NOYES.

ONEIDA CIRCULAR.

TIRZAH C. MILLER, EDITOR.

MONDAY, FEBRUARY 17, 1873.

REV. JOSHUA LEAVITT, D.D.

I WAS acquainted and associated with Dr. Leavitt in the old times of Revivals and Reforms. He was editor of the *New York Evangelist*, the organ of Finney, at the time when I was Managing Agent of the *Advocate of Moral Reform*, the organ of J. R. McDowall. We worked together in many a field and fought together in many a battle. Of course I have watched with interest whatever the papers have said about him since his death. The following scrap from the *Springfield Republican* caught my eye some time since, and I said to myself, I can tell a story to illustrate that:

Mr. Tilton's notice of his long-time associate in the *Independent* office, Joshua Leavitt, is both genial and truthful, and probably gives a better idea of the man than any other of the newspaper obituaries. He describes him as very courtly in manner, but very bitter and lasting in his prejudices. He never forgave a man for being a protectionist or a "free-thinker," or for being against cheap postage. He hated the *Tribune* as the Jew hated a Samaritan, yet, oddly enough, the most cordial and flattering account of his life and character in any of the papers was that in this. Finally, Mr. Tilton says: For a fine specimen of a thoroughly intolerant Christian gentleman, we point back proudly to our old friend, Dr. Leavitt. We used to think what a polite and superb pope he would have made!

The story I had in mind to tell upon this was told for me by the *Independent* itself in its editorial eulogy on the Doctor, as follows:

What he saw he had the nerve to say, no matter who opposed him. He might have been imperious but for that utter unselfishness and humility which marked his Christian character. "I never wish to see you here again. I ABHOR you!" were his words to an acquaintance of his youth who called upon him at this office, with whom he had once been associated in Christian labor, but who had adopted principles and practices subversive of all social order.

I am the man whom Joshua Leavitt turned out of doors with those rude words. I called at the office of the *Independent* on a little matter of business with Mr. Benedict, another old friend of mine, who was then the business manager of the paper. Mr. Leavitt was the only person in, and on discovering that I was his old acquaintance, he saw in me nothing but an enemy and a reprobate, because I had become a Perfectionist and joined the Oneida Community; and without provocation or prelude he broke out upon me in the manner described above. The present editor of the *Independent* "points proudly" to this eruption as a fine specimen of "nerve" and fidelity to principle; but Mr. Benedict, whom I met on the street shortly after my adventure with the Doctor, seemed grieved and mortified at the affair, and remarked that "Mr. Leavitt had very little *self-control* when his prejudices and passions were aroused; and that he often abused his best friends and made many enemies by his imperiousness and irritability." Whatever may have been the actual moral merit of Mr. Leavitt's treatment of me, one thing is certain, that it did not make me "*abhor*" myself—nor him. I sincerely thank God that I had an opportunity, a few days before his death, to send him an expression of respect and kind remembrance. GEORGE CRAGIN.

COMMUNITY JOURNAL.

—The event of the week is the arrival of a new piano for the Hall. It was purchased at Utica of Couch Bros., and was made by Kranich, Bach & Co., N. Y.

—We are again indebted to our Congressman, Wm. E. Lansing, for interesting public documents. "Preliminary Reports for the United States Geological Survey of Wyoming and Montana and parts of Contiguous Territories," giving catalogues of plants, birds, mammals, insects, shells, and so forth.

—Noticing a gradual accumulation of lumber beside the railroad we inquired what new project was on foot, and learned that the Midland Railroad Co. are making preparations to repair the trestle which runs across the meadow south of our house. They propose to strengthen it with 50,000 feet of lumber. It is a relief to hear this, for it makes one's blood run cold to think of any insecurity in the timbers of that long, high trestle.

—Our taxidermist has been stuffing a three-legged duck for a gentleman at Oneida. We went down to the farm-office this morning to see the anomaly, expecting to be shocked by an unsightly outrage upon nature; but the curious tripod stood so gracefully and looked so altogether at ease in its trifurcated condition that our wonder is that all ducks don't have three legs. The third leg was of little use in walking, but served as a rudder in swimming.

—The greater part of the meeting hour last evening was occupied with reading an account from *The Sun* of the sorrowful tragedy which ended the career of Mr. Greeley, and in conversation about the strange providence which made his last days so different from any thing he ever contemplated. It is scarcely more than a year since he said that he looked back upon his life as a successful one; and yet the cry which told the burden of his heart during the few days previous to his death was, "I am ruined! I am ruined!"

—When we were children we used to play

"Pinny, pinny, poppy show,
Give me a pin and I'll let you know;"

but now that we are grown up we do something different. "Pinny, pinny, poppy shows" are not pleasant to the washerwomen at the laundry, so Miss Emma, who has charge there keeps an account each week of the pins left on garments by careless ones, and Mr. W. reads the list in meeting as an aid to the memory. The last reading showed a great reduction of heedless barbarity. Mr. Victor Hawley, who is the boiler superintendent, and is frequently annoyed by an excessive return of steam, has employed the same plan for jogging the memories of those who leave their waste-valves open. The delinquents caught take the exposure in good part, and say they hope Mr. Hawley will criticise them every time they are guilty of like unfaithfulness.

—Mrs. M. E. Newhouse, who has mothered our youngest flock at the Children House for a year, stepped away from her post a few weeks ago for rest and change of scene. She was admirably adapted to this vocation and won every baby heart and every mother's heart by her gentle, earnest ways. She took the little ones when they went from the arms of their mothers and cared for them until they were old enough to enter the higher department. Passing through the halls you will frequently meet some tiny figure running after a familiar dress, and calling "Mamma 'House! mam-

ma 'House!" in a tone of voice which shows how warm a place she has in the affections of the little ones.

—S. B. C., who walks out with the children before breakfast, says they treated her to an impromptu masquerade the other morning. When she met them on the piazza for the start she could scarcely recognize one of them. Theodora looked unusally small and Emily had suddenly grown tall. Fanny and Anna looked strangely; and George, Temple, Ormond, Harold and even Eugene, Ransom and Deming, as well as Cossette, Virginia and Maud had added some new kink to their dress or had exchanged sacks, hoods, caps or tippets so as to be quite transformed. Some of them acted their parts so admirably that she failed to discover "who was who," until they reached home.

Friday Morning, Feb. 14.—A roaring, rushing, grating sound at midnight startled us from our slumbers. Springing to the window we saw a freight-train about midway on the trestle, the engine looking like one sheet of flame. There was a great deal of hallooing, swearing and shouting. The night was clear and cold, with a great golden moon looking soberly down. Some of our men hastened to the scene of distress, and found that two empty coal-cars had pitched off the trestle a short distance north of the bridge, to the ground, twenty-three feet below. The wheels of one of them had been off the track since the train left the first switch a quarter of a mile back, scraping along on the ties, and finally wrenching and tearing them from their places. On the trestle-work back of where the catastrophe occurred, full two hundred ties were splintered and broken into kindling-wood. For an hour this morning there was a steady line of pilgrimage to the ruins.

—Terpsichore, dainty goddess, tripping with "light fantastic toe," has lately been superseded by Mars, with his measured tread and upright mien. "Squads," "regiments," "captains" and "divisions" are every-day words. Don't be alarmed, gentle reader We are not projecting a revolution, and President Grant will never be any wiser for our military operations. We are affecting the milder attributes of the warlike god, so there will be none of the smoke and din of battle. We observed that dancing is an amusement in which not more than half the family take part. Let's have some exercise, suggested one, which will bring us all upon the floor. As there is scarcely anybody but can walk in a straightforward manner, marching was hit upon as the thing for us. Mr. Herrick drilled a small company for several weeks to see what might be done in this line. He gave an exhibition of their attainments a few evenings since, and the family were so well pleased with their varied evolutions that a large number of volunteers have entered the lists. The drilled "Squad" act as captains of the raw recruits, and it won't be long before we shall do the "right and left wheel," "double-quick" and all that quite *a la* the Prussian six-footers or the Imperial Guards.

—We have disarmed winter, thanks to our admirable system of steam-heating, so that we suffer none of the shrinking dread which is often experienced, especially by elderly persons living in ordinary habitations, at the approach of a long, rigorous, northern winter. Our chief concern is that we do not get over-heated, living as we do inclosed in brick walls, with a summer temperature maintained day and night from basement to attic. We are threatened with the enervating influences that pertain to tropical climates, and we have had to earnestly exhort the "heaters" to carry less head of steam. The women occasionally have to bestir one another to take constitutionals. We are under more than ordinary temptation to neglect out-door exercise. Our great Community mansion, containing two-hundred inmates, provides good society and good distances of travel, so that there is no occasion to go abroad visiting. Our assembly Hall, which is in our home dwelling, makes it unnecessary to step out-doors to attend meetings, hear lectures or find amusements. The dining-room, to be sure, is in the "Tontine;" but it is connected with the mansion by a steam-heated, covered passage, through which persons who do not choose to encounter the storms and chills of winter may find their way to their semi-daily supplies of mush and hard-tack. Thus while we rejoice that winter is so effectually kept at bay, and laugh at the winds and storms and pinching frosts, we must see to it that we do not become mere hot-house plants, and lose the vigor, elasticity and enterprise which our nothern latitude is so well calculated to foster.

—Since we have adopted the two-meal system and have given rather more attention to the subject of dietetics and hygiene than heretofore, there has come about an increased home consumption of apples, and especially of sweet apples. Sweet baked apples are in good demand at every meal. But the Midland Railroad took a bee line through, and perched a station-house in, one of our orchards so that our home supply has been very materially diminished. Another railroad has surveyed its route right through two more of our orchards. In view of this alarming aspect of affairs the question has lately been agitated of setting out a new orchard in some secluded spot where locomotives will not be likely to go. There are some things to encourage us in such an undertaking. One is the fact that we have had during the last two years very good luck in fighting that worst enemy of the apple crop, the codling moth. The experiment we tried was that of keeping sheep in the orchards. Two years' trial, of course, is not enough to fully determine the question whether or not this is a "sovereign remedy;" but the balance of evidence last fall was certainly on that side. The Henry Sweet, a very fine-flavored, red-streaked apple, yielded abundantly, and it happened that many of the trees were in an orchard that was not pastured, while a somewhat larger number were in a sheep-pasture. Those in the sheep-pasture were almost wholly free from worms and the scars and knotty places that are caused by them, while scarcely an apple could be found in the other orchard that was not affected.

—The practice of arranging in advance the date, place and person for any given course of action, so common with traveling performers of every kind, is coming in vogue with us to some extent. For instance: A chart has been made out for the year 1873, informing our nine silk agents of the routes they are to make, and the days on which to start. The date of their return is also definite, being two or three weeks distant, according to the importance of the route. Thus their year's work in this line is before them. Our late round of family criticism was systematized in this way, and later still our hair-cutting, which has always been a slow and irregular process, has been similarly mapped out for the coming year. The question arises, would not our businesses generally be benefited by an arrangement like the foregoing, modified to suit the particular case? Our farmers, gardeners, horticulturists and fruit-preservers could make out with tolerable accuracy, a scheme of operations, based on the experience of former years, as to the time and labor involved in many routine duties, and thus save themselves the burden and perplexity of carrying so much on the mind.

—Though religious experience often causes one to feel the delicacy and shrinking from publicity with which a newly-awakened love fills the heart, yet it is very difficult to hide the light which comes from heaven "under a bushel." So it often happens among us that what one writes but for the eyes of a friend, becomes a source of edification to the whole family. The following letter was intended for the private ear of Mr. N.; but he sent it to the meeting, where it created a great deal of interest, and now we put it in the Journal, where it may serve to strengthen some whose faith is wavering:

O. C., Jan. 27, 1873.

DEAR MR. N:—For some time I have thought it might interest you to learn something of my spiritual whereabouts. I have thought also that it might be good for me to open my heart; so here is my story.

To begin with, I will refer to my terrible fever-and-ague experience, which so used me up that I almost despaired of ever recovering from the dreadful state into which I had fallen. I had, indeed, scarcely a ray of hope to which I could cling. For weeks I felt that the fever-and-ague devil held me completely in his power, with his foot upon my neck, gloating over me. The vivid recollections I still have of my condition at that time, make me shudder. I know I came into personal contact with the devil's vile life; and that the cold, clammy sweat, from which I suffered everything, was only the effect of his wicked spirit. After the severe criticism which was given me when I came from Wallingford, I became so discouraged that I did not care for anything. I seemed to have commenced a down-hill course, and everything conspired to urge me on. Every one, young and old, it seemed to me, felt it a duty to give me a thrust, and shove me along. To attempt to make headway against such a current, I thought a hopeless task, and I said, "I won't try; I will keep out of everybody's way and float with the current." Yet in spite of all this discouragement, there was a spark of hope in my heart that things would sometime mend. This hope was not, however, strong enough to assert itself, and so matters went on frombad to worse.

As I now see things, it is plain to me that every circumstance of my life for months had been thrusting me more and more inextricably into God's mill, with no possible way of escape from a grinding to powder; but I did not understand this at the time. Many questions concerning the doctrines of the Community, which had long been settled, and, as I thought, unchangeably, came up for reconsideration. The question of salvation arose before my mind, and my position in regard to it; and I was made to feel that very probably I was a reprobate and a candidate for damnation. Such was the hardness of my heart, that I could contemplate that fact without fear. I realized that everything desirable was passing away from me. At last I had a clear sense that I was completely stripped, with nothing left, when I became reckless. In order to avoid trouble, I endeavored to get along without getting into collision with any one. I tried to live peaceably with all, and devoted myself wholly to the business I had in hand.

The first idea I had that I was looked upon with favor by any one came from a remark of H. M. W. W. A. H. called upon various persons one evening to praise any person whom they would like to speak a good word for. She being called upon, made a few commendatory remarks of one whom she designated as H——. Passing her after meeting she asked, "Did you know who I meant? It was you."

About this time it was proposed to me to take the flower-garden for my summer work. I found some crumbs of comfort in my new occupation, but matters did not mend much, as I could discover, until I had a certain talk with you. Then I experienced something new. God came nigh to me, and a new thing was done; something was begot-

ten in me which gave me great peace. Although the "I don't care" feeling had not wholly passed away, there was something in me which took care of itself. It grew and prospered independently of my will, and steadily asserted itself in my life over every temptation. There was a power in it which removed all obstacles. It began to make me happy and independent of circumstances. For the first time in my life, I realized what Paul meant by "walking in the spirit." For years I had sought to gain my ideal of this state; but all my efforts only ended in disastrous failure and disappointment. Often in my distress, the question would arise, "How do others succeed where I fail? Have I been called of God? Then why this distress?" Only a short time ago, the sorest temptation of all was, "Why am I tormented thus?" But now all this is changed. How I could be otherwise than happy I cannot conceive. This seed which God has planted is growing and taking a controlling possession of me. Behold! that thing which I sought long and eagerly, has been flashed into me as a free gift, and that too, at a time when, so far as I was concerned and can see, I was careless and indifferent to it. It is a wonderful mystery, for I understand now what it is to have Christ work in me "to will and to do of his good pleasure." The day has certainly dawned and the day-star has risen in my heart. Christ is formed in me. I am in the highway of holiness. I assert and believe with all my heart that Christ is in me a thousand times stronger than any power the devil can boast, and he can make it manifest.

I want to keep this new growth which God has put into me, and I have no fears but I shall, for I trust it wholly to the same almighty power which has begotten it; and therefore I shall be kept from trying to hold it in my own strength. I yield my all to Christ, for of his own free grace he has saved me and planted me on a rock; and because of that grace I shall never wander from him more. Words fail me to tell the strength, the joy and the comfort I feel in the realization of this great salvation by the Gospel of Jesus Christ. I know I shall be a young convert *forever*.

To-day a cloud of anguish came over me. So intense was it for a few moments, that the tears rolled in streams down my cheeks; but I talked with God about it and asked him to help me, and to do anything with me which would make me realize my union with Christ. In a few minutes a broken, soft-hearted spirit drove the cloud away, and a glimpse of the riches I inherit in Christ came to me. I seemed to touch the heavenly Church, and to understand what and how much Christ meant when he said, "All mine is thine, and thine is mine." Truly, all things are ours. Seeing what God has at his command takes away all feeling of poverty, and from henceforth it shall be sufficient for me that I am his.

One word more and I will end this perhaps, already too long letter. I find from time to time within me a struggling or yearning of heart after the resurrection power of Christ. It impels me to seek to take hold on that great power. It stimulates me to strive in all ways to please Christ. I believe it is his resurrection life which I feel working in me. Now and then it asserts itself in a very sensible way, and with such power as to assure me that by it I shall be preserved unto his heavenly Kingdom. I feel that I shall not grow old, whatever changes I may meet. A young and vigorous life is mine, which will know no decay. The Lord is my God and he will dwell in me. I believe in him and his goodness, whatever or however things may be. Turn they as they will the Lord is my joy and song. He is my salvation; in him will I trust.

I have taken a part of three days to write this, and it expresses my experience pretty well, only half is not yet told.

I am your son in the Gospel, L. H. B.

WALLINGFORD.

—Some of us have scarcely comprehended the term "Credit Mobilier," so last evening C. S. J. gave us a very clear and interesting explanation of the discreditable affair in which so many of the men of the nation are involved.

—The harvesting of the ice has been attended with splendid luck this year. John got all through with it on Monday and just in time for a thaw which came on in the night. Mr. Nash has been out to measure the thickness of the blocks and reports it to be eighteen inches—twelve inches solid, clear ice.

—It is getting to be a busy time here again, but it does not show so much at the house. Just take a walk down the hill to the factory—carefully, for it is exceedingly slippery. You can peep in at the silk-room door as you pass by. Work there is going on evenly as usual. Then run up stairs and in and out one or two narrow passages and you will come to the press-room (pleasant place); there the three presses are under full headway. Leonora is feeding the Campbell press; two or three girls are bronzing for George Henry, and a company of six are taking out papers from the press and at the same time putting in a new set. Now come into the composing-room, stopping as you go along to speak to E. H. H., who is at work at the cutting-machine. Here in the composing-room you will find Marion and Charlotte at work upon a catalogue; Annie Kelly is over in the corner, and by the case in front of her stands Miss Harriet Allen, who frequently comes up from the silk-room to help. Mrs. Noyes, with a handful of type, is going from case to case distributing. Mr. Skinner, Mr. Campbell and Harley are distributing too. C. S. J. is taking a proof for which a man is waiting outside the door, while Edwin is getting a form ready for the press.

—Harry, whose eye is under treatment by Dr. Bacon at New Haven, has been quite unmanageable, making it very hard for those who take care of him to do for him what is considered necessary for his good. His fear of pain made him perfectly unreasonable. The other day Mr. Hamilton talked with him most earnestly and wrestled in spirit with him so effectually that he has appeared like a changed boy ever since. Mr. Campbell took Harry to New Haven to-day, and he behaved well. After Dr. Bacon had placed him in the chair, Dr. Farnham came in. Dr. Bacon went on with the operation, explaining as he went along. While he probed the eye and put in nitrate of silver Harry sat *very* still, and presently Dr. Farnham said, "This is a better behaved boy than the one you had here a few days ago." "When?" asked Dr. Bacon. Dr. Farnham specified. "Why," said Dr. Bacon, "it is the same boy." "Well," said Dr. Farnham, "I thought I recognized the motion of his hands, but I thought if it was the same boy he had lost the use of his lungs." "Yes," said Dr. Bacon, "he is much more tractable."

FROM OUR YALE STUDENTS.

v.

EVERY school-boy, perhaps, knows that iron expands or contracts as its temperature is increased or diminished; and may be able to repeat from his "Physics," that, according to the dictum of that duplex authority, Dulong and Petit, its expansion in bulk is 1 in 282—whether in inches, feet or miles, it does not matter. Yet sometimes very smart people, like the Directors of the Pacific Mail Steamship Co., seem to forget it. Years ago when our Prof. Trowbridge was in charge of the Novelty Iron Works, they called upon him to get up the machinery for one of their steamships. Among other things, they stipulated that the paddle-wheels should be made with a solid hub. When the steamer was returning from Aspinwall on her first trip, she encountered a storm, broke down, and had to be towed several hundred miles to New York. Examination showed that the huge solid hub, weighing perhaps twenty or thirty tons, had cracked in two from end to end. "Damages, gentlemen—heavy damages," said the P. M. S. Co.. "Very bad iron." Superintendent Trowbridge, though the solid hubs were made contrary to his advice, was finding it a little difficult to prove his own hypothesis, viz: weakness of the wheel from strain of contraction in cooling, when chance or Providence gave him a lift. An extra wheel had been cast, and thrown aside to meet this possible emergency. When the order came to fit it up, a workman went to examine it. It lay in the yard, exposed on one side to the heat of the sun. As the man went over it, he struck it carelessly with a hammer, when with a sharp crack, the hub split from top to bottom! The casting was spoiled, but the "Novelty Iron Co." was "let out."

One of the most remarkable instances in which the contracting power of iron is taken advantage of [I am still collating from Prof T.], is in casting the Rodman cannon. By means of a stream of water introduced into the hollow core, in a pipe, the inside of the gun cools the fastest. The effort of the contractive force is, in consequence, that of crushing the gun *in*, thus to a certain extent neutralizing the bursting strain when it is discharged.

As a kindred item, I will mention that the road to fame is open to him who will invent a pyrometer —some instrument whereby high temperatures may be measured with absolute accuracy. Hundreds have been invented, but now, not even Daniells' can be regarded as perfect. Tyndall thinks that an instrument which will in some way indicate, perhaps photographically, the length of the heat vibrations, is, at least, a possibility. K.

SCHAUS'S ART STORE.

THE children needed some new drawing cards, so the last time I was in New York I stepped into Schaus's store to buy them. It was always hard for me to pass the great glass windows of that store without stopping. Some fine oil paintings make it easier and easier to stay the longer you tarry; and if [illegible] poppy show-bill on the little cabinet pictures at the side, your down-town appointment at ten o'clock is sure to be unfulfilled for that day.

There is a sort of unworldliness and generosity in artists which affect even the sellers of their works. They permit you to enter their rooms and look at their pictures by the half hour, and never make you feel that you are at all in the way, or that it is your duty even to speak of buying. Those polite men in Schaus's, how many pleasant hours I owe them! Pictures, like nature's works, give pleasure without impoverishing themselves They are like the bounty of the sunlight which all eyes can enjoy without fear of coming want.

There were some new studies in crayon fresh from Julien, of Paris, which pleased me much. My eye delighted to follow their graceful shaded lines and drink in their soft lights. Then there were new German chromo-lithographs—so beautiful, so clear, with cloud and sky and mountain, and in oil colors, too. High art effects, which but a few years ago were out of the reach of all except the richer classes, can now gladden frugal homes, and adorn the walls of cottages.

In a quiet back room is a little free art gallery, and there stand four long-wooled sheep, the

sunlight striking one wether on his head, so that you can see through the white wool almost to his pink and tender skin; near by an old hen, with unbounded self-respect, is wading slowly through the yellow straw. Why, she looks like one of the very hens we used to have! Everything is so still. Can it be possible that things alive can stand so long and not move? Is it only a picture? O, divine art, which makes us forget for the moment that we are in Broadway, in the heart of a great city, and, as if by magic, transports us far away into the country and back to the summer days of our childhood, when we watched the sheep and hens as we watch now this picture lost in wonder.

J. B. H.

JOTTINGS AT THE CRITICISM CLUB.

IV.

V—— has this serious fault, that her words are often better than her deeds. She has a bright intellect, and seems to apprehend the truth readily; her understanding assents to it and apparently rejoices in it; but for some cause it does not sufficiently modify her external conduct. Consequently her words are at a little discount—like the notes of banks that have issued more paper than they can redeem. Our deeds form the specie basis of our characters, and if they fall behind our words the latter will not long be taken at par. Such a condition of things is deplorable, and must be the result of unbelief. If the heart sincerely believes in God it will express itself in deeds truer and better than any words.

....

L—— is very earnest, and yet his discourses in public and private are often unacceptable and unedifying. We involuntarily feel that his exhortations savor of legality rather than of grace. He needs to consider that *being* is far more important than *doing*, and seek to attract persons to his standard of excellence by his own life-example rather than to drive them to it by words. In his zeal to improve others he ignores many faults in his own character. In other ways his zeal defeats itself. For one thing, it leads him to introduce the most profound religious subjects into conversation with little reference to the proprieties of time and place. We would not have him less earnest, but more wise.

....

A—— is another earnest man; but he fails to some extent of the grace of God because he is too personal and [illegible] seeking improvement. He makes himself too much the center of his prayers and strivings. If he could induce God to do as he wishes it would evidently fill him with spiritual pride. He needs to make God's great interests the main object for which he labors, and link his personal interests to them. The Lord, we may suppose, is interested in our improvement only as it will help on his great work in the world. He will see that the personal interests of those heartily devoted to his service are well cared for; but we need not ask him to give very special attention to us as individuals seeking improvement independently. As Mr. Noyes says in one of his Home-Talks: "Private interests have their day, but they are limited in their nature, and will last only so long as they are profitable to the great public interest. If we have any interests separate from the public interest, we may be assured that God has made no arrangement for their satisfaction; but so far as we have identified ourselves with the public interest, success and prosperity are ensured to us for time and eternity: governmental arrangements are everywhere made to prosper the agents of that interest. The actual *couriers of heaven* will find *relays* of horses waiting for them in all directions; but persons who travel for their own objects must get along as best they can: possibly they may have to go on foot."

RECEIPTS FOR THE CIRCULAR.

S. B. M., Salt Lake City, Utah, $2.00: S. S., Gratiot, Wis., 50 cts.; D. R. B., Dunleith, Ill., $2.00; G. F., Cedar Falls, Iowa, $1.00; D. M. H., Prospect, Conn., $2.00; M. C. C., Westminster West, Vt., $1.00; M. L., Bergen, N. J., $2.00; E. D., Chicago, Ill., $2.00; C. E., New Castle, Ind., $5.00; L. T., Drummondville, Ont., $2.00; A. I., Brooklyn, L. I., $2.00; F. H. B., Rockford, Ill., $1.00; T. H., Ottawa, Ont., $2.00; M. W., North Lawrence, Kans., $2.00; J. H., D., Spring River, Pa., $2.00; S. H. D., Collinsville, Cal., 50 cts.; E. Y., Dixon, Cal., 52 cts.; T. M. C., New York, 50 cts.; S. W., South New Berlin, N. Y., $2.00; D. R. W., Prospect, Conn., $1.00; J. S. C., Pontiac, Mich., 50 cts.; M. M. S., Wilcox, Pa., $2.00.

THE NEWS.

AMERICAN.

It is reported from Salt Lake City that the Mormon leaders are much excited in anticipation of immediate Congressional action in relation to Utah.

A thousand departmental clerks in Washington have signed a petition favoring the passage of the bill, now before Congress, to abolish the sale of liquors in the District of Columbia.

Gen. John W. Geary—for years one of the most influential and respected citizens of Pennsylvania—died on the 8th inst. He had just completed his second term as Governer of his native State.

Lozada, the Mexican leader who refused to capitulate upon the death of Juarez, is at the head of an insurrection that threatens much trouble to the Lerdo Government, but that is not likely to be permanently successful.

Henry Wilson has resigned his seat in the United States Senate, his resignation to take effect on the 3d of March; after which he will serve in the higher office of Vice-President. He has represented Massachusetts in the U. S. Senate for eighteen years.

The quarrel over Mr. Greeley's wills has been finally settled by the decision of Owen J. Coffin, Surrogate of Westchester county, that there is proof that Mr. Greeley was insane before he made the last will, and no proof that at the time he made it there was an interval of reason. The will of 1871 is therefore accepted as Mr. Greeley's last will and testament.

Senator Pomeroy, on returning to Washington, pronounced the charge that he had attempted to secure his reëlection by bribery utterly groundless, and earnestly called for an investigating committee, which was appointed; but it is thought there is not sufficient time before the close of the session to fully investigate the matter. Meanwhile an investigation is going on concerning similar charges brought against the other Kansas Senator, Mr Caldwell.

The electoral vote of the different States for President and Vice-President was read in joint convention of both Houses of Congress on the 12th inst., and resulted as follows: whole number of votes cast for President, 366; number counted, 349; for Ulysses S. Grant, 286; B. Gratz Brown, 18; Thos. A. Hendrics, 42; C. J. Jenkins, 2; David Davis, 1. Number of votes counted for Vice-President, 352; Henry Wilson, 286; B. G. Brown, 47; N. P. Banks, 1; Geo. W. Julian, 5; Alfred H. Colquitt, 5; Wm. S. Goesbeck, 1; John M. Palmer, 3; Willis Machem, 1; Thos. E. Bramlette, 3.

Congressional investigations continue to absorb the attention of the public. It is too early to say who have been unjustly charged with complicity in the Credit Mobilier scandal. The suspected all deny any intention of wrong-doing; while it is more and more plain that Congress includes many corrupt men high in influence, and that the judgment is very likely to strike where least expected a short time ago. It is a rather sorry spectacle to see Congress arranging for a crusade against the Mormons, professedly in the interests of morality, when it can scarcely find time to look after the morality of its own members.

The text of the Charter of the Canadian Pacific Railway is published. It provides "that the railway be divided into sections as follows: The eastern section, extending from the eastern terminus to Red River; the Lake Superior section, extending from some point on the eastern section to Lake Superior; the central section, extending from Red River to a point in the longitude of Fort Edminton; the Manitoba section, extending from the main line in the Province of Manitoba to the boundary of the United States; and the western section, extending from a point in the longitude of Fort Edminton to the Pacific Coast. The Company shall, within two years from the 20th day of July, in the year 1871, begin simultaneously the construction of the railroad from the Pacific Ocean toward the Rocky Mountains, and from a point in the Province of Ontario, hereafter to be determined by the Government, toward the Pacific Ocean, to connect the seaboard of British Columbia with the railway system of Canada; and, further, shall construct the Manitoba section by the 31st of December, 1874; the Lake Superior section, and such portion of the main line as shall be required to complete communication between Lake Superior and Red River, by the 31st of December, 1876; shall proceed with and construct the eastern and western sections simultaneously; shall prosecute the work of constructing the railway with all due diligence, and shall complete the whole railway within ten years from the said 20th day of July, 1871, unless the last-mentioned period be extended by Parliament, in whose care the Company shall complete the whole railway within such extended period. The Company is also empowered to make arangements with any railway company in Canada or the United States for connecting the sections of the Canadian Pacific and to secure running powers over such railways. The maximum amount of both land and money subsidy, namely, 30,000,000 acres of land and $30,000,000 in money, are guaranteed to the Company. It is reported that Sir Hugh Allan, Mayor Walker, the Hon. A. G. Archibald, and the Hon. J. J. C. Abbott, will proceed to England about the end of the current month to make the financial arrangements in connection with this great work."

FOREIGN.

Lunalilo, the new King of the Sandwich Islands, promises to restore to his people the constitutional rights of which they were deprived by the late king, Kamehameha V.

The inquiry having been raised in the English House of Lords, whether measures had been taken to complete the settlement of the western part of the boundary line between the British Dominions and the United States, Earl Granville replied that steps had been taken to settle all boundary questions between the two countries; that a British Commission had surveyed a line which is almost identical with that laid down by the Americans; and that instructions had been sent out with a view of arriving at an agreement upon the exact boundary.

King Amadeus has determined to resign. His reasons are supposed to be, disagreement with the Cortes and dislike of a life of turmoil. The following dispatch from Minister Sickles has been received at Washington: "The Cortes have adopted a republican form of Government by a vote of 259 in the affirmative and 32 in the negative." Great excitement in Madrid, and the abdication of the Spanish King is the absorbing topic of interest in London and Paris.

Later.—King Amadeus has sent his formal message of abdication to the Cortes. Telegraphic dispatches represent him as saying, that "when he accepted the Crown he did so under the belief that the loyalty of the people who had called him would compensate for the inexperience which he brought to his task. He had found that herein he was deceived. If the enemies who had beset his path had been foreigners, he would not have taken the course now determined upon; but they are Spaniards. By them Spain had been kept in perpetual disquiet. All his efforts to quiet her or put an end to the intrigues which were the source of her agitation had proved unavailing. It was not enough that he had a partisan support. He had no wish to remain on the throne as the King of a party. He therefore announced his abdication on behalf of himself and his heirs."

The abdication was unanimously accepted. The Senate and Congress immediately constituted themselves the Sovereign Cortes of Spain, and resolved—that Spain be

declared a Republic; that the National Assembly assume all the powers of the supreme authority; and that they appoint a responsible government to execute their decrees. Señor Figueras stands at the head of the new government, while Señor Castelar, the great Republican orator, holds the office of Foreign Secretary.

WHAT A DUCK!

DEAR CIRCULAR:—An item from our W. C. Journal, in your last week's issue, says: "Mr. Hamilton espied what seemed to be a duck *hovering* over the water," &c. Good gracious! Who ever heard of a duck, or any game of that kind, "hovering" over the water? What will Kit Carson and all his satellites say? They'll think we have a new species of duck out this way. Now our journalist is a most worthy and honest person, I know; but she is not accustomed to the use of fire-arms. At any rate, if she is, she entirely overshot the mark this time, for the bird was not "hovering *over*," but playing *in*, the water when our steady-handed Mr. Joslyn fired the successful bullet.

W. C., Feb. 13, 1873.

FEET VS. FEELING.

ONE of the most irritating, temper-spoiling conflicts into which fashion pushes poor, civilized men and women, is, I have lately discovered, that which rages between the feet and the feelings.

The opinion seems to be verv well settled that small feet are handsomer than large ones. Of course we are not yet debased to the Chinese standard, but only tending toward it, so that those individuals who have naturally the smallest feet in proportion to their size and stature are esteemed fortunate. Perhaps no fault can be found with this opinion in point of artistic taste. At any rate fashion has asserted it as a maxim, and that is sufficient for our present purpose, for just here comes in the difficulty. Those unfortunate humans who, on arriving at years of indiscretion, are dissatisfied with the size of their pedal extremities, incontinently fall back on that hoary artifice of a foolish world which persuades them that even if their feet are not small, the defect may be partly overcome by *making them look small*, by some device. This device constitutes, now-a-days, the shoemaker's art and mystery, which art, in this view of the matter, may be said to have made great strides.

If you order a pair of boots I can describe your experience beforehand. You go and have your measure taken. Nothing easier. The man of the bench is anxious to please and has the most perfect confidence. You explain to him that, your feet being a little tender, you desire an easy fit. "O, certainly! Of course!" and down go the figures. After a reasonable time you call for the boots. They are finished and look handsome enough. At the shoemaker's suggestion you try them on; or, to speak more exactly, you try them part way on. Then you are compelled to back off until the obliging shoemaker, who takes this all as a matter of course, has daubed your stockings with pulverized soapstone or something similar, and handed you a pair of boot-hooks, over which you bow yourself, litting until you are very red in the face. The man of leather, who knows his part, meanwhile gets on his knees and further assists by rubbing vigorously up on the instep and directing your toes, until at length you have the exquisite sensation caused by your poor heel's slipping inside the "counter." Then with two or three vigorous stamps the boot is on! The shoemaker, in positive glee, rubs it a little more to make sure there is no wrinkle, then steps back, casts an admiring gaze, and assures you all is right. The boots are a "splendid fit;" "like a glove;" "like a duck's foot in the mud;" "Jaumet's best French uppers, and oak-tanned soles;" "after they are *broke in* they will be easy, and such a fit." (*After* they are "broke in," mind you.)

Your foot, as it protrudes from your trowsers, does certainly appear much daintier than usual, and although the joints of your toes show through Jaumet's best uppers like little knuckles, your feelings are immensely tickled thereby. Unwilling to remove so elegant a fit, or doubting your ability to put them on again unaided, you decide to wear them home, thus getting them partly "broke in." So you wrap the old pair in a piece of brown paper and take your departure indulging in pleasing fancies of the effect such dainty leather must have on the susceptibilities of Maria Jane.

But before you reach home your feelings have had their day and your feet begin to assert themselves. You discover that they ache badly, and in fact, are partly benumbed so that they feel like wooden feet, or like a tooth which the dentist has "wedged." This intensifies each minute and when you finally limp into your own friendly room, the "fine" boots come off in a hurry and go *slam* into the closet. They flattered your feelings, but oh! how they hurt your feet!

After a dozen or more such experiences you begin to philosophize upon the matter, and end by uttering the following aphorisms:

1. Never "break in" boots or shoes. If they are not easy when new, don't take them; for the boots will break your feet oftener than your feet will break the boots.

2. If you go on "breaking in" boot-leather, you will need a special last, made with all sorts of knobs and protuberances to correspond with your distorted joints. Then you will be sorry.

3. If you have large feet, admit it in all honesty and have your boots made accordingly. Then you will be happy.

F. W. S.

☞The Address of the Rev. Jesse H. Jones is East Abington, Mass. We are receiving some responses from our subscribers to Mr. Jones's "Plan for the Organization of a True, Christian Community," which was published in the CIRCULAR of Feb. 3rd. More or less fault is found with his scheme; but as we do not care to engage in any further discussion of this matter, we have forwarded these letters to Mr. Jones.

CHOICE FLOWER-SEEDS FOR SALE.

TWENTY packages (our selection) sent to one address, postage paid, for $1.00. Special selections sent at the annexed prices:

Acroclinium, rose and white,	5 cts.
Ammobium altum,	5 "
Amaranthus salicifolius (Fountain Plant),	25 "
" bicolor, tricolor,	5 "
Asters, Truffaut's, 15 cts. German,	10 "
Antirrhinum (Snapdragon),	5 "
Balsam,	5 "
Cacalia (Flora's Paint-Brush),	5 "
Calliopsis (Coreopsis),	5 "
Celosia (Cockscomb), pyramidalis, cristata, dwarf,	5 "
Dianthus (pink) Clove, China, German,	5 "
" barbatus (Sweet William),	5 "
Gomphrena (Globe Amaranth), purple, white, striped,	5 "
Helianthus (Sunflower), Mammoth Russian,	5 "
Hollyhock (double), white, black, mixed,	5 "
Linaria,	5 "
Nigella (Love in the Mist),	5 "
Marvel of Peru (Four o'clock)	5 "
Pansies,	15 "
Portulaca (double),	15 "
Phlox Drummondii,	10 "
Petunias,	10 "
Ricinus Sanguineous (Castor-Oil Bean),	5 "
Salpiglossis,	5 "
Satin Flower,	5 "
Sweet Pea,	5 "
Solanum Texanum (Ornamental Egg-plant), wax-like, vermillion colored fruit, small and handsome,	5 "
Tagetes (Marigold) signatus, Pumila, African,	5 "
Campanula grandiflora, Large Bell-Flower, blue,	5 "
Zinnias,	10 "

These seeds were grown with care on our own grounds. All colors mixed except when noted.

ANNOUNCEMENTS.

SILK GOODS.

Machine-Twist and Sewing-Silk of their own manufacture for sale by the Oneida Community.

Address, [S] ONEIDA COMMUNITY, *Oneida, N. Y.*

PRESERVED FRUITS AND VEGETABLES

Put up for sale by the Oneida Community in tin and glass. Price list sent on application.

Address, [F] ONEIDA COMMUNITY, *Oneida, N. Y.*

STEEL TRAPS.

Eight sizes and kinds, suitable for the House-rat, Musk-rat, Mink, Marten, Fisher, Fox, Otter, Beaver, the Black and Grizzly Bears, are made by the Oneida Community Descriptive price-list sent on application.

Address, [T] ONEIDA COMMUNITY, *Oneida, N. Y.*

MACHINE-SHOP AND FOUNDRY.

Improved Lathe-Chucks, Blinn's Patent Gate-Hinges, Machines for Measuring the Length and Testing the Strength of Manufactured Silks, Bobbin-Winders for Sewing-Machines, etc. Agricultural, Machine and Light Castings, on hand or made to order. Descriptive price-list sent on application.

Address, [M] ONEIDA COMMUNITY, *Oneida, N. Y.*

THE WALLINGFORD PRINTING COMPANY.

All kinds of Book and Job Printing executed: Manufacturers' Illustrated Catalogues made a speciality: also Bronze and Color Work, and the finer kinds of Card, Circular and Bill-head Printing. Having enlarged its works and added new motive power, this Company is in renewed condition to meet the wants its patrons with promptness and accuracy.

P. O. Address, *Wallingford, Conn.*

PUBLICATIONS.

(Sent from the Office of the Oneida Circular by mail, post-paid, on receipt of price.)

History of American Socialisms. By John Humphrey Noyes. 678 pp. 8vo. J. B. Lippincott & Co., Philadelphia. London, Trubner & Co. Price $3.00.

The Trapper's Guide; a Manual of Instructions for Capturing Fur-bearing Animals. By S. Newhouse. Third edition with New Narratives and Illustrations. 215 pp. 8vo. Price bound in cloth, $1.50.

Salvation from Sin, the End of Christian Faith; an octavo pamphlet of 48 pages. By J. H. Noyes. Price 25 cents per single copy, or $2.00 per dozen.

Dixon and His Copyists; a Criticism of the Accounts of the Oneida Community in "New America," "Spiritual Wives," and kindred publications. By John Humphrey Noyes. Price 25 cts.

Scientific Propagation. By John Humphrey Noyes. Large octavo pamphlet of 32 pages. Price 25 cts.

Male Continence. By John Humphrey Noyes. An octavo pamphlet of 24 pages. Price 25 cts.

Hand-Book of the Oneida Community; Containing a Brief Sketch of its Present Condition, Internal Economy and Leading Principles. Price 25 cts.

The five pamphlets—"Salvation from Sin," "Dixon and his Copyists," "Hand-Book of the Oneida Community," "Scientific Propagation," and "Male Continence," will be sent to a single address on the receipt of $1.00.

Back Volumes of the Circular. Unbound. Price $2.00 per volume.

MESSRS. TRUBNER & COMPANY, Book-sellers, Paternoster Row, London, have the "History of American Socialisms," the "Trapper's Guide," and the "Hand-Book of the O. C.," for sale. They will receive subscriptions for our other publications.

PHOTOGRAPHIC PICTURES

Of the Oneida Community Buildings and Grounds, made by a first-class artist and finely mounted, can be had on application at the Office of the Oneida Circular.

LARGE VIEWS.

Bird's-eye View, looking West, of Community Buildings and Grounds, 12 by 14 inches, on fine enameled board 16 by 20, price $1.75. Quadrangle and Group, 12 by 14, mounted like the above price $1.75. South and East Fronts of the Community Dwellings, giving a good view of the New Wing occupied by the Children—8 by 10, on tinted board 10 by 12, with an ornamental border price $1.00.

STEREOGRAPHS.

No. 2, East and North Lawns. No. 3, East Lawn and Portico. No. 4, East Front. No. 5, North Front and Lawn. No. 6, Bird's Eye View of Buildings looking West. No. 7, Lawn and Summer House. No. 8, West View, toward Railroad. No. 11, Quadrangle. No. 12, Lawn View. No. 15, South and East Fronts. Price of Stereographs $3.00 per doz. Sent by mail, post-paid, on receipt of price.

Oneida Circular.

A WEEKLY JOURNAL OF HOME, SCIENCE AND GENERAL INTELLIGENCE.

Published by the Oneida & Wallingford Communities.

ONEIDA COMMUNITY, FEBRUARY 24, 1873.

New Series, Vol. X, No. 9
Whole No. 1450.

POST-OFFICE ADDRESS:

ONEIDA CIRCULAR, ONEIDA, N. Y.

TERMS:

The CIRCULAR is sent to all applicants, whether they pay or not. It costs and is worth at least two dollars per volume. Those who want it and ought to have it are divisible into three classes, viz., 1, those who cannot afford to pay two dollars: 2, those who can afford to pay *only* two dollars: and 3, those who can afford to pay *more* than two dollars. The first ought to have it free: the second ought to pay the cost of it: and the third ought to pay enough more than the cost to make up the deficiencies of the first. This is the law of Communism. We have no means of enforcing it, and no wish to do so, except by stating it and leaving it to the good sense of those concerned. We take the risk of offering the CIRCULAR to all without price: but free subscriptions will be received only from persons making application for themselves, either directly or by giving express authority to those who apply for them.

Foreign subscribers, excepting those residing in Canada, must remit with their subscriptions money to prepay the postage.

THE UNITED COMMUNITIES.

ONEIDA COMMUNITY

Is an association living in Lenox, Madison Co., N. Y., four miles south of Oneida and a few rods from the Depot of the Midland Railroad. *Number* of members, 205. *Land*, 654 acres. *Business*, Manufacture of Hardware and Silk goods, Printing the CIRCULAR, Horticulture, &c. *Theology*, Perfectionism. *Sociology*, Bible Communism.

WILLOW-PLACE COMMUNITY.

Branch of O. C., on a detached portion of the domain, about one and one-fourth miles north of O. C. *Number* of members, 19. *Business*, Manufactures.

WALLINGFORD COMMUNITY.

Branch of O. C., at Wallingford, Conn., one mile west of the Hartford and New Haven Railroad. *Number* of members, 45. *Land*, 228 acres. *Business*, Publishing, Job Printing, Manufactures, and Horticulture.

SPECIAL NOTICE.

The O. C. and Branches are not "Free Lovers," in the popular sense of the term. They call their social system BIBLE COMMUNISM or COMPLEX MARRIAGE, and hold to freedom of love only within their own families, subject to Free Criticism and the principles of Male Continence. In respect to permanency, responsibility, and every essential point of difference between marriage and licentiousness, the Oneida Communists stand with marriage. Free Love with them does *not* mean freedom to love to-day and leave to-morrow; nor freedom to take a woman's person and keep their property to themselves; nor freedom to freight a woman with offspring and send her down stream without care or help; nor freedom to beget children and leave them to the street and the poor-house. Their Communities are *families*, as distinctly bounded and separated from promiscuous society as ordinary households. The tie that binds them together is as permanent and sacred, to say the least, as that of marriage, for it is their religion. They receive no new members (except by deception or mistake), who do not give heart and hand to the family interest for life and forever. Community of property extends just as far as freedom of love. Every man's care and every dollar of the common property are pledged for the maintenance and protection of the women and children of the Community.

ADMISSIONS.

These Communities are constantly receiving applications for admission which they have to reject. It is difficult to state in any brief way all their reasons for thus limiting their numbers; but some of them are these: 1. The parent Community at Oneida is full. Its buildings are adapted to a certain number, and it wants no more. 2. The Branch-Communities, though they have not attained the normal size, have as many members as they can well accommodate, and must grow in numbers only as they grow in capital and buildings. 3. The kind of men and women who are likely to make the Communities grow, spiritually and financially, are scarce, and have to be sifted out slowly and cautiously. It should be distinctly understood that these Communities are not asylums for pleasure seekers or persons who merely want a home and a living. They will receive only those who are very much in earnest in religion. They have already done their full share of labor in criticising and working over raw recruits, and intend hereafter to devote themselves to other jobs (a plenty of which they have on hand), receiving only such members as seem likely to help and not hinder their work. As candidates for Communism multiply, it is obvious that they cannot all settle at Oneida and Wallingford. Other Communities must be formed; and the best way for earnest disciples generally is to work and wait, till the Spirit of Pentecost shall come on their neighbors, and give them Communities right where they are.

EVER PRESENT.

The sun of yesterday is set—
  Forever set to time and me;
Yet of its warmth and of its light,
  Something I feel and something see.

The flower of yesterday is not;
  Its faded leaves are scattered wide;
Yet of its perfume do I breathe,
  Still does its beauty stir my pride.

The friend of yesterday is dead;
  On yonder hill his grave doth lie;
Yet there are moments when I feel
  His presence, as of old, draw nigh.

A part of what has been remains;
  The essences of what is gone
Are ever present to my sense;
  Though left, I am not left forlorn.

In thought, in feeling, and in love
  Things do not perish, though they pass;
The form is shattered to the eye,
  But only broken is the glass.

Sun, friend, and flower have each become
  A part of my immortal part;
They are not lost, but evermore
  Shine, live, and bloom within my heart.

[*Baptist Weekly.*

SELF-PROVING INSPIRATION.

Home-Talk by J. H. N.

IS it possible to have immediate and definite communication with God so that the guiding of our life shall be primarily within ourselves? Is the baptism of the Holy Ghost an intelligent and directing influence, freely given to all believers? The world says no. We say yes; and the issue here made covers or includes most of the specific doctrines in which we differ from others. Settle that, and the question of salvation from sin is determined; because salvation from sin is effected, if at all, by the presence of God in the heart, without law or any external influence. So our views of faith and unbelief are involved in the decision of this point. We say that unbelief is not a mere lack of faith, but a positive baptism of a spirit of darkness, by which the true light is excluded from the guidance of men. But if there *is* no such spiritual illumination, then we have mistaken the entire nature of faith and are still under law, dependent on human interpreters of the Bible for direction, and must be content with uncertainty in all our actions; in short, our experience and theology are worthless.

The point, then, of actual and direct intercourse with God is the key to our position. Now while the whole Bible, by the very nature of its origin, witnesses to the truth of this position, and while its specific instructions clearly and uniformly teach that immediate, personal, universal inspiration is the very soul of Christianity, yet these verities are either boldly set aside or are ingeniously nullified by the teachings of the popular sects. It is clear, then, that the LIVING EXAMPLE of believers must justify the declarations of the written word and break up the time-hardened atheism of the church and world. The inspiration of the writers of the Bible is a seed which must spring up and bear fruit *after its kind*—must produce such living embodiments of the divine influence as the prophets and apostles were, in order that the spirit of falsehood and the perversions of unbelief which gather round their testimony, may be swept away. "God MANIFEST in the flesh" must again be the power and harbinger of judgment; the presence of the "Comforter" in humanity must again "convince the world of sin."

We are satisfied with the most concrete and practical form which can be given to the question in controversy. Let the world shut us out by their faithless experience and prejudices from the Bible and from all argument in proving what we claim in regard to inspiration. We are willing to depend on the thing itself; knowing that like the immediate hand of God, it is irresistible and self-sustained. *Having* it, we shall conquer in spite of all denial; and without it a change of the world's mere belief would be good for nothing.

Let us then direct our attention to the decisive point; and if *we ourselves* are to be the agents of proof in this case, let us coöperate in God's design of making us unincumbered vehicles of his Spirit. The beginning is made in every believer. However latent and obstructed his inspiration may be, it is in him a hidden fire, which in due time will burn its way through all obstacles to perfect manifestation. To be thus cleared of obstructions, a transparent medium of the light of God and a perfect instrument of his will, should be the ambition of every one who is a partisan of faith in the great controversy that is agitating the world. * * * * * *

INSPIRATION IN UTTERANCE.

It is as important now as it ever was that men should speak "as they are moved by the Holy Ghost." But the mental habits which will allow a person to speak in this way are very different from those which govern the ordinary communications of men. In the case of inspiration thought is not prompted by external suggestion; it is not the offspring of mere intellectual exertion; it is not, in fact, the creation or property of any mere human faculty; but is infused into the man through his spiritual nature by the Holy Ghost. He is "an oracle of God." His attitude is that of an active listener, rather than that of a voluntary thinker. A prayerful working of the central life is the main exercise, and the intellect is only the servant of the heart. Thus

Christ directed his disciples, when delivered up to the magistrates, to turn their minds, not to their plea, but to God. For, said he, "*it shall be given you in that same hour* what ye shall speak. For it is not ye that speak, but the Spirit of your Father that speaketh in you." We may with certainty infer from this language that habits of thought, such as are formed in the schools of the world and are adapted to a condition of non-inspiration, are utterly incompatible with the process by which we are enabled to speak the "wisdom of God." Until true central reflection takes precedence of the common superficial modes of thought, education must be in many respects a direct impediment to the flow of inspiration.

FACTS OR FEELINGS—WHICH SHALL WE HEED?

IT is not uncommon for persons who once rejoiced in freedom from condemnation and were happy in God's love, to sink at times into the depths of self-accusation and be tempted to the verge of despair. These extremes of experience remind us of the spiritual philosophy involved in Paul's question to the Galatians—"Received ye the Spirit by the works of the law, or *by the hearing of faith?*" Gal. 3: 2. The subjects of it have their eye on their feelings, or their imperfections, or on something besides Christ, and have forgotten for the time being that they are justified by faith. But such a spiritual condition need not be wondered at, and should not be allowed to work self-condemnation. The temptation to reaction from a bright to a mournful state of mind—or the liability to a sudden transition from spiritual exaltation to spiritual darkness—grows out of the new relations to the spiritual world which the believer enters upon in making his first confession of Christ; and an analysis of the experience in question would show it to be simply the collision in his nature of the two opposite principles of "law and grace," or of "the flesh and the spirit," which in all believers are contending for possession and control—a conquest for which believers are in no wise responsible, though one in which they must learn to take sides.

Justification by God's free grace, through faith, and freedom from condemnation as a consequence, is the doctrine that is preached and reiterated again and again in the epistles of Paul; and especially in those to the Romans, the Galatians and the Hebrews, is it the theme on which by simile, allegory and illustration the changes are rung until it would seem the truth should be clear as a sunbeam that he that *believeth* is justified.

If the tempted one will revert to his first experience when the joy of the Lord and the assurance of salvation were in his heart, he will see that these blessings came to him as a result of his believing in Christ—that FAITH was the medium to him of God's reconciliation and justification. It was the grace of God apprehended by faith, and not his happy feelings, that justified him. If he is now in trouble, beset with self-condemnation and with sensations the reverse of his first happy experience, and perhaps judging himself for this cause as unworthy of salvation, let him remember with thankfulness his first consciousness of God's work in his heart, for it was surely not in vain; and let him recur in a believing spirit to the same facts of the gospel which first gave him a justified heart, and his original sense of justification will assuredly be repeated. The question of happy sensations, or of any effervescence whatever, of "good feelings," need not come into the account, as they form no part of his justification, though sometimes a natural consequence of it. He will learn in time that suffering and discipline—the *crucifixion*, in fact, of his old life—are quite as legitimate consequences of true faith and justification as are ecstatic but evanescent feelings; and that the most important victories and enduring joy are often won when, if feelings merely were allowed to testify, failure would seem inevitable. He will find, indeed, that he is called to a *warfare*, though not to defeat, and to endure and conquer what he could not endure and conquer without the grace of God in his heart; and that the most grievous tribulation even, which he may for a time be tempted to interpret as just occasion of discouragement and despair, may be instead evidence of his acceptance with God and as such to be rejoiced in, knowing that it is working for his good and necessary for his perfection. "For whom the Lord loveth he chasteneth and scourgeth every son whom he receiveth." And again, "If ye endure chastening, God dealeth with you as with sons. But if ye be without chastisement, whereof all are partakers, then are ye bastards and not sons."

Consider also the rugged faith heroes of the past, from Abel to the Primitive Church, and since—how in all ages they have endured persecutions, afflictions, temptations and death, and have overcome; and the believer may see how he can suffer all the evil, physical or spiritual, that it is in the power of a devil to inflict, or any discipline that a wise Father may arrange for his purification and salvation, and still have remain to him the enduring fruits of the Spirit, without which all external good is nothing, viz., "love, joy, peace, long-suffering, gentleness, goodness, faith, meekness, temperance." But he may be sure that the worst possible use he can make of spiritual distresses, of unsatisfactory circumstances, or of present discomforts of any kind, is to get into a quarrel with God about them, and so allow them to breed in him self-condemnation. By faith he is justified, irrespective of his works, his feelings, or his circumstances; and as the sense of God's justification is the basis of all real self-improvement, so to forget this fact or to substitute anything in its place is sowing to the flesh or turning to dead works for justification, in which case the harvest in store will be disastrous. S. R. L.

LOSS AND GAIN.

"HE that loseth his life for my sake shall find it," says Jesus Christ. Who has tried this, and not found it more than true? What if there is an interval of desolation between surrender and return; it is short—and our faith and patience are profiting the while. "The husbandman waiteth for the precious fruit of the earth, and hath *long patience for it;*" but the harvest is not so sure to him as to us who bury our lives with Christ. For me, I have not given up any attachment, any source of pleasure, any good in life, which was not well parted with for this promise; and I have said in my heart many times, "Return unto thy rest, O my soul, for the Lord hath dealt bountifully with thee." With improving capabilities of happiness, we find all its natural sources returning in our heavenly inheritance. We relinquish our idols reluctantly, we make a great virtue of the sacrifice, as though they were gratuitous favors to Christ, for which he would say, "*Your most obliged;*" but he has doubtless some of the pride of an honorable man, and will keep even with us at least. Our repinings, and lingering looks behind, are but small compliments to the generosity of him who once gave his life for us, and who is now the most noble and glorious of Princes, with thrones and kingdoms in his gift. If we would not insult the greatness of his soul, we should expect certainly not less than a hundred-fold for all that he receives from us. And our regrets are more ridiculous, for, magnify our loss as we may, we hold no lease of the possessions we give up. Chance may take them away any day, and death would certainly take them some day; and to exchange them while we may for a hundred times their value, would be anything but grievous. We do not believe Christ's promise if we look wishfully behind; if we make much of the sufferings of the present time, it is because we do not think enough of the glory that is to be revealed. If we ask bread, Christ will not give us a stone. He will not take our friends, our name, our houses and lands, our ambition, our pleasures, and give us only a harp and a kneeling-place before his throne. We shall find the same breathing life that we lost. The affections, the cravings that we gave up to be crucified—we shall find them all alive again, in a field of innocent and expanded gratification. H.

TRUE LUXURY.

SAID a friend in my hearing lately, "The sweetest luxury I know is the sense of improvement, and I enjoy it so much that I am not ashamed to ask God to give it to me all the time." Who has not experienced the blessed consciousness of improvement, and does not know the hunger and thirst which invites it and opens the life receptivity to it? If any such there are, we can only say, You have not yet penetrated to the true secret of happiness. Improvement implies success. Whoever seeks improvement faithfully, may be said to have the promise of the life that now is and of that which is to come. It is equivalent to seeking the kingdom of God; and all such subjective workers may be sure of the objective part of the reward. If, as has been said, "the English hell is the fear of not succeeding," then we should say that the way to escape that hell, and all other hells, is to get in love with improvement. Yea, "bind it about thy neck; write it upon the table of thine heart."

All the success the O. C. has gained is to

be attributed to the love of improvement. Its founder has been a devotee to improvement, and it has shaped his whole career and destiny. It so ruled his life that his soul revolted against a religion that did not lift its converts out of the slough of sin and selfishness. His love of improvement impelled him forward till he caught the light of the primitive gospel, and in its clear beams sin and condemnation fled away and his heart found innocence and peace. The revolt in his soul against sin reacted also against the conditions that sin has imposed on society. Once emancipated from the bondage of Satan, an improved social life became possible.

Why should it be thought incredible that religious and societary conditions should undergo changes—should be lifted out of the time-worn grooves of tradition and habit upon the plane of inspiration and science, when we see every other interest of life instinct with the spirit of progress? Shall science, invention and discovery have free scope in all the minor departments of human weal, and yet be excluded from the spiritual and social domain where sin and ignorance have wrought their deepest degradation? The darkness is too far past and the true light shineth with too clear a light for ignorance and intolerance to bear rule in this nineteenth century. The spirit of improvement certainly deserves toleration, and the only claim which the Community urges for itself is that it has subverted old institutions and customs under the dictates of that spirit. If our works and our innovations will not stand the test which is inevitably applied to all progressive measures, we ask no favors for them.

W. H. W.

CONQUER WHERE YOU ARE.

I WAS earnestly praying one day for a change of circumstances. If this thing only were different, or that obstacle removed, I thought to myself, it would be easy to do right, and I should not have to resist temptation. I cried to the Lord with my whole soul. Suddenly those beautiful words that were once given to the apostle Paul were given to me: "My grace is sufficient for thee." At first my faith did not grasp the promise, and I continued praying; but again those words seemed whispered in my heart, and this time I stopped and thought: "Yes, those words are for me; I will believe them. Christ is 'the same yesterday, to-day and forever.' He can save me from temptation right where I am, without any change of circumstances, if I will only take him at his word. His strength is in me to resist the devil. What if I am weak? His strength can be made perfect in my weakness. I will consecrate myself anew to him and not try to save myself. I will make good resolutions again; but instead of breaking them, I will trust God to make me keep them."

This prayer and the assurance that God heard me were the beginning of victory. I found, to my surprise, that the temptations which had appeared so formidable were in reality very small. I realized the promise, "Draw nigh to God and he will draw nigh to you." My weakness took hold of his strength and I no longer wished for a change of circumstances. Everything was just right. The path of duty which before was full of thorns to my feet was now smooth and easy to tread. My heart which seemed so hard and encrusted with worldliness seemed to break and I thankfully exclaimed, "It is not a hard thing to serve God. I will begin anew, thanking him for the simple faith which enables me to lay hold of the promise, 'My grace is sufficient for thee.'"

T. M. S.

HABITATIONS.

III.

WE have discussed the location and character of habitations, first, as determined by the necessity of securing safety; second, as determined by the demands of exchange or commerce. We will now glance at the location and characteristics of dwellings which the earth affords for production. Houses of immense strength built on piles driven in lakes, castles of stone, and light tents in a plain country affording every facility for flight, characterize those people whose chief object is safety. Cities by the sea and situated at all points which are easy of access and egress are characteristic of people who are devoted to trade. But when we speak of the location of habitations with reference to facilities of production, we find a large proportion of the land can be appropriated to this use. The principal source of the wealth which contributes to human sustenance, comfort and luxury, is the pulverized rock which we call soil. If modern research has rightly read the rocky records of the past, it is to the huge, icy mill-stones of the glacial ages that we are indebted for the grinding of this enormous, and to us indispensable, grist. Wherever on the land there are sunshine and rain, the third condition of productiveness, that is, soil, is not usually lacking. There is therefore a large amount of the earth's surface which, so far as the work of production is concerned, is adapted to the establishment of human homes.

It is curious to notice how the homes as well as the characters of men are modified by the land upon which they dwell. How different were the primitive races who inhabited the hilly and wooded countries from those who took up their abode on the immense plains that constitute so large a portion of the earth's surface! In neither case were they so far advanced in the arts but that they were compelled to take the shortest cut to the goal of securing a living; viz., killing animals, both for food and clothing. But before the advent of civilization the plain-dweller evidently had the advantage. He was the owner of the flocks and herds upon which he subsisted, and their numbers were limited only by the extent, richness and continuous yield of the pastures which supported them. The Indian, who roamed through wooded and hilly countries, where he was wholly dependent on his skill in the chase for his subsistence, was evidently much more exposed to danger from famine. In either case the habitations of men must have been few and far between as compared with what they have been since civilization has so multiplied and enlarged the sources of production. The dispute between Abraham and Lot about lack of pasturage for their numerous animals could only be settled by placing them in fields at a greater distance apart.

But admitting these manifest advantages possessed by the plain-dwellers at that time, let us compare the two regions since the advent of civilization. Why is it that the people of the hilly and wooded countries of Europe and America have made such steady and rapid progress in civilization, while the Arab and other Asiatics on their native plains are to this day in precisely the same condition that they were in the days of Abraham? Are there not some things in the location and surroundings of the dwellers among the wooded hills and mountains that are more favorable to the work of striking out new paths in the direction of securing human liberty as well as in the direction of discoveries in the arts that promote physical comfort and luxury?

Each family or tribe among the plain-dwellers having the means of supplying its simple wants within itself has no outlet for its ambition, or means of gratifying it, except in the conquest of its neighbors. Such conquest results in no change in the form of society, but merely effects a change of masters. A certain amount of servile work must be done, the largest share falling to the women, and society exists from age to age with no outward cause to stimulate it to an onward and upward movement.

Let us look, on the other hand, at the condition of the people inhabiting a hilly country. Assuming that they are sufficiently intelligent to subdue the forests and raise grain, one of their first wants is to rid themselves of the irksome drudgery of grinding it by hand. They immediately call to their aid an agent which the plain-dweller does not possess, viz., water-power. When the plain-dweller proposes to rid himself of this drudgery, he can think of no other means than that of conquering and enslaving his neighbor and compelling him to do it. But in the case of the hill-dwellers this same desire to rid themselves of drudgery binds together the whole neighborhood of those who take their grists to the same mill, putting them under bonds to keep the peace. At the same time that the grist-mill liberates them from drudgery, it makes bread more abundant.

But is it conceivable that a people who have taken this step in the way of availing themselves of their advantages of location should stop there, and make no further progress? No, indeed! They demonstrate at once that the power that can grind grain, or saw logs, can drive machine-shops and iron foundries, weave cloth and serve them in a thousand other ways. How true is this of the people of New England! Of the thousands of streams that trickle from their hills and mountains, there can scarcely be found a water-power that has not at some time been put to use. It is therefore not at all surprising that their habitations huddle around the falls and rapids which do such a large share of labor for them and contribute so much to their comfort, leisure, and luxury. So attached are

they to their water-powers that they can even afford to cease entirely the cultivation of their sterile soil, drawing their subsistence from the rich prairies of the West, through the medium of exchange.

It may be said, however, that steam-power is as accessible to the plain-dweller, as to the hill-dweller. That is true, but when we come to inquire why it is that the uses of steam were not discovered and appropriated in a region where there were no water-powers, we shall find, that the step from mere hand labor to the use of steam is altogether too long for the human mind to make. Mankind needed an apprenticeship at the business of using the more simple water-power before he could discover and apply the more complex steam-power.

It seems evident, therefore, that the hilly and wooded regions of the earth are designed by Providence as places where certain races are receiving the impetus and drill which are necessary preliminaries to the great work of elevating the mass of mankind to a higher stage of existence. H. J. S.

ONEIDA CIRCULAR.

TIRZAH C. MILLER, EDITRESS.

MONDAY, FEBRUARY 24, 1873.

OUR MUSICAL EXCHANGES.

The *Musical Gazette*, published by Bigelow and Main, 425 Broom st., N. Y., now comes to us much enlarged, and greatly improved in character and appearance. Among other new and interesting features, the Feb. issue presents an engraving of the fine face of Dr. Lowell Mason, who has perhaps done more than any other man to revolutionize sacred music, and make it popular. We have followed the *Gazette* through its several changes of form, management etc., and have gleaned from its pages many a gem of sacred song and fine old Anthem. "Answers to Correspondents" by Theo. F. Seward, a gentleman of well known musical ability, are alone worth the price of the paper. To Mr. Seward, also, we are indebted for producing the hitherto unwritten, but soul-stirring songs of the "Jubilee Singers," in printed form, so that they have become the songs of the people. *The Gazette* is ably edited, and a greater variety in the style of music will naturally follow its expansion.

The Bulletin, another musical paper published by Charles W. Harris, N. Y., gives as its name imports, glimpses of home and foreign artists, and the current events in matters musical, both on this, and the other side of the water, accompanied often by a home-life sketch of some grand old master. *The Bulletin* has the rare faculty of discussing a musical celebrity with candor and good will. The music it contains is generally good, and its visits are always acceptable. H. C. N.

A correspondent writing from England says:

"There is one striking coincidence which I cannot account for unless by a theory that there is a spiritualistic sympathy which annihilates space and takes no thought of time. I allude to Mr. Noyes's condemnatory criticism of 'Excelsior.' About the time he must have uttered it, and long before I could have known that such utterance had been made, I was strongly impressed with a similar reflection. Why, thought I, should such waste of life and effort be depicted for so barren a result? And then I further cogitated, Is it not true that many of the woes and foibles of Americans are owing to the very fact that 'Excelsior' is so deeply imbued into their souls, that contentment ever recedes from them—the demon of unrest ever pursues them, and instead of obeying the Scriptural injunction, 'Be not high-minded, but fear,' the continuous effort after the high and unattainable, makes society a constant battle, and life a furious fever, in which the strong trample on the weak, and the cunning lord it over the feeble? *Humilior! humilior!* is a new cry which may be unwelcome to some ears, but which as a counteracting agent may not be without its instant influence and benefit."

POPULATION OF THE UNITED STATES.

IN 1870 the total population of the United States and Territories was 38,925,598. Of this number 33,592,245 were white, 4,886,387 were colored; 63,254 were Chinese; and 383,712 were Indians (the latter partly estimated and partly enumerated). The increase of population since 1860, has been 22.22 per cent.; and the increase of the blacks 9.21 per cent. The white population has changed as follows: In Alabama there was a loss of 0.93 per cent.; Arkansas, 11.71 per cent. gain; California, 54.54 per cent. gain; Connecticut, 16.84 per cent. gain; Delaware, 15.84 per cent. gain; Florida, 23.55 per cent; Georgia, 8.01 per cent. gain; Illinois, 47.34 per cent. gain; Indiana, 23.69 per cent, gain; Iowa, 76.35 per cent. gain; Kansas, 225.57 per cent. gain; Kentucky, 19.49 per cent. gain; Louisiana, 1.29 per cent. gain; Maine, 0.34 per cent. loss; Maryland, 17.39 per cent. gain; Michigan 58.57 per cent. gain; Minnesota, 158.72 per cent. gain; Mississippi, 8.19 per cent. gain; Missouri, 50.74 per cent. gain; New Hampshire, 2.42 per cent. loss; New Jersey, 35.37 per cent. gain; New York, 13.01 per cent. gain; North Carolina, 7.70 per cent. gain; Ohio, 12.99 per cent. gain; Oregon, 66.66 per cent. gain; Pennsylvania, 21.32 per cent. given Rhode Island, 24.36 per cent. gain; South Carolina, 0.56 per cent. loss; Tennessee, 13.23 per cent. gain; Texas, 34.17 per cent. gain; Vermont, 4.85 per cent. gain; Virginia, 32.01 per cent. loss, owing to the erection of fifty counties into the State of West Virginia; Wisconsin, 35.89 per cent. gain.

The colored population of the several States has been affected as follows: Alabama shows 8.62 per cent. gain; Arkansas, 9.81 per cent. gain; California, 4.55 per cent. gain; Connecticut, 12.07 per cent. gain; Delaware, 5.40 per cent. gain; Florida, 46.29 per cent. gain; Georgia, 17.06 per cent. gain; Illinois, 277.06 per cent. gain; Indiana, 114.91 per cent. gain; Iowa, 439.01 per cent. gain; Kansas, 2628.55 per cent. gain; Kentucky, 5.91 per cent. loss; Louisiana, 3.95 per cent. gain; Maine, 21.02 per cent. gain; Maryland, 2.49 per cent. gain; Massachusetts, 45.25 per cent. gain; Michigan, 74.28 per cent. gain; Minnesota, 193.05 per cent. gain; Misisippi, 1.55 per cent. gain; Missouri, 0.36 per cent. loss; New Hampshire, 17.41 per cent. gain; New Jersey, 21.01 per cent. gain; New York, 6.28 per cent. gain; North Carolina, 8.33 per cent. gain; Ohio, 72.37 per cent. gain; Oregon, 170.31 per cent. gain; Pennsylvania, 14.65 per cent. gain; Rhode Island, 26.01 per cent. gain; South Carolina 0.85 per cent. gain; Tennessee, 13.89 per cent. gain; Texas, 38.57 per cent. gain; Vermont, 30.32 per cent. gain; Virginia, 6.57 per cent. loss; having now become second in point of colored population: Wisconsin, 80.44 per cent. gain. These figures show that the colored population is gradually diffusing itself through the free States, especially those in the West and North West. After deducting the percentage of colored increase from the percentage of total increase, we have a difference of 13.01 per cent in favor of the latter rate of increase, a difference too large to be accounted for by the influx of foreign whites. The blacks have, in a sense, been a petted race, but now under circumstances which put them on their real powers of endurance, they begin to show signs of weakness. The next census will settle this point better. A. B.

COMMUNITY JOURNAL.

ONEIDA.

—Evening reading resumed. Stanley's "How I Found Livingstone" draws a very good audience.

—Our machine-shop is certainly more worthy of its title than it used to be in the old "mill" when three or four second-hand lathes, a gear-cutter and drill, comprised the modest outfit of that department. It has now fifteen lathes and at least half of them are substantial well-made machines; four are rather new and combine all the modern improvements. Mr. D. A. Abbott runs the large twelve-foot lathe, and those great rough disks, which he turns to a true polished surface, are designed for the largest sized chuck, of which there are nine sizes now made. There are two shaping-machines, two planers and a new milling machine. Eight hired men are employed, and it has been found advantageous to let each become skillful in some particular part of the work. The obliging foreman will show cupboards filled with polished parts of chucks ready to be fitted together. The machine-shop is and always has been a very valuable helper to our other industries, but it has now risen to the dignity of a self-supporting manufactory of machinist's tools.

—We were about to speak of a fireside chat which interested us the other evening, when we bethought ourselves: Fireside? Why, we haven't any such thing. That pleasant word will soon pass away. How does this sound: Steam-coil chat—radiator chat—register chat? Ugh! How one's sense of the euphonious is outraged! It will take a decade at least to wear away the intense practicality of those words and cover them with the moss of sentiment. We have one room, though, which seems like a bit of antique among the modern improvements of our establishment. This is the nursery-kitchen, and never was there a room of its size put to so many uses. Here are a stove, a pump (rare antiquity), a sink, a buttery, a lounge, an easy-chair, and all the other contrivances of a farm-house kitchen. Here you may see boiling, frying, stewing, washing and ironing *ad infinitum*, and here you may toast your feet in the oven of an evening, to the simmering of the tea-kettle, while your thoughts wind and twirl and soar far away with the curling vapor which repeats over and over its montonous song.

—The railroad men have been busy all day removing last week's wreck from below the trestle, hauling it up the hill and loading it upon platform cars. Since an early hour two of our strongest teams have been hard at work drawing the fragments as near as possible to the foot of the hill, and now at 10 A. M. superintendent Lewis has ordered up the locomotive "Otsego," with a hundred feet of huge manilla rope, heavy hooks, chains etc., and soon we have a grand exhibition of the power of steam. First come the trucks. These being comparatively light and on wheels are brought up with a rush, crashing and splintering everything and anything which happens to lie in their way, it seems to make no difference what; an instant more and they are landed on the road above, lifted upon the rails and run off to the side track. Now they fasten to one of the heavy platforms or body of a car. This huge mass of wood and iron besides being very heavy is exceed-

ingly rough and irregular, presenting many protruding corners and angles. To smooth the way a little, heavy timbers are placed at the angle at the foot of the hill and now all hands out of the way, for the grand trial of steam vs. inertia and a rough road. Superintendent Lewis, standing where he can command a view of the whole field of operations, gives his orders: "Now, then, Condee (the engineer), do your best!" The engine starts and slowly the rope gets more and more tense as the whole power of the engine is brought to the strain. Suddenly the huge mass below starts forward; faster and faster it moves, plowing and grinding through the frozen earth and snow. Striking the timbers at the foot of the hill, with a tremendous jar, it mounts upward. Crash! a projecting end of one of the trestle cross-timbers is reduced to splinters and checks for an instant the moving mass. "Go on! Go on!" shouts the superintendent, and on it goes with a frenzied bound which scatters in wild dismay the crowd of Irishmen standing near. In two seconds more the top of the hill is reached and the engine stops. Bravely done! The huge platform is soon loaded upon a car, and now at 5 o'clock the entire mass of the wreck is starting off on its way to Oswego.

—Mr. A. L. Burt, when recently passing through a New England town saw a company of boys sliding down hill on a novel kind of sled, which pleased him so well that he has since constructed a similar one for the Community boys and girls. It is very well adapted to the gregarious habits of children, and especially of Community children, because a dozen or more can ride on it at a time, and this is one of its chief charms. It is simple and easily made, provided you have a couple of ordinary sleds to use; for you have only to take an inch board of any length you choose, eight, ten, or twelve feet, place the two sleds, one under each end of the board, and attach them to it in the same manner that "bob" sleds are attached in the construction of ordinary "traverse" sleds or sleighs. Another merit this kind of sled has, which prudent folks think of (though it doesn't have much weight with children) is, that it saves boots and shoes, as the "steering" for the dozen is done by one and that without using the foot for a rudder, as commonly practiced. The forward sled, which is attached by a "king-bolt," moves easily in either direction from the line of the sled, by aid of the hands on the "tongue" or rope by which it is drawn, and thus the direction of the sled can be determined easily at will. This aggregation too, greatly increases the momentum, so that the single sled is materially distanced in coasting competition. The dignity and responsibility of the office of steersman is much enhanced by this double-geared arrangement, for he has the safety of his comrades intrusted to him, and he must have a quick eye and a firm, steady hand that will guide his precious freight to the foot of the hill in safety or he will be disgraced, lose his position, and be obliged to take a back seat. The spectacle, as the observer watches the descent of the sled, with its ten-foot row of boys and girls in variegated costume, is unique, not to say comical.

—Our Sunday evening entertainments afford us a great deal of amusement this winter. They are made up for the most part of short dramatic scenes, original or selected, tableaux, burlesques, with musical sprinklings, instrumental and vocal. They serve also as a school to bring out and develop whatever artistic and dramatic talent there may be latent among us, thus combining improvement with pleasure. Our last, which was more impromptu than usual, opened with a three-part song. Then followed a recitation by H. J. S. Next a young lady who has lately heard Miss Anna Mehlig appeared in costume and gave an imitation of her style. Following this came an old English song, "Robin Ruff." The next piece, "The Bashful Lovers," was a capital hit, but is one of those indescribable scenes which has to be seen to be thoroughly appreciated. However, we will try to give some idea of it. The curtain rises and discloses the interior of an old-fashioned kitchen. At a table in the center of the room, busily engaged in paring potatoes, sits a country lass, jauntily dressed and looking very demure. Suddenly a knock is heard which is immediately responded to by the fair occupant. The door opens, and a tall, green-looking youth steps awkwardly in, holding his cap in one hand and a smoky lantern in the other. His hair is carefully plastered down, forming two of the most miraculous beau-catchers imaginable, and his pantaloons have long since dissolved partnership with the tops of his buckskins. He has evidently never strayed far from the pumpkin and squash-vines of his father's farm, and his appearance and manners exhibit a ludicrous mixture of sheepish pleasure and overpowering embarrassment. He is cordially invited to take a chair, which is standing some yards distant from the damsel. Then ensues an awkward pause. The fair one smiles encouragement, but says nothing. Growing desperate the youth breaks the ice with the anxious inquiry,

"Do you like cheese?"

"Yes," is the response. He hitches his chair a little nearer at this, and evinces his embarrassment and pleasure by continually rubbing his great hands over his knees and casting sly, sidelong glances at his companion. He again ventures,

"Does your mother like cheese?"

"Yes," very sweetly.

"Does your father like cheese?"

"Yes."

Emboldened by his success, the rustic lover hitches his chair nearer and nearer his sweetheart and asks with unction,

"Does your grandfather like cheese?"

"Why, he's dead!"

This somewhat disconcerts the youth, who moves his chair uneasily backward and scratches his head as if in perplexity. Presently he brightens up with,

"Do you think he would have liked cheese if he had lived?"

"We *all* like cheese," she confidingly answers. Abruptly changing the subject he asks,

"Do you like maple-sugar?"

"Yes, ain't it sweet?" her head on one side, looking very winning. At this the swain moves his chair very near that of his fair companion and says affectionately,

"Wal, the next time I come, I'll bring you a great gaub!"

The concluding piece was an overture by what purported to be Theodore Thomas's orchestra, and was one of the funniest burlesques we ever had on our stage. The performers were as innocent of any practical knowledge of the instruments they held as babes unborn. Their leader was equally proficient; but what he and they lacked in other respects they made up in enthusiasm and vim. What wonderful *crescendo* and *diminuendo* effects! What excruciating solos on the clarionet! What marvelous rhapsodies from the violoncello! But the pen falters.

—S. R. L. writes from Gouverneur: "Occasionally on the cars or elsewhere, I am drawn into conversation with some one who is curious to learn a little more about the Community of which he has heard so much by report. 'Why, *that is not nature*,' said one gentleman to me when I informed him that it is our freedom from selfishness that enables us to live together in harmony; 'the general conviction is that not even two families can live amicably together as one household.' 'It is not human nature as we generally see it,' I replied; 'but it is *God's* nature to be unselfish, and we believe in being born again.'

"Said another gentleman to me—'Your *social* position seems to be the great bug-bear in people's minds. Everything else but that they can get along with. But my opportunities of acquaintance with society have been somewhat extensive, and according to my observation, happy marriages are extremely rare. When persons come together in courtship,' said he, 'they see no evil in each other, or if they do see some things they don't quite approve, they yield to one another's prejudices and try to make themselves mutually agreeable. But some how or other after the parties become united in the holy bonds of matrimony all the little faults come to the surface, and produce disagreements and unhappiness.' 'That's it exactly,' I responded; 'so long as a loving couple remain unmarried, they strive to please each other. But marriage changes the relative standing of the parties—they are no longer on an equal footing. The law of marriage places the wife in the power of her husband, and she finds that if for any cause he is tempted to irritation or ungentlemanly conduct, he no longer feels under the same necessity to please her whom the law has made his own. Hence the closer familiarity of marriage, instead of increasing love as was hoped, tends to the contrary. And this state of things suggests the real difference between social life at O. C. and that of ordinary society. It is the difference between courtship and marriage. One sex does not own the other, but both are put upon their good behavior; and all the politeness and tender regard for one another in little matters which are so common in courtship, with us continue to be the standard of every-day life.' 'If that is what you are doing,' said the gentleman, 'your example, if it could be followed, would be of inestimable value to the world.'"

WALLINGFORD.

—This evening Mr. H. expressed thankfulness for the good spirit manifest in our work, and hoped we should work as "unto the Lord." In our business here we are liable to many pressures and severe strains, and we should learn how to meet them in a spirit of steadiness and cheerfulness, that is not worried nor frightened by a great rush of work. A few people, well organized, will accomplish double the amount of business that a great number working in an unorganized way can. It is well for us to consider also our remarkable exemption from accidents. Let us remember God's goodness to us in this respect and give expression to thankfulness.

—During the reading the other night, Fidelia and journalist kept noticing a peculiar and unaccountable noise, not loud nor continuous, but occurring at intervals and something like the rumble which is said to precede an earthquake. It was really quite mysterious and ghostly. At meeting time one and another began to notice it. One would say (listening intently), "There, I hear it!" and then would arise such a chorus of "I hear it," that it was quite certain no one was hearing it. "It is the vibration from the dam," said one practical voice. The windows were raised, but the air seemed still and no sound of the dam could be heard. C. S. J. went up stairs and down stairs and out of doors, but heard nothing, we in the Hall affirming that we had heard it in his absence. It was in that room somewhere. After meeting Mrs. Noyes went round and rattled each window, but not till the next morning was the question solved. Marion was studying in the Hall when, lo! the noise again! She went to a certain window and put her finger on it. The noise ceased; taking it off, it began again. It was the vibration from the dam that caused it after all. The boys who room down stairs say that some nights it makes the

windows rattle so that they have to wedge them in order to sleep.

—How you Oneida people *did* surprise us to-day! It is hard to tell when our little family has been thrown into such a flutter of wonderment. A telegram was received at noon from Springfield, notifying us to meet three or four at the half-past four train. "*Three or four!*" was quickly echoed about the house. "Who *can* be coming with Martin? We wondered and guessed, and wondered, and wondered again. We couldn't think of much else. At dinner time, what a buzz the dining-room was in! John C. said he had a letter from Martin saying something about bringing on a farmer and his family. "Oh, pshaw!" That's just it! Some busy brain suggested *sheep*, and that idea was quickly caught at. The consciences of some fun-loving girls suggested that Martin had prepared some joke in return for the cold "gems" with which his pocket had been filled. Another brilliant idea suggested was, that there had been a mistake in the telegram, and Martin meant to say, "Bring three or four to meet me." Wilfred, whose enthusiasm over any new event always calls forth our merriment, put on his wisest thinking-cap and after a profound cogitation, gravely asked Mr. H. whom he "*suspected?*" to which Mr. H. as gravely replied, that really he had been too busy all day to "suspect" any body. We all agreed upon one thing, that a joke was in store for us, and that we would not *one* of us go to the door. The time of arrival drew nigh, and, in spite of our assumed stoicism, feminine curiosity showed itself in the eyes which cautiously peeped out from behind the curtains of the front-room windows. As the sleigh came in sight, Mary Bolles's face was seen, and scattering all our resolutions to the winds, to the door we scampered from all directions. Oh, oh! how astonished we were! But if we had known it for a week, Ann and Mary and that precious baby could not have had any warmer welcome. John with a sly look said, "What do you think of the sheep?"

FROM OUR YALE STUDENTS.

VI.

Indian Canoes.

WENDELL PHILLIPS, in his brilliant lecture on the "Lost Arts," says, "If a London chronometer-maker wants the best steel to use in his chronometer he does not send to Sheffield, the center of all science, but to the Punjaub, the empire of the seven rivers, where there is no science at all." This reminds me of a fact mentioned by Prof. Trowbridge the other day.

In 1854, when he was in command of an expedition to the Pacific coast on some coast-survey business, he found canoes among the Indians at Cape Flattery the model of which was almost perfect. Made from a single log dug out with fire, shaped with the rudest of hatchets, yet with the single exception of greater proportional length, the outline was absolutely the same as that of our best sailing yachts, the lines of which are the result of so much scientific research and mathematical calculation. To be certain of this fact, Prof. T. had his draughtsman make complete drawings of one, and upon his return to New York a model was constructed from them. One would naturally suppose that it would take wild Indians a geological age to work out such problems.

MEDICINE.

Finding that I was likely to have a spare hour every forenoon this term I looked about for a method of spending it. After some inquiry I discovered that the medical students were having four or five lectures every day, and straightway decided to see what they were like. Soon after, meeting Prof. B. I told him I would like to go to a few lectures to get a little smattering of medicine. He made me free to attend any I chose. "Mention my name and your connection with Drs. Noyes and Cragin," he said, "to any of the lecturers and it will be all right." Accordingly, during the next few days I went to one of each course, with a view of selecting the most interesting.

Dr. Hubbard, on Obstetrics and Diseases of Women and Children, comes first in the morning.

Dr. Sanford is next, on Anatomy and Physiology. For pure technicality I never heard his equal. Imagine such talk as this kept up for an hour without a break:

"The fifth pair with the Casserian ganglion, is situated near the inner extremity of the petrous portion of the temporal bone; the glosso-pharyngeal with the ganglion of Andersch, is situated in the jugular fossa, while the pneumogastric presents, just before its passage through the jugular foramen, a ganglion known as the ganglion of the pneumogastric nerve,"—and you have an idea of it. He stopped short one day and observed, "Gentlemen, perhaps this is a little confusing;" a rapid vibration of twenty or thirty pairs of boot-heels on the floor assured him that his suspicion was correct. Nevertheless, his lecture on the spleen and pancreas was of much interest, even to me.

Dr. Lindsay, on Materia Medica, told us all about wine and alcohol, when to use it, what kinds of wine, etc., also Aconite Belladonna, and such stuffs.

Dr. Charley Ives, as the boys call him, lectured on Cancer in the Stomach, Peritonitis Phthisis and the like.

But for me, Dr. Bacon on Surgery was the most fascinating. Cool and self-possessed, yet quick and gentle as a woman, with, so far as I could judge, entire mastery of his theme, the doctor's exhibitions on a "subject" of trephining, tracheotomy, amputations of arms and legs, were only excelled in dexterity by his operations on living subjects at the State Hospital. K.

"FIGURES CANNOT LIE."

A PRACTICAL accountant, of many years experience, once told me of the thousands of persons who start in business it had been estimated that less than one per cent. attained to any position of credit; and that of the thousands of failures among business men, in all his experience, he failed to recall one instance in which the cause could not be traced to the lack of a correct system of accounts. At that time I knew little or nothing of book-keeping, and the statement of my friend, the book-keeper, looked so much like praising his own wares that I treated him to a recital of the old story of the beleaguered city, the Burghers of which called the citizens together to devise the best material for placing the city most effectually in a state of defense. Many trades were represented and each person warmly advocated the adoption of the particular material in which he dealt. At last the shoemaker, hitherto a silent listener, being called upon for his advice, rose with a majestic solemnity which ever gave weight to his counsel, and declared that "there was nothing like leather."

I have since learned more about book-keeping and am inclined to accept my friend's estimate of the value of his "leather." Of course, many start in business with insufficient capital, and so fail; but a knowledge of accounts would enable them to forecast such a result. Then many are ruined by fire or storms; but such contingencies are among the things provided against by those who count well the cost; even those who enter into speculation with an ample system of account-keeping will have an incalculable advantage over those who ignore the record of their transactions. But speculators cannot properly be ranked among business men; they are usually adventurers and gamblers, or men who step outside the bounds of business habits to stake their fortunes on the hazard of a die.

It frequently puzzles me now to imagine how I could have transacted so much business in the past with so little regard to account-keeping, and there is no difficulty in recalling many instances where, with my present business education, I could have saved thousands of dollars. How many times have I been angered, in a final settlement, with the unanswerable argument that "figures cannot lie!" I have sometimes wished they could, but they never did, and the more I have to do with them, the more convincing is the proof that they never will.

I have fallen in love with figures for their very truth-telling. It is this attribute of figures which makes them so popular among us. We care nothing for accounts between each other. One person owns the whole as much as another. There is no place in the world where there is less necessity for acccount-keeping than here; but we love accounts because they speak the truth. We demand the truth from our businesses no less than from each other, and the way we do it is by keeping accurate accounts. When account-keeping in the O. C. was first reduced to its present system of thoroughness, many of us could not see the use of such careful estimations of the exchanges between departments. Some said, "It is like the right hand keeping account with the left;" but when J. H. N. said it was a method whereby the right hand made the left hand tell the truth, we all saw the point and determined that every department and every branch of business should tell the exact truth. The consequence is that we now have as complete a system of accounts as any business organization in the world. Not only are strict accounts kept with every department of expense and production in the Community, numbering as many as forty departments, but some of these departments are again subdivided, so that in our hardware department, for instance, an account is kept with each article of manufacture; each size of trap has its separate account and is charged with its separate inventory which is checked every month, so that our financier can tell at a glance, not only what department is losing or gaining, but the exact status and the actual results in dollars and cents of each article of manufacture. A. E.

BEET-SUGAR MANUFACTORY.

Freeport, Illinois, Feb. 2, 1873.

DEAR CIRCULAR:—Having recently spent a few hours at the beet-sugar factory, situated about two miles east of Freeport, on the farm of Mr. C. H. Rosenstiel, and knowing the interest you take in the development of useful industries, as well as in the progress of science, I jotted down a few of my observations. Mr. Rosenstiel is the general business manager of the establishment, and to him and the gentlemanly and intelligent superintendent, Mr. Richard Pfeiffer, I am indebted for a good look through the establishment, and much interesting information in regard to the cultivation of the beet as well as the manufacture of the sugar. Mr. Pfeiffer is not only thoroughly acquainted with the manufacture of beet-sugar, but is a practical chemist and civil engineer. J. I. Case, Esq., of Racine, Wisconsin, and L. Bunn, Esq., of Springfield, Illinois, both men of large wealth and enterprise, are partners of Mr. Rosenstiel, and have been liberal in outlay of capital to ensure a successful experiment. Mr. Rosenstiel has been for many years a resident of Freeport and vicinity, and has devoted considerable attention to beet-culture, partly for the purpose of furnishing feed to his extensive herds of

cattle, sheep and hogs. A leading object has also been to learn by experience how to successfully raise and encourage the cultivation of beets with reference to the ultimate establishment of a beet-sugar factory.

The building is an immense structure of brick and stone, and appears to be well calculated and arranged for doing the work by machinery with the least possible outlay of manual labor. It stands upon the east side of the Illinois Central Railroad, and with its tower nearly one hundred feet high, can be seen a long way down the railroad coming from the south. A side track runs along on the west front, convenient for receiving coal and other freight by rail. The front of the factory is three stories high. The entire length of what may be called the main building, in which most of the machinery is placed, is three hundred and seventy-four feet, by fifty-five feet wide. Then there is another building, eighty-five feet long by fifty-five feet wide, in which there are six large steam boilers. This building is parallel with the other, and fronts on the railroad track where coal is received. In the rear of this is another building, forming with the main building, a T, one hundred and forty-two feet long, by thirty-three feet wide. This part of the building is two stories high. It is used for storage, and also for purifying the bone-black after it has been used for filtering. When the manufacturing was commenced, about thirty-five or forty tons of bone-black were used for filtering. This was before Mr. Pfeiffer took charge of the works, and he informs me that it would have been good economy to have used at least eighty or one hundred tons to begin with. When the bone-black needs purifying, it is taken out of the filters, and after being treated to a wash of water and muriatic acid, in large vats made of brick and laid in water-lime, it is taken out and carried to a large drying-pan, capable of holding several tons, which is heated from furnaces below. After being sufficiently dried, a process which requires much care in order to avoid over-heating the bone-black, it is again ready for use, having lost in the process of purifying only a small percentage, if the work has been carefully and properly managed. There should not be over ten or fifteen per cent. loss in the bone-black, for the entire season of five or six months.

We will now go round to the east end of the main building where the beets are received and stored until wanted for use. Here we find a room for storing about three hundred tons of beets. A cheap railroad track is laid through the center, by which they are conveyed in a car to a room in the basement of the next building, where they are put into a large, long, revolving washing-machine, which is placed horizontally in a wooden vat, constantly supplied with a stream of fresh water. The washing-machine or tub is made with slats, so that the water can pass out freely, and is raised at the end where the beets are shoveled in. As the washing process goes on by the revolving of the tub, the beets gradually work toward the lower end, where they drop out into an elevator, which carries them up into the next story of the building to the grinding apparatus, which is not unlike a bark-mill, though it revolves much faster. From a vat below the mill, the pulp is shoveled by hand into an inclined trough which carries it to a series of six revolving, perforated metallic tubs. These tubs revolve with great rapidity, and throw off the juice into an outer tub, from which it passes by a conductor into a large vat on the floor below. It is now pumped up through iron pipes, to six large copper boiling-pans, holding from one to two barrels each. In the process of boiling in these pans, it is treated with a substance called the milk of lime, for the purpose of neutralizing the foreign salts and otherwise cleansing it. It is next conveyed through iron pipes to the filtering press, made of strips of woolen cloth and upright iron plates. It is now pumped up into the large tank in the tower, from whence it runs down into eight iron vats filled with bone-black, where it passes through the final process of filtering. As the syrup comes from the last filters it is clear and deliciously sweet. It is now pumped into the boilers for granulating. These boilers are of copper, capable of holding several hogsheads each, and cost between five and six thousand dollars apiece. After the granulating point is attained, it is drawn off from the boilers into large tubs in the main or front part of the building, and when cooled is shoveled into revolving cylinders, of which there are four which revolve with almost lightning speed, throwing off the syrup and retaining the dry sugar, which is emptied into buckets and conveyed to the place for packing and shipping. The syrup which remains is again subjected to the purifying and boiling process until it is converted into sugar; so that there is but a small percentage left which is not convertible into first-class sugar.

To give you, perhaps, a better idea of the extent of the machinery used, and also of the expense incurred, I will mention some of the figures I obtained: there is one seventy-five horse-power steam-engine, one twenty horse-power, one ten horse-power, three air-pumps, three water-pumps, three syrup- and juice-pumps, and one gas-pump. Six boilers supply the steam for the whole. There is an almost endless amount of iron tubing, stop-cocks, etc., etc. Perhaps all the work is done by machinery that can be, and yet eighty hands, consisting of men, women and boys, are needed during the grinding and boiling season to keep the factory running night and day.

The machinery was originally imported by Mr. Bunn, from Germany, at a cost of one hundred and twenty thousand dollars. It was for a time used at Chatsworth in this State; but the soil at Chatsworth and vicinity did not seem adapted to raising a good quality of beets for manufacturing purposes. They grew large and rank, but lacked saccharine matter. This, together with other causes, made the works at Chatsworth quite unprofitable. To make the business a profitable one, the beets should yield from ten to twelve per cent. sugar. If the product is below eight per cent., it can hardly be regarded a remunerative business, considering the large outlay of capital. Some of the beets raised here have been shown, by actual test, to contain thirteen or fourteen per cent. sugar; though that is above the average. A good yield per acre is about fifteen tons; but twenty or twenty-five tons is not an uncommon crop. Dry seasons are better than wet for raising beets of good quality.

The factory here can easily work up about fifty tons of beets per day, if reasonably well managed. When in full blast, from twenty to twenty-five tons of coal are used, costing at the factory about three dollars and fifty cents per ton.

In Germany, where manufacturing sugar from beets has proved profitable, the coal costs from fourteen to fifteen dollars per ton. The manufacturers have besides to pay a Government tax nearly equal to the first cost of raising. If the manufacture of beet-sugar can, with these disadvantages, be profitable in Germany, it would certainly seem that it ought to prove profitable here, where the price of coal is so much cheaper, and where there is no Government tax to pay.

Mr. Rosenstiel and Mr. Pfeiffer both concur in the opinion that the quality of beets raised in this vicinity is fully as good as the quality raised in Germany.

L. W. G.

The 130th asteroid was discovered by Dr. Peters, of Hamilton College, on the night of Feb. 18th. It is in the constellation of the Lion, and only half a degree east of the planet Jupiter.

THE CATECHISM.

[We struck out the following paragraph in the extract we made week before last from "Revival Memories" in the *Independent*, because we thought the article too long; but Mr. Finney's description of Mr. Hervey Smith's repeated stumbling over the Catechism is so good a specimen of the way some people confound the Bible with precepts which have been instilled into their minds from other sources, that we insert it this week:]

As soon as we were introduced, I said: "Mr. Smith I have not come to have any controversy with you; but, at the request of Mrs. Smith, to try to do you good. She has informed me that you are a Deist; and, if you will state to me in brief your objections to the Christian religion, it is possible that I may be able to relieve your difficulties." I then said, kindly: "Mr. Smith, how much do you admit?" He replied: "I am no Atheist. I believe in the existence, providence, and government of God. I am a Deist; still I admit the immortality of the human soul. But I do not, I cannot believe the Bible to be the Word of God." I inquired why. He replied: "Mr. Finney, you and I need not consume much time in going over the subject. We can soon ascertain in what we agree and wherein we disagree. We agree that God created us." "Yes," I replied. "That we are conscious of being free moral agents." "Yes." "That we are endowed by our Creator with certain irresistible convictions of right and wrong." "Yes." "That God is just and good." "Yes." "That any pretended revelation from him must represent him as being wise, just, and good." "Yes." "That any pretended revelation that represents God as doing or saying things that are contrary to our fundamental and irresistible convictions of what is right and just cannot be from God." I again said: "Yes, provided the revelation be rightly interpreted and our convictions rightly and thoroughly developed." He then said: "I am glad that we are agreed so far. My objection to the Bible is that it teaches doctrines that directly contradict my irresistible convictions of right." "Wherein?" I inquired. He replied: "The Bible teaches that God holds all men guilty of Adam's sin, and threatens us all with eternal damnation for the guilt of it. Certainly, no book can be from God that teaches such a doctrine as this." "Where," I asked, "does the Bible teach this? Will you produce the passage?" Instead of quoting the Bible he quoted the Catechism. I said: "Mr. Smith, let us confine ourselves to the teaching of the Bible, and for the present lay the Catechism aside. Where does the Bible teach this?" He could not produce the passage that, when justly interpreted, he dared to say taught such a doctrine; but proceeded to say that the Bible represented all mankind as being born under a divine constitution, with a nature wholly sinful in every faculty and part of soul and body, as wholly incapable of good and disposed to all evil, as coming into being in a state of condemnation and wrath, and for this sinful nature doomed to everlasting misery. Here he waxed warm, and asserted that no book that taught such a doctrine as this could be from God. Again I mildly demanded the passage that taught any such doctrine; and he again quoted the Catechism. I again declined to receive the Catechism as proof, and insisted upon his showing me where the doctrine was taught in the Bible. He failed to produce any passage on which he could rely as teaching the doctrine. "But," he said, "are you not a Presbyterian minister, and do you not receive the Confession of Faith as teaching the true meaning of the Bible?" I replied: "Mr. Smith, we are not all agreed as to the exact meaning of the Confession of Faith on all points. If you please, we will confine our examination to the Bible, and deal fairly with it." Failing to fasten this doctrine on the Bible, he proceeded to say that the Bible calls upon all men to repent, on pain of eternal damnation; and yet teaches that we can no more repent than we can create a world. "Can that be a revelation from God, that demands the performance of impossibilities, upon pain of eternal damnation?" I again called for proof; and he again quoted the Catechism, and added that these were in substance the doctrines that he had heard preached all his life. I held him to the Bible. He proceeded to charge other doctrines upon the Bible; but failed to show that the Bible taught any such doctrines. He finally set himself back in his chair and said: "Mr. Finney, you are the first Presbyterian minister I ever conversed with that would not receive the

Catechism as the true exponent of the teachings of the Bible." I replied: "My dear sir, we have the Bible in our hands. We need not go to the Catechism. We can expound it for ourselves; and certainly, you have failed to show that the Bible, when rightly interpreted, teaches these obnoxious doctrines, to which you so strongly object."

DREAMING.

WHERE is the strange, mysterious land in which we pass a third of our existence? What vagaries, what absurdities we there commit! Sleep has been called the great leveler of distinctions; the rich and the poor, the loved and the despised, go together to the realms of Morpheus. Yet who can give an accurate description of that boundless kingdom? We read the conjectures of philosophers; but they seem only able to account in part for the capricious character of our dream-life.

Though our dreams are as varied as our dispositions and ambitions, it being seldom if ever that we encounter similar adventures in our night wanderings, yet there are a few dreams which all have in common. Among these the one of which I oftenest hear is the fancy that you are about to take a journey and discover, just as you seat yourself in the cars or have started down street with your satchel, that you are minus your shoes and stockings, or even your gown or coat. Dismayed at your condition, you return in search of your clothing; starting again, you find that some mischievous elf has spirited away your hat. You instigate another search, and continue this aggravating process until, worn out with the endeavor to get your wearing apparel into concrete and decorous condition, you awake without ever accomplishing the journey you projected. There are also dreams of flying, climbing, falling, which we embellish with similar incidents and which are doubtless produced by similar causes.

Dreams often afford people practical assistance. Dr. Franklin once observed that "the bearings and results of particular events which caused him much trouble while awake were not unfrequently unfolded to him while dreaming." I have heard of a number of instances of persons who had lost or mislaid some valuable article and after vainly searching, fell asleep with the subject on their minds, beheld the missing object concealed in a certain spot and on awaking found their dreams to have been a kind of clairvoyance. One of our best inventors has often been aided by dreams in the solution of mechanical problems.

With what Quixotic heroism we dare and do in dreamland! We calmly ascend hights or cross yawning chasms which in our waking moments we shudder but to think of. Last night I dreamed of being upon the top of our highest Mansard roof, from whence I must descend by the corner-stones, while I carried in my hand—O, inexorable fate!—a stopperless inkstand! I reached the shelf below the slate roofing in safety to ink and bones; but essaying to descend by the white, jutting stones, I discovered, to my horror, that they were so much loosened, that at the slightest touch of my foot they slipped from their sockets and fell with a terrific crash to the ground, thirty feet below. But the situation became too fearful for the bands of sleep to hold me, and I escaped the inevitable catastrophe.

Dreams played an important part in Bible-life, particularly in the early days of the prophets. Men when sleeping were peculiarly impressible to the supernatural, and God often approached them in the visions of the night. "In a dream," says Job, "..... he openeth the ears of men and sealeth their instruction." "God came to Laban in a dream," he "appeared to Solomon in a dream by night;" "the angel of the Lord appeared to Joseph in a dream." The mind, while the body lies passive, seems much at the mercy of spirits, both good and evil; and how sweet is that innocent trust in a "guardian angel" with which the child closes its eyes in slumber! Who has not been made happier for a whole day or had the whole course of his experience changed by a dream in which good angels seemed hovering near? Sleep to the guilty conscience is purgatorical torment; while to the righteous man it is the balmy restorer of all his faculties.

THE NEWS.

The new Spanish Republic has been recognized by France.

An explosion occurred on the 18th inst. in the coal mines at Staffordshire, England, by which from thirty to forty miners are reported killed.

The number of emigrants who left Bremen for the United States during the past year was 80,000; and from Hamburg the number was 59,000. These figures are largely in excess of any former year.

A movement is on foot, initiated by prominent citizens of the city of Brooklyn, for annexing Brooklyn to New York. It is reported that a bill will be presented to the next Legislature of the State, proposing the immediate consolidation of the two cities.

The Watchman's Cry, an Adventist paper published in West Meriden, Conn., says "the prophetic numbers clearly indicate that the year 1873 is the last in the world's history this side of the resurrection of the dead and redemption of all the saints."

The Beet-Sugar Factory at Freeport, Ill., has now been in operation two months, and is turning out a good grade of refined sugar. It is run 24 hours per day, working up sixty-five tons of beets, and employing 80 men. It is claimed that at the rate paid at the factory, the beet crop has paid $50.00 per acre to the growers.

The Congressional Investigating Committee in the case of the Credit Mobilier affair, made their report to the House on the 18th inst. They recommend the expulsion from that body of Mr. Oakes Ames and Mr. James Brooks, as the two members most dishonorably implicated. Early the present week it is understood the House will take up and consider the recommendation of the Committee. Meanwhile their report is making a great commotion in Congress, and it is anticipated that any vote on the question of expulsion will be preceded by an excited debate.

The National Association for securing such an amendment to the Constitution as will suitably acknowledge God as the author of the nation's existence and the ultimate source of its authority, and the Bible as the fountain of its laws, have issued a call to all citizens who favor such an amendment, without distinction of party or creed, to meet in National Convention in the Hall of the Cooper Union, New York city, on Wednesday, Feb. 26th. The Convention will hold five sessions, organizing at 2 o'clock Wednesday afternoon, and adjourning finally on Thursday night. Addresses by able and eminent citizens will be delivered at each session.

"The Rocky Mountain Saints; a full and complete history of the Mormons, from the first vision of Joseph Smith to the last courtship of Brigham Young;" is the title of a new work just published by D. Appleton & Co. The author of this History is Mr. T. B. H. Stenhouse, who many years ago was connected with the New York press, but for twenty-five years has been an elder in the Mormon church, and for part of that time editor of a Mormon journal. "The book," says the Evening Post, "bears inherent testimony of an honest purpose to tell the truth, even to the extent of drawing no unjustifiable inference from the facts given, and thus utterly obliterates the suspicion which one naturally feels of a story told by a person who has put himself in hostile relations with that which forms the theme of his narration."

ANNOUNCEMENTS.

SILK GOODS.

Machine-Twist and Sewing-Silk of their own manufacture for sale by the Oneida Community.

Address, [S] ONEIDA COMMUNITY, *Oneida, N. Y.*

PRESERVED FRUITS AND VEGETABLES

Put up for sale by the Oneida Community in tin and glass. Price list sent on application.

Address, [F] ONEIDA COMMUNITY, *Oneida, N. Y.*

STEEL TRAPS.

Eight sizes and kinds, suitable for the House-rat, Musk-rat, Mink, Marten, Fisher, Fox, Otter, Beaver, the Black and Grizzly Bears, are made by the Oneida Community. Descriptive price-list sent on application.

Address, [T] ONEIDA COMMUNITY, *Oneida, N. Y.*

MACHINE-SHOP AND FOUNDRY.

Improved Lathe-Chucks, Blinn's Patent Gate-Hinges, Machines for Measuring the Length and Testing the Strength of Manufactured Silks, Bobbin-Winders for Sewing-Machines, etc. Agricultural, Machine and Light Castings, on hand or made to order. Descriptive price-list sent on application.

Address, [M] ONEIDA COMMUNITY, *Oneida, N. Y.*

THE WALLINGFORD PRINTING COMPANY.

All kinds of Book and Job Printing executed: Manufacturers' Illustrated Catalogues made a specialty: also Bronze and Color Work, and the finer kinds of Card, Circular and Bill-head Printing. Having enlarged its works and added new motive power, this Company is in renewed condition to meet the wants its patrons with promptness and accuracy.

P. O. Address, *Wallingford, Conn.*

PUBLICATIONS.

(Sent from the Office of the Oneida Circular by mail, post-paid, on receipt of price.)

History of American Socialisms. By John Humphrey Noyes. 678 pp. 8vo. J. B. Lippincott & Co., Philadelphia. London, Trubner & Co. Price $3.00.

The Trapper's Guide; a Manual of Instructions for Capturing Fur-bearing Animals. By S. Newhouse. Third edition with New Narratives and Illustrations. 215 pp. 8vo. Price, bound in cloth, $1.50

Salvation from Sin, the End of Christian Faith: an octavo pamphlet of 48 pages. By J. H. Noyes. Price 25 cents per single copy, or $2.00 per dozen.

Dixon and His Copyists; a Criticism of the Accounts of the Oneida Community in "New America," "Spiritual Wives," and kindred publications. By John Humphrey Noyes. Price 25 cts.

Scientific Propagation. By John Humphrey Noyes. Large octavo pamphlet of 32 pages. Price 25 cts.

Male Continence. By John Humphrey Noyes. An octavo pamphlet of 24 pages. Price 25 cts.

Hand-Book of the Oneida Community; Containing a Brief Sketch of its Present Condition, Internal Economy and Leading Principles. Price 25 cts.

The five pamphlets—"Salvation from Sin," "Dixon and his Copyists," "Hand-Book of the Oneida Community," "Scientific Propagation," and "Male Continence," will be sent to a single address on the receipt of $1.00.

Back Volumes of the Circular, Unbound. Price $2.00 per volume.

MESSRS. TRUBNER & COMPANY, Book-sellers, Paternoster Row, London, have the "History of American Socialisms," the "Trapper's Guide," and the "Hand-Book of the O. C.," for sale. They will receive subscriptions for our other publications.

PHOTOGRAPHIC PICTURES

Of the Oneida Community Buildings and Grounds, made by a first class artist and finely mounted, can be had on application at the Office of the Oneida Circular.

LARGE VIEWS.

Bird's-eye View, looking West, of Community Buildings and Grounds, 12 by 14 inches, on fine enameled board 16 by 20, price $1.75. Quadrangle and Group, 12 by 14, mounted like the above price $1.75. South and East Fronts of the Community Dwellings giving a good view of the New Wing occupied by the Children—8 by 10, on tinted board 10 by 12, with an ornamental border price $1.00.

STEREOGRAPHS.

No. 2, East and North Lawns. No. 3, East Lawn and Portico. No. 4, East Front. No. 5, North Front and Lawn. No. 6, Bird's-Eye View of Buildings looking West. No. 7, Lawn and Summer House. No. 8, West View, toward Railroad. No. 11, Quadrangle. No. 12, Lawn View. No. 15, South and East Fronts. Price of Stereographs $3.00 per doz. Sent by mail, post-paid, on receipt of price.

Oneida Circular.

A WEEKLY JOURNAL OF HOME, SCIENCE AND GENERAL INTELLIGENCE.

Published by the Oneida & Wallingford Communities.

ONEIDA COMMUNITY, MARCH 3, 1873.

New Series, Vol. X, No. 10
Whole No. 1451.

POST-OFFICE ADDRESS:

ONEIDA CIRCULAR, ONEIDA, N. Y.

TERMS

The CIRCULAR is sent to all applicants, whether they pay or not. It costs and is worth at least two dollars per volume. Those who want it and ought to have it are divisible into three classes, viz., 1, those who cannot afford to pay two dollars; 2, those who can afford to pay *only* two dollars; and 3, those who can afford to pay *more* than two dollars. The first ought to have it free; the second ought to pay the cost of it; and the third ought to pay enough more than the cost to make up the deficiencies of the first. This is the law of Communism. We have no means of enforcing it, and no wish to do so, except by stating it and leaving it to the good sense of those concerned. We take the risk of offering the CIRCULAR to all without price; but free subscriptions will be received only from persons making application for themselves, either directly or by giving express authority to those who apply for them.

Foreign subscribers, excepting those residing in Canada, must remit with their subscriptions money to prepay the postage.

THE UNITED COMMUNITIES.

ONEIDA COMMUNITY

Is an association living in Lenox, Madison Co., N. Y., four miles south of Oneida and a few rods from the Depot of the Midland Railroad. *Number* of members, 205. *Land*, 654 acres. *Business*, Manufacture of Hardware and Silk goods, Printing the CIRCULAR, Horticulture, &c. *Theology*, Perfectionism. *Sociology*, Bible Communism.

WILLOW-PLACE COMMUNITY.

Branch of O. C., on a detached portion of the domain, about one and one-fourth miles north of O. C. *Number* of members, 19. *Business*, Manufactures.

WALLINGFORD COMMUNITY.

Branch of O. C., at Wallingford, Conn., one mile west of the Hartford and New Haven Railroad. *Number* of members, 45. *Land*, 228 acres. *Business*, Publishing, Job Printing, Manufactures, and Horticulture.

SPECIAL NOTICE.

The O. C. and Branches are not "Free Lovers," in the popular sense of the term. They call their social system BIBLE COMMUNISM or COMPLEX MARRIAGE, and hold to freedom of love only within their own families, subject to Free Criticism and the principles of Male Continence. In respect to permanency, responsibility, and every essential point of difference between marriage and licentiousness, the Oneida Communists stand with marriage. Free Love with them does *not* mean freedom to love to-day and leave to-morrow; nor freedom to take a woman's person and keep their property to themselves; nor freedom to freight a woman with offspring and send her down stream without care or help; nor freedom to beget children and leave them to the street and the poor-house. Their Communities are *families*, as distinctly bounded and separated from promiscuous society as ordinary households. The tie that binds them together is as permanent and sacred, to say the least, as that of marriage, for it is their religion. They receive no new members (except by deception or mistake), who do not give heart and hand to the family interest for life and forever. Community of property extends just as far as freedom of love. Every man's care and every dollar of the common property are pledged for the maintenance and protection of the women and children of the Community.

ADMISSIONS.

These Communities are constantly receiving applications for admission which they have to reject. It is difficult to state in any brief way all their reasons for thus limiting their numbers; but some of them are these: 1. The parent Community at Oneida is full. Its buildings are adapted to a certain number, and it wants no more. 2. The Branch-Communities, though they have not attained the normal size, have as many members as they can well accommodate, and must grow in numbers only as they grow in capital and buildings. 3. The kind of men and women who are likely to make the Communities grow, spiritually and financially, are scarce, and have to be sifted out slowly and cautiously. It should be distinctly understood that these Communities are not asylums for pleasure seekers or persons who merely want a home and a living. They will receive only those who are very much in earnest in religion. They have already done their full share of labor in criticising and working over raw recruits, and intend hereafter to devote themselves to other jobs (a plenty of which they have on hand), receiving only such members as seem likely to help and not hinder their work. As candidates for Communism multiply, it is obvious that they cannot all settle at Oneida and Wallingford. Other Communities must be formed; and the best way for earnest disciples generally is to work and wait, till the Spirit of Pentecost shall come on their neighbors, and give them Communities right where they are.

NOT AS IT SEEMS.

Not long ago, in pensive mood,
I left the town and sought the wood,
Where underneath the naked trees
The dead leaves lay, in mimic seas
Heaped by the wind. The sun's slant rays
Shone through the Indian summer haze
With kindly warmth, as if they strove
To lengthen out the days of love.
In vain, alas! the summer dies
So soon, so soon: above us rise
The drear, cold clouds of winter gray,
While yet we hoped to hear the lay
Of the wood-robin in the grove.
To-day we gather round the stove,
And from our windows view around
A waste of snow that hides the ground.
And shall we ever thus behold
The grave our cherished joys enfold,
And all things lovely end in death?
O, coward! hast thou no more faith?
More have the grasses of the plain.
Rouse up thy soul and go again
Into the forest; even there
A lesson thou mayst learn, though bare
Are all the beauteous trees. Not dead
They are, but sleeping. O'er thy head
Cut with thy knife a twig away,
Its heart is green as e'er in May.
Already formed, the new buds wait
The spring that's sure to liberate
The opening blossoms; and below,
Brush but away the fallen snow,
Thou'lt find the leaves thou mourn'st as dead
Are covering in their matted bed
The seeds that in the years to be
Shall bless the land in many a tree.
Then think, if e'er thy joys are shed,
The heart is sleeping, and not dead;
Nor reckon lost those joys to be,
If they have brought good fruit to thee.

J. J. S.

SPIRITUAL FERTILITY.

Home-Talk by J. H. N.

ANIMALISM in the sexual department works in the two extremes of action and reaction. On the one hand, it is sensual and fiery, and on the other, dead. Both these forms are equally disgusting. The second form of animalism, that of amativeness in its reactive state, is considered a high state of grace in the world. There is a seeming continence in it, which actually passes for virtue. But it is repulsive to real purity. It is antagonistic to the spirit that makes truth supreme. A person under its influence is virtuously horror-struck whenever sexual matters are alluded to. His mind revolts from the study of an important branch of human nature, and the Spirit of Truth can not be at home with him.

This reactive form of amativeness, so much commended, is really a disease. A person can not be in health who has lost the natural activity of the passion of amativeness. The devil's oxidation is at work in him.

Fix your attention on animalism, and don't be deceived with regard to the identity of these two forms of it, but learn to hate it in both forms. I do abhor this kind of touchy virtuosity that the world is so full of, as much as I abhor the sin of harlots. It is the same thing in another form. "Be not conformed to this world, but be ye transformed by the renewing of your minds, that ye may prove what is that good and acceptable and perfect will of God." We are apt to think of this passage as referring to our spirits; but in the verse before, Paul beseeches believers to present their *bodies* a living sacrifice, holy and acceptable unto God. The trouble yet is, even among us, that we cannot talk on sexual matters without making the waters turbid. We must be able to think on this subject and speak of it in a way that is really natural. We can judge what is natural by little children; their minds are full of curiosity about sex. This subject is the vital center of society. It is the soul of the fine arts. It will be foolish for us to undertake to cultivate music or poetry or painting or sculpture, until we set the center and soul of them in its true place. * * *

All our capability of serving God acceptably in anything depends on our being magnetic. I take it as a universal principle that our usefulness will be in proportion to our magnetism; that we are dead and barren except as we are charged with electric life. It is true that we may be charged with life inwardly, and yet be dead outwardly to a certain extent. The soul may be in one state and the body in another. But still there is action and reaction between the two, and a constant tendency toward identification. Now what precisely is it to be magnetic? It is to be *porous*, so as to admit the infusion of the life of God and a chemical combination throughout between his life and our life. That is what is meant by *softness of heart*. When a heart is spoken of as *hard*, the meaning is that it is *compact*—that cohesion exists between its own particles, so that there is no room for another life to come in. Cohesion in chemistry is opposed to combination or chemical attraction. Cohesive attraction, or the attraction between particles of the same body, is egotism. It is chemical attraction, admitting other particles into the combination, that makes us magnetic, charges us with love and life, and so makes us fruitful.

You will inquire, perhaps, What has all this to do with the subject of love between the sexes? It has a great deal to do with it. To be in a condition to be permeated by another spirit is much the same thing, whether that other spirit is human or divine. A soft heart in relation to the attraction between the sexes, and a soft heart toward God, are so nearly alike that they often coalesce and run into each other. And though I should say that a person might be capable, to a certain degree, of love without being inspired, I should say the converse cannot be true; a person cannot be inspired, i. e., charged with the Spirit of God, without being magnetic toward human beings. In Paul's philosophy, to be without natural affection is as damnable a thing as to have inordinate affection.

THE EFFECT OF BEING.

WE are constantly exercising an influence, by our spirit, on all around us—imprinting ourselves upon others. We preach by spirit as well as by word, and generally with more effect. For this reason we are bound to *be* what we wish others to be. Instead of fretting at the faults we see in our companions we should make them inducements to us to attain the opposite virtues. For instance, if we would teach humility, we must attract those around us to a meek and lowly spirit, and in order to do it we must ourselves have a meek and lowly spirit. The same is true of all the fruits of the spirit. Paul said that in the gospel of Christ, "the righteousness of God is revealed *from faith* to faith;" by which I understand that he expected to communicate to others the faith he had in himself.

BACKWARD GLANCINGS.

XV.

THE sixteenth of December, 1835, will long be memorable as the day of the "Great Fire" in New York, and also as one of the coldest days ever known in our climate. It was on this terribly cold day that J. rode in the old-fashioned stage-coach of the period from New Haven to Hartford with only his ordinary clothing on; that is, without overcoat, drawers or over-shoes. His fellow-passengers, furred and wrapped from head to foot, pitied him and feared that he would freeze. But, battling the cold by faith and a vehement action of the will, he became sensible of a warm current flowing to every extremity, and he made the forty-mile journey with less discomfort than the other passengers with all their furs and cloaks. On the 19th he arrived in Putney. He was gladly received by the family and the believers in that section, and remained with us till the following spring. My memory does not recall with much distinctness the occurrences of this winter. J. did not preach or visit as much as the winter before, but lived rather retired, and was much occupied with deep reflection and prayer. He was accustomed to sit or lie with folded arms and closed eyes while thus engaged, and one of my most vivid recollections of him, at this period, is that of seeing him often in this attitude. Mother was still struggling with unbelief and bondage to church ordinances, and could give him but little spiritual aid or comfort. The rest of us were pre-occupied, and not yet sufficiently earnest to understand and enter into sympathy with him.

I extract from J.'s "Religious History" his description of the spiritual exercises and experiences of that winter:

"I remained at Putney through the winter of 1835—6. Perfectionism at that time was in its darkest trial. Disorder and dissensions within, and reproach from without, rendered its desolation complete. Though I was separated from the sect, yet I felt myself identified with its testimony, and its desolation came upon me like a flood. I was compelled to take a minute measurement of my own responsibility in regard to the disastrous consequences which seemed to be following the career of the doctrines, in the publication of which I had been so deeply concerned. In a substantial sense I stood before the judgment-seat of Christ. My works were tried by fire; and although the result of the trial was altogether favorable to my peace, my sufferings for several months were very severe. The scrutiny through which I passed, instead of convicting me of sin, purged and healed my conscience; but it deepened my sense of responsibility, and impressed upon my spirit a sobriety and a resolution to resist corruption among professed Perfectionists, which has since been of great value to me."

In the spring, April, I think, J. left home suddenly on foot. He bade no one good bye, but simply told my sister E. he was going. He took a road little traveled, leading over the western hills, and we saw him no more for several months.

In a few weeks we received the following letter:

New Haven, May 12, 1836.

DEAR FRIENDS:—I thank God for your sakes as well as for mine, that he sent me away from you suddenly and without ceremony. It was absolutely necessary for the good of my soul, and God gives me hope that it was also expedient for you. God plainly manifested to me his will that I should go to Albany, and without conferring with flesh and blood I departed, not in anger, but in great sorrow and heaviness of heart. I spent the Sabbath in Albany, and was permitted to bear testimony to a few persons concerning the kingdom of God, but found none with whom my spirit could rest. From thence I went to Pittsfield in Massachusetts, and tarried two days with Elder Beach, a beloved disciple of Christ, and spent the next Sabbath at Southampton. On Tuesday of this week I arrived here, and till this have lodged with the old lady whom I have often mentioned to you—Mrs. Spencer. The Lord sent me again to sit at her feet, for which I thank him without ceasing. I was weary, sick and in prison, and the Lord made her my comforter. By his grace I now rejoice in the strength and liberty of the inner man without carefulness for the outer.

Boyle and his wife have removed to Newark, and the witnesses for the truth that remain in this city are few and feeble. In the abounding iniquity of these last days the love of many waxes cold. After Christ's crucifixion some of his best disciples returned to their fishing. In like manner at this time I find many who were once free entangling themselves again with this world, and all scattered like sheep without a shepherd. Yet the hosts of heaven have not ceased to sing, "Hallelujah, for the Lord God omnipotent reigneth," and my lot is cast with theirs so that I can and will rejoice. Though Israel be not gathered, the foundation standeth sure, having this seal, the Lord knoweth them that are his. The Lord hath established my heart in the purpose henceforth to know no man after the flesh. My friends are the friends of Jesus Christ, and his enemies are mine. I know that his will is that all men be saved and come to the knowledge of the truth; and he has sworn that he has no pleasure in the death of him that dieth. Herein his will is mine. Yet I know also that "narrow is the way that leadeth unto life and few there be that find it;" and I must content myself with that which satisfies the soul of Christ—the salvation of comparatively few. God has given me grace, after much tribulation, to set my seal upon his righteousness in taking vengeance upon them that know not God and obey not the gospel; and like grace I know will be given to all whom he calls to salvation.

Mother, my hope of you remains, though I have greatly feared lest I have bestowed labor on you in vain. The Lord suffers me to pray for you fervently and I am somewhat comforted concerning you. May the Spirit of Truth bring to your remembrance the things I spoke to you and lead you into all truth. I know not what more I can do for you, though it is in my heart to live or die with you and for you. The Lord will surely show you that "with the *heart* man believeth unto righteousness, and with the mouth confession is made unto salvation." It is his work to take the stony heart away and give the heart of flesh, and he will do it for *his own sake*. Yet he will be inquired of by the house of Israel to do it for them. I desire the peace and salvation of you all. But my God testifies that there is no peace to the wicked, and I know his testimony is true. You must take refuge in Christ or abide the storm. "Flee the shadows of this world; look for your everlasting rest."

My inward monitor bids me remain for a time in this city, and I shall board for the present at the house where I boarded in the fall, trusting God for the means of living honestly with all men. I am not ashamed to dig or beg if it be the Lord's will. But he suffers me to do neither, giving me a quiet assurance that in some way my necessities will be supplied. I would that I might kiss you all; but first you must all kiss the Son, who is my king and redeemer. J. H. NOYES.

[Selected from G. W. N.'s Writings.]

SURF-BATHING.

WE must attempt to give our readers a notion of the pleasant novelties of *surf-bathing* as we experienced it, for the first time, one day this week. Step then with us and a visiting friend, who "wished to see the ocean," on board the steamboat *Economy;* and in a passage of an hour and a half we are landed at Coney Island at the mouth of the harbor. We step ashore on the hither or bay side of the island; it is a desolate place of drifting sand, with some patches of coarse sea-grass, but without a tree or shrub to break with a friendly shadow the arid glare of the place. On the rising ground, however, as we cross over the island, there are one or two houses of entertainment for summer visitors, whose verandahs invite us to a moment's shelter. Here we have the ocean all in front—its long, level horizon of blue, stretching on and on in the direction we are looking, unbroken by land till it reaches the coast of Spain.

But let us pass down to the beach on the seaward side. We can already see the white caps of the breakers as they feather their spray along the shore. How fresh and exhilarating is the facing breeze! Now we come within sound again of that solemn mysterious roar that we first heard last year at the Sandy Hook Ocean House.

We stand by the "sounding sea!" It always must strike the mind as a scene of surpassing mystery and power, suggesting God. Here is this eternal *motion*, and this never-ceasing *sound*, and nothing to suggest a cause. The wind is still—everything else is hushed in the calmness of a summer noon, and yet this sublime, continuous vibration and concussion—you are puzzled to account for it. Philosophically, it would be explained we sup-

pose thus: The ocean, being so vast a surface of water, is always in a state of disturbance somewhere, by the winds; and the waves thus formed, however distant, are transmitted in some degree over the whole expanse. They reach us here in the fine, calm weather, in the shape of great glassy swells, rolling on noiselessly until the bottom of the wave is stopped by the shelving beach, when the top, still urged on by the old momentum, suddenly rears itself like a perpendicular wall, and then the white-cap comes combing over like a small cataract, and the heavy fall upon the hard sand of the beach makes the resonance we hear; then all is broken and leveled away for the next swell. This is the after-thought of philosophy, making all clear enough, but still the immediate impression suggests a living power, and is eloquent of faith.

But there are various groups of bathers, men and women, whose odd figures and adventures in the surf we have been laughing at. How like a rude but good-natured giant old Ocean plays with them—handling them as gently as possible; but his lightest touch evidently has power in it. Shall we join them? We step into a long board building near by, where we are furnished with dresses, and private stalls in which to make our bathing toilet. Soon we emerge, in the simplest kind of a rig that it is possible to devise, viz., striped shirt and pants somewhat shortened at the extremities, and with a straw hat tied on to shade the head. If your companion is a lady, the costume is nearly the same, a well-fitting sack being the upper garment. Hand in hand we advance to the margin of the creamy strand, shyly essaying to tempt, for the first time, old Ocean's embrace. Timid at first, we follow down a retreating breaker, and then wait till another one comes in, bursting around us in square rods of milk-white foam. Presently we get bolder, and advance into a greater depth, where the swells stagger us, and try to lift us off our feet, to float on their rocking bosoms. But this is not getting fairly into the business: come on a little further. See, yonder is a big wave coming. Here is the spot where it will surge. Now stoop a little, and——the next thing you know you are swallowed up body and senses and all. The billow breaks over you with a crash and din that stops your thinking—your underpinning is knocked out, and you are tumbled on by the mighty thing that has got you, you know not where. For the instant you seem to be at the mercy of chaos: but the next moment you find yourself left almost bare, and at liberty to pick yourself up—blowing the salt spray from your dripping countenance, while you join in the hearty merriment of friends on shore, who witnessed your baptism. Repeat this a good many times, and with numerous variations (as you become more accustomed you can keep better posession of yourself), and that is *surf-bathing*. To the uninitiated it is a delightful first experience.

We found that the shock and force of the blow given by the waves upon the body produced an excitement and exhilaration that made it pleasant to stay in for a longer time than in ordinary bathing, and we infer that it must be in general a very healthy as well as delightful mode of water recreation.

HABITATIONS.

IV.

THERE is probably no single circumstance which has a greater influence in determining the character of human habitations than the poverty or wealth of their occupants. As a rule, the poverty or wealth of the tenants of particular dwellings is determined by the length of time which a country has been inhabited by a people. Great Britain, France, Germany, Spain, Italy, Russia, etc., demonstrate this fact. In these countries we find an exceedingly small minority of rich people who live in splendid edifices, while by far the greater part of the population live in small, mean houses. That the stronger, more shrewd and intelligent of the human race, should acquire the great bulk of all the property that exists, and that they should shape the laws and customs so as to secure it to their progeny, is one of the natural laws of a selfish society, and is no more to be wondered at than the Darwinian law that the strongest and healthiest animals invariably crowd out the weaker. But the complete working out of this law, necessarily requires the element of time. It is necessary that the land and all other sources of wealth, excepting muscular power, should be appropriated by the stronger party, before the ripe fruits of this arrangement can be distinctly manifest.

The only reason why there is a different state of things in this country is, because the nation is still young and there is an abundance of room for the people. Selfishness has not yet had time to thoroughly ripen its fruits. Wealth is more easily and evenly distributed in a land where so many methods of accumulating are open to the enterprise of all, and where labor of all kinds is so eagerly called for on every hand.

The United States seems to be characterized by the large number of cheap dwellings which it contains. The accumulation of sufficient property to enable a man to become the owner of a house and the head of a family is here a comparatively easy matter. Under this regime how rapidly is population increasing, and how swiftly are we approaching the inevitable goal of all selfish society in which the select few shall possess and control by far the largest share of the wealth of the country! This, we say, is the natural law or tendency of selfish society; and these results will inevitably follow, unless these tendencies are interfered with by the operation of some higher law, for which interference, all lovers of their kind ought most devoutly to labor and pray.

But there is one factor that is so constant and universal in our estimate of what goes to make up a home, that we are apt to overlook it entirely. That is, the idea that every home must necessarily have two persons, a husband and wife, as its head. The first and most notable effect of this arrangement is, that it limits the size of families and also of their habitations, at the same time that it multiplies and scatters them. Families are like the corn and wheat and other annual plants which the farmer cultivates. They sprout and grow in courtship, blossom in marriage, and bear fruit in children; then they grow old and die as the children establish other homes. It is only when families pattern after the perennial trees instead of the annual corn and wheat, that human beings can be surrounded by the very best conditions. Look among your acquaintances, and point out if you can, a perfect, model family, in which the children are born and reared under the best possible influences. Even supposing that you are able to indicate a single instance, is there any probability that these conditions could be made universal under the marriage system of the world as it now exists? No; not until the hearts of men are purged from selfishness, can they enjoy the privilege of living in palaces where all the offices that pertain to the highest life which mankind is capable of attaining, can be attended to in perfection. It is only in Communism that science can discover and apply the necessary pre-natal conditions for the production of the highest order of human beings.

When society shall be made up of hearts that have attained to the heavenly plane of civilization, the landscape will appear very different from what it does now. Poverty being banished and population being under intelligent control, we shall have no more miserable contracted habitations, necessarily located in lonely or crowded, barren, bleak or unhealthy situations; but the large and beautiful homes in which human beings shall dwell, will be placed in the richest and choicest locations, having railroads and telegraphs at their command, fit emblems as well as servants of the united brotherhood. A complete unity of plan will prevail in the apportioning of woodland to their appropriate places; the work of cultivating the soil will be perfected and the whole land will suggest to the eye, the harmony which reigns in the hearts and in the homes of men. Nor will this beauty and harmony be of the evanescent and perishable type which characterizes the dual marriage family. The glory which radiates from an innumerable multitude of happy homes, will be characterized by the infinity as well as the joy of heaven.

H. J. S.

A LOOK AT THE MOON.

WE all admit that there is something unaccountably charming in the usual aspect of the moon, and we take it as a matter of course; but have we ever thought of a reason for it? With some of us, the charm may lie partly in the fact that the function of the moon as a distributer of light, suggests a deeper fact—one which touches the inner life. We have an inkling of it in the following passage, for instance: "For God who commanded the light to shine out of darkness, hath shined in our hearts, to give the light of the knowledge of the glory of God *in the face of Jesus Christ.*" Here we have a most interesting analogy. From the moon, the otherwise overpowering rays of the sun come to us so tempered that we "behold as in a glass" the reflected glory of that great luminary, and consequently that which would have blinded us to look at, is now become the delight of our eyes. So, the office of Christ, as a mediator, is to temper to us the glory that excelleth, that we may not be consumed thereby.

The moon is the handmaid of the sun, without

any pretension whatever, modestly dealing out what she gets from him. Blot out the sun and where would be the light of the moon? So, "the Son can do nothing of himself, but what he seeth the Father do." Now this subservience on the part of the moon, is brought to view in the phenomena of her phases. It is interesting to watch them, for they unerringly point to the source of her wealth. She sets the sun always before her face, waiting upon his smiles and transmitting them as she gets them—sometimes more and sometimes less—but always faithfully and always freely.

We never fail to associate with the moon that which is gentle and mystical. We are still apt to wonder, notwithstanding scientific decisions to the contrary, whether she has inhabitants, and whether they are like us; what they think of us and our great world; whether the earth appears to them as bright as the moon does to us, etc., etc. It is greatly owing no doubt to this incessant call for speculation, that our satellite maintains a permanent hold upon our imaginations. There is no telling how we should feel were we to lose our moon.

ONEIDA CIRCULAR.

TIRZAH C. MILLER, EDITRESS.

MONDAY, MARCH 3, 1873.

DOUBTFUL SUCCESS.

THE editor of the *Independent* says, at the close of his eulogy on Joshua Leavitt, that "*he lived to see the labors of his life crowned with success.*" I doubt whether this is essentially true. If the labor of his life, to which the first love of his heart was given, was for the abolition of slavery, then it is true that he lived to see a certain kind of success. But I doubt this premise. From my memory of Mr. Leavitt's early career I have a better opinion of him than to believe that his heart was set on any such external achievement as the abolition of slavery or even the "molding of the elements which formed the New School wing of the Presbyterian church" which the *Independent* editor speaks of as his secondary life-labor. He started from Putney, Vt., as I did a few years after him; and the impulse that sent him to the front, was the same that sent me. It was the REVIVAL MOVEMENT. Putney was a center of Revivals as far back as I can remember. There was a wonderful awakening there in 1819, which spread in the neighboring towns and swept through all classes, taking possession of children by hundreds, myself among the rest, then living at Dummerston, eight years old. There was another great Revival in Putney about 1826, just after Finney commenced his career in the Gouverneur region. Two of his early disciples, Hervey and Henry Smith, appeared there like angels of judgment, and the "new measures" and awful scenes that agitated Central New York were reproduced in that little Vermont village long before they had any general run in New England. In the period between these Revivals, during which the rumblings of the same spiritual forces were yearly renewed, Joshua Leavitt was awakened and found it necessary to quit the law and turn to the ministry. I was away at school most of the time, but well remember the vibration of those movements and their effects on Mr. Leavitt's character and career. A third great revival came to Putney in 1831, and carried me away in like manner from the study of the law to the business of "saving souls." (And by the way, Mr. Finney himself, to whose influence one, if not both, of these conversions from law to preaching may be traced, was himself a lawyer when the revival spirit siezed him and sent him to his great work.) It was in 1831 that Mr. Leavitt became the editor of the *Evangelist*. That paper was the devoted organ of Finney and the Finney Revival. The editor of the *Independent* says, "It was started for the express purpose of defending Revivals and Evangelists against all opposition to the New Measures," [meaning by this term, "protracted meetings," "anxious seats," &c.] and again: "Dr. Leavitt's exhausting labors, especially in reporting, we might say reproducing, Finney's Revival lectures, nearly cost him his life." The *Evangelist* was the acknowledged flag of the great Revival army which, in the period between 1831 and 1834, undertook to conquer the United States, and came very near doing so. I served in that army with my whole heart and strength, and know very well what was the spirit and purpose of Joshua Leavitt at that time. I can not believe that the abolition of slavery was, either in point of time or of importance, the leading object of his life. He was, by his first love and by the labors of his most effectual manhood, preeminently a Revival man. His heart in the most fervent period of his life was set on nothing less than the establishment of the kingdom of heaven on earth. "On to the Milllennium!" was the battle-cry of the earnest souls among whom he was standard-bearer. To say that "he lived to see the labors of his life crowned with success" merely because slavery has been abolished, seems ridiculous to one who remembers the great hope of 1831. It may be true that Wm. Lloyd Garrison "has lived to see the labors of *his* life crowned with success." But he won his success by drawing away such men as Joshua Leavitt, Theodore D. Weld, and even Charles G. Finney, from their true life-labor to a local and inferior reform, which, according to present appearances, has not saved the nation from its desperate wickedness, and certainly has not ushered in the Millennium. J. H. N.

RUSSIA ADVANCING ON INDIA.

THE recent panic in the English Cabinet in regard to the Russian expedition to Khiva reveals at once the jealous care with which England guards all approach to her rich possessions in the Punjaub and the fertile valleys of the Indus and Ganges. Russian ships on the Aral, and Russian engineers exploring the ancient bed of the Oxus are considered but the prelude to the final conquest and occupation by Russia of the whole of Turkestan from the sea of Aral to the summits of the Hindoo Koosh, virtually giving her command of all northern India in case of war between the two powers.

Since the tenth century, and even earlier than that, Russia has steadily pushed her conquests south and east. Although defeated and checked in her advance upon Constantinople and the control of the Mediterranean and Black seas, she will not in the least abandon her gigantic scheme of territorial aggrandizement until she has cut her way through to the Indian Ocean and compelled England to divide with her the control of the Eastern World. England demands that Russia shall respect the neutrality of Afghanistan in the hope that the latter country will prove an effectual barrier to the progress of Russian conquest. The history of England's subjugation of India at once shows the fallacy of such a hope. If Russia occupies and civilizes Turkestan, even though it be the civilization of a modern military protectorate, she will easily find a sufficient pretext for extending her power through to the Arabian sea.

By conquest and treaty Russia has acquired complete control of the Caspian Sea, which gives an unbroken water communication by means of the Volga from the middle portions of her vast empire to within five hundred miles of the Persian Gulf. With war fleets on the Black and Caspian seas, and the right to occupy the sea of Aral and ascend the Jihoon or Amoo river to the foot of the Himalayas, through the deserts of Khiva and Bokara, she now seeks control of this last-named river, with a view of completing her facilities for military movements.

It has long been claimed by Russian geographers and topographical engineers that the river Jihoon or Amoo—the ancient Oxus—at one time discharged its waters into the Caspian sea instead of the sea of Aral, and that the ancient bed of the river can now be traced across the desert of Khiva to where it joins the present channel near its mouth. If this were true, and were it possible to turn the river back into its former channel with its mouth at the Caspian, three hundred miles west, the advantage to Russia, in a military point of view, would be incalculable. It would give an unbroken water communication of over three thousand miles in length, from Moscow and Nijnii Novgorod to Khiva, Bokara and Samarcand. Malte-Brun discusses at some length this question in regard to the river Oxus. He shows quite conclusively that the ancient river entered into the Gulf of Scythia, which was then supposed to be an arm of the Caspian sea, but which is now known to be the sea of Aral. It has been demonstrated by barometrical observation that the sea of Aral is at least eighty-four feet below the Caspian sea, and the travelers, Georgi and Gmelin, claim that the basin of the sea of Aral is completely separated from that of the Caspian by a chain of mountains extending from Kirghis to Astrabad. Peter the Great sent an expedition of three thousand men to take possession of this river, from its supposed mouth on the Caspian, to Khiva, the Capital of Northern Turkestan. The expedition met with final and total defeat by the Tartars and the skin of the leader, Beckewitz, was made into a drum-head, and preserved at Khiva as a trophy.

Russian engineers have doubtless by this time dispelled the illusion in regard to changing the river into its ancient hypothetical channel and are preparing to make the sea of Aral the base of operations against Turkestan and Northern India.

G. E. C.

COMMUNITY JOURNAL.

ONEIDA.

—The farmers we notice have put up fixtures at the large barn for steaming food for the cattle.

—The carpenters are making preparations for building three or four tenant-houses. We have already twenty-two, and the total number of buildings on the domain, including barns and sheds, is fifty-three.

—The "star performance" of this week's entertainment was by the youngsters, Richard, Humphrey, Rutherford and Dorr. With turbans on their heads, each one stoutly dragging his dust-pan by a string, they pranced about the stage like Lilliputian ponies, making a feint at grading with tiny scrapers.

—The cheery song of the snow-bird comes pleasantly to the ear from various parts of the domain. These hardy little creatures are unusually numerous this winter. Glancing out yesterday we saw a flock of them beneath the dining-room windows busily picking up crumbs, quite unmindful of a freezing nor'wester which was ruffling their pretty brown feathers.

—It is reported from the Willow-Place Works that Mr. J. W. Wescott, who has worked in the machine-shop there for several years, has left, for the purpose of engaging in business at Oneida village, where his family resides. Mr. W. com-

mended himself while in our service by his skill, his faithfulness and his gentlemanly deportment. Our Mr. Dunn will fill his place in the machine-shop.

—It pays to visit the barn at this season when every day brings additions to the grade Holsteins, the full-blood and grade Ayrshires, the Cotswold, Leicester and Lincoln lambs, etc. The January inventory of the Farm department has these statistics of stock on hand: 4 pure-blood Holsteins, 3 grade Holsteins, 28 pure-blood Ayrshires, 74 grade Ayrshires and natives, 213 sheep, 24 horses and colts.

—The "great blow" is apparently over for this time. The drifts between here and W. P. are so high that passengers have to jump out at certain points in the transit and steady the sides of the sleigh, to avoid tipping over. But the Midland has had the hardest of it. The snow packed so heavily that it was with great difficulty that the track was cleared. For several days the trains went and came in the most promiscuous manner.

—An evening this week was given to health-testimony. The general health of the family this winter has been excellent. Freedom from colds has been very marked. Many testified to having recently overcome chronic difficulties which had harassed them for years. The children have been remarkably well. We see reason to believe that health revival will go hand in hand with genuine heart revival.

—To "go down cellar and see the kitty" is the two-year-old idea of enjoyment nowadays, unequaled by anything unless it be the sport of throwing handkerchief-rabbits at spinning tops. J. H. N.'s room is the scene of this exercise. Upon his table is a rare collection of tops—tall tops, short tops, thick tops, thin tops, level tops, curved tops—and to see them all going, while the little fellows energetically pelt them, is a sight worth beholding.

—Our evening meeting has been held at eight o'clock for twenty-four years; but last fall, when we changed the dinner-hour to three o'clock, we also changed the meeting-hour to seven. Since then an hour has been gained for slumber. Ten used to be the general hour for retiring, and by eleven the house was very still; but the house is as quiet now at ten as it was wont to be at eleven. This may prove a beneficial arrangement, if it be true, as has been said, that two hours' sleep before midnight are worth four afterward.

—"The court," intermediate between the central part of the Community mansion and the south wing, is an excellent place for green-house plants. It receives the common warmth of the house from the halls which open into it on three sides, and the fourth side being of glass it catches the western rays of the sun. Among the plants which it has harbored this winter there are two which meet the eye with a peculiar charm, as they are approached and seen through the vista of the hall, they are so suggestive of tropical warmth and luxuriance. One of these is a venerable century plant, with dark green and fleshy leaves terminating in dusky spikes, sharp enough to impale the hand that should fall upon them rudely. We involuntarily thought of this spiked-tipped plant while listening to the reading of Stanley's adventures and hardships in working his way through the jungles of Africa in search of Dr. Livingstone. The other plant is a Yucca, standing seven or eight feet high, with its tufted foliage at the top very much like the pictorial representations of the palm-tree. This little ten-foot area of tropical suggestiveness, has been like an oasis to us all winter, as we have passed through it into the regions of ice and snow outside.

—February has been tempered so mildly this season, that it is very likely we may have been tempted into some delusive anticipations. Only a few days since the prophetic rumor was put in circulation, and the external signs conspired to give it currency, that the winter had well nigh spent its strength, that it was disabled, in short, from a serious fracture of its "back-bone." One who received the "prophetic rumor" with pleased credulity talked to his friends of the "spring influences" that were stealing in upon us in subtle, mysterious ways. It is all well enough, perhaps, for sanguine folks to indulge in a little sentiment and enthusiasm of this kind, and we will not say it is all imagination; but it is rather premature, in this latitude, to throw open doors and windows before February is gone under the delusive enchantment that winter has come to an untimely end in consequence (by accident or otherwise) of a broken back-bone. At all events the last few days, with the mercury at zero and below, and a roaring, blistering nor'wester upon us, has had the effect to dissipate some of the "illusions of hope" that were based on spring influences, broken backbones and the like.

—The old Noyes clock, which has been for years in J. H. N.'s room, has lately been furbished up and hung in the South Parlor. It has been steadily running for more than half a century, and yet it is at this moment the best timekeeper in the house. Mr. Abbott still consults it every morning when he starts on his regulating round. This is a most wonderful clock. Its very idea of existence appears to be different from that of clocks in general. It has a repose of manner which is truly salutary to the mind. Though exceedingly exemplary in its behavior, it never obtrudes itself upon the attention. Instead of ticking excitedly, as is the habit of most clocks, as though life were a race which must be run at a frantic speed, it marks the passing moments with an air of lofty composure which is positively soothing to the troubled spirit. If you sit down with a book, it never goads you to be up and doing, but, like a sensible clock as it is, it allows you to read in peace. It never startles you by the announcement that another hour is gone, for it is never guilty of striking. Calmly, considerately, majestically it runs its course, conveying its instructions by rectitude of behavior rather than by rasping warnings.

THE VILLA.

—A glowing fire-place is a joy forever, as every body knows who has sat by one. It radiates cheerfulness even faster than it does heat, and is doubly comforting now that the stormy winds do blow so vehemently. Our parlor is warmed and lighted by a genial grate, and about this grate cluster much of the sociability and merriment of home. The other evening the family formed a large circle around the fire-place, which S. piled high with wood, and played the game called "Proverbs." We have a notion that the readers of the CIRCULAR might like to try this game, in their own families, so we will tell them how. Have your family gathered together with the exception of one who shall wait in an outer room. Then select some every-day proverb with which all your household are familiar, and without letting the person outside know what proverb has been chosen recall him and allow him to ask any question which his fancy may suggest of the various persons in the group. In answering the questions, the first one addressed must introduce into the reply the first word of the proverb selected; the second must bring in the second word, and so on till all the words comprising the proverb have been brought into the replies. The questioner is generally able to guess the proverb before all the words have been introduced; but sometimes, when the answers are ingenious and the words are brought in cunningly, he is baffled till the final word (which is often odd and significant) betrays it. The fun of the game is in the droll circumlocution which has often to be made use of in order to bring in the required word, and the irrelevant matter which is thus introduced. To illustrate from our game last evening. One proverb selected was: "Birds of a feather flock together." This having been agreed on, Mr. K., who had been waiting in the kitchen, was recalled to the parlor and beginning with Mr. I., who works in the machine-shop, he asked:

"Mr. I., have you been making screws to-day?"

Mr. I. (after deep cogitation)—"No, I have not been making screws to-day; but in the course of the spring when the *birds* sing and all nature looks gay I hope to do something at it."

Mr. K., after reflecting a moment, goes on. The next two words, *of* and *a*, are not significant enough to afford any clue. The fourth question he puts to Mrs. B.

"Mrs. B., were those gems which you made for dinner to-day with water as good as those which were made with milk?"

Mrs. B.—"Yes, I don't know but they were better. They were light as a *feather*, and the folks ate them all." (*Laughter and cheers.*)

Mr. K., looking somewhat mystified, finally asks Belle:

"Belle, are you going to O. C. to-morrow?"

Belle. (Laughing.)—"Why, I don't know but I shall if a *flock* of us go over."

"I have it," says K. "Birds of a feather flock together."

Another proverb agreed upon, while Belle was in the kitchen, was: "A rolling stone gathers no moss." Her second question was put to L.

"L, why did you stay at O. C. so long to-day?"

L.—"To practice singing. I like to sing the Jubilee songs very much; especially the one called, 'I'm a *rolling*.'"

Belle.—"Mr. K., were you glad that you found the tippet you lost the other day?"

Mr. K.—"Yes; I don't think I should have lost it if I had not stumbled over the *stone* at the door when I was coming in."

Belle plies the questions till she comes to the last word. Her question is now to Mr. I.

"Mr. I., did not that spark which just flew from the fire-place burn you?"

This was a poser, and Mr. I. breaks down with,

"No, but I was fearful that it might *burn the moss off from the carpet!*"

Amidst general laughter at this reply Belle pronounces the proverb to be: "A rolling stone gathers no moss." G.

WALLINGFORD.

—We are reading Irving's "Astoria," and find it interesting.

—Last evening we listened to a very interesting lecture from E. H. H. on "Philip the Second."

—A fine portrait of Mr. Noyes now ornaments our Hall, the gift of Mr. John Hull, photographic artist of Springfield, Mass.

—Ann and Mary went down this morning to see the dam. Mary surveyed it some time in silence, feeling no doubt duly awe-struck by its grand proportions. At last, instead of going into any ecstacies, she simply exclaimed, "And that is *all soft water!*" What an appreciative mind was that!

—This afternoon while Fidelia was up in the silk-office she heard a great screaming down-stairs and immediately the machinery stopped. Going down she found that one of the cleaners in endeavoring to put on a belt, had in some way got her hand caught and drawn over under it. One of the girls, with presence of mind, stopped the silk machinery, and another was so frightened that she ran into the machine-shop and shut down the gate. The little girl was rescued from her uncomfortable

position without serious injury. Her hand and wrist got a thorough pinching and looked pretty red and some swollen; but after a while she went to work again. Fidelia says it is the nearest approach to an accident that they have had in the shop.

—Master Wilfred went down to the factory this morning to take some apples to "Mr. John" and the "Captain." When he got there the Captain asked him to get some things that were up at the house, and said that if he would do so he would give him ten cents. Wilfred did the errand and soon came bringing the things. True to his promise the Captain offered him ten cents, but Wilfred, looking at him very solemnly said, "No, Mr. Snow, we are rich and don't need your money. We are very rich. No, I can't take it." Much against his sound convictions it was forced upon him. When he came up to the house, Mrs. N. told him he could put his money into the treasury. He looked rather crestfallen at that proposition; so she told him he could make a deposit, and when at any time he wanted to get something he could present a check for his money. This plan seemed to please him.

[Master Wilfred does'nt know how much money we borrow.]

—C. S. J. had promised 1800 catalogues to a customer to-morrow and Mrs. N. was anxious to have a grand bee to finish them. There were two sheets of eight pages each, besides an extra leaf to be slipped in at the front, and another to be pasted on at the back. At one o'clock we had a fine bee. Mrs. N. organized it well, and the work went off like magic. One set folded, another pasted, another cut the leaves and put in the leaf with the bronzed illustration. One person did all the pricking, and still another set were sewing books. We kept Mrs. N. going busily enough attending to us all. It seemed possible that we might get through by nine o'clock. After dinner we went back again. Twelve hundred books were yet to be sewed. The men helped in various ways. Mrs. N. called out now and then, "One hundred more done." And would you believe it, by half-past five those books were *all* sewed, and ready to go to the cutting-machine, and the Hall was in order.

EVERGREEN HEDGES.

WERE I a farmer living on the western prairies I would make much use of the hardy evergreens, especially of the Norway spruce, not only for fencing but also as a protection from the bleak winds of winter. It appears to me (and I have had some experience with the Norway spruce) that the farmers of the West could not do a better thing than plant parallel lines of this evergreen, running north and south across the land every forty rods, thus belting their entire farms with hedge-rows of this kind. If desirable, they could cut up the land into lots, planting rows at right angles eighty rods apart, thus enclosing twenty acres or less. These rows of spruces, if cultivated and well cared for, would in a few years not only form a substantial hedge, but would be found of great benefit in protecting winter grain and grass lands from the bleak winds of winter, which seem to be the greatest drawback to raising winter grain on the western prairies. The winds having an unbroken sweep, carry away the snow that falls, leaving the plants of wheat and grass exposed, to be uplifted by the frost, or, as sometimes happens, to be blown out by the roots in consequence of the violence of the winds.

A specimen of this sort of hedge and windbreaker may be seen on the O. C. domain. Having occasion a few years ago to remove some Norway spruces, when about three feet high, we transplanted them in a single row running north and south, setting them four feet apart. Not having occasion to use the spruces elsewhere, they were allowed to remain. They were twice cut back and then left to take their own course. Consequently we have now, by mere accident, a hedge wind-breaker twenty feet high which is a perfect barrier to either man or beast, and so compact from the ground upward that a bird can with difficulty find its way through it.

This wind-breaker, though short, is highly appreciated as a shelter to a dwarf pear orchard which stands near it, and the fruit is considered comparatively safe from the violence of the west wind as far as the hedge extends.

We have another spruce hedge growing by the roadside, some twenty-five rods in length, which, though entirely neglected except for the first two years, promises in a year or two more to become a substantial hedge. The plants in this case were set three feet apart in a single row, and, with the exception of the first and second years, have received an annual clipping for the purpose of forming a compact base.

The objection may be raised that to belt a farm with evergreen hedges after the above plan would ultimately take up too much room; but I think it will be found that a spruce hedge, even twenty feet high, will occupy scarcely more space than an ordinary worm fence. Should it, however, in time take up even more land, the benefit derived from the protection afforded to growing crops would more than compensate for the extra land and the cost of planting and cultivating the hedge.

Not only do prairie farmers stand in great need of some such protection, but eastern land owners also will one day find it for their benefit to plant largely of these hardy evergreens. As to the durability of such hedges, we see no reason why they should not last for generations.

H. T.

"PRAISE IS COMELY."

H.—I dislike the voluntary humility which refuses sincere, hearty praise. An incident occurred to-day which led me to look at this spirit and criticise it. I helped Mrs. C. about some work she was doing; and when she said it was kind, and just like me to do people good, I disclaimed her praise.

J.—I think *you* need never be afraid of receiving praise; there is no danger of your over-appreciating yourself. Your modesty is excessive.

M.—When I praise a person in sincerity, I hate to have it thrust back upon me.

J.—So do I. I take the praise if merited, and thank God, and help it along by backing it up. And this spirit we condemn, what is it? Is it not a coquettish spirit, seeking for more praise?

G.—How are we to know when praise is sincere?

J.—Judge by the *feeling;* and if it is flattery, criticise it on the spot.

M.—I wish to mention an instance which occurred to-day, of my being praised, and receiving it with thanks to the person and to God. F. praised me heartily for general management, good housekeeping, etc. She used to think me very green at it. I thanked God, saying, "Things *do* come round."

J.—I think you deserved it.

All.—So do I.

M.—*I* think so too; thank God for his grace.

REVIVAL RECOLLECTIONS.

V.

A few years have passed, and I am numbered among the pupils of the Canandaigua Female Seminary. I can truly speak of my life there (which continued between five and six years) as full of revival experience. Not a term passed during that time but that some who entered the school, thoughtless and impenitent, returned to their homes with a warm interest in the Redeemer's kingdom, and with a serious and determined purpose to devote their lives to God. In that Seminary the heart received attention as well as the intellect. Our united Principals, Miss Upham and Miss A. Smith, made the Bible their most prominent text-book, and all questions of truth and duty were referred to it for decision. The Bible was not so unpopular in the schools of those days. I remember how the frank, energetic manner in which the great-hearted Miss Upham received me as a new comer, impressed me like the welcome of a mother to a daughter, while the sweet tone of the voice, the light of the eye, and the gentle pressure of the hand, of the quiet, lady-like Miss Smith went to my heart. Although these two women were quite unlike in character, they were both quick to draw practical, religious instruction from all their scientific pursuits.

Among the many teachers in the Seminary was my friend, Miss De Votee, who had been sent there by Dr. Porter (then President of the A. B. C. F. M.) to be educated for the foreign mission. When the spirit of the Lord was upon her, her earnest supplications would start a flame of living fire which it was as impossible for the heart to resist as it is for chaff to lie quietly before the whirlwind. There was also Miss E. Smith, whose intelligent face and open countenance invited confidence, and who has since been popular in connection with the Packard Institute of Brooklyn. There, too, was the plain Miss E. Chadwick, whose confidence in God was as simple and true as a child's in its mother. Her fellowship with God was so close that the thoughtless could not comprehend her, for their spirits did not harmonize with hers. The energetic way she had of saying the most common things would absolutely constrain you to give ear. There was a regular prayer-meeting in the Seminary, generally led by Miss C., which the scholars attended *ad libitum*. So vividly does she come up before me now, that it seems but yesterday that I was sitting upon the seat in that large library, drinking in her words as she dwelt upon an important thought or a passage of scripture, until my whole mind was pervaded with the truth which she saw and felt. Her soul would sometimes be so ravished with the glories of the heavenly state, that the veil would be lifted from my own mind, and my soul too would be carried forward into the glowing realities of eternity.

On preparatory lecture day, before the church communion, we were assembled in the lecture-room. Mr. Thompson was our minister. He was a frequent visitor at the Seminary, and had caught so much of the revival spirit that he had an earnest desire for the revival of the whole church. After preaching a rousing sermon, he called upon Deacon A. to speak. But O! what lifeless words he uttered! Then Deacon B. was called upon. He did likewise. Prof. H. was then called upon, and his prayer was no better. There was no life in any of them. Mr. Thompson arose and said, "he was discouraged. He felt as though he preached to the walls, and the walls only echoed back his words." He then turned to a gray-haired colored man who was sitting in the farther corner of the room and said, "Jacob, have you any thing to say?" In a moment black Jacob (as he was called) was on his feet, and said:

"Yes, Massa Thompson. When I was praying in my chamber this morning, and trying to get ready for this meeting, it seemed to me just as if my Savior spoke to me and said, 'Jacob, I want you to speak for me to-day, to the people,' and I have been waiting for you to ask me." Then elevating his voice, and rasing his hands he said, "Why, Massa Thompson, you feel discouraged? My Massa Paul said he could do all things through Christ strengthening him, and who couldn't with such a helper as my Lord Jesus Christ? He is my helper, and is he not yours, Massa Thompson?

The Lord and I have been talking together about this matter. While I have been busy with my work I would tell him how much we needed his spirit to come down here because the church were all dead, and sinners were rushing down to hell. And now Massa Thompson," said he, "do not be discouraged, for the Lord is going to pour out his spirit, and great numbers will be converted. Don't feel troubled about these dead professors, for the Lord will take care of them."

And the spirit did come down with mighty power. What a scene followed! Mr. Thompson groaned aloud; and the deacons and professors wept with all the rest of the congregation. When Mr. T. arose to pronounce the benediction he could only wave his hand and let us go. That revival spread through the village and a large number were converted. But who was Jacob? I will tell you something about him in the next chapter.

C. B. B.

NOT TOO OLD.

I SOMETIMES hear such expressions as these from middle-aged and elderly people: "I am too old to learn this or that new thing; I cannot remember it if I try. It is of no use for me to read or study now. When I was a child I learned as easily as anybody. I never had to study much to get my lessons in school, and kept at the head of my class with very little effort; but now I cannot remember anything. Do not ask me to join a class in history or any thing else, for I shall not know any more about it when I get to the end of the book than when I begin. There is no use in my trying to commit to memory a piece of poetry or a wise saying in prose, for I shall forget it in a very short time if I do."

Hearing such remarks as the foregoing, and also realizing in my own experience to some extent the truth of them, has led me to reflect upon the subject and ask: Why is this? Why do we lose our power of acquiring and retaining knowledge when we get beyond the spring-time of youth? Why does not the ability to learn new things grow with our growth and strengthen with our strength? Why does the keen, eager appetite for knowledge that characterizes childhood become palled as we advance in years? Why is it that we look back with such intense longing for the fresh zeal with which we once undertook a difficult problem—and for the deep satisfaction we felt after mastering it?

May not the answer to these questions be something like this? We allow our life and attention to be absorbed by the external cares, duties and wants of every-day life. As we progress from youth to middle life and old age, our whole life flows in new channels and a thousand things claim our attention where perhaps not more than one forced itself upon our minds when we were young. Now, if we could, as it were, empty our minds of these accumulations of years and take hold of study with the single eye of childhood, I have no doubt we could learn, and retain what we have learned, as well now as then. Can we not do this? I, for one, feel like entering my protest against this clogged state of the mind. Can we not find a way to stop the great swarm of objects which force themselves upon our thoughts, and learn to so control our attention that we may concentrate our whole strength upon our lessons or upon whatever is most desirable? As believers in Christianity we have a right to expect to be able to do this. One of the most earnest Bible students I ever knew once said, "The power of concentration is one which is of vital importance to believers growing in grace."

What is growing in grace? Is it not overcoming ourselves; concentrating our attention on Christ and yielding our natures, step by step, to be possessed by his nature? When this is done in such a way that we can say, "I live, yet not I, but Christ liveth in me," we shall be able to exert that self-control which is necessary to make us "become as little children." Children are wide awake to learn new things. They always have time enough, and it is easy for them to turn from one thing to another. They do not fall into fixed habits of thought nor into fixed ways of doing any thing; so, when they are asked to leave any pursuit in which they are engaged and attend to this or that study, they put out of mind whatever at the moment engrosses it and are instantly ready to "go off on a new tack."

This susceptibility to change is one of the most interesting traits of childhood. It is the exact opposite of old age. When we have found out a way to change with the facility and aptitude of a little child, have we not found out the way to immortal youth? "Except ye be converted and become as little children ye cannot enter the kingdom of heaven;" i. e., except we find a way to get rid of fixed habits and free our minds from the clogs and fetters which make them tardy servants to our wills, we cannot enter the kingdom of heaven.

T. M. S.

TO A LITTLE BOY—AN ONLY SON.

DEAR J.:—I dreamed about you last night, and I will write you my dream. I thought I was at Oneida, and noticed one day that you were not among the children, and come to look for you, we found you had not been seen for a day or two. No one remembered putting you to bed with the other children for two nights; and the last we could learn about you, some one saw you going into the woods alone. The woods, I thought, were our Putney woods—but dreams, you know, mix places all up together. This made me feel very bad. I thought you had lost your way in the woods, and must have slept on the hard ground two nights, with nothing to eat all day, and no fire to warm you by, and nobody to speak to. I cried very hard, and my heart almost broke. Then I dreamed some of the Community went to look for you, and pretty soon Mrs. W. came and told me that they had heard you call, and would soon find you, which made me wipe away my tears—and very soon you were in my arms. You looked bright and happy. I asked you if you did not cry a good deal; you said you did at first. Then I asked you if you did not pray to God; and you told me you did—you had been praying when they found you, and it made you feel very courageous and happy: you had got all over feeling bad, because you prayed. Then I thought I was not sorry this had happened to you, because it had taught you to pray, and taught you something about God; and softened your heart toward him. When I awoke in the morning, the first thought that came into my mind was this text which you will find in your Bible: Zechariah, 12th chapter, 10th verse: —"And they shall mourn for him as one mourneth for his only son—and shall be in bitterness, as one that is in bitterness for his first-born." This means, I think, that our hearts will mourn after Christ as I did for you when you were lost; and I was glad to know the depth of that feeling by my dream, so that I could see how we shall long for Christ, when we know how lovely he is, and see all his goodness; and we shall find him as I did you.

MOTHER.

VALUE OF SCIENTIFIC KNOWLEDGE.—As a striking illustration of the value of scientific knowledge, I will refer to the well known case of Pasteur among the silk-worms of France. A disease broke out among the worms of the silk districts, which reduced production fully one-half and threatened the entire destruction of the silk-producing industry. Not only the people, but the government was alarmed. The friends of Pasteur, having confidence in his scientific abilities, turned to him and told him he must go and look into the matter. He protested that he knew nothing about silk-worms, and it was absurd to expect him to do anything to remove so alarming a scourge. But they would not take no for an answer, and he was commissioned by government to go and see what he could do. He applied the microscope, after making himself familiar with the character and habits of the worm. It revealed the fact that a species of fungus grew all through the body of the diseased silk-worm, and the germ of this fungus was found in many of the eggs. All eggs that contained the fungus germ produced diseased worms. The remedy was simple—destroy all diseased worms and eggs, and develop the healthy eggs under circumstances that would prevent their coming in contact with the fungus germs. The result was, that in two or three years the silk culture of France was restored, with the knowledge how to prevent another disaster from the same sources. Such was the value of science in this case, and of the services of a man trained in making scientific investigations. He simply brought to light facts and principles not before understood, and made their application easy. And such is the end of all science. It may for a time be called abstract, but sooner or later it is made applicable in some way to the uses of life, and the world is the better for it. Let us not look lightly on any scientific discovery, however useless it may seem to be; for it may be the germ of something as valuable as the telegraph or steam engine. It may save to the country and the world a valuable industry, as did the simple discovery of Pasteur among the silk-worms of France.—*Address of T. D. Curtis before the Lewis Co. Dairymen's Association.*

LIFE ASSURANCE.

From an article with the above heading in the *Galaxy* for February we learn that the first American Life Assurance company was organized in 1842. Nineteen years later there were 60,000 policies in force, assuring $170,000,000. Ten years still later—in 1871—there were over 800,000 policies in force, covering more than $2,000,000,000. In 1871 the New York companies alone issued nearly 210,000 policies. In 1861 the income of the companies was less than $7,000,000, and their assets some under $30,000,000. In 1871 the incomes must have reached $125,000,000, and the assets more than $300,000,000. These figures indicate great confidence in Life Assurance, especially on the part of those who originate these companies for purposes of money-getting. But this is the bright side of the picture. To show what an undertone of disappointment there is in this business, especially among the policy holders, we quote entire:

When a policy is issued, the contemplated method of its termination is the death of the holder or the expiration of the term for which he was assured. Under the heads of "death" and "expiry" ought to be found, therefore, all or nearly all the policies terminated in any given year. How nearly the facts correspond with the reasonable expectation may be learned from the annual reports of the New York Insurance Department. These reports deal merely with the companies authorized to do business in this State, but they cover, nevertheless, a very large proportion of the business of the country. From them it appears that in 1864 (the first year for which returns were properly classified), of the policies terminated (excluding those "changed" and "not taken"), but fifteen per cent. ceased through "death" and "expiry," and that even this small percentage had shrunk in 1871 to less than seven and a half. The decrease in the number terminated in the natural and proper methods has been accompanied by an increase of those ended in modes that are a reproach to the business. The modes here referred to are "lapse" and "surrender." It must be understood that in surrender the policy is delivered up to the company for a small consideration, and is cancelled; and that in lapse the company confiscates to itself all, be it much or little, which the unfortunate holder has paid upon it. [This privilege of wholesale confiscation does not exist in Massachusetts.] With this understanding, the significance of the following facts will be apparent. The figures are taken as before, from the New York reports, and policies "changed" and "not taken" are not considered. In 1864 twelve per cent. of terminated policies were surrendered, and seventy-three per cent. lapsed—and lapse and surrender swallowed up eighty-five per cent. of the whole: in 1871 twenty-

one and a third per cent. were surrendered, seventy-one and a third per cent. lapsed—and lapse and surrender took the lion's share of nearly ninety-three per cent. Verily, "something is rotten in the state of Denmark." In view of the average experience of the last eight years, it may be said of every ten policies which cease, but *one* will do so by death and expiry, while *one and a half* will be given up for a slight compensation, and *seven and a half* will be absolutely thrown away by the holders. The number of policies which fail of their proper use would, perhaps, surprise the general reader more even than the statement of percentages. In 1871 the number of policies really terminated in companies of New York was 124,275; of these, 9,063 were by death and expiry; 115,212 lapsed and were surrendered, of which 88,706 were by lapse alone. When next the companies issue their circulars and expatiate on the blessings bestowed by life assurance on the widow and the orphan, let them devote a paragraph or two to the loss, disappointment, and vexation which in some way or other, through it, are inflicted on thousands who wish to avail themselves of its benefits and are excluded.

THE NEWS.

Austria, Prussia and Russia will not recognize the Spanish republic until convinced of its stability.

The papers report particulars of a frightful socialistic insurrection that has broken out among the peasants in the Russian provinces of Volhynia and Podolia.

Thomas Guthrie, D.D., the eloquent Scotch divine and philanthropist, died in London on the 24th ultimo, in his 73d year.

A distinct shock of an earthquake was felt at Eastport, Me., on the morning of the 22d Feb., at about half-past seven o'clock.

It is said that the success of the beet-sugar cultivation and manufacture in California has already reduced the price of sugar there from 1 to 1½ cents per lb. The usual proportion of sugar to pulp in that State, is 8 to 8½ per cent.

It is reported that a Philadelphia manufacturer is preparing a plan for a column one thousand feet high, to be constructed entirely of iron in open-work, from the summit of which the grounds of the Centennial Exposition are to be illuminated by means of a Drummond-light.

The House recently passed a bill reducing the postage on all letters from three to two cents, and providing that newspapers shall be prepaid at the office where mailed. The bill however must be passed by the Senate before it becomes a law.

The entire force of the Government printing-office at Washington is reported as now working eleven hours daily, instead of eight as heretofore, to get out public documents, the printing of which has been ordered, so that they can be mailed before the 30th of June, the date at which the franking-privilege ceases to exist.

The officers of the Pan-Handle Railroad have recently discovered an extensive swindling operation, which has been carried on for two years by employés of the company working between Cincinnati and Pittsburg. Sixteen persons are implicated. The *modus operandi* was for the conductor to take up the tickets on the train and pass them back to the station-agent without punching them. The loss to the road is estimated at $80,000.

A general movement of European religious societies toward this country seems imminent. The latest sensation of this character is the proposed emigration, almost if not quite *en masse*, of a society of German Mennonites, who have for a long time been subjects of the czar. This sect was first organized in Holland in the sixteenth century, and derives its name from that of the founder, Menno Simonis. They are a denomination of Baptists, and like all religious bodies which had their origin during that period of time, were persecuted by the dominant sects. The Russian colony dates from the eighteenth century, when, strange to say, they fled from the intolerance of protestant and catholic Germany, to the autocrat, for protection and exemption from military service. Since their establishment in Russia, the colony has increased rapidly in numbers and influence, and is now said to number more than 270,000 souls. The enemies of the society in Russia admit the peaceful and orderly character of its members—less than forty it is said, of its number having ever been convicted of any crime; and if they come, they will undoubtedly make excellent citizens. The cause of the movement is said to be a recent decree abrogating their privilege of exemption from military service.—*Exchange and Review.*

The *Evening Post* says people are going to Rochester from all parts of the State to obtain fish and spawn for stocking purposes. Over one hundred lakes and streams have been furnished with bass or pike, or both, this winter. And to show how far a small number goes in stocking a body of water it mentions that fourteen years ago 14 black bass were put in the Potomac, and that river has now become the best stream in the country for black-bass fishing.

In the House of Representatives last week Mr. Wood of New York introduced a resolution to impeach Mr. Colfax, which was voted down by 109 nays to 106 yeas—all the democrats and nine republicans voting in favor of the resolution. The Judiciary Committee of the House, to whom was afterward referred the testimony criminating Mr. Colfax, reported, after a session of several hours, that the House had no jurisdiction relating to the improper acts alleged to have been committed by him prior to his election to the Vice-Presidency.

The Sewing-Machine Ring, which is made up, says the *Springfield Republican*, of the two Howe companies, the Wilcox & Gibbs, the Wheeler & Wilson, the Grover & Baker, and the Singer companies, are endeavoring to carry through Congress a renewal of one of their representative patents. The *Republican*, the *Scientific American*, and other papers earnestly oppose the influence and scheming of this monied combination to carry their point, contending that further extension should be refused them. They say that the most approved sewing-machines can be sold, with reasonable profit, for $20 to $25, instead of $60 to $65 as now charged—and would be sold for these lower prices if these grinding monopolies were refused extension. The present high prices of sewing-machines they say are the heaviest taxes now imposed on the industry of the country, and fall heaviest on the poor women out of whom the greater portion of their enormous profits are made.

Tuesday last was termed by some a "field day," and by others a "judgment day," in the House of Representatives. At no time since the impeachment of Andrew Johnson, report says, has there been seen in the Capitol such an audience as was assembled to listen to the debate on the resolutions reported from the Poland Committee, to expel Ames and Brooks for bribery. The galleries and lobbies and even the floor of the House were crowded with spectators of both sexes. Messrs. Brooks and Ames themselves were in their seats, the observed of all observers, and both taking a more or less active part in the debate. A lengthy address was read by the clerk of the House from Mr. Ames, in which he rehearsed the story of the building of the Union Pacific Railroad, the obstacles it encountered, its expenses, and its connection with the Credit Mobilier corporation, which altogether was an able and eloquent plea in his own defense. The whole of Tuesday, Wednesday, and of Thursday until 12 o'clock was taken up in speeches and debate on the resolutions for expulsion, when a vote was ordered, which resulted in 59 ayes against 165 nays. Afterward, resolutions of censure and condemnation of the conduct of Ames and Brooks, were offered as a substitute for those of expulsion, and passed.

RECEIPTS FOR THE CIRCULAR.

W. A. B., West Meriden, Conn., $2.00; J. C. B. W., Baldwinsville, N. Y., $2.00; S. E. C., Washington, N. J., $1.00; W. M. D., New York, $1.00; H. G. G., Waukon, Iowa, 50 cts.; G. W., Drummondville, Ont., $2.00; J. M., Patterson, Pa., 50 cts.; L. S. P., Willow Springs, Kans., $2.00; H. F., St. Croix Falls, Wis., $1.00.

ANNOUNCEMENTS.

SILK GOODS.

Machine-Twist and Sewing-Silk of their own manufacture for sale by the Oneida Community.

Address, [S] ONEIDA COMMUNITY, *Oneida, N. Y.*

PRESERVED FRUITS AND VEGETABLES

Put up for sale by the Oneida Community in tin and glass. Price list sent on application.

Address, [F] ONEIDA COMMUNITY, *Oneida, N. Y.*

STEEL TRAPS.

Eight sizes and kinds, suitable for the House-rat, Musk-rat, Mink, Marten, Fisher, Fox, Otter, Beaver, the Black and Grizzly Bears, are made by the Oneida Community. Descriptive price-list sent on application.

Address, [T] ONEIDA COMMUNITY, *Oneida, N. Y.*

MACHINE-SHOP AND FOUNDRY.

Improved Lathe-Chucks, Blinn's Patent Gate-Hinges, Machines for Measuring the Length and Testing the Strength of Manufactured Silks, Bobbin-Winders for Sewing-Machines, etc. Agricultural, Machine and Light Castings, on hand or made to order. Descriptive price-list sent on application.

Address, [M] ONEIDA COMMUNITY, *Oneida, N. Y.*

THE WALLINGFORD PRINTING COMPANY.

All kinds of Book and Job Printing executed: Manufacturers' Illustrated Catalogues made a speciality: also Bronze and Color Work, and the finer kinds of Card, Circular and Bill-head Printing. Having enlarged its works and added new motive power, this Company is in renewed condition to meet the wants its patrons with promptness and accuracy.

P. O. Address, *Wallingford, Conn.*

PUBLICATIONS.

(Sent from the Office of the Oneida Circular by mail, post-paid, on receipt of price.)

History of American Socialisms. By John Humphrey Noyes. 678 pp. 8vo. J. B. Lippincott & Co., Philadelphia. London, Trubner & Co. Price $3.00.

The Trapper's Guide; a Manual of Instructions for Capturing Fur-bearing Animals. By S. Newhouse. Third edition with New Narratives and Illustrations. 215 pp. 8vo. Price bound in cloth, $1.50

Salvation from Sin, the End of Christian Faith; an octavo pamphlet of 48 pages. By J. H. Noyes. Price 25 cents per single copy, or $2.00 per dozen.

Dixon and His Copyists; a Criticism of the Accounts of the Oneida Community in "New America," "Spiritual Wives," and kindred publications. By John Humphrey Noyes. Price 25 cts.

Scientific Propagation. By John Humphrey Noyes. Large octavo pamphlet of 32 pages. Price 25 cts.

Male Continence. By John Humphrey Noyes. An octavo pamphlet of 24 pages. Price 25 cts.

Hand-Book of the Oneida Community; Containing a Brief Sketch of its Present Condition, Internal Economy and Leading Principles. Price 25 cts.

The five pamphlets—"Salvation from Sin," "Dixon and his Copyists," "Hand-Book of the Oneida Community," "Scientific Propagation," and "Male Continence," will be sent to a single address on the receipt of $1.00.

Back Volumes of the Circular, Unbound. Price $2.00 per volume.

MESSRS. TRUBNER & COMPANY, Book-sellers, Paternoster Row, London, have the "History of American Socialisms," the "Trapper's Guide," and the "Hand-Book of the O. C.," for sale. They will receive subscriptions for our other publications.

PHOTOGRAPHIC PICTURES

Of the Oneida Community Buildings and Grounds, made by a first-class artist and finely mounted, can be had on application at the Office of the Oneida Circular.

LARGE VIEWS.

Bird's-eye View, looking West, of Community Buildings and Grounds, 12 by 14 inches, on fine enameled board 16 by 20, price $1.75. Quadrangle and Group, 12 by 14, mounted like the above price $1.75. South and East Fronts of the Community Dwellings, giving a good view of the New Wing occupied by the Children—8 by 10, on tinted board 10 by 12, with an ornamental border price $1.00.

STEREOGRAPHS.

No. 2, East and North Lawns. No. 3, East Lawn and Portico. No. 4, East Front. No. 5, North Front and Lawn. No. 6, Bird's Eye View of Buildings looking West. No. 7, Lawn and Summer House. No. 8, West View, toward Railroad. No. 11, Quadrangle. No. 12, Lawn View. No. 15, South and East Fronts. Price of Stereographs $3.00 per doz. Sent by mail, post-paid, on receipt of price

Oneida Circular.

A WEEKLY JOURNAL OF HOME, SCIENCE AND GENERAL INTELLIGENCE.

Published by the Oneida & Wallingford Communities.

ONEIDA COMMUNITY, MARCH 10, 1873.

New Series, Vol. X, No. 11
Whole No. 1452.

POST-OFFICE ADDRESS:

ONEIDA CIRCULAR, ONEIDA, N. Y.

TERMS:

The CIRCULAR is sent to all applicants, whether they pay or not. It costs and is worth at least two dollars per volume. Those who want it and ought to have it are divisible into three classes, viz., 1, those who cannot afford to pay two dollars: 2, those who can afford to pay *only* two dollars; and 3, those who can afford to pay *more* than two dollars. The first ought to have it free; the second ought to pay the cost of it; and the third ought to pay enough more than the cost to make up the deficiencies of the first. This is the law of Communism. We have no means of enforcing it, and no wish to do so, except by stating it and leaving it to the good sense of those concerned. We take the risk of offering the CIRCULAR to all without price; but free subscriptions will be received only from persons making application for themselves, either directly or by giving express authority to those who apply for them.

Foreign subscribers, excepting those residing in Canada, must remit with their subscriptions money to prepay the postage.

THE UNITED COMMUNITIES.

ONEIDA COMMUNITY

Is an association living in Lenox, Madison Co., N. Y., four miles south of Oneida and a few rods from the Depot of the Midland Railroad. *Number* of members, 205. *Land*, 654 acres. *Business*, Manufacture of Hardware and Silk goods, Printing the CIRCULAR, Horticulture, &c. *Theology*, Perfectionism. *Sociology*, Bible Communism.

WILLOW-PLACE COMMUNITY.

Branch of O. C., on a detached portion of the domain, about one and one-fourth miles north of O. C. *Number* of members, 19. *Business*, Manufactures.

WALLINGFORD COMMUNITY.

Branch of O. C., at Wallingford, Conn., one mile west of the Hartford and New Haven Railroad. *Number* of members, 45. *Land*, 228 acres. *Business*, Publishing, Job Printing, Manufactures, and Horticulture.

SPECIAL NOTICE.

The O. C. and Branches are not "Free Lovers," in the popular sense of the term. They call their social system BIBLE COMMUNISM or COMPLEX MARRIAGE, and hold to freedom of love only within their own families, subject to Free Criticism and the principles of Male Continence. In respect to permanency, responsibility, and every essential point of difference between marriage and licentiousness, the Oneida Communists stand with marriage. Free Love with them does *not* mean freedom to love to-day and leave to-morrow; nor freedom to take a woman's person and keep their property to themselves; nor freedom to freight a woman with offspring and send her down stream without care or help; nor freedom to beget children and leave them to the street and the poor-house. Their Communities are *families*, as distinctly bounded and separated from promiscuous society as ordinary households. The tie that binds them together is as permanent and sacred, to say the least, as that of marriage, for it is their religion. They receive no new members (except by deception or mistake), who do not give heart and hand to the family interest for life and forever. Community of property extends just as far as freedom of love. Every man's care and every dollar of the common property are pledged for the maintenance and protection of the women and children of the Community.

ADMISSIONS.

These Communities are constantly receiving applications for admission which they have to reject. It is difficult to state in any brief way all their reasons for thus limiting their numbers; but some of them are these: 1. The parent Community at Oneida is full. Its buildings are adapted to a certain number, and it wants no more. 2. The Branch-Communities, though they have not attained the normal size, have as many members as they can well accommodate, and must grow in numbers only as they grow in capital and buildings. 3. The kind of men and women who are likely to make the Communities grow, spiritually and financially, are scarce, and have to be sifted out slowly and cautiously. It should be distinctly understood that these Communities are not asylums for pleasure seekers or persons who merely want a home and a living. They will receive only those who are very much in earnest in religion. They have already done their full share of labor in criticising and working over raw recruits, and intend hereafter to devote themselves to other jobs (a plenty of which they have on hand), receiving only such members as seem likely to help and not hinder their work. As candidates for Communism multiply, it is obvious that they cannot all settle at Oneida and Wallingford. Other Communities must be formed; and the best way for earnest disciples generally is to work and wait, till the Spirit of Pentecost shall come on their neighbors, and give them Communities right where they are.

LOVE.

I.

Love lingers not where sorrow dwells,
She cannot bide the downcast face,
Where laughter rings like golden bells
Is her abiding place.

II.

Love follows those, though seeming vain,
Who gild life's path with faith and hope;
She smiles on those who smile again—
Not on the misanthrope.

III.

Love ne'er can be disconsolate,
For love is happiness untold;
Oh, then, whate'er may be thy fate,
Be cheerful, bright and bold.

IV.

Then fairer than a morn of Spring
Beneath the sun's unclouded glance,
Shall be thy life, for love shall fling
O'er all, her radiance.

G.

THE DRIFT OF FAITH.

Home-Talk by J. H. N.

I HAVE queried how we were going to get at the public mind, so as to bring the great truth of the Second Coming to bear. But I see now that the work is done and being done, in this way: Most persons have the Bible, and read it from time to time; the more zealous people in religious denominations ponder it; theological students and ministers study it; it is the most common book in the world. We have found and demonstrated the true doctrine in regard to the Second Coming, and the report of our position has gone abroad very widely. It is reported and known quite extensively that *somebody* believes that the Second Coming is past—that it took place within the generation in which Christ lived. After that theory is once circulated, every one who reads the New Testament will stumble upon it; every few steps it will trip people up, and they can't help saying in their hearts, "Why, that is the Perfectionist doctrine; that looks as though Christ really did come." They may not believe it; they may be willfully dead-set against it; and yet that process will go on as long as they read the Bible. That book will all the time buffet them toward our theory. It is so plain and manifest in the language of the New Testament, that they can't help being constantly reminded of it, and compelled to brace themselves against it. So far as they are truthful and honest, our theory will all the time leak into them. Little has been said in the churches since 1834 about a future Second Coming. I am inclined to think that the greater part of the ministers and persons of advanced minds are convinced that the Second Coming is past. Alpheus Crosby, the Dartmouth Professor, wrote a book long ago which substantially seconded our doctrine.

We may be prepared for a great and sudden disappearance of the common doctrine concerning the Second Coming. It will be like what takes place at the end of winter on the lakes and ponds. The ice holds together until it is perfectly water-soaked, and then some night it suddenly disappears. We shall not have the credit of beating our doctrine into the public mind; the Bible will have that credit, while we only stand by and catch the ball, as you may say, and throw it back. It is a great advantage to get into such a relation to the Bible. It is so universally read that it is worth a great deal to have it in our favor. The case is like the flood of population going west. A man sometimes goes a great distance beyond present civilization, and selects for himself some favorable spot where he is sure civilization will come. He is in a safe place for making money: the tide will roll on west until it reaches him, and his land will rise in price. We are just in that situation in relation to the Second Coming and many other doctrines. The whole population which reads the Bible is rolling on toward our position.

A RELIGIOUS DAILY.

[G. W. N. Looking Forward in 1854.]

DO our friends keep in mind the idea that we are sometime to have a *Daily Paper*, devoted to Christ and the Truth? We do; and if for any cause it becomes temporarily obscured or overlaid by other cares, it ever comes up again with new force and liveliness, as one of the good things that is preparing for us and which we are preparing for. We must have a Daily for our own improvement, and to please the living Spirit of Truth. That is the point of view from which we start. It is not a question whether we are to have a large subscription list, or an advertising constituency demanding the measure; that is a consideration for those who do their work as unto men, and who receive honor and reward one of another. There is a more central law of action, a genius within, which is the only motive which we care to consult. Has the time come for the Heavens to have such an agency? Is there a Spirit ready to communicate good to the world on this great scale? These are the questions that arise first in our hearts. And the affirmative answer in our consciousness gives a buoyancy for the enterprise that no variations of outward fortune will seriously affect.

We wish our friends who are purposing to coöperate in the matter to take the same view. Communicate with God about it, and find out his pleasure, and whatever is done or given in the cause, let it be as unto him, and not unto men. In this way the communication of help will be an ordinance of blessing to all parties.

If there is any spirit of misgiving that a daily paper will be too much of a tax on the time and attention of readers, or that it cannot be made interesting, etc., we answer that just such a faith-movement as the one proposed is required to rout the dull and lazy spirit that takes this view. The tendency of the movement will be to strain up all concerned—both readers and writers—to the true concert pitch of resurrection energy; and we are assured that in so doing it will bring us into *rapport* with good influences, infusing into the paper and all its concerns new power. We should not tolerate for a moment, as believers, the old humdrum inactivity that leads many people to be content with Sunday preaching and a weekly newspaper. On the contrary, we should not be satisfied till the spirit of improvement makes us eager for constant supplies and equally active in doing our share in supplying others. Nothing short of a lively and powerful *daily* circulation through the whole body of truth-lovers will develop them to the point of sympathy with the social energy of heaven.

NOW.

"There is a tide in the affairs of men,
Which, taken at the flood, leads on to fortune:
Omitted, all the voyage of their life
Is bound in shallows, and in miseries.
On such a full sea are we now afloat,
And we must take the current when it serves,
Or lose our venture."

THESE words of Shakspeare occurred to me a few days since with great force. I had had a bright revival experience and felt as if I had given my heart to God without reserve, and it made me so happy that I wished my good feelings might last forever.

"What is to hinder," I asked myself, "my going on to still brighter and brighter experience? I must do so or else go backward. Suppose I stumble and make a failure of this conversion after all." The thought troubled me greatly.

"Be sincere with yourself and you will not fail," said the inward monitor.

"I will," I said. Thorough self-searching showed many a weak spot where the devil could reach me if I were not wide awake. Giving up *all* for Christ never meant so much to me before. But I was not alone. On the right hand and on the left, brothers and sisters were giving in their testimony for an unreserved surrender of all for Christ. I felt as if I were indeed on a "full sea," and must keep in the current or lose all. Strong affections hampered me; but *now* while the tide was setting toward victory was the time for me to get my freedom. Conscious of the grace of God, and strong in a sense of unity with those who were seeking entire salvation, I found it easy to be sincere. If tempted to hold back any part of the price, Paul's words spurred me on: "Behold *now* is the accepted time; behold *now* is the day of salvation." *Now* it shall be then," I said, "while inspiration gives me strength. If I wait till to-morrow, I am undone, weak, indifferent." I am rewarded above measure. That bright, happy revival experience still clings to me and I have full faith in the power of God to keep me in it as long as I am obedient and faithful to his inspiration.

S. L. N.

REVIVAL RECOLLECTIONS.

VI.

BLACK JACOB, as he was called, was a free-born native of Pennsylvania—a child of ignorance and poverty. A part of his life was spent on the ocean. When quite advanced in years an event took place which changed the whole aspect of his subsequent life. He was living with a family, in Orange County, N. Y., who were in a quarrel with one of the neighbors about some property. Murder was determined upon, and poor, ignorant Jacob who lived with the injured party, was selected to be the immediate instrument of the fatal deed. The guilty instigators at first tried to persuade him of the justness of the act, and gave promise of reward, but he steadily refused to comply because he felt that it would be a sin. To overcome this difficulty, they took advantage of his intemperate habits, and when in a state of intoxication put a gun into his hands and told him to follow and shoot the man. He obeyed; but the shot not proving mortal, his accomplice, who was close by, seized the gun, and with it struck the man until he died.

When Jacob became sober he was so filled with remorse and anguish for the deed, that those who urged him to it felt that it was not prudent for him to remain in the place, and they sent him off to the sea; but he was arrested while going down the river to New York. He made a full confession of the whole transaction and was sentenced to be hung; but when Judge Van Ness pronounced his sentence, he said to him, "You possess more than ordinary strength of mind. Providence has blessed you with a memory without a parallel in all my experience." The simplicity and honesty of Jacob's whole deportment, while upon trial, made such an impression upon the people, that they applied to the Legislature and obtained a change of the sentence to that of imprisonment for twenty-one years.

Jacob was sent to the Auburn prison, and in his narrow cell was placed a Bible, which was then a sealed book to him, for he did not know a letter of the alphabet. The gratitude he manifested for the kindness he received, attracted the attention of the chaplain of the prison and he proposed to teach him to read. His first lesson was the first word in the Bible—*In;* but he very soon learned to comprehend the force of letters when combined in words. He always spoke very affectionately of the chaplain in after life. "God sent him," he would say, "to put me in the way to gain the salvation of my soul." The fifty-fifth chapter of Isaiah was read to him by one of the theological students, and that encouraged him to call upon God in prayer; but he said the more he prayed the worse he felt. The student told him to ask the next person that called on him to read to him the fifty-first psalm. So Jacob commenced counting the chapters himself, until he came to the fifty-first, and when he had spelled out the first verse he went to the corner of his cell and prayed about it, and thus he continued with every verse through the chapter. When he came to the words, "Deliver me from blood guiltiness," etc., he cried earnestly for mercy, and felt the pardoning love of Christ. But one should hear the description of his experience in his own simple, unbroken language to fully realize how powerfully God can work in an honest heart, however ignorant. In speaking of the circumstance afterward, he said that the prison became a palace to him, and he felt like blessing every stone in it. He continued the practice of praying over the passages he read from the Bible during the remainder of his life. He once said to me, that he was such a poor, ignorant man that he never felt sure of knowing what was meant till he had asked God; but the Lord had promised to give wisdom and knowledge to all who lacked as he did, and he had not failed to give him understanding. "Oh!" he would say, "the Lord is so good to this old Jacob."

Jacob's deportment was so satisfactory that he was soon released from prison and taken into the family of the steward of the Theological Seminary. He also united with the Presbyterian church at Auburn. During a revival which occurred there Jacob was requested to go and pray with the steward's daughter who had been in great distress of mind for several days; but when he came into her presence he did not pray, as requested, but told her to give her heart to Christ at once, and left the room. She obeyed and found peace.

After a few years Jacob went to Canandaigua and took charge of the residence of a widow in in that village. The first time I saw him he was at the bellows of the large church organ, which he worked every Sunday, and I noticed the very close attention he gave to the services. When we scholars followed our teacher down from the gallery, Jacob stood where we passed by and returned the bows which many bestowed upon him. I was much impressed with his joyful countenance, his straight and manly stature and with his dignified and commanding movements. When I became personally acquainted with him I many a time crossed the street to walk down to the office with him, conscious that I was walking by the side of one who was familiar with God, and whose utterance was that of a heavenly spirit. At such times a remark upon some passage of scripture would often escape him clothed with such majesty of thought, that I knew that it could come from God alone, and it served as food to my spirit for many days.

Rev. Mr. Dwight, who was devoted to the improvement of prison-discipline, was very much interested in Jacob's history and character. He remarked that no human being ever read the word of God in his hearing in tones so impressive. Whenever he visited him he was accustomed to ask Jacob to lead in prayer, and Mr. Dwight said he never felt drawn nearer to God or more impressed with the feebleness of his own exercises than when attempting to follow this simple servant of God. No one indeed did attempt to follow him without feeling similar emotions.

When Black Jacob died the Canandaigua people erected a splendid monument, with a short sketch of his history engraved upon it. This monument was placed among those of the aristocracy of the village; but his body was buried in the corner of the yard among the graves of the colored people

C. B. B.

JOTTINGS AT THE CRITICISM CLUB

V.

EVIL spirits love darkness and work in darkness. If persons do not let into their hearts the daylight of heaven, they must not wonder that bats and owls make their home in them.

....

The word *imprudence* describes the great cause of many persons' bad spiritual experience: they are imprudent in listening to evil thoughts and suggestions—imprudent in the use of the tongue—imprudent in exposing themselves to temptations. We are dealing with a watchful, subtle enemy, who is ready to take advantage of every mistake; and the results of our imprudence are measured, not by our own intention, but by the power of the enemy. But if the devil is subtle, God is more subtle. His sagacity is infinite; and it is accessible to us; with it we can conquer at every point in the great contest with evil.

....

Evil spirits are always in a hurry and will not wait to be tested: good spirits, on the contrary,

love the judgment—love to be put to trial, and are never in such haste that they cannot wait for it.

....

To tease children to be obedient and otherwise treat them so that they do not expect to obey promptly, is real cruelty. It keeps alive in them the spirit of disobedience: whatever obedience they have is forced, and so good for nothing. It fosters cant and hypocrisy in them. Mercy and wisdom alike require that even small children should be taught to obey the first time spoken to, and never wait to be coaxed into obedience.

....

Children often get into the major position toward their parents and manage them and bring them into bondage. This is all wrong. Much as we love our children, their good and our own good require that we should keep the major position toward them and control them. And we must not let our happiness be dependent upon them. We must ever realize that their destiny as well as ours is in the hands of God. Let your heart be dependent on your children for happiness and they will instinctively find it out, and soon act as though you were made for their pleasure. The reverse of that is nearer the truth. In a certain sense children are made for the happiness of their parents—made to be dependent on them and serve them. But children cannot be made to feel this unless it is a reality in the hearts of the parents. Many persons live and labor as though the great end of existence were to serve their children, and especially to see that all their superficial wants are satisfied: they have little thought of disciplining and educating them for God: that is left to take care of itself.

....

R—— is a woman of very winning disposition. She is affectionate, kind and sympathetic, and makes a great many friends. She is faithful and public-spirited in business, and there is a kind of fervor of earnestness about her which draws out confidence in her spirituality; and yet there is a lack in her: what is it? Studying her character and looking back upon her experience, we see that she has been one of those persons who come under conviction, after a time of straying from God, and make an apparently sincere confession of wrong-doing, and then consider that the matter is ended. It has often been a mystery to many that she should repeat again and again the same unprofitable experience after a season of what seemed to be earnest conviction and self-judgment. The work of judgment does not go deep enough; no real change of character takes place. She confesses, but does not forsake. Letters of confession which are written without any serious idea on the part of the writers of changing their course and character, are mockery. They breed the genuine article called *cant*—one of the wickedest things in the world. The more people deal in that kind of currency the poorer they will be. The way to help R—— is to help her to make an end of cant. In doing this we may help others; for there are, no doubt, many persons who squander the grace of God and stop his work in them by talking about it and writing about it under the feeling that if they put their experience on paper or bring it out in meeting they need not give any further attention to it, but count it ended. The experience described is often only the beginning of what should continue for a long time. A woman after the first pain in child-bearing might think her suffering ended; but she must have many pains, one after another, before the child is born, and if she is wise she will desire them. So the birth into the kingdom of heaven cannot be accomplished by a single pain—a great number are necessary; but they may be dissipated and stopped by foolish ostentation and by unnecessary talk about them. Superficial, shallow, religious experience which expresses itself in talking and writing, but does not result in deeds, will never save anybody. Testimony is paper currency, which must sooner or later be redeemed with the specie of actual deeds. "Not every one that saith unto me Lord, Lord, shall enter into the kingdom of heaven, but he that *doeth* the will of my Father which is in heaven."

The following paragraphs from J. H. N.'s "Religious Experience" are applicable in this connection:

"The reaction upon myself, of my labors to convert others in the revival at New Haven, was the immediate cause of my conviction and conversion to Perfectionism. In searching the scriptures for truths to pierce the hearts of the impenitent, I was found at last pierced and writhing on the points of those very truths myself. Every discourse I preached came back upon me with all its convicting power. I knew I was a sinner myself, and I could not 'preach to sinners' without classing myself among them and sinking with them into condemnation. I felt in my inmost soul that the hand of God was upon me, and that he was making use of that revival, and of my labors, not merely to convert others, but to convert myself.

"I well remember one discourse which I preached, in different places, four times within a few weeks, and every time with an increasing weight of self-application. The text was Prov. 28: 13; 'He that covereth his sins shall not prosper; but whoso confesseth and forsaketh them shall find mercy.' The train of thought was this: The antithesis of *covering* sin is confessing *and forsaking* sin. Mere confession is not enough. If men do not forsake their sins they cover them, though they may confess them every so much. In fact, confession of sin in the common way, i. e., without forsaking it, is the most ingenious and satisfactory way of covering it. When a man's sins lie before him in all their hatefulness, what better way can he take to cover them than to spread a *neat white confession* over them? This hides their deformity from himself and his fellowmen. But God sees through the cover and must abhor this whole system of sinning and confessing and sinning again, which prevails in the churches. Common sense, as applied to the dealings of men with each other, repudiates it. If a man steals from you to-day and afterward confesses it, you forgive him. But if he steals again to-morrow, and again confesses it, you begin to distrust him. Perhaps, however, you forgive him the second time. But if he steals the third day, and confesses the third time, even with tears, you account his confession as bad as his theft—an insult added to injury—a cover of iniquity. Yet this is the way that men who profess to be religious are dealing with God all over the land. From day to day, from Sabbath to Sabbath, from year to year, in the closet, the family and the church, they confess the same sins over and over, and never forsake them—never expect to forsake them. The thought I have thus sketched was like a barbed arrow in my heart. Every time I handled it it entered deeper. It brought me into an agony of conviction, from which I knew there was no escape except by the abandonment, once for all, of the whole body of sin."

THE GREAT MUSEUM.

WE have always considered the British Museum as the head and parent of all similar institutions of the kind, embracing in its vast collection every thing of interest in every department of science and art. Huge as it is, we have, however, a growing rival at Cambridge, Mass., which even now in the department of natural history far surpasses it in size and in the scientific character of its system. This great life-work of Prof. Agassiz, to which he is devoting every energy, is rapidly developing such grandeur of plan and completeness of detail as to command the admiration of the whole scientific world. It already exceeds everything of the kind in Europe, not excepting the famous *Jardin des Plantes* at Paris.

The plan of the Museum contemplates no less an object than the illustration of the entire history of creation, so far as science has revealed that history. Prof. Agassiz says that he needs a million dollars to enable him to carry out the entire plan of the work. The present buildings are barely sufficient for the beginning of this stupendous undertaking, and additions every year are becoming more and more imperative. "He desires room wherein to display all the kingdoms of the world and the glory of them." In the words of Mr. Cary, "It is intended to exhibit all the animals peculiar to the different parts of the world in such a manner as to impress the observer with their actual association in nature so that the student in natural history shall be able to make himself familiar in one part of the building with the latest results of scientific research in working out the system of thoughts which binds together the whole animal kingdom as a unit, while in another part of the building the geographical distribution of animals upon the whole surface of the earth, and their various combinations and associations in different continents will be made apparent. Such a two-fold arrangement of collections has never yet been attempted in any manner, not even in the largest and most prominent institutions of the kind in Europe. The fossil remains of past ages will be exhibited in like manner in such a way as to display at the same time their order of succession in geological periods and their relations to animals now living. It is intended to complete this plan by exhibiting also the different stages of growth of all known animals from the earliest period of development from the egg to the adult condition."

G. E. C.

CONNECTICUT.

IT is so difficult to say anything about Connecticut without lugging in something about the "land of steady habits" that I shall try, as a bit of moral exercise, to avoid doing so. There is no denying that many peculiarities are to be noticed in the people of Connecticut, as to their characters and habits, by one coming here, for example, from New York State. Let me mention a few at the risk of repeating what "Foot-Notes" may have described much more felicitously.

First, then, I have been impressed with a certain increased civility and good-natured conduct of the people which shows itself in a variety of ways. If you are traveling afoot on the highway, people in carriages or on horseback will take care to turn out for you, a rare thing in my experience farther west. I have seen a railroad conductor here stop his train after starting out from a station, to oblige a single youth who was a little too late to make the connection. I was surprised at this, but after looking at the man carefully, I judged that such acts of kindness were a habit with him.

Another noticeable thing is, the larger number or proportion of well educated people. It is particularly unsafe here to judge of a man's intellectual attainments by his looks and clothes. The laws in regard to the attendance of children at school are strict and thoroughly enforced, and at the same time college life and its advantages are held up before them, so that all the young folks have attractions in front of them and a smart, legal incentive behind them. Quite an effect results with the lapse of time. Ordinary, farmer-looking fellows

you find to be graduates of the college, who are now managing large businesses or making important surveys. Or, as was my unhappy case, you may discover that they are college professors!

Possibly there is a connection between the two points I have mentioned; that on account of the impossibility of discerning those who are worthy of respect by their outward appearance people have come to treat all more politely and so avoid unpleasant mistakes.

I might mention some disagreeable peculiarities also, but will content myself with one; to wit, the prevalent custom of domesticating large and bad-tempered dogs, thus forcing timid gentlemen into the undesirable practice of carrying canes.

ONEIDA CIRCULAR.

TIRZAH C. MILLER, EDITRESS.

MONDAY, MARCH 10, 1873.

The Advertisement of the *Daily Graphic* is on our last page. We print it partly for the sake of bringing to the notice of our readers the new art of photo-lithography and a vast enterprise connected with it which is likely to be famous, whether successful or not; and partly for the sake of getting the paper for ourselves by complying with the terms offered to weekly papers. We must, however, for honesty's sake, express some dissent from the claims of the advertisers. We have seen two or three numbers of the *Graphic*, and cannot say that its illustrations are "executed in the most faultless and artistic style." Several of them seem to us slovenly. All we can say is that they are wonderful, considering the short time required to make them, and that we may hope they will improve, as the photo-lithographic art outgrows its infancy. We must also apprise our readers that the *Graphic* is conducted by persons who are not likely to flavor it with Christianity. It is, however, quite sure to be entertaining.

The *Daily for the Eye* has come. *The Daily for the Heart* is yet to come; G. W. N. prophesies that on our first page.

WHERE THE MONEY GOES.

AFTER publishing a financial statement of our year's earnings, we are apt to receive a good many letters importuning us for money. Such has been the case more than ever this year. Judging from the coolness with which some of our correspondents request us to disburse, we are inclined to think that perhaps many of our readers are laboring under the erroneous impression that we have a large surplus of funds lying idle. For the sake of their enlightenment, we will briefly explain where the money goes.

The Community and its industries are yet in the stage of development. We have some prosperous manufacturing interests from which we derive our principal income; but these are limited for lack of capital, and if their crying wants were all supplied they would absorb a much greater surplus than we are yet able to command. As yet they use a portion of borrowed capital, accounting that they can better afford to pay interest on it than to go along in a crippled state, unable to fulfill the demands upon them.

There are at least two good water-privileges on the Community domain which are still undeveloped, waiting for the propitious time in the future, when they can be utilized and turned to profit. There are also innumerable other schemes which show brilliant possibilities, but are obliged to lie in durance like eggs that await the favorable time for hatching. The Community has had a very successful incubation at W. C. during the last two years, and the result is a two hundred-horse water-power; but this is only the basis of enterprise. In order to utilize that great power and make it pay dividends, a great deal more money must be expended upon it. But the result already attained affords some self-complacency, and we like to tell once in a while of the self-denial we exercised to gain the means to arrest and take into our service, the water-power of the Quinnipiac. For one thing we went a whole year without buying any new clothes, shutting up the tailor's shop and placing the tailor among the producers of the Community. In this and many other ways that might be mentioned, we practiced rigid economy, cutting off those things that were non-essential to our happiness or well-being, and thereby saving twenty thousand dollars for the use of the W. C. enterprise.

Perhaps we may as well confess in this connection, what is the central ambition of our lives; what it is that stimulates us to business activity and enterprise—to develop water-powers, and covet all the means and appliances of extended business, education and wealth. It is that we may create *good homes*. By good homes we do not mean simply homes which shall be free from selfishness, and centers of all the bright joys and warm affections which cluster around the common ideal of a true home. While we would secure all these, we would say that these alone would fall far short of constituting what we regard as a true model of home. Beautify and glorify home as much as you please, and if it yet lacks *perpetuity*, it will not at all satisfy the objects we have set before us. In ordinary society men and women may work never so assiduously for the interests of home, and yet, all that they do is under the shadow and paralysis of dissolution. Marriage and death are active agents of disintegration in ordinary families, and their wrecks are common scenes of desolation. Communism implies perpetuity of home. We are seeking that foundation, and all our acquisitions are made subservient to this object. That is the altar to which we freely bring all our gifts and gains. And in this great work we claim to be true philanthropists and benefactors, with an enterprise as broad as the world and as deep as humanity.

We indulge ourselves in one wholesale benefaction—that of publishing a free paper; and a little reflection will show any one that the expense of an indulgence of this kind, continued for years, must amount to a large sum. We do not mean to be behindhand in sympathy for the misfortunes of our fellow-creatures; but the law of self-preservation is a sound one and people must allow us to be in a measure our own judges of our limitations, and not cavil at us if we firmly adhere to our life-purpose and sometimes turn a deaf ear to those who would absorb our attention and means in petty ameliorations of the hardships of ordinary society.

W. H. W.

COMMUNITY JOURNAL.

ONEIDA.

—The principal attraction in the library just now is a beautiful copy of "Black's General Atlas of the World," which is placed upon a pivotal book-holder at the end of the desk, where it is handy for any one who wishes to consult its full and clearly outlined maps.

—Stanley's "How I Found Livingstone" proves quite entertaining. His style, verging perhaps on the sensational at first, improves in simplicity and force as we proceed. The interest is enhanced too by the thought that he all the time had a definite object in view—the discovery of Dr. Livingstone, and in the attainment of which he was entirely successful. One can't help admiring the author's pluck and perseverance and the indomitable resolution with which he surmounts every obstacle.

—A thrilling incident occurred the other day which might have made a companion piece for the the love-lorn tragedy of the "Misletoe Bough." When the south wing of our mansion was built, a new style of fastenings was put on the closet doors, which had no knobs on the inside. Some of the cautious ones, remembering the fate of Lovell's bride, of whom it was said that

> "They sought her that night, and they sought her next day.
> They sought her in vain when a week passed away."

had some misgivings about this new-fangled notion, fearing that our closets might some day prove themselves "old oak chests" in earnest; but their apprehensions were considered groundless, and the fastenings went on. Two years and more have passed away without any serious inconvenience from the semi-knobless condition of the closet doors, and our fears had become somewhat allayed, although some of us, when alone in the Mansard attic last summer, used occasionally to shudder when we stepped into the closet at the possibility that a sudden breeze from the window might blow the door together. It would have been quite out of the question to liberate one's self, had that happened, except by breaking through the panels. Our house is so thoroughly inhabited from garret to cellar that there is little danger of remaining a prisoner for more than half a day at the utmost; yet the prospect of being shut up in a closet for any length of time is hardly an enjoyable one; which opinion, however, may be a relic of the "halcyon days" of childhood. But to our story. A few evenings since, C. A. M. was in her room, on the second floor, and with her were the little two-year-olds—Holton and George. Her room opens into the South Parlor on one side and into one of the avenues on the other. She stepped into the closet for a moment, and while her back was turned the little fellows ran and shut the door. In a moment the horror of her situation flashed upon her. She remembered that both the doors of her room were shut, that the steam was coming with full force into the long coil which was wholly unprotected from their infant hands, that there was no one in the adjoining parlor, and that she herself might smother before any one should happen that way to extricate her, though she knew it was seldom that ten minutes passed during the day without some one calling to see her on business. She shouted and pounded with all her might upon the door. Then she listened for a moment; but nothing could she hear save the play of the children and the distant noise of the house. Again she screamed for help and struck upon the door. To add to her distress the babies now burst into a frightened cry. With the energy of desperation she shrieked again and renewed her pounding. Joseph, who was upstairs practicing on the violin, had his attention suddenly arrested by the unusual commotion below and ran down to see what the matter was. Meeting Constance they entered the room together where they found the two little boys in tears, vainly endeavoring to turn the knob of the closet door and crying "mamma, mamma," in pitiful tones. C. was instantly liberated and when the meeting-hour arrived told her story to the family, who with one accord voted an immediate reconstruction of these dangerous door-fastenings.

—What were the people thinking and talking about a century ago—when our grandfathers and grandmothers were unborn, and our great grandfathers and great grandmothers were the "rising generation," the "hope of the nation?" What were the subjects that interested, the topics that occupied their thoughts and conversation from day to day? Were they like us, full of hope and speculation for the future, or were they content

with the present, unambitious for coming events? These, and many more questions were suggested to our mind on looking at two daguerreotypes last evening—one of little Richard's great grandmother—the other of his great great grandmother. The picture of the great grandmother (our "grandmother Noyes," who spent her last years in the Community)—looks majestic in her consciousness of mature old age; and as some one expressed it as if "she were master of the situation;" and indeed, the peace of mind she enjoyed, is shown in the calm serenity of the expression of her countenance. The picture of her mother, Richard's great, great grandmother, though taken when she was scarcely older, looks worn, and impressed us as a sadder and more anxious face, and we were not surprised to learn that she, though a very pious lady, was never satisfied with her religious attainments. Little did she divine the manner in which the "desires of her heart" were to be fulfilled, and far from her imagination was the thought that her descendants were to be chosen as preachers and teachers of the Gospel of salvation to the world; else that anxious face would have been lighted with the smile of peace and hope that we see in her daughter, who lived to hear the truth proclaimed.

IS RELIGION OPPOSED TO AMUSEMENTS?

IN a late *Independent* we notice a curious collision of opinions on the subject of amusements. A long article entitled "A More Excellent Way," by Rev. Charles G. Finney, represents the class of strict religionists, who keep the revival-tone of forty years ago; and the reply of the editor in the same number undoubtedly represents the popular mind of the churches at the present time as taught by Henry Ward Beecher. A sketch of these articles may be entertaining to our readers.

Mr Finney after showing the double nature of man—one side being allied to the physical universe, the other to the moral and spiritual universe—describes the change that takes place in the natural appetites, desires and propensities when the heart is surrendered to Christ. "The desires of our lower nature," he says, "begin their development at birth. At first these desires are very few and simple, terminating on food and drink. As we grow older, our sensibility is more and more developed in its relations to the multitudinous physical objects with which we become acquainted. If unenlightened by the spirit of God at an early age, the development is altogether on the natural or physical side of our nature. We begin with desiring to play with a rattle, then with a doll or a hammer or whip; and then we desire pictures and music and books, and physical science and art, sports, pastimes, and rise from step to step in our desires. As the higher ones are developed the mind naturally drops out and ceases to exercise the lower ones. The rattle and the doll are exchanged for higher amusements, and the lower are suppressed by the development of the higher, until we lose ourselves in reveling in the higher walks of science." All this takes place before the conscience is awakened. "But when the Spirit of God once takes possession of the heart, we are overwhelmed with our sinfulness. All that was pleasure to us before, we loathe and detest. We are bowed under a sense of condemnation and lose all interest in worldly amusements. When at last we are entirely abandoned to this love for God and live only for him, we are born again. We have come to live, as it were, in a new world. A new set of truths, realities and facts have been revealed to us; and our moral nature is engrossed with them and we naturally lose our interest in the pleasures, fun and play of this world. * * * As an inevitable consequence, our desire for worldly sports, glee, fun, pastime, play is no longer present in our consciousness. This is only a higher development, and no annihilation or mutilation; it is only the inevitable consequence of divine illumination. * * * From this standpoint it is easy to see how Christians may be and are enabled to live above the world whilst they are in it; how and when it ceases to be a snare to their souls, and by what means both the aged and the young Christians of all ages may be permanently so interested in Christ and his religion as to be full of spiritual cheerfulness, peace, joy in the Holy Ghost, and effectually rid of the clamor of their lower propensities for fun, glee, merriment and hilarious sports. Pleasure-parties, picnics, pleasure-excursions, theatres, balls and all like amusements cease to be desired. * * * It is spiritual darkness that leaves the mind in so low a state as to be hungering and thirsting after worldly pleasures and amusements."

The editor of the *Independent* regards this "as an utterly mistaken theory of the Christian life," and puts in the following "words of earnest protest:"

"President Finney is one of the best men of this generation, but he is not infallible; and we have no more doubt that he is wrong in his teachings about amusements than that the Pope is infallible. The worthy President seems to concede that the love of sport is natural to a child; but we are left to infer that the 'propensities' which seek it are sinful even in a child, and that children who are converted in early life have thereafter no fondness for fun—that children who are 'unenlightened by the Spirit of God' are fond of rattles and dolls, but when that enlightenment takes place this guilty fondness is immediately suppressed, because a higher principle of life has taken possession of them; that all little children who become pious, immediately destroy their rattles and burn their dolls on the funeral pile of dead innocence." * * * "But," continues the editor, "the main argument of the article seems to be that, although converted men may resort to pleasant pastimes, yet, when they are thoroughly converted, they are 'effectually rid of the clamor of their lower propensities for fun, glee, merriment and hilarious sports,' or that they cease to desire not only such high-spiced diversions as theaters and balls, but also 'pleasure-parties, picnics, pleasure-excursions, and all like amusements.' * * We have no doubt that he is sincere in this opinion; but we have grave doubts as to whether this opinion fairly represents the mind of Him who hath made all things beautiful in his time. If President Finney has become effectually rid of all desire for diversion, as well as all appreciation of the beautiful in art and nature, we do not believe that it is by the work of God's spirit in him. God's saints in all the earth are against him in their testimony, a hundred to one. * * * By the standard which President Finney sets up nine-tenths of the Christians in the land are condemned as utterly wanting in spirituality. 'If this is Christianity,' writes a good man, 'then I never was a Christian, and what is more, I never want to be.' * * * We do not write these words of protest because we think that the love of amusement needs any encouragement at this time, or because we suppose that many persons will undertake to live by President Finney's rule. We speak only for the sake of those who may be repelled from religion by words like these, coming from a recognized authority in the church. * * * If President Finney had said that when a man is thoroughly consecrated the love of sport is no more the ruling affection, that it ceases to be sought as an end in itself, but rather as a means of health and usefulness; that no true Christian ever permits it to absorb his affections or keep him from the post of duty, we could have heartily agreed with him. But when he says the best Christians are 'effectually rid' of all desires for diversion, then we cannot but cry out against the laying of such a burden upon Christ's little ones."

Perhaps it does not become us to interfere in this quarrel, or to give any opinion on the merits of the case; but we will say so much as this: that the more liberal view represented by the editor, has been pretty thoroughly popularized by H. W. Beecher, and is becoming more and more the practical policy of the Young Men's Christian Association; so that there seems to be little reason to hope that the churches will ever return to the severe style of piety recommended by Mr. Finney. He was pilot forty years ago and run out his tack in the solemn direction with great faithfulness. Since then the vessel has "come about," and H. W. Beecher has held the helm, running on the tack of "cheerful Christianity." Whether the latter pilot may not have nearly gone ashore, we cannot say. Our hope is that we shall by and by get a fair wind, so that we "can lay our course" in the direction between these opposite tacks, keeping all the advantages of both sobriety and mirth in our voyage toward heaven. H. M. W.

CANT OUT-CANTED.

ACCORDING to a maxim of the homeopathists "like cures like." A corresponding paradox of equal truth is that like *kills* like. When Napoleon Bonaparte began his brilliant career, he held the world at his feet by his wonderful military genius; but he so lavishly used his power that his enemies learned his arts, and it was not long before the tables were turned upon him and he was defeated by his own strategic inventions. The Methodists, in the days of their greatest influence, had a marvelous knack at harrowing men's souls, by shaking them over hell-fire and transfixing them with darts of damnation; but the newspapers have learned their style of warfare, and perceiving their vulnerable points, are pitching into them with their own weapons. We do not think of the Methodists exactly as does the writer of the following article from the *Sun*, but what he says is so funny as a specimen of a rousing Methodist sermon against the Methodists themselves, that we think it ought to be preserved as a literary curiosity, whether the Methodists deserve the sermon or not:

WHAT AILS THE METHODISTS?—LACK OF FEAR OF GOD.

The Methodist clergymen of the New York Conference, who hold weekly meetings to discuss the affairs of the Church, have been much exercised for several months past in regard to the lack of religion in their congregations and the difficulty of getting up evangelical revivals. Many of them declare that the trouble is that Methodist ministers do not nowadays preach up the old-fashioned hell with sufficient frequency, power, and unction. At their last meeting the Rev. W. B. Corbett, a preacher of thirty-five years' experience, closed as follows an impassioned appeal for the old-fashioned style of preaching:

"Why do you ignore the fact that hell, damnation, and the devil are means, if rightly applied, that will be instrumental in winning souls to God? What! are you spending your time trying to find some new method of salvation? Perhaps you would like to create a new heaven and a new God, or some new Pullman palace cars to convey damned sinners to heaven. I was never so much astonished as when I heard one of our own number say that he seldom used the words hell or damnation in his sermons, but used words more appropriate. Great God! has it come to this?"

A frightened brother here jumped to his feet and requested the speaker not to be so profane, at which the Rev. Mr. Corbett shook his fist and said:

"Will my friend please mind his own business? I ask you, brethren, has it come to this in a preacher's meeting that I be kept from saying what I please, and when under the influence of the Holy Ghost? I say preach depravity, preach hell fire, hot damnation,

scorching flames, and the devil, until the world shall be awakened."

After the adjournment a throng gathered around brother Corbett and said that he had done his work well; but we think that he is mistaken in attributing the decadence of the Methodist Church to a lack of hell-fire in the preaching of its ministers. The real trouble lies in the lack of the Spirit among leading and influential members of the Methodist denomination, and in the non-enforcement of discipline against such members when they violate the rules of the Church and the fundamental principles of religion. The old camp-meeting hymn says:

"Oh, when you come to the Land of Rest,
You will find me there among the Blest,
Because I'm an honest Methodist."

That word "honest" tells the whole story. Who does not remember the time when Methodism and morality were synonymous? When membership in the Methodist Church was a certificate of good character, because a man who held it, however poor and humble, was known as one in earnest in his religion, despising the world, and faithful to the commandments of God? Is it so now? In these days, is the fact that a man is a member of the Methodist Church equivalent to a certificate that he is a spiritually minded and an upright man? Does it not, on the contrary, raise a suspicion in the community that he is a worldly man and even a rogue? Will the reverend gentlemen who may assemble at their weekly conference this morning, meet these questions squarely and with the good, old-fashioned spirit of truth and honesty which once made the Methodist Church a power in the land? For the Methodist Church was once a power in the land—a power for good, a very bulwark of society, a sheet-anchor of the republic.

No other church ever got such a hold on the Protestant masses of the country as the Methodist Church once had. Even those who made no profession of religion believed in it as they never believed in any other church; and why? Because its members were earnest, unworldly men and women, who kept the Commandments and paid a hundred cents on the dollar, and because if a member was caught in unchristian practices he was disciplined, and if he did not stop his evil doing he was expelled from the Church, no matter how rich or distinguished he was. Such men as Harlan, Garfield, Pomeroy, Daniel Drew, William E. Dodge, and others of that kidney, could not have retained a membership in good standing in the old-fashioned Methodist Church. Had they been members of it they would have been expelled, and its rolls purified of their names. But who ever hears of the expulsion of rich and influential Methodist scoundrels from the Church in these days? What Methodist preacher dares now to go to any rich member of his church, whom he may know to be living in sin and corruption, and reprove him and compel him to amend his ways on pain of expulsion? And as the rich and influential wrong-doers are not expelled, of course the poor and obscure ones must also be allowed to remain, and the result, as everybody knows, is that the name of Methodist has ceased to be a sure passport to public and private credit. In truth, the Methodist Church is no longer filled with the living spirit. It lies dead in trespasses and sins. The lusts of the flesh and the flood of worldliness and the love of lucre have gone over it and drowned out the fear of God and the love of heaven. Its voice once startled the world and raised sinners almost from death; but that voice is dumb and well nigh forgotten.

This is no strange result, nor is it any new thing. From the earliest ages every church that has tolerated dishonesty and corruption in its bosom has suffered in consequence. In the seventh chapter of the book of Joshua, there is a striking illustration of this truth recorded for the benefit of every church on earth, and it is an illustration and an example to which every church on earth should pay incessant heed. The Lord's chosen people were discomfited by the men of Ai, because, as the Lord told Joshua, the Israelites had soiled their hands with public plunder, "and have also stolen, and dissembled also, and they have put it even among their own stuff." What an accurate description this is of the great pious thieves of the present day, who have stolen and dissembled also, and put the plunder even among their own stuff! And the Lord said to his chosen people then, as he says to the Methodists now, "Neither will I be with you any more, except you destroy the accursed from among you." And so the thief was hunted out, and "was burned with fire, he and all that he had;" after which—and not before—the Lord's people were able to overcome their enemies.

The time was when the Methodists were as inexorable to the extent of their discipline with offenders in their Church, as Joshua was with Achan, and with similar results. When they kept their Church purged of thieves and dishonest people of every kind, they were full of the power of the Spirit. Then victory always perched upon their banners, and the Jerichos and Ais of sin went down before their triumphant hosts as they marched on to conquest in the name of the Lord. And if the Methodist Church would regain its old power, it must turn its back upon the flesh-pots of Egypt and return to its old spirituality and earnestness. It must first purge itself before it can successfully undertake the work of purifying outside sinners. What good does it do for a Methodist minister to preach hell-fire to unconverted men who have been cheated out of their just dues by conspicuous members of that very Methodist minister's own church? Will not those men look upon the whole thing as a piece of hypocrisy? Every Methodist clergyman in the land knows that they will do so, and that his preaching hell-fire to outsiders will be in vain so long as the insiders are allowed to cheat and dissemble also, and put the plunder even among their own stuff—except that portion of it which they give to the church or unload themselves of at donation parties.

What would be the use of a Methodist clergyman's trying to get up a revival in Senator Harlan's neighborhood? That unctuous old hypocrite was once a Methodist preacher himself, and is still a member "in good standing" of the Methodist Church. What good would it do to preach hell-fire to Harlan's neighbors with Harlan sitting as a shining example of the benefit of religion, in full view of the sinners? What would Brother Corbett's invocation of the devil avail in such a case? If the devil would only come forth at Brother Corbett's call, and go at Harlan with a red-hot pitchfork, right in the presence of the sinners, and after proding him up and down the aisles, carry him off beyond the help of whitewashing Congressional committees, then indeed we might see such an awakening as Brother Corbett prays for. But so long as the devil declines to come to the front, and saves up the red-hot pitchfork which he has in the embers for Harlan until preachers shall be in vain, it is useless to try to play him off on Harlan's neighbors. Call Harlan to account first; then peradventure, ordinary sinners may be likewise awakened.

We ask the Methodist clergymen who may assemble to discuss these matters this morning, if they expect, or if it is reasonable to expect that the Gentile Ai, can be captured by any army of the Lord's which is swarming with Achans, loaded with plunder and steeped to the lips in immorality. We ask this question not scoffingly, but in sincere sadness. We would gladly see that Church, which in former days was alive with the spirit and was such a bulwark of morality and religion, regain its ancient power for good among the people, and shine again with its old glory.

"Triumphant Zion lift thy head
From dust and darkness and the dead;
Though humbled long, awake at length,
And gird thee with thy glorious strength.

"Put all thy beauteous garments on,
And let thy excellence be known;
Decked in the robes of righteousness,
Thy glories shall the world confess!"

BOYISH MEMORIES OF TROPICAL FRUITS.

II.

WHAT shall we say of that marvel of lusciousness, the

MANGO?

When you hear some people hold forth about this, and other such fruits, you strongly suspect that "ne'er a bit" ever got into their mouths, because there's not a particle of enthusiasm in what they say. The mango is a fruit which makes my mouth water even to think of, although it is more than half a century since I saw one. The mango, my friends, it seems to me, may have sufficed to put the finishing touch to the banquet in Eden. I wish I could give you my impressions of the rare excellence of this product of our kind mother nature. But you must be in the tropics to do it justice—and perhaps in the shoes of a youngster. Of all fruits in those regions, it seems to be the best adapted to relieve the system from the effects of the excessive heat prevailing there. It does more; it regales you with a combination of some of the finest properties to be found in the category of fruits. The pulp is mellow; yet there's grain enough in it to retard its deglutition after the juice is disposed of, which of itself is not only overflowing, but exquisite in quality. True, it is rather more than a sub-acid, but so compounded as to suit the palate exactly. The flesh is just firm enough, in the best varieties, to let you slice it, but it must be done over a dish, to save the juice. The better way, however, is to eat it as you would a peach, first peeling it, for the skin is thick and leathery, like that of most of the tropical fruits, being intended, probably, as a shield against the withering effects of a burning sun. Like the peach, it has a stone, though larger, to which the flesh clings.

As to the flavor of this renowned fruit, the richest, tenderest and juciest apple you ever ate, having added to it something of a perfumed flavor, may give you just the faintest idea of what the mango is. There is no other fruit to which I can compare it. It might indeed be called the apple of the tropics.

Now you'll want to know how the tree looks. It is lofty, with a fine spreading top, not unlike that of the sweet chestnut, but of a dense and dark green foliage, forming altogether one of the finest looking trees known. The blossom is white, streaked with yellow. The fruit is somewhat kidney-shaped, in size generally that of an average apple—the skin of the same quality, but much thicker. The home of the mango is in the East, but it is plentiful in the West Indies also, having been introduced there about a hundred years ago. It is cultivated in hot-houses in England and in this country; with what success I know not.

But how do early recollections paint the

CUSTARD APPLE?

The very name implies something rich. This freak of nature is of the size of a large orange, and grows upon a small tree. The surface of the fruit is covered with lobes of a uniform diameter of a fourth of an inch, which are well rounded and closely packed. The skin itself looks somewhat like sha-green. Now, when you take an outside view of this curious looking ball, you little think that the inside can contain anything very nice. Your surprise then is all the greater when you open it and discover the hid treasure that seems to laugh at your quandary. Behold! a cup of custard made ready to hand after the choicest receipt, of the consistency of the thickest cream, delicately tinged with yellow. Take a spoon, now, and see if I am mistaken. You will not fail to notice the fine granulation of the contents, which is so common a case with these fruits, and which I think contributes much to one's relish. What is remarkable in this fruit is the fact that although it is luscious in the extreme, you never tire of it, nature has so seasoned it (and the young appetite too, no doubt). To call it custard is a feeble attempt to convey an impression of the luxury; it is simply unique. Suffice it to say that while you are entertained by it, you have not a thought beyond; unless indeed, it be of Him whose bounties cry aloud for acknowledgment.

R. S. D.

TOWNSHIP CO-OPERATION.

[Here is a speech that is well worth reading for the sake of its last paragraph if nothing more, in which the speaker, already known to our readers as the champion of "Christian Fourierism," sticks to it "that coöperation cannot succeed without a religious basis."]

SPEECH BY SAMUEL LEAVITT.

"The New York Liberal Club was addressed last evening upon 'Township Coöperation, the Legitimate Fruit of the Protectionist Theory,' by

Mr. Samuel Leavitt. The lecturer said that the only originality he claimed for the views he should present was to be found in the fact that he gives a novel turn to the doctrines of the Protectionists. The latter, or at least their strongest writers make these well-substantiated assertions: That the first need of man is association with his fellows; that societary motion, and thence prosperity, is in proportion to the intimacy of association and the diversity of employment in any district, if human rights are tolerably respected therein; that commerce being the direct exchange of services and ideas, and trade their indirect exchange for others, the former should be encouraged and the latter counted as simply an inevitable evil, to be restricted as much as possible; that the value of a thing being the measure of the obstacles to obtaining it, and middle-men being "creators of values," they are by so much nuisances; that approximation in the price of raw and finished commodities is a prime desideratum, and is to be accomplished by home manufactures; that keeping producers and consumers close together relieves the community of the heaviest tax, that of transportation, and prevents the ruin of soils by sending them afar in the shape of produce.

"The turn given by the speaker to these doctrines is that man being the molecule of society and the family a microcosm corresponding to the macrocosm—the state—what is good for the latter is good for the former; though it is not necessary to bring the technical doctrine of Protection into operation in a smaller sphere than that of the township. A man, to be sure, must be enabled to protect himself against all other men, but as a social and commercial being his highest prosperity is to be obtained by combining with a thousand or so others in a township for protection against the world. A truly scientific, cooperative society associated in all the relations of life, having agriculture for a basis, working up its raw material in factories, having all trades and productions maintained on the domain that can be carried on profitably, returning the debris of its produce as manure, &c., to the soil, displays the acme of Protectionism. Any other is open to criticism. For instance, as White, of the Chicago *Tribune*, says, in his introduction to Bastiat, it makes no difference to the soil of the Western State whether its product of wheat goes to England or to New England, it loses its vitality all the same.

"The township must be enabled to protect itself against the State Government, and the latter against the General Government. Thus shall the centripetal and centrifugal forces of society be kept in balance. The Senator from Flushing told this Club lately that a chief cause of legislative demoralization was the passage of small bills at Albany, and that all small local matters should be decided by township supervisors. Let the township be scientifically organized and officered by men whose interest it is to promote the general welfare, then supervisors can be trusted to control local interests, and then if the 'referendum' is adopted there will be a body of careful thinkers to respond to it from each of these little centers of true civilization such as any true legislators may fearlessly refer their enactments to. In the cooperative townships also a noble nomination and balloting for legislative, Congressional, and judicial officers would obtain such as the world has never seen. Some think that if the machinery of the General Government is well put together all will go well. The lecturer lays much more stress upon the minor machinery, and says: 'So circumstance the individual, so organize the family and the townships as will best tend to make them good, wise, and prosperous, and the General Government will soon come right.' Jefferson said, 'True political reform begins in the township.'

"Mr. Leavitt dwelt upon the appalling signs of the times. We should not be deceived by the glitter of progress in sience and art. Our advancement is different in degree and not in kind from that witnessed ages ago in India, Egypt, Assyria, Greece, and Rome. There are times when the scientific, artistic, and æsthetic classes rise in haughty disdain of the ethical man. They promise to carry humanity to an earthly paradise of luxury and ease. But they bring ruin only when unchecked by moral restraint, and presently the despised moralists come again to the top and gather up the fragments of all this 'skilled labor.' So the early Christian Church gathered what was left of Greek and Roman art and culture; so in the time of Dante and Tasso the long-despised Giaour began the work of gathering from the cultured Mohammedan Moor those glorious treasures of art and science that were falling from his enfeebled hand.

"The major part of the address was a setting forth of the protectionist arguments upon the points mentioned. He had not time to go into particulars as to the style of cooperation which he most admired. He had shown, however, in a previous lecture, as Horace Greeley finally admitted, that integral cooperation had never succeeded except upon a religious basis. He read, as further proof of this, an account of the rich German colony in Iowa. These are communists; he is not. He might, he said, be called a Christian Fourierite. He showed further that besides the eighteen rich Shaker societies and the Oneida Communists there are half a dozen other prosperous bodies of full cooperators in this country. Partial cooperation is flourishing greatly in England in stores, in France and Germany and Italy in banks, and latterly in Iowa, where 35,000 farmers have shown the world how to check railroad monopoly. Integral association by townships is sure to come ere long—for even such conservative progressives as Colonel T. W. Higginson are telling us of 'that great undercurrent which is sweeping us all toward some form of associated life.'"

A CO-OPERATIVE PLAN.

[As a pendant to the above we print the following letter, acknowledging hearty sympathy with the apparent spirit and wishes of the writer.]

———, *Hall Co., Nebraska, Feb. 24, 1873.*

DEAR FRIENDS:—Since I have been in this country and observed the crowds of immigrants, singly and in colonies, which are pouring in here, I have thought it possible to form a colony of those who love Jesus above everything else, and who love his followers as they love themselves. How pleasant it would be to live in such a neighborhood, and how profitable too, in a spiritual sense! I do not propose that we form a Community, but that we live as in ordinary society, and let the loving, brotherly spirit bind us closer together. If, at length, when we become known to each other we feel like gradually drawing the bonds closer, and forming a Community, we will but realize the hopes I entertain. We may make the change so gradual, as we learn each other's characteristics, and are drawn toward each other by love and sympathy, that there will be no danger of the disappointment and vexation that would certainly result if we attempted to gather at some point and form a Community at once. This is a splendid country, and good locations for such a colony could be found at numerous points between here and Colorado.

What do you think of the plan? I shall not select a homestead until I hear from you. I should be glad to correspond with any that desire to enter such a colony, and will make Jesus, his glory and honor, the prime object of their lives. While the prospect is fair for them to better their material condition if a Community is never formed, it is certain that the prospect will be even brighter for bettering our spiritual condition. B. F. O.

[Here is another letter nearly in the same vein, but aiming a little higher.]

Cedar Falls, Iowa, Jan. 25, 1873.

DEAR FRIENDS:—I am reading and studying the "History of American Socialisms." The thoughts that fill my mind while reading I would respectfully submit to your criticism. I have social ideas and desires, which are essentially religious and obtained from holy scripture. The teachings of Christ and his apostles are so deeply planted in my heart that I must meditate upon them day and night. Should I ever attempt to construct a social scheme or system I would have to do it on a Bible basis. To what has God destined and created man? The answer to this question is the substance of my ideas and desires. May it be truly answered not only by myself, but by Christ and his Holy Spirit. I do not attempt to form social theories, although I have extensive meditation, but I wish to enjoy the fulfillment of Bible teachings.

After reading "American Socialisms" I am not discouraged, but humbled in a certain measure. I do not consider myself a worthy leader or originator of an independent Association; but I should be thankful if I could only, even as a hired servant, come under the influence of a sound and prosperous Communism. Such is the present condition of my feelings and desires.

I do desire neither more nor less than a perfect image of the living God, and a perfect love to God and man. Love, not as a mere doctrine but as an afflatus, is, according to my ideas, the first and principal essential of a successful Communism. This book has taught me many very important lessons. I am convinced that prosperous Communism cannot be the task of one distinguished person. It must be the result of the unanimous and cooperative labor of several who are truly qualified and in one accord, as the New Testament requires. It cannot be the work of man, but must come from a higher inspiration.

I do not wish for a joint-stock or a common-stock Association, nor for an attractive Industry in which I cannot obtain that religious and personal Communism which the New Testament teaches and requires. I am in favor of a perfect, religious, Bible Communism. I have no right to require either more or less than does the Holy Bible. G. F.

THE NEWS.

The reduction of the Public Debt during the month of February was $5,277,880.

A duck of the Icelandic species, known as the long tail bird, was recently shot in the vicinity of Oswego.

An enormous California vulture, measuring 15 feet from tip to tip of wings, is exhibited in San Francisco.

The rebel Vice-President, Alexander H. Stephens, has been elected to the Congress of the U. S. from Georgia.

The fastest railroad train in the world is said to be the one from London to Bath, a distance of 107 miles. It makes the trip in two hours and thirteen minutes, including a stoppage of ten minutes.

According to the official records of New York city, last week was unusually favorable for matrimony, there having been 234 marriages, which is 128 more than during the previous week. Deaths in the city for the same period, 519; births, 408.

The New York Tribune Company have issued an extra sheet of eight pages containing a complete history and report of the Credit Mobilier matter in Congress, which sheet can be obtained from the publishers by enclosing ten cents with an order for it.

On the expiration of the 42d Congress, the Senate of the 43d Congress immediately convened, in compliance with a call from the President for an extra session of that body; so that this branch of Congress is still at work on unfinished business, attention to which seemed to the President imperative.

On the 28th ult. the Pope received a deputation of citizens of the United States. Mr. Glover of New York read an address; to which the Pope replied with hearty thanks, saying he would always pray for a country so particularly blessed of God with fertility of soil and industrious inhabitants. He hoped, however, that material things would not become the sole affection of the American people, for excessive love of riches corrupted the heart.

The suit against the firm of Phelps, Dodge & Co. for defrauding the Government of custom-house dues, has been settled by a compromise with the Government, the firm confessing judgment in the sum of $271,000,

and depositing their check for the amount, and the Secretary of the Treasury giving an order for the discontinuance of the case before the court. This is a virtual confession by the firm that their invoices were not correct, either by mistake or design.—*Independent.*

The proposed tour of the Shah of Persia is strongly opposed by the priests of his kingdom, who contend that his leaving is an infringement of all the traditions of Persian history, and use their influence to induce him to alter his determination. But the Shah has fully made up his mind to visit St. Petersburg, Vienna, Berlin, Paris, London, Constantinople, and probably Rome; and is proud of the thought that he will be the first monarch of Persia to break through the bonds imposed by prejudice and ignorance.

The recent discovery of immense frauds on the Bank of England, causes great excitement in financial circles in London. Forgery of U. S. bonds to the amount of about two millions of dollars is the trouble. The forged drafts were drawn on Jay Cooke & Co., Baring Brothers, and the Rothschilds. The workmanship of the bills was such as to almost defy detection, and the accidental discovery of the forgeries was brought about by one of the Messrs. Rothschilds noticing in some bills of exchange a difference in the color of the ink from that ordinarily used. £2.500 have been offered for the arrest of the forgers.

On the eve of adjournment both houses of Congress passed a bill increasing the salaries of Congressmen and government officers, to take effect from the 4th of March 1873, as follows: The President of the United States to receive $50,000; Vice-President, $10,000; Justice of the Supreme Court, $10,500; Cabinet officers, $10,000; Assistant Secretaries of the Treasury, State and Interior Departments, $6,000; Speaker of the House, $10,000; Senators, Representatives and Delegates (including the Congress just expired), $7,500. This is to be in lieu of all pay and allowance, except actual individual traveling expenses from their home to the seat of government and return, by the most direct route usual to travel for each session.

At noon last Tuesday the 42d Congress adjourned *sine die.* The inauguration of the President and Vice-President elect immediately followed, and the accompanying ceremony and parade, was reported as unusually brilliant and imposing. The following paragraph from President Grant's Inaugural address, gives his idea of the future of this country:

"It is my firm conviction that the civilized world is tending toward republicanism, or government by the people through their chosen representatives, and that our own republic is destined to be the guiding star to all others. Under our republic we support an army less than that of any European power of any standing, and a navy less than that of either of at least five of them. There would be no extension of territory on this continent which would call for an increase of this force, but rather might such extension enable us to diminish it. The theory of government changes with general progress. Now that the telegraph is made available for communicating thought, together with rapid transit by steam, all parts of a continent are made contiguous for all purposes of government, and communication between the extreme limits of the country made easier than it was throughout the old thirteen States at the beginning of our national existence. * * * * * I do not share in the apprehension held by many as to the danger of governments becoming weakened and destroyed by reason of their extension of territory. Commerce, education, and rapid transit of thought and matter by telegraph and steam, have changed all this. Rather do I believe that our Great Maker is preparing the world in his own good time to become one nation, speaking one language, when armies and navies will be no longer required."

CHOICE PLANTS AND SEEDS.

The O. C. offer 25 packets of Flower Seeds, put up in neat boxes, for $1.00.

BULBS.—Gladiolus, 10 cts each, $1.00 per dozen.
Cannas, " " " " " "
PLANTS.—Extra Pansies, 15 " " $1.50 " "
Clematis Viticella, (common name, Garden Jasmine) 25 cts. each, $2.50 per dozen.

A NEW ERA IN JOURNALISM.

The Great Achievement of the Nineteenth Century.

THE DAILY GRAPHIC.

All the News and Full of Pictures.

The DAILY GRAPHIC is the title of a newspaper, published in New York, which is achieving the most remarkable journalistic success ever chronicled. It is an eight-page evening paper (three editions daily), elegantly printed, and conducted by the ablest editorial talent attainable.

As a newspaper THE DAILY GRAPHIC stands in the first rank, and contains regularly

The Very Latest and Fullest News from all Parts of the World.

Its great feature consists in the fact that it is not only a newspaper, but *an illustrated newspaper* as well. Four of its pages are filled with choice reading matter—telegrams, editorials, general and local news, items, gossip, and correspondence on the freshest and most interesting topics. The remaining four pages consist of

SPLENDID ILLUSTRATIONS

executed in the most faultless and artistic style, and *portraying accurately and fully all leading events within twenty-four hours after their occurrence.* Those who have made journalism a study, and fully appreciate the great enterprise manifested in the collection and publication of news by the aid of the telegraph, steam presses, and the development of journalistic talent, have been fond of advancing the theory that the next advance in that field would result in a newspaper furnishing in its regular issues pictures of all current prominent events. That theory is a theory no longer; the newspaper of the future is the newspaper of to-day, and that paper is THE DAILY GRAPHIC. The processes which render this marvellous achievement an existing fact are the result of the most careful study and endless variety of experiments, gradually perfected during the past twelve years. They depend upon improvements in lithography and the application of the photographic camera. By their aid a picture is engraved and made *ready to print* in from twenty minutes to two hours. Costly and elaborate plates, works of art, scenes of interest, are reproduced and pictured forth with equal facility and the most scrupulous fidelity. Illustrations of leading events are engraved and prepared for the press even before the accompanying written narrative or description leaves the hands of the compositor.

For the proper practical working of so great an enterprise, THE GRAPHIC COMPANY was formed with

A Capital of $500,000 in Gold;

months and months before the first issue of THE DAILY GRAPHIC, the most extensive preparations were made, and to-day THE GRAPHIC COMPANY has

The Largest and Most Complete Newspaper Establishment in the United States.

In the great work of illustrating the events of the day an extensive corps of the best known and most accomplished artists are constantly engaged.

THE DAILY GRAPHIC aims to be in its strictest sense a *newspaper.* Striving always to be just and truthful, it discusses all questions independently and impartially. It is not the organ of any party, sect, or creed. It is always high-toned, and contains nothing to offend any taste. Its contents give it an immense advantage over the "old fashioned" papers. The annual subscriber gets

A PICTORIAL HISTORY OF THE YEAR.

a volume of twenty-four hundred pages, constituting a valuable record of events and a graphic panorama of our time and progress. It possesses not merely a local interest, but is a paper for every reader of the language. It is, emphatically,

The Paper for the Household.

Terms, $12 per year, or $3 for three months.
Address,

THE DAILY GRAPHIC,
39 and 41 Park place,
New York City.

ANNOUNCEMENTS.

SILK GOODS.

Machine-Twist and Sewing-Silk of their own manufacture for sale by the Oneida Community.

Address, [S] ONEIDA COMMUNITY, *Oneida, N. Y.*

PRESERVED FRUITS AND VEGETABLES

Put up for sale by the Oneida Community in tin and glass. Price list sent on application.

Address, [F] ONEIDA COMMUNITY, *Oneida, N. Y.*

Scientific Propagation. By John Humphrey Noyes. Large octavo pamphlet of 32 pages. Price 25 cts.

Male Continence. By John Humphrey Noyes. An octavo pamphlet of 24 pages Price 25 cts.

Hand-Book of the Oneida Community: Containing a Brief Sketch of its Present Condition, Internal Economy and Leading Principles. Price 25 cts.

The five pamphlets—"Salvation from Sin," "Dixon and his Copyists," "Hand-Book of the Oneida Community," "Scientific Propagation," and "Male Continence," will be sent to a single address on the receipt of $1.00.

Back Volumes of the Circular. Unbound. Price $2.00 per volume.

MESSRS. TRUBNER & COMPANY, Book-sellers, Paternoster Row London, have the "History of American Socialisms," the "Trapper's Guide," and the "Hand-Book of the O. C.," for sale They will receive subscriptions for our other publications.

PHOTOGRAPHIC PICTURES

Of the Oneida Community Buildings and Grounds, made by a first-class artist and finely mounted, can be had on application at the Office of the Oneida Circular.

LARGE VIEWS.

Bird's-eye View, looking West, of Community Buildings and Grounds, 12 by 14 inches, on fine enameled board 16 by 20 inches, price $1.75. Quadrangle and Group, 12 by 14, mounted like the above price $1.75. South and East Fronts of the Community Dwellings, giving a good view of the New Wing occupied by the Children, 8 by 10, on tinted board 10 by 12, with an ornamental border price $1.00.

STEREOGRAPHS.

No. 2, East and North Lawns. No. 3, East Lawn and Portico. No. 4, East Front. No. 5, North Front and Lawn. No. 6, Bird's-Eye View of Buildings looking West. No. 7, Lawn and Summer House. No. 8, West View, toward Railroad. No. 11, Quadrangle. No. 12, Lawn View. No. 15, South and East Fronts. Price of Stereographs $3.00 per doz. Sent by mail, post-paid, on receipt of price.

Oneida Circular.

A WEEKLY JOURNAL OF HOME, SCIENCE AND GENERAL INTELLIGENCE.

Published by the Oneida & Wallingford Communities.

ONEIDA COMMUNITY, MARCH 17, 1873.

New Series, Vol. X, No. 12
Whole No. 1453.

POST-OFFICE ADDRESS:

ONEIDA CIRCULAR, ONEIDA, N. Y.

TERMS:

The CIRCULAR is sent to all applicants, whether they pay or not. It costs and is worth at least two dollars per volume. Those who want it and ought to have it are divisible into three classes, viz., 1, those who cannot afford to pay two dollars: 2, those who can afford to pay *only* two dollars; and 3, those who can afford to pay *more* than two dollars. The first ought to have it free; the second ought to pay the cost of it; and the third ought to pay enough more than the cost to make up the deficiencies of the first. This is the law of Communism. We have no means of enforcing it, and no wish to do so, except by stating it and leaving it to the good sense of those concerned. We take the risk of offering the CIRCULAR to all without price: but free subscriptions will be received only from persons making application for themselves, either directly or by giving express authority to those who apply for them.

Foreign subscribers, excepting those residing in Canada, must remit with their subscriptions money to prepay the postage.

THE UNITED COMMUNITIES.

ONEIDA COMMUNITY

Is an association living in Lenox, Madison Co., N. Y., four miles south of Oneida and a few rods from the Depot of the Midland Railroad. *Number* of members, 205. *Land*, 654 acres. *Business*, Manufacture of Hardware and Silk goods, Printing the CIRCULAR, Horticulture, &c. *Theology*, Perfectionism. *Sociology*, Bible Communism.

WILLOW-PLACE COMMUNITY.

Branch of O. C., on a detached portion of the domain, about one and one-fourth miles north of O. C. *Number* of members, 19. *Business*, Manufactures.

WALLINGFORD COMMUNITY.

Branch of O. C., at Wallingford, Conn., one mile west of the Hartford and New Haven Railroad. *Number* of members, 45. *Land*, 228 acres. *Business*, Publishing, Job Printing, Manufactures, and Horticulture.

SPECIAL NOTICE.

The O. C. and Branches are not "Free Lovers," in the popular sense of the term. They call their social system BIBLE COMMUNISM or COMPLEX MARRIAGE, and hold to freedom of love only within their own families, subject to Free Criticism and the principles of Male Continence. In respect to permanency, responsibility, and every essential point of difference between marriage and licentiousness, the Oneida Communists stand with marriage. Free Love with them does *not* mean freedom to love to-day and leave to-morrow; nor freedom to take a woman's person and keep their property to themselves; nor freedom to freight a woman with offspring and send her down stream without care or help; nor freedom to beget children and leave them to the street and the poor-house. Their Communities are *families*, as distinctly bounded and separated from promiscuous society as ordinary households. The tie that binds them together is as permanent and sacred, to say the least, as that of marriage, for it is their religion. They receive no new members (except by deception or mistake), who do not give heart and hand to the family interest for life and forever. Community of property extends just as far as freedom of love. Every man's care and every dollar of the common property are pledged for the maintenance and protection of the women and children of the Community.

ADMISSIONS.

These Communities are constantly receiving applications for admission which they have to reject. It is difficult to state in any brief way all their reasons for thus limiting their numbers; but some of them are these: 1. The parent Community at Oneida is full. Its buildings are adapted to a certain number, and it wants no more. 2. The Branch-Communities, though they have not attained the normal size, have as many members as they can well accommodate, and must grow in numbers only as they grow in capital and buildings. 3. The kind of men and women who are likely to make the Communities grow, spiritually and financially, are scarce, and have to be sifted out slowly and cautiously. It should be distinctly understood that these Communities are not asylums for pleasure seekers or persons who merely want a home and a living. They will receive only those who are very much in earnest in religion. They have already done their full share of labor in criticising and working over raw recruits, and intend hereafter to devote themselves to other jobs (a plenty of which they have on hand), receiving only such members as seem likely to help and not hinder their work. As candidates for Communism multiply, it is obvious that they cannot all settle at Oneida and Wallingford. Other Communities must be formed; and the best way for earnest disciples generally is to work and wait, till the Spirit of Pentecost shall come on their neighbors, and give them Communities right where they are.

THE BATTLE OF LIFE.

Home-Talk by J. H. N.

THE world and the world's doctors say that death is *natural*. Yes, I answer, and so is life natural. Indeed if there were no life, there could be no death; so that life is natural first, and death only afterward. It ought to be presumed therefore, that life is *more* natural than death. They are exactly opposite to each other, and yet both are natural: therefore nature fights itself, and antagonism is natural. The fact that a thing is natural, then, is no sure sign that it will prevail or has a right to prevail. It has a right to fight, but so has its antagonist; and the question which shall prevail must be determined by a higher power. It is natural for the cat to kill the mouse; but it is just as natural for the mouse to escape the cat with all its might, and a little more so, because life to the mouse is worth more than meat to the cat.

The statement, therefore, that death is natural, is not quite half of the truth: the whole truth is, that a fight between life and death is natural, and that life being primary and better than death, has the right to prevail, and is most likely to in the long run, if there is a good God that manages the world.

Throughout the animal creation there is a universal and everlasting fight against death. Every living being, from the infinitesimal insect to the elephant and the whale, is striving with might and main to keep itself alive, and stave off death as long as possible. But this fight, so far as brutes are concerned, is carried on by mere instinct and momentary struggles without concert or foresight, or science.

Man on the other hand, though an animal, is quite distinct from all other animals, by the fact that in the fight with death, he foresees, calculates, lays plans. uses science and combination; and even hopes in one way or another for immortality. It must be that man hates death far more intensely than the brutes can, because he understands its horrid character, can reflect upon its details, foresees and dreads it from afar. In fact, man's life, unlike that of the brutes, is made miserable almost from birth by the fear of death. So that the universal revolt against death is immensely fiercer and stronger in the human sphere than anywhere below; and with this intensified hatred of death, man's foresight and invention go to work and organize all the results of experience and science into a vast system of strategy against the destroyer. With thousands of educated men for leaders, the millions are forming themselves into one great army of resistance to disease; and as disease is the cause of death—nay, is death itself in its beginning—the courage and enthusiasm of this army, must at last rise to the encounter with the central foe under whom the whole creation groans. Now must we believe that man, with all this advantage of power and reason, will have no better success in the war with death than the brutes have? Are we to be stopped in our plea against the king of terrors by the allegation that death is natural, when we know that this allegation only means that death has been natural to brutes, and to men so long as they were like brutes, too ignorant to combine and fight the enemy scientifically?

What is the difference between man and the brute? The popular answer is, Man has a soul, and the brute has none. Very well; but is man, with a soul, amenable to death, just as if he were a brute without a soul? Must man, with the consciousness of an immortal, inner life, submit to the law that governs the brutes that perish? Reason demands that there should be a difference of bodily destiny between soul and no soul. If the soulless brutes do die, that is no reason why immortal souls should have nothing but mortal bodies. Let like go with like. If we are immortal beings, I say it is natural that we should have immortal bodies.

[Selected from G. W. N.'s Writings.]

THE RESURRECTION CHANGE.

THE numerous railroads, telegraphs, lines of steamships, and enterprises of similar magnitude which abound in our country, give evidence of a great amount of well-directed energy. The enterprise which leads so many of our citizens to accumulate splendid private fortunes, is an index of much individual power and prowess. Inherent in the organization of most men, there is a reservoir of energy and enterprise, which in one way and another constantly struggles for expression. Hence the many monuments of individual power, which so impress the beholder in all parts of our land; hence the railroads which compress as it were days into hours, and the telegraphs, which anticipate time itself. They are but the outward manifestations of a principle which dwells, consciously or unconsciously, latent or active, in the breast of every man.

The death and crucifixion of the flesh is a direct and inevitable consequence of the believer's union with Christ. It is a painful and trying process, and to no part of human nature is it more painful than the department of life mentioned above—that which craves active, energetic expression in some outward way. Often the sufferer feels himself broken—ground to powder, as it were; his native energy and strength gone—the will of the flesh subdued and weakened, and he comparatively powerless. He fears he shall never be the strong, efficient person he once was. The heavens look dark

above him, and life, for a time, seems deprived of half its charm. This is the death of the cross—the extinguishment of the natural life—of the old man.

But God's purpose in this is not to annihilate or weaken our natural powers, but to *change their direction.* He desires that that part of our nature whose tendency is outward—toward the inane, should be turned within, and should gravitate toward the center. The severe ordeal which tries the very soul, is the least painful process necessary to effect this change. And when the current of our life sets in the central direction, we shall find not only that we have lost none of our normal energy and power, but on the contrary, that by amalgamation with the life of Christ, our spirits have a tenfold buoyancy and strength. There is opportunity for the exercise of any amount of individual enterprise in the direction of Christ, and the church which is "the bride, the Lamb's wife." And in looking this way—laboring earnestly "to apprehend that for which we are apprehended by Christ," we realize in us a constantly increasing vigor—a perrennial freshness of strength, which never wearies, but is immortal. This is the resurrection.

PAUL'S HUNDRED-FOLD.

HE exchanged the service of a bigoted, persecuting Jewish council for that of a devout, loving, Christian brotherhood. From hunting down and destroying innocent Christians, he became the bearer of the glad-tidings of salvation to both Jews and Gentiles all over the world. He was blessed with abundant revelations. He founded churches that loved and served him as their father in Christ. He vindicated himself and his cause in eloquent, inspired speech in the presence of Roman Governors and kings and high priests and before Hebrew, Greek and Roman citizens. He was endowed with power from on high and wrought many mighty works; in Christ's name he healed the sick and cast out devils, and became known and loved as a great public benefactor. He wrote a large share of the world's text-book for teaching the truths about Christianity, for which countless hearts in the ages since have fervently blessed him. In a life crowded full of suffering, adventure, heroism, romance, and manifestations of supernatural power he always exhibited an unquenchable zeal, an undaunted courage and devotion, unsurpassed and sublime. Truly he fought a noble fight and finished a splendid course and won that crown of righteousness which was laid up for him in that bright world to which he was called. J. H. C.

A LIFE-CHAPTER.

MY father died when I was but two years old, leaving my mother entirely penniless with myself and a sister older to provide for as best she could. My father was a very unthrifty man, living from hand to mouth. He was also intemperate, so that our home was a very wretched one. Unable to support us, my mother gave me away to a neighboring farmer. I was then three years old. The family having charge of me had an only son, a boy about four-years my senior. Being a petted child, he, of course, had pretty much his own way, as such children usually do. I very soon became a pupil of this lad and was by no means a dull scholar in learning the juvenile vices in which he was an adept. My new master seemed to regard me as having been born for toil and nothing else, and as my disposition refused to appreciate his theory, I did as much shirking as I could with safety to my skin and bones.

How much of my father's shiftlessness I inherited I cannot say, but a good deal of it, no doubt; I also inherited a weakness toward strong drink. At a very early age I indulged in intoxicating liquors whenever offered me, and I remember getting drunk several times before I was fifteen years of age. One of my most serious faults was that of contracting debts without bestowing a thought upon the question, How am I to cancel them? I would borrow a neighbor's horse, for instance, to ride off to some village and then say nothing about compensating the owner of it on my return. I was naturally quite generous toward my friends, giving away things with a free hand; but that was no justification for running in debt.

In looking back on those dark days of my childhood, I can see that a good providence did not entirely forsake me. In the wife of my master I had a friend. Mrs. D—— was a religious, God-fearing woman. To me she was a good angel. When I was deserving of severe chastisement, she would, like a true mother talk to me very kindly, but sincerely, about my faults and about seeking the salvation of my soul. My own parents were Universalists, so far as they pretended to have any religion, and the question of saving their souls, through a change of heart, had never troubled them.

At the age of seventeen I left Mr. D—— to go and learn a trade. Possessing considerable mechanical talent I was soon able to earn good wages. My shiftlessness, however, did not leave me, and being easily drawn into bad fellowships, I foolishly squandered my earnings. The tendency also, to contract debts without knowing or caring how I was to meet them, grew on me as I advanced in life. I had a good trade and could always find work at liberal wages. But my father's shiftlessness, like an evil angel, pursued me wherever I went, so that my reputation for being the most unthrifty of mortals was generally understood in all places where I found employment. "C—," my employers would say, "is a tip-top workman; but he is always in debt, and never even with his promises." At times my thoughts would wander back to the good advice given me by Mrs. D——, and I would ask myself if it were possible that I could get religion and be made a better man? That I was a great sinner no one needed to tell me. But could my character be changed for the better?

In the town of B., where I was at work, a a new sensation occurred in the religious world. A public lecture was advertised on the subject of "Perfection, or the Doctrine of Holiness." If any man in the world, thought I, needs a religion that can change character I am that man. Accordingly I attended the lecture and to me indeed was opened a new gospel. With all my vices I had conformed to the prevailing custom in New England society of attending church on Sunday. The preaching, however, did not seem to reach my case. The lecturer on this occasion was a man who spoke as one having something to say and authority for pressing it home upon the hearts of his hearers. From that hour the Bible became a new revelation to me. I began to be impressible to good influences and to yield to their guidance. Though it is now nearly thirty years since that evening, I have never ceased to thank God for the good providence which led me to listen to J. H. Noyes, the discoverer of Paul's gospel of justification by faith, freedom from sin and self-condemnation, through the confession of an indwelling Christ. My heart was made joyful by the abundance of light and love which now filled my soul to overflowing and I little dreamed of the deadly conflicts with enemies within which awaited me. I connected myself with a few other converts to the doctrine of Perfectionism and we congratulated ourselves that we had so easily put off our old life. This delusion, however, did not last long in my case. I learned by long and severe combats with evils in my character that God does not destroy our enemies for us, but strengthens our own arm, by giving us the faith and spirit of his Son, that we may do it for ourselves.

Soon after my conversion I formed an acquaintance with the Putney School of Perfectionists and became a reader of their publications. I went on swimmingly for a while; but it was not long before my old enemies, shiftlessness and debt-making, appeared again in all their strength. I had a good trade and no one to support but myself, and yet I was unable to keep out of debt. From my earliest recollection I had been a victim of the spirit of fear. Discouragement seized me, and finally to cap the climax disease prostrated me.

While in this situation a good providence sent to me a physician, not exactly of my own choosing, and one whose prescriptions were then a novelty. A member of the Putney Corporation happened to be in town on business, and having heard of my illness he called on me. That visit is still fresh in my memory. After learning something of my spiritual state he said the medicine I needed could not be found at the drug-store, nor in the prescription of a doctor, but in the Spirit of Truth: in a word, what I needed was a rousing criticism. That, he said, was the only medicine which would do me any good. I having signified my wish to have the dose administered, the Putney friend called into my sick room a few of the neighboring Perfectionists and without ceremony this impromptu committee spoke the truth about my case in all sincerity.

"What!" said my Putney brother, "do you expect to enter heaven and associate with the pure, the honest, the faithful and the victorious and keep at the same time your shiftlessness, indolence and a score of other faults? What is your confession of Christ good for, if it does not begin at once to change your character by giving you courage and strength to con-

quer your bad habits? God, in his infinite goodness, has given you the spirit of his Son for the very purpose of enabling you to overcome every enemy that your adversary the devil can bring against you. Undoubtedly you inherited this shiftless tendency from your father. Well, admitting that you did, then criticise your father, your mother, or any other one who may have had an agency in transmitting to you these defects of character. Sincere criticism was undoubtedly what Christ meant when he said, 'If any man come to me, and *hate* not his father, and mother, and wife, and children, and brethren and sisters, yea, and his own life also, he cannot be my disciple.'"

The foregoing is a sample of the medicine administered, and it was not long, I can assure you, in taking effect. Before the criticism committee had fairly finished its work I found myself in a profuse perspiration and the breaking up of my fever soon followed. That criticism brought a flood of light upon my soul. I seemed to hear Christ saying to me, "You have ample means in the gift of my spirit, which is in you, to work out your own salvation." I immediately set about judging my past life, boldly combating the spirit of my family in myself with the confession of the truth about it, however mortifying to self-complacency and family pride. From that criticism I date the beginning of a radical improvement of character. When temptations assailed me, presence of mind and strength were given me to effectually resist them. Twenty-five years ago I joined the O. C., and of the grace of God working in me through obedience to the faith principles of the Community, I cannot say too much. In conclusion I venture to assert that one can scarcely be found, in any of the walks of life more heavily burdened with inherited and acquired defects of character than was I when cast upon the cold charities of the world. C.

THE SHAKER PARADOX.

IT is well known that dancing forms no insignificant part of the devotional exercises of the Shakers; but the arguments by which they defend their practice in this respect against the criticisms of those who urge that dancing has been from time immemorial perverted to the service of the wicked are not so generally understood. Here are some which we condense from a chapter on "Dancing as an Act of Divine Worship" in one of their standard works:

"Every created talent pertaining to fallen man, which was designed for the service of God, has been perverted and abused to vain, foolish and wicked purposes; and perhaps none more generally so than that of singing. Music, unconnected with dancing, is doubtless much more generally used as an amusement of the wicked: besides, as it is the very life of dancing, it must, at least, be equally reprehensible in that view alone. But this is not all. The talents of poetry and music, exclusive of their connection with dancing, are still far more abused by being devoted to base purposes. Is there a single base passion or evil propensity in human nature which has not been more or less excited, indulged and gratified by means of poetical and musical compositions?

"And yet music has been encouraged and practiced, as a part of divine worship, by nearly all denominations, while dancing has been condemned and excluded. But upon what principle? Why truly, upon this: that dancing cannot be an acceptable mode of worship, because it is practiced in the carnal recreations of the wicked! Thus man assumes the right of deciding in what manner God shall be worshiped! But will God acknowledge such a decision as this? And must the followers of Christ, in compliance with this decision, bury a portion of their talents in the earth, which were given for the service of God, because the wicked have profanely abused such talents in the service of the devil? Does such a decision appear honorable to the wisdom of man, even upon the supposition that he has a right to decide in what manner God shall be worshiped? Is it not rather a glaring evidence of the total insufficiency of human sagacity to regulate those things which belong to Divine Wisdom?

"God has created man an active, intelligent being, possessing important powers and faculties, capable of serving himself according to his needs and circumstances; and he is required to devote these powers and faculties to the service of God. To devote only a part to the service of God is to render an imperfect service, which God never will accept. Man is required to love God with all his heart, soul, mind and strength. Every faculty must therefore be devoted to the love of God; but it is in vain to talk of loving God with all the faculties without serving him with all the faculties; for no man who truly loves God with all his faculties can refrain from devoting all to his service; and he who is unwilling to devote all to the service of God can never devote all to his love.

"God has created nothing in vain. The faculty of dancing, as well as that of singing, was undoubtedly created for the honor and glory of the Creator; and therefore it must be devoted to his service, in order to answer that purpose. God has created the tongue of man and endowed it with the faculty of speech, by which he is enabled to manifest the desires and feelings of his mind. He has also created the hands and the feet, and enabled them to perform their functions in the service of the body. And shall these important faculties or indeed any of the powers and faculties of man, which God has given to be devoted to his service, be active in his own service, or in the service of sin, and yet be idle in the service of God? Or shall the tongue alone be employed in the service of God, while all the other faculties of the body are idle or otherwise employed? employed, too, perhaps, in some evil, or at best, some useless purpose.

"The parable of the unfaithful servant, who buried his talent in the earth is well calculated to show that God requires of man the faithful improvement of his talents; and it must hence appear evident that he who will not improve his talents cannot be accepted of God, nor find an entrance into the Kingdom of Heaven. Man is made up of certain active powers and faculties which were created of God, and which must be employed in some active service or remain idle. When these faculties are exercised in divine worship God is honored and glorified by them; but when they are exercised in the service of sin and Satan then God is dishonored thereby. If, therefore, the soul who suffers these talents to remain idle and unimproved is to be excluded from the Kingdom of Heaven, what must be the portion of him who employs those talents in the service of the devil, which were given him for the service of God?

"God requires the faithful improvement of every created talent.

"Since we are blessed with hands and feet, those active and useful members of the body on which we mostly depend, in our own service, shall we not acknowledge our obligations to God who gave them, by exercising them in our devotions to him?"

We think the reader will agree with us that there is much truth as well as shrewdness in these arguments. It must be admitted that the Shakers show there is no good reason why the abuse of any part of our God-created faculties should excuse us from their legitimate use, and that we are under obligations to devote every talent and power given us to the service of God. But how persons who put forth such arguments should at the same time make such a notable exception to their own ruling as the Shakers do, or how they excuse themselves from the grossest inconsistency, we cannot understand. They cannot deny that the same Power which endowed man with talents for poetry and music endowed him with sexual attraction, or that the means by which that attraction finds expression were not created by Him who "blessed us with hands and feet." They have cut themselves off from all recourse to the common argument that the sexual functions cannot be exercised in the service and to the glory of God "because they are practiced in the carnal recreations of the wicked," by declaring that "God requires the faithful improvement of every created talent," and that "to devote to his service only a part" of "the important powers and faculties" with which he has created man "is to render an imperfect service, which he will never accept." Their language covers the whole ground. To be sure, sometimes, in claiming every faculty of man for the service of God, they add the qualifying phrase, "which God has given to be devoted to his service," or "which was designed for the service of God." but in other cases, as the above extracts show, they make no such exception, and their reference to the parable of the unfaithful servant and their assertion that "man has no right of deciding in what manner God shall be worshiped," fairly preclude them from making any exception to their rule, that "every faculty must be devoted to the love of God," and that "it is in vain to talk of loving God with all the faculties without serving him with all the faculties." W.

"HOMEWARD BOUND."

THE nebular theory of the astronomer La Place, presented, or rather depicted as it is by Edgar A. Poe in that singular production of his, entitled "Eureka," may serve as a fine illustration of what may be going on in the spirit-world. The main point with the writer is the *unity* of matter as a source of all natural phenomena, operating through the laws of attraction and repulsion; all the particles of matter have such an affinity for one another from having once existed as a homogeneous mass, that they were no sooner disbanded and scattered throughout space, than they began their homeward march by seeking their normal condition. Hence the law of gravitation with its infinite complications. The conclusion arrived at is that a return to the original state is the inevitable destiny of every single atom of matter—the cycles to be repeated perhaps, *ad infinitum*.

With this for a text, what may we not picture to ourselves in regard to the great spiritual plot of creation? There seems to be something from time to time in the spirit of man that singularly corresponds to this yearning among the atoms for aggregation—this longing for some lost home, as it were. Has there then been a corresponding expansion or dispersion in the spirit-world, of the original *unit* of life, accompanied by a centripetal force that shall never rest until it restores each member of that unit to the bosom whence it came? In other words, are all those spirits that belong to the original "bundle of life" destined as are the atoms in space, to find their way back to their primitive home, when they shall have fulfilled the purpose of their mission in a world of matter?

"But the soul of my lord shall be bound in the bundle of life with the Lord thy God."

As to the object in view by such expansion or diffusion of life, it might be said that when God made man, for instance, of the dust of the earth, he breathed into him the breath of life. He sent that life adrift, as it were, assigning it a course of experience with matter that should give it circulation and growth, thereby securing in the end a greater breadth of life for the benefit of the common stock. But, as in the case of matter, that life seems to have carried with it a centripetal force that has tended to bring it back to the point whence it started, so that in spite of all it had to contend with under a dispensation of "good and evil," it never really forgot its home. At the very worst Christ could say that his sheep "knew his voice." *Growth*, then, appears to have been one of the objects of a diffusion of life—through intercourse with matter as a means.

According to our author's view of the nebular theory (which by the way, is a very interesting one), it may be said of matter, as of spirit, that it is "homeward bound." Matter, in short, partaking of so essential a property of spirit, may, for aught we know to the contrary, be part and parcel of the same, and may be united to it as body is to soul. Why need we suppose that matter was ever made out of nothing? The Maker of all things was always complete in himself, and that idea involves every conceivable thing (matter in some state or other included); therefore matter must always have existed. "Things which are seen were not made of things which do appear."

R. S. D.

ONEIDA CIRCULAR.

TIRZAH C. MILLER, EDITRESS.

MONDAY, MARCH 17, 1873.

☞We are pleased to see that the *Daily Graphic* steadily improves. The pictures are clearer than they were at first, and bid fair to rival those of the weekly Pictorials. The printing also is better. We judge that a better quality of paper has been adopted. The reading matter is lively and artistic. The whole tone of the paper is, to our taste, as fair and wholesome as it can be under the prevailing fashion of propagating no-religion by infinitesimal spores. The make-up of the paper has some inconveniences. The pictures occupy the four outside pages; so that to get at the reading matter immediately one has to either peep inside the uncut leaves, or turn the paper inside out. The best way is to put the paper on file and cut the leaves.

The Graphic gives an account of an article in *Frazer's Magazine*, by Galton, on "*Viriculture*," which is his new term, coined as our word "*Stirpiculture*" was, for use in the growing science of Human Propagation. We shall say something about Galton's article when we get the Magazine. Meanwhile we suggest that the word "*Viriculture*," according to strict etymology, means the cultivation of the *male* part of humanity only. The dictionaries say that *Vir* means "a male person; a man in distinction from a woman; a husband;" but is never used in the common gender as our word *man* is. *Homo* is the noun for that sense. *Human* and *humanity* come from *homo*; but *virile* and *virility* come from *vir*. Does Galton propose exclusive cultivation of the male in the future development of humanity?

We confess that our word *Stirpiculture* is generic, including all kinds of race-culture, animal and human; and a more specific name for the culture of human thorough-breds is desirable. But if good Latin is of any importance, we must content ourselves with *Homoculture* or *Hominiculture* or *Humaniculture*, though these words do not sound so well as *Viriculture*.

And, after all, these words do not exactly express what we want. It is not the culture of the human race, but the culture of *special breeds* of the human race, that calls for a new name. If we could invent a single euphonious word that would stand for *Human Stirpiculture*, we should have the precise convenience required.

"BEGGARS BEWARE!"

"Polypodiums and Scolopendriums set here."

Old Joke.

TO reassure the doubting on the question whether men can work and prosper in Communism, the O. C. has from time to time made a showing of its financial success. Every one of these exhibitions of profit has been followed by a long string of letters asking for loans and for contributions to all manner of charities. It has appeared to us sometimes as if there were a body of people in the world—we don't call them philanthropical blood-suckers—who are ever on the alert for rich and thrifty men, and when they find one, they say, "Here is Richness—let us bleed him."

We do not object to these people who, in the natural course of things, are necessary to do the charities of the world. They remind the prosperous of their duties and help forward the lame and halting. They are an authoritative class and speak confidently in the name of benevolence and charity. But we do object to all parasites and blood-suckers, and when the really philanthropic seek to take advantage of our prosperity we beg to rise and explain a little. We say, "Gentlemen, it *is* true that we are prosperous. We have made a little good blood, as they say at the Water-cures, and are tolerably healthy. We hope you enjoy seeing us well. It is pleasant to see well folks. At any rate we enjoy our own health. But you don't understand us. We are in the charity business, too; we ourselves are a new kind of eleemosynary institution."

Besides taking care of our own weak and disabled ones, we have from the very beginning of the Community published a free paper, that the poor and believing may share in the comfort we get from God and the Bible. If there is any more thorough-going charity than that, we have not heard of it. If you take our editor, writers, compositors, book-keeper and printer all together, where, in a society so small, will you find so many engaged in works of charity? To do a great deal more than we now do, might interfere with the proper growth of our businesses. Our paying businesses are the basis of the CIRCULAR. But a small weekly paper is not the hight of our ambition by any means. Our old readers know that our purpose is to publish a free daily paper. How much money will it take to do that? To publish a daily paper having the size and character of the present CIRCULAR, the Community ought to have three millions of dollars in its businesses, otherwise the paper would be an embarrassment. This is one way of looking at the money we shall need for our enterprise.

But what will be the actual requirements of a paper such as we propose? The large city-dailies, it is well known, require large investments. The *Daily Graphic* has started on a capital of $500.000 in gold. Besides depending on their capital, the great dailies depend, first, on the sales of their papers, and second, on their advertisements. Our free daily, cannot of course depend on its subscribers, and only in a limited sense will it depend on its advertisements, for it will accept only such as it can approve. A paper of this character cannot be self-supporting any more than our colleges are. No college can live by its fees; it has to depend on its endowments. We expect that a free daily paper will have to be endowed as are the colleges. We can have endowed editorships: say, one of art, one of news, one of science, one of spiritual philosophy, one of stirpiculture, one on the production of wealth, health and so on. A paper of this character, depending on endowments and not on subscriptions, must be in possession of an immense capital. Until the Community is able to endow these editorships, it must and will protest against being drawn into any other philanthropic schemes.

A. B.

COMMUNITY JOURNAL.

ONEIDA.

—We are verging upon one hundred days of sleighing this winter, and this month promises to give us the round number with a good shaking down.

—The vegetable gardeners are anticipating the spring-time and harvest by raising the temperature in the "forcing-pit" to the germinating degree, thus giving the tomatoes, cabbages, etc., an opportunity to sprout, grow and develop their tender age under glass, while the snow is on the ground, and "winter lingers in the lap of spring."

—The children entertained us Sunday evening with a rehearsal of some pieces they had lately learned. With but slight assistance their manner of delivery and costuming were all their own. Each one contributed something, and each in his or her peculiar style. It was very pleasing to see them march bravely to the front of the stage, make their bow and utter what they had to say in clear ringing tones. First Temple spoke the "American Eagle," said to be "Ike Partington's composition." Then Ormond promptly followed with "The Skaters." The little boys (our youngest in pantaloons) with Ruth, after forming into a line, recited "The Works of God." With shy glances toward the audience they faintly lisped out line by line, until their last words died away to whispers, and they bashfully ran off the stage. Then George and Virginia, in appropriate costume, entertained us with the well-known dialogue, "The Fortune-Teller," Emily entering at the closing scene to condole with the duped lady on her great lack of penetration. The parts were well committed, and the acting of Miss Virginia in particular gave us much pleasure. Next Deming repeated the poem, "Little Things;" he was very much frightened, but his manner of showing it was funny enough; he spoke in an unusually loud tone of voice, and at the enunciation of each word opened his mouth very wide as if doubting whether to go on or to stop, and at the close of the piece made his exit from the stage as fast as his feet could carry him. Then Theodora recited "Hezekiah and Ruth," and Eugene, "I Never Chew Tobacco;" both very well done. Harold and Cosette, dressed in unique costumes, gave us the quaint story of "Gudhand and his Wife." Anna and Ransom acted a little scene called "Domestic Difficulties," in which Ransom, in the part of a troublesome child, broke a plate. Fanny recited a poem. Then the curtain rose and Jessie and Maud, representing mother and daughter, were discovered, Maud repeating in a clear, sweet voice the song of the "May Queen." The closing scene represented a store; Temple acted as clerk, while Emily, Theodora, George, Virginia and Maud were customers, who found very little in the store that suited them—especially George (Mr. Jones), who, endeav-

oring to purchase toys for his children, made some objection to every ware that was offered him, and so purchased nothing. Both the selection and management of the pieces were good, and the family considered themselves well paid for listening.

—One day this week twelve of us, Clara, Emma, Cornelia, Tirzah, Florence, Harriet, Lily, Edith, Jessie, Marion, Ida K. and Ida May—equipped with thimbles and scissors, rode over to the Villa for the benign purpose of assisting Susan or "Susie," as we call her, about her sewing. For Susie, though the very embodiment of industry, though unrivaled in the faculty of keeping "busy from morning till night," and though the most orderly, indefatigable housekeeper, spends but a small part of her time in sewing. Sewing with her is a secondary consideration; she has far more relish for making a comfortable fireside. It is pure delight with her to wash and iron, to sweep and dust, and "put everything to rights." She never tires of it. She is in her element. And when she does sit down to sew you may be sure everything about the house is in apple-pie order. She is most persistent in darning and patching, every stitch of which is fearfully precise; but when it comes to dressmaking she does not get on at all. This fact is so well understood by those who know her, that all are glad to lend a helping hand. On this occasion two dresses were to be made, and seating ourselves round a work-table in Susie's cozy room, we were soon busy in the details of cutting and basting, while her merry laugh cheered us as we worked. The time slipped away almost before we knew it, and in three hours the gowns were nearly done, when Susie called us to dinner, declaring she could easily "finish them herself." So after accepting her invitation, and making her welcome to our needle-service in future, we bade her good afternoon and came home.

—The various character of the snow-drifts the past winter in the road between O. C. and W. P. may be worth noticing. The general course of the road is northerly; the wind here blows for much the greater part of the time from the west and north-west. Leaving the north entrance to the O. C. lawn, a well-grown and healthy apple-orchard and a high barberry-hedge shelter the road on the west. After passing the orchard the hedge continues some rods farther, with a row of maple trees not full grown between it and the track. Then comes a line of wire fence with the row of shade trees. After crossing the Hamilton bridge a very young orchard and a low board fence stand west of the road. Then a hop-yard with a board fence, then open ground and the board fence, and after passing Mud Creek the board fence is succeeded by a zig-zag rail fence, and this finally by another board fence. We have had a great amount of snow this winter, and many furious north-west winds. But opposite the orchard and barberry-hedge the road has not been blockaded once. There has indeed been a pretty high drift there, but it has kept almost entirely on the west side of the track, leaving a free passage for sleighs. A good depth of snow has lain in the orchard. Beyond the orchard the hedge has stopped so much snow in the road as to fill it up nearly even with the top of the hedge, except a narrow passage on the east side where the sleighs have been obliged to go. When the drifts were forming in this part of the road it was observable that the maple trees aided the work, as the drift was enlarged opposite each tree. But further on, where there is only a wire fence with the shade trees, the wind has so free a sweep under their branches that the road there has been kept free from troublesome drifts. Opposite the hop-yard the road and fields are quite level and the drifts have not been serious. But on the hill before reaching Mud Creek the road has been for weeks so full of snow as to compel a detour through the lot to the east. The effect of the zig-zag fence beyond Mud Creek was to heap the snow in wave-like ridges, the high parts being generally opposite the angles pointing toward the road. These waves became exaggerated by the travel passing over them, until a person was heard to say that after riding from W. P. to O. C. on one occasion, the effect of it remained till he was going to sleep at night, when he felt as if he had been riding in a boat on the water. Opposite the last board fence the road is uneven, the wind has a fair chance from the north-west, and many a sleigh-load of screaming travelers has here been tossed into the treacherous drifts.

—One of our accountants sends in the following pleasant paragraph:

"Merchants all over the country, our agents report, make many complaints of the tightness of the money-market and of the difficulty they find in making collections. We, all through this time of stringency, have had such good luck in receiving money just at the time we needed it that we wish to acknowledge God's care of us. In the early days of the Community we were sometimes in great straits for ready cash and had frequent recourse to prayer and to a conscious exercise of a faith which was never disappointed. At such times of anxiety our attention was called to the special providence which again and again supplied us with funds just at the right moment. Even now, though our businesses are extensive, the matchings of receipts and payments are often as remarkable as in the days of our poverty. A large payment came in the evening mail last week, several days before it was due. It was so opportune that it made us feel that the Lord had sent it, that he had delight in our prosperity, that he sympathized with our business and took pains to save us trouble as well as relieve our wants."

A FRESH OBSERVATION.

W. C., March 9, 1873.

DEAR CIRCULAR:—The change in coming from O. C. with its steam-heated, brick house of magnificent distances, to this cozy little home on the eastern slope of Mount Tom, is like leaving the city to go cousining in the country. You live on a farm there, to be sure, but you scarcely realize it, for it is so outlying, beyond your cluster of buildings and spreading lawn. Not so here: just across the road stands the barn and the various sounds arising from its yard are constant reminders of the rural domesticity of the place. But these are not the only sounds you notice. What is the slightly intermittent roar so plainly heard? It is the fall of the water from the new pond. The sight of this sheet of water as it dances and sparkles in the morning sunlight, unceasingly tumbling over the dam in such a wild and headlong manner, creates a "humming in the tissues," while the power it gives causes a more practical humming in the factory close at hand.

The factory proper is a three-story building standing north and south, and is 28 by 75 feet. The first floor is occupied by a branch of the O. C. Silk Manufacturing Co. and at present employs 43 hands. On the next floor are found the offices of the silk-works and the Wallingford Printing Co., occupying the north-east corner; next, what is called the cutting-room of the W. P. C. From this pass into the large and well-lighted composing-room where is an almost endless variety of type used in the job- and book-work in such demand in this land of many factories. The third story is yet unused, but soon will be occupied. Part of the room is to be for silk machinery and the remainder for the printing business. On the east side of the main building is a one-story, 28 by 46 feet "lean-to," making a snug but convenient little laundry. On the west side is a two-story brick building 38 feet square. The basement is about equally divided between the carpenters and machinists. Above this is the press-room occupying the whole floor. In this room, which is a palace for the business, are two small Degener job-presses, one Campbell press for book-work, an hydraulic-press and a ruling-machine; another Campbell press of larger size is expected in a few days. First-class work is done in this establishment and orders are promptly filled. If Silas Wegg could rightfully be called a "literary man" because he sold pamphlets, surely this family is a literary one, for its members are constantly employed in printing, folding, stitching and covering pamphlets of all kinds and sizes. A large share of work is done at the house in the hall, and a very attractive home-industry it makes.

This has been a remarkable winter. Mr. Kinsley says there have been one hundred days of sleighing, and colder weather than for twenty years. Our friend Mr. Smith, from Prospect, says the oldest inhabitants remember nothing equal to it. For all the snow and low temperature the weather here is quite in contrast to that of York State. During the last month there have been but three cloudy days! What does Aunt Delight say to that? Every morning the sun rises grandly from behind the eastern mountains and floods the valley with such golden glory that the beauty is like a forever fresh creation. All these days of sunshine and clear blue sky are succeeded by serene and brilliant nights. Though the winter has been so severe, it is now yielding to the subtle and mysterious influence of spring's first days of genial warmth. This morning robins and blue-birds were both seen and heard—sure harbingers of coming summer. X. once said the intoxicating effect of these first days in spring rendered him incapable of telling whether he was himself or another man.

The noticeable difference between the two Community families is an external one. Here you find different persons, but they are of the same faith and spirit; they possess the same earnestness, cheerfulness, love and unity that go to make both places such happy homes. ASH.

THE DUST OF TRAVEL.

XI.

Meadville, Penn., March 2, 1873.

DEAR CIRCULAR:—The strange seeming of strange towns! If a man were complete master of himself and able at any time to enter into his best state of activity—the active-passive—and there hold himself open to the subtle differences of things—you know it is the constant perception of sameness which kills one—he might, I think, get at the real seeming of any place; and if in addition to this delicacy of perception, he should have the adequate powers of expression, he might write you something that would have the essence of the towns he visited—towns where the farmers prevail; towns where the people cut wood and save tan-bark; lumber-towns that smell of freshly-cut pines and sawdust; mining towns and iron-worker's towns; towns in which the people fish and rake up oysters and green slimy sea-weeds; college towns with their life and trade in ideas; towns where the folks go abroad in ships; towns where they have quarries and get out grind-stones; towns that live on your curiosity about some great natural feature—Niagara, for instance; border-towns with their smugglers and revenue-men, all very active but very still, too, as if there were always something in the air; railway towns, trading towns, towns that

make cow-bells, or make ships, or anything; towns that drink water, towns that drink beer, towns that pray. Could he do all this, he might write you a book of travels that should be read with the sensibilities rather than by the mind in quest of geography and statistics; it would be like a work on the cryptogams with bits of moss and lichens fastened on the pages.

And writing on these things which touch the nerves more than the understanding, your commercial traveler is reminded that he is never farther from home than he is the moment he gets aboard the cars at your little station and goes flying away. How strange then is your old cedar swamp where in our leisure moments we have been so much at home among the logs which are cushioned with mosses stitched on with Gold-thread and set off with Sun-dew as with buttons. By the time he gets to Erie, Pennsylvania, he is in Germany, in beer-land, as you may see by consulting the brick-red spots on the census-maps showing the distribution of our German people. From Erie on to Cleveland, you pass over a great deal of warm, red-clover land; now looking against a dense patch of hemlocks, and now looking down some river-bottoms, with large chestnut trees on either hand, and a view of the lake at the farther end. Northeastern Ohio is woody still. I always think Painesville has a flavor of the forest. I have visited it a dozen times perhaps, and the constancy of this impression is what surprises me. At one end of the street is the public square, set with maples in anything but a sylvan manner; from the other end you look across the river to where a group of old pines are kept to moan over a cemetery. The people are no back-woods men; but somehow they have the flavor of freshly-cut timber as if they had come from the forest. I think of lichens and resinous woods, when there is nothing in sight to suggest them. Why should I seem to feel the presence of *Usnea* and *Hypna* when among fine tailors and book-sellers, bankers and jewelers? May be the woods and country-folk are too strong for the town yet.

I still think a man should go afoot if he would realize how far he goes. You take a sleeping-car in Detroit and wake in Chicago; you even make the journey in the daytime; 'tis all one; these cities are never any farther apart than they are on the map. The atlas-maker has gotten between me and the reality, and going by rail does not help me any.

Lake Michigan, hanging down from the chain of great lakes like a well rounded saussage, is almost without banks at its southern end, and might come ashore any day should it get angry with the land. At New Buffalo you begin to see the heaps of sand it has thrown up. At Michigan city these heaps have become hills, and farther west they have become still bigger—vast heaps of building-sand, if I may name them such, forever hopeless of grass, and but thinly clad with struggling oaks and pines. The lake, always receiving contributions from the land, is here giving something back. These great dunes become less before you reach Chicago. Between them and the lake, grows the *Salix admophylla*, a rare willow first discovered on the coast of Labrador and but lately found here. And what does a new willow amount to? Why, willow goes to the making of gunpowder, and gunpowder clinches an argument now and then. It made room for Protesants to think in; it made room for the negro to walk in. Whether it will be needed to give the woman question a final statement, I know not. Perhaps the Lord will soften our hearts before things come to that.

The rebuilding of Chicago is a wonder to you, notwithstanding you believe it would have to be rebuilt every ten years should it burn so often. Chicago is one of the corner-lots on this continent; there will always be a store there. 'Twill be the fashion to speak of its wonderful energy and power of recuperation; but correct thinking will make us to think of it in other terms. Chicago is the product of physical geography and of a rapidly increasing population. It is a social-physical result. Chicago is not rebuilding itself; the country is doing that. It was built gradually as the country needed it. The country needs it entire now and so it is rebuilt suddenly. The men who are making the new Chicago are not always the ones who made the old. The great number of old men who have melted away since the fire is a matter of comment. They had shot their best arrows and had to retire from the fight. New men are everywhere on the ground. Of the men who have crept away into corners, ruined, no account is taken. Cities have to fulfill their destinies though men fail. The play is kept going, but the actors change. A man with half an eye to business might have predicted the rebuilding of Chicago and invested his money wisely. That man over the way there, whom I often suspect of caring more for the mosses in some fragrant bog than he does for any corner-lot whatever, was heard to say in his cool, sap-headed way when Chicago was burning, "Now is the time for capitalists to go to Chicago and put their money into new buildings." A new store can't be amiss there. It will be wanted by some of your thin, long-headed eastern men, who look as if they were born for schoolmasters and ministers; it will be wanted by some curly-headed Jew, with his look of power, and with his dark and hunted look, too, which, methinks, he has taken on, in part, by spoiling us Egyptians, and in part, by skulking before a storm of curses. The intensity of the business spirit in Chicago is something remarkable. It was so when the city was no bigger than your village of Oneida; it was so in its day of pride; it is so now in its day of humiliation. Standing there as it does, on the edge of a wet prairie, you think of Chicago as my lady, over shoes in mud.

A night-ride and sleeping-car from Chicago to Cincinnati: Indianna does not become any bigger than it looks in the map, and Indianapolis and Lafayette, are nothing but dots still. If Chicago is my lady struggling to reach a drier footing Cincinnati is a tawny housewife jostling in a crowd for more elbow-room. On my way I touch again the famous Miami valley—one great crib of corn it seems—then up the Ohio to Cincinnati, all the way in sight of Kentucky hills.

The Ohio is a wild stream when filled to its banks. It was fretting the other morning and tossing in the face of a rough westerly wind. It steamed like a pot, and yet gave an awful sense of chill. The lambent film of vapor wavered and whisked and spurted aloft, as if it had been a dense spray dashed upward from the rocks. It had the manners of fire, and yet 'twas chill and wet; it was a frozen flame, if I may be allowed to see likeness in unlikeness. The Ohio is peculiary interesting, I think. 'Tis no common river, nor ever can be. Not because it goes winding among the gently rounded hills, on whose tops are villas, and on whose sides are orchards—apple and peach, and in whose valleys are church-towers and steeples; not by reason of its wines and its vines; not because of its busy steamers and smoky towns, nor because the old-time Frenchmen have called it the "beautiful river." Not for one of these reasons, nor for all of them, is it chiefly interesting. It is interesting because it has been the gulf between freedom and slavery; it kept liberty out and it kept bondage in. The hunted slave, fleeing toward the north star, found himself stopped by it, as if God and nature were against him. Its rough flood, therefore, seems running full of pathos, grief, joy, sin, bitterness, and a sense of triumph. You feel toward it as you may toward some woman who has been plunged in sin partly by her own fault and partly by that of others, and yet is not beyond hope and chance of purity. For has not this beautiful river gathered its waters from the land of the slave-owner? Not one rain, not ten thousand rains falling on Kentucky, free, can rinse the Ohio clean. It will always be a thing whose gaiety is kept down by the remembrance of an early sin; it will always float the memory of an ancient wrong. If there could be a rain to wash the mind, all might be different. Till then, the Ohio will be dear to the poet and story-teller.

A. B.

INDOLENCE.

INDOLENT! indolent! yes, I am indolent!
So is the grass growing tenderly, slowly;
So is the violet fragrant and lowly,
Drinking in quietness, peace, and content;
So is the bird on the light branches swinging,
Idly his carol of gratitude singing,
Only on living and loving intent.

Indolent! indolent! yes, I am indolent!
So is the cloud overhanging the mountain;
So is the tremulous wave of a fountain,
Uttering softly its eloquent psalm;
Nerve and sensation in quiet reposing,
Silent as blossom, the night dew is closing,
But the full heart beating strongly and calm.

Indolent! indolent! yes, I am indolent!
If it be idle to gather my pleasure
Out of creation's uncoveted treasure,
Midnight and morning; by forest and sea;
Wild with the tempest's sublime exultation;
Lonely in Autumn's forlorn lamentation;
Hopeful and happy with Spring and the bee.

Indolent! indolent! are ye not indolent?
Thralls of the earth and its usages weary;
Toiling like gnomes where the darkness is dreary,
Toiling, and sinning, to heap up your gold;
Stifling the heavenward breath of devotion
Crushing the freshness of every emotion;
Hearts like the dead, that are pulseless and cold!

Indolent! indolent! art thou not indolent?
Thou who art living unloving and lonely,
Wrapped in a pall that will cover thee only;
Shrouded in selfishness, piteous ghost!
Sad eyes behold thee, and angels are weeping
O'er thy forsaken and desolate sleeping;
Art thou not indolent?—Art thou not lost?

UNLEAVENED BREAD.

[Though we are working away at dietetic reform, we are still, as we have said before, in a transitional state in regard to the matter, and have not yet reached a standard which justifies us in saying much to influence others in this direction. We do not consider the following letter strictly scientific. In the recipe given for "gems," we should say that for children and persons of scrofulous tendencies, water should be substituted for milk. But our correspondent gives some idea of the progress we have made toward scientific hygiene, and we can safely endorse her recommendation of "gems," though mixed with milk, as vastly better for the health of anybody than old-fashioned bread made of milk-emptings, hop-risings, yeast-cakes, or any other lightening compound which is used in the manufacture of leavened bread.]

W. C., March 12, 1873

DEAR CIRCULAR:—The two-meal system now appears to be fairly established among us; and we find another change is going on in the Community (almost imperceptibly) from leavened to unleavened bread. "Gems," which are served at every meal, and are held in high repute with us, are fast superseding the old-fashioned leavened bread. The demand for yeast bread has fallen off to less than a quarter what it formerly was, and we at W. C. are about dropping it entirely from our bill of fare. A few loaves of the fine wheat are all that are now baked. One whose opinion we respect in such matters said to us the other day: "I never touch bread of any kind when I can get 'gems.' I have become keenly sensitive to the bad taste of yeast and soda, and to the good sweet

taste of pure wheat." Another remarked, "Bread with yeast in it always tastes sour to me now."

"Gems" with us are made of coarse or Graham flour and cold skimmed milk, mixed well together. A brisk stirring for ten or fifteen minutes while mixing the batter will add to their lightness. It is difficult to give an exact recipe for the quantities, as some kinds of flour swell more than others; but the proportions are about one quart of flour to one pint of milk. They are baked in patent bread-pans, of cast iron, twelve or twenty-four forming a set. These must be *thoroughly heated* beforehand in the oven or on the stove. This is the most important thing to be attended to in order to secure lightness. One half-hour is sufficient time to bake them in a very hot oven. Time is saved by this change. Formerly it took nearly six hours to mix, raise and bake our bread, which had to be done every other day. Now we make "gems" enough for one day's use in one and one-half hours; thus making the comparative time:

Making unleavened bread for 6 days . . . . . 9 hours.
" leavened " " " . . . . . 18 "

—a saving, you see, of just one-half the time, to say nothing about the care and anxiety avoided, only known to the experienced in common bread-making; for the sponge must be carefully watched, tasted and corrected with soda, if the least sour, and, O, the uncertainty of any calculation as to the quantity of the alkali! after the bread is mixed, it must be looked at every few minutes to see that it is rising just right, and does not become sour; at the right point it is to be molded and put in the baking tins; and after another rising it is ready for the oven, where it must be watched for another hour. Many housewives consider themselves totally incompetent to make a loaf of leavened bread, and resort entirely to the bakers. To all such there is a refuge from over light, husky, and frequently sour bread, to good, sweet, light, healthy "gems," for these can be made without care, requiring but little skill or time.

CARRIE.

A FUNNY LETTER.

[We had such a good laugh over the following letter that we thought we would print it and let other folks laugh, too. The writer is a Swiss and seems sadly "put to it" to master the English language. He says that he has seen some of our papers and observes that we have formed ourselves into a "company to epolish selfishness. From this surce," he truly adds, "the most evels of mankind starts, then nature works for the present, and has no eye for the rightjusness of the future." For the "good couse of humanity" he conceived it to be his duty to make an appeal to the President, of which he sends us a copy. And here it is:]

To the U. St: President Ulisa Grant

DEAR SIR! Ther i have the prevetize as a citizen of the U: St: to writ unto you to the wellfaire of the nation, so do i write with pleasur what my sole like to be than,—

We should all labor for the goodnees of the hole country and strife that Life becomes more thrue Christien like and discharge our work daly to the benefite of this duty,

It is our study to lerne the nature Laws and Love of our hevenly father and bring tham in progress of our earthly carrier, so as Education advences we become more perfacter beings and so with a country for the blessed.—

When i had wread the history of this country, how and unter witch circumstances it conceald its freedoom and declard equalty for all man that live therin, i could not see and say otherweise as God was ther protecter. Only a few republice are in existens and therby hade they sold ther free fondation and speculatet in every direction for monny seek. Man can be free mais ther is a limit wher free doom git untermeindet and with the time it will fall. I cam from a little Republice Switzerland and have seen before i laft how hard it is for a poor man to make his living and harter seen the unjustees than to inocans.—

It is still a Republice mais in manny respect it is not better than unter a kingdoom

The Lord has an eye and watit for the time that it mais come right and therfore must we work to our ability. Manny relitious man thinks that we must live this go as it will; the Lord will mandge it at last. Mais i say we must be instrument in his hande and us our tallon to do our shore for to make it come right.

The country has concort freedoom in the year 1776 and growt enormus an population since that time. It was free than indeed.

Now it is free unter the name of having no king mais Land is mostly westet and cloth in depto free Landsall, Speculation, Manufactors and Merchens of fortunes and war have playd the tune of destruction Not satisfait of having nof for ther life time and ther owne mais an place of doing good work they grow in evel. The true man see time grow darker and will be savender in manny respect. The poor can live mais for to save and advence to a confortable life he must have a start: The Land for homestate gitting way of in the west; wher he has to bay everything and has low market for was he has to sell. Manny profitet the homestedt. Rentet ther old home and tuck a homestadt. What i say he has no right to. How so ever has a home should have no right to tack up a homestadt. When he do it he do it for monny seek:

The Land has reisd an value and taxes ther worth mais it makes the Land not better nor will it yet larger crops. It has only destroyed the true farming therof Peple like to git riche in a short time and sacrifaise Land and then health

R. S.

THE GRAND CANON AND FALLS OF THE YELLOWSTONE.

IN Hayden's "Report of the United States Geological Survey of Montana and Adjacent Territories," recently received from our M. C., we find a very interesting description of the wonders of the great Yellowstone Basin—its hot-springs and geysers, falls and cañons, lakes and forests. The following paragraphs relate to the Grand Cañon and the Upper and Lower Falls:

The objects of the deepest interest in this region are the falls and the Grand Cañon. I will attempt to convey some idea by a description, but it is only through the eye that the mind can gather anything like an adequate conception of them. As we approached the margin of the cañon, we could hear the suppressed roar of the falls, resembling distant thunder. The two falls are not more than one-fourth of a mile apart. Above the Upper Falls the Yellowstone flows through a grassy, meadow-like valley, with a calm, steady current, giving no warning, until very near the falls, that it is about to rush over a precipice 140 feet, and then, within a quarter of a mile, again to leap down a distance of 350 feet. Before proceeding further with a detailed description of the falls and cañon, I may attempt to present what I believe to be the origin. For about a mile above the Upper Falls there is a succession of rapids in the river. The walls of the channel are not high, but are composed of massive basalt. Just along the Upper Falls there are five huge, detached blocks of basalt in and near the center of the channel. These show the force with which the water has rushed down the channel at some period. Just above the Upper Falls are two beautiful cascades, 20 to 30 feet high, and at the east one, the rocks so wall in the channel that it is not much more than 100 feet wide, and the entire volume of the water, which must form a mass 100 feet wide and 30 feet deep, rushes down a vertical descent of 140 feet. There seems to have been a sort of ridge or belt of very compact basalt that extended across the channel, so hard as to resist successfully atmospheric power, while below, the nearly vertical walls, which are composed of clay, sand, and bowlders, mingled with hot-spring deposits, seem to have readily yielded, and thus the river has carved out its channel. From any point of view the Upper Falls are most picturesque and striking. The entire volume of water seems to be, as it were, hurled off the precipice with the force which it has accumulated in the rapids above, so that the mass is detached into the most beautiful snow-white, bead-like drops, and as it strikes the rocky basin below, it shoots through the water with a sort of ricochet for the distance of 200 feet. The whole presents in the distance the appearance of a mass of snow-white foam. On the sides ot the basalt walls there is a thick growth of vegetation, nourished by the spray above, which extends up as far as the moisture can reach. The upper portion of the walls of the cañon on the east side is composed of a coarse volcanic sandstone and pudding-stone, perfectly horizontal, and below are loose variegated clays and sands. There is no doubt that this deposit forms a part of the bed of the ancient lake in its enlarged extent, and that this deposit was made on the rugged, irregular basalt surface. In the mean time, there were occasional outflows of igneous matter, and the hot springs were operating in full force. The lake basin was closed at the lower end of the range of mountains that form the rim, and the river gradually forced its way through this rim, forming the Grand Cañon, draining the lake basin, and the falls were the result. There is all around the basin a sort of secondary shore in the form of a group of low, pine-covered hills, varying in hight from 8,500 to 9,000 feet above the sea, while the highest ranges, 10,000 to 11,000 feet, constitute the primary rim. The lower hills are made up mostly of the old lake deposit, and are either Pliocene or Post-Pliocene, probably both.

But no language can do justice to the wonderful grandeur and beauty of the cañon below the Lower Falls; the very nearly vertical walls, slightly sloping down to the water's edge on either side, so that from the summit the river appears like a thread of silver foaming over its rocky bottom; the variegated colors of the sides, yellow, red, brown, white, all intermixed and shading into each other; the Gothic columns of every form standing out from the sides of the walls with greater variety and more striking colors than ever adorned a work of human art. The margins of the cañon on either side are beautifully fringed with pines. In some places the walls of the cañon are composed of massive basalt, so separated by the jointage as to look like irregular mason-work going to decay. Here and there a depression in the surface of the basalt has been subsequently filled up by the more modern deposit, and the horizontal strata of sandstone can be seen. The decomposition and the colors of the rocks must have been due largely to hot water from the springs, which has percolated all through, giving to them the present variegated and unique appearance.

Standing near the margin of the Lower Falls, and looking down the cañon, which looks like an immense chasm or cleft in the basalt, with its sides 1,200 to 1,500 feet high, and decorated with the most brilliant colors that the human eye ever saw, with the rocks weathered into an almost unlimited variety of forms, with here and there a pine sending its roots into the clefts on the sides as if struggling with a sort of uncertain success to maintain an existence—the whole presents a picture that it would be difficult to surpass in nature. Mr. Thomas Moran, a celebrated artist, and noted for his skill as a colorist, exclaimed with a kind of regretful enthusiasm that these beautiful tints were beyond the reach of human art. It is not the depth alone that gives such an impression of grandeur to the mind, but it is also the picturesque forms and coloring. Mr. Moran is now engaged in transferring this remarkable picture to canvas, and by means of a skillful use of colors something like a conception of its beauty may be conveyed. After the waters of the Yellowstone roll over the upper descent, they flow with great rapidity over the apparently flat rocky bottom, which spreads out to nearly double its width above the falls, and continues thus until near the Lower Falls, when the channel again contracts, and the waters seem, as it were, to gather themselves into one compact mass and plunge over the descent of 350 feet in detached drops of foam as white as snow; some of the large globules of water shoot down like the contents of an exploded rocket. It is a sight far more beautiful, though not so grand or impressive as that of Niagara Falls. A heavy mist always arises from the water at the foot of the falls, so dense that one

cannot approach within 200 or 300 feet, and even then the clothes will be drenched in a few moments. Upon the yellow, nearly vertical wall of the west side, the mist mostly falls, and for 300 feet from the bottom the wall is covered with a thick matting of mosses, sedges, grasses, and other vegetation of the most vivid green, which have sent their small roots into the softened rocks, and are nourished by the ever-ascending spray. At the base and quite high up on the sides of the cañon are great quantities of talus, and through the fragments of rocks and decomposed spring deposits may be seen the horizontal strata of breccia.

THE NEWS.

A rhinoceros for Barnum's World's Fair arrived on the 11th inst. from Europe. He is six feet high, nearly twelve feet long and weighs about four tons. He is nearly as large as a full sized African elephant.

An original style of thievery obtains at the Astor Library, New York. Under pretense of reading some rare work its engravings are slily abstracted. The evil is growing and causes the worthy custodians much trouble.

Prof. John Torrey, of Columbia College, formerly chief of the assay office at the sub-treasury, and the well-known botanist, died Monday evening last of pneumonia. He was about eighty years of age and during his long life had become prominently known and acknowledged among scientists.

The total production of crude petroleum in this country in 1872 was 6,539,703 barrels of forty-three gallons, a daily average of 17,195 barrels against 15,800 barrels in 1871 showing a daily increase of 2,115 barrels and a total increase of 77,975 in 1872. For the first time in the history of the trade there was a falling off in the export owing to the attempt to force up prices.

Spain is ambitious to become a federal republic. Already the ancient provinces of Andalusia, Catalonia, Biscaya and Arragon, the ancient boundaries and customs of which have never been entirely obliterated after ages of despotic rule, are crying out for distinct representation in the national councils, and threatening immediate action if their claims are not at once attended to. Verily, the "effete monarchies" are moving on apace.

The Massachusetts Legislature, after a close canvass of several days, has elected George S. Boutwell for U. S. Senator for six years from March 1st, 1873, in place of Henry Wilson who resigned for the Vice-Presidency. There is but little doubt that Judge Richardson, the present Assistant Secretary of the Treasury, will be promoted to the Secretaryship and that his name will be sent to the Senate before the adjournment, which will soon take place.

The bill passed by the forty-second Congress to increase the pay of members to $5,000, and made retroactive, is condemned in unmeasured terms by most of the leading journals. It is significant that the New Hampshire Legislature, after denouncing the measure, has elected three Democratic Congressmen; and that the Illinois Legislature by vote of 104 to 3 adopted a resolution severely censuring the Illinois Congressmen who voted for the bill.

Our Texan frontier is in a deplorable condition. It seems to be at present a free raiding ground for the Indians; at least such is the testimony of Gen. Lewis G. Brown, ex-army officer and acting internal revenue collector for southern Texas. Bands of savages mounted on swift horses cross the Rio Grande from Mexico and sweep over a belt of country one hundred miles in width toward the mouth of the river, destroying ranches, killing the occupants and carrying off horses cattle and sheep to the utter despair of the agriculturists of that region.

The new king of the Sandwich Islands was elected by an almost unanimous vote of the people, and is said to be very popular. His prime minister is a Mr. Bishop, a banker, formerly from New York city. Another cabinet officer is Mr. Judd, son of the famous missionary. The journal of the largest circulation and influence in the native language is conducted by H. M. Whitney, an ardent American. The two principal exports, coffee and sugar, are non-paying crops just now on account of low prices at San Francisco. The whaling interest also has dwindled to a very small one. The public debt is $300,000. Taxation moderate. A reciprocity treaty between the Islands and the United States is talked of and much desired.

The honor of first looking into the crater of Mount Cotopaxi, situated in northern Equador about 50 miles south of the equator and 100 west of the meridian of Washington, belongs to Dr. Reiss, a German naturalist. The Dr. measured the hight by two methods and gives it as 19,496 feet, nearly 1,000 feet more than the measurement made by Humboldt. Dense volumes of smoke with deep internal rumblings are the only signs of fire at present in this great king of all the volcanoes. Evidence of former activity is shown by the nature and thickness of the deposits at the base which in some places exceed 600 feet in thickness.

The coöperative movement in Kansas, started about four years ago by E. V. Boissiere and E. P. Grant, seems to be prospering. The culture and manufacture of silk is to be one of the principal industries of this Association, and accordingly their domain, comprising more than three thousand acres, has taken the name of Silkville. A silk factory is already in operation and ten thousand mulberry trees have had three years of thrifty growth. Two hundred and fifty acres of this immense farm have been brought under cultivation, and now the projectors of the enterprise announce themselves as ready to receive associates to carry into effect its original purposes. The Association is to be formed on Fourier's plan of the "Combined Household." A building, large enough to accommodate from eighty to one hundred persons, will be erected the coming season. Each person admitted will be required to deposit one hundred dollars.

The Irish University Bill, so called, was defeated in the House of Commons on the 11th inst., by a small majority. Great excitement prevailed and the galleries were crowded. The result is considered to be a virtual defeat of the ministry, and Mr. Gladstone has already waited on the Queen to tender his resignation. Mr. Disraeli, the leader of the opposition, is the only one named for the new premiership. The main points of the bill are briefly these: 1. Incorporating the University of Dublin and combining the other colleges of the city as well as those of Cork and Belfast under that title. 2. The abolition of all religious tests in all collegiate examinations. This is but justice to the Catholics who out-number the Protestants by more than 3,000,000. 3. The Government to be by a Chancellor appointed by the Crown, and a Council of twenty-eight nominated in the act. 4. For security of conscience there will be no chairs of theology, moral philosophy and modern history. The bill, though granting equal privileges to all sects, failed in its principal object—it did not find favor with the Roman Catholics, who would accept nothing less than the endowment of a sectarian institution of their own.

RECEIPTS FOR THE CIRCULAR.

J. S., Rome, N. Y., $1.00; C. S. T. M., Omaha, Neb., $1.00; E. F., Watkins, N. Y., 50 cts.; G. E. P., South Edmeston, N. Y., 50 cts.; G. W. H., Sandown, N. H., $2.00; S. H., Belchertown, Mass., $5.00; E. R. E., New York, $1.00; E. B. S., Syracuse, N. Y., 25 cts.; R. A., Fletcher, Vt., $2.00; J. V. V., New York, $2.00; B. F. O., Wood River, Neb., $1.00; S. L., New York, $1.00; G. C., New York, 25 cts.; J. B. C., Portsmouth, Mich., $1.00; J. H. P., Biddeford, Me., $3.00; J. F. W., Philadelphia, Pa., $1.00; O. F., Galveston, Texas, 50 cts.; J. M., South Edmeston, N. Y., 50 cts.

CHOICE PLANTS AND SEEDS.

The O. C. offer 25 packets of Flower Seeds, put up in neat boxes, for $1.00. Postage paid.

BULBS.—Gladiolus, 10 cts. each, $1.00 per dozen.
Cannas, " " " " " "
PLANTS.—Extra Pansies, 15 " " $1.50 " "
Clematis Viticella, (common name, Garden Jasmine) 25 cts. each, $2.50 per dozen.

ANNOUNCEMENTS.

SILK GOODS.

Machine-Twist and Sewing-Silk of their own manufacture for sale by the Oneida Community.

Address, [S] ONEIDA COMMUNITY, *Oneida, N. Y.*

PRESERVED FRUITS AND VEGETABLES

Put up for sale by the Oneida Community in tin and glass. Price list sent on application.

Address, [F] ONEIDA COMMUNITY, *Oneida, N. Y.*

STEEL TRAPS.

Eight sizes and kinds, suitable for the House-rat, Musk-rat, Mink, Marten, Fisher, Fox, Otter, Beaver, the Black and Grizzly Bear, are made by the Oneida Community Descriptive price-list sent on application.

Address, [T] ONEIDA COMMUNITY, *Oneida, N. Y.*

MACHINE-SHOP AND FOUNDRY.

Improved Lathe-Chucks, Blinn's Patent Gate-Hinges, Machines for Measuring the Length and Testing the Strength of Manufactured Silks, Bobbin-Winders for Sewing-Machines, etc. Agricultural, Machine and Light Castings, on hand or made to order. Descriptive price-list sent on application.

Address, [M] ONEIDA COMMUNITY, *Oneida, N. Y.*

THE WALLINGFORD PRINTING COMPANY.

All kinds of Book and Job Printing executed: Manufacturers' Illustrated Catalogues made a specialty: also Bronze and Color Work, and the finer kinds of Card, Circular and Bill-head Printing. Having enlarged its works and added new motive power, this Company is in renewed condition to meet the wants its patrons with promptness and accuracy.

P. O. Address, *Wallingford, Conn.*

PUBLICATIONS.

(Sent from the Office of the Oneida Circular by mail, post-paid, on receipt of price.)

History of American Socialisms. By John Humphrey Noyes. 678 pp. 8vo. J. B. Lippincott & Co., Philadelphia. London, Trubner & Co. Price $3.00.

The Trapper's Guide; a Manual of Instructions for Capturing Fur-bearing Animals. By S. Newhouse. Third edition with New Narratives and Illustrations. 215 pp. 8vo. Price bound in cloth, $1.50

Salvation from Sin, the End of Christian Faith; an octavo pamphlet of 48 pages. By J. H. Noyes. Price 25 cents per single copy, or $2.00 per dozen.

Dixon and His Copyists; a Criticism of the Accounts of the Oneida Community in "New America," "Spiritual Wives," and kindred publications. By John Humphrey Noyes. Price 25 cts.

Scientific Propagation. By John Humphrey Noyes. Large octavo pamphlet of 32 pages. Price 25 cts.

Male Continence. By John Humphrey Noyes. An octavo pamphlet of 24 pages. Price 25 cts.

Hand-Book of the Oneida Community; Containing a Brief Sketch of its Present Condition, Internal Economy and Leading Principles. Price 25 cts.

The five pamphlets—"Salvation from Sin," "Dixon and his Copyists," "Hand-Book of the Oneida Community," "Scientific Propagation," and "Male Continence," will be sent to a single address on the receipt of $1.00.

Back Volumes of the Circular, Unbound. Price $2.00 per volume.

MESSRS. TRUBNER & COMPANY, Book-sellers, Paternoster Row, London, have the "History of American Socialisms," the "Trapper's Guide," and the "Hand-Book of the O. C.," for sale. They will receive subscriptions for our other publications.

PHOTOGRAPHIC PICTURES

Of the Oneida Community Buildings and Grounds, made by a first class artist and finely mounted, can be had on application at the Office of the Oneida Circular.

LARGE VIEWS.

Bird's-eye View, looking West, of Community Buildings and Grounds, 12 by 14 inches, on fine enameled board 16 by 20 price $1.75. Quadrangle and Group, 12 by 14, mounted like the above price $1.75. South and East Fronts of the Community Dwelling giving a good view of the New Wing occupied by the Children 8 by 10, on tinted board 10 by 12, with an ornamental border price $1.00.

STEREOGRAPHS.

No. 2, East and North Lawns. No. 3, East Lawn and Portico. No. 4, East Front. No. 5, North Front and Lawn. No. 6, Bird's Eye View of Buildings looking West. No. 7, Lawn and Summer House. No. 8, West View, toward Railroad. No. 11, Quadrangle. No. 12, Lawn View. No. 15, South and East Fronts. Price of Stereographs $3.00 per doz. Sent by mail, post-paid, on receipt of price.

Oneida Circular.

A WEEKLY JOURNAL OF HOME, SCIENCE AND GENERAL INTELLIGENCE.

Published by the Oneida & Wallingford Communities.

ONEIDA COMMUNITY, MARCH 24, 1873.

New Series, Vol. X, No. 13
Whole No. 1454.

POST-OFFICE ADDRESS:

ONEIDA CIRCULAR, ONEIDA, N. Y.

TERMS:

The CIRCULAR is sent to all applicants, whether they pay or not. It costs and is worth at least two dollars per volume. Those who want it and ought to have it are divisible into three classes, viz., 1, those who cannot afford to pay two dollars; 2, those who can afford to pay *only* two dollars; and 3, those who can afford to pay *more* than two dollars. The first ought to have it free; the second ought to pay the cost of it; and the third ought to pay enough more than the cost to make up the deficiencies of the first. This is the law of Communism. We have no means of enforcing it, and no wish to do so, except by stating it and leaving it to the good sense of those concerned. We take the risk of offering the CIRCULAR to all without price; but free subscriptions will be received only from persons making application for themselves, either directly or by giving express authority to those who apply for them.

Foreign subscribers, excepting those residing in Canada, must remit with their subscriptions money to prepay the postage.

THE UNITED COMMUNITIES.

ONEIDA COMMUNITY

Is an association living in Lenox, Madison Co., N. Y., four miles south of Oneida and a few rods from the Depot of the Midland Railroad. *Number* of members, 205. *Land*, 654 acres. *Business*, Manufacture of Hardware and Silk goods, Printing the CIRCULAR, Horticulture, &c. *Theology*, Perfectionism. *Sociology*, Bible Communism.

WILLOW-PLACE COMMUNITY.

Branch of O. C., on a detached portion of the domain, about one and one-fourth miles north of O. C. *Number* of members, 19. *Business*, Manufactures.

WALLINGFORD COMMUNITY.

Branch of O. C., at Wallingford, Conn., one mile west of the Hartford and New Haven Railroad. *Number* of members, 45. *Land*, 228 acres. *Business*, Publishing, Job Printing, Manufactures and Horticulture.

SPECIAL NOTICE.

The O. C. and Branches are not "Free Lovers," in the popular sense of the term. They call their social system BIBLE COMMUNISM or COMPLEX MARRIAGE, and hold to freedom of love only within their own families, subject to Free Criticism and the principles of Male Continence. In respect to permanency, responsibility, and every essential point of difference between marriage and licentiousness, the Oneida Communists stand with marriage. Free Love with them does *not* mean freedom to love to-day and leave to-morrow; nor freedom to take a woman's person and keep their property to themselves; nor freedom to freight a woman with offspring and send her down stream without care or help; nor freedom to beget children and leave them to the street and the poor-house. Their Communities are *families*, as distinctly bounded and separated from promiscuous society as ordinary households. The tie that binds them together is as permanent and sacred, to say the least, as that of marriage, for it is their religion. They receive no new members (except by deception or mistake), who do not give heart and hand to the family interest for life and forever. Community of property extends just as far as freedom of love. Every man's care and every dollar of the common property are pledged for the maintenance and protection of the women and children of the Community.

ADMISSIONS.

These Communities are constantly receiving applications for admission which they have to reject. It is difficult to state in any brief way all their reasons for thus limiting their numbers; but some of them are these: 1. The parent Community at Oneida is full. Its buildings are adapted to a certain number, and it wants no more. 2. The Branch-Communities, though they have not attained the normal size, have as many members as they can well accommodate, and must grow in numbers only as they grow in capital and buildings. 3. The kind of men and women who are likely to make the Communities grow, spiritually and financially, are scarce, and have to be sifted out slowly and cautiously. It should be distinctly understood that these Communities are not asylums for pleasure seekers or persons who merely want a home and a living. They will receive only those who are very much in earnest in religion. They have already done their full share of labor in criticising and working over raw recruits, and intend hereafter to devote themselves to other jobs (a plenty of which they have on hand), receiving only such members as seem likely to help and not hinder their work. As candidates for Communism multiply, it is obvious that they cannot all settle at Oneida and Wallingford. Other Communities must be formed; and the best way for earnest disciples generally is to work and wait, till the Spirit of Pentecost shall come on their neighbors, and give them Communities right where they are.

THE KING OF THE GENTILES.

Home-Talk by J. H. N.

THE resurrection of Christ, whatever else may be said of it, was certainly a transformation which enabled him to come back to his work in this world. He continued to superintend his disciples. Although withdrawn from sight except on special occasions, he was yet in the field, directing the movements of his army as its commander-in-chief.

This simple view of the resurrection of Christ leads to a sure conclusion with respect to the raising of his followers which took place at the time of the Second Coming, about the year 70. It is safe and sufficient to say that the Primitive Church, by their resurrection at that time, were brought into the same condition with their Master, and like him re-assumed active relations toward this world. They did not die, nor sleep, in the sense of passing away from the field of action in which they had been engaged during their life. They took their place with Christ in the invisible world, and kept on in their work as he did. We find this distinctly indicated by the promises made to them. They were to be associated with Christ in the establishment of his kingdom. "I go," said he, "to prepare a place for you.....that where I am, there ye may be also." He went to a place from which he could act upon the nations of this world, and they joined him there, "sitting with him on his throne," and having "power over the nations" as he had.

We conceive then of the Primitive Church as a mighty, universal empire established in the invisible world, of which Jesus Christ is the head, and the apostles are the chief officers. We think of this government as now presiding within and around us, and directing all the affairs of this world. And advancing from this conclusion, it is proper for us to consider more closely the personal, matter-of-fact relation of the apostles to outward humanity. If we believe in the resurrection at the Second Coming, we must believe that Paul, for instance, from that time forward possessed, within his sphere, the same power of operation upon the external world that Christ had after his resurrection; and as Paul was the apostle to the Gentiles previous to his translation to the spiritual world, there can be no doubt that he still holds a corresponding office. In his epistles he called himself the servant of Jesus Christ; and just as certainly as Christ has been ruling the world the last eighteen hundred years, so certainly has Paul been his servant engaged in the same work. And as the heavenly administration extends to state affairs as well as religion, including church and state under one head, Paul and his associates must have what may be called a secular function, as well as a spiritual one. In a word, Paul is a *king*. His proper title is KING OF THE GENTILES, as Christ's was KING OF THE JEWS. It is nearer the truth to say that Paul is a king, than it is to say that he is merely an apostle or bishop. He *was* an apostle, but at the Second Coming he ascended his throne and became king. Priests and bishops have but little to do with politics and statesmanship; but Paul is busy with both. If we are wise we shall study his character as king of the Gentiles; and in so doing we shall find ourselves in the most favorable condition to come into valuable relations with him.

BACKWARD GLANCINGS.

XVI.

THE summer of 1836 opened with many unfavorable omens to the cause of Perfectionism. Boyle, Dutton and the other leading spirits were as widely separated from each other as from J. Anti-slavery and other reforms absorbed what little enthusiasm they had left. In our family the same purpose to divide and scatter, if possible, was at work. An elder sister whose husband was in the West Indies, spent several months at home. She was a person of great decision and strength of character—very attractive and much beloved by us all. Naturally she was much interested in the education and prospects of her younger brothers and sisters. Though a church member, her tastes and ambition led her toward worldly success. She saw and felt instinctively that J.'s influence over us was to lead us away from the world and make us unfashionable as he was. This, seen from her point of view, was to make life a failure. In May I was sent to a boarding-school in Hartford, and George's preparation for college was urged forward. My sister took Harriet with her to Saratoga for a three weeks' visit. For the time being it looked as if we should all drift away with the tide. But the darkest hour precedes the dawn.

Late in the fall J. returned home. He came unannounced as usual, but was received with joy. Mother was a frequent invalid at this time, and kept her chamber. In her room J. felt most at home. The Bible was always her favorite study, and her interest in true religious experience was never cold. I do not know exactly how it commenced, but soon my sister Harriet began to spend her evenings in mother's room listening and reading with them. Her whole soul was hungry for salvation—for an experimental acquaintance with God. While she was thus pressing forward she had one great drawback; it was the thought that she must leave me behind. If I continued indifferent, she and I, who had been inseparable from childhood, must here part. To give me up cost her many tears. How did I know it?

Nothing had been said to me of her struggles, but I felt in my heart that Harriet had left me, that she had set out in earnest to be religious. This broke up my indifference. My heart melted toward God. I must go with her. She had opened the way and I would follow with all my heart. I joined her in spending all my leisure time in that "upper chamber." George came too. This was the beginning of a new era in our family. J. commenced his Home-Talks there with mother, Harriet, George and me for listeners. It was a revival on a small scale that lasted all winter. We studied the Bible in a practical, self-applying way. The truth that had been before held as a theory was laid to heart. J. watched the process of conviction, and warned, exhorted and encouraged us, and led us along step by step.

It required more courage at that time to confess salvation from sin than it does now. Harriet, George and I, though called Perfectionists, had never made such a confession. In February, I think, we all made a public confession in this way: George was attending the district school, and one morning after the teacher and scholars were all seated he rose and confessed his belief in Christ as a Savior from sin. The same evening Harriet and I called upon a near neighbor who, though a church member was the most notorious gossip and newsmonger in the village. We told her we believed that Christ came to save his people from their sins, and we believed that he had saved us. She was loud and voluble in her opposition, and her husband —no church member—said with solemn emphasis, "They are joined to their idol, let them alone!" But we went home light-hearted, knowing that now our confession would go as far and fast as tongue could carry it, and believing it true that Christ would confess us.

THE TRUE LIGHT.

"DO not hide your light under a bushel; let it shine," said a friend to me with emphasis, as I expressed a determination to seek self-improvement first as the best means of helping others into the light.

"Would you think it the best way," I answered, "to run about seeking to light your neighbors' lamps, leaving your own neglected and in danger of going out altogether? A lamp well trimmed and burning was probably the figure in the mind of Christ when he uttered those memorable words. Would it not be the better way to turn your attention first to the care of your own lamp, and, regardless of the necessary time and labor, form a connection between it and an inexhaustible fountain of supply, seeking to have the light emanating from it of a character so clear and unmistakable that others seeing it should be attracted by it to fill their lamps from the same fountain, and uniting their lights with yours should attract others until a flame would be raised which, radiating through the surrounding darkness in still increasing and ever widening circles, should at last pierce all the dark corners of the earth?"

"This seems reasonable enough," said my friend in a thoughtful mood; "but was this the way that Christ and the church that he founded let their light shine? His express command to the disciples was, 'Go ye into all the world and preach the gospel to every creature.'"

"Quite true, so far," I replied; "now if you will add the rest of the command—'but tarry ye in the city of Jerusalem until ye be endued with power from on high,' and then read with me the account of the work wrought in the disciples as they waited patiently for the promise of the Father, I think we shall find that the primary work of this church was self-improvement even through the first stages of its experience during the forty years of growth from babes in Christ to the full stature of men and women, when they were able to declare with all boldness, 'The darkness is past and the true light now shineth;' and, 'If we walk in the light as God is in the light we have fellowship one with another, and the blood of Jesus Christ his Son cleanseth us from all sin.' They literally obeyed the command of Christ by proclaiming the gospel to all of the then known world before the Second Coming of Christ; yet the real light in them which was judging the Jewish nation, was God manifest in the flesh as victorious over sin as he was in Christ. The kingdom of God in them was not so much in word as in the power of the spirit of the Lord. In this way their light sent forth its brightest beams, and is judging the world to-day wherever the Bible has found its way. They proved it possible for men to hold direct and open communication with God and to be wholly saved from sin, declaring that 'whosoever is born of God cannot sin because he is born of God.' The evidence of the establishment of this great truth in them, together with their unquestioning faith in the promise of Christ that he would come again within the life-time of that generation to gather his elect from the four winds of heaven, are facts which now, after the lapse of so many centuries still stand a solid foundation for every earnest seeker after the truth, and as 'a flaming beacon send their blaze afar.' This faith which we find recorded upon so many pages of the New Testament is a light which is searching all Christendom wherever the Bible is received as the word of God. Now if you will please turn to the 17th chapter of John we will study together the prayer of Christ and see if we cannot learn from it a way for the church to send forth a light that will be far more effectual than any that comes through preaching, for the purpose of convincing the world of sin."

"Is this it?" asked my friend, as she read carefully, "Neither pray I for these alone, but for them also which shall believe on me through their word; that they all may be one; as thou, Father, art in me, and I in thee, that they also may be one in us: that the world may believe that thou hast sent me. And the glory which thou gavest me I have given them."

"Yes, it is all there. First, the light which comes through the word to believers who receive the truth. Second, the greater light shining through the unity of the church—a light which will enable all men to see that Christ was the Son of God and ripen them for the judgment: 'I in them and thou in me, that they may be made perfect in one.' This is God manifest in the flesh, and through this manifestation the world shall know that God now loves his church as he loved Christ. Made perfect in one implies not only the unity of believers in the out-world but in all worlds. It means no less than the gathering together in one all that are in Christ, 'both the family which are in heaven and the family which are on earth, according to the promise which was made to those who are now living in the dispensation of the fullness of times.'"

"Well," said my friend, "this gives me much food for thought. It would seem from your belief that the world is having a similar preparation for the judgment that the Jews had at the close of their dispensation, and that as the kingdom of God came to them 'without observation' it is now aproaching the world in the same way. Perhaps you are not really hiding your light under a bushel notwithstanding my impressions to the contrary, for it may be true that in seeking self-improvement you are taking the best way to have Christ's prayer fulfilled in you and so let your light shine before men that they may see your good works and glorify your Father which is in heaven."

S. E. A. D.

A SCHOOL INCIDENT.

IN the summer of 1840, Miss V—— was asked to take charge of a disorderly school in a small New England village. It was a beautiful morning when she entered the school-room, where she met forty or fifty children all neatly attired and looking bright and cheerful, with the exception of one little boy about eight years of age. His appearance was quite in contrast to that of the others. He was dirty and ragged, without sufficient clothing to cover his nakedness.

Miss V—— began to organize the school, and soon ascertained that this little boy had a brother present, who was neatly dressed. She wondered at the difference between the brothers. Her attention was frequently called to the boy by the other pupils. He was so full of mischief, that he was constantly annoying those who sat near him. He seemed determined to be ugly and defiant; but she only gave him a glance, not wishing him to see that she noticed him. The labors of the day being over she repaired to her boarding-place. The gentleman and lady of the house made many inquiries about this "bad boy," as he was called, and were astonished that she had managed to get through the day without inflicting punishment upon him. They said they did not think he ever attended school a day before in his life without punishment. The gentleman, who was a merchant, said that the boy was the worst child he ever saw or heard of; he would lie, swear, steal and fight, and he would not have him in his store or about his premises.

From all that she could learn from others and observe for herself the teacher became convinced that the child had not a friend in the world, not even among his own family. He was daily whipped or punished in some way, and

no one ever spoke a pleasant word to him. He was a bright, keen-looking little fellow, and she felt a deep interest in him. She retired early to her room, not to sleep, but to think. She had one absorbing thought—what could she do for the unfortunate child? She prayed to God for help, and he heard and answered her.

Miss V—— entered the school-room the next morning with a firm purpose to do all that was in her power to reform the boy. It was not long before she saw him pinch a child near him. "Now is my time," she thought, "to begin to act on my theory of the best way of treating him." She asked him to come to her. He hesitated, and gave her a scowl. She answered with a smile and again requested him to come to her. He then came without hesitation. She seated him beside her and gave him a book of pictures. O! the puzzled expression of his countenance! It was extremely amusing. He looked at the book, at the teacher, and at the school, in perfect bewilderment. She at once saw that she had gained his confidence. Another important point to be gained was to induce the school to coöperate with her. She was sure that the boy's bad reputation was more owing to his surroundings and to the treatment he received from others than to any real viciousness in himself. She sent him out to gather some flowers, and in the mean time presented his case to the school, telling them that she believed he could be made a good boy if the right course were pursued; but that he would be ruined if his companions continued to treat him as they had done. She requested them to make no further complaint against him. They demurred; they frowned, and some said it was impossible for such an ugly boy to reform. The teacher saw that her words had no effect on a part of them. She then resorted to an extreme measure and said, firmly: "The first scholar who makes a complaint against that boy shall be punished." She told them of the importance of treating him kindly and enjoined it upon them with great earnestness that they must use him well. They complied with her request. From that time the school was under her control. It was very seldom that she had to correct a child, and she was not obliged to resort to corporeal punishment during the term of five months.

A decided change immediately took place in the child. He became obedient, kind and affectionate. His parents began to take an interest in him and he was soon well dressed and appeared neat and tidy. He made rapid progress in learning, considering that he had never before learned the letters of the alphabet; and it was not long before he won the confidence of the whole village, and his father in after years was often heard to remark that Miss V—— saved his boy from ruin and made a man of him.

AUNT SUSAN.

LOCOMOTION.

I.

PERHAPS the progress of the human mind as well as the human body has in no one thing been so marked as in the business of locomotion. Literally speaking, I presume to say, that there is no motive-power operating on human nature to help forward its progression which is so efficient as the locomotive, and this outward progress is probably only an index of the spiritual progress it is making. Certainly there never was a greater commotion made in the spiritual as well as in the social and political departments of human society than there was at the time of the advent of steam locomotion. But while we would esteem this wonderful power according to its just deserts, and while we are shocking the Chinese out of their lethargy of centuries by telling them wonderful tales by electricity as easily as if they sat at our elbow, it may perhaps be of some interest to look at the beginnings of this business of locomotion and discuss its origin and progress.

When we come to consider the subject of human locomotion in all its bearings we find that it has naturally four grand divisions:

I. Locomotion on Land.
II. " " Water.
III. " in Air.
IV. " " Spirit.

These may be again separated into as many subdivisions as there are methods of locomotion in these several departments; as, for instance, under the head of human locomotion on land we have:

1. Creeping. 2. Walking, 3. Riding on the backs of animals. 4. By drag or stone-boat. 5. On wheels behind animals. 6. Over railroads.

Then subdividing the method of human locomotion by water we have:

1. Swimming. 2. Floating down-stream on a log. 3. Rafting. 4. By dug-out. 5. Boating with oars. 6. Boating with sail. 7. Canal boating or towing. 8. By ocean sail-vessels. 6. By ocean steamers.

Then under the third heading there is the great subject of navigating the air. At present we are practically acquainted with no other method of traveling through the air than that of ballooning; but there is no telling how soon we shall be using wings, or perhaps the same power that sends the rocket on its brilliant mission.

Lastly there is locomotion by spirit, as well in spirit, about which the Bible and modern spiritualism are full of most marvelous accounts.

When we look at a full-grown specimen of human anatomy, we find that nearly half of its longest extension is devoted mainly to the business of locomotion. Though this may not be the chief end of man, we naturally infer that it holds an important place in the divine mind. We can scarcely find a better illustration of a case where the other end of existence is chiefly developed than in that of the well-grown cabbage. It is probably for this reason that people reply, "I am no cabbage," when their moving is brought in question. That there is an intimate relation between these two ends of human existence, and that the higher end is exceedingly dependent on the lower, is clearly demonstrated by the fact that good feet and legs are absolutely necessary to enable a person to get a-*head* in the world. I desire very much to propitiate the Phrenologists and others who have gone ahead of me in studying the motive powers of human nature, and with this in view I would respectfully remind them that the locomotive powers do not propose to charge them anything for the rides they furnish. These powers propose to give the head the office of conductor, or the privilege of being a deadhead if it chooses. With this fair and liberal understanding we hope to proceed smoothly on our proposed route without any fear of collision with our very respectable neighbors.

H. J. S.

HOW TO USE THE EYES.

I.

A CELEBRATED German philosopher once remarked in the course of a lecture on the eye, "that if he should receive an optical instrument so full of imperfections as the human eye he would at once return it to the maker with the severest censure upon such slovenly work; but that the more he studied the eye, the more he had occasion to admire its wonderful mechanism and perfect fitness for the work it has to perform."

Our optical surgeons tell us that the diseases known as Asthenopia and Amaurosis are on the increase; which means, when translated into English, that weak eyes are much more common now than they were years ago. It may be that weak eyes are more common now than formerly, for the same reason once given in a literary debate, why white sheep eat more than black ones, viz., because there are more of them. There are, certainly, many more eyes in this country now than fifty years ago, and even if the proportion of weak eyes were the same, the aggregate would still be large. Be that as it may, the numerous cases of weak eyes, and the increasing demand for spectacles at an early age, indicate a growing evil which threatens to make of us a nation of "blind leaders of the blind." That the failure of the eyesight at an early age is entirely caused by overwork or misuse, we are not prepared to demonstrate, but that a large, a very large share of such cases can be directly traced to such causes we are thoroughly convinced, and will try to prove the correctness of our theory.

In order that we may fully understand how the eye should be used, we must comprehend these two fundamental principles: 1. That the eye is an optical instrument and must have certain optical conditions if we would get the best results; 2. The eye is, in a measure, a self-regulating, and self-protecting instrument, constantly on guard to prevent injury to itself and to give warning when too heavily taxed.

One day while talking with my neighbor, the inventor—a sort of universal genius who sometimes glances at the human machine while studying the pitch of a screw—he remarked, "I've about made up my mind that Old L. hit the nail on the head when he declared that it is the *unconscious* strain upon the eyes which weakens them." Old L. did hit the nail, or we might say the bull's eye, when he made that remark; and to impress it on our readers we repeat that it is the "unconscious strain" which, in the great majority of cases, is the cause of failure, and it is in the management of light that we produce this unconscious strain. Let us watch yonder naturalist for a moment and see how he manages the light in that most sensitive of optical instruments, the compound microscope; after carefully adjusting the object and the focus of the lens he turns a bright pencil of light upon—what? The *object* and not upon the object-glass or lens. The thing to be seen or examined is illuminated, but the eye is left in comparative darkness. How often do we violate this rule! How often do we sit directly in front of a strong

glare of light shining directly into our eyes instead of upon our work; and often with the light coming from behind or at one side causing the object to lie in a shadow! It is in these ways that we soon produce a strain of which we are unconscious at first and perhaps for a long time, but which finally becomes but too painfully real. The strain in these cases is produced in two ways: by the efforts of the pupil to contract under a strong light, and then to expand when the object is in the shade or imperfectly illuminated. Under a strong light the efforts of the pupil to contract are held in check by the will which compels the eye to work under protest. If you open the eyelids of a person asleep and hold a light near, the pupils at once contract, although the mind of the sleeper knows nothing about it. His will is off duty, and the sensitive organ acting through the never slumbering spinal cord at once shuts out the intruder.

You may say to all this "that it is natural for the eye to look at the light and to be used in the light, not only without being injured, but to grow strong and healthy under the exercise." All of which I admit, simply insisting that there is a right way and a wrong way to use the eyes, and that if we wish to do the greatest amount of work with them during the longest period of time, we shall have to conform to the rule of the microscopist and illuminate the *object* and not the object-glass.

TIRZAH C. MILLER, EDITRESS.

MONDAY, MARCH 24, 1873.

SELFISHNESS ON TRIAL.

IF there is one thing more repulsive than another to a mind purified by the love of God, it is the spirit of selfishness—a spirit which seeks its own private ends regardless of the rights and feelings of others. Nothing too bad can be said of it, for when entirely stripped of all disguises there is nothing left of it but "pure cussedness," as one might say. Not a redeeming quality can be found in it. In a word, selfishness is the spirit of the devil, whose greediness acknowledges no right but the right to devour. Although there are all shades of selfishness found in unregenerate man, from the subtle and refined, to the gross and brutal, yet the root is identical wherever discovered. The spirit of selfishness is so entirely incompatible with God's generous purposes concerning humanity, that it is constantly seeking, by all manner of plausible subterfuges, to hide its hideous deformity from the light of advancing civilization. Yet no reflective mind can fail to see that this venomous foe to human redemption is coming to judgment as never before. It would almost seem that the invisible powers of good were combining for its overthrow, by exposing it to the light of day in high places. For weeks past public attention has been directed to the council chambers of the nation, where virtually, the spirit of selfishness is on trial. Men in responsible positions have been betrayed by this demon, and of course they are very much mortified; but the more they have tried to cover their tracks by plausible explanations, the deeper have they sunk into the mire. Few, indeed, are the number, with sufficient moral courage and manliness to confess the truth and thereby shame the devil who led them into falsehood; but selfishness, like murder, will out.

Men are quite too apt to justify a little selfishness in themselves on the ground that every body else is selfish too. But that won't do. Selfishness is a sin, and no amount of philosophy can change it into a virtue. When selfish deeds are seen in others, they invariably look hateful and mean, so that no man with a grain of generosity in his heart can approve of them, whether committed on a petty or on a gigantic scale. Selfishness may be tolerated, but it cannot be justified. Mean, selfish deeds are often pardoned on the ground of ignorance, moral weakness, or cowardice; but the light of civilization is dispelling ignorance, just as the light of the gospel of Christ is dispelling all excuse for sin. Before Christ came, all men were more or less in bondage to sin, however much they may have hated the power that held them in that condition. But the discovery of the great spiritual facts created by Christ's death and resurrection, showing how he destroyed the power of sin in human nature, so that in his spirit men can live without sin and consequently without selfishness, has furnished an unselfish standard of morality, by which men are now to be judged.

We repeat, that selfishness is on trial; and for what? For all the crimes and vices of which man has been guilty since his seduction by the old serpent whom God pronounced as "more subtle than any beast of the field." The result of this trial, however, is not doubtful. Selfishness has the unanimous, unqualified condemnation of heaven and earth, and can have no defender except in Satan and his angels. There is every indication that the principality of selfishness is fleeing before the evangels of Faith and Science, whose discoveries are revealing the fact that God has "made of one blood all nations of men to dwell on all the face of the earth;" and equally certain is it, that these twin forces, which are doing the will of heaven, will yet prove that all men have a common interest in hating iniquity and in loving righteousness; a common interest in supporting Christ as the rightful owner of all men, and as the sovereign of this world; a common interest in helping each his neighbor to know God and to do his will on earth as it is done in heaven; a common interest in regarding selfishness as the bane of all true happiness, and a barbarism not to be tolerated among civilized beings.

G. C.

REVIVAL INCIDENTS IN GOUVERNEUR.

[Mr. Finney's interesting account of the Gouverneur revival and J. H. N.'s comments upon it, tracing a marked connection between the work at Gouverneur and a later revival at Putney, induced one of our traveling agents whose route lay through the former place, to call on some of the old inhabitants and obtain further information. The following entertaining letter contains the result of his inquiries:]

Gouverneur, N. Y., March 15, 1873.

DEAR H.:—I am stopping over Sunday once more in Gouverneur; and I have "interviewed" pretty thoroughly Mr. Daniel Keyes, the Spencer family referred to by Mr. Finney, a Mrs. Almira Johnson (sister of the Putney Smiths), a son-in-law of Harvey D. Smith, and divers others of the men and women of fifty and sixty years ago. You may rely upon the information I give as correct as far as it goes, though possibly some of the details will be a little tedious to you if you do not enjoy reading about genealogies.

To begin, then, my investigations show that there were at least *four* distinct Smith families that emigrated to Gouverneur from different parts of Vermont some fifty or sixty years ago—which families were in no wise related to each other when they first came to this place, though they have since become somewhat so by intermarriage. So you may well conclude that this is a very *Smithy* place, though some discount must be made on the remark of the man who told me that every other one I met, if I were to ask his name, would tell me it was *Smith*. Johnson is another quite common name here, and that also was first imported from Putney. But so far as the Smith families are concerned, I will confine myself to a mention of the Putney Smiths, and to the Harvey D. Smith referred to by Mr. Finney. The last-named Smith came from *Poultney*, Vermont, and was not related to the Smiths who came from Putney, as was suggested in the CIRCULAR of February 10th. He died six years ago, and from the time of his acquaintance with Mr. Finney until his death, continued to be a pillar in the church. I called at the home of his widow, who lives with her son-in-law in an elegant mansion, but learned that she was just now visiting a son in Buffalo.

Mr. Daniel Keyes, a genial, well-preserved gentleman of ninety-one years, who also expressed a warm interest in Mr. Finney and his revival labors in Gouverneur, informed me that old Mr. Ashbel Johnson, and his daughter Mrs. Hale, were the first emigrants from Putney. They came to Gouverneur between sixty and sixty-five years ago. Ten years later, or fifty-one years ago this spring, Mr. Keyes himself left Putney for Gouverneur. One year after came Captain Benjamin Smith, and two years after that, Daniel Keyes's brother, Joel Keyes. Next came Joseph Smith, who was son-in-law to Ashbel Johnson: his brother Isaac and the other Smith brothers following, one after another, until in the course of a few years the five brothers and their families had all removed to Gouverneur. Their names were Joseph, Isaac, Jonathan, Benjamin and Nathaniel; the last named being the only one still living. He now lives somewhere in the west. Benjamin Smith died twenty years ago. (He it was, as is mentioned in a late No. of the CIRCULAR, that built and lived in the house which on his removal to Gouverneur was purchased by the father of J. H. N., and became the home of the Noyes family in Putney. He had a zealous interest in the revival movement, and Messrs. Finney and Nash made their home at his house for a part of the time of their sojourn here.) A family of Perrys also came from Putney about the same time that the Smiths came—Ira Perry and Sullivan Perry; and a few years later came George, son of Dr. Alex. Campbell, and the Stoddard family. Besides these, were Saml. Smith (from a family not related to the one already referred to), Mr. Joshua Parker, Wm. Read, Emery Eager, and Geo. Miller—which, as near as I can learn, constitute all the families that came from Putney. And so many of these settled on one street leading from the village that some of the Vermont emigrants still speak of it as "Putney street." It is interesting to know, too, that fifteen of these emigrants were members of the Congregational Church of Putney, and that they formed an important part of the material with which God wrought one of the greatest revivals of modern times.

Henry and Julia were brother and sister, children of Joseph Smith, but were adopted by their uncle Benjamin, who had no children of his own. Harvey, the young man, was the son of Jonathan Smith, who at the time of the Governeur revival still remained in Putney. Lucius Johnson's mother was one of the Smith sisters, and his father was brother to the Ashbel Johnson who lived in Putney (next house to lady Campbell's) when we moved from there. His aunt Almira, another of the Smith sisters, still lives in Gouverneur, and lived with her brother Benjamin at the time that Mr. Finney and Father Nash made it their home there. She married Stephen Johnson, another brother of the Ashbel Johnson I have just mentioned.

The young men, Henry Smith, Lucius Johnson

and Harvey Smith, went to Putney during the revival, which was in 1825, and shortly after their return to Gouverneur they went South, Henry finally becoming a slaveholder in Georgia, in which State he is supposed to be still living. He took up arms against the North in the late civil war, and his sister Julia, who visited Gouverneur lately, says he is a rebel still. Lucius Johnson, who went South with him, died twenty years ago. Young Harvey Smith went to Illinois and engaged in mercantile business. He died two years ago. I have heard him spoken of here as bright, and exceedingly apt as an exhorter and lecturer in religious meetings; could preach as good a sermon as a regular minister, etc.

But now for some reminiscences of the great revival. It was in 1825, forty-eight years ago, that Mr. Finney and Father Nash were here, from April to September. As already intimated, I have interviewed a number of the men and women here who were personally and well acquainted with both Finney and Nash, and with the whole progress of the revival. I have visited families where they boarded, and the houses in which they held prayer and conference meetings night after night and week after week, and have had my heart stirred by the experiences and incidents that have been related, very much as though I had taken a personal part in them. It was truly a very remarkable revival. It lasted for a whole year. Many hundreds were converted in Gouverneur and the adjacent villages, including the very hardest cases from all classes of society; and there are but comparatively few of the whole number who have not held to their profession and continued to be the salt of the church. The people describe Mr. Finney as a powerful man, in the prime of life, with an eye that would seem to search the sinner through and through; and anecdotes of his style of preaching are still vivid in the recollections of many. The testimony in relation to Father Nash was the same from all lips. He was not only one of the best of men and greatly beloved, but the most powerful in prayer of any person they ever heard, a man full of faith and of the Holy Ghost, and a very "*son of thunder*" in convicting sinners. "In prayer Finney wasn't anywhere by the side of him." Yet the two worked harmoniously together, appreciating one another, and each considering the other as necessary to his success. Finney regarded Nash as his right-hand man, and felt that he could not get along without him.

It was a custom with Father Nash when laboring with the unconverted, if he found them obdurate, to go away and without further conference with them make them special subjects of secret prayer until he had received an assurance of their conversion. Indeed, according to report he was wonderfully successful in receiving assurances from time to time in answer to prayer, that such and such an one should be converted. To illustrate his character in this respect, Mr. Keyes mentioned a notable case named Nathaniel Martin. He was a Universalist, and deadly opposed to the revival. Father Nash was bent on his conversion, and retired day after day to the grove back of Benjamin Smith's house to pray for him. At last he came into the house one day saying that his prayer had been answered. There had been no visible change in Martin up to this time; but Father Nash was positive that "there was no mistake." Sure enough, Martin was shortly converted, and he afterward became a talented Congregational preacher.

Another person told me of Raymond Austin, who was much opposed to the meetings, and had resisted all the entreaties of his wife to go. One day after positively refusing to go to the meetings, he started with his ax for the woods to do some chopping. Father Nash told him on starting that he would never get to the woods. And, strange to tell, he fell, cut his foot, was obliged to return to his house, and was afterward converted. He belonged to the Gouverneur "roughs," and was said to be the one who contrived to put a quantity of pulverized potash on the pulpit seat one day just before the services commenced. But Mr. Finney's eagle eye discovered a suspicious looking substance on his seat just in time to avoid disagreeable consequences. One person told me of a prayer he heard made by one of the converts. In imitation of Father Nash he asked the Lord to "*shake* the sinner over hell," and then by way of cautioning the Lord, added, "but for Christ's sake *don't let him fall in!*"

Father Nash is reported to have had his stated times of secret prayer every day; and as he always journeyed on horseback, if his time of prayer came while he was traveling he invariably stopped (no matter what the circumstances) and attended to the ordinance. Both he and Mr. Finney spent much time in prayer in the woods and groves of the village; and, indeed, I was informed that for months during the summer and fall of the revival year one could scarcely go out at any hour of the night without hearing individuals or companies of individuals praying in the fields and groves in several directions at the same time.

During their stay at Gouverneur Finney and Nash would also hold meetings in the adjacent villages for several miles around. On one of these occasions the "roughs" made an arrangement to give Mr. Finney a "ride on a wooden horse," as they called it, on his way back to Gouverneur in the night. But contrary to their expectations he was providentially detained over night in the place where he had been preaching, and so escaped the ride prepared for him. Another night these "sons of Belial" sheared very close the mane and tail of Father Nash's horse, as they supposed. But it proved in the morning to be the horse of a peddler who had put up at the same place over night, and there were some damages to pay in consequence.

Mr. Finney, one man told me, was accustomed to boast over his converts in DeKalb—a town twelve miles from Gouverneur. "Why," said he, "one of those young converts would pray a kingdom down quicker than some of these old professors can pray a sitting hen off her nest." Another story reported to me about Mr. Finney by one of his friends who evidently believed it, is that in riding from place to place he drove a spirited but balky horse; and that on one occasion as he was driving to Ogdensburg the animal became unmanageable. His efforts to persuade him to go along proving unavailing, Mr. Finney finally retired a short distance and prayed for the horse; after which he behaved well, and never gave any further trouble. But Mr. Finney not only believed in the efficacy of prayer for his horse—he went further; he believed in consecrating his horse to the service of God. For when one day a gentleman came to borrow the animal, he was made welcome to its services on condition that he was going to use it on the Lord's business; but if otherwise, there could be no accommodation. One man of whom I inquired respecting the social habits of these two men, aside from their religious labors, replied that Finney was somewhat given to joking; and that Father Nash was more solemn, but at the same time a very sociable, nice, and good man.

The excitement during the revival was tremendous here and in all the region about. Saints and sinners confess to that; and Gouverneur has never got over it. There is really a good deal of genuine faith in the place. But some of the old Universalists who have recovered from Mr. Finney's charge on their ranks, claim that Harvey D. Smith was just as good a man before he was converted as he was afterward—that he was always one of the best of men, etc.

When I was here five weeks ago the people had not yet heard of Mr. Finney's articles in the *Independent*. But now there is great excitement in the town over them. The Baptists don't like them very well; and one of the elders has written an article which is printed in a Baptist paper, controverting some of Mr. Finney's points. But the general feeling sustains Mr. Finney as substantially correct. Daniel Keyes and others who have not yet seen the *Independent*, told the same story about the Baptist controversy that Mr. Finney reported.

I was received by persons on whom I called with much friendliness, and was more than once invited to spend Sunday with them. And not the least interesting feature of my contact with the good people of Gouverneur who remembered Father Nash, was the hearty interest they manifested when I told them that I lived in the same family with his children and grandchildren and that they were all followers of his unfeigned faith. But I must stop. Good bye.

S. R. L.

COMMUNITY JOURNAL.

ONEIDA.

—A small cottage at the north end of the lawn has lately been fitted up for the use of the musicians. The old piano has been placed there, and the practicing will now be done out of hearing of the family—an arrangement which is mutually agreeable.

—This is a noisy house, as you can imagine it might be with so many of us passing to and fro all day long; but some lovers of peace and quietness petitioned for a fund to expend in cane-matting for the halls, and we are now enjoying a stillness which is quite delightful.

—The tulip-tree is not only beautiful in summer with its straight, symmetrical proportions, broad, truncated leaves, and variegated, cup-shaped flowers, but it has one peculiarity which gives it a singularly pleasing effect in winter, after a storm of snow has fallen unaccompanied by wind. Wherever there was a flower in the tree the remaining carpels form a little open-work basket or cup, about the size of an egg-shell. Every branch is studded with these tiny cups, and the snow, gently falling, fills them with heaping measure until each one is surmounted with a beautiful crystalline cone. These little cups with their contents are not unlike cotton balls, though persons of imaginative disposition compare them to frosted cakes, or vanilla ices. The one tulip-tree standing in the Quadrangle is often seen loaded with its beautiful winter fruit; but whoever would enjoy the sight must not wait too long after a snow-fall, for the first wind that blows will shake it all to the ground.

—Our Sunday evening entertainments are quite informal. In the absence of some of our more professional instrumentalists, those at home band together and play at sight old familiar airs reminding us of the days when the orchestra was in its infancy. The actors are constantly changing, so that we are not unfrequently surprised by an exhibition of genius in persons whom we had never before suspected of theatrical talent. When on the last occasion it was announced that "the next piece would be a Jubilee song by a Jubilee singer," the audience were wholly unprepared to see a tall, well-proportioned negro walk nimbly upon the stage and make his bow. For an instant we were puzzled; but the conviction soon flashed upon us that it was no other than our Mr. Shelly, well disguised. Was he about to sing? We had never heard him sound a note in the world and were a little curious to know what kind of mu-

sic he would make. In another moment he struck up in a clear, firm voice, "I'm a Rolling," and followed this with "Swing Low, Sweet Chariot," and "Children, You'll be Called On." He entered into these songs with so much zest and abandon, and withal rendered the music so well, that one might have thought that he had sung on the stage for a profession.

—The little safe that has done duty so long in our business-office, has been for the past year unable to hold all our important ledgers and journals. On the first of January an application for a new and larger one was granted. The work of investigating the merits of the prominent safes in the market devolved on a committee, who finally selected the make of Mosler, Bahmann & Co., of Cincinnati; their safes having stood the test of the Boston fire with remarkable credit. The new safe arrived last Friday, and on being drawn to the office was found too large to enter the door, until a carpenter removed the casing; then six men, with the aid of crowbars, rolled the strong-box into its place. It weighed 4,800 pounds. The outer doors are ornamented with an oil painting of the O. C. landscape; the inner doors with fancy figures. Many have come to look into the innermost compartments of the new safe and explore the mystery of its lock without a key, vainly turning its silver knob with the hope that the one lucky combination in the 125,000 possible, might prove an "open sesame." Altogether the safe is very satisfactory to us and we commit our books and valuables to it without fear, though we hope that it may become old and rusty before it is tried by fire.

—On Tuesday evening eleven of our people went to Oneida to listen to the "Oratorio of Esther," under the direction of Prof. R. W. Seager. There were forty performers on the choruses, including the four principal soloists, R. W. Seager, Miss Ella Knapp Seager, Mr. F. Roraback and Miss Lettie Johnson. Our party felt well paid for their ride over a rough road. One said that he could not help thinking that the effect of the musical rendering of the simple stories of the Bible, must be much more elevating than the usual theatrical programmes. The scenery and costuming were very fine. The next day the noon train brought several of these artists to our station, among whom were Mr. Seager and daughter. Their visit lasted about three hours, and was mutually pleasant—they favoring us with a few extracts from the Oratorio, and one or two ballads, to which we, at their request, responded with a few songs.

—If the theme would admit of the least flight of imagination we should be tempted to sing the praises of "earth-closets." Science has been invoked in a thousand ways to bless mankind and ameliorate human conditions, but in its whole scope, as applied to domestic arrangements, we can think of no achievement that is calculated to minister more directly to the health and comfort of man than the earth-closet. To the invalid and the aged it is an inestimable boon, at once so simple and inexpensive as to be within the reach of people in almost the humblest circumstances. We do not write this as an advertisement, and do not know to what extent the earth-closet has been introduced, but in a sanitary point of view, and as marking an important step in civilization in this nineteenth century, we think it worthy of all acceptation. We hardly ever call at a hotel or railway station without involuntarily thinking that the proprietor might do a good work toward abating nuisances and ushering in the "good time coming" by adopting earth-closets.

—Stories of providences, we think, are the news best worth telling. A member related the following incident the other evening:

"I was on my way to Indianapolis. Having some business in a city by the way, I stopped off to attend to it. That being finished I was in some doubt whether to make a call on some friends in the city; so I asked the Lord what I should do. On starting I had purchased a through ticket. When I was getting out of the cars I felt for my ticket and it was gone. The fare to Indianapolis was eight dollars and forty cents, but in my pocket-book were only seven dollars. So my doubt was resolved, for there was no other way open but to call on my friends. I found them very glad to see me. I told them that I deserved no credit for calling as I was uncertain about stopping until I asked the Lord, and received an answer by losing my ticket, and now had to come to borrow some money. They gladly accommodated me. When I was about to start again on my journey westward I casually said to my friends, 'Would it not be a good providence if I should find my ticket?' That was the first time the idea of recovering the ticket had entered my head, and the impression that I should find it grew so strong upon me that I went to the depot and told the ticket-agent of my loss. Before I had finished speaking he directed me to the depot policeman who, he said, 'knew about it.' I sought the policeman and inquired for my ticket. He went away and returned in a few moments bringing it to me. He said he found it in the doorway of the car I rode in. I thanked him and returned to the house of my friends and told them of my good luck."

—Prince or Prin, our favorite dog, has "gone to his death." Prin was a large, shaggy shepherd's-dog, and probably had water-spaniel blood in him; but it did not save him from a watery grave. It was his wont to follow the men to and from their work, and in the summer season he delighted to swim the creek which crossed the route. Sunday morning Mr. Taylor, one of our workmen, with Prin and another dog, was going his usual round of farm duties. The water was high, and a large open place in the ice discovered a dangerous whirlpool, which it is supposed his dogship attempted swimming across. For when Mr. T. reached the barn he missed Prin, and on looking toward the creek, saw him apparently lying on his back, with his head downward, and his feet projecting from the water. Before T. could possibly reach him, he disappeared under the ice, thus ending the useful life of our old dog Prin. He was a model dog in his way, and famous for driving cows; he had a remarkable intelligence, which enabled him to perform this duty without running or worrying them. He left many friends to regret his loss, especially among the children, who do not tire of rehearsing the story of his fate. But science assists us in contemplating the sad event with a good degree of fortitude: What if Prin in the geological ages yet to come should turn up a splendid specimen of petrifaction? The stream that "engulphed his lifeless form," runs directly into Oneida Lake; the weather is cold; the water is cold; no decay of the body is likely to ensue. Floating into the Lake it will lie on the bottom until the spring freshets, when it will be entombed in the vast deposits of sediment, where it may stay for millions of years, when some day the "organic remains" will be found in a state of perfect petrifaction! What dog wouldn't be drowned in preference to "dying a natural death" if he could know the glory awaited him of becoming a "fine geological specimen?"

—For the last month the feminine part of the O. C. has been busily engaged in a unitary plan. They resolved themselves into an impromptu school of design, and some astonishing works of art have been produced. Three months ago Mrs. Noyes wrote from W. C. that she wished the women here would each contribute a block ten and one-half inches square to a bedquilt she proposed to make. H. H. S. suggested that each one follow her own fancy in the pattern she adopted and make the dissimilarity as wide as possible. Large bodies, as every philosopher knows, move slowly. So two months had slipped away before we were fairly under headway; but what we lacked in promptness we made up in assiduity. C. A. M.'s genius with the pencil was in great demand for designing and drawing; some of the men exercised their draughting knowledge in the service, and some of the women, with creditable independence, made their own patterns. Aggregation lends enthusiasm, and as E. E. B., who is skilled in needle-work and was hourly sought for advice, spent her time in the Back-Parlor, that room became the general rendezvous.

Now the fever is over, and for a week the South Sitting-room has been transformed into a mimic fair for the exhibition of the month's work. A long strip of cloth stretched from corner to corner, covers the four sides of the room, and on this the blocks are pinned, so that they may be closely examined without handling. There are one hundred blocks, representing many things which we scarcely believe were ever before attempted in needle-work. A number have executed designs symbolical of their occupations. Here, for instance, is the one made by H. H. S., who presides at the home machine-shop: a specimen of spur-gearing—a central cog-wheel surrounded by four smaller cog-wheels, beside which are written, "The Lathe, The Sew-Machine, The Locomotive, The Clock, The Printing-Press." This is nicely done in blue on a white groundwork. Mrs. N., who also works in the shop, shows us her industrial implements—the hammer, the calipers, oil-can, wrench, etc.; and here is a hand-lathe. O., who is phonographic reporter, depicts her table, with pencils, note-book and copying-press. H., who is financier, portrays her desk, with its drawers, pigeon-holes, ink-stands and ledger. Here is a very small young lady perched upon a very large stool at a Steinway Grand. This was made by E., who is taking lessons on the piano. Mrs. F., who used to be in the picture-business, gives a fair representation of a photographic machine. Mrs. S., who works at the silk, makes a very good likeness of the standard and pin with a large bunch of silk at the left, while at the right are hanging the bright-colored skeins, all neatly knotted and ready to be made into hanks; Mrs. C., who superintends the silk-spooling at the factory, shows us what she does by a variegated pyramid of spools filled with machine-twist. Here is a type-case; this was made by E. M., who is one of our chief typos. Here is the editorial table, with books, clip and inkstand. H. and L., who are singers, have delineated the musical staff, one in black and the other in colors. M., who helps take care of the babies, has represented some of them at their play, C. A. M. completing the group by sketching in the background the heads of all the rest in India-ink—"block-heads," Z— facetiously remarked. Here are the four little boys playing at leap-frog, while Ruth looks on; here is a cradle, with numerous other "fixings" which are found in the nursery, and should be labeled "great expectations," some one says. Here are four baby hands with names attached. The croquet-ground, with mallets and balls, makes a pretty picture. A clock-face, accurately outlined in embroidery, looks like a veritable time-keeper. There are several astronomical designs—Saturn with its rings, the phases of the moon, etc. Flowers are depicted in various pleasing forms, conspicuous among which is a basket of pansies. Fruit is also fairly represented. There are strawberries, pears, cherries, and here is a beautiful cluster of grapes. Here are two flags of different nationalities; here is a bee-hive with bees flying toward it; a dove, holding in its mouth a slip upon which is written the words, "Revival and Peace." Two girls are

playing at battledoor and shuttle-cock; and here a mop-wringer immortalizes Mr. J. Leonard, who contributed his mite toward the emancipation of woman. This demure representation of little "Red Riding-Hood," was made by Miss Jessie, who is attending drawing-school. Here is a block containing one hundred pieces; here is Noah's ark resting on Mount Ararat, a rainbow arching the zenith; and here is the typical negro of plantation-days, balancing on one heel in a jiggish attitude, while he draws his inspiration from an old fiddle beneath his chin. This is the production of a young man—sewing and all. One of the most interesting blocks exhibits a striking similitude of two squaws as they sit at our back-door waiting for Margaret to take their baskets in exchange for broken victuals. There are besides various designs taken from carpets, paper-hangings, oil-cloths, stoves, etc., to which we can give no name. Those who used to be active at "quiltings" forty and fifty years ago, say they never heard of a quilt like this. It is an "album-bedquilt" with the wildest variations, and we imagine that half a century hence it will be an interesting memorial of the industries and aspirations of the year 1873.

A Double Orange.—In a lot of oranges we had for dinner, March 18, there was one that might be called double; it was, however, more like an orange within an orange. The only external peculiarity was the greater relative longitudinal diameter, but on tearing away the rind and taking out two of the segments it was found that the twelve outer segments inclosed a body an inch in thickness, and having six segments. This did not have a rind different from the usual segment-covers, but was intimately connected with the stem-end of the fruit. The whole orange had less than the usual number of seeds—there being only two in the outer segments and three in the inner ones. To account for this freak of nature, if we accept the theory of the morphologists, that the flower-bud is a modified leaf-bud, and that all the parts of the flower—sepals, petals, stamens, and pistils, are so many leaves differentiated to perform new offices—we may suppose that in the flower which produced this orange, there were two whorls of these hypothetical pistillate leaves on the same axis, and near enough together for the lower one to inclose the upper. This unusual arrangement might also account for the imperfect fertilization as shown by the small number of seeds. As helping our hypothesis, we mention the case of double fruits, where an apple, for instance, has another one growing from its calyx or "blow end." Are these double oranges common, and how do *you* account for them? We had never seen one before.

FROM OUR YALE STUDENTS.

VII.

IN speaking of the medical lectures I attended I omitted to mention those of Dr. Barker. I only heard two, as the hour made it impossible for me to attend usually. In the last lecture of his course on Toxicology, he showed us specimens of crystallized uric and hyppuric acids.

"These fine specimens," he said, "were prepared for me by Messrs. Noyes and Cragin, who graduated in '67. They prove conclusively that even students are capable of conducting important scientific experiments"—a question evidently considered problematical before.

You have probably noticed Dr. Barker's appointment to a chair in a Philadelphia college. New Haven will be sorry to lose him, as he is one of her pet lecturers.

I believe I have n't mentioned anything about the improved condition of the Law School. They have just moved into their new rooms in the city Court House; and very magnificent rooms they are: Lecture Room, Moot-Court Room, Library, etc., all nicely fitted up. The Library has had $10,000 in new law books added this spring, a gift of Ex-Gov. English.

Ex-President Woolsey is delivering a course of lectures on International Law. He will be followed by Rev. Dr. Leonard Bacon on Ecclesiastical Law. There is talk of instituting a junior annual examination. Altogether the Legal branch of the university is having a fine growing time.

To return to our own school. Among the most interesting lectures I have listened to lately (although they are not precisely in the line of Dynamical Engineering) are those of Prof. Brewer on Stock-Breeding. These lectures are not fine-spun theories derived from "book knowledge," but simply great collections of facts carefully got together and arranged so as to shed the greatest amount of light on this comparatively little understood subject. Last week he took up the question of the power of the imagination in affecting the offspring during pregnancy. The medical world, he said, as a general thing do not believe in the idea, and for a long time he thought they were right, but of late years he had changed his views somewhat. He read to us the account of the first intelligent attempt at stock-breeding of which we have any record, and curiously enough it was one in which the power of the imagination on the unborn offspring seemed to be brought into play. The account is found in the 30th chapter of Genesis. He went on to mention many facts that had been brought to his notice, such as cows having white calves after the stables were whitewashed; sheep dropping black lambs after having been guarded by a black dog, etc., and then told the following story as a sample of hundreds that he had heard, and of thousands that might be collected. An intimate friend of his while residing in Maryland, before the war, became intimate with a rich slaveholder, from a son of whom he had the statement. Here is the story:

A slave boy had done some piece of mischief which so much enraged his master that he threatened, with a horrid oath, to chop the boy's hands off, if he ever did it again. The planter's wife, who had just become pregnant, happened to be standing near and heard the threat. Of course the boy afterward repeated the act, and, almost equally as a matter of course, escaped with another threat or kick; but the lady became impressed with the idea that her child's hands would, in some way, be affected. This feeling grew with the child, and at its birth it was found that both hands were wanting, from the wrist downward.

But the great trouble with all these facts is that they cannot be proved absolutely to be the results of the causes given. Coincidents as curious as these are constantly occurring that are purely accidental, and how can it be shown beyond a question that these cases of ante-natal "marking" which can apparently be traced to some direct cause, are not, after all, accidental?

On the other side he stated that in the Lying-in Hospital in London, every woman, for many years, had been carefully questioned before parturition as to whether she had any instinct, imagination, or idea relating to physical or mental defects in her offspring. The answers are recorded and preserved. There has not been a *single* coincidence between the mother's imagination and the child's condition. He gave as an opinion that if the child is affected in any such way it is only and very soon after conception. The whole field is as yet untouched by scientific inquiry. K.

DUCHESSE D'ANGOULEME PEAR.—Fuller, in his *Pear Culturist*, relates the following bit of romance in connection with the celebrated Duchesse d'Angouleme pear: A French nobleman, observing his tenant about to destroy a fine, thrifty pear tree, inquired the cause. He was told that it was a chance seedling, and had borne no fruit in twenty years. He had already cut its roots preparatory to the first stroke, but was ordered to let it remain. He did so, and in the following year it was loaded with superb fruit of an entirely unknown variety, which at once became celebrated. The root-pruning the gardener had given it worked like a charm. Not many years afterward, when the Duchesse d'Angouleme was passing through Lyons, its inhabitants sent to her their hospitalities. Nine fair maidens presented the Duchesse with golden salvers, on which lay heaped this precious fruit, and begged her to bestow on it her name, and the pear, now recognized as the crowning glory of all fruits, was thenceforward known as the Duchesse d'Angouleme.—*Exchange.*

A TILT AT MANNERS.

EVERYBODY is familiar with the sound of a cough, but who imagines that it has peculiarities worthy of critical notice? Everything produced by human effort is worthy of study. A little attention turned toward the subject of coughing will find in it such a variety in pitch, power, quality of tone and meaning conveyed, as at once to arouse the interest of an inquiring mind. Coughing is the language of invalidism, and to the unthinking requires an interpreter. There is, for instance, the complacent hack, thrown off at short intervals without the least effort. The meaning of the dry little bark is, that you are an afflicted brother, but are bearing up under your trials with Christian fortitude. Then there is the deep, sonorous cough which shakes the whole frame and issues with that tearing sound which you imagine must be healthy practice for the throat and internal organs. It produces a note which arrests the attention at once, and when chronic is a good specific for people whose nerves are over sensitive. One ought really to feel privileged in listening to this solemn sound of advancing decay: for it plainly says—"I am troubled with a very serious lung difficulty, and my cough is quite dangerous. This should make you modest in view of your own robust health." Next comes the spasmodic coughing-fit, which possesses greater merit because more rare. It is most telling when suddenly executed in a crowded assembly during an interesting reading or debate, thus relieving the monotony of the occasion and making a hiatus in the proceedings quite grateful to the tired listeners. These are some of the elementary sounds, but they are susceptible of endless variation, and may, with practice, be rendered with great effect.

Apropos of coughing is another habit nearly akin to it, viz., sneezing. Most people indulge in a quiet little effort of this kind which is hardly noticed. This is called a cat-sneeze and is childish. The true sneeze for the adult should be accompanied with an explosion like the concussion following a sudden discharge of fire-arms. There are, however, few persons who have reached the highest standard in this little accomplishment. The most remarkable feat in this line of which we have heard was performed by a lady, who is said to have produced such a commotion of atmospheric waves by a single "Ha-rasch-ah!" as to cause a general slamming of the ventilators in that part of the house. It may not be commonly known that the nose can be made to yield a loud, resonant note when properly handled; such is the fact, however, and it is peculiarly appropriate as a flourish before addressing an audience as signifying readiness for action. Lastly: The majority of folks including most of the gentler sex make a silent use of the handkerchief in public when afflicted with a cold in the head. Quite too much delicacy. How will it ever be known that you are suffering from this malady unless you in some manner make your distress audible?

Now there is a certain class of people who en-

tertain radical ideas in regard to the practices above mentioned. They maintain, for example, that the innocent practice of coughing is a decidedly injurious one, not in good taste in the presence of others and quite out of character in any public gathering. They say that it is a mild imposition on our neighbor: that he should not be forced to hear what he does not wish to, and further that it is possible in almost all cases to so control ourselves as to entirely repress the tendency to cough. Our ailments, say they, should not be obtruded upon the notice of others—but rather carefully concealed. These remarks they aim as much at the nose as at the lungs. This organ they solemnly declare should *never* be heard from, and they lay down the following rule:—"Repress absolutely all sounds which can by any possibility be unpleasant to your neighbor." J.

THE NEWS.

Mr. James L. Orr, the newly appointed Minister of the United States to Russia, has been received by the Czar.

Geo. W. Carleton, the well known artist-author, has sailed for Bermuda to seek recreation from professional labors.

A fire at Lawrenceburg, Ky., has burned nearly the whole town, leaving the inhabitants in a destitute and almost starving condition.

The President has nominated ex-Senator Sawyer of South Carolina to be Assistant Secretary of the Treasury in the place of Judge Richardson.

Pere Hyacinthe is meeting with success at Geneva where he received a call to preach some time since. A great interest in religion has been aroused.

The latest sensation in Wall-st. is the disclosure of a large issue of forged stock certificates which have been foisted on the market by the firm of Oddie & Austin.

The Emperors of Germany and Austria will celebrate the Czar's birthday in St. Petersburg, where great civic and military preparations are making for the occasion.

Rev. T. DeWitt Talmadge reports that subscriptions are coming in rapidly, and that the sum necessary to build his new church, will soon be raised. The plans and specifications are already made.

The announcement is made on the authority of Dr. Deems that Commodore Vanderbilt has given $500.000 to Bishop McTyeire of the Southern Methodist Church, to establish a University in Tennessee.

Thirty years ago the Island of Nantucket, Mass., owned and sailed one hundred whaling ships, fine large vessels, the best of their class. Recently the last one was sold. Meanwhile the ancient town has subsided into a watering-place.

French finances are in a hopeful condition, as shown by the exhibit of the annual budget just made public. The treasury contains half the sum of money due Germany, and no loan will be required to complete the payments of the war indemnity.

New York city is suffering from an epidemic of ruffianism, particularly manifest in the street-cars. Robbery and murderous assaults are of common occurrence in these vehicles in the evening. The cause is attributed to the demoralization of the police.

The people of New Jersey are rejoicing at the overthrow of the great railroad monopoly under whose tyrannical rule they have so long suffered. The Legislature by its action on the 20th swept away forever the special privileges of this moneyed class.

Ireland's day of days, dedicated to its great Patron St. Patrick, was celebrated as usual in New York city on the 17th with undiminished enthusiasm. The green banner of Ireland flaunted high in the air and thirty thousand men marching in columns through the principal thoroughfares gave evidence of how brightly burns the national love for the "Green Isle" in the Irish breast.

In the House of Commons on Monday Mr. Gladstone announced that he had been informed by the Queen that there was no prospect that the Opposition would form a new Government. In reply he placed his services at her Majesty's disposal. Mr. Disraeli has informed the Queen that he is not prepared to carry on the Government with the present Parliament.

Mr. Anson Green Phelps Dodge, brother of Wm. E. Dodge Jr., of New York city, became a British subject last year by special act of the Canadian Parliament of which he has become a member, being an extensive owner of lumber, land and mills in North York. He has joined the Tory party in the House and in a late speech berated most severely the Republic and her institutions.

The census taken of the inhabitants of the Dominion of Canada in 1871 is now officially published. The increase of population in the last decade was 395,000. The leading nationalities of the country stand thus: French 1,082,940, Irish 846,414, English 706,369, Scotch 549,646, German 202,991. Classified according to their religion the bulk of the population stands thus: Roman Catholics 1,462,029, Church of England 494,049, Methodists 567,091, Presbyterians 544,998.

Governor Dix refuses to commute the death-sentence of the murderer Foster to imprisonment for life, though extraordinary and persistent efforts have been made to secure the Executive clemency. Letters from lawyers, clergymen, ex-officials of high standing, the jurymen that tried the case and even the wife of the murdered man have been of no avail with our Governor. He stands firm. In an excellent letter to Rev. Stephen H. Tyng, D.D., to whose church Foster belonged, the Governor justifies his course by an exhibit of the law and evidence in the case which should be satisfactory to every candid mind.

Later.—Foster was hanged on Friday, the 21st inst.

The Caldwell expulsion case is exciting no little interest in political circles at Washington because there are similar ones awaiting investigation and the decision will be looked on as a valuable precedent for guidance in the future. The case is briefly this. Caldwell is a Senator elect from Kansas, but on presenting his credentials before being sworn in, it was discovered that he had bought his seat by the expenditure of large sums of money among the members of the legislature which elected him. Senator Morton at once introduced a resolution declaring his seat vacant. Much argument pro and con ensued thereupon. An exceedingly able speech made by Senator Shurtz in favor of expulsion virtually decided the question and there is now little doubt that the case will go against Caldwell.

The struggle in the Legislature over the new Charter for the city of New York continues without abatement. The two contending parties, the Custom House Ring, and the Committee of Seventy which represents the honest citizens of New York, agree in the main as to the document in question and the contest is now chiefly on one point: viz., the location of the appointing power. It is the misplacing of this power that has caused the mal-administration in the government of the city and has been a prolific source of the manifold and gigantic frauds which have so disgraced the great metropolis. The present charter is the one foisted on the city by Tweed and party and admits of unlimited plundering by making the appointing power independent of the mayor, thus reducing him to a sort of figure-head. The Custom House Ring are seeking substantially to incorporate the same powers in their charter, while the citizen's party have adopted the only natural method: that of giving the appointing power to the mayor with the confirming power in the hands of the aldermen. There is good prospect of the ultimate triumph of the party for right rule.

CHOICE PLANTS AND SEEDS.

The O. C. offer 25 packets of Flower Seeds, put up in neat boxes, for $1.00. Postage paid.

BULBS.—Gladiolus, 10 cts. each, $1.00 per dozen.
Cannas, " " " " " "
PLANTS.—Extra Pansies, 15 " " $1.50 " "
Clematis Viticella, (common name, Garden Jasmine) 25 cts. each, $2.50 per dozen.

ANNOUNCEMENTS.

SILK GOODS.

Machine-Twist and Sewing-Silk of their own manufacture for sale by the Oneida Community.

Address, [S] ONEIDA COMMUNITY, *Oneida, N. Y.*

PRESERVED FRUITS AND VEGETABLES

Put up for sale by the Oneida Community in tin and glass. Price list sent on application.

Address, [F] ONEIDA COMMUNITY, *Oneida, N. Y.*

STEEL TRAPS.

Eight sizes and kinds, suitable for the House-rat, Musk-rat, Mink, Marten, Fisher, Fox, Otter, Beaver, the Black and Grizzly Bears, are made by the Oneida Community. Descriptive price-list sent on application.

Address, [T] ONEIDA COMMUNITY, *Oneida, N. Y.*

MACHINE-SHOP AND FOUNDRY.

Improved Lathe-Chucks, Blinn's Patent Gate-Hinges, Machines for Measuring the Length and Testing the Strength of Manufactured Silks, Bobbin-Winders for Sewing-Machines, etc. Agricultural, Machine and Light Castings, on hand or made to order. Descriptive price-list sent on application.

Address, [M] ONEIDA COMMUNITY, *Oneida, N. Y.*

THE WALLINGFORD PRINTING COMPANY.

All kinds of Book and Job Printing executed: Manufacturers' Illustrated Catalogues made a speciality: also Bronze and Color Work, and the finer kinds of Card, Circular and Bill-head Printing. Having enlarged its works and added new motive power, this Company is in renewed condition to meet the wants its patrons with promptness and accuracy.

P. O. Address, *Wallingford, Conn.*

PUBLICATIONS.

(Sent from the Office of the Oneida Circular by mail, post-paid, on receipt of price.)

History of American Socialisms. By John Humphrey Noyes. 678 pp. 8vo. J. B. Lippincott & Co., Philadelphia. London, Trubner & Co. Price $3.00.

The Trapper's Guide; a Manual of Instructions for Capturing Fur-bearing Animals. By S. Newhouse. Third edition with New Narratives and Illustrations. 215 pp. 8vo. Price bound in cloth, $1.50.

Salvation from Sin, the End of Christian Faith; an octavo pamphlet of 48 pages. By J. H. Noyes. Price 25 cents per single copy, or $2.00 per dozen.

Dixon and His Copyists; a Criticism of the Accounts of the Oneida Community in "New America," "Spiritual Wives," and kindred publications. By John Humphrey Noyes. Price 25 cts.

Scientific Propagation. By John Humphrey Noyes. Large octavo pamphlet of 32 pages. Price 25 cts.

Male Continence. By John Humphrey Noyes. An octavo pamphlet of 24 pages. Price 25 cts.

Hand-Book of the Oneida Community; Containing a Brief Sketch of its Present Condition, Internal Economy and Leading Principles. Price 25 cts.

The five pamphlets—"Salvation from Sin," "Dixon and his Copyists," "Hand-Book of the Oneida Community," "Scientific Propagation," and "Male Continence," will be sent to a single address on the receipt of $1.00.

Back Volumes of the Circular, Unbound. Price $2.00 per volume.

MESSRS. TRUBNER & COMPANY, Book-sellers, Paternoster Row, London, have the "History of American Socialisms," the "Trapper's Guide," and the "Hand-Book of the O. C.," for sale. They will receive subscriptions for our other publications.

PHOTOGRAPHIC PICTURES

Of the Oneida Community Buildings and Grounds, made by a first class artist and finely mounted, can be had on application at the Office of the Oneida Circular.

LARGE VIEWS.

Bird's-eye View, looking West, of Community Buildings and Grounds, 12 by 14 inches, on fine enameled board 16 by 20, price $1.75. Quadrangle and Group, 12 by 14, mounted like the above price $1.75. South and East Fronts of the Community Dwelling, giving a good view of the New Wing occupied by the Children, 8 by 10, on tinted board 10 by 12, with an ornamental border price $1.00.

STEREOGRAPHS.

No. 2, East and North Lawns. No. 3, East Lawn and Portico. No. 4, East Front. No. 5, North Front and Lawn. No. 6, Bird's Eye View of Buildings looking West. No. 7, Lawn and Summer House. No. 8, West View, toward Railroad. No. 11, Quadrangle. No. 12, Lawn View. No. 15, South and East Fronts. Price of Stereographs $ 3.00 per doz. Sent by mail, post-paid, on receipt of price.

Oneida Circular.

A WEEKLY JOURNAL OF HOME, SCIENCE AND GENERAL INTELLIGENCE.

Published by the Oneida & Wallingford Communities.

ONEIDA COMMUNITY, MARCH 31, 1873.

New Series, Vol. X, No. 14
Whole No. 1452.

POST-OFFICE ADDRESS:

ONEIDA CIRCULAR, ONEIDA, N. Y.

TERMS:

The CIRCULAR is sent to all applicants, whether they pay or not. It costs and is worth at least two dollars per volume. Those who want it and ought to have it are divisible into three classes, viz., 1, those who cannot afford to pay two dollars; 2, those who can afford to pay *only* two dollars; and 3, those who can afford to pay *more* than two dollars. The first ought to have it free; the second ought to pay the cost of it; and the third ought to pay enough more than the cost to make up the deficiencies of the first. This is the law of Communism. We have no means of enforcing it, and no wish to do so, except by stating it and leaving it to the good sense of those concerned. We take the risk of offering the CIRCULAR to all without price; but free subscriptions will be received only from persons making application for themselves, either directly or by giving express authority to those who apply for them.

Foreign subscribers, excepting those residing in Canada, must remit with their subscriptions money to prepay the postage.

THE UNITED COMMUNITIES.

ONEIDA COMMUNITY

Is an association living in Lenox, Madison Co., N. Y., four miles south of Oneida and a few rods from the Depot of the Midland Railroad. *Number* of members, 205. *Land*, 654 acres. *Business*, Manufacture of Hardware and Silk goods, Printing the CIRCULAR, Horticulture, &c. *Theology*, Perfectionism. *Sociology*, Bible Communism.

WILLOW-PLACE COMMUNITY.

Branch of O. C., on a detached portion of the domain, about one and one-fourth miles north of O. C. *Number* of members, 19. *Business*, Manufactures.

WALLINGFORD COMMUNITY.

Branch of O. C., at Wallingford, Conn., one mile west of the Hartford and New Haven Railroad. *Number* of members, 45. *Land*, 228 acres. *Business*, Publishing, Job Printing, Manufactures, and Horticulture.

SPECIAL NOTICE.

The O. C. and Branches are not "Free Lovers," in the popular sense of the term. They call their social system BIBLE COMMUNISM or COMPLEX MARRIAGE, and hold to freedom of love only within their own families, subject to Free Criticism and the principles of Male Continence. In respect to permanency, responsibility, and every essential point of difference between marriage and licentiousness, the Oneida Communists stand with marriage. Free Love with them does *not* mean freedom to love to-day and leave to-morrow; nor freedom to take a woman's person and keep their property to themselves; nor freedom to freight a woman with offspring and send her down stream without care or help; nor freedom to beget children and leave them to the street and the poor-house. Their Communities are *families*, as distinctly bounded and separated from promiscuous society as ordinary households. The tie that binds them together is as permanent and sacred, to say the least, as that of marriage, for it is their religion. They receive no new members (except by deception or mistake), who do not give heart and hand to the family interest for life and forever. Community of property extends just as far as freedom of love. Every man's care and every dollar of the common property are pledged for the maintenance and protection of the women and children of the Community.

ADMISSIONS.

These Communities are constantly receiving applications for admission which they have to reject. It is difficult to state in any brief way all their reasons for thus limiting their numbers; but some of them are these: 1. The parent Community at Oneida is full. Its buildings are adapted to a certain number, and it wants no more. 2. The Branch-Communities, though they have not attained the normal size, have as many members as they can well accommodate, and must grow in numbers only as they grow in capital and buildings. 3. The kind of men and women who are likely to make the Communities grow, spiritually and financially, are scarce, and have to be sifted out slowly and cautiously. It should be distinctly understood that these Communities are not asylums for pleasure seekers or persons who merely want a home and a living. They will receive only those who are very much in earnest in religion. They have already done their full share of labor in criticising and working over raw recruits, and intend hereafter to devote themselves to other jobs (a plenty of which they have on hand), receiving only such members as seem likely to help and not hinder their work. As candidates for Communism multiply, it is obvious that they cannot all settle at Oneida and Wallingford. Other Communities must be formed; and the best way for earnest disciples generally is to work and wait, till the Spirit of Pentecost shall come on their neighbors, and give them Communities right where they are.

THE HIGHER CHEMISTRY.

Home-Talk by J. H. N.

BY inheritance, and by our own wicked works, we come into what may be called chemical combination with evil spirits; and salvation is effected by a process which disengages our spirits from this combination; in other words, by decomposition. The essential spiritual idea of repentance is just that—chemical decomposition; the precipitation of the devil, setting the human spirit free. The great question, of course, is how to bring about this repentance; that is, how to start spiritual decomposition.

In many cases, people are evidently conscious of being in the snare of the devil; as insane persons often know their own condition. They see that they have no power of their own wills, but are under the control of something that carries them where, in their deepest thoughts, they are unwilling to go. They even see that it is the evil one who holds them captive; and that nothing but spiritual, God-given repentance can set them free. They long for repentance, but feel that their hearts are hard, and don't know how to begin to repent. Now it would be a wonderful and blessed discovery to them in this situation, if they could find some medicine to be taken, or some definite thing to be done, which would be sure to start decomposition, and dissolve their hearts into repentance and freedom to combine with eternal life. What is the name of the acid or alkali that must be introduced into this terrible combination to commence precipitation of the devil? Or if the necessary elements are all present, but inactive for want of certain chemical conditions, what can be done to shake them into reaction? Let us see if we cannot find a practical answer to these questions.

One of the inevitable results of your combination with the devil is that you *do* things that you are ashamed of. Wicked spirits love darkness; and they "come not to the light, lest their deeds should be reproved." If your spirit has been combined with such spirits, they have been working their deeds of darkness in you and by you. Perhaps you have hated to do their dirty work, but have found your will carried against your conviction; and finally have come to regard their deeds of darkness as your own, and have taken on yourself their condemnation and shame and hatred of the light. In short you have got within you devil's secrets, which you are carefully keeping for fear of your own shame. Now if you will look over the lot of these secrets, and select the very one that you most hate to tell of, and go and *confess* it to some friend who will make good use of it, I can almost warrant that you will start decomposition. Because evil spirits love darkness, the moment you begin to come to the light by confessing your sins, you begin to dissolve partnership with them. They find themselves betrayed and begin to leave. Therefore, instead of trying to escape criticism and the judgment, turn right round and help on the searching out of all your devil's secrets; and instead of coming to shame and suffering thereby, you will get immediate relief from the misery of a hard heart, and find yourself emerging into the blessedness of that "repentance that needeth not to be repented of." Then you will know and feel the supreme luxury of combining with spirits who have nothing to be ashamed of and no secrets to keep—the ransomed of the Lord, who walk in white.

THREADS FROM MY LIFE-BALL.

I.

I WAS born in 1805. My parents were respectable and somewhat aristocratic, particularly my mother. Neither of them was religious, although my father was nominally an Episcopalian and had his children baptized. We were taught to say the church catechism, repeat the Lord's Prayer on going to bed, and to read the Bible. This constituted our religious training. The subject of faith in Christ and a change of heart was never mentioned. My parents were ambitious to give their children a good education, and I was accordingly kept at school until I entered society at the age of fifteen. Appearing much older than I was on account of my rapid growth I was forced into society prematurely, though my parents little knew the suffering that awaited me in subsequent years because of their indiscretion in this respect. Belonging, as I have hinted, to an aristocratic family, and possessing some personal attractions, I became one of the gayest of the gay. Balls, parties of pleasure and the ever-changing fashions of the world occupied pretty much all my time.

My first great sorrow was the death of a sprightly little nephew to whom I was much attached, which caused me to reflect seriously on the vanities of a false, superficial life. I then, for the first time, had some aspirations for a better life, but knew not how to attain it. My parents at this time were receiving some Universalist papers, and I well remember asking my mother one day how she construed those passages of scripture which spoke of the righteous and the wicked and of their final separation at the judgment. She could make no reply, but referred me to those papers. I read them, but they failed to satisfy my mind. I was tempted to wish their doctrines were true, for then, thought I, my salvation would be secure. But some good, unseen power

prevented me from accepting a scheme of religion so selfish and indiscriminating.

Among my young associates was a Miss S—— to whom I became very much attached. She was about my own age, but my superior in mental culture and intellectual gifts, and had, besides, ample means to meet all the demands of aristocratic circles. With a logical turn of mind, and a tendency to skepticism, Miss S——'s influence on me was by no means favorable to the reception of religious truths. We were almost inseparable companions and were the leaders in our town of the fashions of the day. We had, of course, many admirers, some of whom were extremely lavish, as I can now see, of their fulsome flattery. Having reached a marriageable age I received several offers. My acceptance of any one of these proposals would have been gratifying to my parents, as they were made by gentlemen who were considered very eligible; but I refused them as I had not found the ideal of my romantic visions. Here I can see an unseen power guiding me on to my true destiny.

At the dancing-school I became acquainted with H——. He was a plain, unostentatious young man, not so popular with the young ladies as the more haughty and self-sufficient; so I simply regarded him as worthy of my respect, and nothing more. I preferred the society of others. Providence, however, did not justify me in judging his character from outward appearances. Quite unexpectedly I was chosen secretary of our young ladies' sewing society, and it therefore became my duty to be present if possible at every gathering. Among the most industrious of our members were two sisters of H—— who, being their only brother, could do no less than accompany them, spending the evening in chit-chat with the busy pliers of the needle. Though naturally diffident, modest and unassuming, H—— gradually and unwittingly disclosed such noble traits of character that, in spite of my dainty taste respecting outward show, I began to appreciate him much more than I was really willing to confess to myself. The result of our better acquaintance was occasional invitations to accompany him to balls, rides and places of amusement. Still I felt no particular interest in him as we were extremely unlike in almost everything, and he was not at all suited to my taste externally.

Emboldened by my freedom to chat with him H—— proposed marriage, but I refused him. From this time a change seemed to come over me. I began to look more seriously than I had done at the course I was pursuing. I compared H—— with others who were more fascinating and gentlemanly in their manners. My better judgment assured me that H—— had a heart worth securing and that he was a man who could be trusted. Finally my conscience began to upbraid me saying, "You really begin to like him, but your pride and fear of the world's ridicule and the disappointment such a choice would be to the ambition of your family, keep you from doing right." I went on thus for some time, dissatisfied with myself and with the world, though apparently I was the gayest of the gay. I knew that I was living only on the surface of existence, while deep down in my heart there was a void which the world could never fill.

Some months after this affair the report came to me that H—— was ill and had left home to travel for his health. This gave me a pang as it was insinuated to me by a friend that his trouble was in some measure owing to his disappointment. I subsequently found myself making inquiries about him, and in spite of my pride and fastidious taste I was deeply interested in everything relating to him, though I should have been exceedingly mortified had any one suspected my secret.

Not long after H——'s return I heard that he had been converted and united with the Congregational church. I felt then that all communication was at an end—that we should probably tread different paths, and I resolved to dismiss the subject from my mind. This was more easily said than done. There was much wonder among the gossips of the town that I did not get married, knowing as they did that I was well acquainted with many whom the world call suitors. Little did they know what was going on in my proud heart; I could think of no one but H—— and could accept of no one but him. I soon became quite serious and thoughtful about my future state, and longed to be a better woman. I felt that I was as unfit for the duties and responsibilities of matrimony as I was for heaven, and that it would be an imposition on any man to accept him as a husband. My aspirations for a higher life continually increased, though the circumstances in which I was placed seemed to preclude the possibility of attaining a very high standard. Help from my parents was now cut off as they had become confirmed Universalists and looked on revivals and a change of heart as all a delusion. Had I been incarcerated in some lonely cell I could not have been more helpless. I began to pray as well as I knew how that God would in some way lead me to himself.

Just at this point in my experience temperance societies were organized. The temperance movement was then a new one, and met with much opposition in the fashionable circles. When the pledge was presented to me some influence impelled me to sign it without hesitation. This step was as much a wonder to myself as to others. "How could you do it," said one, "knowing the opposition of your family to so unpopular a cause?" But something whispered to me, "You have taken one step in the right direction." Was it my good angel? Whatever it was, I felt strengthened and emboldened to stand firm on this new ground till I could again advance. Opposition in subtle arguments came, and I was not shaken but confirmed in meeting them. Just after this affair I was startled to hear of the sudden death of a very dear friend. She was a devoted Christian and I wondered very much that I could be a special favorite with her, as she often told me I was. But although thoughtless and superficial I loved this servant of Christ, and even coveted her beautiful spirit of meekness and good-will to others. She died so peaceful and happy that I inwardly exclaimed, "Oh, that I could be like her and my end like hers!" The sermon preached at the funeral of my relative and friend the next Sabbath was the first that ever secured my undivided attention; every word of it was like a nail driven in a sure place. I returned home thoughtful and sad, but with a determination to read my Bible more attentively. On opening the Bible the following passage was the first that caught my eye: "Let the wicked forsake his way and the unrighteous man his thoughts; and let him return unto the Lord and he will have mercy upon him; and to our God for he will abundantly pardon." This was to me a voice from heaven. It melted my heart and I burst into tears. Involuntarily my heart for the first time uttered the words, "My Father in Heaven, deliver me from evil."

From this time I began to lose my relish for the society of my fashionable friends, and to seek acquaintance with pious people. Again and again the still small voice whispered to me that *deeds* not words could move God's sympathies toward me. I resolved to take another step forward. What shall it be? One day I called on one of my worldly associates and proposed to her to go with me into the sabbath school as a spectator, the next Sunday. After some hesitation she consented to do so. This produced quite a sensation. Some of the members of the church seemed electrified. For two such proud girls to take such a bold step was astonishing, for it was equivalent to acknowledging that we were ready to give our attention to religion. As we entered the school-room there stood H—— distributing books and papers to the children. My heart gave a bound, but I hoped to be unobserved by him, occupied as he was with the responsibilities of superintendent. I will not stop to analyze my feelings on that occasion. During that week the news of revivals in adjoining towns sent a thrill of joy through me. At the same time my convictions of sin were deepening and I longed to have the great awakening reach our town, hoping that in some way I might be drawn into its spiritual vortex.

E.

LOCOMOTION.

II.

LET us first resolve locomotion on land into its primary elements. In attempting this, we find ourselves, at the outset, face to face with a somewhat complex problem. To facilitate the resolving of it, let us divide terrestrial locomotion into two parts, calling one of them vital locomotion, or the locomotion of men, brutes and insects, and the other mechanical locomotion, or that which makes chief use of the wheel as an agency.

Our first proposition in respect to vital locomotion is, that an indespensable part of it consists in the expansion and contraction of the base or part which comes in contact with the earth, or foundation over which progress is made.

Our second proposition is that the part of the base which is extended or put forward must have power to maintain its position when

the base is contracted, or made shorter. This power may consist in a prehensile faculty, or in an ability to sustain a greater weight than rests upon the other part of the base.

The locomotive powers of man, who is the complete epitome of all animal life, will best illustrate our propositions. When a man stands with his feet together his base is in its most contracted condition. When, in making a stride, he puts one foot forward, his base is in its most extended condition. When, by means of the muscular spring that is in the foot which has not been moved, and by the momentum attained by the forward motion of the body the weight is thrown on the forward foot, then the conditions of the second proposition are fulfilled. Then when he narrows the base by bringing the hind foot up to the other, the remaining condition of our first proposition is fulfilled, and now we have taken the first and all-important step in the solution of the problem of locomotion.

It should be borne in mind that the habit common to both bipeds and quadrupeds of putting the feet alternately forward, first one and then the other, is by no means essential to locomotion. If we were to follow the sage maximizer who advises us to "Put our best foot forward" we should no longer see the democratic, careless, and rapid swinging of the feet which is now so universal, but every one would move with a stately, slow and majestic tread, and it could then be said of bipeds as well as of quadrupeds that they have a hind as well as a fore foot.

Considering the disparity between man and his brother "worms of the dust," it may be that somebody will be so presumptuous as to suggest that these formulas of vital locomotion which I have put forth, will not cover all cases. I resent any such insinuation. I maintain against all comers that these formulas will cover the cases of every form of animal progress on land that can by any possibility be brought forward. Take one instance of nature's oldest and least developed children, a case where but one foot was given to travel with, that of the common clam (and in some thick-shelled sorts it is certainly a hard case), and it will be found that my formulas are most triumphantly vindicated. The cases that I have in my eye (not literally, for that would be a great calamity, I mean in my memory's eye) are those of fresh-water clams, although I have no doubt that round clams or quahaugs, from which we obtain our sea-pork, would serve equally well as an illustration. When, on different occasions, the water was drawn away from the mill-pond in my native neighborhood, the great old patriarch clams were left bare upon the mud in full glare of the sun. At length when they could bear it no longer, they opened wide their shells, put their best and only foot forward into the mud, drew themselves up to the edge of their open shells, and, as if acting from a preconcerted plan to illustrate the truth of my formulas, drew themselves forward, hitch after hitch for rods, in the search of water, leaving behind them marked demonstrations of the spirit of progress that actuated them, for the benefit of the generations of little clams that should follow.

Now this naked foot of the clam protruding into the mud and drawing the great brown shell after it, hitch after hitch, exhibits the statements of my formulas in all the simplicity of naked truth, undisguised by the higher accomplishments by which man and the superior animals have covered it.

But it may be maintained that there is no shadow of analogy between the locomotion of the human biped and that of the caterpillar. Before people make such rash and heedless assertions they ought at least to consider the ancient and wise saying that the best of us are only poor worms of the dust. To demonstrate the truth of this saying, we can most conclusively show that man and the caterpillar walk by the same rule. The best illustration of the principles that govern the caterpillar in his daily walk, is the measuring-worm. This worm has four feet attached to each end of its body the middle being as smooth as a pipe-stem. When he purposes to take a walk he stretches himself at full length, grasps the foundation over which he is progressing with his forward feet, lifts the whole hinder part of his body from the earth, shortening its base by bending it up in the form of a verticle bow, plants his hind feet up close to his fore feet, and is then ready to repeat the operation by extending his fore feet forward again. It may thus be seen that by making a bow of his whole body, he becomes the perfect beau ideal representative of our two propositions concerning the elementery steps of locomotion.

But the rapid progress of a hairy caterpillar on a board fence, in the hot summer sun, is not a whit different in principle, when resolved into its elementary steps, from that of the precise and deliberate measuring-worm. The only difference is, that the caterpillar has a great many more pairs of legs, and the alternate extensions and contractions occur between the different pairs of legs a great deal more rapidly, than in the case of the measuring-worm, causing the wavelike motion which his back exhibits.

It may be contended that we cannot organize the snake into our great family of locomotors. Nothing more easy. Instead of contracting his base vertically as in the case of the measuring-worm and caterpillar he does it latteraly. Instead of depending on feet and legs as in the case of the worm, he depends in great part on his scales which admit of his easy motion in one direction while they hinder it in the other. The prehensile power of these scales is made more sure and strong by means of certain internal muscles in connection with the ribs. This lateral extension and contraction admits of motion on a much more extensive scale than the vertical. Considering the wonderful extent to which serpents avail themselves of this fact, it is not at all surprising that their skin gets worn out in the service, and they need to change it pretty often.

But I perceive that my pencil has contracted a locomotive fervor and I must take heed lest while it devours space and paper, it also may use up the patience of both printers and readers.

H. J. S.

HOW TO USE THE EYES.

II.

IN order to get a clear idea of the way to manage the light so as to use our eyes to the best advantage, we must, for a moment, go back to first principles and study the laws of reflection. Our "Ganot" tells us that when a ray of light strikes an object and is reflected, the angle of incidence is equal to the angle of reflection. To illustrate the principle we will make use of a common rubber ball, which for the present we will consider as a ray of light, and we will begin our experiments with the best of lights—sky-light or light from above. We drop the ball on the floor or table. The angle is in this case a right-angle, and according to the rule, the ball or ray returns to us in the same angle. A book or paper placed under a sky-light reflects a large part of the light directly back toward the source from whence it came, and of course, directly into our eyes if they happen to be in the way. Here then we obtain the most favorable condition possible. Our object is thoroughly illuminated without any shadows; our eyes are comparatively in the shade, only receiving reflected light, and thus avoiding the severe strain caused by direct light in front or at the side; and if the sky-light be on a northern exposure, we get a light of uniform strength throughout the day, and avoid the varying glare of sunlight and cloud. This is the kind of light most prized by engravers, type-setters, photographers, and others of like craft. Sky-lights on a southern exposure give a very strong glare of sunlight through the middle of the day, which for some kinds of work is quite objectionable. The same is true of light from the east or west; but for general purposes, sky-light, on whichever side of the house it may happen to be, is by far the best light we can get upon any subject. On the other hand, it is the most costly light we can use for manufacturing and other purposes. Its distance above the ground involves a great deal of difficult transportation up and down, and the difficulties in making the windows water-tight materially increase the cost. This leads us to an investigation of the cheaper as well as the more common of lights—side-lights or the light from a common window.

We will return to our rubber ball, and illustrate the kind of light we get from a single side-window thrown on a table six or eight feet distant. We throw the ball straight upon the object, a book or paper, and off it goes to the other side of the room. The only angles of incidence possible under these circumstances, are much less than with sky-light, besides the reflection is thrown off past the angle of vision, and, were it not for the fact that dull objects, like the page of a book and the various articles of furniture, reflect the light in every direction, we should not see them with a side light, only as we faced about so as to receive the rays at the same angle at which they enter the room. As it is, however, we lose a great deal of light when we try to use it in this way, viz., from the side, and at a distance from the window. By sitting or working with our backs to the window, and as near it as possible with the light coming over our shoulders, we may almost convert this side-light into sky-light, especially if we can so hold our object as to have the rays strike at right angles. This can be easily done by elevating the book or paper in front of our eyes, or by using a desk inclined toward the window. If, however, we are compelled to use this back-light at a distance from the window so as to cast a shadow upon the object, we are in every sense in our own light and the quicker we get out of it the better.

It is not an uncommon arrangement, especially in poorly lighted libraries, to have a writing-table at one end, while the light is mainly supplied

through narrow windows at the other. Persons reading or writing in such places are compelled to accept the alternative of either facing the light or of enveloping their book or paper in a deep shadow. Individuals with strong eyes *can* use them under such circumstances for some time, without feeling any serious inconvenience from the practice; but sooner or later, and it is generally sooner, they will be heard complaining of a dull ache in the eye-ball, "floating specks," dimness of vision, and various other symptoms, all indicating weakness of some part or the whole of the eye and its appendages, the direct result of long continued and oft-repeated strains, of which they were unconscious at the time, but which finally made themselves felt in a way not to be ignored or mistaken. G. E. C.

ONEIDA CIRCULAR.

TIRZAH C. MILLER, EDITRESS.

MONDAY, MARCH 31, 1873.

THE ARISTOCRACY OF THE FUTURE.

MR. GALTON, whose book on "Hereditary Genius" was noticed at length in these columns at the time of its appearing, has told us in a late number of *Fraser* how the English world can raise its standard of manhood and genius by carrying on a systematic course of propagation in obedience to the law of heredity. He tells us nearly at the outset that "our present moral nature is as unfitted for a high-toned civilisation, as our intellectual nature is unfitted to deal with a complex one;" and therefore, the great need of securing a race of men that shall be a match for the times. Even our best statesmen cannot express their ideas with sufficient clearness to avoid serious political complications arising from misunderstanding alone.

For the improvement of a people we have two things to consider, namely, race and "nurture." The one means "the constitutional peculiarities transmitted to a man by inheritance;" the other means "the various circumstances to which he has been perforce subjected, especially in early life." Of these two, Mr. Galton looks on race as the more important. He says:

Race has a double effect, it creates better and more intelligent individuals, and these become more competent than their predecessors to make laws and customs, whose effects shall favorably react on their own health and on the nurture of their children. The merits and demerits of different races are strongly marked in colonies, where men begin a new life, to a great degree detached from the influences under which they had been reared. Now we may watch a band of Englishmen, subjected to no regular authority, but attracted to some new gold-digging, and we shall see that law and order will be gradually evolved, and that the community will purify itself and become respectable, and this is true of hardly any other race of men. Constitutional stamina, strength, intelligence, and moral qualities cling to a breed, say of dogs, notwithstanding many generations of careless nurture; while careful nurture, unaided by selection, can do little more to an inferior breed than eradicate disease and make it good of its kind.

But on the other hand, our modern civilization is at work in many ways to spoil the race. One of these ways is "the free power of bequeathing wealth, which interferes with the salutary action of natural selection by preserving the wealthy, and by encouraging marriage on grounds quite independent of personal qualities;" and another is "the centralizing tendency of our civilisation, which attracts the abler men to towns, where the discouragement to marry is great, and where marriage is comparatively unproductive of descendants who reach adult life." The census returns of 1,000 families of factory operatives in Coventry were compared with the returns of the same number of Warwickshire farm-people, and it was found that the latter had almost twice as many grandchildren as the former. This centralization of people in cities is on the increase and is helped on by the use and invention of machinery. More than one-half of the English people live in cities. So far as urban life is concerned we have little to hope from natural selection and survival of the fittest. It is the coarsest and lowest types of organization which survive unhealthy conditions and live to beget the next generation. It has been remarked by travelers in Ireland, that the Irish face has become more prognathous—more like the negro in the protrusion of the under jaw—since the potato famine.

Mr. Galton admits that the influence of many generations of civilized life has "bred out many of the savage instincts" of our forefathers, and he takes courage accordingly. But it seems to us that he should make a greater account of Christianity as an improving influence on human nature. The experiences of our late civil war taught many to believe in the survival of the best. It was frequently remarked that men of apparently delicate and nervous organization stood the rigors of camp-life better than the coarser and seemingly more robust ones from the country. But Mr. Galton thinks that "natural selection has no influence in securing dominance to the noblest" of men. "But the case," says he, "would be very different in those higher forms of civilisation, vainly tried as yet, of which the notion of personal property is not the foundation, but which are in honest truth, republican and coöperative, the good of the community being literally a more vivid desire than that of self-agrandizement or any other motive whatever. This is a stage which the human race is undoubtedly destined sooner or later to reach, but which the deficient moral gifts of existing races render them incapable of attaining."

This is a very neat description of Communism without the odium of naming it; and if any one gets comfort from the idea that Mr. Galton does not propose to "segregate us in Communities" for the purpose of carrying on his "viriculture"—a term which he seems to have borrowed from some other writer—we beg to call attention to the fact that he is looking toward Communism as a possible result of his race-culture.

Giving up the idea of conducting his improvements on the basis of Communism, Mr. Galton proposes to create a caste of good blood, the members of which shall be families that have shown an heredity of genius. These he proposes to have selected and put on record by experts who have made a specialty of genealogy and heredity. A young man, for instance, who has forgotten the worth and possibilities of his breed, will be apprised of his value, and it is expected that he will take advantage of the hint and marry into the chosen circle. At last by the collection and dissemination of the facts of heredity, there will come to be an enthusiasm of humanity among the gifted families and they will act primarily for the future of the race, and only secondarily to the present well-being of themselves and contemporaries. They will no more think of squandering their blood by base alliances, than we do now of squandering our patrimonies by one-sided marriages. Individuals of feeble constitution will show their mercy to their kind by remaining in celibacy. Thus by a world of discussion and reïteration of the truths of race-culture, the best will come to know their worth, and, "anticipating the slow work of natural selection, they will feel it a paramount duty to assist in the work of breeding out feeble constitutions and base and petty instincts." "My hope," continues Galton, "is, that the average standard of a civilised race might be raised to the average standard of the pick of them, as they now are, at the rate of one in every four. It will be clearly understood by those familiar with the law of deviation from an average, that the distribution of ability in a race so improved, would be very different from that of the pick of the present race, though their *average* worth was the same. The improved race would have its broad equatorial belt of mediocrities, and its deviations upward and downward, narrowing to delicate cusps; but the vanishing point of its baseness would not reach so low as at present, and that of its nobleness would reach higher. On the other hand, the pick of our present race would not be symmetrically arranged, but the worst of them would be the most numerous and the form of the whole body, when classified, would be that of a cone resting on its base, whose sides curved upward to a sharp point."

It is anticipated that the creation of a caste of favored people will stir up envy, but it is also expected that such a caste will win its way at last by its acknowledged superiority. At any rate the collection and dissemination of knowledge of the value of different families will belong to the domain of science and cannot be objected to. If after becoming somewhat conspicuous in the towns, this caste should become objectionable to the democrats, it could retire to the country places where it would have better sanitary conditions, and might be led into some sort of Communism, which would afford conditions better still. In the end when it shall have become paramount it will give the law to the mongrel races. These of course will be treated kindly if they continue in celibacy; but should they persist in breeding, the nobler race would find it its duty to extirpate them.

This scheme of breeding from the best is set forth with a good deal of skill and is really quite plausible and taking. Perhaps the idea is going to have a run, warming and leavening the public mind with new thoughts of improvement, something as Fourierism did. But can it be carried into effect? We say yes, and we say no. It is in part operation now. If we should look into the matter we think it would be found that the best families of New England, and perhaps those of every other part of the United States, know their own worth and avoid unions with inferior blood. We should very naturally keep an eye on any such "viricultural" bureau as Mr. Galton proposes to establish. If his creators of a caste should only aim to people the earth with a race of graceful athletes, capable of breeding poets, painters, musicians, scientists, statesmen, philosophers, leaders in business and invention, in fact, give us a sort of splendid paganism, we should have to object in the name of our spiritual interests. The men who have the blood of Jesus Christ in them are the ones who ought to breed a noble caste. But no one need borrow any trouble on account of Mr. Galton's scheme, for, like Communism, it is one that cannot be carried into effect without religion. And where else will you find the necessary "enthusiasm of humanity?" A. B.

THE HOME OF THE NOYESES.

THE Noyes family moved to Putney in 1823, which according to S. R. L.'s dates in the last CIRCULAR was coincident with the extraordinary emigration from that place to Gouverneur. The house they moved into was purchased of Mr. Benjamin Smith, whose family was the fourth of fifteen or sixteen families that followed each other in that emigration within a very few years. Five years before this Mr. Noyes had moved his family from Brattleboro to Dummerston, a small place between Brattleboro and Putney, where they made a temporary residence while Mr. N. closed up his

business as a merchant and sought a more eligible location for the education of his growing family. He was now toward sixty years of age; but having married at forty a young wife, his eight children were all under twenty. He was by taste and early habit a student rather than a business man, and just as soon as he had acquired what he thought property sufficient for comfortable maintenance and the liberal education of his children he quit money-making, though he was in the full tide of financial success, and reverted to his books and papers, and his original occupation as teacher, with his children around him as scholars. In seeking a new residence he had most in mind intellectual advantages, and looked toward New Haven or Amherst as desirable places; but the mother, whose ambition for her children was predominantly religious, who was used to say that she hoped all her sons would be ministers and all her daughters would marry ministers, and who devoted John H., her first son, to the Lord from his birth, praying that "he might be a minister of the everlasting gospel," had her mind on the spiritual advantages of the place they might choose. Putney had been a favored seat of revivals, and this gave it more illumination to her than could be shed by the greatest university in the land. Her prayers prevailed. In a little sketch of her life that she wrote, this family crisis is referred to as follows:

"When we had eight children, the eldest seventeen, Mr. Noyes having acquired a competence determined to retire from business, and find a place with better advantages for the education of his family. When he talked with me about it, I saw that it was a matter of considerable importance where we went. I felt my own insufficiency to advise, and I could only make it a subject of prayer, which I did three months. The burden of my prayer was that we might choose a place which would best promote the spiritual improvement of the family. I think I was divested of any desire for worldly advantages for them, and I had the comfort of believing that God directed the movement when we took up our residence in Putney instead of Amherst, where the four eldest children were at school, or any of the large towns that we had in view."

In this move was wrapped up the conversion of John H. and the other children, and the subsequent development of Perfectionism and the Oneida Community. The connection of Putney with Gouverneur helped to bring the family more powerfully under the influence of the great revival of that period. H.

THE DEVIL, OR WHAT?

COUSIN SETH, what do you think of attributing disease to the effect of evil spirits? Do you believe in it? asked Mira in her abrupt way.

S.—I can't say: I have n't given thought enough to the subject to believe or disbelieve understandingly. I think, however, I incline toward belief.

M.—I don't; I don't want to. Now suppose Lucy here should have the measles. Which would be the more sisterly way for me to treat her; to consider her possessed of an evil spirit, and so criticise and rebuke her; or act as if she were afflicted and deserved my pity and kindest attention?

S.—If you don't want to believe, of course you won't. I think the answer to your question depends entirely upon the right or wrong of this theory under discussion. If it were true that bad spirits infused into her system animalcules which caused her disease, the kindest thing to her would be to face the truth and treat her accordingly.

Lucy.—These violent and contagious diseases do seem like the work of the devil; but the case is somewhat different in regard to inherited and chronic infirmities. Don't you think so, Jane?

J.—No, I can't truthfully say I do. I think all disease is hateful, and instead of being petted and condoled with should be charged to bad spirits and told to stand back. It seems to me that the difficulty with you and Mira is that you do not distinguish between the disease and the person. It is not the person we call hateful, nor do we blame him only so far as his spirit may have been open in the wrong direction, thus making him liable to such an attack. By telling him the real cause of his trouble he can hate it and take hold intelligently to be rid of it.

M.—So, Jane, you are a believer in this doctrine?

J.—A firm and full believer.

S.—Is your belief merely theoretical, or have you had experience as a foundation?

J.—At first I believed it in a general way because it appeared rational; experience has strengthened and confirmed me in it. I well remember when I was finally converted.

M.—Won't you tell us about it?

J.—'T was in the fall of 1870. Several years previous, while engaged ten or twelve hours a day in sedentary labor, I contracted a very troublesome pain in my left side. It had steadily grown worse until the time I speak of, when it was constant and most of the time very severe. The lightest labor was distressing. I was rooming at that time with H—— S——, who you know was quite feeble. I had been reasoning on this very point and found that though I had a theoretical belief that all such difficulties were chargeable to evil spirits, in my own particular case I shrank from owning it; did n't like to think I lived near enough to the devil to admit of his operating on me so uncontrollably. One morning while dusting the furniture, H—— sat watching me and suddenly asked, "Do you believe the devil is the cause of all disease?" Promptly I answered, "I do. I think God may and does permit the devil to bring distress upon us for our good, but I know he is the author of no evil." After a moment's pause she said, "Do you think the pain in your side is caused by the devil?" The very point I had been trying to evade! I felt a cold perspiration start out all over me, but resolutely answered, "*Yes.*" Nothing more was said on the subject between us. During the forenoon I found myself in a tight place. I had committed myself and must live up to my testimony. I certainly wanted to give no quarter to the devil; if this pain were his work, as I had said I believed it to be, I must ignore and get rid of it. But how? The first light I had was: "Resist the devil, and he will flee from you. Draw nigh to God, and he will draw nigh to you." That evening I opened the Berean and read "The Cause and the Cure." It seemed so applicable to my case and threw so much light on the subject, that I confessed to H—— the dilemma her question had put me in, and read the article to her. We both found much comfort in it. Six months from that time my side was entirely well. This is one item of experience that has tended to confirm my belief.

M.—I'm going to read that article and see if I feel better about this idea. Ash.

COMMUNITY JOURNAL.

Mar. 27—Eleven little lambs made their appearance this morning.

—At the railway station the other day we saw a new lathe for our machine-shops. This business has lately been divided into two departments—one for manufacturing and the other for miscellaneous and home jobbing.

—A heavy snow-storm yesterday (26). The trees are loaded and the walks have to be shoveled out as in mid-winter. Some of the folks begin to talk of the possibility of a repetition of the year 1816 when winter did not break up till the middle of April, when snow fell upon the blossoming trees, and again in July whitened the summer landscape. But we need not look back so far as that for an example of the presistent grip of winter. On April 5, 1856, the snow at O. C. was so deep that we walked to our work at the mill on the tops of the fences, which were on a level with the center of the road; yet the succeeding summer was warm and equable.

—Though earth, hedge and shrub are blanketed with snow, though pond and river are bound in icy fetters, the robins and blue-birds have come to herald the advent of spring. They twitter, chirrup and carol, and carol, chirrup and twitter, as they fly hither and thither seeking their grains of comfort. One chubby fellow perched on the topmost twig of a leafless chestnut tree, after taking in the dreary scene before him thus poured forth his plaints: "We have left a genial clime and come to find shelter and food with you; but cold and desolate is your land of the north, and bleak and cheerless the picture before me. You do not make us welcome, but would drive us back with your frigid atmosphere and sterile landscape;" and in another moment forgetting his griefs, he bursts into the lively refrain. "But winter is over and spring has come—delightful, charming, bewitching spring; the snow will soon melt before the sun, the gentle rains will fall, and all nature burst into life, and we will stay to greet the budding trees with our songs of gladness." With this he flew away to mingle with his companions. Appropos of the robins, the other day a flock of lusty fellows alighted in the small buckthorn tree that stands south of the house. Here they tarried in most unbirdlike manner. From the window we watched them, and for hours they clung to the branches and twigs of this homely tree. At a loss to conjecture what attraction held them so long together, our curiosity brought us to the spot. Ah! they had found a rich repast in the berries with which the tree was laden. The berries were shrivelled and shrunken by long exposure to the winds and frosts of winter, but they made a royal banquet for the robins. The little gluttons must have gorged themselves, for not till they had picked every berry were they willing to leave; and after supper when one of the children sprinkled a generous handful of bread-crumbs under the tree, only one robin came to pick them up.

[The following "personal" from the nursery can be read for its lively appreciation of children, but not as evincing a desire on our part to make our children unnecessarily prominent:]

—Last Sunday Mrs. C. A. M. gave the little ones a happy surprise by covering inside and out with beautiful pictures the long box in the drawing-room which holds their playthings. So much was said of the metamorphosis it had undergone, that the next day we went to see it. Having admired it sufficiently, we stepped into the East room, and were just in time to see the whole little flock "dressed, washed and combed." Dear little creatures, if we could only have them pictured in all their infantine simplicity! For time flies, and they will soon outgrow the laps of their kind nurses as well as their baby ways. Yet we would not have it otherwise if we could, for it is delightful to watch their growth from month to month; to hear their funny attempts at pronouncing long words, their droll speeches, their unexpected questions. Nothing affords us more amusement than to sit for half an hour in their play-room. Pierrepont, with high brow, fair complexion, large brown eyes and dimpled cheek, is the oldest of the group; his bashful manner lures you to seek his acquaintance; by degrees the ice of reserve is broken, and you discover as voluble a little talker as you often find. Felix, with dark brown hair, laughing hazel eyes and fre,

ever-varying expression, eludes you most cunningly; he will look at you from a distance, wary of all advances till he sees his companions eager for your notice, and then his capture becomes easy; but you may know he is a rogue by the merry twinkle of his eye. Agnes, the only brunette of the nine, with "soft black eyes and hair of jet," is as healthy and hearty as she looks. You will find her very sociable; and she will be quite likely to favor you with the information that *her* "mamma lives at the Villa." Holton, a fair-haired, blue-eyed boy with large forehead and persuasive manner gets you to sit down. If you stop to tell him a story or sing him a song, he will beg you to "do it adain;" and would keep you "doing it adain" for any length of time, if you will. George W. has deep blue eyes, light auburn hair, and a face as "round as an apple;" watch him as he runs about, and you can almost fancy he is making fun of you; for the waggish air and droll expression which he assumes occasionally seem to say, "I know something funny that you don't." Then again he will carry himself with so much dignity and composure that you will call him a "little judge." Elinor, flaxen-haired, with light blue eyes and delicate complexion, is a veritable little chatter-box. As you enter the room she will come dancing toward you, and if you are a woman, address you as "mamma," and taking your hand will lead you to a chair and ask to "sit in oor lap;" this accomplished, the little fairy proceeds to tell you the news, of which she seems to have no end. Berton, with a wide forehead, brown hair and sad, hazel eyes, is less talkative, but as playful as the others; he has much to tell you about his "pretty horsey," which it is his delight to draw about the house. Joanna has very light hair, grey eyes and fair complexion. She is not half as demure as she looks; she is learning to talk, and can make herself understood very well, and is fast developing a talent for housekeeping; she is quite a manager, and already the others stand some in awe of her authority. The little maiden Gertrude, with blue eyes, light brown hair and rosy cheeks, is an energetic little lady. She can lisp a great many words, and bids fair to make as great a talker as Elinor. She is fifteen months old and the youngest of the lot. But these are not babies, you will say. True, they are not. We call them so because they are in the "infant department," but they can all walk and talk and take care of themselves very well. We have but four genuine babies and they are Theodore, Allan, Walter and Corinna; all well and good-natured.

DEPARTURES.—Julius Hawley, for Wallingford; Myron H. Kinsley, for Chicago; H. W. Burnham, for New York and Boston; John F. Sears, for the East on a tour of observation.

ARRIVALS.—T. L. Pitt from a tour through Canada, the West and Southwest: H. G. Allen from Baltimore and Washington.

THE VILLA.

—Our evening reading is Dicken's novel, "Hard Times." We find it sufficiently humorous and pathetic to be quite entertaining.

—A little sugar-making in which some of the boys are engaged, met with a slight drawback the other day when they ignorantly put the sap a-boiling in the onion-kettle. The offending kettle has since been put out of reach.

—"O, the long and dreary winter," say some of our friends, who are hungry for spring with its unfailing starts and stimulants. And indeed, winter does seem uncommonly prolonged. 110 days of sleighing and drifts and gales and storms, and still on this twenty-sixth day of March there are no signs of relenting. The sleighing is good; there is a brisk snow-storm and a furious west wind. This rude weather so late in the season reminds one of Tennyson's plaintive appeal to spring:

> "Dip down upon our northern shore,
> O sweet new year, delaying long;
> Thou dost expectant nature wrong,
> Delaying long, delay no more.
>
> Bring orchis, bring the foxglove spire,
> The little speedwell's darling blue,
> Deep tulips dashed with fiery dew,
> Laburnums, dropping wells of fire."

—Readers of the CIRCULAR will remember that we last spring vacated our original Willow-Place house beside the trap-factory, for a more elegant and commodious residence at the Villa. Bright home associations grow fast in a Community family, and they had sprung up so thickly about the Willow-Place house during the six years that we lived there that we might reasonably feel quite sentimental had we left it desolate or to be inhabited by strangers. But no such fate has befallen it. It is now, perhaps, more than ever one of the home centers, for it is a new family machine-shop, where men and women are combined in happy industry and where the mechanical arts are pursued with a zest uncommon even to a Community who always supposed that it knew how to love labor. In the old family sitting-room there are five lathes two of which are kept running ten hours a day by relays of Community women. One of these women was long a resident of the Willow-Place house and how she feels about the old spot and toward the machinist's trade may be seen by the following private letter to a Wallingford friend:

Home Machine-Shop, Mar. 22, 1873.

"DEAR H.:—I wonder if you realize what a transformation our old Willow-Place parlor has undergone since our family left its sacred precincts? When we bade the old house good-bye last spring I confess to feeling a pang of regret at the thought that soon this nice wood-work and these neatly papered walls were to be marred and soiled by pulleys and grease. But lately my feelings have very much changed. I have no longer a dislike to pulleys and grease. As I stand by my lathe watching its evolutions and guiding the sharp tool while it cuts the little chains, rings and bright bits from the hard steel, shaping it into screws, wrenches and many other necessary and useful tools, I am much interested, yes, I may say charmed with the employment. I am not ashamed of my black oily hands. I can even look at them with a complacent smile. The charm of guiding these complicated machines is many times greater to me than making lace collars or plaiting ribbons to deck myself with. What would a fashionable belle say to this? I should be happy to have you call and take a look at our woman's machine-shop.

Yours, E. H.

WALLINGFORD.

—Our baby thrives finely in this new land to which he has been transplanted. For a few days past his mother has been studying a contrivance for his benefit; begging some twine of this one, some canvas of that one, coaxing another to saw out some odd-shaped bits of board and still another to give her two iron rings. Yesterday we were told that we might come up to her chamber and see the results of all this planning. So up we went, about as many of us as the room could hold, and there we saw the little fellow calmly and happily swinging to and fro in a tiny hammock suspended in the center of the room. Some of you mothers and baby-tenders who want to turn off the little ones for an hour, just try this new arrangement, and you will think it a "nice thing." Take a piece of canvas or sacking, cut it in an oval form, hem the edges, through the hem on each side run a stout cord—which you may attach by rings to opposite sides of the room—slip a narrow bit of board in at the head and foot to keep the hammock open, put in a soft shawl or pillow, then put in the baby, and peace and quietness will follow for some time.

Evening Meeting.—E. H. H. spoke of our printing business, saying that he wished us to continually strive toward a higher standard. Let each person in each part of the business see to it that he does his work in the very best manner. We must constantly look forward to the highest art and the best taste. In order to accomplish this we must make criticism free, there must be freedom to suggest improvement and correct faults, and we must get rid of sensitiveness about having our work criticised. He thought there was some tendency to excuse ourselves when fault was found with our work. True humility and softness of heart will free us from this spirit.

AKIN TO VOLITION.

HOW PLANTS BEHAVE: *How they Move, Climb, Employ Insects to Work for them, &c.* By Asa Gray.

This little book almost persuades us that all plants have something akin to the power of voluntary motion. No one has seen the Sensitive Plant of our gardens shrink from the slightest touch, and quickly fold together in pairs its little leaflets, while its branches and leaf-stalk all bend to the ground as if they would escape observation and so avoid a repetition of the unpleasant contact, without surprise and the thought that this plant behaves as though it had both the power of motion and a sense of feeling. "How Plants Behave" shows that the Sensitive Plant is not such an exceptional phenomenon in plant life as is usually supposed. It describes of course the peculiar movements of certain rare plants such as the *Desmodium gyrans* of India and of our hot-houses, whose side leaflets "under the temperature of a sultry summer's day may be seen to rise and fall by a succession of jerking movements, not unlike those of the second-hand of a clock, but without much regularity, now stopping for some time, then moving briskly, always resting for a while in some part of their course, commonly at the highest and lowest points, and starting again without apparent cause, seemingly of their own will;" and the no less interesting motions of Venus's Flytrap (*Dionæa muscipula*), whose leaf, fringed with bristles, folds quickly on itself as if hinged at the midrib, when even a fly brushes against the sensitive bristles on its surface, holding the victim all the more closely for its struggles until it is dead, when it opens and is ready for the next luckless adventurer; but it also shows that more common plants have peculiarities of movement which should attract our attention. For instance, many plants of the Pulse family and of other families recline or assume other singular positions at night. The leaves of house plants turn their upper face toward the light. The motions of twining plants are specially interesting. Some twine with the sun, as the Hop and most Honeysuckles; while the Morning-Glory, Bindweeds, Beans, etc., turn from left to right, or against the sun. "When a twining stem overtops its support, the lengthening shoot is seen thrown over to one side, and usually outstretched. One might suppose it had fallen over by its weight; but it is not generally so. If turned over, say to the north, when first observed, it will probably be found reclining to the south an hour or so later, and an hour later again turned northward. That is, the end of the stem is sweeping round in a circle continually, like the hand of a clock. It keeps on growing as it revolves; but the revolving has nothing to do with the growth, and indeed is often so rapid that several complete sweeps may be made before any increase in length could be ob-

served. The time of revolving varies in different species. It also depends upon the weather, being slow or imperceptible when it is cool, and more rapid when it is warmer. Sometimes it stops when everything seems favorable, and starts again after a while. The Hop, Bean and Morning-Glory are as quick as any. In a sultry day, and when in full vigor, they commonly sweep round the circle in less than two hours. They move by night as well as by day. When the free summit of a twining stem is outstretched to two feet or more in length, so as to magnify the motion, this is sometimes rapid enough to be actually seen in some part of the circuit.

"Because twining stems are often twisted more or less, some have supposed that the twisting was the cause of the revolving sweep of the free end. If so, the stem below would in a day or two be likely to twist itself off. And twiners seldom twist much when climbing a smooth and even support. To learn how the sweeps are made, one has only to mark a line of dots along the upper side of the outstretched revolving end of such a stem (say that of the Morning-Glory), and to note that when it has moved round a quarter of a circle, these dots will be on one side; when half round, the dots occupy the lower side; and when the revolution is completed, they are again on the upper side. That is, the stem revolves by bowing itself over to one side—is either pulled over or pushed over, or both, by some internal force, which acts in turn all around the stem in the direction in which it sweeps; and so the stem makes its circuits without twisting.

"So the sweeping round of the stem is a movement like that wonderful one of the leaflets of *Desmodium gyrans*, just described, only slower. And here we see what it is for. The sweeping movement of the stem is the cause of the twining. The stem sweeps round that it may reach some neighboring support; as it grows it sweeps a wider and wider space, that is, reaches farther and farther out. When it strikes against any solid body, like the stalk of a neighboring plant, it is stopped: but the portion beyond the contact is free to move as before; and, continuing to lengthen and to move on, it necessarily winds itself round the support, that is, *twines*."

Plants climb by roots, as in the case of the Iris and Trumpet-Creeper—by stems, as in the case of the Hop and Honeysuckle—by leaves, blade or petiole as in the Clematis—and by tendrils, as in the Passion-flowers. The latter means is "the most exquisite, and under many circumstances the most advantageous, as it is one of the commonest of the contrivances for climbing. The tendril, as it grows, stretches out horizontally, as if in search of a supporting object. More slender than a stem or any other sort of stalk, it can thus extend farther at the least expense of material. In the most perfect tendrils, and notably in the slender Passion-flowers (such as the annual *Passiflora gracilis*, and the Maple-leaved species, *P. acerifolia*), opportunities for securing a hold are much increased by the revolving of the tendril. It sweeps circuits, like the stem of a twiner, although with less regularity, sometimes, however, with great rapidity. In hot weather these tendrils often move through the complete circle in an hour or less, or even so fast that the motion of the end of a long tendril may sometimes be distinctly seen in a part of its course.

"In revolving tendrils the most wonderful thing to remark is the way in which they avoid winding themselves around the stem they belong to. The active tendrils are of course near the top of the stem or branch. The growing summit beyond the tendril now seeking a support is often turned over to one side, so that the tendril, revolving almost horizontally, has a clear sweep above it. But as the growing stem lengthens and rises, the tendril might strike against it and be wound up around it. It never does. If we watch these slender Passion-flowers, which show the revolving so well in a sultry day, we may see, with wonder, that when a tendril sweeping horizontally comes round so that its base nears the parent stem rising above it, it stops short, *rises stiffly upright, moves on in this position until it passes by the stem, then rapidly comes down again to the horizontal position*, and moves on so until it again approaches and again avoids the impending obstacle!"

The book before us does not undertake to explain the remarkable phenomena it describes; it leaves us to wonder and worship if we will. We commend it as a book that is certain to interest the young and their seniors if they are not too wise; in which case they can wait for the improved edition in which Professor Gray promises to treat the subject "with somewhat of scientific and historical fullness." W.

INTERNATIONAL.

"RATHER do I believe that our great Maker is preparing the world, in his own good time, to become one nation, speaking one language, when armies and navies will be no longer required."

This is cheering indeed. Coming as it does from a high quarter (being embodied in the President's inaugural address) it is like unfurling to the nations the banner of perennial peace. Happy the man who was seer enough to utter a prophecy so noble. America, then, has spoken the word. Henceforth let all nations take their cue from her, and seek after unity. One nation and one language! Is it not enough to soften the hardest, and draw tears of joy from us all, to think of there being no more war for ever—to think of swords beaten into ploughshares and spears into pruning-hooks? And surely, there are nowadays most significant tokens of the approaching fulfillment of prophecies such as these. The case of Japan is electrifying. The change in that nation's foreign and domestic policy is something akin to a resurrection from the dead. It is impossible for any one with his eyes open to be altogether insensible to the fact; and to those who believe in an overruling Providence, it is really awe-inspiring. China hears the rallying cry, and is in fact doing the bidding of Japan in following her example, however tardily. Persia, too, has aroused from her long traditional slumbers, in spite of her priesthood, and her sovereign seeks unto the nations.

It is very interesting to think of this Asiatic movement, for among the Tartar hordes we have reason to believe have been harbored the lost tribes of the children of Israel. Who knows but this movement is destined to usher in their return to the Jehovah of their ancient hearths; "for if the casting away of them be the reconciling of the world, what shall the receiving of them be but life from the dead?" This, though directly applicable to the dispensation of the Jewish people at the destruction of their capital, must apply in some sense to the whole house of Israel. But as the "receiving of them" cannot be "until the fullness of the Gentiles be come in," may we not hope that the signs of the times above alluded to, indicate a rapid approach to that fullness?

I am disposed to make a great deal of that paragraph in the President's address. It is very unostentatiously put, but none the less freighted with truth. I look upon it as a very hopeful sign that we have come out of the complications of the late civil war in the way we have—especially as it relates to England. There is a spirit abroad that is more amenable to the dictates of justice. Criticism seems to have free scope among the nations. The late humiliation of France was a most palpable criticism of the war spirit. Judgment takes effect in high quarters. Men of high standing can no longer count on concealing their misdeeds. Owing to the effects of the freedom of public expression, the whole world will in due time form a standing committee of criticism until righteousness covers the earth as the waters cover the sea. What will then hinder the solidarity of the human family? Criticism, it seems to me, is competent to take the place of war; for is not war after all a coarse form of the same ordinance? It is certainly better to save life if we can purify it short of death. And if the standard of public opinion in regard to true refinement keeps advancing, criticism will so effectually apply the test, that no individual whatever will be able to escape the ordeal—hence our hope of the final and complete expurgation of the population of the globe, and of the "restoration of *all* things." And this, mind you, will be a *bloodless* revolution, effected by righteous judgment, backed by a world-wide and, therefore, overwhelming public opinion. R. S. D.

FROM OUR YALE STUDENTS.

VIII.

OUR new building slowly approaches completion and there is a rumor afloat that the necessary moving of school furniture will be done during the next vacation, which begins April 3d. The lecture-room is the finest in the University, and recitation-rooms, Professor's rooms etc., are all quite magnificent. It must be very pleasant to build for yourself and have somebody else pay the bills. The Scientific School builds and Mr. Sheffield pays in the present case.

Yesterday afternoon C. and I went to hear Prof. Dana lecture to the junior academics on

CORALS AND CORAL FORMATION.

The small lecture-room was closely packed. Many ladies, mostly wives and daughters of Professors, were present. My attention was particularly called to their presence by the fact that one sat directly in front of me with such an amount of frippery on her head as to quite shut out the view.

Prof. J. D. Dana is one of the foremost geologists in this country—probably in the world. His Manual of Geology has been called by some European authority, one of the two really scientific works ever published in this country—Gray's Manual of Botany being the other. The Professor is a small, thin man, with a complexion browned by sun and wind, rather long gray hair, deep-set blue eyes, a large nose and a cleanly-shaven chin. His manner is animated and pleasing, and, somewhat to my surprise, his lecture was interspersed with flashes of wit and poetical quotations, and better still with allusions to the controlling hand of God in the universe. The student of geology will find most of his lecture in his Manual; but for the benefit of some who have not read that rather formidable work, I will briefly sketch it.

THE ISLANDS OF THE PACIFIC,

omitting New Caledonia and some other large ones in the southeastern part, number 600, with an area of but 40,000 square miles, or less than that of the State of New York; 290 of these are coral islands, and many of the others are surrounded by reefs of coral. The larger part of coral islands consists of a narrow rim of reef surrounding a lagoon or salt-water lake. Such islands are called *atolls*, a name of Maldive origin. Their size varies from a length of two or three miles to fifty. The reefs about other islands are of two kinds, fringing and barrier. A fringing reef, as the name implies, is a coral fringe attached directly to the shore,

while barrier reefs, like artificial moles, are separated from the shore by a channel. Having thus given us an idea of these formations, he took up the subject of the coral itself. He read to us a bit of poetry about the Actinoid Polyps (though I guess that was not the name of the piece). It was a description of the way the little animal started from the bottom of the ocean, and builded slowly up his palace and his tomb, dying when he reached the surface, etc. His comments reminded me of Cuvier's on somebody's description of a crab: fine poetry, incentive to industry, resignation and all that, but the poet was laboring under a serious delusion. The polyp doesn't begin at the bottom of the ocean, doesn't build a palace nor a tomb, and doesn't die when he gets to the surface. The common reef-making coral does not start from the ocean's bottom, because he cannot live in water over one hundred feet deep. The polyps do not build anything; but the coral is secreted within them as other animals secrete their bones. It is internal, not external. A coral formation, however great, has only an inch or two of live polyps at its top. A colony of polyps may commence anywhere near the shore where the water is not too deep; but each member dies at his post, and his children stand on his back, as one might say. He had pictures exhibiting the animals in all their bright colors, purple, red, green, and yellow.

Prof. Dana next took up Charles Darwin's theory of the origin of the atolls. According to him, each atoll began as a fringing reef around an ordinary island, which slowly sinking till it disappeared, while the reef continued to grow upward, left the reef at the surface as a ring of coral around a lake. As the corals are so limited as to depth, this solution is doubtless the true one.

He closed by describing the miserable condition of the natives on certain small coral islands he visited when filling the post of Geologist in Wilke's Expedition, also with an anecdote about a big white bird which he tried to kill on an uninhabited atoll. It sat still and let him draw blood from its neck. The sight of it on the white feathers, unnerved him, and he gave up the task. The bird sat quietly and watched him as he retreated. As he was not haunted like the Ancient Mariner, he concluded the creature must have lived:

" For the dear God who loveth us
He made and loveth all."

K.

CURIOUS EPITAPHS.

[A friend sends us the following epitaphs espied by a tourist in his walks in England and Scotland in search of the quaint and curious.]

An honest fellow here is laid,
His debts in full he always paid,
And what's more strange, the neighbors tell us,
He brought back borrowed umbrellas.

On a talkative old maid (1750):

Beneath this silent stone is laid
A noisy, antiquated maid,
Who from her cradle talk'd till death,
And ne'er before was out of breath.

On a Mr. Box:

Here lies one Box within another—
The one of wood was very good,
We cannot say so much for t'other.

In a church-yard in Norfolk, on a lawyer:

God works wonders now and then;
He, though a lawyer, was an honest man.

In St. Michael's church-yard, Coventry; on a wife:

She was ——
But words are wanting
To say what!
Look what a wife should be,
And she was that.

In Westminster Abbey, on Samuel Foote, the comedian:

Here lies one Foote, whose death may thousands save,
For death has now one foot within the grave.

Here is a queer one:

Here lies John Bunn;
Who was killed by a gun!
His name wasn't Bunn, but his real name was Wood.
But Wood wouldn't rhyme with gun, so I though Bunn would.

Another:

Under this stone aged three score and ten,
Lie the remains of William Wood-Hen.
N. B.—For Hen, read Cock. Cock wouldn't come in rhyme.

THE NEWS.

The health of Senator Summer is so far restored as to enable him to resume his seat in the Senate.

Senator Caldwell, from Kansas, anticipated expulsion by resigning his seat in the U. S. Senate.

Twenty-five hundred immigrants arrived in New York city on Monday last.

The Second Adventists of Groton, Vt., have designated April 12, 1873, as the last great day.

The late Lord Bulwer Lytton left personal property to the amount of $400,000.

A special edict tolerating Christianity throughout the empire of Japan, has been promulgated by the Mikado.

James Savage, the antiquarian, and author of the "Genealogical History of the First Settlers of New England," died in Boston on the 8th inst., in his 89th year.

The emperor William of Prussia was 76 years old on Saturday the 22d inst., and that day was a gala day in the Fatherland in consequence.

Of the forty-two cardinals of the Popish church all but two are old men. Lucien Bonaparte, the youngest, is 45. The oldest, Archbishop of Chambery, is 90.

Gov. Washburn of Massachusetts has appointed the 3d of April next as a day of fasting and prayer for the citizens of that State. Gov. Jewell has appointed April 11th as fast-day in Connecticut.

At Jersey City on the 22d inst, the passenger depot, two freight depots with most of their contents, with the ferry building and bridge of the Erie Railroad Co., were destroyed by fire.

The Mormons have in Utah 161 edifices for public worship, capable of seating over 85,000 persons. In California they have three; in Florida one; in Idaho two, in Illinois two; Iowa one, and Nebraska one.

Germany is said to stand foremost among European nations in the encouragement of agricultural science. Specially is this true of Prussia. An important agricultural school will be opened at Bittburg next month.

An official investigation under the direction of the Governor of Minnesota reveals the fact that during the terrible storm in that State on the 7th and 8th of January 70 persons lost their lives by freezing and exhaustion, and 31 were seriously injured.

The new Republic of Spain has abolished slavery in the island of Porto Rico. The bill passed the Spanish Assembly on the 22d. It provides that the freedmen are to remain in the service of their former masters for three years longer, in a kind of apprenticeship relation, and are not to become Spanish citizens until five years have elapsed. A resolution congratulating the Spanish Republic on the passage of this bill (which sets free something less than 100,000 slaves) was unanimously passed in the U. S. Senate last week.

Bishop McIlvaine of the Episcopal Diocese of Ohio died recently at Florence, Italy, where he was residing for the benefit of his health. He was a man of great ability and culture, celebrated as a preacher, and a writer of remarkable strength and clearness. His lectures on the Evidences of Christianity, delivered before the New York University in 1831, ran through thirty editions. In 1825 he was appointed chaplain of West Point Military Academy, and was instrumental in starting the most remarkable religious revival which ever took place in that institution.

ANNOUNCEMENTS.

SILK GOODS.

Machine-Twist and Sewing-Silk of their own manufacture for sale by the Oneida Community.

Address, [S] ONEIDA COMMUNITY, *Oneida, N. Y.*

PRESERVED FRUITS AND VEGETABLES

Put up for sale by the Oneida Community in tin and glass. Price list sent on application.

Address, [F] ONEIDA COMMUNITY, *Oneida, N. Y.*

STEEL TRAPS.

Eight sizes and kinds, suitable for the House-rat, Musk-rat, Mink, Marten, Fisher, Fox, Otter, Beaver, the Black and Grizzly Bears, are made by the Oneida Community Descriptive price-list sent on application.

Address, [T] ONEIDA COMMUNITY, *Oneida, N. Y.*

MACHINE-SHOP AND FOUNDRY.

Improved Lathe-Chucks, Blinn's Patent Gate-Hinges, Machines for Measuring the Length and Testing the Strength of Manufactured Silks, Bobbin-Winders for Sewing-Machines, etc. Agricultural, Machine and Light Castings, on hand or made to order. Descriptive price-list sent on application.

Address, [M] ONEIDA COMMUNITY, *Oneida, N. Y.*

THE WALLINGFORD PRINTING COMPANY.

All kinds of Book and Job Printing executed: Manufacturers' Illustrated Catalogues made a speciality: also Bronze and Color Work, and the finer kinds of Card, Circular and Bill-head Printing. Having enlarged its works and added new motive power, this Company is in renewed condition to meet the wants its patrons with promptness and accuracy.

P. O. Address, *Wallingford, Conn.*

PUBLICATIONS.

(Sent from the Office of the Oneida Circular by mail, post-paid, on receipt of price.)

History of American Socialisms. By John Humphrey Noyes. 678 pp. 8vo. J. B. Lippincott & Co., Philadelphia. London, Trubner & Co. Price $3.00.

The Trapper's Guide; a Manual of Instructions for Capturing Fur-bearing Animals. By S. Newhouse. Third edition, with New Narratives and Illustrations. 215 pp. 8vo. Price bound in cloth, $1.50

Salvation from Sin, the End of Christian Faith; an octavo pamphlet of 48 pages. By J. H. Noyes. Price 25 cents per single copy, or $2.00 per dozen.

Dixon and His Copyists; a Criticism of the Accounts of the Oneida Community in "New America," "Spiritual Wives," and kindred publications. By John Humphrey Noyes. Price 25 cts.

Scientific Propagation. By John Humphrey Noyes. Large octavo pamphlet of 32 pages. Price 25 cts.

Male Continence. By John Humphrey Noyes. An octavo pamphlet of 24 pages. Price 25 cts.

Hand-Book of the Oneida Community; Containing a Brief Sketch of its Present Condition, Internal Economy and Leading Principles. Price 25 cts.

The five pamphlets—"Salvation from Sin," "Dixon and his Copyists," "Hand-Book of the Oneida Community," "Scientific Propagation," and "Male Continence," will be sent to a single address on the receipt of $1.00.

Back Volumes of the Circular, Unbound. Price $2.00 per volume.

MESSRS. TRUBNER & COMPANY, Book-sellers, Paternoster Row, London, have the "History of American Socialisms," the "Trapper's Guide," and the "Hand-Book of the O. C.," for sale. They will receive subscriptions for our other publications.

PHOTOGRAPHIC PICTURES

Of the Oneida Community Buildings and Grounds, made by a first-class artist and finely mounted, can be had on application at the Office of the Oneida Circular.

LARGE VIEWS.

Bird's-eye View, looking West, of Community Buildings and Grounds, 12 by 14 inches, on fine enameled board 16 by 20, price $1.75. Quadrangle and Group, 12 by 14, mounted like the above price $1.75. South and East Fronts of the Community Dwellings giving a good view of the New Wing occupied by the Children—8 by 10, on tinted board 10 by 12, with an ornamental border price $1.00.

STEREOGRAPHS.

No. 2, East and North Lawns. No. 3, East Lawn and Portion. No. 4, East Front. No. 5, North Front and Lawn. No. 6, Bird's Eye View of Buildings looking West. No. 7, Lawn and Summer House. No. 8, West View, toward Railroad. No. 11, Quadrangle. No. 12, Lawn View. No. 15, South and East Fronts. Price of Stereographs $3.00 per doz. Sent by mail, post-paid, on receipt of price.

Oneida Circular.

A WEEKLY JOURNAL OF HOME, SCIENCE AND GENERAL INTELLIGENCE.

Published by the Oneida & Wallingford Communities.

ONEIDA COMMUNITY, APRIL 7, 1873.

New Series, Vol. X, No. 15
Whole No. 1453.

POST-OFFICE ADDRESS:

ONEIDA CIRCULAR, ONEIDA, N. Y.

TERMS:

The CIRCULAR is sent to all applicants, whether they pay or not. It costs and is worth at least two dollars per volume. Those who want it and ought to have it are divisible into three classes, viz., 1, those who cannot afford to pay two dollars; 2, those who can afford to pay *only* two dollars: and 3, those who can afford to pay *more* than two dollars. The first ought to have it free: the second ought to pay the cost of it; and the third ought to pay enough more than the cost to make up the deficiencies of the first. This is the law of Communism. We have no means of enforcing it, and no wish to do so, except by stating it and leaving it to the good sense of those concerned. We take the risk of offering the CIRCULAR to all without price; but free subscriptions will be received only from persons making application for themselves, either directly or by giving express authority to those who apply for them.

Foreign subscribers, excepting those residing in Canada, must remit with their subscriptions money to prepay the postage.

THE UNITED COMMUNITIES.

ONEIDA COMMUNITY

Is an association living in Lenox, Madison Co., N. Y., four miles south of Oneida and a few rods from the Depot of the Midland Railroad. *Number* of members, 205. *Land*, 654 acres. *Business*, Manufacture of Hardware and Silk goods, Printing the CIRCULAR, Horticulture, &c. *Theology*, Perfectionism. *Sociology*, Bible Communism.

WILLOW-PLACE COMMUNITY.

Branch of O. C., on a detached portion of the domain, about one and one-fourth miles north of O. C. *Number* of members, 19. *Business*, Manufactures.

WALLINGFORD COMMUNITY.

Branch of O. C., at Wallingford, Conn., one mile west of the Hartford and New Haven Railroad. *Number* of members, 45. *Land*, 228 acres. *Business*, Publishing, Job Printing, Manufactures, and Horticulture.

SPECIAL NOTICE.

The O. C. and Branches are not "Free Lovers," in the popular sense of the term. They call their social system BIBLE COMMUNISM or COMPLEX MARRIAGE, and hold to freedom of love only within their own families, subject to Free Criticism and the principles of Male Continence. In respect to permanency, responsibility, and every essential point of difference between marriage and licentiousness, the Oneida Communists stand with marriage. Free Love with them does *not* mean freedom to love to-day and leave to-morrow; nor freedom to take a woman's person and keep their property to themselves: nor freedom to freight a woman with offspring and send her down stream without care or help; nor freedom to beget children and leave them to the street and the poor-house. Their Communities are *families*, as distinctly bounded and separated from promiscuous society as ordinary households. The tie that binds them together is as permanent and sacred, to say the least, as that of marriage, for it is their religion. They receive no new members (except by deception or mistake), who do not give heart and hand to the family interest for life and forever. Community of property extends just as far as freedom of love. Every man's care and every dollar of the common property are pledged for the maintenance and protection of the women and children of the Community.

ADMISSIONS.

These Communities are constantly receiving applications for admission which they have to reject. It is difficult to state in any brief way all their reasons for thus limiting their numbers: but some of them are these: 1. The parent Community at Oneida is full. Its buildings are adapted to a certain number, and it wants no more. 2. The Branch-Communities, though they have not attained the normal size, have as many members as they can well accommodate, and must grow in numbers only as they grow in capital and buildings. 3. The kind of men and women who are likely to make the Communities grow, spiritually and financially, are scarce, and have to be sifted out slowly and cautiously. It should be distinctly understood that these Communities are not asylums for pleasure seekers or persons who merely want a home and a living. They will receive only those who are very much in earnest in religion. They have already done their full share of labor in criticising and working over raw recruits, and intend hereafter to devote themselves to other jobs (a plenty of which they have on hand), receiving only such members as seem likely to help and not hinder their work. As candidates for Communism multiply, it is obvious that they cannot all settle at Oneida and Wallingford. Other Communities must be formed; and the best way for earnest disciples generally is to work and wait, till the Spirit of Pentecost shall come on their neighbors, and give them Communities right where they are.

SPIRITUAL FACTS.

Home-Talk by J. H. N.

THERE must be many facts in every person's experience, which it is important that he should thoroughly believe and reverence, although they are not of such a nature as to be readily proved or communicated to any one else. We must not judge the facts which arise in our consciousness by any rule of scientific communicability. Whether they are demonstrable or not, if by our own sensations or intuitions we know them to be facts, then before God we are just as much bound to recognize and make much of them as though we could write them in a book and get Huxley or Liebig to acknowledge them. There is certainly a very great range of such facts that are vitally important to every one of us, and which every man is as certainly bound to take cognizance of, and to respect, as though he were alone and there were no other beings in the universe. These facts are by their very nature hidden from the world of external science; they cannot be taken posession of nor inspected by it, and we are not responsible to the external world in regard to them, but to God.

Is there any way by which these facts can be made common property, so that all can have the benefit of them? There must be some way of bringing them within the domain of sure and universal knowledge, although you cannot subject them to the ordinary manipulations of science. They are solid rocks, and if the scientific ship does not recognize them. so much the worse for it. Sometime it will run upon them and knock a hole in its bottom.

Why can we not cautiously verify a man's character, until we get such confidence in him that we can be just as sure of a fact that he reports as taking place in his spiritual experience, as of any external fact he may report as an observer? Credulity is not required. A large proportion of scientific facts are received upon the testimony of single individuals, and many deceivers find their way into the ranks of learned men. We must examine the character of discoverers more thoroughly than they do. But we must hold the whole domain of intuition and private experience as belonging to science, and its facts as imperative, when reliably reported, though they cannot be subjected to the tests of the crucible or the microscope.

THREADS FROM MY LIFE-BALL.

II.

ON the following Sunday I went again with my friend (who was also becoming serious) to the Sabbath-school, where we joined the Bible class. This time I stepped boldly to the desk and bought a question-book of H——. Never shall I forget the expression of his countenance as he gave it to me. Expecting to see his face long and solemn, I was surprised to find it beaming on me with kindness and good-will.

The church had become considerably awakened from its lethargy; meetings were multiplied, prayers were more earnestly offered, confessions of sin were more sincere, and parties of pleasure began to give place to serious gatherings in which many anxiously asked, "What shall we do to be saved?" But so deeply had I been involved in the spirit of worldliness, and so much was I still in bondage to my companion, Miss S——, that I was greatly tempted to be ashamed to have it known that I was sincerely seeking the salvation of my soul. That this friendship was a snare to me I was thoroughly convinced, but how to gain my freedom I knew not. While thus meditating and asking God to help me, news came that S—— had left town, to be absent several months. Inwardly I thanked God, fervently praying that I might be converted to Christ before I saw her again.

Returning from meeting one night, a meeting over which the spirit of heaven seemed to preside, a new feeling of confidence and security in my heavenly Father came over me, filling my soul with a peace and joy that I had never experienced before. On awaking the next morning all sense of sin, sorrow and condemnation was gone. Gleams of light burst in on my soul during the day, and before night I felt as though the earth, with all its vanities and illusions, had passed away and that I was dwelling on a new earth where all was peace and innocence. I hardly knew what to make of so great a change, and while relating my experience to a pious worker in the religious field, she exclaimed, "Why, E——, you have experienced religion!" "That seems too much for me to believe," I replied. "No, it is not too much for you to believe; for have n't you been asking God to convert you?" "Oh, yes," I responded, "I certainly have." "Well, then," she answered, "God has given you what you asked for, as any good father would do. Moreover," my friend continued, "you are the first fruits of our revival, and we shall need your services, for there is a great work to be done in this place."

That evening I went to church, and the discourse gave me such a feast that I seemed to be transported to heavenly regions. As I rose to leave the pew I noticed that H—— sat in the one behind me, his countenance radiant with happiness. He extended his hand to me and I realized from that moment that we were one. We walked together to the porch where we met the gentleman who accompanied me. H—— then informed me that one of my

young lady friends had that day given her heart to God, and, in an instant she was in my arms. We met as never before; and both felt that every longing of our hearts was satisfied. From that time I was conscious of a great change in my spirit. The society of those I prized so highly had now no attractions for me. I packed up borrowed novels and returned them to their owners without a glance at their contents; jewels, the gifts of my indulgent father, I returned to him with the remark, "I shall never wear them more." At this he was greatly astonished, saying, "If you, E——, will do this, I must admit that some mysterious change has taken place in you." It was a change, however, which was not pleasing to my parents, nor to my unconverted brothers, one of whom, some years later when on his dying bed said to me, "E——, I have chosen the wrong road and it is now too late to turn." I replied, "It is not too late to give your heart to God." Again he exclaimed, "Too late, too late," and thus he died.

The great revival movement steadily progressed, not only in N. but in all parts of the country. To many it seemed like the waking up of a nation to listen to the voice of God who was passing by. This was in the winter of 1830–31, and there was scarcely a family in any of the towns, where protracted meetings were held, in which one at least was not converted. Sometimes whole families were brought to a knowledge of the truth. Of the stability of the converts, at that eventful period, it is not my province to speak. Subsequently the words of Christ came to me with much force, "Many are called, but few are chosen."

In connection with other young converts I walked a mile before breakfast every morning to a place of rendezvous, chosen as our Bethel, where our united prayers were offered in behalf of our brothers, sisters, lovers and friends. We afterward had the pleasure of greeting many of them as the friends of the Redeemer. I was very zealous in proclaiming to all I met, especially my former associates, the glorious gospel of the cross of Christ. That my zeal was at one time tinged with fanaticism I do not doubt, for I subjected myself to such frequent fastings that the practice at length told seriously on my health, and when admonished respecting my course, I would reply, "I have meat to eat that ye know not of." Finally an older and wiser Christian friend, with less zeal but more piety and good sense, told me frankly that in thus abusing my body I was abusing God's holy temple, and that if I felt anxious to please my heavenly Father I must conform to good physiological rules in regard to eating. This kind, but sincere rebuke, had the effect to start me in more regular habits. The idea prevailed extensively among young converts in those days that they were doing God's service in sacrificing their health to their work.

Intimacy was again renewed between H—— and myself. The revival having extended into remote districts of the town, leaders to conduct meetings held in those parts were in great demand. As H—— was gifted in prayer and exhortation his services were in constant requisition; and he occasionally invited me to accompany him as a co-laborer. During one of these long but not disagreeable rides, coolness having given place again to warmer feelings between us, H—— once more solicited my hand in marriage. One would naturally suppose, that conscious of the mistake I had made the first time, I should have given him a straightforward answer in the affirmative; but the truth must be confessed. I repeated my mistake by clothing my Yes in language so ambiguous that H—— interpreted it as another refusal! In my heart of hearts I had no other answer than the one he had a right to expect from me, and I had no intention of giving any other. This second disaster seemed for a while to be a fatal one. For weeks and weeks there was no communication between us except a passing greeting. My good religious experience was shrouded in much darkness. Clearly enough could I see that this misunderstanding was due to the effects of my novel reading, worldly pride and false modesty. Again was I thrown into suffering. Previous to this incident my sky had seemed always unclouded and I was conscious of dwelling under the shadow of the Almighty.

The revival, however, did not stop on account of this affair between H—— and me. For several months meetings were held in the basement of the church. Neither H—— nor I had ever been absent from these gatherings; but one evening I missed him from his usual place. Many anxious inquiries were made about him, for he was a beloved member, and it was soon ascertained that he was ill. I went home that night with a heavy heart. I kneeled down to pray before retiring, but found I could pray for nothing but H——. The burden of my cry was that he might be restored, for it seemed to me the prosperity of the church demanded it. Having thus cast my sorrow on the Lord, I arose, took my Bible, and the first passage which met my eye was this from Isaiah: "Peace, peace; I will heal him and restore comforts to him and to his mourners." I was astonished, and retired with a quiet assurance that my prayer was answered. The next Sabbath he was at his post as usual. His increased earnestness and zeal in prayer impressed us all, and knowing that his health was not very good we thought he was ripening for heaven. This drew out my heart to him in greater tenderness, and I felt that something must be done speedily. Resolving to cast aside the false and foolish delicacy which had enslaved me so long, I revealed my secret to an elder sister in the church. She exhorted me to put away my pride and recall him at once. This advice coincided with the dictates of my own conscience and I determined to follow it. After laying the matter before the Lord my heart was at rest, and when I arose in the morning I felt peaceful and happy. The first thing I did was to write the following note to H——:

"I am very anxious to have an interview with you. There has been a misunderstanding between us, which I think, could I see you, would be set right at once."

No sooner had I penned these lines than my soul was filled with unspeakable joy. I was vividly conscious of God's presence and approval. I saw that all my sad discipline had been necessary to humiliate me and make me willing to perform this act of sincerity, and that God like a kind father was leading me on to my destiny by a path I saw not. I knew not how my note would be received, neither did I care, for I had committed it to God and trusted results to him. I gave the note to my friend, requesting her not to hand it to H—— until after the forenoon service, as it might prove a distraction to his mind. But this request was in vain, for my friend's curiosity to see the effect of the note upon him was greater than her discretion. So watching her opportunity, as H—— was coming out of the morning prayer-meeting she slily slipped it into into his hand. H—— afterward confessed that he heard very little of the sermon that day. At the close of the evening meeting H—— accompanied me home, where everything was explained to the entire satisfaction of both parties. E.

REVIVAL RECOLLECTIONS.

VII.

THE next revival which took place in Canandaigua began with the conversion of my brother. The earliest incident I can recall is my mother kneeling in prayer by a chair with her hands placed on my brother's head, while I stood at her side. I do not remember her words, but the impression of her earnest manner was fixed in my mind for eternity. It was one of those moments when deep feeling gives energy to language, and the soul stamps its image on every sentence. She seemed dead to everything except the Being whom she addressed. I could not understand her actions and afterward asked her why she prayed so with her hands on the boy's head? She replied that God was going to be his father, and she thought he would grow up and be a minister.

Mother died the spring that my brother was eighteen years old. I persuaded him to come to the Canandaigua Academy so that we might be near each other. While relating to me the events of his journey he told me with unaffected simplicity that he had smoked his first cigar on the way. Oh! I had not thought it possible that he would ever indulge in that practice; and then the first dash he made after coming into the village was to go to a circus! Youthful blood and curiosity were certainly in him, with a keen appreciation of all earthly enjoyments, notwithstanding his severe and sanctimonious training in the belief that to attend a theater, or a dance or circus was to set out on the sure way to perdition. I was greatly troubled by the fact that he was now exposed to much greater temptation than ever before, and that he was destitute of the restraining power of Christ. I did not hide the depth of my feelings from him, but pressed on his conscience the necessity of repentance and faith in Christ. I also sent a request to the teacher's meeting that he might be made a special subject of prayer. He soon realized his situation, and was humbled under the touch of God's Spirit. The first testimony to the change wrought in him was in the Saturday evening prayer-meeting. Mr. Thompson said: "Has the Lord really come into our midst and converted a soul and we did not know it? And have we not even been looking for it?" After continuing several minutes in one of his most powerful exhortations he was followed by Jacob's strong faith-testimony, ending in a prayer so full and fervent that it was alone sufficient to arouse a spiritless

meeting into a state of sensibility. The hearts of all were moved. Jacob had noticed several of the Seminary girls weeping during the meeting, so as we were passing out of the lecture-room he spoke to one after another. His freedom never repelled; and though his words were not dictated by any process of thought, they did not disturb by their unfitness, for they were inspired by God's Spirit, and when he urged some to repent without delay. all knew that he uttered the deep desire of his soul.

About four o'clock on Sabbath morning I was awakened by a singular noise outside the building, and on opening my window I saw Jacob kneeling on the stoop in the cold and darkness, his voice raised in earnest, wrestling prayer for the conversion of the Seminary girls. Miss Upham immediately called some of the praying ones into the drawing-room that our spirits might unite with his in supplication. One after another came, and by daylight the room was full. That Sabbath in church the girls were not watching to catch the glances of the Academy boys on the opposite side of the gallery, for the great subject of their soul's salvation possessed both parties. After the morning service there were prayer-meetings appointed in several rooms at the Seminary.

About twenty of the girls came to my room, where I had invited Miss Esther Buckley from the village to meet us. She was a cheerful soul. Her happiness was a living spring, clear and sparkling, bubbling up and overflowing its bounds and refreshing whoever came near her. She made a few remarks in her simple-hearted way. She said that we were to have a season of communion with God, and that when we prayed in the hearing of others we were often tempted to be very careful in our choice of words, but she hoped that every one would first consider just what she wished to say to God, and have no reference to those around her. Christ, she said, wanted us to confess to him our secret sins, and if we desired to be cleansed from sin we must ask in faith for forgiveness and he would answer according to our sincerity. The movement of the spirit in that room was like the pouring upon us of a sudden and powerful shower of rain; but it descended with so much gentleness that its effect was more soothing than exciting. One after another broke out in confession and prayer until all professed to give themselves to God. I never witnessed such a Sabbath. There were about forty conversions in the Seminary that day and a number in the Academy.

There was one of the girls, however, who was not seen in any of the prayer-meetings. She was remarkably plain-looking, being cross-eyed, and having a dark complexion and rather coarse features. As she was also destitute of taste in dress the first impression she made was quite repulsive. But she was a very smart young lady. She had been educated in Universalism, and was full of sharp, witty sarcasm. If any of the scholars were in trouble over a hard problem they knew well that Harriet Fisher was both willing and competent to explain the difficulty. A number of the girls made a bold attack upon her with strong appeals to her conscience; but they were generally outwitted by her crafty reasonings, or silenced by her sarcasm. Miss Upham requested the girls not to speak to her upon the subject of religion, and then asked me to associate with her as much as possible and exercise my own judgment in talking with her. I spent some time with her for several days. Finally she asked why I did not talk to her about the "salvation of her soul." I told her it was because she had no particular interest in that subject, and then left without giving her an opportunity to reply. The next time she met me she said that I left her rather abruptly, but she presumed she thought as much about her salvation as any of the girls. I told her if she did she thought more of her own opinion than she did of Christ's words, and then again gave her no chance to reply. The next day she came to me and said she was sick and could not study, but she was not going into the hospital; she should leave the school and go home. I told her she better not go that day, and that if she would go to my room I would wait on her and keep her as quiet as possible. When I attempted to do something to relieve her she exclaimed, "Oh! nonsense, it is my soul that is sick, and not my body!" She said she believed there was a devil and that she was full of his spirit; that God hated her, and that every good person in the school hated her. I then talked to her about her rebellious spirit against God and urged her to immediate submission. She asked if I would pray for her; but I told her as the controversy was between herself and God I did not feel inclined to do so. God required that she should pray for herself. I saw that the hardness of her spirit was vanishing like the melting away of a snowdrift, and she soon poured out her heart in confession like a little child. Her conversion was a source of great rejoicing in the Seminary. She lived in West Mendon, and as she was going home to spend the Sabbath she said she felt her need of strength to meet the strong tower of Universalism in her father's family. The first disclosure she made of her change of heart was by asking them to remain after breakfast while she read a chapter in the Bible, and then she prayed in a fervent manner for them. Her labors during that visit resulted in the conversion of the family and a great revival in West Mendon.

The revival in Canandaigua continued until spring, when some of the people thought they must have a more finished style of preaching. Accordingly Mr. Edwards, of Rochester, was sent for. He was a very stylish, flowery preacher; but there was nothing in his sermons which touched those tender instincts of the soul and caused it to rise out of the human into the image of the divine nature. Thus the revival was killed. C. B. B.

FIRESIDE CHAT.

II.

Vega.—This east wind makes the fireside very pleasant.

Chara.—There! you have referred to a subject which has perplexed me many times, and I was just thinking of it. What is this singular superstition about the east wind? It is always spoken of as though it were peculiarly surly and unwholesome, but it seems to me no more bitter or blighting than these driving west winds of which we have had so many this winter.

Vega.—Do you call it a superstition about the east wind? If it is so, it is as old as Isaiah, for he says of the Lord: "He stayeth his rough wind in the day of the east wind." It was a "vehement east wind" too that so vexed Jonah after his gourd withered.

Chara—Yes, I know that the east wind is spoken of many times by the writers of the Old Testament, David and Job and Ezekiel. It was the east wind that blasted the seven thin ears in Pharaoh's dream. But what I want to know is whether we have the same reason for complaining of the east wind that they have in more eastern countries? Have we not borrowed our idea of the east wind from lands where it is a veritable affliction?

Vega.—I never thought of that; perhaps it is so, or we may associate the east wind with the direful plagues which have come to us from the East, such as the cholera and locusts.

Chara.—I called the common idea about the east wind a superstition, because I did not know any reason for its being specially unkind. I remembered too that it is often very eccentric people who have this horror of the east wind. Don't you remember the story about the old English Doctor and the east wind, that was in some book we were reading awhile ago?

Vega.—No, but I rememember that Dickens makes Mr. Jarndyce in "Bleak House," refer to the east wind in a nervous way whenever he feels embarrassed. What was the story about the old Doctor?

Chara.—Why, he was an exceedingly whimsical, learned old fellow who taught a school of some kind. He had a mortal terror of the east wind, and nothing would ever induce him to stir out of doors when there was a breeze from that quarter. It was his custom on rolling out of bed every morning, to go immediately to the window and pull aside the curtain for a look at the weather-vane. If this indicated an east wind, he would go straight back to bed, fuming and grumbling in high discontent, nor would he go near his school until the wind changed. The Doctor's pupils were wild, fun-loving boys who stood in the same terror of the Doctor that he did of the east wind, and they soon discovered what it was that kept him at home. Of course the boys thought it would be a fine thing if the east wind would blow a little oftener. Accordingly two of the boldest secretly clambered up to the vane and, having set it from the east, fixed it there with a nail. For five consecutive mornings the Doctor after taking a look at the vane, which indicated an obstinate gale from the east, went back to bed in great dejection. He had nearly fretted himself into a fever, but on the sixth morning he could believe his eyes no longer and sent a man to examine the vane. Of course the cause of the persistent east wind was discovered.

Vega.—I should think such stories as that would make you wonder as to the character of the east wind. I am curious about it, and here comes Regulus; let us ask him.

Chara.—Regulus, why should the east wind be a specially "ill wind?"

Regulus.—I do not think it is an ill wind in this country, at least, it has not that peculiarly unwholesome character which makes it so much dreaded in England and Spain. I have in my note-book a little sketch which an English friend once gave me relating to the east wind in England. Let me read it; it begins with a droll incident:

"In the parish of Pimlico, one of the suburbs of the city of London, or more properly perhaps, the city of Westminster, there stands a small Episcopal church built about eighteen or twenty years ago. A passer-by stopped to admire its elegant proportions, its chaste Elizabethan architecture and elaborate carvings. An eastern door especially attracted his notice; a low, richly-carved massive arch, was embellished by canonical letters deftly cut in the stone, and colored bright blue and gold, which notified the stranger 'This is the gate of Heaven,' while a more unsophisticated notice, written in a good round text and posted on the oaken door, still farther notified all who would seek an entrance, that *the door was closed during the prevalence of the east wind.* 'Twas but a step from the sublime to the ridiculous, for there was no escape from the absurd inference, that fashionable church-goers could only get to heaven in fine weather.

"But in America we can form no idea of what this east wind is that becomes a by-word in the mouths of Englishmen, and a proverb with the nations of continental Europe, so that the Spaniards say, 'Never ask a favor during the east wind.' We have stamped the east wind as unhealthful in America, but how much of this idea has been imported? Our east wind blows across the Atlantic Ocean and is probably a healthy breeze, but some-

what distasteful to us from the excess of moisture it has taken up from the water; but in Europe the east winds gyrating from the equator, blow across the deserts where their moisture is thoroughly absorbed by the arid sands, and they reach England cold and so exceedingly dry that they chap the lips and hands, make the eyes sore and blood-shot, and dry up one's skin to scales. Altogether, a most unpleasant time is the two weeks in March in which Englishmen have to endure this east wind. Our northwest wind in the northern states more nearly resembles it than any other; but for dryness and discomfort, we fortunately have to endure nothing on this side of the Atlantic that can compare with that wind which in England has been known to close even the gates of heaven."

Chara.—Then you think that our notion regarding the east wind, is mainly one of association caught from countries where it has been a kind of scourge for centuries?

Regulus.—I am inclined to think so. It is true that the sugar-makers say that the sap will not run when the east wind blows, and it may be cold coming from near the Atlantic; but I do not think it distinguished for unhealthiness with us. It certainly is not a vampire as it appears to be in Europe, sucking the blood and chapping and cracking the hands and lips.

Vega.—See! while we have been talking the wind has changed. G.

ONEIDA CIRCULAR.

MONDAY, APRIL 7, 1873.

THE NEW RELIGIOUS ASPECT IN FRANCE.

BY THEO. L. PITT.

THERE is not much prospect, after all efforts to the contrary, that the Bible and Bible religion will be laid on the shelf, and sprinkled over with the dust of death. There is an astonishingly persistent life in them which baffles the subtilest, mightiest labors of their enemies. To-day unbelief may win its proudest victories, but to-morrow the same battlefield is swept by a fresh host and the old banners of faith gleam in the sunlight of a new and nobler conquest. Always is the old fact repeating itself which turned back the fleeing prophet of Israel. A remnant is left who have not bowed the knee unto Baal, whose mouths have not kissed him. This remnant becomes a new generation that eventually deliver their nation from its oppressors.

An interesting illustration of the persistent vitality of the influence and religion of the Bible has occurred during the past year in France. After a lapse of more than two hundred years a Protestant Synod was convened in that country on the 6th of last June. Since the previous meeting of a body of this kind, a long and terrible history had been enacted. There had been the Revocation of the Edict of Nantes and the following persecutions which drove the Huguenots and Protestantism almost entirely out of France. There had been the unbelief and Rationalism of the eighteenth century, more deadly even than persecution. But all through these two hundred years a remnant of believers had been left in France. During the present century this remnant has been warmed into new life, and grown into larger proportions. It is still a very small part of the nation. But the Synod of last year has demonstrated in an almost startling way that small in numbers as Protestantism may be in France, it has a vigorous life worthy of the old Huguenot days.

This Synod, we take it, was one of the most noteworthy gatherings which has taken place in Europe for years. Very remarkable was it in the intelligence and high character of its members; still more remarkable for the issues raised by it and its action upon them. Prominent among the members of the Synod were the venerable M. Guizot, and M. Athanase Coquerel, representatives, respectively, of the Evangelical and the Liberal wings of French Protestantism. Paramount among the questions discussed by the Synod were the issues between the parties which these two men represented. On the two questions, Shall the Synod adopt a definite confession of its belief and so constitute French Protestantism an organized, living church? and, What is our belief in regard to Jesus Christ and to the Bible as a supernatural revelation? were fought the great battles of the Synod.

On both of these issues the Evangelical party carried the day by decisive majorities. A confession of belief was adopted of a distinctive Christian character as opposed to Deism. The divine nature and miraculous resurrection of Christ and the supernatural revelation of the Bible were clearly asserted. To this confession of faith the pastors of the French Protestant church are required to declare their adhesion at their ordination. Of the debates on these great issues M. Guizot is reported to have said: "I have been present for more than sixty years at parliamentary struggles, in which the first orators of France were engaged. I have never seen any which had a more elevated or more dignified character, or which was more remarkable for form and substance." The reports of the debates which we have seen certainly confirm this high estimate. There were no personalities. There was intense earnestness in both parties. There was a struggle of mighty spiritual forces. There was apparently a new birth of Christianity in France. "The supernatural," say the men who carried the issues in the Synod, "clings to the very entrails of Christianity." "The very substance of the Gospel is that it is a dispensation breaking forth from the general course of nature and of providence, a divine intervention."

Very significant is all this. Just at the time when Comtism, the completest and most ambitious form of French infidelity, is pushing into England and this country with the boast that the old Bible religion is dead and out of all minds that are half awake, in the heart of France that same old Bible religion is having a resurrection. Amid the great national humiliation and suffering brought about by the Prussian war, a new spiritual life breaks into growth and startles Europe and the world with the earnestness of its action and utterances. May it not be that the success of the new French republic, and the moderation of its leaders, are due to the new religious influences which are at work in the nation? M. Guizot is one of the leaders of the Protestant party and is a personal friend of M. Thiers, while M. Thiers himself treated the late Synod with marked respect, refusing to interfere in any way with its liberty of action. If France fully succeeds in her new experiment of Republicanism, we suspect it will be at last found that there was a connecting link between that success and Bible inspiration and a supernatural Christianity.

COMMUNITY JOURNAL.

Sunday, Mar. 30.—"It doesn't seem like Sunday to-day," said L., "what is the reason?" "I don't know, I'm sure," answered R, "but now that you have spoken of it I can see that it does not seem quite as usual to-day. Stiller, isn't it?" "Perhaps, but the storm still rages outside. Ah! I have it! The Villa folks are not here. It must be that the snow last night and the storm to-day have made it impossible for them to come over." Upon making inquiry we learned that they were indeed snow-bound.

"A fenceless drift what once was road"

intervened between them and us. Two brave men who had struggled through the depths of snow, one of them creeping on his hands and knees a part of the way, told us that the Villans had resigned themselves to the necessity of spending the day at home. Toward night when the sun came out a party of us ran down to the road to see the blockade:

"We looked upon a world unknown,
On nothing we could call our own.
Around the glistening wonder bent
The blue walls of the firmament,
No cloud above, no earth below—
A universe of sky and snow!"

O, the drifts, the beautiful drifts, so delicately cream-tinted, so billowed and curved and boundless, rising like miniature Alps, o'ertopping the fences!

Monday, Mar. 31.—Yahonk! yahonk! yahonk!

—There have been for several months two classes in drawing—one of the Misses, the other of the children. The school closed Saturday, and the results of the winter's practice are on exhibition in the South Parlor. Very well done, is the verdict, and they reflect credit on the teacher, Mrs. S. E. A. Dascombe.

—In our evening meetings lately we have listened to the reading of a capital paper on Scientific Breeding by Mr. S. L. Goodale, Secretary to the Maine Board of Agriculture. The article in question is found in the fifth volume of the Maine reports (1860). It treats at length, and in a very interesting manner, of the great economic value of good breeds; the law of resemblance of offspring to parents; the law of variation whereby new breeds and varieties are started; ativism, or the resemblance of children to ancestors rather than to their parents; the great influence of a first male on all the subsequent offspring of the female; the points in which children resemble the father; the points in which they resemble the mother; in-and-in breeding—its value and limitations; crossing and its uses; the formation of new breeds; the different races of cattle and sheep, giving their histories, points of excellence, defects, and special adaptations to soil, food, climate, markets, and so on. And while it gives light to the stock-breeder and farmer, it unavoidably lights up another important subject which has hitherto been left in outer darkness to the guidance of whim and chance.

—We sometimes wonder whether fathers and mothers generally know what an excellent family institution is the reading aloud of some entertaining book of tales or travel. In the fall when the nights begin to lengthen, and in the winter when they are very long, how much could be done to make home a charmed circle if parents only had the tact to keep up short evening readings in some interesting book! We presume this is done in many of the better families; but your journalist's experience as a school-master, "boarding around," did not make him acquainted with any such fashion. The Community has always appreciated its Evening Reading as a very cozy, home influence. Of course every one does a great deal of special reading— but nothing is more charming than the book for public reading. Travels, biographies, pleasing histories, and now and then a good story, are the works that draw best. We have just finished Stanley's "How I Found Dr. Livingstone," and judging from the very full attendance we guess every one found it nice to spend "Sixty minutes in Africa." And now we are following Mr. Seward in his voyage "Around the World." Africa must

have charms for the Community mind. May be it's because the Nile is there—the river that has been the least known, and the longest known, too, we had nearly said. Looking among our books of travel, we notice Dr. Barth's three volumes of "Explorations in Central Africa;" Gordon Cumming's three volumes; Anderson's "Lake Ngami"; "Captain Speke's Journal" and Burton's work; Dr. Livingstone's "Travels and Explorations in South Africa," and last of all Stanley's book.

—Much philosophical reasoning and experimenting were provoked by the following, which appeared on the bulletin last Wednesday:

CONUNDRUM, OR A QUESTION FOR THE PHILOSOPHICS!"

"*Why does a spinning top, at the close of its whirl, apparently go into a motion in the opposite direction from that in which it started?*"

In a short time some one appended this doubt:

"Does it do so unless it meets an obstruction strong enough to reverse its motion?"

Ans.—"Try it and see." And several tops were placed on the floor in the Court, directly below the bulletin-board. Here the wise heads soon convened, and with perplexed faces might have been seen studying over the problem of the "reversed motion" of these spinning tops, some assigning one reason and some another. As many as could, crowded around to see the tops and hear the various explanations; and there were a few who retired to the solitude of their own rooms to ponder over the question in silence.

Another paper in the handwriting of the conundrum, stated the following as "facts established by observation:"

"1. As the top approaches the end of its whirl, an oscillation, commonly called a 'wabble,' sets in, which oscillation is *in the same direction with the revolution of the top on its own axis.*

"2. When the sides of the top come in contact with the floor, the revolution of the top on its own axis *nearly ceases.*

"3. At the same time the first oscillation ceases, and a new one *in the opposite direction* commences and continues through several revolutions.

"Theory must account for these facts."

Thereupon many theories were brought forth and expounded to eager listeners. Another paper appended to the bulletin, which stimulated further experiment, read as follows:

"The theory that the apparently reversed motion of the top, near the close of its spinning, is really a continuation of its previous motion on its axis, modified by its rolling partly on the side-contact with the table, seems not tenable for this reason: viz., if you watch a piece of paper stuck on the disk of the top, you will see that after the new motion commences, the top does not turn on its axis but a very short distance—never more than once around—whereas you will see by the gyrations of the stem, that there are *several* complete revolutions of the top in some other way. I think it is matter of sure observation that the gyrations of the stem around an imaginary center go one way just before the side-contact with the table, and the opposite way after it. Try it and see. Fix your attention on the top of the stem, and see if its motion—not around its own center—but around an imaginary center, i. e., the center of the wabble, is not at a certain point reversed."

All day Thursday the discussion concerning this matter ran high, and whenever the interested were at leisure, you might be sure they were talking about it. The women and girls too were hardly a whit behind in the desire to find out the whys and wherefores concerning the top's idiosyncracies. At length Friday morning, an "approximate solution" was posted on the bulletin by J. H. N., who with G. E. C., G. D. A. and others had studied the matter. It ran thus:

"I perceive distinctly that the motion of the top in its last oscillations is in the same direction with reference to its revolution on its axis, as it would be if the disk were in a vertical position and the motion were a roll. Thus I am sure that the final oscillations are produced by the axillary motion. Instead of a roll straightforward, which we should have if the disk were in a vertical position, we have a roll in a circle, in consequence of the oblique position of the top, resting as it does, partly on the edge of the disk and partly on the point. In short, the final circular motion is produced by *traction.* At the moment when the edge of the disk touches the table, you will perceive by close watching, first a period of *friction*, as when the driving-wheels turn round and round on the track without moving the cars; and secondly, the *conversion of this friction into traction*, as when the cars begin to move. The period of friction appears to be employed in overcoming the oscillation, and in doing that, it also nearly overcomes the axillary motion—*but not quite.* Enough is left "to start the cars," i. e., to give the top a few revolutions in the new "wabble." The curious thing that I do not quite understand yet, though I see it is a fact, is, that the top turns on its axis *only once* while it performs *five or six of the oscillations* or revolutions on the edge of its disk, as may be shown by putting a small piece of paper on the disk and watching it in the final oscillations."

N. B. The kind of top used in these experiments, is that which consists of a wheel-like disk, flat or nearly flat above and below, with a stem and point perpendicular to the disk. The *conical* top will not reverse its motion. For the purpose of these experiments, a suitable top may be easily made by putting a pointed peg through the central hole of a common button-mould.

THE VILLA.

Monday, Mar. 31.—Somebody has said that consistency is a jewel. If so we have had a "jewel" of a month, for it has been from first to last, strong, lion-like March; a most un-Christian lion too, for with but one faint exception, it has lashed itself into a terrible fury o' Sundays. Would you believe it, yesterday it roared and growled, and made such a pow-wow with the wind and snow, that for the first time in all this wild new year, we had to forego our cherished custom of spending Sunday at O. C. The teamsters there were all too wise we found to venture out after us, over such a turbulent waste of snow, in the teeth of such a nor'wester. We think some of us could emulate their wisdom before the day ended; but *our* wisdom was the result of some exceedingly fresh experience. We'll tell you how we gained it: but don't you let it out to those practical-wise K——s, for we wouldn't run the risk of having them call us "sapheads." You see, one of our first duties after breakfast on Sunday mornings, is to take our soiled linen to the O. C. laundry for the weekly wash. H—— was to do this yesterday morning. But first he took old Whitefoot and our little sleigh, and went to the foundry on hardware business. We learned afterward that on the way there he had to stop to shovel out both horse and sleigh from snowy sloughs. Not a lisp of this did he let out when he finally arrived at our back door. He stowed the bags of soiled linen in the back of the sleigh, with an energy and gravity of purpose that made us almost imagine them already in the suds. But whoever saw a Yankee that didn't know when he was well off? When the load was ready, Eddie B—— and G—— came along purposing to have H—— drive them to O. C. also. But H—— casually remarked that he "guessed there wasn't room enough for three in the sleigh, with all the other load." He "was n't particular about going over to O. C." Oh, no! And with a magnanimous, self-sacrificing air, he yields his seat and the reins to G—— and Eddie. Now G—— isn't exactly a descendant of the Jehus and Centaurs; with a steady horse and fair going, he may feel at home; but he has had little experience with horse-driving 'mid the wilder vicissitudes of wind and weather. So, with unsuspecting innocence, he accepted H——'s resignation. The swirls of snow and the fierce nor'wester almost took G——'s and Eddie's breath away, as they started down the turnpike; but they met no drifts and had no fears. When they turned into the cross-road, down went the horse up to his knees, then to his belly. Eddie looking ahead, saw only wild unbroken drifts, and suggested going back. "Oh no!" said G—— with the confidence of inexperience. "I think we can get through somehow." A little further and old Whitefoot became nearly buried in an enormous bank of snow. Here was a "to do" indeed! No going backward or forward, or any-ward. Eddie runs back to the shop for a shovel.. While he is gone G—— makes a desperate effort to turn around; but Whitefoot only gets sadly entangled in thills and harness, and the sleigh upsets. After unfastening the horse and some pretty hard shoveling, they get him out trembling with fright. All this time a blinding gale is blowing, and more than once G—— goes frantically tumbling over the drifts after his hat. The clothes, too, are scattered promiscuously over the snow. G—— isn't laundry-wise enough to conceive the idea of leaving them there to bleach, but gathers them carefully and soberly up, and comes back to the house to get laughed at. We imagined we saw a sly twinkle in H——'s eye, as we called him from a snug *read* in an upper story, to help put the horse and sleigh in the barn, while G—— took all our quips and sallies good-naturedly and with the air of a man who thought he had learned "a thing or two," and was making "a note of it."

THE TRUE ISSUE.

[The following is a discourse delivered by an able and good man of our acquaintance, to a little band who are experimenting in Communism. It is a clear expression of what we have frequent occasion to say for ourselves:]

What is it that distinguishes the Oneida Community?

We are too apt to look at what is called the social theory of the O. C. as being its distinguishing characteristic. The world about us thinks it is such. When the Community is thought of or mentioned by outsiders, the prominent idea in the mind of the person speaking is, that it is a society of people who are living in promiscuous sexual intercourse, "worse than the Mormons," some will say; others have to call it "worse than a brothel," in order to give adequate expression of their horror of it. About the only idea many people have, when the Community is mentioned, is that of sexual communism.

Now as we are growing up into a Community, we shall very likely have frequent occasion to meet this, and have it thrown in our faces, when people come to know about us and get enough interested to make observations and get into conversation with us about Community matters; and I have lately been thinking the matter over and considering the best answer to make to such observations, if any is to be made at all. Perhaps in the majority of cases it may be best to make none, and let such things pass without notice. But there will be those we may want to talk with a little; and when they come at us in this way, being candid but deceived, how had we better meet them? Of course, if we have a large faith in God and keep close to Him we can trust that in critical times

he will give us what we shall say, but I think we may at the same time settle certain things as wise to be done at nearly all times and under most circumstances. And it seems to me that, instead of undertaking to defend the social theory of the Community against the attacks of its enemies, the best and wisest course will be to waive that subject almost if not altogether, and turn the mind of the objector entirely from it, and put him on another course of thought. Only with sincerely religious people, as a general thing, shall we talk at all I hope; and we can take the position with perfect sincerity and consistently with the most faithful adherence to the truth, that the social theory is not what distinguishes the Community from the world or from professed Christians. The Community can exist without that theory. It did exist for years both at Putney and at Oneida without it; or if it held the theory as for the future, it lived without any departure from the ordinary sexual relations and morality of marriage, unless it was a departure in the way of elevating and raising them out of marriage sensuality. This we know. And we must not think and talk of the Community as limited to the organization at Oneida. It exists elsewhere. It existed for several years at the "New York Agency" without the practice of the social theory. It exists in its business agents who traverse the country from one end to the other for weeks and months I may say at a time, without practice of the social theory. It exists in numerous isolated families scattered throughout the land without it—for has not the Community always strictly enjoined, and does it not now enjoin upon those of the faith who are "scattered abroad," rigid fidelity between husbands and wives, exhorting to faithfulness, patience and love, and discountenancing divorce and separation, except for the cause stated by Christ, namely, adultery; and exhorting the unmarried to the strictest chastity? It is even so. It exists also as with us and in us, in the form of abstinence or Shakerism if you please, not under law but under grace, being freely adopted as the rule of the family. And we may say the Community at the center does not regard the social theory as essential to its existence *as a* Community. I understand the facts to be, that during the early years of their existence at Oneida when prosecution was imminent, they offered to relinquish their experiment in social matters if the people should demand it; and even held themselves in readiness to move away if the inhabitants of the county should decide they would not allow them to go on with their social experiments unmolested. And now even, after all the toleration which is accorded to the Community where it is, I believe they hold themselves ready to give up the practice of the social theory or remove elsewhere if public sentiment should in any legitimate and decisive way pronounce against them. This theory, then, as I before said, is not the distinguishing characteristic of the Community; it is not essential to it. And the object of living in the Community is not, primarily, to enable men and women to be communistic in their sexual relations. It is rather, because Communism is favorable to, and furnishes the conditions for, good religious experience, and for continuous improvement through criticism, and by daily meetings keeping alive the revival spirit.

And now the question arises, if the Community should not be looked at in this way, what is it that forms its distinguishing characteristic; in what direction shall we turn the minds of persons who would like to talk with us, and with whom we can profitably talk, about the Community? I think this is the truth: The Community is distinguished by belief of certain religious doctrines; and two points present themselves to my mind in respect to which the faith of the Community is distinctive; and they are, first, concerning the nature of salvation; and second, the condition of the believer. Agreeing with most professed Christians in faith in a personal God, the author of all good, whose will is the supreme law of man's life, and in the mission of Christ, that he came to seek and to save that which was lost, and that salvation is to be had through his name and faith in his name and no other, still there is a very radical difference in their doctrine of the nature of that salvation. Most professing Christians conceive of salvation only as a sort of insurance against the danger of getting into hell-fire in another world; and on the ground that Christ has suffered the penalty of violated law in man's stead, they hold that through faith in him man can have the benefit of that suffering imputed to him and get the insurance. A Methodist minister was telling me the other day, while lamenting the low conceptions of salvation which many Christians have, that one of his prominent *members* said to him if it were not for avoiding hell-fire hereafter, he would not trouble himself to serve God, but he wanted to be saved from that. Mr. Noyes and the Community have a very different idea of salvation from this. They say salvation is deliverance from sin itself, from an evil spirit or rather from the spirit of the devil, and of course from all the painful and terrible consequences of being possessed by such a spirit. And salvation consists in being separated from that spirit, in having it cast out of us by Christ and in having his Spirit take possession of us and become our life. It consists in being saved not from anything without but from something within us; it is not in any sense an external but in every sense an internal and spiritual work, and is to be accomplished as above stated, by Christ taking possession of us; so that he is, in the nature of the case, an indwelling Savior. And then as to the second point, as the Spirit of Christ is a holy spirit, the necessary and inevitable consequence of his taking possession of us and dwelling in us, is, holiness. This is certainly a fundamental and distinguishing doctrine of the Community. Mr. Noyes says in substance that Christ will not share his occupation of us with the devil. There is no concord between Christ and Belial, no fellowship of light with darkness, and there can be no such joint occupation of the soul by the contending powers of good and evil. Christ will not and can not be satisfied with a half possession; he must have the whole heart and soul. The prince of this world, the spirit which is the sole cause and author of sin, must be, and is cast out of the believer and the Holy Spirit takes his place. Then the condition of the believer must be holy, sinless. "The blood (life) of Jesus Christ cleanseth from all sin." The person so possessed by Christ may be inexperienced, ignorant and weak in spiritual things, in many respects, but his heart is pure and holy. The work of dispossession of the evil spirit and of taking full possession by Christ may not be done at once; we may be long in the travail of the new birth which commences when we confess Christ in us, and the performance of that work may take more time in some than in others, but when done it is done effectually and forever. In a letter to Rev. C. T. Torrey published in the *Witness*, vol. 1, p. 74, Mr. Noyes lays down the following as the main points of doctrine peculiar to Perfectionists which *distinguished* them from other sects: 1. Their belief that perfect holiness when attained is forever secure; 2. Their belief that perfect holiness is not a mere privilege, but an attainment necessary to salvation; 3. Their belief that the Second Coming of Christ took place at the destruction of Jerusalem. And now I think it will be wise for us when any one shows a disposition to draw us into discussion of the social theory of the Community, to give him to understand what is the plain truth: That that theory does not form the distinguishing feature of the Community; that the establishment of that theory in a practical way is not the object we are seeking, but that we are seeking holiness, that our zeal is for Christ; that if the questioner wants to talk with us about Christ and his relation to us and to the world and his work in us and the Community, in short, about our religious faith and experience, we will give him the benefit of our testimony; that the proper place for the social theory is in a state where the "Holy Spirit takes the place of laws, ceremonies and public opinion;" that we are seeking to attain that state through that spirit; and till we get there, we do not care to stop to discuss what we shall do when we get there, but we can say with perfect confidence, as Mr. Noyes has said, that we have no fears that when the Holy Spirit has full possession of our hearts, it will lead to or allow anything that is not pure and useful, and that we are willing to trust that Spirit, lead where it may.

MUSCI ONEIDENSES.

The following Mosses and Liverworts were collected last year, mostly on the domain of the Community, Oneida, N. Y., and named by Mr. Coe F. Austin, Closter, N. J. A few of them were found abroad, as will be seen. The list is not offered as being a complete one for this neighborhood:

MUSCI.—Hypnum sylvaticum, Linn. Hypnum sylvaticum *var.* Sullivantiæ, Schpr. Hypnum Schreberi, Willd. Hypnum hians, Hedw. Hypnum serrulatum, Hedw. Hypnum Haldanianum, Grev. Hypnum splendens, Hedw. Hypnum triquetrum, Linn. Hypnum tamariscinum, Hedw. Hypnum Novæ Angliæ, Sulli. & Lesqx. Hypnum strigosum, Hoffm. Hypnum acuminatum, Beauv., Springfield, O. Hypnum rutabulum, Linn., Niag. Falls. Hypnum curvifolium. Hedw. Hypnum imponens, Hedw. Hypnum lætum, Brid. Hypnum serpens, Hedw. Hypnum serpens *var.* orthocladon, Beauv. Hypnum serpens *var.* radicale, Brid. Hypnum serpens, *var.* Iniquum (?). Hypnum filicinum, Linn., Niagara Falls. Hypnum salebrosum, Hoffm. Hypnum acutum. Hypnum Sullivantii, Spruce., Niagara Falls. Hypnum recurvans, Schwærgr. Hypnum delicatulum, L., Black Hand, O. Hypnum Blandowii, W. & M. Gymnostomum curvirostrum, Hedw., Niag. Falls. Atrichum undulatum, Beauv. Atrichum angustatum, Beauv. Bryum uliginosun, Br. & Sch., Painesville, O. Bryum Wahlenbergii, Schwærg. Bryum bimum, Schreb. Bryum argenteum, L. Bryum pyriforme, Hedw. Bryum intermedium, Brid., Springfield, O. "TOMAHAWK CRITICISM" NOT MODERN.

SHAKESPEARE, Milton, Gray, and others, whose productions constitute the classics of English literature, were as familiar with it as the latest aspiring writer. Indeed, according to the stories told in the January No. of *Fraser's Magazine*, literary criticism, one or two hundred years ago, was more biting and merciless than to-day. Thus Samuel Pepys, who saw *Romeo and Juliet* acted for the first time, Mar. 1, 1661, recorded his verdict in the following words: "It is a play of itself the worst I ever heard:" and of *Midsummer Night's Dream* he wrote: "It is the most insipid, ridiculous play that ever I saw in my life." *The Merry Wives of Windsor* "did not please him at all;" while *Taming of the Shrew* he pronounced "a mean play," "a silly play." He was however "mightily pleased with *Hamlet*," and admitted that *Macbeth* was "a pretty good play." Dryden, too, rather severely censured Shakespeare's language and style, and much preferred the works of Beaumont and Fletcher.

Miss Hannah More wondered that Milton could write "such poor sonnets," while Doctor Johnson said "Milton was a genius that could cut a colossus from a rock, but could not carve heads upon cherry-stones."

But Doctor Johnson was an overbearing egotist, and seldom had an appreciative word for others. When Boswell replied to Johnson's remark that Gray "was a dull fellow," that "he was reserved, and might appear dull in company, but surely he was not dull in poetry," the Doctor thus silenced him—"Sir, he was dull in company, dull in his closet, dull everywhere. He was dull in a new way, and that made many people call him great."

Johnson himself scarcely received better treatment from others. Horace Walpole called him "the tasteless pedant," and of his *Life of Pope* said—"It is a most trumpery performance, and stuffed with all his crabbed phrases and vulgarisms and much trash as anecdotes. Was poor good sense ever so unmercifully garbled by a babbling old woman? Prejudice and bigotry and pride and presumption and arrogance and pedantry are the hags that brew his ink."

And Boswell and his *Life of Johnson* fared no better at the hands of Walpole. "Boswell's book," he said, "is the story of a mountebank and his zany"—"A jackanapes who has lately made a noise here, one Boswell, by anecdotes of Dr. Johnson."

This is the way Walpole in turn was handled by another critic. Coleridge said of his *Mysterious Mother:* "It is the most disgusting, vile, detestable composition that ever came from the hand of man. No one with a spark of true manliness, of which Horace Walpole had none, could have written it."

Coleridge did not hesitate to write down the great Gibbon in this way: "When I read a chapter of Gibbon I seem to be looking through a luminous haze or fog: figures come and go, I know not how or why, all larger than life, or distorted, or discolored; nothing is real, vivid, true; all is scenical, and, as it were, exhibited by candlelight."

Coleridge, too, feels the tomahawk. Southey said of his *Ancient Mariner:* "It is I think the clumsiest attempt at German sublimity I ever saw."

In fact all great writers have had to run the gauntlet of criticism; and the ordeal seems to have been more terrible in the past than at present. It is very rare nowadays that we find anything so ruthless in the way of literary criticism as some of the sayings of the old critics we have quoted. They failed in that function of criticism which points out and commends excellences; with them, criticism signified little else than to expose and ridicule faults and say the sharpest possible things of their authors. The critics of to-day are more merciful, and perhaps not less just. Those of the future will know still better how to speak the truth so that it shall "wound but to heal." W.

WHAT HAPPENED TO NELLY.

I knew a little girl,—
You? Oh, no.—
Who came to live on earth,
Just to grow;
Just to grow up big
Like Mamma,
Big as grown-up ladies
Always are;
Not to stay a baby
As she came—
Yet each morning found her
Quite the same.

Quite the same, they said,
Not a change
Since she went to bed—
Ah, how strange!
Baby Nell at night,
Baby Nell at morn,
Everything the same,
Not a dimple gone.
They saw her every hour,
So you 'll own,
If a change had come,
They'd have known.

Yet the clothes grew small—
Bibs and frocks;
Couldn't wear her shoes.
Nor her socks.
Then as years went on,
Seven, maybe,
Not a soul could call
Nell a baby.
Still Mamma declared,
Every minute
She had been the same—
What *was* in it?

She saw her all the time,
So you'll own,
If a change had happened
She'd have known.
Baby Nell herself,
Though uncommon wise,
Ne'er had seen an inch
Added to her size.
Even Pomp, the dog,
Never barked to say
"Nell is not the same
Now as yesterday."

Yet, as I have said,
Clothes kept growing small,
Tight at first, and then
Would n't do at all.
Even Nelly's toys,
Skipping-rope and hoop,
Once quite big enough,
Now would make her stoop.
Why, her very crib
Seemed to shrink away,
Till it cramped the child
Any way she lay.

So, from day to day,
Not a person knew,
Looking straight at Nell,
That she ever grew.
Little baby Nell,
On the Nurse's knee,
Baby Nell at school
Learning A B C.
How *did* it happen?
When did she change?
No one had noticed—
Wasn't it strange?

Show me when a bud
Changes to a rose,
And I'll tell you truly
When a baby grows.

[*Scribner's Monthly.*

A company has been formed under the title of the Black Sea Telegraph Company for the purpose of laying a submarine cable from Odessa to Constantinople.

THE ADVANTAGES OF A SCIENTIFIC ORTHOGRAPHY.

IF the nations are sometime to have a common tongue, there are many and good reasons for believing that the English or some modification of it will be that language. Its acknowledged simplicity, flexibility, strength, expression, and adaptability to all forms of thought, as well as its present use by two of the most advanced nations of the world, all point to it as the one destined to become the universal language if the world is ever to be bound together by a bond of that kind. But with these desirable features are linked certain defects which render the written language difficult to master even by native English-speaking people, and still more so by foreign nations. The greatest of these defects is our chaotic orthography. The pronunciation of a word affords but little clue to its common spelling, and its common spelling conveys as little idea of its proper pronunciation. Such irregularity is utterly unscientific and out of keeping with the march of progress of the present century. A rational orthography would give to each vocal element of the language one infallible sign or letter, and only one.

The number of simple vocal elements in the English tongue is estimated to be from forty to forty-six. We ought, therefore, to have forty or forty-six letters. A child or foreigner would then have merely to learn his forty letters and their sounds, and with a simple indication of accent he would straightway be able to pronounce any written or printed word or write any spoken one. But alas! There are only twenty-six letters to represent these forty sounds, and yet these forty sounds *are* indicated in the common spelling in more than three hundred different ways. Not one of these sounds has a uniform representation. Let us glance at a few of the advantages of a phonetic orthography.

In the printing of books and papers, more letters are used than are necessary to indicate the elementary sounds of words. If these were omitted and each sound represented by one letter not larger than the average size of our common letters, there would be much saved in the way of paper, ink, labor of setting the type, writing, etc. For instance, a cursory examination of a copy of the New York *Times* shows that the space occupied by unnecessary letters is a little more than one-nineteenth of the whole sheet. Reckoning that the omission of these would lessen the cost of the publication in this proportion, the reduction of expense in the course of a year of eight hundred issues would be equivalent to sixteen complete editions. The cost of all printed matter would probably be reduced in about the same proportion, thus saving in material and labor millions of dollars annually, and aiding indirectly in the education of the people.

But perhaps the greatest benefit of a scientific orthography is the direct aid it would render to education by reducing the difficulties and expense in the way of learning to read and write. The art of reading and writing is simply the instrument or key that unlocks all the treasures of revealed truth and science. But in the present state of our orthography most of the time set apart by the mass of the people to be devoted principally to study is spent in getting used to the instrument. Little time is left for the study of positive science and practical truth.

Suppose the acquisition of a mechanical trade required at the outset six or seven years practice with a certain cumbersome unwieldy tool before any profitable work could be done. Such a difficulty would greatly enhance the cost of production in that trade, and discourage persons from attempting to learn it. Would not that man be

considered a public benefactor who should simplify that tool so that its use could be readily acquired? This is the case with our language, but the people who are affected by this evil are not a small class only. Every man, woman, and child, in the United States and Great Britain, and we may say in the world, is vitally interested in the speedy simplification of this immense tool.

The Japanese want a better language. They like the English. But it is a difficult tool to handle. It will be a life-time or more before they can do much productive labor with it. A comparatively slight adjustment will make its use easy to all. Shall it not be done? The proposal of the Japanese minister is particularly interesting as pointing out the possible mode in which this adjustment will be brought about. Let the people of Japan adopt the English language freed from its unnecessary difficulties, and they will possess a tool at once so simple and efficient in production that the native English-speaking people themselves will not be able to compete with them without adopting similar improvements. The little Japanese of ten years may possess as much practical information as the English student of eighteen or twenty.

Our language-tool, awkward as it is, is far superior to what it was three or four centuries ago. From the 10th to the 16th centuries it was in process of formation as a distinct language, and its changes were rapid. The invention of the art of printing and the extensive circulation of printed matter tended to make the orthography uniform and check rapid change. Progress has been made, however. Dr. Johnson, Noah Webster, and others have made many improvements.

To appreciate in some degree the incumbrances that have been cut away from our language within four and one-half centuries, compare with the common text the following translation by Wycliffe in 1380 of the first four verses of the eighth chapter of Matthew:

"Forsothe when Jhesus hadde comen doun fro the hil, many cumpanyes folewiden hym. And loo! a leprouse man cummynge worshipide hym, sayinge: Lord, yif thou wolt, thou maist make me clenes. And Jhesus holdynge forthe the hond, touchide hym, sayinge: I wole; be thou maad clene. And anoon the lepre of hym was clensid. And Jhesus saith to hym: See, say thou to no man; but go, shewe thee to prestis, and offre that gifte that Moyses comaundied, into witnessing to hem."

J. S. F.

THE NEWS.

New Zealand has 3,286 miles of telegraph line.

There is a wide-spread revival influence at work in the country, especially at the west.

It is said that President Grant recently avowed himself as opposed to Woman Suffrage.

The last vessel in the whaling business, belonging to Nantucket, was recently sold at Callao.

The Spanish Republic is thus far successful, though Carlist disturbances continue to be reported.

President Thiers has received an invitation from the Emperor of Austria to attend the Vienna Exposition.

The census of Canada for 1871 gives a population of 3,485,671, a gain of only about 400,000 in the last ten years.

Several bands of Sioux Indians who have heretofore been hostile, appear desirous of peace and of coming on to reservations.

It is reported that the Catholic, Arminian and Greek clergy of Jerusalem are in a state of great anxiety owing to premonitions of coming persecution.

The French Atlantic Telegraph Company are about to lay down another cable across the Atlantic. 2,567 miles of the cable have been embarked on board the Great Eastern.

A council of foreign bondholders in London have opened communications with the Samana Bay Company for the purpose of bringing about an equitable arrangement of their claims on the Republic of Santo Domingo.

European machinists get from $1.00 to $1.33 per day wages. Fairbanks pays his hands from $1.50 to $4.00 per day, and yet is able to sell 6,000 scales per year in foreign markets, in competition with the world.—*Evening Post.*

The State of New Jersey which has long been the victim of gigantic railroad monopolies, has at length freed itself by the enactment of a general railroad law which is said to be in advance of the railroad laws of any other State.

King Lunalilo, the new ruler of the Sandwich Islands, has made a tour of his kingdom in the United States Steamship Benicia, on the invitation of Admiral Pennock. The King will come to San Francisco with Gen. Schofield, to make a tour of the United States.

The trouble between the Postmaster-General and the railroads in relation to the compensation for running postal cars, has been compromised, the companies agreeing to run the cars until the special committee appointed by the Senate shall have reported on their demands.

Prof. O. C. Marsh says of the huge fossil animals found in the tertiary deposits of Wyoming: "They nearly equaled the elephant in size, and their limbs were also similar to the great proboscidians. The skull, however, presents a most remarkable combination of characters. It is long, narrow, and supports three separate pairs of horns.

In the recent report of the Indian Commissioners it is asserted that the partially civilized tribes of the Indian Territory have, in proportion to population, more schools, with a larger average attendance, more churches, church members and ministers, and spend more money for education than the people of any territory in the United States, and life and property are more safe among them.

Prof. Agassiz some time since proposed the establishment of a school of Natural History at Nantucket. Within a few days he has come into possession of an island in Buzzard's Bay containing about 100 acres, and $50,000 in money—the gift of a gentleman in New York for the purpose of establishing permanently on this island such a school. Other gentlemen and scientific men associated with Prof. Agassiz, propose to secure another $50,000 to be used in supplying the necessary buildings on the island.

The Western Union Telegraph Company have plans nearly matured for a reduction of tariffs which is to be of a most radical and sweeping nature. The change contemplates the use of only ten different rates for the entire country, and will establish a uniform air-line distance rate between all offices in each of the divisions. With their improved apparatus for the transmission of messages, this company is prepared to expeditiously perform the increased business which it is believed will arise from these concessions.

The most terrible shipwreck of half a century took place near Halifax, April 1. The steamship Atlantic of the White Star Line, from Liverpool for New York, being short of coal attempted to put in at Halifax. The sea was rough and the night dark. At 2:30 A. M. the steamer went ashore on Meagher Rock, 22 miles from Halifax. In a few minutes she careened and sunk. She had on board about 800 steerage passengers and about 33 cabin passengers. Of these and of the ship's crew and officers only 430 were saved. Most of the passengers were in their rooms below when the vessel went down. The steamer was nearly new, having made her first voyage in the summer of 1871, and was splendidly built and equipped with the latest improvements in ocean steamers. The ship and cargo are a total loss.

Rev. Capel Molyneux, vicar of St Paul's Church, England, after a ministry of forty-two years in the Church of England, has seceded from that establishment and announced himself as simply a minister of the Church of Jesus Christ, wherever it is found on earth.

ANNOUNCEMENTS.

SILK GOODS.

Machine-Twist and Sewing-Silk of their own manufacture for sale by the Oneida Community.

Address, [S] ONEIDA COMMUNITY, *Oneida, N. Y.*

PRESERVED FRUITS AND VEGETABLES

Put up for sale by the Oneida Community in tin and glass. Price list sent on application.

Address, [F] ONEIDA COMMUNITY, *Oneida, N. Y.*

STEEL TRAPS.

Eight sizes and kinds, suitable for the House-rat, Musk-rat, Mink, Marten, Fisher, Fox, Otter, Beaver, the Black and Grizzly Bears, are made by the Oneida Community Descriptive price-list sent on application.

Address, [T] ONEIDA COMMUNITY, *Oneida, N. Y.*

MACHINE-SHOP AND FOUNDRY.

Improved Lathe-Chucks, Blinn's Patent Gate-Hinges, Machines for Measuring the Length and Testing the Strength of Manufactured Silks, Bobbin-Winders for Sewing-Machines, etc. Agricultural, Machine and Light Castings, on hand or made to order. Descriptive price-list sent on application.

Address, [M] ONEIDA COMMUNITY, *Oneida, N. Y.*

THE WALLINGFORD PRINTING COMPANY.

All kinds of Book and Job Printing executed: Manufacturers' Illustrated Catalogues made a speciality: also Bronze and Color Work, and the finer kinds of Card, Circular and Bill-head Printing. Having enlarged its works and added new motive power, this Company is in renewed condition to meet the wants its patrons with promptness and accuracy.

P. O. Address, *Wallingford, Conn.*

PUBLICATIONS.

(Sent from the Office of the Oneida Circular by mail, post-paid, on receipt of price.)

History of American Socialisms. By John Humphrey Noyes. 678 pp. 8vo. J. B. Lippincott & Co., Philadelphia. London, Trubner & Co. Price $3.00.

The Trapper's Guide; a Manual of Instructions for Capturing Fur-bearing Animals. By S. Newhouse. Third edition with New Narratives and Illustrations. 215 pp. 8vo. Price bound in cloth, $1.50

Salvation from Sin, the End of Christian Faith; an octavo pamphlet of 48 pages. By J. H. Noyes. Price 25 cents per single copy, or $2.00 per dozen.

Dixon and His Copyists; a Criticism of the Accounts of the Oneida Community in "New America," "Spiritual Wives," and kindred publications. By John Humphrey Noyes. Price 25 cts.

Scientific Propagation. By John Humphrey Noyes. Large octavo pamphlet of 32 pages. Price 25 cts.

Male Continence. By John Humphrey Noyes. An octavo pamphlet of 24 pages. Price 25 cts.

Hand-Book of the Oneida Community: Containing a Brief Sketch of its Present Condition, Internal Economy and Leading Principles. Price 25 cts.

The five pamphlets—"Salvation from Sin," "Dixon and his Copyists," "Hand-Book of the Oneida Community," "Scientific Propagation," and "Male Continence," will be sent to a single address on the receipt of $1.00.

Back Volumes of the Circular, Unbound. Price $2.00 per volume.

MESSRS. TRUBNER & COMPANY, Book-sellers, Paternoster Row, London, have the "History of American Socialisms," the "Trapper's Guide," and the "Hand-Book of the O. C.," for sale They will receive subscriptions for our other publications.

PHOTOGRAPHIC PICTURES

Of the Oneida Community Buildings and Grounds, made by a first-class artist and finely mounted, can be had on application at the Office of the Oneida Circular.

LARGE VIEWS.

Bird's-eye View, looking West, of Community Buildings and Grounds, 12 by 14 inches, on fine enameled board 16 by 20; price $1.75. Quadrangle and Group, 12 by 14, mounted like the above price $1.75. South and East Fronts of the Community Dwellings, giving a good view of the New Wing occupied by the Children—8 by 10, on tinted board 10 by 12, with an ornamental border price $1.00.

STEREOGRAPHS.

No. 2, East and North Lawns. No. 3, East Lawn and Portico. No. 4, East Front. No. 5, North Front and Lawn. No. 6, Bird's Eye View of Buildings looking West. No. 7, Lawn and Summer House. No. 8, West View, toward Railroad. No. 11, Quadrangle. No. 12, Lawn View. No. 15, South and East Fronts. Price of Stereographs $3.00 per doz. Sent by mail, post-paid, on receipt of price.

Oneida Circular.

A WEEKLY JOURNAL OF HOME, SCIENCE AND GENERAL INTELLIGENCE.

Published by the Oneida & Wallingford Communities.

ONEIDA COMMUNITY, APRIL 14, 1873.

New Series, Vol. X, No. 16
Whole No. 1454.

POST-OFFICE ADDRESS:
ONEIDA CIRCULAR, ONEIDA, N. Y.

TERMS:

The CIRCULAR is sent to all applicants, whether they pay or not. It costs and is worth at least two dollars per volume. Those who want it and ought to have it are divisible into three classes, viz., 1, those who cannot afford to pay two dollars; 2, those who can afford to pay *only* two dollars; and 3, those who can afford to pay *more* than two dollars. The first ought to have it free; the second ought to pay the cost of it; and the third ought to pay enough more than the cost to make up the deficiencies of the first. This is the law of Communism. We have no means of enforcing it, and no wish to do so, except by stating it and leaving it to the good sense of those concerned. We take the risk of offering the CIRCULAR to all without price; but free subscriptions will be received only from persons making application for themselves, either directly or by giving express authority to those who apply for them.

Foreign subscribers, excepting those residing in Canada, must remit with their subscriptions money to prepay the postage.

THE UNITED COMMUNITIES.

ONEIDA COMMUNITY

Is an association living in Lenox, Madison Co., N. Y., four miles south of Oneida and a few rods from the Depot of the Midland Railroad. *Number* of members, 205. *Land*, 654 acres. *Business*, Manufacture of Hardware and Silk goods, Printing the CIRCULAR, Horticulture, &c. *Theology*, Perfectionism. *Sociology*, Bible Communism.

WILLOW-PLACE COMMUNITY.

Branch of O. C., on a detached portion of the domain, about one and one-fourth miles north of O. C. *Number* of members, 19. *Business*, Manufactures.

WALLINGFORD COMMUNITY.

Branch of O. C., at Wallingford, Conn., one mile west of the Hartford and New Haven Railroad. *Number* of members, 45. *Land*, 228 acres. *Business*, Publishing, Job Printing, Manufactures, and Horticulture.

SPECIAL NOTICE.

The O. C. and Branches are not "Free Lovers," in the popular sense of the term. They call their social system BIBLE COMMUNISM or COMPLEX MARRIAGE, and hold to freedom of love only within their own families, subject to Free Criticism and the principles of Male Continence. In respect to permanency, responsibility, and every essential point of difference between marriage and licentiousness, the Oneida Communists stand with marriage. Free Love with them does *not* mean freedom to love to-day and leave to-morrow; nor freedom to take a woman's person and keep their property to themselves; nor freedom to freight a woman with offspring and send her down stream without care or help; nor freedom to beget children and leave them to the street and the poor-house. Their Communities are *families*, as distinctly bounded and separated from promiscuous society as ordinary households. The tie that binds them together is as permanent and sacred, to say the least, as that of marriage, for it is their religion. They receive no new members (except by deception or mistake), who do not give heart and hand to the family interest for life and forever. Community of property extends just as far as freedom of love. Every man's care and every dollar of the common property are pledged for the maintenance and protection of the women and children of the Community.

ADMISSIONS.

These Communities are constantly receiving applications for admission which they have to reject. It is difficult to state in any brief way all their reasons for thus limiting their numbers; but some of them are these: 1. The parent Community at Oneida is full. Its buildings are adapted to a certain number, and it wants no more. 2. The Branch-Communities, though they have not attained the normal size, have as many members as they can well accommodate, and must grow in numbers only as they grow in capital and buildings. 3. The kind of men and women who are likely to make the Communities grow, spiritually and financially, are scarce, and have to be sifted out slowly and cautiously. It should be distinctly understood that these Communities are not asylums for pleasure seekers or persons who merely want a home and a living. They will receive only those who are very much in earnest in religion. They have already done their full share of labor in criticising and working over raw recruits, and intend hereafter to devote themselves to other jobs (a plenty of which they have on hand), receiving only such members as seem likely to help and not hinder their work. As candidates for Communism multiply, it is obvious that they cannot all settle at Oneida and Wallingford. Other Communities must be formed; and the best way for earnest disciples generally is to work and wait, till the Spirit of Pentecost shall come on their neighbors, and give them Communities right where they are.

SPRING.

O, fragrant Spring! I know you bring
Earth's tender flowers;
Their sunny smile shall long beguile
Our summer hours.

You bring again the April rain
When smiles and tears
Shall give earth's face the fleeting grace
Of childhood's years.

But more than these, O, bid each breeze
Bring faith and love!
No flowers more fair could angels bear
From fields above.

Then when with song the days are long
In fields of June,
Strong hearts shall raise sweet hymns of praise
To Nature's tune.

G.

THE HEAD-LIGHT.

Home-Talk by J. H. N.

CHRIST, in speaking of his departure, said, "Howbeit, when he, the Spirit of truth is come, he will guide you into all truth; for he shall not speak of himself; but whatsoever he shall hear, that shall he speak, and *he will show you things to come.*"

John, in his revelations, tells how he fell down to worship the angel who had shown him a prophetic vision of the New Jerusalem. The angel said to him, "See thou do it not; I am thy fellow-servant, and of thy brethren that have the testimony of Jesus; worship God; for *the testimony of Jesus is the spirit of prophecy.*"

These two passages hint at the same truth. True faith is foresight given by God. The Spirit of truth is the testimony of Jesus, and its business is to show us "things to come." That is what we want more than anything else. We want, each one, to see the things before us. Sight of things behind is comparatively unimportant. A railroad train has a great reflector on the engine which throws a bright light along the track ahead. That is very necessary, because the engineer must see if there is a stone or fence-rail on the track before him; the track just passed is all right of course. That is the promise we have, if we get the Spirit of truth in our hearts; our train shall have light in front.

The true thing to aim at, is to get constant and universal faith. We must not be content with having a glimpse of light ahead once in a while, and go on in obscurity the rest of the time. We must find a way to carry a prophetic light all the time, which will shine upon small things as well as great. This is the nature of true prayer. The theory concerning prayer which is maintained by the great men in the orthodox world, is, that you are to pray for what you want, and then leave it to God to answer or not, just as he pleases; keep putting in your petitions, and if they are not answered it is all right; if God does not give you what you ask, he will give you something else as good. On the other hand, I say that a man who prays by inspiration, is in communication with the foresight of God, and will receive what he asks for. That is essential to the prayer of faith. That is the faith once delivered to the saints. The faith of the Primitive Church, real faith in God and prayer, whether for miracles or anything else, has prophecy in it. It is a sure foresight of things to come, given by God.

The faith which precedes a miracle is itself miraculous. The faith of miracles, which is the spirit of prophecy, must necessarily be the faith of salvation, because it is impossible to have assurance of salvation without prophecy. To have certainty of salvation, you must, in a measure, have power to foresee for eternity, all the events of your existence. If a man has that in his heart which gives him a right to say "I am sure I am to be saved," he has a prophecy in his heart which is vastly more important and even miraculous, than the prediction of any temporal event. You may have a *hope* of salvation; any sinner has that; but an *assurance* of salvation must be a prophecy. It must be a consciousness of, and sympathy with, the eternal purpose of God.

OLD BOTTLES.

A SAILOR coming out of a Bethel chapel once was heard to say to his shipmate: "I never believed the Bible until to-day, because I could not see why old bottles were not just as good as new ones; but the preacher made it all clear, when he told us that the bottles in those days were made of goat's skin; and now I can see some meaning to that story about the wine and the bottles."

I, too, can see some meaning to that story. The old wine is selfishness; the old bottles are customs, laws and institutions that express and repress selfishness. The new wine is the new life of Christ; the new bottles are the forms, customs and institutions that express the life of Christ. Old bottles! old bottles! I see them with their cracked and mouldy sides, some rent, despised and useless, some leaky and well-nigh dried. There is slavery, which once stood upright, but has now fallen forsaken, a hissing and a reproach. for the life of Christ has entered the slaves, their masters and their countrymen. The fermentation of that new wine began in the revivals of forty years ago, and the spirit that makes men free burst the old bottle of slavery and good men rejoice.

Baptism with water, is an old bottle, narrow and contracted; the baptism of all flesh by the spirit of the Living God is the new wine

that will burst it. The Sabbath is an old bottle. The old wine that it has held as sacred for so many centuries is the teaching that one-seventh of our time should be devoted to God; but when man is saved from sin and filled with the life of Christ, he finds that all his time is sacred; the whole week is the Lord's, and so that precious old bottle will burst for being only one seventh large enough to hold the new wine.

The institution of private property is an old bottle, and selfishness fills it. When the spirit of God came like a rushing mighty wind and filled the place where the early Christians were assembled, the old bottles of private property were suddenly rent from side to side; the old wine of selfishness was spilled; "neither said any of them that aught of the things which he possessed were his own; but they had all things common:" this was new wine and new bottles.

Marriage is an old bottle. It is leaking, leaking fast. It is one of the most conspicuous forms of private ownership—selfishness. Like slavery it has stood for ages; like the Sabbath it has religious veneration surrounding it; like all private property it appeals to the possessive feelings; but it will not hold the new wine of heaven; it cannot contain the new life of Christ. "The children of this world marry and are given in marriage;" they are selfish and the old bottle holds the old wine; "but they which shall be accounted worthy to obtain that world and the resurrection from the dead, neither marry nor are given in marriage." In the unity of marriage "twain become one flesh;" in the unity of the new life all become "one spirit." A new institution must express the new life; new wine must be put into new bottles.

Death is an old bottle, a very old bottle, the oldest, vilest bottle of all; made to surround, contain, and restrain selfishness; the wages of sin. When selfishness is abolished there will be no old wine for death to hold. The new life of Christ does abolish selfishness, and thus bursts the old mouldy bottle. Lazarus, Christ and the whole Primitive Church have broken death's bonds and rent the old wine-bottle. The same spirit that brought Christ from the dead works in modern revivals, converts from sin and changes character; it abolished slavery when the nation was ready for it; and it will as surely abolish death when the world is prepared for it.

"New wine must be put into new bottles and both are preserved." Communism is a new bottle. It is an institution which expresses an unselfish life, but without the new wine of the life of Christ it is useless, impracticable. Certain French enthusiasts have repeatedly tried various forms of Communism. They have undertaken to abolish property, but as often have they failed because they lacked the new wine. Fourier devised a form of socialism that sought to inclose and regulate selfishness: but this scheme has always and everywhere failed, because, though he had found a new bottle, he had no new wine to put into it. There are in this country many meddlers with social institutions who despise Christ and know not the new life that alone can safely burst the bonds of the old. The new form cannot adapt itself to the old life. So long as selfishness rules, so long old bottles have their use; they are torn only with fearful risk, and are sure again to be patched up. Private proverty, marriage, slavery, death, and the long, long row of old bottles that have held the world's selfish life for centuries, have held it by virtue of mutual adaptation, and they will continue to hold it, old and patched though they be, until the new, pure, strong life of Christ shall take to itself in this world appropriate surroundings and both the new wine and the new bottles shall thus be preserved.

LOCOMOTION.

III.

WE have divided terrestrial locomotion into two parts, vital and mechanical. We will now proceed to a discussion of the latter. We have defined mechanical locomotion as that kind which makes chief use of the wheel as an agency. At first it might seem that there is no analogy between the ordinary leg locomotion and locomotion by means of wheels, but I think that by giving the subject a little patient analysis we shall discover that these methods of progress are based upon the same principles.

Call a man's two legs, when the feet are separated in making a stride, the two spokes of a wheel, the center of which is at the point where the legs join the body. The two spokes of course are two radii, and the space between the two feet is an arc or section of the wheel. Now in walking it will be observed that the earth, or foundation walked over, is repeatedly measured by this arc or section, so that walking and running are founded on precisely the same elementary principles as the wheel, being modified by the capacity which the spokes have for lengthening and shortening themselves by means of the knee, the ankle joints and feet, and also by the power to alternately change their relative positions in the wheel. The essential part of locomotion by wheels is, that the surface moved over should be measured by the circumference. This essential condition is complied with in the section of a wheel in the manner we have described.

Now if any one is disposed to cavil at my analysis and generalization on this point, I shall appeal to great Plato, the father of ancient wisdom. He says: "In the good old times, before men grew wicked in their thoughts, and heaven became alarmed for its own safety, there was no such thing known in the world as sex. Every living man was male and female; perfect in form, in faculty, in spirit. The form in which he dwelt was a round ball of flesh, having four hands, four feet, two faces and one brain. * * * He was a creature of inconceivable strength and swiftness. He could fell an ox, outrun a race-horse. When he wished to move quickly, he thrust out his four arms and legs, and rolled along the road like a wheel with eight spokes which had lost its tire. [They were *tireless* runners.] But these strong men, of no sex in particular, grew proud before the faces of the gods; so that, like Otus and Ephraltus they made an attempt to scale the spheres, and cast the immortals from their thrones. Zeus in his anger shot his bolts cleaving them through the head downward; parting each round wheel of flesh into two halves; separating the male side from the female side. Great was the agony and loss of power. * * * Each part of the man had now to stand on two legs—a feat of much skill, the art of which he was slow to learn and swift to lose."

Is not that a triumphant vindication of my generalization, from the oldest and highest authority? We have before observed that the essential part of human locomotion is that the foot which is left behind must be drawn ahead to the forward one, and one or the other must be thrust forward for another step. Now it does not matter a whit in what manner the hinder foot comes up to, or gets ahead of the other, whether it is put forward in the ordinary manner, or turned around laterally as you would make a chair walk on two legs, or whether the legs that are to go ahead are whirled over vertically. The essential thing is, that they get ahead into a position where they can take their turn in supporting the body in its progress. This the spokes of a wheel do, and this is the essential part of walking.

We will now take note of the comparative advantages and disadvantages of step locomotion and wheel-locomotion. One serious disadvantage connected with step-locomotion is the fact that in the effort to heave the body forward, the feet are compelled to remain stock-still for an instant, and then as they appear to be on the point of being left behind they are compelled to start forward, almost instantly attaining a speed which is double that of the rest of the body, only to be stopped when under full headway and again jerked forward. Is there not a great loss of power in this jerking, vibrating motion? First there is the inertia that is to be overcome in jerking up the hinder foot and giving it a speed double that of the rest of the body, so that it can get ahead; again there is the expense of stopping it when it gets under full headway, so that it may take the weight of the body and again do its work of heaving the body forward. We must not forget that our famous 2-17 trotters are compelled to comsume a certain modicum of their precious time in allowing each of their feet to stop for a time at every step, and that the rest of the time is consumed in putting them under a headway twice as great as that which the judges credit to the animals. Here is an exceedingly great loss of power. It appears to be a wise provision of nature, that animals' feet are in good part made of glue, otherwise we might often hear of their snapping their feet off, exposed as they are to such violent jerking.

The question which now seriously presents itself is, how can we improve upon nature, and, saving this effort which is expended through the front muscles of the leg, make every movement tell on the simple and direct labor of propelling the body forward. This problem is solved by the driving-wheel of a steam locomotive. The cylinder alternately receives and discharges a column of steam, which gives the same reciprocal lengthening and shortening

characteristics which are possessed by the measuring-worm, or caterpillar. The end of the piston-rod is attached to a part of the driving-wheel between the center and circumference in such a way that whether the piston-rod is drawn back or thrust forward, the wheel is made to turn in the same direction and no power is lost in the alternate stopping and starting into rapid motion of any considerable part of the mechanism. Aside from the vast power of steam, there is, therefore, abundant good reason why a locomotive can outrun a man, or even a horse.

While we frankly admit this disadvantage of leg-locomotion in respect to speed, we find other advantages connected with it that more than compensate for this single drawback. One most manifest advantage is, power to surmount obstructions with ease. The two or four jointed spokes, which carry men and the larger animals, admit of many of the smaller obstructions passing between them thus avoiding the jolt that is inevitable to wheels. Then again the two spokes of the human motor are packed away in such small space that a man can manage them much more easily than he could carry one or two clumsy wheels.

But there is one point about which it seems important that we give a word of caution before we bring this already somewhat extended paper to a close. It is a well-known fact that the breeders of fast horses are exceedingly enthusiastic in their vocation, and are disposed to adopt every expedient to increase the speed of the animals they rear. If upon reading this paper, with their favorite object in view, they should undertake to secure a cross between their best trotters and the steam locomotive, we should feel very much chagrined. Aside from the great difficulty of securing such a hybrid, breeders ought to consider the liability of having wheels in the place of the fore legs while the hinder parts are patterned after the horse, or vice versa, as they would be troubled with the disadvantages of both methods of locomotion, while there would be no real gain. Moreover there would be so much uncertainty whether the animal would consume hay and oats, or wood and coal, that it would be a very risky business. Should it prefer the former and at the same time have the enormous appetite of the locomotive, it would be a very expensive animal to keep. Having presented all these considerations we shall utterly refuse to take any responsibility for moves which others may make in this direction.

H. J. S.

HUMAN THOROUGH-BREDS.

WHEN Pizarro invaded Peru in 1528, he found that country under the dominion of a race of kings and nobles called INCAS, who kept themselves distinct from the mass of the people and perpetuated their dynasty by a systematic course of breeding "in and in." Prescott, in his "Conquest of Peru," gives an interesting account of them, from which we obtain the following sketches:

The Incas were called the Children of the Sun. The traditions of the Indians over whom they ruled were, that about four hundred years before the advent of the Spaniards, the Sun, the great luminary and parent of mankind, taking compassion on their degraded condition, sent two of his children, Manco Capac and Mama Oello Huaco, to gather the natives into communities, and teach them the arts of civilized life. The celestial pair, brother and sister, husband and wife, advanced along the high plains in the neighborhood of Lake Titicaca, to about the sixteenth degree south. They bore with them a golden wedge, and were directed to take up their residence on the spot where the sacred emblem should without effort sink into the ground. They proceeded accordingly but a short distance, as far as the valley of Cuzco, the spot indicated by the performance of the miracle, since there the wedge speedily sank into the earth and disappeared forever. Here the children of the Sun established their residence, and soon entered upon their beneficent mission among the rude inhabitants of the country; Manco Capac teaching the men the arts of agriculture, and Mama Oello initiating her own sex in the mysteries of weaving and spinning. The simple people lent a willing ear to the messengers of Heaven, and, gathering together in considerable numbers, laid the foundations of the city of Cuzco. The same wise and benevolent maxims which regulated the conduct of the first Incas, descended to their successors, and under their mild scepter a community gradually extended itself along the surface of the broad table-land and asserted its superiority over the surrounding tribes.

As the history of the Incas approaches the time of the conquest, it emerges from these misty traditions which can only be regarded as shadows of truth. Prescott accepts as authentic the following account of the last centuries of the Inca dynasty:

At first, the progress of the Peruvians seems to have been slow and almost imperceptible. By their wise and temperate policy, they gradually won over the neighboring tribes to their dominion, as these latter became more and more convinced of the benefits of a just and well regulated government. As they grew stronger, they were enabled to rely more directly on force; but still advancing under cover of the same beneficent pretexts employed by their predecessors, they proclaimed peace and civilization at the point of the sword. The rude nations of the country, without any principle of cohesion among themselves, fell one after another before the victorious arm of the Incas. Yet it was not till the middle of the fifteenth century that the famous Topa Inca Yupanqui, grandfather of the monarch who occupied the throne at the coming of the Spaniards, led his armies across the terrible desert of Atacama, and, penetrating to the southern region of Chili, fixed the permanent boundary of his dominions at the river Maule. His son, Huayna Capac, possessed of ambition and military talent fully equal to his father's, marched along the Cordillera toward the north, and pushing his conquest across the equator, added the powerful kingdom of Quito to the empire of Peru.

So much of the traditional pedigree assigned to the Incas as represented them to be the descendants of a single pair, and that pair a brother and sister, is rendered probable by the laws and customs which the Spaniards found among them. Prescott says of the royal line:

The scepters of the Incas, if we may credit their historian, descended in unbroken succession from father to son, through the whole dynasty. Whatever we may think of this, it appears probable that the right of inheritance might be claimed by the eldest son of the *Coya*, or lawful queen, as she was styled, to distinguish her from the host of concubines who shared the affections of the sovereign. The queen was further distinguished, at least in later reigns, by the circumstance of being *selected from the sisters of the Inca*, an arrangement which, however revolting to the ideas of civilized nations, was recommended to the Peruvians by its securing an heir to the crown of the pure heaven-born race, uncontaminated by any mixture of earthly mould.

The descent and rank of the nobles below the royal line are thus indicated:

By far the most important order of nobility in Peru was that of the Incas, who, boasting a common descent with their sovereign, lived, as it were, in the reflected light of his glory. As the Peruvian monarchs availed themselves of the right of polygamy to a very liberal extent, leaving behind them families of one and even two hundred children, the nobles of the blood royal, though comprehending only their descendants in the male line, came in the course of years to be very numerous. They were divided into different lineages, each of which traced its pedigree to a different member of the royal dynasty, though all terminated in the divine founder of the empire.

They were distinguished by many exclusive and very important privileges; they wore a peculiar dress; spoke a dialect, if we may believe the chronicler, peculiar to themselves; and had the choicest portion of the public domain assigned for their support. They lived, most of them at court, near the person of the prince, sharing in his counsels, dining at his board, or supplied from his table. They alone were admissible to the great offices in the priesthood. They were invested with the command of armies, and of distant garrisons, were placed over the provinces, and, in short, filled every station of high trust and emolument. Even the laws, severe in their general tenor, seem not to have been framed with reference to them; and the people, investing the whole order with a portion of the sacred character which belonged to the sovereign, held that an Inca noble was incapable of crime.

The general laws of marriage were these:

The great nobles of Peru were allowed, like their sovereign, a plurality of wives. The people, generally, whether by law, or by necessity stronger than law, were more happily limited to one. Marriage was conducted in a manner that gave it quite as original a character as belonged to the other institutions of the country. On an appointed day of the year, all those of a marriageable age—which, having reference to their ability to take charge of a family, in the males was fixed at not less than twenty-four years, and in the woman at eighteen or twenty—were called together in the great squares of their respective towns and villages throughout the empire. The Inca presided in person over the assembly of his own kindred, and taking the hands of the different couples who were to be united, he placed them within each other, declaring the parties man and wife. The same was done by the curacas toward all persons of their own or inferior degree in their several districts. This was the simple form of marriage in Peru. No one was allowed to select a wife beyond the community to which he belonged, which generally comprehended all his own kindred; nor was any but the sovereign authorized to dispense with the law of nature—or at least, the usual law of nations—so far as to marry his own sister.

Thus it appears that the Incas, both of the royal line and in all of the collateral branches which constituted the nobility of Peru, were a race of "thorough-breds," produced by a closer system of interbreeding than we find elsewhere in the history of the world.

We may judge what were the results of "in-and-in breeding" in this remarkable case, by the following observations of the historian:

It added not a little, (says Prescott), to the efficacy of the government, that, below the sovereign, there was an order of hereditary nobles of the same divine original with himself, who, placed far below himself, were still immeasurably above the rest of the community, not merely by descent, but as it would seem, by their intellectual nature. These were the exclusive depositaries of power, and, as their long hereditary training made them familiar with their vocation, and secured them implicit deference from the multitude, they became the prompt and well-practiced agents for carrying out the executive measures of the administration. All that occurred throughout the wide extent of his empire—such was the perfect system of communication—passed in review, as it were, before the eyes of the monarch, and a thousand hands, armed with irresistible authority, stood ready in every quarter to do his bidding. * * * It was the Inca nobility indeed, who constituted the real strength of the Peruvian monarchy. Attached to their prince by ties of consanguinity, they had common sympathies and, to a considerable extent, common interests with him. Distinguished by a peculiar dress and insignia, as well as by language and blood from the rest of the community, they were never confounded with the other tribes and nations who were incorporated into the great Peruvian monarchy. After the lapse of centuries, they still retained their individuality as a peculiar people. They were to the conquered races of the country what the Romans were to the barbarous hordes of the empire, or the Normans to the ancient inhabitants of the British Isles. Clustering around the throne, they formed an invincible phalanx, to shield them alike from secret conspiracy and open insurrection. Though living chiefly in the capital they were also distributed throughout

the country in all its high stations and strong military posts, thus establishing lines of communication with the court, which enabled the sovereign to act simultaneously and with effect on the most distant quarters of his empire. They possessed, moreover, an intellectual preëminence, which, no less than their station, gave them authority with the people. Indeed, it may be said to have been the principal foundation of their authority. *The crania of the Inca race show a decided superiority over the other races of the land in intellectual power; and it cannot be denied that it was the fountain of that peculiar civilization and social polity, which raised the Peruvian monarchy above every other state in South America.*

PAN PIPING ON VIRICULTURE.

ONE of the *Graphic* writers calls himself "Pan" and his effusions "Pan-Pipings." He writes smoothly and as if only intent on pleasing his readers, choosing such simple themes as the lateness of spring, and giving very touching pictures of his disconsolate and down-hearted sparrows during the last snow-storm, as they huddled together for warmth, "each a mere tuft of brown feathers, with a little projecting beak and two black, sorrowful, bead-like eyes." But as you read on you discover that "Pan" after all has his own thought about things, and very pleasantly, to be sure, but forcibly, urges it. In the present case, his object is to prejudice his readers against modern theories of race-culture as applied to human beings; and this is the way he proceeds: Having told how his little sparrows behaved when "the snow-storm was too much for them," it was *natural* that he should contrast their behavior in pleasant sunshine: "they are loud, militant and vixenish—the air peals with their domestic broils and discords." Then he suggests that "perhaps they are choosing their mates," and asserts that "amatory election ever involves war:"

"As with my sparrows, whose emotions this morning seem unusually turbulent, so with men and lions and eagles: perhaps with slugs and oysters. When the lion seeks a consort, that fickle and unfaithful female summons, with far-sounding cry, from twilight deeps of desert and overarching jungles, *other* lions to come and fight with her suitor. They come from all surrounding sands—tawny warriors, topaz-eyed, resounding, manes tossing on the wind. Hunters and travelers say that while the rivals meet in death embrace, the lioness, at a little distance, rolls upon the sand, purs, licks her sides, and exhibits all feline symptoms of rapture. She meekly follows the conqueror. Sometimes both of her lovers are slain. She wastes no tears upon them, but without delay adventures forth into the desert upon a new matrimonial hunt. It is beauty soliciting strength and strength battling for beauty, and this soft invitation and strenuous warfare are continuous conditions of all living generations, from the small gilded fly that doth buzzing battle in the air for the possession of his queen, whose brief race and dynasty are bounded by the afternoon, up through the ascending grades of life to man himself, who challenges his rival, or slanders him, or outdoes him in rich gifts."

Then follows "Pan's" grand appeal and argument against all experiments in scientific human breeding:

"Nature thus provides that all her races shall be borne forward by the strong. The weak die, fade out, pass away. It is as true of the races of men as of dragon-flies or eagles that strive in heaven, and woo their co-mates in cloud embrace, like rolling, centaur-begetting Ixion. Therefore, O Editor, when you again preach on the fantastic text of viriculture, or the scientific improvement of the human race, I pray you to enjoin upon that race the wisdom of abstaining from experiments. Let them 'rest and be thankful,' as Lord John Russell bade the Whigs to do; bid them abstain from these fretful anxieties for 'improvement.' That is well provided for by Nature, wiser than those who would change her immemorial and unchanging ways. The strongest strive for and *will have* the fairest, impelled by strange, irresistible, undying forces—unconquerable indeed as those latent forces within the germ which makes it grow into an oak. The daughters of the Sabines were fair and the Romans were strong, and we know what befel. It hath been so from the beginning and will be to the end, and it is from hence that races are exalted, ennobled, made valiant of heart, and fair to look upon. Because she was fair and he was powerful, an emperor took the Russian Catharine from her peasant threshold where she stood dazzled (and dazzling) with majesty; and a later emperor, stooping with chivalry and grace from the highest of human thrones, lifted (because she was fair) a little Spanish donna, granddaughter of a respectable Scottish gentleman of moderate fortune, upon the royal chair beside him. They say that the majesty of Persia picks and chooses among the virgins of his realm as he will. The daughter of a dervish, or a basket-weaver, or a gardener, may bear the royal heir. The barriers of caste fall down before the magic radiance of beauty, as in the Arabian tale the walls of the idolators fell before the halo of the angel's face. How do you think my pastoral peoples became so perfect in form—the men Apollos and the women Aphrodites—visions of immortal beauty, like the which the world hath not seen elsewhere? Why, they married as they would; the maid's dowry a kid; the man's fortune a bow, a pipkin, a cluster of grapes. The most powerful carried off the fairest, and so came the bosoms and the loins, the limbs of swiftness and of beauty, of potency and grace, the brows calm, serene, and of deathless loveliness, which Phidias copied. You can't produce these results by ordaining that all marriages shall be arranged by decree of the courts; by decision of the selectmen; by any arbitrary interference whatsoever. In so far as differences of fortune or social rank limit the freedom with which the maiden chooses her lord, the lover his mistress, just in so far is the exaltation and ennoblement of the race impaired. This, with suitable deference to the apostles of viriculture, is the opinion of PAN."

These "Pipings" of "Pan," authoritative as they seem, should not be accepted as final without an examination. "Pan" ought at least to have piped something about the experiments that have been made in the descending grades from man. If his dictum be true, that Nature has provided for this whole matter of procreation more wisely "than those who would change her immemorial and unchanging ways," then all the efforts of breeders to improve the lower animals have been futile; and the Southdown, Cotswold and Lincoln sheep, the Devon, Hereford, Alderney, Ayrshire, and Short-Horn cattle, the improved trotting and race-horse of to-day, are inferior to the sheep, cattle and horses Nature would have given us without the aid of man's science! But here at least it is clear that the fashion of selecting and mating that prevails among the dragon-flies and eagles, "perhaps with slugs and oysters," may be advantageously set aside by what "Pan" is pleased to call "arbitrary interference." It is for "Pan" and those who hold to his view to show that the amatory elections of men and women cannot be as wisely interfered with as those of sheep, cattle and horses. Until that is done many will prefer to take their illustrations of the conditions that should prevail among men and women regarding procreation from the improved domestic animals rather than from the dragon-flies and eagles or even the untamed lions.

"Pan" would not of course say that mere physical strength should carry off all the best prizes in love; still, modify his theory as you may, we do not see but that "amatory election" under it would, as he says, always "involve war"—the fierce struggle of the most ungovernable passions. Tragedies like those of James Fisk and Charles Goodrich are quite too frequent without an accepted theory that it is natural and right for the strong to fight over the fair after the manner of the wild beasts. "Pan" would probably favor the substitution of other weapons for the dagger and bullet; at present money is mainly relied on for success in the amatory contest, and as it often happens that fools and knaves have the most money the fairest women scarcely have so good a chance in the line of propagation as the Sabine daughters who had no choice.

It is true that under the principle of "natural selection" such combinations take place among wild animals as are most favorable to their vigor and adaptation to their circumstances; but that kind of selection cannot be made among human beings, except on an exceedingly limited scale and by those who, like the emperors of Russia and Persia, are in a position to set law and public opinion at defiance. In earlier and ruder times the examples of these emperors might have been followed by tribes and races, as in the case cited of the Romans. But all the present regulations of society forbid such selection; and so men and women in their mating do not have even the benefit of the principle of "mutual selection" which prevails among lions and wild horses. That principle actually restrains, to a considerable extent, the weak, deformed and diseased from taking part in propagation. No such restraint is recognized among human beings; the weakest in body and least worthy in other respects are as free to multiply their kind as the fairest, strongest and best.

Unless, therefore, "Pan" or some one else can "pipe" out a better theory for the exaltation and ennoblement of the human race we shall continue to urge the claims of Scientific Propagation. W.

CO-OPERATION IN KANSAS.

MR. E. V. BOISSIERE and E. P. Grant having been in Kansas for three or four years and made some necessary preliminary improvements, have issued their circular inviting people of means to join them in a co-operative movement at Silkville, their place there. A leading object of the scheme is to establish the combined household of Fourier. Its principal aim is to organize labor, first, on the basis of remuneration proportioned to production; and second, in such manner as to make it attractive and efficient. Guarantees of education, subsistence and help to all, are postponed for the present. The projectors have a silk factory and three thousand acres of land, with some orchards and vineyards. In October they will have a stone mansion large enough to accommodate eighty or one hundred persons. The coming summer while the house is building, people will have to live in temporary dwellings. Employment for wages at customary rates will be furnished to a limited extent. The opportunities for business are chiefly agricultural and horticultural. It is hoped to gather a nucleus this year of persons who can take the entire responsibility of their own support and employment. For good reasons men of independent means are specially desired to come on and begin business. The conditions of admission are the constant prepayment of room-rent and board for two months in advance, and the deposit of one hundred dollars for each person joining, and for each one of his dependents. On this deposit interest will be allowed at six per cent. per annum, and in case of withdrawal the deposit itself will be refunded. No efforts will be made to select persons of like beliefs and creeds, or to mold them afterward to any uniform pattern. People who know what a power for attraction and repulsion there is in religion, will of course have their doubts as to the practical wisdom of undertaking to form an association without a good deal of unanimity in religious matters. These we believe are the main points of the enterprise as it now stands. For further information the reader is referred to either of the above-named gentlemen.

at Williamsburgh P. O., Franklin Co., Kansas, who on the receipt of fifty cents will furnish a work containing the details of their project.—We have no hesitation in helping this scheme to publicity. It is not Communism, nor old-fashioned Fourierism, but simply co-operation; and we have confidence in the prudence and honesty of the managers. Schemes for close association without religion are invitations to failure; but co-operation of any kind, if entered upon with due caution, must be better than isolation or mere conglomeration.

What is the matter over the sea? The *Pall Mall Gazette* of March 19 reports the birth of twenty-three girls and only thirteen boys. England must do a great deal better than this if she expects to cope successfully with the German invader at Dorking.

—*The Daily Graphic.*

We are doing a deal better up here in the middle of the Empire State. The O. C. three-year-olds are sixteen boys to six girls. How is that for Dorking?

COMMUNITY JOURNAL.

Tuesday, April 8.—A thick fog filled our valley this morning, a phenomenon so rare that we have to make a note of it. After the rains and thaws we have been having the western hills look like a motley in dirty brown and white. Winter held its own until the last moment, with March blustering and storming through the whole of his part, when suddenly the prompter whistled and down came the curtain to rise again with bright Spring on the stage ready for all sorts of pastorals and bucolics.

"We hail thee, glad spring-time!"

—Never was spring more welcome than the one now at hand. The rain with its angry thunder; the creek with its turbulent waters swelling into a flood; and even the road with its pools of mud and slime, give us joy. Anxiously we watch the snow disappear from the western hill. The lawns are uncovered, and already show signs of life. When the bed of crocuses in front of the house was first divested of its winter robe, the delicate buds looked almost too fragile to live; but the first day of sunshine gave them a start, and they are now in full bloom. Their variegated blossoms of white, orange and purple, present a striking contrast to the very unsummer-like appearance of everything else, but we know they are only precursors of what is to come. Some one, seemingly impatient of spring's delay, has very tastefully arranged a plate with mosses, sprigs of evergreen and one-berries, in the center of which is placed a tiny mirror. The design is very significant of a landscape, and when looking at it we can easily fancy ourselves gazing at a lake surrounded by a forest.

—By this time every body must be pretty familiar with both the name and nature of the *epizoötic*. We are. Very few of us have escaped a slight touch of it. More than a month ago we had our first symptoms. We knew it was raging throughout the country and that in many cases it resulted fatally. We took occasion to fortify ourselves against it with the weapons of faith, spending one or two evenings talking about the matter. Since that we have had no fear, though the attacks from it have been frequent. It swept rapidly through our group of little ones, not excepting the four-months baby Corinna. A few days of special care were given the ailing ones, and they were restored to their usual state of health, and are now as well and hearty as ever, some of them better.

—During the cold weather of week before last the flock of lambs at the barn increased rapidly, and, although the rough west wind seemed strangely tempered to their helpless condition, they have done well, the farmers say. A pleasant sight on a warm spring day are one hundred and thirty lambs practicing their gambols in anticipation of the time of green grass and daisies. An occurrence which caused no little excitement among the children and wonder among some grown people was the birth of two black lambs; not brown ones, but inky black. Hardly another black spot in over one hundred and thirty!

"Why," inquire some tyros in the study of heredity, "can a full-blooded Cotswold ram beget a black lamb? To be sure, it is a mixture of the native stock in the ewe, but that she should have triplets and two be white and one jet black, while the father belongs to a pure race which has not a black representation in probably fifty years, passes my comprehension."

"I can explain the black strain in the ewe," said one of our old New England farmers. "When I was a boy folks wore home-spun cloth and a black sheep was prized; the blacker the better; for of the black wool mixed with white mother used to make the 'sheep's-gray' which wore like iron and never faded, because it was 'dyed in the wool.' The black strain was encouraged on this account, even to the extent of sometimes using a black ram, and this is why the native sheep still persist in occasionally producing a black lamb."

"And I," said some one who had read Darwin and Galton, "can tell you why the black lambs are born of white parents. According to the philosophers who have made a study of these things, the individuals in a race do not receive from their parents and transmit to their children only the characteristics and traits which are apparent in them. A very small part of the characteristics which you and I received from our parents are manifested in us. We include and carry on to posterity not only the assemblage of physical and mental traits which make us what we appear to be, but a vast collection of other traits and tendencies which exist in us *latent*, never to be developed in our persons. These tendencies instead of being mixed incoherently, seem to 'hang together' in groups and thus we may be the hiding-place of inherited tendencies which have not appeared for a number of generations, but which may some day come out in full force in our posterity like these black lambs. But luckily for our hopes of improvement by scientific propagation, the longer a group of traits is suppressed and continues latent the less able it is to come to the surface, and finally in a thorough-bred race it practically disappears forever; although I suppose never so completely that it might not be brought up again if desired. So also it is very encouraging to know that new traits may be brought in by cultivation and go to swell the great stream of latent good tendencies which will make our children better than we."

—H. W. B. writing from Boston last Monday to his daughter M. says:

"Three hundred of the survivors of the wrecked Atlantic were brought here yesterday—nearly all of them steerage passengers. The Boston people gave them a dinner in old Faneuil Hall. I visited the Hall just after they had eaten their repast and talked with some of the poor fellows. They were all men in middle life except the boy Hanly, who is eleven years of age. This boy was surrounded with a group of persons eager to get a look at him, his situation is such an affecting one. A police officer had him in charge and took whatever money persons gave him. The officer's hands were full of greenbacks, and I see bythe papers this morning that $200.00 were contributed to the child's support. He is a bright little fellow and was kept busy writing his name on blank bits of paper for those who wished his autograph. I laid down a little money and asked for his autograph. He wrote slowly and rather crookedly, but the officer remarked that he had been writing so long that he was tired and did not write so well as at first. I will show you the name when I get home."

—A young Welshman called on us the other day. He said he was interested in Communism and the various forms of coöperation, but did not care for religion. He left the following advertisement issued by Colin A. Campbell, a jolly Scotchman who is preaching Communism. Now is your chance, friends:

PROCLAMATION!

Christian Communism taught in short and easy lessons to the Clergy of the City, at 447 Milwaukee St.

The foundations for such teaching are found in the New Testament, in the life and sayings of Jesus, the labors of Paul, and the Acts, made manifest by the early Disciples, in the ever-memorable Day of Pentecost, when they were all of one mind, and had all things in common.

Like Paul, I work with my Hands for my living!

TAILORING!

In all its branches, done at short notice. Cutting, Making, Cleaning and Repairing Clothing, reasonably done, for Cash only.

The Trinity in Unity of the future must be *Production, Distribution, and Consumption!*

Closed on Sundays, as on that day the Clergy must earn their living! Amen!

COLIN M. CAMPBELL.

Some one said the mixing of sacred and secular in this advertisement made him think of the widow who at the funeral of her husband requested the prayers of the church for his soul, and added in the next breath that the business at the grocery around the corner would be carried on as usual!

THE VILLA.

—Despite the wind and reiterated showers, we at the Villa are made conscious of spring by the more frequent calls from O. C. Parties out for a walk drop in upon us most any time. Now it is one of the sterner sex, oftener a flock of rosy-cheeked girls, in beaver sacks, picturesque opera-hoods, and high-topped rubber boots. They come in upon us like a wave of vigorous life. Yesterday, as we greeted two or three such companies, we were reminded of fragments of old Martin Parker's ballad on,

"THE MILKMAID'S LIFE."

The bravest lasses gay
Live not so merry as they:
In honest civill sort
They make each other sport
As they trudge on their way.

Come faire or foul weather,
They're fearefull of neither;
Their courages never quaile:
In wet and dry,
Though winds be hye
And darke's the sky,
They nere deny
To carry the milking paill."

* * * * * *

Their labor doth health preserve;
No doctors rules they observe,
While others, too nice
In taking their advice,
Look alwaies as though they wold starve.
Their meat is digested,
They nere are molested,
No sickness doth them assaile;

* * * * *

They pleasantly sing
To welcome the spring,
'Gainst heaven they never rayle:
If grasse wel grow
Their thankes they show,
And frost or snow
They merrily goe
Along with the milking paill.

—Last Sunday we went as usual to O. C. lending to them the peculiar spice which ye O. C.

journalist seems to credit us with imparting to that day.

—The wood-pile is manifesting the first symptoms of our passion for "tidying up" that comes with spring.

April 8th.—One at our elbow says:

"Spring has come."

"Truly," we reply, "here are the singing birds, but the ethereal mildness has been doled to us in scantiest measure."

"Yet spring, like some very pretty women, is charming, even though in tears."

"Yes, but who would want one's lady-love to have the dumps for eight days together? What a week we have had of it! rain, fog, mud, ugh!

"Why," says the one at our elbow, indignantly, "you must be blind if that is all you note. We have had several hours on two or three days that have been all one could wish—bright sunshine, lovely sky, balmy air and singing birds."

CHEERFULNESS.

Rocking along over the H. & N. H. R. R. the other day, we listened to a gentleman behind us who was complaining of the weather. He called it "disagreeable, cold, windy, rainy, sloppy, bad getting about, and a very late season." In fact everything seemed to "go contrary" with him. We mentally labeled him "dyspeptic," and were turning away when another voice—such a contented, happy voice—answered, "Why no; this is good weather, *nice* weather. If it were the middle of May we might call it rather late, but not now. I'm glad it's no worse. That's what I always say. When I break my arm, I'm thankful it isn't my leg. If I lose a thousand dollars to-day, I'm thankful it isn't two thousand." You dear, cheery man, we mentally exclaimed, you have no need to mind the weather; you carry your sunshine with you. For what is more sunny than a thankful heart? As we listened we almost seemed to see Uncle Tom's dark face and hear his touching words to Aunt Chloe in the hour of their great trial. By the way, we have come to think that among all the good things written by Mrs. H. B. Stowe, this saying of Uncle Tom's is one of the best. Many a time when tempted to think of our lot as hard, we have remembered him and said in his own words, "Let's think on our marcies." M. & H.

MY FATHER'S FAMILY

OF hens was always small, and select to a feather. It never exceeded ten nor ever fell below eight. I give these figures to show the plan of the family rather than its fluctuations, for now and then a hen would come to an untimely end by drowning in a swill-barrel. I do not mention the cock, for a family without a vigorous masculine head is not to be thought of a moment. Why my father should have hit on those numbers I know not, but I presume it was from an intuitive sense of the great law of supply and demand—the exact matching of hens at the barn and eggs and chickens needed at the house—for John our impractical boy had not been to school then and brought home books on Political Economy. I have an idea also that father may have gotten the way from his father before him. After deciding to have so small a family I can well see how he should have fixed it in his mind as "eight or ten hens and a rooster." One thing it was more free and latitudinarian and not so unyielding as precise *eight* or sharp *ten* would have been. Besides it was more indulgent to human nature; and this, you know, has its ups and downs—its spring-tides and its neap-tides, and when he came to the annual killing he could, if he felt pretty brisk, keep right on until he had left only ten pullets, and then he could pause a little and taper off gracefully by wringing the necks of two more; and if he did not feel quite so incisive, he could begin to consider a little when he had dispatched all but twelve, and then thinking of his rule he could dispose of two more hens and feel that he had acted from principle and not from impulse.

I have said that our hens were selected to a feather; they were so indeed. While our neighbors had black, and white, and yellow, and red, and top-knot, and creeper hens, we always had blue or hawk-colored hens. In the fall when there was a rigid examination of all the candidates for perpetuating the noble family, none were saved except those who came nearest the ideal color; all the rest were sent to pot. They were not even allowed to go into the back country or back streets to raise families of wood-choppers, and teamsters, and hod-carriers. None but the best were allowed to propagate. That was a family to delight the soul of Galton.

I think those hens must have been of some pure breed; though we did not talk much about such things in those days. Be that as it may, they had had a chance to become pure, for they had been in the family for nearly forty generations of hens. My father had them from his father as a present on going to keeping house. And grandfather brought them with him when, as a New Hampshire emigrant, he jolted all the way from Deering to Northern Vermont; his wife and two children in a wagon and his four hens and a cock in a basket swinging behind. Perhaps I am confusing the reader by speaking of our hens as having been given to my father and also as coming from New Hampshire. But the fact is the flock of young hens which took the place of those that scratched around the year before was so like its progenitors that we never thought of any distinguished ancestors nor of any young cock as going ahead of his father. As a consequence individuals were of no particular account; the family was every thing; it was that which made an image on the mind of nine blue hens and one light gray cock. Individuals slipped in and slipped out, but made no impression. The flock, ideally speaking, was always one and the same. And I have no doubt that this oneness was brought about by in-and-in breeding. My father never introduced any foreign blood into the family, nor my grandfather either, for he was a stout Presbyterian and didn't believe in "new measures." The young cocks always married their sisters. In fact our hens were nearer related to one another than all that—they were dreadfully related. The old cock was not only related to all his forefathers but he really was himself all those forefathers and all his descendants, too. I don't know as you can quite see that, nor whether I can, but it was so anyhow. Despite our in-and-in breeding there was one thing which told against the purity of our hens. They would sometimes have chickens with pale legs. A rich butter-yellow was the true color. This white leg was a streak of vulgarity with which we always strove.

Perhaps it was that strain of vulgar life which kept them strong, for they never showed any resemblance to that family of hens which Hawthorne has preserved, as it were in amber, in his "House of Seven Gables." They were healthy, hearty folk; equally removed from dyspepsia and consumption on the one hand, and from apoplexy and grossness on the other. I don't think the men would have ever made governors or generals, but they would have done for farmers, and foremen in iron-shops, and maybe for bankers in country places. It was pleasant to see the old cock come out after he had had his beef-steak and coffee and morning paper, and cast his eye around the horizon for information, and then up into the sky to look out for hawks, and then down on the ground for corn and worms. In his suit of light gray with a pair of stout spurs at his heel, with two long white tail feathers curving over and backward, and with his broad red comb set proudly forward as if he were used to respect, he was as fine a specimen of force and elegance as you often see. He was always wide awake, crowing early in the morning and sometimes in the night, and many times in the day just to show how full of hope and vim he was. Then his gallantry and care for others. I have seen him when he had found good picking, call his family around him and show them what a good provider he was. Sometimes he would call them to see a nice bit he had gotten and then swallow it himself. I never understood whether he did that for a joke or whether he did it because he was unwilling to eat alone. He had, it is true, a truculent way of looking at us boys, as if he hated us for belonging to a master race. But we never thought evil of him for that.

The agility of our hens was another proof that they had not lost anything by in-and-in breeding. We seldom undertook to chase one down when a chicken was needed for the pot. We always took them by strategy. And in this respect we deviated from every tradition of our family. There was nothing feline or stealthy about our folk. They never used any more diplomacy than a dog uses. Whatever they did had to be done in a blunt, main-strength way or else not done at all. We always knew better than try any such rough methods on our chickens.

Our hens were always young, for they were kept chiefly with a view to eggs. They were good vigorous layers. Their ovaries were full-set clusters from which we were always getting the first fruits. In the warm spring months when sugar was making in the woods and when the sheep were dropping their lambs in the green, stony pastures, there was no surer way of surprising mother than for us boys to hide the white warm eggs until she began to wonder what was the matter with the hens. It didn't take long to get a hat full of eggs in that way. Those hens were good cacklers, too; I never heard better. After sitting a while in a kind of deep silence they would, on the production of an egg, come off their nests with a rush and burst into a cackle which spurted upward and outward, and rose and fell, and scintillated and flashed up and died away. It was full of joy and triumph and glad fruition. It made a far-off ripple in the human breast. A hen never has the least doubt but what she has done a fine thing. In this respect our hens were so different from our folk. We were never very sure that we had done any thing worth speaking of. Our geese weren't "all swans." That was our bad habit of mind. And though I have come to know the value of thinking well of what you do, I can assure you that I sha'n't cackle over this writing when it is done. I shall be pestered with a feeling that it ought to have been as drowsy and full of peace as a sermon which sets you a nodding. I shall be plagued with the idea that it ought to have been an eager hunt after some kind of truth. And well our hens might cackle, for whether boiled or fried or scientifically considered, an egg is a wonderful thing. It consists of two parts: the shell, or the thing containing, and the meat or the thing contained. Then again, the meat is composed of two parts; the white or albumen and the yolk or yellow. This last is also in two parts; the yolk proper, and the germinating vesicle; and this in turn has its main body or vesicle and its germinating dot. Thus we see that an egg is a series of concentric dualisms, capable under the right conditions of time and heat of becoming a new dualism or chicken, consisting of two halves not quite identical, and yet having a painful sort of unity or loneliness until it

meets another chicken and some more eggs are produced.

But all this takes me away from the character of our hens. I think they capered with their tongues on purpose, for they knew how to be still, and in the summer they would steal away awhile and come back some day with a surprising lot of chickens. They were good sitters and good mothers, and just as faithful to one chicken as they were to a dozen, scratching and fighting, too, if need be, with unflagging energy. Whatever in-and-in breeding may have done for other folk, it never altered the moral character of our hens; they were always the same industrious, faithful, vigilant creatures, never leaving a child until it was thoroughly educated. That done, their emotions of philoprogenitiveness died away. In this respect they were like the brutes in general, and not at all like folk. I never knew any one of them to crow or take to public speaking, or in any way show a likeness to her father, except in the matter of feathers. There never was an idiot among them. In pleasant times I have seen an old mother-hen who had weaned her chickens go around the yard in a sort of meditative way, *craiking* and thinking, and now darting off with head outstretched to catch an insect on the wing. I knew then just as well as I wanted to, that she was in that state of mind into which we sometimes fall when walking up and down the nutty hedge rows in autumn we gather more ideas than I could ever beat out in any Baconian method whatever. Now that I have come to it, I think that method has tyrannized over me. I have thought I ought to gather a great lot of facts and thresh them and make them yield something, but I never succeeded very well. My ideas come to me, and I lay 'em just as a hen does her eggs. Our hens were wise in their way but they didn't try the inductive method. The author of the "Home-Talks" has somewhere said that a state of mind akin to reverie is the one that gives the most fruit: and I believe it too, for the Master of the universe holds its keys, and why should we try to wrench its secrets from him? Thus much for the mental character of those hens.

Perhaps the greater stamina of our hens, when compared with that of the old Pyncheon flock, was owing to their free country living. In the summer they ranged far and near, pick-nicking everywhere and roosting in the trees. In the winter they were more circumscribed, but never softened by heat and bad air. Coming home in the evening I have often seen them by the light of a blinking lantern, sitting heads and tails on a perch in an open shed. The old cock looked as stupid as any of them, and quite shorn of his fierce majesty. But he only needed waking to show himself.

I have intimated that our hens were a pure breed. Dominiques or Plymouth Rocks, perhaps. But this purity was in danger more than once. Tempted for a moment by the bright feathers of some red hens in the neighborhood John was unguarded enough to come into possession of a new cock and bring him home. He was a sort of dissolute king Charles; with an enormous single comb, lopping over like a plume, a great deal of red neck-feathers, black wings and irridescent streamers and a pair of slashing spurs. In an evil moment for him he got into difficulty with our rooster and disappeared from the scene. It was whispered among the children that father had killed him; and we were all glad. He was ours by possession but not so by any of those ties which made our rooster "our rooster." I don't think the question was ever raised whether he could have imparted any vigor to our flock.

But a fatal step was made at last. In the fall of 1840 when the Harrison campaign was at its hight, we got old Clemens to help us dig potatoes. An old sea-dog he was, who had wandered back into the country from nobody knew where; and besides, he had a talent for invention, I think. I remember he told us that he was one of the five or six men who were with Commodore Perry, in 1813, when that hero left his sinking ship and went to another in an open boat and renewed the fight. In fact, it was Clemens's own jacket which the Commodore stuffed into a shot-hole to keep his boat afloat. But somehow this story was either too big or else it lacked the accents of truth, for it was not quite believed by us, though we were boys and greedy for wonders. Our folk were Democrats fashioned in the time of Jefferson, and old Clemens was one, too, and that fall we were very much in a minority and not in a condition to reject sympathy. Now was the devil's chance, and Clemens improved it by proposing to swap hens. The hen we got was a yellow one, and when I think of all the consequences of that trade, I can't help calling her a *yaller* hen. She was allowed to raise a family, and by some oversight, one of her chickens was saved. We could never get rid of old Clemens's hen after that; we tried every year for ten years to weed her out and could not do it. The whole flock seemed to break out with *yaller* chickens every spring and summer. It had become thoroughly mongrel and vulgar and we soon left that region.

On reading what I have written I am reminded that every writing should have a good moral, either tacked on behind or else diffused throughout the whole like the pleasant oils of mint and geranium leaves. Therefore my paper ought to have a moral; and therefore it shall have one; and fearing that you won't smell it anywhere, here it is: Don't have anything to do with old Clemens or any of his hens.

A. B.

SPIRITUAL ALCHEMY.

[The ancient precursors of the chemical fraternity practiced a secret art which, as they claimed, enabled them to transmute all baser metals into gold. Whether man is to acquire a power of this kind over material things, we do not know; but there can be no doubt that there is at work in the world a species of spirtual alchemy which effects a transmutation of evil into good for those who love God. We admire our correspondent's method of turning evil to good account:]

Eau Claire, Wis., March 27, 1873.

DEAR FRIENDS:—Of all the blessings of Communism, there is none I covet more than criticism. This thought first took possession of my mind when I lived in a place where I had few friends, and, on account of my social views, a great many enemies. Then something seemed to say to me suddenly, "You are not making the most of your privileges. You get plenty of extremely free criticism every day, and if instead of resenting its malice and injustice, you would try to correct whatever there may really be about you to provoke it, you could turn all the enmity you have excited into a means of grace." I acted on the suggestion, and found that hostile criticism could be made nearly as useful as friendly, also that it was not half so spiteful and uncalled for as I in my vanity and stubbornness had thought it, and finally that the appetite for criticism grows with the proper use of it. I had no idea that there was so much happiness to be found in it before. If I could fix the object of my religious ambition it would be that I might yet be found worthy to preach (by my life) the duty of rejoicing in the Lord, and of believing it to be much easier and pleasanter to be holy than unholy. I think hypochondria and cowardice are the great sins of our religious life, and I love the CIRCULAR above all other modern religious literature because reading it always inspires me with happiness and courage.

C. L. J.

THE SECRET OF SUCCESS.

"NOT deliberate enough!" pleasantly remarked a friend, as my ball was shooting over the croquet-ground wide of position. I had made several points in succession, and now under the impression that I could afford to strike with less care, failure was the result. We finished the game, but I did not regain what I had lost for the want of a little more deliberation. In three words my friend had revealed to me not only one secret of his success at croquet, but what it is that has enabled him to win a name for being successful in whatever he undertakes.

Long after the game was over these words went ricocheting back over the mistakes caused by many a hasty act in my past life. How much grievous sorrow and mortification had been saved me by a little more care and deliberation! How many a cup of joy had been dashed from my lips or turned into bitterness for the want of it! I picked the words to pieces: "Taking counsel with one's self, carefully considering the probable consequences of a step," said the learned lexicographer, and much more; but all this, when applied to the character of my friend, did not define to me the kind of deliberation, the mainspring of action, that had made him successful and happy where others more talented and more versed in the wisdom of the schools have failed to attain either happiness or usefulness. Instead of taking counsel with himself when about to decide upon any matter whether of trivial or great importance, he seems to be under the control of an invisible guide, or a vital force which turns him at will. The Bible defines this kind of deliberation as waiting on the Lord, or being led by the Spirit of God; it is walking by inspiration as Christ walked, who repeatedly declared that he did nothing of himself and spoke nothing of himself, but only as the Father gave him to do and to speak; it is living by faith—the kind of faith that receives the promises of God. The sweet singer of Israel says of the man whose delight is in the law of the Lord, "He shall be like a tree planted by the rivers of water, that bringeth forth his fruit in his season; his leaf also shall not wither, and *whatsoever he doeth shall prosper.*"

Although the invitation to all who lack wisdom is to ask it of God who giveth liberally, yet how few have sought and found it—how few have been governed by true deliberation, in a world strewn with wrecks for the lack of it! Men who have been regarded by the world as its heroes and philanthropists, after running a seemingly brilliant career for a time, have been blown away like chaff before the wind. In an evil hour they have found their own wisdom insufficient, and instead of grasping the crown of victory, shame and obloquy have too often covered their good name as with a pall. Away, then, with my own wisdom, or with the best the world affords, for that is always in danger of failing me in the hour of my direst need. Welcome! the faith and courage that will enable me to wait patiently on the Lord, and learn deliberation of him who is meek and lowly in heart.

REFRIGERATORS FOR FRUIT-MEN.

HAVING had some experience of the benefits derived from refrigerators, or cooling-rooms, I feel prepared to recommend their more extensive use; not merely by butchers and house-keepers, but also by fruit-growers and fruit-dealers. The difficulty of getting the more perishable fruits to market in a good condition is well understood, and the liability to damage and loss is so great, as to prove a serious drawback to an otherwise profitable traffic. Happily now all these difficulties can be obviated by the use of some one of the patent refrigerators, or cooling rooms; one of which I have

tested and am prepared to recommend. It is that of J. H. Fisher, Chicago. This refrigerator is adapted to the use of railroads, and I understand that cars are in making at Chicago for the express purpose of transporting fresh meats from that city to New York. And why may there not be cars fitted for the purpose of carrying soft fruits as well?

The question with the fruit-growers of the west is, how to market their fruits; and many are disposed to be discouraged in view of the business being overdone. Here then is a subject for the consideration of fruit-growers. Who of that enterprising class shall be the pioneer in making a refrigerator fruit-car for the transportation of perishable fruits from western Michigan, say, to New York, or any where within paying distance? That the thing can be economically done I have no doubt; as the fruit-car may be attached to a through freight-train, thus avoiding the exorbitant express charges which now prohibit the sending of fruit to distant markets, to say nothing of its unsalable condition on arriving at its destination. Let such a car be made with proper arrangements, and with easy springs, and after a journey of a week, or even ten days, the fruit will be found in good condition.

In a cooling-room prepared on the plan above recommended, I have known cherrries to be kept two weeks in good condition, after having been brought a hundred miles; plums and peaches from one to three weeks, according to the condition in which they were received; and strawberries fresh from the vines were kept from one to three weeks. Therefore we say to the fruit-growers of the West, send along your surplus of fine fruits; it will all be wanted at paying prices, in this and in other localities that are not so favorably situated for raising the nicer varieties. Doubtless the western fruit-growers will yet find that they can send their fruit to New York city more cheaply than we can now send ours to the same market.

H. T.

An Exceeding Hard Object to Fall Over.—One of our citizens, who writes from experience, hands us the following for publication:

"If you have occasion to use a wheelbarrow, leave it, when you are through with it, in front of the house, with the handles toward the door. A wheelbarrow is the most complicated thing to fall over on the face of the earth. A man will fall over one when he would not think of falling over anything else. He never knows when he has got through falling over it either, for it will tangle his legs and his arms, turn over with him and rear up in front of him, and just as he pauses in his anger to congratulate himself, it takes a new turn and scoops more skin off him, and he commences to evolute anew and bump himself on fresh places. A man never ceases to fall over a wheelbarrow until it turns completely on its back, or brings up against something it cannot upset. It is the most inoffensive-looking object there is, but it is more dangerous than a locomotive, and no man is secure with one unless he has a tight hold of its handles and is sitting down on something. A wheelbarrow has its uses, without doubt, but in its leisure moments it is the great blighting curse to true dignity."

—*Exchange.*

THE NEWS.

A man on a velocipede is called a relic of barbarism by the St. Paul papers.

Ninety-two per cent. of the receipts of the Erie Canal were spent in repairs last year.

The recent census of Brazil shows a population of 10,000,000 including nearly 2,000,000 slaves.

Wilkie Collins, the novelist, and Mr. Bradlaugh, the English political agitator, are coming to visit this country.

A Japanese minister resident at Vienna, and a minister plenipotentiary to Russia, have recently been appointed.

The Samana Bay Company has purchased a new steamer for use at Samana. It is proposed to construct large wharves at that port.

In Japan the translation of the Gospel of John is publishing. An edition of Matthew will soon be ready, and the revision of the translation of Luke is nearly done.

The new divorce law adopted in Indiana is much more stringent in its provisions than the old one which made that State so notorious in the marriage world. The *Independent* thinks this is a sign that Pantarchism is losing ground.

The *Santa Fe Union* says that the grapes now grown through the whole length of the Rio Grande valley to the lines of Texas and Chihuahua are among the richest in the United States, perhaps in the world. Vineyards yield fruit in great abundance.

The Rev. Capel Molyneux, who recently resigned his living at St. Paul's, Onslow Square, London, on account of the ritualizing tendencies of the English Church, has been presented by his late congregation with an address accompanied by about $18,000.

H. W. Beecher says: "I look back to my missionary life in the West, when I was working among poor people, and going to log houses, and to rough unlettered men, gathering them into little companies, as the sweetest portion of my life, surpassing all joys of the present."

The loss of the steamship Atlantic is now attributed to two principal causes—carelessness or selfishness of the Company in allowing the ship to sail without a full supply of coal, and carelessness of the captain and officers of the ship in approaching so dangerous a coast in the night, running at full speed, without good outlook.

The question of the coal supply has been agitating the people of England for some time past. It is estimated that the total amount of coal in that country is only about 80,000,000,000 tons. The amount annually used at present is about 110,000,000 tons, with an annual increase of about 3,000,000 tons. At this rate the supply which is accessible for mining will last only about 125 years. The House of Commons has appointed a committee to investigate the matter.

The Legislature of New York, in May, 1872, passed an act appointing Commissioners of Parks for the State of New York, and directing them to inquire into the expediency of providing for vesting in the State the title to the timbered regions lying within the counties of Lewis, Essex, Clinton, Franklin, St. Lawrence, Herkimer and Hamilton and converting them into a public park. Under the direction of these Commissioners a new survey of the Adirondack region was made last year by Mr. Verplanck Colvin, a scientific gentleman and artist who has heretofore had much experience in exploring the wilderness sections of our State. Many new and interesting geographical facts have been noticed, the positions of many of the mountains and lakes have been determined by triangulation, more accurately then ever before. The hights of the mountains have been measured by barometer, and many errors corrected. Mt. Marcy, the highest of the group, was found to be 5,333 feet high. Gray Peak on the south side of Mt. Marcy is 4,947 feet. A little lake lying between Gray Peak and Skylight mountain, at an altitude of 4,293 feet above tide water, was discovered to be the highest source of the Hudson river. A mountain in Hamilton county north of Pleasant Lake, which does not appear on any map of the State, was found to be 3,859 feet above tide. It is known to guides and hunters as Baldface or Snowy Mountain, the snow remaining on it late in the spring. Mt. Seward was found to be 4,348 feet above tide, or considerably lower than previous estimates. In some parts of the region passed over Mr. Colvin noted the singular fact that all the spruce timber was dying and falling to the ground, from some unknown cause.

ANNOUNCEMENTS.

SILK GOODS.

Machine-Twist and Sewing-Silk of their own manufacture for sale by the Oneida Community.

Address, [S] Oneida Community, *Oneida, N. Y.*

PRESERVED FRUITS AND VEGETABLES

Put up for sale by the Oneida Community in tin and glass. Price list sent on application.

Address, [F] Oneida Community, *Oneida, N. Y.*

STEEL TRAPS.

Eight sizes and kinds, suitable for the House-rat, Musk-rat, Mink, Marten, Fisher, Fox, Otter, Beaver, the Black and Grizzly Bears, are made by the Oneida Community. Descriptive price-list sent on application.

Address, [T] Oneida Community, *Oneida, N. Y.*

MACHINE-SHOP AND FOUNDRY.

Improved Lathe-Chucks, Blinn's Patent Gate-Hinges, Machines for Measuring the Length and Testing the Strength of Manufactured Silks, Bobbin-Winders for Sewing-Machines, etc. Agricultural, Machine and Light Castings, on hand or made to order. Descriptive price-list sent on application.

Address, [M] Oneida Community, *Oneida, N. Y.*

THE WALLINGFORD PRINTING COMPANY.

All kinds of Book and Job Printing executed: Manufacturers' Illustrated Catalogues made a specialty: also Bronze and Color Work, and the finer kinds of Card, Circular and Bill-head Printing. Having enlarged its works and added new motive power, this Company is in renewed condition to meet the wants its patrons with promptness and accuracy.

P. O. Address, *Wallingford, Conn.*

PUBLICATIONS.

(Sent from the Office of the Oneida Circular by mail, post-paid, on receipt of price.)

History of American Socialisms. By John Humphrey Noyes. 678 pp. 8vo. J. B. Lippincott & Co., Philadelphia. London, Trubner & Co. Price $3.00.

The Trapper's Guide; a Manual of Instructions for Capturing Fur-bearing Animals. By S. Newhouse. Third edition with New Narratives and Illustrations. 215 pp. 8vo. Price bound in cloth, $1.50

Salvation from Sin, the End of Christian Faith; an octavo pamphlet of 48 pages. By J. H. Noyes. Price 25 cents per single copy, or $2.00 per dozen.

Dixon and His Copyists; a Criticism of the Accounts of the Oneida Community in "New America," "Spiritual Wives," and kindred publications. By John Humphrey Noyes. Price 25 cts.

Scientific Propagation. By John Humphrey Noyes. Large octavo pamphlet of 32 pages. Price 25 cts.

Male Continence. By John Humphrey Noyes. An octavo pamphlet of 24 pages. Price 25 cts.

Hand-Book of the Oneida Community; Containing a Brief Sketch of its Present Condition, Internal Economy and Leading Principles. Price 25 cts.

The five pamphlets—"Salvation from Sin," "Dixon and his Copyists," "Hand-Book of the Oneida Community," "Scientific Propagation," and "Male Continence," will be sent to a single address on the receipt of $1.00.

Back Volumes of the Circular. Unbound. Price $2.00 per volume.

Messrs. Trubner & Company, Book-sellers, Paternoster Row, London, have the "History of American Socialisms," the "Trapper's Guide," and the "Hand-Book of the O. C.," for sale. They will receive subscriptions for our other publications.

PHOTOGRAPHIC PICTURES

Of the Oneida Community Buildings and Grounds, made by a first-class artist and finely mounted, can be had on application at the Office of the Oneida Circular.

LARGE VIEWS.

Bird's-eye View, looking West, of Community Buildings and Grounds, 12 by 14 inches, on fine enameled board 16 by 20 inches, $1.75. Quadrangle and Group, 12 by 14, mounted like the above, price $1.75. South and East Fronts of the Community Dwellings, giving a good view of the New Wing occupied by the Children—8 by 10, on tinted board 10 by 12, with an ornamental border, price $1.00.

STEREOGRAPHS.

No. 2, East and North Lawns. No. 3, East Lawn and Portico. No. 4, East Front. No. 5, North Front and Lawn. No. 6, Bird's-Eye View of Buildings looking West. No. 7, Lawn and Summer House. No. 8, West View, toward Railroad. No. 11, Quadrangle. No. 12, Lawn View. No. 15, South and East Fronts. Price of Stereographs $3.00 per doz. Sent by mail, post-paid, on receipt of price.

Oneida Circular.

A WEEKLY JOURNAL OF HOME, SCIENCE AND GENERAL INTELLIGENCE.

Published by the Oneida & Wallingford Communities.

ONEIDA COMMUNITY, APRIL 21, 1873.

New Series, Vol. X, No. 17
Whole No. 1455.

POST-OFFICE ADDRESS:

ONEIDA CIRCULAR, ONEIDA, N. Y.

TERMS:

The CIRCULAR is sent to all applicants, whether they pay or not. It costs and is worth at least two dollars per volume. Those who want it and ought to have it are divisible into three classes, viz., 1, those who cannot afford to pay two dollars; 2, those who can afford to pay *only* two dollars; and 3, those who can afford to pay *more* than two dollars. The first ought to have it free; the second ought to pay the cost of it; and the third ought to pay enough more than the cost to make up the deficiencies of the first. This is the law of Communism. We have no means of enforcing it, and no wish to do so, except by stating it and leaving it to the good sense of those concerned. We take the risk of offering the CIRCULAR to all without price; but free subscriptions will be received only from persons making application for themselves, either directly or by giving express authority to those who apply for them.

Foreign subscribers, excepting those residing in Canada, must remit with their subscriptions money to prepay the postage.

THE UNITED COMMUNITIES.

ONEIDA COMMUNITY

Is an association living in Lenox, Madison Co., N. Y., four miles south of Oneida and a few rods from the Depot of the Midland Railroad. *Number* of members, 205. *Land*, 654 acres. *Business*, Manufacture of Hardware and Silk goods, Printing the CIRCULAR, Horticulture, &c. *Theology*, Perfectionism. *Sociology*, Bible Communism.

WILLOW-PLACE COMMUNITY.

Branch of O. C., on a detached portion of the domain, about one and one-fourth miles north of O. C. *Number* of members, 19. *Business*, Manufactures.

WALLINGFORD COMMUNITY.

Branch of O. C., at Wallingford, Conn., one mile west of the Hartford and New Haven Railroad. *Number* of members, 45. *Land*, 228 acres. *Business*, Publishing, Job Printing, Manufactures, and Horticulture.

SPECIAL NOTICE.

The O. C. and Branches are not "Free Lovers," in the popular sense of the term. They call their social system BIBLE COMMUNISM or COMPLEX MARRIAGE, and hold to freedom of love only within their own families, subject to Free Criticism and the principles of Male Continence. In respect to permanency, responsibility, and every essential point of difference between marriage and licentiousness, the Oneida Communists stand with marriage. Free Love with them does *not* mean freedom to love to-day and leave to-morrow; nor freedom to take a woman's person and keep their property to themselves; nor freedom to freight a woman with offspring and send her down stream without care or help; nor freedom to beget children and leave them to the street and the poor-house. Their Communities are *families*, as distinctly bounded and separated from promiscuous society as ordinary households. The tie that binds them together is as permanent and sacred, to say the least, as that of marriage, for it is their religion. They receive no new members (except by deception or mistake), who do not give heart and hand to the family interest for life and forever. Community of property extends just as far as freedom of love. Every man's care and every dollar of the common property are pledged for the maintenance and protection of the women and children of the Community.

ADMISSIONS.

These Communities are constantly receiving applications for admission which they have to reject. It is difficult to state in any brief way all their reasons for thus limiting their numbers: but some of them are these: 1. The parent Community at Oneida is full. Its buildings are adapted to a certain number, and it wants no more. 2. The Branch-Communities, though they have not attained the normal size, have as many members as they can well accommodate, and must grow in numbers only as they grow in capital and buildings. 3. The kind of men and women who are likely to make the Communities grow, spiritually and financially, are scarce, and have to be sifted out slowly and cautiously. It should be distinctly understood that these Communities are not asylums for pleasure seekers or persons who merely want a home and a living. They will receive only those who are very much in earnest in religion. They have already done their full share of labor in criticising and working over raw recruits, and intend hereafter to devote themselves to other jobs (a plenty of which they have on hand), receiving only such members as seem likely to help and not hinder their work. As candidates for Communism multiply, it is obvious that they cannot all settle at Oneida and Wallingford. Other Communities must be formed; and the best way for earnest disciples generally is to work and wait, till the Spirit of Pentecost shall come on their neighbors, and give them Communities right where they are.

CHRIST AND I.

Home-Talk by J. H. N.

WE make progress in our course of becoming spiritual and refined beings, fit for the society of heaven, only as we prevail against the sensuality that surrounds us. In this warfare let us remember that we are dealing with a *spiritual principality* which must be conquered before we can expect permanent peace. It is useless to set our faces against this and that form of sensuality, such as drinking alchhol or tea or coffee, or against eating too much or too little, or against eating particular things; all this is only resisting superficial manifestations of the sensual spirit and not "laying the axe at the root." It will avail little or nothing to achieve such partial triumphs; we should seek a complete victory over the generic life of sensuality.

Back of all external action, there is a certain life on which our attention should be fastened—a life that is "crucified with Christ." Paul calls it "*the old man.*" And this certain something, "the old man," is the generic principality that is the source of all intemperance; it represents the whole sensual corporation that men belong to before they believe in Christ. It is the same thing that Christ and the apostle elsewhere call "*the flesh.*" If we desire to get at the seat of evil, we must call off attention from specifics, and fix it upon that great generalization "called the old man" and "the flesh," which is "crucified with Christ." All that is required to ensure a perfect victory, not only over the various manifestations of inordinate alimentiveness, but over every form of evil, is the right and thorough application of the crucifixion of Christ. This will be effected by identifying ourselves with Christ; by "knowing him and the power of his resurrection;" by coming into such a partnership with him that we can each of us use the pronoun *we* in connection with him, so that we realize that we are not fighting the battle with evil individually, but in connection with Christ. When individuals can say *we*, in view of their unity with Christ, then the death and resurrection of Christ are available to them. Let us not struggle to gain mere personal victories; but seek a position where we can say *we*, that is, Christ and I; and then ascertain what *we* want to do. What Christ and I together want to do, we shall do; but what I alone wish to do, will not necessarily come to pass.

UNITY, THE MEASURE OF POWER.

[Selected from G. W. N.'s Writings.]

ADVANTAGES in human society are proportioned to the faculty of agreement. This is the great principle that is written on the whole scenery of civilization: it is the axiom by which we may estimate the world's progress, past, present, and prospective.

Advantages are proportioned to the faculty of agreement. All the improvements of the age, Railroads, Telegraphs, Steamships, Manufactories, Hotels, Fairs, Commercial enterprise, Insurance, and the thousand lively characteristics of our present civilization, are due, every one of them, to the increased faculty of agreement there is among men; and express exactly the proportion in which this agreement is present. Think of the extent of concert there must have been required to build the railroad that now* exists between New York and St. Louis—to tunnel the mountains—bridge the rivers—import the iron—build the engines, and run regular daily trains with a dispatch that takes passengers safely through from the Atlantic to the Mississippi in sixty hours! And this is on the point of extending across the continent, so that shortly, passengers will be able to check their baggage to San Francisco, pay their fare, and resign themselves without further care to a railroad organization, which, by virtue of the power of agreement, will have its army of officials stationed throughout the line of the road, each man having a certain duty to perform, and by their united concert insuring safe and regular arrivals on the shores of the Pacific.

The same principle is illustrated in the design and accomplishment of the World's Fair. The building itself, a fairy-like structure of iron and glass, springs up like Aladdin's palace, almost in a night—the magic in the case being the agreement of some thousand or two of various workingmen. Then all the wonderful contents of the building—the treasures of art, beauty and utility that are there collected from many parts of the world, are still, from the first conception to the present combined exhibition of them, the product of human agreement. Without it, they could never have existed—without a high development of it they could never have been brought together in the present form of a festive entertainment to all nations.

It is evident that power is rapidly accelerating with the increase of agreement, and that in consequence of it the conceptions and undertakings of men are continually vaulting into the miraculous. We are reminded of that remarkable saying of Christ to his disciples, "If two of you shall agree on earth, *as touching any thing that they shall ask, it shall be done for them of my Father which is in heaven.*" Is not this the great principle of human accomplishments? It is further evident that every advance which men make in the facility of agreement, opens the way, by a natural law,

* This article was written in 1852.

for new and more radical steps in the same direction.

For instance, the present popular hotel system is an entirely new development of the faculty of agreement, by which hundreds of families find themselves more pleasantly situated and served with the comforts and luxuries of life in a spacious common dwelling, than they could be each one having a separate establishment. * * * Now the single step of moving into common agreement, so far as is included in common hotel life, while it increases the power of parties, and economizes their means, also opens the way for new advances on every hand, in the art of social condensation, whereby still further advantages may be gained. For instance, it is obvious that only one step further in agreement would be necessary, to combine the property of the separate families, in paintings, sculpture, etc., into one more or less splendid common gallery, whereby the enjoyment of all would be immensely increased. So with library privileges, and all those kinds of property which are not consumable by use. Then it is but one step after this to communize the table, and the wardrobe, with similar advantages accruing, and so the process of agreement naturally goes on in an expanding ratio of preparation and reward, until it results in complete unity. All those business men who combine for public enterprises—those young men and artists who organize for holiday effect, and those citizens who resort to public boarding with their families, for economy of means, are tampering with a principle that has its final development and its full power in Communism. The world is really all undermined with this tendency—its selfishness is *powder-posted*, and the foremost ranks of society are liable at any time to stumble into virtual Communism, almost without knowing it.

The Fourierist formula for the solution of human relations and prospects is, "Attractions proportioned to Destinies." Modern Times propounds the "Sovereignty of the individual to be exercised at his own cost." Our generalization, suggested above, is a little different from either of them, viz., "*Advantages proportioned to the faculty of agreement.*" This is not so profound but that it can be easily understood—every stroke of progress preaches it to the dullest observation, and it is calculated to direct our efforts at improvement in a right, practical direction. It is evident that the development of this faculty of harmony will secure the final, universal premium. Those that can agree best one with another, and can flock together harmoniously, will make out the best. Such is the law of this world, as well as the other. The great agreeing forces will be able to use all the labor-saving machinery, and so will take the means out of the hands of the isolated workmen. We understand that in the case of the sewing-machine, the advantage has already passed beyond the reach of individual workers into the hands of large establishments, so that the machine fails to support those who attempt to work it singly and alone.

It follows that that system which in the long run tends to promote the most unity, is the best. Here comes in Christianity—Christ's principle of loving one another. Advantage is proportioned to union: the faculty of union is proportioned to true refinement; and true refinement is proportioned to faith.

The world has yet but imperfectly developed the faculty of agreement—society can only agree in a partial manner. Still a part is better than nothing: and the present attainments in the art of social agreement are to be valued for the proportion of power they give. The brothers Rothschild, we understand, in consequence of the dying injunction of their father, have made it a rule through life, to engage only in such business transactions as they could act in unanimously; and they are said to wield a power of eight hundred millions of dollars. But they have not attained to the highest results of unity. Any body of men and women who have a better faculty of agreeing than the Rothschilds, have the germ of greater power, to be developed sooner or later, even in this world. The highest results of the faculty of union will be manifest in the department of *life* itself. The Rothschilds with their millions, can only operate in a superficial sphere. They cannot help a sick person, or make a man happy in his domestic relations. Power in this department is the result of that final development of agreement, where selfishness is wholly abolished from between men. And certain as it is that society has been progressively raised to its present state above barbarism, by the power of this principle of agreement, so certain is it, that the end and perfection of this principle will give complete power over evil in all its forms. That unity which Christ held up as the standard of his system, will be effectual to change character, vitalize society, and abolish death. Such is the good conclusion to be derived from the axiom that *Advantages are proportioned to the faculty of Agreement.*

NOTE ON FIRST THESS. 5: 22.

"ABSTAIN from all appearance of evil." This precept of Paul has been so applied by some as to imply that the principal thing to be avoided is the *appearance* of evil; that is, that we should abstain from all things which may expose us to the *suspicion* of doing evil, though the things done may not be evil in themselves. But that this is not the true meaning of the words, we think will be manifest by taking them in connection with the context, and especially by examining them as given in the Greek text. In the verse immediately preceding the one above quoted, Paul says, "Prove all things; hold fast that which is good." Then follow the words we are considering—"Abstain from all appearance of evil:" a better and more exact rendering of which would be, "Abstain from all forms [or kinds] of evil." That is to say, first faithfully prove and determine what is good and what is evil; then hold fast that which is good, and abstain from every kind and form of evil. The apostle then concludes with this fervent aspiration for the believers: 'And the very God of peace sanctify you wholly; and your whole spirit and soul and body be preserved blameless unto the coming of our Lord Jesus Christ. Faithful is he that calleth you, who also will do it." Can there be any doubt that Paul believed and preached the doctrine of complete salvation from sin in this life?

J. L. S.

THREADS FROM MY LIFE-BALL.

III.

AS H—— was a man of energy and decisive action he informed his parents the next morning of the engagement between us, and began that same day to procure timber for a house. A little incident connected with the situation of the building here recurs to my mind. Several years previous to any particular acquaintance between H—— and myself his sisters proposed one day that the sewing society meet at their house. We young ladies were of course much pleased with the proposition and jumping into our carriages drove away merrily to keep our appointment. On reaching our place of destination we discovered that we had, like the careless girls we were, left all our work behind. Here was a dilemma! What shall we do? It was a lovely June day, and we were young and bouyant and not very sorry that we need not spend the time shut up in the house bent over our sewing, so we started off on a ramble through the adjacent meadows and fields in search of wild strawberries. We wandered about sometime in the groves and pastures and at last clambered up a high hill along the sides of which we found an abundance of luscious strawberries. Having soon picked all I cared for I locked arms with H——'s eldest sister and we strolled away together down the hill toward the road leaving the others to follow at their leisure. We had not gone far when we seated ourselves on a little eminence for the purpose of resting and looking about us. "What a splendid situation for a house!" I exclaimed, "the view is so extended and the scenery is so delightful!" Directly opposite, a mile and a half away, was my native village with its pretty white dwellings, trees and shubbery; on the north the blue outlines of the mountains cut sharply across the horizon, while below in the valley the sparkling river V—— could be seen for a long distance threading its circuitous course through the green meadows, the clumps of hazel and o'erhanging alder. H—— afterward bought this land and selected for the site of his house this very spot where I stopped that bright June afternoon to admire the surrounding landscape. He made the choice without knowing of my remark, and before he had communicated with me on the subject.

While H—— was engaged in building I was also busy with the preparation of my marriage outfit. It may be inferred from the course of gaiety which I pursued that I was not trained to habits of industry; but that is far from true. I was early taught to take an active part in household duties. Our family was large, and as our house was besides often full of guests, I had little time to be idle. My mother was one of those sensible women who considered good cooking a ladylike accomplishment, and she took great pains to instruct me in the art. Though we kept servants, the making of the

Digitized by Google

cakes, pies and other pastry devolved upon me, and there was besides no branch of household labor that I did not learn. I also embroidered in lace and muslin and spent considerable time in cultivating flowers in which I took great delight.

The winter following my engagement was one of considerable tribulation. The weather was extremely cold and my parents were both taken sick with the prevailing epidemic—lung fever. Our hired woman also fell ill and as the disease was so widely spread it was impossible to obtain assistance, so that I was left alone to nurse my parents and take care of our large family. Had I not received help from God I am sure I could never have accomplished all that I did. An incident occurred at this time which made an indelible impression on my mind. I had cleared away the breakfast one morning and had attended to my duties among the sick, when to my surprise I observed that it was nearly eleven o'clock and I had not made any preparation for dinner. I felt the more uneasy because several hired men took their meals at our house. I could think of nothing that we had on hand which I could cook quickly. I went down cellar for the vegetables and falling on my knees on the straw I asked God to help me. Looking up through the dimness as I arose I discovered a number of chickens hanging from the ceiling all dressed and ready for use. Mother had put them there before she was taken sick, but I knew nothing of it. I took them with a thankful heart and went about my work rejoicing, and dinner was ready at the usual time.

My attachment to my friend S—— had been of the nature of fascination; but since my conversion and change of heart I felt sure that her power over me was gone. Instead of dreading her return, I longed to see her once more and help her to attain the peace of mind which I enjoyed. While thus thinking of her one day, I heard of her arrival in town. She at first shrank from meeting her old friends who were now engaged in revival labor; but we treated her affectionately hoping that she might be penetrated by the religious spirit then prevailing. It distressed me to observe, as I soon did, that she was quite unchanged. She was apparently as independent as ever and as impervious to all attractions except those of a worldly nature. But as nothing is impossible with God he found a way to bow her haughty head. Her parents had both died of consumption, and as S—— was of a delicate constitution many fears had been expressed that she would be attacked by the same disease. But it did not suit S——'s pride to have people look upon her as frail, and relying upon her own will to exempt her, she often declared that *she* should not die of the consumption. One beautiful May morning she called on me clad, as was her wont, in a rich and airy costume. I observed that she looked pale and thinner than usual, and she had besides a cough which thrilled through me. I ventured to expostulate with her about the thinness of her dress so early in the season. On questioning her closely about her health I found that she was indeed in a decline, and I sought to arouse her to a sense of her situation, beseeching her to seek for more enduring happiness than she could ever find in the superficial life she was leading. She appeared touched, answering that her parents were gone and now her most cherished friend no longer loved her. I threw my arms around her neck assuring her that I never loved her so truly as now, otherwise I should not feel such anxiety for her future welfare. She burst into tears and for the first time I saw her somewhat softened. From that day she gradually declined. I sought every proper occasion to press the truth on her conscience, and before she died I had the satisfaction of seeing her no longer indifferent to the claims of Christ, but anxious to yield her heart to his control.

H—— and I were married Sept. 2, 1832, a time of great seriousness throughout the country on account of the ravages of the cholera. Many families had lost friends in the city of New York and it was expected that our town would be made desolate. Prayers were constantly offered by the most devout, that the plague might be stayed. Not a case occurred in our town. I was extremely averse to a gay wedding, and I attempted to follow the injunction of Christ, "When thou makest a feast call not thy rich neighbors &c., but the poor, the maimed, the blind." I therefore, in addition to my near relatives, invited my father's workmen and their families and the poor people of the neighborhood without distinction.

Within three months after our marriage we moved into our new house, and the first night we spent under our own roof the family altar was established, which, to me, was a source of great satisfaction as I had never before enjoyed the privilege of meeting my family friends at the throne of grace. As my husband and I were one in our religious sentiments our marriage proved a happy one.

In 1834—5 another powerful revival visited our town. During the protracted meetings which were held at that time came ministers from abroad, and among them was Rev. James Boyle, of New Haven. His eloquence and fervor attracted eager listeners from far and near, filling the church to its utmost capacity. Indeed, so popular did he become that the people turned out *en masse* to hear the "splendid orator" regardless of pouring rains, and almost impassable roads. Some of the most influential men of the town succumbed to the power of truth; and so great was the excitement that for a while it appeared as though there would not be left an unbeliever in all that region. That revival movement, however, was too sensational to be deep and lasting; and was succeeded by a state of apathy and indifference toward the cause of religion quite unaccountable. H—— and I wondered why this should be so. The conclusion we arrived at was, that the practice of backsliding was not the true gospel standard of a Christian life. We felt a conviction that believers must reach a higher plane, where divisions and backbiting could have no place. Although we strictly conformed to all the religious ordinances required of us—keeping the Sabbath holy, as much after the Mosaic pattern as circumstances and our northern climate would allow—we were far from satisfied with our attainments. The more we strove to obey the law, the broader seemed to be its claims upon us, while we grew more and more dissatisfied with our own state. To force our way heavenward, by our own will-works, under the lash of legalism, was to attempt the impossible. But that was just what we were trying to do under the preaching of such divines as Dr. Taylor, the leader of New Haven Theology. He and his school of divines proclaimed that man was able to keep the law, else it would not be required of him. "For without holiness no man shall see the Lord." But they did not tell us how we were to get the disposition to make that attainment.

At this point in our experience a good providence came to our aid, although disguised in the form of an affliction. The health of H—— failed him to a degree that required cessation from physical labor. Accepting this situation as of God's appointment, he applied himself with much enthusiasm to the study of the New Testament, laying aside commentaries and musty sermons as hindrances, rather than aids to the understanding of the simple words of the apostolic record. While thus engaged in listening to Paul, instead of Dr. Taylor, a report came to us that a new sect had arisen in New Haven who believed in the possibility of attaining *present, perfect holiness.*

E.

REVIVAL RECOLLECTIONS.

VIII.

ALTHOUGH these last revivals partook largely of the progressive spirit of the age, the doctrine of Salvation from Sin was never mentioned. There was nothing in the doctrines of the church or in the teaching at the Seminary to excite the fears of the most conservative. Miss Buckly was the first who directed my attention to the doctrine of Salvation from Sin. Her honest, earnest piety commanded respect. She was a privileged character at the Seminary, and was allowed to call at the room of any person whenever she desired. Heart met heart when she and I were together. We were both radical abolitionists, both teachers in the African Sunday-school and also tract distributers in the same district. So close was our intimacy that the people of the village sometimes called us David and Jonathan.

Miss B. had formed the acquaintance of the Rev. Ovid Miner, a minister then preaching in Penn Yan, and had received from him a number of the *Oberlin Evangelist*. We were interested in the doctrine of holiness described in that paper, but the rendering there given of the Bible was so different from the early religious instruction I had received that I felt cautious about receiving it. Subsequently I married Mr. B., a man with two children. He was an Oberlin believer, and when I presented my old school-arguments to him, instead of replying he handed me his Testament in which he had marked every passage that touched on the doctrine of holiness or perfection. His marking commenced in the first chapter of Matthew, at the verse, "And thou shalt call his name Jesus, for he shall save his people from their sins." He wished me to take time and explain each passage to him as I went along. I read and reflected without attempting any explanation. When I had finished the examination I was convinced of the truth that a perfect life, through Christ, was what was required of me. Miss Buckly came and spent several weeks with me, and never did theological

students enter on the study of theology with greater earnestness, than did we upon the investigation of the writings published in Oberlin. Miss B. subsequently married Rev. Henry Peck who was then preaching in Rochester, and was afterward Prof. Peck of Oberlin College.

About this time a new minister came to Bloomfield, a neighboring town, who had been educated at Oberlin and whose wife was a daughter of one of the pioneers of that school. He was an intellectual man, and preached the doctrine of holiness with great plainness. His easy manner in the pulpit and in conversation had power to attract and hold the attention. Action was his watchword. He drew most of the congregation into the Sabbath-schools. A Bible class of about twenty-four young men from eighteen to twenty-five years old was placed in my charge. A revival commenced in the school and after two or three conversions, meetings were held every evening for several weeks. We lived close by the church and our parlor was filled with seats for the inquiry meetings which were frequently held there both before and after the evening services. In these inquiry meetings the "sinner" was urged to make some direct effort for his conversion (a manner quite new to me), and when that effort was put forth, he was taught to consider himself converted. About half of my class were numbered among the converts. All who were not in the habit of using tobacco in some form professed a change of heart. Although some of these young men are now members of the church, I wish I could recall one whose life is a living witness to the truth of the doctrine that the "blood of Christ cleanseth from all sin;" but I cannot.

The doctrine of holiness and other circumstances had so unsettled my mind that I did not realize that satisfying peace which I had felt in former revivals. I was like a broken branch without aim or rest. C. B. B.

TIRZAH C. MILLER, EDITRESS.

MONDAY, APRIL 21, 1873.

"INNOCENCE OF NATURE."

IN our pursuit of the growing theory that parasitic life is the cause of nearly all diseases, let us not fall into contracted notions of the nature of that life and of the kingdom to which it belongs. We are liable to think of parasites as consisting chiefly or altogether of minute insects and fungi, microscopic forms of life, animal and vegetable, which prey on other life. Whereas the tremendous and almost overwhelming truth is that *all irresponsible life is predaceous*, and thus essentially parasitic. To state the fact more definitely, all life that builds itself up by eating, or other like methods of appropriation, and that has not intelligence to give it conscience and enable it to reason on the rights of other beings, is, by its very nature a beast of prey ready for remorseless plunder and slaughter. We need not make any distinction between the different grades and species of animals as though there were moral differences between them in this respect. It is true that some have more natural appetite for flesh than others, but all seek their prey with the same selfishness. The cow ravages your corn-fields as remorselessly as the crow or the cut-worm. The "innocent" dove and the "pretty" squirrel have no more conscience in your wheat-fields and granaries than their smaller brethren of the insect tribes. The "darling" robin plunders omnivorously, and is just as "innocent" when he strips your cherry-trees, which you cherish, as when he gobbles up the insects which you hate.

A general survey of the animal kingdom leads to the conclusion that the supreme law of that kingdom is that *the strong shall eat the weak.* And that law is so unconditional that in many cases it pays no respect to the claims of relationship or species. The pickerel and the hog eat their own young as readily as those of another race. This law of subsistence by slaughter graduated according to ability, may be traced through long series and circles in a thousand examples. The frog eats the insect; the pickerel eats the frog; the large pickerel eats the small pickerel; the man eats them both; and finally the worms eat the man, and so begins a new circle. In general, fishes devour one another without regard to any consideration except the ability to swallow. Large birds eat small birds; small birds live on insects, and insects revenge themselves on man and beast by devouring every green thing. The feline and canine races of animals slaughter the herbivora without mercy; and the herbivora take the life that is weaker than their own, viz., that of vegetables, with the same recklessness of all but their own appetite and power. Indeed the herbivora, innocent of blood as they may seem, are as ready, under certain circumstances, for slaughter as for plunder. Place a bunch of hay before a herd of hungry cattle and they will hook to the death till they have proved by trial of battle which has the might that gives right. And the strong yield not a whit of their right to ravage, to save their own race or all other races from starvation. The male rabbit, herbivorous and gentle as it is by reputation, devours its own young with the gusto of a cannibal.

Hovering over, enveloping and penetrating the whole of this vast arena of mutual slaughter are the vermin of the microscopic world, whose ravages we are just beginning to understand and trace in various forms of disease.

Seemingly the weakest of all animals, these diminutive guerrillas of the great life-battle are really the strongest of all the tribes that live by prey. It is not bulk that is the measure of power in the hostilities of the animal world. In a thousand cases we see this rule reversed. The crow chases the hawk, the king-bird chases the crow, and it is said that the phebe chases the king-bird, and the wren chases the phebe. While birds exterminate the larger classes of insects, they are themselves persecuted by the smaller. Probably among all the visible predaceous tribes, lice occupy the widest field, infesting and destroying the whole range of beasts, birds, and insects larger than themselves. In all these cases mobility and concealability, instead of bulk, are the measures of power; and these qualities increase as size diminishes. The principle of the homeopathists that infinitesimals are the strongest because they approach nearest to the penetrative mobility of spirits, is certainly true in the conflicts of the predaceous world. And from this principle it might have been presumed, before the microscope was brought to bear on physiology, that most of the ills that all flesh is heir to, are the works of atmospheric animalcules.

This view of the universal parasitism of the animal world, while it may lower our estimation of the innocence and loveliness of certain favorite tribes, will on the whole dispose us to at least a relative sort of charity toward the vast hordes which we have been accustomed to hate as specially predaceous. The truth is that the fever animalcule and the louse get their living as honestly, and fulfill their destiny as faithfully, and deserve as much approbation as the robin and the cat. ANTI-PAN.

Loving a woman to death is thought to be a very pretty expression for a very innocent thing. They don't think so in Utopia. A man who did such a thing there was called a parasite, and was imprisoned for twenty years as a homicide.—*Diggs.*

COMMUNITY JOURNAL.

ONEIDA.

—The spring of the year brings not only the house-cleaning campaign which lasts about a month, employing seven or eight hired persons, but it also brings a time of outdoor bees for restoring order and neatness to the lawns, walks, and premises immediately surrounding our buildings. The scrupulosity of the Community in respect to outdoor tidiness is inevitably somewhat relaxed during the winter, and there is freedom then to throw the refuse of nuts, oranges, apples etc., from the doors and windows. This winter indulgence does not offend any eye while the snow lasts, for our little delinquencies are covered then with a most charitable mantle. But April showers and sunshine have removed the mantle and our untidiness stares us in the face everywhere. As a consequence systematic raids on litter are imminent and threatening. The foremen of the different business departments are put under pressure to see that their premises are properly "tidied up," and the Community is going into a committee of the whole to arrest and put in durance whatever is lying around in a way to offend any one of the five senses. We live so much under the eye of the public that we are under a constant stimulus to set a good example of order and neatness; but without any reference to this, our own self-respect and a sense of what is due to civilization prompt us to make our outward surroundings as far as possible a reflex of our inward life.

—A woman of respectable appearance, somewhat past middle age, called on us one day last week to get us to purchase embroidery patterns. These consisted of a great variety, and there were many elegant designs. She urged that "embroidery was such a nice way for young girls to spend their spare moments." We told her that we have many ways for employing young people which we like much better, and that ornamentation is quite a subordinate thing with us. Making these patterns is her main dependence for subsistence, and she says she always finds a great demand for her work in the villages. Her home is in Saratoga, but she spends most of the time in traveling. Her story was quite a sad one. She had when young married a man who had a name for virtue and integrity. She soon found that he was shiftless and selfish, and wholly incapable of supporting a family. But she was tied to him, and realized to the utmost the bitterness of her bondage. The support of the six children that were born to them devolved upon her; the husband, instead of helping, proved an additional burden. They have always been poor; several times fire has visited them and burned what little they had accumulated. One by one the children died, until only a daughter remains. This daughter has a taste for needlework and assists her mother in the family support. We were shown an elaborately embroidered garment, the work of her fingers. The husband generally accompanies them on their travels, but takes no responsibility whatever for the pecuniary interests of the family.

—On Friday, the 11th, six of the young men went to Oneida Lake on a fishing-excursion, and returned Monday evening with a long string of pike and perch weighing nearly a hundred and fifty pounds. Their good luck is partly due to the kindness of a fisherman who had eighty-six lines set, and being obliged to leave for a few days, offered our boys the use of them. This was a great favor, as in order to fish at all, it is necessary to cut holes through the ice, which is very thick. But all they had to do was to make good use of the fisherman's tackle, and their success was complete. They report that the Lake has risen higher this spring than any previous time for fifty years. The water stands within ten feet of our house (Joppa), and sets back to the Fish Creek station, a distance of a mile, making very good boating. One incident of their jaunt deserves to be reported. The first day they were there, they noticed a ground-squirrel or chipmunk within a few feet of the house, looking very much as if it would like to be invited to come in. Cornelius (our taxidermist), who happened to be in the company, viewed the little creature with a coveteous eye, and resolved to make a captive of it. He found no difficulty in catching it in his hand, as it seemed quite willing to be caught, and placed it for the night in a perforated pail which he covered with a cloth. The next morning it gnawed a hole in the cloth and put its head through as if to take a survey of the situation, and finally ventured to come out into the room where it played about like a kitten. It showed no fear at the presence of so many strangers, and what surprised them more, it seemed not at all anxious to escape. So they let it run at large about the house. It ate the crumbs given it with avidity. At night C. gave it the whole of a Graham biscuit and was amused at its manner of disposing of the food. Seizing the morsel offered it and filling its cheeks it scampered off into the bedroom, and then returned for more. He thought nothing of the occurrence, however, until bedtime, when he noticed the tumbled appearance of his bed; in spreading it into shape, he turned down the coverlet and lo! all in a heap and lying in the very center of the bed, were five little newly born chipmunks! A sight to appeal to the sympathies of a taxidermist, truly! So the strange behavior of the little creature that had sought refuge with them, was explained. It is needless to say that mother and children were carefully treated, and are at the present time faring well under the care of Cornelius.

—We have just emerged from a winter that will be long remembered on this continent. We have had one hundred and twenty-three days of sleighing, and although during the first half of the time Æolus held the reins pretty tightly, he let go altother the rest of the way, for it has been one incessant whirl ever since from east to west and back again, almost within the twenty-four hours. Equally surprising has been the "get up" of a snow-storm. There was no telling whence it came. Then again, the mercury followed suit and dodged in like fashion from 20° below zero to 47° above, scoring the while at different times 17, 14, 11 and 10° below zero, the last figure being repeated frequently up to the second week in March and in almost every case accompanied by high wind. There has been some compensation however in point of sunshine. In all there have been thirty-three days in the four months, without a cloud, and a large number of such as might be called cheery. As a general thing, the colder the season the brighter the skies—and the increase of our winter sunshine for a number of years has steadily kept pace with the decrease of temperature.

THE VILLA.

April 16th.—Yesterday at sundown the last "water-logged" remnant of ice in the pond cast its moorings from the eastern side and floated toward the center. To-day we see no ice; and the pond is one big, rippling, sunshiny smile.

—As a variation of our favorite game of "Proverbs," described in a Villa journal some weeks ago, we were called upon last evening to guess the Anglo-Saxon of some "Pristine Proverbs, prepared for precocious pupils." Here are a few specimens:

"Cryptogamous concretion never grows
On mineral fragments that decline repose."

"Decortications of the golden grain
Are set to allure the aged fowl in vain."

"Whilst self-inspection it neglects,
Nor its own foul condition sees,
The kettle to the pot objects
Its sordid superficies."

"Bear not to yon famed city upon Tyne
The carbonaceous product of the mine."

"The earliest winged songster soonest sees,
And first appropriates the annelides."

This reminded G. of one of Willis Gaylord Clarke's proverbs:

"That culinary utensil which is subjected to constant ocular inspection is never known to perform the process of vaporous ebulition."

But the climax of the absurd was in Mr. I.'s recital of the way in which some overwise gentleman asked for the candle-snuffer:

"Will you be so polite, madam, as to extend to me those ignipotent digests, that I may defalcate the excrescence of this cylindrical, nocturnal luminary?"

JOTTINGS AT THE CRITICISM CLUB.

VI.

C—— has the pride of oddity—a special fondness for differing from others It has been bred into him, and shows itself on all occasions, particularly in efforts to excel in daring, reckless exploits. This is a fault everywhere cultivated in young people. They think to please by doing things that excite fear as well as surprise. They do not please in that way those whom they should care most about pleasing. Possibly C—— may in his exploits seek to please by variety; but he is at least in danger of forming bad habits—such as will make him an "odd stick" in society. Father Richards used to say of B. that he had every kind of sense but common sense. I should advise C—— to get in love with common sense. If you find that people around you generally think thus and so, count it all the better for that, and adopt the same thought if you can conscientiously, and not from the pride or habit of oddity take the unpopular side of questions. By common sense is meant the sense of people in general. Having established himself in common sense—that is, in sympathy with those around him on all sorts of subjects—then it will answer better for C—— to indulge in occasional oddities; but there should be first a basis of sympathy and unity.

We know when the Lord is pleased with us and when we dwell in the sunshine of his presence, and we know too what it is to grope along in the devil's eclipse. In the one case wind and tide are in our favor, and we glide along smoothly and easily, and good luck crowns all our efforts; in the other case wind and tide are against us, and nothing goes well with us. Knowing these things and knowing also that criticism—self-judgment and the sincerity of others—can keep us out of bad experience and improve the good, we shall be sure to make use of it from time to time to avoid the devil's eclipse and keep in the Lord's sunshine. We shall see that the inducements are all in favor of criticism—even the whole tendency to pleasure-seeking; for having once felt the joy of the Lord's sunshine, what pleasure can with it compare? What inducement shall be strong enough to make us walk in darkness? Balaam said to Balak, "If thou shouldst give me thy house full of silver and gold, I could not go beyond the commandment of the Lord." And so we may say, A house full of gold and silver would be no inducement to submit to the murky influences of evil. We know what the gall and wormwood are. We know the difference between good and evil, and know how to expel evil and attract good. The whole secret is to "walk in the light," and this is what criticism enables us to do.

R—— is so full of business that he does not attend to the spiritual world; he does not have any regular time for practice in spiritual music. We ought not to expect to become proficient in spiritual music without thorough drill and practice any more than we should to become creditable performers on the violin or piano without having expended a great deal of time and labor. The musicians cannot hope to get along well in the orchestra unless they take their regular hour for practice; neither shall we get along well in the heavenly band if we are not faithful to our regular hour for spiritual practice. The great need among us is a system of shutting ourselves up daily for the purpose of solitary reflection and seeking the Lord in prayer—an hour for practice in spiritual harmony. Somebody must take time to do a great deal of this labor in order that the family may be kept in a healthy condition. There must be just so much of this work done, and people can take their choice; they can go to God for themselves and keep up a system of sincere self-examination and criticism or they can neglect this work and take their share of it in the form of criticism from others. Self-criticism and criticism from others stand in the relation of equivalents. Just in proportion as we take time to improve ourselves by spiritual labor we render criticism from our associates unnecessary. People can judge for themselves which is the more comfortable way. We ought to establish as an institution among us the the daily practice of setting apart an hour for secret prayer, for seeking spiritual fellowship with and knowledge of God. In the long run we shall find that the best thing we can do for all our other interests will be for us to resolve that we will be faithful to our hour for spiritual practice and that we will not for any consideration allow our spiritual fingers to become numb or stiffened so that we shall not be able to make harmony with the heavenly band.

SAWS NOT NEEDLES.

DEAR CIRCULAR:—I see by your last issue that Mr. Colin Campbell, "a jolly Scotchman," proposes to teach Communism in connection with the practice of tailoring! Now what, in the name of all Communistic tradition, has tailoring to do with the beginnings of Communism? Any one can see by reading the pages of "American Socialisms," that not a tailor's shop but a *saw-mill* has from the days of Owen and Fourier, been the inevitable forerunner and accompaniment of all social harmony. Doth not ye author of "American Socialisms" say on ye 19th page of his History:

"It is really ludicrous to see how uniformly an old saw-mill turns up in connection with each Association, and how zealously the brethren made much of it"?

Almost none of the Communities, Phalanxes and Associations, were so poor as to be without a saw-mill, and some of them had two! We confess that we have never been able to see the intrinsic connection between Communism and saw-mills; it is one of those inscrutable things apparently past finding out, but however recondite it may

be, the facts of American Socialism show that it unquestionably exists. The O. C. began with a saw-mill. In view of these hard facts would not Mr. Campbell do well to shut up his tailor's shop and open a saw-mill? He could then add to his

"Proclamation!

Christian Communism taught in short and easy lessons,"

this further inducement:

"It has been shown that saw-mills are the peculiar industrial stepping-stones to Communism. All persons taking lessons in Communism of the undersigned will be entitled to gratuitous instruction in the management of saw-mills."

This is only a "bee for the 'jolly Scotchman's' bonnet." SAW-HORSE.

A FOREST TALE.

BY JOHN PARKER HUTCHINS.

'Twas once beside a forest lake,
In golden autumn fair,
I met a lonely woodsman old,
By chance most strange and rare.

His face was marked by time's rough hand,
His garb was quaint and wild;
But snowy locks and soft blue eyes
Bespoke a heart more mild.

His coat was once the prowling wolf's,
His cap by otter borne,
And on his legs he wore the garb
That once the moose had worn.

I scarce knew how to speak to one
So old and yet so queer;
But said that "I, if not too bold,
Would ask, why art thou here?"

"Bold sir, these forest ways are rough,
Thou seemest old and lame,
Thy days should end amongst thy friends;
Leave youth to chase the game."

"Not yet too old, my boy," said he,
"To love to chase the game;
Come sit thee, lad, beneath this pine,
I'll tell thee why I'm lame.

"Dost thou not hear that river roar,
That torrent fierce and strong?
On slimy rock amid its foam,
I stood one dark night long.

"Aye! dark as death, although the moon
Lit up the dancing flood;
The darkness reigned within my soul;
I felt the hand of God.

"'Tis long time since that fearful night.
E'en now," he said with sigh,
"I seem to feel that cold, cold flood,
And hear the night-bird's cry."

He ceased, and bent his ear as if
To catch that river's roar,
While softly sobbed the rippling lake
Against its rocky shore.

And then the whispering pine-trees told
Of lands for him more fair,
And through their boughs a sun-beam stole
And lit his silver'd hair.

"O, tell me all thy wondrous tale,
Thou aged Nimrod bold!
And let me sit beneath this pine
Till all the tale be told."

"Then hark thee, lad! 'Twas on these shores,
Before that thou wert born,
I chased the stag and panther fierce,
And blew the huntsman's horn.

"Among the lairs of savage beasts
With lordly step I trod;
Almost forgot my fellow-men,
And quite forgot my God.

"A comrade, shared my camp-fire then—
A strong youth brave of heart—
I loved him with a woman's love
And thought we ne'er could part.

"I feared not either man or brute;
Or storms or foaming tide,
Whene'er that fair-haired, noble youth
Stood proudly at my side.

"O'er mountain hights, on forest lakes,
Together we did roam,
While rung his laugh 'gainst rock-bound shore,
And songs of forest home.

"We camped one still September night
On yonder mountain side,
And heard that river's muffled roar
Like ocean's swelling tide.

"The screech-owl kept his cave that night,
The moon ran full and high;
But by the lofty pine-trees' moan
We knew a storm was nigh.

"Well worn with toil and heavy chase,
Soon on the boughs we lay;
And soundly slept where 'neath the pines
'Tis said that wood-nymphs play.

"The woodsman worn sleeps calmly on,
Nor dreams of weal or harm.
The satyr's dance, or siren's song
Has not for him a charm.

"When midnight came I heard a cry
From out that roaring tide.
Three times it came, and, strange to tell,
Methought my comrade cried!

"I quickly rose and stirred the blaze
That lit his noble face,
And saw him lie as sweetly calm
As infant in his place.

"I doubting said, I heard no cry:
'Twas but the night-bird's scream,
Or weariness from heavy toil
Had caused a restless dream.

"Again on boughs I lay my limbs
With heavy troubled sigh,
But ere I closed mine eyes in sleep,
I heard again that cry,

"A piercing, long, heart-rending cry
That woke the forest deep
And caused a chill within my veins
That drove away my sleep.

"Again I rose with trembling pulse,
And, mid the shades of night,
I saw a bright and airy form
Beneath the moon's pale light.

"That form so like an angel bright
Did quickly pass away;
And then I heard my comrade sigh
As on the boughs he lay.

"My soul was so with wonder wrought,
No more that night I slept;
But while my comrade softly dreamed,
A restless watch I kept.

"When morning came with forest gloom
And heavy, lowering sky;
The restless stag-hound's anxious bay
Told us that game was nigh.

"'Let loose the dogs!' my comrade cried,
'The bear will seek the plain!
We'll shoot him on the river's brink
And cross to camp Morain!'

"The bear had passed the camp that night,
A savage brute was he;
So fierce he fought the fiery hounds,
'Twas shocking sight to see.

"The chase waxed hot throughout the day,
The heavy rain fell fast,
A cold wind swept through mountain-gorge
In one unceasing blast.

"At times we heard the baying hounds
Above the storm-god's wail;
But more we searched the dripping earth,
To find the bloody trail.

"At last we reached the river's bank,
Well nigh the close of day;
And o'er the stream, 'mong ragged pines
The bear was brought to bay.

"The stag-hounds screamed, the river roared,
Such din was never heard;
And o'er our heads, the raven soared,
That dark, ill-omened bird.

"To cross the stream we hastened now
Before the day was o'er;
Of cedar trees we made a raft
And shoved ourselves from shore.

But lo! the swollen, maddened stream
Did all our efforts mock,
And down its course the raft was hurled
Upon a hidden rock.

"The raft at once, to pieces went,
So fearful was the shock!
And in the foam my comrade fell,
While I clung to a rock.

"He sank beneath that seething flood,
Like snow-flake in the tide.
Oh, God! it dashed him o'er the falls!
'I'm lost! I'm lost!' he cried.

"That awful cry, it pierced my soul!
'Tis done! My God! My God!
My comrade! Oh! my comrade lost!
Take me, O cruel flood!

"I thought I could but say my prayers,
Ere I with him should sleep;
The hungry waters, o'er the rock,
Half to my knees did sweep.

"But night came on, the fierce storm ceased,
The moon shone full and bright,
And praying for my wretched soul
I spent that awful night.

"For nine long hours that angry flood
Discoursed to me of Death.
On rushing wave I saw him dance
And felt his icy breath.

"Sometimes a sleep like that of death
Would steal across my brain;
And then as oft that piercing cry
Would rouse me up again.

"'Twas like the cry I heard in camp,
And o'er and o'er again,
The fearful bodings of that night
Rushed through my reeling brain.

"I scarce remember all that passed,
For life was spent well nigh;
But think the Lord, to whom I prayed,
Did hear my wretched cry.

"I saw a form—that angel form—
Above the mad waves float;
He spurned the tide like thing of light,
And pulled me 'board his boat.

"I heard these words, and knew no more;
Perhaps they were my own;
But more, I think the angel said:
'Wilt worship God alone?'

"Alone, in camp, I next awoke,
And in that same sweet tone,
Methought the Angel whispered still,
Wilt worship God alone?

"'I will, O God!' I crying said,
'Nor stray from thee again;'
Then sought a home among my kind,
And loved like other men."

The old man paused, as if in thought,
And bowed his snowy head;
But when he saw me listening still,
This more he also said:

"To crown my home I had a son;
A smiling, happy boy,
And blessings more, a hundred-fold,
O'erran my cup of joy.

"But still," he said, "I tell thee, boy,
In golden autumn fair,

I love to don this garb of old
And breathe the forest air.

"It stirs my blood, and nerves my limbs
To hear the stag-hound bark,
And when the deer is brought to bay,
To sound the horn—But hark!"

The old man's ear had caught the bay
Of hounds on yonder shore.
Mid golden leaves he stole away;
I saw him never more.

A LEATHERY CONFAB.

ONE of the minor questions not yet satisfactorily solved by our heads came up for some good-natured remarks in our meeting a few evenings since. It was: "What shall we do with our old boots and shoes and rubbers and hats and bonnets when they become unfit for use?" The women who do the sweeping, mopping and arranging of the house, do not like to have them left here and there to be moved every morning. The farmers request that old shoes and rubbers shall not be flung on their territory, for they are perennial. Plow them under, they soon crop out somewhere else; once sown you are never rid of them. Old rubber can be sold for two cents per pound. The general verdict on old leather was —burn it.

Retiring soon after this discussion, the visions of my head were rather peculiar and somewhat as follows: Wishing to hang something on a line that stretches across one of the back rooms I opened the door and saw a circle ot chairs extending round the apartment; immediately in tront of each an old cast-off pair of boots, shoes or rubbers, and above each chair a dilapidated hat or bonnet. These latter had no apparent support but occupied much the same position as if resting on the heads of people whose feet should have been in the shoes. Much wondering at the sight and not a little curious I was about to call some one to explain, when I was stopped by seeing a large pair of rubber boots, shaded by a wide brimmed hat some six feet above them, step toward the center of the room and address the audience. Sheer astonishment prevented my hearing the entire speech, but it was delivered with vehemence, the hat making many emphatic and impressive nods, suggesting to my bewildered mind that the arms, situated somewhere between the hat and boots though invisible, were also making appropriate gesticulations. The substance of his remarks (I should say *their* remarks) was that the meeting had been called to exhort the boots and shoes fraternally to rise as one boot and defend themselves against the abuses of mankind; they had been misused, trodden under foot, and kicked about long enough. He took his seat (that is, the boots resumed their former position in front of the chair) amidst general applause.

Immediately a short, much worn, extremely wrinkled, and very heavy pair of leather boots took a central stand and said, "I was owned by a brisk but careless-stepping young man, and my life was really knocked out of me by being so continually thrust against every stick, or stone or other obstacle in his way. You have but to look at the risers of any flight of stairs and you will see how constantly I was snubbed by him. Now I'm to be thrown one side or burned. Is this not too much? Are we to wear out our very soles for these men to be repaid like this?"

The applauditory agitation was great and followed by complaint from a warped, unshapely pair of moroccos: "I covered the dainty feet of a thoughtless damsel who forced me into the mud and wet, and then instead of removing the sticky soil from my sides and allowing me to stand in some warm place where I could gradually recover my youthful form and elasticity, I was left in this filthy state till I became stiff and ugly; now she scorns me."

"My sorrows," said a slender pair of men's gaiters, "are not like yours. I was not ruined by cold and wet, but alas! I belonged to a cold-footed student and he must render me worthless by repeatedly scorching me. Had he been merciful enough to have uncased his feet to warm them I might have served him twice the days I did."

A large pair of cowhide brogans said, "I was made exclusively for outdoor wear and hard service. My owner always obliged me to go thundering about with elephantine tread into evening assemblies, by the doors of invalids, among slumbering infants, carrying distress to the nerves of people wherever I went. At last he caused me to become such a general nuisance, that I was discarded."

A rusty velvet slipper feelingly remarked, "I was made on purpose for the service you were obliged to render; I served a little while and was flung one side because the shoemaker gave my owner such fits."

The next speaker said, "I endeavored to make my wearer understand the heavy trials of my lot, but the great weight I supported made my voice quite unmelodious and only elicited from her the caustic remark, 'They are horrid, squeaky old things.'"

Before this speaker could say more a pair of high-laced boots stepped forth, looking as greasy as the Rev. Chadband, and explained, "'Twas squeak that brought my fate to me. A blithe young lass said, 'I'll cure you of this.' So, unmindful of her philosophy, she put me in a pan and poured some foul smelling oil into it, to such a depth as just to cover the bottom of the pan. Here she left me, thinking, I suppose that if a little of a thing was good, a great deal of it would be better. Alack! Why should there exist an attraction between liquids and the surfaces of solids? Who should stay it? I felt the oil obeying this attraction, creeping up my sides, penetrating and permeating my entire being. When she found me so saturated she subjected me to the most rigorous measures. I was made to stand near a stove, to hang in the sun; I underwent rubbing with old rags and other distasteful processes. At length she pulled me on one morning over a pair of clean white stockings, with the least bit spiteful ejaculation, 'I guess you won't squeak now.' I didn't; but the oily cure was worse than the original sin —it exuded from every pore, and like the Wandering Jew, she left the imprint of her shoe wherever she went. It would not do, I was spoiling every stocking belonging to this Miss, to say nothing of the disaster I brought to carpets and nice floors. I was cast out drippingly forlorn. I still retain more than my share of oil finish."

The first speaker, the big rubber boots, again strode forward, saying that the meeting was already rather long; the hats and bonnets had had no chance to speak of their troubles; "but," added he, "are we not ready to adopt some protective measures? Shall we not resolve"——a cry from a baby in the other bed suddenly woke me. ASH.

At a late meeting of the Pig Iron Manufacturers Association in New York 31 companies were represented. From the Secretary's report it was shown that 2,388,250 tons of iron were made in 1872, divided as follows: Anthracite, 1,197,010; Raw bituminous and coke, 912,500; Charcoal, 478,500. During the year 109 furnaces were built and 30 projected; 42 rolling mills were built and 11 projected—a total of 192 new establishments. This probably does not include all. It is estimated that the country last year used in castings 1,103,000 tons; in railroad supplies 2,478,500 tons, and in other wrought iron products 730,000 tons. Total, 4,311,500 tons. Five Bessemer works are in operation, and they used in 1872 125,362 tons of pig. The Bessemer rail production was about 90,000 tons. At least four new establishments are projected. The report, says the *Mining and Engineering Journal*, "while exhibiting a most flattering picture of our progress toward supplying our own iron, is still more encouraging in the proof it gives that the very large extension of our productive power within late years has not only not overdone the market, but has fallen very far short of answering the needs of the country."

Mr. Lindslay, of Jackson, Tennessee, an old telegraphic operator, has invented a printing telegraph instrument, for which a patent has been issued recently. In order to give it a fair test Mr. C. C. Partee, of Memphis, has taken steps to aid the inventor by organizing a company with a capital stock of $150,000 subscribed, and which Mr. Partee succeeded in getting without delay. Applications for more stock have been refused, because the amount subscribed is large enough to introduce the new instruments, and to demonstrate the utility and economy of using them. Telegraphic operators who have seen and examined the Lindslay instrument are convinced that it will displace the present system, and work a complete revolution in the transmission of despatches and in the reduction of telegraphic tolls. The instrument can be worked by any person who has two hands, and who can read and write, and a day's instruction will make them good operators. The inventor is preparing to make tests of the machine, in short and long circuits, and the results will be made known to the public telegraph companies and to the Government.—*American Artisan.*

THE FIRE-DANGER IN NEW YORK.

"A well known citizen of New York now traveling in Italy, and whose opinions are deserving of consideration, thus expresses his impressions in a private letter, suggested by the current discussions upon the liability of New York to a disaster like that which has befallen Boston:

One word about fires in New York. It would not surprise me any day to hear that New York city was utterly destroyed, burnt up from the Battery to Central Park; it might happen any day that a strong wind prevails from the south: there is nothing to prevent it—everything to provoke it; the buildings are combustible to the last degree. Now, just look for one moment at Paris; there is a superbly built city; in order to burn a building there they were obliged to fire it in every apartment and then it would not burn; not a soul dared interfere to put out the fire; not a drop of water used; the fire would not spread. In forty places you see where the Commune, with the aid of petroleum and all sorts of combustibles could not make it burn. Even the Bible says: "Where no wood is the fire goeth out." The "Mansard roof" and all that twaddle is all in your eye. "Wisdom crieth aloud in the streets and no man regardeth her." If stores and buildings for dwellings are well built you cannot burn them; it is the cheapest in the end to build well, but

"He builds too low, that builds beneath the skies."

Send a committee of honest men to Paris to study "fire-proof." Let 'em look over the Hotel de Ville, the Palace of the Tuileries—and all, every one of the stores and dwellings that those devils attempted to burn, and let them report, and then have a law, as the French have, that every building shall be constructed upon that of fire-proof plan. Then begin at the Battery, tear down and put up anew—it will cost something, but it will be the cheapest in the end. Wind up all your insurance companies, and let them go to grass; be wise, and defy the foul fiend, not go right on in security and be caught napping again, again, and again."

—*Albany Times.*

CORRESPONDENCE.

Fontana, Kans., April 8, 1873.

DEAR CIRCULAR:—I am pleased to learn that the project of "a daily paper for the heart" is assuming proportions which leave no doubt in my mind that the realization of G. W. N.'s prophecy is not far distant. I have but "two mites," but I

want to cast them into your treasury for the benefit of that project. When I wrote you last, saying that whatever of temporal goods I should be blessed with in future above my family's wants should be yours for the publication of a free gospel, I gave expression to what seemed then a sudden impulse of the heart; but since that time I have had a constant assurance that God would bless the labor of my hands. And looking over the past with its misfortunes and losses it seems to me that I have had no settled object in life worthy of being blessed. and hence all the property I had accumulated was taken from me. But in consecrating myself unreservedly and entirely to the service of God I am assured that those who are dependent on me for support will be cared for while under my protection whether they are willing to serve God or not; and hence I look to him for guidance, protection and a plentiful supply, that I may have at least "one mite" left for the Lord's treasury. I am tired of seeing all the devil's doings reported, while the deeds of the Spirit of Truth are not reported. God is at work everywhere and Satan only where he gets a chance; but Satan's reporters write for nearly all the papers in the land while truth is "crushed to the earth" for want of utterance. It seems to me that I certainly must be one of the "least of them that are the Lord's alone;" but it is so much comfort to feel that I am working for the Lord every day in the week and to know that he assists and directs even in those little things which so often perplex the mind and weary the body, that I want to say to every one I meet or whom I can reach by means of the pen, "If you would be happy, 'trust in the Lord.'" E. Y.

FIELD-MICE.

PASSING over meadows and through orchards and groves of timber this spring, and observing the amount of damage done by the field- or meadow-mouse, I was led to ask the question: Where did these mischievous quadrupeds come from in such numbers as their work of destruction indicates? Last fall I had little suspicion of their presence. Not only have many valuable trees fallen a prey to their voracity, but the meadows and grass lands generally seem to have suffered severely from their ravages, especially where the snow covered the ground to a considerable depth. Even the grounds bordering on the swamps and woodlands have not escaped these depredators as their numerous paths and burrows testify. The practice of banking fruit-trees with earth late in the fall usually proves a protection against barking by mice; but in case of deep snows and drifts the method is of little avail, as the animals then finding their way above the mound are still able to perform their work of destruction under cover.

We accidentally stumbled on a plan which may prove a remedy for this evil. Late in the fall and during early winter, having an occasion to thin out an orchard by cutting away a number of trees, we threw the brush in piles and left it on the ground. These brush-heaps doubtless protected the orchard to some extent, as on the side where they lay there were no trees barked, but instead the vermin took to the brush-wood and to the trees on the opposite side of the orchard.

The idea occurs to us that by pruning orchards in the fall, which is doubtless the best time in the whole year, and leaving the trimmings on the ground, we may, in case of deep snow, pretty effectually secure our trees from damage by mice, as they seem to prefer the tender bark of twigs to the coarse rough bark of the trunk. But the question still remains: Where do these mice come from so suddenly and in such numbers? Did they come from other parts, or were they bred on the spot unnoticed? H. T.

AN EPICUREAN'S EVENING SOLILOQUY.

"Day is done brown and set away to cool:
And evening like a salad fresh and moist,
And peppered with her mustered stars, comes on;
The moon, like a large cheese, cut just in half,
Hangs o'er the landscape most invitingly;—
The milky way reveals her silvery stream
'Mid the blanc mange-like clouds that fleck the sky:—
The cattle dun, sleeping in pastures brown,
Show like huge doughnuts in the deepening gloom.
How like a silver salver shines the lake!
While mimic clouds upon its surface move,
Like floating islands in a crystal bowl.
The dews come down to wash the flowers-cups clean,
And night winds follow to wipe them dry."

THE NEWS.

The Pope is sick and supposed to be dying.

President Grant is reported as seriously ill.

Mrs. James Gordon Bennett died recently at Konigstein, Saxony.

The city of San Salvador, Central America has been nearly destroyed by an earthquake and some five hundred persons killed.

Miss S. F. Wilkinson of Bridgeport, Conn. has gained a verdict of $25,000 damages against "Brick Pomeroy" for breach of promise of marriage.

The approach of the Russian troops on Khiva has caused the Khan of that country to change his policy. The Russian prisoners whose imprisonment caused the war, have been set at liberty, and sent to meet the Russian advance.

Charles Francis Adams has received $22,500 in gold as pay for his services as arbitrator for the United States at the Geneva tribunal. He was allowed the same pay per annum that he received as minister to England, with an additional sum of $5,000 for traveling expenses. Considering the high prices that are commonly paid for justice in this world, especially national justice, this is getting off pretty cheaply. Alas! if there were no traitors among us mortals, we should not be compelled to pay the arbitrators.

The American Palestine Exploration Society has reached Syria, under the command of Lieut. Steever United States Cavalry, accompanied by Prof. Paine formerly of Robert's college, Constantinople, and at last advices was fitting out at Beyrout, with a view of taking the field early in March. By an arrangement with the British Palestine Exploration Society the whole country east of the Jordan, embracing the old territories of Moab, Gilead and Bashan, are to be relinquished exclusively to the American Society.

A committee has been formed among the members of the Berlin Geographical Society, and a plan drawn up in connection with the other Geographical Societies of Germany, for the completion from the west coast of Africa of the discoveries begun by Dr. Livingstone from the east. The expedition is to start from the west coast south of the equator. The funds are already partly provided. It is to be hoped that this expedition won't be thwarted by a visitation of the red tape worm, as was the case with the expedition sent by the British Geographical Society for the relief of Dr. Livingstone, and met by Stanley on his return.

Major-General Canby, and the Rev. Dr. Thomas of the Peace Commission, were wantonly and treacherously murdered, by the Modoc Indians while holding a conference. A. B. Meacham, formerly superintendent of Indian affairs for Oregon, and a member of the Peace Commission was also seriously and it is feared fatally wounded. This tragedy ends all efforts for a peaceful arrangement with the Modocs, and General Sherman has telegraphed orders for a most vigorous prosecution of the war against them. Major-Gen. Jefferson C. Davis has been ordered to assume the command of the forces.

ANNOUNCEMENTS.

SILK GOODS.

Machine-Twist and Sewing-Silk of their own manufacture for sale by the Oneida Community.

Address, [S] Oneida Community, *Oneida, N. Y.*

PRESERVED FRUITS AND VEGETABLES

Put up for sale by the Oneida Community in tin and glass. Price list sent on application.

Address, [F] Oneida Community, *Oneida, N. Y.*

STEEL TRAPS.

Eight sizes and kinds, suitable for the House-rat, Musk-rat, Mink, Marten, Fisher, Fox, Otter, Beaver, the Black and Grizzly Bears, are made by the Oneida Community Descriptive price-list sent on application.

Address, [T] Oneida Community, *Oneida, N. Y.*

MACHINE-SHOP AND FOUNDRY.

Improved Lathe-Chucks, Blinn's Patent Gate-Hinges, Machines for Measuring the Length and Testing the Strength of Manufactured Silks, Bobbin-Winders for Sewing-Machines, etc. Agricultural, Machine and Light Castings, on hand or made to order. Descriptive price-list sent on application.

Address, [M] Oneida Community, *Oneida, N. Y.*

THE WALLINGFORD PRINTING COMPANY.

All kinds of Book and Job Printing executed: Manufacturers' Illustrated Catalogues made a specialty: also Bronze and Color Work, and the finer kinds of Card, Circular and Bill-head Printing. Having enlarged its works and added new motive power, this Company is in renewed condition to meet the wants its patrons with promptness and accuracy.

P. O. Address, *Wallingford, Conn.*

PUBLICATIONS.

(Sent from the Office of the Oneida Circular by mail, post-paid, on receipt of price.)

History of American Socialisms. By John Humphrey Noyes. 678 pp. 8vo. J. B. Lippincott & Co., Philadelphia. London, Trubner & Co. Price $3.00.

The Trapper's Guide; a Manual of Instructions for Capturing Fur-bearing Animals. By S. Newhouse. Third edition with New Narratives and Illustrations. 215 pp. 8vo. Price, bound in cloth, $1.50.

Salvation from Sin, the End of Christian Faith; an octavo pamphlet of 48 pages. By J. H. Noyes. Price 25 cents per single copy, or $2.00 per dozen.

Dixon and His Copyists; a Criticism of the Accounts of the Oneida Community in "New America," "Spiritual Wives," and kindred publications. By John Humphrey Noyes. Price 25 cts.

Scientific Propagation. By John Humphrey Noyes. Large octavo pamphlet of 32 pages. Price 25 cts.

Male Continence. By John Humphrey Noyes. An octavo pamphlet of 24 pages. Price 25 cts.

Hand-Book of the Oneida Community; Containing a Brief Sketch of its Present Condition, Internal Economy and Leading Principles. Price 25 cts.

The five pamphlets—"Salvation from Sin," "Dixon and his Copyists," "Hand-Book of the Oneida Community," "Scientific Propagation," and "Male Continence," will be sent to a single address on the receipt of $1.00.

Back Volumes of the Circular. Unbound. Price $2.00 per volume.

Messrs. Trubner & Company, Book-sellers, Paternoster Row, London, have the "History of American Socialisms," the "Trapper's Guide," and the "Hand-Book of the O. C.," for sale. They will receive subscriptions for our other publications.

PHOTOGRAPHIC PICTURES

Of the Oneida Community Buildings and Grounds, made by a first-class artist and finely mounted, can be had on application at the Office of the Oneida Circular.

LARGE VIEWS.

Bird's-eye View, looking West, of Community Buildings and Grounds, 12 by 14 inches, on fine enameled board 16 by 20, price $1.75. Quadrangle and Group, 12 by 14, mounted like the above price $1.75. South and East Fronts of the Community Dwellings, giving a good view of the New Wing occupied by the Children—8 by 10, on tinted board 10 by 12, with an ornamental border price $1.00.

STEREOGRAPHS.

No. 2, East and North Lawns. No. 3, East Lawn and Portico. No. 4, East Front. No. 5, North Front and Lawn. No. 6, Bird's Eye View of Buildings looking West. No. 7, Lawn and Summer House. No. 8, West View, toward Railroad. No. 11, Quadrangle. No. 12, Lawn View. No. 15, South and East Fronts. Price of Stereographs $3.00 per doz. Sent by mail, post-paid, on receipt of price.

Oneida Circular.

A WEEKLY JOURNAL OF HOME, SCIENCE AND GENERAL INTELLIGENCE.

Published by the Oneida & Wallingford Communities.

ONEIDA COMMUNITY, APRIL 28, 1873.

New Series, Vol. X, No. 18
Whole No. 1456.

POST-OFFICE ADDRESS:
ONEIDA CIRCULAR, ONEIDA, N. Y.

TERMS:

The CIRCULAR is sent to all applicants, whether they pay or not. It costs and is worth at least two dollars per volume. Those who want it and ought to have it are divisible into three classes, viz., 1, those who cannot afford to pay two dollars: 2, those who can afford to pay *only* two dollars: and 3, those who can afford to pay *more* than two dollars. The first ought to have it free: the second ought to pay the cost of it; and the third ought to pay enough more than the cost to make up the deficiencies of the first. This is the law of Communism. We have no means of enforcing it, and no wish to do so, except by stating it and leaving it to the good sense of those concerned. We take the risk of offering the CIRCULAR to all without price; but free subscriptions will be received only from persons making application for themselves, either directly or by giving express authority to those who apply for them.

Foreign subscribers, excepting those residing in Canada, must remit with their subscriptions money to prepay the postage.

THE UNITED COMMUNITIES.

ONEIDA COMMUNITY

Is an association living in Lenox, Madison Co., N. Y., four miles south of Oneida and a few rods from the Depot of the Midland Railroad. *Number* of members, 205. *Land*, 654 acres. *Business*, Manufacture of Hardware and Silk goods, Printing the CIRCULAR, Horticulture, &c. *Theology*, Perfectionism. *Sociology*, Bible Communism.

WILLOW-PLACE COMMUNITY.

Branch of O. C., on a detached portion of the domain, about one and one-fourth miles north of O. C. *Number* of members, 19. *Business*, Manufactures.

WALLINGFORD COMMUNITY.

Branch of O. C., at Wallingford, Conn., one mile west of the Hartford and New Haven Railroad. *Number* of members, 45. *Land*, 228 acres. *Business*, Publishing, Job Printing, Manufactures, and Horticulture.

SPECIAL NOTICE.

The O. C. and Branches are not "Free Lovers," in the popular sense of the term. They call their social system BIBLE COMMUNISM or COMPLEX MARRIAGE, and hold to freedom of love only within their own families, subject to Free Criticism and the principles of Male Continence. In respect to permanency, responsibility, and every essential point of difference between marriage and licentiousness, the Oneida Communists stand with marriage. Free Love with them does *not* mean freedom to love to-day and leave to-morrow; nor freedom to take a woman's person and keep their property to themselves; nor freedom to freight a woman with offspring and send her down stream without care or help; nor freedom to beget children and leave them to the street and the poor-house. Their Communities are *families*, as distinctly bounded and separated from promiscuous society as ordinary households. The tie that binds them together is as permanent and sacred, to say the least, as that of marriage, for it is their religion. They receive no new members (except by deception or mistake), who do not give heart and hand to the family interest for life and forever. Community of property extends just as far as freedom of love. Every man's care and every dollar of the common property are pledged for the maintenance and protection of the women and children of the Community.

ADMISSIONS.

These Communities are constantly receiving applications for admission which they have to reject. It is difficult to state in any brief way all their reasons for thus limiting their numbers; but some of them are these: 1. The parent Community at Oneida is full. Its buildings are adapted to a certain number, and it wants no more. 2. The Branch-Communities, though they have not attained the normal size, have as many members as they can well accommodate, and must grow in numbers only as they grow in capital and buildings. 3. The kind of men and women who are likely to make the Communities grow, spiritually and financially, are scarce, and have to be sifted out slowly and cautiously. It should be distinctly understood that these Communities are not asylums for pleasure seekers or persons who merely want a home and a living. They will receive only those who are very much in earnest in religion. They have already done their full share of labor in criticising and working over raw recruits, and intend hereafter to devote themselves to other jobs (a plenty of which they have on hand), receiving only such members as seem likely to help and not hinder their work. As candidates for Communism multiply, it is obvious that they cannot all settle at Oneida and Wallingford. Other Communities must be formed; and the best way for earnest disciples generally is to work and wait, till the Spirit of Pentecost shall come on their neighbors, and give them Communities right where they are.

THE ART OF GLANCING.

Home-Talk by J. H. N.

IN old times when we used to make trap-springs by hand at the forge, there was a great liability to injure the eyes by looking at the bright hot steel under the hammer; and a number of our men had sore eyes. I talked with Mr. Newhouse about the matter one day, and found he had a theory that one who hammers heated steel should not look at it constantly, nor even fix his eye steadily upon it at all; but get in the habit of *glancing* at it. By coquetting with the fiery ingot in that way he got along without having any difficulty with his eyes. I tried the plan, and found there was good, practical philosophy in it.

Since then I have found many ways of applying this glancing philosophy of the old trap-maker to higher matters than hammering steel. For instance: the eyes of the *mind* are liable to get sore by looking too fixedly at subjects that are hot with interest. Even questions of ordinary business sometimes assume a fiery glow that makes continuous attention to them painful and dangerous. Insanity generally comes by too long gazing at some one subject that is absorbing enough to hold and compel thought, till the brain gets sore. The way to keep a healthy mind, in the midst of complicated businesses and mighty issues, is, not to gaze long and fixedly at any one thing, but to do the looking that is indispensable to action, by swift, well-directed glances.

I find too, that it makes my spiritual eyes ache, to pore over the popular newspapers. With their murders and hangings and shipwrecks and car-smashings and man-roastings, they may be said to be all the time in the white heat of hell-fire; and the only safe way for me to go through them, is by skipping-glances; taking whole paragraphs by their first lines, and keeping my eyes puckered to their smallest capacity, to keep the sparks out.

Then again, a man who attempts to keep posted in scientific matters, will find himself dealing with a dazzling, sparkling mass of conjectures and colliding hypotheses, which will worry him into intellectual opthalmia, if he stares long at them. All the old workers in the speculation-shops learn, perforce, the art of glancing and eye-puckering, and those who don't generally go crazy.

Above all, the glancing philosophy is indispensable in the love-business. There is a blinding radiance in magnetic beauty which cannot be stared at steadily without heart-disease. The sexes in their prime are like white-hot steel to each other. Whoever would keep his heart for God and for all, must learn to practice an honest kind of coquetry, which withdraws the gaze before it goes into bondage and idolatry.

In short, we must practice the art of glancing in all our dealings with external objects, if we would keep healthy eyes for things internal and eternal.

It seems to me that in a true system of education, the ability to withdraw the attention will be as important as the ability to fix the attention, and as worthy of systematic training; because the way for us to make the most of ourselves for God, man and the universe, is certainly, to keep our freedom; that is, to save our minds, imaginations, and hearts from all seizure and bondage to specialties. I see plainly that this has been God's way of training me. He has taught me always and thoroughly to coquet with all things below himself. By his grace I am master of the art of glancing. For that, above all things, I am ever thankful.

THE WAY OUT.

A GREAT rift in my life had opened the way for the light of truth to shine through, revealing to me many imperfections in my character. I had been for days in great heaviness on account of manifold temptations. My heart was indeed a battle-ground where the powers of good and evil were waging fierce warfare. "Give up! what is the use of your trying to overcome? Cease all effort and drift with the tide," said the enemy. Yet in the midst of this dire confusion caused by the clatter of my feelings and the cloud of unbelief, I could still hear the voice of God whispering down in my heart: "Fear thou not; for I am with thee; be not dismayed; for I am thy God: I will strengthen thee; yea I will help thee; yea I will uphold thee with the right hand of my righteousness." Thus for a moment my faith would be encouraged until a gleam of light would reveal Christ in me victorious over evil and able to transform me into his own image. Following him as he "run patiently the race that was set before him, enduring the cross and despising the shame" in view of the joy that was awaiting him at the right hand of God, I would catch a glimpse of him, not only as the author, but as the *finisher* of my faith. Still the enemy would come upon me like a flood until the Lord would again provide a way of escape, which he did at one time very effectually by throwing in my way just at the right moment an old tablet containing a few brief extracts from the writings of one whose words have so many times come to me as the voice of God, that I am fast learning to receive them, with the same unquestioning faith that I have learned to receive the Bible. Trusting that these extracts will be a help to others

suffering from like temptations I will give them entire:

"CHRIST is able to fertilize us with goodness and truth, and to protect us from being infected with the poisonous influences of unbelief. He is not only a 'glory in the midst,' but a 'wall of fire round about,' to those who receive him. His spirit will disperse, and precipitate, and consume the infusions of Satan, and close up our susceptibilities to evil, by taking possession of them, and filling them with good.

"The subtle messengers of GOOD, as well as evil, are flying about; and where susceptibilities are prepared, they fertilize our spirits, beget themselves in us, and change our characters.

"All our susceptibilities to evil, when they are modified by true brokenness of heart and a true understanding of our nature, become open mouths to Christ, and cry for salvation; and then evil is repulsive to them.

"'*Let us labor to enter into rest.*' What shall we do? Seek, in the first place, *good life*. We get that from Christ. 'Lay hold on eternal life.' In doing this, we shall find that we are getting into circumstances that are adapted to the growth of that life. No matter what comes to it: every thing is fertilizing to true life. Labor, then, to obtain a good life, and God will take care of the rest. To good life, the sunshine, and rain, and earth, and every thing above and below, will help forward its growth and fruitfulness."

S. E. A. D.

LOCOMOTION.

IV.

HAVING glanced at some of the basic principles involved in terrestrial locomotion, let us now study and compare more at leisure some of its specific forms. It has been said that the original germ of all living creatures, from the highest to the lowest, whether it be that of a frog or of a human being, is the same; that all the higher developments are built upon and subsequent to the lower. Science has taken a great deal of pains to confirm the saying that "We must creep before we can walk," by showing that we have all had our tadpole experience in early life. Creeping is the ground-work of a future and higher walk in life. It is a method of progress well adapted to incipient human nature, because it is the only one by which human beings can establish a broad and sure basis for success in the business of locomotion. To begin the great race of existence on all fours, and then after having gone a little way to rise and finish it by using only the hind legs, is a feat that is peculiar to the human race, and is performed by no other animal. It is the power to do this that raises him above the brute creation. The anterior limbs are very handy at helping in the incipient stage of locomotion, but having finished the work of educating the posterior limbs, they immediately rise to a higher level of existence, having a better work to do.

It is a noteworthy fact that the feet and lower limbs are precocious. They get a sound and thorough understanding of their proper duties and destiny long before the education of the hands and other parts of the body is completed. It is said that nations differ in this respect. I have somewhere read that the Africans in their native country can walk almost immediately after they are born. The cause of this phenomenon I must of course leave to Mr. Walker the great ethnologist and anthropologist. Perhaps philology might help him. Who knows but that the word negro was originally spelled knee-grow, in allusion to the early development of the lower limbs?

When a baby creeper quits the quadruped stage of development, and, rising on end, comes into the ranks and begins to keep step to the great anthem of human progress, there is commonly much rejoicing among mammas, uncles, aunties and sympathizing friends; but I do not believe that any of us fully appreciate the momentous significance of the occasion. Some maintain that a great skull full of brains is the crowning characteristic that distinguishes man from the brute. But it is said that the elephant has a heavier brain than a man; and yet with all his brains what has the elephant accomplished without hands, compared to man, notwithstanding he has a trunk which is very handy? What would be the value of the boasted brains of man if he were not armed with hands to enable him to fight successfully in the great struggle for existence? One of the strong points of the dog, the swine, and indeed nearly all quadrupeds is the absence of heavy brains and instead a protrusion of jaws armed with teeth for laying vigorous hold of those things which are so needful for the supply of their elementary and alimentary wants. What could we do with our brains if we were quadrupeds? They would tip over our porridge-dish every time we attempted to eat. Moreover they would necessitate such an enormous development of the muscles of the neck in order to support the head in a horizontal position that to be stiff-necked if not rebellious would be one of our chief characteristics. Nature was obliged to look out for that when she made the huge unwieldly elephant. She gave him a neck so stiff and stout that it apparently has no joint, but it serves the purpose of comfortably supporting his heavy brains, and if she had not good-naturedly given him a trunk to hold his goodies, and to serve as a sort of commissariat, there is no telling how he would keep out of the poor-house.

But fortunately we are not quadrupeds. Our great brains are packed away in a nicely-fitting box on top of the spinal column where they admirably serve our purpose both as mental and ornamental constituents of the human corporation. Nature made a most excellent hit when she struck upon the idea of instructing human beings to walk on their hind legs. As I think of the matter I am utterly overwhelmed with the greatness of the task of showing up the immanent advantages of this method which I have so inconsiderately assumed.

With the idea of forming a conception of what abject slaves of nature the "four-footed beasts and creeping things" are, let the reader call to mind the condition of the wild cattle and horses that live on the prairies. They are the victims of nature, not its masters. What can they do when they get a mote in their eye, to say nothing of a beam? How little can they affect their surroundings in the direction of a change that is favorable to themselves. True they can diligently nibble to death the young forest trees that spring up and threaten to deprive them of pasturage, but how insignificant is this compared to the magnificent ameliorating changes that human hands have wrought. A stalwart woodsman with mighty strokes sending the monarchs of the forest crashing to the ground, is a striking illustration of the victory of man over nature: and this victory comes as will be observed through his capacity for walking on his hind legs. The striking points of the wild horse are his feet (particularly his hind ones), which give him a fleetness far superior to man, and yet with this great and splendid gift how insignificant is his power over nature when compared to that of man! Against the lasso and the rifle wielded by the cunning human arm and hand he is powerless.

But considering the fact that the gorilla, the orang-outang and monkey have been regarded by a certain class of scientists as constituting a part of the human pedigree, they have had conferred on them of late years much notice and respectability. How much nearer to a victory over nature do they come than our horses and oxen? Not a whit. They live in tropical forests instead of on prairies like cattle and horses, and their four hands indicate that they are merely an appendage to the forest, their extra hands enabling them to climb easily. They are said to be four-handed animals, but they are not nearly so fore-handed as human beings, having nothing like the human capacity for providing for the future. If the baboons would only make a practice of standing up straight and walking on their hind legs, I should feel a great deal more brotherly toward them. So greatly do I appreciate this accomplishment that I am inclined to think that I should in that case be willing to contribute something to the support of missionaries among them for the purpose of saving their souls. REVIVAL RECOLLECTIONS.

VIII.

IT is sometimes necessary to retrace our steps a little in order to make a story clear, so I will go back and mention an incident which occurred during one of Mr. B——'s calls, just before we were married. He presented me with a new Bible one day, and said, "See what will be the first passage your eye will fall upon." I opened and read: "Thy Maker is thy husband: the Lord of Hosts is his name." We both wondered what the text could mean, and my thoughts dwelt much upon it. There had been nothing sentimental in our courtship. The day was fixed for our marriage, but our engagement had been a mere business transaction. I had never felt his heart, and it was impossible when alone to prevent the occasional deep-drawn sigh. But Mr. B—— was fine looking, and a very benevolent, anti-slavery and temperance man. He was a deacon of the church, the Sabbath-School Superintendent, and a sort of general adviser in all matters pertaining to the society. He bore just the reputation which met my beau-ideal of a good husband. Such a man is

he seemed to be, I said to myself, is worthy of my love, and shall have it.

After we were married our minister made a large party in honor of the wedding. He wrote some passages of scripture on a number of small strips of paper and putting them indiscriminately into a box, requested those who were present to each draw a slip and read. My verse was: "Thy Maker is thy husband: the Lord of Hosts is his name." We all looked at Mr. B——, and his face revealed his perplexity. He afterward told me that cold chills went over him when I read that verse, and he thought that perhaps I was thinking too much of him. But the mist of my love-dream soon disappeared in the stern realities of life. It did not take a long acquaintance, or very deep soundings to strike the bottom of his soul, for so far as outward demonstration gave evidence the center and circumference of his love were limited to himself. The conviction of this fact cost my woman's heart many a pang in the early part of my wedded life, for I longed for those daily outgushings which are like God's loving-kindness—new every morning; but instead of giving vent to such expressions he maintained the most frigid indifference. Cold, proud precision was so ingrafted into his nature that I suppose any little demonstration of affection could not have passed from his lips without a painful sense of awkwardness. But this marriage was not the result of blind chance. My heavenly Father had arranged my circumstances and had given me just the husband I needed, to keep me from idolatry and to reveal to me what was covered within myself. He had only closed the door of my outgoings that a friendship more divine might possess my soul.

Mr. B—— professed to have experienced the blessing of entire sanctification. He was extremely punctilious in the performance of all the church ordinances, and was so much in the habit of mechanical, daily duty-doing, that he was led by a blind sincerity into the fancy that he had really gotten the victory which overcometh the world, while in reality his great study was for a good reputation among men. Four times a day would he repair to his closet for devotional exercises which occupied from one to two minutes, and regularly after breakfast he would take his children to the closet to say their prayers. These were the words of their prayers: "May I be a good boy (or girl) and serve the Lord, for Jesus Christ's sake. Amen!" This form was kept up without variation until they were old enough to be sent from home to the Seminary. When I asked Mr. B—— what was his experience when he obtained the blessing of sanctification, he said that when his wife died he was at first unreconciled, but he came at last into such a state of nearness to God that he was filled with joy and peace, and for some time he did not feel conscious of committing sin. Although he had lost the blessing of sanctification he was seeking and expecting to receive it again, and he certainly was carefully and conscientiously doing those works by which he expected to be saved. I could not see as his experience was in any essential point different from what mine had been at times, ever since I had united with the church, when I did not look for sanctification until death; but I now believed that God required me to live constantly without sin, and that he had made provision for me to enjoy that privilege. The more I prayed and struggled for that state, the worse it seemed to me I grew.

Disappointed in the character of my husband, I watched for failures in all the Oberlin believers I met. I was at times fretful, and frequently indulged in sharp retorts which plunged me into the deepest state of condemnation, and made me fearful of risking my soul in eternity. Sometimes I would have joyful seasons, and then again my mind was like a tempest on a desolate field stirred by the temptations of Satan.

At last I met the Rev. Ovid Miner while on a visit to Rev. H. Peck, Rochester. I felt that surely he would help me out of my difficulty. I told him of my temptations, and how I longed to meet with one person among the Oberlin believers who lived as near to God as did Miss Chadwick or Black Jacob. He said it was the spirit of God that had given me this desire for holiness, and if I continued to pray in faith, the Spirit would eventually bring me into that state. He could not say that he lived without sin, and was himself in the same struggle that I was; I should probably always feel that lack in myself that I saw in others; but he said he could direct me to one person whose life was a living testimony to the truth of the doctrine of holiness, viz., Mrs. Otis in Kanona. I very soon called upon Mrs. Otis, and did indeed find that the communication between her soul and God seemed to be direct, and that her faith enabled her to live above her circumstances. She knew that Christ lived in her and she in him, and that he kept her from sin. I felt that her spirit bore witness to the truth of her words. My visits became frequent. When urging her to tell me just how she came into that state, she replied, "You will find it by trusting God." She then brought forward a large manuscript and read from it quite a number of prayers which she had written down before she received this light.

"Now," said she, "in one sense these prayers are all stuff, for there was no faith in them. I might have piled them mountain high, and yet if I had not found out how to trust God I should never have found rest. It is true God has answered them, but it was because I trusted him to save me."

My spirit quarreled with that expression, "These prayers are all stuff," and I resolved that I would not sleep that night, but would pray until I found rest; but by midnight nature was exhausted, and the morning waking found me in the same condition.

BOYISH MEMORIES OF TROPICAL FRUITS.

III.

THE ORANGE.

WILL it appear strange if I say that ever since I left the shores of my native land the orange has not seemed to me like the same fruit? There is no question I think, that an orange of the first quality will almost rival the finest product of the Indies. Indeed it is even preferable at times to any other; but it must be plucked ripe from the tree and eaten when fresh. When I see an orange nowadays, I always think of lemonade, and lemonade it certainly becomes if I get hold of it, for in no other way can I dispose of it without a wry face. But you can make an artistic thing of the eating of an orange provided it *be* an orange. Children in Ceylon used sometimes to get together to cut oranges and after removing the peel of the fruit, divide it with the fingers at the natural seams into ten or a dozen parts, without in the least starting the juice, each division or lobe being entirely independent of the rest. This would prolong the entertainment indefinitely and make room for sport; but some preferred to suck the juice from a hole in the rind.

The orange tree is small, and is now to be found wherever the climate is warm enough for it to grow, not excepting the south of Europe; and we hear from Loudon that it was introduced even into England in 1595, where it was grown against the walls, and bore fruit for many years (the climate, by the way, must have changed somewhat since then); but its original home is in southern China, and among the hillsides of the Himalaya. There are many varieties of this favorite fruit, the most noted being the mandarin, so called from being exclusively appropriated by the officials in China, because it peels so easily; the Seville orange (in Spain) famous for marmalade and orange water, and the Bergamot; but you know what that is.

THE PINE-APPLE

is now so much under cultivation almost everywhere by means of hot-houses, etc., that hardly anything is left to be said about it; but I will say that the specimens you generally find in the market fail to give you an adequate impression of the real character of the fruit. It is undoubtedly, when in its prime, one our choicest fruits; yet I could at any time exchange it for the mango. The pine-apple, which has spread from South America to Africa and the East Indies, and of which there are fifty varieties or more, is propagated by burying the crown of the fruit, containing the germ, which is protected by a hard tuft of prickly leaves. The fruit is formed by the swelling together of the ovaries of the spike of flowers, hence the very rough exterior. The blossom is beautiful and fragrant. From the leaves of one variety very fine cloth is made. The pineries in England (where they spare neither pains nor expense) are said to produce pine-apples far superior in flavor to any grown in the open air, though the wild ones in the East are highly prized.

THE DATE PALM.

This member of the palm family has a lofty bearing and strews its fruits along the Nile, and through Arabia, and Persia, while commerce does the rest of the scattering. It is to those countries in many respects what the cocoa-nut palm and banana are to more southern climes. The fruit is abundant, though, unlike the banana, it fails to minister to the brain and muscles; therefore, if freely indulged in, it is apt to make you grow fat and lazy. The date is so abundant (each tree yielding one to three cwt. of fruit annually) that the Arabs feed it even to their horses. Is it this which contributes mainly to that sleek appearance and fine temper for which that breed has been so long celebrated? There is a pretty custom among the Arabs in regard to this palm. The trees are diœcious, so that in some cases they have to be fertilized by carrying the blossoms of the male to those of the female. When this necessity exists, they make a regular festival of the occasion, naming it "the marriage of the palm trees."

THE POMEGRANATE

is naturally a thorny bush, but has been known to become a small tree. It came originally from the north coast of South America, though it is now scattered throughout the length and breadth of the tropics, and even beyond. The city of Grenada in Spain is supposed to have been named from its pomegranate surroundings. There are five distinct varieties, of which the double red flower is cultivated in the South of France and elsewhere for its great beauty. Persia is fortunate in having the fruit in perfection. The people there call it delicious. Some varieties are found without seed under the snowy hills near the Cabool river, and some parts of the plant are used medicinally both in the East and West.

It is not surprising that the word pomegranate should jingle in our minds so musically, when we reflect that they made so much of that fruit in the regions that were the scenes of our Bible histories, to say nothing of the fact that we meet with frequent allusion to it in the pages of that book. There is besides something ethereal both in the look and the flavor of the contents of the numerous little cells that honeycomb the inside of this interesting fruit. Its peculiar construction makes rather a hard shell of the outside, but this is needed, no doubt, to store away the very juicy plup that awaits you within, replete

with vinous and refreshing qualities. The cells are numerous, each containing a seed embedded in a transparent sack that holds the pulp, which also is transparent and delicately tinged with crimson (in some varieties) so that it looks like a gem. Fancy tier after tier of rubies glittering with something for the palate as well as the eye, and you may then form some idea of this long-cherished *bijou*.. You con think that you have the apple of Eden. R. S D.

ONEIDA CIRCULAR.

TIRZAH C. MILLER, EDITOR.

MONDAY, APRIL 28, 1873.

OUR OLD PUTNEY PASTOR.

MENTION was made in a late number of the CIRCULAR, of a remarkable revival which broke out in Putney in 1819 and swept over all the region round about. The children of the villages were particularly affected, and J. H. N., who was then about eight years old, was drawn into the little praying circles and received religious impressions which he never lost. That revival occurred under the preaching of a Congregational minister who was distinguished as a scientific man as well as a religious man. The ministers of that day were not so exclusively clerical as those of some time afterward, when Andover Seminary began to be popular and to send out its thorough-bred licentiates. This minister, whose name was Elisha P. Andrews, had his mineralogical collection and his chemical laboratory, and was exceedingly fond of philosophical experiment and investigation. He lived, as you may say, in the dim dawn of this day of science, but his eyes were as wide open and as curious as a child's in the morning. Some of us remember how he once visited the village school where we were learning the rudiments; and bringing in a stalk of Indian corn in the tassel, he dissected it before us and explained the wonderful processes and uses of the pollen, the silk, etc., etc. We never forgot what he told us, that the golden dust of flowers, flying in every wind, is the essence of all fructification. His theme well illustrated what he was doing himself—fertilizing the opening mind with a love of science.

J. H. N. took in this influence at a susceptible age. He was eleven years old when his father moved to Putney. Mr. Andrews was the pastor of the Noveses for several years, and there was intimate friendship between the families. One of Mr. Andrew's sons was classmate of J. H. N. at Dartmouth. A little cabinet of labeled stones and curiosities, arranged on shelves in a kind of recess to one of the chambers in the Noves mansion, bore witness for many years to the fertilizing power of this minister's example on his youthful friend.

He was a reverend gentleman of the old school; had the round proportions which good-nature and a good conscience sometimes give; yet he was tender-hearted as a woman, often weeping as he spoke from the desk, touched with the pathos of eternal truth. His liberal taste, though it did not hinder him from being the medium of a powerful spiritual awakening, was the cause of his being driven away from his church at last. One of the members, who was the very type of sanctimonious ignorance, stirred up the people to think they must have a minister more exclusively devout. His own children, contrary to the proverb, did honor to his religion. The classmate of J. H. N. has long been missionary in the Sandwich Islands.

This conjunction of revivalism and science, which was common and even general among the New England clergy of old times, deserves to be studied as an element in the history of the modern enthusiasm for discovery. In this connection we call attention to the following speculations. H.

KINSHIP OF RELIGION AND SCIENCE.

Mr. Francis Galton in a late English Magazine, gives an account of a French book in which the author, M. de Candolle, discusses "the causes which create scientific men:"

His scheme is, to analyze the conditions of social and political life under which the principal men of science were severally living at the four epochs 1750, 1789, 1829, and 1869. The list of names upon which he depends, is that of the foreign members of the three great scientific societies of Europe—namely, the French Academy, the Royal Society, and the Academy of Berlin—in each case about fifty in number.

From an examination of these lists the author draws a large variety of interesting deductions. He traces the nationalities and the geographical distribution of the distinguished men of science, and compares the social conditions under which they lived. He finds them to be confined to a triangular slice of Europe, of which middle Italy forms the blunt apex, and a line connecting Sweden and Scotland forms the base; and then he shows that, out of a list of eighteen different influences favorable to science, such as liberty of publication, tolerant church, and temperate climate, a large majority were found in the triangular space in question, and there alone. The different nations vary at the different epochs in their scientific productiveness; and he elaborately shows how closely the variation depends on some or other of the eighteen influences becoming favorable or unfavorable. The author, himself descended from the Huguenots, lays just stress on the influence of religious refugees, whose traditions were to work in a disinterested way for the public good, and at the same time to avoid politics. The refugees rarely had their property in land, of which the oversight occupies time, but in movable securities; thus they had leisure for work. Then, again, as they were debarred from local politics, the ambition, especially of those who had taken refuge in small countries, was to earn the approval of enlightened men all over Europe, and this could most easily be effected by doing good work in science. Out of the ninety-two foreign associates of the French Academy, no less than ten were descended from religious refugees, usually in the third or fourth generation. Switzerland had eight out of the ten, and we may thence easily gather how enormously she is indebted to the infusion of immigrant blood. Similarly, the only two American associates—Franklin and Rumford—were descended from Puritans.

The blighting effect of dogmatism upon scientific investigation is shown both in Catholic and Protestant countries. The Catholics are the more dogmatic of the two, and they supply, in proportion to their population, less than one quarter as many of the foremost scientific men as the Protestants. There is not a single English or Irish Catholic among the ninety-two French foreign associates. Austria contributes no name, and the rest of Catholic Germany is almost barren. In Switzerland, the scientific productiveness of the Catholics is only 1-26 that of the Protestants. Again, the Catholic missionaries have done nothing for science, notwithstanding their splendid opportunities. In past days, when they were absolute masters of vast countries, as Paraguay and the Philippines, the smallest encouragement and instruction given at the college of the Propaganda to young and apt missionaries would have enriched Rome with collections of natural history. If any city more than others deserved to have the finest botanical garden and richest herbarium, it is Rome; but she has scarcely any thing to show.

The most notable instance of the repressive force of Protestant dogmatism is to be found in the history of the republic of Geneva. During nearly two hundred years (1535 to 1725) its laity as well as clergy were absolutely subject to the principles of the early reformers. Instruction was imposed on them; nearly every citizen was made to pass through the college, and many attended special courses at the Academy, yet, during the whole of that period, not a single Genevese distinguished himself in science. Then occurred the wane of the Calvinist authority, between 1720 and 1735. Social life and education became penetrated with liberal ideas; and, since 1730, the date of the first election of a Genevese to an important foreign scientific society—our own Royal Society—Geneva has never ceased to produce mathematicians, physicists, and naturalists, in a number wholly out of proportion to her small population.

The author argues from these and similar cases that it is not so much the character of the dogma taught that is blighting to science, as the dogmatic habit in education. It is the evil custom of continually telling young people that it is improper to occupy their minds about such and such things, and to be curious, that makes them timid and indifferent. Curiosity about realities, not about fictions of the imagination, is the motive power of scientific discovery, and it must be backed up by a frank and fearless spirit. It is known that birds originally tame, when found on a desolate island, soon acquire a fear of man, and transmit that fear as an an instinctive habit to their descendants. Hence we might expect a population, reared for many generations under a dogmatic creed, to become congenitally indisposed to look truth in the face, and to be timid in intellectual inquiry.

Can, then, religion and science march in harmony? It is true that their methods are very different; the religious man is attached by his heart to his religion, and cannot endure to hear its truth discussed, and he fears scientific discoveries which might, in some slight way, discredit what he holds more important than all the rest. The scientific man seeks truth regardless of consequences; he balances probabilities, and inclines temporarily to that opinion which has most probabilities in its favor, ready to abandon it the moment the balance shifts, and the evidence in favor of a new hypothesis may prevail. These, indeed, are radical differences, but the two characters have one powerful element in common. Neither the religious nor the scientific man will consent to sacrifice his opinions to material gain, to political ends, nor to pleasure. Both agree in the love of intellectual pursuits, and in the practice of a simple, regular and laborious life, and both work in a disinterested way for the public good. A strong evidence of this fundamental agreement is found in the number of sons of clergymen who have distinguished themselves as scientific investigators; it is so large that we must deplore the void in the ranks of science caused by the celibacy of the Catholic clergy. If Protestant ministers, like them had never married, Berzelius, Euler, Linnæus, and Wollaston would never have been born.

COMMUNITY JOURNAL.

ONEIDA.

—Our taxidermist rejoices in the possession of a very large owl, having a spread of wing from tip to tip of four feet and ten inches. He has preserved the bird with great care, and it now looks as it sits on the perch like a thing of life, and the great eyes, though artificial, detract nothing from the proverbial wisdom of his owlship. The "Canadian Trapper" calls it an Arctic Owl; and the color of the bird, snowy white, with the exception of the wings which are delicately mottled with black, and the profusion of feathers which cover it literally from top to toe, would indicate that its proper home is in the polar regions, amid eternal snows. It is armed with a formidable beak and claws, sharp and hooked; but these nestle in downy feathers and are so hidden from sight that the most wary mouse might be beguiled into fatal security. The presence of this strayling in our latitude is probably due to the fact of the more than usually Arctic winter we have so lately experienced. This bird was caught in a neighboring town. The local papers heralded the capture and our taxidermist, who is on the alert for everything rare of the bird kind, saw the paragraph and took immediate steps to secure the prize.

—A few evenings since Signor Blitz, the professor of legerdermain and ventriloquism, stopped off at our station, and sent us an attractive programme of his illusive arts, offering to give us an entertainment. In consideration of the great reputation of this gentleman, we put aside any previous prejudice we may have had against jugglery, and consented to spend an evening in being thoroughly mystified. And mystified we

were. To be sure there were those in the audience who were shrewd enough to detect many of the tricks, but the children and we who never before witnessed such conjurations, were completely puzzled. Signor Blitz prefaced his artifices with an appropriate and graceful speech to the effect that we of course knew the evening's entertainment would be all deception—indeed, we should not be amused were we not cheated. "So," said he smilingly, "unless your eyes are quicker than my fingers you will not be able to detect me." From this he proceeded to his work, which to our bewildered senses seemed like magic. How he managed to put a live rabbit in a can which we with our own eyes had seen him fill with oats, and how a watch and chain that he had seemingly pounded to atoms a moment before came to be around that rabbit's neck, when Mr. R., one of the audience, had been holding the pail the whole of the time, for the life of us we couldn't tell. How he could produce eggs from a bag after threshing it against a trunk; how, after breaking these eggs into a hat and stirring them violently, he could return the hat unsoiled to the owner, were problems equally puzzling. With his magical wand, which he remarked was "supposed to be three hundred years old, and to have been handed down since Salem Witchcraft times," he excited our wonder to the utmost. Nothing amused us more than the operation he performed on Mr. R., of extracting from his mouth three enormous carrots, one after the other. How could we doubt our eyes? If this was sleight-of-hand, it seemed little short of miraculous. We all agree that the Signor excelled as a ventriloquist. In this he is genuine, and those of our folks who have had opportunity to hear other ventriloquists believe he has few rivals. The acting which accompanied it was admirable; he had a quiet manner of turning to the audience and smiling at the nonsensical answers of his imaginary companion, that lent very much to the deception. The undertone of his dialogue though pitched full an octave below, was quite as distinct as his natural voice. The children were positive there was an "old man under the table," and wondered why he did not come out. And indeed, it was a little difficult to fancy only one person concerned in the colloquy, when the voices became animated and seemingly spoke almost at the same instant. The whole performance was entertaining, and we enjoyed the hearty laughs we got out of it. We were pleased with the simple unostentatious manner of the Signor, and his business-like way of going through with the details of his programme commanded our admiration.

* * * * *

Since writing the above, our illusions respecting the oats and the rabbit, as well as the other tricks of the Signor have been utterly dispelled. Our Mr. S., a man of a very practical turn, and somewhat versed in these matters, ruthlessly tore away the veil of mystery that surrounded Signor Blitz's sleight-of-hand operations, by producing a repetition of them and giving a very matter-of-fact explanation of their mechanism and performance. Our curiosity was satisfied, to be sure, but we hardly knew whether to feel grateful or not. It is a little painful to have one's imagination receive such a fall on the hard foundation of reality. But we shall keep quiet about what we know, and you, gentle reader, may have the benefit of our first impressions.

Wednesday, Apr. 23. —A fine, sunshiny morning, but the air is full of the frigid reminiscences of winter. A merry company of men and women are out with rakes and brooms clearing away the litter from around the office-building across the road; the children and "little fry" are having a regular romp on the lawn; the gardeners and farmers are making their plans for the day's operations; the house-cleaners are shaking a huge carpet to the rhythm of their own voices; others are out to get a sniff of the fresh air, taking as they stroll about, a general survey of all that is doing.—Mr. Kelly reports that the great dam, our "old mill-dam," which has been in existence full half a century, broke down during the night, and the water is running away in torrents. The accident was caused by the water washing out the earth foundation from beneath it, and it sunk in a mass within six inches of the water level below the dam. It can not be repaired. Consequently we must build a new one as soon as possible, and in the meantime take up with a coffer-dam. The inconvenience will be but temporary.——In the afternoon A. B. takes the 5 o'clock train on the way for the West, to be absent three weeks.——After supper a party of young women, accompanied by Mr. B. and Mr. H., stroll into the Pine woods, and return two hours later, laden with hepaticas and "spring beauties," of which they say there are countless numbers still left.——At 6 o'clock Mr. Underwood reads from "Seward's Travels Round the World." At 7, we have a meeting in the Hall. After the correspondence and a discussion of a few matters of minor importance, some of the young people testify to a good religious experience, as well as to a renewed allegiance to the cause.

—We have recently come in possession of three enormous volumes of the *New York Evangelist*, published during the years 1830–36. Mr. Herrick, while at New York a few weeks since, tried to obtain them at the present publishing office of the *Evangelist*. Herehe could obtain none of the back numbers of that paper. But Mr. Field, the editor, kindly offered to put an advertisement in his paper for them, which in a few days, brought the following letter to Mr. Herrick:

——, *Ct., Apr. 3d,* 1873.

DEAR SIR:—The *Evangelist* of to-day represents that you desire to procure the first seven volumes of that paper. I have them bound, and will send them to you if you will offer me a good price for them. The first three volumes are bound together; so are the fourth and fifth; also the sixth and seventh. I am an aged Congregational minister, seventy-three and one-half years old, lain aside, and need what I can honestly get.

Yours respectfully, ——.

Mr. Herrick promptly replied that we would like the books, and would gladly pay him the sum of twenty dollars. The books soon came to hand, and also a letter from the owner, saying that he should be satisfied with that sum. The twenty dollars were duly sent, and the other day we received a letter of grateful acknowledgment from the aged minister, with the following postscript:

"Old soldiers like to fight their battles over again frequently. I began to preach on missionary ground Aug. 20, 1826, and have preached since then eight thousand five hundred times, and labored in eighty-five revivals, in which three thousand souls were hopefully converted. I have conducted most of the revivals, and done nearly all the preaching in three-fourths of them. I would not intimate by this that I am much of a preacher, or ever have been. But I present the truth plainly, and in simple language. I mix law and gospel. While I am an old-fashioned New School Calvinist, I have offered, of course, a free salvation. But my preaching work is done. I am living without a salary, and with a small income, and am quite lame from a fall which nearly dislocated my hip. Yours truly, ——."

Thus in helping ourselves we have suited somebody else; and quite unexpectedly got a peep into the history of one of the old revivalists. The volumes alluded to, are a mine of historical wealth, especially rich in accounts of the great revival of 1830–4, as well as of the conspicuous actors in it. If the "old soldier" is pleased with his money, we are equally pleased with our part of the bargain.

THE VILLA.

—House-cleaning, that trite affair, though thorough, is blessedly unobtrusive this spring.

—Two pretty wild ducks, as they journeyed this way, stopped to take a swim on our pond. Of course somebody told the sportsmen.

—A flock of red-winged blackbirds, with their sweet, watery whistle, come daily and flash in and out among the leafless twigs of our apple orchard.

—One of the Villans thought he had a rather stern mission when he went over to the O. C. the other day to have the dentist file his teeth, and to have the Criticism Club file his character. He said when he got back that he never expected to like tooth-filing, but he thought it quite easy to fall in love with criticism.

Apr. 23.—Chill frosts o' nights. The sun got up with the rest of us this morning, for the first time in a week, we think. We have been reminded these frowning days of the quaint linest who says:

"'Tis some delight to us the while,
Though nature now does weep in rain,
To think that we have seen her smile,
And haply may we do again."

—We don't remember to have seen such a specimen of impotent rage as that hawk exhibited which was kept in the fox-house down by the home-machine-shop last week. Big, gray, and fierce, for more than a week it was prisoned there waiting the leisure of our taxidermist. It didn't act as if it had ever heard of any kind of philosphy that would help it to a little resignation. Not a bit of it. Every day, as we passed by it, approaching first the back of its prison, it would frantically fly at the wire-work in front, trying to get out. As we went to the front to take a look, it always retreated toward the lattice-work at the back, and took an attitude of defiance really imposing—feet apart, claws spread, as if eager to tear our flesh, wings wide-spread and rigid, mouth open, red, horny-tipped tongue protruding, and sending from its throat a hissing sound. We laughed when we first saw it thus, it did seem such a ridiculous parody on human nature, as if some mighty one of the earth had hopelessly fallen into the hands of his enemies, yet was proudly defiant still. But after all, the poor hawk was so persistent in its courage, so majestic in its rage, thut we were fain to pity and admire.

SIR JOHN FALSTAFF.

I.

BY GEORGE NOYES MILLER.

WERE all men like Prince John of Lancaster, whom Falstaff lamented that he could not make laugh, we should doubtless see but little in this "mountain of a man" save repulsive animalism and gross indecorum. But, happily, the springs of human life are not so chill, nor is it in the nature of man to be thus cold-blooded. There are infinitely more Prince Hals than Prince Johns in the world, though they lack neither dignity nor wisdom, neither stability nor reverence. The ringing laughs which intone alike from the breast of the friend and the stranger, tell us how deeply innate is the love of merriment in mankind. The playful quips and sallies of every daily associate assure us that the fondness for gaiety is universal. Nay, the but half-repressed twinkle which we catch from the eye of the scholar and the philosopher, convinces us that the intuitive appreciation of humor is inexpugnable and may not be proscribed It is therefore, from our very nature, impossible to turn unmoved from such vivid wit, such all-pervading humor as that of Falstaff, even though it gleam like the jewel in the head of the toad, from so base a setting. We who love gladness can not

dwell upon this masterpiece of humorous delineation without in some measure entering into the magnetic relations which existed between him and Prince Hal. The astute, comprehensive discrimination which Falstaff himself implied respecting the power of his wit in favor of Prince Hal, holds good of us, as it must forever hold good of the laughter-loving races. *He will make them laugh*, and thus while the name of Shakespeare is exalted in literature, so long will merry Jack Falstaff hold the sway of an irresistible power.

Gross and palpable as are the excresences of Falstaff's character, and great as is the moral distortion, so that we are constrained to cry of him as he of Prince Hal:

"He hath given us medicines to make us love him; it could not be else,"

we must still acknowledge that his utter fleshliness furnishes a sullen foil upon which his wit but gleams the brighter. Indeed, the critical reader of Shakespeare, who ponders as he reads, may well be in doubt whether to admire most the intrinsic value of Falstaff's exuberant fancy, or the surpassingly bold and ingenious contrasts through which it has been set off and magnified by the great artist. Of the seven acts which Shakespeare has ascribed to man in the drama of life, he has shown us Falstaff in but two—those of the lover and the soldier. The utter incongruity of these pursuits with the physical grossness and fleshly fears of Falstaff, strikes us at the outset as marking the very bounds of contrast. Had Shakespeare chosen to portray Falstaff in another garb, as for instance that of the Justice, while his wit might not have deteriorated, the *tout ensemble* of his humorous perfection would manifestly have been less striking. For Falstaff corresponded in figure to the ideal Justice,

"In fair round belly with good capon lined,"

and his genuine wit would assuredly have been not less becoming to the profession of the law than the vapid conceits of the insensate Shallow. But the allied arts of love and war, which call for the tender emotions of a refined sensibility, the sincerity of a genuine manhood, and the sternness of an inexorable purpose, by what possible means could we associate Falstaff with these? Through what revolution of our ideas of the eternal fitness of things could we make so gross a being as Falstaff, appear either chastely tender, or rashly brave? It is impossible that we should do it. In either vocation, whether of love, or of war, Falstaff could not but appear ludicrously grotesque, absurdly fantastic, and challenge the deepest mirth. For the pursuit of high and noble aims, the taste for the refining amenities of courtship, the devotion to the stern duties of war are not less indissolubly linked in our minds with dignity of soul, than with a certain continence in physical habit. Falstaff himself perceived the wide discrepancy between his animal extravagance and the exalted character of the lover.

"He could not cog, he could not prate."

Forced as we are then by our innate prejudices to smile at Falstaff in the characters of lover and warrior, what wonder if we are filled with laughter when he enlivens their perfunctory duties with an overrunning, excelling wit!

But, as if these incongruous professions of love and war did not afford sufficient relief to the inimitable qualities of Falstaff, Shakespeare has carried the hight of contrast into the *dramatis personæ*, in their relations with this central figure. With whom is Falstaff most conspicuously opposed throughout the first and second parts of King Henry IV.? With a grave and pompous "Chief-Justice of the Realm" to whom he sustains the relation of culprit, and upon whom his "infinite jest, his most excellent fancy" has no enlivening effect. He is associated with a Shallow, whose feeble, conceited nonsense but causes the fires of his own imagination to glow more brightly, and finally the one congenial nature that most often blows those fires into brilliant flames, is the Crown-Prince of a great nation—his own king's son, the "mad wag," Prince Hal.

And shall we venture to inquire into the nature of Falstaff's wit? We may for the reason that Shakespeare, as usual, anticipating every idea of the human mind, has made Falstaff himself define it beyond hope of improvement. It is "apprehensive, quick, forgetive, full of nimble, fiery and delectable shapes." And more than this; we may perhaps say that Falstaff's wit seems to us at the farthest remove from the cold, sharp, intellectual corruscation which dazzles merely. It is rather notably earthy, essentially human. It savors of joviality, geniality, conviviality, not less than boisterous denunciation and scathing sarcasm. It is never mingled with the acidity of stoicism, nor the bitterness of misanthropy; so that all the titles of a purely human good fellowship come gracefully to it.

The nimble shapes which Falstaff's forgetive wit so gracefully conjures, and the power of his wit in making others witty, are pleasingly shown in his conversational tilt with Prince Hal in the second scene of the first part of King Henry IV. In this scene, Falstaff himself is not only vivaciously witty, but he envelopes the "mad wag" in such a current of stimulative ideas, that we laugh alike at sally and rejoinder. Thus: Falstaff having made the quaint simile that he is "as melancholy as a gib cat, or a lugged bear," the sympathetic prince catching the humor and inventive genius of his master in wit, rejoins: "Or an old lion, or a lover's lute," and the congenial pair bandy droll comparisons till Falstaff, half in admiration of his quasi pupil, cries out, "Thou hast the most unsavory similes; and art, indeed, the most comparative, rascalliest sweet young prince."

The purest example however, of Falstaff's wit working naturally and spontaneously, unassisted by the stimulus of a sympathetic mind, is doubtless to be found in his exquisitely humorous puns and comments upon the names and appearances of his recruits:

Fal.—Is thy name Mouldy?
Moul.—Yea, an't please you.
Fal.—'Tis the more time thou wert used.

The like vibrations which Falstaff's wit excites in the mind of Prince Hal, justify the truth of his assertion that he is "not only witty in himself, but the cause that wit is in other men" were there no other proof of it. But Bardolph is witty upon him who is the cause of wit, when he tells him he must needs "be out of all reasonable compass" being so fat. The turbulent Pistol has a quickness of conceit caught from his master upon whom he does not hesitate to try his reflected wit. Thus, in "The Merry Wives of Windsor," Falstaff addressing his knavish satellites says: "My honest lads, I will tell you what I am about." Hereupon Pistol with literal cunning thrusts in, "Two yards, and more." It is not difficult to fancy that even the childish babbling of Shallow acquires a transient sprightliness in the company of Sir John.

A notable element of Falstaff's forgetive wit, is the dexterity with which he finds specious justification for his "incomprehensible lies," and the open and apparent shame of his arrant cowardice.

"Why, hear ye, my masters: Was it for me to kill the heir apparent? Should I turn upon the true prince? • • • • Instinct is a great matter; I was a coward on instinct."

Still more laughable is Falstaff's vindication of himself after his gross abuse of Prince Henry in Scene IV of Act II, Part II:

"I dispraised him before the wicked, that the wicked might not fall in love with him—in which doing, I have done the part of a careful friend, and a true subject, and thy father is to give me thanks. No abuse, Hal!"

But the fertility of Falstaff's inventive genius as shown in these passages is eclipsed by its exquisite cunning in others. This is admirably illustrated where Falstaff in sporting with Prince Hal, has assumed the character of King Henry, and takes occasion, while rebuking the prince for keeping evil company, to recommend himself:

Fal.—That thou art my son, I have partly thy mother's word, partly my own opinion; but chiefly a villainous trick of thine eye, and a foolish hanging of thy nether lip that doth warrant me. • • • Why, being son to me, art thou so pointed at? There is a thing, Harry, which thou hast often heard of, and it is known to many in our land by the name of pitch; this pitch, as ancient writers do report, doth defile; so doth the company thou keepest; and yet there is a virtuous man, whom I have often noted in thy company, but I know not his name.

Prin. H.—What manner of man, an it like your majesty?

Fal.—A good portly man, i' faith, and a corpulent; of a cheerful look, a pleasing eye and a most noble carriage; and, as I think, his age some fifty, or by'r lady, inclining to threescore; and now I remember me, his name is Falstaff; if that man should be lewdly given, he deceiveth me; for Harry, I see virtue in his looks. If, then the tree may be known by the fruit, as the fruit by the tree, then, peremptorily I speak it, there is virtue in that Falstaff; him keep with, the rest banish.

This cunning in pleasantry is even more humorous in hypocritical knavery. An incomparable instance of this is where Falstaff in wrangling with the hostess, assails the astounded Chief-justice who has interfered between them with:

"My Lord, this is a poor mad soul; and she says up and down the town that her eldest son is like you."

The three pound for freeing Mouldy and Bullcalf, give to Falstaff the ready appearance of a wise discrimination of mettle, and a lofty disregard for appearance which is exceedingly laugh-provoking:

"Will you tell me, master Shallow, how to choose a man? Care I for the limb, the thewes, the stature, bulk, and big assemblance of a man? Give me the spirit, master Shallow."

GOOD LIFE, LONG LIFE.

He liveth long, who liveth well;
All else is life but flung away;
He liveth longest, who can tell
Of true things truly done each day.

Then fill each hour with what will last,
Buy up the moments as they go;
The life above, when this is past,
Is the ripe fruit of life below.

Sow love, and taste its fruitage pure;
Sow peace, and reap its harvest bright,
Sow sunbeams on the rock and moor,
And find a harvest-home of light.

[*Selected.*

THE HAMPTON COLORED STUDENTS' CONCERTS.

DEAR CIRCULAR:—Another band of colored singers from the South, formerly slaves, comprising nine men and seven women, recently made their appearance before a New York audience, and were kindly received and warmly applauded. They call themselves "The Hampton Students." Those who have heard both troupes declare that the "The Hampton Students" sing as well as "The Jubilee Singers." In some respects their abandon to the inspiration of their peculiar and weird-like songs is greater than that of "The Jubilee Singers."

The writer attended one of their concerts and confesses that he witnessed a scene to which memory will always delight to revert. The concert was given in West 23d-st., Presbyterian church, Dr. Northrup pastor. A large audience gathered to greet their appearance. As the singers modestly assembled on the platform, dressed in the plainest attire, with good-nature and simplicity written on their countenances, free from all affectation, one was impressed with the novelty of the scene and the change which a few years had wrought in the status of this people. These "Hampton Students" presented a spectacle no less vivid for its striking features than dramatic in its associations. In that group of sixteen were

represented nearly all the shades of color and all the types of feature of the Africo-American. Among them were some whose complexion and features were but a slight remove from those of the Caucasian. One exhibited an expression that in itself was a history in *alto-relievo* of the wrongs and cruelties inflicted on his race. Another showed the features and expression of one who had had his manhood almost crushed out of him. A third shone all over with a good-natured expression that seemed to speak a volume of humor and an easy-go-lucky spirit. While a fourth presented the beautiful head and slight frame of a charming, innocent boy. Among the girls were some whose faces beamed with intelligence, and whose bearing indicated innate refinement. One of them in particular was strikingly beautiful in person and spirit. Artistically grouped they presented a study impressively suggestive of a history whose dark pages are now compensatorily illuminated with brighter colors betokening the dawn of liberty and better days for their race.

The programme, consisting of choice characteristic songs, was as follows:

1. SWING LOW, SWEET CHARIOT.
   (With Oh Rise and Shine.)
2. OH, WASN'T DAT A WIDE RIBER?
3. MY LORD, WHAT A MORNING!
4. THERE'S A GREAT CAMP-MEETING IN THE PROMISED LAND.

("This hymn was made by a company of Slaves who were not allowed to sing or pray anywhere the old master could hear them, and when he died their old mistress looked on them with pity, and granted them the privilege of singing and praying in the cabins at night. Then they sang this hymn, and shouted for joy, and gave God the honor and praise.")

5. NOBODY KNOWS THE TROUBLE I'VE SEEN.
6. OH YES, OH YES.
7. WHO'LL JINE DE UNION?

("When folks were going to join the church, and everybody felt very joyful and happy like, they would always sing this.")

8. I HOPE MY MOTHER WILL BE THERE.

("This was sung by the hands in Mayo's Tobacco Factory, Richmond, and is really called 'the Mayo Boys' song.'")

9. SWING LOW, SWEET CHARIOT.
   (Known by this company as the Danville Chariot.)
10. ROLL JORDAN, ROLL.
11. I DON'T FEEL NO WAYS TIRED.
12. AINT THAT HARD TRIAL?
    (With Steal away to Jesus.)

In addition to the above several other pieces were sung. Two of the girls performed pieces on the piano in a very creditable manner, one of whom accompanied herself in song, which was highly applauded.

These singers were very natural in their manner, and sang with a sweetness and in a spirit and style that stamped the entertainment as one of genuine merit and artistic excellence. In voice, harmony and expression they compare favorably with either our foreign or native first-class vocalists, so-called. In fact their singing is of a character entirely distinct from all other. Nearly all their pieces were *encored*.

A very wrong impression has prevailed with many who have not heard either the "Jubilee," or the "Hampton" singers, which has led to the supposition that these colored singers from the South are only a second edition, revised, of burnt-cork negro minstrelsy. The fact is that there is not the least resemblance between them. One is an exaggerated, atrocious caricature of the negro race, the other is a beautifully simple and touching representation of the ideal faith of a people of dusky hue, who, in the very depths of a cruel bondage looked to God for deliverance and sustained themselves by their wonderful faith. Faith in any circumstances actuating and sustaining a person, or a people, is a sight calculated to appeal to the heart and evoke the sympathy and praise of the good and the true. When exhibited in the circumstances in which this people has been placed, what an impressive spectacle it presents!

In all their songs, even when a brilliant color of simple humor lightens the shade of their weird-like singing, no person apprehending the spiritual significance of the words and who is in sympathy with the vital element underlying their meaning, can see anything provocative of vulgar laughter. Back of all their singing may be discerned a soft, tender wail as of a people crushed but not in despair, bearing their oppression and suffering in the spirit of a sublime faith in God's coming mercy and deliverance from the yoke of bondage. Some of their songs are remarkable for plaintive sweetness. Some of the more tender and pathetic are sung with so much expression and abandon to the spirit of the sentiment that one is carried away with emotion and all eyes are suffused with tears. "Swing Low, Sweet Chariot," was sung with such exquisite tenderness that it seemed as though it were the echo of angels' voices. Entranced by its sweetness, looking at these simple singers in admiration of their marvelous vocalization, and peering into the background, I heard, as it were in a vision, the wail of all the oppressed of all nations, and saw responding to the cry, Jesus, and heard his voice, saying, "I am come to deliver, all that cry unto me shall be heard, and I will deliver them from the hands of their oppressor, and they shall all be gathered unto me."

"I Hope My Mother will be There," was very finely rendered. One piece sung, not in the programme, took the audience by surprise, and was significant of the unsectarian spirit in which the religious training of these students is conducted. A brief sketch of it here may not be amiss. All the singers are seated, when suddenly one of the girls shouts in song:

I'm a Baptist, I'm a Baptist, I'm a Baptist.
An' I'm going to heaben as a Baptist,
An' I'm going to heaben as a Baptist.

Another sings:

I'm a Methodist, I'm a Methodist, I'm a Methodist.
An' I'm going to heaben as a Methodist,
An' I'm going to heaben as a Methodist.

A third shouts:

I'm a Presbyterian, I'm a Presbyterian, I'm a Presbyterian.
An' I'm going to heaben as a Presbyterian,
An' I'm going to heaben as a Presbyterian.

Here a man rises, and in a deep bass voice shouts:

You'd better stop your jangling, and go on your way to God;
You'd better stop your jangling and go on your way to God.

All four now join in chorus—

You'd better stop your jangling and go on your way to God,
You'd better stop your jangling and go on your way to God.

The peculiar quaintness with which this was sung, added to the sentiment, produced an electrical effect on the audience, evoking from them a spirited burst of applause.

One remarkable feature of the concert was the improvisation of about three-fourths of the solo part of a lengthy piece by one of the men, who, the manager said, has a wonderful faculty for improvisation.

The object of "The Hampton Colored Students" in coming North and concertizing is to raise funds for the enlargement and perpetuity of the "Hampton Normal and Agricultural Institute," of which they are members, devoted to the education of colored teachers for the colored race, situated in the town of Hampton, Virginia, near Fort Monroe and the mouth of Chesapeake Bay. By one of the curious circumstances of history, this school is close to the spot where the first slaves brought to this country were landed. Here too was issued the famous order declaring fugitives "contraband of war," and here was established the first school for Freedmen. A practical feature of this school, which commends itself to all, is its Manual Labor System, which was adopted at the outset. Hence in addition to the ordinary English branches, the men are obliged to work on the farm, in the carpenter's and blacksmith's shops, the printing-office, etc., while in the industrial department the women are taught the use of various sewing-machines and the usual duties of a household. At the present time, the boys of the institution having no better accommodations, have each passed two months of the bleak Virginia winter, in squads of twenty-four, in tents situated between the great school-building and the sea, and the girls' dormitory so-called, has been in a long line of barracks, a relic of the war. Both girls and boys have exhibited a pluck in their endurance and manifested a zeal in their efforts to improve their minds worthy of all admiration.

One of the students at Hampton, a woman, relates her history thus:

"I was born a slave in the year 1852. I spent my happiest days of slavery in my childish days, and thought it was always to be just that way, but at the age of seven years that thought was changed, and a sorrowful change it was. I was then taken from my mother, as all the rest of the children were. Neither of us went to the same place, and only one stayed at the old home. My master, as I called him, died, and being greatly in debt, we were first hired out to get money to pay the debts. This was not so grievous at first. We would get together and talk to each other about it, and how we were going to eat good things when we got to our new homes; but just a few days before the hiring took place I was struck to my heart with a scene I can never forget, and it was this. It was a very public place where I then lived, and all that wanted to hire, sell or buy, would come there, generally in court week or the first day of the year. Then the streets would be crowded, to get them a nigger, as they generally called us, and in the crowded street, sitting on the ground, was a colored woman and her children; her husband was standing a little way off from her, crying. There walked up to him a white man, and said, 'Have you any clothes? If you have, get them. You belong to me now. I want you to go home with me. Be quick about it, for I want to be off.' Then with a loud cry the colored man said, 'I have nothing but my wife and children. Have you bought them too? Are they going with you?' 'No,' said the white man, 'I have bought none but you.' Then he begged to stay and see what was going to be done with his wife and children, but the man screamed out at him to get into the wagon to go, but would not tell him where he was going. Just at that time stepped up a very nice-looking man, and said, "I have bought your wife and the baby, but the little boy I can't get. I will give her enough to eat and wear, and she shall be my cook.' Then walked up a great ugly-looking man and said, 'Tell your mammy good-bye then.'

"I stood and looked some time without stirring, and when I found myself, the briny tears were trickling down my cheek. This was my first dread of slavery. Then the day came for me to stand on the block. It did not go so hard with me, but my sisters and brothers were scattered so that I never saw them again until we were called to this place again, not for the same light occasion, but it was for the fearful one of being sold. I was bought by the same one that I was hired to. I became quite a favorite with this family. They were very good to me and taught me some of the precious truths of the Bible, which I have found of much use to me. God grant that I may continue to learn of them and become wise in Christ.

"The war came and went without my feeling it in the least. Then came the Emancipation, which was welcomed by every colored person, for it was the first time they were able to say, 'Glory to God in the highest, peace on earth, good will to men,' without being afraid. I could hear first one and

then an other saying, 'I am free!' Then I went to live with my cousin, and had a chance to go to school. I went six months, and learned to read very well, and then went out to service again, as I thought it my duty to help my father who was not very strong, and had six children of us. In 1870 I got a very pleasant school. This I taught one year and then returned *home* for the first time in my life. In October, 1872, I came to Hampton, and will still look to God for the future."

As a specimen of some of their quaint songs we give the words of

WHO'LL JINE DE UNION?

CHORUS.

Oh Hallelujah! Oh Hallelujah! Oh Hallelujah, Lord.
Who'll jine de Union?

1. I come dis night for to sing and pray,
   To drive ol' Satan clean away.
2. When de Christian pray de debil run,
   An' leaves de field to Zion's Son.
3. De Heavenly Land so bright an' fair,
   A bery few dat enters dere.
4. Ef you want to catch de Heavenly breeze,
   Go down in de valley on yer knees.
5. Go bend yer knees right smooth wid de ground,
   Pray to de Lord to turn you round.
6. Ef you want to make ol' Satan run,
   Jes' mount an' shoot 'im wid yer Gospel gun.
7. I met ol' Satan at de end a' de lane;
   I took 'm an' whaled I 'im wid de Gospel cane.
8. Ol' Satan made one grab at me;
   He missed my soul an' I got free.
9. What make de Christians stomp der feet?
   De love of God does run so sweet.
10. Oh, shout my sister! you are free,
    For Christ has bought yer liberty.
11. He gave me de light, an' set me free,
    An' gave me all my liberty.
12. Now I'll go all about from do' to do',
    An' praise my God wherever I go.

New York City, April 19, 1873. M. L. B.

THE NEWS.

An excellent carriage road, with shade trees and a bridge over the Nile, has been built from Cairo to the Pyramids.

A Washington editor named Reed boasts that he can say the hardest things in the fewest words of any man in America. He evidently does not consider himself a broken reed, however modest he may be in other matters.

President Grant appears to have recovered from his reported illness, and taken Greeley's advice and "gone west." At last accounts he was in St. Louis, responding to toasts. Speaking of toasts, some temperance people will have it that that's what's the matter with the President.

It is rumored that James Gordon Bennett is making preparations to establish a new daily paper in London. The project is said to have been a favorite of his father's, who held that a London daily conducted on American principles and with American enterprise, must reach an enormous success.

A mid-April snow storm of a severity never known before, has passed over Nebraska, continuing for three days. People were frozen to death, houses were blown to pieces and railroads blockaded for a week. It is thought that half the unsheltered stock perished. The winter of 1872–3 will probably pass into history as the severest of the century.

On the 1st of May the Post-Office Department will furnish to the public the new postal card for purposes of mail communication. These cards may be written or printed on, addressed and sent without envelops through the U. S. Mail, for one cent postage each. 5,000,000 of the cards will be ready by May 1st, and orders to the amount of 30,000,000 have already been received at the Post-Office Department.

The emperor and empress of Austria are cousins, and the empress is called the handsomest woman in Europe. She is in her thirty-seventh year, and although the mother of several children, "is still as beautiful as the day." As Francis Joseph does not lack in manly beauty the children of the pair should have some stirpicultural points worthy of note. One of them Gisele, "beautiful, accomplished and amiable," having much "musical talent" and the "best horsewoman in Europe," has just been married to Prince Leopold of Bavaria.

Brigham Young has been in a mood of resignation for some time past. At the Spring Conference of the Mormon Church he resigned his position as Trustee of the church, a position which gave him control of its finances. He has also resigned the offices of President of the Deseret National Bank and of Zion's Coöperative Mercantile Institution, and his official connection with the Utah railroads and other corperations. He retains his position as President of the Mormon Church. He announces that the Mormons are about to send a colony into Arizona. They will locate near San Francisco mountain. south of the Colorado Chiquito river. They will found towns and cities and there probably the official center of the church will remove. It is a fertile country with a delightful climate. Young it is reported will go with the colonists and thus complete his resignations by resigning Utah to his official successors and ultimately to Gentile control.

Seventeen Modocs have been killed since the murder of Gen. Canby.

The rest of them are supposed to be still in the lava beds.

General Gillem commands the forces operating against the Modocs.

Gen. Kill'em would like to be made Superintendent of Indian affairs.

The Quakers and Peace men object and say his policy is more costly than theirs.

Every Indian killed costs about $1,000,000. As the average lifetime of poor Lo is only about thirty years, would it not be more economical to feed and clothe him and give him a shanty and a cook-stove? This need hardly cost more than $15,000 a year, a saving of half a million dollars on each Indian; which might be used in paying off the National debt.

White men sometimes forget that red men have long memories. The murder of Canby and Thomas seems to have been only a return sample of the treatment the Modocs themselves have been subjected to at the hands of the whites. Twenty years ago during hostilities between the Modocs and California settlers, on account of emigrants penetrating the tribe's hunting grounds. forty-seven of the Indian warriors were invited to a peace conference by Ben. Wright, the captain of the whites. The Indians were under command of Schonchin, father of the Schonchin who participated in the murder of Gen. Canby and party. "The two forces encamped close together. During the night it rained heavily, rendering the weapons of the Indians useless by relaxing the strings and the sinews on the backs of the bows. When Wright in the morning saw them standing round their fires, drying their bows he changed his plans and, instructing his men accordingly, he advanced alone. Extending his hand to Schonchin, then suddenly drawing his pistol, he shot down the unarmed chief. This being the signal agreed upon, the rest rushed in and butchered them, only seven escaping. I know this," says a gentleman writing to the New York *Tribune*, "not only from general report at Yreka, but from the lips of one of Wright's men, who has related to me the circumstances many times."

The man who tried to break paving stones by suddenly sitting down on them has given up the business as not remunerative.

RECEIPTS FOR THE CIRCULAR.

S. E., Auckland, N. Zealand, $3 00; W. M. T., Brooklyn, L. I., $1.25; E. H., Middle Granville, N. Y., $2.00; J. H., Milwaukee, Wis., 50 cts.; H. C., Galveston, Texas, $5.00; T. M., Jersey City, N. J., $5.00; J. S., Missouri Valley, Iowa, 25 cts.; H. L. B., Fayetteville, Kans., $1.50; F. W. F., Fort Dodge, Iowa, 50 cts.; J. W., Thompsonville, Iowa, 50 cts.; M. L. A., Superior, Wis., $2.00; W. R., Falling Waters, W. V., $1.00; M. A. S., Prescott, Mass., $2.00; S. D. C., Greenwich, Mass., $1.00; J. L. P., Vineland, N. J., $1.00.

ANNOUNCEMENTS.

SILK GOODS.

Machine-Twist and Sewing-Silk of their own manufacture for sale by the Oneida Community.

Address, [S] ONEIDA COMMUNITY, *Oneida, N. Y.*

PRESERVED FRUITS AND VEGETABLES

Put up for sale by the Oneida Community in tin and glass. Price list sent on application.

Address, [F] ONEIDA COMMUNITY, *Oneida, N. Y.*

STEEL TRAPS.

Eight sizes and kinds, suitable for the House-rat, Musk-rat, Mink, Marten, Fisher, Fox, Otter, Beaver, the Black and Grizzly Bear, are made by the Oneida Community Descriptive price-list sent on application.

Address, [T] ONEIDA COMMUNITY, *Oneida, N. Y.*

MACHINE-SHOP AND FOUNDRY.

Improved Lathe-Chucks, Blinn's Patent Gate-Hinges, Machines for Measuring the Length and Testing the Strength of Manufactured Silks, Bobbin-Winders for Sewing-Machines, etc. Agricultural, Machine and Light Castings, on hand or made to order. Descriptive price-list sent on application.

Address, [M] ONEIDA COMMUNITY, *Oneida, N. Y.*

THE WALLINGFORD PRINTING COMPANY.

All kinds of Book and Job Printing executed: Manufacturers' Illustrated Catalogues made a speciality: also Bronze and Color Work, and the finer kinds of Card, Circular and Bill-head Printing. Having enlarged its works and added new motive power, this Company is in renewed condition to meet the wants its patrons with promptness and accuracy.

P. O. Address, *Wallingford, Conn.*

PUBLICATIONS.

(Sent from the Office of the Oneida Circular by mail, post-paid, on receipt of price.)

History of American Socialisms. By John Humphrey Noyes. 678 pp. 8vo. J. B. Lippincott & Co., Philadelphia. London, Trubner & Co. Price $3.00.

The Trapper's Guide; a Manual of Instructions for Capturing Fur-bearing Animals. By S. Newhouse. Third edition with New Narratives and Illustrations. 215 pp. 8vo. Price bound in cloth, $1.50.

Salvation from Sin, the End of Christian Faith; an octavo pamphlet of 48 pages. By J. H. Noyes. Price 25 cents per single copy, or $2.00 per dozen.

Dixon and His Copyists; a Criticism of the Accounts of the Oneida Community in "New America," "Spiritual Wives," and kindred publications. By John Humphrey Noyes. Price 25 cts.

Scientific Propagation. By John Humphrey Noyes. Large octavo pamphlet of 32 pages. Price 25 cts.

Male Continence. By John Humphrey Noyes. An octavo pamphlet of 24 pages. Price 25 cts.

Hand-Book of the Oneida Community; Containing a Brief Sketch of its Present Condition, Internal Economy and Leading Principles. Price 25 cts.

The five pamphlets—"Salvation from Sin," "Dixon and his Copyists," "Hand-Book of the Oneida Community," "Scientific Propagation," and "Male Continence," will be sent to a single address on the receipt of $1.00.

Back Volumes of the Circular, Unbound. Price $2.00 per volume.

MESSRS. TRUBNER & COMPANY, Book-sellers, Paternoster Row, London, have the "History of American Socialisms," the "Trapper's Guide," and the "Hand-Book of the O. C.," for sale. They will receive subscriptions for our other publications.

PHOTOGRAPHIC PICTURES

Of the Oneida Community Buildings and Grounds, made by a first-class artist and finely mounted, can be had on application at the Office of the Oneida Circular.

LARGE VIEWS.

Bird's-eye View, looking West, of Community Buildings and Grounds, 12 by 14 inches, on fine enameled board 16 by 20; price $1.75. Quadrangle and Group, 12 by 14, mounted like the above price $1.75. South and East Fronts of the Community Dwellings giving a good view of the New Wing occupied by the Children—8 by 10, on tinted board 10 by 12, with an ornamental border price $1.00.

STEREOGRAPHS.

No. 2, East and North Lawns. No. 3, East Lawn and Portico. No. 4, East Front. No. 5, North Front and Lawn. No. 6, Bird's Eye View of Buildings looking West. No. 7, Lawn and Summer House. No. 8, West View, toward Railroad. No. 11, Quadrangle. No. 12, Lawn View. No. 15, South and East Fronts. Price of Stereographs $3.00 per doz. Sent by mail, post-paid, on receipt of price.

Oneida Circular.

A WEEKLY JOURNAL OF HOME, SCIENCE AND GENERAL INTELLIGENCE.

Published by the Oneida & Wallingford Communities.

ONEIDA COMMUNITY, MAY 5, 1873.

New Series, Vol. X, No. 19
Whole No. 1457.

POST-OFFICE ADDRESS:

ONEIDA CIRCULAR, ONEIDA, N. Y.

TERMS:

The CIRCULAR is sent to all applicants, whether they pay or not. It costs and is worth at least two dollars per volume. Those who want it and ought to have it are divisible into three classes, viz., 1, those who cannot afford to pay two dollars; 2, those who can afford to pay *only* two dollars; and 3, those who can afford to pay *more* than two dollars. The first ought to have it free; the second ought to pay the cost of it; and the third ought to pay enough more than the cost to make up the deficiencies of the first. This is the law of Communism. We have no means of enforcing it, and no wish to do so, except by stating it and leaving it to the good sense of those concerned. We take the risk of offering the CIRCULAR to all without price; but free subscriptions will be received only from persons making application for themselves, either directly or by giving express authority to those who apply for them.

Foreign subscribers, excepting those residing in Canada, must remit with their subscriptions money to prepay the postage.

THE UNITED COMMUNITIES.

ONEIDA COMMUNITY

Is an association living in Lenox, Madison Co., N. Y., four miles south of Oneida and a few rods from the Depot of the Midland Railroad. *Number* of members, 205. *Land*, 654 acres. *Business*, Manufacture of Hardware and Silk goods, Printing the CIRCULAR, Horticulture, &c. *Theology*, Perfectionism. *Sociology*, Bible Communism.

WILLOW-PLACE COMMUNITY.

Branch of O. C., on a detached portion of the domain, about one and one-fourth miles north of O. C. *Number* of members, 19. *Business*, Manufactures.

WALLINGFORD COMMUNITY.

Branch of O. C., at Wallingford, Conn., one mile west of the Hartford and New Haven Railroad. *Number* of members, 45. *Land*, 228 acres. *Business*, Publishing, Job Printing, Manufactures, and Horticulture.

SPECIAL NOTICE.

The O. C. and Branches are not "Free Lovers," in the popular sense of the term. They call their social system BIBLE COMMUNISM or COMPLEX MARRIAGE, and hold to freedom of love only within their own families, subject to Free Criticism and the principles of Male Continence. In respect to permanency, responsibility, and every essential point of difference between marriage and licentiousness, the Oneida Communists stand with marriage. Free Love with them does *not* mean freedom to love to-day and leave to-morrow; nor freedom to take a woman's person and keep their property to themselves; nor freedom to freight a woman with offspring and send her down stream without care or help; nor freedom to beget children and leave them to the street and the poor-house. Their Communities are *families*, as distinctly bounded and separated from promiscuous society as ordinary households. The tie that binds them together is as permanent and sacred, to say the least, as that of marriage, for it is their religion. They receive no new members (except by deception or mistake), who do not give heart and hand to the family interest for life and forever. Community of property extends just as far as freedom of love. Every man's care and every dollar of the common property are pledged for the maintenance and protection of the women and children of the Community.

ADMISSIONS.

These Communities are constantly receiving applications for admission which they have to reject. It is difficult to state in any brief way all their reasons for thus limiting their numbers; but some of them are these: 1. The parent Community at Oneida is full. Its buildings are adapted to a certain number, and it wants no more. 2. The Branch-Communities, though they have not attained the normal size, have as many members as they can well accommodate, and must grow in numbers only as they grow in capital and buildings. 3. The kind of men and women who are likely to make the Communities grow, spiritually and financially, are scarce, and have to be sifted out slowly and cautiously. It should be distinctly understood that these Communities are not asylums for pleasure seekers or persons who merely want a home and a living. They will receive only those who are very much in earnest in religion. They have already done their full share of labor in criticising and working over raw recruits, and intend hereafter to devote themselves to other jobs (a plenty of which they have on hand), receiving only such members as seem likely to help and not hinder their work. As candidates for Communism multiply, it is obvious that they cannot all settle at Oneida and Wallingford. Other Communities must be formed; and the best way for earnest disciples generally is to work and wait, till the Spirit of Pentecost shall come on their neighbors, and give them Communities right where they are.

DEEP SOUNDINGS.

Home-Talk by J. H. N.

I HAVE found in all my experience, that faith and reflection are nearly equivalents of each other. My acquaintance with God and spiritual union with him have always been proportionate to the amount of my meditation. It is true that meditation is not necessarily faith; in the world there is a great deal of meditation under unbelief; but meditation of a peculiar kind—meditation of the heart and intellect combined, which has in it the nature of prayer (though it is also a highly intellectual exercise), is the indispensable condition of faith. By meditation of this peculiar kind, we obtain that communication with God which is described in the Bible as an ever-springing well in the heart: "Out of his belly shall flow rivers of living water."

By this we obtain free communion with the Spirit of Truth. The promise of the Comforter, which is given to lead us into all truth, attaches to us as reflectionists;—not as men of business, or professors of certain external doctrines; but as men given to reflection. We must go back into the interior of our being to meet the Spirit of Truth. It necessarily addresses the deepest part of our nature. Its principal dealing, according to the name which Christ applied to it, is with our *rational spirit*. In calling it the *Spirit of Truth* we comprise in it the two ideas of life and light. Its contact is not with our intellect chiefly; it is with our spirit; but it touches that side of our spirit which is the seat of intelligence. It is a rational spirit; and as such addresses a corresponding element in us. To have free communication with it, we must have our rational spirit, which is concerned in true meditation, awake to its impressions.

Full communion with the Spirit of Truth, according to the conditions of it which I have described, is not possible to persons who are immersed in worldly business, reading, or external occupation of any kind. I do not say it is impossible that there should be any kind of profitable intercourse with God under such circumstances. There is doubtless a superficial operation of the Spirit of Truth on persons who have not time nor taste for meditation. Sympathetic communication between believers, by which spiritual influence is diffused from individuals through the mass, may give some participation in the Comforter; but I cannot see how more than this sympathetic baptism can be gained otherwise than by reflection, or giving one's self up to deep spiritual meditation.

Evidently there are two classes in reference to this matter. One class receives the Spirit of Truth sympathetically. These can hardly be said to have faith of their own and to be "rooted and grounded" in communication with Christ. They are under his influence by connection with others; are perhaps yielding to it more and more, and will ultimately have the eternal fountain opened in them. The other class are those who already have in them the "well of water springing up into everlasting life." They have not only received the word of God, but have digested it, reflected upon it, and entered into affinity with it. They are more than passive material for the Spirit to work upon; they are in a state actively to coöperate with it. They do this by reflection, closing their eyes to external things, and searching the center of their being for illumination.

The distinction between the art of reflection and the ordinary process of thought is seen in the acts which follow. By meditation you get access to a fountain of pure inspiration, and necessarily become original in your ideas and movements. You find in yourself continually new purposes, that cannot be traced to any connection with other people, or to the influence of ordinary motives. I always know when a man has been holding central converse with God, by his coming forth with some new glowing enterprise fresh from heaven. As fast as you become reflectionists you are emancipated from the spiritual direction of others. The more original and independent you become in this way the better; there can be no clashing of purposes or beliefs that are derived from the same author.

Between the two spiritual and mental conditions that I have defined there is naturally a transition state, in which the person has intervals of deep meditation, occasionally touching bottom in the ocean of truth, and finding there new and needful stimulus. It is a principal benefit of suffering that it throws us back on deep meditation. In the common routine of affairs, and especially in the sunshine of prosperity, the tendency of men's thoughts is centrifugal; but in a time of terrible temptation and trial, when they are cornered by suffering, the fire is driven inward, and they find out the profit of meditation. When their thoughts have thus been driven inward, and they have had a good season of reflection, they reäppear in new beauty and vigor. Every such period of reflection is a point of departure in the believer's course. He takes a new start; and the impulse he gains carries him forward until his thoughts and actions become superficial again, when he is again driven back by suffering to central search after God. There is thus great benefit to be derived from temptation; and God repeats the chastening again and again, until we form a chronic habit of turning inward. This habit constitutes spirituality. The difference between a spiritual and a worldly

man is not in their natural faculties or constitutional powers, but in the bent and direction of their attention. The spiritual man exactly reverses his natural aim of thought; the current of his attention is centripetal. He has been plied with suffering in the school of God for the very purpose of turning his mind from the superficial to the central. Conversion is inversion.

Nothing is so satisfactory to my heart as to see people fond of spiritual meditation; not the idle, luxurious meditation of the quietist, but that earnest recurrence to one's own center, which is in fact recurrence to God. As God is the most active being in the universe, engaged in unremitting beneficence, the kind of meditation which connects us with him makes us also active, and furnishes us unto every good word and work.

There has always been some method provided for consulting God. The patriarchs had a way of laying their projects before him. David asked counsel of the Lord against the Philistines—"Shall I go up?" Having obtained an answer, he knew he should succeed. The ark of the covenant was long the place where the people of Israel consulted God. What was then locally true is now a universal principle. The external type is superseded by the spiritual substance. You will find in your own nature a sanctuary—a holy of holies, an ark of the covenant a place where God reveals himself; and it is your privilege in all transactions to ask counsel of God and talk with him about your purposes. We must search out this central sanctuary—must know where the ark of the covenant rests—and be in a condition to recur to it. It should become a habit of our lives to turn to God for consultation and assistance in all affairs; and when the flesh most calls for activity, when conflicts and emergencies are most pressing, and everything is whirling with excitement, then is the time to fall back and commune with God; because then we have the least ground to hope in the efficiency of our own wills. Much as we have to do there is still no hurry; and we need not recklessly drive on for fear our work will get ahead of us, or think we have no time for reflection. Even in the hurly-burly of battle, if you do not see your way clear your safest course is to lie down and reflect. In meditation you have at all times a quiet, safe refuge; and when you have got counsel from God you will go forth to action with a sure heart.

THREADS FROM MY LIFE-BALL.

IV.

I CLOSED my last chapter with the thrilling news that a new sect had arisen in New Haven, professing to have attained a sinless state. At first we thought that if the report were true, a more daring, presumptuous step mortal man could not have taken, and that of course it would prove a monstrous delusion. Yet we were anxious to learn more about the people who made such professions. The fact "that they were everywhere spoken against" only increased our desire to become acquainted with their doctrines. Soon the report came that Mr. J. H. Noyes, a licentiate of the Theological department of Yale, a young man of marked ability, was the author of this heresy, as it was then considered. We heard that some of the most spiritual members in the churches were among the first to embrace this new and strange faith; and what startled me still more was the news that among them were three cousins of mine—a young man in college and his two sisters, who were at that time teaching school in New Haven. As I knew my cousins were regarded as eminently pious, this intelligence deeply affected me.

Not long after this we attended a religious convention at North Haven, where quite unexpectedly we met the two young ladies. Their solemn countenances had become radiant with joy and happiness. Knowing them to have been consistent and exemplary professors of religion I longed to have some conversation with them. Being invited to accompany them to a neighboring house during the intermission, where several clergymen were stopping, I had an opportunity of conversing with them. From all I then heard I became satisfied that the so-called heresy was inseparably indentified with the Holy Scriptures, and would stand or fall with them.

Here I will take the liberty to digress a little from my story, in order to give a sketch of my cousins. Their parents were eminently religious. Their father was a deacon in the Congregational church in N——, and had the pleasure of seeing his nine children, three sons and six daughters, hopefully converted in youth and communicants of his own church. Several of them became missionaries and were noted for their piety and unflagging zeal in their master's service. Mrs. C——, one of the six daughters and the elder of the two sisters referred to above, had been a missionary among the Indians in the then far western world, where she lost her husband, and at her father's request she had lately returned to her old home. But not wishing to be idle, this lady with her youngest sister formed a Home Missionary Society and did what she could in distributing alms among the poor, and telling those who had ears to hear the story of the mission of the Son of God into this world to save sinners.

Thirty-five years ago it was a universal custom among the devotedly religious to attend the May Anniversaries in the city of New York. My cousins, as was their wont, were there the spring following their espousal of the new faith. During that visit they formed the acquaintance of John R. McDowall and wife, the W———s, Mr. and Mrs. Cragin and others, who were engaged in the reforms of the day. With the latter family they left a few copies of the *New Haven Perfectionist*. Previous to their conversion to holiness, the two female missionaries had rented a building in New Haven, where they opened an African free school and were meeting with much success in their missionary work when Mr. Noyes astonished the religious community by his confession of *freedom from all sin*. Among the first to embrace the unpopular faith were the two sisters and their brother then in college. The lady friend whose happy death was mentioned in my first chapter, and by which I was so deeply moved, was the eldest sister in this rather remarkable family.

Soon after our return from the convention in North Haven we received the first issue of the *New Haven Perfectionist*, which we read with great avidity. From this time H—— and I were confronted with the question, "Is freedom from all sin attainable in this life." Our minister and the clergy generally had taken the ground that it was not. That we differed widely from so respectable, and at that time so formidable a body, I may say was no fault of ours. The Bible, which was to us now more precious than ever, compelled us, so to speak, to indorse Perfectionsm. The second number of the *Perfectionist* contained Mr. Noyes's views on the Second Coming of Christ. With Bible in hand, we read it with absorbing interest. Its perusal let in upon our minds a flood of light. That Christ came the second time immediately after the destruction of Jerusalem, according to his own predictions, we could no longer doubt; and equally clear were the arguments that perfect holiness, in this life, was the sure and unmistakable promise which the gospel of Christ held out to those who believed on his name. But how to attain this spiritual freedom was to us a more difficult problem.

The labor of soul consequent on the conviction that we must be saved from all sin now, or otherwise there was no salvation for us, seemed to be more than the physical frame of H—— could endure. Already feeble, he was attacked by the typhoid fever, which held him for several weeks so closely at death's door that his final recovery was regarded by all as a miracle in very deed. Just at the time, however, when H—— was prostrated by disease, the lady superintendent of the Sunday-school, with which he had been so long connected, called to see him; and to her H—— confessed his freedom from law and sin. The lady, though deeply interested in his testimony, was terribly shocked by it. What! freedom from all sin in this world? The very thought of such a thing seemed to many, in those days, like committing the unpardonable sin, so ignorant were the great majority of professing Christians of the plain, simple truth the Bible presents in favor of holiness.

From that confession of H—— consternation seized the church. "Our good brother H—— has embraced strange, heretical views," was whispered to one and another by busy tongues. Being dangerously sick, was not his mind a little shattered? So they reasoned. In the meanwhile the church was offering prayers on his behalf. For several days he was unconscious of what was passing around him. Finally, when his reason began to resume its function, and his strength to increase, he astonished his watchers (who were members of his church) by preaching to them the doctrine of holiness. The news was immediately communicated to the pastor, who lost no time in coming over to reason with and rescue the esteemed brother from the dreadful error. Day after day I sat by and listened to the arguments pro and con, and so plausibly did our minister talk aginst the new faith that at

first I was a little staggered. It was not long, however, before I saw very clearly that the Bible was wholly on the side of perfect perpetual holiness of heart in the Christian believer; and when I confessed, on being appealed to, that my convictions and sympathies were all on the side of the truth, the news again spread abroad that the church had two opponents at our house instead of one. Every day seemed to strengthen the faith of H——, and his spirit rose free from all doubts and fears into an atmosphere of security, peace and happiness.

As H—— began to recover, my overtaxed powers, both physical and mental, began to give way. The doctor noticing this, kindly offered to prepare a medicine to "tone up" my system. I respectfully declined the offer. The medicine that I needed was a baptism of resurrection life. Just then my cousin, who had left college on account of his adherence to the new faith, called upon us. It was refreshing to H—— to see one with whom he had full fellowship in the truth. Although I greatly enjoyed their happiness I was nevertheless bowed down with a deep sense of sin, a burden from which I longed to be delivered. On taking leave of us F. put out his hand saying, "Cousin E., have you that faith which works by love and purifies the heart?" This touched a tender cord, and with tears I replied, "No, but nothing else will satisfy my longing soul." For several weeks a severe conflict within ensued.

By the light of the new truths, brought out in the writings of Mr. Noyes, I was enabled to analyze my past religious experience. The change wrought in me, by my first conversion, was chiefly a change of purpose, making me desire to serve God instead of myself, relying mainly on my own will; so that my religion consisted mostly of will works. I saw that what I now needed was a crucifixion of my self-will, that God's will might work in me "of his good pleasure." This, and nothing else, the Perfectionists taught was the new birthboon, not of the will of man, but of God, resulting in a new disposition and a radical change of character. I had to confess that in the past "when I would do good evil was present with me." But an end, I felt, had come to such miserable confessions of perpetual defeats. I also made the discovery that I was now knocking at the gate of a kingdom into which no idols could be carried. Husbands, wives, parents, children and all worldly possessions were to be joyfully surrendered, and hated even, if they were rivals of the love of Christ. Could I do this? E.

SPIRITUALISTS AND CHRIST.

Some of the ablest Spiritualists are drifting toward Christ and Christianity, and we have no doubt that the Christian "Religion of the Future," as defined by Henry Ward Beecher, will eventually gather a large harvest of honest and loving hearts from among the adherents of Modern Spiritualism. Here is what Robert Dale Owen said of Christ and his teachings in an address at the twenty-fifth anniversary of Spiritualism, held at Music Hall, Boston:

"I know I shall have dissenters in my audience from what I propose to say, but I regard Christ as the crowning exemplar of the spiritually inspired.

"I regard Him—I say it with reverence—as the great founder of Spiritualism.

"My opinion is that Christ outshone, as the sun and stars, all other moral and spiritual teachers.

"While due weight may be properly attached to the words of Confucius and Socrates, Plato and Seneca, and all the rest, I find nothing which comes up in beauty and purity of teaching to the ethics of Christ himself.

"Other religious systems speak highly of love, but of Christ's system it is the very soul and center. 'Love is the fulfilling of the law.'"

"LET NOT YOUR HEART BE TROUBLED."

Let not your heart be troubled,
Nor let it be afraid;
If you in Jesus Christ believe
You on the rock are stayed;
The storms that come will only show
How firm that rock is laid.

Cast all your care upon the Lord,
He every sorrow knows;
He loves you more than parent loves,
He'll conquer all your foes.
Believe on Him! Believe on Him!
His power no limit knows.

No mother's love is half so full
Of tenderness and care,
No sparrow falls without his will,
He numbers every hair;
His promises are rich and sure,
His mercies free as air.

In accents sweet I hear Him say,
"Come, weary, laden breast,
Give me your load, take my light yoke,
And I will give you rest."
To every meek and lowly heart
He gives this blessed rest.

HELEN MAR.

From the Christian Union.

RELIGION IN THE FUTURE.

IF we take a wide survey of the present field of religious thought, we see a chaos of conflicting opinions. We find, too, a general conviction that out of this confusion there will, sooner or later, arise some settled agreement, some definite basis. For ourselves, we believe that this faith of the future will be Christian, by virtue both of its historical connection and of its allegiance to Christ. But it will be Christianity under a new aspect. We believe that it will retain the great central truths that have always been the heart of Christianity. God and Christ and immortality; all the sweet and comforting assurances of the Gospel; all its energizing moral impulses,—whatever, in a word, has stayed and strengthened the followers of the Lord Jesus throughout the ages—will, in its substance, be held more firmly and realized more vividly than ever before. The outer husk of dogmatic statement may wither or change, but only to show more clearly the vital, underlying fact. Farther, the outward instrumentalities of religion will, doubtless, be largely altered; not only our creeds, but our modes of worship and of church government, the appliances for practically reaching men, will be changed in the direction of greater efficiency. The details of these modifications cannot be foreseen. But we look with confidence for a special prominence of certain spiritual qualities in the coming development of religion.

We believe that one of its qualities will be the truth-seeking spirit, the love of truth for its own sake. That is a wholly different thing from love for one's own beliefs. The essence of genuine love of truth is willingness to learn. Its temper is not self-confidence, but humility. It is open-eyed, receptive. It holds truth so sacred that it will sacrifice comfort, ease, peace of mind, rather than to rest in a delusion. The religion that includes this element must have the broadest tolerance for sincere opinion. It must place absolutely no limit on the honest search for truth. Thus far, freedom of opinion has been conceded only as a social right, not as a Christian right. Heretical opinion has ceased to bring civil penalties, but it still excludes men from the churches. We must go beyond that. The time is coming when it will be recognized that to think with perfect honesty—that is, with perfect freedom—is not only a right, but a Christian duty; that to the truth-seeking spirit belongs the highest moral quality. When that is fully understood, exclusion from the church for opinion's sake will be unknown.

There will be present, too, a deep element of faith. Faith is the soul's dependence on a higher being. It is the recognition, by a spiritual sense, of a personal embodiment of power and love, from whom man draws his life, and in communion with him and aspiration toward him finds his highest good. Faith is the faculty by which this Being is known and felt. The validity of the faculty is challenged; sometimes a storm of doubt shakes the hold of man on God; the deepest struggle of the time is to know whether faith is a delusion. If it is a delusion, man's nature is a fraud, and the only wisdom is blank, total skepticism. Not such is the goal toward which the minds of men are pressing. Out of the tumult faith will emerge, purer and serener than ever before, the more sure and precious for the unsparing trial that has proved her. Those who come after us will have not less, but more faith than we.

The truth-seeking spirit and the spirit of faith, instead of being opposed, are in the deepest harmony. The man whose faith is most profound is willing to have its assertions tested by the severest scrutiny. And the passion for truth has underlying it a profound conviction that what is real is best; that when we get to the heart of things we shall find there what we most need. Faith is false to itself when it dreads truth; and the desire for truth is prompted by an inner voice of faith.

Above all, the religion of the future will be a love-religion. That element will be central and sovereign. Raised to its rightful place, we cannot tell how deeply it will change our present systems of thought, our ideals of character, our social usages, the whole inner and outer life of society. We know that, so far as its power extends, it will sweeten and brighten all things. It will make religion joyful, filling the soul with a new sense of the transcendant glory and loveliness of its God. When we not only say, but know, that God is love, our whole vision of time and eternity changes; the universe is transfigured before our eyes. Nor, with such a change, shall we lose in energy and moral fiber. True love is of all principles the most active and mighty. Its counterfeits and its lower forms may be weak; but love which has the divine quality is majestic, strong to suffer, all-powerful to conquer evil. When men know something of what love is in God, and catch its inspiration in their own hearts, they will be strong enough to re-make the social world. Such work is to be done by men for each other, as has hardly yet been thought of. The disposition which was Christ's, the giving up of life to the service of others, is to so spread among men that it will inspire benevolences, habits of brotherly feeling and action, a sweetness and health in the whole social body, that we have not yet dreamed of.

When shall these things be? God only knows. But the signs of them are among us. The truth was never sought more earnestly than a host of men are seeking it now. The distressing doubts that thousands are grappling with are the birth-pangs of a higher faith. The idea of a God of love and a religion of love is being so developed and so received that it is almost like a new revelation. In different nations, and under countless forms, we see the promise and beginning of a practical, many-sided benevolence, a brotherly feeling and helpfulness, such as perhaps was never seen before. And these signs are worthy to be trusted.

On a day in early spring, when the woods are bare and the fields brown, when the earth is mantled with gray clouds and chilled with raw mist, we ask, "Where is the summer that was promised?" But looking closer, we see upon the orchards a faint flush of springing buds, and on sheltered hillsides the grass is green; under the dead leaves we may find the arbutus, and now and then the note of a blue-bird pierces the heavy air. Summer is coming! And God's summer is coming among men. Not to-morrow, perhaps, nor next year, but in his good time, surer than the apple-blossoms of next June, fairer than the brightest day on which the sun ever rose.

THE KEEPING OF THE TRUE LENT.

BY HERRICK.

Is this a fast, to keep
The larder lean,
And clean,
From fat of veals and sheep?

Is it to quit the dish
Of flesh, yet still
To fill
The platter high with fish?

Is it to fast an hour,
Or ragged go,
Or show
A downcast look and sour?

No: 'tis a fast to dole
Thy sheaf of wheat,
And meat,
Unto the hungry soul.

It is to fast from strife,
From old debate,
And hate;
To circumcise thy life.

To show a heart grief-rent,
To starve thy sin,
Not bin;
And that's to keep thy Lent.

ONEIDA CIRCULAR.

TIRZAH C. MILLER, EDITOR.

MONDAY, MAY 5, 1873.

Read the article on "Religion in the Future," by Henry Ward Beecher, copied on another page, from *The Christian Union*. It is a true prophesy.

The *Phenological Journal* for June is to contain an article on "Socialism in America" by Samuel Leavitt. From a glance at the proof-sheets we judge that the article will be entertaining and truthful—its facts having been gleaned from that standard work, Noyes's "History of American Socialisms."

The writer of an article on another page, entitled, "Legal Status of Married Women," is a lawyer in respectable practice, and has held a judicial office in an important city. We invited him to the task he is entering upon. He says in a note accompanying this article:

"This first installment of my series on the legal status of married women may strike you as starting out for an elaborate and exhaustive review of the whole law of marriage, and perhaps threatens to take up too much room; but it seems to me it would be instructive, while endeavoring to develop the facts as to the changes made by modern legislation, to take a brief and systematic view of the historico-legal aspects and phases of the institution. It is something I have often thought I would like to do in lectures or articles; and I hope my plan will be found consistent with your purposes in conducting the CIRCULAR."

LIBER PRIMUS.

SOCIALISM is coming to the front again. Coöperation, Spiritualism and true Religion are all helping it forward. No one need be surprised to see another Socialistic Revival soon sweep over the land, more wide-spread and powerful than the great Fourier Revival of 1843. Classes for drill and experiment are already forming in the East and in the West. Our interest in the good cause makes us earnestly deire that the classes forming should have a full acquaintance with the Associations, Phalanxes and Communities which have already lived and died and that now exist, with their causes of failure or success, before undertaking new experiments themselves; for thus and thus only can they avoid the mistakes of the past and work intelligently for the future. Therefore to all who are investigating Socialism, whether with a view to practical experiment or otherwise, we say, Study the "History of American Socialisms." That is the first book—the true *liber primus*—of Socialism. We have no heart to counsel any one on this subject who has not read that book. You would call a man a fool who should set out on a voyage of geographical discovery without first acquainting himself with the discoveries that had already been made and the liabilities and dangers incidental to such voyages. In the "History of American Socialisms" are given accounts, more or less complete, of nearly three score voyages in search of the new Eldorado of Social Harmony; and no wise man will hereafter think of setting sail with the same object in view without first reading the stories of the cruises of Coxsackie, Forestville, Franklin, Haverstraw, Kendall, Macluria, New Harmony, Nashoba, Yellow Spring, Adelphia, Brook Farm, Clarkson, Clermont, Columbia, Garden Grove, Goose Pond, Grand Prairie, Hopedale, Marlboro, North American, Skaneateles, Wisconsin, etc., etc. These are all contained in "American Socialisms," and their general perusal must accompany a general revival of Socialism, or a repetition of the failures of the Owen and Fourier epochs can only result.

PLURALITY, OR WHAT?

WHAT shall be done with the excess of women in the older States? In New Jersey there are 6,752 more females than males, in New Hampshire 7,020, in Rhode Island 7,841, in Massachusetts 49,793, and in New York 56,301. The young men who have abandoned those who would have naturally become their wives and "gone West" are in great part responsible for this condition of things. In the Territories and newer States the men are everywhere in excess. A deportation of one hundred and fifty or two hundred thousand women from the East to the West might settle the whole question; but the remedy is harsh and cruel and impracticable. Few women could be induced to leave home and birthplace, with all their endearing ties, throw away their present means of livelihood, and go into distant parts of the country, simply to improve their chances of getting a husband; yet monogamy has nought else to offer! Polygamy promises to remedy the evil where it exists; and if we can give credence to an article in a late number of the *Daily Graphic*, this remedy is actually favored by many women in Massachusetts, where the disproportion between the sexes is greatest. The article is furnished by a Lowell contributor, and contains a copy of the following petition, now circulating in that city:

LOWELL, April—1873.

To the Honorable the Senate and the House of Representatives of the Commonwealth of Massachusetts:

The undersigned, citizens of the State, respectfully set forth the grievances under which they suffer as women who are not permitted to vote, hold any and all offices, and engage in the occupations opened to men, and are otherwise restricted in the opportunity of earning a living, and herewith beg your permission to suggest the remedy for these evils, upon which they pray your honorable body to act.

The law which now governs society says, practically, that women should be married, should engage in work at their own homes, and should look to their husbands for support. On the other hand, the census shows that it is impossible to carry out this unwritten but recognized law, for the reason that there is a large excess of women in the commonwealth, and many of the men of lawful age are idle, vicious, incompetent, or otherwise unfit to be the heads of households. Yet your petitioners hold that the matter is not without remedy. Prejudice and custom have decided in favor of restricting the husband to a single wife, yet without justice and authority, as we believe. In the Book which lies at the foundation of all law recognized in this country, there is no injunction against a plurality of wives, while there are many examples therein recorded in its favor. Men's wives appear to have increased in number in proportion with their flocks and riches. Such a rule even now holds in the land from which the Christian nations received their religion.

Your petitioners have no desire to interfere with the regulations of any existing household, but simply to present their claims to the marriage state for your respectful consideration. They deem it their privilege and their duty to suggest the abolition of the law against the marriage of a man to more than one wife, in cases where the first wife does not object, and where it is made evident that the man is able to support the additional burden laid upon his resources. They are aware that it may take years to remove prejudices, and that those who take a second or third place in the household may be looked upon with disfavor; but, confident that their proposed action will ultimately do away with much of the social evil that afflicts and distresses all communities, they are willing to be the first to engage in the work of this reform. Society, which now insists that woman shall be married and look to her husband for support, will, after mature reflection, countenance this effort to carry out its laws practically.

It is far from the design of your petitioners to ask legislation in behalf of free love or any loosening of the marriage bond. We ask that the marriage of the second wife shall be made as binding and permanent as that of the first, and that all the children of the household shall have equal honor. And in asking this, we believe that we have taken a long step toward doing away with foundling asylums, preventing ante-natal murders, and lessening the vagabond child population of our large cities.

For the reasons enumerated, your petitioners respectfully ask the passage of a law permitting plural marriage in the cases above enumerated, and under such other conditions as to your judgment shall seem wise and proper.

And your petitioners will ever pray, etc., etc.

We cannot vouch for the genuineness of the above document; but the *Graphic* writer says it bore one hundred and sixty-two names when he saw it, which were apparently genuine, and it is certainly not surprising that in a State where there are nearly fifty thousand more women than men such documents should originate and find favor. Society says to these thousands, "Marry if you would win support, happiness, and respect." They see that under the monogamic rule it is impossible that they should fulfill this behest. They find "no injunction against a plurality of wives" in the Bible; and what more natural than that they should desire to have their matrimonial chances improved by the repeal of all laws against plural marriages?

But polygamy is an old, effete institution of the past, antagonistic to the spirit of the present; and it is useless for the fifty thousand to base their hopes upon it. Complex marriage is the new social system, which promises to satisfactorily settle all such questions as this of the disproportion of the sexes. Though it requires certain indispensable preliminary conditions, they are such as should be found in the best civilizations. We see no reason why, for instance, many churches in New England and elsewhere could not conclude that their relation to one another as members of Christ is more sacred than any other relation, and in fact includes all other relations. And that is Complex Marriage—the marriage of each to all and all to each. When any church or other organization reaches that point it is entirely unnecessary to count the men and women to find out whether they are exactly even. All would find support and all the comforts of home and of the family relation. Complex Marriage is a

system adapted alike to the supposed normal condition of the sexes in which their numbers are equal, to the condition found in the older settled countries in which women predominate in numbers, and in newer countries in which men are in excess. Everywhere it gives a home and all its privileges to those who enter into its sacred bonds. Let the fifty thousand women in Massachusetts, the fifty-six thousand in New York, and the thousands in other Eastern States, who are deprived by the rule of monogamy of so many important rights and privileges, look forward to Complex Marriage rather than back to a system which does greater injustice to woman than even monogamy, inasmuch as it gives man greater ownership of woman. Complex Marriage asks no more for man than it gives to woman; it makes an end of all ownership of persons, while its guarantees are more complete than even those of monogamy. W.

REVIVAL-DYNAMICS.

BY THEO. L. PITT.

HENRY WARD BEECHER, in a recent lecture to the theological students of Yale College on the subject of Revivals and the method and influences which promote them, is reported as saying:

"All seasons are not alike favorable. All methods we know are not alike wise, neither are all seasons for the procuring of these results wise. It is, for instance, unwise to attempt to stir up in a community or in any church in the community a very wide-spread, very deep and general moral excitement while the whole community are burning and blazing with political excitement, on the ground that you cannot have two such excitements at the same time, and the religious feeling in a community is not generally strong enough to resist this greater excitement. Then there is a great deal of difference in the time of the year, whether people can get out to meetings or can spare the time. In the midst of harvests I have known but one revival in my life among hundreds and hundreds, because men can not spare time from the harvest-field; and there may special things happen in communities which prevent or are the exact time for revivals, as in case of great sickness or the death of one greatly respected or beloved. All these things are to be watched in communities, and your revivals are to be in the proper seasons of the year. You are to adapt your moral culture to all these peculiarities of God's providence, which with some little care and observation every one may discern."

Mr. Beecher in his lectures strongly advocates revivals, and declares his belief in the "new birth" and a radical change of character in men under revival influence; but in the above paragraph we think, if correctly reported, he falls into a very common and wide-spread error. The idea has become general among religious people that revivals are subject to circumstances and times and seasons: that they can be carried on successfully only when business, political and other excitements, are at low ebb. Under the prevalence of this theory revivals in summer or during a political campaign are almost unknown. Mr. Beecher says only one summer revival has taken place among the hundreds in his day. Only in late fall and winter, when men have comparative leisure from business pressure, and only during the lapses of political excitement, do we find much revival interest at work. When spring opens, farm work begins, and mercantile and manufacturing interests get a new impulse; when the pleasures of summer come in, or when a new President or Congress is to be elected, then the revival interest begins to abate and society falls back into its old religious apathy.

Now it seems to us that instead of being the true order of revival procedure—a necessary "peculiarity of God's providence," as Mr. Beecher puts it—this state of things is the result of a low estimate of the importance of revivals, a weak interest in the means of making them perpetual, and unbelief in the power of God's spirit or of supernatural influence. Let us think a moment:

1. Our relations to God and the supernatural world are the most important relations we can have with any beings or spheres of action.

2. These relations should be of the most intimate, continuous and improving character.

3. Everything which tends to foster, strengthen and improve these relations should be sought with the utmost energy of the powers of both soul and body, at all times and seasons and in all circumstances.

4. Everything which disturbs these relations should be fought against and destroyed always and everywhere.

5. It is the paramount peculiarity of God's providence to favor everything which tends to promote these relations and to oppose everything which opposes them.

6. Hitherto in the history of the world the revival spirit has been the supreme agency in promoting those relations. The genius of that spirit is not sporadic but persistent and enduring world without end.

7. The revival spirit as the dominant influence should inspire and control all human relations, business, action and passion; in other words, become the governing power in human affairs.

8. Such a manifestation of the revival spirit would be the establishment of the kingdom of God in this world.

If these propositions are true, then revivals are God's choice agency for operating upon and controlling the course of human history. Then also we may expect to find many instances in that history where the revival spirit has not been subject to the times and seasons of men's business or political convenience, to winter's leisure and to summer's harvests, but has taken possession of men's attention and hearts and swept "in season and out of season" with resistless power of conviction and revolution over all obstructions of time, place or circumstance. Such were the revivals of the Old Testament age. Such was the revival career of Christ. Such was the forty-year revival of the Primitive Church, beginning on the day of Pentecost, sweeping over all the known world and culminating amid the distractions of the Roman destruction of Judaism—the greatest "political excitement" the world ever saw—in the Second Coming and the first resurrection. But coming down to modern times, we find illustrations of the same tendency. The second revival of the "Great Awakening" under Edwards, at Northampton, began in the spring of 1741, continued on through the summer that year, the following winter, and reached its highest fervor in the summer—amid the "harvest"—of 1742. The Gouverneur revival of Finney and Father Nash was a "summer" revival. The labors of these two men on that occasion extended from April to September, 1825—the busiest time of the year. So completely were the people of the town absorbed in it that the opponents of the revival taunted the farmers with neglecting their crops and prophesied their failure. But it is said by an eye-witness that instead of the crops failing for want of care they were better that year than had ever been known in that region before. This was one of the most remarkable and interesting revivals of modern times, and typical in many respects of the great awakening of 1831—34. Undoubtedly many more instances might be mentioned, but these are enough to overthrow the "times and seasons" theory which Mr. Beecher supports. The strongest facts of history are against it as an explanation of the law of God's working through revivals. That theory instead of being a guide and help in promoting revivals is really one of the greatest existing obstructions to vigorous, permanent revivals. The true end of revivals is good religious experience. But this theory says, "You can only have such experience at certain times and seasons—in winter, when work is slack, and when there is no political campaign going on. Don't seek it in harvest time or during a Presidential election." Is it any wonder that under the influence of such theories political campaigns have become corrupt and loathsome, and that men are elected to office who bring disgrace on the nation? Is it strange that sensualism is the vice of the age? When, we ask, does a nation need to be more completely controlled by the spirit of God than when choosing its rulers and legislators? When does a man need more to be under the dominance of the revival spirit than in the pressure of business and amid the sensual delights and temptations of summer?

Even if it is true that at certain periods, when religious activity has been weak among the people and distracting influences strong, it has been found expedient to take advantage of circumstances and seasons for promoting revivals, and greater success has been attained at these times than at others, we must not allow that fact to limit the power of God, or attempt to deduce a fixed law of revival success from it. Such a state of things, if it indicates anything, shows weak devotion to the revival spirit and an imperfect mediumship on the part of those engaged. There is no time or season or condition of outward affairs when the "Lord's hand is shortened that it cannot save," or when the revival spirit cannot blaze forth in the fullness of its power. That spirit is ever-ready, ever-present, and waits only for the inward condition of earnest and sincere invitation on the part of men to fill them continuously with its afflatus.

We believe the time has come to sweep away such theories of the limitations of God's spirit, and begin to work for a revival which will save men and women from all sin now and here, and make them "young converts forever;" a revival which shall be perpetual, ever-increasing in power, independent of times and seasons, controlling all the interests and activities of life, and, at last, world-wide in scope. That is our ideal of a revival, and the central purpose of the Oneida Community.

COMMUNITY JOURNAL.

ONEIDA.

Thursday, May 1.—Since Sunday last the weather has been unsurpassed in loveliness; grateful nature leaps to life beneath the influence of the sun's warm rays, and the lawns are once more carpeted in green.——The usual amount of ditching and digging, plowing and planting, fencing and repairing is going on in the farm and garden departments; the usual amount of raking and spading, planting and transplanting, in the flower-garden; and there is rather more than the usual amount of enthusiasm on the part of the juveniles for a plot where they can "plant and rake and hoe." So Mr. Cragin has laid out a ground west of the hedge across the road, where the children can deploy to their hearts' content.——Day before yesterday a committee, appointed to select a new croquet-ground, strolled into the meadow east of the house, and after viewing the landscape far and near, pronounced the ground lying just the other side of the hedge as most suitable for our outdoor home amusements. Here it was thought we should ultimately appropriate several acres for this purpose, including the hillside beyond the creek, and might easily convert all into a very picturesque park, by setting out trees, erecting fountains, etc.; but the present year we will content ourselves with

merely a play-yard and arbor for the children and a family croquet-ground.——A party of men and women, who went to Joppa Tuesday, came home last evening and brought with them handfuls of the trailing arbutus, and say that it is among the commonest flowers about the Lake. They also report that the ice has not yet gone out of the Lake, and the water has lowered but little since the freshet.——We had a call yesterday from a physician of some note, who complimented us on the healthy appearance of our children.——The silk department is dyeing a batch of silk for a silk manufacturer in New Jersey.——Manly reports that part of the sheep are turned out to pasture to-day.——The 'bus is in front of the door and the two-year olds are jubilant over a prospective ride.——The boys and girls have just donned their summer hats and bonnets for the first time and gone into the fields to play.

—An intelligent correspondent, writing about Male Continence, pithily says: "I am satisfied you are right. *There must be self-denial somewhere, and you impose the very least.*"

—A jocose visitor of last week said that when making an excursion down the Potomac from Washington, a few years ago, he was introduced to Delegate Hooper and two other Mormon gentleman. Mr. Hooper asked to be introduced to his wife, which request was granted on condition that he should not run away with her. The lady at once plied the Delegate with close questions.

"How many wives have you?" she asked.

"Only one."

"Do you expect to have any more?" urged the inquisitor.

"My dear madam," responded Mr. Hooper, "I never expect to marry again so long as I live *unless you should be so unfortunate as to become a widow!*"

Meanwhile certain young ladies of the party interrogated sharply another of the Mormon three, and with scarcely better result:

"I have, ladies, but one wife, *but I wish you to understand that I am in the market!*"

—It is generally supposed that we are "dead set" against marriage; but here is a letter just received from a western subscriber, which traces the history of a match that was brought about, partly at least, by the O. C., and seems to have turned out satisfactorily to all concerned:

Letter from E. Y.

"The ONEIDA CIRCULAR under date of March 25th, 1872, contains a letter I received from E. B. S. It is the result of that letter that I wish to trace on this occasion. Here are the 'Chronicles:'

"1st. E. B. S.'s letter to E. Y., Jan. 21st, 1872.

"2d. E. Y.'s reply, Feb., 1872.

"3d. E. Y.'s report of the above letter and reply to the Oneida Community, March 8th, 1872.

"4th. The publication of said report in the ONEIDA CIRCULAR, and the editor's comments.

"5th. S. H., a reader of the ONEIDA CIRCULAR, visits E. Y. for the purpose of forming an acquaintance, and introduces himself by referring to the above publication and comments.

"6th. Miss P. writes a letter to E. Y. referring to the ONEIDA CIRCULAR'S publication of aforesaid report of E. B. S.'s letter, and desires to become acquainted with E. Y. by means of the pen.

"7th. E. Y. replies, and a lively correspondence follows.

"8th. S. H. visits E. Y. again, and is shown the letters received from Miss P.

"9th. E. Y. introduces S. H. to Miss P. by letter, and a correspondence between them follows.

"10th. E. Y. introduces Mrs. W., a reader of the ONEIDA CIRCULAR, to Miss P. by letter.

"11th. Correspondence between Mrs. W. and Miss P.

"12th. Miss P. makes her home with Mrs. W.

"13th. S. H. visits Miss P. at the home of Mrs. W., and is disinclined to propose a union.

"14th. S. H. asks advice of the Oneida Community concerning his motherless children, etc.

"15th. O. C. replies, advising S. H. to marry, and proposes to introduce him to a woman in his State.

"16th. S. H. guesses who it is, and replies to O. C., stating his disinclination.

"17th. The O. C. withdraws its proposition and declines any further responsibility.

"18th. S. H. is thus brought to a state of mind in which he resolves to lay the whole matter before God and ask his direction, and receives the answer, 'Propose to Miss P., and in so doing you shall have prosperity.'

"19th. S. H. proposes, and is accepted.

"20th. S. H. and Miss P. are pronounced husband and wife in the presence of the school which Miss. P. had been teaching, and which closed on the day of her union with S. H.

"In conclusion I would add that Mrs. H. is already dearly beloved by the three no longer motherless little daughters of Mr. S. H., and we have reason to believe that there is a stronger bond of union between the 'happy pair' than idolatrous love. They are united primarily by having a common faith in Christ as an indwelling Savior. Precious Faith; Amen."

This reminds us that we have something quite as odd to tell the reader about what we ourselves have lately done in the matrimonial line within the Community. On Monday evening, the 28th inst., between the hours of 7 1-2 and 9 o'clock, we had a COMMUNITY WEDDING! How you start! Well, it *is* rather unusual, and we must hasten to explain how it was brought about, who was married, etc., etc. It is of course well understood that our matrimonial system is complex marriage; which means that all the men are married to all the women, and all the women to all the men; and that our obligations to one another are not less binding, and the relations between the men and the women not less sacred, than those which exist in marital alliances elsewhere. We have lately discussed at some length our views concerning this subject, and have obtained some new ideas respecting the duties and responsibilities of our kind of matrimony. But curiously, just at this time, a young man whom we will call Z., who had been staying with us a good while in the dubious relation of candidate under obstructions, was admitted to membership by a unanimous vote of the family. After meeting, one enthusiastic person says to another,

"What kind of a notion would it be to have Z. married to the Community in due form?"

"Not a *real* marriage? you don't mean *that!*" says incredulous H.

"No, not exactly; but Z. might choose a partner, who could act as the representative of the whole family, and so go through the marriage ceremony on the stage."

"Do let us propose it," says A., "for we have never had anything like it here; and I always did want to see a wedding."

"Well then," says No. 1., "tell Z. to select some lady, and he and his partner their bridesmaids and groomsmen. To-morrow will be time enough for preparation, and in the evening we will have a regular old-fashioned wedding."

"And I," says E., the stewardess, "will see that the cake and wine are forthcoming." And so the matter was laid before the more conservative members, who, strange to tell, entered into the project with due alacrity. The very novelty of the idea seemed to make it popular. The next day was a busy one. We went about our preparations just as we do to get up any other evening entertainment. Z. chose Y. for his bride; C. and J. to be bridesmaids, and W. and A. as the groomsmen. H. W. B. was appointed to officiate as clergyman; and N. and S. to act the part of parents in giving away the bride. The tasty fingers of H. C. N. and G. J. S. were tasked to arrange the bridal costumes; and the musicians and choristers were instructed in their part of the programme, so that in nothing it should fall short of a "regular wedding." At the time appointed, the bridal party marched through the Hall on to the stage, to the music of "Mendelssohn's Wedding March," N. leading the bride, while Z. escorted the bride's mother, followed by the groomsmen, bridesmaids and choristers. After a few formalities, the reverend clerk in white robes commenced reading the Episcopal service, the choristers chanting the "Amens," following with a motet and chant. Then came the nuptial ceremony, which was in no way different from the usual Episcopal service, excepting the form of the marriage vows, which, instead of binding Z. simply to Y., bound Z. to Y. as the representative of the Community. It was worded as follows:

Priest.—(In slow and solemn voice, addressing the bridegroom), Wilt thou have this woman and the whole Community which she represents to thy wedded wife to live together after God's ordinance in the holy state of complex marriage? Wilt thou love them, comfort them, honor and keep them in sickness and in health, and keep thee unto them so long as ye shall live?

Z.—I will.

Priest.—(Addressing the bride.) Wilt thou, as the representative of the Oneida Community, have this man to thy wedded husband to live together after God's ordinance in the holy estate of complex marriage? Wilt thou, as representative of the Oneida Community, love, honor and keep him in sickness and in health so long as ye shall live?

Y.—I will.

Then, turning to the wedding company, the priest asked, "Who giveth this woman to be married to this man?" Here N. came forward and performed the part of parent in giving away the bride, and Z., having received her from the priest, repeated after him the following words:

I, Z., take Y. and the Community which she represents to my wedded wife, to have and to hold from this day forward, for better for worse, for richer for poorer, in sickness and in health, to love and to cherish till death us do part, according to God's holy ordinance.

And afterward the bride on behalf of the Community repeated the same words, substituting "wedded husband" for "wedded wife." Then Z., placing the ring on Y.'s finger, again followed the priest, sentence by sentence,

"With this ring I this Community wed, and with all my worldly goods I this Community endow. In the name of the Father and of the Son and of the Holy Ghost. Amen."

At the close of which the whole family were invited to join in singing the Doxology in Old Hundred.

Following this was the Presentation, which differed somewhat from the ordinary style of conducting such matters. A procession of twenty couples marched on to the stage, and each lady after shaking hands with N. (the father), was led by him to the bridegroom, whom she kissed, while S. (the mother), introduced each man to the bride, whom he kissed. This formality ended, the choristers and bridal party returned to the body of the Hall, and the whole family had a good time with cake and wine and toasts and talk. Some singing followed and the entertainment closed.

Was this a farce? Not exactly—we might say, not at all. The words and the acts so well expressed what is in the very heart of the Community, that a solemn stillness stole over us all, and here and there tears might have been seen by any one who had the presence of mind to turn his eyes a moment from the thrilling scene on the stage.

—Below is a letter from a young man who seceded nearly ten years ago:

"——, *Mich., Apr.* 24, 1873.

"MR. NOYES:

"*Dear Sir:*—I have hesitated for some time about writing to you, thinking that you would not care to hear from me after leaving the Community as I did. I have never had anything but the best of feelings toward the Community, and could I live my life over again I should spend it at the O. C., for I know that you are far ahead of society in the world. But I allowed my passions to run away with me, and I have been the loser. Still I

know it has been good experience for me. When I think over my past life I cannot help feeling very sorry for the ungrateful way I used the kindness of the Community; and I would like to ask its forgiveness. If there is anything that I could do to atone for my past faults I would gladly do it. Since leaving the Community I have married, and have two boys aged two and four years, and I wish very much to see them brought up to serve the Lord. I take pleasure in reading the CIRCULAR; the journal always seem like getting a letter from home. I should like very much to see you once more, but if I am not present with you in body still I feel that I am in spirit, for my prayer is to do the will of the Lord. If you see fit to answer this I should be happy to hear from you.

"Yours in the service of Christ, —— ——."

LEGAL STATUS OF MARRIED WOMEN —PAST AND PRESENT.

I.

THE object of this and succeeding articles will be to show in what respects and how far the legal status of married women has been changed by modern legislation from what it was at common law; and thus to show by comparison how far the civil institution of marriage is from being what it was; and to point out to the thoughtful and unprejudiced the fact, however deplorable it may be regarded by conservatives, that old-fashioned marriage, if it has not already departed, is rapidly passing away.

In order that the subject may be fully understood and the changes referred to fairly appreciated, it will be necessary to consider briefly the nature of the legal status of marriage. In the more frequent legal sense of the word marriage, it signifies a condition, a civil status (state, condition) of a man and a woman united in law for life, under the obligation to discharge to each other and the community those duties which the community by its laws imposes upon persons whose relation and association are founded on the distinction of sex. In law-language, marriage is generally denominated a contract, and yet it is said to be more than a contract, and to differ from all other contracts. Men have been and are divided in opinion whether it shall be regarded as a civil contract or a religious vow. In Catholic countries the latter opinion is quite religiously followed out in church and state; marriage is a sacrament. Though Protestants do not so regard it generally, they account it as of divine origin and invest it with the sanctions of religion. But however deeply the religious nature of marriage may engage the affections of the community, the law in Protestant countries leaves this nature to the sole care of the church, and contemplates it only as a civil institution. Hence, to distinguish marriage in its legal sense from marriage as a religious rite, it is described in the law books as a "contract," a "civil contract." Thus an ancient law-writer says: "Marriage is considered in every country as a contract, and may be defined to be a contract according to the form prescribed by law, by which a man and woman capable of entering into such a contract, mutually engage with each other to live together their whole lives in a state of union which ought to exist between a husband and his wife." Judge Story, in his "Conflict of Laws," says, "I have throughout treated marriage as a contract in the common sense of the word, because this is the light in which it is ordinarily viewed by jurists, domestic as well as foreign. But it appears to me to be something more than a contract. It is rather to be deemed an institution of society founded upon the contract or consent of the parties." Another authority says, "Marriage, though in one sense a contract is nevertheless *sui generis* (of its own kind), and unlike ordinary or commercial contracts is *publici juris* (of public law or right), because it establishes fundamental and most important domestic relations." And another and later authority goes further and distinguishes it more sharply from other contracts, saying, "in strictness, though formed *by* contract, it signifies the *relation* of husband and wife, deriving both its rights and duties from a source higher than any contract parties are capable of, and as to these, uncontrollable by any contract which they can make. When formed, this relation is no more a contract than a fatherhood or a sonship is a contract. It is no more a contract than serfdom, slavery and apprenticeship, the latter of which it resembles in this: that it is formed by contract. To this relation there are two parties, and these parties are placed by the relation in a certain relative state or condition under the law, as are parents and children, masters and servants." This is undoubtedly the truer view of the subject. Marriage is formed by contract. And while it is an executory agreement to marry, it does not differ essentially from other executory civil contracts; but it does not itself superinduce the status. But when the agreement to marry is performed, and the contract is executed in what the law recognizes as a valid marriage, its nature as a contract is merged in the higher nature of the status. The *contract* in fact no longer exists, but the parties henceforward are governed by the *law* of husband and wife. Certain obligations are imposed upon the parties assuming this status, but they are obligations, not of contract, but of law. The relation of parent and child, which proceeds from that of husband and wife, somewhat resembles it in its legal character. Another similitude is to be found in the relation of guardian and ward; the relations in all these cases are voluntarily assumed, but the mutual obligations and duties imposed upon the parties are created by law.

Only one thing does the law allow the parties to a marriage to regulate by contract which shall survive the assumption of the status, and that is rights of property between themselves. By what is called "marriage settlements," the rights which a woman has before marriage in respect to property may be secured to her, so that in respect to that property and its disposition she may be free from the control of her husband and may act after marriage as a *femme sole* or unmarried woman. But in the absence of any ante-nuptial agreement in regard to property, the law of the status furnishes the rule to be applied and determines the rights of the parties.

The assumption of this legal status works great and important changes in the legal capacities, rights and obligations of the parties, especially in those of the woman. These changes run throughout the whole domain of the law, civil and criminal. To define and set forth these changes is to define the legal status of married women. And it will be seen that these changes consist mostly, if not wholly, in deprivations of legal capacity, right and obligation, which woman suffers when she enters into this status; that marriage confers nothing upon woman except the right to be supported by her husband, that is to say, to be provided with the common necessaries of life—food, clothing, shelter, etc.; and the burden of lawful (legitimate) child-bearing; while it takes from her many things which she before possessed in common with all other human beings, and which are generally regarded as valuable. The only real difference between the past and present legal status of married women is the difference in the kind and amount of deprivation which woman undergoes at the hands of the law when she enters this status.

T.

A Japanese newspaper, owned and edited by Japanese, is about to be started in London. Its name will be *Tai Sei Shimbum* (Great Western News). It will be illustrated, and publish the writings of the numerous Japanese now in England and this country, of which there are more than seven hundred, mostly students.

SIR JOHN FALSTAFF.

II.

BY GEORGE NOYES MILLER.

AS Falstaff is so preëminently witty, it seems but natural and appropriate that he should discuss his own and comment upon the wit of others. He promises himself, with the confidence of conscious power, that he will "devise matter enough out of this Shallow to keep Prince Harry in continual laughter the wearing out of six fashions. O, you shall see him laugh, till his face be like a wet cloak ill laid up."

So, too, Falstaff expresses himself contemptuously of Poins's wit. "He a good wit? Hang him, baboon! his wit is as thick as Tewkesbury mustard; there is no more conceit in him than there is in a mallet." It is noticeable moreover that Falstaff's cordiality toward his associates is in direct proportion to their appreciation of humor. He shows his love for the congenial soul of Prince Hal, by the endearing titles "mad wag," "sweet wag;" but there is something fairly pathetic in the sigh of genuine disappointment with which he acknowledges his inability to make the stern Prince John laugh: "I would you had but the wit; 'twere better than your dukedom. Good faith! this same young sober-blooded boy doth not love me; nor a man cannot make him laugh."

The hostility between Falstaff and the Chief-Justice is based upon this same uncongeniality of temperament, and is one of the most curiously interesting studies in Shakespeare. To the stern Chief-Justice, immersed in the affairs of state, and "dealing in wise saws and modern instances," the trickling wit of Falstaff seemed like the empty babbling of a fool. His nearest approach to playful banter—for which Falstaff was ever so ready—is where, holding up the terrors of the law, and naturally quoting an old saw, he admonishes Falstaff not to "wake a sleeping wolf."

This cold imperturbability, which refused to thaw under his assailing humor, angered Falstaff to the heart. The only instance in which he manifests the deep defiance of a self-respecting manhood, the sober resentment of an injured person, is where, after apparently exhausting his humorous arts upon this unappreciative judge, he defies him in virtue of his commission, and boldly demands the protection due to his knighthood. This defiant speech of Falstaff's is most remarkable. In almost every scene of every play in which Falstaff appears, we may see him in a seeming hyperbole of passion. He berates his roistering companions, not excepting Prince Henry himself, with stinging epithets and boisterous vehemence; he scourges the rebellious Poins with an ironical wrath till he cries, "I c. relent; what wouldst thou more of man?" But all seems "like a tale told by an idiot full of sound and fury signifying nothing," when compared with the sober defiance which he throws into the face of this judge of the King's Bench. Its very sobriety, coming from one so chronically humorous, sarcastic, and coarsely vituperative, gives it a preternatural solemnity:

"My lord, I will not undergo this sneap without reply. You call honorable boldness impudent sauciness: if a man will make court'sy, and say nothing, he is virtuous. No, my lord, my humble duty remembered, I will not be your suitor; I say to you I do desire deliverance from these officers, being upon hasty employment in the king's affairs."

Diametrically opposed as Falstaff and the Chief-Justice were in their relations to the law, we still cannot doubt that their hostility would have been much less marked could the judge have shown any disposition to gaiety. But alas! Falstaff's keenest shafts could not pierce the rigid armor of judicial training, and it was owing to this invulnerability that they became so deeply inimical on Falstaff's part. The cold contempt for his wit Falstaff could neither forgive nor forget. It ran-

kled in his mind, and the only really malicious speech which Shakespeare has put in his mouth is directed at the Chief-Justice. In his tumultuous joy on hearing of the accession of Prince Henry to the throne, Falstaff exclaims to Shallow, "Happy are they which have been my friends; and woe to my lord Chief-Justice!"

Falstaff was thoroughly devoted to his vocation as a highwayman, and, despite his cowardice, it must be confessed that he lent a marvelous luster to it. He joined in proposals to purse-taking with a ready enthusiasm, and fortified and garnished his nefarious trade by abundant witticisms. "Why, Hal, 'tis my vocation, Hal, 'tis no sin for a man to labor in his vocation." His answer to Poins's unfolding of the prospect of rich plunder is, "Hear me, Yedward, if I tarry at home and go not, I'll hang you for going." In perfect keeping with this ready knavery, this "feeling of his business," is his comical sigh after Prince Hal's restoration of the booty taken from the Canterbury pilgrims: "O, I do not like that paying back; 'tis a double labor." There are signs that Falstaff brought to his vocation even an appreciation of art, as is implied in his lamentations after being deserted by Prince Henry: "Where shall I find one that can steal well? O, for a fine thief of the age of two and twenty or thereabouts! I am heinously unprovided." That this "stealing well" was of the first importance in Falstaff's eyes is further shown in his reflection upon Bardolph when he succeeded to the post of tapster at the Garter Inn: "I am glad I am so acquit of this tinder-box; his thefts were too open; his filching was like an unskillful singer, he kept not time."

THE NEWS.

Navigation on the Lakes is resumed.

Baron Justus Von Liebig, the great chemist, died at Munich, April 18.

A venerable Mexican has been writing Santa Annals of the affairs of his country.

The French Atlantic Cable is broken, and rates over the other line have been advanced.

One hundred and thirty first-class steamers now run between New York and European ports.

A recent election for members of the National Assembly, in Paris, resulted in a Radical Republican victory.

The cholera has broken out in Vienna. Should it continue through the summer the Exposition may prove a failure.

President Grant has been to Colorado. In honor thereof a big mountain has been granted the name of "President's Peak."

Mrs. D. G. Croly ("Jennie June") and Madame Demorest have withdrawn from the New York Sorosis, and will, say the papers, start an opposition club.

The number of converts in the Protestant missions of the world is computed at 1,300,638. The number of missionaries and native clergy in the mission field is 2,176.

Advices from Fort Garry indicate that the Black Feet Indians are on the war path. Troops are to be sent to protect the surveying parties of the Northern Pacific Railroad.

A reconnaissance in force of the Modoc position, on the 26th, was repulsed with a loss of twenty-three killed and eighteen wounded. A new mode of modifying the Modocs seems necessary.

The attempts of the United States Government and the legal authorities of New York to prove George Francis Train insane, in order to avoid bringing him to trial on the charges for which he was arrested, seem likely to prove a failure.

It is reported that a Mr. Eden of the Edinburgh telegraph office has invented a system by which, with the existing instruments, it has been found practicable to send messages from both ends of a wire simultaneously. The invention has been tested between Edinburgh and Glasgow, and one wire has been found capable of doing double work.

The negotiations of Sir Bartle Frere for the suppression of the slave trade on the African Coast and the Eastern Gulf have been attended with some success. The Sultan of Muscat and the Chiefs of the Arab tribes bordering on the Gulf have signed an anti-slavery treaty. The Sultan of Zanzibar, however, has thus far refused to give up the trade.

English Spiritualists and believers in the Harmonial Philosophy propose to organize a coöperative land and labor association, to be located in one of the Australian colonies or New Zealand, and to be called the Aurelia Association. A general ferment also prevails among the Spiritualists of this country on the subject of a new social and industrial organization.

The exhibitors at the Vienna Exhibition are said to be divided into groups according to the character of their contributions, each group having a president and two vice-presidents. The presidencies of the groups of Education, and of the Trade and Commerce of the World, and vice-presidencies of the groups of Civil Engineering and Public Works and Architecture and Farm, Houses have been assigned to the United States.

The Shah is coming from Ispahan!
Nothing so strange has happened to man
Since the days of wonderful Kubla Khan,
Who dwelt where "the sacred river ran
Through caverns measureless to man
Down to a sunless sea."

The Shah is coming from Ispahan
And the palace and gardens of Teheran!
From beyond the mountains of Kurdistan,
Where the sun comes up over Khorasan
From the far-off valleys of Kafiristan,
The western lands to see.

Nasredden Shah is the name of the man
Who is coming to Europe from Ispahan—
From the home of the old Aryan clan
By Ararat and the far Shushan—
To see what the modern Aryan man
Has done by the western sea.

Nasredden Shah is a wiser man
Than some who have ruled in Ispahan:
He likes railroads better than caravan,
Builds telegraphs, and has a plan
To govern men as well as he can,
In his land by the Caspian Sea.

Those who have visited his court, say the Shah "is a calm, handsome sovereign, with eyes large, dark and sad, bushy eyebrows that are almost joined together, a nose of Oriental curve, such as may yet be seen upon the sculptures old as Egypt, older than history, of Khorsabad and Nineveh. The type seems not to have changed in four thousand years. Nabopolasar may have had such a nose; so may have Cambyses and Artazerxes Mnemon; and the same hair and beard may have characterized Cyrus and Darius Hystaspes. Those who look upon Nasredden Shah amidst the imperial and kingly and princely group which is to gather under the crystal dome of the Austrian sovereign by the borders of the Danube, may fancy if they like, that they are looking upon the renascent image of some of those mighty and warlike Persian kings, that thundered through the Bible books with such unscriptural clangor, and who reduced the world under their dominion."

ANNOUNCEMENTS.

SILK GOODS.

Machine-Twist and Sewing-Silk of their own manufacture for sale by the Oneida Community.

Address, [K] ONEIDA COMMUNITY, *Oneida, N. Y.*

PRESERVED FRUITS AND VEGETABLES

Put up for sale by the Oneida Community in tin and glass. Price list sent on application.

Address, [F] ONEIDA COMMUNITY, *Oneida, N. Y.*

STEEL TRAPS.

Eight sizes and kinds, suitable for the House-rat, Musk-rat, Mink, Marten, Fisher, Fox, Otter, Beaver, the Black and Grizzly Bears, are made by the Oneida Community Descriptive price-list sent on application.

Address, [T] ONEIDA COMMUNITY, *Oneida, N. Y.*

MACHINE-SHOP AND FOUNDRY.

Improved Lathe-Chucks, Blinn's Patent Gate-Hinges, Machines for Measuring the Length and Testing the Strength of Manufactured Silks, Bobbin-Winders for Sewing-Machines, etc. Agricultural, Machine and Light Castings, on hand or made to order. Descriptive price-list sent on application.

Address, [M] ONEIDA COMMUNITY, *Oneida, N. Y.*

THE WALLINGFORD PRINTING COMPANY.

All kinds of Book and Job Printing executed: Manufacturers' Illustrated Catalogues made a speciality: also Bronze and Color Work, and the finer kinds of Card, Circular and Bill-head Printing. Having enlarged its works and added new motive power, this Company is in renewed condition to meet the wants its patrons with promptness and accuracy.

P. O. Address, *Wallingford, Conn.*

PUBLICATIONS.

(Sent from the Office of the Oneida Circular by mail, post-paid, on receipt of price.)

History of American Socialisms. By John Humphrey Noyes. 678 pp. 8vo. J. B. Lippincott & Co., Philadelphia. London, Trubner & Co. Price $3.00.

The Trapper's Guide; a Manual of Instructions for Capturing Fur-bearing Animals. By S. Newhouse. Third edition with New Narratives and Illustrations. 215 pp. 8vo. Price bound in cloth, $1.50.

Salvation from Sin, the End of Christian Faith; an octavo pamphlet of 48 pages. By J. H. Noyes. Price 25 cents per single copy, or $2.00 per dozen.

Dixon and His Copyists; a Criticism of the Accounts of the Oneida Community in "New America," "Spiritual Wives," and kindred publications. By John Humphrey Noyes. Price 25 cts.

Scientific Propagation. By John Humphrey Noyes. Large octavo pamphlet of 32 pages. Price 25 cts.

Male Continence. By John Humphrey Noyes. An octavo pamphlet of 24 pages. Price 25 cts.

Hand-Book of the Oneida Community; Containing a Brief Sketch of its Present Condition, Internal Economy and Leading Principles. Price 25 cts.

The five pamphlets—"Salvation from Sin," "Dixon and his Copyists," "Hand-Book of the Oneida Community," "Scientific Propagation," and "Male Continence," will be sent to a single address on the receipt of $1.00.

Back Volumes of the Circular, Unbound. Price $2.00 per volume.

MESSRS. TRUBNER & COMPANY, Book-sellers, Paternoster Row, London, have the "History of American Socialisms," the "Trapper's Guide," and the "Hand-Book of the O. C.," for sale. They will receive subscriptions for our other publications.

PHOTOGRAPHIC PICTURES

Of the Oneida Community Buildings and Grounds, made by a first-class artist and finely mounted, can be had on application at the Office of the Oneida Circular.

LARGE VIEWS.

Bird's-eye View, looking West, of Community Buildings and Grounds, 12 by 14 inches, on fine enameled board 16 by 20; price $1.75. Quadrangle and Group, 12 by 14, mounted like the above price $1.75. South and East Fronts of the Community Dwellings giving a good view of the New Wing occupied by the Children—8 by 10, on tinted board 10 by 12, with an ornamental border price $1.00.

STEREOGRAPHS.

No. 2, East and North Lawns. No. 3, East Lawn and Portico. No. 4, East Front. No. 5, North Front and Lawn. No. 6, Bird's Eye View of Buildings looking West. No. 7, Lawn and Summer House. No. 8, West View, toward Railroad. No. 11, Quadrangle. No. 12, Lawn View. No. 15, South and East Fronts. Price of Stereographs $3.00 per doz. Sent by mail, post-paid, on receipt of price.

Oneida Circular.

A WEEKLY JOURNAL OF HOME, SCIENCE AND GENERAL INTELLIGENCE.

Published by the Oneida & Wallingford Communities.

ONEIDA COMMUNITY, MAY 12, 1873.

New Series, Vol. X, No. 20
Whole No. 1458.

POST-OFFICE ADDRESS:
ONEIDA CIRCULAR, ONEIDA, N. Y.

TERMS:

The CIRCULAR is sent to all applicants, whether they pay or not. It costs and is worth at least two dollars per volume. Those who want it and ought to have it are divisible into three classes, viz., 1, those who cannot afford to pay two dollars; 2, those who can afford to pay *only* two dollars; and 3, those who can afford to pay *more* than two dollars. The first ought to have it free; the second ought to pay the cost of it; and the third ought to pay enough more than the cost to make up the deficiencies of the first. This is the law of Communism. We have no means of enforcing it, and no wish to do so, except by stating it and leaving it to the good sense of those concerned. We take the risk of offering the CIRCULAR to all without price; but free subscriptions will be received only from persons making application for themselves, either directly or by giving express authority to those who apply for them.

Foreign subscribers, excepting those residing in Canada, must remit with their subscriptions money to prepay the postage.

THE UNITED COMMUNITIES.

ONEIDA COMMUNITY

Is an association living in Lenox, Madison Co., N. Y., four miles south of Oneida and a few rods from the Depot of the Midland Railroad. *Number* of members, 205. *Land*, 654 acres. *Business*, Manufacture of Hardware and Silk goods, Printing the CIRCULAR, Horticulture, &c. *Theology*, Perfectionism. *Sociology*, Bible Communism.

WILLOW-PLACE COMMUNITY.

Branch of O. C., on a detached portion of the domain, about one and one-fourth miles north of O. C. *Number* of members, 19. *Business*, Manufactures.

WALLINGFORD COMMUNITY.

Branch of O. C., at Wallingford, Conn., one mile west of the Hartford and New Haven Railroad. *Number* of members, 45. *Land*, 228 acres. *Business*, Publishing, Job Printing, Manufactures, and Horticulture.

SPECIAL NOTICE.

The O. C. and Branches are not "Free Lovers," in the popular sense of the term. They call their social system BIBLE COMMUNISM or COMPLEX MARRIAGE, and hold to freedom of love only within their own families, subject to Free Criticism and the principles of Male Continence. In respect to permanency, responsibility, and every essential point of difference between marriage and licentiousness, the Oneida Communists stand with marriage. Free Love with them does *not* mean freedom to love to-day and leave to-morrow; nor freedom to take a woman's person and keep their property to themselves; nor freedom to freight a woman with offspring and send her down stream without care or help; nor freedom to beget children and leave them to the street and the poor-house. Their Communities are *families*, as distinctly bounded and separated from promiscuous society as ordinary households. The tie that binds them together is as permanent and sacred, to say the least, as that of marriage, for it is their religion. They receive no new members (except by deception or mistake), who do not give heart and hand to the family interest for life and forever. Community of property extends just as far as freedom of love. Every man's care and every dollar of the common property are pledged for the maintenance and protection of the women and children of the Community.

ADMISSIONS.

These Communities are constantly receiving applications for admission which they have to reject. It is difficult to state in any brief way all their reasons for thus limiting their numbers; but some of them are these: 1. The parent Community at Oneida is full. Its buildings are adapted to a certain number, and it wants no more. 2. The Branch-Communities, though they have not attained the normal size, have as many members as they can well accommodate, and must grow in numbers only as they grow in capital and buildings. 3. The kind of men and women who are likely to make the Communities grow, spiritually and financially, are scarce, and have to be sifted out slowly and cautiously. It should be distinctly understood that these Communities are not asylums for pleasure seekers or persons who merely want a home and a living. They will receive only those who are very much in earnest in religion. They have already done their full share of labor in criticising and working over raw recruits, and intend hereafter to devote themselves to other jobs (a plenty of which they have on hand), receiving only such members as seem likely to help and not hinder their work. As candidates for Communism multiply, it is obvious that they cannot all settle at Oneida and Wallingford. Other Communities must be formed; and the best way for earnest disciples generally is to work and wait, till the Spirit of Pentecost shall come on their neighbors, and give them Communities right where they are.

A SERMON FOR THE TIMES.

Home-Talk by J. H. N.

Text: "The things of God knoweth no man, but the Spirit of God." 1 Cor. 2: 11.

THERE are evidently two methods of acquiring knowledge; one by what is called *scientific discovery*, and the other by *revelation* from the Spirit of Truth: and it is important to settle in our minds what is the true scope and comparative value of each. It is very important in seeking an education to find out how much we should rely upon scientific discovery, and what available opportunity there is for revelation, so that we may seek knowledge in the right quarter and by the right methods. If we suppose that scientific discovery is the only method, we may be ignoring vast stores of information that might be obtained in another way; and on the other hand, if we have a longing for revelations that has no rational foundation, our minds are diverted from pursuing after knowledge in the way of scientific discovery. The two methods must be understood in their relative value; they must be harmonized in our minds by the subordination of one to the other according to the true relation between them, if we are to have the benefits of both. There is certainly a possible harmony between them, and it must come in the only way that harmony is ever possible between competing dualities, by finding out which is the major and which the minor, and subordinating the minor to the major.

I will state the principles which in my mind settle the true relation between science and revelation. The universe is certainly divisible into two great departments—the outer, visible universe, and the inner, spiritual universe; and as I understand it, science, properly so called, has for its field of discovery the outer department, and revelation the inner. I think it can be demonstrated that science, in the usual sense of the word, is excluded from the inner world—that that field is not open to the simple effort of discovery, but is necessarily and naturally the proper domain of revelation.

The argument may be stated thus: A stone, or a star, or any object of inspection that is not vital, voluntary and intelligent, is subject to the various methods of insight that science employs; it cannot resist your attempts at discovery; it is a passive thing; you can look at it on one side and the other, and bring your telescope or microscope to bear upon it; it is always accessible, and you are at liberty to experiment and reason about it and make discoveries at your leisure. But a living being is not in that way the passive subject of your inspection—even human beings are not. If your science is directed toward the thoughts and feelings and inner workings of the soul of a human being, it has there a subject which is not passive, and in order to make discoveries you will need to get that soul's coöperation. It takes two to make a bargain in that case. In the case of a dead subject, as a stone or star, you can make your own bargain as to what amount of inspection and investigation you will apply to it, and you expect results proportioned to the pains you take in the investigation. But in relation to the thoughts and feelings and nature of a living being, that is free to act and think and speak as well as you, you cannot make discoveries without his consent. He can reveal to you what he pleases and give you special insight, but it requires voluntary discovery on his part.

This principle is certainly true of all that part of the universe that is vital, intelligent, and superior to ourselves. It is true, in the first place, of God himself. Paul says, with good reason, "What man knoweth the things of a man save the spirit of man that is in him? *Even so*, the things of God knoweth no man but the spirit of God." In the nature of things God has control of his own life and spirit, and it is not a passive subject of inspection by science; he can hide himself from all philosophical minds just as far as he chooses, and discover himself according to his own pleasure. This is true of all the great central existences surrounding God—of the angels, of Christ and of Christ's body, the Primitive Church. In general, it is true of the world of life, that it is not a passive subject of science. And I should say of any spiritual sphere—of the spheres, for instance, reported by the Rappings—if any of them are passive subjects of science, which men can explore as they would explore unknown regions of the earth, or the mysteries of electricity, then they are external, superficial spheres.

We may run the line here between the inferior and superior departments of the universe. The inferior is the passive subject of science. The superior is necessarily the keeper of its own secrets, and discovers them only by the mutual agreement of the parties.

We can judge now exactly what science is worth. It can give us some knowledge of the more superficial and least valuable part of the universe, but it cannot open the inner treasures at all; and for the discovery of the deepest things—the knowledge of God and superior existences, which we are chiefly interested to obtain—we need *revelation;* not Bible revelation, merely, but actual communication with the Spirit of Truth. The Bible may convey to us some general idea of the nature of God and angels, but we cannot know much about them except as they are pleased to reveal themselves to us. Superior beings hold the key to the knowledge of themselves, and admit or

exclude all inferior beings as they choose. Then to complete the education of mankind, and raise the human mind into the highest sphere of knowledge, it is very apparent that the great promise of Christianity must be fulfilled—"In the last days, saith God, I will pour out of my Spirit upon all flesh: and your sons and your daughters shall prophesy, and your young men shall see visions, and your old men shall dream dreams: and on my servants and on my handmaidens I will pour out in those days of my Spirit." There is the final element of knowledge and education without which all scientific education must be comparatively worthless.

In view of what has been said, I think we can safely take this position: that, in the first place, science cannot help us to any knowledge whatever of the most important part of the universe; and in the second place, it cannot give us anything like complete and sure knowledge even of that part which it has for its proper domain. For we cannot really understand the superficial universe, except as we see it in its relations to the spiritual universe, and except as we see it from the interior of both. Any sure, absolute truth is and must be God's perception of facts. Absolute truth, i. e. complete truth, cannot be attained in reference to anything except by the perception of it from God's point of view. It is only in sympathy with his mind that we can thoroughly inspect the nature and relations even of superficial things.

Science needs revelation to perfect itself. With all the self-complacency of this scientific age, it is safe to assert, that the obscurities, doubts and perplexities of the human mind in reference to the superficies of the universe, increase fully as fast as scientific discovery—that science as it progresses brings to view new problems to be solved, even faster than it disposes of old ones. Offsetting the discoveries by the doubts which follow in the train of science, we are constrained to ask, How much is the world the gainer by its progress? In spite of all pretensions to the contrary there are dark shadows of doubt over all the most important conclusions and theories of human science. There is a shivering consciousness among scientific men that their theories are liable to mistakes, which the perfect light of the day of judgment will uncover.

We want then revelation, in the first place in order to have access to the best part of the universe, and secondly, we want it very much in order to perfect the discoveries of science. In the end it will be found that the real value of the world's education in science lies in the discipline of mind and development of nervous power that has been the result, preparing men to finally receive the revelation of God. That kind of discipline of mind which science gives, in its true subordination to the Spirit promised for the last days, and as a servant of revelation, will be very valuable. The difficulty is that science has got the world into the habit of supposing that all the subjects of discovery are passive. It is a general maxim among scientific men that nature will certainly reward all faithful investigation: the meaning of which is, that we may go to work and investigate all subjects, with certainty that they will disclose their secrets to us and that they are compelled to; no consent on their part is required; our investigations are all that is necessary in order to make discovery to any extent. That may be true philosophy looking downward, but it is not true looking upward. In that spirit a man will make no headway at all in the knowledge of the most important things. The knowledge of God is not to be pursued in that way. Your attempts in that direction will fail unless you have something more than a spirit of curiosity, which relies for discovery on keen examination. Scientific furor and faithfulness, however successful they may be in the lower spheres, are presumptuous and futile when turned toward God and the upper world. So far as science encourages a false spirit of this kind it is a hindrance to true knowledge. Before our education is complete we shall have to free ourselves entirely from that spirit, and pursue knowledge in the ascending direction with moral purposes that will suit those we deal with. The heavenly spheres will not open their secrets to us or answer our interrogations, except as they can see some good purpose in it. So that the best part of the universe is locked up, and can be seen only by those who want the knowledge for good purposes. The universe below us is subject to our inspection, but it is the right and privilege of superiors to be free from the surveillance of inferiors. We may turn our telescope toward the stars, but not toward God. We shall have to get his consent before we shall be able to inspect him, and that is to be obtained only by *pureness of heart.*

Do not try to investigate heaven and heavenly beings in the scientific way. They are not for inspection in that spirit. In the scientific spirit we are seeking to possess the truth; whereas the TRUTH is a living being, and must ultimately possess us. If we attempt to investigate the nature of heaven and the angels in the selfish, acquisitive spirit which wants to possess the truth, we shall find that they have no object in gratifying a prurient curiosity. We shall surely be barred out until we come in a more acceptable spirit.

LOVE BETTER THAN LABOR.

I LIKE to recall some of the incidents which occurred in the early days of our Community life. Although we enjoyed a good degree of unity and fellowship of an outward kind, our interior lives and characters had received but little attention, and the close relations into which we were brought by our new circumstances often developed traits in our characters of which we had not before been conscious. In those days, although our business organization was incomplete, there was a help-distributing committee, whose duty it was to look into and supply the wants of each department. We were building that summer, and E—— and C—— were appointed to assist in that work. They were as opposite in business habits as two men could well be; C—— had formed very slack habits, and appeared to have but little appreciation of the value of time; E—— had a restless, driving spirit, which appreciated persons only for doing, forgetting the more important part of being. After working awhile together, although no discordant words passed between them, it was evident that there were chafing and irritation. It was our custom, when there was any disagreement between members, to stop work at once, and set about reconciling them by advice or criticism. We thought then, as we do now, that unity was far more important than work. So we talked with E—— and C——, and advised them to consider one another to provoke unto love and good works. We had not learned to receive criticism and apply it so as to get the full benefit of it as we have since been able to do. E—— and C——, though anxious to overcome their faults, had not learned to appreciate the good in each other and trust God to eradicate these faults; and it was therefore not long before they were again tempted into evil-thinking of each other and forgot the desire for unity which they had expressed in our meeting. Every one who has passed through such experience knows that giving way to evil temptations obliterates all good from the mind and fills it with darkness. Believing as we did that the power of evil could be broken by the truth, we again laid our tools aside, and inviting some of the more spiritual members to join our impromtu committee, we sat down with E—— and C——, praying God to give us wisdom to deal with them. We criticised them for a lack of faith and trust in God, and advised them to look away from each other's faults and open their hearts to the spirit of truth and the love of God, which would certainly flow in and fill them with love for each other.

E—— was sitting in the parlor that afternoon thinking of the matter, when suddenly he resolved that he would accept the criticism and act in accordance with it; immediately the faults of C—— disappeared from his mind and his heart was filled with love for him. While he sat reflecting upon the change which had come over his feelings G. W. N. came to him and asked him to receive C—— as a room-mate. He answered heartily that he should be glad to do so. He then went to C——'s room and told him the change he had passed through and the love he felt for him. C——'s countenance lighted up as he exclaimed, "Why, that's just the way I feel!" Thus were two hearts brought together, and although more than twenty years have passed since that day not a shadow has come between them to mar their love and fellowship.

REVIVAL RECOLLECTIONS.

IX.

WE had changed our residence from the fine rolling fields of Bloomfield to the vale of Avoca, among the hills of wild Steuben. It was a rural district, with a society quite different from that we left. There were in our neighborhood one Presbyterian family, one Methodist, and three belonging to the sect called "Christians," besides Universalists and Infidels. Mr. B—— put up a notice that there would be a prayer-meeting in the schoolhouse on Sabbath evening. Quite a strange event for that neighborhood. At the appointed time the room was full, and another was appointed for the

succeeding Wednesday evening, and on the next Sunday a Sabbath-School and Bible-class were organized. This movement excited the Methodists and Baptists in the village, and they immediately commenced a protracted meeting which continued six weeks, each taking charge of the meeting on alternate evenings. A number of converts united with both churches in the spring. Mr. Otis and Mr. B—— thought it desirable to have an Oberlin minister for that neighborhood and Kanona. Tilton Otis was going to Ohio, and I was going to Oberlin to spend six weeks, and we were requested to present the subject to the Oberlin faculty. A man by the name of Smith was said to be the most spiritual among the graduates, and he agreed to go to Avoca after Commencement. Three weeks after the arrangement was made Rev. George Clark sent for me, and said Mr. Smith had accepted another call and was going where he would receive higher wages. I was greatly disturbed by this intelligence; the disappointment seemed quite unbearable.

On returning to Prof. Peck's, where I was stopping, suddenly, as if by a flash of lightning, I was aroused by these words, "I will go before, and I will make the crooked places straight." I could not recollect having seen this passage in the Bible, but I knew it was the voice of God speaking to me, and I soon understood its meaning. I had taken upon myself the responsibility of the conversion of the greater part of Steuben county, and God had summoned me to judgment and given me to understand that he would do his own work and keep it in his own hands. All that night the self-righteousness of my past life, in scene after scene, came up for judgment. "Thy Maker is thy husband" came thundering back. Then I saw how the greatest energy of my life had been exercised in trying to win the love of man, and I had not been willing to accept God as my husband. In the morning I opened the Bible, and the first words I saw were, "I will go before, and I will make the crooked places straight." I dropped on my knees and told the Lord he might lead me; lead me forever. That was all I wished to say. On going to breakfast Prof. P. asked me what was the matter? I could only choke out the words, "Christ is going to lead me." He replied, "I have been through that experience; it will pass away one of these days."

During the forenoon Mrs. P. invited me to call upon Pres. Finney. The President met me with the same question Prof. P. had asked; but "The Lord is going to lead me" was all I had to say. He then called to Mrs. Finney to come and see the woman who had died and was now gasping for life. "But," he added, "do not talk to her now. Let the Lord bring her out in his own way." What a comfort to me were those words!

After I had slept the next night my mind burst into activity, and then what a vision of the love of Christ was manifested to me! I hardly know how to express it. God was presented to me as Love, and his dwelling in me and I in him was a reality all new. He was my true husband and lover now. He had taken me to himself and shut the door against intruders. He had kindled in my heart a love for himself which displaced all desire for the love of others. Then my mind was given new power. I had always been troubled about repeating anything *verbatim;* but now whole chapters of the Bible would come to me just as they were written. I began to hold mental conversations with Christ, and to ask questions and receive answers which were clear at the time, but which were so different from the teachings of the churches, that when I was in the presence of others I could neither define nor speak of them. The coming of Christ's kingdom, his Church on earth, and the difference between the Old and the New Covenants, were to me absorbing themes. I saw how the Old Covenant was weak through the flesh, and how he would now lead his people through the ministration of his spirit, which would be powerful and effectual in their hearts; and how in the New Covenant the law of commandments contained in ordinances is abolished. I saw that the true church was just what Christ was, Love, and that every member of it would feel that perfect satisfaction in him that I then felt. But the present church had not abolished outward ordinances; and the question would arise, Does Christ really lead it? and does the spirit of love rule it?

I frequently saw Mr. Finney. He was kind and fatherly, and I thought much of him; but the Lord gave me no liberty to talk with him about my new experience. When he tried to draw me out I could only say, "I have a new husband, and he is teaching me." He said I must be more interested in what was going on around me or my health would fail; I must tell my new husband that though *he* did not need rest I did; and I must ask him to put me to sleep. My strength did at last give way, and I was brought near to death with dysentery, though I do not recall any great sense of bodily suffering. I was finally aroused by Prof. Peck's reading to me a letter that he had written to Mr. B——, telling him to come immediately if he wished to see me alive. The thought of dying did not disturb me, for I knew that I was already with Christ. I said to him, "The Lord has not told me I am to die, and you can tell Mr. B—— to wait until the letter by the next mail reaches him." I then turned my heart to Christ. Presently the parable of the withered hand was presented to me. My question was, Did Christ take away that power from the earth when he ascended? The answer came, "All power in heaven and on earth is mine. The man with the withered hand was told to stretch it forth, and he obeyed." Then came the voice, "Arise from that bed and test my power!" And strength was given me to stand, and I felt the healing power go over me from my head to my feet. Mrs. Peck opened the door, and was surprised to see me standing; but I told her I was healed from my head to my feet—just as the man was with the withered hand. I then dressed myself and wrote to Mr. B—— by the next mail, of the way in which Christ had healed me, and informed him when to meet me at Hornellsville on my return to Avoca. I then went to Mr. Finney, and told him of my recovery and that I should leave for home the next day. He said, "God bless you, my child. I did not think you would die, but live to do the Lord's work. Go home and proclaim Christ's mighty power." I followed Mr. Finney's advice in proclaiming God's power; and from that time the spirit led me onward until I found the Oneida Community, which proves to be the realization of what I saw in Oberlin. C. B. B.

THE PRAYER OF FAITH.

FATHER NASH, the eminent revivalist, was especially noted for his success in obtaining what he asked in prayer. The following from his pen shows what he believed and taught about the prayer of faith:

"The prayer of faith is dictated by the Holy Spirit. Some, of whom we are obliged to doubt whether they know anything as they ought concerning the prayer of faith, think that they, who pray with such confidence, set up their own will, regardless of the will of God—that they are guided by their own wisdom, instead of the wisdom of God; but this is wholly incorrect. They are not led by their own fancy, or natural affection or wisdom. All these they resign, and resign themselves too, even their eternal interests, into the hands of God. The specific object or subject of prayer is presented to the mind, is laid upon the heart, by the Holy Spirit, by an impulse from the Holy One. Thus the Spirit teaches, particularly, *what they should pray for*, as they ought: without this, they would not know for what, in particular, to pray. Having done this, the Spirit produces the unconquerable desire for the object, which it has selected. Then the Spirit makes intercession for them, produces the travailing pains, causes the unutterable groans, excites the fullness of faith, gives confidence to lay hold of the promises, to take Jehovah at his word, gives boldness to come to the throne of grace, presses the suppliant to hold the Eternal to his promise, leads him to sacrifice himself on the altar of prayer, gives strength to wrestle and prevail, strength to bring forth saying, I cannot, must not, "will not let thee go," for thine honor is concerned. The Spirit also, at the same time, makes intercession for them, according to the will of God. When prayer is *thus* offered, there can be no mistake about the subject, none about the will, or purpose of the Lord, and none concerning the wisdom by which the subject is selected, by which the prayer is made; the Spirit regulates all that. It is as God would have it, the prayer is made in obedience to the will of God; and will he now deny? He cannot, and will not; because he has engaged to answer the prayer thus made, to do *that* thing for which his people thus pray. Besides, as all is done according to the will of God, and by the leadings of the Holy Spirit, should he refuse to do the thing thus asked, to grant the thing thus sought, he would in the denial act contrary to his own will, and deny himself directly; but he cannot deny himself. This is a weighty reason, why the prayer of faith should be answered, and the specific thing for which we pray be granted."

THE RELIGIO-METER.

England in the eighteenth century, certainly had less belief far than we have; indeed, Christianity has never been more in any age of the world than a thin stratum of powerfully modifying belief in relation to the great mass of its nominal adherents, an ingredient in, rather than the substance of, the world's living principles; and yet the English unbelief of the eighteenth century melted away, and was succeeded by vehement forms of faith like the Wesleyanism, Simeonism, Coleridgeism, Tractarianism, and Nonconformity of the last half-century. No doubt the tide has again receded rapidly for the last ten years, partly under the influence exerted by a more severe historical criticism, partly under the influence of Mr. Darwin's valuable and masterly, but only half-apprehended speculations. No one, however, who has ever entered truly into the spirit of Christ's life will believe for a moment that either the historical blunders of the Christian records, or evidence, however convincing, of a uniform law of evolution, connecting the organization of man with the lower stages of animal and vegetable life, will eventually diminish the overwhelming force of the evidence of conscious life coming from above our own—of an imperious mind which guided the whole course of Jewish history, and became a spring of overpowering wonder and fascination in the Gospels. * * * We suspect that never was a time when the belief that man constitutes the apex of the spiritual universe was morally less credible to us than it is now. The positivists themselves cannot believe it, and have to invent an ideal humanity as *être suprême*, to receive the wealth of the life which they find it impossible to lavish on man as he is. Strauss invents his Universum to fill the void he has created, and makes us believe very much to feel a faint loyalty to this dim spectre of the understanding. We do not think that the mind of our country at least was ever in a less self-dependent and self-satisfied attitude, ever less disposed to find its spiritual law in its physical lineage. * *

Surely, if there ever was a miracle in this world which no scientific analysis will succeed in dissolving—a miracle that still attests as powerfully as ever it attested the superhuman life of him who worked it—it was the miracle of the profound confidence with which Christ said to a few poor fishermen on the Lake of Galilee: "Fear not, little flock, for it is your Father's good pleasure to give you the kingdom," half fulfilled as it has been by centuries of splendid though most imperfect achievement. He who could speak of his own immediate death—to human eyes so far from certain that it was even on its eve not particularly probable—as founding a new covenant and communion from which the life-blood of a new world was to spring, spoke to a new sense, almost then and there implanted in man, the sense of a supernatural life in death, a supernatural gain in loss;

and without this sense there is no adequate evidence of his real divinity. We do not in the least believe that the power of that spell is exhausted or exhaustible—least of all in a society which is finding every day new evidences of the intensity and number of the ties which bind the highest to the lowest. Only, if the authority of Christ is to assert itself again, it will be in a social movement, something like that of the first days of the Gospel, one stripped of the accidents which belonged solely to those days, but of which the principle—not making war against economy, and science, and the arts, but going far beneath and beyond economy, and science and the arts—must be the same as before, the confounding of the mighty things of the world by the things that are weak and base and despised, and the bringing to naught, by the things which are not, of the things which are. There lies the true evidence of the supernatural, and there also the secret of the only true "revivals." —*London Spectator.*

TIRZAH C. MILLER, EDITOR.

MONDAY, MAY 12, 1873.

THE DARK SPOT.

THE Spiritualists claim to have communications through their mediums from relatives in the other world and also from many philosophers and great men there. They have given plenty of utterances purporting to come from Moses, Mahomet, Franklin, Shakespeare and other celebrities of the past. But in all these assumed messages from the "summer land" we hear very little said about Jesus Christ, and nothing pretending to be directly from him. There was therefore a clear pertinency in the inquiry which a certain medium made of his spirit-interlocutor as to the reason of this reticence on the part of the founder of Christianity. The question and answer were thus reported in one of the Spiritualist papers:

"*Ques.*—Will the controlling Spirit tell us why Jesus Christ never comes to us through a medium?

"*Ans.*—Are you sure that Jesus Christ never does come through a medium? No, you are not. And still further, are you sure that such a man as Jesus Christ ever existed? No, you are not: but through faith, which is an attribute of the soul, you believe it. You believe that such a person had an existence in the past. Soul has a right to so believe; and for our own part we do not question the truth, the absolute truth of such an existence. But so far as you mortals are concerned, you do not know it. There are many persons who are investigators of this beautiful philosophy, called modern Spiritualism, who are disinclined to believe that their God-idol, Jesus the Christ, could by any possibility return manifesting personally through media. Well, we shall not blame them because they cannot believe that Jesus Christ could come in these days, or does come. Suppose we should say he does return, and much oftener than you suppose; would you believe us? Some of you would, but the masses would not. We beseech you to cast off your outside shells. Let them fall like dead leaves at your feet; and when anything comes from the spirit-world that appeals to your inner consciousness as truth, receive it, whether it comes from a Jesus Christ or a Thomas Paine."

This answer reminds us of the lawyer's plea about the cracked kettle: "May it please the court, we shall show you in behalf of our client, 1, that the kettle was cracked when we borrowed it; 2, that it was whole when we returned it; 3, that we never had it." "Perhaps Jesus Christ does come through the mediums," says the spirit, "and you do not know it; and then, again, there's no knowing that such a person as Christ ever existed." It is difficult to reply to such logic.

Stripped of its circumlocution, this answer is an admission that Jesus Christ has nothing to do with Spiritualism, though it omits to give the reason why, which was the point of inquiry. Since the spirits will not answer the question we must seek an answer elsewhere. And the most obvious reason that occurs why "Christ never comes through" the so-called mediums is, that he and they are operating in a widely different manner and place. To put the reason in another way, they are wildly astray in their geography. They think they are scaling heaven, when in fact they are only looking through the key-hole into Hades and reporting what is seen and heard there. Now as Christ is a resurrection being, he will come into the world by some other route besides that of the death-world. When he manifests himself it will be in deeds of power, changing the heart and life of men, and not in gassy volumes of sentiment and description. The fact that his name is not taken by some of the familiars of Spiritualism may be perhaps explained by the circumstance that the good folks in Hades do not wish to counterfeit him, and the evil ones dare not.

A PEEP INTO OLD TIMES.

LOOKING into the musty volumes of the *New York Evangelist*, which have lately come into our possession, we came across the following scrap under date September 13, 1834. The reader will easily guess to whom it refers:

From the Landmark.

A MISTAKE CORRECTED.

In a late number of the *Vermont Chronicle* an account is given of "a New Haven Perfectionist." From the manner in which this statement appears, it is not improbable that some may regard the doctrine of perfection as one of the views of the New Haven Theologians, or at least as a doctrine which follows as a legitimate inference from these views. And forasmuch as many have attributed to the New Haven divines sentiments which they have neither advocated nor entertained, it seems nothing more than an act of justice to these gentlemen, and to the institution with which they are connected, to give the community a plain statement of facts in relation to this newly discovered doctrine, as it has recently been enforced and exemplified in New Haven.

The individual to whom the *Vermont Chronicle* alludes, as the writer of a certain pamphlet on this subject, is a graduate of Dartmouth College; a man who, until within a few months, has always distinguished himself as a scholar and a Christian. The first year of his theological course was spent in the seminary at Andover, after which he became connected with the Theological Institution at New Haven. About six months since, he came in contact with the views of the New York Perfectionists, which he at length embraced.

They start with the unauthorized assumption that God, as the moral governor of the universe, can look with approbation upon nothing short of *perfect holiness*, a sinless conformity to the divine law. From this they infer that imperfect Christians are under the wrath and curse of the Almighty; or, in their own technical language, that they are "on the devil's side."

* * * *

But what will be considered, perhaps, the most dangerous of these evils is a state of unnatural excitement, which generally results from this doctrine. It is not unfrequently the case that no sooner does a man become perfect in heart than he is deranged in intellect. And it is a melancholy fact, that the individual to whom allusion has been made is now in a state of utter derangement. Having become completely unfitted for study, he has been returned to his friends; and thus a mind of a superior order, and one which has long been distinguished for its acuteness and its brilliancy, is under a temporary and perhaps a protracted eclipse. [Doubtful.—*Ed. Evang.*]

In conclusion, we would observe that this person is no longer a member of the Theol. Seminary at New Haven. If we have been correctly informed, he not only left that institution at the expiration of the second term, but relinquished to the association the license which he received from them about a year ago. Although the New Haven divine is so heretical as to deny that "sin is the necessary means of the greatest good," and that man is physically depraved, and although he is unable to comprehend the sublime obscurities and obscure sublimities of the Coleridge philosophy, he is entirely opposed to the doctrine of perfection and all its consequences. A. E. W.

In confirmation of the doubt expressed by the Editor of the *Evangelist*, it may be mentioned at this late day that J. H. N. at the date of the above, was hard at work in New Haven, writing leading articles for *The Perfectionist*, then just commencing; and was just as crazy as he is now and has been ever since.

COMMUNITY JOURNAL.

ONEIDA.

—Monday evening (5) a notice on the bulletin read, "*The small orchestra will meet in the Hall at half past six o'clock.*" "What does that mean?" said we, "How can the orchestra play, when so many of our musicians are absent?" "Sure enough, that is mysterious," answered some one, "but I am told it is true." "Come up into the Hall," said a third, laughing, "and find out for yourselves." So up we went, and were just in time to hear the word of command, "*March*," in a sharp, quick voice; and on looking whence the sound proceeded, saw Miss Constance at the head of a file of "infantry!" each soldier carrying a musical instrument in one hand. In military style they marched on to the stage, and formed themselves into a semicircle, and at the proper signal began playing, when our ears were greeted with sounds most indescribable from fifteen willow whistles, blown in the most violent manner by fifteen ardent little performers. We were told this was the "Overture to the Spring Whistle!" But unlike most musical artists they soon tired of their own music, and began biting the bark off their instruments, and would have destroyed them *in toto*, had not Miss Constance interfered, giving the order to "play" as they marched off the stage.

—There is great enthusiam these days for acquiring a thorough knowledge of the English language. Mr. N. remarked a week ago at one of our evening gatherings, that "in the true order of art the cultivation of language is more important than the cultivation of music; language is an instrument that is not only more useful but more capable of giving artistic pleasure than any musical instrument or combination of musical sounds. We should begin our artistic education with the cultivation of language, and give attention to music and other fine arts afterward. Scientific men all over the world now consider it quite probable, that the English language will ultimately be the language of the nations. If this is so, we may expect that the same spirit which on the day of Pentecost gave the apostles the gift of tongues will be found now ready to give us an enthusiam for studying the English language. Spelling is one branch of this subject, and quite an important branch. Bad spelling is like discord in music, and will spoil any performance on the instrument of language. We should begin by clearing out all discords of this kind. After we have accomplished this we may go on to the higher branches of rhetoric and literary art generally."

A few evenings later, he suggested a few practical measures:

"Suppose we should resolve ourselves into a committee of the whole for detecting and criticising bad spelling. It should be considered right and honorable to expose every case that comes to light. We might have persons appointed to receive reports of bad spelling and read them from time to time in the public meeting. It should be the duty of every one who receives notes on business documents or writings of any kind from other persons to watch critically the spelling of all such writings, and if misspelling is found, report the same to the

committee appointed, with the name of the misspeller, and these collected reports should be read every evening if necessary. It would be well for us to devote a whole evening occasionally to critical gossip about bad spelling. There is no nuisance that more deserves to be regularly ventilated."

Since the above suggestions we have had a revival of interest in the matter of spelling. Every evening between the hours of seven and eight o'clock persons gather in the South Sitting-Room, Upper Sitting-Room and Large Hall, and each one, furnished with a slip of paper and a lead pencil, takes his seat in readiness to write down words as they are put out from a spelling-book. The method of writing is preferred rather than oral spelling on many accounts; and especially as it assists the memory in retaining the impression of the forms of the word while pronouncing the sounds. Many persons who spell correctly when they write are confused when they attempt vocal spelling; and others, who are excellent spellers vocally, forget when they attempt writing. Some of our best scholars say that they have been caught several times with an *l* missing in such words as *recall*, or an extra *l* in *filament*, *supercilious*, and the like, when in spelling the same words orally they would have been certain of every letter. The vigilance committee has been appointed, and is informed of all egregious errors. We have already had one amusing expose in meeting, but the committee say that it is not so easy to detect errors of this kind as formerly, and they are in danger of getting out of business if people continue as eager to improve as they have been the past week. It was urged, however, that we should not content ourselves until bad spelling is thoroughly weeded from the Community orthography; those who spell well (and this includes the greater part of our family) should assist in bringing the rest up to the perfect standard; and those who have heretofore been careless should seek criticism until correct spelling becomes a habit with them. There is no lack of enthusiasm on the part of any one, and we feel sanguine in the belief that faulty orthography in the O. C. will ere long be among the things that "used to be."

—Last week we told the story of a Community wedding; this week we have a story to tell of a Community death! On Monday, the 5th inst., MISS HELEN MAR HUTCHINS died, aged 38. The history of her life with us for twenty-three years is full of interest, but we will only trace the outlines of that history, dwelling more particularly on the touching incidents of her late sickness and death. At the age of fifteen Helen came to the Community with her parents and brothers and sisters. In less than a year the parents became discontented and left, taking their children with them. But the two daughters, Helen and Elizabeth, longed to get back to the home they had learned to love, and after six months, though yet under age, had the written permission of their father and mother to make the O. C. their home, as the adopted children of Mr. and Mrs. Burt. The parents and one brother in a few years made another trial of Community life, resulting as before. But Helen and Elizabeth never regretted their choice and in all the years that have since ensued have been unswerving in their loyalty to the cause of Communism. Helen, the younger of the two, was of a buoyant temperament. She had an ardent love for the beautiful in nature and art, and naturally was fond of dress and personal adornment. Indeed, possessing a pleasing face, dark sparkling eyes, and a symmetrical figure, it is not strange, considering her fondness for beauty, that her greatest fault should have been superfiality, and it was the struggle of her life to bring this tendency into subjection to her deeper nature—her love for religion. As a companion and friend she was loving and sympathetic, and her faults sunk out of sight when you were once acquainted with her heart.

A year ago she became a victim to the disease that resulted in her death. She suffered uncomplainingly for several months, unable to determine the character of the malady, but conscious of the drain it was to her life. Her body grew weaker, but her heart grew stronger every day; she went to Christ for help, and became reconciled to God's will concerning her body. In January last, while yet uncertain as to the cause of her suffering, she wrote to a companion, "I thank God for grace to keep my attention on Christ and seek the revival spirit. I find it easy to trust the Lord about my condition, and realize as I never have before that I belong to God and the church." Shortly after this a diagnosis was given by Drs. Cragin and Noyes that her distress arose from an ovarian tumor, a very dangerous disease and incurable except by a severe surgical operation. Her faith in God and his providences was unmoved by this intelligence, and she grew bold in testifying her love for God. She was never downcast; though all outward remedies failed to relieve her bodily anguish, the living faith that filled her heart made her independent of physical conditions for happiness. It was at this time, with a heart softened by severe suffering, that she arose one night from her bed and penciled this little poem that we printed last week:

Let not your heart be troubled,
Nor let it be afraid;
If you in Jesus Christ believe
You on the rock are stayed;
The storms that come will only show
How firm that rock is laid.

Cast all your care upon the Lord,
He every sorrow knows;
He loves you more than parent loves,
He'll conquer all your foes.
Believe on him! Believe on him!
His power no limit knows.

No mother's love is half so full
Of tenderness and care,
No sparrow falls without his will,
He numbers every hair;
His promises are rich and sure,
His mercies free as air.

In accents sweet I hear Him say,
"Come, weary, laden breast,
Give me your load, take my light yoke,
And I will give you rest."
To every meek and lowly heart
He gives this blessed rest.

As the disease became more threatening, Dr. Cragin went to New York city to consult an eminent surgeon there about it. On his return he brought word that Dr. Peaslee had operated successfully in such cases as this, and from the description given by Dr. Cragin thought it was a favorable case for surgery. He offered to make an examination for $25, and to remove the tumor for $500, if the patient came to him. Helen, though aware of the risk involved, bravely chose to submit herself to the skill of the surgeon. It was decided that she with Dr. Cragin, and Mrs. Langstaff as a nurse, should go to New York the coming Monday, the 28th of April. However it might turn with her we knew she had no care for anything but Christ, and that the victories she had gained were permanent. The work of grace had been done in her heart. The evening before her departure she sent the following words to the family, written to Mr. Noyes:

Sunday, April 27, 1873.

DEAR MR. N.:—My heart is full of gratitude to God, to you and the Community for this generous effort to save my life. I have no anxiety about the results. I have unmistakable evidence that God is near me and has the case in charge. I know his will will be done, and *his* will is my will. I feel the faith and courage of Christ in me, and expect nothing but good. I realize my union with the Community as I never did before, and if God spares my life I know that I shall devote it to his cause as never before. I thank God from my heart for all this chastening. I recognize his loving hand in it. I know that my salvation is sure. This is enough.

Lovingly,

HELEN MAR.

The next forenoon she and her attendants left on the ten o' clock train. Her face was beaming with smiles as she said good-bye to one and another, and it was difficult to realize the object of her expedition. She said to some one in her usual sprightly manner, "If I die I mean to die like a soldier; I mean to die with all my armor on." While at Oneida waiting for the train she wrote a few lines to her sister, intended as an apology for some nervousness betrayed in the exciting moments of dressing for the journey:

Oneida, April 28, 1873.

DEAR E.:—Don't feel bad one bit about my flurry in getting dressed—I only wish I had behaved myself better. You have been a dear sister to me to the last, and I *appreciate* it all, and thank God for you with all my heart; if I have seemed to lack in appreciation and love for you, I know our hearts' relation and union is all right, and you need never reproach yourself for anything in the past. I am really happy. It seems as though the Lord had built a wall around us, so that we cannot touch the world, even though we may be in its wickedest place. I had not got half way to Oneida before my nerves were as calm as a placid lake.

With a heart full of love for you and all the *dear ones*, and a blessed sense of God's love and nearness,

I am your sister, HELEN MAR.

From New York she wrote to Mrs. C. A. Miller soon after her arrival, and a few days previous to submitting herself to the surgeon's knife:

DEAR MRS. M.:—The "joy of the Lord" seems to fill my heart all the time. My state of mind and feelings is a miracle to myself. God gives me grace to look only one day ahead, and so far every day has been filled to overflowing with his special providences. I know that he will give me grace to meet whatever there is in the future and magnify his power. I am sure that God will direct the surgeon. Feeling strong in the Community faith and your prayers, I am God's child.

Lovingly, HELEN MAR.

These are the last words she ever wrote. On Saturday she submitted to the operation under the professional skill of Dr. Peaslee, attended by Dr. Emmet, a very prominent medical man, and several others of the profession. At quarter past six we at home were electrified by receiving a telegram containing the words, "*Operation successful—tumor removed—patient doing well.*" Imagine our joy at this intelligence. Anxiously we awaited a letter that should detail to us the whole transaction. Hope grew high as the mail delayed, and we fancied our dear sister now out of danger, and counted the weeks that must make her recovery sure, when she would be restored to us in better health than ever. Strong in this belief, it is difficult to describe our sensations when the telegram came Monday morning: "*Sudden change for the worse—Helen is failing rapidly.*" But our minds were fully prepared for the dispatch that came in the afternoon announcing her death.

Tuesday evening Dr. Cragin arrived with the remains. In the evening he gave us the particulars in full of all that occurred after they left us a week ago Monday morning. They had a pleasant journey to the city, and Helen was feeling as well as usual on arriving there. They took lodgings at the Ashland House on 4th Avenue. Dr. Peaslee made one examination and was unable to give an opinion. At the second he said her symptoms were contradictory, and the case was an obscure one. Dr. Emmet was consulted; he thought there was no tumor, but simply ascites. It was very difficult to decide the case. Both gentlemen said her bouyancy and courage were greatly in her favor, and considered it best to have an operation.

On Saturday, the 3d inst., every preparation was made, and at two o' clock she was put to sleep by ether. In two hours and a-half, the tumor was removed and the incision closed. Very little blood was lost, the patient rallied at once, and the operation gave promise of being a perfect success. The first words Helen said upon awakening from her stupor were, "I am so thankful for science!" The Doctors present said they never knew a patient rally so well without recovering. Her symptoms continued very favorable all night and till noon of the next day, when her pulse quickened and she seemed restless. Dr. Peaslee said that was a bad sign. Stimulants were given and everything done that could be done, but Dr. Cragin said he never saw any one sink so rapidly as she did from that time. Her mind was perfectly clear until within two or three hours of her death, and she was entirely free from pain for the last twelve hours. Dr. Peaslee said he never met with a patient who showed so much courage, having an intelligent conception of the danger of her situation. Upon being asked if it would have been possible to treat her case more wisely, he said we had no cause for regrets; we had done all we were warranted in doing; the operation did not kill her; but the disease had prostrated her nervous system, so that it was impossible for her to rally; and had there been no surgery in the case the disease would have worn her out in a few weeks more.

Miss C. A. Macknett, who went from Wallingford to assist in waiting on Helen, wrote the following to her sister Elizabeth after her death:

New York, May 5, 1873.

MY DEAR E.:—I cannot write much, for I am weary with watching and anxiety. Dr. Cragin will tell you all the particulars. He has been untiring in his care and attention to Helen, and last night, when he found he could do no more for her, he kneeled beside her bed and cried like a child. About three o'clock she heard us say we thought she could not live till morning, when she promptly replied, "I am willing to die; I am ready." And when she saw us all crying she looked up and smiled, and said, "It was only a question of time, and you must not any of you feel bad." She sent her love to Father Noyes, to you, Agnes, and all the folks. She said she had many times thought how kind Father Noyes was when he lifted her out of the carriage. She spoke of Mr. George Noyes and the good folks that were in Hades, and said perhaps they needed her help. She repeated the text, "Ye have not chosen me, but I have chosen you." Helen has certainly fought the good fight, and I believe she will receive a crown of glory. We have all had a struggle, but realize that God orders our circumstances, and he has been our help and support. Helen went to sleep between three and four o'clock, and did not wake up again, but passed away quietly. I trust that God will comfort your heart.

With much love, your sister,

CARRIE A.

We are comforted with the thought that the Community had an opportunity to do its very best to save Helen—to show its love and generosity in a way that she very much appreciated; and she, on the other hand, has shown her courage and faith, and leaves a beautiful memory. Then her sufferings have been very much shortened. We see many reasons for rejoicing, and count the manner of her departure as a mercy and blessing of God. One remarked that it seemed more like a translation than a death; and another, that we might say of her as was said of Lincoln, "She could not have gone in a better time, for she was in the hearts of all the people."

MORE ABOUT THE GOUVERNEUR REVIVAL.

Gouverneur, N. Y., April 20, 1873.

DEAR FRIENDS:—Unexpectedly I am stopping over Sunday again in Gouverneur, a town, by the way, in which the old-fashioned custom of ringing the church bell at 6 o'clock in the evening still prevails; and where, if the people are not all pious, they are pretty generally church-goers on Sundays, and are respectful and reverential toward religion to a degree that I do not notice in every town in which I sojourn. Indeed I believe the town was in a sense *born* of the great revival that prevailed here in 1825. Though the great majority of the actors in that revival have passed from the stage, the effects of it for good are still visible in their descendants. It was in truth, as many yet acknowledge, a very wonderful outpouring of God's spirit on the people—a work so marked, and so different in its beginnings, its course and its results from many of the more recent religious excitements, that it is worth while to revert to some of its main points by way of contrast.

It would seem that in the spring of 1825 Messrs. Finney and Nash, who had been laboring as evangelists in other parts of the country, came to Gouverneur uninvited by man, but sent of God, as they professed. At the time of their coming, they were unacquainted with a single individual here, and as near as I can learn from those who ought to know, no one in the town had ever heard of either of these two men, not even by report. Mr. Finney, a young man fresh from the study of the law, strikingly abrupt and rash in manner, and sometimes even harsh to the point of giving offense to many, was yet so imbued with zeal and love and power in the new calling he had espoused, that he soon gained the confidence and coöperation of those to whom he was sent. Father Nash, the benign, the mild, the man "powerful in prayer," and whom "everybody loved," was equally efficient in his calling, and was marvelously successful as God's instrument in converting sinners. These two men worked together as one man, and God was with them. They labored in public and in private, visiting from house to house conversing and praying with the inmates; and the little church in Gouverneur soon waked up and engaged earnestly with them. A copious shower of heavenly influence followed, and as the result, in the months of July and August of the same year not less than eighty persons, half of whom were heads of families, were received into the church. And of this whole number, the "first-fruits" of the revival that continued through the year and longer, I have only heard of two that ever dishonored their profession; but on the contrary the fruits of this great outpouring of God's spirit have been plainly visible in the long series of years since, in the reformed habits of the people and in the general tone of society.

And two things are worthy of remark here, in connection with this revival, because they are uncommon. 1st. There was no premature forcing of persons forward to the "anxious seat," nor into rising for the prayers of the church, that have been characteristic of some of the more modern revivals. Messrs. Finney and Nash evidently depended more on the quiet influence of the truth presented in public and in private, and on God's spirit for producing conviction and conversion, than they did on more coercive measures; and they were singular in this respect, it is said, as compared with more modern revivalists. They did sometimes invite persons to rise or to come forward, if they chose to signify their wishes in this way; but the practice was by no means so prominent nor so common as to be considered a necessary feature of the exercises. 2d. The anti-sectarian feature of the revival is worthy of remark. Starting as it did with the Presbyterians or Orthodox, the Baptist denomination at first withheld their sympathy; but my information is reliable that before it was finished the Baptists shared equally in the work; and there was no effort made by either of the denominations to secure converts for their particular churches. Conversion to God, and not to sectarianism, seemed to have been the prevailing spirit of all concerned.

S. R. L.

"YE OLDE FOLKES' CONCERTES."

New York City, May 23, 1873.

DEAR CIRCULAR:

Strange as it may seem, Socialism is fascinating and captivating our city churches. It has not yet attracted them into Communism of property and affections. Oh, no! But it has attracted them into many things which have for their animus the communistic spirit. For years coldness, formality and exclusiveness have been decreasing in our city churches, until now a mild form of socialism has come on them and taken them unawares in social gatherings, Sabbath-school exhibitions, picnics, strawberry festivals, tea-parties, love-feasts, fairs, social business meetings, church, musical and literary entertainments, and last, though not least, "Ye Olde Folkes' Concertes," which the past winter and spring have been very popular in many of the churches. These concerts are generally given ostensibly for the purpose of raising funds for some department of the church. But back of this, and no doubt equally strong, is the anticipation of the social enjoyment attending them. This is no less predicable of the participants in the concerts than of the audience, which generally comprises particular and general friends and sympathizers.

The writer attended one a few weeks ago at the 4th Avenue Presbyterian church, Dr. Howard Crosby pastor; and this last week, by invitation of a friend, one at the Presbyterian church in West 13th-st., Dr. Burchard pastor. Both were entertaining to a high degree—a packed audience on each occasion evidencing the popularity of this form of innocent social entertainment. The one given at Dr. Burchard's church was most decidedly a unique affair, unctuous with humor, and highly dramatic in many of its features. As a novelty and *fac-simile* of the programmes of our New England forefathers' concerts, I hear give you a *verbatim et liberatim* copy of the programme of the concert at Dr. Burchard's church, with a few of the features of that at Dr. Crosby's:

A Lyfte

Of Sacred Hymns and Tunes, and likewise Worldly Songes, certain of wh were sunge in ye yeres of our Lord

1608 and 1772,

And certain yeres betwixt.

And wh pieces will be once more pleyed and sunge bye ye choir of ye church at a

GREATE CONCERTE

To be attended at

Ye Prefbyterian Meeting Houfe,

Right downe ye

THIRTEENTH STREETE, betwixt Sixth & Seventh Ave

In ye Towne of New Yorke, at early candle lighte, on

Tuesday ye 29th day of ye month of April,

In ye yere of our Lord

1873.

All ye money wh shall be payed in for thys Concerte is to go to buye goode books for ye children to reade, in hopes therebye to make them better boys and girls.

N. B.—Ye Titheing-man, Ichabod Armstrong, will put out all ye boys who flamme ye benches or wh do throwe apple-cors on ye floore.

N. B.—Forafmuche as ye younge women who singe are shamefatte, ye younge menne are defired to loke awaie from them whenne thai singe.

GREATE CONCERTE.

Timest: Doctor Jedediah Pettibone.

Ye Parte Firfte.

1.	Auld Lang Syne,	All ye men and women Singers
2.	Sons of Zion,	All ye men and women Singers
3.	Ruffia,	All ye men and women Singers
4.	Worldly Songe,	Jonadab Higginbotham
5.	Confidence,	All ye men and women Singers

6. Worldly Songe, ... Prudence Higgins
7. Montgomery, ... All ye men and women Singers
8. Worldly Songe, ... Eliza-Ann Bulkley
9. Before Jehovah's Awful Throne (Denmark), All ye men [and women Singers
10. Worldly Songe, ... Father Hodijah Owenson
11. Strike ye Cymbal (Solo parte by Mehetable Billings), All [ye men and women Singers

N. B.—Ye choir will ftop finging for fome minutes, if fo be ye fingers may re-obtayne theyer breath, and ye younge men may have opportunitie to afk ye younge ladyes, fuch as they may want to go home withe, which is very proper.

N. B.—Ye olde ladyes whofe foot-ftoves need frefh coals can nowe have them fent in from Naber Jenkins, hys kitchen, as hys women folk will keepe up a big fire on purpose.

Ye Parte Seconde

1. Eafter Anthem, . . . All ye men and women Singers
2. Two Parte Songe, ... { Prudence Higgins / Anna Ruth Bulkley
3. David's Lamentation, All ye men and women Singers
4. Worldly Songe, ... Ichabod Plummer
5. Ode on Stience, . . . All ye men and women Singers
6. Two Parte Songe, ... { Eliza-Ann Bulkley / Barzillah Bigelow
7. Sound Ye Loud Timbrel, All ye men and women Singers
8. Worldly Songe, ... Philip Poppenhuysen
9. New Jerusalem, ... All ye men and women Singers
10. Coronation, ... All ye men and women Singers

N. B.—All thofe who are bleffed withe goode lungs, and likewife an ear for mufick, and have religious training, are expected to ftand up and helpe finge ye laft tune wh is called Coronation.

P. S.—Women withe younge children may as well go in and fit by Naber Smith, her fire, if fo be theye growe wearie—clofe by ye meeting-houfe.

IF any bodye wolde wifh to carry thys lyfte to hys owne home, let hym take goode care of ye same, infomuche as thys Concerte may, of neffitye, be againe reherfed for ye sake of some othere goode cauſe.

Sundrie Cautions.

1. All ye men folkes are wanted to tye ye hoffes under ye trees or fheddes, and give them each fome fodder, if fo be thai whinner or kick, wh may difturb ye choir while thai fing fheir pieces. Deacon Good-hearte has agreed not to turn out his fhort-horned brindle cow (fhe that has a cracked bell) for ye fame reafon.
2. Ye women folkes will be founde goode places to fee and hear, by certain of ye mofte difcreete younge men of ye parifh, whofe help has been obtayned for this Greate Concerte by Deacon Higgins and Deacon Mofes Green.
3. When ye fingers have funge all ye pieces on thys Lyfte, ye are afked by ye perfons who have got up thys Greate Concerte to go ftraighte home to your own houses and not to ftop to gollip in ye meeting houfe, as is your wont; for be it known to ye all, the candle lightes coft us manie fhillings, and alfo it is now ye planting feafon, when all ye farmers fhould git up earlie.
4. Reverend Solomon Wifeaker will preach to all wh may be religiouſly inclined and wh may come together at ye Red School-houfe, wh is at ye four crofs roads in ye northe part of ye towne, on next Sunday at earlie candle lighte, Providence permitting. Deacon Grimthaw will pitch ye tunes.

N. B.—Elder Winthrop, hys Publi ke, seven dores from ye Meeting-Houfe, will be open to ye Hungerie; Porke and Beanes, and Kyneinjun Bread supplied to alle who wifhe.

N. B.—2 pens a plate.

N. B.—Nannie Jenkins will kepe ye Chickens oute of ye Meeting-Houfe, and Jeruſhy Timpkins will dryve ye Cow awaie from ye Fore dore.

Excepting a few regular professional singers as leaders, the choir was formed of the young ladies and gentlemen of the church. They wore the costumes in vogue in 1700, most of which, we must suppose, were worn by the "better-to-do" people of those ancient days. As they stepped on the platform many a hearty laugh was evoked at their quaint appearance. Who could refrain from tittering at seeing the young gentlemen metamorphosed into the outward semblance of the youthful beaux and staid men of 1700, with their powdered hair, queus, long-skirted coats and knee-breeches, with here the legendary Yankee costume, and there Father Hodijah Owenson in his queer suit and on his head a hat with a three-inch crown, and a twelve-inch brim; and the young ladies with the waists of their dresses almost under their arms, vandykes and enormous frilled collars around their necks, and bonnets of the size of corn-baskets and fans a yard long!

After the ladies had hung up their bonnets, all took seats and assumed a gravity becoming the occasion. But human nature, be the circumstances what they may, will be itself. And soon Ichabod Plummer, he in the legendary Yankee costume, began to cast sheep's-eyes at "ye younge women" and squirm in his seat and fumble his hair and restively slide his feet, while mother Mehetable Billings was very much concerned about the lighted candles, and in meddling with them snuffed one of them out. Father Hodijah thought he must make himself officious, and in so doing he fell sprawling on his back, when a general giggle took place among the singers, accompanied by a burst of laughter from the auditory. The social warmth had now attained a point at which it was easy for the choir to commence, and in pretty quick time and snap movement "Auld Lang Syne" was sung, followed by "Sons of Zion," in appropriate style.

The auditorium was now densely crowded, and one genial spirit of good humor seemed to pervade the assemblage. Piece after piece was sung, to the delight of the auditory, whose applause was long and frequent. Ichabod Plummer, having worked himself up to a high pitch of drollery, relieved himself of his surplus humor by singing a highly amusing "Worldly Songe," which brought down the house and was encored. Father Hodijah Owenson brought tears to the eyes of many in his exquisite rendering of a "Worldly Songe" of a touchingly sentimental character. Prudence Higgins (Miss Brainard, a popular and well-known professional singer) and Anna Ruth Bulkley in their "Worldly Songes" were encored, so exquisite was their vocalization. A "Two Parte Songe"—Scotch love duet, by Eliza Ann Bulkley and Barzillah Bigelow, was one of the gems of the evening, rendered as it was in a natural style, with all the shades and colors expressive of pure, youthful love and simple, honest-hearted trust. The entire entertainment was of a most pleasing character, and the applause from beginning to end, spontaneous as it was, was a well-deserved tribute to "ye younge men and younge women singers."

During the whole evening a sly and ludicrous flirtation was going on among some of "ye younge women" and "younge men" of the choir, making the scene vivid and life-like and realistic of human nature. Much food for thought and many lessons were suggested by this dramatic picture, carrying one back to his forefathers, and bringing up before him their trials, loves, pastimes, religious experiences and moral lives. But prominent was seen the underlying social element, which was the magnet that drew them together then as it now drew together this assemblage, and which is ever at work in all social gatherings. The most significant fact to be descerned in this and all other similar entertainments is the progress the spirit of socialism is making in the churches and its leavening influence on all within the sphere of church influence. One could feel the nimbus of a genial sociability, and read in the scene a prophecy of the good social time coming when all who love God in sincerity and truth will be drawn into a unit, and marshalled under Christ march on to the era of pentecostal love and unity.

M. L. B.

SIR JOHN FALSTAFF.

III.

BY GEORGE NOYES MILLER.

FALSTAFF leaves his favorite occupation of purse-taking with visible reluctance for the legitimate and honorable service of a knight in the king's employment. Yet scarcely has he heaved the sigh of regret at Prince Hal's forsaking the unlawful craft, than new views of self-interest induce reconciliation, which he expresses in the droll, intensely characteristic speech: "Well, God be thanked for these rebels, they offend none but the virtuous; I laud them, I praise them." But Falstaff the warrior does not differ from Falstaff the rogue. Ever-present in both are the same shameless knavery, the same boasting cowardice, the same witty tongue. The mountains which Falstaff heaps up in boasting of his "pure and immaculate valor" are leveled by a stroke of Shakespeare's pen in the closest expression of purely natural fear that was ever conceived. Just before the battle of Shrewsbury Falstaff says to Prince Henry: "I would it were bed-time, Hal, and all well."

But strangest of all the strange anomalies which cluster about and center in this conception of character are his oft-recurring, evanescent fits of contrition. Indeed, we feel a degree of confidence in asserting that these fleeting gusts of remorse are a supremely ludicrous thing about Falstaff. Wit has been defined by an English critic to consist essentially in joining things by such distant and fanciful relations that they impinge the mind with a shock of pleasant surprise. Wherein then is this shock of pleasing unexpectedness so cunningly prepared? What possible conjunction of remote ideas could surprise us more than the momentary moral awakenings which perturb the sensual slumber of Falstaff? His trickling wit, like deep-dyed but limpid wine, has made us laugh. Recognizing in Falstaff but too plainly a paragon of animal vices, we nevertheless follow him with keen relish in sally, rejoinder and repartee, from the fact that we do not fear contamination from that which is essentially detestable to our interior instincts. Every characteristic of the man appears so intensely earthy, so remote from the province of morality and spirituality, that the balancing of moral questions does not seem to call for our discrimination. We do not chafe against Falstaff's vices, for we see no ground for virtue. Thus at ease with ourselves we admire the excellent coinage of Falstaff's teeming brain, and we are enjoying the keenness of the mental wards and thrusts between him and Prince Hal in Scene I of part I of King Henry IV. Far away from the remotest suspicion of an ethical consideration, we are suddenly overwhelmed by an undreamed-of penitence. Could such spiritual zephyrs trouble so stagnant a pool? But the ludicrous effect of Falstaff's sudden contritions is in their transitory nature. Hardly have we fallen into this ingeniously devised pitfall than Falstaff has passed from "prayer to purse-taking," and is the same obstreperously witty and profane rogue as before.

Preposterous as these fits of contrition may seem, they are still ingeniously and naturally introduced. If there were any flickerings from the moral sense of a man who was resolutely striving to quench them by dissolute ways, they would naturally rise at the suggestions of his companions in vice. A profligate man may be never so callous to the admonitions of the just, but the allusions to a hereafter of those who like himself have everything to fear from it trouble him with vague apprehension. So when Prince Henry, in replying to Falstaff, makes use of the saying in Proverbs, "Wisdom cries out in the streets and no man regards it," Falstaff is reminded of the great scheme of death and judgment, and in the penitence of a momentary fear cries out:

"O, thou hast damnable iteration; and art, indeed, able to corrupt a saint. Thou hast done much harm upon me, Hal, God forgive thee for it! Before I knew thee, Hal, I knew nothing; and now am I, if a man should speak truly, little better than one of the wicked. I must give over this life, and I will give it over; by the Lord, an' I do not I am a villain. I'll be damned for never a king's son in Christendom."

So, too, when Doll Tearsheet, the most vicious of Falstaff's associates, says to him: "When wilt thou begin to patch up thine old body for heaven," he silences her with quick entreaty, "Peace, good Doll! do not speak like a death's-head; do not bid me remember mine end."

Lesser causes than direct allusion to Holy Writ or heavenly places give rise to more philosophical hintings at remorse. In the scene after Prince Henry's exposure of his "incomprehensible lies," we find him in his discomforture anticipating decay, and addressing Bardolph thus:

"Bardolph, am I not fallen away vilely since this last action? do I not bate? do I not dwindle? Why, my skin hangs about me like an old lady's loose-gown; I am withered like an old Apple-John. Well,

I'll repent and that suddenly, while I am in some liking: I shall be out of heart shortly, and then I shall have no strength to repent. An' I have not forgotten what the inside of a church is made of, I am a pepper-corn, a brewer's horse: the inside of a church! Company, villainous company, hath been the spoil of me."

The nicety with which Falstaff recognizes the precariousness of his moral situation is exceedingly humorous in his dispute with Pistol in "The Merry Wives of Windsor."

Fal.—I am damned in hell for swearing to gentlemen, my friends, you were good soldiers and tall fellows; and when mistress Bridget lost the handle of her fan I took 't upon my honor thou hadst it not.

Pist.—Didst thou not share? hadst thou not fifteen pence?

Fal.—Reason, you rogue, reason: think'st thou I'll endanger my soul gratis? * * * You'll not bear a letter for me, you rogue! you stand upon your honor! Why, thou unconfinable baseness, it is as much as I can do to keep the terms of my own honor precise. I, I, I, myself, sometimes leaving the fear of heaven on the left hand and hiding mine honor in my necessity, am fain to shuffle, to hedge and to lurch; and yet you, rogue, will ensconce your rags your cat-a-mountain looks, your red lattice phrases, and your bold beating oaths, under the shelter of your honor?

Prince Henry, when about to receive the Sheriff in sobriety, says to Falstaff, "Go, hide thee behind the arras; the rest walk above. Now, my masters, for a true face and a good conscience." To which Falstaff rejoins, "Both which I have had, but their date is out, and therefore I'll hide me."

We have said that these gusts of unlooked-for penitence are in their transitory nature a supremely ludicrous thing about Falstaff. Now we must hazard a thought concerning a more recondite effect. May we not presume that the great master of the thoughts and emotions of the heart, who has touched so skillfully every chord of human sympathy, had a deeper design than to make the contrition of Falstaff a mere vehicle for wit? It could be spared, and we should still laugh at a contritionless Falstaff. But let us not say that these shadowy gleams of a far-off state of innocence, these reminiscences of childlike purity, do not work upon the sympathies even though we laugh at their evanescence. They speak of a consciousness of virtue which lingers in the memory, if not in the heart, and upon such subtly slender threads hang the impulses of interest, sympathy and affection. It is our nature to catch with eagerness at every sign of redemption, at every appearance of tenderness, however deeply buried beneath the slime of evil deeds, in one with whom we are already strongly linked by the bonds of admiration and community of pleasure. A sunbeam is not less a sunbeam though it illumine the abode of bats and owls, and we cannot see repentance, however vague it may be, overcome an evil nature without our special wonder. We doubt if any reader of Shakespeare could smile with anything like genuine mirth at the account of Falstaff's end. All the admiration of his bubbling wit is transmuted into something very like sorrowful affection when we read that "a babbled of green fields," and we find ourselves bound to him by a tie stronger than admiration—by the tie of a common unregeneracy and a common susceptibility of soul. Candor, in our love of Falstaff's wit, might compel us in that last scene to say, "We could have better spared a better man," but charitable affection none the less reminds us of Falstaff's own words, "Dost thou hear, Hal? thou knowest in a state of innocency Adam fell; and what should poor Jack Falstaff do in the days of villainy? Thou seest I have more flesh than another man, and therefore more frailty."

Through a New York correspondent we have received a copy of *The Specimen*, a journal designed to illustrate the new process of photo-engraving; by which it is claimed that relief-plates may be produced from all kinds of prints, pen-and-ink drawings, original designs, photographs, &c., on metal so hard and tough that with ordinary care fifty thousand copies may be printed from them without wear or damage, and at prices not exceeding half those charged for wood-cuts. A special advantage of the new process is, that by it the largest plates can be engraved in a few hours. The illustrations in *The Specimen* certainly commend the new process. The Photo-Engraving Company may be addressed at 62 Courtland St., New York.

THE NEWS.

The Purple Finches are building nests.

The Hermit Thrush has come to the northern woods again.

The Khan of Khiva is said to be doing what he can to secure peace with the Russians.

The Supreme Court of this State has denied the application of E. S. Stokes for a new trial. The case will now probably go to the Court of Appeals.

Salmon P. Chase, Chief Justice of the United States, died of apoplexy and paralysis in New York city on Wednesday morning last.

The beer-drinkers of Cincinnati do not like to pay more than three cents a glass for the beverage; the beer-sellers ask five cents. How the matter will be settled does not yet appear. A beer-drinkers' strike would be a curiosity.

It is reported that the Darien Surveying Expedition has discovered a practical route for a canal which will be only 28 miles long, by the Atrato, Dognado and Napipi rivers. A tunnel three miles long will be involved, and the total cost is put down at $70,000,000.

A law has passed the Legislature of Illinois defining as extortion any discrimination in passenger and freight rates, and prohibiting more than a fair and unreasonable toll. The State Railroad and Warehouse Commissioners are empowered to adopt a schedule of maximum passenger and freight rates.

The United States Board of Indian Commissioners say that "it is an indisputable fact of history, that previous to the incoming of the present administration of the Government nearly every Indian war on record owed its immediate as well as remote origin to acts of injustice, oppression, or crime, on the part of white men."

A bill has passed the Legislature of this State annexing the towns of Morrisiana, West Farms and Kingsbridge, Westchester County, to the city of New York.

Astronomers find some positive indications that there are two planets revolving around the sun within the orbit of Mercury, one with a period of about 34 days and the other 16 days.

A California letter says:

"There is a new pleasure for this season's tourists in California. A new and greater Yosemite than that heretofore known to the world has been discovered. It was penetrated last fall by Galen Clark, State guardian of the great valley, and John Muir, an enthusiastic and devoted geologist, botanist, and mountain explorer. It is situated in the Tuolumne river cañon, 17 miles north of the Yosemite. The main Tuolumne river, which is a much wider stream than the Merced, runs through the great Tuolumne cañon. This cañon and its connections have an unbroken length of 40 miles. For 20 miles of this distance the cañon is shut in by vertical walls of granite, some of which are from two to five hundred feet higher than the very highest in the Yosemite valley. The Tuolumne cañon or Yosemite, at its widest part, is only a quarter of a mile wide, while the Merced Yosemite valley is from half a mile to a mile and a quarter wide. The falls in the latter surpass those of the Tuolumne cañon in unbroken volumes of falling water, but in endless variety of cascades and water-shoots the Tuolumne cañon is much the grandest. There is one leap 1,000 feet high in the latter. One of its waterfalls spreads out at first like a great fan of silvery-threaded water; but, after a descent in this shape of about 200 feet, it is whirled over, closed up, changed in color, and shot down a narrow groove worn in the rocks like an arrow of steam. There is a greater display and variety of water hues, tints, motions, and expressions in the Tuolumne cañon than in Yosemite."

ANNOUNCEMENTS.

SILK GOODS.

Machine-Twist and Sewing-Silk of their own manufacture for sale by the Oneida Community.

Address, [K] ONEIDA COMMUNITY, *Oneida, N. Y.*

PRESERVED FRUITS AND VEGETABLES

Put up for sale by the Oneida Community in tin and glass. Price list sent on application.

Address, [F] ONEIDA COMMUNITY, *Oneida, N. Y.*

STEEL TRAPS.

Eight sizes and kinds, suitable for the House-rat, Musk-rat, Mink, Marten, Fisher, Fox, Otter, Beaver, the Black and Grizzly Bears, are made by the Oneida Community Descriptive price-list sent on application.

Address, [T] ONEIDA COMMUNITY, *Oneida, N. Y.*

MACHINE-SHOP AND FOUNDRY.

Improved Lathe-Chucks, Blinn's Patent Gate-Hinges, Machines for Measuring the Length and Testing the Strength of Manufactured Silks, Bobbin-Winders for Sewing-Machines, etc. Agricultural, Machine and Light Castings, on hand or made to order. Descriptive price-list sent on application.

Address, [M] ONEIDA COMMUNITY, *Oneida, N. Y.*

THE WALLINGFORD PRINTING COMPANY.

All kinds of Book and Job Printing executed: Manufacturers' Illustrated Catalogues made a speciality: also Bronze and Color Work, and the finer kinds of Card, Circular and Bill-head Printing. Having enlarged its works and added new motive power, this Company is in renewed condition to meet the wants its patrons with promptness and accuracy.

P. O. Address, *Wallingford, Conn.*

PUBLICATIONS.

(Sent from the Office of the Oneida Circular by mail, post-paid, on receipt of price.)

History of American Socialisms. By John Humphrey Noyes. 678 pp. 8vo. J. B. Lippincott & Co., Philadelphia. London, Trubner & Co. Price $3.00.

The Trapper's Guide: a Manual of Instructions for Capturing Fur-bearing Animals. By S. Newhouse. Third edition with New Narratives and Illustrations. 215 pp. 8vo. Price bound in cloth, $1.50

Salvation from Sin, the End of Christian Faith; an octavo pamphlet of 48 pages. By J. H. Noyes. Price 25 cents per single copy, or $2.00 per dozen.

Dixon and His Copyists; a Criticism of the Accounts of the Oneida Community in "New America," "Spiritual Wives," and kindred publications. By John Humphrey Noyes. Price 25 cts.

Scientific Propagation. By John Humphrey Noyes. Large octavo pamphlet of 32 pages. Price 25 cts.

Male Continence. By John Humphrey Noyes. An octavo pamphlet of 24 pages. Price 25 cts.

Hand-Book of the Oneida Community; Containing a Brief Sketch of its Present Condition, Internal Economy and Leading Principles. Price 25 cts.

The five pamphlets—"Salvation from Sin," "Dixon and his Copyists," "Hand-Book of the Oneida Community," "Scientific Propagation," and "Male Continence," will be sent to a single address on the receipt of $1.00.

Back Volumes of the Circular, Unbound. Price $2.00 per volume.

MESSRS. TRUBNER & COMPANY, Book-sellers, Paternoster Row, London, have the "History of American Socialisms," the "Trapper's Guide," and the "Hand-Book of the O. C.," for sale. They will receive subscriptions for our other publications.

PHOTOGRAPHIC PICTURES

Of the Oneida Community Buildings and Grounds, made by a first-class artist and finely mounted, can be had on application at the Office of the Oneida Circular.

LARGE VIEWS.

Bird's-eye View, looking West, of Community Buildings and Grounds, 12 by 14 inches, on fine enameled board 16 by 20, price $1.75. Quadrangle and Group, 12 by 14, mounted like the above price $1.75. South and East Fronts of the Community Dwellings, giving a good view of the New Wing occupied by the Children—8 by 10, on tinted board 10 by 12, with an ornamental border price $1.00.

STEREOGRAPHS.

No. 2, East and North Lawns. No. 3, East Lawn and Portion. No. 4, East Front. No. 5, North Front and Lawn. No. 6, Bird's Eye View of Buildings looking West. No. 7, Lawn and Summer House. No. 8, West View, toward Railroad. No. 11, Quadrangle. No. 12, Lawn View. No. 15, South and East Fronts. Price of Stereographs $3.00 per doz. Sent by mail, post-paid, on receipt of price.

Oneida Circular.

A WEEKLY JOURNAL OF HOME, SCIENCE AND GENERAL INTELLIGENCE.

Published by the Oneida & Wallingford Communities.

ONEIDA COMMUNITY, MAY 19, 1873.

New Series, Vol. X, No. 21
Whole No. 1459.

POST-OFFICE ADDRESS:
ONEIDA CIRCULAR, ONEIDA, N. Y.

TERMS:

The CIRCULAR is sent to all applicants, whether they pay or not. It costs and is worth at least two dollars per volume. Those who want it and ought to have it are divisible into three classes, viz., 1, those who cannot afford to pay two dollars; 2, those who can afford to pay *only* two dollars; and 3, those who can afford to pay *more* than two dollars. The first ought to have it free; the second ought to pay the cost of it; and the third ought to pay enough more than the cost to make up the deficiencies of the first. This is the law of Communism. We have no means of enforcing it, and no wish to do so, except by stating it and leaving it to the good sense of those concerned. We take the risk of offering the CIRCULAR to all without price; but free subscriptions will be received only from persons making application for themselves, either directly or by giving express authority to those who apply for them.

Foreign subscribers, excepting those residing in Canada, must remit with their subscriptions money to prepay the postage.

THE UNITED COMMUNITIES.

ONEIDA COMMUNITY

Is an association living in Lenox, Madison Co., N. Y., four miles south of Oneida and a few rods from the Depot of the Midland Railroad. *Number* of members, 205. *Land*, 654 acres. *Business*, Manufacture of Hardware and Silk goods, Printing the CIRCULAR, Horticulture, &c. *Theology*, Perfectionism. *Sociology*, Bible Communism.

WILLOW-PLACE COMMUNITY.

Branch of O. C., on a detached portion of the domain, about one and one-fourth miles north of O. C. *Number* of members, 19. *Business*, Manufactures.

WALLINGFORD COMMUNITY.

Branch of O. C., at Wallingford, Conn., one mile west of the Hartford and New Haven Railroad. *Number* of members, 45. *Land*, 228 acres. *Business*, Publishing, Job Printing, Manufactures, and Horticulture.

SPECIAL NOTICE.

The O. C. and Branches are not "Free Lovers," in the popular sense of the term. They call their social system BIBLE COMMUNISM or COMPLEX MARRIAGE, and hold to freedom of love only within their own families, subject to Free Criticism and the principles of Male Continence. In respect to permanency, responsibility, and every essential point of difference between marriage and licentiousness, the Oneida Communists stand with marriage. Free Love with them does *not* mean freedom to love to-day and leave to-morrow; nor freedom to take a woman's person and keep their property to themselves; nor freedom to freight a woman with offspring and send her down stream without care or help; nor freedom to beget children and leave them to the street and the poor-house. Their Communities are *families*, as distinctly bounded and separated from promiscuous society as ordinary households. The tie that binds them together is as permanent and sacred, to say the least, as that of marriage, for it is their religion. They receive no new members (except by deception or mistake), who do not give heart and hand to the family interest for life and forever. Community of property extends just as far as freedom of love. Every man's care and every dollar of the common property are pledged for the maintenance and protection of the women and children of the Community.

ADMISSIONS.

These Communities are constantly receiving applications for admission which they have to reject. It is difficult to state in any brief way all their reasons for thus limiting their numbers; but some of them are these: 1. The parent Community at Oneida is full. Its buildings are adapted to a certain number, and it wants no more. 2. The Branch-Communities, though they have not attained the normal size, have as many members as they can well accommodate, and must grow in numbers only as they grow in capital and buildings. 3. The kind of men and women who are likely to make the Communities grow, spiritually and financially, are scarce, and have to be sifted out slowly and cautiously. It should be distinctly understood that these Communities are not asylums for pleasure seekers or persons who merely want a home and a living. They will receive only those who are very much in earnest in religion. They have already done their full share of labor in criticising and working over raw recruits, and intend hereafter to devote themselves to other jobs (a plenty of which they have on hand), receiving only such members as seem likely to help and not hinder their work. As candidates for Communism multiply, it is obvious that they cannot all settle at Oneida and Wallingford. Other Communities must be formed; and the best way for earnest disciples generally is to work and wait, till the Spirit of Pentecost shall come on their neighbors, and give them Communities right where they are.

LEGAL STATUS OF MARRIED WOMEN —PAST AND PRESENT.

II.

THE legal status of marriage has been defined in general terms, and it has been seen that it is formed by contract; but it may be observed that it is very difficult to treat fully of the status of the wife without confusing it with that of the husband. The status of the husband is a very different thing from the status of the wife. The rights and duties belonging to them, far from being reciprocal, are very dissimilar, are derived from very different principles of law, and flow through wholly different channels.

Before proceeding to speak of the changes which are wrought when a woman enters into the status of a wife, it will be instructive to notice that in the primitive ages this status was superinduced without any contract whatever, without consulting the will of the woman; that, in fact, she had no will to consult, and that the idea of making a contract before entering into the status of marriage is altogether a modern innovation; and a glance at some facts of this sort will serve to explain why the status of the wife remained such as it was at common law, even after marrying by contract came into fashion. As before observed, a striking feature of the status of the wife is that of legal incapacity, or disability. Law-writers have different ways of accounting for the disabilities of married women. In 1632 an anonymous book appeared in London, entitled "The Lawes resolutions of Woman's Rights, or the Lawes provision for woman." The author accounts for the disabilities in this way: "Return," he says, "a little to Genesis, in the 3d chapter whereof is declared our parents' first transgression in eating the forbidden fruit; for which Adam, Eve, the Serpent first, and lastly the earth itself, is cursed; and besides the participation of Adam's punishment, which was subjection to mortality, exiled from the garden of Eden, enjoined to labor, Eve, because she had helped to seduce her husband, hath inflicted on her an especial bane. In sorrow shalt thou bring forth children, thy desires shall be subject to thy husband, and he shall rule over thee. *See here the reason* of that which I touched upon, that women have no voice in Parliament. They make no laws; they consent to none; they abrogate none. The common law here shaketh hand with Divinitie." Yet, strange as it may seem, this author grew to manhood under the rule of a queen.

A writer of our own times upon "the law of married women," referring to their disabilities and their cause, says: "It is sufficient in vindication of the law to say, that when the legal rule was established it accorded with the notions and habits generally prevailing in the community, and those notions and habits had at least some countenance in the law of nature which gave strength to the man and feebleness and dependence to the woman; putting into his hands the weapons of war, and building in her heart the golden throne before which the victor and the vanquished alike bow;" and then he indulges in quite a flight of fancy about these things changing when nature so changes that the women go to war and the dishcloths come into the hands of the men, etc., etc. The argument, what there is of it, which seeks to justify these disabilities is the same that in substance has been used from time immemorial to justify cruelty, robbery, slavery and every oppression which has at any time been practiced by the strong upon the weak. Let us trace back the operation of this "law of nature" a little, historically, and find if we can upon what basis the law of the status of married women rests, and upon what it has been built.

There can be no question in the mind of any one who has looked at the evidence on the subject that our ancestors, in whose moral and social condition the roots of the English law of marriage are to be found, existed in a ruder and more savage state than is now the condition of any known barbarous tribe. They fed upon earth, roots, grubs and shellfish generally, but not always, for they were cannibals. There was then no such thing as marriage and no such thing as the family. The opinion and habits of these people had at least some countenance in the law of nature "which gave strength to the man and feebleness and dependence to the woman." Acting upon this law of nature, it was the rule to kill the female children except the first-born when a female. To tribes surrounded by enemies and unaided by art, contending with the difficulties of subsistence, sons were a source of strength both for defense and in seeking food; daughters a source of weakness. Hence this cruel custom, leaving the primitive human hordes with very few young women, occasionally with none, forced them to prey upon one another for wives when wanted. And hence it came to pass that a woman would sometimes belong to several men, or several men would have several women in common. Such was the state of a large part of Great Britain at the time of the Roman invasion.

The fundamental idea of the right of property is this: that he who feels a want and by his own effort obtains the means of supplying that want is entitled to the use of those means after he has obtained them; and the first settled notion of the right of a man to the exclusive possession of a woman probably arose from the practice of capturing wives. The men of a tribe were killed in the tribal frays, and the women became the wives of the captors. The phrase "took a wife" was not then a figurative expression, but was prosaic to the letter. In the Book of Judges, last chapter, we have an account of how, as a punishment for not having gone up to the assistance of Israel to Mizpeh, the inhabitants of Jabesh Gilead were smitten with the sword, and four hundred young virgins were saved and given to the men of Benjamin; and how afterward, when there was still a lack of wives for them, they went where the daughters of Shiloh came out to dance, and lay in wait in the vineyards, and came out and caught every man his wife. This must also have "had some countenance in the same law of nature which gave strength to the man and feebleness and dependence to the woman," for it was at a time when "there was no king in Israel and every man did that which was right in his own eyes."

The legends of this forcible capture of women for wives exist in the literature of all nations which have an ancient literature—in that of the Greeks, the Romans, the Hindoos, the Chinese, and in the old Irish and Gaelic poems. Women are now captured for wives among the tribes of Africa, and

according to Humboldt in South America. There is historical evidence that this practice was once general among the nations of the North of Europe. Even in Great Britian the capturing of wives derived for a long time "some countenance from the law of nature." Sir Walter Scott, in the historical introduction to "Rob Roy," gives an account of how the MacGregors as late as 1750 captured a wife for Robin Oig. But by and by abduction came to be a crime.

Among savage nations, as civilization advanced, the next step from the capture of women was their purchase. In this a woman's inclination was not consulted. Her father was her owner, and that ownership was bargained away to her husband. She was a thing to be sold, and counted to her possessor as so many sheep or oxen, camels or skins. By the purchase she became, according to the old law phrase, *sub potestate viri* [under the power of the husband]. She had no will of her own, indeed she never had any will of her own, and it was not, as the law books say, "that by reason of this lack of will she cannot contract." She could not contract because she was a chattel. She was a "thing" of her husband, who had bought and paid for her and who owned her absolutely. She was as much his as she would have been if under the earlier custom he had slain her father and taken her as the spoil of war. The fact is, the institution of marriage grew up with the institution of slavery. It was the same thing as slavery, but the wife was the superior slave as she was nearer her master's person. His other female slaves were frequently with her, mothers of his children. At the hight of Rome's grandeur the forms of marriage were but relics of the ancient customs of the capture and purchase of wives. T.

Note.—For much of the matter in this article the writer acknowledges his indebtedness to an able article in Vol. 6 of the *American Law Review*, page 57.

TWO CERTAINTIES.

Home-Talk by J. H. N.

EVERYTHING persuades me to humility and docility and communism of heart. Looking over the whole field of intellectual survey, I inquire of myself, What do I most certainly know—what is the surest thing of all others to me?—and the answer is, of all things that I know, this is the surest, that *I know but very little.* When I dig to the bottom, this is the lowest stone upon which my individual wall is built; I am sure that I am a very limited, ignorant creature, and most of the things above that layer of truth I am not so sure of. A *negation* of my wisdom is at the bottom of all my capacity for wisdom. I know that I am inexpressibly ignorant a good deal surer than I know that the earth goes round the sun.

Then the second surest thing which I know is an excellent complement of the first. I know that some other being besides myself is infinite in knowledge. Of course I cannot see infinite distances, but I can see enough around me to show me that the universe is full of somebody else's intelligence, which is, compared with my intelligence, as the ocean to a drop.

Here is the true recognition of the *me* and the *not-me*. The recognition of the me is the negation of all absolute intelligence; and the recognition of the not-me is the recognition of infinite intelligence out of me. Both of these certainties are reasons for humility and docility. They persuade to communism. The me must subside into the not-me; and then by virtue of the partnership it knows all things; but the moment it relapses into the me it knows nothing.

THREADS FROM MY LIFE-BALL.

V.

QUITE a demand for the Perfectionist publications sprung up in our town, and there were many indications that the new views were spreading. A number of church members with whom we had conversed expressed much dissatisfaction with their own attainments and the low standard of religion in the church; but as our pastor denounced the new faith, or, more properly, the old faith of apostolic origin, as a great heresy, the more timid inquirers of the "new way" lacked the moral strength to brave the reproach that they saw must be heaped upon us. Our reputation in the church had already declined; we were no longer regarded as pillars there. I remember that one good sister remarked to me that it must be that H——'s sickness had left him with a disease on the brain, for, she urged, it could not be that when the church had prayed so long and earnestly for his recovery he would be left to embrace error in his right mind. "But would it not be more reasonable," said I, "to believe that God has answered your prayers by blessing him more than you could ask or think? You do not honor God in saying that when you "asked for bread he gave you a stone?'" She could make no reply.

Meanwhile the conflict in my own heart was going on. In taking up one of the Perfectionist papers I read an article on faith by Mr. Noyes, beginning with the passage, "He that cometh to God must believe that he is, and that he is a rewarder of them that diligently seek him." This was life to me, and quickened my perceptions of the way to attain that which I so much needed. I saw at once that it was only by believing that I could be saved; and very soon I was enabled to say, "Lord, I believe, help thou mine unbelief." The peace of God came over me, and I found myself filled with a fullness of the love of God that I had not known before. The whole earth seemed to be filled with his glory. H—— greatly rejoiced at this change, and the praises of God were in our hearts and mouths from morning till night. We were a wonder to ourselves, and an astonishment to our neighbors and friends, for we could not forbear proclaiming the good tidings to all who would listen to us. From this time the ordinances of the church were of little value to us,—but shadows of the glorious substance that filled our hearts. Every day seemed holy, consequently we could no longer observe one in seven as more holy than the rest.

We attended church as usual for a time, but it was not edifying to sit and hear what we knew were God's truths misrepresented and abused, and ourselves scandalized without the privilege of replying; and so we finally concluded to remain at home. After awhile we were arraigned before the church to answer for our heresies. Four different meetings were held with us, and many questions asked respecting our belief, all of which were answered truthfully and fearlessly. Both of us were calm and happy during this ordeal, and never at a loss for a reply. The persecuting party found much difficulty in getting the church to act upon any of the charges preferred. Finally it was concluded to gently reprove us and let us go. Previously we had been visited by a commitee of four, three of whom were deacons, who had questioned us quite closely, but left with impressions of us apparently more favorable than they had before; and had that committee been permitted to report directly to the church, instead of having their report pass through the hands of the minister, a very different impression no doubt would have been made on the minds of the people. It must be remembered, however, that there is much more toleration and freedom of speech in religious societies now than there was forty years ago.

Many months previous to this I had the happiness of welcoming my only sister as a whole-hearted believer in the doctrine of perfect holiness. Though a devoted member of the church, and active in various benevolent societies connected therewith, she had for a long time been dissatisfied with the standard of nominal Christianity. The fruits did not correspond with the requirements of the gospel as she understood it. The unity taught by Christ was greatly lacking, as every man looked on his own things and not on the things of others. She was convinced there was a better way, and it was not long before she found what her soul desired. This change from law to grace brought her into great tribulation, as it was a sore trial to her friends. She had, however, counted the cost, and did not shrink from declaring the whole truth, cheerfully enduring the loss of reputation, family confidence, and all things that the world hold dear. Her husband at this time was an active member of the church, and now occupied the places vacated by H—— in the Sunday-School and elsewhere. Hitherto there had been perfect unanimity of feeling between herself and husband on all religious and moral questions; but now that harmony was destroyed. There seemed to be a great gulf between them which neither could bridge over. It was the antagonism of law and grace, of legal righteousness and the righteousness of God. Entertaining, as he did, rigid Orthodox views, it was not strange that her husband should think her deluded, and condemn her accordingly. While she suffered much persecution it did not hinder her progress nor suppress her hopeful, rejoicing spirit in the midst of her family duties and responsibilities.

This sister, now doubly dear to me, was the only person in our neighborhood with whom we had full fellowship in the truth. In the adjoining towns there were a number of believers, and in one of them free meetings were held quite regularly on Sundays in a very ordinary building called the "Lock House." Most of those who attended were persons who had been connected with the popular sects, but entertaining advanced views and believing in free discussion on all subjects, preferred a congregation which would allow them to speak if they had anything to say to one that denied

such liberty. At these meetings we were occasionally edified, and very much so at one time. It was in the fall of 1842, I think, when word came to us that Mr. John H. Noyes of Putney, Vt., would be present the next Sunday at the Lock House meeting. On entering the hall we found it quite full already, and still persons came until there was no standing-room. Mr. Noyes read the 35th chapter of Isaiah, commenting on every verse as he read, but dwelling particularly on the last, which represents the ransomed of the Lord as returning and coming "to Zion with songs and everlasting joy upon their heads." They were not to wait, he said, until they had reached Zion, but on their journey thither were to have "songs and everlasting joy upon their heads." This explanation was new, and the words uttered came freely and with great power; and I never saw an audience give more breathless attention. We returned greatly strengthened and encouraged.

IMMORTALITY.

WE are to live for ever—for eternity; the sublime thought is awe-inspiring, and yet how cheering. It reveals as we contemplate it far-reaching, never-ending possibilities of improvment. We need not fear to commence any course of progress, for an infinite future is before us, in which we can take up any study, any pursuit, where we are now obliged to leave it, and go on learning forever and ever. "What's the use?" I asked the other day when looking over an old portfolio my eye fell upon a bit of paper yellow with age, recalling the enthusiasm with which for a time I pursued a now neglected study; but the temptation endured only for a moment. A flash of light revealed the illimitable future—luminous, glorious, yet calm and free from all distraction. I realized in my innermost that I had only entered upon existence; that I was still a child, with everything to learn and time enough in which to learn. I seemed to hear a voice, saying—"Go on—improve the present hour to the best advantage; then the next hour, the next day, the next year, the next decade, the next century, yea, century after century, and still there will be something new to learn and endless opportunities before you." I could but respond—Thanks be to God that he has made us immortal; and endowed us with capacities for continual improvement; and above all, that he has given us souls capable of being filled with his love and life and of coming into perfect unity with him. M.

WHO INVENTED THE PRESERVING PROCESS?

THE art of preserving food by hermetically sealing it in cans and bottles has already done so much to increase the comforts and luxuries of mankind, and promises so much for the future, that the above question is likely to become of great interest. Though the art is the product of modern invention its beginnings are already enshrouded in mystery. The writer who contributed to the CIRCULAR of Sept. 16, 1872, the interesting article on the "Beginning and Growth of Fruit Preserving," is inclined to give the honor of first conceiving the idea of preserving food by the hermetically sealing process to M. Appert of France, who received from the French Government in 1810 twelve thousand francs for introducing his process of parboiling provisions and then confining them in air-tight cans. Let M. Appert have the honor until one more worthy appears. A document now before us sets forth that His Most Excellent Majesty, King George the Third, did by letters patent, on the 25th day of August of the same year, 1810, give and grant unto one Peter Durand the sole privilege and authority to make, use, exercise and vend an invention for preserving animal and vegetable food by processes less perfect but much like those now used by large packers in this country; but as it appears from the same document that the invention was communicated to Durand by a "certain foreigner residing abroad," and no clue is given to his name, we are left to conjecture that it may have been M. Appert of France.

The writer of the article referred to in the CIRCULAR was unable to give any data respecting the preserving of fruits and vegetables earlier than 1853. From testimony given in a recent patent trial before the United States Circuit Court for the District of Maine, it appears that both fruits and vegetables were preserved by the new process many years earlier even in this country, and still earlier in France, though attention was everywhere first given to the preservation of animal food. Thus Jean Louis R. Bertram testified that he learned the art of preserving in Cologne, Prussia, about the year 1820; worked at it five years in Paris, and then eighteen years in Sedan. "In France," he added, "we put up all fruits and vegetables raw in cans; asparagus, little peas, string-beans, Lima beans, little carrots, corn, etc. He saw corn canned in Cologne as long ago as 1830. Charles Mitchel, a Scotchman by birth, testified that he learned the art of preserving in Aberdeen, Scotland, in 1831, and that after coming to this country he canned sweet corn as early as 1843. Louis Bernard testified that he began in New York in 1842 to manufacture and sell hermetically sealed goods, fruits, and vegetables; but it does not appear from his testimony that he did at that early date actually preserve any fruits by the new process, though it is clear, if his testimony is to be credited, that fruits were thus preserved at an earlier date in France; for he says, "I came to New York in 1837; I knew M. Appert in France, and under his process learned the art of hermetically preserving vegetables *and fruits*. W.

MEETINGS OF THE COLORED PEOPLE.

A correspondent of the *Catholic Review* writing from Florida describes the meetings of the colored people of the South in the following graphic manner:

As the earnestness of the preacher increases, he generally falls into a sing-song intonation, his voice rises to a pitch painful alike to orator and auditor; his breath becomes short, his articulation labored; after each triplet or more of words, he utters a gasping "ah!" he moves agonizingly from side to side, his face perspiring, his eyes rolling, his gestures and utterances accelerating, until his auditory, catching the excitement, break forth in a chorus of responses, such as, "Oh, Lord!" "Oh, Zion!" "Do, Lord!" "Please, Lord!" "Glory!" "Zion forebber!" and the like. Then, with a startling suddenness, the preacher drops his voice and his lofty language to an ordinary pitch, from which he gradually works himself and his hearers to a new intensity of excitement. In the singing all unite—men, women and children—without regard to compass or adaptedness of voice. Usually, however, the effect is not unpleasing. The singing is perceived at once to be

THE SPECIAL FEATURE OF THE SERVICE.

The women at these meetings, far outnumber the men (they sit on different sides), and their shrill, reedy voices lead the van in every variation of the tune. The words are announced by one of the deacons, and his errors of pronunciation are repeated by the congregation with a scrupulous fidelity. It is in the local or informal hymns always introduced that the choral genius of the race becomes the more apparent. Frequently there is a sort of concerted arrangement, both effective and characteristic. For example in the hymn:

De Gospel train 's a comin,
I heard it jus' at han'!

in the chorus

Children, git abo-oard!
Children, git abo-oard!
Children, git abo-oard!
Dere's room for many a-more!

a soprano sings the first word "Children," a number join in the words, "git abo-oard." The following two lines are repeated in the same manner, and the conclusion is given with the entire strength of the congregation. The swaying of the body, and the tapping of the feet on the floor, are the invariable accompaniment. When a lull occurs—at the termination of a song, one of the deacons appeals pathetically to the "sisters." "Won't de sisterns gib us someting? Come, sistern, Come! Sing up, sistern!" Thus exhorted, the "Sistern" quickly lead "a new departure." The formal service over, a "hand-shake" is a favorite conclusion of the meeting. A crowd of the most enthusiastic worshipers collects in front of the reading-desk, and a "member" (male, or female), with an exuberance of voice, starts a rythmical improvisation of some scriptural story to the tune of a "walk around," and with a constant and monotonous choral response from the others, the air of which varies only in terminating, now with the rising, now with the falling inflection. One of these performances was as follows:

Solo—Noah, he did build an ark!
Chorus—Oh, for de kingdom!

Solo—He built de ark tree stories high.
Chorus—Oh, for de kingdom!
I'm boun' for de kingdom.
I'm boun' for de kingdom.
I'm boun' for de kingdom.
Oh! come along!

Solo—Dem said he war a foolish man.
Chorus—Oh, for de kingdom.

Solo—But still he built it right along.
Chorus—Oh, &c., &c.

He took de animals and insecks in;
Oh, for &c.

De horse de cow and eberyting.
Oh, &c.

De water, it rose up right high.
Oh, &c.

Dem had to leave de first story;
Oh, &c.

But still de rain, it did cum down;
Oh, &c.

Dem had to leave the second story;
Oh, &c.

Dem had to leave de third story;
Oh, &c.

Dem had to git upon de roof.
Oh, &c.

and so, throughout the whole narration, with the most minute embellishments and details. The principal accompaniment of this song consists in a sort of "mark time," up and down movement of the body by bending and straightening the knees, the head and trunk remaining rigid, but the arms swinging loosely at the sides. The "hand-shake" comes in at the chorus, the singers shake each other by the hand, keeping tune with the rhythm of their song. The rest of the congregation, meanwhile, indulge in unrestrained conversation and join at will in the singing or gradually leave the sacred scene.

BEAUTY OF THE HUMAN FOOT.—When we saw "Pygmalion and Galatea" recently performed, we were struck with a peculiar movement in the actors' feet which for a time, sitting afar off, we did not understand. With every step, with every turn of the ankle, a kind of delicate ripple passed over the instep as a thrill runs through a corn-field sometimes under a tender wind; we were surprised to see how beautiful the movements were, how graceful were the lines from the ankle in every position. Presently we discovered that the beauty and the grace were due to the absence of shoes. On inspection, the feet of the ladies were not particularly small, yet they were better than the smallest concealed in boots; there

was scarcely a position in which they did not appear lovely. The actresses were in fact thinly stockinged, with sandals beneath the feet, an embroidered strap coming between the two first toes across the instep, after the old Roman fashion. We have often thought, considering how much we lose by shoes and how very little we gain, that it is a thousand pities women do not bring in sandals—not the foolish ribboned pumps of the last century, but the real Greek sandal. Without the hard and deformed shoe, every muscle of the foot is in motion, and visible at every step; it is quite wonderful how pretty the feet appear, even when not very small. In reality we lose nearly as much by the shoe as the face loses by a mask.—*St. Paul's Magazine.*

ONEIDA CIRCULAR.

TIRZAH C. MILLER, EDITOR.

MONDAY, MAY 19, 1873.

DISCRIMINATING SPIRITUALISM.

COMMUNICATION with spirits is desirable. In fact, the gospel is nothing but a call to intercourse with the highest and best of all spirits. "Our fellowship," says John, "is with the Father and with his Son Jesus Christ." The difference between the believer and the unbeliever is, that the one looks up to invisible spheres, and seeks improvement and renovation by communion with celestial life, while the other looks down to the world of matter, and nurses his life with earthly things.

But in seeking or accepting intercourse with the world of spirits, we ought to know what part of that world we approach, what nation (so to speak) we visit, and who the strangers are that visit us. For the Bible and experience instruct us that the invisible world is made up of divers principalities or nations, as well as this world. Suppose we belonged to some other sphere, and were approaching this world for instruction and fellowship. We can see that there would be need of discernment and good judgment in choosing our company out of all the nations and sects that might present themselves to our attention. It would not be very profitable, for instance, to enter into credulous communication with the Chinese, though they might astonish us with their oracular boastings of the wonders and glories of the "Celestial Empire." So we should not get much real wisdom or goodness from the Mohammedans, though their own report of the excellence of their condition and of their prospective beatitudes would doubtless be very weighty and persuasive. And the nations and sects of Christendom even would require close examination and careful choosing. In short, a pilgrim from some other world to this would find it easy to get into bad company, and somewhat difficult to meet with a people whose reports of themselves and the rest of the world could be trusted, and whose communications would be really profitable.

So, from what we know of the analogy between the state of things in this world and in the invisible world, it is safe to presume that it is easy, in approaching unknown regions of spirits, to meet with tribes of the mean, deceitful, boasting sort, and a matter of difficulty, requiring caution and patient search, to find the true children of light, that will lead us upward to the throne of God.

To us it is manifest by reason and accumulating experience, as well as from the Bible, that there is in the invisible world one name that is above every name—one principality that is far above all heavens—one nation that is distinguished from all others, by the glory of the power that raised Jesus Christ from the dead. For that nation we have the highest respect. Our ambition is to be received into their company. To visit them, or to give place to them in this world, is our brightest hope. Our lives are at their service. Other tribes of spirits, we confess, have for us small attractions. In fact, we count it a privilege to be excused mostly from their company. But for Jesus Christ and his advancing train the cry of our hearts is, "Lift up your heads, O ye gates, and be ye lifted up, ye everlasting doors; and the King of glory shall come in."

REVIVAL-DYNAMICS.

II.

"A certain man made a great supper, and bade many: and he sent his servant at supper-time, to say to them that were bidden, Come, for all things are now ready. And they all with one consent began to make excuses. The first said unto him, I have bought a piece of ground, and I must needs go and see it: I pray thee have me excused. And another said, I have bought five yoke of oxen, and I go to prove them: I pray thee have me excused. And another said, I have married a wife: and therefore I cannot come." And when the servant reported these things to his master he was angry. See Luke 14: 16—21.

"All seasons are not alike favorable. • • • There is a deal of difference in the time of the year whether people can get out to meetings or can spare the time. In the midst of harvests I have known but one revival in my life among hundreds and hundreds, because men cannot spare time from the harvest-field. • • • Your revivals are to be in the proper seasons of the year. You are to adapt your moral culture to all these peculiarities of God's providence, which with some little care and observation every one may discern." *H. W. Beecher on Revivals.*

We cannot discover that the reasons which Mr. Beecher allows as sufficient to excuse men from taking part in a revival are any better than those offered in the parable as excuses for not coming to the great supper. Besides if farmers are to be excused from giving special attention to religion during harvest-time, merchants and others whose business is equally pressing at all seasons of the year may be wholly excused. This Mr. Beecher would not for a moment admit; but he must do so unless he takes the ground that religion is always and everywhere primary, and whenever its interest conflicts with that of business in such a way that one must temporarily suffer, it should be business and not religion.

Another thought: If it be true, as Mr. Beecher says, that "there is a great deal of difference in the time of the year whether people can get out to meetings or can spare the time," then we have in this fact one of the strongest arguments for such a thorough reörganization of society as will make it convenient for people to come together daily for religious culture. The demands of the world are pressing upon the attention continually, and nothing less than continuous attention to God can keep the true balance and save our souls. Communism furnishes the conditions for this. It is as easy for Communities to "get out to meetings" in harvest-time as at any other season. In fact, they don't have to go out to meeting at all. Their house is their church and school as well as home. Not only does Communism abolish distances and so make daily meetings possible, it also abolishes the fierce competitive strife that makes it so difficult for people to "spare the time" at any season for such continuous attention to religious exercises as revivals require.

W.

The Graphic says at the close of a touching paragraph on the tender affection between John Stuart Mill and his wife: "Too soon for us but not for them, we may now write above the graves of the wonderful pair the old Virgilian epitaph, 'Lovely in their lives, in death they were not divided.'" We are sorry to see this pretty bit of poetry filched from the Bible and given away to the heathen. Saul and Jonathan, two Jewish heroes, were the lovely pair for whom this epitaph was made, and the royal poet and musician, David, was the author of it. (See 2 Samuel, 1: 23.) Positivists are welcome to the good things of the Bible; but they ought to give credit.

There is no one thing that adds so much to the miseries of human life as the modern newspaper. When a man has as much as he can do to carry the load of his own troubles, the newspaper piles on him all the troubles of everybody else.

Somebody robbed, somebody killed,
Somebody sent to jail,
This is the way the papers are filled
Coming by every mail.

All that devils and bad men do
Faithfully gathered in;
The press has become a horrible ghoul
Feeding on filth and sin.

Shame on the din, vaunting of hell,
Telling of death and strife;
Crowding away from aching hearts
Glad news of love and life!

Here is a little advice, half a century old, from Thomas Jefferson:

"If you ever find yourself in difficulty, and doubt how to extricate yourself, do what is right, and you will find it the easiest way of getting out of the difficulty. Give up money, give up the earth itself and all that it contains, rather than do an immoral act. And never suppose that, in any possible situation or any circumstances, it is best for you to do a dishonorable thing."

This reads a little odd in these days of Credit Mobilier statesmen, lobbyism and general stealage. How new, strange, and refreshing it would be to wake up some morning and find everybody acting out this advice, and all the newspapers reporting nothing but right and honorable doings throughout the world. 'Twould be the greatest sensation in history.

COMMUNITY JOURNAL.

ONEIDA.

—Says the Oneida *Democratic Union*, "The first postal card that came to the Oneida post-office was received by the Oneida Community."

—The gardeners have got a good start with their vegetables. The asparagus and pie-plant are already large enough to cut and suitable for table use. The potatoes are all planted and growing finely, and on Wednesday the second crop of peas was planted. The smaller vegetables are also in a thriving condition.——The farmers are putting up a new fence between the barn and the bridge which will much improve the appearance of the road. Several new tenant-houses are building, one of which is nearly covered.——The Willow-Place factory is as busy as ever, and the whirl and roar of machinery as deafening, while big piles of traps are made every day, and silk cleaning and winding and spinning and twisting are going on from morning till night. The chuck business is growing and seems destined to become one of our most important branches of manufacture.

—The following parody was read at a late meeting, and as we have since learned was the combined production of Carrie and Lily, who have for several months served in the capacity of table-waiters, and experienced the perplexity of waiting with empty plates for the tardy movements of the dumb-waiter between the kitchen and dining-room:

Only waiting till the waiter
Makes its ascent from beneath,
'Till the pancakes and the butter
Come to give our minds relief.
Only waiting for the apples
And the mush we so much need,
Only waiting for potatoes
All the hungry folk to feed.

They are waiting for molasses,
For cold mush, and Graham bread,
And we think if you'll but send them
We'll pour blessings on your head.
For we know the folks have patience,
But it cannot last all day;
There are some so tired of waiting
They get up and go away.

Through the whistle we entreat you
Send, O send those nutcakes brown;
Though they are not hygienic
There are some "who put them down."
Ah! at last we see them rising,
And our hearts are made so glad;
For to see the folks so hungry,
Really makes us waiters sad.

—If we consider the quantity of music made by all the boys playing on spring whistles, and the enthusiasm of the musicians, we shall conclude that this primal branch of art is more important than the performances of all the orchestras, opera troupes and church choirs in the world.

—This is a note from one who sometimes contributes to the Community Journal, written after an invitation to furnish us an item or two:

"Items! write items for the Journal. But the difficulty is that I must have the items before I can write them. If things don't happen I have not the power that was claimed by an editor I once heard about to "make them happen." Says the cook-book, "first take the shad"—well if I have not the shad, what is the use of all the subsequent cooking directions? This "counting the chickens before they are hatched" is risky business in journalizing. I well remember Holton's experience in thus experimenting with probabilities; he was journalist at the New York agency, and wrote that "Mr. N. arrived safely, and we were all glad to see him," and posted the journal, expecting Mr. N. would come as was his wont on the evening train. But that unlucky Monday Mr. N. concluded to stay at W. C., and you can imagine his surprise on reading the item of his safe arrival in New York while he was yet in Connecticut.

"The exciting scenes of the 4th of March, in Washington, were described and printed in *Harper's Weekly* and most of the papers sold two days before the events occurred. It is fair and provident to be up with the times; to have perhaps the biographies of leading living men all written and on file in the office, so that in case of the sudden death of any of them in the evening the full obituary notice may appear in the next morning's issue. Old father time used to be represented as quietly reaping with his scythe. Should he be pictured now, his forelock would be bound in the firm grip of the modern news-item writer; his speed that of the railway; his scythe trailing behind him. Now you don't want news items until they happen, do you?"

—This little poem, which some one pinned on the bulletin-board, we think will be appreciated by all lovers of the

TRAILING ARBUTUS.

My beautiful darlings, do you know how we love you?
Seeking you out from your rude dwelling place,
Do you see the delight in the faces above you?
Are you not a bit vain, 'neath your shy modest grace?

Do you know that your presence is simply a wonder?
How did you make ready so quickly to come?
You've not been a week outside your snow prison,
You brave little, bright little, bride of the sun.

Ah, you are no laggard, his first kiss awoke you,
The blushes he called are still to be seen;
You knew he'd not fail you, so put off your wrappings
And step in a trice to your bright throne of green.

Bright little, wild little, child of the woodland,
Though we cherish you fondly your stay is not long;
You came with the blue-bird, the phœbe and robin,
And charm with your fragrance as they with their song.

Though your visit is transient we will not forget you,
Among all the treasures that summer can bring.
Their gorgeous apparel shall never eclipse you.
Our bright little, sweet little, darling of Spring.

—Monday (12) the journalist in company with seven others went down to Joppa. The morning though cloudy gave promise of a fair day, and before we had arrived at Fish Creek Station the sun was shining brightly. Stepping off the cars our guide led us over a sandy road by several small farm-houses, across a rough, uncultivated lot, which terminated in an open pasture cut through by the river. Fifteen minutes brought us to the bank where lay our boats. A lively gale was blowing, ruffling the river we were to cross, while the lake south of us was turbulent with white-caps and angry-looking billows. Our boats put off from shore and we were soon landed on the thickly-wooded peninsula where stands our snug little cottage. This cottage is a well-built, two-story house, containing two rooms below stairs and one above, and commands a fine view of the Oneida Lake from north, south and west, and of Fish Creek, or river, on the east. After a pretty thorough inspection of everything in and around the dwelling we decided it was an infinitely pleasanter and a more civilized place for excursionists to spend a night in, than the rude inclosure and fixings of a tent. The women of our party found plenty to do in the way of "tidying up," and proceeded at once to sweep and put the house in order; but we were obliged to use a fire-shovel to take up the litter we had collected as nothing could be found in the shape of a dust-pan on the premises. Then we mopped the floor, which it is not too much to say improved it wonderfully. We found a number of things lacking in the domestic economy, such as a dipper, a skimmer, a dust-pan, an old broom for scrubbing, a flat-iron, a pitcher, a salt-cellar, curtains for the windows, a rocking-chair, a clock, a comb, and last, but not least, suitable reading matter, all of which we noted down as necessary additions to the household conveniences. There is no cistern near; all the water used is brought from the river; and here we must express our delight at the quality of this water, it being so clear and beautiful and soft—softer than the softest spring water. The suds we made by dropping in a little soap was perfectly charming.

At noon we went out with the men on the river to try our luck at fishing; but though we went to the fishing-grounds recommended by our guide, and though we waited patiently for two full hours with our lines in the water the fish would'nt bite, and we returned to our cottage with "nary a fish." S., our guide, comforted us with the information that "some days perch will take hold and bite like everything, and you can just stand and pull them out hand over hand; and then again they wont bite at all!" We could attest the truth of his last statement. We had an excellent relish for our supper, and after the dishes were cleared away were ready to go out fishing again. A pleasant ride up and down the river, a view of the glowing sunset on the distant lake, and three fishes caught by H., N. and S., rewarded us for our second trial. We returned to the cottage contented with our luck, and enjoyed the picturesqueness and grandeur of the scenery around us. The lake was now smooth as glass, the sky unclouded; the sunset had faded away leaving a faint streak of yellow light in the western horizon; the air was ringing with the voices of insects; frogs were humming, birds were singing their evening songs, and loud above all was the continuous note of the whip-poor-will. Once more snugly housed, we gathered around the stove and talked over our day's experience, and rejoiced that here too we could have the home feeling. One remarked that he "felt a spirit of prayer," and went on to make the following proposition: "Now that parties are coming down here frequently, generally making their calculations to stay over night, I think it would tend to give a good tone to such excursions to have it understood that the evening should be spent in good spiritual conversation, and in turning their attention to fellowship with one another and with God. This will make a great difference in the character of our excursions, and we shall enjoy them better for being mixed up with a good religious experience. We can plot to-night for future excursions; after the day's excitement in fishing, eating and drinking is over, we can add to the good time by spiritual conversation and heart experience, which will be far more satisfactory all round. This place needs the revival spirit to complete it as a Community resort. We must elevate it. If God don't take possession of this post the devil will. Why cannot we carry the revival spirit into our sports and make them a means of grace? I think we can, and I think we will." These remarks met with favor in our little circle, and we united in the purpose expressed by our companion to sanctify such sports. We were put to sleep by the ceaseless, mournful song of the whip-poor-will. At 5 we were up and dressed, and soon on our way to the fishing-grounds hopeful as ever; but heavy, ominous clouds hung above us, the wind was high and the waters of the lake were lashed into a fury; the river, too, was unquiet, and our little boat bounded over the waves like a thing of life. Hardly had we cast our lines into the water before the fast gathering clouds warned us to shore. We reached the house in season to escape the shower, and laughed at the strange fatality that kept us from getting any fish. The shower did not last long, and after breakfast we started for home, expecting to have an hour or two to ramble in the woods and pick flowers on our way to the station; but a shower came up just as we arrived at the woods, and the women retreated to the station, leaving the men to gather arbutus for them. In a short time they brought a large basket filled with these lovely blossoms, and reported that the woods were a perfect marvel for the rank growth of the arbutus plant, and the ground was crimson with the myriads of winter-green berries. We came home with a new realization of the treasures we have access to at our residence in Joppa. The delights of a New England wildwood are here combined with fishing accommodations and a taste of sea life. But above all, we like our home at Joppa for being so quiet and retired, and though we had poor success in fishing and no startling adventure marked our jaunt, we shall think with pleasure of this excursion, as being principally a consecration of this retreat to reflection and prayer.

—Here is a letter from one who left the Community a number of years ago in a quarrel with our system of mutual criticism:

———, *May* 11, 1873.

DEAR ONEIDA:—Will you please send me the CIRCULAR? This is the second time I have been without it,—there is nothing that fills its place. I would to God that my home was with you. I know I am not worthy of your favor, and how much I have lost by being outside of the Community. Should there be any in the Community that are a little discontented I would say to them, "God will follow you, go where you will: you cannot be happy." That has been my experience. I most heartily accept all the criticism of the Community. I hope they will forgive me and pray for me, for I feel as if I had wandered a great way from the fold. O, if God will forgive I think that his children will.

I offer myself for criticism, and would make all free to express their opinion of me, for if I ever get on the right track again it will be by being willing to accept your criticism.

Yours affectionately, ——.

—The letters below from some of the men of the Community to Mr. Noyes were mostly drawn out by the late talks we have had on the subject of our marriage relations; and, though never designed for any eye but his, they were read aloud to the family, and we take the liberty to pass them on to our readers as specimens of the heartfelt and unsolicited expressions of loyalty to our cause:

Villa, April 19, 1873.

DEAR MR. NOYES:—Your talk about complex marriage has invested our Community relation with a new and sacred beauty, and I think it is one which every honorable man will come to prize as he prizes his own soul. The results of your definition of our union must be to increase love and unity in the Community; but it seems to me it may legitimately enhance self-respect. The thought of being joined in an eternal marriage union by God is exceedingly ennobling and dignifying. It makes our covenant with each other appear holy and precious beyond any legal ceremony, and our responsibility in being faithful to that covenant a surpassingly sacred and honorable one. All trivial thoughts and sentimental fancies concerning the nature of our union can henceforth be done away with, and every man may truly regard it as a solemn compact made to last forever.

Yours faithfully, —— ——.

O. C., April 20, 1873.

DEAR MR. NOYES:—I do not feel that there is any necessity for me to renew my protestations of loyality to you and the Community, still this seems an appropriate time for all of us to settle now and forever the foundations of our union with one another and with God. I consider the step which I took in coming to the Community one of the most important and sacred acts of my life. The compact between us was made after the most mature consideration and prayer, and I can never leave the Community through any act of my own without violating every law of God and every code of honor, the observance of which constitutes what is generally known as a gentleman. I will not say that I will never leave the Community, in any way as depending upon my own will or power to withstand temptation, but I have the same faith in God that he will enable me to overcome all temptations and that he will keep me here, that I have he has saved my soul from hell: and if I should ever come under temptation, let this be a record before God and man against me, that in my calmest moments and with the most positive assurance of the truth of my position that it is possible for man to have, I say that my marriage with the Oneida Community is the act of God and for eternity, and if I violate it I do so at the peril of my soul and in violation of every law of God and honorable dealing.

Faithfully yours, —— ——.

O. C., May 6, 1873.

DEAR FATHER NOYES:—I feel like giving my whole life and strength to the service of God forever. It seems as though God was never so near to the Community as now. He is working in every heart, to bring on the continuous revival that has been hoped for so long. I believe it has come now in the Community, and is turning all our hearts in prayer to God for the salvation of our souls. The more I think of it the more my heart fills with thankfulness to God for his goodness. I thank him for grandmother Noyes, who used to teach me Psalms when I was very young, and who first taught me to pray and put my trust in God. I thank him for her children, who are leading the army of Christ in this world, the army that will drive the devil from this earth and establish the kingdom of God.

As I know that the Lord only is able to keep us, and that the devil is always ready with his temptations, I take this occasion to shut the door behind me, and affirm that God is directing you and the Community, and that the doctrines and practices of the Community are holy and righteous. I feel a firm determination to devote my future life to serving God and the Community.

Your son in the gospel, —— ——.

Villa. April 22, 1873.

DEAR FATHER NOYES:—I have a new appreciation of what you have done and are doing for the young men in the Community. Your talk to us last week I know is the truth. Many of the points brought out were new, but have worked in me for good. I know that you are the best friend I ever had and the best friend of all that desire to be saved. Your patience and kindness toward me and others have drawn out my heart in love toward you, and I know I never shall sever the connection I have formed with you. God has placed me here, and he arranges my circumstances.

The new purpose that took possession of me a a month ago, "to know and do the will of God," is a bright thing in my experience that I constantly refer to when beset by the devil's temptations to unbelief and discouragement.

Confessing anew my loyalty to you and the O. C,

Yours always, —— ——.

O. C., May 4, 1873.

DEAR MR. NOYES:—I awoke with my heart filled with love to you, and I wanted to express my gratitude and thankfulness for all you had done for me. When I was a young man I had, I suppose, many of the doubts and temptations that beset young men, but there came a time, in the midst of great distress and struggle of soul, when I was enabled to see your true character and to yield my life to yours. Since then I have always felt that, except to God alone, my relations to you were more sacred and vital than any relation I had ever known or could know. I think it has had all the sacredness of marriage with an added religious obligation that is often wanting in married life. I do not suppose that I have escaped from suffering by living in the Community; perhaps I have had a great deal more than I should had I remained in the world, but in my deepest depression I have never been tempted to turn away from you, but have always been sure that you were my best friend, and have often had my heart lifted in thanksgiving to God that when so few had been called he had chosen me.

Yours sincerely, —— ——.

O., C. May 4, 1873.

DEAR FATHER NOYES:—I want to say something that will forever place beyond a doubt the possibility of my deserting the cause that you and the Community are engaged in. My heart is full of thankfulness to God for his mercy and kindness, and that he has kept my heart soft through my late temptations, so that his words sent to me through you and others could reach me. I make this vow before God and man, that whatever trials or temptations God may see fit to put me through I believe he has joined me to this Community to help carry out his plans, and I have no right to leave it.

Yours in humility, —— ——.

O. C., May 9, 1873.

DEAR MR. NOYES:—Knowing the interest you take in all signs of the revival spirit among us, I venture to relate some of my late experience. For some weeks past I have been conscious that a softening process was going on in my heart, until now it is so filled with joy and love and peace that frequently during the day, when thinking on God's love and some of your lately expressed ideas, tears fill my eyes and great waves of love and gratitude surge over me, thrilling me with the deepest sensations. I find this experience is not dependent upon times and seasons, but upon conditions brought about by turning the attention inward. Skeptics say the sensations produced in the hearts of young converts during revivals are the result of the influence exerted by a minister of strong magnetic power, and Henry Ward Beecher believes it impossible to have these deep revival experiences in the midst of business; but my experience to day disproves all this. While at work entirely alone so far as persons of a spiritual character are concerned, surrounded by whirling machinery, clanging hammers and the constant thud of a heavy drop as it fell upon the springs I was stamping, my mind recalled one of your late talks, and a spirit of love and broken-heartedness came upon me filling me with sensations which words are too weak to express. I trust as a family we are entering upon a perpetual revival. My heart is big with desires to clear myself of all hindering causes that the spirit of truth and sincerity may have free course.

Praying for chronic softness of heart, I remain

Yours faithfully, —— ——.

—DEPARTURES.—E. H. H., F. S. C., for W. C. ARRIVALS.—A. S. H., M. L., and T. H. S., from W. C.; W. G. K. and J. R. L. from New York: S. R. L. from the East; A. B. from the West.

THOSE PUZZLING DIPHTHONGS

IE AND EI.

THESE diphthongs bring to mind the little checked aprons that brightened a play-ground, one summer morning, a long time ago. It was my first day at school. "Sis" and I had stopped on our way "just a minute" at aunt Cecelia's, and passed out through her front door-yard. There were a great many flowers there, I remember, and some of the tall ones nodded their heads at us. I thought they meant, "Good morning, my little man," and as we trudged up the road there was a barking here and there of dogs that seemed to have a special interest in us; but the greeting we met when we reached the low square house on the corner with only one door was overwhelming.

Reader, have you forgotten your experience at that eventful time? Have you forgotten the state of mind you were in when you made your first "obeisance" to the school-ma'am? Do you remember your new spelling-book with its sky-blue cover, from which you proceeded, with not a little inward triumph, to read and spell *ab, eb, ib,* and *ba, be, bi?* You did not have to stop to potter with your letters—thanks to Amy's tutelage at home—you were sure of *them*, all 'cept b and d, and p and q, which would sometimes get a little mixed; but you could almost tell them at sight. *Da, de, di, do, du*, you spoke loud and prompt because you knew what you were about, and when the last line on the page, *za, ze, zi*, and so on, was mastered, any one might have seen that you liked the new spelling-book, and the teacher, and the way you were getting on, which was surprising, you thought. May be you did not feel so crank at the bottom of the next page, and when, in course of time, you got to words of two syllables, straightened yourself up, and sang out, "B-a *ba* k-r *ker* baker," and teacher said "Next," and "s-i *si* d-r *der* cider," and teacher said "Next" again, you became a sober kind of boy, you remember. But one day teacher told the class in a very decided way that "*S-e-i-z-e* is pronounced siv, and *s-e-i-g-e* seej," and then you had a great misgiving,—"The book is not a n'onest spelling book after all."

I once knew a sharp-eyed, red-headed little fellow in a class, who had a happy thought after several misspellings. A theory flashed into his mind, and he was going to put it to the test, too. He would try it on the next word. The next word was *crucifix*. The four or five above him missed it

"C-b-n-w-y, crucifix," he shouted, and started for the head. He was so sure he was right. The experiment brought down the school-house figuratively speaking. The boy's theory, I afterward learned, was to spell words with silent letters altogether. From the present state of the language one might suppose the same theory to have been in vogue among the early writers.

Children like to see things match—the letter and the sound. They spend in making matches a great part of their time. Some grown folks, I have observed, are childlike in this respect. There is my portly neighbor, Lambert. We had a talk one day standing by the road-side. He took solid grounds on that occasion. Planting his feet well apart I was reminded of a pyramid, a thing not easily overturned. Said he:

"Now where's the sense in spelling *receive* with *ei* and *believe* with *ie?* The sound's the same in both words, then why not have the spellin'?"

"My dear sir," I replied, "these words don't have a like origin. They come from different roots, and they root in different soils, so to speak; *believe* in Anglo Saxon and *receive* in Old French."

"Well s'pose they do. When you transplant such words—set 'em out, to use your own figure, in English soil, why don't you change the spellin' if need be so's to have 'em in some sort'o sympathy with their kin in the country you're movin' 'em into?"

"That has been thought of, but some things don't change easily. There's that tropical plant, the Yucca, that I have been watering and taking into the cellar winters for a dozen years or so. When I look at that plant in a meditative way it seems to belong to the hemlock family."

"Does it? Then how does it seem when you look at it in the ordinary way with your eyes open?"

"Not of very near kin, I admit, that is, to young hemlocks; but as you go back in the hemlock ancestry the resemblance becomes striking. For instance, it does'nt look very much like the sap heads down in the swamp; but when you compare it with the patriarchs on the hill yonder that have had the winds of a hundred winters whistling through their branches, the likeness is almost as strong as that of twins. (Lambert wanted to know if my Yucca was dead at the top!) I have tilled that plant a long time, with an eye to bringing out the latent hemlock; but after all it does'nt show much of the hemlock yet, in regard to the quality of its timber, and I begin to think it never will. Some of the neighbors discover it to be a foreign plant, after a careful examination. It pleases one to find out one is clever, you know, and so I keep it. Besides the plant is queer, and it has a story, for any one who will take the trouble to read it, of a strange land and people. Well, it seems no less difficult to remodel the words that come to us from abroad. They have as wonderful a self hood, as wonderful a story, as plants have, and won't oblige anybody by losing themselves in the language. Posterity can readily learn where they came from, and get a taste, now and then, of their original flavor, which some folks relish as much as they do old wine."

"What'll they care about that? they'll have enough to do that's more important. Now I've been tryin' to teach my Johnny to spell, but you've played such pranks with the alphabet (Lambert knows very well that I am no more responsible for this thing than he is) that he gets put out, and I can't make it seem clear either. You say *lief* is pronouned leef, *lien* lean, *mien* mean, *piece* pees, and so on. Well, then we should pronounce *hie* hee, *pie* pee, *vie* vee, should'nt we? But we don't."

"As a general rule *ie* has the sound of *e* in me, but there are a few exceptions."

"I should think so. If *ie* as a general rule has the sound of long *e*, suppose we turn the thing around, and see what the general rule is for *ei*. It should'nt be long *e* should it? for we've settled that *ie* shall stand for that. But here we have s-p-e-c-e-i r-e-c-e-i-p-t, r-e-c-e-i-v-e, c-o-n-c-e-i-v-e, and so on. And now I'd like to know what becomes of your general rule for *ie?* What's it good for?"

"It seems to me that *ei*, as a general rule, has the sound of *a* in *lane*, as in *rein, veil, feign*; but *s-p-e-c-i-e* spells specie if I remember rightly, and therefore its pronunciation falls under the general rule for *ie*."

"I'd like to find a general rule that has'nt more exceptions than conformities. You are always bringing up a general rule when you get into a corner; but they're of no account. Produce one of the right kind, one that'll cover all cases, and I shall begin to have a little respect for 'em."

I told him I thought there were rules that had no exceptions, and I would see if I could'nt find some; if I did I would let him know what they were, and he could make use of them in exercising his Johnny.

(It is always better in discussing a matter with such a person as Lambert to leave off the moment his assurance that he has got the better of you in the argument has reached its hight. To gracefully yield the point at this crisis has a tranquilizing effect upon both of you at the time, and you are more likely to be on good terms when you next discuss.)

I went in, and turned to the authorities. I extracted, here and there, two long columns of words, and arranged them under the headings, "Words that have *ie*," "Words that have *ei*." I studied these words some, and found the following exceptions to the general rule that *ie* has the sound of *e* in me:

Alien and derivatives, also *deficient, deficiency, proficient, proficiency, sufficient, sufficiency*, which come to us from the Latin, *friend* and derivatives, *flies pied, piedness, pries, tried, tied, vied*, and words ending in *ie* as *vie, fie*, etc. Here I got a glimpse of a rule of the right stamp,—one that will satisfy Lambert, I think. The exceptions to the general rule that *ei* has the sound of *a* in *lane* as in *deign, rein, vein*, I found to be still more numerous:

Ceil, ceiling, conceit, conceive, eider, either, inveigle, foreign, forfeit, heifer, height, heigh-ho, kaleidoscope, kaleidophon, leisure, neif, neither, meine, meiny, meibomian, meiwell, meionite, peise, receipt, receive and derivatives, seid, seidlitz, seizin, seiner, seismic, seize and derivatives, sheik, seignior, sleight, teil, teine, treillage, weir, weird, and some others.

After having elaborated a rule or two of the kind that will gratify Lambert, I became satisfied with regard to these diphthongs. I then dipped into the grammars, and after some searching found a rule of the unexceptional kind—one that will help Lambert in teaching I was sure. I considered myself fortunate. Of course, I made a careful copy.

Having my papers ready, one evening near sunsetting, I walked over to my neighbor's. Thrice is he armed that hath his documents in hand. I was now prepared to squelch Lambert. I reached the door—I heard voices inside. Ah! he was giving his Johnny a lesson. I had arrived at the nick of time. I listened:

"D-e-i-g-n dane, v-e-i-l vail, r-e-i-n rane, s-e-i-z-e saze."

"No, Johnny! That's what Mike calls it; but he's not naturalized. Say seez."

"S-e-i-z-e seez."

At this point I rapped. Lambert said he was glad to see me; had I found them rules?

"Yes, I think I have something that will help you. The language is not entirely at loose ends, after all. It has some settled principles, which is not a safe thing to say of scarcely anything now-a-days."

"That's so. What have you got?"

"We were talking about the diphthong *ie* the other day. Well, I have learned, when a word ends in *ie* that the diphthong always has the sound of *i* in wine, as in *fie, belie, untie*, and so on."

"How about prairie? You would'nt pronounce it *pray-righ*, would you?"

"Not exactly. There's one certainly."

"Here's another,—*menagerie.*"

"That makes two, sure enough!"

"Then there's *reverie*, and *aerie*, and now I think of the word we happened to mention the other day, *specie*. We should pronounce that spershigh, if we followed your rule."

"These words do appear to deviate a little at present; but they will fall into line eventually beyond doubt. By the by, Lambert, while looking over my grammar two or three days ago I came across a good spelling rule, which it seems to me you might make useful at once. It is said to have no exceptions—just the kind you like. Here it is."—I read from my paper: The diphthong is always *ei* when c is the letter that precedes it, never *ie*."

"Always *cei*, is it? Your grammarian is a ninny. Did'nt we settle it the other day that s-p-e-c-i-e spells *specie?* and how do we spell such words as *deficient, proficient, sufficient, coëfficient*, and"—

"Let me get the rule fairly before you, Lambert: '*for—the—person—who*'—is the saving and concluding clause, as the person who *conceives, perceives, receives*, and the like."

I had him at last. He could think of no exceptions, though he would have been glad to break the rule, I have no doubt. It would have afforded him a well-spring of satisfaction. But he could'nt, tug as he might. After a time, fearing that his mental machinery might receive injury from the unwonted strain he was putting upon it, I contrived to ease the burden by means of a diversion. I artfully introduced the subject of stock-breeding, which shortly after led us to the pasture, where I admired his really fine cattle until those perplexing diphthongs had dropped out of mind.

C. W. U.

THE NEWS.

Khiva has fallen.

Not much "ethereal mildness" yet.

The Japanese Embassy has arrived at Rome.

The Pope is eighty-one years old and very feeble.

The woods slowly put forth their delicate green tints.

The wife of Father Hyacinthe has given birth to a boy.

John Stuart Mill has just died at Avignon, France. He was born in 1806.

The king and queen of Sweden were crowned at Stockholm on Monday last.

A financial panic prevails at Vienna which is seriously affecting the money market of Europe.

George Francis Train announces himself a convert to Paganism—another train off the track.

Late reports from Fort Garry represent that the Indians in that section are in a peaceable and satisfactory state.

That pastime of fools who labor under the hallucination that they are gentlemen, duelling, still prevails in Virginia.

The last attack of the Modocs has been repulsed, and the troops are said to have got between the Indians and the lava beds.

An election in Spain for members of the Constitutional Cortes has resulted overwhelmingly in favor of the Federal Republicans.

The old Sadducees appear to be having a resurrection. On their reappearance, however, they discard the old name and call themselves Positivists.

The king of Ashantee has declared war against Great Britain, and with an army 35,000 strong is threatening Elmina, a fortified town on the Guinea coast.

Eugene Schulyer, the American secretary of legation at St. Petersburg, has gone to Tashkend in Toorkistan, to watch the progress of the Russian expedition against Khiva.

Efforts are making to secure an international coinage of silver for the immediate use of nations in America and Europe and for the eventual use of all the civilized countries of the world.

The Elmira *Advertiser* tells this: There is a couple in this city, the husband nearly seventy years of age and the a wife in her sixty-third year. One day last week a little daughter was born to them. It is a little singular that the mother's name is Sarah and the father's Abraham. Pity that the child was not a boy so that it might be called Isaac.

It is said that Mr. Bennett, the proprietor of the New York *Herald*, has purchased the site of ancient Troy, with all rights of excavation. It is rumored that the same gentleman is to marry a Danish Princess. It is a fact that he has secured the services of the celebrated German writers, Berthold Auerbach and Lousia Mülbach, as Viennese correspondents during the Exposition.

The new *Tribune* building to be built this season in New York is to be in the Florentine order, nine stories high, with a tower 200 feet high. It will occupy the site of the present office and some adjoining buildings. The cost will be $500,000. Some of the *Tribune's* envious contemporaries say that it is not announced that the sub-cellars of the lofty structure will "extend to the axis of the earth, but it is supposed that this will be the case."

A new through route from New York to Chicago has been arranged over the Erie, Great Western, and Michigan Central railroads, and palace cars will now run daily. Heretofore it has been impossible to run the cars of the Erie road over the narrow-gauge roads from Suspension Bridge to Chicago. This difficulty has been obviated by changing the trucks of the Erie cars at Clifton, Canada. Cars with their passengers are raised by a hydraulic press, the broad trucks are taken out and narrow ones substituted, in the space of seven minutes, without the slightest inconvenience to passengers.

The Cleveland *Herald* says: "A 'Progressive Community' has been established near Cedar Vale, Kansas. It was formed in January, 1871, has 320 acres of land, is out of debt, and has fair prospects—in the opinions of its members—of success in the future. Our knowledge of its existence and plan comes from a pamphlet published in its interest in San Francisco by a Russian, who is endeavoring to secure recruits among his fellow-countrymen, and we therefore take it that the Community is made up in part of that nationality. The constitution provides that the members shall unite in their labor and business, hold their property in common for the use of all, and dwell together in a unitary home. We do not learn what religious views are held in this 'Progressive Community,' and therefore cannot say whether they are Shakers, Oneida Brethren, or merely Communists on economical principles."

Capt. C. F. Hall's Arctic Expedition in the steamer Polaris, in search of the open Polar Sea, has been mainly a failure. Capt. Hall, after penetrating with his ship to latitude 82° 16′, made a siedge journey over the ice some distance further. He discovered and crossed the open sea which Dr. Kane saw, and found it to be a strait fifteen miles wide. There were signs of open water further north. On his return to the ship he was stricken down with paralysis and delirium and died Oct. 8th, 1871. After his death another attempt was made to reach the Polar Sea. When that failed the Expedition started for home. In August, 1872, the ship was surrounded with ice and drifted to latitude 77° 35′. Here a part of the crew, 19 persons in all, left or were accidentally separated (their own account says the latter) from the ship, and never regained her. They drifted southward on the ice for more than six months, and were at last picked up in April, by the ship Tigress, about forty miles from the coast of Labrador, in latitude 53° 30′. The Polaris when this party left her had fourteen men on board under command of Capt. Buddington, with abundance of provisions. Hopes are entertained that the ship will return home this season.

Mirth is God's medicine. Everybody ought to bathe in it. Grim care, moroseness, anxiety, all this rust of life, ought to be scoured off by the oil of mirth. It is better than emery. Every man ought to rub himself with it. A man without mirth is like a wagon without springs, in which one is caused disagreeably to jolt by every pebble over which it runs.—*Springfield Union.*

FRUITS, VEGETABLES & JELLIES

PACKED BY

ONEIDA COMMUNITY,

Oneida, N. Y.

Price-List for 1873.

VEGETABLES IN CANS.

Per Dozen Quarts.

TOMATOES	$2 75
SWEET CORN	3 75
YELLOW PUMPKIN	3 50
SUCCOTASH	4 50
WHITE KIDNEY BEANS	5 00
GREEN PEAS	5 00
STRING BEANS	3 50
LIMA BEANS	5 50
TOMATOES in 8lb. Fruit Cans (per doz.)	6 50
TOMATO CATSUP in Pint Bottles, " "	2 50

FRUITS IN CANS AND BOTTLES.

Per Dozen Quarts.

	CANS.	GLASS.
PEARS	$5 50	$7 00
PLUMS, Damson	5 50	7 00
" Lombard	5 50	7 00
" Gage	5 50	7 00
CHERRIES, Black Tartarian	6 00	7 50
" Yellow Spanish	6 00	7 50
" Other Varieties	6 00	7 50
QUINCES		7 00
PEACHES	5 50	7 00
" whole (pared)	5 00	
RASPBERRIES, Philadelphia (red)	5 50	7 00
" Hornet (red)		8 00
" Doolittle (black)	5 50	7 00
STRAWBERRIES	5 50	7 00
PINE-APPLES	9 00	10 50
CURRANTS		7 00

SWEET PICKLES IN GLASS.

Per Dozen Quarts.

PEARS	$7 00
PEACHES	7 00
CRAB-APPLES	7 00

JELLIES IN 8oz. TUMBLERS.

Per Dozen.

CURRANT	5 00
CRAB-APPLE	4 00
QUINCE	4 00
RED RASPBERRY	4 50

CURRANT JELLY in Crocks to order.

N. B.—The foregoing will be subject to such alterations as the changes in prices of fresh fruits may make necessary.

The Vegetables put up by the O. C. are all raised in the immediate vicinity of the Preserving Factory, and great care is taken to have them harvested at the best moment and canned while they are fresh.

The Fruits are preserved in heavy syrup made of the best white sugar, and are ready for table use without further attention. The aim has been to put them up in the best manner.

Our packing-cases hold two dozen cans, or one dozen bottles; and parties are requested to order full cases. Jellies are packed in cases of one or two dozen, as desired.

Shipping directions will be strictly followed, and goods will be delivered at the nearest railroad station in good order without extra charge; *but the Community will not be held responsible for any breakage which may take place after the goods are shipped.*

Orders from persons unknown to us must be accompanied by the cash or suitable reference.

ANNOUNCEMENTS.

SILK GOODS.

Machine-Twist and Sewing-Silk of their own manufacture for sale by the Oneida Community.

Address, [K] ONEIDA COMMUNITY, *Oneida, N. Y.*

PRESERVED FRUITS AND VEGETABLES

Put up for sale by the Oneida Community in tin and glass. Price list sent on application.

Address, [F] ONEIDA COMMUNITY, *Oneida, N. Y.*

STEEL TRAPS.

Eight sizes and kinds, suitable for the House-rat, Musk-rat, Mink, Marten, Fisher, Fox, Otter, Beaver, the Black and Grizzly Bears, are made by the Oneida Community Descriptive price-list sent on application.

Address, [T] ONEIDA COMMUNITY, *Oneida, N. Y.*

MACHINE-SHOP AND FOUNDRY.

Improved Lathe-Chucks, Blinn's Patent Gate-Hinges, Machines for Measuring the Length and Testing the Strength of Manufactured Silks, Bobbin-Winders for Sewing-Machines, etc. Agricultural, Machine and Light Castings, on hand or made to order. Descriptive price-list sent on application.

Address, [M] ONEIDA COMMUNITY, *Oneida, N. Y.*

THE WALLINGFORD PRINTING COMPANY.

All kinds of Book and Job Printing executed: Manufacturers' Illustrated Catalogues made a specialty: also Bronze and Color Work, and the finer kinds of Card, Circular and Bill-head Printing. Having enlarged its works and added new motive power, this Company is in renewed condition to meet the wants its patrons with promptness and accuracy.

P. O. Address, *Wallingford, Conn.*

PUBLICATIONS.

(Sent from the Office of the Oneida Circular by mail, post-paid, on receipt of price.)

History of American Socialisms. By John Humphrey Noyes. 678 pp. 8vo. J. B. Lippincott & Co., Philadelphia. London, Trubner & Co. Price $3.00.

The Trapper's Guide; a Manual of Instructions for Capturing Fur-bearing Animals. By S. Newhouse. Third edition: with New Narratives and Illustrations. 215 pp. 8vo. Price, bound in cloth, $1.50.

Salvation from Sin, the End of Christian Faith; an octavo pamphlet of 48 pages. By J. H. Noyes. Price 25 cents per single copy, or $2.00 per dozen.

Dixon and His Copyists; a Criticism of the Accounts of the Oneida Community in "New America," "Spiritual Wives," and kindred publications. By John Humphrey Noyes. Price 25 cts.

Scientific Propagation. By John Humphrey Noyes. Large octavo pamphlet of 32 pages. Price 25 cts.

Male Continence. By John Humphrey Noyes. An octavo pamphlet of 24 pages. Price 25 cts.

Hand-Book of the Oneida Community; Containing a Brief Sketch of its Present Condition, Internal Economy and Leading Principles. Price 25 cts.

The five pamphlets—"Salvation from Sin," "Dixon and his Copyists," "Hand-Book of the Oneida Community," "Scientific Propagation," and "Male Continence," will be sent to a single address on the receipt of $1.00.

Back Volumes of the Circular, Unbound. Price $2.00 per volume.

MESSRS. TRUBNER & COMPANY, Book-sellers, Paternoster Row, London, have the "History of American Socialisms," the "Trapper's Guide," and the "Hand-Book of the O. C.," for sale. They will receive subscriptions for our other publications.

PHOTOGRAPHIC PICTURES

Of the Oneida Community Buildings and Grounds, made by a first-class artist and finely mounted, can be had on application at the Office of the Oneida Circular.

LARGE VIEWS.

Bird's-eye View, looking West, of Community Buildings and Grounds, 12 by 14 inches, on fine enameled board 16 by 20, price $1.75. Quadrangle and Group, 12 by 14, mounted like the above price $1.75. South and East Fronts of the Community Dwellings giving a good view of the New Wing occupied by the Children—8 by 10, on tinted board 10 by 12, with an ornamental border price $1.00.

STEREOGRAPHS.

No. 2, East and North Lawns. No. 3, East Lawn and Portico. No. 4, East Front. No. 5, North Front and Lawn. No. 6, Bird's Eye View of Buildings looking West. No. 7, Lawn and Summer House. No. 8, West View, toward Railroad. No. 11, Quadrangle. No. 12, Lawn View. No. 15, South and East Fronts. Price of Stereographs $3.00 per doz. Sent by mail, post-paid, on receipt of price.

Oneida Circular.

A WEEKLY JOURNAL OF HOME, SCIENCE AND GENERAL INTELLIGENCE.

Published by the Oneida & Wallingford Communities.

ONEIDA COMMUNITY, MAY 26, 1873.

New Series, Vol. X, No. 22
Whole No. 1460.

POST-OFFICE ADDRESS:

ONEIDA CIRCULAR, ONEIDA, N. Y.

TERMS:

The CIRCULAR is sent to all applicants, whether they pay or not. It costs and is worth at least two dollars per volume. Those who want it and ought to have it are divisible into three classes, viz., 1, those who cannot afford to pay two dollars: 2, those who can afford to pay *only* two dollars; and 3, those who can afford to pay *more* than two dollars. The first ought to have it free; the second ought to pay the cost of it; and the third ought to pay enough more than the cost to make up the deficiencies of the first. This is the law of Communism. We have no means of enforcing it, and no wish to do so, except by stating it and leaving it to the good sense of those concerned. We take the risk of offering the CIRCULAR to all without price; but free subscriptions will be received only from persons making application for themselves, either directly or by giving express authority to those who apply for them.

Foreign subscribers, excepting those residing in Canada, must remit with their subscriptions money to prepay the postage.

THE UNITED COMMUNITIES.

ONEIDA COMMUNITY

Is an association living in Lenox, Madison Co., N. Y., four miles south of Oneida and a few rods from the Depot of the Midland Railroad. *Number* of members, 205. *Land*, 654 acres. *Business*, Manufacture of Hardware and Silk goods, Printing the CIRCULAR, Horticulture, &c. *Theology*, Perfectionism. *Sociology*, Bible Communism.

WILLOW-PLACE COMMUNITY.

Branch of O. C., on a detached portion of the domain, about one and one-fourth miles north of O. C. *Number* of members, 19. *Business*, Manufactures.

WALLINGFORD COMMUNITY.

Branch of O. C., at Wallingford, Conn., one mile west of the Hartford and New Haven Railroad. *Number* of members, 45. *Land*, 228 acres. *Business*, Publishing, Job Printing, Manufactures, and Horticulture.

SPECIAL NOTICE.

The O. C. and Branches are not "Free Lovers," in the popular sense of the term. They call their social system BIBLE COMMUNISM or COMPLEX MARRIAGE, and hold to freedom of love only within their own families, subject to Free Criticism and the principles of Male Continence. In respect to permanency, responsibility, and every essential point of difference between marriage and licentiousness, the Oneida Communists stand with marriage. Free Love with them does *not* mean freedom to love to-day and leave to-morrow; nor freedom to take a woman's person and keep their property to themselves; nor freedom to freight a woman with offspring and send her down stream without care or help; nor freedom to beget children and leave them to the street and the poor-house. Their Communities are *families*, as distinctly bounded and separated from promiscuous society as ordinary households. The tie that binds them together is as permanent and sacred, to say the least, as that of marriage, for it is their religion. They receive no new members (except by deception or mistake), who do not give heart and hand to the family interest for life and forever. Community of property extends just as far as freedom of love. Every man's care and every dollar of the common property are pledged for the maintenance and protection of the women and children of the Community.

ADMISSIONS.

These Communities are constantly receiving applications for admission which they have to reject. It is difficult to state in any brief way all their reasons for thus limiting their numbers; but some of them are these: 1. The parent Community at Oneida is full. Its buildings are adapted to a certain number, and it wants no more. 2. The Branch-Communities, though they have not attained the normal size, have as many members as they can well accommodate, and must grow in numbers only as they grow in capital and buildings. 3. The kind of men and women who are likely to make the Communities grow, spiritually and financially, are scarce, and have to be sifted out slowly and cautiously. It should be distinctly understood that these Communities are not asylums for pleasure seekers or persons who merely want a home and a living. They will receive only those who are very much in earnest in religion. They have already done their full share of labor in criticising and working over raw recruits, and intend hereafter to devote themselves to other jobs (a plenty of which they have on hand), receiving only such members as seem likely to help and not hinder their work. As candidates for Communism multiply, it is obvious that they cannot all settle at Oneida and Wallingford. Other Communities must be formed; and the best way for earnest disciples generally is to work and wait, till the Spirit of Pentecost shall come on their neighbors, and give them Communities right where they are.

LOOK AND LISTEN.

Once, in the glad beginning of the year,
When flocks of honking geese did northward fly,
A noted three—a busy, bustling wife,
A merry maid, a crooked, bearded crone—
Went forth to sniff the air and look and listen.
That thrifty, careful dame did nothing hear
Except the cackle of her spotted hens,
And tale of neighbor passing in the road,
Who spoke of one as wed, or born, or dead.
That gleesome, giddy girl would only hear
The robins in the fragrant poplar trees,
And hum of bees among the snowy plums.
But she of withered jole could nothing hear
Except the tearful strain of mourning doves,
And dismal plaint of lonely, starving owls.
And each one, hearing only what she did,
Thought herself wiser, shrewder than the rest.
There was that day, a solitary man—
A stalwart seer—who went not out at all,
But staid within, and watched from morn till night
To hear the word of God, and when it came,
He knew himself a softer, meeker man,
And shrewder, wiser far, than all the rest.

A. B.

J. H. N. ON MARRIAGE.

A Letter to a Bible Man.

DEAR SIR:—You think that the fashion of this world in regard to marriage is best till the advent of the *resurrection*. So do I; but this is as much as to say that it is best for man in his *apostate condition*. This is certainly no great compliment to the system. I suppose too that slavery and many other heavy oppressions are, on the whole, desirable during the apostasy. I cannot, however, couple the "full reign of the gospel," as you do, with this state of things. If you refer me to the Primitive Church as a specimen of the harmony of the "full reign of Christ" with the marriage system, I reply, The example is unfavorable for your argument; for the leaders of the Primitive Church, Christ and Paul, discouraged marriage; the first by example, and the second by example and precept. They treated marriage as they did slavery, as an institution not to be quarreled with by the church; but their advice in relation to both was, "*If thou mayest have thy liberty, use it rather;*" and the reason they assigned was, that "the fashion of this world passeth away"—"in the resurrection they neither marry nor are given in marriage;" hence for believers the only proper course was, either not to marry, or if they had wives, to "be as though they had none." This is precisely the amount of harmony there was in the Primitive Church between the gospel and marriage.

Do not blink these facts and go off into philosophical theories about the beauties of duality, which in fact are theories suggested by things as they are, and are rendered plausible by that kind of reason, which some one has said, "is given to man to enable him to justify whatever he is inclined to." It is useless to try to make Christ or Paul or the gospel the humble servants of marriage. It is as plain as it can be, that their endeavor and hope was, that "*all* may be one"—not two and two—and that they crowded against marriage just as hard as they could safely during the church's transition-pilgrimage, pointing always to the hope of an entirely different state of things in the Kingdom of God. If you look this matter candidly in the face as a Bible scholar, you will have to accept either our theory or the Shakers', as the hope of our calling; ordinary marriage, or even spiritual romance of duality is out of the question—not to be thought of any more than the fashion of private property in other things. If you accept the Shaker theory, nature and common sense, as well as the Bible, will contradict and harass you. If you accept our theory, but say it is proper only for the heavenly state, then I ask you either to stop praying, "*Thy kingdom come, thy will be done, on earth as it is in heaven,*" or to prepare yourself for the answer to that prayer. If you are going to a wedding, don't spend your time in patching and praising your washing-dress, but make ready your wedding-garment. This was the way of the Primitive Church. If you think we have begun to put on our wedding-garments *too soon*, say so, and prove it if you can; but don't object to them as bad in themselves, and don't forget to get your own ready *soon enough*. We think that the Kingdom of God has come—that the resurrection and judgment are begun, and of course that it is time to begin to yield ourselves to the will of God as it is done in heaven. When you are as much in earnest as we are, looking for the Kingdom of God, perhaps you will find that we are keeping time with God better than you.

Yours sincerely, J. H. N.

LIBERTY TO CHANGE.

[Selected from G. W. N.'s Writings.]

THE great struggle between freedom and slavery is a struggle for the liberty of forsaking old institutions. It is attachment to old institutions, old habits of life, that checks and holds in bonds the spirit of growth and improvement. Men become attached to the institutions in which they are born and bred, their life works itself into a certain channel, and they come to regard it as the best and truest, and to oppose all change. Especially is this the case in matters of religion and conscience. Of this the facts of history, the lessons of the past, give abundant evidence. It was clinging to old institutions, old forms of life, that made it so hard for the Jews to give up idolatry. And again, when Christ came and sent forth his gospel into the world, the greatest obstruction which it met with was

attachment to Judaism. The gospel came expressly to end that institution and supplant it with something better; hence the struggle between them which immediately resulted. All the life of the old Jewish organization was immediately aroused to oppose Christianity and prevent its progress. The Jews held on with a death-grasp to the customs and traditions of their fathers—to the law which had been delivered from Mount Sinai in so sublimely impressive a manner, and was hallowed with the sanction of the God of heaven through so many centuries. In the struggles of the Reformation and the conflict between monarchy and republicanism in later times, this same fact is distinctly manifest. The spirit of free thought and free speech, of education and improvement, demands institutions more in accordance with its genius and character than those which have been formed in and are adapted to an age of barbarism. The immigration of the Pilgrim fathers to this country was a protest against the spirit that would compel them to conform to old forms of worship and modes of thought, and an assertion of the right to worship God according to the dictates of their own conscience and the new light which was given them.

There are always undoubtedly many reasons which can be urged against meddling with present institutions, but it is none the less true that the spirit of progress and improvement demands their constant change and renovation. A fresh advance, a new development of life, demands new forms and modes of expression. In the very nature of things it can no more accommodate itself to the institutions of the past than a new plant can grow into the skeleton of an old tree. It must have the liberty of developing itself externally according to its genius and character. Christ well illustrates this truth in his allusion to the effect of putting new wine into old bottles. New wine must be put into new bottles. The present nations of Europe are probably but ill-prepared for republicanism, but it is none the less true that the growth of mind and social progress generally demand more liberal forms of government. The difficulty in the case is not so much in the fact that the people are not prepared for it and change is not needed, as that the present rulers are opposed to all change. Their self-interest and education attach them to their old institutions. So it is in the case of slavery. It is clearly an institution that is behind the age, and must be broken up, but men have become so attached to it as to regard it as the corner-stone of society.

The truth is, all present institutions are growths from an imperfect society, and are adapted only to a transition state. This is true of religious as well as political institutions, marriage as well as slavery. The spirit of heaven, in order to its full development in this world, requires of us that we be ready to forsake all institutions adapted to a selfish state of society, and to expect something new and better. A truly conservative man, therefore, will be ready for change. He will not violently or unwisely attack any present institutions, but he will be ready and on the lookout for change.

A DEAD STOP.

"To hear good things stop your ears."

HERBERT lay flat on his back on his bed at mid-day.

What could be the matter with him? He was not sick, for he had no maladies, but was lusty and sprightly with the vigor of undiminished youth. He was not drowsy, for he had slept unbrokenly through the night; he was not tired, for the labors of the morning had been burdenless. Yet there he lay, prone and supine, wide-awake and perfectly still, while the garish sunlight thrust its lances through the window, across and across him, and the many-voiced day called and shouted and clamored for activity, as only the day can call and shout and clamor, in the newly-awakened spring. But Herbert heeded neither the lances of the sunlight nor the voices of the day, for he had learned to turn away from the swift-whirling centrifugal life, when it threatened to daze him and amaze him and craze him, to watch intently for signals of an inner life, a life deep and hidden, but incomparably more real and even than a tumult of glittering deeds. In fact Herbert's spiritual horizon had become overcast, as a mirror is sullied by being breathed upon; his spiritual atmosphere had become thick and hard to breathe, through the mugginess of things pertaining to this life; his spirit felt feverish, gasping, grasping, eager and panting, so that he had, as was his wont, obstinately balked to all exterior calls upon his attention, and come to a dead stop in order that he might "commune with his own heart upon his bed," after the fashion of King David. He wanted to anchor his tossed about life.

Herbert felt certain that the signals he wanted for right conduct and sure action would be given. He had tried them too often to be deceived, and he knew if they were invisible as the electric current, they were yet surer than a beacon on a headland. "It is only to put away every engrossing thing," he thought, "and the good which is pressing down on us like the atmosphere will flow in and make the turbid life clear, and the heart far-seeing and strong."

As Herbert grew stiller and stiller, his heart-watching and heart-study became deeper. He searched his life keenly as the chemist scrutinizes his menstruum for the indissoluble, in order that he might find the cause of his disquietude. And this is what he saw in his introspection. He saw that he had insensibly allowed his desires to crowd him out of a peaceful, trustful state into one of hopeless, faithless longing. He saw that he had almost unconsciously been striving to appease the crying mouths of Desire and Want and Longing in his own way, and by his own arm, without waiting on God. He remembered that he had felt a spirit of sorrow when the things he wanted seemed distant, and that he had listened to a spirit of fear when it whispered that they might never be his. This hopeless hankering had instigated him to heave and tug and worry, and was manifestly the cause of his perturbation. He felt convicted of a lack of faith. As Herbert saw this his heart became soft and broken. Verse after verse of the Bible, counseling, urging and beseeching to trust in God and throw all care upon him, ran swiftly through his mind. How many there were: "Is anything too hard for the Lord?" Herbert could bear conviction no longer. "O," he thought, "I deserve to be the least of all the earth for the little trust that I have put in Him who pitieth as a father pitieth his children." With his contrition came anger at the spirit of distrust and self-care, and he turned upon it as an householder turns to expel an insulting intruder, with fury. His anger made him strong and clean, and then came peace which made him happy. He had lain still scarcely an hour but he opened his eyes upon a new world. The voices of the day were gladsome in his ears, and the new wine of spring-time was inexpressibly sweet to his senses.

"What a glorious way it is," said Herbert to himself, "to get comfort by turning aside to watch. If a man should say to me, as Macbeth said to the doctor:

> "Canst thou not minister to a mind diseased;
> Pluck from the memory a rooted sorrow;
> Raze out the written troubles of the brain;
> And with some sweet oblivious antidote,
> Cleanse the stuff'd bosom of that perilous stuff,
> Which weighs upon the heart?

I would answer,

Yes, lie on your back an hour every day, and stop all motion but heart motion."

G.

"NEVER TOO LATE TO MEND."

THIS is one of the finest old sayings that ever greeted the ear. What could be a greater comfort to one who has had a life-long struggle with evil than to be assured that his efforts have not been vain—to say nothing of the fact that under the same head may be included every attempt at personal improvement, no matter in what direction. With some persons, in addition to faults of character, defects of education present a formidable barrier to self-improvement. All depends on the attitude we take. Admitting even that in the case of old age the memory fails, shall we make it worse by neglecting its use? Besides, the memory is assisted by the faculty of association. The more we know the more we *can* know, because one thing suggests another and one thing helps another in the way of comprehension. And old age should not be allowed to quench our desire for improvement. Some one has well said, "It is not possession but acquisition that gives men pleasure and sense of power. They observe sooner a small happiness new to them than a great happiness which is old." We have examples even in worldly men of indomitable pluck in old age—sometimes in the face of death itself. Ben Jonson, for instance, is said to have composed that last and in some respects most attractive work of his, "The Sad Shepherd," in a sick chamber, "to an accompaniment of bottles, physic, doctors, with a nurse at his side, amid the anxieties of poverty and the choking fits of a dropsy!" Old Isaac Walton was between eighty and ninety when he wrote his last work. Such men could not have given much place to the idea of being "laid on the shelf." On the contrary death must have been to them a puzzle.

The truth is, friends, that there are more things in heaven and earth than are dreamed of in man's philosophy; and we may as well conclude to make the most of them. We need not wage war in order to "die in our armor"—there are other roads to glory. But the most important result of a right attitude in this matter is, that it reäcts on our spirit and helps our faith. The goal we have set before us is perfection of heart and understanding, and the greater the enterprise the greater the stimulus to a man of faith. The promise to me and to you, reader, is that if we believe in Christ "we shall never die." Now I don't care how we take this, whether literally or spiritually. I mean to stick to the *spirit* of the thing at any rate, and that spirit scouts the idea of relaxing in our efforts to advance, no matter how old we are. On the contrary, the older we are, provided that we have "kept the faith," the better equipped we should be for the fight of faith, which includes all proper management of ourselves both as to body and soul. Let us not be limited by the world's experience. We have a right to expect new things, for new things really belong to faith. What we have to do is to be true to our faith, leaving the results with God, and that will keep us busy enough, we may be sure, for our interest in all that is really good will increase more and more, as our light shines brighter and brighter unto the perfect day.

R. S. D.

THE ENGLISH BIBLE.

WE find a very good article in the Boston Monthly, *Old and New*, under the title *Revision of the Bible*. The writer gives some account of the work now in progress in the Church of England of revising the English version of the Bible and makes the subject the occasion of many interesting remarks about the Bible itself. He treats the book not as an anthoritative revelation, but as a human record, and yet because of its extraordinary character he gives it all the influence which the most reverent or even superstitious could demand. This is what he says of the place the Bible has gained for itself in the great empire of civilization:

The most skeptical of men, if he speaks of our English language, has to recognize the power of this English Bible over that English-speaking race which rules half the world. He has to admit that this book holds the hearts of men as no other book holds them. To take Dr. Martineau's vivid expressions, "It has opened the devout and fervid East to the wonder and affection of the severer West. It has made old Egypt and Assyria more familiar to Christendom than our own lands; and, to our people at large, the Pharaohs are less strange than the Plantagenets, and Abraham is more distinct than Alfred. The Hebrew prophet is domesticated in the Scotch village, and is better understood when he speaks of Jordan than the poet at home when he celebrates the Greta and the Yarrow." Further yet, we may say simply, that, with all possible variations of human pride and self-reliance, still, on the whole, most men and women believe that in this book is the surest guide for life, if they can only find out what that guide says.

The present English Bible, it is well known, is the version of a learned body of men appointed by James the First in the beginning of the seventeenth century. These men did not attempt a new translation but revised the translations of their predecessors, Wiclif and the Protestants of Queen Mary's time. The wisdom of their courseis thus commended by our writer:

From those earlier fountains came the Saxon strength and vigor into the very language of our Bible. If we compare the fustian of the translator's preface, with the undefiled English of the book itself, we see how glad we ought to be that they revised the translations which they found in existence, in preference to attempting a new one of their own. The brother to whose pen was intrusted the dedication to the king was so left by all good angels, that he wrote,—

"Whereas it was the expectation of many who wished not well unto our Sion, that upon the setting of that bright Occidental star, Queen Elizabeth, of most happy memory, some thick and palpable clouds of darkness would have so overshadowed this land that men should have been in doubt which way they were to walk," and much more in the same high-wrought strain. To compare that bombast in mere language with the work of the pen that wrote "King Agrippa, believest thou the prophets? I know that thou believest," or with the work of the pen that wrote, "Nathan said unto David, Thou art the man"—is to see why we are to be grateful to the Providence that gives us the Saxon of Wiclif for our one religious reading instead of the euphuistic flummery of a courtier of King James.

In the quotation which follows, the Bible is shown to have a new function, which is exceedingly significant in this day of the supreme ascendency of the English tongue:

Wholly apart, also, from any measure of its divine inspiration, the English Bible has a worth which we cannot fully state, as the momument which commemorates, and the talisman which preserves, the English language. It is the best memorial of that language as it existed in its very best times. And because it is read in every cottage, and quoted in every workshop and on every exchange, it preserves the English language, and keeps it from wandering far from its originals. In Mr. Marsh's beautiful figure, it is the central sun around which the English language revolves in its orbit: so that in point of fact, the English spoken to-day is even nearer the English of the English Bible, than was that written by Addison, by Dr. Johnson, and by Cotton Mather. The centripetal attraction governs; and from this sacred centre the language cannot wander far. We must recognize the same Providence in the sister fact, not so important, but not to be forgotten, that the English of that very period is the English of Shakespeare,—the only poet who holds sway over all speakers of the English tongue in all time,—the man whose wisdom is quoted, and whose wit is remembered, in cottage and in palace, and will be. His hold on the heart of Englishmen, and the descendants of Englishmen, is one bond more—and that no weak one—to hold them firm and faithful to the familiar use of the English of the English Bible.

The revision now in progress was proposed in a grand assembly of the Bishops and Clergy of the English Church. The proposal meeting general assent, a strong committee was appointed to whom the work was given, with instructions to "invite the co-operation of any persons eminent for scholarship, to whatsoever nation or religious body they may belong." Following their instructions the committee have obtained the help of distinguished scholars in every sect both in England and America, and are now diligently engaged in their business. They are a board of revision, not of translation. They do not intend to sacrifice the quaintness and simplicity of the present reading; they are not going to modernize the style; they mean "simply to get errors out of the text and compel the English language, if they can, to say all that the Hebrew and Greek do." The facilities for doing this are much increased since King James's time. We have better scholars and better access to ancient manuscripts, with vast accumulations of Biblical literature.

Of the changes in the new version anticipated by the writer in *Old and New*, we will cite one that particularly pleases us:

The beasts in heaven will disappear from the revelation. They are "living creatures," so glorious, that the poet could give them no name but the name of "the living."

We quote two more passages from this writer in which we see foreshadowed the reconciliation of faith and science—faith courting investigation, and investigation leading to faith; the Bible asking nothing of credulity, but gaining everything from enlightened freedom:

Strange to say, it is not the extreme liberals, the purists of the Puritans, who care most for the revision. We have long got beyond Chillingworth's narrow motto, which was, "The Bible, and the Bible only, is the religion of Protestants." We have come so far as to say, "God, and God only, gives the religion to Christians;" and we believe that God has a thousand voices which are to be studied, as well as the directions of the Scripture. But none the less, as we have said, the Bible, if not the only authority, is the leading authority, with all Christian men; and in mere decency, in common honesty, nay, in loyalty to truth, they must read what its writers really said, with no man's gloss upon it, or emasculations. * *

Even in this sedulous care to bring the Scripture to its purity, the idolatry of the letter is gone forever. Men do not scrape and file and polish the idol which they worship; they take it in all its ugliness,—"the stone which fell from heaven," the figure-head of the old wreck as it was washed ashore: but they take it as it is, and they do not pretend to refine upon it. The moment when the Christian Church solidly and squarely sets itself to work on a task like this, reason is enthroned, and superstition dies. Grant to a hundred of the purest and wisest men in England and America the right to determine which reading shall be selected, and which version used, and you have restored the Bible to its true place. It is the human record of the most extraordinary events in history. It is no longer a stupid oracle, with a "Thus saith the Lord," speaking imperatively for contingencies and difficulties never dreamed of when it was written. It becomes the intelligible and living statement of what has happened in ages of faith, among men who believed in God, when they obeyed, and when they disobeyed. To restore the Bible thus to its true position, to begin to worship God again, and to turn to God again, and to seek his Holy Spirit, and to turn away from that idolatry of a book, which, for two centuries, fettered half Christendom,—this is a victory, and a great victory.

SHADOWS.

The clouds hang heavy round my way,
I cannot see;
But through the darkness, I believe,
God leadeth me.
'Tis sweet to keep my hand in His
While all is dim;
To close my weary aching eyes
And follow Him.

Through many a thorny path He leads
My tired feet;
Through many a path of tears I go,
But it is sweet
To know that He is close to me,
My God, my guide.
He leadeth me, and so I walk
Quite satisfied.
To my blind eyes He may reveal
No light at all,
But while I lean on His strong arm
I cannot fall.

Exchange.

"PUT YOURSELF IN HIS PLACE."

THIS title of one of Charles Reade's books embodies a very practical and useful lesson for almost every sphere of life. Persons often get very different ideas and impressions of objects from different points of view; and we are likely to make a different estimate of persons if by any means we can put ourselves in their places and view their character and conduct from the midst of their own surroundings. If you would know a brother's trials and sorrows, and thus be able to impart true comfort, put yourself in his place. If you would tell that brother the truth in the spirit of charity and sincerity, put yourself in his place. If you are tempted to think evil of the position of any one who may stand as superior to you in authority and influence, try to put yourself in his place. It is one of the best ways to harmonize apparent incompatibilities and promote harmony. There is nothing impracticable in this advice. We

were made for unity and organization with one another, and that requires such a sacrifice of egotism and individuality as will enable persons not only to put themselves in one another's places, but to come into spiritual identity, mingling life with life.

The office of Christ as a Savior is efficacious because he can put himself in our place. He is not a high priest who cannot be touched with a feeling of our infirmity, for he was tempted in all points like as we are; and for just this reason, that he could put himself in our place. He was made under the law and under the curse, that he might know the depth to which we had fallen and restore us with his own strong arm.

ONEIDA CIRCULAR.

TIRZAH C. MILLER, EDITOR.

MONDAY, MAY 26, 1873.

WHAT THE LORD'S PRAYER MEANS.

THE leading petition of the celebrated form of prayer which Christ gave to his disciples, and which is in daily use throughout Christendom, is, "*Thy kingdom come:* THY WILL BE DONE ON EARTH AS IT IS DONE IN HEAVEN." Would it not be well for those who present these sacred words at the throne of grace, to consider how much they mean? It is easy to ascertain from the Scriptures, with indisputable certainty, how the will of God is done in heaven in respect to several interesting points. Let us see.

1. The will of God, as it is done in heaven, *excludes sin.* "There shall in no wise enter therein anything that defileth, neither whatsoever worketh abomination, or maketh a lie; but they which are written in the Lamb's book of life." (Rev. 21: 27.)

2. The will of God, as it is done in heaven, *abolishes the fashion of the world, including marriage.* "In the resurrection they neither marry nor are given in marriage." (Matt. 22: 30.)

3. The will of God, as it is done in heaven, *abolishes sickness and sorrow.* "There shall be no more sorrow, nor crying, neither shall there be any more pain." (Rev. 21: 4.)

4. The will of God, as it is done in heaven, *abolishes death.* "Neither can they die any more."—(Luke 20: 36.)

So we might go on to establish by categorical testimony many other excellent features in the economy of heaven. But these are enough for the present. Let all seekers of heaven and users of the Lord's prayer, read the New Testament through, with their eye on the constitution of the celestial kingdom, and extend our inventory at their leisure. The point we are upon, is, that these ascertained facts of the heavenly condition, should be recognized as legitimate objects of prayer in this world, and for this world. If we pray, "*Thy will be done on earth as it is done in heaven,*" we ought not to shrink from filling out that prayer, by asking specifically for whatever we know to be according to the will of God as it is done in heaven. The following, then, would be a proper expansion of the first part of the Lord's prayer:—

Our Father who art in heaven, hallowed be thy name: thy kingdom come: thy will be done on earth as it is done in heaven: *and by this we mean,* let sin be entirely abolished; let the fashion of the world, including marriage, pass away: let sickness and sorrow come to an end: let death be dethroned and its ravages forever cease. Come Lord, with all thy holy angels, and dwell with men; for thine is the kingdom, the power and the glory, forever and ever. Amen!

N. B.—If we pray for these things, we ought to expect them; and if we expect them, we ought to labor for them; and if we labor for them, we ought to begin by clearing away all doctrines that deny the possibility of them. So mote it be.

TOLERATION IN THE FUTURE.

THE article that we copied not long ago from the *Christian Union*, entitled *Religion in the Future*, contained a paragraph on toleration, the most notable part of which is as follows:

"The religion [of the future] must have the broadest tolerance for sincere opinion. It must place absolutely no limit on the honest search for truth. Thus far, freedom of opinion has been conceded only as a social right, not as a Christian right. Heretical opinion has ceased to bring civil penalties but it still excludes men from the churches. We must go beyond that. The time is coming when it will be recognized that to think with perfect honesty—that is, with perfect freedom—is not only a right, but a Christian duty; that to the truth-seeking spirit belongs the highest moral quality. When that is fully understood, exclusion from the church for opinion's sake will be unknown.

On which *The Graphic* thus commented:

Will the Church of the future, if Christian, be so broad that "exclusion from it for opinion's sake will be unknown." These, certainly, are weighty words, if Mr. Beecher's or another's. "The time is coming," says the writer, "when it will be recognized that to think with perfect honesty—that is, with perfect freedom—is not only a right, but a Christian duty." But how if a person should "honestly" think there is no God—in his review of Buckle, Littre has asserted he knew such people; how if one should assert the mere humanity of Christ in all honesty—Mr. Beecher perhaps knows such persons; and how if one should claim, in all freedom, that immortality was impersonal, would this Christian Church in the future include such persons? Or, if these dissenters did not go so far—if they took a stand as to all the questions similar to Mr. Froude's on immortality, that the doctrine has been very mischievous in the past and should be left in the dust—would this scheme take such persons in? If exclusion from the Church for opinion's sake is to be unknown in the future, the faith of the future will not be Christian, for it will include persons who are not Christians in thought or sentiment, however Christ-like their actions may be. After all, such a liberal millennium seems a chimera. Churches in the future, as in the past, must, under pain of disorganization, exclude those who deny their dogmas; and a church without a dogma would be like a man without bones.

The *Christian Union* rejoined as follows:

The *Graphic* presses to its extreme conclusions our prediction that there will be an end to exclusion from the church for opinion's sake; and challenges an answer. We must not be understood as supposing that a Christian Church in the future will attempt to hold together a discordant jumble of disciples of Christ and of Belial; of men of convictions and of no convictions. We take it for granted, that men whose faith lies far outside of Christianity will seek no admission to a Christian Church. The Church is a body of men seeking by co-operation to reach that life and character which was set forth by Jesus. It would be absurd to suppose that any others would wish to join such a society.

Now for the *Graphic's* questions. "How if a person should honestly think there is no God?" *He* will not be excluded—for he will never wish to join. It is an absurdity in terms, that one who disbelieves in God should wish to unite with others to serve and love God. Such a question could never arise but for the lurking presence of the old idea, that if you leave a man outside of the church you leave him to perish eternally. We utterly disclaim any such idea as that.

"How if one should claim that immortality was impersonal?" He could certainly associate kindly with Christians; but any union implying affinity would be as impossible to the applicant as to the church. Is a concert not free, because deaf men are unable to partake? Is a scientific circle not catholic, because blind men could not be microscopists? What has a believer in substantial personal annihilation to do with a company whose very life is inspired by a belief in personal immortality?

"How if one should assert, in all honesty, the mere humanity of Christ?" If one who disbelieves the divinity of Christ prefers the company of those who heartily and adoringly believe that the Son "counted it not robbery to be equal with God," why should he not consort with them? Is not the desire to do so an evidence that his dissent is rather technical and verbal, and that at heart he trusts the Saviour as they do who avow his divinity?

We never knew a primary school where children were refused admittance for being ignorant, if they were willing to learn. We never knew a hospital that rejected patients because they were sick. And some one will see the day—though we may not—when the Christian Church will not turn away men who seek the warmth and light of Christian fellowship, because they are ignorant or mistaken.

"Churches," says the *Graphic*, "must, under pain of disorganization, exclude those who deny their dogmas." If the life of the organization is philosophic dogma—yes. But if the dogmas are those which have their whole value in the *life which they produce*, may not the life be taken instead of the dogma? "By their fruits ye shall know them." "If any man will *do the will* of my Father." "If ye love me." "Inasmuch as ye have done it unto the least of these, my brethren, ye have done it unto me." The Church is not a society to transmit sacred formulas. It is not a select company of the wise and perfect. It is the association of those who are trying to live the life that Christ did, a life of disinterested love. He welcomed into his company whoever was ready to follow. He received men gladly, not as they were perfect, but as they were full of defect, and needed him. If we are his followers, we should receive men unto our number in the same way,—on condition only that they seek the Divine love which we are trying to reach and to express; on the very ground that they need our fellowship and ask it.

If we may presume to offer a small contribution to this discussion we would say, that even if Atheists or other unbelievers should by their own choice or by force of circumstances be connected with societies of Christians, the *Church of the Future will be so strong in faith that it will not need to expel them.* Conscious of the prepotency of its life, it will be well able to apply to such connections the rule which Paul gave for marriage:

"If any brother hath a wife that believeth not, and she be pleased to dwell with him, let him not put her away. And the woman which hath an husband that believeth not, and if he be pleased to dwell with her, let her not leave him. For the unbelieving husband is sanctified by the wife, and the unbelieving wife is sanctified by the husband: else were your children unclean: but now are they holy. But if the unbelieving depart, let him depart. A brother or a sister is not under bondage in such cases; but God has called us to peace. For what knowest thou, O wife, whether thou shalt save thy husband? or how knowest thou, O man, whether thou shalt save thy wife?"

It may be noted in this connection that there actually were Positivists in the bosom of the Primitive Church. The most famous chapter in all Paul's writings—the 15th, of 1 Corinthians—was specially addressed to persons of that persuasion within the Corinthian church. For proof of this read the following passages interspersed in that chapter:

"If Christ be preached that he rose from the dead, how say some among you that there is no resurrection of the dead. * * If in this life only we have hope in Christ, we are of all men the most miserable. * * If I have fought with beasts at Ephesus, what advantageth it me, if the dead rise not? let us eat and drink; for to morrow we die. * * * Awake to righteousness, and sin not; for some have not the knowledge of God. I speak this to your shame."

These passages all plainly imply, and some of them explicitly say, that there were members in the Corinthian church who did not believe in any resurrection, but held that this life is all man has to hope for. This, we take it, is substantial Positivism. But we do not find Paul ordering these men out of the church. On the contrary he labored pa-

tiently and skillfully to wake them from their sensual dream and make true Christians of them.

J. H. N.

The *Graphic* says, "The fact is we have fallen upon evil times and the public conscience is dead." Why not? These are the times of Positivism, when there is an almost irresistible persuasion sweeping over the land that there is no God, no immortality, no accountability. What occasion is there for conscience, public or private? "Let us eat and drink, for to-morrow we die." This is all the morality there is room for in such an epidemic; unless it be the higher morality of suicide, which indeed is becoming fashionable. That improves the Epicurean motto thus: "Eating and drinking don't pay; let us not wait for to-morrow, but die to-day."

A WOMAN'S PROPHECY.

A widow, writing for the *Graphic* about her wrongs, concludes with the following burst of eloquent good sense:

"A change must eventually come, otherwise women will be completely crushed. The separation and warfare between men and women must come to an end. All the mere expedients of woman's voting, or her having free access to the professions and general business, will not make matters much better. God made men and women to love one another. Marriage of some kind, of a permanent and pure character, must be held between man and woman. If monogamic marriage is fraught with suffering and misery in most cases, and is becoming unpopular with the wise ones, then some other kind of permanent union between the sexes must come in vogue. I know Christ said: 'The children of this world (age) marry and are given in marriage, but they that shall be accounted worthy of the resurrection and the life (age) to come, neither marry nor are given in marriage, but are equal unto the angels.' But as he told his disciples to pray that the kingdom of God might come on earth, it is evident that sex will not be obliterated. The times indicate that a sweeping and radical social revolution is at our doors, in which the relations between men and women will be rectified, the quarrel between them ended, and a true and lasting peace and union established for which I believe all in heaven and the course of events on earth are working. Let my sisters drop all mere patch-work reform, and all exclusive selfish aims manward, and study woman's practical redemption *here*. And then will sound the tocsin for the destruction of man's selfishness towards women, which destruction will inure to his real integral enfranchisement and elevation to his true position toward woman, who was made his companion, and to look up to him in love and trust. BLANCHE."

COMMUNITY JOURNAL.

ONEIDA.

—D. E. Smith and T. R. Noyes have just put up a photographic gallery in connection with the Laboratory at the Seminary, and will soon be ready to take pictures for the Community.

—H. J. S. who has a passion for the nut-bearing trees, has just planted one of our sandy knolls with the sweet or American chestnut. This nut-orchard covers between two and three acres and has some two hundred and fifty trees, some of which will be thinned out before they all come to full growth.

—Miss Ann who has lately come from Wallingford, hands us a jolly sad note from one of the girls there:

"I felt rather bad and lonely after you and the little boy had really gone, but tried to make the best of it and "think on my marcies." On getting home from the Station I found that F—— had been indulging in a few tears and was feeling rather blue. I was myself inclined that way, and I fear that we were not a very lively pair. But we soon had a hearty laugh over Wilfred. Harriet Mallory was sitting there with us when he came into the room holding a letter in his hand, with the most doleful expression on his face. "What's in that letter?" Harriet asked. "What's the matter?" "O bad news! bad news!!" says Wilfred with a burst of tears. Harriet on reading the note found it was from one of his mates at Oneida and that it conveyed the sad news that Mr. Clarke had killed one of the hens which Wilfred had left behind him. We tried to console him, and finally got to laughing ourselves."

We may add for the comfort of Wilfred that his hen has not been killed at all. Mr. Clarke sold all the others but kept that one to raise some chickens from.

—The following interesting experience may help some one as much as it did the writer:

"Women," said a friend to me one day, "expect to get what they want by fretting if they cannot get it in any other way. Let me advise you to try the experiment of winning over your friends to your way of thinking by keeping a soft heart, and then every one will feel it a pleasure to try to please you." I had to confess there was truth in his assertion at least in my own case and resolved to take his advice. I soon had a chance to put my resolution to the test. I made an appointment with a friend who promised to meet me at a certain place promptly at the time set. The time came but my friend did not appear. The temptation to get out of patience was pretty strong, but remembering the advice I had received I sat down and waited. While waiting it occurred to me that praying was better than fretting, so closing my eyes to all outward things I soon forgot everything else in a whole-hearted communion with God. It was half an hour before my friend came, but it was a precious time to me. Had I spent that time in fretting I should have met her perhaps with a clouded face and sharp words, but instead of this I accepted her apology in the spirit that that silent prayer had given me. This was the beginning of a new experience. Many are the hours made up of odd minutes that I have spent in prayer since then, and the effect on my character and health has more than repaid me. S.

—"Shall John and Katie Hutchinson spend Sunday with you?" said a telegram Saturday afternoon. "Yes," was the prompt response, and at nine o'clock our expected guests were with us receiving congratulations and words of welcome on every side. It was like a reünion of old friends. Mr. Hutchinson is an enthusiast for Communism and though not much acquainted with the fundamental principles upon which our Community is founded, always expresses great interest in our movement. He related briefly some events of his life, which have undoubtedly given a tone to his whole subsequent career as a singer. There were originally sixteen of the Hutchinson brothers and sisters, thirteen of whom at one time gave concerts together. They all lived on a farm in the "Old Granite State." Their father in dividing the property said to the seven youngest, "Be singers and single" and gave them the old homestead. The idea came to John, Judson and Asa, of forming a Community of the Hutchinson family, somewhat after the pattern of Brook Farm. This they carried out, and soon were joined by others of the brothers and sisters, until there were seven or eight of them committed to the plan. The lands were held in common, and the profits accruing from the concerts were shared equally by all. For three years they worked together in harmony, and as Mr. H. expressed it, it was "beautiful—charming—all the care and anxiety of account-keeping between them done away, and each working for the general interest." This, he averred, was the secret of the great charm and magnetic power that characterized their concerts. They were wonderfully successful financially, and there is no reason why they should not have continued so if they had held to their Communism. But alas! there came a change. One brother took him a wife. Then another. Then a sister brought her husband into the circle. This occasioned a slight jar, but still they continued holding their property together. At length two of the brothers sickened and died. Matters began to get confused. At this time two older brothers who had never been very cordial toward the Communistic attempts, thrust in cold, unsympathetic words, together with worldly advice, and gradually the little band drifted back into the old-fashioned way of living. "But never from that day, now thirty years," said Mr. H. with much feeling, "have I ceased giving my voice in favor of Communism—for I believe it is the *true way for men to live*."

—"Surely, Apollo is bountiful," we thought the next morning, as two carriage-loads of people were set down at the front door, and we recognized our neighbor Bailey with his wife and son, and learned that they had with them a number of persons who were musical geniuses like themselves. Mr. Bailey, we should explain, is a colored music-teacher, his wife a quadroon and a guitarist, the son a pianist. The people with him were his guests, some of whom were colored; all were musically inclined, and there seemed to be a feeling of perfect equality among them. Prof. Gilbert a tall, broad-chested, broad-faced, good-natured, middle-aged colored man, had a deep baritone voice; and his wife a well-proportioned, graceful, queenly octoroon, had a pleasing mezzo-soprano voice. The rest of the party were white. Mr. Bailey had kindly invited them to ride over and favor us with their music. Arrangements were made for a concert, and at 4 o'clock we assembled in the Hall and listened to some very pleasing instrumentation, and several songs, under the superintendence of Mr. Bailey, who introduced the entertainment with a few appropriate remarks. The opening piece was a duett from Norma, by Mr. Bailey and son on the piano and violin, followed by nine other pieces, vocal and instrumental. Prof. Gilbert and wife sang two duetts, one of which was very amusing, entitled, "Mr. and Mrs. Snipps," and Miss Ida, their daughter, only eleven years old, played a solo on the piano, and sang a little ballad. Mr. Charles Bailey, the son, who played the accompaniments and executed a solo in masterly style on the piano, possesses three important requisites for a pianist, viz., a musical temperament, and strength and flexibility of hand; and with more feeling and tenderness of expression added to these, will make, we opine, an artist of no inferior rank. One of the most pleasing features of this entertainment was the solo playing of Prof. Wilimek a member of Conrad's Sextette Club, on that unique, but sweetest and most touching of instruments, the zithern. The zithern was first made in Bavaria, a hundred years ago, but it is only within the last forty years that it has reached its present completeness. It is a popular instrument in Russia, and is beginning to be well known in this country. It combines the pizzicato effect of the harp and guitar, with the singing tones of the violin. Prof. Wilimek, a real artist and a German by birth, displayed great taste and musical sensibility in his execution of the slide and tremulo; and his rendering of "Sweet Home" on the harmonics, commanded an attentive and almost breathless audience. Prof. Wilimek at the request of his friends gave us "The Carnival of Venice" with variations, played on a *lead pencil* held loosely in the left hand

between the teeth, and thrummed with the fingers of the right, while the tones were guided by the action of the breath over the teeth, and the vibration of the pencil between them. The intonation was excellent and very curious. The entertainment closed with an instrumental quartette, by the violin, piano, flute and zithern. Could it be possible an hour and a half had slipped away so soon? The time seemed very short as it always does when people are agreeably entertained. The affair was managed with a great deal of tact by Mr. Bailey, who seemed to take as much pleasure in giving us music, as we did in listening to it.

—But where were our guests the Hutchinsons? They were present and enjoyed the performance as well as any of us. In the evening when the family came together at eight o'clock, the seats were all facing the stage again, and soon Mr. Hutchinson and his niece Katie began their songs. It seemed as if they never had sung so sweetly as now, and we realized that their singing interprets music for the heart as no other singing we have heard. It was soothing to hear the perfect harmony of their voices. Mr. Hutchinson is a complete actor, and he sang one or two comic songs in the most inimitable style. To finish he invited our choir to join in the chorus of "Steal Away to Jesus," while Miss Katie in her pure soprano voice sang the solos. At the close of the meeting the following remarks were made by one on behalf of the family: "I am sure I express the feelings of all present when I say that we are very thankful not only to the friends who have so pleasantly entertained us this evening, but to the kind Providence that brought them here. That Providence has given us many entertainments in the past, but none more acceptable than this."

WALLINGFORD.

—One of the students tells the following story which is going the rounds of the medical folk. A man was brought into one of hospitals at New Haven to have an operation performed on his leg. He was soon under the influence of chloroform. The bone was diseased and as the operation progressed the surgeon took a mallet and chisel and commenced tapping on the bone, "Come in," called out the man, thinking from his dreamland that some one was "rapping, gently tapping" at his door.

May 18th.—Mr. Burt has been indefatigable in his efforts to secure us a fine croquet ground. The site chosen for it is just behind the old printing-office. The fence is set further up on the hill-side and widens our extent of lawn considerably. Several days were spent in grading and in making a wide terrace of an elliptical form. All around the west side is a bank nicely sodded, and on the east a slope also covered with sod. Last night a shower came up as Mr. Burt was engaged in tamping down the ground, but nothing daunted he procured an umbrella and went on with his work. This morning he called for a bee to clear away the stones and rubbish and give the finishing touches to the ground. This call was well responded to, and in an hour or two we looked with much complacency on what we unhesitatingly pronounced the finest croquet ground in the State. It is almost circled with shade trees, and comfortable seats have been prepared for lookers-on. The arches were set and the first game was played by Mother Noyes, Carrie A., Mr. Burt and Lorenzo, and the second by Mr. Hamilton, Charlotte and the little boys, followed by many others in the course of the day.—An edifying meeting this evening. Mr. H. talked about our responsibilities as members of a great household bearing each others burdens and feeling individually responsible to do all we can to make an attractive happy home.

The water-wheel has given considerable trouble for some days, running both night and day as for some cause the gate could not be shut down. The matter was investigated by John Freeman, Mr. Thayer and Mr. Burt and the cause discovered. An oak stick six inches long and of proportional width had got into the wheel through the flume and made much mischief. Ten of the buckets were cracked in the middle and one was broken entirely, and the wheel so sprung as to prevent the gate from shutting down. They have worked at repairing it Sunday, but probably silk and printing will have to wait for a day or two at least. The stick could not have got in through the rack, but through a crack by the stem of the head-gates, and we conjecture that it must have been dropped in by some mischievous urchin.

THE DUST OF TRAVEL.

XII.

Columbus, O., May 12, 1873.

DEAR CIRCULAR:—I have been down into picturesque Southern Ohio; almost down to the point where it is thrust in between Virginia and Kentucky as if to look into the mouth of the Big Sandy when it comes down on the line between those two States. Leaving Portsmouth on the Ohio yesterday morning I rode nearly all day among the hills which stand like a thousand up-turned kettles, and came at last to Lancaster, some thirty miles south of this, where the hills melt away and you enter on the great plains which surround Columbus and, so far as I know, stretch northward to the great lakes and up into Michigan—westward through the heavy timber-lands of Indiana and across the prairies of Illinois—across the Mississippi and onward further west than I have ever been. To give you the true feeling of my jaunt my sentences ought to go winding along with a sort of sleepy rhythm, while my words crunch, and grind and jolt under a burden of pleasant things, but getting more in earnest after awhile they begin to z-i-p and go straight to their mark.

The hills are nowhere of any great hight after you get back from the Ohio. In their tops are immense layers of sandstone which crop out in ten thousand cliffs, and give the country a gentle ruggedness that will only improve with time and cultivation. And these hills are made still more piquant by having here and there a patch of lean yellow pines. On the way from Portsmouth to Athens one sees a good many indications of iron-mining and in the Hocking valley as you come from Athens toward Lancaster there are all the signs of a great coal business.

The spring is very late in southern Ohio. The rains have left a world of dirty water in all the low-lands; and though the grass looks finely and the apple trees are out of bloom and the quince trees just in prime, there has been but little plowing done, and it looks as if there would not be any more for weeks to come. In fact I saw more men a fishing than farming. But whether folks were fishing or plowing the time was spring to me and made pleasant by many new aspects of nature. The buckeye was in bloom, a tree I had never seen in that state and so was the red-bud or Judas tree, as it is strangely called. This I had never seen before. Its flowers come out before the leaves and cluster among the branches in little rosettes. They strike you like the sight of peach blossoms.

And while I am telling you of my route from Portsmouth hither, I may as well tell you how I got from Cincinnati. It was by the "Ohio, No 8," a freight and passenger boat on the Pomeroy and Cincinnati line.

Going down to the foot of Main street about five in the evening I found the "Ohio" with her head up stream and her left shoulder touching the shore. Indeed, everything in that region seemed to have its corners toward the corner of every other object. That way seemed to be the style of things on the river. A gang of colored boatmen were bringing on freight in a sort of pic-nic fashion, as if the work was doing for the first time and was never going to be done again. Things were not done on the square, they were done cornerways. Well, I suppose our Western streams don't admit of docks and river-walls, such as one sees on the St. Lawrence at Montreal.

It was a moment of gentle excitement when our boat dropped out from among the crowd of steamers. All of those on board look ashore; and all those on shore pause a moment to look at us. As soon as we are well out in the stream every one of the passengers, as if by a grand sympathetic movement, turns away from the shore and gives his feeling to the boat as if to his home It is an electrical movement, and one that makes you tingle with feeling.

We leave the Suspension Bridge behind, looking like a great spider's web. The American ensign floats over the delicate green turf at the Newport Barracks We go under the frail looking railway-bridge and then straighten up our flag-staff and smoke-stacks. On our left is Mount Adams with a church near its top, which seems to be a part of the hill itself it is so well put. The Mitchell Observatoy on the very summit has been turned into a Catholic house of some kind, and a cross stands in place of the old telescope. Science you see has had to give in to smoke and religion. Just at dark the boat puts in toward what seems an inaccessible clay bank and takes on a family with a few bundles of household stuff and furniture. The family institution seemed pretty small just then.

And now when there is nothing more to be seen, I begin to think of the boat itself. To get a good idea of a Western river-boat suppose you take a long shallow bread-tray and lay a pie-crust board on top of it, letting the edges of the board extend considerably beyond the sides of the tray. In the center of this board you set up your boilers and engines, and then with a kind of South-western frankness, we will say, let them be all open to view just as some folks have all their fires of passion and appetite. Fill up the remaining space with merchandise and give the whole the smell of a machine-shop, a horse-stable and a big grocery store. Above all this have a flat-roofed shed resting on pillars. On this roof put a long narrow cabin with state-rooms on either hand, and with a piano at one end and a captain's office at the other. Above this cabin set another, but make it shorter and narrower. This will do for the boatmen. And on the top of this last cabin set up a pilot-house. This done and you have a sort of irregular pyramid or pagoda, from the different parts of which shoot up smoke-stacks, steam-pipes, stove-funnels, flag-staffs and lantern-poles. You may have side-wheels, or stern-wheels as you like.

There is something in the atmosphere of these Western boats which puts you on the hunt to make it out as if trying to read character. Maybe it is a wild spirit of dissipation, but I will not say, for every one is sedate enough and some are languid for all I know.

One might think that steamboating would take all the hurry out of a man. It don't, though. Kept back by a fog in the night we had all the next day to look at the hills. It is a hill on the Kentucky side and a piece of fine alluvium on the other; then it is hill on the Ohio side and a stretch of rich bottoms on the Kentucky bank And yet we don't tire, for we realize more than ever, that we are on a beautiful, beautiful river. We soon left the villas and cottages of the city. Their places on the hill-tops and in the niches opening into the great valley are now filled with farm-

houses and barns. There was an old log-cabin in one place looking quaint enough on the summit of a hill. The beech-trees in their delicate pea-green. and the buckeyes in their darker verdure stand at the foot of the rich slopes, while the steeper hill-sides are colored with the pale green oaks. The river everywhere gives signs of having been a narrower stream, but these encroachments of the water have been checked in some places by extensive plantings of willow. After a while we get beyond the rich limestone hills such as you see at Cincinnati. Sandstone makes it appearance, pine trees find a footing on the crests of the hills, high cliffs show themselves everywhere and the whole landscape begins to bristle and look hungry.

The flowering dogwood was also coming into bloom, and in one place it whitened the distant hills like ragged patches of old snow.

But our life on the "Ohio, No. 8" was not wholly spent in noting the advent of spring. There was activity on board. Just before meal-time the table-waiters would gather inside of a doorway which led from the cabin to some crypt in the boat. At the sound of a whistle they rushed in and with a whisk and a jerk the round tables which stretched down the boat were turned into a long line of oval ones and set with dishes in less time than it has taken to make this sentence. At another signal we all sit down. The waiters dash in loaded with a variety of dishes, and every one of the passengers has his meat set before him as if he were one of a great number of children. The eating begins and the band strikes up, playing that sharp, twanging kind of music which prickles on the ear like mustard on the tongue, and goes through the din like a needle through a piece of cloth. Before one has time to fairly consider whether his meat be tough or tender, large numbers have finished eating and jumped up from the table. Dickens, I think, must have gotten his ideas of American haste in eating, from seeing us on board of Western steamers.

Perhaps the more notable sights along the river to a northern man were the flocks of great lumpish turkey-buzzards, with their dirty white wings, looking as if they didn't care much whether they succeeded in lighting on a tree or in tumbling to the ground; then there were the gangs of negro boatmen and their wild river-ways, trying, it seemed to me, to get a little time and tune into everything they did. Add to these a few dark Kentuckians in wide-brimmed hats. As for your snug business man and bag-men you know they are everywhere.

Before leaving Cincinnati I attended the May Festival which the musicians of that city have been holding at Exposition Hall under the direction of Theodore Thomas. There were something more than a hundred instruments in the orchestra, and room for eight or nine hundred singers in the chorus. Thomas is reported to have spoken very highly of the style in which the musicians did their work at rehearsal. The afternoon was wet when I attended, and not more than half of the singers were present. The best effect of the opening pieces were, in a great measure, lost in the noise of the rain which poured on the roof, but when Mrs. Smith came to sing [Aria—Prayer and Barcarolle—L' Etoile du Nord, by Meyerbeer], the conditions were all right, and she had no difficulty in mastering her audience. 'Twas a sight for contemplation. A young woman in the prime of life and power to love, standing alone on the outer verge of the stage, a great orchestra following her and supporting her, now delicately and now strongly. A great throng of men and women looking up to her from the floor below, and down on her from the galleries above, one half of whom are ready to sympathize with her because she belongs to their sex and party, and the other half just as ready to sympathize with her for the very opposite reason, that she does not belong to their sex and party. She sings, and they are all still. She stops singing, and that great crowd storms and rages like some half-fed thing that wants to fall on its keeper. When the Chorus came to sing Mozart's "Ave Verum" I was not prepared for the effect. I did not even know what it was all about, but I felt that it was something about the goodness of God. I know it brought tears into my eyes, as if God had drawn near to us and shown some great mercy. It stirred the audience profoundly. I did not think until it was over that Mozart wrote it in a gush of thanksgiving for health and new life. Perhaps the next best thing—if I may judge from the applause—was Strauss' "On the Beautiful Blue Danube," a waltz by the orchestra. The violins seemed to whisper like zephyrs; the oboes sobbed; the flutes were as the notes of thrushes and wood-robins; the kettle-drums and cymbals near the roof, crashed in like thunder in the sky, while the great double-basses caught up the sound and rolled it about among themselves like the echoes of thunders trundling off among the craggy hills; and through all and over all the piccolo "piped and whistled," its notes going up and up in ziz-zag flashes as if it were a kind of musical lightning.

A. B.

A PLEA FOR SENSE.

Violet Lane, May 18, 1873.

DEAR CIRCULAR:—I know that your people are engaged in stirpiculture and I see from occasional allusions in the "Community Journal" that you have babies of all ages among you. Now from all that I can learn by reading your CIRCULAR and by listening to the accounts of people who have visited you, I am convinced that you are at least a sensible people, and therefore I make bold to address you upon a subject which has of late occupied my attention.

I am the only daughter of my father by his first wife who died when I was too young to remember her, but was, I have been told, a woman possessed of an extraordinary amount of common sense and many virtues. My father was so grieved by his loss that he did not again marry until about two years ago on my nineteenth birthday. As a natural consequence, perhaps, there is a baby in the house, and that you will soon see is the cause of my cogitations.

My little brother has just reached the prime of babyhood—eight months. He has four white teeth, he creeps, he crows, he laughs, he holds out his hands to be taken, and he does all the cunning things which babies, I suppose, have done since Eve sorrowfully fondled Cain and Abel in the wilderness beyond the garden of Eden. Grandpa and grandma and all the aunts and uncles say that there never was such a baby. Though I don't consider myself a judge, I must say that I think he is a very fine specimen of the *genus homo*, and for that reason as well as several others, I am about to appeal to you in his behalf.

Mother, who is but a few years older than I am, is of course unable to take care of the baby alone, and so, in addition to the other servants, we employ a nurse—a sturdy Welsh-woman whose general make-up is strongly suggestive of Tilly Slowboys, though she shows some more discretion in steering clear of projecting furniture as she navigates the house, baby in arms, and is more of a character in her way. I wish Dickens could have seen her. Had he done so her fame would certainly have passed down to posterity among the immortal galaxy of oddities which his marvelous pen has left the world.

Notwithstanding her eccentricities Nurse is one of the best hearted creatures in the world, and takes the nicest care of the baby. But there seem to be some strange contradictions in her character, and now I come to the point to which all the preceding has been preamble. Her usual mode of speech is slow and measured, and she delights in intoning the chants of the Episcopal service with an air of deep solemnity; but you should hear her talk to the baby! Dominie Sampson's hair would stand on end and he would murmur "Prodigious!" with greater unction than he was wont to do in Colonel Mannering's library, were he so unfortunate as to be within hearing. The other day the baby fell over a stool and bumped his head. Nurse caught him up quickly pouring forth a volley of such stuff as this:

"O, my poor 'ittle darlin'! Did 'im fall over ee ole naussy tool? So' im did. Bad ole tool, wasn't it? Nursy tiss him, make it all well? So ee will. [Renewed shrieks from baby.] Poor 'ittle sing! Wot sall ee do! Do 'im won to see ee horsey? So he sall, bless it tunning dearie! He's auntie's sweetins duckins, so he was! Bressens 'ittle honey;" and so on for fifteen minutes.

Now, Miss Editor, why in the name of all that is reasonable, should babies be addressed in such gibberish as that? What is the mortal use of "baby-talk," as it is called? It seems to me that we have not such a surplus of sense in the world that we can afford to bring up our children on nonsense. I would not by any means have them spoken to in the style which I once heard used by a pedantic young mother when her infant of fourteen months declined having his face washed: "Are you aware, my son, that your behavior in thus evading the aquatic ordeal conflicts with all laws of reason and nicety?" No, affectation is as bad as nonsense. But wouldn't it have a good moral effect to treat infants from the beginning like rational beings and expect that they will comprehend simple, correctly spoken words as quickly as meaningless twaddle?

Yours for ungarbled English,

ZAIRE.

[Our correspondent's letter is quite appropos; for only last Sunday at one of our committees, a member was criticised for too great proneness to baby-talk. The broken prattle of the infant tongue is sweet to every parent's ear; but the mutilated counterfeit practiced by nurses is at least, it seems to us, in very bad taste. The almost inexpugnable habit which small children have of ending their nouns in *ey* as *horsey*, *cartey*, *doggey*, and the like would doubtless be much sooner dropped if nurses took more care to speak them in simple, sensible English. ED. CIR.]

A HEROIC MAN.

The wreck of the Atlantic will long be remembered as one of the most terrible of ocean disasters. But as a bright gleam of sunshine is sometimes thrown athwart a black and storm-lashed sky, so across the gloom of this ghastly shipwreck shines the bright light of a bravest of brave deeds. This was the rescue of Chief Officer Firth, by Mr. Ancient, the English clergyman and missionary at Terrance Bay. A newspaper correspondent thus describes him and what he did:

I found him at his home near the plain little chapel on the hill. He was a man about thirty-six years of age, an Englishmen by birth, six feet in hight, and strongly built. He has a genial face, a bright eye, a clear head and a warm heart. He speaks fluently, but is so unpretending that his noble action speaks more loudly than his own modest words. Since the wreck he has been busy burying the dead, performing his duty as a minister, and seeing that everything is done decently and in order.

Mr. Ancient's account of the part he played in the fearful tragedy was vivid and interesting. When he reached the wreck, which took place about two miles from his house, most of the saved had been landed. He sought to find them shelter, till his

attention was attracted by the man and the woman in the rigging and a boy on the wreck. He went to Mr. Ryan, the magistrate, and said, "The water is smooth enough; you can get along-side in a boat." They were then hauling the boats on the shore. "But you cannot get at them when you get out there," said Mr. Ryan. "Give me a boat and some men; put me on board and I will get them." A boat was manned, but when they neared the ship the men would not put him on board. They loved their pastor, and thought it certain death to put him on the vessel. Mr. Ancient entreated them. "John," he said to the most solicitous of the crew, "if I am doomed I won't hold you responsible. Put me on board." While they were backing and filling the boy fell off. They picked him up, wrapped a coat around him, and landed him.

Finally the men agreed to put Mr. Ancient on board. The ship's side was then at an angle of fifty degrees, and the fishermen have not yet got over their admiration for their pastor's skill in climbing it, and in running the rail he found a piece of one of the braces in the main rigging, made one end fast and carried the other along with him. When he reached the outer davit he shouted to the man in the rigging, "You are an officer, are you not?" "Yes" was the reply. "Then you know how to make a bowline?" "Yes, sir." Mr. Ancient then threw him an end of the rope, first taking a turn around the davit. "Now put confidence in me and move when I tell you." Mr. Firth followed his directions, and the minister led him along by the rope, taking in the slack as he went. Whenever he slipped the turn around the davit and the strong arm of his rescuer held him. A great sea swept over and washed the officer off. "Oh, Lord," he cried out, "I have broken my shins."—"Never mind your shins, man! it is your life we are after." Finally he got him to the main rigging and to the vessel's side and let him into the boat by a rope, and the man was saved.

Mr. Ancient was formerly a Scripture reader in the British navy, but has been at Prospect for six years. He passed his examination and has taken orders, determined to become a fisher of men. He is a man thoroughly in earnest, but not so serious that he could not laugh heartily when he spoke of officer Firth's solicitude for his shins.

THE NEWS.

The Khivan Khan,
Unfortunate man,
Has been captured of late
By the Russian van.

Henry Ward Beecher, say the papers, is about to visit California.

George Eliot got forty thousand dollars for writing Middlemarch—a great march toward fortune.

Nasby has left his former residence, "Confederit X roads"—which is Toledo, and gone to live in New-York.

Teheran, the capital of Persia, has a population of 130,000. A mission station is about to be established there by the Presbyterian Board.

The New York Senate has passed a bill imposing a tax of $5 on all dogs except rat terriers and poodles, which go free. Now let every dog not worth $5 be killed, in which case those left would be few and far between.

The report of the murder of Sir Samuel Baker while on his expedition up the Nile, was unfounded. Dispatches have been received from him, at London, dated March 15th, stating that himself and Lady Baker were in good health, and reinforcements had reached him. He was on the White Nile.

Prof. Young of Dartmouth College has an electric battery of thirty-six cells which was once owned by Dr. Franklin. It was brought to this Country by Dr. Priestley, and owned successively by Franklin, Dr. Prince of Salem, Mass., and Prof. Young's grandfather.

Congressman Platt, of the Fortress Monroe district, Virginia, has appointed as Cadet to West Point Military Academy, a young mulatto, born a slave. Messrs. Cain and Ransier two of the colored Congressmen from South Carolina, have nominated two white youths who excelled in competitive examinations, to West Point. Mr. Cain has also nominated a colored youth, who stood a similar test to a naval cadetship.

Gerrit Smith says in a recent published letter: "If we look through history we shall learn that all the widest and grandest upward steps of mankind have been taken in defiant opposition to what had hitherto been accepted as law."

It is now said that the nineteen survivors of the Polaris expedition who were discovered on the ice and rescued, have the prevailing impression that Capt. Buddington willfully abandoned them. They also believe that Capt. Hall was poisoned.

The British Government seems to be in earnest in the matter of putting down the Zanzibar slave trade. Since the return of Sir Bartle Frere from his unsuccessful mission to the Sultan of Zanzibar, Admiral Cumming, commanding in the Indian Waters, has been ordered to proceed to Zanzibar with all his available naval forces and there await orders from the home Government. The time has come to down with the slave dhows.

A VERNAL FACT.

Janette and I sat under a tree
A-laughing and talking merrily;
It happened so—
Girls will, you know.

"Ah! who is coming down the road
In such a happy, leisurely mood?
Who can it be?
Do look and see."

We looked and saw a man and maid
Ride up the hill from the grassy glade;
We did, we did,
We surely did.

They thought themselves alone, you know,
And never dreamed we sat below—
Ha! ha! they didn't!
They really didn't!

We saw the knightly head bend down
And lightly touch the curls of brown—
But that's not all!
O no! not all!

And what was done we saw full well;
But do you think we are going to tell?
You do, you do!
I know you do!

A secret we can keep, I ween,
If 'tis two laughing girls between.
We can, we can,
Of course we can!

For 'tis not ev'ry day, sweet Miss,
That one can see a stolen kiss—
O, my! I've told!
I've up and told.

Lord Kames wrote a hundred years ago, "In all the works of nature, simplicity makes an illustrious figure. It also makes a figure in works of art: profuse ornament in painting, gardening, or architecture, as well as in dress or in language, shows a mean or corrupted taste. No single property recommends a machine more than its simplicity; not solely for better answering its purpose, but by appearing in itself more beautiful. Simplicity in behavior and manner has an enchanting effect, and never fails to gain affection: very different are the artificial manners of modern times. General theorems, abstracting from their importance are delightful by their simplicity, and by the easiness of their application to variety of cases. * * * * * The best artists in all ages have been governed by a taste for simplicity."

ANNOUNCEMENTS.

SILK GOODS.

Machine-Twist and Sewing-Silk of their own manufacture for sale by the Oneida Community.

Address, [K] ONEIDA COMMUNITY, *Oneida, N. Y.*

PRESERVED FRUITS AND VEGETABLES

Put up for sale by the Oneida Community in tin and glass. Price list sent on application.

Address, [F] ONEIDA COMMUNITY, *Oneida, N. Y.*

STEEL TRAPS.

Eight sizes and kinds, suitable for the House-rat, Musk-rat, Mink, Marten, Fisher, Fox, Otter, Beaver, the Black and Grizzly Bears, are made by the Oneida Community Descriptive price-list sent on application.

Address, [T] ONEIDA COMMUNITY, *Oneida, N. Y.*

MACHINE-SHOP AND FOUNDRY.

Improved Lathe-Chucks, Blinn's Patent Gate-Hinges, Machines for Measuring the Length and Testing the Strength of Manufactured Silks, Bobbin-Winders for Sewing-Machines, etc. Agricultural, Machine and Light Castings, on hand or made to order. Descriptive price-list sent on application.

Address, [M] ONEIDA COMMUNITY, *Oneida, N. Y.*

THE WALLINGFORD PRINTING COMPANY.

All kinds of Book and Job Printing executed: Manufacturers' Illustrated Catalogues made a specialty: also Bronze and Color Work, and the finer kinds of Card, Circular and Bill-head Printing. Having enlarged its works and added new motive power, this Company is in renewed condition to meet the wants its patrons with promptness and accuracy.

P. O. Address, *Wallingford, Conn.*

PUBLICATIONS.

(Sent from the Office of the Oneida Circular by mail, post-paid, on receipt of price.)

History of American Socialisms. By John Humphrey Noyes. 678 pp. 8vo. J. B. Lippincott & Co., Philadelphia. London, Trubner & Co. Price $3.00.

The Trapper's Guide; a Manual of Instructions for Capturing Fur-bearing Animals. By S. Newhouse. Third edition with New Narratives and Illustrations. 215 pp. 8vo. Price, bound in cloth, $1.50.

Salvation from Sin, the End of Christian Faith; an octavo pamphlet of 48 pages. By J. H. Noyes. Price 25 cents per single copy, or $2.00 per dozen.

Dixon and His Copyists; a Criticism of the Accounts of the Oneida Community in "New America," "Spiritual Wives," and kindred publications. By John Humphrey Noyes. Price 25 cts.

Scientific Propagation. By John Humphrey Noyes. Large octavo pamphlet of 32 pages. Price 25 cts.

Male Continence. By John Humphrey Noyes. An octavo pamphlet of 24 pages. Price 25 cts.

Hand-Book of the Oneida Community; Containing a Brief Sketch of its Present Condition, Internal Economy and Leading Principles. Price 25 cts.

The five pamphlets—"Salvation from Sin," "Dixon and his Copyists," "Hand-Book of the Oneida Community," "Scientific Propagation," and "Male Continence," will be sent to a single address on the receipt of $1.00.

Back Volumes of the Circular, Unbound. Price $2.00 per volume.

MESSRS. TRUBNER & COMPANY, Book-sellers, Paternoster Row, London, have the "History of American Socialisms," the "Trapper's Guide," and the "Hand-Book of the O. C.," for sale. They will receive subscriptions for our other publications.

PHOTOGRAPHIC PICTURES

Of the Oneida Community Buildings and Grounds, made by a first-class artist and finely mounted, can be had on application at the Office of the Oneida Circular.

LARGE VIEWS.

Bird's-eye View, looking West, of Community Buildings and Grounds, 12 by 14 inches, on fine enameled board 16 by 20; price $1.75. Quadrangle and Group, 12 by 14, mounted like the above price $1.75. South and East Fronts of the Community Dwellings, giving a good view of the New Wing occupied by the Children—8 by 10, on tinted board 10 by 12, with an ornamental border price $1.00.

STEREOGRAPHS.

No. 2, East and North Lawns. No. 3, East Lawn and Portico. No. 4, East Front. No. 5, North Front and Lawn. No. 6, Bird's-Eye View of Buildings looking West. No. 7, Lawn and Summer House. No. 8, West View, toward Railroad. No. 11, Quadrangle. No. 12, Lawn View. No. 15, South and East Fronts. Price of Stereographs $3.00 per doz. Sent by mail, post-paid, on receipt of price.

Oneida Circular.

A WEEKLY JOURNAL OF HOME, SCIENCE AND GENERAL INTELLIGENCE.

Published by the Oneida & Wallingford Communities.

ONEIDA COMMUNITY, JUNE 2, 1873.

New Series, Vol. X, No. 23
Whole No. 1461.

POST-OFFICE ADDRESS:

ONEIDA CIRCULAR, ONEIDA, N. Y.

TERMS:

The CIRCULAR is sent to all applicants, whether they pay or not. It costs and is worth at least two dollars per volume. Those who want it and ought to have it are divisible into three classes, viz., 1, those who cannot afford to pay two dollars; 2, those who can afford to pay *only* two dollars; and 3, those who can afford to pay *more* than two dollars. The first ought to have it free; the second ought to pay the cost of it; and the third ought to pay enough more than the cost to make up the deficiencies of the first. This is the law of Communism. We have no means of enforcing it, and no wish to do so, except by stating it and leaving it to the good sense of those concerned. We take the risk of offering the CIRCULAR to all without price; but free subscriptions will be received only from persons making application for themselves, either directly or by giving express authority to those who apply for them.

Foreign subscribers, excepting those residing in Canada, must remit with their subscriptions money to prepay the postage.

THE UNITED COMMUNITIES.

ONEIDA COMMUNITY

Is an association living in Lenox, Madison Co., N. Y., four miles south of Oneida and a few rods from the Depot of the Midland Railroad. *Number* of members, 205. *Land*, 654 acres. *Business*, Manufacture of Hardware and Silk goods, Printing the CIRCULAR, Horticulture, &c. *Theology*, Perfectionism. *Sociology*, Bible Communism.

WILLOW-PLACE COMMUNITY.

Branch of O. C., on a detached portion of the domain, about one and one-fourth miles north of O. C. *Number* of members, 19. *Business*, Manufactures.

WALLINGFORD COMMUNITY.

Branch of O. C., at Wallingford, Conn., one mile west of the Hartford and New Haven Railroad. *Number* of members, 45. *Land*, 228 acres. *Business*, Publishing, Job Printing, Manufactures, and Horticulture.

SPECIAL NOTICE.

The O. C. and Branches are not "Free Lovers," in the popular sense of the term. They call their social system BIBLE COMMUNISM or COMPLEX MARRIAGE, and hold to freedom of love only within their own families, subject to Free Criticism and the principles of Male Continence. In respect to permanency, responsibility, and every essential point of difference between marriage and licentiousness, the Oneida Communists stand with marriage. Free Love with them does *not* mean freedom to love to-day and leave to-morrow; nor freedom to take a woman's person and keep their property to themselves; nor freedom to freight a woman with offspring and send her down stream without care or help; nor freedom to beget children and leave them to the street and the poor-house. Their Communities are *families*, as distinctly bounded and separated from promiscuous society as ordinary households. The tie that binds them together is as permanent and sacred, to say the least, as that of marriage, for it is their religion. They receive no new members (except by deception or mistake), who do not give heart and hand to the family interest for life and forever. Community of property extends just as far as freedom of love. Every man's care and every dollar of the common property are pledged for the maintenance and protection of the women and children of the Community.

ADMISSIONS.

These Communities are constantly receiving applications for admission which they have to reject. It is difficult to state in any brief way all their reasons for thus limiting their numbers; but some of them are these: 1. The parent Community at Oneida is full. Its buildings are adapted to a certain number, and it wants no more. 2. The Branch-Communities, though they have not attained the normal size, have as many members as they can well accommodate, and must grow in numbers only as they grow in capital and buildings. 3. The kind of men and women who are likely to make the Communities grow, spiritually and financially, are scarce, and have to be sifted out slowly and cautiously. It should be distinctly understood that these Communities are not asylums for pleasure seekers or persons who merely want a home and a living. They will receive only those who are very much in earnest in religion. They have already done their full share of labor in criticising and working over raw recruits, and intend hereafter to devote themselves to other jobs (a plenty of which they have on hand), receiving only such members as seem likely to help and not hinder their work. As candidates for Communism multiply, it is obvious that they cannot all settle at Oneida and Wallingford. Other Communities must be formed; and the best way for earnest disciples generally is to work and wait, till [illegible]t of Pentecost shall come on their neighbors, and give them [illegible]es right where they are.

LEGAL STATUS OF MARRIED WOMEN —PAST AND PRESENT.

III.

THAT there has been no exaggeration in what has been said in reference to the basis of the law of marriage and the manner in which it has been built up, and that the institution itself had a common origin with slavery, is further seen in various incidents of the early status of married women under the branch of the common law relating to torts and crimes. And a consideration of a few of these will further illustrate that "law of nature which gave strength to the man and feebleness and dependence to the woman." But it may be observed first, that the common law allowed the husband to a certain extent to chastise his wife. The anonymous author before quoted has the following passage on the subject:

"Justice Brook, 12 Henry 8, fol. 4, affirmeth that if a man beat an outlaw, a traitor, a pagan, his villein or his wife, it is dispunishable, because by the common law these persons can have no action. God send gentle women better sport or better companie! But it seemeth to be very true that there is some kind of castigation which law permits a husband to use; for if a woman be threatened by her husband to be beaten, mischieved or slain, Fitzherbert sets down a writ which she may sue out of Chancery to compel him to find surety of honest behaviour toward her, and that he shall neither doe nor procure to be done to her (mark I pray you) no bodily damage, otherwise than appertains to the *office of a husband for lawful and reasonable correction*." And Blackstone says that "the husband also, by the old law, might give his wife moderate correction." "But this power of correction," he further says, "was confined within reasonable bounds." And according to some of the old authorities the bounds of reason were not transcended if the husband used a stick "no bigger than his thumb." This of course "accorded with the opinions and habits generally prevailing in the community."

At common law, if a wife murdered her husband her crime was not merely murder, but was of a higher degree, the same as when a villein or slave murdered his master, namely *petit treason*. So Coke says, "Whatever will make a man guilty of murder will make a woman guilty of petit treason, if committed upon her husband." If a husband murdered his wife he was hanged; if a wife murdered her husband she was *drawn* and burned, "and so," says Coke, "is the common practice." To be drawn was to be tied to a horse's tail and thus be dragged on the ground from the place of trial to the place of execution. Even the hurdle was unknown to the earlier common law. The reason for drawing criminals was "their not being worthy any more to tread upon the face of the earth." Blackstone seems to think the burning of women has at least "some countenance in the law of nature." He says, "The practice seems to have been handed down to us from the laws of the ancient Druids, which condemned a woman to be burned for murdering her husband, and it is now the usual punishment for all sorts of treasons committed by those of the female sex." This burning of women was only abolished in the year 1790.

Again, it was the rule laid down by Hale, one of the oldest criminal law writers, that "the law can not take notice of killings which cannot be proved by the prosecution, for the reason that secret things belong to God." Yet there was an exception, and in this case against women, which even Blackstone (who almost uniformly takes the view of an optimist and endeavors to find "some countenance in the law of nature" for the anomalies of English law), says "savors pretty strongly of severity." The exception was, "that if any woman be delivered of a child which if born alive shall be a bastard, and endeavors privately to conceal its death, the woman so offending shall suffer death as in the case of murder, unless she can prove by at least one witness that the child was actually born dead." It would seem from this that there were some secret things pertaining to woman which were not considered as belonging to God in the sense of Hale's expression. But nature gave strength to man, and he could even take God to himself and exclude woman from an equal share when he thought best.

Again, what is called in the ancient law "benefit of clergy" in criminal cases, was another legal rule which discriminated against woman; but which, when established, accorded with the notions and habits generally prevailing in the community, and has been thought by famous law writers to derive its authority from the law of nature. In it the law "shaketh hand" with the Romish Church, if not with "Divinitie." Blackstone says this rule "had its origin from the pious regard paid by Christian princes to the church in its infant state." Under this rule when a clergyman committed any capital offense, he was allowed either before or after conviction to plead the fact of his office, and this entitled him to be discharged from all punishment, so that so far as the law was concerned he might commit as many and as grave offences as lust or passion should prompt. And, as originally none but the clergy could read, and the ability to do so was regarded in those days of ignorance and gross superstition as a mark of great learning, it finally came to pass that this ability was adopted as the criterion for determining who were entitled to the "benefit of clergy," and when one was accused and plead his clergy, he was simply called upon to read in open court as a test. In respect to laymen, however, this difference was made when they plead their clergy, "they were burned with a hot iron on the brawn of the left thumb," before being discharged. Women, however, not being fit to become clergymen, could not be allowed like them to commit crimes with impunity, and so in all capital cases (and these were numerous, for larceny of any sum exceeding twelve pence was punished with death), they were either hanged or burned. And under the operation of this rule it sometimes happened that when a man and woman jointly committed a crime, the man would plead and be allowed the "benefit of clergy" and be discharged; but the woman would be put to death. This legal rule was limited from time to time after the reign of Edward IV., but not wholly abolished till the year 1827. In view of things of this sort, the language of Blackstone, "*so* great a favorite is woman with the laws of England," seems the keenest irony.

As further illustrating the present topic (the basis of English laws), we may refer to certain remedies

afforded by the common law to the husband for injuries done to him in his relation as husband. For example, if a wife was abducted from her husband, whether done by fraud or persuasion, or by open violence (though the law in both cases supposes force and constraint to be used, the wife having no legal power to consent), a remedy was given the husband by what was called a *writ of ravishment*, by which the husband recovered damages for taking her away on the same principle that he might recover damages when another took his beast or any other article of property and converted it to his own use. "The old law was so strict on this point," says Blackstone, "that if one's wife missed her way upon the road it was not lawful for another man to take her into his house, unless she was benighted or in danger of being lost or drowned."

Again, if a man committed adultery with a married woman, or in law-phrase had criminal conversation with her, the common law gave the husband an action of trespass against the adulterer, in which large and exemplary damages were often recovered; and even though the *crim. con.* were procured by the grossest fraud upon, and the seduction of, the wife, the law recognized it only as an injury to the husband.

Again, when a man's wife was assaulted and beaten or otherwise ill-used, though ordinarily he and she might have an action jointly for the trespass upon her person, she could have none alone, no matter how unwilling her husband might be to join her, or how great the indignity or injury; but if the maltreatment was great, so that he was deprived for any time of her company and assistance, the law also gave him an additional action on the case, for the ill-usage *per quod consortium amisit* [by which he lost company or society.] But in neither of these cases was a like remedy or any remedy given to the wife for a similar injury to her. Her husband might be persuaded to abandon her, or be forcibly abducted; or seduced into adulterous alliances with other women, no matter by whom or how; or beaten and injured to maiming, so as to deprive *her* of *consortium* and support; yet she was helpless before the law, and, as it is but too plainly to be seen, for the reason that she had no property in him which the law recognized; while on the other hand it did recognize that he had property in her, injuries to which the law would avenge by giving him compensation in money damages. T.

THREADS FROM MY LIFE-BALL.

VI.

FOR nearly fourteen years we lived in comparative isolation. During this long period we were called to part with my sister with whom we had had so much fellowship in the truth. Her death was such a happy one that I feel inclined to mention a few particulars. She was in such a peaceful, rejoicing state of mind that she was a wonder to the town, and many called to see her, to catch if possible something from her lips. The day before she died she said to me, "I have but little time to stay. You had better take home to-night the *Berean* and papers you loaned me. You can't imagine what a comfort they have been to me or how I have prized them." To a friend who called she said, "There is no death for me—I went through that when I gave up the world." To another she remarked, "I do not see the grave; Christ has made a bridge over that for me." She could wish, she told me, that her family would dispense with mourning and all sorrow on her account. "I hope," said she, "that they will not suffer with the spirit of fear, as they have in the past when death has entered the house. I have been praying earnestly that the peace of God may rest upon the family, and I believe it will." When we left that evening the last look she gave us was one of ineffable happiness, and her last words to us were, "Quietness and peace forever." That night at two o'clock she departed. Her watchers informed me that she slept sweetly till that time, when she awoke and motioned for her husband and family saying, "I am going now; *peace! peace! rivers of peace!*" Before her husband arrived her spirit had fled, and the heavenly smile that lighted up her countenance was indescribable. Her prayer was answered, and her peace left behind in the family. Her husband told me afterward that his feelings were unaccountable. A beautiful, quiet spirit seemed to surround him when he retired at night and at all times. It was something entirely different from anything he had anticipated. It was so with all the family. Her son said to me a few days after the burial, "Aunt E., it is something very strange; I go up into the third story and lodge all alone, and feel so peaceful and quiet that it astonishes me; I have none of those horrid feelings that I formerly had when a death occurred in the family, and I believe mother's prayer has something to do with it, and that she was a true Christian."

The outward form of the new faith, to correspond with its spirit—What was it to be? We did not know. It had not come to us, and yet we had a vague feeling that the germ of the body of the new faith was in Putney, Vt. The *Spiritual Magazine*, published there by Mr. Noyes, came to us with the choicest of spiritual food, and was just adapted to our needs. In this we could see the tender parental care of our heavenly Father. We had little fellowship with the state of things around us, though we had succeeded in living down the evil reports in circulation about us, and were getting a reputation for being truthful, conscientious and benevolent. The neighbors did not lose their confidence in H——, and as he occasionally attended church he was invited to take a Bible-class of young men. We had four children, and, for the lack of something better, they accompanied their father to church. At an early age we endeavored to teach them the truth as we saw it, and as they were receptive to us they imbibed our principles as far as they understood them. As they began to mingle in society we were at a loss how to protect them from the snares of the world. We had already become acquainted with several members of the Putney Community, and were in full sympathy with their views of Pentecostal Communism, and now saw, although but dimly, a resurrection church on earth as a home for ourselves and our children. These thoughts about vital society which we had caught from the writings of Mr. Noyes, were greatly strengthened by the careful study of the New Testament.

In the fall of 1847 we were startled by the news that persecution had risen against the Putney Community and dispersed it suddenly. Involuntarily we exclaimed,

> "Truth crushed to earth shall rise again,
> The eternal years of God are hers."

Some months after the expulsion of the Perfectionists from Putney we heard that they had received an invitation to settle in central New York; and the year following news came that Mr. Noyes and others had established another Community family in Brooklyn. We had been watching the indications of Providence with a desire to visit this Brooklyn family, but our way had been hedged up. It seemed strange that we should be so hindered, but since then the mystery has been explained. At that time the father and sister of H—— were living with us, and both were bitterly opposed to our new faith. Adhering, as they did, with the greatest tenacity to every form and ceremony of their church, any deviation from the path in which they tried to walk was regarded by them as heresy. Of course our freedom was somewhat restricted, though we lived in outward harmony and they never attempted to interfere with our family arrangements; but still we always felt that they were hostile toward our principles and to our friends who called on us. This state of things may have tended to modify our most radical ideas, though we never felt like sacrificing a single truth for the sake of peace.

Our children were now at the age to be sent abroad to schools, and were beginning to be drawn into society, the effects of which were to counteract our home influences, causing us to feel that their real interests were suffering. We longed for some change that would save them from this vortex of ruin. Just at this crisis the way unexpectedly opened for us to visit the Brooklyn family. The aged father of H—— suddenly died, and after his affairs were settled, we saw no obstacle in the way of making our contemplated visit. Accordingly in February, 1851, we visited the Brooklyn Community.

This visit made another great change in our plans and prospects. We had not been there long before we were fully persuaded that the Kingdom of God was indeed set up on earth and that we were standing on holy ground. The spirit of peace, unity, and love, that prevailed in the Brooklyn family, bore an unmistakable testimony to this truth; and after duly weighing the matter we did not hesitate to consecrate ourselves and all our possessions, to the Lord, requesting the Community to dispose of everything as they saw fit. That step, taken twenty-two years ago, we have never had occasion to regret, though we have been through many severe trials. Indeed, there is no one movement in all of my history where I am more sure of God's guidance than in that of identifying myself with the Communistic movement of which J. H. Noyes is the leader.

Before leaving Brooklyn we invited the criticism of the family. It was sincerely given, and we received much benefit. On returning home we felt that we were now moored in the true haven of rest and love, and that our children could receive the education we so much desired for them. That they would follow us, we had no doubt for we trusted in

the promise, "All thy children shall be taught of God," and claimed it as ours. On our return from Brooklyn we set about disposing of our family of boarders and hired help with a view of offering our homestead to the Community. E——, a sister of H——, was still living with us, and as hostile as ever to the new doctrines we had espoused. Still we felt like trusting God to help us out of our difficulties. On our return from Brooklyn she maintained a persevering silence, not deigning to ask a single question in regard to our visit. She was however compelled to hear many inquiries from our children, all of which were answered in a way to prove that we had been profited by our visit, and that we had surrendered every thing unconditionally into the hands of the Community. This was more than E—— could stand. The spirit of sincerity, to which we had given place, was to her like judgment fire, and in a day or two she became entirely disarmed, and acknowledged that we were standing on a plane much above that of the church she had loved so well. In persecuting Mr. Noyes, and his followers, she found that she had been fighting against God, and soon wrote a letter to her minister to that effect. And to her sister, who had been of the same mind with herself, she wrote that the "stone which they had rejected had become the head of the corner."

MY EXPERIENCE IN SCHOOL-TEACHING.

MY parents were poor and could only give their children the advantage of a common school education but they were ambitious to make the most of that. As I always liked my books and my teachers, I often got some special attention for my diligence at school.

At the age of sixteen I thought it time to earn my own livelihood, and wished I were old enough to teach school, but this I dared not dream of doing. Judge then of my surprise when a stranger called at our door to engage me as a teacher of his five children. In a few days I was installed as a member of Mr. Holmes' family, and doing my best to gain the good will of his children, whose ages ranged from five to twelve years. Mr. H. as well as his father, had a good, kind heart, covered up by a somewhat stern exterior. He was particularly exacting of his children, never giving any favors nor stopping long to reason, though I doubt not he loved them well. The children were generally quick and submissive, with the exception of one boy, Darius, who was rather headstrong, and not very earnest in applying himself to study.

The winter soon passed away and I returned home, but only to spend a few weeks, before receiving a second call from Mr. H. who engaged me to teach in his district, which consisted of only three families and twelve pupils. I was glad to renew my acquaintance with his children, to whom I had become quite attached. That summer and the next winter found me in the same employment in the same cozy little district. Every thing passed along smoothly with the exception of an occasional collision with Darius. I felt bound never to give up until he was conquered. One time he told a lie. This was a heinous offense to me and to his rigid father and grandfather, the latter of whom hung about the school-house to satisfy himself that I was sufficiently severe. I punished the boy sincerely until he confessed the truth, reasoning with him meanwhile as best I knew how. His mother and grandmother were the kindest and most tender-hearted women I ever saw, and they suffered keenly on the boy's account, though they never said anything. I feared the boy would retain a lasting dislike to his young teacher; but many years afterward, when I had moved hundreds of miles away and he had assumed all the responsibilities of a man and a parent, my heart was gladdened by receiving a message from him assuring me of his deepest respect, and of his sincere gratitude for the punishment I had given him for lying; as it made an end of that propensity in him and instilled into him a love of truth and righteousness, for which he could not be too thankful.

I now felt that it was time to improve myself, and so I went to school, spring and fall, that I might be prepared to serve in a larger field. I was asked to teach in a district where were two large boys noted for their proficiency in arithmetic. I objected on this account, but the committee said, "Go ahead;" they presumed those boys, or young men as they really were, would find something else they needed to learn. So I accepted the situation, embarrassing as it was, for I was anxious to get a place, and this was near home. I had never been much abroad and was naturally diffident, but the very idea of being schoolma'am made me feel the importance of *assuming* that I was at home under all circumstances. Every week or two would find me in a new boarding-place, a circumstance not at all to my liking, but which had to be borne with a good grace.

The way I got along with my smart arithmeticians was to have them apply themselves closely to first principles, giving a reason for all they knew; and if at any time I was asked to solve a problem beyond my depth, I told them plainly that I did not know how and that I did not pretend to do so. This course seemed to win their respect, and they were the more ready to apply themselves to some other branches in which they were very deficient, but in which I was perfectly at home. So this winter was passed rather pleasantly.

The next summer Mr. Scott, a godly baptist, and an entire stranger to me, came to engage me to teach in his district, for the reason that he had heard that I was religious and prayed in my school. This was true, as I had become a zealous convert in the great revival of 1838–9, and one of the crosses I had borne cheerfully since that time [then 1841] was to open my school with prayer. This sometimes cost me a struggle, as there were often pupils larger than their teacher; but duty to God was not to be set aside for any consideration.

Mr. S. invited me to make my home at his house, where I found his wife a very motherly woman, and his two young daughters winning and affectionate scholars, especially little Emily; while with his oldest daughter A., I formed a very close intimacy, based principally on the fact that we were both young converts, and wanted to remain so—an intimacy which has continued to the present time, and which will probably never grow less.

In the course of the summer there was quite a revival in the neighborhood, and our little school partook largely of its warming influences. The school frequently opened with a prayer-meeting, the little girls and boys joining in all heartiness and simplicity. Well do I remember with what zeal Auria B. and Emily S. poured out their young hearts in prayer at those morning meetings. I do not remember any unpleasant incidents during that season.

In the winter of 1841 I attended a protracted meeting at St. Albans and formed an acquaintance with Miss Cordelia Whittimore, who persuaded her father to have me teach their school the next summer. This was a new era in my experience; going twenty or thirty miles from home, among comparative strangers, to teach a school of some thirty children of all grades and of several different nations: intelligent Americans, smart, though common French, Irish, English and Manx. None of them were more than twelve or thirteen years old. There was one regulation in this district that served to cramp the teacher somewhat, and that was that she should not administer any corporeal punishment but should report misconduct to the committee. The adoption of such a rule worked very badly in one or two cases. Most of the children were good and obedient from attraction, but there was now and then an ugly and ungovernable child that was more than a match for me under that rule. One day I had a collision with an English girl six or eight years old, who threw herself on the floor in a great rage, and I inconsiderately laid hands on her. She came to terms, but I was in perplexity. I went as soon as I could after the close of school and reported myself to the committee. He regretted what I had done but passed the matter over.

There were some very very smart French children. One girl twelve years old, with her two little nephews, came daily, and acted as interpreter for the boys. One day the smaller boy had committed some misdemeanor, and on calling him up his aunt came also. I told her to ask him why he did thus and so, and he replied by very gracefully bidding her to sit down, which she did. I told her to get up and the examination went on. She was evidently accustomed to obey him, though he was much younger than herself.

There were a few children of wealthy parents attended this school, and some of exceedingly poor ones. I heard that one of this latter class was sick, and went with a young lady to call on the boy. The family lived away from the main road in a shanty, in one corner of which was a bed on which the lame father lay, and in another corner was a low cot on which was the poor dying boy. We stayed to watch with him, and never can I forget that night. We had to spread an umbrella over the child to protect him from the rain, and give

him his medicine from a rusty iron spoon. The next day his troubles ended. He was a good and studious boy, and I loved him, but how could we regret his early death? After teaching here four and a half months and forming some close attachments, I returned to my home with a thankful heart. S. B. C.

MONDAY, JUNE 2, 1873.

THE BIBLE VIEW OF PRAYER.

PAUL gives a definition of true prayer, where he calls it "supplication *in the Spirit.*" (Eph. 6: 18). He assumes that believers have the Spirit of God, and know how to walk in the Spirit, and of course know how to speak as the Spirit gives utterance; and from this point of view his idea of prayer is, that it is speaking to God and making requests of him according to the inward moving and suggestion of his Spirit in their hearts.

This conception of prayer, as an exercise that is actuated and authenticated by the Spirit, is very plainly seen in many other passages of Paul's writings. In the plainest terms he says, in the epistle to the Romans: "The Spirit helpeth our infirmities: for we know not what we should pray for as we ought: *but the Spirit itself maketh intercession for us*, with groanings which cannot be uttered; and he that searcheth the hearts knoweth what is the mind of the Spirit, because he maketh intercession for the saints according to the will of God." (Rom. 8: 26, 27). The intercession here spoken of is clearly the working of the Spirit *in* the believer's heart, causing him to pray with unutterable groanings for that which God chooses to give him. With like import Paul says in another place (Gal. 4: 6), "Because ye are sons *God hath sent forth the Spirit of his Son into your hearts, crying, Abba, Father;*" i. e., enabling and moving them to pray to him, as children to a father.

This prayer-giving function of the Spirit is very distinctly recognized in one of the Old Testament promises concerning the latter-day effusion. In Zechariah 12: 10, it is written, "I will pour upon the house of David and on the inhabitants of Jerusalem *the Spirit of grace and of supplications.*" In Paul's time this promise was being fulfilled: and accordingly we see that "supplication in the Spirit," the "intercession of the Spirit," the presence of the Spirit of the Son" in the heart, "crying Abba, Father," were to him familiar ideas.

With this view of prayer it is easy to understand the scope and truthfulness of all those absolute and unlimited promises of success to prayer which abound in the New Testament. "Ask, and ye shall receive"—"Whatsoever ye ask, believing, it shall be done;" such are the pledges, varied and repeated on almost every page of the Evangelists. To reduce these pledges, so as to make them mean only that God is generally well disposed toward mankind, and will answer their prayers when it is convenient and best that he should, (which is about the amount of meaning generally recognized), is an abuse of language, and really puts an imputation on God's sincerity. But on the other hand, it is impossible to suppose that God is pledged to answer all mere formal requests of selfish men, or any requests over which he has not antecedent control. The idea that true prayer is moved and authorized by the Spirit, precludes both of these difficulties. With this definition of prayer, all mere selfish and formal requests are excluded from an interest in those strong promises; while all real inward yearnings, which come by intercession of the Spirit, and which alone can attain honest faith and so come within the conditions of the promises, are as sure to obtain what they cry for, as the bills that an honest Bank has signed and sent out, are sure to be paid when they come back.

COMMUNITY JOURNAL.

ONEIDA.

—Mr. Sears, who has the management of the Laundry, says they wash 5,400 garments a week.

Sunday, May 25.—The cherry trees are a little past their full bloom. Apple trees are making a fine show of flowers, but these are not fully out.

—A new dam is soon to be built to replace the old one. Those who superintend the job tell us that they have engaged 25,000 feet of lumber, and all the stone, with the promise of having it delivered a few rods from the building-site.

—The last spot of snow disappeared from the west hills on Saturday, the 24th ult. There are three or four deep pockets up there into which the snow gathers in great quantities, and having a northeasterly exposure they generally hold their contents until far into spring.

—A water-cure paper recommends DR. DIET, DR. QUIET, and DR. MERRYMAN as the best physicians. We know that these are better than old DR. DOSEM and his brethren; but we prefer to either sort, as our family physicians, DR. FIRMFAITH, DR. LOVEWELL and DR. ROUTDEVIL.

—Mr. Kelly, our carpenter, reports one new tenement finished and two others building. There is no plastering about this house. The walls are lathed only three feet up, and then the sides of the room and the ceiling are covered with a stout paper-board made for that use. A coat of whitewash overhead, and paper hangings on the wall, finish up the room.

—The new site selected a few weeks since for our home amusements is now in preparation. A croquet ground is already laid out, and we have spent several mornings before breakfast in lively "bees" making fence, leveling etc., etc. The women and children have found something to do. An arbor is to be put up in one corner for a retreat from the sun.

—The pansies are out in all their splendor and as vari-colored as they are numerous. There are the deep purple pansy that looks like richest velvet; the rich maroon pansy, the white pansy, the black, the yellow, the speckled, the streaked, and the queer little pansy that seems to be making up faces at you all the time, and the old-fashioned pansy that grew in your grandmother's front door-yard, all now in bloom and vying with each other in thrift and beauty.

Monday, 26.—The sunshine was streaming in at our windows when we were awakened at 5 o'clock by an unusual clamor of voices and clatter of feet. Stepping into the hall and peering over the balusters, we discovered great excitement below-stairs. The children were all up and scampering about in every direction. Emily, who acted as spokesman for the others, said, "We are all going to Joppa to pick winter-green berries, and will start at half-past seven in the omnibus—all except Virginia. Walter, Deming and me—we are going with Miss Constance on the cars." They were soon ready, only waiting to eat the lunch Miss Jane had provided for them. They returned at half-past eight in the evening, and reported that they had a splendid time. They rode on the ferry-boat across the river, and went out on the lake in a row-boat; they went fishing two or three times, but caught no fish; they ate breakfast and dinner at the lodge, and had a nice run in the woods; they explored the outside and inside of a new canal-boat lying near the shore; they went in the water and had a fine swim (those that could); and they rode home perfectly contented with their jaunt, though a shower came up just as they were about going after winter-green berries, and they did'nt pick one. "But," said several of the boys quite unanimously, "we had fun enough without winter-green berries!"

—The following remarks, made at a criticism of one of our leading musicians sometime in April last, sunk deep into the hearts of those who listened, and has worked a great change in the Community:

"The general trouble with E—— is, that he is so full of business that he does not attend to the spiritual world—he does not have any regular time for practice in spiritual music. We cannot be proficients in spiritual music without thorough drill and practice, any more than we can in common music. You would not expect to get along well in the orchestra unless you took your regular hour for practice. Neither will you get along well in the heavenly orchestra if you don't take some time for practice. My recommendation now to all the musicians is that they take at least as much time henceforth to give themselves to reflection, prayer, and labor to make harmony with heaven as they have spent in practicing on their instruments. I should be very glad to commute with them and have that considered as the exchange. Let them take hereafter the time they have spent in instrumental practice for playing in the orchestra and give it to spiritual exercise, solitary seeking after God and harmony with him. I think the great need throughout the Community is an *hour of practice* in spiritual harmony. The simple truth about the matter is that in order that there may be a good, healthy Community, there must be a great deal of practice of this kind. There must be a throwing aside of business, and a sitting, or lying down or kneeling and shutting the eyes and going to God. There must be real spiritual labor. We ought in some way to establish an institution among us which will rise above everything else, *a system of having a daily time set apart for seeking spiritual fellowship with and knowledge of God.*"

—There resulted from this advice a purpose on the part of many individuals to set aside an hour of each day for communion with God, which has been conscientiously adhered to up to the present time. We may truly say that the Community watchword is "secret prayer," and we believe it is more potent in overcoming evil than any other agent. The topic of the meeting last Sunday evening, the 25th, turned on the experience of individuals resulting from this practice, and the following testimony was given:

Ida Kelly.—I have taken some time every day for prayer and reflection since Mr. Noyes proposed it, and find it easier to control my attention and to feel that I draw near to God.

D. E. Smith.—I hope we shall be encouraged to pursue this plan until the habit becomes chronic. I have received benefit from it in many ways. Sometimes business has pressed me so that I have been tempted to curtail the time; but have found that it has been a loss to me in every way when I have done so.

H. G. Allen.—When anything prevents my taking an hour for retirement I miss it; and when I have taken it I find that I can do more work, and that I am filled with the peace and love of God.

H. M. Worden.—I feel encouraged to pursue

this plan. It has been a great help to me in every way; it helps me to control my tongue and attention.

G. E. Cragin.—I find great benefit from this practice. It makes me feel that I have a reserve of strength to fall back upon.

C. W. Underwood.—I have felt more of a spirit of prayer every day for some time past than ever before, and it is the result of taking time for meditation and prayer. I find it easy to turn my heart toward God, and find it easier to do my work than ever before.

V. C. Noyes.—My hour of retirement is the most precious hour in the day to me.

W. G. Kelly.—I received great benefit from this practice while out on a business trip lately.

P. M. Underhill.—It has greatly increased my faith.

Mr. Noyes.—With this object in view of affording opportunity for reflection and prayer, I have been rather pleased to notice there is a growing tendency among us to want separate rooms. I think there is a natural ground, a good spiritual ground, for that desire, and I hope we shall not be contented until every person who wants it has a private room. That ought to be regarded as a birthright of every person who can pray, to have a closet of his own where he can isolate himself, and always find quiet and retirement. If we lay our plans with this object before us, it seems to me that we can ask God to give us the means for enlarging our dwelling, until our accommodations shall be perfectly adapted to good religious experience. (Applause.)

W. H. Woolworth.—It is a necessity of our spiritual life that we should have this opportunity for seclusion and prayer—communion with God.

C. A. Burt.—I have been made thankful by feeling that God drew near to me when I turned my heart to him.

E. L. Hatch.—Prayer has been a great benefit to me and has given me new faith for individuals and the Community as a whole.

J. H. Cragin.—I have had a deeper experience than ever before since entering on this practice of "going home" every day; and I thank Mr. N. for suggesting the idea.

S. B. Campbell.—I thank God that I can shut my door and turn my attention from outward things.

E. E. Otis.—I have found it easy to pray and trust God.

Mr. Cragin.—The more time I give to prayer the stronger my desires are for spiritual growth and usefulness.

J. B. Herrick.—Mr N. said to-day one great advantage of prayer is, that it makes us acquainted with God's character. If we think of something that we want very much, get our minds and hearts set on it, then have liberty to pray for it, the good we get in wrestling with God for that thing is worth more to us oftentimes than the thing itself. God keeps us in some great hunger toward him, and we have to struggle with him for the thing we want until we gain it. He coquets with us and don't give us all we want at once, and in that way he educates us to seek him. If he gave us all we wanted at once we might become indifferent to him; but in this way he keeps us asking, receiving and learning.

E. S. Burnham.—I am satisfied from my own experience that there is no better way to repel temptation, than this of going to God every day. I have had temptations that seemed severe at times, but have found them conquerable by persistently following this course.

Mr. Noyes.—Many cases might be mentioned in which the pursuit of a thing is worth more than the thing itself. For instance, in England the glorious sport of fox-hunting is worth much more than the fox after it is caught. So it is in all fishing; the great pleasure is in playing with the game. Its value as food or as an article for market may be very small. For such sport it is necessary on the one hand that there should be good strong hope and expectation of success; and God has taken care of this matter by his promises to prayer, and we know also by experience that there is a good ground to expect success. Then as a counterpoise to that, there is required a great deal of coquetry and delay, and God insists on it that we must pray without ceasing and without fainting. Christ mentions the importunate widow who followed up the judge until she got what she wanted. Any one can see that she became acquainted with the judge in that way. Probably the exercise she had in arguing with him and getting acquainted with him was worth more than all she got out of him. At least it is so in our dealings with God. I think that is the most complete explanation of the object of prayer.

E. P. Inslee.—I find that this practice of "going home" every day is an excellent balance-wheel to one's spiritual machinery.

J. B. Herrick.—It is a command to us to pray and not to faint.

Mr. Noyes.—We ought not to make prayer a solemn thing, but go to work in a fox-hunter's spirit. Start a fox—get something to pray for, and then make it a lively struggle in the real spirit of sport. Get your health and education by it, and learn to know God by it. No matter what you pray for, if it is something God is interested in. God himself will start a fox for you if you really want to be a hunter: he will start a fox that will really draw out your heart and you can learn to make a splendid game of it."

—Below is a letter written confidentially from one friend to another, and never intended for the CIRCULAR, but as it falls in with the testimony given Sunday evening, we subjoin it:

"*O. C., May* 26, 1873.

DEAR MRS. S:—I was very much interested last evening in what Mr. Noyes said about prayer. I have had some experience about it that edified and encouraged me, and which may not be uninteresting to you. For several weeks after Mr. Noyes's advice to us to take an hour every day for secret prayer I had a very happy experience in prayer and in the good effects of it. Perhaps Mr. Noyes would say I had a good time hunting and fishing and caught something every time. But there came a time when the good luck I had had seemed to come to an end. I could not catch anything. I began to get discouraged and heart-sick. It seemed as though God hid himself away from me. I felt just as earnest as I had done before, and I could not understand why I failed to get a response. During this cloudy time Mr. H——came from W.C., and one day I had some conversation with him. I was very much impressed by his spirit. He was so soft-hearted and considerate, so full of charity and good-will. I thought about it after he left me. The next day he talked with me again, and his spirit seemed to search my heart. When my time for prayer came I asked God to tell me what it was that hindered me from feeling his presence as I had done. Then I realized for the first time what Mr. Noyes meant when he said that God criticised him sometimes. I felt conscious of God's criticism of me. I have been criticised many times since I came to the Community for pride, but although I accepted it I never fully acknowledged the truth of it. But God brought me under conviction about it and made me confess that I had a proud heart. That was the cloud between us. He gave me good luck up to a certain point that made me trust him; then when I was ready to listen to him, he resisted the pride in my heart and made me feel that grace was for the humble, for the broken and contrite spirit. After these thoughts I poured my heart out in prayer; but all I could ask of God was that he would give me a broken and contrite spirit; that he would free me from pride. I felt willing to exchange everything I possessed for a humble heart.

This experience makes me feel sure that the habit of prayer brings us very near to God. I know that while he grants me all the good that I can ask of him, he will search my heart and purge it of every evil thing; and I am thankful for the process. I expect blessings and sufferings will go hand in hand till I can go to him with a pure, undefiled heart. I find this hour of prayer a good time to listen and find out whether God has anything to say to me. Why should I be all the time asking him to grant me some good thing? Perhaps he has something to ask of me. In the instance I have mentioned he stopped my asking him for any more blessings till he made me promise that with his help I would be a humble woman. And he put such a spirit of hope and courage into my heart that I am just as sure that I shall conquer as I am sure that there is power in him to help me.

With thankfulness for God's goodness,

Yours, SOPHIA."

—These lines (of no particular merit as a poem), were penned by one who has experienced the benefits of faithfulness to her hour of prayer and, though written with no thought of publication accord with the testimony given above:

A PRAYER.

Give me a heart that is tender and pure,
Give me a strength that is firm to endure,
Give me a trust that can rest all secure
In Thee!

Take every treasure I 've e'er called my own,
Take every idol I've doted upon,
Take my whole heart, and keep it alone
For Thee!

Quell the strong passions that rise in my breast,
Quell the deep anguish that gives me no rest,
Give me thy love—the reward of the bless'd—
My God!

What if the billows surge over my soul?
What if the waves of despair o'er me roll?
What if my bark should be dash'd on the shoal?
Why fear?

What is life here to the life that's to come?
What is life here, if I once gain my home?
What is life here, while I know there is room
In heaven?

God is my God, though with tempests I'm driven,
God is my God, though my sails should be riven,
God is my God, my hope and my haven—
For aye!

DISENTHRALLED.

[The following note, written by a young woman at Wallingford to her aunt here, speaks for itself:]

W. C., May 18, 1873.

DEAR AUNT:—I am going to open my heart to you. You will recollect what a passion I have always had for novel-reading. When you first had charge of me you tried to break it up, but with only partial success. The next few years, when I lived with Mrs. ——, my taste grew stronger for this kind of literature than ever. My conscience, however, always condemned me. You know the bad effect such reading had on my body and spirit. Since I came to the Community I have had freedom to a certain extent to gratify my taste for reading, but at various times I came under severe conviction in regard to it; but my passion was stronger than my resolutions, and again and again I

made vows and broke them. I was always conscious that I should have to expose the matter sometime. Well, here at W. C., as I have grown more interior and in earnest to obey God, I have been more and more convicted about this thing, and have desired to get rid of my appetite for novels. Quite a while ago I was in great suffering about it, but somehow whenever I was tired I would take up a story to rest me instead of going to God, and then there would come a loss of self-respect—condemnation and bad experience generally. I became convinced that such reading had had much to do with bad experience in love. At last I got desperate and threw myself at God's feet for help. The still small voice said, "Tell Mother Noyes." Oh! it seemed as though I could not do that. What would she think of me to be so weak and so powerless to resist temptation? But I could not get away from it, and at last one afternoon as I was working with her I told her all my trouble and asked her help. Do you believe it? she told me of a similar trouble she had once had, and kindly pointed out a way of relief. From that time it has seemed as if God were on my side, strengthening me and chastening my appetite. I feel like a new woman. I prayed that I might have new attractions and an obedient heart, and that prayer has been answered. B.

CRITICISM BY LETTER.

[The following notes have been diverted from the channels of private correspondence. They will explain themselves. We print them as a specimen of the letter-writing we sometimes have to do].

O. C., May 27, 1873.

DEAR MR. X.:—One reason why I have not written oftener was because I felt that your communications with our men when in your city would be far more profitable to you. I am also interested in Mr. and Mrs. A., and what I have learned of them through Mr. P. has made me think more of them. I look forward with pleasure to Mrs. A.'s anticipated visit here—when we shall be more intimately acquainted. But much correspondence before that time would be spiritually expensive to me at least. I presume this remark will be rather strange to you, but if you were living with us you would realize the truth of it. When any of our agents have been out on a long trip they sometimes need a good sound criticism before they can clear themselves of the spiritual influences they take in in meeting with outsiders. Thus in corresponding with outside believers we cannot get very near them without being obliged to deal with them in the same truthful frankness that we deal with each other, and that needs a thorough acquaintance. I think if Mr. A. could visit here with his wife it would do him more good than all that could be said to him. From some little hints dropped by two of our agents, I mistrusted there was something in your spirit which they thought did not harmonize with the Community spirit. I have asked Mr. P. to pencil down just what he thought of your spiritual state, and in looking it over I have concluded to copy it just as it was written. It has been written and sent in love, and if the intent is comprehended and received I have no doubt it will prove a great blessing to you. You will also have an opportunity of knowing just what Community criticism is. Since writing the above I have received what Mr. A. B. had to say, and I indorse it. Hoping to hear from you again, I remain,

Yours sincerely,

C. B. B.

REMARKS BY MR. P.

My intercourse with X. has on the whole been quite pleasant. I have touched his heart, and it seems to me that he is a lover of the truth and a man of honor. I have felt a brotherly loving spirit in him, that has made me respect and love him. He has to a considerable degree apprehended the gospel which the Community holds and lives, and is earnest in his adherence to it. He has some of the stuff in him of which men are made who can die for their convictions.

On the other hand I have felt some criticism of him. He is somewhat conceited—is too full of himself and his own ideas. In fact this is a very prominent fault in him. Probably some of it is inherited. But his career in the world has been of a nature to foster the tendency. With quick, available talent, successful as a student, fond of science and literature, of which he has absorbed a great deal, living much alone and fighting his own way—all these things have tended to make him absorbed, conceited, egotistical. They have filled him up and he has become somewhat non-receptive. He is more ready to talk than to listen, more ready to lead than to be led.

This lack of the receptive, child-like, listening spirit was quite observable and quite painful to me in late interviews with him. I did not feel quite ready then to say anything to him in the way of criticism, though I hinted to him that it would be well to curb his tendency to mere intellectual investigation and learn to accept some things as settled truths even though he had not "thought all round them," as he phrased it. He was somewhat disposed to criticise our attitude toward the Methodists and the outside churches—thought we were not charitable enough in some of our remarks about them in the CIRCULAR. He had evidently let in a spirit of evil-thinking and mere intellectual judgment, which I felt would run him off the track if he were not careful.

This leads me to say that his own estimation of himself as a spiritual man is a little too high. He has some ambition and lust for leadership. He assumes something of this attitude toward the A. family. I don't believe he is qualified for a leader yet. I don't think he should assume to be their leader and superior. One reason why he has not more influence with Mr. A. is because he assumes too much the attitude of superiority and criticism toward him. And instead of winning him by the simple magnetism of example and brotherly love, he is all the time judging and criticising him, in spirit at least. A. needs to be surrounded more by the uplifting, justifying spirit of Christ. No doubt A. needs criticism from time to time, and is somewhat unstable in his purposes and moods. Still success in helping him out of all this, will come full as much by respecting him and winning him to self-respect and earnestness, as it will by trying to criticise those things in him. And here I will say, that when I was last in C. I was more attracted to A. than I was to X. He was very kind and brotherly. I could not help respecting a great deal that I saw in him. He wants to do right. There seems to be a good providence surrounding him in business, and he is prospered in making money. In this respect he is beating X. He seemed sincere in his expressions of love for the Community. Now with such a man, X should be very patient and tender both for his own sake and for the truth's sake. He ought not to assume the position of leader and teacher to the A.s, but should simply regard himself as a *fellow scholar* in the study of the Gospel and Community truth. He has not led them into the truth, but has simply been the instrument in the hands of Providence for placing in their hands the *Berean* and other Community writings, and *these* have done the work that has been done in them.

There is a vein of pride in X's character which will have to be criticised sometime. It needs purifying. If there is anything worth being proud of it is humility, if the paradox were possible, and this is just what X. lacks. It seems as though he was not willing to come to the Community unless he can come in a way that will save his reputation. He is not quite willing to come in *any* way, even though it involves the complete smash of egotism and all the intellectual capital he has accumulated. When he was invited to come here as a school-teacher, with a view to an ultimate membership in the Community, he was not ready. And though on the whole his reasons for declining the invitation were some of them plausible and some of them good, yet the manner of the declination, as he has himself admitted, was unpleasant, and injured his fellowship with the Community. It was his pride, and fear that the Community would be disappointed in him as a teacher and in other respects, which made him take just the course he did. Now the Community does not value people greatly for what they have become in the world and before they join the Community; it values them mainly for what they can be made *after* they have joined the Community. If X. ever joins the Community he will have to make up his mind to let his worldly life, culture and reputation die. He must be willing to ask to be admitted. It is not likely the first step will come from the Community next time.

If I were asked to say what I think is the main thing which has got Mr. X. off the track of faith, simplicity and receptivity, I should answer, His devotion to botany and science generally. I had a clear instinct two years ago that he needed to quit working at that, for a long time at least, and get completely out of the spirit and associations into which his pursuit of botany has brought him. My mind is still the same. Botany and other sciences at the present time are largely saturated with the infidel spirit, and it is difficult to deal with them in a healthy way, until one has passed through the judgment in regard to them and can look at them with clarified eyes. In Mr. X.'s case botany has brought him into contact with a great many worldly, scientific men, with whom communication and fellowship are spiritually expensive and dangerous.

Finally, I would advise Mr. X. to cut off outside fellowships and clear himself from the family influence. Turn his back more effectually than he has ever yet done on his family and relatives. He has done enough for them. Let them either take care of themselves or follow him into the truth and toward the Community. T. L. P.

MR. B'S LETTER.

DEAR MRS. B.:—You ask me what I think of Mr. X.

Well, I think he is a bright, active and painstaking sort of man, so far as his mind is concerned. Is not a coarse man in any common sense of the term. Should say that he is honest-hearted and likes the truth, let it come as it may. And in saying this I don't say that he would not have any trouble in adjusting himself to it, for that is more than I can say of many. In my talk with him I have found him attentive enough and friendly, but when I came to get away from him and realize the effects of the visit, I have felt bad and oppressed and in contact with something that made me feel as if I must have a chance to criticise him before I could feel good again. This was my experience the first time I saw him, and it was my experience the last time I saw him.

I did not expect to feel so the first time, and I did not mean to feel so the last time. The feeling was involuntary and made me consider his character and situation.

To dive right into the thick of it I should say that X. is too full of himself: he has too much individuality and conceit. That is what H. G. A. thought of him, but I withheld judgment till I could know for myself. This trait shows itself in conversation; he is not a nice listener—(not that I

wanted to talk very much myself)—is not chatty even, but is very prone to run off into little ten-minute lectures on science and set speeches on things in general. I can see how his circumstances keep him shut up, and how the closer intimacy we offer him makes him free to act himself out and spill over.

Then living as he does in a great city—one that stands third in point of self-conceit—I can again see that he is all the time unconsciously nerving himself to hold his own, if not actually asserting himself. It will not do for our men to meet him in anything like a passive or receptive spirit. If they do so they will be very likely to feel oppressed.

Although he professes attachment to the Community his attitude is more that of a judge and critic than that of a learner.

His botany is an unedifying thing, notwithstanding it has been a point of sympathy between us. The thing about it is this; it is poisoned with the rivalries and jealousies of men who are trying to build themselves up on science. With the eagerness he is pursuing the study of fungi, I do not see how he is ever going to be soft enough to get into the Community. If I were he, instead of spending my money on rare books of science, I would have a room that I could control, and once a day I would get away from every body except God. If he would do this it would take away that sense of failure in life which haunts him. There is no such thing as failure to a man who draws nigh to God and feels Him.

I saw that things were not going very smoothly with him and the A. family. This was at my last visit. The first time I was there I got the idea that he was either managing that family or trying to. If his individuality and high-handedness should hurt them as it does us, I do not wonder that he feels a separation from them. He does have a respect for the O. C. that keeps him a little more humble with our men than he doubtless would be with the A.s. The fact is he has not been near enough to the O. C. to get its spirit, and in any other spirit it would be hard for the A.s to accept him. My idea is that he had better make a bee line for the O. C. if he wants to, and let the A.s do the same for themselves if they want to, and not try to be a leader yet. Yours, A. B.

BOILER INCRUSTATIONS.

III.

IN the *Scientific American* of May 3d, page 280, appeared an interesting article on the prevention of boiler incrustations by means of a liquid tannate of soda, manufactured by Mr. N. Spencer Thomas of Elmira, New York. The writer after giving a condensed statement of the chemical reactions produced by the introduction of the tannate into a boiler, closes with a selection from our last article on the use of tannate of soda, published in the CIRCULAR of Feb. 10th, 1873. As no other preparation of tannate of soda besides that made by Mr. N. Spencer Thomas is mentioned by the writer of this article in the *Scientific American*, the readers of that paper will of course infer that the results quoted from the CIRCULAR were obtained by the use of this liquid tannate. This is not the case, and in simple justice to Dr. Joseph G .Rogers of Madison, Indiana, the first to discover and bring into public notice this valuable re-agent, we will reprint the substance of our former articles upon this subject.

We will premise by stating that for all we have said and published on the use of tannate of soda to prevent boiler incrustations we have received no pecuniary return. The results of our experience in the use of Dr. Roger's preparation, were published without his knowledge. Our idea was to simply call attention to an important scientific discovery, the use of which was saving us hundreds of dollars annually in fuel and repairs, to say nothing of the greatly diminished risk of explosions.

In the CIRCULAR of Aug. 26, 1872, we published the following in answer to a letter of inquiry from Pleasantville, Penn:

From the time we first began using steam in 1863, until the present summer, we had the usual trouble and vexation incident to the use of hard water in steam-boilers. A partial analysis showed that even our best spring water contains a large quantity of the salts of lime, carbonates and sulphates, including the sulphate of magnesia. A few weeks' use of this water was sufficient to produce a heavy incrustation, corroding the boiler-plate and filling the tubes with sediment. In one instance, after using a boiler three months a scale half an inch thick was found deposited in one part of the flues. Aside from the loss of fuel in using boilers incrusted with lime, we were in constant anxiety, from the danger of explosion from the unseen corrosion of the boiler-plate. Various remedies were tried with indifferent success.

All authorities on the subject agreeing that nothing yet had been discovered which would dissolve or prevent the formation of scale and not injure the boiler, or be objectionable in one way or another, we read with some incredulity in the *American Chemist*, sometime last spring, an abstract of a paper on steam-boiler waters and incrustations, by Dr. Joseph G. Rogers of Madison, Indiana. In this article Dr. Rogers treated the whole subject of boiler incrustations and the means used for prevention from a chemical point of view, and gave the results of a series of experiments with tannate of soda as an agent which fulfilled the chemical requirements of the case. We at once ordered of Dr. Rogers a quantity of his tannate of soda, and gave it a thorough trial in our Root boiler. This boiler had been in contant use for nearly eighteen months, most of the time with hard water, and in consequence was very heavily coated with scale. We began by using about three lbs. per week dissolved in the feed water, and blowing off a few minutes every morning before starting the pump. At the end of a month we opened the boiler and made a thorough examination. The tubes were found to be as clean and free from scale as when we first fired up a year and a-half before. The tannate seemed to soften the scale into a mushy mass, which settled into the mud-drum and from there was easily blown off. As far as we could discover, the tubes had not suffered from any corrosive action of the tannate. After the boiler was thus thoroughly cleaned of scale it required but a small amount of the tannate two or three times a week to prevent the further formation of scale.

Early in July last, we set up in our new Preservatory a thirty-horse power Densmore boiler. Having no soft water on hand, we were compelled to get our supply from Oneida creek, which runs within a few rods of the boiler-house. This creek water we had found in former trials was very hard indeed, and contained a much larger proportion of the salts of lime than the spring water used in our other boilers. To prevent incrustation we at once began using the tannate of soda, putting in about four ounces every other day. At the end of a month we opened one of the lower tubes where the scale should be the heaviest, and found not the slightest trace of a deposit. The tube was as clear as when first placed in position. We are now using one-fourth of a pound three times a week in our Phleger boiler. There has been no complaint of any unpleasant smell or flavor about the steam supplied to the kitchen, and we are satisfied that the boiler is kept free from incrustations by the chemical action of the tannate of soda, which action Dr. Rogers describes in the following words:

"Tannate of soda decomposes the carbonates of lime and magnesia as they enter, tannates being precipated in a light, flocculent, amorphous form, so that they do not subside at all in the boiler, but are retained in suspension by the boiling currents until they find their way into the same receiver, when they settle into a loose, mushy mass, which may be easily blown out from time to time. The carbonate of soda, formed in the reäction, is retained in solution, becoming a bicarbonate by appropriation of the free carbonic acid in the water. This decomposes the sulphate of lime, the resulting sulphate of soda being retained in solution. and the carbonate of lime being acted upon by fresh portions of the tannate of soda as above. The constant presence of the alkali protects the iron from all action, either of the carbonic or tannic acids. The same reäction takes place between the tannate of soda and the already existing scale with like results, but more slowly, some weeks being generally required, in practice, in removing the deposit, if it exists in any considerable quantity.

"Portions of scale are detached from time to time which may be removed at the usual cleanings, which should be made at short intervals, when possible, until the boiler is entirely clear of all incrustation, after which, this will not be necessary. Extensive practical trial of this process for two years has demonstrated its utility for all varieties of boilers. It is economical, easy of application, and generally adaptable. It may be used in marine boilers as well as those using fresh water, since the marine scale is almost identical with that formed in boilers using ordinary waters, consisting almost entirely of the carbonates of lime and magnesia and sulphate of lime. The chloride of sodium forms a mushy deposit, but it is only incorporated in the scale to a slight extent."

In cases where the water used in a boiler is found to be heavily loaded with the salts of lime and magnesia, causing active corrosion of the iron, it would be well to use a small quantity of the tannate every day, blowing off in the morning before starting the pump.

From the CIRCULAR of Feb. 10, 1873, we select the following from an article on "Removing Boiler Incrustations:"

Last July we started a new thirty horse-power, Densmore boiler. This boiler has been in constant use ever since, using nothing but the hardest kind of water. Having occasion lately to open it we found the tubes perfectly clean and free from scale of any kind. The inventor of the boiler, who was present at the time was much surprised at the result, and declared he had never seen anything like it before in all his experience in making and using boilers.

In regard to the amount of tannate necessary, much depends upon the character of the water used. At the rate we are now using it the cost per annum is about $66 for three 30 H. P. boilers. But as we use considerably less during the summer when we can get more soft water and require less steam for heating, the annual outlay will not be much over $50.

Now how much do we save by the use of this agent?

In the two boilers at the house we use about $2,500 worth of coal per annum, reckoned at last year's prices, which were below the prices paid any previous year. As near as we can now estimate, the cost of coal used in the Densmore boiler is about $375 per annum. Now according to our best authorities on the subject of steam and economy of fuel, a deposit of scale one-sixteenth of an inch thick, will increase the amount of fuel required 15 per cent.; a deposit one-fourth of an inch thick, will increase the fuel 50 per cent.: a deposit one-half an inch thick, 150 per cent., and so on. From careful observation we feel warranted in assuming that by the use of tannate of soda in our Root and Phleger boilers, we save at least 20 per cent. in fuel; and in the Densmore boiler, which has to use very hard water, 25 per cent. This being allowed, it is plain that $2,500 is 80 per cent. of the amount of coal which we should have to use to produce the same results without the tannate. $2,500 as 80 per cent. would be $3.125 as the cost of the coal required in these boilers with a scale less than an eighth of an inch thick. A saving of 20 per cent. would be equal to $625 in these two boilers.

In the Densmore boiler we have a present cost of $375 as 75 per cent. of the cost without the tannate; $375 as 75 per cent. would be $500 per annum as the cost of coal without removing the scale in the boiler. A saving of 25 per cent. would be 125 dollars.

Here then are our figures:

Saving in coal per annum in three boilers	$750
Cost of tannate of soda per annum at highest rates	66
Balance in favor of tannate of soda	$684

To make sure that we are within limits we will call the saving in the two boilers at the house 15 instead of 20 per cent.; and in the Densmore boiler 20 instead of 25 per cent. This would reduce our total amount saved to $492.

We lately had occasion to open our Root boiler. The tubes were found to be perfectly free from scale, and the boiler was apparently in as good condition as when first set up two and a-half years ago.

In regard to the liquid tannate of soda manufactured by Mr. Spencer Thomas we can say nothing, as we have never seen the article or heard of it before reading the notice in the *Scientific American*. Our results were obtained solely by the use of the solid tannate manufactured by the inventor and patentee, Dr. J. G. Rogers. G. E. C.

"FOURTEEN WEEKS" IN NATURAL SCIENCE.

Fourteen Weeks in Natural Philosophy; Fourteen Weeks in Chemistry; Fourteen Weeks in Astronomy; Fourteen Weeks in Geology; Fourteen Weeks in Physiology. By J. Dorman Steele, Ph. D. A. S. Barnes and Co., NewYork and Chicago.

The object of the author of these volumes is to make the common branches of science attractive to the average student; and in this he has succeeded. They are, for one thing, finely printed —in this respect superior to most school textbooks; then the illustrations are simple, and the explanations easily understood. The author has intentionally "omitted that which is perfectly obvious to the eye—that which everybody knows already—that which could not be long retained in the memory—and that which is essential" only to those who wish to become thorough scientists; and yet he has not sacrificed clearness. They are, in short, such books as one would like to read who wishes to be introduced to the most important facts and principles of science, and who yet does not care to cumber his mind with all the details which must be at the command of the professional worker. The "Practical Questions" scattered through the books are of the right sort to make the student think, and yet are not so abstruse as to discourage him. When so many subjects of science are in dispute among scientists themselves, it can scarcely be expected that any work on science will be faultless; the best a writer can do is to accept as truth the theories which seem to be fully confirmed by experiment, and be ever ready to welcome new truths and modify past theories. This position Prof. Steele takes; and in accordance with it has already issued a revised edition of his "Fourteen Weeks in Chemistry." We note with special appreciation that Prof. Steele's study of science has everywhere revealed to him "proof of a Divine care planning, conforming and directing to one universal end, and that in all, and through all, and over all, the Lord God omnipotent reigneth."

Quis Custodiet ipsos Custodes?

A correspondent writes from Wallingford: "In the CIRCULAR of May 12, I find the following bit of strange news:

A law has passed the Legislature of Illinois defining as extortion any discrimination in passenger and freight rates, and prohibiting more than a fair and unreasonable toll.

"What in the word do they mean by a fair and unreasonable toll?"

We will admit that this is rather an *un*reasonable statement.

"Then in the CIRCULAR of May 16th," he writes again, "I find that '*s-e-i-v-e* is pronounced siv, and *s-e-i-g-e* seej,' and that our word for hard money is spelled '*s-p-e-c-e-i.*' *Quis custodiet custodes?* What are we coming to, when our great orthographical high priests and teachers, in trying to lead us poor purblind mortals in the way we should go, fall into the ditch as above? or are we old-fashioned folks all wrong, who have always been accustomed to spell such words as *sieve* and *siege* and *specie* with the *i* before the *e*, or is this the commencement of a new order of things?

"Alas for the rarity
Of good orthography
Under the sun."

We have to own that our correspondent has be-*siege*-d us to some effect, and that he has sifted us in our own "*seive.*" But when he came to meddle with our "*s-p-e-c-e-i*" we nabbed him. If he had been real sharp he would have seen that *specie* was misspelled on purpose. We advise him to beware of anything *specious.*

PROOF-READER.

THE NEWS.

Another great fire has occurred in Boston.

The Hot-spring Indian allies of the Modocs have surrendered.

The President has issued a proclamation sustaining the Kellogg Government in Louisiana.

President Thiers has resigned and Marshal MacMahon has been appointed his successor.

Prof. Peters, of Hamilton College, discovered on the morning of May 26, a new planet of the eleventh magnitude.

Prof. Agassiz is delivering a course of lectures on the Radiates at the Cambridge Museum of Comparative Zoölogy.

The New York Central and Hudson River Railroad Company is rapidly pushing the grading and masonry for the two additional tracks.

The trial of George Francis Train has ended in a verdict of "not guilty, on the ground of insanity." An order was at once made out committing him to the Lunatic Asylum at Utica.

Major Gen. Lew. Wallace has written a romance founded on the Conquest of Mexico by Cortez. A competent critic says it is "hardly surpassed in historical fiction."

The London *Daily News* publishes the correspondence between M. De Lesseps and Gen. Ignatief the Russian Embassador at Constantinople, regarding the building of a railroad across Central Asia to connect the Russian and Indian railway systems.

The New York and Oswego Midland Railroad Company has reörganized, with Geo. Opdyke of New York as President. At a late meeting for the purpose of devising measures for relieving the road from its present financial embarrassment, it was announced that the new syndicate was prepared to furnish the required $4,000,000 to settle all claims against the road and to finish the Western division extending from Cortland to Buffalo.

Baron Reuter, the famous news-collector, has formed a contract with the Shah of Persia for carrying out a gigantic scheme of internal improvement in that country. Reuter and his associates are to build railroads, canals, reservoirs, wells, water-works; to utilize forests, work the mines and to farm the revenues. They begin by contracting a loan of $30,000,000, upon which the Persian Government guarantees the interest.

The long talked of lightning express train between New York and Boston made its first trip on the 26th. The trains leave the two cities at 10 A. M. and make the trip in seven and one-half hours, running at the rate of thirty-one miles per hour including stops.

Gen. McKenzie, U. S. A., commander of a military post on the Rio Grande, has at last retaliated on the lawless bands of Indians who have so long infested the northern parts of Mexico. Exasperated by the unchecked raids of the Kickapoo Indians into Texas and despairing of ever getting the Mexican Government to put a stop to the outrages, Gen. McKenzie at the head of 600 cavalry dashed across the border 80 miles into the interior and struck the Indian camp at early dawn. About 40 Indians were killed and wounded and the rest scattered into the mountains. The troops lost but three men, one killed and two wounded.

ANNOUNCEMENTS.

SILK GOODS.

Machine-Twist and Sewing-Silk of their own manufacture for sale by the Oneida Community.

Address, [K] ONEIDA COMMUNITY, *Oneida, N. Y.*

PRESERVED FRUITS AND VEGETABLES

Put up for sale by the Oneida Community in tin and glass. Price list sent on application.

Address, [F] ONEIDA COMMUNITY, *Oneida, N. Y.*

STEEL TRAPS.

Eight sizes and kinds, suitable for the House-rat, Musk-rat, Mink, Marten, Fisher, Fox, Otter, Beaver, the Black and Grizzly Bears, are made by the Oneida Community Descriptive price-list sent on application.

Address, [T] ONEIDA COMMUNITY, *Oneida, N. Y.*

MACHINE-SHOP AND FOUNDRY.

Improved Lathe-Chucks, Blinn's Patent Gate-Hinges, Machines for Measuring the Length and Testing the Strength of Manufactured Silks, Bobbin-Winders for Sewing-Machines, etc. Agricultural, Machine and Light Castings, on hand or made to order. Descriptive price-list sent on application.

Address, [M] ONEIDA COMMUNITY, *Oneida, N. Y.*

THE WALLINGFORD PRINTING COMPANY.

All kinds of Book and Job Printing executed: Manufacturers' Illustrated Catalogues made a specialty: also Bronze and Color Work, and the finer kinds of Card, Circular and Bill-head Printing. Having enlarged its works and added new motive power, this Company is in renewed condition to meet the wants its patrons with promptness and accuracy.

P. O. Address, *Wallingford, Conn.*

PUBLICATIONS.

(Sent from the Office of the Oneida Circular by mail, post-paid, on receipt of price.)

History of American Socialisms. By John Humphrey Noyes. 678 pp. 8vo. J. B. Lippincott & Co., Philadelphia. London, Trubner & Co. Price $3.00.

The Trapper's Guide; a Manual of Instructions for Capturing Fur-bearing Animals. By S. Newhouse. Third edition: with New Narratives and Illustrations. 215 pp. 8vo. Price, bound in cloth, $1.50.

Salvation from Sin, the End of Christian Faith; an octavo pamphlet of 48 pages. By J. H. Noyes. Price 25 cents per single copy, or $2.00 per dozen.

Dixon and His Copyists; a Criticism of the Accounts of the Oneida Community in "New America," "Spiritual Wives," and kindred publications. By John Humphrey Noyes. Price 25 cts.

Scientific Propagation. By John Humphrey Noyes. Large octavo pamphlet of 32 pages. Price 25 cts.

Male Continence. By John Humphrey Noyes. An octavo pamphlet of 24 pages. Price 25 cts.

Hand-Book of the Oneida Community; Containing a Brief Sketch of its Present Condition, Internal Economy and Leading Principles. Price 25 cts.

The five pamphlets—"Salvation from Sin," "Dixon and his Copyists," "Hand-Book of the Oneida Community," "Scientific Propagation," and "Male Continence," will be sent to a single address on the receipt of $1.00.

Back Volumes of the Circular, Unbound. Price $2.00 per volume.

MESSRS. TRUBNER & COMPANY, Book-sellers, Paternoster Row, London, have the "History of American Socialisms," the "Trapper's Guide," and the "Hand-Book of the O. C.," for sale. They will receive subscriptions for our other publications.

PHOTOGRAPHIC PICTURES

Of the Oneida Community Buildings and Grounds, made by a first-class artist and finely mounted, can be had on application at the Office of the Oneida Circular.

LARGE VIEWS.

Bird's-eye View, looking West, of Community Buildings and Grounds, 12 by 14 inches, on fine enameled board 16 by 20; price $1.75. Quadrangle and Group, 12 by 14, mounted like the above; price $1.75. South and East Fronts of the Community Dwellings, giving a good view of the New Wing occupied by the Children—8 by 10, on tinted board 10 by 12, with an ornamental border price $1.00.

STEREOGRAPHS.

No. 2, East and North Lawns. No. 3, East Lawn and Portico. No. 4, East Front. No. 5, North Front and Lawn. No. 6, Bird's-Eye View of Buildings looking West. No. 7, Lawn and Summer-House. No. 8, West View, toward Railroad. No. 11, Quadrangle. No. 12, Lawn View. No. 15, South and East Fronts. Price of Stereographs $3.00 per doz. Sent by mail, post-paid, on receipt of price.

Oneida Circular.

A WEEKLY JOURNAL OF HOME, SCIENCE AND GENERAL INTELLIGENCE.

Published by the Oneida & Wallingford Communities.

ONEIDA COMMUNITY, JUNE 9, 1873.

New Series, Vol. X, No. 24
Whole No. 1462.

POST-OFFICE ADDRESS:

ONEIDA CIRCULAR, ONEIDA, N. Y.

TERMS:

The CIRCULAR is sent to all applicants, whether they pay or not. It costs and is worth at least two dollars per volume. Those who want it and ought to have it are divisible into three classes, viz., 1, those who cannot afford to pay two dollars: 2, those who can afford to pay *only* two dollars; and 3, those who can afford to pay *more* than two dollars. The first ought to have it free; the second ought to pay the cost of it; and the third ought to pay enough more than the cost to make up the deficiencies of the first. This is the law of Communism. We have no means of enforcing it, and no wish to do so, except by stating it and leaving it to the good sense of those concerned. We take the risk of offering the CIRCULAR to all without price; but free subscriptions will be received only from persons making application for themselves, either directly or by giving express authority to those who apply for them.

Foreign subscribers, excepting those residing in Canada, must remit with their subscriptions money to prepay the postage.

THE UNITED COMMUNITIES.

ONEIDA COMMUNITY

Is an association living in Lenox, Madison Co., N. Y., four miles south of Oneida and a few rods from the Depot of the Midland Railroad. *Number* of members, 205. *Land*, 654 acres. *Business*, Manufacture of Hardware and Silk goods, Printing the CIRCULAR, Horticulture, &c. *Theology*, Perfectionism. *Sociology*, Bible Communism.

WILLOW-PLACE COMMUNITY.

Branch of O. C., on a detached portion of the domain, about one and one-fourth miles north of O. C. *Number* of members, 19. *Business*, Manufactures.

WALLINGFORD COMMUNITY.

Branch of O. C., at Wallingford, Conn., one mile west of the Hartford and New Haven Railroad. *Number* of members, 45. *Land*, 228 acres. *Business*, Publishing, Job Printing, Manufactures, and Horticulture.

SPECIAL NOTICE.

The O. C. and Branches are not "Free Lovers," in the popular sense of the term. They call their social system BIBLE COMMUNISM or COMPLEX MARRIAGE, and hold to freedom of love only within their own families, subject to Free Criticism and the principles of Male Continence. In respect to permanency, responsibility, and every essential point of difference between marriage and licentiousness, the Oneida Communists stand with marriage. Free Love with them does *not* mean freedom to love to-day and leave to-morrow; nor freedom to take a woman's person and keep their property to themselves; nor freedom to freight a woman with offspring and send her down stream without care or help; nor freedom to beget children and leave them to the street and the poor-house. Their Communities are *families*, as distinctly bounded and separated from promiscuous society as ordinary households. The tie that binds them together is as permanent and sacred, to say the least, as that of marriage, for it is their religion. They receive no new members (except by deception or mistake), who do not give heart and hand to the family interest for life and forever. Community of property extends just as far as freedom of love. Every man's care and every dollar of the common property are pledged for the maintenance and protection of the women and children of the Community.

ADMISSIONS.

These Communities are constantly receiving applications for admission which they have to reject. It is difficult to state in any brief way all their reasons for thus limiting their numbers; but some of them are these: 1. The parent Community at Oneida is full. Its buildings are adapted to a certain number, and it wants no more. 2. The Branch-Communities, though they have not attained the normal size, have as many members as they can well accommodate, and must grow in numbers only as they grow in capital and buildings. 3. The kind of men and women who are likely to make the Communities grow, spiritually and financially, are scarce, and have to be sifted out slowly and cautiously. It should be distinctly understood that these Communities are not asylums for pleasure seekers or persons who merely want a home and a living. They will receive only those who are very much in earnest in religion. They have already done their full share of labor in criticising and working over raw recruits, and intend hereafter to devote themselves to other jobs (a plenty of which they have on hand), receiving only such members as seem likely to help and not hinder their work. As candidates for Communism multiply, it is obvious that they cannot all settle at Oneida and Wallingford. Other Communities must be formed; and the best way for earnest disciples generally is to work and wait, till the Spirit of Pentecost shall come on their neighbors, and give them Communities right where they are.

REACTION.

To one who said his life was bare and dry,
I strove some present, potent aid to reach;
Till hardly knowing what I said, or why,
I spoke of God—I said that he was nigh;
Then wondered at my speech.

But in my simple words, so poor and few,
He found a rest that put away his fear;
"He would not grieve," he said, "if that were true."
Then all the day my peace the greater grew,
For God seemed very near.

G.

THE HOPE OF COMMUNISM.

[Selected from G. W. N.'s Writings.]

THE present false, disorganized state of society is the natural and necessary result of the universal selfishness and consequent separation and antagonism of interest that prevails among mankind, and before Communism can be permanently successful, it must have some central bond of unity, sufficiently strong to overcome selfishness. The mere desire to avoid the evils of present society, and realize the benefits, the pleasures and happiness which Communism can give will never furnish any such bond of union. This is in reality only a refinement of the selfish principle. A self-sacrificing devotion to communistic principles may answer for a time, but the only thing that will prove thoroughly effectual is religion. A sincere recognition of the Creator, and a hearty, lively devotion to him as the "true God," however crude and imperfect it may be, has a powerfully neutralizing effect on selfishness, and furnishes a common interest, and a common center around which sympathetic hearts can gather and become united. It is at once a common bond of unity, and the mutual love which it engenders is a guarantee to all, that the separate individual interests of each will be properly cared for.

But there is a still stronger reason for considering religion as the grand element of success in Communistic enterprises. The lack of sympathy and brotherly feeling, or more properly the alienation existing among men, is the result of their alienation from God, and before they can legitimately expect true fraternity and community among themselves, it will be necessary to go back to the original source of the difficulty and come into loving, harmonious relations with God—into loyal union with him—and this will necessarily produce true communism with each other. In him they will meet.

In this work Christ has led the way. He laid the foundation of a true, perfect state of Communism, by first perfecting his obedience and loyalty to God, and then laying down his life for his brethren; and now stands ready to pour out his spirit and life upon all who will receive it, and walk in his steps.

THREADS FROM MY LIFE-BALL.

VII.

PREVIOUS to writing the letters mentioned at the close of my last chapter and while under deep conviction of sin for her past course, E—— would request us to sit up after the family had retired that she might converse with us on these deeper problems in spiritual philosophy. New light dawned upon her heart while talking, reading the Bible and Mr. Noyes's writings, and on the third morning after our return she came down to breakfast, and setting her lamp upon the table with such force as to make us all start, she exclaimed—"*Live or die, sink or swim,*" I am for the administration of J. H. Noyes!" Expressions of joy and thankfulness burst from us. The barriers to fellowship being removed, our hearts flowed together like oil, and our breakfast was indeed a love-feast. Her character for sober reflection and stability was too well known to allow any doubt of her sincerity. That she had counted the cost of the step now taken was equally a matter of certainty. Her face which had been very long and solemn, became radiant and pleasant to look upon. Merry laughter came frequently from her lips, and we thought the time had indeed come when "the mouths of the saints should be filled with laughter." It seemed to us miraculous that such a determined will as hers could be subdued so suddenly; and I did not for a moment doubt that the change was caused by Mr. Noyes's spirit working in our family.
