Meade Layne, M.A., Editor and BSR Director, and Assocs. -- Margaret V. Locke, Associate Editor; Kathleen Banks, Accounts.

Published bi-monthly at BSR Hdqrs., 3524 Adams Ave., San Diego 16, California. Subscription included with BSR membership, per year $5.00. Copies, 50¢ each. - The BSR is a non-profit and non-sectarian organization.

A SPECIAL

MERRIE CHRISTMAS

TO ALL

OUR B.S.R. ASSOCIATES --

- AND A NOTE OF APPRECIATION FOR YOUR CONTINUED SUPPORT AND INTEREST IN MAINTAINING OUR NON - PROFIT ORGANIZATION, BORDERLAND SCIENCES RESEARCH ASSOCIATES.

-- MANY THANKS TO YOU ALL --

- N. Meade Layne, M.A., Director and Editor.
- Margaret V. Locke, Associate Editor.
- Kathleen Banks, Accounts.

"SCIENCE AND HEALING"

(Excerpts from The Ark)*

"The attention of all readers of THE AR' is directed to Mrs.Eyre-Smith's article in this April number ... This is something as revolutionary as the discovery of steam or gravity or gunpowder, and as yet it is hardly known. On the other hand it is so old that it is but a resume of something we can trace back (to the ancients). As applied to healing it is called radiesthesia. . . Briefly, the cell is not the ultimate unit of matter (e.g., the human body.) It is itself made up of infinitesimal atoms, positive and negative.

Disease is a disturbance of the radionic pattern of the subject. This can now be 'photographed'. Healing is effected by the application of something having the same electronic pattern. . . We suggest that all readers according to their opportunity, call the attention of their friends to these discoveries, which are as yet almost unrecognized, though work is going on in France and America and Oxford (England), which will most certainly be opposed by all who make money out of the present system."

(Note: by Editor of ARK).

'It was discovered by Abrams more than thirty years ago, that disease is an abnormality of the atoms of the cells, not of the cells primarily. He was able to devise a means of arresting the progress of intra-atomic disease such as cancer before the cellular damage has even begun. Delicate radionic instruments have since been devised and perfected ... yet are hardly known to the orthodox medical profession... About the same time, two French priests in the Matto Grosso Mission in the interior of Brazil arrived at the same results by the use of the pendule ... which detects the wave length set up by disease in the atomic elements of the cell, and were able to ascertain the remedial properties of plants with remarkable results.

'Scientists have since followed up and developed Abrams fundamental proposition, that the atom of any remedial agent produces its beneficial effect by virtue of the fact that its component electrons have a vibratory frequency corresponding to that of the diseased atom for which it is prescribed. These frequencies can be detected and measured. . .

'For every disease wave length there is somewhere in the magnetic field a corresponding wave length that acts as an antidote.

'It must be realized that many diseases originate in the soul and mind of man long before they affect the physical body - a fact recognized by Jesus in his healing ("thy <u>faith</u> has made thee whole: thy <u>sins</u> are forgiven thee, etc.) This element is always present whether we realize it or not.' **

*See note at end of article. ** Recognized in all 'occult' Orders.

(ml)

'Radionic instruments have been devised (as at the Delawarr laboratories in Oxford) which show that, all matter being a manifestation of cosmic energy, even the uncreated potential pattern of the flower can be shown by actual photographs from radiations given off from the seed, to be, so to speak, 'etched in space' ... these invisible radiations correspond to and build up in space the whole of the future form and pattern of the plant or tree, and can actually be recorded on photographic plates.

'In a similar way it is possible to capture the radiations from living cells and organisms by instruments so sensitive as to record even the radiations of thought. . .

'It appears that all creation radiates from a basic cosmic energy in obedience to a law of harmonics, and that resonance applies * not only to sound waves but to all radiations in nature... Resonance is a principle of growth as well as of design. The infinity of form and pattern represents the infinity of different arrangements, like the harmonics in music . . . Thus in the field of cosmic energy everything in creation has, so to speak, its 'number', its pattern.

'The instruments used in this new form of photography do not depend on light, but on modulated cosmic energy, the 'camera being first focused by a process of tuning-in, something in the manner of a wireless set, to record the radiations be it of a plant form existing in space, or a living organism, or of an aggregate of atoms, or merely a thought-form . . . I have before me a photograph of chestnut flowers taken from radiations given off from its seed, the chestnut itself, thus showing that the potential flower actually existed in space, though the visible flower was not yet created in visible form. . .

'Even more wonderful is a photograph showing an aconite flower as a result of the camera being tuned-in to a bottle of aconite pilules, the potential form of the uncreated flower existing even in the infinitesimal quantity of aconite contained in the pilules. . . . So also can the camera be tuned in to the radiations of the different parts of the human or animal organism through a blood spot taken from the subject ... and record the condition of particular organs on a photographic plate.

. . .'I have before me radionic photographs showing disease of the organs of the human body taken from blood-spots of patients which far excel in clarity those of X-rays. . . A photograph taken from the blood spot of a cow suffering from an unknown ailment showed the cause to be a stone and piece of wire lodged in the cows stomach - the cow being some 40 miles distant from the radionic camera. On the removal of the objects, the camera showed the stomach free from foreign bodies. **

- - - - - - - - - - - - - - - - -

* All underscoring is by the present writer (M.L.)

** The BSR Director has these and similar photographs, originating in the Delawarr laboratories (ML).

. . . 'Scientists at the Delawarr laboratories have found that tissues emit energy patterns consonant with their own cell structure, and that a disease radiation was additive to the normal cell radiation. It has been proved conclusively that there is a condition of resonance be - tween a patient and his blood or sputum specimen. It is now possible to detect the very early stages of any disease with a great degree of accuracy. . .

'These scientists are of the opinion that the radionic photographs referred to above represent the counterpart body built up in the ether, rather than the physical body as we understand it. . . Infection is first discernible in the counterpart body ... Diagnosis is frequently made from a lock of hair instead of from a blood spot. . .

'As to photographing thought radiations - I have before me a photograph showing a half-opened penknife. While the camera was tuned-in to his thought radiations, the scientist concerned concentrated his thought on a half-open penknife, and the astounding photograph was the result.

'A photograph of Oxford tap water showed the different elements by radiating lines; another showed tap-water and salt "after blessing". The latter showed a white cross superimposed over the lines. Thus it would seem that even our thought forms and intentions exist in space.

NOTE: (I recall that the Qabalist Dion Fortune once remarked, that the next advance in biology and medicine would be the recognition of the existence of the etheric body. .. That "thoughtsare things" has been a 'bromide' among spiritualists and occultists for generations - and so too with most persons who have observed the effects of ritual "worked with intention and with power". . . The giant 'space ships' now thronging our skies are certainly, in their origin, etheric constructs, made from etheric matter which by reason of its high density is amenable to the 'energy' of thought. . . The whole subject of etheric objects and 'doubles', and 'planes' and worlds and etheric Beings - is a vast and inexplicable lacuna in Occidental knowledge. This is the Great Gap, the incredible stupidity which vitiates equally our science and our religion... For ten years George de la Warr and his associates have struggled against bigotry and ridicule (and not least against the British Medical Association, true brother-under-the-skin of our AMA); but now at last they are being justified by sheer weight of factual evidence and rigorous research. . . Radionic therapy is the Healing Art of the future, and radionics in general is its science and metaphysics. ML

Homoeopathy is based on the principle of like to like - and the wave lengths or radiations from homoeopathic remedies can be equally well transmitted through radionic instruments as directly on the tongue of the patient, as hitherto. These instruments can also indicate which foods or medicines would be beneficial, or harmful. The spread of radiesthesia, in innumerable forms and especially in Europe, is realized by few - and on this Mme.Eyre-Smith gives important data, though we do not have space for it in this sketchy summary. (ml)

To continue, then, with further brief extracts from the Science and Healing brochure. Part III is entitled "The Sixth Sense in Man and Animal". 'The new discoveries referred to in these articles, and in particular the photographing of radiations, carried out at the Delawarr Laboratories, of as yet uncreated flower forms built up in space, bring to light an invisible world, which, as Langston Day has expressed it, would appear to be the framework on which our visible world is built.' Eyre-Smith discusses the data of healing by tele - pathic means, points out that it has been known and practised from the earliest times and among all races, and believes that all these phenomena can be integrated under the term of radiesthesia.

'Mr. De la Warr explained the evidence for what one might call the consciousness of plants. . . Radionic instruments seem to bear out the work of Professor Sir Jagadis Bose, and concerning this Captain Quentin Craufurd wrote: "There are difficulties about the meaning of consciousness as applied to the plant, for apparently the conscious part of it does not reside within; that some Being is conscious of what happens within the plant appears to be the nearest meaning we can get ... It means that those plants which supply us with drugs for the alleviation of pain contain their own secret ... there is no need to torture animals to find out the ef- fect of a drug on the nervous system - it can be recorded by the plant itself..." '

'Mr. de la Warr explained the means of treating deficient soils from a distance by radionic instruments' ("crop benefaction"). A relationship exists between an area of soil and the photograph of it. . . A decisive increase in productivity can be obtained by radi- ating the appropriate wave pattern to the photograph - referred to by World Science Review as an 'incredible and breath-taking dis - covery'.

'In a paper delivered before a scientific Congress in 1950, Mr. de la Warr stated: "There is indeed a scientific approach to under- standing the physics of the universe which will be acceptable to classical physicists, philosophers and theologians alike. Undeni- ably universal cosmic energy is present, call it Universal Mind if you like, but it is still energy and capable of being invoked. . .

'He explained the method by which it is possible by means of radionic instruments to tune in to the physiological and psycho - logical condition of a patient. "We believe that each cell has its own little force field aerial with which it tunes into and re- ceives fundamental energy; and that the totality of all these minute aerials constitutes the Etheric Body" ... "The wave form for a psychological condition such as anxiety can be produced and radiated or irradiated to the patient . . . This associates the mind and body in no uncertain manner.

'Mr. de la Waar concluded his paper by saying that their organi- zation wished to be associated with the New Laws of Physics which he enumerated as follows:' (next page, please)

The Manifestation of Universal Energy

1.
The fundamental energy of the universe in the form of energy particles manifests through any energy pattern which modulates it according to a law of harmonics.

2. All forms of matter radiate a combined form of energy which forms a force field body due to the interaction of inherent radiations.

3. The force field body is related to the atomic structure and acts as a complex frame aerial through which the fundamental energy duly manifests as matter.

4. The modulation wave form depending on space-time considerations can have wave characteristics.

- end of excerpts -

The real objective of the Science and Healing brochure quoted on foregoing pages, is to deliver a devastating attack on the practise of vivisection - and to do this in the name of the most remarkable findings of scientific research. The present writer considers vivisection to be an iniquity beyond words and sympathizes with this criticism.

Vivisection, however, is not for the moment our prime concern. We have been publishing material from the Langston Day manuscript and articles dealing with the work of the de la Warr laboratories; hence all our excerpts bear on this subject only. Further, the Science and Healing brochure (a reprint from THE ARK) is concerned largely with a religionistic approach - and this also is not shown by our quotations.

We give this much Round Robin space to SCIENCE & HEALING because it is an admirable exposition of extremely important scientific research. The printed legend on the brochure reads: "Science and Healing -- reprinted from The Ark, Nos. 52, 53,54,55 -- Printed at Catholic Records Press, Exeter" (Devonshire, England?). The brochure runs to 27 printed pages: no price stated; probably sent on request. We are indebted to Assoc. E.W.H. for the copy received by us.

PERSONAL BULLETIN SERVICE: In April 1954 we sent out a memorandum to all Associates, suggesting that they send us (say) ten (10) self-addressed and stamped envelopes (preferably No. 10, 9½"),to be used "in case" of rigid censorship of printed matter or other interference (re, the aeroforms, et cet.), or urgent news of any kind. The next Bul. to be used will be No.5; if you sent only 5 "eps", please take note. We have not charged for this service, but the demand (and work) has increased and any small donation will be applied to it.

ML

THE LITTLE GREEN MEN

The C. S. I. JOURNAL of Auckland, referred to on another page of this Round Robin, contains an article by Curtis Fuller which itemizes some of the "Little Men" reports:

"From the United States, Canada, from all over Europe come reports of the flying Saucers and of little men . . The main trouble is that the little men all seem to be different and they aren't always little. Some times they are "big".

Two eight-foot giants clad in pocketless metallic suits, says Sr. Ferriera, who claims they were in a craft that looked like a flying cup.

Munster, Germany: Franz Hoge, a projectionist, said that four creatures, about 3½ feet tall, came out of a cigar-shaped craft - had thick-set bodies, oversized heads and delicate legs. The craft gave off a blinding blue radiance.

Quarouble, France: Marius de Wilde, steelworker, saw a black mass of some kind on the railroad tracks, turned on his flashlight and saw two little men ... they had legs but no arms, and big 'space helmets'. A bright green light from the machine temporarily blinded him. "I seemed to be paralyzed", he told police. Then the object rose into the air with black smoke hissing out from somewhere. Police found burn marks on the railroad ties.

Bucine, Tuscany: Signora Rosa Dainelli while walking in the woods was accosted by two merry little men. They snatched a silk stocking and some carnations she was carrying. They took off in a spool-shaped craft.

Sudbury, Ontario, Canada: (This is the Sarza case. The three beings were about 13 ft. tall, of greenish-blue color, with a single eye in the center of the forehead; their bodies seemed to glow. They had "six sets of evenly distributed arms and legs; the hands were equipped with crablike claws. They had twin antennae on their heads.

Coldwater, Kansas: John Jacob Swaim, 12, while discing on his father's tractor saw a little man only about 20 ft. away - who then ran to his nearby saucer and took off. The footprints were pear-shaped, about 4½" long and a little less than 2" across the toes.

"One French report describes a small bearded man with one eye in the middle of its forehead" (writes Mr. Fuller, and adds): "if all these creatures actually exist they are obviously different kinds of beings".

The instances cited are sufficient to illustrate the oddities and wide differences among our planetary visitors. It may be worth while to pursue this subject for a few pages, though we may seem ourselves as ridiculous as a six-handed goblin with twin antennae on his head. ACHTUNG!

ARE THE "LITTLE MEN" ELEMENTALS?

In our Clips & Quotes E-8 (Nov. 1, '55) we quoted the comments of the trance Control Natalli - who had been questioned about the enti - ties mentioned on the preceding page. With apologies to CQC readers we quote the substance of his remarks:

'The Green men are also space beings, and can construct and operate the Discs or 'Saucers' much as do the other space entities now visiting your earth. Yet they are more in the nature of Elementals. They are often mischievous, inquisitive and imitative, but seldom malicious. They are related to the Space People in about the same sense that your earth Elementals are related to humans. Elementals are not excarnate humans and (strictly speaking) do not belong to the human evolutionary order. The universe swarms with life in a multitude of forms. . .

Now we can begin to see why Jerry-Know-Nothing can accept this weird visitation of the Aeroforms with more equanimity and common - sense than displayed by his supposed betters. For what can be more ridiculous and downright revolting, to the scientific and academic intelligence, than this talk about Elementals, in broad daylight and the mid-20th century? Pay but the least attention to such bobbery, and presently we shall be asked to consider witches and warlocks, and doppelgangers, and maybe all the host of Erebus begin to squeak and gibber in our (Roman) streets. There is, however, a considerable store of information, or alleged information for anyone who wants it --

'Elementals' says Dr. De Purucker for instance, 'are conscious ethereal entities, as invisible as ether ... they are Nature spirits of countless kinds, from unsubstantial thought forms down to invisible but atomic organisms. They are in the fire, in the water, in the earth, in the sky ... each in its appropriate sphere, just as men are on the earth. Some are very friendly to men, some are hostile, not by will but by natural character; men and they don't tune in together. Some of them can and do communicate with men . . . '

Gnomes and fairies, sylphs and salamanders - these names at least are known to most of us, and they are associated with the 'Four Elements' of the ancients - that is, with solids, liquids, gases, and radiant energy. But their names and orders are legion, among all races, in all lands and ages. It would take a library to contain what has been written about them. Much of this is strange and fanciful, and altogether lovely. Some of it is also centered about a hard core of facts and natural law.

The Comte De Gabalis (by the Abbe de Villars) is a wise and witty book, which has in it much lore of the elemental kingdoms, and I quote briefly from it. And I add here, most unwisely, that occultists throughout the world know very well that these elemental creatures exist, and can be invoked and seen and conversed with, though cautiously and according to their kind.

Le Compte de Gabalis; Paris 1670

"This book", wrote Alexander Pope, "both in its title and size is so like a novel, that many of the Fair Sex have read it for one by mistake. . ."

"When you have been enrolled among the Children of the Philosophers and when your eyes have been strengthened by the use of the very Holy Medicine, you will straightway discover that the Elements are inhabited by the most perfect beings. . . The immense space that lies between earth and heaven has inhabitanta far nobler than the birds and insects. These vast seas have far other hosts than those of dolphins and whales; the depths of earth are not for the moles alone, and the Element of Fire was not created to remain useless and empty.

"The Air is full of an innumerable multitude of Peoples whose faces are human, seemingly rather haughty, yet in reality tractable, great lovers of the sciences, cunning, obliging to the Sages, and enemies of fools and the ignorant. Their wives and daughters have a masculine beauty like that of the Amazons".

"Why, Sir, I ejaculated, 'do you mean to tell methat these hobgoblins are married?'

"Don't be upset by such a trifle, my son", he rejoined. Believe me, everything I am telling you is sound and true. These are but the Elements of the ancient Cabala ... Know that the seas and rivers are inhabited as well as the Air. The ancient Sages called this race of people Undines or Nymphs ...

"The Earth is filled well-nigh to its center with Gnomes, peo - ple of slight stature, who are the guardians of treasure, minerals and precious stones. They are ingenious, friends of man and easy to govern. The Gnomides, their wives, are small and very amiable, and their dress is exceedingly curious. As for the salamanders, flaming dwellers of the Region of Fire, they serve the Philosophers, but do not seek their company eagerly, and their daughters and wives rarely show themselves".

"They do right, I interrupted, "and I had rather have their room than their company."

"Why so?" inquired the Compte.

"Why so, Sir?" I replied. "Who would care to converse with such an ugly beast as a salamander, male or female?"

"You are mistaken", he rejoined. "The Salamander women are beautiful, more beautiful even than any of the others...

COMMENTARY: When speaking of the four Elements, their range of vibration in matter is meant. Obviously, visible and transitory flame cannot be the habitat of a long-lived race. Yet the Ele - ment of fire, or its rate of vibration, interpenetrates every manifestation of Nature, even the grossest, as the finding of radium in pitchblende evidences, and in this clearly defined range of

vibration a race of intelligences highly differentiated and evolved has its being. The essences of the earth, air and water are also filled with conscious and appropriate life. If man will purify his body, emotions and mind ... he may enter into harmonious relation - ship with these People of the Elements. (Lotus Dudley).

Commentary, con. -

Numa.- When those Higher Intelligences which guide the evolution of mankind have determined upon that fixed ideal or principle which shall hold together in concord the minds of a race for a certain epoch of time, in order that a definite range of experience may be gained, they send their Messenger to mankind . . . creating in the minds of men that new ideal . . . (L.D.).

(From Discourse IV: The Abbe' to Le Comte):

Sir", I interposed, pray let us drop Melchizedek, the Sylph that begat him, his cousin Egeria, and the sacrifice of bread and wine. These proofs seem to be rather remote. I should be greatly obliged if you would tell me some more recent news. For when someone asked a certain Doctor what had become of the companions of that species of Satyr which appeared to Saint Anthony and which you call a Sylph, I heard him say that all these folk are dead nowadays. So it may be that the Elemental peoples have perished, since you own that they are mortal and we hear no tidings of them."

"I pray God" exclaimed the Comte with emotion, "I pray God, who is ignorant of nothing, to be pleased to ignore that ignoramus who decides so presumptuously that of which he is ignorant. May God confound him and all his tribe! Where has he learned that the Elements are abandoned and that all these wonderful peoples are annihilated? If he would take the trouble to read history a little, and not ascribe to the Devil, as the old wives do, everything which goes beyond the bound of the chimerical theory which has been constructed about Nature, he would find in all ages and in all places proofs of what I have told you".

(The Commentator, Lotus Dudley, offers an example of the "more recent news" which the Abbe' asks for, by quoting Document 278 of 1912, Records of the British Observatory at Bombay. The passage describes a long series of remarkable appearances of the sea, with flashes of light and violent agitation of the water without visible cause. But now with the true visitation of the Etheric people, including certain types of the Elementals, we have almost a surfeit of the marvellous in our daily fare, so that I shall not quote verbatim from the Document referred to. ml).

The book Comte de Gabalis, by the Abbe' N. de Montfaucon de Villars, translation and commentary by Lotus Dudley, was published by Macoy Pub. a n d Masonic Supply Co., N.Y. 1922. The Comte de Gabalis books are famous in occult literature. We shall be glad to learn of any titles for sale. ml

PROJECT APOLLO

(Preliminary note: The following information concerning certain 'medical rays' was received by our Associate Rolf Telano in 1952. Publication was delayed in the hope of receiving more detailed information. "It seems" (R.T. now writes)"that the basic idea is correct, but the exact frequencies are not, it being quite a job to translate this data into our standards here. . . Nothing more was ever received, but if you want to print it as experimental data only -- a sort of basis from which researchers here could begin, with some sort of caveat about the accuracy of the frequencies, I can see no objection . ..

("I fear that perhaps, as was the case with Project Hermes, the available electronic components on this planet may not be capable of producing the correct frequency, but can see no reason why any qualified researcher should not be given any available information.."

(Assoc. Rolf Telano is known to our readers as the author of a remarkable brochure "The Flying Saucers" (a BSR publication). He is an electrical engineer by profession and a resident of Ohio. His receptivity to Etheric contacts has never been publicised).

The Communications:

MODUS OPERANDI: With the exception of the first ray mentioned below the entire group function by stimulating certain glands of the body into extra-normal activity. The glands involved are chiefly the endocrines, although some rays also involve some of the secondary sex glands.

LIMITATIONS: This group of rays works by greatly accelerating natural processes. They cannot effectively function if the control glands have been surgically removed, have completely atrophied, or are undeveloped.

APPARATUS: The apparatus used is basically an oscillator and amplifier, of fairly conventional design, though some minor modifications may be necessary. Frequencies should be maintained within plus or minus 17.5 M.C. of the specified optimum in each case. Use of crystal controllers and temperature compensated components is recommended. Closer control than the allowable drift specified above will increase the effectiveness of the rays.

All components should be fully shielded to prevent any stray radiations or the production of undesired harmonics.

Output radiation is directed by a parabolic reflector, so arranged as to permit either sharp or broad focus of the beam.

CUT-RAY: 296.5 M.C. - Used in surgery at very sharp focus and relatively high power. Functions by destruction of the tissue and should therefore be used with great caution,, preferably only by a competent surgeon or biologist.

GENERAL HEALING RAY - 407.5 M.C.

Used to promote the general healing of any wound or diseased part of the body. Focus is adjusted so that it covers the entire area involved, and comparitively long exposures are used at moderate powers. It is also sometimes used at a very wide focus, to cover the entire body, at a very low power, as a general "tonic" ray.

LORNICE RAY - 468.5 M.C. - A sedative ray used at moderate powers and medium broad focus to reduce hypertension in any part of the body. It is also used at broader focus and lower power as an aid in reducing fatigue poisons and to promote general relaxation.

JOINING RAY - 507.5 M.C. Used to cause cellular fusion. In surgery it is used at relatively high power and very sharp focus to suture wounds of any nature. Such use is generally held to a minimum, due to the very powerful effect of the ray, and the complete healing continued at a slower rate under general healing ray (407).

It is also used in biological research to cause dissimilar genes to unite, thus permitting experimental cross breeds which could not be produced by natural means.

DETOXIFICATION RAY - 572.5 M.C. - General use is at wide focus and moderate power to purge the body of any toxic substance. It can also be used at sharper focus and somewhat increased power to cleanse the toxins from some specific organ of the body. It must be used with considerable caution, as prolonged use tends to also destroy certain beneficial micro-organisms in the body.

This ray also aids in the elimination of radioactive or "age" toxins, although its effect on such is relatively weak, and the use of certain chemical absorbents and purges is usually also necessary in order to have any significant effect in this category.

GROWTH RAY - 896.5 M.C. - Used chiefly in biological and horticultural research to accelerate the growth of any form of animal or plant life. It is effective only on carbon-based life-forms, having no effect upon silicon-based forms. These latter are represented chiefly on your planet by the various viril. Focus is adjusted to cover either the entire body, or only the portion which it is desired to stimulate, as the details of the experiment may require. Intensity of power is also dependent upon the requirements of the experiment.
This ray is also used on humans, very occasionally, to correct cases of retarded development, general or specific. Such use requires maintenance of very delicate balances, and very great caution.

EXPERIMENTAL WORK: Since the rays are capable of doing considerable harm, the user is advised against preliminary experiments on human subjects. The mechanism and its use should both be fully proven by animal experimentation -- and such experimentation should be carried on at very reduced powers during the preliminary stages.

Rolf Telano

RADIESTHESIA IN BRITAIN IN 1955

-by-

Egerton Sykes, in Pendulum

The position of radiesthesia in Great Britain still shows signs of confusion, and some lack of coordination. Apart from this there is a tendency on the part of many investigators to cloak even the simplest forms of research with a veil of secrecy calling to mind the alchemists of the middle ages. In the following is given a list of the more important bodies with an endeavour to give a reasonable assessment of their relative positions.

The first and most important is the British Society of Dowsers, with a quarterly journal RADIO PERCEPTION which goes to all its 700 members, scattered over Britain and the Commonwealth. The great majority are interested in water divining and mineral prospecting rather than in the medical side. Colonel A.J. Bell, D.S.O., who has for many years been Chairman, has, with a skilled hand, guided the divergent elements in his committee through many storms. Unfortunately it must be admitted that the organization is handicapped to some extent by its reluctance to participate as a body in international groupings. The address is: York House, Portugal Street, London, W.C.2, England.

The second organization is the Society for Medical Radiesthesia. They formerly published an annual, "Radiesthesia", which is now suspended. There are about 40 members, mainly Doctors, and they have conducted much valuable experimental work since their formation.

Next in order of importance is the London Divining Methods Research Group, whose chairman is Mr. Noel Macbeth. They hold frequent meetings during the winter, and publish a monthly typewritten circular, one or two pages. The number of members is assumed to be about 30, but the number of those attending lectures is doubtless considerably larger. They may be considered as followers of the late M. Turenne.

Then comes the A.R.O. headed by Dr. Michael Ash. This research organization holds frequent lectures and an annual Congress, the current one which is being held while this issue goes to press will be reported shortly. The emphasis of the work is on the combination of religion and medical science. A large number of eminent people ranging from Bishops to Harley Street specialists have at one time and another been associated with this group.

Another organization is the Electronic Communication Society, which is mainly concerned with the electronic reception of psychic communications and radiesthesia. There are about 30 members. The secretary is Dr. Royston Low.

The Psychic World has also been turning its attention to Radies - thesia, having been introduced to it through the medium of parapsy- chology. This is all to the good as, apart from the fact that it will tend to widen the field of interest, it is also part of the movement to switch over a section of their activities towards a more construc- tive field of endeavour than has always been the case in the past. . .

There are two journals dealing with Radiesthesia: "Radio Percep- tion", the organ of the British Society of Dowsers mentioned above, and the PENDULUM in which this article appears. Other publications have from time to time made sporadic appearances, but at the moment the situation is as described. . .

Public interest in Radiesthesia in Britain is, as yet, dormant. The proportion of those taking any active part in investigations, is the lowest of any country in the West of Europe. As mentioned be - fore the total circulation of all the periodicals on Radiesthesia in the Anglo Saxon world is under 2000, a figure which can be topped with ease by most of the French and Belgian periodicals and probably also in Germany and Switzerland. This state of affairs is in part due to the bad reputation given to all things in the paranormal field by the excesses of some enthusiasts in the inter war period, a n d also by the fact that the Anglo Saxon public, as a whole, is inclined to be suspicious of assertions made in a phraseology which they can- not always understand. . .

(Pendulum, Aug. '55.

- e n d -

Harold T. Wilkins, in letter to BSR.

. . . . About a year ago I drew attention of your readers to disturbing phenomena in the reg- ion of Portsmouth dockyard, the naval center of the British Royal Navy. I then said that the au- thorities were worried by the mysterious 'ionization' or interruption of radio service for which no cause could be found. This hiatus also affected the BBC broadcasting programs. One R.N. officer said: "we wish to God we could find out the reason".

Lest some persons should deem that since the "free" British press has for many months shut down on "Saucer" reports, these flying o b- jects have lost all interest in our planet, let me undeceive them. (Of course I well know that if there be no will to be undeceived, all efforts will be as the crackling of thorns under the fool's pot).

Apart from the fact that in August last both fleets and units of UFO were seen as far apart as Newcastle on Tyne and Birmingham in the Midlands, and the western shire Cotswold Hills, consider the follow- ing sent me by a woman ex-air-pilot who lives in the Portsmouth area. She writes of what happened at 6:00 p.m., Saturday, October 8, 1955:

"Once more I have to report to you the same indications of mys - terious 'saucer' activity. On the night above I switched on m y wireless set, time 6:00 p.m., and there was no come-back from any station on any wave length for four minutes. I do not know how long the total cut-off was, but I do know that it normally takes or ly one second for my perfect set to warm up , and my set then went completely dead on all stations, foreign and home."

Of course, not one word has appeared in the British press either local or national about these radio phenomena. Nor has one word been said about the strange gray shape seen in the sky over the English Channel, by passengers, pilots and hostess of an air-liner bound from London to Paris, early in September 1955.

As sheep before the shearers we stand, if not dumb, then certainly as dumm in the German and German-American sense. Now we hear of pain and paralysis rays being put on at night for one minute, by a strange UFO hovering over a lonely place in Sao Paulo, Brazil. The man on whom the rays were projected was rooted to the ground, and for 28 hrs. afterward suffered a violent cerebral pain which no available doctor could diagnose. And there have been strange fires caused in the bush of the Meseta Central of one Central American State - which also r e - ports a "saucer" landing and use of a base in an extinct volcano in an unexplored region not more than 150 miles away.

In the first incident the local charcoal burners have been so scard that they will not venture within miles of the region where the UFO swooped down and caused the fires in Martian fashion (a la H.G.Wells). In the second incident a "violent" radiant energy is used, of unknown type to us - who know so little of the unknown octaves of the solar spectrum,-the impact of which turns stone to something like a colloid- al or sugary substance.

The voices cry in the wilderness. They ask, 'what do the world's Governments know and conceal from the herd who pay them. And meantime we know not what these mysterious objects are here for, except that it is NOT for our benefit, nor to provide vicarious gigolo-thrills for old women with more money than sense and too much time on their hands, at places like Tunbridge Wells, Kent.

We are like Montezuma and the Aztecs were - really far worse - be- fore Cortez landed with his Castilians and put paid to the old Empire of Mexico. God, what fools these mortals be! They talk of thrills from "luvverly men" from Venus, and they have - pain rays, fire rays, paralysis rays - from entities "yearning to save us from our conceit and folly". The voice calls in the wilderness and the reply is from the silly old women of Tunbridge Wells - that Kentish spa, the symbol of our fools! . . .

H.T. WILKINS, scholar, explorer, scientist and author needs no intro- duction here. The letter quoted is characteristic of his courage and sincerity; vox clamantis in deserto, almost alone, since the few voices

since the few voices of like opinions, including the chirp of this Robin, do not have a comparable audience. But as to the abundance of data of the kind cited by H.T.W., and the hoodwink we reach for when it is mentioned, there is no doubt whatever. It would be easy to fill every page of this RR with substantiated facts which could be, might be and may yet be the alarum-bells of Terra.

To cry WOLF too often is a dark dis-service to the sheep. Is it any less dis-service not to raise this cry at all?

Oscar Wilde described the English fox-hunting gentry as "the un - speakable in pursuit of the uneatable".

The legless moppets, the six-armed gnomes and the one-eyed giants are 'unspeakables' to our peccant taste (IF they exist, as of course they do not!!!). But are we quite sure that we are classed as un-eatables, in the environs of Shan?

This reminds us, that one of our most tough-minded contemporaries * (Saucer News) announces a nonscheduled Newsletter, "the purpose of which is to bring to you certain information which is too hot to han-dle in regular editions." We know how the S.N editor feels, since our Personal Bulletin service is offered for the same reason.

The gathering of the UFO in Chile and Venezuela was reported to us several weeks ago, first by 'psychic' means, later by our foreign Associates. A series of unexplained fires in the forests of Puna & Kapoho, T.H. have been accounted for so 'plausibly' that we prefer to blame Pele for the whole affair **

Under the title, Children's Day at Casa Blanca we have given an ac-count of a group of fantastic entities who frightened a number of children, near Riverside, Calif. (August 28, '55). See our issue of Clips & Quotes, with mimeo. drawings. Of course grown-ups don't believe children's stories, but the small fry who wept for an hour afterward are believers - so, who's a psychopath?

The concern expressed by H.T. Wilkins over the intent of the Space People is repeated with almost equal bluntness by L.H. Stringfield Editor of ORBIT ***. "Why Operation Earth? What of the mind behind these operations? Only a few have reared their heads from the sand to seek the answers, and fewer still to offer a theory... Perhaps a small group of international military officials know all the answers-but more likely they know some only and wish for all . . . But we do have a few directional hints from informed people, and these, backed with workable evidence suggest that the Saucers' mission to earth is not benevolent." (LHS)

THE MORAY MYSTERY

by
Gaston Burridge, BSRA

Is there a group of high frequency vibrations pervading the cosmos, faster than the speed of light? Do these vibrations continually bom - bard, not only the earth, but all else, with an almost fantastic amount of energy? If so, can mankind tap this power flow by suitable means - with a device something like a radio receiver, only in power propor - tions?

Mr. T. Henry Moray, of Salt Lake City, Utah, believes so. After dis-covering the existence of these vibrations, he has worked for more than 30 years on an electrical mechanism which he claims will intercept them. He calls them, and his device, "Radiant Energy". He tells me he has developed his circuit and its equipment to a present output capacity of around 50 kilowatts, or slightly more than 67 horsepower per unit. The size of the complete outfit which produces this amount of energy meas-ures about 30 inches long, 16 inches wide, and 16 inches high. As near-ly as can be estimated, the system would cost approximately $800 t o build, singly. Mass production would probably effect much lower costs.

The electrical current which flows from the secondary of a 1000 to 1, step-down transformer in this apparatus, is of extremely high frequency, thus is an alternating current. I am told it will light ordinary incan-descent light globes. The light these globes emit is "whiter", less "stabbing" to the eyes when looked into directly, than the light pro - duced from the same bulb when lighted by house current. It appears sim-ilar to a fluorescent tube's light. Some say the bulbs so lighted are cool to the touch - except at one spot. Others contend they are much hotter! It seems agreed the actinic qualities of this light are high - that is, its effect on photographic films is great - and fast. O n e must stop his camera's lens way down in order not to overexpose his film. Out some distance from the lighted globe, when photographed di-rectly, appear a dark circular ring. This ring looks like a shadow poised in mid-air, yet appears to possess considerable transparency.

The current output will also heat electric flat-irons or other radi-ant heating electrical equipment just as commercial electricity does. These seem to be heated in much less time than by commercial electric-ity. It will not operate commercial electric motors, however. Motors must be wound especially to function on this type of current. When so wound, develop fantastic speeds, according to Moray - speeds as high as 36,000 revolutions per minute! These motors are said to run per - fectly cool. They are not very efficient, though, as compared with the everyday variety of alternating current motors which now turn industri-al wheels or run one's refrigerator or vacuum cleaner. Moray s a y s

these high frequency motors glow in the dark, when running, with a rich violet halo or aura.

Many persons have seen demonstrations of the Moray device. Prob - ably, many more than 100 persons have witnessed such demonstations. I have letters from some of them. I have read photostatic and print- ed copies of many more. Of those who have seen the exhibitions o f the Radiant Energy system, many feel it is a perfectly legitimate dis- play. Others feel it is faked in some way. However, none of those who feel it is faked will offer any explanation of how they think t h e fakery is accomplished.

I have discussed this matter at length with one engineer and physi- cist. He is a man who has seen many exhibitions of it and who has a Ph.d. He has the high respect and esteem of his colleagues. While this gentleman feels in his own mind that the Moray device is a fake, he freely admits he has no idea of How it is faked - if it is - nor have any of those of similar training, presented him with any plausi- ble explanation of how they believe the fakery might take place - if it does.

This gentleman tells me he has passed a loop of wire completely a- round the device while it was operating. Thus he feels rather cer - tain the device has no outside power connections. He believes no sort of wet or dry batteries could furnish the amount of power he has wit- nessed produced by the "box" for as long a time as it appears to have produced it.

We discussedat some length, the possibility of the apparatus being fed through induction from an outside electrical source. His search would indicate any such means might be ruled out. We concluded, much like the old-timer said, "It ain't the things you don't know that hurts you. It's the things you think you know for sure that ain't so!"

Early in Moray's development work, he used both an antenna a n d ground connections in the operation of his system. Some said t h e mechanism obtained its power by induction from a power line. Moray no longer uses either an aerial or ground connection! When he did use them, the antenna was always placed at right angles to any known power line, not parallel to it! Thus, an antenna certainly would not absorb much energy from a power line so placed.

Others have claimed Moray received his energy from radio trans - mitters. To anyone knowing anything about such matters, this claim is almost laughable, because to amplify radio signals enough so that they may be even heard through a loud-speaker, electrical energy has to be fed into the radio set!

There is a rumor, however, that Moray's power bills were high during times when many demonstrations were being given, but there is no substantiation of this at all. . .

Moray's apparatus is made up of several different groups of material. It contains some coils of wire. Such coils of wire are called inductances. It also contains items called condensers, or capacitors. Electrical condensers are made of alternate sheets of metal foil with sheets of a dielectric, or insulating material, between them. An electric condenser will absorb an electric current. Then, when its capacity has been attained, the condenser "spits" or "explodes" this pent-up energy back out into a circuit. If no circuit exists, then it will discharge between its own terminals or puncture the dielectric and "short" itself out. The Moray apparatus also contains electronic valves, or vacuum tubes - like radio tubes - only much larger. The system also contains a bar of silver and a bar of copper of certain sizes and distance apart. Added to this is a "starting mechanism".

If any part of the Moray device is more important than any other, that part would appear to be these vacuum tubes or valves. There seem to be two types of these tubes. Those which Moray calls detectors, and those called oscillators. Of these tubes, the detector seems to be the most critical, the most fragile, the most likely to get out of adjustment easily. Even a slight jar is cause for this tube's failure - or at least, it must again be adjusted before the mechanism can be brought back into operation.

These particular tubes or valves are known in electronic parlance as "cold tubes". That is, their operation is not accomplished by electrically heating a filament and having the electrons thus discharged provide the means of passage of current between various parts of the tube. Just what means are used to provide this passage of current in the Moray tubes is one of Moray's secrets. A good guess is, the tubes contain some sort of radioactive materials. As both the detector and oscillator are cold tubes, it may be assumed both contain radioactive materials. But whether they both contain the same kind of material, or totally different materials, is not known to me.

The tubes are not made after the conventional pattern of electronic valves. To describe them would be uninteresting to all except those electronically minded - and at the same time, it might possibly make known some of the tube's secrets - a thing I have no desire to do. The tubes are of Moray's own manufacture as well as his own design. Probably, these tubes are the weakest link in the device's chain, and one which production methods and practices would improve markedly.

Another of the Mysteries of the Moray apparatus is the function of the copper and silver bars. Whether their size, their weight, their distance apart, their composition, is critical or not, we have no way of knowing - and Mr. Moray isn't saying! It is quite possible they are

there purely as a decoy. It may be also possible their composition is important and they are "copper" and "silver" in name only! As we learn more about the various "radiations" of different materials, it is quite possible these bars lend a certain"balance" to the operation of the cold tubes in the apparatus. Again, they may function as an "absorbing agent for certain waves or vibrations set up in the machine when operating. - Whatever their use, it is esoteric as far as any orthodox physicist or electronic engineer I have talked with is concerned.

While in operation, the Moray device "runs cold". It would appear it working creates no internal heat - or at least, only a very small amount of it. The longest record of continuous performance of the device is given as something over 74 hours. On an endurance test, the system was operated under standard R.R. Seals for a total of 157 hours and 55 minutes Examination of the various parts of the device after this run revealed no flagrant weaknesses.

As can be readily seen from the above, the Moray system does not approach anything which could be construed as "perpetual motion". We know that even the sun does not completely replace all the energy it spends, and one day, perhaps some billions of years hence, it too will become a red star. Mr. Moray does not say the energy source which he claims his apparatus taps, is everlasting. He does not believe in perpetual motion perpetual light or perpetual power sources. He does feel, however, the source of power his system taps is sufficient for all mankind's needs for the foreseeable future.

Who is Thomas Henry Moray? Moray is an electrical engineer who was born in Salt Lake City, Utah, August 28, 1892. He is the son of John C. and Petronella (Larson) Moray, and is of French and Scottish ancestry. He was educated in the public schools of Salt Lake City. After graduation there he attended the Latter-Day-Saint's Business College of that place. Following graduation here he completed an electrical engineering course with the International Correspondence School, then obtained his E.E. from the University of Upsala.

Mr. Moray held a position with the Utah Power and Light Company as electrical engineer and designer. He maintained a similar place with the Phoenix Construction Company. Moray was assistant to the Chief Engineer of Aarastard Construction and Engineering Company. At one time he had a responsible place with the Mountain State Telephone and Telegraph Company. His experience was broadened by a stint as a consulting engineer in private practice. He has written many articles for several publications on electrical subjects.

Moray is credited with having designed the electrical layouts for some of the West's largest buildings as well as for some of its early important power plants. He was a First Lieutenant, Electrical Engineers, U.S. Army, during the First World War. For the last number of years, Moray

has devoted himself almost exclusively to free-lance research along Radi ant Energy and kindred lines at his own laboratory in Salt Lake City.

This very high frequency energy Moray says he taps, comes to the eart in definite oscillations or surges. His device picks up these oscilla- tions through its oscillators or, as he explains, through "neutron bombardment". The energy has what he calls a definite "elastic rigidity", which is said to be subject to "displacement and strains". When these strains are removed, this medium springs back to its former position - and then, beyond it - thus surging back and forth like the waves of the ocean, only at infinitely higher speed, of course. It continues to so oscillate until the original pressure is entirely consumed.

If some internal impedance is too much, no oscillations will occur. By artificially cutting this resistance to a minimum, (tuning the circuit) synchronous actions of the system will build up and recovery will come faster and faster until "inertia will assert itself and then lengthen out the time of the final recovery by carrying the recoil beyond the natural oscillations, thus prolonging the vibrations by oscillations. When the recovery is distinctly oscillatory and harmonics set in, t h e oscillations will go on forever because of the oscillations of the "Universe", according to the Moray theory.

While those engineers and physicists who believe the Moray apparatus is faked, but do not present explanations of how they think the fakery comes about, they do present other points which should have a hearing. One is, that nearly 30 years have passed since Mr. Moray gave his first demonstration, and Moray has, as yet, obtained no basic patents or no patents on any applications of this energy.

Further, they point to three separate patent applications made by Moray to the U.S. Patent Office, which have been denied. They say the laws covering the granting of any patent in the U.S., clearly state an application must contain, in drawings and text, sufficient information regarding the device so anyone familiar with the art covering said device, will be able to construct a working model from those application drawings and text. This, these men contend, has never been fully furnished by Mr. Moray, thus the applications have had to be denied.

Again, some of these men say they know of several occasions upon whic Mr. Moray was offered substantial inducements by men representing respon sible concerns, if he would perfect a workable model and allow them to manufacture it. Moray has, they contend, always - at the last moment - turned these propositions down. Moray claims there was always a "hidden string" attached. . .

Of course, there must be mutual regard for the other party's word in any business transaction. If such does not exist there can be no transaction.

All this author can say is this: If the proposition made to Mr. Moray by the Fisher Brothers of the Fisher Body Corporation, General Motors, was actually made by them as reported to me by those who "say they were there", and if Mr. Moray had accepted it, he would be one of the richest men in the world today! Why Moray did not accept that proposition is another in the long list of Moray secrets.

Time dulls memory's sharp edges of any past event. Predictions of the future are always dangerous. It is my belief, however, that Mr. Moray's apparatus - whatever its value or merits may be - will probably die with its inventor. Mystery always spins a silken web. The strands always push in closer after the principal has passed on. The intricacies of this web would,even now, fill a good sized book.

Perhaps it is as Mr. Moray says, "A man one year ahead of his time is progressive and respected. A man five years ahead of his time is a radical and dangerous. A man twenty years ahead of his time is a nut and shunned."

How far ahead of his times is T. Henry Moray?

- e n d -

And Dr. T.H, Moray himself, writing in PENDULUM for May 1955 says in part:

The earth is a huge generator producing 200 million amperes of electrical current ... Nicola Tesla said 'ere many generations pass our machinery will be driven by power obtainable at any point in the universe. . .'

"Radiant Energy, as the term is here used, is the energy which exists in space surrounding the earth but not limited thereto, and which has or may have its source in the natural processes and move - ments of the earth, in the earth itself and in its atmosphere and components parts or elements in celestial bodies. This is the same source of energy tapped by any electrical generator in one's automobile, motor boat, or the mightiest electrical power plant in the world. In other words, one method employs a mechanical prime mover to oppose magnetic lines of electric force. The Moray method employs an electrical oscillatory method to to oppose oscillatory lines of force.

"The energy received is all the same, electro-magnetic. This is not a new force - only a different way of tapping an existing one.

. . ."Whatever the quantity of electricity in the universe there will be no kinetic energy delivered if there is no disturbance of equilibrium - that is to say, a chnage of potential or electrical level.

. . ."It is a mere question of time when men will succeed in attach - ing their machinery to the very wheel work of Nature. . ."

TSK!. TSK! REACTIONS:

TSK! TSK! is also represented in print, I believe, by TUT-TUT, sometimes perhaps by EH? W'OT! It indicates, among other sentiments, surprise, scepticism, and pity. It translates into "isn't that too bad", and "how did he get that way?". Our Associate C.A.P. encountered it recently in a group listening to a tape recording made (injudiciously) by the BSR Director, and which contained at least two TSK! provocations. These were about as follows:

A. Anything the human mind can conceive exists somewhere -
B. You ARE where your consciousness is -

Now, the idea back of the first of these is simply that mental action, while not an energy as that term is used in physics, is 'energic' in character. It affects etheric and astral matter, as well as matter which our senses can perceive. It produces thought-forms, and 'thoughts are things'. You can create your own angels or hobgoblins, or anything else, and these will be 'real' existents in etheric matter. Their existence may be very brief, or it may not. Mental creations may exist for centuries if they are sustaind ('ensouled') by belief, worship, fear, or love. If the Gods and demons of antiquity are dead, it is only because their worshippers have fallen away. To revive them is not too difficult, as many occultists are well aware. (The proof of such statements is neither short nor simple, but is accessible to those who really want it).

As to statement "B" - this has always seemed to me the most basic axiom of occult thinking, obvious and undeniable, but involving many different angles of approach. The TSK-TSK'! attitude is rooted in the identification of mind with the physical body - that instinctive and powerful delusion from which few of us ever es - cape during earth life. But supposethat you, sitting here in your chair, are listening to sounds in the next room. That means that a part of your attention, of your awareness or consciousness has gone away into that room. Suppose further (what is quite possible) that you become so intent and concentrated that ALL your attention is in that other room. The question then arises: Where are YOU?

There is only one possible reply to this. Remember that the <u>whole</u> of your awareness is by hypothesis now in another place - there's nothing left over, or left behind, so to speak. This "projection" of conscious attention takes place at every moment of our waking life, but usually in a partial and small degree; yet it can be trained, controlled, and increased - perhaps the 'most important' fact in human psychology - as well as the most neglected one in the disciplines of our so-called education. Well, the Tut-Tut inquirer, when held rigidly to the question, usually begins to founder. "<u>Of course</u>", says he,"all I'm conscious of is the next room. But what about my physical body? It's still here, isn't it?"

One reply would be: 'How do you know it's still here? You're not aware of it.'

- "But I remember it. If I go back there I shall find it. If other people go into the room they will see it."

Every one of these statements is an inference, from remembered experience or from ingrained belief and habits of thought. How does a room look if there's nobody to see it? What does thunder sound like when there's no one to hear it? You might remember about your physical body being in another place, and believe it is still there, but the upshot is inference and not certainty.

What happens in the case of an astral or etheric projection? The YOU, the consciousness, gets out of the physical-chemical body and into control of another 'vehicle' - another body just as real as the first one. Let us take the common view without questioning it and say that the first body does stay behind in a trance state. Are you going to say that this is YOU? Or that you now have two you's? But awareness or consciousness is YOU. If you die are you going to say that your dead body is you? It is necessary to decide what is meant by this word YOU - and then to avoid using it in two incompatible ways. If awareness of self, and of surroundings, and voluntary movement, and memory are essential, and yet you describe your self in terms of a form (the physical body) which has none of these, you are abusing language and logic. YOU ARE consciousness, and you are where that consciousness is - for if not, where else?

In all this I am, of course, by-passing all kinds of relevant subtleties and holding close to our one 'maxim'. Consciousness, awareness and attention are practically equivalents for our present purpose. And attention goes (as we say) to Polaris as quickly and easily as from this page to the next one. That means it is independent of space; and where space is not, no time is required for the 'crossing' of it. It is like the electron which (according to Russell at least) passes instantaneously from one orbit to another, and hence requires neither space nor time. This seems to be the time-vacuum of which the Control Natalli speaks and which hints at very great mysteries. My good friend Frank Edwards, communicating shortly after his death, told me: "If you can't control your attention after you get over here you will be bounced about from heaven to hell". That means once again, we ARE where our consciousness is, and nowhere else. The saving grace in this situation is, that attention control can be learned and extended indefinitely. It is the greatest of all achievements, on all planes of which we have any knowledge. It would rid our lives of pain and solve all problems for us, and give us true dominion over space and time.

'As the long-legged water-skimmer in bright sunlight moves boldly on the surface of unfathomable pools, so the symbolism of words passes lightly over the mysteries of the Abyss. '

ML

FURTHER EVIDENCE OF AN ETHER

by
Assoc. C.F. Krafft

In my previous article on "The Existence Of An Ether", the subject was treated from an astronomical standpoint, and it will now be considered from the standpoint of the Sagnac experiment which is just as important as the Michelson-Morley experiment, although not as well-known as the latter.

The Sagnac experiment was first performed in 1913 in France in an effort to disprove Einstein's theory of relativity, and with minor variations has been repeated several times since then, but always with the same positive results. It consisted of splitting a beam of monochromatic light into two component beams which were sent in opposite directions around the periphery of a turntable by means of mirrors until they met again at the opposite end of the table so as to produce interference fringes which were recorded on a photographic plate. When the table with all the apparatus on it was slowly rotated the interference fringes were shifted by an amount equal to what the shift would be if the light waves traveled in a medium that was stationary relative to the earth. As long as the table remained stationary, the light waves in the two component beams would traverse the same distance, namely half the circumference of the table. As soon as the table was rotated, however, the light waves of one beam would have to traverse a greater distance than those of the other beam because the photographic plate on which the interference fringes were recorded would then be moving toward the light waves of one beam and away from those of the other beam.

Since the time of travel in each beam must remain the same, any difference in the lengths of the two paths would have to result in a displacement of the interference fringes in the one direction or the other.

The same positive result was obtained regardless of whether the source of light was carried by the turntable or was on a stationary support adjacent to the turntable, which rules out any attempted explanation based on the movement of the source of light. The only possible explanation for the shifting of the interference fringes when the table is rotated is that the light waves of the two component beams travel in a medium, namely an "ether", which is stationary relative to the earth, or more specifically relative to the earth's gravitational field, and which does not partake to any measurable extent of the rotation of the turntable.

("Further Evidence Of An Ether" (con.)

The Sagnac experiment is therefore in complete agreement with George Stokes' interpretation of the Michelson-Morley experiment because the gravitational field of the turntable is negligible in comparison with the gravitational field of the earth.

- e n d -

The foregoing article formerly appeared in our CQC- E-8, pg. 1, but is here reprinted on account of its importance. We call attention to his article, "The Existence of an Ether", in RR XI-3, also to the 60-page brochure by Dr. Krafft, titled The Ether and its Vortices (BSR Hdqrs., or obtain from the author (Box 687, Rt.2, Annandale, Va. $1.).

Growing Into Light - by Max Freedom Long, founder and Director of the Huna Research organization. 177 pgs., $ 3.00. Order fromthe Huna Research Publications, P.O. Box 875, Vista, Calif. Max Long emphasizes that he is not a teacher and does not offer finalities or revelations, but writes as a student trying to share what hehas so far learned. Growing Into Light is a must book for anyone interested in the Huna techniques.

Spiritism and the Beginnings of Christianity; by J.R.L. Morrell. An 87-pg booklet, pocket size. "An account of the destruction of a pure and ancient religion - and the true origin of the teachings attributed to the "historical" Jesus. We have acquired a few additional copies of this but the supply will soon be exhausted. No fixed price, but we recommend that Associates interested in the subject send $1.00 to the author, at the Morrell Bldg.,Remington, Ind. -
-- or to BSR Hdqrs. --
- - - - - - - - - - - - - - - - - - -

Remember that a subscription to Round Robin, and/or to our bi-weekly Clips, Quotes, & Comments makes the best kind of Christmas gift - one which keeps coming all the year through, and with information of a kind not easily found elsewhere. ($5.00 for six issues of RR, or 12 issues of C.Q.C.

It will facilitate our office work and improve our service 2 U,, if U will please, in ordering books, select from our most recent list sent with each RR - and order promptly, as we usually have only one copy of each. -- And if U will please put your name and address on everything you send us ---- and we would like to get used copies of Steiner's books, and Phylos or Dweller on Two Planets, Bucke's Cosmic Consciousness, The Secret Doctrine, books by Annie Besant, Hereward Carrington - "Etidorhpa " ... Book donations have come to be an im - portant item in meeting the BSR budget.

DIVOBEQUA - M.L.

"One Final Thought" by Dr.Gilbert N. Holloway : in Travel Notes No.1, 1955.

"Yesterday's newspapers mentioned that the US Air Force is releasing a new 314-page study which analyzes 'Saucer' sightings and concludes there is no evidence for the interplanetary idea. How dumb does the Government (or Air Force at least) take the American public to be. Why this endless cover-up of vital information? It is the greatest story of the century, yet the military is feeding lies and half-truths to the public continually. Some day there will be a reckoning on this, when the public loses confidence in practically all governmental 'information'.

On this topic I would include in the lowest depths the blurbs of the US Food and Drug Adm. urging all municipalities to treat their water supplies with sodium fluorides ... I believe that within a few years the campaign for water fluoridation will be seen as the greatest hoax in public health of many generations."

FLYING SAUCER NEWS Newtown, Bristol 2 Eng. - No.9. issue.

"It is said it may be up to ten years before 'jet-lift' can be adapted for use on passenger aircraft. Yet Kenneth Arnold saw his 'Saucers' in 1947, and strange objects were being reported the previous year, which most certainly could not have been produced by any country on earth at that time ..." (to say nothing of scores of instances in the 19th century and earlier. But now the new jet is supposed to explain all!! m.l.)

FLYING SAUCER REVIEW No.10, Oct. '55 Box 441- Seattle 1

"Hundreds see Saucer" is the title of Article : a "terrifying" object over Corpus Christi. "Here we have another major Saucer sighting, witnessed by hundreds; 250 witnesses call the local newspaper ... the newspaper does NOT print the news of the sighting. About the same number call the nearby Naval Base. The next day the officer in charge at the Base denies that any calls had been received or that any planes had been sent into the area." (But observers reported "a whole fleet of planes and a play of searchlights. ml)

Broadcaster DICK JOY comments: How can the new jets look like the flying saucers when there aren't any ? (Clip from Mrs IJP).

HOLIDAY, JANUARY 1948 (Press clip.) "Dozens of Flying Saucers, ranging in size from a pie plate to 'a washtub big as a five-room house' shuttled back and forth over the United States in June at speeds up to 1200 m.p.h. None was grounded. By mid-July they went back where they had come from, probably for good".

(Eheu! Was it Vergil who said something about the 'ignorant minds of prophets?)

B.S.R.A. "BOOK CLEARANCE" LIST

--- December 1, 1955 ---

Name of book:	By:	Pgs.	Our Price:	Cond.
**"Laboratory Investigations Into Psychic Phenomena"	H. Carrington	249 pg	$2.50	g.c.
**"When The Heavens Speak"	Nell King	103	$1.50	good
**"The Voice Of Isis"	Curtiss	422	$2.00	fair
	-- --(clean text - cover damaged - binding loose)-			
**"Sacred Books Of The East"	(Max Muller)-Vol. VIII (O.P.)	394	$5.00	- good

The Borderland Sciences Research is conducted as a public service, and funds received from the sale of books are applied to expenses of operation.

THE NATIONAL HEALTH FEDERATION IS BORN

Today, the American people face the perilous threat of losing the last vestige of freedom in matters relating to their health. The overwhelming evidence forces one to conclude that there exists in our Country today a giant, octopus-like, medical monopoly reaching into every household of the land and affecting every American whether he realizes it or not. Apparently the program of this monopoly -- this conspiracy -- includes the complete destruction of the natural and harmless methods and schools of healing, the stifling of honest and progressive medical research in the fields of the dreaded diseases and the complete subjugation of the American people in all matters relating to health.

To become convinced of the existence of such a monopoly, one need only review the stories of the ridicule, the pressure and the persecution heaped upon Dr. Koch, Dr. Harry Hoxsey, Dr. Andrew C. Ivy, Dr. Lincoln and others who have developed at least reasonably effective methods of treatment for the cause of cancer. Not only have the men been slandered and persecuted but also the remedies, in some instances, have been prohibited by the government from interstate shipment. These stories point to a conspiracy to prevent the development of a cure for cancer. For additional evidence, one need only take note of the number of states in which bills have been introduced into the legislature to prohibit the sale of such simple items as vitamin and mineral supplements without a prescription written by a physician authorized to prescribe narcotic drugs. Or, one may note the current efforts to effect compulsory, mass medication. Or, the current, arbitrary regulations of the Federal Food and Drug Administration requiring the "prescription legend" on physical therapy equipment to prevent their future purchase and use by the members of the non-medical professions. Or, the many examples of persecution of the courageous and progressive medical physicians who dare to use methods not approved by the American Medical Association. And surely we must all become horrified on learning that during one year alone in the United States 100,000 pounds of dyestuffs known to cause cancer in animals were approved by the Federal Food and Drug Administration for use in our foodstuffs.

This perilous state-of-affairs has been permitted to develop because the public never has had a powerful, organized voice to speak in their behalf in these matters of health. Consequently, our Congress, legislatures and government bureaus have yielded to the powerful and relatively unopposed pressure of special interests and the medical monopoly.

Now, at long last, with the founding of the National Health Federation, the American people now have a voice to speak out in their defense for the protection and the preservation of the health freedoms of the American people. The National Health Federation opposes medical monopoly on all fronts and works unceasingly to restore and preserve freedom from the dictates of special interests or the medical monopoly when their acts are not inimical to the best interests of the people.

The National Health Federation is a rapidly growing organization made up of zealous people in all walks of life. These people are organized into small working units (called "Local Chapters") in many parts of the Nation. Where there are sufficient numbers of members, they are organized also into strong county and state organizations capable of dealing with local or statewide health problems.

It may be said that the National Health Federation has a "grass roots" origin -- it essentially is an organized crusade of the public against the acts and practices which are detrimental to the health of this Nation's people and it is the united strength of all the members throughout the Country that makes possible the effectiveness of the national organization functioning on a national level.

The National Health Federation provides three classes of membership: (1) Regular, (2) Active, and (3) Sustaining. Regular members are those who are sincerely interested in the objectives of the organization, who have a desire to participate in the movement and who will pay annual dues of $2.00. Active members are those who are sufficiently interested in health freedom to pay annual dues of $5.00 and, in addition, to secure not less than ten regular members to work with him as a unit, called a Local Chapter, in matters relating to health and welfare. Sustaining members are individuals, firms or corporations who desire to assist in the work of the organization by paying annually the sum of $25.00 or more.

The organization of the National Health Federation is a democratic structure. Its policies and program are formulated by a Board of Governors elected by the active and sustaining members. The Board is composed of representatives from each of the states in which a state organization has been chartered as well as members-at-large representing the viewpoints of each of the healing professions, the health food industry, the manufacturers of food supplements and of therapeutic equipment, the organized groups engaged in spiritual healing, etc. The National Health Federation is a non-profit, non-membership liability corporation and its membership roles are held in the strictest confidence. Members are kept informed of the activities of the organization through the BULLETIN sent to all members each month.

The National Health Federation has a broad program but it is a program that will benefit you and every other American. This program can be successfully carried out by the uniting together of the freedom-loving Americans who sense the critical need for an organization of this type. The success of the organization depends upon your support -- give it that support today by joining and working with it in the fulfillment of its objectives. Tell your friends about this new movement and urge them to join also. Use the convenient membership form below and mail to the National Health Federation, 2452 Van Ness Avenue, San Francisco 9, California.

THE CASA BLANCA ENTITIES

BY JEAN ROWLAND

- FROM DESCRIPTIONS BY THE CHILDREN -

WHAT SAYS THE YADA?

(We have a few readers who are indifferent to any and all of the Mark Probert Controls, and a few more who are impatient with the BSR Director for publishing anything said by them. But we hear also from many others who extend to them their liveliest interest and respect - as I do also, after a near-decade of study of their communications. We owe to them 'our' etheric interpretation of the aeroforms, which is the only one worth while in the world today - and which is steadily gaining ground. But always we urge that these (and all other) 'psychic' communications be judged on their own merits quite apart from any alleged origin and authority).

'Concerning the landing at Muroc Base - this truly took place, and a number of highly placed governmental officials were present and examined the craft'(as reported by the BSR at the time). 'The President himself was not there.'

'The Russians also know about the Etheric people and their incursion. Many persons in authority throughout the world have long been informed of the main facts. Such persons have repeatedly met the Etherians.

'At present there is a great rendezvous of the aeroforms in the mountains of Chile.'

'The least rigid censorship just now is that of the French government.'

'The reason for the long period of denials and evasions, is that all governments have feared social repercussions, particularly in the fields of science and religion. There must be - there will be - a great overturning of orthodox religionism - and as for science, the text books will have to be destroyed. I refer especially to basic concepts of Space, of the Ether, of the nature and structure of matter. The science of physics will be reconstructed.'

'The Government of the United States has long ago been told how to build these 'ships' - that is, how to build and to propel the disc-shaped craft, and others. But such craft, constructed by earth people, will not be usable for true space travel. They can be used, however, for travel at great speed within the atmosphere and/or the magnetic field of the earth.'

'These craft will not be usable for interplanetary travel. One reason will be, that your physical organism, your human bodies will not withstand the conditions, particularly the cosmic rays - which might not be immediately fatal' (but after a short time). Now, the etheric people travel in space if they so desire, but this is possible to them because their bodies are not like yours, but made of etheric substance and in frequency rates which are not impeded by the Rays.

'One great objective of these space people, is to put into your minds the idea that there are other values in life than producing machines.

'You must not assume that all the Beings of other planes have human-like forms, or that all their forms are pleasant for you to look at.' (Another Control said recently:'all is not milk and honey among what you call etheric beings').

- - - - - - - - - - - - - - - - - - - -

The Yada thus confirms specifically what he and other Controls have said heretofore - and has been said piecemeal and variously many times by the BSR publications. The peoples of earth face a period of radical reconstruction, of knowledge, belief, and faith. There will be fear and anger and confusion, unless some very wise and powerful guidance appear in the affairs of men. What can YOU do? What can I do? Only, perhaps, to help some one else to understand and to accept in some degree a New Order in a swiftly changing world.
