HORRORS OF TUBERCULIN TEST

Once Rejected By American Medical Association, Now Foisted on Unsuspecting Public

The poor suffering public! Nowhere in the World is such a mass of active medical propaganda published as in this country, through the channels of the newspaper, radio, magazine, school board and the like. The suffering public is lead to believe that the Medical Doctors are concerned solely in public health and in its maintenance and that the whole activity is carried on so the public may stay healthy. However, the same suffering public has not the slightest idea how under the guise of philanthropy, charity and good intentions, the public is downright cheated, bamboozled and hoodwinked, so the pockets of these quassi-angelic knights of commercial pilldom may be well lined and their limousines run 75 miles an hour, with their wives decked in sealskin coats.

What persuasions and subtle inducements are used by them may well be gathered from a recent syndicated article published in the daily newspapers over the signature of Dr. Allen G. Ireland. Its smoothness and glossy character are self-apparent, its innocence as a guiding hand against public health completely disguised. The heading is the usual "Your Child And The School". He says:—

"Throughout the nation the drive against tuberculosis is taking new form. Without question it is one of the most far reaching public health movements of our time.

"A cry now familiar to every one is 'find it early'. We hear it with respect to cancer, colds, diabetes, boils and what not. The significance is very great in the case of tuberculosis. 'Find it early'. For only in this way may we hope to stamp out this disease.

"The tuberculin test now being introduced through the school is a simple, harmless procedure. Each year will find it used more extensively, perhaps becoming eventually a routine procedure.

"But there is one warning, one word I want to impress upon every parent. If the report of your child's test says 'positive' don't be panicky. A positive test does not always mean that active tuberculosis is present. Only the X-Ray and the physician's examination can determine the true facts.

"Every teacher and school nurse should learn the meaning of the tuberculin test in order to interpret its true significance to parents."

So they are warning parents in a kindly manner to permit the Tuberculin Test, so the darling children may be "protected" (?).

Now read the facts. In an article by Samuel McC. Hamill, M. D., Howard Childs Carpenter, M. D. and Thomas A. Cope, M. D. in The Archives Of Internal Medicine, published by the American Medical Association, December 15, 1908, is given an illustration of the severe damage done to the eyes after a Tuberculin Test. The condition of the child's eyes was wholly the result of that experiment. The following details of this terrible fraud on the gullibility of the public, produced by Masters Of Dopology are taken from a warning issued by the Vivisection Investigation League of New York, New York, through the kind courtesy of its President Sue M. Farrell.

"After describing the method of administering the Calmette or eye test by instilling a drop of tuberculin solution into the eye of an immunized individual we are told that of the one hundred and fifty-eight children receiving the eye test twelve had rickets, four had whooping cough, twelve had bronchopneumonia, some had typhoid fever, acute articular rheumatism, pleurisy, neuritis, heart disease, etc. No. 25 had whooping cough and bronchopneumonia when both eyes were instilled and both reacted. No. 59 had pustules on the eye, inflammation of the cornea, with a corneal ulcer eight days after. Nos. 60 and 62 had similar trouble. No. 74 had pustules, conjunctivitis appearing in 96 hours, continuing two weeks. Nos. 92 and 107 had typhoid fever and "conjunctival test applied at height of fever". No. 101 had bronchopneumonia and "Tests were applied within eight days of death." No. 103, 1½ years of age; "Child anemic and emaciated. Test applied three days before death." Nos. 104, 105 and 106, "Post-mortem showed no evidence of tuberculosis."

"Practically all our patients were under 8 years of age and all but twenty-six of them were inmates of St. Vincent's Home (Philadelphia), an institution with a population of about 400, composed of foundlings, orphans and destitute children. The cases in the home were tested in routine by wards, **irrespective of the conditions from which they were suffering, and in the great majority of instances, without any knowledge of their physical condition prior to or at the time the tests were applied. We purposely deferred the physical examination of these children until after the tests had been applied. . . . . In addition to the cases designated in the tables, we have applied the test to seventeen infants ranging in age from four weeks to five months."** . . . . . One case in this latter group was "probably one of tuberculous meningitis; the patient was tested within the last twenty-four hours of life." "In about sixty of our cases the conjunctival test was applied

from one to three weeks before the scarification and ointment tests. In the remainder of the cases the three tests were applied at the same time. . . . . Before beginning the. . . . conjunctival test, we had no knowledge of any serious results from its use. It is unquestionably much easier of application than the other tests, ... but it has the great disadvantage of producing a decidedly uncomfortable lesion, **and it is not infrequently followed by serious inflammations of the eye, which not only produce great physical discomfort and require weeks of active treatment, but which may permanently affect the vision and even lead to its complete destruction.** In our series we have had two cases of severe purulent unilateral conjunctivitis, six of severe recurring phlyctenular conjunctivitis, one of which developed corneal ulcers, and one case of keratocyclitis with a large central corneal ulcer. **Permanent disturbance of vision is sure to follow in this last case from the central scar,** even should the associated lesion, which at present is in a very unpromising condition, clear up eventually.

"These results are by no means unique, many similar observations having been made" by Webster and Kilpatrick, Moro, Feer, Schenck, Eppenstein and Gaupp, Van Durme and Stocke, Seifert, Krause, Hertel, Ebstein, de Lapersonne, Heymann, Renon, Simonin, Buch, Cassoute, and Barbier.

"We have had a number of verbal reports of eye complications, some relating to very serious conditions, and we are sure they are much commoner than the references we have communicated would indicate. . . . . **In fact, we are strongly of the opinion that any diagnostic procedure which will so frequently result** in serious lesions of the eye. . . . . has no justification in medicine, **especially since there are other diagnostic tests of equal if not superior value, which are applicable to the same class of cases and not attended with the same disturbing results."**

Albert E. Taussig, writing on the conjunctival method in the **Interstate Medical Journal for June** 1908, says that

"Plehn's experience with the conjunctival method has not at all convinced him of its value. He objects in the first place that many plainly tuberculous individuals fail to give a positive reaction, a statement in which all observers agree. But what is worse, he obtained a positive reaction in a considerable proportion of non-tuberculous patients. **Thus two out of five cases of typhoid, two out of five cases of scarlet fever, six out of twelve cases of rheumatism, three out of six with acute bronchitis and several cases of enteritis (Inflammation of the intestines) reacted positively. None of these patients showed any evidence of tuberculosis. Moreover, unpleasantly severe reactions were not uncommon."**

He also quotes Levi and Collin on the dangers of the test, and the **London Lancet, December** 26, 1908, had an article to the same effect.

With the very evident danger accompanying this test, its use would hardly seem justifiable, but that is not the attitude of the experimenter, and we therefore find in **The Archives of Internal Medicine for May 15,** 1909, Louis Hamman, M. D., and Samuel Wolman, M. D., describing their experiments on 500 patients in the following words:

"So much has been written about the cutaneous and conjunctival tuberculin tests that one feels constrained to offer an apology before making a further contribution.....What we have to say is the result of over a year of experience with patients coming to the Phipps Dispensary of the Johns Hopkins Hospital."

The reader will observe in the following sentence the callous and indifferent manner in which the authors refer to the poor persons coming to them for relief as "material."

"It is important that these tuberculin tests should be tried on as varied a material as possible, and we feel **that we have had not only a rich material at our disposal,** but one differing in many ways from the cases described in most of the reports that have appeared.. ....It is now well known that patients who have had a conjunctival or a skin tuberculin test exhibit a marked tendency for these **areas to flare up on subsequent subcutaneous injection of tuberculin**..... the conjunctival recurrence was nearly always more severe than the cutaneous.....so many healthy people react to tuberculin, that the method gives positive clinical results only when there are present definite signs of a focal reaction. ..... It should be **fully emphasized that none of these tests can replace in the slightest degree a carefully taken history and a well-made examination."**

In **The Archives of Internal Medicine for December** 15, 1910, the same physicians describe their further experiments as follows:

"In May, 1909, we reported the results of the conjunctival and cutaneous tuberculin tests in 500 patients. The present report deals with 1,000 additional patients to whom these tests were administered, and who formed the **unselected material of an ambulant clinic,** the Phipps Dispensary of the Johns Hopkins Hospital. .....In the event of no reaction we proceeded with one drop of a 5 per cent solution in the right eye. If this, too, produced no reaction, we refrained from further instillations, fearing the possible intensity of a reaction consequent on a second instillation of tuberculin into an eye. **Our**

fear is based on evidence, gathered accidentally, that a second instillation may give a positive and even a severe reaction in a case in which a previous similar test gave a negative result. ..... It is clear that a positive skin reaction in an adult cannot be used as evidence of clinical tuberculosis. .... ..We cannot, therefore, attach any prognostic value to the skin and eye tests ....."

In the meantime, a paper by Drs. Derby and Ayer was read at the session of the American Medical Association, in 1909, and published in the **Journal of the American Medical Association, May** 28, 1910, in which they applied the test to ninety-two patients "in the out-patient clinics of the Carney Hospital and the Massachusetts Charitable Eye and Ear Infirmary, **and we are much indebted to the staff of the latter institution for allowing us to make use of their material."** They add that they "have discarded the conjunctival test as being occasionally productive of disastrous results. ....." Among others who declared these tests to be harmful were Wm. S. Magill, M. D., Director State Laboratories; Professors Sahli, Bosanquet and Eyre; Wm. B. Trimble, Lecturer on Diseases of the Skin, New York University and Bellevue; Muthu of London, Bruno S. Horowicz, M. D., von Pirquet, and the Report of the Committee for Study of the Relation of Tuberculosis to Diseases of the Eye, published in **The Journal of the American Medical Association, July** 2, 1910, says:

"The Calmette test, which, on account of its danger in diseased conditions of the eye, one would hesitate to use for ophthalmic diagnosis, even if one eye is sound."

"The above quotation clearly indicate that after these tests were found to be distinctly dangerous the experiments still continued and "material" was freely furnished by authorities of various public institutions."

What imposture, what hypocrisy, what subtlety! To deprecate a method once and later endorse and adopt it. The trusting parents of children through their insidious propaganda are made to believe the Medical Doctors are working to maintain the health of the community, whereas all the time they are acting through the Health Boards to undermine the people's health so their pockets may stay filled with tainted lucre sucked from the veins of their deluded clients.

Down with the nefarious Medical Trust! Down with all its ghastly ramifications and uproot their control over our beloved little ones!

APPLICATIONS WANTED From Responsible And Capable Affiliates To Act As State Field Solicitor In Their State On Adequate Compensation.

FIRST ST. LOUIS MISSOURI PLANET

(HOTEL MELBOURNE, ST. LOUIS, MISSOURI)

Meeting Of Thursday, April 2, 1936

Successful Use Of Spectro-Chrome In:—Mumps, Pneumonia, Pains, Headache, Heart Disorder, Carbuncle, Tonsilitis, Cataract.

Reported By:—CHARLES H. STIERMANN, *Recorder*

Deputy Clemens M. P. Neumann was in the chair.

Letter was read from the Principal Office that a larger room would be provided for accommodating the Meetings of the Planet. A circular of the lectures by Colonel Dinshah in Wilmington Delaware was read, indicating that Spectro-Chrome is ever enlarging its field.

Eleanore N. reported a case where a child of 6 years having Mumps, was normalated in 2 days by use of Spectro-Chrome. The child returned to school and Sister at school sent child home again fearing recovery was not complete. The child returned to school after 2 more days, the recovery having been complete.

The Deputy reported a case of Pneumonia. Boy 16 years old, running a Fever of 104 Degrees, had a relative who was a trained nurse and felt other attention than Spectro-Chrome was required. It was normalated in 4 days. Blue and Green Systemic and Orange were used with Magenta on Area 4. He was a very light meat eater, so there followed a speedy Normalation.

The Deputy had terrific pains which too were relieved by Spectro-Chrome in 2 days.

Josephine S. had Headache brought on by severe Cold. Used Blue on Area 1 and had immediate results. She spoke on the Dinshah system of Whole Wheat Cake (Deshikek) which she found very palatable. Most of those assembled felt the same way; some used nuts in its making.

Grace R. spoke again about Whole Wheat Bread. Some did not care for it.

The Deputy stressed the importance of using Rational Food Of Man system for better health; he said if it be followed to the letter, one could dispense with Spectro-Chrome. In the discussion, he also emphasized the fact of the Red, Green and Violet being the Primary Colors, hence the most essential, the others being gradations built from those Colors.

Konrad F. reported a case of Heart Disorder. Lemon Systemic and Indigo for Pain on Areas 4-18. Heart irregular of long standing. Used Spectro-Chrome since Christmas; tonating Area 4 with Magenta made it regular.

A question arose about tonating Hardening Of Arteries. Suggested that Purple be used to act as Vasodilator.

Konrad F. sought information on Enlarged Heart and what caused it. Josephine S. advised finding the History of the case as it may be produced by different causes. If the Heart is beating too fast or too slow, tonate accordingly. Study the Ratio between the Kardoscil and the Spiroscil.

Martha H. reported Carbuncle on her husband's elbow normalated by Spectro-Chrome. Arm was swollen to 9 inches in diameter; the pain was so terrific that he became faint and dizzy at times. Over a quart of foreign matter drained from the Carbuncle and had a core ½ inch thick and 2 inches long. Green Systemic and Orange Local to bring to a head, Turquoise when open and Indigo to seal. It opened in 10 days. The trained nurse saw it and advised having a Medical Doctor to cut it. Two Tonations Local and one Systemic taken daily.

Josephine S. reported a case of a friend who had Heart Disorder and who had to call a Medical Doctor when attacks came on. Learned of Spectro-Chrome and immediately put it in use. The Doctor was prescribing Digitalis. Purple brings prompt relief and the Doctor is called no more. He marvels that she is doing so nicely.

The Deputy reported a case of a girl of 22 having Tonsilitis. The Medical Doctors were about to remove the Tonsils when her father (a policeman) heard about Spectro-Chrome and decided to give it a trial before operating. The girl was home only 2 days after which she returned to work and was normalated completely in 10 days. Green Systemic, Magenta on Area 4 and Turquoise were irradiated.

Oneida W. spoke of a case of Lung Fever, a bronchial condition, tonated with Blue on Area 18 with no effect. Used a few days; was suggested that if Turquoise had been used on Area 17 instead, the results would have shown.

Joseph Z., purchaser of a new Equipment, sought information as to how to start Tonation. Told to start all Tonations with Green, the Cleansing Agent. Was advised to take advantage of the Free Guidance of Spectro-Chrome Institute by filling a Chart and sending it there. Many Purchasers do **not** take this advantage.

A question arose for advice from headquarters whether it is harmful for the Rays of an Electric Heater to strike the Body at the same time as the Spectro-Chrome, during Tonation. Does it detract from the benefit? Also if operating a Radio in the same room during Tonation is harmful. Will it reduce the power of Spectro-Chrome?

Grace R. reported a case where Cataract forming in the Eye was caught in its infancy; Spectro-Chrome was used and so arrested the formation that it never matured and was normalated. This person would not sell her Spectro-Chrome at any price, having proved its efficacy on several occasions.

Elizabeth G. asked about Ordinary Coughs. Was advised to use Turquoise Systemic and Lemon Local to loosen the Phlegm. She asked if two children be tonated at the same time. Was advised that if they were 3 feet apart, tonating may be successfully done and results gained.

Oneida W. asked how to tonate for Tuberculosis of the Bone. Lemon was indicated as the Bone Builder and was so advised.

EDITORIAL  REMARKS

Every school should have a Spectro-Chrome installed and put out the Medical Doctor. The silly ideas inculcated by that fraternity work on the mind of parents through sheer fear. Spectro-Chrome will be their cheering hope for betterment.

It were better if the report had stated in what Area the "pains" of the Deputy were, because we are sure to receive letters from inquirers who will perhaps innocently believe they were "Labor Pains"!

There is no hard and fast rule for the "Deshikek" or any other food. Use spices and ingredients for flavor to suit. All we desire to impress is that the wrong materials should not enter the Body.

The Gradational Attuned Color Waves produced from the Primaries are just as useful, because of their specific Attributes. With solely the three Primaries, without the Combinations of the Secondaries and the Tertiaries, the complete Elemental Physiological Functions can not be performed in their complex relations in Organic Chemistry. Furthermore, the Emotional Vehicle can not be oscillated without the Secondary and Tertiaries.

Hardening Of Arteries is not a Disorder, but, is the result of certain wrong conditions produced by Food or Habits.

What difference does it make whether the Heart is dilated

or contracted? Its condition will reflect promptly in the Ratio as well as the Frequency.

By proper Irradiation, Spectro-Chrome performs many feats formerly possible solely by Constructive Surgery.

Keep the Tonsils where they are.

Oneida W. using Blue on Area 18 is not comprehensible. The Turquoise for Area 17 had sense, but what really should have been done was to look into the Kardoscil and Spiroscil Ratio.

Most Purchasers are too lazy to read the Spectro-Chrome Home Guide. They expect the apparatus to operate by itself. The Guidance is Free, yet most do not ask for it. Wherever there is any lack of response, it is the improper or want of use of the apparatus. Spectro-Chrome Institute is ever anxious to serve its patrons.

The Heat Rays are on the Infra-Red Division of the Spectrum, hence they should never be allowed to strike directly the Sufferer, when Ultra-Green Tonations are irradiated. The Heat of the incandescent Red Resistance Coil has Color also. Many Headaches are traceable to sleeping with bare head on which the Heat of a hot water or steam radiator impinges. Keep the head protected against thermal changes during sleep by wearing a light skull cap. In regard to the Radio, there is no question that concentration on any object in view always enhances and quickens recovery. A Radio is an unquestionable disturbance and distracts the mind of the Sufferer from the Normalation idea, which should be the one thought uppermost; the Radio also is likely to interfere with the peace and calmness which supervenes during Tonation. Unless the program be distinctly pleasing and exhilarating, the button may as well be turned to "Off" position. There is also to be considered the Radio Frequency Oscillations of the instrument, the surge from which may not be in harmony with the Oscillatory Frequency of the Spectro-Chrome Attuned Color Wave and its Reinforcement or Interference on the Auric Vehicle. The less disturbance of any kind during Tonation, the better. The best is to allow Sleep to supervene.

Cataracts in the incipient or formative stage are amenable to Spectro-Chrome easily. Our records are full of favorable reports.

Two or more persons may be tonated at the same time with a single Equipment, if the same Attuned Color Wave is to be used. However, under the Laws regulating Optical Beam Dispersion, as the amount of Energy on the Area is inversely in proportion to the square of the distance, because of the necessity of separating the Sufferers

by over 18 inches, the Energy falling on their systems is liable to be scattered detrimentally. A saving of the Electric Bill and some time might be effected, but, such procedure is not advisable, because of the involved factors which might impede the results.

Oneida W. should study Spectro-Chrome Metry Encyclopaedia and refresh her classwork. She must also forget Differential Diagnosis. All Persistent Disorders are amenable to Lemon as a Chronic Alternative and no matter what name be given, the Remedy in Spectro-Chrome is the same.

We are glad to note your Planet is working satisfactorily.

MENSTRUATING BOYS!

What calibre of intelligence rules some of our Boards Of Education, may be gathered from the story which is going the rounds of a certain town in New Jersey. It has as usual a Board Of Education, one of the prominent members of which signs his name with a X mark, because he can not write!

In one of the meetings, a woman member brought for consideration a subject on which she was well posted. She said that the female students in the community were mainly of nationalities having quicker maturity and it was therefore advisable that boxes of sanitary pads be provided in the washrooms of the girls by the Board Of Education. On vote being taken, the above alluded member promptly registered his opinion in substance, "Non, everyting must be equal. If the goils have it, the boys must have it; if the boys don't have it, the goils don't get it!"

The report states that at this outburst of Solomonic erudition and sense of equal rights for both sexes, the woman who proposed resigned.

CARBON ARC HEALTH LAMPS

For years and especially since the introduction of Spectro-Chrome to the family, the Medical Doctors have been harping on the value of the Ultra-Violet and the Infra-Red Rays, to the utter derogation of the Chromatic Spectrum, which is visualized as Colors. Most of the users of the Ultra-Violet and Infra-Red Rays, prefer to use the Carbon Arc Lamps for their therapeutical value, forgetting that such lamps are highly variable in their Emission Values and are in many respects detrimental to health.

In the March 1936 issue of the Technical News Bulletin of the National Bureau Of Standards in Washington, D. C., is printed an open warning that such Carbon Lamps contain "ultraviolet radiation of very short wavelengths and infrared rays of long wavelengths which are not found in sunlight."

They are coming nearer daily to the principles set down in Spectro-Chrome Metry and it is solely a question of time when the potentiality of the Attuned Color Waves of the Chromatic Spectrum will receive its deserved recognition.

SPECTRO-CHROME SMILES

Viewpoint—"All of my uterus was removed when I was 35 years old. I am now 52 and the mouth of my uterus is aching."

Smile—"Most probably you are growing a new uterus, as strange things occur in America."

Viewpoint—"I have a fallen wound."

Smile—"You will need a special type surgeon."

Viewpoint—"My noise clugs up witch drip water on dump days."

Smile—"It is a good remedy to stop talking."

Viewpoint—"I am horse."

Smile—"Attach a carriage."

Viewpoint—"Surgeons tapped my spine and took some fluid; don't know whether it was put back or not."

Smile—"The proceeds flowed into the Surgeon's pocket."

Viewpoint—"My wife drinka da milk and vomit; da vomit no milk, all cheese. Whata could I do?"

Smile—"Open a dairy."

Viewpoint—"Your Advice says my wife should use Spectro-Chrome on Number 4; where shall I put it? I do not know which part."

Smile—"Your wife has only 2 bosoms; put it on the left one; that is the meaning."

Viewpoint—"Electricity here costs me too much money to run the Spectro-Chrome; how can I reduce the cost?"

Smile—"Don't run it".

Viewpoint—"I am a Medical Doctor. In your literature you state that 'The Attuned Color Waves should be applied to the **bare skin**'. What purpose does the animal serve?"

Smile—"Are you sure it was a bear? We see only a donkey."

Viewpoint—"She is very week."

Smile—"Wait till the month comes."

FIRST DETROIT MICHIGAN PLANET

(HOTEL TULLER, DETROIT, MICHIGAN)

Meeting Of Thursday, April 2, 1936.

Successful Use Of Spectro-Chrome In—Mucous Colitis, Cold, Asthma, Carbuncle, Boil, Ear Disorder, Toothache, Tetanus, Burn.

Reported By:—GREETA O. PECK, *Deputy*.

Deputy Greeta O. Peck was in the chair.

Otto H. spoke of Spectro-Chrome in relation to children. In a home where there are children such as his where there are two little grandchildren, he related what a blessing it was to be relieved of all fear, from the anxiety of anything serious developing from their little coughs and colds. They just vanish into thin air. He told of Mucous Colitis being normalated in the older child and the speed with which a Cold was normalated in the case of the younger child. In fact, he stressed the excellent results that are obtained in all Children's Disorders.

Sarah C. used Scarlet for four Tonations on Area 18, that normalated the swelling in her big toe and joint and all around the arch and ankle. This was the condition that was reported at last month's meeting. She reported that she had not received her April Favorscope.

Magdalene A. reported a case of Asthma. Green and Magenta were used alternately for four days with such splendid results that the Sufferer was able to go riding after having been confined to her home for a long period. Lemon is now being used and the Sufferer is continuing to improve.

Thomas H., a new member, told of the remarkable results obtained in his own case of Asthma. He was in a hospital, being treated for his condition when he accidentally heard of Spectro-Chrome. Green produced sleep the first night. After one week of Green and two weeks of Lemon and Magenta, he feels like a new man and is very grateful to Spectro-Chrome.

John W. told of normalating two Carbuncles and a Boil by using Orange, Green and Indigo. His baby with a festered ear, which broke, was being given Green and Turquoise with good results.

Norman D. told of tonating a pivot tooth (from which a

bridge was swung) which was aching. The Dentist wanted to extract it. Blue for one Tonation normalated the condition. He also reported the case of a friend who struck his foot while using a pick. The injury was so slight that he paid no attention to it, but Tetanus set in and he consulted a Medical Doctor. He spent $30.00 for "Serum Treatments", but the condition grew worse and possible amputation was suggested. The foot looked very bad with a dark Red spot the size of a silver dollar and Purple streaks radiating from it. At this point, Norman D. loaned the man his Spectro-Chrome Equipment and Green quickly normalated the condition.

Albert G. reported the case of a third degree Burn from steam and scalding water. Blue was used for two days so the pain disappeared and the blisters, which were about the size of hen's eggs, broke. Then Turquoise was used and when it looked as though infection might be setting in, Green was given. Cocoanut Oil and waxed paper were the only dressings used. In two weeks' time this serious Burn was normalated.

The Deputy told of a friend who had a similar Burn, which was attended by a Medical Doctor. The case was given for comparison. Infection did set in and $50.00 spent for dressings alone. A Doctor was calling every day and a nurse was required to dress the wound twice a day for several weeks. It was six weeks before the Sufferer was around as usual. Thus can be seen what Spectro-Chrome accomplished in two weeks, in comparison to the medical treatment.

L. Roy D. said, "I am familiar with two other healing systems, but I put Spectro-Chrome first." He stressed the importance of looking after Area 4 in all Disorders. He told of a severe Cold in the case of his wife which was normalated in two tonations of Yellow and Blue respectively.

Harley S. stated he had proven that a high Kardoscil will respond to Magenta on Area 4 if used three times weekly. He also stressed the vital importance of the Rational Food Of Man system in the Normalation of Constipation.

Edwin L. read an "exposure of Colonel Dinshah in Health And Hygiene" a medical magazine. It was moved and seconded that the above magazine be sent to Colonel Dinshah, so he might send them a challenge.

Albert G. read chapters 110, 111 and 112 from the third volume of Spectro-Chrome Metry Encyclopaedia, being respectively on

Brain And Cranial Nerves, Great Sympathetic Nervous System and the Pillars Of The Temple Of Solomon.

EDITORIAL  REMARKS

The April Favorscope was printed in the issue of February 1936. Sarah C. will please refer, as our records show it was mailed to her. From next year, an innovation will be made. The entire 12 months of the Favorscope are now being computed by Irene Grace Dinshah and will be issued as a single booklet to the Affiliates. The monthly printing in the Spectro-Chrome will be discontinued after the expiration of the current year.

Be careful in loaning your Equipments, lest some day you lose your Slides or Spectro-Chrome Home Guide. Recently an Affiliate in Claymont, Delaware loaned the book to a neighbor who lost it in a fire. It means loss of investment.

The reply of Colonel Dinshah to "Health And Hygiene" libel was already printed in the Spectro-Chrome of March 1936, under "Their Skin Is Now Sizzling". Many thanks for the kind courtesy. Be always on the watch for such covert attacks. The doom of the messpot of the Medical Dumkopfs is sealed, no matter what they print about the Originator.

—o—

LEAKY HEART NORMALATED

By:—MARY P., *West Philadelphia, Pennsylvania.*

I am a young woman of 29 years with a little girl who has a very serious heart condition. Thirteen weeks ago she was taken with Scarlet Fever; she had a leaking heart before she got Scarlet Fever, but, since then the heart has been worse. Eight weeks ago our Doctor gave her up; her pulse was 158 and her respiration 58; temperature 102 for six weeks. She had five blood transfusions at home. Our family Doctor said it was just a matter of time; her heart was so large it filled her left lung and part of the right one.

Well, I have a Doctor who gives me Color treatment with one of your Spectro-Chrome lamps and I telephoned her and she rented me a lamp and gave me instructions on the Colors over the telephone.

The child had been spitting up blood and when she had two treatments with your lamp of Magenta, one could see the change in her.

We have had the Spectro-Chrome at home for nine weeks

and it has done her wonders. I wish you could see her; she is a beautiful child of nine years, but, the Spectro-Chrome Normalator claims she must continue the light treatment. I have seen what wonders it has done and I will be scared without one.

TWILIGHT SLEEP DESTRUCTION

We are not the only ones who oppose the introduction of poisons into the Body of the woman in childbirth. Dr. Gertrude Nielson, at the last Annual Convention of the American Medical Association in Kansas City, Missouri, denounced the use of "Twilight Sleep" in the conduct of childbirth cases, as being dangerous to both the mother and the infant.

The idea of the Medical Doctors is that as there is no "nerve connection" between the mother and the progeny; they may do what they please with the mother and the child is not affected. They forget that the blood of the mother circulates through the Placenta and builds the baby and that anything entering the mother's blood MUST shortly pass into the circulation of the infant.

Twilight Sleep is a crudely conceived idea. It is defined as "a condition of light anesthesia marked by mental subconsciousness." It is produced in the woman in the process of childbirth, by the hypodermic injection of Morphine (H21 C17 N O4) and Scopolamine (H23 C 17 N O5). Morphine needs no elucidation as being the most active Alkaloid of Opium. Scopolamine, which is the same as Hyposcine, is defined as a "poisonous nerve depressant, mydriatic (pupil dilator) and hypnotic." The introduction of two such poisons into the blood of the mother, is bound to produce undesirable results in the blood of the infant and no words are powerful enough to express our denunciation of such ignorant tactics.

Spectro-Chrome Purple is capable of affording the needed relief without upsetting the vital equilibrium and the Medical Doctors will some day realize how utterly unreasonable they were in endeavoring vainly to choke the propagation of the science.

Radio reports that the well-timed denunciation of Dr. Gertrude Nielson, a mother of several children herself, was received by the A. M. A. Convention with vociferous applause. We add some more to it. When the time will come for the Medical Octopus to die it will not be through any trampling under foot by us, but, through an internal explosion that will rock the Healing Fraternity from

pole to pole. Spectro-Chrome set the train of Dynamite under it; all that is needed is the final spark to ignite.

There are many Medical Doctors who are ready to blow out of the accursed gang, but are not aware of the means. Spectro-Chrome will prove their final solution when that fact becomes better known.

FIRST MILWAUKEE WISCONSIN PLANET

(HOTEL WISCONSIN, MILWAUKEE, WISCONSIN)

Meeting Of Thursday, April 2, 1936

Successful Use Of Spectro-Chrome In:—Prostatitis, Rheumatism, Gastroenteritis, Headache, Hemorrhage, Fits, Diabetes, Tuberculosis, Scarlet Fever, Asthma, Anemia, Ringworm.

Reported By:—CAROLINE ZIMMERLING, *Recorder.*

Deputy Otto H. Lutz was in the chair.

He read a telegram from the Principal Office stating that Mrs. Lena Held had been expelled from the Scientific Order Of Spectro-Chrome Metrists.

Chapter 74 on "Chemical Puzzles" and 75 on "Tuberculosis By Medical Conception" from Spectro-Chrome Metry Encyclopaedia were read by Caroline Zimmerling. A discussion followed.

Alma Horvath volunteered to read Chapters 76 and 77 on "My Experience In Consumption" and "Spectro-Chrome In Tuberculosis" at the next meeting.

Otto H. Lutz read from the Spectro-Chrome Home Guide the Attributes Of The Orange wave. Case reports followed.

The Deputy reported the case of a man 51 years of age, named Robert V. who owned a Home Equipment but was not getting results. He was suffering from severe pains, due to Prostate Gland trouble. He suggested he use the Blue Local, Turquoise Systemic and then Scarlet Local. This was done and in three days the man was all right.

Another case reported by him was that of Joseph M., 31 years, who had Rheumatism. He had pains all over his body. He rented an Equipment for 4 weeks. At the end of 2 weeks all the pain was gone with the exception of the feet. Green Systemic and Magenta on Areas 4 and 18 were used first and then Lemon Systemic with Magenta on Areas 4 and 18. He lost no work at all. He will purchase an Equipment of his own now.

Kurt B. said that a man came to him asking what should be done. His wife was suffering from what is known in this locality as "Stomach Flu". She had severe pains in the Abdomen. Three Purple Tonations on Area 4 were given and two Turquoise Systemic and she was all right.

Frank B. reported two cases of the same ailment in his own family. He and his son both had it. They used Turquoise Systemic only and were all right.

Frances B. reported that Indigo had helped her daughter when she had this same ailment.

Hedwig N.'s daughter, aged 27, had a severe Headache one morning. Given Green on the head for 20 minutes, caused her to vomit. She had only the one tonation, but was feeling fine thereafter.

Carrie M. told of a case of a school teacher who had slipped and fallen, hurting her side very badly. She was also injured internally, evidenced by bleeding from Area 11. Carrie M. took her Equipment to her and gave her Magenta on Area 4. Then she gave her Green and Turquoise to help the bleeding. Three Indigo Tonations for the pain were effective. In 3 weeks the Sufferer was well again. Before using Spectro-Chrome she was not able to move.

Otto S. has had his Equipment since January 17, 1936. In the fall he could not work, the Doctors saying he had fits and was headed for the insane asylum. He would have these fits every 4 or 5 weeks. Since he used Spectro-Chrome he had only one of these spells and that only slightly. He used Green and Lemon. Backelim he finds is not so good. The members of the meeting suggested that he use for the purpose Lemon or Orange according to what he finds is best suited to his needs. The Deputy suggested Yellow on Areas 8, 9, 10 and 19.

Walter B. said his wife found that since she had been adhering to the Rational Food Of Man system she is getting much better results in the Backelim.

Marie L. had one Tonation at the Deputy's house for a pain in her arm and difficulty in breathing. Took Orange and pain was gone completely. She is getting very good results for Diabetes. She takes her Tonations twice a day. She is on the Yellow for the fourth month now and takes 3 Magenta Tonations a week on Area 4. She used Orange for a while, but was not satisfied. She is using Yellow now and is well satisfied.

The Deputy reported a case of Diabetes in which Gangrene had set into the leg. Yellow drained it nicely.

Annette T. reported the case of a friend's brother who was ordered sent to a hospital for Tuberculosis. X-Rays showed he had holes in his lungs as large as 50 cent pieces. Three months later, after using Spectro-Chrome, X-Rays showed the holes to be only as large as pin heads. Her Sister had Scarlet Fever and with Turquoise Systemic was all right in 4 days, while her girl friend was ill for 4 weeks with the same thing.

Esther F. said her mother has been deaf for 32 years. She has been using the Equipment for about a year; Green, Lemon, Orange and is now on Red. Has not had much in the way of results for the hearing, but is better in general health. She is patient, however, because she knows it is of long standing.

David V. used Green 1 week, Lemon Systemic and Magenta on Area 4, for 4 weeks, Orange for 5 weeks and has had no trouble with his Asthma since using Spectro-Chrome.

Louise L. asked what could be done for her too hearty appetite. David B. suggested that she take smaller mouthfuls and masticate her food more carefully. Kurt B. suggested that she use Indigo on the stomach.

Leona M. says her mother has been using Spectro-Chrome for Diabetes for 1 month. She is rather weak now. She had a heart attack a week ago and has been using Magenta on Area 4, for the past three days. She is using it for her self too, for her leg. There is a paralyzed condition. She uses Lemon and Magenta.

Ann P. asked what she could use on her niece, who is suffering from Anemia. Frank B. suggested Scarlet. Walter B. suggested 1 week of Green, 3 weeks of Lemon and then Orange. This, he said, normalated an anemic condition in his daughter.

Florence G. reported that she had rented an Equipment for her mother's use for 5 weeks before purchasing. Her mother had a complication of ailments. Her hands, especially, were diagnosed by the Doctors to have Ringworm. Since using Spectro-Chrome her hands healed and she is up and around, doing her own work again, which she had not been able to do for a long time. She is well satisfied with the results she is getting. Her sister also used the Equipment for Nervousness. She took 1 Yellow Tonation on the head only and felt better.

Chester D.'s wife had a Cramp in the small of her back. It was very severe. She found it very difficult to move even a little. Orange, Turquoise and Indigo were unsatisfactory. Lemon did not prove satisfactory either. She was in bed about 10 days, using Lemon

and Turquoise Systemic, but results were very slow, even with 2 or 3 Tonations daily. A discussion on this case followed, suggestions being made that she should have used Blue and Turquoise. Red was also suggested. Kurt B. suggested that if she had looked to her Kardoscil and Spiroscil a tonation on Area 4 would have done more.

Louise M. has been suffering for 3 years from a back ailment. Spectro-Chrome Institute advised her to use Green and Lemon, which she did. She is not following the Rational Food Of Man system so well. All of her bodily functions are normal outside of her back. She has not had much in the way of results.

Anita D. has been using her Spectro-Chrome for a year for Indigestion. She used Green, Lemon and Magenta on Area 4. While she was observing the Rational Food Of Man system, she felt much better than she does now that she is not following it closely. She has had results, however.

Alma M. spoke of the importance of keeping the thermocept clean. She had some difficulty in getting hers clean and noticed that her son, who is using the Equipment, was not getting the results that he was getting when the thermocept was clean.

EDITORIAL REMARKS

Your Planet is working steadily to greater usefulness. It is necessary for the Sufferers to comprehend that in order to receive the full benefit which Spectro-Chrome is capable of conferring, they MUST follow the Rational Food Of Man system and reform where necessary their personal habits. One can not violate the Laws Of Health and expect to maintain it. Most people seem to believe that they may follow their own prior habits of life, which induced their Disorders and yet leave their recovery to Spectro-Chrome; this is an evident mistake. Nature's Laws can not be transgressed.

The Thermocept, like any other piece of similar apparatus should be kept clean. If your water be not clean, use spring water, but many seem to think that we must give them something that will last for 343 years without cleaning.

SPECTRO-CHROME METRY ENCYCLOPAEDIA—VOLUME 3.

By:—FRANK S. B., *Milwaukee, Wisconsin.*

The wealth of knowledge contained in Volume 3, should be studied by every person seeking to broaden and improve his or her store of general information. Besides being interesting and instructive, it is a work of revelation few of us have ever dreamt of.

Spectro-Chrome Metry Encyclopaedia 1-2-3 are by far the most interesting, instructive and conclusive work it has ever been my pleasure and good fortune to possess. I value them highly and treasure the work of the Originator, so ably, yet simply composed, that even one of ordinary education can comprehend their value and enlightenment.—E. P.

WHAT IS IT ANYHOW?

Rudolph S., Detroit, Michigan, asked us "What is Hodgkin's Disease"? Here is the answer in the lingo of our friends."

"Hodgkin's disease, a disease marked by an infectious granulomatous condition (inflammatory enlargement) involving particularly the lymphadenoid tissues of the body, with the presence in the lymph glands of fibro-blasts, eosinophils, giant cells, and frequently of an organism, Corynebacterium granulomatis maligni, which is possibly the causative agent of the disease. The glandular enlargement begins on one side of the neck and extends thence to the axillary, inguinal, mediastinal glands, and to the spleen. It is usually attended with a relapsing fever. Called also infectious granuloma, malignant granuloma, malignant lymphoma, lymphomatosis granulomatosa, lymphadenoma, lymphogranulomatosis, granulomatosis maligna, lymphosarcoma, anemia lymphatica, and pseudoleukemia."

Can you realize why we junked this conglomeration of words, worthless for our Spectro-Chrome? Yet, very few communications come to us without their writers parading a number of such formidable names, expecting us to reply in similar formidable language. They forget that the fundamental essentials of Spectro-Chrome completely abolished Differential Diagnosis, releasing mankind permanently from the bondage of 6,000 years of civilization. The names of Disorders were a curse to life and complicated the Healing Science; Spectro-Chrome entered that Chaos and shed the glory of Light, scattering the ignorance with which the Medical Doctors had surrounded the most valuable asset of the human race—Health.

It is strange how the present generation does not estimate in its proper value the gift of God—Spectro-Chrome. Unfortunately for us, most cases which resort to Spectro-Chrome are not Acute (Recent), but are solely those which are Chronic (Persistent) and given up by the Medical Doctors, after plenty of butchering. In spite of all such handicaps and obstructions, Spectro-Chrome paved its way and made for it a place which no time can efface. The public WILL awaken to its merits before long.

No Diagnosis — No Drugs — No Manipulation — No Surgery

OUR AIM: SPECTRO-CHROME—IN EVERY HOME

MILWAUKEE MEDICO-LEGAL BURLESQUE

Medical Doctors Swear Spectro-Chrome Has No Merit And Is Merely Mental!!!

When Edward A. Ernest became the Distributor General for the United States Of America, for the Equipments of Spectro-Chrome Institute, The Milwaukee Journal of Milwaukee, Wisconsin, published a defamatory article under the heading "Magic Healing Device On Sale, Wizard Gone", in its issue of Sunday, November 19, 1933, reviling the Originator of Spectro-Chrome Metry and holding E. A. Ernest to ridicule for his affiliation.

Dinshah threatened to bring a Libel Suit, but refrained when Ernest filed one against that newspaper. It was understood the Originator would appear as a witness for the Distributor, but when the said Ernest lost his distributorship, it was impossible for the Originator to appear in aid of the individual whose expulsion from the Organization he had caused.

The Damage Suit went on trial before the Honorable Judge Sherman E. Smalley, on Monday, March 30, 1936, in the Circuit Court. Frank P. Burke, attorney for Ernest, had tried hard to interest Dinshah to go on the witness stand, which he flatly refused for obvious reasons known to our readers. A Jury of 5 women and 7 men was selected. Attorney J. G. Hardgrove represented the Defendant Newspaper. Our comments are collected from the reports which appeared from time to time in The Milwaukee Journal.

Hardgrove called Spectro-Chrome "hocus pocus" and said that Dinshah was interested "in earlier years in many kinds of occult systems of treatment. Those systems included hypnotism, mesmerism and mystic oriental and European philosophies". He wanted Ernest to establish "scientific proof of the merits of the machine". This could not be done by him without the help of the Originator, as Ernest with his limited knowledge became so tangled in cross examination that his answers became a boomerang against his success. *The Court debarred all testimony of laymen and admitted solely that of Medical Doctors,* as if those opponents would extol Spectro-Chrome! Had the Originator been there, he would have shown the same turn of Court as he did successfully in the Supreme Court Of New York State, but the Plaintiff in this case having no such training could not stand against the onslaught of the Defendant. Ernest could not make clear about Spectro-Chrome having no Differential Diagnosis and the more Frank P. Burke endeavored to elucidate, the worse became the tangle. The Auric Vehicle was torn to pieces and much silly talk resulted. To save his case, Ernest dragged in the names of many prominent purchasers of Spectro-Chrome to prove its merits, an act which in itself was out of the line of gentlemanly decency and was nothing short of a betrayal of confidence—a treachery.

The articles published by the American Medical Association against Dinshah were placed on record, but without the presence of the Originator who had the rebuttal records, the Plaintiff could do nothing. With the production in Court of a Wood Cabinet Spectro-Chrome, irrelevant subjects like the Itisometer, Lavan, Manjan and the like were introduced. It was mentioned the Lavan was sold for $3.00! The Favorscope too came in for its share of ridicule.

The icebox incident of a person was brought into question. The said person had made it appear he could stay in ice long because of the "color"!!! This circus play brought smiles. The Esquimos live in ice huts without using "colors". The public however has little discrimination of what is true or otherwise. Ernest stated that the new color equipment he was selling, since his expulsion from the Spectro-Chrome Organization, was "superior", (?) although Spectro-Chrome was good! He wiggled every way to save his skin,

but, the shrewd Hardgrove pinned him each time. The Court ruled out the whole humbug.

The Defendant Newspaper called as a witness Dr. Norbert Enzer, Specialist in Pathology and Diagnosis at Mount Sinai Hospital. This Medical Doctor emptied his Solomonic wisdom that "the visible rays were utterly without value for specific or symptomatic complaints"! He declared ignorance of Green being a Disinfectant or Yellow a Motor Stimulant. He never had heard of it and to him it was all "absurd". He pooh-poohed "self-treatment".

Another Medical Doctor Louis M. Warfield stated that the claims for Colors were a century old and were disapproved, "there being no scientific proof of their value".

Affidavits and other so-called "evidence" about Dinshah went in without his presence. Hardgrove made plenty of fun about him; although Frank P. Burke did his best to show the work of Dinshah in good light, volumes of irrelevant matters went on record.

Through a dodge on the part of E. A. Ernest many Graduate Spectro-Chrome Normalators went on the stand on his behalf to defend the merits of Spectro-Chrome Metry. When Ernest found that the Originator refused to appear for him in the case, he telephoned a number of established Spectro-Chrome Normalators and told them glaring untruths that they should appear without summons voluntarily, because Dinshah was likely to be there! This lying trick worked and the Graduates went to help Ernest, believing they were aiding the cause of Spectro-Chrome.

Medical and physical experts—self-centered orthodoxists—swore on the stand "that the equipment, developed by Dinshah Ghadiali, Malaga, N. J., a native of Bombay, did not have any substantial healing or curing merit!" Those misjudged, arrogant bookworms *never* heard Dinshah or studied his Science, which in a few years more will most assuredly drive their medical hocum to the rocks. They were brought in as parrots and the testimony shows them to have imitated the cry of their guide the American Medical Association.

Attorney J. Gilbert Hardgrove scraped the skin of Dinshah to bleeding, when as Defense Counsel he summed the case to the Jury. Among the glittering gems of argument scattered by him were these:—"This man Dinshah tells the people never to allow the use of serums, vaccines or any test approved by the medical profession. Yes, he would put the fate of people, their very lives, in that worthless box with an electric light and a few pieces of colored glass. .....He would have people believing that we are all surrounded by an invisible aural body. Hocus pocus and nothing else, a gigantic scheme of fraud. .....It is important that such fakes and schemes be eliminated and people be protected from being preyed upon.....".

Attorney Frank P. Burke as the Plaintiff Counsel did his utmost to maintain the ground for his client. Among many compliments he showered on the Originator, he stated "that he accepted Dinshah Ghadiali as a scientist". However, because of the absence of the Originator who alone could duly defend his Science, he obviously could not impress the Jury about the merits of Spectro-Chrome.

The Honorable Court gave a fair Charge to the Jury and the verdict was given in favor of the Defendant. The Milwaukee Journal won every point at issue. Edward A. Ernest lost the case as the Jury decided in the absence of rebuttal testimony, that "the application of light rays by the use of Spectro-Chrome instrument has no substantial healing or curative effect on disease of the human body"!!!

Fools rush in where angels are afraid to tread. In going to Court to prove the merits of Spectro-Chrome and the libel against his character, *without the aid and presence of the Originator,* E. A. Ernest severely burnt his fingers, by losing self-respect as well as a suit of $150,000.00 damages. He had a good and conscientious lawyer in Frank P. Burke, but as the rebuttal records were in the hands of Spectro-Chrome Institute, without its assistance the Jury had to nod as the Medical Doctors testified and no wonder.

God put the vital organs in the Body, so the Surgeons may fatten by their removal; He likewise made the serious error of manufacturing White Light with a 7 Color Spectrum, so Medical Dopers may have the satisfaction of swearing that "color is of no value!" Hallelujah! More will be published later.
