The World Through the Eyes of Dinshah—

ANNUAL CONVENTION NUMBER

Editor
Dinshah P. Ghadiali

In course of life you reach a time,
When Doctor, Lawyer, Priest alike,
Does fail to give the sought relief,
To troubled mind or burdened heart—
Then come to me;
I help you to help yourself.

EXTRAORDINARY MEETING

OF

AMERICAN ASSOCIATION OF SPECTRO-CHROME THERAPISTS

IN PLACE OF

FIFTH ANNUAL CONVENTION

A PICTURE OF SUCCESS

AND EXEMPLARY UNANIMITY

The Fifth Annual Convention of American Association of Spectro-Chrome Therapists, which should have met according to the By-Laws on November 28th, could not be gathered because of the unavoidable departure of the President Colonel Dinshah P. Ghadiali and Secretary Kashmira Dinshah and of Irene Grace Dinshah the Secretary of Spectro-Chrome Institute, for the Pacific Coast, to attend to important matters at law.

Returning from Oregon during the middle of December and seeing the necessity of convening all the Associates, the President consulted the Chief Executive Council. It decided that the occasion was an unprovided one and resolved upon calling an Extraordinary Meeting at short notice in place of the usual Annual Convention.

The call was promptly answered from all quarters, those not able to join sending their regrets and extending good wishes for customary success.

On Sunday December 27, 1925, the Chelsea Room of Hotel Lorraine Philadelphia, Pa. again resounded to the oscillations of Spectro-Chrome By Yellow 00 White, the time set for the opening of the Extraordinary Meeting, the beautiful audience chamber had many more than the quorum necessary to begin the business of the day. On the right and left of the platform, a mahogany and an oak Itisometer was working to show the year's remarkable progress in Therapeutical Precision. Smiling faces, cheerful happy women and men of culture and intelligence—representatives of the various Centres of the Association, graced the sunlit hall and the encouraging presence of the Vice-presidents Kate W. Baldwin, S.C.T., M.D., F.A.C.S. and Martha J. Peebles, S.C.T., M.D. on the platform added to the enthusiasm of the crowd. Only Associates were admitted, the doors being totally closed to Strangers during the first day.

FIRST DAY MORNING SESSION

On the stroke of 10, President Dinshah called the meeting to order. The roll demonstrated the presence of Associates from Mighigan, Massachusetts, Ohio, New York, New Jersey, Pennsylvania, Rhode Island, Delaware, Maryland, Connecticut and other States.

The minutes of the Fourth Annual Convention were presented as printed in Spectro-Chrome of January 1925 and on motion of John A. Cohalan, S.C.T., D.O., seconded by Ruth A. Verbeck, S.C.T. were accepted unanimously as correct.

The Secretary Kashmira Dinshah, S.C.T, presented the Annual Report. There was no resignation or violation Moved by Welcome A. Hanor, S.C.T., M.D. and seconded by Bessie A. Hasenau, S.C.T. that the said report be accepted, Unanimously passed.

The report of the Treasurer Dinshah P. Ghadiali, S.C.T. was then presented showing a good balance in favor of the Association notwithstanding the expenses incidental to the pioneer work. Moved by Ruth A. Verbeck and seconded byCharles F. Lallouette, S.C.T. that the report be accepted. Unanimously passed.

Second Vice-president Martha J. Peebles, S.C.T., M.D. spoke about her endeavors in New York to maintain a Centre exclusively with Spectro-Chrome Therapists who were licensed by the State to practise Medicine, Osteopathy or Dentistry. She said she had first thought that would produce ethical co:operation from certain of our Associates who wanted to avoid troubles among their medical and other licensed brethren by joining only a Centre where no lay Spectro-Chrome Therapists could be affiliated, but, her experience during the last year showed that it would be wiser not to have such separate Centres. She requested the Chief Executive Council to affiliate all the Spectro-Chrome Therapists in New York with the First New York New York Centre which she headed, instead of formulating the Second New York New York Centre for the lay persons.

Dinshah commended Dr. Peebles for her sagacity and foresight saying he was perfectly willing that the medical and other licensed friends be given all the consideration to maintain their affiliations with their respective organizations, provided our By-Laws were not transgressed. He was glad to allow Dr. Peebles to have her way in maintaining the First New York New York Centre as an "exclusive" Centre, but he was pleased to note the worthy Vice-president's experence made her change her views. The Chief Executive Council would welcome the change as marking more harmonious co:-operation.

Surgeon Kate W. Baldwin corroborated the views, saying she presided over the First Philadelphia Pennsylvania Centre—a Centre which had nearly 75 Associates of different walks in life, yet, all were of one mind when it came to Spectro-Chrome Therapy. She had no difficulty whatever with them and the laymen and the professionals were one at heart and purpose in the practice of Spectro-Chrome Therapy. She eulogized Dr. Peebles for the change and assured her she would find it beneficial. Dr. Baldwin said that the editor of the Journal of American Medical Association—Morris Fishbein—had published a book called "The Medical Follies" in which he wrote among other systems a few lines against Spectro-Chrome Therapy also. She said she was surprised how anyone could write anything like that without proper investigation. It did not seem fair.

Ruth A. Verbeck asked for forms of Transfer of Affiliation. Dinshah said they were getting ready and would be mailed.

Dr. Kate W. Baldwin spoke against allowing Associates to be enrolled as Fellows, when they had only a 400 Watt Intermediate Equipment. "The 400 Watt Equipment is good for its work, but, you can not expect proper results in general office practice with it," she remarked.

Dinshah said it was true, but, as the By-Laws differentiated between Members and Fellows only as those not practising or practising among the public, without reference to the type of equipment possessed, he did not believe in enforcing otherwise.

He stated it would look as if Spectro–Chrome Institute wanted to lease only the higher–priced equipments, which would be selfish because all could not afford them and also because it did not appear right yet the time to lay down such restriction. He smilingly said it were better if each Fellow were compelled to have an Itisometer also!

The question of maintaining reserve Slide Sets with Centres came for discussion. Dinshah said he wrote to all Centres about it asking them to have a separate fund for maintaining Slide Sets and Slide Carriers in reserve. The First San Francisco California Centre and the First Boston Massachusetts Centre were the two which did not fall in line with the others. He explained how vitally essential the absolute protection of genuine Spectro-Chrome slides was. "It is either they must be in accordance with their proper spectral positions for Therapeutical Precision or they would be just pieces of colored glass. This is the *only one* difference between the true Spectro–Chrome Therapy and the imitation Fakeo–Chrome! If I were to release my hold on this situation, you might as well bid good-night to honesty and integrity; the American people have been cheated long enough; let us stand by our high principles aid guard against anything that would open the door to unprincipled imitators. I stopped a large source of revenue by stopping all sales and by absolutely shutting out unauthorized persons from even leasing our equipments. It was done to protect your interests and those of the suffering public and we must be ever watchful to prevent any leak in the Slides situation. There is too much fraud going on and I wish each Centre will realize its responsibility by guarding against imposition."

Dr. Martha J. Peebles eulogized Dinshah's interest in the work, said he was doing his utmost to maintain the high character of the Institute and asked all to support his endeavors. She said it was marvelous what he accomplished within the last five years. She was satisfied all that could be done was done for the benefit of the Associates.

The morning session adjourned at Green 00 White.

FIRST DAY AFTERNOON SESSION

The afternoon session commenced at Blue 00 Black. There was a larger attendance than in the morning, as the whole afternoon and evening were especially set apart to hear of the "adventures" the President had gone through during the year and to listen to which the Extraordinary Meeting was convened.

Dinshah commenced by giving an account of the rapid development of Spectro–Chrome Institute and his efforts to secure faithful and efficient employees for carrying on the complex work. He stated how it was necessary for him constantly to travel, how he had suffered during his April 1925 Pacific Coast tour, how certain malicious organizations and persons had placed him in great trouble and loss and persecuted him most virulently. He stated how his life was threatened with extinction in a pistol combat, how he came safely through it, how the most pernicious falsehoods were uttered and spread about him and his dear wife and daughter, how some of his trusted employees had bitterly stung him by deliberate perjury and how he had

been put through every possible annoyance to ruin his character, reputation, finances and business. He emphatically repeated that notwithstanding all that was done to the contary, he was yet alive to serve the World.

The first day afternoon session adjourned at Purple 00 Black.

FIRST DAY EVENING SESSION

The first day evening session met at Red 00 Black. There was even a larger attendance than in the two prior sessions and the Associates listened with rapt attention. As records were read by Dinshah to prove his innocence of the horrible charges against him—records that no impartial person could read without feeling a sense of anger against his revilers—the Associates expressed their resentment in open terms. When they heard about the perfidy and treachery of certain persons and how it resulted in Dinshah coming near losing his life 3,500 miles from his home, being kept days without food or drink, shut away from communication with the outside world,the tenseness of the situation gave way to moist eyes. Many shouted for retaliation and turning the tables against the persons who instigated such atrocities, but, Dinshah calmed them saying he had no revenge in his mind and was not seeking to injure anyone. Truth was ever triumphant and he hoped soon to put the evildoers to shame by exposing their lies.

The Associates clamored that a fund should be started to help Dinshah in carrying out his appeal against injustice, but, Dinshah declined any such help by saying it was against his principles to receive gifts or presents. He said if anyone wanted to help let the help come through different channels. Let them take Preferred Stock in Spectro-Chrome Institute or send him more students, but, he would accept no gifts. He requested his Associates to keep a level head under trying circumstances, to divest themselves of harmful thoughts against the opponents. Truth must prevail and he would get justice eventually. Evil thoughts were boomerangs. "Wish no evil to my revilers; they will get what is coming to them from Higher Powers than human. Send them on the contrary good thoughts so they may be filled with remorse. When the sting of conscience will come, they will be sorry for their conduct. I am only paying the penalty common to every pioneer. They persecuted Zoroaster, Buddha, Jesus, what am I—a mere servant of humanity, compared to Those Enlightened Souls?"

The first day evening session was concluded at a few minutes past midnight and each Associate went pondering on the "Faithlessness of the World." It was a painfully instructive session in many ways, in regards to the peculiar psychology of humanity.

SECOND DAY MORNING SESSION

Monday morning was fruitfully utilized in exchange of views among the Associates in regards to Spectro-Chrome Therapy. It was an entertaining session.

Clara C. Bryant, S.C.T. said that Spectro-Chrome Therapy satisfied people; her sufferers were pleased with the results. Painful boil on Area 15 was normalated by Orange.

Ruth A. Verbeck, S.C.T. spoke of a case of Rheumatic Inflammation

about which Dr. G. Ernest Spear, S. C.T. had inquired. The President asked her how she know it was "Rheumatic Inflammation" and she said the doctor said so. This led to Dinshah advising the lay Associates to cut out medical phraseology as being a jargon of unmeaning words and to take to Spectro-Chrome methods for better accuracy and safety.

Dr. Martha J. Peebles spoke very emphatically about the worth of changing the phraseology. Medical phraseology led to errors which in a therapeutically precise system like Spectro-Chrome could not exist.

Dinshah was asked to speak on the Science of Itisometry, which he did at some length.

Dr. Martha J. Peebles spoke of a case of High Blood Pressure with 280 systolic and 140 diastolic, which she tonated with Spectro-Chrome Therapy in a week. She said that the stress laid by us in our work, on the breathing processes was correct, in as much as life depended on proper breathing; she had exemplified it.

Bert C. Smith, S.C.T., D.C. described the case of a bank manager who had cankerous sores which were normalated by attention to the diet in accordance with our system.

Wallace F. MacNaughton, S.C.T., M.D. made some sensible remarks about diet and tonation of disorders. He alluded to the difficulties met with in certain cases where Backelim Retardation existed.

After enjoyable discussion, the second day morning session adjourned at noon.

SECOND DAY AFTERNOON SESSION

The second day afternoon session opened at Blue 00 Black. According to announcement, the doors were opened to Strangers introduced by the Associates and many brought sufferers in to demonstrate the success achieved by them with Spectro-Chrome Therapy.

Grace E. Lallouette, S.C.T. started the meeting by speaking of a case of Infantile Paralysis she had normalated. She also spoke of a case in which by the administration of the Lemon Attuned Color Wave the sufferer passed a bunch of worms and was normalated.

Ernest Carreiro, S.C.T., D.C. described a case which the Medical Doctors had diagnosed as Hodgkin's Disease. The sufferer was "dying because of 14 consultants"! Had 55 respiration, 102 Degrees temperature, pulse threadlike; swollen like a pig; had been ill 3 years. Tonated with Spectro-Chrome at bedtime; Magenta improved the condition. Now his Kardoscil is 100, Spiroscil 24; swelling is gone. A woman of 75 had Tic Douloureux; very painful 6 years; had eminent consultants; they were injecting Alcohol in temples. First day of Orange Attuned Color Wave gave relief and 6 weeks normalated.

A girl of 13 had Infantile Paralysis. Had it for 5 years; had been to the State Hospital; Yellow, Lemon and Magenta normalated her in 3 weeks.

Nissin S. Hanoka, S.C.T., D.D.S. said that he had satisfactory experience in all cases tonated by him during three years of his practice as a Spectro-Chrome Therapists. He normalated toothache, hemorrhage, Tic-douloureux. His wife tonated children who ate poisoned fruit; 104½ degrees, fever; Orange on Area 8 Blue Systemic, Magenta on 4 made them orelimate and backelimate and

in the morning they were right. The doctor would not believe it. Spectro-Chrome does more than we thought it would.

Bert C. Smith, S.C.T., D.C. spoke of his success with Spectro-Chrome A case was reported of Erysipelas in foot from soft corn. Four Indigo tonations and it was gone. Woman suffering from Ringworm on Number 1 was given by someone Ultra-Violet Rays and was burnt. One tonation with Yellow was given; she went home, slept and the scales dropped off.

Ernest Carreiro, S.C.T., D.C. reported ohter cases. A woman suffering 13 years from Pulmonary Tuberculosis, was married and had two children. Ran temperature, had a bad heart with leaky valves, was helpless. Five months of Spectro-Chrome tonation relieved her. She went to motion pictures; had no cold now. Used Orange on 5 and 4, Lemon on 17; also Magenta; Green systemic twice. A man 28 years of age had Pulmonary Tuberculosis with putrid mucous discharge; chest sounds could be heard six feet away like gurgles and explosions; he had been given X-Rays.

He wrote to Dr. Kate Baldwin about it and she encouraged him Nine months of Spectro-Chrome normalated the man and he took a machine shop. He had an impression that where night tonation is not given Spectro- Chrome may not be so successful. A case of Psoriasis was so bad a trail of scales was left. Turquoise, Lemon and Magenta was used for five months. The sufferer was relieved of the disorder. He had normalated Acute Appendicitis; Neurasthenia in woman responded to Spectro-Chrome; the survival value of tonation with Spectro-Chrome was large.

Bert Smith, S.C.T., D.C. spoke about the harm caused by the removal of organs; he said the removal of the Thyroid Gland in his wife caused her to succumb to Pulmonary Consumption.

Dinshah said that the removal of the Thyroid was a serious mistake; the chain of internal glands should never be disturbed.

At this point, Emma H. Gabriel, S.C.T., N.D. escorted Anna Schoener the (formerly paralyzed) girl whose case was reported in Spectro-Chrome of February 1925. She came walking with her father, a Philadelphia, Pa. policeman. The father reported to the audience how helpless the girl was and how Spectro-Chrome helped her. Another case of a paralyzed burnt girl was also introduced. Both cases interested the Associates who expressed their satisfaction with applause.

The President extolled the praiseworthy endeavors of Dr. Emma Gabriel in the cause of suffering humanity and presented to her the Silver Medal of Spectro-Chrome Institute; the second one to be so presented, the first one having been awarded to Dr. Kate W. Baldwin, two years ago.

Dr. Martha J. Peebles spoke about the value of long and continued tonations for long standing disorders. She explained the beauty of the Magenta Attuned Color Wave and spoke about the rejection of the superfluous Color by the Auric Vehicle.

Wallace F. MacNaughton, S.C.T., M.D. reported some of his interesting cases, which included Paralysis, Colic, Constipation, Corneal Ulcer, Stomach Ulcer, Psoriasis and the like. He asked for more information about Impeded Back Elimination.

Dinshah spoke at length about the reason of Imbackelim and why some cases did not appear to respond to Yellow. He impressed upon all the value of taking the Visible Physical Vehicle as one unit machine and not tonating it purely locally. The defective circulation in the internal organs needed Magenta on 4 or 18 and without removing such sluggishness the local Area may not respond. Furthermore, the original cause may need systemic; the Itisometer was the one apparatus that was necessary to find where apparent failures occurred, but, now there should be no failure of any kind. The Itisometer gave the correct clue and gave the Remedial Wave, which may in an aggravated case be Orange as Yellow.

Dr. Wallace F. MacNaughton spoke of the beneficial effects of Magenta and Purple in the case of a woman who had ulcer in the stomach, Kardoscil 92, Spiroscil 16. After tonation with Spectro-ChromeTherapy, she could eat a pear, a fruit she could not eat during three years; her Kardoscil came down to 64 with Spiroscil 16.

Nissin S. Hanoka, S.C.T., D.D.S. spoke of his success in normalation of Imbackelim. He had one case which always needed an enema and had piles cut. Orange on 8-9 with later Yellow gave results. A boy of 5 years; had convulsions since birth; constant Imbackelim; 18 tonations cleared all disorders. A dentist had varicose veins for 30 years; was 3 weeks in bed with a swollen foot; Spectro-Chrome equilibrated him so, he became interested and went to see the Spectro-Chrome Institute Research Laboratory.

Grace E. Lallouette, S.C.T. reported some of her work. A married woman, young, was told by Medical Doctors she had a tumor on the right ovary and her case was declared hopeless. She was reduced to 92 pounds. Two Spectro-Chrome tonations per day were given; in six months she was 122 pounds. Her home was a hundred miles away, so an Equipment was loaned to her; she was soon restored to normalcy; her present weight is 133 pounds. Two cases of Infantile Paralysis are progressing toward recovery; they received four tonations daily for some time. She reported favorably in cases of chronic Imbackelim.

Frank E. Kaufman, S.C.T. reported a case of a man of 55, suffering from Shaking Palsy and recovered after leaving smoking and drinking and being treated with Spectro-Chrome. He spoke of a case of Tic-Douloureux.

Anna M. Dana, S.C.T. treated Imbackelim, Piles, Eczema, Itch and other disorders with Spectro-Chrome successfully.

Dr. Maude B. Crans, S.C.T. spoke of her experience as a Chiropodist, with Spectro-Chrome. Man of 30 was doubled with heel trouble; Yellow strenghtened his arch. A gangrenous toe was normalated. She said Spectro-Chrome was good for foot troubles. Ingrowing nail disorders responded.

Ernest Carreiro questioned about dropsical conditions and wanted explanation about a case where the lower limbs and abdomen were swollen and the heart was out of order. The Kardoscil and Spiroscil ratio was 8 to 1.

The President gave a lengthy explanation about such conditions, upon the general lines as taught in the classwork on Spectro-Chrome Therapy, emphasizing the beauty of Spectro-Chrome in finding whether the

sufferer will recover or pass away. The public being present, he spoke guardedly without giving details, but was thoroughly understood by the Associates.

Cleo V. Butner, S.C.T. spoke of her success in the South. She blamed Dinshah, in jest, for the publication of her letter from Alabama and said she did not write to gain publicity. She reported many interesting cases. A child had bad sore leg; tubercular bone; pussy mass on shin; Green skinned it in one tonation; three tonations completely normalated; two months totally set right all disorder. A woman had neuralgia; Yellow used; perspiration poured; in three tonations went to work. A man was tonated for disorders caused by adhesions inside; he was normalated soon. She was working with a Medical Doctor, who had seen several of her cases and had joined for the next Course in Spectro-Chrome Therapy, because he believed Spectro-Chrome was simply a wonder. A case of Cancer was reported. She said they had over 20 cases of Tonsilitis waiting for her return to avoid removal; Turquoise always set them right. A man had no relief from Rheumatism for 5 years; Blue worked on him; after the first tonation he slept the whole night.

Soon after Purple 00 Black, the session adjourned.

SECOND DAY EVENING SESSION

The Evening Session of the second day was instructive like the others and being open to Strangers, many were introduced by the Associates.

Ruth A. Verbeck, S.C.T. discussed two of her cases. Boy 4½ years old had his face and ear scalded by hot water. She gave ½ hour Blue; next morning another ½ hour Blue; normalated. A girl of 15 was having epileptic fits according to the Medical Doctors; she had them since she was 4 years old; just establishing ovelim; tonated with Green systemic, Magenta on 4-18;Violet on 16; she went through her period without an attack; at other times, the mother had to carry "ether cones" to relax her.

Bessie A. Hasenau, S.C.T. was next in line with some of her work. A young woman of 32, had no Backelim without enema nad drugs; six years ago she had Rheumatism; lost use of right knee; she dragged right foot behind; worked in agony; was about 7 weeks in a hospital and the doctors said it was useless for her to stay longer; went to Rome Indiana; she was there given opiates; came for Spectro-Chrome; left medicine at home; tonated with Red and Scarlet systemic, Indigo on knees; has no pain now; has two Backelims daily; equilibrated. A man was in the habit of drinking; he was perspiring profusely when brought in; systemic Green gave him pain; by Turquoise he trembled; systemic Violet and Magenta on 18 made him sleep for half an hour, then he went to office.

Dinshah again emphasized the necessity of attending to the Kardoscil and Spiroscil before starting tonation. He said the man's case showed the potent value of Attuned Color Waves of graded known frequencies.

Jacob Lickerman, S.C.T. had a case of a woman who had only 1 Backelim in 2 weeks. She was tonated with Green and Yellow to Orange with Magenta. She was perspiring under her hat; three tonations normalated her.

Surgeon Kate W. Baldwin, S.C.T. gave the assembly the benefit of her wide experience in the use of Spec-

tro–Chrome for all types of complications. A man of 59 had been paralyzed from infancy; his right leg was shorter; he was an artist and a woodcarver; for 17 years he worked 18 and 20 hours a day; ate little but meat; had 1 Backelim in 2 weeks; smoked all the time; ate two meals a day; his left side gave out; took Aspirin; when he was given under her care, looked like a hopeless case; she let him have a Practitioner's Equipment; four weeks of tonation changed the condition of the man; the case became very hopeful; the man left off his smoking and became a vegetarian saying if it was good for his recovery he was going to do it; his bad piles were shrunk; Backelim cleared; he had Green and Red, Magenta and some Yellow; since she received the Itisometer he was itisized and the Areas proved on Zero Scale showing his growing vitality; his Area 4 was good.

Speaking of the Itisometer, Dr. Baldwin stated the apparatus for a while puzzled her; a man itisized Zero all over and he was far from normal; he coughed and expectorated heavy mucous; then her attention was drawn to the Kardoscil and Spiroscil as well as Zero needed Green; that cleansed him. The Itisometer gave some peculiar readings; one had to learn its peculiarities; she used the Itisometer constantly; she had apparatus Number 1; she was anxious for months to have it and now she had it, she would feel lost without one; it was a great help in Spectro–Chrome Therapy. She spoke about two cases of Glaucoma which she tonated with Spectro–Chrome; they were well responding.

Dr. Baldwin emphasized again the necessity of Fellows of the Association having proper Spectro–Chrome Equipments; it was not fair to the public to go for tonation with insufficient apparati; they should at least have a Practitioner's if not a Graduate Spectro–Chrome Equipment; it was inportant for proper results. She spoke of a sanatarium doctor who had itisized Ultra–Zero 110 all over and steadily recovered until the Itisometer proved him near Zero.

Anna M. Dana, S.C.T. asked Surgeon Baldwin about X–Ray burns and was informed that Spectro–Chrome was effective in those cases.

George F. Ehrline, S.C.T. introduced a young man of 19 whose left side was paralyzed from childhood; left arm was short; gave him 18 tonations in 36 days; his forearm increased 3–16th of an inch and Area 14 increased 3–8th of an inch in girth; the youth was slowly but steadily recovering; he said he was satisfied that soon better results would appear.

The Evening Session upto O 10 B was open to the, public; after that owing to too much of classwork being given, the President declared it a closed session; discussions also continued about the best means of defeating the foul aims of those who were fighting to ruin Dinshah and to destroy his family, reputation and work.

Dinshah having received that evening, the transcript of record and other valuable documents from the Pacific Coast, read aloud certain portions and a majority of the assembly who knew the truth again clamored for justice. They expressed their willingness to go to the Pacific Coast and testify as to the untruth of the charges against Dinshah, from what they personally knew. After quiet deliberation, the meeting was adjourned past midnight.

THIRD DAY MORNING SESSION

On the last day of the Extraordinary Meeting which represented the Fifth Annual Convention, the interest and enthusiasm of the Associates was unabated. They were as usual hungry for knowledge, thirsty for information, ready to expound and stand by the truth.

The President brought to the attention of the meeting that he had information of the persecution of an Associate Joseph J. Zilis, S.C.T. in Cleveland Ohio, on the complaint of an agent of the Ohio State Medical Board. He said he had not the full information, but, that Zilis was given no proper opportunity to defend in the Court. The Court had told Zilis that he should secure a License from the Ohio State Medical Board!!!

Dinshah said that the time was ripe for the Association to start an insurance scheme to protect against such medical tyranny; he could not authorize the use of the regular Association funds for such purpose, because, it was not fair to the Association to be the custodian of individual safety at this juncture as the limited funds of the Association would not warrant it; furthermore. the Charter of the Association may not be construed to authorize such disbursement; he was willing to help, but, the help should be from a separate fund to which those who wanted such special protection might subscribe. Other Associations had similar provisions and we should find out what would be the best for us. He asked Bessie A. Hasenau, S.C.T., President of the First Cleveland Ohio Centre, if she knew and could give verbatim report of who were the accusers of Zilis and what happened in the Court actually so the Association might come to some understanding. She had not any special inside information and was unable to give an exact rendering

Vice-President Dr. Martha J. Peebles wanted action in the matter to give relief to Zilis if it were found he was unjustly persecuted by the Medical Board; she stated how Dinshah had appealed to her about helping Zilis, but, without learning the inner facts, nothing could be done.

Dr. Wallace F. MacNaughton wanted to go through this case thoroughly to set a precedent. Welcome A. Hanor, S.C.T., M.D. expressed similar opinion.

Dr. Ernest Carreiro spoke about it being the same attitude as against the chiropractors. He was arrested eight times and was once convicted, but, he continued his practice as a chiropractor in spite of the persecutions. We must have a separate organization for taking care of such legal troubles.

Anna M. Dana spoke about the license troubles in Massachusetts.

Cleo V. Butner spoke of free tonations.

Dr. Martha J. Peebles said that even licensed Medical Doctors were subject to malpractice charges and the American Medical Association would not defend individuals; there were numerous spite cases among them also and much of the annoyance was by unjustified lawsuits.

Dr. Nissin S. Hanoka said his dental friends went through similar troublesome experiences. He told of a negro who came for a tooth extraction, gave two dollars and sued for $2000 damages. Each Spectro-Chrome Therapist should carry protective insurance against such blackmail.

Dr. Wallace F. MacNaughton called it a necessity; he favored it.

Dr. Martha J. Peebles gave an enlightening address on the values of different policies and moved that the President investigate this question from various insurance companies and report to the Chief Executive Council what was the best to protect the interests of all concerned.

The assembly did not take any definite action in regards to the Zilis case owing to the absence of full particulars.

THIRD DAY AFTERNOON SESSION

The afternoon was well used in discussing how to raise the standards of training in Spectro–Chrome Therapy so as to meet progressive requirements and fulfill the purpose (h) of our Constitution.

The President spoke at length in connection with this. He had started since June 1925 classes at Malaga New Jersey, where right in the Research Laboratory the students were trained very carefully with elaborate experiments and demonstrations in Spectro–Chrome Therapy. The full course was composed of 30 discourses instead of 24 and was gaining the favor of the students. He had given all he possessed to Spectro–Chrome Institute and was so arranging matters as to maintain the work even after his death. However, he said, he was very busy and had no leisure yet to die; the World needed his services and he would live years to see his goal of Therapeutical Emancipation achieved.

Walllace F. MacNaughton S.C.T., M.D., suggested that an addition of Professional Economics in the Course would be of benefit to the S. C.T. It was necessary to teach the S. C.T. how to earn livelihood after graduation and not to lose. Dinshah said they learnt that the same way as the Medical Doctors.

Bert C. Smith, S.C.T. spoke of his experiences as a Doctor of Veterinary Medicine. Some interesting questions issued in regard to hay and oats for horses.

Dr. Martha J. Peebles said she had a wide experience in medicine and did not lose more than perhaps $1000 in all 25 years. People were in general honest and practitioners did not lose much; she gave service to many poor free of charges and did not regret it.

Bessie A. Hasenau, S.C.T. lost only $54 in two years.

Dinshah offered a prize of $25 for the best article on "Professional Economics." Dr. Martha J. Peebles said Spectro – Chrome Institute should receive help from the Associates and not give prizes. Dinshah stated with a twinkle in his eyes that it meant really more money for the Institute, because, although it would pay $25 the copyright of the article would belong to the Institute and it was worth more than that. He felt sure if nobody won it, Wallace Mac Naughton was sure to win, he was a good writer and had a clear head. He did not smoke!

Dinshah then brought forward another item of interest—it was about the degree of Master of Spectro–Chrome (M.S.C.). The Charter of Spectro–Chrome Institute provided for that high degree, but during the period of its existence, none received it. He had guarded those initials as a treasure would be and asked for suggestions as to the qua–

lifications necessary in a Spectro-Chrome Therapist to deserve it. Spectro-Chrome Institute did not—and would not-create "Doctors," bnt would stick to its own original line and would have nothing to do with the titles of other professions. The following suggestions were offered by some of the Associates, for attaining the degree:—

Wallace F. MacNaughton — 100 Itisations, 2 years practice as S.C.T., 6 months of experience in Itisometry, 5 articles to be written for Spectro-Chrome, each of 1000 to 5000 words.

Welcome A. Hanor—5 years practice as S.C.T., affidavits from 500 sufferers normalated, 1 year of Itisometry.

Martha J. Peebles—Suggestions reserved.

Frank E. Kaufman—4 years as S. C.T., 1 year as Itisometrist, 200 case reports.

William E. Darling — Besides practice, the S.C.T. should be able to tonate without the use of an Itisometer as Dinshah does.

Bessie A. Hasenau—Should know why Orange or Yellow may or may not help, how something is wrong with the inner Triangle, 3 full courses in Spectro-Chrome Therapy, 4 years as S.C.T., 200 case reports,1 year in Itisometry.

Nissin S. Hanoka—3 years as S. C.T., 100 Itisations, 10 articles on interesting subjects in Spectro-Chrome, 1 thesis on Spectro-Chrome Therapy and Itisometry.

R. Sitarama Rao—should have knowledge enough to defend Spectro-Chrome Therapy, 3 years as S. C.T., 6 months of Itisometric experience, 200 case reports.

Emma H. Gabriel—3 fullCourses in Spectro-Chrome Therapy, 4 years as S.C.T., 6 months as Itisometrist, 100 case reports.

Anna A. Dana—Supported Bessie A. Hasenau.

Jacob Lickerman—100 so-called "incurable" case reports.

Bert C. Smith—The average suggestions as given.

Bessie P. Grist—Should take a repeat Course in Spectro-Chrome Therapy.

Dr. Kate W. Baldwin was not present at this session because of pressing professional engagements. She offered her suggestions on arrival in the evening:—Must have full Spectro-Chrome Equipment, take Post-Graduate Courses, take repeat Courses in S.C.T., 2 years as S.C.T., 100 Itisometer Charts of tonated cases; she further said that the American College of Surgeons requires for admission as Fellow, fifty or more major operation reports and the like and our requirements ought to be sufficiently met for our purpose by following the outlined suggestions.

Dinshah took the matter under advisement saying he would fully consider all the issues involved and soon establish the requirements for the degree of M.S.C. (Master of Spectro-Chrome). He hinted that he was looking for competent persons whom he could train so as to be fit to succeed him; the pistol combat on the Pacific Coast in which he was innocently involved had made him determined in his resolution to fortify the work so as to prevent its destruction on his demise. He was training his wife Irene Grace and his daughter Kashmira to carry on the work; he had taught them the process of attuning slides for Spec-

tro–Chrome Therapy; he was trying to get such helpers as would be interested in the work and would take to it as a permanent career. He assured the Associates Spectro – Chrome Therapy had no death—it would live until the Sun Moon and Earth changed their chemical potentialities and light gave a new Spectrum!

Discussion then started about Post–Graduate Courses for higher knowledge in Spectro–Chrome Therapy. Bert C. Smith suggested further elucidation of the "Occult Operation of the Great Sympathetic Nervous System"; Wallace F. MacNaughton asked for a Course on "Psychical Disturbances".

R. Sitarama Rao, S.C.T., B.Sc., N.D.reported a case of a girl of 17, epileptic; did not attend school; was backward in education; had Imbackelim; several fits a day; was considered by the Medical Doctors as a hopeless case. Spectro–Chrome Equipment was used. She started proper Backelim after only three tonations and had no day fits. On those days, previously, that she had fits she was very cross. Her mental condition improved in two weeks. She was tonated 4 months; did not adhere well to our vegetarian diet. She had Lemon systemic, Magenta on 4–18; occasionally Purple systemic, Orange on 8. He asked for further information.

Dinshah explained how Epilepsy was connected with disorders of Areas 10 and 11 and how those Areas reacted on Area Number 8 Flatulence and similar disorders of the digestive tract arose in conjunction with such derangements and the handling of Dr. Rao was in line with our methods.

Nissin S. Hanoka spoke of a case of a married man; he was a big man, but had trouble in the use of Area Number 11. Some discussion was carried on about similar disorders and Dinshah explained at some length the working of the Psychical Vehicle.

The Election of Trustees was unanimous. The same three Trustees were reelected and installed: Dinshah P. Ghadiali, Irene Grace Dinshah and Kashmira Dinshah.

The Trustees unanimously reappointed Dr. Kate W. Baldwin and Dr. Martha J. Peebles as the Vice–Presidents and they were installed amidst loud cheers and applause of the assembly.

THIRD DAY EVENING SESSION

R. Sitarama Rao presented a case of a woman of 35; severe pain at Ovelim which was irregular and scanty; had headaches; stayed at home for about 3 years during which the Medical Doctors treated her fruitlessly. Her husband finally requested him to use Spectro–Chrome. An Intermediate Equipment was used and she improved. After the second Ovelim period, there was no headache; two tonations a day for four months; had no trouble during the last 2 years. Systemic Lemon, Magenta on 4–18, Scarlet on 10–11 and Turquoise on Area 1 were employed as needed.

Surgeon Kate W. Baldwin spoke on the way the Itisometer could be used for demonstrating to medical people the efficacy of Attuned Color Waves by the change being measured and shown. Sugar might be passing and its elimination according to their testing methods might be shown by the Areas responding through Spectro–Chrome Therapy.

Dinshah said that in Spectro–Chrome Therapy, as the names of disorders were eliminated, the lay practitioners had better stick to the terminology of Spectro–Chrome as taught. He said many complaints were received where Centre Presidents had allowed discussion according to other therapeutical systems in Centre meetings and it was averred that some Associates who were doctors of other systems persistently kept up heated arguments about systems foreign to our work. He drew the attention of the assembly to the Bylaws pertaining to the subject and requested the Centre Delegates to inform their respective Centres to refrain from allowing any Associate to bring up such matter in our Centre meetings. We were not meeting to know about other systems and their merits, but, were concerned only with Spectro–Chrome Therapy. Let the Medical Doctors discuss medicine and Surgery in their societies, the Osteopath and Chiropractors carry their special talks to their organizations and so on; let us consider in our meetings how to establish and disseminate our work in our ways. Centre Presidents allowing irrevelant discussions and foreign arguments were not right in their attitude and any Associate present when such irrelevancy was going on would be right in calling for order. He would not encourage other therapeutical matters in this Association and would only adhere to our principles and purposes. He expressed high regard for Dr. Kate W. Baldwin and eulogized her devotion.

After further remarks of similar character, the President asked for a rising vote in silence for five seconds, in honor of four of our friends who died in active service to our Cause:– Lieutenant Colonel Frank G. Bolles, S.C.T., Pauline Barton–Peeke, S.C.T., Martin Lappa, S.C.T., and Laura M. Gaudette, S.C.T., which was duly accorded.

There being no further business, the Extraordinary Meeting was dissolved at midnight.

Opinion was unanimous that the meeting was a picture of unanimity, singleness of purpose, fraternal feelings and boded success. Nothing marred the smoothness and all went to respective duties well satisfied that the three days were among their happy ones.

***

DR. KATE W. BALDWIN HONORED

In appreciation of her services to the suffering and in recognition of her learning, the Maryland Academy of Sciences of Baltimore Maryland, conferred upon Kate W. Baldwin, S.C.T., M.D., F.A.C,S,, First Vice–President of American Association of Spectro–Chrome Therapists, Life Membership in the Academy.

We congratulate the worthy surgeon and cordially wish she may live long to enjoy many more honors which she well deserves.

We also congratulate the Maryland Academy of Sciences and especially its dean Dr. Francis C. Nicholas for the wise selection. In honoring Surgeon Kate W. Baldwin, they demonstrated a high sense of civic duty.

We are proud of Dr. Baldwin and the Association may well be proud to have such a distinguished woman as its First Vice–President.

ITISOMETER MANUAL

The Itisometer Manual, the handy guide for Lessees of the Itisometer, is published and distributed. A copy was mailed to each Lessee of an Itisometer. Each copy has the name of the Lessee and the number of the Itisometer to which it belongs.

The Itisometer Manual is the Sole Property of Spectro–Chrome Institute and can not be issued or circulated by the Lessee. Its value is assessed at One Hundred Dollars and a new copy will not be obtainable without the return of the original.

This volume is the result of years of concentrated labor and represents a fund of information of the most important character in a condensed form.

It will NOT be issued to any but a Lessee of an Itisometer when the apparatus is delivered.

CENTRE SECRETARIES PLEASE NOTE

Our Centre Secretaries are generally very conscientious and methodical in their reports, but, a few points may be drawn to their kind attention. They are important.

In reporting, OMIT all those cases in which other forms of healing were used with Spectro–Chrome Therapy. By reporting and publishing such mixed cases, we reach nowhere, because, we are not interested in promoting other systems, our Graduates are not taught by us other than Spectro– Chrome Therapy, our unlicensed practitioners are not encouraged to use any system other than ours and reporting mixed cases gives no clue to the value of Spectro–Chrome Therapy.

Spectro–Chrome Institute, American Association of Spectro–Chrome Therapists and readers of Spectro–Chrome are only looking forward to know about Spectro–Chrome Therapy. Without deprecating or downing our friends who follow other methods, we may say that our sole goal is Spectro–Chrome Therapy which has unquestionably proved to be the most accurate—in fact the ONLY precise mode of relieving the ailments of humanity.

Please therefore, give us by all means Spectro–Chrome Therapy and only those cases where the relief may be attributed straight to Spectro–Chrome Therapy. Let the use of other methods be reported where it may belong AND let Centre Presidents kindly see to it that such mixed business does not come on our platforms for discussion or debate.

Many of our Centres are lagging in their meetings and reports. The attention of the Centre Executive Councils may be drawn to our By–Laws which provide for monthly meetings, monthly reports and the like.

If a cause is worth working for, work for it and do the duty attached to your affiliation.

Spectro–Chrome Therapy needs you and the World needs Spectro–Chrome Therapy.

———***———

ANNUAL FEES

The Annual Fees become due on January First and those not paying them are automatically suspended at the end of February. Those not paying their Annual Fees by the 31st of March will have their names struck off the roll and all their privileges forfeited.

Please note that our By-Laws are made to be observed and they WILL be observed. Do not blame your Chief Executive Council for dropping your name. The fees MUST be in by March 31st.

Our Association as a Corporate Organization will make no exceptions—and do not forget that your suspension and resignation means the end of your connection with Spectro-Chrome Institute and Spectro-Chrome Therapy. Do not endanger your Equipment and Slides Leases by forgetting to mail your Annual Fees.

Do it now!

———***———

TO SUBSCRIBERS OF SPECTRO-CHROME

This is the last issue for your present subscription.

Should you wish to continue, please forward $3 promptly, otherwise the next issue will not be mailed.

All subscriptions begin with January and end with December.

Spectro-Chrome is issued to any subscriber, whether our Associate or otherwise.

———***———

CENTRE ELECTIONS

Election reports of several Centres are not yet in. Kindly send them promptly to avoid confusion in the transmission of respective remittances. Do not sleep on your duties.

———***———

HARSH JUDGMENT

Jake Ball, a cleaner and dyer, used an American flag to wipe his shop windows. He pleaded ignorance of the law, but, was told by the judge that his ignorance on that point was worse than the desecration. He got a sentence of 250 days in jail. The judge forgot the law of mercy himself. What was the intention of the offender? That should have counted for mitigation; sentence too severe to fit the case. Such harshness on the contrary breeds unrest and contempt of law; the man when out of jail, will treat the flag and what it stands for with less respect and there will be no "ignorance" then, for, he will know what the flag did to him.

———***———

NEXT CLASS

The next class for instruction in Spectro-Chrome Therapy with experiments and demonstrations will open at Malaga, New Jersey, on Monday, April 12, 1926. All fees and arrangements are as usual.

Come and bring your friends or recommend them to take this unique course.

It is the Only One of its kind in the World.

———***———

SPECTRO CHROME LANGUAGE

Until now, in deference to Spectro-Chrome Therapists who were prior Graduates of other schools of therapy, we continued to use the language common to others, but, since the birth of Itisometry, Spectro-Chrome Therapy has gone to such higher levels of Therapeutical Precision that a new language has been formulated to express our views in our own ways. This will clarify our situation still further, by creating for us an exceptional field, a different scientific status, which by our originality was always ours.

The medical world has nothing on us. We are not dependent on them, their drugs, their dopes, their poisons, their vaccines, their serums, even their complicated jargonic expressions. We have no guessworks, no differential names of disorders, no hidebound ageold lines of thought or action—Itisometry brought absolute automatic positivity of the most unbelievably accurate character in therapeutics and with its original phraseology also gave birth to a new language. This language—Spectro-Chrome language—will henceforth be adopted in our work and as far as practicable we shall expect our Associates to learn to talk and express their views in it. It is beautiful and simple in build, graceful in cadence, sweet in enunciation and is devoid of incomprehensible terms. Above all, it is entirely original and will surely appeal to our progressive Associates as the one necessity of our work which is now fullfilled through the Itisometer. "Treatment of Dis-Eases" now disappears for ever and "Tonation of Disorders" takes its place—a more appropriate phrase in line with our science. The following is the current vocabulary to which new words will be added as needed or coined and published. If you have suggestions, they will be surly considered; send them. If the suggestion be accepted, your name will be published and the words will be adopted in our language.

AREA—Main Division of the Visible Physical Body.

ASANA—Posture during Itisation or Tonation.

AURICULAR ZERO—The resultant of the auriculation of Intareas A-B-C-D of Area 1 and Intarea E of Area 15.

AURICULATE—To find with the Auriculator.

AURICULATION—The process of Auriculating.

AURICULATOR—That part of the Itisometer which reckons the values of the Spectral Scales from the Itisometer readings.

BACK AURA—The resultant of the auriculation of the Auricular Zero with Intareas A-B-C-D-E-F of Area 17, Intareas A-B of Area 18 and Intarea A of Area 19.

BACKELIM—Back Elimination.

BACKELIMATE—Eliminate through Back Orifice.

BACKEXIT—Back Orifice.

CALORIC CHAMBER—Cylinder for warming the Tanger.

CHRONOMETER—The Spectro-Chrome Timepiece.

CHRONOS—The time computed with Spectro-Chrome Attuned Color Wave System.

FRONT AURA—The resultant of the auriculation of the Auricular Zero with Intarea A of Areas 2-3-4-5-6-7-8-9-10.

FRONTELIM—Front Elimination.

FRONTELIMATE—Eliminate through Front Orifice.

FRONTEXIT—Front Orifice.

HUMAN—Male or Female.

ILLUMINATOR—Lamp.

IMBACKELIM—Impeded Back Elimination.

INTAREA—A Subdivision of an Area.

ITISATION—The process of Itisizing.

ITISEE—The person being Itisized.

ITISIZE—To determine with the Tanger.

ITISOMETER—The apparatus invented by Dinshah P. Ghadiali for determining the precise Predominant Color Wave values in the various Areas of the living body and automatically indicating the Remedial Attuned Color Wave, in accordance with the Science of Spectro-Chrome Therapy.

ITISOMETER NORMAL—The Red Line within the Zero Scale.

ITISOMETRIST—Practitioner of Itisometry.

ITISOMETRY—The science originated by Dinshah P. Ghadiali for determining the precise Predominant Color Wave values in the various Areas of the living body and automatically finding the Remedial Attuned Color Wave, in accordance with the teachings of Spectro-Chrome Therapy.

KARDOSCIL—Pulse beats per minute.

LUNA—Moon Period.

MISTONATE — To project the wrong Attuned Color Wave.

MISTONATION — Projection of the wrong Attuned Color Wave.

NORMALATE—To restore the Radio-Active and Radio-Emanative Equilibrium.

NORMALATION—Restoration of the Radio-Active and Radio-Emanative Equilibrium.

ORELIM — Oral Elimination.

ORELIMATE— Eliminate through mouth.

OVELIM—Ovarian Elimination.

OVELIMATE—Pass Ovarian Elimination.

PRIMOCHROME—The resultant of the auriculation of Intareas A-B-C of Area 1 and Intarea A of Areas 6 and 7.

RATIOTE—To find by the Ratio Dial.

SECOCHROME—The resultant of the auriculation of Intarea D of Area 1, Intarea E of Area 15, Intarea A of Area 8, and Intareas A-B of Area 18.

SLOT—The indentation admitting the Tanger cord when in use.

SPIROSCIL—Respiration per minute.

SUFFERER—Unwell person.

SWEEPINDEX—The moving Needle.

TANGER—That part of the Itisometer which contacts the Itisee.

TANGER LOCKER—The lockable compartment for holding the Tanger cord, Tanger and Itisometer Manual.

TONATE — To project the Remedial Attuned Color Wave.

TONATION — Projection of the Remedial Attuned Color Wave.

TONE—Perfect functioning of all Areas.

———***———

ITISOMETER NUMBER 20 EXPRESSED TO CALIFORNIA

Itisometer Number 20, the first one sent by American Railway Express across the United States was received by the Lessee Dr. A. T. Vance, S.C.T., President of First Los Angeles California Centre. He wired, "Itisometer arrived. Working beautifully. You will win Nobel Prize some day. Success and thanks."

Thanks to you, Doctor Vance, for your kind patience and progressiveness. Thanks to Mr. J. A. McKeon and Mr. W. J. Hoy, Claim Supervisors of the American Railway Express Company who advised us about the proper packing to avoid damage and took the trouble to come all the way from New York twice to inspect the designing of the special container and the like.

Thanks are also due to Mr. E. H. McCarty, the Express Agent of Malaga, N. J. whose careful handling of the situation smoothed the transit arrangements.

The way is now opened for transportation of other apparati and soon the installment instruments also will be delivered by rail. They are now being manufactured.

Attuned Green Wave

(Spectro-Chrome Therapy, Spectro-Chrome Therapists)

THE SATISFACTION OF ITISOMETRY.

By:—WALLACE F. MACNAUGHTON, S.C.T. M.D.,

The world little knows what exactness in the Healing Art is now available with the production of the Itisometer. To Spectro-Chrome Therapists, it is almost unbelievable yet comprehensible. Without a knowledge of the teachings of Spectro-Chrome Therapy, the operation of the Itisometer staggers the imagination, but, is no less fascinating.

The operation of the Itisometer is beautiful and the beauty is shed by the truth it tells. There is no experimentation, speculation or delay. There are no Laboratory Analyses, X-Ray pictures, Therapeutic Tests or Medicinal Remedies necessary, but, trouble anywere in the body is detected unmistakably.

With the Itisometer the trouble is located at once. The variation from normal function or health is measured definitely and exactly and recorded in figures not only for the body as a whole, but, for any obscure area on which information is desired.

An appreciation of such an instrument and the assistance it gives to the practitioner can only be gained by using it. Such an appreciation is enhanced many times if the practitioner is then forced to do without it. The loss seems tremendous at first and it is not until the memory of former days recalls the fact that Spectro-Chrome Therapy has been practised without the Itisometer—after a fashion.

Both local and systemic treatments are indicated by it which no stretch of the imagination or any amount of reasoning would enable one to select as the proper tonation. The response of the sufferer and the changes in readings on subsequent Itisation seemed to prove that the nail had been hit precisely on the head in each case. Another valuable feature is the knowledge it gives of when to persist for a number of days in one color on certain areas, for instance, the Red on 17 and 18 or when to give a tonation of Orange for instance, on Intarea 1C.

As for psychological effect, the sufferers may observe that the needle comes to rest in the Ultra-Zero Scale

indicating subnormal condition or in the Infra–Zero Scale indicating supernormal condition of an organ, but, they are not stricken by being labeled with some terrorizing "disease" or subjected to the hazards of diagnosis, which even medical authorities admit to be only 57 per cent correct.

It is important to observe certain technical precautions so that the readings may have uniform conditions. In cold weather, the sufferer should be "acclimated" to room temperature of 75 to 80 degrees Fahrenheit before Itisation is begun and kept as far as possible from radiating too much warmth. To insure this uniform surface temperature, a smock may be used which permits the application of the Tanger to any Intarea with the minimum of surface exposure. It will also give the sufferer a greater sense of privacy and contribute to comfort. If desirable, a sheet may be thrown over shoulders to keep Back Areas from being chilled while Front Areas are being Itisized.

The following findings are submitted as suggestions for future abservations and it will be interesting to note if other Itisometrists corroborate them.

One observation that the writer has made is that a surprising number of cases past middle age showed Ultra–Zero findings on Intareas 17 C, D, E, F, and 18, especially 18 E, some persisting beyond 90 degrees Ultra–Zero for several days. Another interesting point was observed on a case showing high fever and Infra–Zero readings on all Intareas which was to be expected.

The Auriculation of the Front Aura was higher than the Back fourteen out of sixteen Itisations although both sometimes fell within the same Remedial Color Wave. In this case, there was more or less correspondence between the range of the fever and the Remedial Attuned Color Wave indicated.

At past middle age, the energies circulating blood slow down and Area 17 may keep registering in Ultra–Zero. As 18E registers Pancreatic activity, that may also indicate Ultra–Zero as the organ wears. Fevers are Accelerations of energies and the Itisometer therefor records it always on Infra–Zero . Whichever rendering be taken, the indications of the Itisometer, although sometimes apparently mysterious are in absolute harmony with universal laws regulating humans. Follow the Itisometer—IT KNOWS!!!

———***———

FIRST LOS ANGELES CALIFORNIA CENTRE

Reported By:—THOMAS W. Mc ALLISTER, S.C.T., D.O. SECRETARY

There was a regular meeting in October. In the absence on tour of Dr. T. W. McAllister, Jessie H. Lansing, S.C.T. acted as Seretary pro tem, Dr. Henry Gross in the chair.

Unanimously resolved that a letter be written to Col. Dinshah expressing our sympathy and our faith in his honor and character; it was drafted by the President, approved and signed by all present.

Lillian E. Fluke, S.C.T. reported the case of a child of ten years with a temperature of 105 degrees. Turquoise was applied; in one half hour, the fever was all gone.

Dr. Henry Gross gave an interesting talk on the seasonal changes of the human body and its relation to the cosmos. A warning was given of the danger of X-Ray and Radium treatments, many instances being cited of serious injury resulting from such treatments.

A regular meeting was called to order on Wednesday November 4, 1925 at 8 P.M. Dr. Henry Gross presided.

The minutes were read and approved.

A letter was read from Col. Dinshah Ghadiali in answer to the letter forwarded by the Centre expressing appreciation for sympathy and kind heartfelt wishes of all.

The plan for maintenance of reserve Spectro-Chrome Slide Sets was read and acted upon. Two bills were allowed.

Following the transaction of business, the Secretary Dr. T. W. Mc Allister was asked to give a resume of his trip East and more especially of his visit to the Central Office and Research Laboratory at Malaga, New Jersey. Everyone was most interested in the development and future plans.

Meeting dissolved at 10:25 P.M.

———***———

FIRST PROVIDENCE RHODE ISLAND CENTRE

Reported By:—FREDERICK CROMPTON, S.C.T. SECRETARY.

Following is a report of the meeting of the First Providence Rhode Island Centre, held on Sunday November 1, 1925, at 5:30 P.M.

The meeting was called to order by Dr. Charles C. Hesse, S.C.T., the President. The Secretary's report of the previous meeting was accepted as read.

Nine applications for affiliation were favorably passed upon by the Centre Executive Council.

There was varied discussion on the Centre carrying extra supplies and on refund of dues from the Headquarters to the Centre.

Meeting dissolved at 6:30 P.M.

Attuned Turquoise Wave

(Poetry, Romance, Drama, Art)

WOODLAND SPRITES

By:—KASHMIRA DINSHAH, S.C.T.

Here we come, a musical throng,
Hopping, skipping, tripping along.
The velvet turf we lightly tread,
By wish for happy frolic led.

Adown the forest lane we glide,
Assembled fays from far and wide,
From homes in caves or coverts green,
A host by mortal eyes unseen.

From flowers fair and berries we
Draw our silvery harmony,
With magic touch and fairy skill,
And dulcet chords the night air fill.

For drums we use the gooseberry,
With twigs of weeping–willow tree,
The drums are struck, sonorous floats
The joyous thunder of their notes.

The harps are made of pansies pale
Over which stretched are cobwebs frail.
The fifes and flutes, orchestral needs,
Are fashioned from slim hollow reeds.

Bright trumpets formed of lilies white,
Send the echoes flying thru the night.
The woods and hills and leas resound
With this sweet music all around.

O, happy Woodland Sprites are we!
All night we sport so merrily!
But, when day dawns, we slip away,
Till darkness comes, which is our day.
